Turning Your Critical Thesis into a Critical Book

Participant: **Kristin Samantha Williams**, *Acadia U.*
Participant: **Liela A. Jamjoom**, *Dar Al-Hekma U.*

In this PDW we share insights into publishing a monograph and specifically turning a critical PhD thesis into a critical book. The PDW features authorial journeys from defending a thesis through to publishing a monograph. The PDW will also feature insights from publishers on the process of acquiring a publisher and navigating the publishing process from beginning to end.

Putting Craftspeople Front and Center in the Luxury Market (CANCELLED)

Session Chair: **Fabio Duma**, *ZHAW School of Management and Law*
Session Chair: **Jana Hawley**, *U. of North Texas*

It is human nature to surround ourselves with beautiful things. Luxury companies understand this and have produced luxury goods that are not only beautifully crafted, but also bring prestige, aspiration, symbolic value, and well-being to the consumer (Sinha & Som, 2016). While ateliers still employ hundreds of skilled craftspeople who create superb products, most of today's luxury companies focus on profits that are driven from brand recognition. When scholars write about luxury markets, they often focus on an analysis of luxury companies and the markets they serve. Inspired by this year's AOM theme Putting the Worker Front and Center, this PDW starts with a panel discussion that provides a broad context of the current state of the luxury industry and then compares it to an emerging alternative luxury market that focuses on the artisans themselves and their traditional production methods. Following the panel, participants in the workshop will form discussion groups to collectively and creatively think about how an alternative model of luxury could focus more attention on the artisans and skilled craftspeople who produce products that provide meaning to consumers. We believe the discussion will result in ideas that lead scholars to submit to a peer-reviewed focused issue that explores alternative business models that put the artisan and their consumer's front and center.

Attendance of the PDW is limited to 30 people. Conference attendees interested in participating please send an email briefly explaining their motivation and including a short CV (or link) to Fabio Duma (fabio.duma@zhaw.ch) and Jana Hawley. Thank you!

Knowledge Discrimination Against Female Skilled Immigrants from Non-European Countries

Speaker: **Minoo Selseleh**, *Faculty of Liberal Arts and Professional Studies, York U.*

Organizations continuously face challenges in meeting their strategic goals due to skill shortages, and one common solution is to hire skilled immigrants, who are most often educated and gained work experience in foreign countries (Chen, Tansley & Chou, 2021). The goal is to diversify scarce knowledge by adding immigrants' knowledge and expertise to the organization's knowledge repository to meet strategic goals and retain competitive advantage (Chen et al., 2021). Diversity of knowledge is only achieved through the free and smooth transfer of ideas without using knowledge holder race, gender, or place of gaining knowledge as a reason for discrimination (Davis, 2013; Sidhu, Ansari, Volberda & Oshri, 2011). Despite pro-diversity and inclusion policies and multiple anti-discrimination legislation, social processes behind daily organizational interactions perpetuate a specific kind of discrimination against skilled immigrants known as knowledge discrimination (Chen et al., 2021). It happens so broadly that can be seen as a labour market-wide phenomenon that stands in the way of knowledge flow and benefiting from the diversity of knowledge (Dietz, Joshi, Esses, Hamilton, & Gabarrot, 2015). Knowledge discrimination negatively affects organizations and can result in billions of dollars in economic loss (Dietz et al., 2015). For example, Canada's economy annually loses over $11 billion because immigrants' skills are devaluated and underutilized (Dietz et al., 2015). The situation is more intense for female racial minorities from non-European countries (Dietz et al., 2015). This workshop provides a deeper understanding of knowledge discrimination underlying processes that can be used for designing strategies for minimizing it.

Dear AOM Conference Participants, I am thrilled to invite you to register for the Workshop titled "Knowledge Discrimination Against Female Skilled Immigrants from Non-European Countries." This workshop sheds light on the overlooked discrimination that prevents skilled immigrants, specifically female racialized minorities, from sharing their knowledge. It can provide theoretical insights into how knowledge discrimination can counteract global talent management, diversity and inclusion, and knowledge management initiatives. Moreover, it calls for research on knowledge discrimination based on race and gender, which would be fruitful for a deeper understanding of this common discrimination and designing strategies for minimizing it. To attend this workshop, please register and submit your CV to my email address: selseleh@yorku.ca .Additional information regarding the time and location of the workshop will be provided later. Looking forward to it! Best, Minoo

Developing a DEIJ Strategy in Academic Affairs: Balancing Inclusion, Process & Accountability

Organizer: **Donna Maria Blancero**, *Bentley U.*
Organizer: **Alex Hirs**, *Harvard Business School*
Organizer: **Erin Kelley**, *Bentley U.*

Many leaders in higher education face an array of challenges when preparing to develop a DEIJ strategy. Too often, only short-term or one-off programs are created, serving more as window dressing than mechanisms that facilitate long-term change, learning, and organizational growth. Given the Academy's theme of "Putting the Worker Front and Center," we believe that members would benefit from an engaging workshop that considers how focused and systematic DEIJ efforts support faculty, staff, and students at institutions of higher education. This workshop provides an in-depth review of the process that was used to develop a comprehensive DEIJ strategy for academic affairs at Bentley University. A team within the office of the provost grounded the creation of this strategy in inclusive excellence practices, which aligned with the broader DEIJ strategy for the institution. Stakeholders (including faculty, staff, students, alumni, and trustees) were provided numerous opportunities to assess the needs of the academic affairs unit, weigh in on draft goals and priorities, and ensure the final plan was culturally relevant and accessible. In this workshop, we will outline steps for developing a DEIJ strategy, explore how to assess progress toward goals, and discuss the mindset that enables leaders to leverage DEIJ strategies as living, evolving documents. Participants will have the opportunity to begin drafting a strategy for their university and/or refine their existing strategy. This PDW will be appropriate for faculty, deans, provosts, and staff who are involved with DEIJ efforts at their institution.

ENT Doctoral Student Consortium Part 1

Organizer: **Veroniek Collewaert**, *Vlerick Business School & KU Leuven*
Organizer: **Will Drover**, *Texas Christian U.*

Designed to launch doctoral students into their research career, the Consortium brings together young scholars and experienced faculty to discuss opportunities for advancing academic understanding of entrepreneurship. As such, the Doctoral Consortium's primary objective is to help prepare students for a successful career as a researcher/professor in academic institutions of higher education. This year's program will include discussions on the challenges of pursuing an academic career, the publication process, and a host of other relevant topics. Furthermore, students will have the opportunity to receive constructive feedback about a research article on which they are currently working.

Only open to those pre-approved by the Consortium organizers.

Recalibrating Entrepreneurship Research: Embracing Decolonization, Pluralism and Everydayness

Participant: **Helen Haugh**, *U. of Cambridge*
Participant: **Robert Nason**, *McGill U. - Desautels Faculty of Management*
Participant: **Pablo Munoz**, *Durham U. Business School*
Participant: **Friederike Welter**, *U. Siegen / IfM Bonn*
Participant: **Giacomo Ciambotti**, *U. Cattolica del Sacro Cuore*

There is a major disconnect between theory and phenomenon in the study of entrepreneurship. Entrepreneurship is the study of diversity (Welter, Baker, Audretsch, & Gartner, 2017), yet the body of knowledge developed over the past decades has been built primarily by studying start-ups with elite characteristics such as high tech, high growth, venture capital investment, or reaching IPO status. The reality is that most entrepreneurship is not so glitzy (Munoz & Kimmitt, 2018). The highest rates of new venture activity are in the global south (GEM, 2020) and even in the United States, most start-ups are relatively mundane (Aldrich & Ruef, 2018). At the same time, other forms of organizing are being infused with entrepreneurial activity including non-profits, social enterprises, and social movements. The aim of the PDW is to consider this important gap between theory and phenomenon – seeking to move towards recalibrating what we study and how we study it in entrepreneurship research. This effort is important because a theory-phenomenon disconnect exists across management domains where strategy scholars over-examine the precious few large public corporations and HR scholars concentrate on white-collar jobs. The scholarly conversations we aim to provoke about the wider significance and consequences of entrepreneurship build on the strong foundation of prior research that has investigated entrepreneurship and poverty (e.g., Kimmitt, Munoz, & Newbery, 2020), gender and emancipation (e.g., Rindova, Barry, & Ketchen, 2009), diversity (e.g., Verduijn & Essers, 2013), and decolonizing management research (e.g., Muzio, 2022; Banerjee, 2022).

Scaling Up Accelerator Research

Participant: **Violetta Gerasymenko**, *Oregon State U.*
Participant: **Gary Dushnitsky**, *London Business School*
Participant: **Susan L. Cohen**, *U. of Georgia*
Participant: **Sandy Yu**, *U. of Minnesota*
Participant: **Benjamin L. Hallen**, *U. of Washington, Seattle*
Participant: **Raphael H. Amit**, *U. of Pennsylvania*
Participant: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*
Participant: **Yeon Jin Kim**, *U. of Minnesota*

Over the past decade, accelerators have become an important feature of the global entrepreneurial landscape. Over the past three years, in our PDW, we focused on: (1) discussing the effects of accelerators on the emergence of entrepreneurial identity, (2) considering different venture-specific factors that determine the extent to which ventures will benefit from participation in accelerators, (3) re-examining the effects of different mechanisms of accelerators on ventures' performance, and (4) identifying lessons for generating novel theory. The goal of this PDW will be to move beyond the research that uses "accelerators to understand accelerators". We aim to broaden the scope of our inquiry and discuss how research on accelerators may inform and shape the broader management and entrepreneurship literature. Specifically, we aim to inform (1) entrepreneurship resource-assembly literature by documenting evidence about the long-term implications of short-term frictions, (2) informing gender-diversity literature by studying venture and cohort gender composition (3) understand the implications for organizational learning literature by hypothesizing and testing specific learning mechanisms, such as absorptive capacity and vicarious learning, and finally, (4) exploit the accelerator context to coin a novel concept of organizational learning, - candid learning. Our discussion will place particular emphasis on the role of the entrepreneur and falls squarely in line with the 2023 AOM theme "Putting the Worker Front and Center."

Advancing Entrepreneurship Science with Meta-Analysis

Organizer: **Mark Geiger**, *Duquesne U.*
Organizer: **James Field**, *West Virginia U.*
Panelist: **David W. Williams**, *U. of Tennessee*
Panelist: **Alexander Glosenberg**, *Loyola Marymount U.*
Panelist: **Mingang K. Geiger**, *Duquesne U.*

Entrepreneurship, as a field of research, is suffering from its own success. For more than two decades it has been on a quest for academic and institutional legitimacy, trying to gain recognition for the quality and scientific standing of its academic outputs. On this front, the field has been an unqualified success, yielding premier outlets for scientific influence that are able to display the rigor of our work and our dedication to advancing theory (McMullen, 2019). In the process, the field has naturally accumulated an abundance of empirical evidence across studies that "report seemingly conflicting findings and draw dissimilar conclusions (Schmidt & Hunter, 2015)" (Combs et al., 2021, p. 343). This is problematic and calls for new efforts to systematically synthesize fragmented and dispersed research to improve our understanding of phenomena and advance an area of science (Aguinis et al., 2011; Combs et al., 2019). Meta-analysis is a powerful method to deal with this problem, yet surprisingly absent in entrepreneurship scholarship. This PDW addresses a timely and relevant issue in the field of entrepreneurship, namely the need for more meta-analyses (Combs et al., 2021; Geiger & Field, 2022). Using Journal of Business Venturing (JBV) Insights as an example, this PDW will help prospective authors of meta-analytic studies prepare their work as new publication opportunities become available across entrepreneurship journals (e.g., JBV Insights; Geiger & Field, 2022) and other management outlets (e.g., ORM; Aguinis et al., 2023). There are two parts to this PDW. Part 1 is an open panel discussion with journal editors and authors of recently published meta-analyses. Part 1 is open to all attendees. Part 2 is a roundtable session, facilitated by the panelists, where attendees' ideas or proposals for a meta-analysis on an entrepreneurship topic will be discussed. Part 2 requires preregistration. Submitting a proposal for Part 2 is encouraged but not required. Please reach out to Mark Geiger at geigerml@duq.edu if you are interested in participating in Part 2 of the PDW.

Emerging Scholars Consortium (Part 1)

Session Chair: **Deirdre McCaughey**, *U. of Calgary*

Are you a junior faculty member, post-doc, or doctoral student with research and/or teaching interests in health care management? Join us for the Health Care Management (HCM) division Emerging Scholars Consortium (ESC) on Friday, August 4th in Boston, where a diverse group of outstanding faculty will facilitate a highly interactive series of sessions geared towards emerging health care management scholars. In addition to the content, the ESC's highly collaborative format is a fantastic opportunity to create relationships with other HCM emerging scholars from around the globe. Many long-time HCM members attest to the ESC as an origin for major research collaborations and employment pathways. HCM Emerging Scholars Consortium day will be divided into individual sessions, so you may attend one or all. We have also built "hallway time" into the schedule, which is time between sessions where people can meet informally. Normally the consortium content is curated for students and junior faculty, however, everyone is welcome to attend any session!

Presenter: **Tse Leng Tham**, *ESCP Business School*
Presenter: **Veronique Tran**, *ESCP Business School*

Combining executive coaching strategies (such as active listening, scaling questions, framing, goal setting & more) with visualization techniques, workshop participants will work with the following 4 tools that become increasingly powerful when developed and used in conjunction: (I.) Inner Compass: Analyzing the Guiding Principles of Your Life, (II.) Spirituality: Developing Your Personal Affirmations, (III.) Resilience: Building Your Personal Resource Map, (IV.) Mental Clarity: Creating Your Personal Work Vision. Each participant will leave the workshop with a personalized visualization of the aforementioned 4 tools.

Gamification in Management Education: Small Changes for Big Impacts

Organizer: **Mai P. Trinh**, *Arizona State U.*
Panelist: **Andreas Janson**, *U. of St. Gallen*
Panelist: **Sofia Schöbel**, *U. of Osnabrueck*
Panelist: **Mai P. Trinh**, *Arizona State U.*
Panelist: **Gergana Vladova**, *Gergana Vladova U. of Potsdam WiSo Faculty Chair of Business Informatics*
Panelist: **Dezhi Wu**, -

Gamification is the use of video game elements such as badges, leaderboards, quests, and resources in non-game contexts (Deterding, 2012). In recent years, the use of gamification has been on the rise due to its ability to use “game-based mechanics, aesthetics, and game thinking to engage people, motivate action, promote learning, and solve problems” (Kapp, 2012, p. 125). In education, the use of gamification has been associated with positive results in student performance, motivation, engagement, attitude towards gamification, collaboration, and social awareness (Antonaci et al., 2019). In this PDW, we aim to provide higher educators, especially those who are teaching hybrid or online courses, with insights regarding how to gamify their classes. The organizers have gathered a diverse panel of experts in gamification with a wide range of experience using gamification in teaching, research, and practice in different settings. We propose a gamified PDW that will last for two hours, divided into two parts. In part I, our diverse panelists will briefly introduce how they have applied gamification in their own teaching and research. They will also answer several questions prepared by the organizers, such as "What are the strengths and limitations of gamification in management education?". In part II, we will ask panelists to each lead a roundtable discussion to help participants brainstorm gamification ideas that they can readily apply in their own classes.

Improvement of Students' Competences by Using Virtual Reality and Learning Analytics

Session Chair: **Andrea Honal**, *DHBW Mannheim / Germany*
Presenter: **Volker M. Rundshagen**, *U. of Applied Sciences Stralsund*
Participant: **Dorothee Beez**, *DHBW Mannheim / Germany*

Today, the rapid technological change offers new opportunities for learners and educators. Immerse technology, like virtual reality (VR), creates realistic environments where young professionals can train in different scenarios and modes. Moreover, the learning units can be measured, and the process can be tracked. This offers great advantages for both - the learners and the teachers. Therefore, the combination of VR and learning analytics (LA) with mobile VR-headsets and special trainings' software, creates a unique teaching and learning setting which can be used for a wide range of lecture types (e.g. soft skill training, healthcare training or machine instruction training). In this context, LA can be defined as the measurement, collection, analysis, and reporting of data about learners and their contexts, for understanding and improving learning and the environments in which it occurs (Siemens, 2013). Within the VR environment, LA helps to receive a better understanding of the learning pattern, the weak points and can be used to adapt future learning scenarios by applying predictive learning analytics in the VR software. In this PDW, the speakers will present evidence-based showcases dealing with the mentioned topics and explain how these technological tools can be used effectively for learners and teachers.

No requirements for the attendees are needed!

Strategy Work with Artifacts: Leveraging the Neurocognitive Advantages of Visual Sense Building

Organizer: **Robert Galavan**, *National U. of Ireland, Maynooth*
Organizer: **Robin Gustafsson**, *Aalto U.*
Organizer: **Kristian Johan Sund**, *Roskilde U.*

Artifacts, or visual aids, are underutilized in strategy work despite their potential neurocognitive advantages for attention, emotion control, learning and memory, intuition, and creativity. The artifacts aid cognition in a variety of ways, providing managers with means of more rapidly and more effectively sensebuild during complex strategy work. Building on the forthcoming work of Gustafsson (2023) which examines the neurocognitive advantages of using visual aids in strategy work, participants will be guided by an academic team of trained facilitators through a practical and hands-on strategy work experience using visual aids. This will be followed by an opportunity to reflect and evaluate the experience with experts and colleagues, exploring the emergence of intuition, insight, and understanding and how participants might incorporate visual aids in their work. The workshop will be presented in three phases, introduction to the concepts and theory of visual aids in strategy work, hands-on experience of a process using visual aids, and reflections on the theory and practice of this approach.

This PDW will involve hands-on work with visual artifacts. We can hence only accommodate 50 participants. As there is no preregistration, seats will be given on a first-come, first-served basis. To secure a seat, we advise to be in good time before the session starts at the venue.

Studying Emotion in Strategy Research

Organizer: **Christopher Golding**, *U. of Manchester*
Organizer: **Mark P. Healey**, *U. of Manchester*
Panelist: **Gerard P. Hodgkinson**, *U. of Manchester*
Panelist: **Timo Olavi Vuori**, *Aalto U.*
Panelist: **Daniella Laureiro Martinez**, *ETH Zürich*
Panelist: **Ryan L. Raffaelli**, *Harvard Business School*

The role and importance of emotion in processes and outcomes of strategy is increasingly recognized, presenting exciting opportunities to study and publish work in this domain. However, researchers face several challenges in doing so, such as how to theoretically conceptualize emotion; effectively managing the strengths and limitations of a qualitative or quantitative approach respectively; as well as negotiating the peer-review process. The intent of this PDW, therefore, is to equip participants—especially PhDs and ECRs—with the skills and knowledge to effectively study and publish on the phenomenon of emotion in strategy by: (1) hearing from leading scholars in the field to become familiar with the domain, appreciate its fundamentals, understand key trends, and learn best practices; (2) discussing their own work, experiences and challenges with leading scholars and peers alike through interactive roundtables to establish fruitful avenues for future research; (3) connecting with like-minded individuals to establish networks that can be drawn upon beyond the AOM 2023 conference, as participants continue to explore and contribute towards this domain.

The first half of the PDW is open to all. Applications to participate in the second half of the PDW - interactive roundtables with a panel member - should take the form of an extended abstract/research idea (2-pages, A4 max) submitted to Chris Golding (christopher.golding@manchester.ac.uk) before 30th June 2023. Successful applicants will be informed by mid-July.

The Productivity Process: Research Tips and Strategies from Prolific Junior Faculty

Organizer: **Nitya Chawla**, *U. of Minnesota, Twin Cities*
Organizer: **Insiya Hussain**, *U. of Texas at Austin*
Organizer: **Ulrich Leicht-Deobald**, *Trinity Business School, Trinity College Dublin*
Distinguished Speaker: **Blake E. Ashforth**, *Arizona State U.*
Participant: **Justin M. Berg**, *Stanford Graduate School of Business*
Participant: **Bonnie Cheng**, *HKU Business School, The U. of Hong Kong*
Participant: **Sarah Doyle**, *U. of Arizona*
Participant: **Hemant Kakkar**, *Fuqua School of Business, Duke U.*
Participant: **Hudson Sessions**, *Southern Methodist U.*
Participant: **Troy Smith**, *U. of Nebraska, Lincoln*
Participant: **Fang He**, *U. of St. Gallen*
Participant: **Max Reinwald**, *LMU Munich*

A major challenge facing junior faculty is understanding and learning how to be productive. This implies that research productivity is a process that can be improved through learning. Similar to the sessions of this Professional Development Workshop (PDW) from prior years, our main goal is to help develop an awareness of the processes used by prolific faculty. Although most PDWs use esteemed senior scholars as panelists, we propose a model that uses peer junior faculty members who have established track records of productivity. A unique feature of this PDW is the focus on work and research productivity as a process. That is, presenters will discuss their work habits and how they go about their work (e.g., time allocation, co-authorships, writing blocks, and strategies) as well as other “life” factors that influence their productivity (e.g., exercise, work/family balance). This session uses a number of formats including individual presentations, panel discussions as a group, small group roundtables where participants are able to have conversations with each of the panelists, and a keynote address. This PDW is organized by members of the OB Division’s Making Connections Committee (MCC).

Panelist: **Shannon G. Taylor**, *U. of Central Florida*

If you joined the Organizational Behavior (OB) division within the last three years and want to learn more about the OB division and starting out in the field of OB, then this forum is for you! This PDW was created to answer your questions about the "essentials" of the AOM conference, the OB division, and the field of OB. The session is organized around a panel discussion between established members of the OB division and new OB members like yourself. The PDW will include a welcome and overview of the OB Division, a networking ice breaker, and a panel discussion prompted by questions from participants. As a participant in the forum, you can ask questions of your choice.

Pre-registration is required; details will be shared on the AOM OB Listserv.

Sponsored by the Kauffman Foundation, the aim of this PDW is to stimulate and help develop research at the interface of organizational behavior and entrepreneurship. To do so, this PDW invites researchers interested in participating to submit a short description of their research at this interface that they seek to further develop. During the PDW, presentations by Miriam Erez outlining the value and promise of research bridging organizational behavior and entrepreneurship and by Wendy Casper on the promises and challenges of entrepreneurship research at one of the primary OB outlets, Journal of Applied Psychology, will set the stage for the more interactive part of the workshop. Accepted participants will be matched with one of the expert panelists prior to the Academy of Management meeting, and they will gather in small groups at the PDW for feedback and discussion of their research. Finally, we will have a forward-looking discussion on main themes with all panelists and participants.

What is the future for the physical workplace? As employee desire for work location flexibility persists, employers are grappling to reconfigure their offices to meet future needs. This PDW will explore how workplaces are changing in response to hybrid working and new work patterns post COVID-19. We consider the potential for management practices, space design, and technology integration to interact with organizational behaviors in future workplaces that address businesses' needs to keep workers front and center. Understanding behavior within hybrid and diverse working arrangements is a complex challenge as the psychological, architectural, technological, organizational, policy and cultural elements intertwine and coevolve. The cross-disciplinary links between these factors are often under acknowledged both theoretically and practically within organizational research. Through two video case studies, invited expert panelists discussion, and facilitated themed breakout discussions, PDW participants will consider the design of future workplaces from differing disciplinary perspectives and contemplate the opportunity to develop multi- disciplinary research collaboration, apply innovative methodologies, conceptualize new elements and theorize emerging phenomena. Research action plans will result from the themed breakout discussions that contribute to a call for action. Video case studies, reflective podcasts, and the call for action summary of the discussions will be shared with participants post event. A twitter feed will capture the important points and interesting discussions taking place during the workshop.

Please register your details so that we can share pre-session materials and information. Registration and resources at: https://futureworkplace.leeds.ac.uk/aom2023/.

Like every year, the OMT doctoral consortium aims at providing late- stage doctoral students with research interests in the areas of organization and management theory practical advice on finding jobs, managing their careers, doing and publishing research, and teaching. It will also provide an opportunity for students to form relationships with others at the same stage in their career and with more senior scholars who share their research interests. The event consists of a series panel presentations, round-table conversations, and mentoring sessions.

Participant: **Andrew Sturdy**, *U. of Bristol*

Research on professionals and their workplaces is becoming increasingly popular, reflecting the growing importance of experts and other knowledge workers in contemporary society (Brock, 2021; Empson, et al., 2015). Following successful PDWs since 2013 on various topics relevant to professional organization research, this year we turn our attention to the challenges of delivering professional services in the global environment. From the start we must acknowledge that the professions have been traditionally located within jurisdiction boundaries (Abbott, 1988; Feyereisen & Goodrick, 2019), and thus were primarily local and focused on delivering services face-to-face with the client. However recent institutional and environmental changes – such as deregulation of services in the wake of the GATT Uruguay round and developments in information technology – have created the context for globalization of service firms. Thus we are addressing a challenging set of issues for researchers and practitioners in these traditionally stable and institutionalized contexts. The PDW will begin with four brief presentations by our panelists, each outlining a research project that addresses the challenges presented by contemporary global environments to professionals firms (details on topics and presenters below). Thereafter we will divide into a series of round tables, each around one of the panelists. The PDW will thus also afford opportunity for small group interactions with our expert panelists and organizers.

The 5W (+1H) of Impact: Who, What, When, Where, Why & How of Creating Impact from Academic Research

Organizer: **Kylie Heales**, *U. of Alberta*
Organizer: **Tanja Ohlson**, *UNSW Sydney*
Panelist: **Jeannette Anastasia Colyvas**, *Northwestern U.*
Panelist: **Tim G. Pollock**, *U. of Tennessee, Knoxville*
Panelist: **Michael Smets**, *U. of Oxford*
Panelist: **Jessica Vredenburg**, *Auckland U. of Technology*
Panelist: **Sandra A. Waddock**, *Boston College*

This PDW will go beyond recent academic research on how researchers in management studies can become more relevant for practice by providing academics with advice and hands-on development regarding how to create impact from academic work. We use the well-known 5W (+1H) approach to think through different forms of impact creation with different stakeholders. The PDW is structured as a workshop in two parts: in the first part, the panelists will present their approaches on how to engage with key stakeholder groups using storytelling, teaching, media, or public policy work. In the second part, registered participants will apply the learnings from the first part in group exercises, guided by the panelists. This way, participants in the PDW will take away some best practice learnings and ideas on how management knowledge can be and is translated for audiences beyond academia.

Everyone is welcome to attend the first part of the PDW (panel discussion). To prepare the skills lab with panellists in the second part of this PDW, please indicate your participation interest via email to tanja.ohlson.dphil@said.oxford.edu by July 15th. In your email, detail your answers to the following three questions in not more than 1 page: (i) Who are you as a scholar (i.e., university and career stage, and your research interest)? (ii) Which of the panellists would you like to work with, and why are you interested in the impact channel they will cover (Tim Pollock: storytelling in writing; Michael Smets: teaching; Jeannette Colyvas: social policy; Jessica Vredenburg: media and communication; Sandra Waddock: corporate responsibility)? iii) What are your expectations for this skills lab?

Panelist: **Anne L. Washington**, *New York U.*

Algorithms are increasingly common in the world. Research exists on the “math” behind algorithms (O’Neil, 2016). But less research looks at how algorithms are deployed in practice, and there is limited research on algorithmic phenomena from a qualitative perspective. In this PDW, we want to help build a community of scholars who are studying algorithmic phenomena from a qualitative perspective. To do so, we envision a PDW with two parts: a) presentations from 4 established scholars in the field (Luciana D’Adderio, Angela Aristidou, Anne Washington, and Vern Glaser) and b) an opportunity for participants to talk about the challenges and opportunities they are facing in their own research in roundtables.

Comparing Wellbeing-Building Strategies for Managing Street Level Bureaucrats Across Countries (CANCELLED)

Participant: **Yvonne Brunetto**, *Southern Cross U.*
Participant: **Adina Dudau**, *Adam Smith Business School, U. of Glasgow*
Participant: **Irene Georgescu**, *U. of Montpellier*
Participant: **Chiara Saccon**, *U. Ca' Foscari of Venice*
Participant: **Elisabetta Trinchero**, *CERGAS SDA Bocconi*
Participant: **Rona Beattie**, *Glasgow Caledonian U.*
Participant: **Alex Trembley**, *Valdosta State U.*
Participant: **Aglae Hernandez Grande**, -
Participant: **David M Herold**, *Georgia Institute of Technology*

In pre-pandemic years, Street Level Bureaucrats (SLBs) delivering health and social services faced continual increases in the demand for their services coupled with a growing normalization of work harassment and intensification, resulting in increasing levels of stress, burnout and turnover. During the COVID-19 pandemic, it was the healthcare, emergency and social services that provided communities with the last line of defence against the disease often working even longer hours under more constrained work conditions compared with pre-COVID-19 conditions. As countries emerged from the crisis (sic?? or not), some countries such as NZ, Australia and the UK experienced a strengthening of austerity measures including stand-downs as well as wage and hiring freezes, along with increasing perceptions of even high work harassment and intensity. Consequently, SLBs need organizational and personal strategies to protect them from stress-producing deductions in wellbeing. We argue that there is a small, but growing body of evidence demonstrating the positive impact of some personal and organizational strategies that can be utilized to address crisis fatigue amongst SLBs. Some are rooted within the discipline of Public Administration, whereas some are borrowed from the disciple of Positive Organizational Behaviour (POB) and other strategies have emerged from the disciple of Human Resource Management (HRM). Personal strategies include training to boost SLBs' psychological capacities such as Psychological Capital, (also called H.E.R.Os) (Luthans et al, 2008) to create HERO-INEs and boost Public Sector Motivation (PSM) (Brunetto et al, 2022); and organisational strategies - include the adoption of Common Good HRM (Aust et al 2020) to ensure an increased focus on management and organizational support policies and practices in line with new international standards, and principles and goals outlined in the UN (2016), ILO (2019), ISO (2021) and WHO (2016) policies.

Thought Experiments for Management Research: Best Practices and Opportunities for Implementation

Presenter: **Jose R. Beltran**, *Iowa State U.*
Presenter: **Ursula Martin**, *Doctoral Student at George Washington U. School of Business*
Presenter: **Herman Aguinis**, *George Washington U.*

Many scientific breakthroughs advancing theory in numerous scientific fields have been due to thought experiments. However, management scholars often overlook this valuable method, which has resulted in little use in management scholarship. By presenting hypothesized alternate explanations, extending extant theory to include new contexts, and providing counterexamples for prevailing theories, fields such as economics, public and international policy, physics, ethics, and others have utilized thought experiments to create novel and useful theoretical insights. This PDW aims to offer best-practice recommendations regarding how to design and implement thought experiments (e.g., theory affirming or theory disconfirming of early or late stages of theory development). Our recommendations are based on a review of 192 substantive and methodological sources. The PDW addresses issues associated with the use of thought experiment methodology as well as provides best-practice recommendations that will increase its use going forward. The recommendations go over each step of the process, from deciding whether to conduct a thought experiment to reporting results as well as having participants develop relevant thought experiments pertinent to their own research.

Panelist: **Samuel MacAulay**, *U. of Technology, Sydney*

Strategic management scholars not part of major schools in the United States, Canada, and other developed countries face several barriers to breaking the glass ceiling and communicating their research in leading (strategic) management journals. This PDW intends to help scholars outside leading schools improve their works by providing helpful guidance to succeed during the publication process. With the support of prominent scholars in editorial positions and with a proven track of publications in leading journals, the PDW is divided into three sections. The first-panel joins editors with vast experience with international scholars to discuss the main problems faced by researchers from disenfranchised settings. The second panel will count on global scholars with a proven record of publications and accumulated experience advising scholars for the international job market. The last PDW section will be restricted to registered participants with a pre-selected working paper. Detailed comments and suggestions from leading scholars in the field will be provided.

The PDW consists of three highly interactive sessions, which complement each other: Editor's Panel, Global Scholars Panel, and Paper Development Session (only for participants with submitted manuscripts): No pre-registration is needed for the Editor's Panel and the Global Scholar´s Panel. To register in the Paper Development Session, please email SandroC2@insper.edu.br and edgar.ramirez@tec.mx with a completed and edited manuscript you plan to submit to a peer-reviewed research journal, before June 20, 2023. The results of the PDW selection process will be communicated via email to the selected scholars by June 30, 2023.

Strategic Management Teaching Clinic: Creating Learning Opportunities to Address Global Challenges

Organizer: **Marlo Raveendran**, *U. of California, Riverside*
Organizer: **Craig Armstrong**, *U. of Alabama*
Speaker: **Sylvie Albert**, *U. of Winnipeg*
Speaker: **John Burr**, *Purdue U., West Lafayette*

Do you wish you could create and teach courses in strategic management that address some of the biggest demands for knowledge and skills we face today in a global society? Teaching students how to work alongside seasoned industry executives to solve unstructured and occasionally “wicked” strategic-level problems is an ambitious teaching agenda. Teaching students how to frame, prioritize, and engage stakeholders to deal with the complex challenges of global sustainability is another ambitious goal. Both of these visions for teaching strategic management deal with teaching high-level skills and frameworks that involve multiple, sometimes competing, perspectives and inputs of expertise. How can a strategic management instructor hope to establish and fulfill ambitious teaching goals for teaching critical knowledge and skills these challenges require? This Teaching Clinic PDW features two expert mentors who will describe their highly experiential and developmental approaches to teaching strategic management in crucial, high-level domains of firm-level challenges and global sustainability. The specific topics include (1) developing and maintaining a professional, client-funded strategic management consulting program and (2) developing and implementing a program of study for strategic management on the topic of global sustainability.

Discussant: **Leandro S. Pongeluppe**, *The Wharton School, U. of Pennsylvania*

This workshop aims to explore research frontiers in the increasingly active area of nonmarket strategy. Through a combination of panel presentations by distinguished scholars and interactive roundtable discussions with workshop participants, we seek to identify how to advance research and how to address some shortcomings in existing approaches – both empirical and theoretical – in nonmarket strategy research. Roundtables will provide a venue for participants to receive feedback on work in progress from leading scholars in the field. The proposed workshop is likely to be of interest to researchers working on topics such as corporate social responsibility, political strategy, (social) innovation, stakeholder governance, and sustainability, providing an informed perspective on cutting-edge research on these topics. This is a continuation of the AOM 2016, 2017, 2019, 2021, and 2022 PDWs under the same name, sponsored by STR, IM, ONE, PNP, and SIM divisions.

This is a two-part PDW, consisting of a panel discussion and a roundtable session. During the roundtable session, participants will receive feedback on their work in a small group discussion, facilitated by a leading scholar in the field of nonmarket strategy. Participants will submit a 5-page research proposal or summary of work in progress that will be shared with the roundtable leader and participants. If you would like to participate in a roundtable, you must pre-register at this link: https://hbs.qualtrics.com/jfe/form/SV_4TRDppN2NX6lo1g. Those wishing to attend only the panel are also encouraged but not required to pre-register. Please pre-register by July 14, 2023. The roundtable sessions can accommodate approximately 40 participants; if you are selected, you will receive a confirmation prior to the start of the conference.

TIM Junior Faculty Consortium 2023

Organizer: **Colleen Cunningham**, *U. of Utah, David Eccles School of Business*
Organizer: **Maria Roche**, *Harvard Business School*
Participant: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*
Participant: **Paola Criscuolo**, *Imperial College London*
Participant: **Victor M. Bennett**, *U. of Utah, David Eccles School of Business*
Participant: **Jeffrey Furman**, *Boston U.*
Participant: **Hong Luo**, *HBS*
Participant: **Bruno Cassiman**, *KU Leuven*

The Consortium will provide junior members of faculty in Technology and Innovation Management with insights on how to thrive in the increasingly challenging academic environment. It focuses on strategies for building a career and increasing impact as a scholar and teacher. It will feature outstanding senior faculty members with proven research and teaching records, who will lead several interactive discussions about how to balance the competing pressures of teaching, research, and service. They will provide first-hand and detailed advice about how to build a successful academic career in a range of different institutional settings. Participants will also learn about strategies for publishing in top journals and engage with editors of prestigious journals in the field. Most importantly, participants will receive feedback on their "research trajectory" from their peers and senior faculty. The Consortium will also provide participants with opportunities for networking with new peers and senior colleagues with interests in technology and innovation. Note: participation in the consortium is limited to admitted applicants ONLY. Primary sponsor: TIM

To apply, participants will have to complete an online registration (Google Form) and email their curriculum vitae to colleen.cunningham@eccles.utah.edu and mroche@hbs.edu using the header TIM Junior Faculty Consortium 2023. Our deadline is June 15, 2023. However, we encourage participants to apply early. We will take applications on a rolling basis until enrollment is full. Please note that we require participants to attend the entire Consortium. Accepted participants will be required to submit a write-up regarding their research trajectory with tenure requirements at their respective universities for the Research Trajectory Exercise by July 10, 2023.

Open innovation (OI) is a management concept that describes the purposive management of knowledge flows across organizational boundaries. It has attracted significant attention from management researchers and has been studied using a variety of theoretical and methodological perspectives. At the same time, researchers in a growing number of disciplines and divisions are attracted to this domain. While our understanding of OI is increasing, many challenges in researching OI remain and new ones emerge. Being the eighth consecutive PDW on this topic, this PDW gathers a number of active scholars conducting research related to OI. These scholars will share and build on their experiences in researching OI to identify some key challenges—and associated opportunities—to help advance research in this domain. By building on recently identified OI research categories, the facilitators will introduce and discuss these challenges, which cover a broad range of levels of analysis, various theoretical perspectives, and methodological approaches. Following this, they will moderate roundtable discussions with interested participants. Pre-registration (by submitting a short text with research interests) is recommended for the roundtables, which have pre-defined topics, but attendance is open as long as space permits.

Please register by July 31st 2023. Register through this link: https://forms.gle/5PHAuMS7bXB2Goce9

Delivering Economic and Social Values Within Mega-Projects: A Nudge for African Workforce

Participant: **Oyegoke Teslim Bukoye**, *U. of Bath*
Participant: **Tomola M. Obamuyi**, *Federal U. of Technology, Akure*
Participant: **Aniekan Essien**, *U. of Bristol Business School*
Participant: **Adeyemi Oluwaseun Adepoju**, *The Federal U. of Technology, Akure*
Participant: **Kehinde Temitope Alade**, *The Federal U. of Technology, Akure*

Projects are becoming more complex as a result of the wider economic, social and political unrests, i.e. grand challenges, they face. Thus, the need to seek ways to maximize the value of projects is the focus of most project managers and policy makers. Over the last decade or so, nudges have now been adopted more widely, across a variety of areas such as encouraging healthy eating, stimulating pension savings, introducing green nudges to tackle climate change and public policy. To buttress its importance, governments such as the UK have established 'Behavioural Insights Team' (BIT or Nudge Unit) to provide innovative ways of encouraging, enabling, and supporting people to make better choices within public policy initiatives, which is adaptable to managing mega-projects. This study is conducted using a multi-method involving semi-structured interviews with project managers and project team (i.e. workforce), rich secondary dataset that includes company and government reports, as well as project presentations. We selected three mega-projects, namely: Lagos City Rail Project; Eko Atlantic City project, and Dangote Petroleum Refinery project worth about $26 billion. Our empirical findings would present the nudges that motivates the workforce (or project team) to deliver economic and social values within an African context. Thus, it bridges the gap between behavioral economics, project management and human-related studies. In so doing, we intend to stimulate new research directions for managing mega-projects through the use of relevant nudges to deliver valuable outcomes.

Sequence Analysis: Techniques and Practical Applications

Organizer: **Katja Dlouhy**, *U. of Mannheim*
Organizer: **Torsten Biemann**, *U. of Mannheim*

This is an introductory workshop on sequence analysis, specifically on optimal matching analysis. Optimal matching analysis can be used to assess similarity of sequence data, and to find patterns in longitudinal nominal data. The workshop is targeted at researchers and doctoral students who want to get started with this method. The objective of the workshop is to encourage and enable participants to apply sequence analysis in their own research. After introducing fundamentals of the method, we will provide examples of its use in empirical research. Attendees will then develop practical, hands-on skills for using optimal matching analysis by analyzing a sample data set. We will discuss important practical issues and introduce some advanced applications, giving enough room for discussion and questions. Participants will be provided with a download link to the free software R, sample data, and some syntax for R that can serve as a blueprint for their own future analyses.

The OMT Junior Faculty Consortium provides a forum for junior scholars interested in organization and management theory to get practical advice and build relationships that will help them prosper in their academic careers. It includes feedback sessions, panels, and facilitated discussions focused on three key topics: 1) developing research for publication with the help of seasoned scholars, 2) strategies for impact and growth as a researcher and teacher, and 3) navigating the pre-tenure years of building a successful faculty career in diverse institutional settings.

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the annual meeting of the Academy of Management (AoM) in Boston, MA, USA. This event will be held from 8:30 AM to 4:30 PM on Friday, August 4th, 2023. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty. Doctoral students are asked to give a short (15 minute) presentation about their research proposal to a panel of senior and junior faculty who then provide feedback and guidance on each proposal. Subsequently, the junior faculty will have an opportunity to present their research programs describing how they are extending their dissertation research and/or starting new research streams. The doctoral students are expected to ask questions and learn about building a research identity. In addition to the research incubator session, several panel sessions will further elaborate on publishing, the development of research streams, and the job market. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

The goal of this PDW is to conduct a doctoral student consortium (DSC) to connect, inspire, and inform doctoral students about elements leading to success in their scholarship, teaching, service, and lives as academics, especially in the area of Social Issues in Management (SIM). We anticipate hosting a fireside chat on Thursday evening followed by a dinner sponsored by the SIM division, August 3rd and a daylong event on Friday, August 4th, 2023. The DSC is designed to be interactive, with ample time for students to ask questions of the panelists and interact with each other, building the SIM community. SIM-affiliated scholars will share their knowledge, participate in panel discussions, and engage with students. Participating students will develop a toolkit for successfully finishing their doctoral programs and entering their professional career.

ENT Early Career Development Consortium

Organizer: **Trenton A. Williams**, *BYU Marriott School of Business*
Organizer: **Magdalena Cholakova**, *Erasmus U. Rotterdam*

The Early Career Development Consortium (ECDC) is specifically designed to meet the needs of those scholars who are early in their career such as tenure-track assistant professors (pre-tenure packet submission). The format for the consortium is intimate and interactive (small group discussions, personalized Q&A, etc.), where we pair small groups of attendees with mentors. Leading entrepreneurship scholars (serving as mentors) will interact with participants, guiding the discussion that will include practical advice to help early-stage academics manage the pre-tenure phase of their career. The goal of this format is also to allow participants to ask specific questions, meet with and interact with individuals in their similar situation, and develop relationships with other participants that (we hope) will continue to be beneficial as they move through their career. Specific topics include: building a successful research pipeline, navigating the publication process, and developing a reputation within a given field.

Student Entrepreneurship: Methodological Challenges and Research Opportunities

Distinguished Speaker: **Philippe Mustar**, *Mines Paris - PSL U.*
Session Chair: **Tommaso Minola**, *U. of Bergamo*
Organizer: **Davide Hahn**, *U. of Bergamo*
Discussant: **Mirjam Knockaert**, *Ghent U.*
Discussant: **Philipp Sieger**, *U. of Bern*
Discussant: **Vangelis Souitaris**, *Bayes business school and U. of St. Gallen*
Discussant: **Elizabeth Lyons**, *UC San Diego*

Student entrepreneurship, defined as new venture creation by university students and recent graduates has recently attracted growing attention by entrepreneurship scholars. This setting can offer valuable contributions to several debates permeating the entrepreneurship community, such as the interplay between agency and context in entrepreneurship and the decision-making of nascent entrepreneurs. Yet, there are several conceptual as well as methodological challenges that need to be addressed in order to tap the full potential of student entrepreneurship research for the broader entrepreneurship community. For example, we need more theoretical development about different manifestations of student entrepreneurship and about the processes leading to student entrepreneurship and its impact. Additionally, the lack of comprehensive data collections of the entrepreneurial activities undertaken by university students and recent graduates jeopardizes our understanding of entrepreneurial ecosystems and of the role of context as entrepreneurship enabler. Departing from these premises, the goal of this PDW is to host a set of reputable keynotes that will illustrate the main conceptual and methodological challenges that scholars need to be aware of in order to study student entrepreneurship, as well as the opportunities that research on student entrepreneurship can offer to the entrepreneurship and the broader management community. The PDW will also host a very interactive session, in which known scholars of the field will mentor authors interested to develop a paper on student entrepreneurship.

The PDW consists of two activities: (1) Presentation by esteemed panelists, which is open to all with NO registration needed (2) Round table discussion and individualized mentorship by an experienced scholar on a paper on student entrepreneurship. The second activity requires registration. Please send an extended abstract (max 3,000 words) and your CV by the 1st July to davide.hahn@unibg.it. Since we are able to accept a small group of participants for the round table, we encourage early submission

Presenter: **Marla White**, *Virginia Tech*

This PDW will launch the Third Edition of the Global Human Resource Management Casebook (which will be available for sale at the Annual Meeting) and will share the dominant themes in the Casebook and their corresponding teaching methodologies and resources with the wider HR community. The Casebook, which contains contributions from 31 countries, will be in print form, while the corresponding teaching notes with lesson plans and answers to the case questions, will be made available on-line. The Casebook is not only designed as a teaching aid for the undergraduate and graduate levels, but also as a practical tool (and source of inspiration) for HR executives. The objectives of our PDW launch for the Casebook will go beyond strengthening the Ambassador network and its projects and promoting the work of our Ambassadors to also developing the wider membership's teaching capability through the cases and the available shared resources.

The purpose of this professional development workshop (PDW) is to offer AOM members the opportunity to learn innovative and experiential approaches to teaching topics in human resources. In this highly interactive "potluck" session, a diverse panel of faculty from different universities will share experiential approaches to teaching human resources for the audience of all levels (undergraduate, graduates, professional students). Attendees will have the opportunity to choose a topic of their interests (e.g., compensation, diversity, staffing, etc.) and to learn about innovative experiential teaching methods in round tables each led by one or two members of the panel. This PDW will provide the audience opportunities to expand their repertoire of experiential exercises that they can implement immediately into their classrooms.

Worker-Centered Agile Transformation: Powering a Hybrid State of Work Through the Project Manager

Facilitator: **Carol McGuire**, *Miami U.*

Agile is the latest in a long line of evolutionary mindsets and methods promising to 'fix' our way of work. However, organizations stumble in their adoption despite the strong frameworks and trusted consulting firms they rely on to successfully transform. Both scholarly literature and practitioner experience agree, it's in part due to the neglect of the 'worker at the center' which creates the drag on adoption. Less is discussed about the compounding factor in transformation efforts - the lack of recognition that firms must exist in multiple ways of work. With few exceptions, companies find themselves continuously moving between agile and traditional ways of work, creating a hybrid, rather than an agile state of work. This workshop explores a prominent area of business life affected by the hybrid state of work – projects and project managers. We explore how project work transforms in the hybrid state and how those in traditional project manager roles are essential to success. We'll introduce a model which gives project managers a process, tool, and coaching construct to navigate the complexity of hybrid work. Workshop attendees will benefit from a highly interactive exchange of ideas and practical experiences led by a subject matter expert representing organizational design consulting and technology management. At the conclusion, attendees will receive a copy of the Hybrid Project Incubator model along with five model - based tactics they can use in practice or to further their own research.

This professional development workshop is designed to assist authors in preparing their management education and learning manuscripts for publication. The submitted manuscript can be in any stage of completion, but must have sufficient content for review and comment. Management education and learning manuscripts submitted, but not accepted in the 2023 Academy of Management's Management Education and Development Division conference program, may be submitted since the manuscript title will not appear in the program. Manuscripts will be grouped with similar management education and learning manuscripts with each author expected to review the manuscripts prior to the workshop. A journal editor or experienced researcher will review each manuscript, provide feedback to participants and will facilitate a discussion of all participants' manuscripts at their assigned table. This workshop is co-sponsored by the Organization Management Journal, Management Learning, the Journal of Management Education, and the Academy of Management Learning & Education.

To participate in the 2023 Management Education and Learning Writers Workshop, please preregister and submit your management education and/or learning manuscript by July 1, 2023 to mgmtedlearnwritersworkshop@gmail.com For additional Information, please contact Kathleen Barnes at mgmtedlearnwritersworkshop@gmail.com.

Organizer: **Kevin W. Rockmann**, *George Mason U.*
Organizer: **Sherry M. B. Thatcher**, *U. of Tennessee, Knoxville*
Organizer: **Geoffrey T. Wood**, *U. of Western Ontario*

This interactive workshop will involve a group of facilitators who have experience as Editors-in-Chief of major journals in the field of management and organization studies, and seeks to encourage participation from others with current or recent editorial leadership team experience at the Editor-in-Chief or Associate Editor level. The workshop has three aims. First, to develop a common understanding of the typical problems and challenges faced by editorial teams across the field, and begin to explore collaborative strategies to address them. Second, to explore mechanisms for nurturing and developing editorial expertise through sharing our experiences, tools and techniques. Third, to explore the potential for developing a continuing network for editors in the field to continue our learning and optimize our support for the field. We invite and encourage current Editors-in-Chief and Associate Editors in management and organization studies journals, and those that have demitted in the last two years, to join us in this workshop.

Pre-registration is not required. However, if you can, let us know your intention to attend and a little about your role as an Editor-in-Chief or Associate Editor by emailing Paul Hibbert (ph24@st-andrews.ac.uk) before the workshop.

Managing Social Issues: Using Practice to Create and Transfer New Knowledge

Organizer: **Fahd Jamil**, *U. of Warwick*
Organizer: **Stephen John Lyon**, -
Organizer: **Pietro G. Micheli**, *U. of Warwick*

The Agenda for Sustainable Development, adopted by the United Nations in 2015, lays forth a radical plan to address the grand challenges that have endangered humanity's well-being. Since then, scholars have enthusiastically heeded the call and have notably produced new theories to address grand challenges. However, to be more effective in managing societal grand challenges, involving diverse stakeholders is crucial. This PDW will emphasize the necessity of galvanizing large-scale collaborative efforts among teams of academics and practitioners (e.g., social workers). Given that social workers typically have first-hand experience with the sources and impacts of grand challenges, they may offer practical insights that can facilitate the process of designing and asking the "right questions" from the right groups of people. It is expected that the presentations by a panel of academics and practitioners, who will concentrate on leveraging mutually beneficial collaborations, reinforced by round table discussions among the presenters and participants, will improve understanding in areas like (1) how the network of heterogeneous actors (academics and practitioners) can develop, contextualize, and enact shared sense of purpose and identities to address grand challenges, (2) explore agreements where academics and practitioners can work together to produce new knowledge, and (3) how the new knowledge can be effectively disseminated across multiple settings (e.g., classrooms, academic writings, conferences etc.) promoting quality in the fields of management research and education. The information gleaned from this PDW will be aggregated and made available through MED, SIM, and other supporting channels.

The One Best Way to Boil an Egg, Following Frederick W. Taylor's Methodology

Presenter: **James M. Wilson**, *U. of Glasgow*

F.W. Taylor followed a consistent research methodology in his studies of management, and those approaches may remain relevant for modern research questions. Teaching research methods may benefit from an example, such as the issues of how to most effectively boil an egg, that students may find readily comprehensible and engaging in their seeming simplicity, yet allow a comprehensive perspective on the design and conduct of a research program. In this session we consider a recent article describing the best approach for boiling an egg, then fit that somewhat loosely defined process within a more rigorously defined research methodology that, coincidentally, matches well with F.W. Taylor's approach.

Panelist: **Hettie Richardson**, *Texas Christian U.*
Panelist: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*
Panelist: **Michael C. Withers**, *Texas A&M U.*

This PDW has a long-standing tradition as a crowd favorite. It is a great opportunity to ask experts any questions you might have about quantitative research methods, such as longitudinal/panel data analyses, effect size, probability, linear/nonlinear modeling, moderation, mediation, meta-analysis, sampling, baseline models, factor analysis, multilevel modeling, endogeneity, latent variables, big data/artificial intelligence, Bayesian analysis, and user questions related to statistical programs such as R, STATA, SPSS, SAS, and Mplus. No preregistration is required and the format is very laid back. Attendees are encouraged to come and go as they please to have their questions answered by quantitative method experts.

AOM 2023 would mark the 10th Anniversary of the creation of this PDW. Across that history, the PDW has been guided by the recognition that the dissertation stage is a critical time in the development of a qualitative scholar's research capabilities and their scholarly identity. This is especially true because qualitative research has no "boilerplate" (Pratt, 2009). Doctoral students who have chosen to use or incorporate qualitative methods into their dissertations require tailored developmental attention. In this PDW, students at all phases of the dissertation process—proposal, data collection, analysis, and defense—will receive advice and personalized mentorship while developing relationships with more senior scholars. Our objective is to connect students with faculty facilitators to receive support on their research, as well as career advice, as they approach the next step in their professional journey. Faculty facilitators are drawn from the vibrant community of qualitative management scholars. Facilitators have published qualitative research in top-tier journals and have experience managing careers as qualitative researchers. Students will be matched with facilitators based on qualitative methodology, research interest, and/or level of analysis. In addition to practical guidance on research methods, students will also have the opportunity to meet with qualitative scholars to expand their networks.

This session is open to everyone but receiving personalized feedback from facilitators requires submitting an application.

Agent-Based Modeling in Organizational Research: Opportunities and Challenges

Organizer: **Mai P. Trinh**, *Arizona State U.*
Organizer: **Sophia Rose Thomas**, *Texas Tech U.*
Panelist: **Jon Atwell**, *Stanford Graduate School of Business*
Panelist: **Corinne A. Coen**, *Case Western Reserve U.*
Panelist: **Michael W. Macy**, *Cornell U.*
Panelist: **Bill Rand**, *North Carolina State U.*
Panelist: **Mai P. Trinh**, *Arizona State U.*

Agent-based modeling (ABM) has gained popularity in the social sciences in the last two decades thanks to its ability to model heterogeneous, interdependent agents in complex systems and its versatility in complementing other research methods. However, in organizational research, ABM still faces many skeptics in the research, review, and publication processes. One reason for this slow acceptance and adoption in our field, relative to other fields of social sciences, is the lack of methods training available to interested researchers as well as journal editors and reviewers. In this PDW, we invite a panel of experts to address the strengths and weaknesses of ABM as well as opportunities and challenges in conducting and publishing ABM research. We will also assign expert panelists and interested participants into small groups to discuss in more detail how to start an ABM project and how ABM could be applied to participants' research agenda. Workshop participants will leave with a deeper understanding of ABM as a research method, opportunities to network with and seek advice from ABM experts, and helpful feedback to use ABM to answer their own research questions. Part 1 of the PDW (panel discussion and Q&A) is open to all AOM attendees. Part 2 (small round table discussions) requires pre-registration and a one-page write-up from participants.

To attend part 2 of the PDW and receive personal feedback from the panelists, please email a one-page abstract of your idea to Sophia Thomas (srthoml1@asu.edu) by July 1, 2023.

Who I Am and What Am I Doing? How to Craft and Communicate a Compelling Academic Identity Narrative

Organizer: **Fannie Couture**, *HEC Montreal*
Organizer: **Krista Pettit**, *Ivey Business School*
Distinguished Speaker: **Tim G. Pollock**, *U. of Tennessee, Knoxville*
Panelist: **Inger G. Stensaker**, *NHH Norwegian School of Economics*
Panelist: **Madeleine Stefanie Rauch**, *Stanford U.*
Panelist: **Ajnesh Prasad**, *CMS*
Panelist: **Katharina Dittrich**, *Warwick Business School*
Panelist: **Keimei Sugiyama**, *U. of wisconsin milwaukee*
Panelist: **Steve Maguire**, *U. of Sydney Business School*
Panelist: **Kenneth Goh**, *Singapore Management U.*
Organizer: **Sophie Elizabeth Jané**, *Umeå School of Business, Economics, and Statistics*
Organizer: **Renate Kratochvil**, *BI Norwegian Business School*

Inspired by last year's success (and award), this Professional Development Workshop (PDW) will focus on providing tangible advice to doctoral students and early career scholars so they can successfully craft their academic identity/ narrative and communicating it to various audiences. It is tailored to PhD students and early career scholars (pre-tenure) in the Strategizing Activities and Practices (SAP) Interest Group and is designed to be part of the SAP Doctoral & Early Career Program 2023. However, the topic can be of interest to scholars from a wide range of interest groups. Early career academics face many 'transitions' – from student to professor, from pre to post tenure, from industry to academia, from solo authoring a dissertation to seeking co-authors. These transitions are not without their load of challenges and uncertainties. Crafting an identity narrative to share with others is a central strategy to overcome these hurdles (Ibarra & Lineback, 2005) yet it is not without challenges of its own. For instance, how can early careers strategically weave their research, teaching, and service work into a coherent and compelling identity narrative? How can they work through the inherent tensions between identity maintenance and change (Sugiyama, Ladge, & Dokko, 2022)? How do they create coherence and continuity when by nature transitions are discontinuous (see Linde, 1993)? In this PDW, a panel of international organizational scholars with varied experience with career transitions and academic narrative/identity will discuss and provide personalized feedback on how early-career scholars can craft an identity narrative that is authentic and appealing and how they can leverage their crafted narrative/identity to facilitate career transitions. This PDW is "hands-on"; participants will leave with tangible advice on how they can craft their academic identity to facilitate their academic journey.

The first part of the PDW (keynote and panel discussion) is open. The second part (speed dating and roundtable) requires registration. First come first serve. Please register using this link.

Creating Nature-Positive Value Through Human-Nature Stakeholder Relationships

Organizer: **Sybille Sachs**, *U. of Applied Sciences in Business Administration Zurich*
Organizer: **Johanna Kujala**, *Tampere U.*
Organizer: **Anna Heikkinen**, *Tampere U.*
Organizer: **Silvan Oberholzer**, *HWZ U. of Applied Sciences in Business Administration Zurich*
Panelist: **José-Carlos Garcia-Rosell**, *U. of Lapland*
Panelist: **Irene Henriques**, *York U.*
Panelist: **Robert A. Phillips**, *Schulich School of Business, York U.*
Panelist: **Nicholas Poggioli**, *Appalachian State U.*
Panelist: **Mark Starik**, *U. of Wisconsin System*
Panelist: **Judith Louise Walls**, *HSG U. of St. Gallen*

Despite the increasing interest on stakeholder theory in corporate sustainability research (Hörisch et al., 2014; Post et al., 2002; Schaltegger et al., 2019), the understanding of nonhuman nature as a stakeholder remains underdeveloped. The integration of nature into stakeholder theory and its stakeholder status have attracted increasing interest over the last decades (e.g., Clifton & Amran, 2011; Driscoll & Starik, 2004; Haigh & Griffiths, 2009; Starik, 1995). While research has advanced the conceptualization of nonhumans as particularized stakeholders (Kortetmäki et al., 2022; Tallberg et al., 2022; Waddock, 2011), we know less about how firms approach and interact with nonhuman stakeholders to create value. In the face of current life-threatening sustainability challenges, such as climate change and biodiversity loss, understanding human-nonhuman nature stakeholder relationships may provide novel insights into how firms can address these challenges. Moreover, given the current state of planetary health, we need new approaches to value creation to effectively tackle the degradation of the natural environment (de Figueiredo & Marquesan, 2022; Ergene et al., 2018). Therefore, this research PDW aims to engage organization and management scholars to discuss how nature-positive value creation can result from human-nonhuman nature stakeholder relationships; topics which are of interest to a growing number of SIM and ONE scholars. Participants will have the opportunity to contribute to novel approaches, going beyond human-focused theorizing, to how firms can make sense of human-nonhuman nature stakeholder relationships and underlying mechanisms for value creation that benefits nature and society.

AI as a General Purpose Technology—Challenges and Opportunities for Management Research

Speaker: **Florenta Teodoridis**, *California Southern U.*
Speaker: **Neil Thompson**, *Massachusetts Institute of Technology*
Speaker: **Robert Channing Seamans**, *NYU Stern*
Organizer: **Nur Ahmed**, *MIT Sloan School of Management*

General purpose technologies (GPTs) such as AI and robots have received significant attention in innovation literature due to their ability to accelerate firm-level innovation. However, the nature of these technologies and how to evaluate them in order for firms to appropriate the benefits of their investment is still not well understood. Additionally, the challenges and opportunities in the diffusion of GPTs, particularly in regard to augmenting innovation also lack empirical evidence. This workshop aims to address these gaps by bringing together innovation and strategy scholars to discuss how to evaluate GPTs, potential bottlenecks that inhibit the diffusion of AI and robots, and potential benefits. The workshop will introduce new data and methods that can be widely used by other innovation scholars. By highlighting the challenges and opportunities in AI and robots for enabling innovation, this workshop aims to broaden the scope of innovation research for management scholars.

A Google form link will be shared with the participants for their application. This data will be used to match the facilitator of the roundtable session. Here is the Google form: https://forms.gle/pAcqghoRkNf7Znge9

Once a research project has been completed, one of the most prestigious forms of publication is a journal paper. There is not only increasing pressure to publish, but to publish in 'top tier' journals. There is vast and comprehensive information about the range and scope of refereed research journals in every field. Through this Professional Development Workshop, the HR Division intends to provide insight to – and engage with – non-US scholars who plan to publish in top tier US journals in the HR field.

Recent economic, environmental, social, and political turbulences in the world have led to an increase in risks in global businesses. Companies are now forced to improve innovation management as well as the transparency of their business processes to meet the new global challenges when it comes to improving their societal impact. On top of that, the pandemic has developed the generalization of home office, a flexibility that is often accompanied by deteriorated working conditions, difficulty of inclusion, and increasing social digital gap. This not only demands a lot from employees, but also pushes managers to their limits. Therefore, the employee of the future must bring different skills to meet these challenges. For this reason, we should not only focus on the "21st Century Competences" but rather develop a vision of the leader of the future who successfully navigates companies through this new age of stack crisis. As management educators, we have an important responsibility in this matter. In order to increase impact from the field of Management Education Development, we need to actively listen to those colleagues from diverse geographical regions. We need to pause and reflect upon experiences from those all around the world, who have solved problems differently. We also need to help our students to learn better by using innovative teaching methods. The aim of this PDW is to share international know-how in management education teaching, research and practice, and enable educators to develop and inculcate the capability to address the challenges in management as stated earlier.

Building on the Positive: Raise Awareness For your Personal and Professional Resources

Presenter: **Sonja Kugler**, *TUM Institute for LifeLong Learning, Technical U. of Munich*
Presenter: **Irmgard Mausz**, *ISM International School of Management*
Presenter: **Karolina Wenefrieda Nieberle**, *Durham U.*
Facilitator: **Dieter Frey**, *Ludwig Maximilian U. of Munich (LMU)*

Null results, rejected articles, publication pressure or funding reductions - all of those are examples of challenging circumstances in the daily life of scientists. Moreover, when the pandemic hit work conditions have changed and challenged academia even further. From short term consequences, like not being able to hold the time schedule for research projects to long term consequences, like the “new normal” of hybrid work and teaching as well as remote teamwork academics’ resources are being drained. However, successfully coping with all those adversities is essential for a successful (and healthy) career in academia. Following this year’s theme of putting the worker front and center, the PDW aims to putting researchers into the spotlight in developing academics’ positive psychological state and their abilities to overcome challenging circumstances in two ways. First, we raise self-awareness to one’s professional development including successful coping with setbacks. Second, we target the development of resilience based on research in the field of positive psychology. This considers individual reflection of strategies and resources as well as social support via peers. Additionally, through a highly interactive and reflective workshop design, we contribute to this year's theme by reflecting on our own personal and professional resources and learning from the experiences and exchange with others.

We have three objectives with this Paper Development Workshop on Essay writing in management. Essays intertwine personal narratives and experiences and incisive arguments and opinions, distinctly from traditional theory or empirical pieces. First we want to briefly showcase the emerging significance of the essay as a genre of management scholarship, sharing the example of new essay categories in various outlets including the Journal of Management Studies, Organization Studies, Academy of Management Learning Education and other. Second, through the insights of scholars who have successfully written essays, we explore the ways in which this format can lead to useful contributions. We will explore how essays can be developed and how we can continue to strengthen their legitimacy as a scholarly contribution. In the third part of the workshop, senior scholars that have edited or are editing for those three outlets (Journal of Management Studies, Organization Studies, Academy of Management Learning Education) will work with participants to help them learn about the objectives, conventions and potential of essay writing as a distinct form of academic output, on the basis of submitted pieces. As such this PDW seeks to provide a structured opportunity for participants to familiarize themselves with this genre, build an understanding of its fundamentals, and develop some ideas for their own potential essays.

Understanding and Mitigating the Impacts of Social Identity Ascription on Talent Development

Participant: **Gelaye Debebe**, *George Washington U.*
Participant: **Diana Bilimoria**, *Case Western Reserve U.*
Participant: **Susan Vinnicombe**, *Cranfield U.*
Participant: **Deirdre Anderson**, *Cranfield School of Management*

Organizations frequently attribute the lack of diversity in the managerial and leadership ranks to the dearth of talented women and members of minoritized groups in the talent pipeline. This rationalization has been largely discredited but, it points to a fundamental problem: social identity ascription (SIA) processes in the schooling experiences of low-income people generally and especially members of minoritized groups produce upstream loss of talent which contributes to a miniaturized talent pool. To understand the glacial pace of progress in promoting equity in career outcomes for women and minoritized groups, we must not only look at SIA processes within workplaces, but also within the socioeconomic sphere and schools. Research suggests that beginning in childhood and continuing in the adult years, individuals from low-income and minoritized groups are denied access to learning opportunities leading to non-ascribed paths. This results in successive elimination of these groups from talent development (TD) pipelines leading to non-ascribed occupations and roles. This PDW will explore and generate discussion about how SIA processes operate in schools and workplaces, what contributes to learners' succumbing to ascribed talent trajectories, what contributes to learners' construction authentic talent trajectories and strategies for mitigating SIA to facilitate TD among women and minoritized workers.

Shedding Light on the "Invisible Minority": The Status of Research on Foreign-Born Workers in the US

Session Chair: **Dayo Akinlade**, *U. of Wisconsin*
Session Chair: **Jason R. Lambert**, *Texas Woman's U.*

Foreign-born workers are a growing reality in today's organizations, yet research on this identity group remains very much in a nascent state. The dearth of research on this topic undermines a comprehensive understanding of the unique experiences of foreign-born workers in the workplace, underscoring the urgent calls in the diversity literature for more research on this topic. The purpose of this proposed Professional Development Workshop (PDW) is to help generate interest and a more active research agenda among diversity scholars that include the experiences of foreign-born workers. The PDW will offer a venue for diversity scholars to discuss the state of research on foreign-born workers, gaps in the literature, and opportunities for future research. Furthermore, the PDW will provide opportunities for attendees to network and develop potential collaborations related to foreign-born workers.

Participants are expected to submit a one-page abstract before the PDW (by May 15th). Only participants that submit a proposal will be invited to attend the PDW session. Participants should complete the Google Form below and upload a one-page abstract. The Google Form also contains a sample one-page abstract. https://docs.google.com/forms/d/e/1FAIpQLSf0yJzW4KHo7fOIqOBc4hsTQT1xS4cw18CMPGCutFpVu31otA/viewform?usp=sf_link.

Going Beyond the D and Focusing on the E and I for Employees in Organizations

Organizer: **Stacey Morin**, *Marymount U.*
Organizer: **Jennifer Robin Bishop**, *Impact of Gender Diversity on work Performance at Work place*
Panelist: **Jennifer Robin Bishop**, *Impact of Gender Diversity on work Performance at Work place*
Panelist: **Stacey Morin**, *Marymount U.*
Facilitator: **Jennifer Robin Bishop**, *Impact of Gender Diversity on work Performance at Work place*
Facilitator: **Stacey Morin**, *Marymount U.*

The professional Development workshop (PDW) illustrates how Corporations need to go beyond the D in diversity, and hyper focus on the E in equity, and I for inclusion, to put the worker front and center based on the alignment of Critical theory. Diversity is the range of human differences that encompasses national origin, language, race, color, disability, ethnicity, gender, age, religion, sexual orientation, gender identity, socioeconomic status, and veteran status. Equity is fair practices and policies acknowledging structural inequalities. Inclusion is where all employees feel a sense of belonging and respected. A diverse workplace is the acceptance and inclusion of all employees of different backgrounds. Obstacles in the way of the E and I need to be addressed if organizations truly want to put the worker front and center. This PDW will examine how scholars and senior leadership will acknowledge inequity and exclusive behavior in their organization bringing the awareness of the need to focus on the E and I.

Addressing Entrepreneurship's Biggest Research and Learning Challenges Through Game Mechanisms

Organizer: **Craig Armstrong**, *U. of Alabama*
Organizer: **Phillip H. Kim**, *Babson College*
Facilitator: **Gregoire Croidieu**, *EMLYON Business School*
Facilitator: **Eliana Crosina**, *Babson College*
Facilitator: **Sebastian Fourne**, *Wilfrid Laurier U.*

Entrepreneurship has long been recognized as a process, with multiple variations of process-based models now part of our literature (e.g., Baron, 2007; Moore, 1986; Shane & Venkataraman, 2000) for explaining entrepreneurial behavior. Those processes are enacted on a more granular level through mechanisms. As a result, entrepreneurship researchers have produced richer and more precise explanations of the entrepreneurial process by identifying and exploring these mechanisms. New insights from the use of these explanations, however, lead to new opportunities and calls for an even better understanding of the underlying mechanisms of entrepreneurship. We believe that studying board games and their own analogous game mechanisms can provide a new source of insights into our study of the entrepreneurial process. Board games have multiple mechanisms their designers employ to create engaging and memorable experiences. Board games let us apply our intelligence and skills in roles we do not normally play in real life under conditions of known objectives and outcomes, boundaries, and rules of play combined with elements of uncertainty and luck. In this workshop panelists and participants will explore how entrepreneurship scholars can use game mechanisms to study and teach entrepreneurship. In particular, we strive to show how mechanisms that are used in popular board games can be used to evoke deeper understandings of the mechanisms of the entrepreneurial process.

Advice on Writing an Award-Winning Dissertation from Dissertation Award Finalists

Session Chair: **Davina E. Vora**, *State U. of New York at New Paltz*
Panelist: **Liang Li**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Panelist: **Harald Puhr**, *U. of Innsbruck*
Panelist: **Jan Schmitt**, *Amsterdam Business School, U. of Amsterdam*
Panelist: **Nan Zhang**, *California State U. Stanislaus*

Deciding on a dissertation topic and completing a dissertation, let alone an award-winning one, can be a daunting task. Are you a Ph.D. student who could use some advice about the process? Do you have questions for others who have not only completed their dissertations, but also whose dissertations were recognized as being among the best in their field? If so, this session is for you! Recent finalists and winners of dissertation awards in international management talk about their experiences and share advice with you. Their points cover the entire scope of the dissertation process as well as both professional and personal issues. Even if you are not striving to have the best dissertation in the world, their tips and suggestions may be valuable to you. Regardless of your stage in the dissertation process, we encourage you to attend.

Organizer: **Senthil K. Muthusamy**, *Slippery Rock U.*
Organizer: **Aarti Ramaswami**, *ESSEC Business School*

This PDW seeks to fulfill the mission of the Indian Academy of Management to build a supportive community of scholars. In line with this year's Academy theme of putting the worker front and center, we endeavor to expand research opportunities to connect and explore new ideas. In addition, this PDW is designed to serve the specific goal of building research capabilities within India. The PDW is targeted at researchers and scholars who are beginning to develop a research stream, and scholars elsewhere seeking to conduct research in India. The partnerships formed during this PDW will hopefully translate to more impactful and higher quality research engagement and scholarly output.

Developing your Educator Origin Story

Participant: **Matthew Eriksen**, *Providence College, School of Business*

When trying to establish credibility, many educators introduce ourselves to our students by sharing what we have done in the past; however, this does not help students understand who we are or why we are doing what we are doing. Understanding us and our teaching purpose helps students orient themselves toward us, provides them with guidance for how things are intended to evolve over the semester, and builds trust and confidence in us. As important as these understandings are for students, they are equally important to us, as educators, to remind ourselves of why we became an educator and the meaningful impact we wish to have on students, especially during moments when we lose belief in ourselves; when things do not go as expected; and when we find ourselves discouraged by such things as our students' seemingly endlessly shrinking attention spans, decreasing effort, and increasing disengagement. In addition, these understandings provide us guidance on our course designs and for our interactions with our students. Drawing on the power story (Gottschall, 2012; Ibarra & Lineback, 2005; Linde 1993), in this workshop, participants will develop a first draft of their Educator Origin Story that 1) is based on self-formation experiences that inspired them or solidified their desire to become an educator, and 2) articulates the desired impact they wish to have on their students. This story provides a vehicle for us to effectively communicate with our students, and ourselves, why we became and the impact we wish to have as educators.

Transforming our Teaching: Integrating DEI into the Business Core

Presenter: **Amanda C. Sargent**, *Bentley U. - College of Business - Management Department*
Presenter: **Mateo Cruz**, *Bentley U.*
Presenter: **Elizabeth Cooper**, *U. of Rhode Island*
Presenter: **Lynn Bowes-Sperry**, *California State U., East Bay*
Presenter: **Xiaoxia Zhu**, *U. of Wisconsin - Milwaukee*
Presenter: **Natalie Schneider**, *U. of Wisconsin, Milwaukee*
Presenter: **Megha Yadav**, *U. of Wisconsin, Milwaukee*

A paradigm shift is occurring in business education. Business school faculty are no longer expected to teach only the subject matter of their core disciplines but are now required to do so in a way that integrates diversity, equity, and inclusion (DEI) concepts and competencies. At the same time, there remain no clear guidelines on how to integrate DEI into all aspects of teaching which includes attention to faculty readiness, shifts in curriculum and pedagogy, and the creation and preservation of inclusive classrooms. The purpose of this PDW is to bring together management educators across disciplines, career stages, and job functions (i.e., faculty, administrators, etc.) to discuss challenges and opportunities DEI integration presents to faculty who teach in the business core, and to share strategies and resources to build community and provide ongoing support. Using a multi-level open systems approach to curriculum transformation, we will facilitate small and large group discussions in an interactive World Cafe format to share our experiences and build on our collective knowledge about ways we can better integrate DEI into the business core. Participants will leave with a framework for DEI integration, connections with like-minded educators, and a crowd-sourced online resource that captures DEI teaching strategies which will remain accessible beyond the AOM conference.

Harnessing the Connective Power of Experiential Learning in Management Courses

Organizer: **Jeffrey Miles**, *U. of the Pacific*
Presenter: **Stefanie E Naumann**, *U. of the Pacific*
Presenter: **Dara Szyliowicz**, *U. of the Pacific*
Presenter: **Lewis Gale**, *U. of the Pacific*
Presenter: **Nydia MacGregor**, *Santa Clara U.*
Presenter: **Jorge Alexis Arevalo**, *William Paterson U.*
Presenter: **Alex Fergnani**, *Rabat Business School*
Presenter: **Jeffrey Miles**, *U. of the Pacific*

According to the AACSB (the Association to Advance Collegiate Schools of Business), the intersection of experiential learning and social capital development is where business schools should excel. After all, management is a social process; it is about getting things done through other people. Connectedness is a key not only to the success of our learners and relevance of our research, but also to unlocking the competitive advantage of business schools in a growing sea of competitors. Our greatest potential is found as much in the diversity of our connections as it is in the depth of our research and education. Business education is no longer just about “knowing, doing, and being”; it is also about “connecting.” Unfortunately, many faculty report that they have no idea how to create such learning experiences in their own management courses. The purpose of this PDW is to answer that faculty call for help by explaining how to harness the connective power of experiential learning activities with social capital development in management courses. An excellent faculty panel will specifically explain and describe how to create outstanding experiential learning opportunities in the areas of: diversity coaching, esports gaming, board readiness, global Anthropocene immersive analysis, futures scenario assessment and evaluation, and human resource information system immersive problem solving. In sum, this will be an exciting and entertaining PDW session that will inspire those members of the Academy in attendance and will enable them to immediately incorporate what they have learned to successfully improve their own management courses.

Bringing Research (and Researchers) to Life Through a Systems Psychodynamic Approach

Organizer: **Jennifer Petriglieri**, *INSEAD*
Distinguished Speaker: **Gianpiero Petriglieri**, *INSEAD*
Panelist: **William A. Kahn**, *Boston U.*
Panelist: **Robin J. Ely**, *Harvard Business School*
Panelist: **Sally Maitlis**, *U. of Oxford*
Facilitator: **Preeti Varma**, *INSEAD*
Facilitator: **Elizabeth Sheprow**, *Harvard Business School*
Facilitator: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*
Facilitator: **Michael Jarrett**, *INSEAD*
Facilitator: **Heidi Stultz Brooks**, *Yale School of Management*

This PDW aims to develop participants' capacity to use the systems psychodynamic approach in their research. After several decades at the margins of organization studies, this scholarly approach is resurging. Unsettling changes in the relations between individuals and institutions, and the reported emergence of a 'new world of work,' seem to have made the systems psychodynamic approach useful again, perhaps more useful than ever. Using it to cast light on the unconscious dimensions of novel or problematic features of organizations, organizing, and the organized, scholars have published their work in top American and European journals (e.g. Anicich, 2022; Ashforth & Reingen, 2014; Fotaki, 2013; Fotaki & Hyde, 2015; Handy & Rowlands, 2017; Kahn, 2022; Kenny, 2010; Kenny et al., 2020; Maitlis, 2022; Padavic et al., 2020; Petriglieri & Peshkam, 2022; Petriglieri et al., 2018, 2019; Petriglieri & Petriglieri, 2020; Prasad, 2014; Stein, 2011, 2013, 2021; Vince, 2019). We hope to help many others do the same. The workshop will begin with a keynote and a panel open to all Academy attendees. Both will explore why and when this approach is valuable, and how leading scholars employ it in their work. In the second session, which will require pre-registration, we will work with participants in small groups, helping them apply the approach in their current research. Specifically, facilitators will help participants interrogate the systemic unconscious dynamics that may be at play in the planning, fieldwork, data analysis, and / or writing up of a specific research project.

The first half of the PDW is open to all. To register for the second half, please email a brief (up to 500 word) summary of a qualitative research project that you are currently invested in, or that you wish to pursue, that you suspect has some unconscious dimensions to it, to Jennifer.petriglieri@insead.edu. These summaries will orient the facilitators (i.e., the keynote speaker, panelists and other system psychodynamic scholars – see below for full list) and other participants to the experience or topic which the attendee wants help to work on. Things you might want to include: 1. Describe, in no more than a sentence or two, a project you are doing, or would like to do, that you believe could be enriched by addressing unconscious elements. 2. Describe, if you can, what you think those unconscious dimensions are. For example: a. What might be happening outside of people's conscious awareness that, if you were able to have access to it, would give you greater insight into the phenomenon you are studying? b. What needs, fears, desires, or anxieties do you think people might be experiencing that are too disturbing for them to acknowledge—even to themselves? c. What processes, at the group or organizational level, might be covertly driving the phenomenon you are interested in—that is, operating beneath the surface, without people being consciously aware of them? 3. Consider any emotional reactions you have noticed in yourself as you have been working on this project. How might they inform the study you are doing?

This PDW will provide an overview of the ODC Division's endorsed effort to explore doctoral education in the field of Organization Development and Change. Led by Dr. Steve Cady, the initiative has attracted 125 participants thus far. The purposes of this PDW will be to share the work that has emerged to this point from the initiative, to engage participants in a dialogue to explore findings and next steps, and recruit others to be part of the effort. The workshop will unfold through four phases: (1) Introduction to the ODC Doctoral Education Initiative, (2) review and dialogue on the guiding strategy, (3) exploration of future possibilities, and (4) planning for the next steps. The intent of this initiative is to transform and strengthen our theoretical and pedagogical foundations for developing doctoral students to flourish in the field of ODC. This initiative is part of the ODC Division's effort to build community (the ODC Hive). This PDW aims to attract the engagement of scholars from many disciplines who have an interest in growing the disciplines and fields related to ODC.

Practice-Driven Institutionalism: Next Steps and Future Directions

Organizer: **Deborah Anderson**, *Alberta School of Business*
Organizer: **Michael Lounsbury**, *U. of Alberta*
Organizer: **Michael Smets**, *U. of Oxford*
Organizer: **Kevin McSweeney**, *U. of Oxford*
Panelist: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*
Panelist: **Richard Whittington**, *U. of Oxford*
Panelist: **Joel Gehman**, *George Washington U.*
Panelist: **Christopher W. J. Steele**, *U. of Alberta*

Bringing together a group of well-established institutional and practice theory scholars, and building upon (Smets, Aristidou, & Whittington, 2017), this submission for our third Professional Development Workshop on practice-driven institutionalism aims to facilitate discussion and spur debate regarding how practice theory and institutional theory can complement each other. This year, our PDW shifts from building the case for PDI – which was covered in our first two PDWs on the topic – and moves to take an inventory of what has been accomplished and map out unanswered questions and future research directions. Specifically, we hope to synthesize some of the current thinking around a practice-driven institutionalism. PDI reflects the practice-theoretical heritage of organizational institutionalism and – by actively acknowledging the role of practitioners and practice – sheds a more comprehensive light on the big debates in institutional theory. In the spirit of "professional development" we aim to highlight opportunities for advancing current debates and for injecting new perspectives into increasingly crowded intellectual fields.

Participant: **Shelley F. Mitchell**, *Hult International Business School*

The ONE Doctoral Consortium aims to offer a networking, learning, and research reflection opportunity to doctoral students engaged in organizations and the natural environment (ONE) research. A maximum of 24 doctoral students will be selected based on their research quality and to represent a diversity of academic institutions, geographic interests, and research topics. The aim of the doctoral consortium is to provide doctoral students with feedback on their work, insights on key areas of the profession, and connections to other junior and senior scholars pursuing similar work. The consortium will be cross-disciplinary and open to different theoretical perspectives and the faculty members involved coming from different geographic and methodological backgrounds. The format of the doctoral consortium is informal and open, but doctoral students will come well-prepared to optimize the interaction with other doctoral students and faculty. The design for this year's consortium will enable doctoral students to engage with ONE faculty from various parts of the world who will share their knowledge and experiences related to their research, teaching, and careers.

The Junior Faculty Consortium (JFC) is an annual event that provides an opportunity for early career faculty members and postdocs that are members of the Social Issues in Management (SIM) division or the Organizations and the Natural Environment (ONE) division to network with senior faculty members and develop their research ideas. The 2023 Annual Meeting's theme "Putting the worker front and center" invites us to rethink how our research and teaching are called on to shape the role of business organizations in providing for the well-being of people and the planet. Furthermore, it is a great opportunity to reorient our attention to those who are often marginalized and silenced–including people and the natural environment–as business organizations try to navigate their ways through unprecedented turbulence and complexity.

This event is by invitation only. The application process is the following: - You must be in the first five years of your employment as a faculty member or a postdoctoral position. - Your application must include a short CV and an extended abstract of a working paper (not more than 5 pages). - Please also indicate two preferred senior scholars you would like to discuss your research with. - Please send your application to Ju Young Lee (julee@ivey.ca), with a copy to Jason Pettit (jmpattit@stthomas.edu) by May 26th, 2023.

Construct Development and Validation: A Workshop

Presenter: **Stephanie L. Castro**, *Florida Atlantic U.*
Presenter: **Claudia Cogliser**, *Texas Tech U.*
Presenter: **Lisa Schurer Lambert**, *Oklahoma State U.*
Presenter: **Larry J. Williams**, *Texas Tech U.*

In all scientific fields, accurate measurement of the constructs we study is critical to the advancement of knowledge. Over the years, multiple reviews have criticized research in management for a general lack of attention to construct measurement validity, with particular criticism of survey measurement scales. We believe this criticism is accurate, and hope to improve the state of our field by providing researchers a simple, psychometrically-sound, programmatic approach to help them establish construct validity for new scales (and evaluate the validity of existing scales). The first half of the session will focus on establishing a general understanding of construct validity as well as best practice approaches to evaluating construct validity. The second half of the session will be "hands-on", conducted in small break-out groups, providing participants an opportunity to apply this information and work on their own measures as well as pose any questions they may have to facilitators.

The Alchemy of Qualitative Research: Crafts and Routines

Organizer: **Alexandra Rheinhardt**, *U. of Connecticut*
Organizer: **Eliana Crosina**, *Babson College*
Organizer: **Tiffany Dawn Johnson**, *Georgia Institute of Technology*
Organizer: **Kam Phung**, *Simon Fraser U.*
Organizer: **Anna Elise Roberts**, *U. of Bath*
Organizer: **Sarah Wittman**, *George Mason U.*
Speaker: **Charlotte Cloutier**, *HEC Montreal*
Speaker: **Spencer Harrison**, *INSEAD*
Speaker: **Majken Schultz**, *Copenhagen Business School*
Speaker: **John Paul Stephens**, *Case Western Reserve U.*

This Professional Development Workshop (PDW) aims to extend the 2022 AOM panel symposium "A Junior Scholar's Guide to Navigating the Trials and Triumphs of Qualitative Research." This symposium brought together a panel of pre-tenure scholars to discuss their personal research journeys, and attracted more than 50 participants. Building on this momentum, we seek to expand and deepen this emerging community's impact in two main ways. First, we invited four senior scholars, all experts in qualitative research, to serve as panelists (in addition to six junior scholars as PDW facilitators). As the title of the proposed PDW suggests, their comments will center on their respective alchemy, or on their crafts and routines for conducting qualitative research, including their idiosyncratic practices for finding flow when writing, establishing productive routines, and getting "un-stuck" when facing roadblocks. This information moves beyond what one may glean from reading experts' work as it pertains to practices which are generally not codified or shared in publications' methods sections. Second, participants will have the opportunity of sharing a planned or ongoing qualitative study, and of gaining personalized feedback. We envision that by July 1st, participants will submit a 2-page summary of an upcoming or current qualitative research project to aomqualalchemy@gmail.com. These 2-page summaries should include an abstract of their project, and a statement that outlines their most pressing challenges. During the PDW, each participant will receive comments and feedback on their work from the panelists, as well as from the junior qualitative researchers involved in the organization of this PDW. To promote rich discussion and feedback, the panel portion will be open to all attendees, but the personalized feedback portion will be limited to 40 participants, and determined on a first-come, first-serve basis.

By July 1st, participants will submit a 2-page summary of an upcoming or current qualitative research project to aomqualalchemy@gmail.com. What's Next for Ecosystem Research?

Organizer: **Ron Adner**, *Dartmouth College*
Organizer: **Michael G Jacobides**, *London Business School*
Participant: **Michael Cusumano**, *Massachusetts Institute of Technology*
Participant: **Annabelle Gawer**, *U. of Surrey*
Participant: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*
Participant: **Martin Reeves**, *reeves*
Participant: **Mary Tripsas**, *U. of California, Santa Barbara*

As the notion of ecosystems within the management literature matures from novel construct to established concept, there is an opportunity to both take stock, and push the boundaries of existing research questions and methods employed, so as to support the development of new research. In the spirit of providing a forum that can aid this intellectual development to the benefit of the field overall and of participating academics in particular, this PDW brings together some of the top contributors in the field. Its contribution is to provide an interactive format around cutting-edge questions and offer the possibility for mentorship to those developing research, as opposed to providing yet another template to present papers. It aims to foster debate, and facilitate the development of next-generation research by workshop participants and panelists alike. In addition, the session will connect to the conference theme of 'worker in the middle' by exploring how an ecosystem approach, which explicates the nature and structure of interdependence both across and within actors in an ecosystem, sheds new light on the nature and challenge of work in the modern era.

The New Geography of Work and its Impact on Innovation and Social Dimensions

Organizer: **Marco Minervini**, *IE Business School*
Organizer: **Jasmina Chauvin**, *McDonough School of Business Georgetown U.*
Organizer: **Viktorie Sevcenko**, *INSEAD*
Organizer: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*
Panelist: **Prithwiraj Choudhury**, *Harvard U.*
Panelist: **Mercedes Delgado**, *Copenhagen Business School and MIT*
Panelist: **Mark Mortensen**, *INSEAD*
Panelist: **Olav Sorenson**, *UCLA Anderson School of Management*
Discussant: **Maryann P. Feldman**, *Arizona State U.*
Discussant: **Exequiel Hernandez**, *Wharton*

The Covid-19 pandemic has significantly impacted the geography of work, presenting new opportunities and challenges for individuals and companies in determining their locational choices and ways of collaborating. This professional development workshop brings together leading experts in the field – Prithwiraj (Raj) Choudhury (HBS), Mercedes Delgado (Copenhagen Business School), Maryann Feldman (Arizona State University), Exequiel (Zeke) Hernandez (Wharton), Mark Mortensen (INSEAD), and Olav Sorenson (UCLA) – who, along with the organizers – Jasmina Chauvin (Georgetown University), Marco Minervini (IE Business School), Victoria Sevcenko (INSEAD), and Thomaz Teodorovicz (Copenhagen Business School) – will discuss current trends in the post-pandemic geography of work at multiple levels of analysis, set the agenda for future research on the geography of work and innovation, connect the topic with the context of social impact, and provide feedback on participants' research proposals.

The workshop will include a panel discussion open to ALL conference registrants, followed by a shorter paper feedback session that will be by invitation only. To apply to attend the paper feedback session, please submit a paper abstract (up to 500 words) using the following link: https://bit.ly/NewGeoWorkAOMPDW by 1st July 2023. Selected participants will be notified two weeks before the scheduled workshop.

Perspectives on Inclusive and Responsible Innovation

Organizer: **Andre Martinuzzi**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Organizer: **Angelo Spörk**, *WU Vienna U. of Economics and Business*
Presenter: **Marcel Bogers**, *Eindhoven U. of Technology*
Presenter: **Svetlana Ivanova**, *Vienna U. of Economics and Business*
Presenter: **Keren Naa Abeka Arthur**, -
Presenter: **Payal Kumar**, *Indian school of hospitality*
Presenter: **Anja Grüll**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Presenter: **Svenja Damberg**, *Hamburg U. of Technology*
Presenter: **Rajnish Tiwari**, *Hochschule Fresenius*

Making technology and innovation more inclusive is essential in the face of the current global challenges in the context of sustainable development. Responsible Innovation addresses ethics, emerging technologies research and innovation governance. Both, inclusive and responsible innovation paradigms, respond to overarching societal challenges, involve multiple stakeholders in innovation processes, and are therefore a promising way for organizations to contribute to the betterment of society. As an outcome of the substantial discourse in several scientific communities, a broad diversity of perspectives on, and tools for inclusive and responsible innovation exist, without a clear overarching framework or toolbox. This PDW will take a first step in systematizing these tools by presenting the basics, principles and benefits of inclusive and responsible innovation, by providing an overview of different tools as well as insights into challenges and benefits of their usage. In particular, it will cover open innovation, co-creation, design thinking, life-hacks, frugal innovation, and specific tools, e.g. for involving blind and visually impaired people in innovation processes. The PDW creates common ground through the perspectives of open and collaborative innovation and inclusive and responsible innovation, respectively. Then, eight presenters will share practical experiences with specific tools related to inclusive and responsible innovation. The second half of the PDW will be dedicated to roundtable discussions with the presenters and organizers and will allow the participants to discuss and experience selected tools themselves.

If you would like to attend this PDW please register this WhatsApp Group so that we can exchange background information before and after the AOM meeting: https://chat.whatsapp.com/KTW9Bmi3FVk854MZsEVHN3

The Four Horsemen of Work Relationships

Facilitator: **Bridget Dongarra**, *U.S. Office of Personnel Management*
Facilitator: **Mike Camburn**, *FMP Consulting*

This highly interactive workshop takes an innovative approach to a decades-old relationship management model from the Gottman Institute. The Gottman Institute's Four Horsemen Model, a reference to the Four Horsemen of the Apocalypse, describes four destructive communication behaviors that forecast doom for relationships. In his research, Dr. John Gottman observed thousands of married couples and was able to predict marriage failure with 90% accuracy based on the presence of the Four Horsemen in their interactions. While the Gottman Institute's research is focused on personal relationships, workshop participants will learn that the lessons of the Four Horsemen Model are equally applicable to the success or failure of their relationships with supervisors, subordinates, co-workers, customers, and other stakeholders. Learning to monitor for the early signs of the Four Horsemen during conflict is the first step to eliminating them and replacing them with healthy, productive communication patterns. Thankfully, there are positive behavioral antidotes to each of the Four Horsemen that have the transcendent power to build trust, psychological safety, and a culture that embraces constructive conflict. Our workshop consists of a series of activities, teaching points, and guided small group discussions. Participants will reflect on the dynamics of their own work teams and professional relationships as they learn how to identify and address problematic communication behaviors. They may also find opportunities to improve conflict management in their personal relationships.

Publishing History in Management Studies: Challenges of Pandemic, Rankings, and Social Media

Organizer: **Nicholous Mark Deal**, *Mount Saint Vincent U.*
Participant: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*
Participant: **Gabie Durepos**, *Mount Saint Vincent U.*
Participant: **Walter Friedman**, *Harvard Business School*
Participant: **Anthony Gould**, *U. Laval*
Participant: **Geoffrey Jones**, *Harvard Business School*
Participant: **Christina Lubinski**, *Copenhagen Business School*
Participant: **Patricia McLaren**, *Wilfrid Laurier U.*
Session Chair: **Jeffrey Muldoon**, *Emporia State U.*
Session Chair: **Michael Heller**, *Brunel Business School, Brunel U. London*

The research process in management and organization studies is wrought with its own unique challenges. In the recent past, mobilizing historical knowledge has also shared its own set of issues. This PDW brings together the editorial teams from six key journals who regularly publish historical research in management and organization studies to give voice to these challenges and opportunities facing Business History, Business History Review, Industrielle / Industrial Relations, Journal of Management History, Management & Organizational History, and Qualitative Research in Organizations and Management. Drawing upon their experiences, the PDW will discuss both the issues confronting journals and editors, and those confronting authors. Topics will include the decline in downloads during the ongoing pandemic; forced retirement/redundancy of scholars and its impact on the academy writ large; the opaque nature of journal rankings (e.g., Australian Business Dean's Council); mobilizing research in the social media age; outsourcing the proofing and publication process to inexpensive, low-quality firms in developing economies. Another issue confronting some journals is the outsourcing of the proofing and publication process to cheaper, low-quality firms. For authors, issues worthy of discussion include the cutback of research funding; the impact of virtual teaching; difficultly in accessing physical libraries and archives. The PDW aims to be interactive so as to allow authors and other participants an inside look into the publication process, the problems confronting journals in the business, management and organizational history; critical management studies; and labour relations spaces, and the wider changes impacting the intellectual reach of academic journals.

Adventure Awaits…Let's Speed Network

Coordinator: **Gabriela Cuconato**, *Case Western Reserve U.*
Coordinator: **Sharon F. Ehasz**, *Case Western Reserve U.*

The benefits and importance of developing social networks and building social capital are not new (see more on Moody & Paxton, 2009) and are not different for academics (Streeter, 2014). However, networking in academic conferences can become a "card-swapping" activity with much effort and little reward. Following the theme of "Putting the Worker Front and Center," this professional development workshop (PDW) aims to put academics themselves in the center and give participants time and space for intentional and meaningful networking, independent of their career stage or academic and demographic background. During the session, we will have a brief introduction and welcome plenary. Then, attendees will actively engage in speed networking, adapted from speed dating, to get to know other AoM members. In four rounds, participants will connect to members who have (1) similar research interests; (2) differing research interests; (3) differing teaching experiences; and (4) similar personal interests outside of work. At the end of our PDW, participants will have practiced networking techniques, leaving the conference with real connections and possibly even research ideas and collaborative projects.

This session requires pre-registration and is limited to 60 attendees. To register, please fill out the form below: https://cwru.az1.qualtrics.com/jfe/form/SV_bdu9fjjbfQvDLcq Please email gdc27@case.edu and sfe21@case.edu if you have any questions or want to withdraw your participation.

Panelist: **Tsedal Neeley**, *Harvard U.*
Panelist: **Paul Leonardi**, *U. of California Santa Barbara*
Panelist: **Danielle Elaine Bovenberg**, *Yale U.*
Panelist: **Asaf Darr**, *Member Prof*

Given the increasing prevalence of expert occupational and professional groups working inside organizations, this workshop explores research at the intersection of occupations and professions in organizations. This year, we will accomplish this by honoring and expanding on Steve Barley's legacy in this domain by bringing together his students, coauthors, and colleagues with participants in an interactive format to advance perspectives on this important area of management research. The goals of this professional development workshop are two-fold: (1) provide contemporary perspectives on occupations and professions in organizations through examination of Steve Barley's work; (2) build a community of scholars who are engaged in theoretical and empirical research on occupations and professions. Through presentations from senior scholars, interactive panel discussions, and roundtable breakouts, we seek to advance scholarship in this important area while simultaneously building community.

Using Sports Data To Advance Management Theory

Organizer: **Paolo Aversa**, *City U. London*
Organizer: **Dmitry Sharapov**, *Imperial College Business School*
Organizer: **Francesca Hueller**, *Bayes Business School*
Panelist: **Sonali Shah**, *U. of Illinois at Urbana-Champaign*
Panelist: **Sarah Doyle**, *U. of Arizona*
Panelist: **Xavier Sobrepere**, *Tilburg School of Social and Behavioral Sciences*
Panelist: **Jongsoo Kim**, *Hong Kong Baptist U.*

Publishing rigorous and relevant research in top management journals often requires rich and suitable data that allow challenging and compelling research questions to be investigated. The surge of accessible sport data in recent years has increased the number of studies that make use of such data to advance management theory. Beyond the fact that professional sport comprises multi-billion dollar industries worthy of attention per se, sport also provides settings in which fundamental themes of competition and cooperation are at play, making it attractive for scholars seeking to advance management theories. However, sport settings combine research opportunities with non-trivial challenges and dichotomies that require further reflection: First, sports greatly differ in their nature, and it is not always easy to choose the most suitable sport contexts to respond to particular research questions. Second, in sport settings, generalizability of results is less evident than in traditional industries, and readers and reviewers often display skepticism about external validity and generalizability of findings to business contexts. Building on successful editions of this workshop at AOM in the previous five years, this two-part PDW will (1) bring together a panel of scholars to share experience in publishing management research with sport data and (2) provide developmental support in the second part of the workshop for scholars that are in the process of using sport data in their projects or who plan to use sport as a setting to study their research questions.

The workshop is organized in two sections. After a welcome, the organizers will present the panelists, an overview of the agenda, and introduce the topic by presenting insights from their recent systematic literature review. In the subsequent “Editor’s Perspective” presentation, an associate editor of a top journal (experienced in both publishing and reviewing papers with sport data) will provide her views on necessary conditions and possible challenges of making a contribution using sport data. Next, each of the remaining panelists will briefly summarize their published research using sport data and bring the audience “behind the scenes” of the writing and review process of each paper. The presentation phase is followed by a Q&A part moderated by the organizers and designed to facilitate an interactive discussion between panelists and audience with emphasis on generalizable topics. The first part closes with a brief summary by the organizers, after which non-registered workshop participants will leave and go to other sessions. After a short break, organizers and panelists will move to round tables to discuss proposals and papers of pre-registered participants (submitted in advance). Participants will be matched to panelist/organizer tables in advance based on the theories to which their work contributes. After discussing each project, each table will explore further research directions in each theory that can be usefully addressed using sport data. Each table will then report the main ideas that emerged in their discussions, leading to a final Q&A.

Multiple Perspectives on Corporate Political Responsibility in Conflict and Post-Conflict Countries

Organizer: **Natalya Turkina**, *RMIT*
Organizer: **Sofia Villo**, *Aalto U. School of Business*
Speaker: **Usha C.V. Haley**, *Wichita State U.*
Speaker: **Stephen Brammer**, *U. of Bath*
Speaker: **Arno Eerikki Kourula**, *U. of Amsterdam*
Speaker: **Jukka Mäkinen**, *Estonian Business School*

Since the 24th of February 2022, when Russia, on the orders of Vladimir Putin, began a large-scale military attack on Ukraine, we have been witnessing that over 1,000 firms from different industries have publicly announced they are voluntarily curtailing operations in Russia (Yale School of Management 2022). Our PDW will look at this unpresented corporate exist from a country through the lens of corporate political responsibility – a concept that views firms as political actors that have human rights-related duties. The speakers of the PDW will take four theoretical perspectives – Hirschman's 'Exit, Voice, and Loyalty' model (Hirshman 1970), Rawlsian perspective on international justice (Rawls 1971), Alexander's societalization theory (Alexander 2018, 2019) and managerial perspective on corporate political responsibility (Lyon et al. 2018) – to discuss how the ongoing Russian-Ukrainian war offers reality checks for these theoretical perspectives and what normative propositions and research foci should be considered by business and society scholars to develop practical interventions for corporate political responsibility in conflict and post-conflict countries. This PDW will gather scholars from different disciplinary backgrounds, which will allow for a critical in-depth discussion about (re)new(ed) issues in corporate political responsibility in conflict and post-conflict countries, including but not limited to the division of moral labor and co-ordination between governments and firms, ethics, power and impact, transparency and stigma, and the role of context. We invite all scholars interested in corporate political responsibility to join this PDW.

Strategy Meets Organization Theory: Learning From Scholars Working at the Crossroad

Organizer: **Giada Di Stefano**, *Bocconi U.*
Organizer: **Filippo Carlo Wezel**, *USI Lugano*
Panelist: **Wei Guo**, *China Europe International Business School (CEIBS)*
Panelist: **Jaekyung Ha**, *EMLYON Business School*
Panelist: **Ivana Naumovska**, *INSEAD*
Panelist: **Tomasz Obloj**, *Indiana U. - Kelley School of Business*
Panelist: **Violina Rindova**, *U. of Southern California*
Panelist: **Anastasiya A. Zavyalova**, *Rice U.*

This Paper Development Workshop aims to bring together researchers who work at the intersection of Strategy and Organization Theory. The goal is to start a conversation inside a community of like-minded researchers who are interested in the perspective of firms with their bundles of capabilities and resources, but also with constraints and opportunities generated by social forces that are above and beyond their agency. The PDW is an opportunity to generate a conversation between the community of STR and OMT and to reflect on potential avenues for future research. After a brief introduction to this scholarship domain, the workshop will include presentations from several renowned scholars who will introduce some of their relevant work. The session will close with a general Q&A session that will address the challenges faced by researchers who aim at publishing in this area, as well as various opportunities for future research.

Impacts of Management Consultant Deep Values: Managing Cooperation-Conflict between Stakeholders

Organizer: **Emmanuel Beck**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*
Session Chair: **Eric Sanders**, *Elmhurst U.*
Panelist: **Rida Elias**, *American U. of Beirut*
Panelist: **Jeffrey R. Moore**, *Anderson U.*

The objective of this PDW session is to explore the relationship between the Workers and the Consultants through different experiments of organizational change. The cooperation/conflict dialectic based on the deep values of consulting/intervention-research methodologies will be underlined. The PDW will focus on the need to control the gaps between values and beliefs of Workers and Consultants. These gaps will be identified in a first phase of the PDW session. Diagnoses and Methods will be presented by the panelists and participants. In a second phase, we'll propose ways of improving processes and tools to enhance the quality of cooperation in a change process that involves different stakeholders, especially putting the Workers Front and Center, mainly in case of conflicts.

Bringing 'Learning Through Play' into the Business School – Learning with the PRME (i5) Project

Distinguished Speaker: **John Goodwin**, *Lego*
Distinguished Speaker: **Mette Morsing**, *professor*
Session Chair: **Dirk C. Moosmayer**, *Kedge Business School*
Facilitator: **Jeremy Williams**, *Zayed U.*
Facilitator: **Meredith Conlin Storey**, *PRME Secretariat / United Nations Global Compact Office*
Facilitator: **John Goodwin**, *Lego*
Facilitator: **Mette Morsing**, *professor*
Facilitator: **Dirk C. Moosmayer**, *Kedge Business School*

The Impactful Five (i5) is the largest project under the roof of the United Nations Principles of Responsible Management Education (PRME). It builds on research by the LEGO Foundation that finds learning most effective when applying the five principles of personal meaningfulness, active engagement, multiple iterations, social engagement and joyfulness. The purpose of the PRME (i5) project is to transfer and apply these practices of effective playful learning into the domain of business schools in order to create an impactful pedagogy for responsible management that is also applicable to other business domains and divisions. While the first year focused on content building, this workshop is part of the second-year rollout activities and building of a community of practice. In this workshop, you will be first learn about the PRME project, the underlying pedagogy research by the LEGO Foundation, and how (i5) has be applied in the classroom. You will then engage in roundtables that explore how the (i5) project can stimulate -a- practice links for your course, curriculum and organization, -b- collaboration around the (i5) at intra-institutional and global level to position your institution and strengthen networks, -c- connections around content development and community to break down inner-institutional silos, -d- program level integration, e.g. to (re-)structure an entire program, and -e- research and publication opportunities around the (i5). You will come out of this PDW with a clear understanding of the opportunities to benefit from and get involved with the PRME (i5) project.

The Public as Co-Strategizers: Communicative Perspectives on Strategizing in the Public Sphere

Organizer: **Elisa Lehrer**, *European-U. Viadrina*
Organizer: **Milena Leybold**, *U. of Innsbruck*
Organizer: **Anne-Christine Rosfeldt Lorentzen**, *Aarhus U.*
Panelist: **Gail T. Fairhurst**, *U. of Cincinnati*
Panelist: **Linda L. Putnam**, *U. of California, Santa Barbara*
Panelist: **A. Paul Spee**, *U. of Queensland*

Facilitator: **Rebecca Bednarek**, *Victoria Management School*
Facilitator: **Leonhard Dobusch**, *U. of Innsbruck*
Facilitator: **Tim Kuhn**, *U. of Colorado, Boulder*

This PDW aims to elucidate strategizing and communication in the public sphere. It seeks to enhance participants' understandings on how communicative perspectives help to conceptualize and investigate the influences of public discourses, competitors' decisions, or other critical events in the public sphere on strategizing. From this perspective, the strategizer is not necessarily a "worker" within an organization - if a human actor at all. Instead, the strategizer can also be part of the public sphere, contributing to organizational strategizing by communicating ideas, goals, or processes. This strategizer can communicate from outside, e.g., in the form of a public discourse. To conjoin academic discourses on the role of the public sphere as an actor and/or a context of strategizing, the PDW brings together two communities: Strategizing Activities and Practice (SAP) and Communicative Constitution of Organizations (CCO). Scholars who have successfully contributed to these communities will support PDW participants by providing new insights and advice to develop their work-in-progress on the nexus of strategizing and communication in and by the public sphere. The PDW has two parts: First, four well-published SAP and/or CCO scholars present and discuss their perspectives on strategizing and the role of communication in the public sphere constituting the public as 1) a co-strategizer and 2) a site of strategy processes. Second, up to four PDW attendees will discuss their work-in-progress with one roundtable facilitator. The PDW requires a pre-registration for the second part, but the first part is open to all AoM attendees.

To register for the second part of this PDW (roundtable discussions), please send an abstract (max. 1000 words) to lehrer@europa-uni.de. The abstract should include a title page with information on your person, position, affiliation, and preferred roundtable facilitator (either one of the panelists or facilitators) as well a short description of your research project you want to discuss at the roundtables. The deadline for application is July 5, 2023.

Panelist: **William S Schulze**, *U. of Utah*
Panelist: **Jette Steen Knudsen**, *Tufts U.*

Our goal in this PDW is to augment discussions between Family Entrepreneurship scholars and those studying the role of business families and their enterprises as social and politicized actors. This PDW is designed to flush out the role played by the family, and their businesses, as politicized actors in the pursuit of their self-interests, and role in filling voids in different national institutional contexts. They are hailed as motors of economies regardless of the perverse consequences on the environment, political institutions, societies, and the proper functioning of the economy itself. Families as primary social units and their businesses as legal entities through which the family acts, may assume a wide spectrum of politicized roles, such as lobbying for preferential treatment (e.g., limiting tax liabilities to pay for reductions in pollution, encouraging national healthcare) at the potential detriment or benefit of all citizens. To support this debate, our PDW will have two parts. In the first part, a panel of scholars chosen ad hoc will interact with our mediators to reflect on the political and institutional landscapes and to identify key behaviors and consequences. In the second part, attendees will have the opportunity to interact with the panelists and general audience in a “open mic”. This session will provide an excellent opportunity for current researchers of FE, CSR and sustainability, and more fundamental social and political issues to connect and collectively sketch out a research agenda that can in turn help advance research, teaching, and practice.

The Future of Entrepreneurship Education Workshop

Speaker: **Jedidiah Weller**, *Entrepreneurship*

Educators in entrepreneurship have long faced the challenge of finding effective ways of providing students with experiential learning within a traditional classroom setting. Wide-ranging materials from texts, live cases, guest speakers, and interactive discussions are important, but do not simulate a real-time entrepreneurial situation by which students apply what they've learned and receive immediate feedback. Subsequently, students graduate without having acquired critical muscle memory from "learning by doing" in their desired business types, and hence, cannot readily transfer lessons from the classroom into real world experiences such that they thrive as entrepreneurs.

A Toolbox for Humor in Management Education, from Award-Winning Instructors and an Emmy-Recipient

Distinguished Speaker: **Joe Toplyn**, *Twenty Lane Media, LLC*
Presenter: **Andre Martinuzzi**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Presenter: **G. James Lemoine**, *U. at Buffalo, The State U. of New York*
Presenter: **Lisa T. Stickney**, *The U. of Baltimore*
Presenter: **Angelo Spörk**, *WU Vienna U. of Economics and Business*
Presenter: **David Stolin**, *TBS Education*
Organizer: **Anja Grüll**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Facilitator: **Svetlana Ivanova**, *Vienna U. of Economics and Business*

Utilizing humor in the classroom helps to motivate students and supports a positive relationship between them and educators. When integrated into course design, humor increases students' understanding of the topic, improves learning outcomes, and positively impacts their creativity, critical thinking and ability to deal with ambiguity. In order to apply humor in management education, a well-founded, modular toolbox is needed; one with established effectiveness that can be used in different teaching contexts and does not require extensive training . This PDW aims to present elements of such a toolbox and will initiate a dialogue about its usage based on first-hand experiences. It will support participants in utilizing humor in their teaching strategies, courses, and exercises by introducing the basic functions of humor, by illustrating how it can be successfully applied, and by providing effective tools. If accepted, this PDW will feature a distinguished guest: Joe Toplyn, a writer and producer of comedy/talk shows and four-time Emmy award winner. He produced segments for daily television shows for over fifteen years and wrote 'Comedy Writing for Late-Night TV', the first and only book ever published on the subject. His insights will be enriched by practical cases of using humor as a teaching and learning tool successfully implemented at business schools in the U.S. and Europe. In an interactive exercise, session participants will gain insights into how to effectively utilize humor in their teaching strategies while avoiding possible negative effects.

If you would like to attend this PDW please register this WhatsApp Group so that we can exchange background information before and after the AOM meeting: https://chat.whatsapp.com/JRH4wYnbSp6CPWtf4d3gfn

Facilitator: **Xinran Joyce Wang**, *Zicklin School of Business, Baruch College, City U. of New York*
Facilitator: **Miles A. Zachary**, *Auburn U.*

This is a two-part PDW. Part 1 provides an introduction to content and text analysis as a research methodology. Presenters will discuss appropriate applications, reliability and validity concerns, complementarities with other methods, data curation, programming, and different computer-aided content analysis tools. Experts will also walk through examples of content analysis techniques from published research and offer publishing tips. Part 1 is open to all AOM attendees and does not require pre-registration. Part 2 of the PDW models MOC's successful "Cognition in the Rough" PDW. Experts and authors will interact in small groups to discuss the content, structure, techniques, and potential journal outlets of submitted proposals. Part 2 requires pre-registration and a submission of a 2-3 page proposal. The deadline for proposal submissions is July 14. Details are available via AOM's Online Communities (e.g., Connect@AOM, Interest Group listservs) or by contacting the organizers at contentanalysis1@gmail.com.

Part 2 of the PDW requires pre-registration and a submission of a 2-3 page proposal. The deadline for proposal submissions is July 14. Details are available via AOM's Online Communities (e.g., Connect@AOM, Interest Group listservs) or by contacting the organizers at contentanalysis1@gmail.com.

Managing for Social Justice: Harnessing Management Theory and Practice for Collective Good

Organizer: **Latha Poonamallee**, *The New School*
Discussant: **Simy Joy**, *Independent Researcher*
Facilitator: **Anita Howard**, *Weatherhead School of Management, Case Western Reserve U.*
Participant: **Akhil S G**, *Weatherhead School of Management, Case Western Reserve U.*

The goal of this PDW is to continue to nurture a community of scholars, educators, and practitioners who engage in management research and teaching that explicitly centers equity, inclusion, and social justice (not just social impact) as the goals of organization and management. Are social justice and management mutually exclusive concepts? How can we draw on management theory and practice for advancing social justice aims? How do we bend the arc of organizational life towards more justice? What are the rights and obligations of organizations and their members to the world at large, and to their local communities and societies? How do we teach about social justice credibly within management curriculum? Is there even a place for it in business and management schools? How do we move from social impact to justice? These are the sort of questions that animate this project and PDW.

Facilitator: **Suhaib Riaz**, *Telfer School of Management, U. of Ottawa*
Facilitator: **Trenton A. Williams**, *BYU Marriott School of Business*
Panelist: **Ana Maria Peredo**, *U. of Ottawa*

Grand challenges, while complex and global in nature, manifest and are experienced in local communities. This reality has given rise to a growing appreciation for the role of local contexts and community-based enterprises (CBEs) in addressing grand challenges. While research on community-based phenomena is growing, there remains a need to further explore the practices and processes of community-based organizing, including how communities shape entrepreneurial efforts and how CBEs work in and with communities to address challenges and build local resiliency. This PDW aims to convene junior and senior scholars in this field of research to discuss these ideas and explore future research pathways. To accomplish this, a panel of accomplished scholars will reflect on the current state of community-based organizational research while drawing upon their own research experiences. This will be followed by roundtable discussions where table facilitators will lead small group conversations with participants around future areas of research within CBE scholarship. Through these conversations, this PDW seeks to advance organization theory and research in entrepreneurship and social issues in management.

Women Entrepreneurs' Use of Spirituality to Manage Workers in Africa

Participant: **Caren Brenda Scheepers**, *U. Pretoria Gordon Institute of Business Science*
Participant: **Anastacia Mamabolo**, *GIBS / U. of Pretoria*
Participant: **Ethne Swartz**, *Montclair State U.*
Participant: **Gloria Mbokota**, *U. Pretoria Gordon Institute of Business Science*

Our PDW focuses on how women entrepreneurs use spirituality to manage workers in women-owned businesses in Africa. Workplace spirituality acknowledges that workers have an inner existence and search for transcendence which require meaningful work within a community. Entrepreneurs with explicit spiritual beliefs incorporate their spirituality within the running of their businesses. This PDW explores the outcomes of this workplace spirituality phenomenon, putting the worker front and center, aligned to the theme of the 83rd AOM Annual Meeting. Africa is characterised by a culture of high power-distance and the PDW pays attention to how women entrepreneurs use spirituality in managing high-power-distance contexts. While literature differentiates between religion and spirituality and assumes that spirituality unites and religion divides, we deem this distinction to be more complex and advocate for embracing diversity in religious and spiritual practices. We also consider concerns around a possible misusing of spirituality as a persuasive tool to manipulate workers. Drawing on current literature we explore how spiritual women entrepreneurs integrate their values, morals and beliefs directly into the management of their workers and the outcomes of these practices.

New Academic Job Opportunities in China (2023)

Organizer: **Jianmin Sun**, *School of Labor and Human Resources, Renmin U. of China*
Participant: **Long Zhang**, *Hunan U.*
Participant: **Bin Hao**, *East China U. of Science and Technology*
Participant: **Ben Nanfeng Luo**, *Renmin U. of China*
Participant: **Ying Wang**, *School of Management and Economics, Beijing Institute of Technology*
Participant: **Qi Li**, *Chinese U. of Hong Kong*

Over the years, universities in China have provided management PhDs and scholars many job opportunities and will probably continue to be so in the next few years. As China job market for management scholars is characterized as complex, dynamic, and of highly internal variety, we delivered a PDW on the academic job opportunities in China in the 2021 AOM conference (which interests about 50 participants) and another PDW in the 2022 AOM conference (which attracts nearly 160 participants). This year, in the current PDW, scholars from several representative Chinese universities will continue to share their experiences, observations, and insights regarding the job opportunities in China for candidates in the management field. It will cover topics including (but not limited to) the application procedures, selection criteria, compensation package, teaching load, promotion, and social service. Besides, this PDW will discuss the key to the career success as an academic scholar in China. The new developments and trends in China job market will be highlighted.

The Power of Sisterhood: Revitalizing the Feminist Spirit in Our Academic and Personal Lives

Organizer: **Natalie Schneider**, *U. of Wisconsin, Milwaukee*
Organizer: **Megha Yadav**, *U. of Wisconsin, Milwaukee*
Organizer: **Xiaoxia Zhu**, *U. of Wisconsin - Milwaukee*
Panelist: **Brianna Barker Caza**, *U. of North Carolina, Greensboro*
Panelist: **Donna Chrobot-Mason**, *U. of Cincinnati*
Panelist: **Audrey Murrell**, *U. of Pittsburgh*
Facilitator: **Stephanie J. Creary**, *The Wharton School, U. of Pennsylvania*
Facilitator: **Emily Dunham Heaphy**, *U. of Massachusetts, Amherst*
Facilitator: **Keimei Sugiyama**, *U. of wisconsin milwaukee*

In the past year, global large-scale events have highlighted the lack or even the suppression of women's rights internationally—yet sisterhood is powerful and endures. To provide renewals for harnessing our collective strength, this PDW is designed to offer healing, replenishment, and revitalization of the feminist spirit for women and non-binary scholars who feel physically, emotionally, and mentally exhausted from gender inequity reflected in current political climates, as well as in their daily lives as they navigate encounters with bias and discrimination in their organizations and careers. Through panel discussion, group work, and joint meditation, participants will engage in active revitalization of energy depleted from coping with gender inequities, bias, and discrimination. The primary goal of this PDW is for participants to actively recover through solidarity, experienced through a panel discussion and breakout circles for healing, recovery, needs identification, yoga, meditation, and positive perspective-taking.

Attendance is limited to the first 100 participants.

Inclusive Entrepreneurial Ecosystems: Shattering the Myths and Not Just the Glass Ceiling

Presenter: **Caren Weinberg**, *Ruppin Academic Center*
Organizer: **Maura McAdam**, *Dublin City U.*
Presenter: **Erik Stam**, *Utrecht U.*
Presenter: **Candida G Brush**, *Babson College*

Research has shown that women are underrepresented in entrepreneurial ecosystems, and a persistent gender bias continues to exist in entrepreneurship discourse and practice, affecting who gets supported in, and by, the system (Brush et al., 2019; McAdam et al., 2019). In order to address this gender bias, this professional development workshop (PDW) showcases various tools developed as part of a Gender Net Plus research project entitled GENRE: "Overcoming the Entrepreneurial Ecosystem Gender Divide: A Cross-Cultural Perspective." Appropriate for both Academia and Industry, this PDW will advance the efficacy of entrepreneurial ecosystems worldwide and promote inclusivity in ecosystems as part of an attempt to dismantle the mythical norms around technology entrepreneurship and stereotypical notions of the 'ideal entrepreneur' as a tech superhero that is stereotypically masculine, aggressive, independent, a risk taker and competitive. In so doing, this workshop aims to enhance knowledge, ability, and collaboration in ecosystems by focusing on norm-reflexive abilities for change among actors in the ecosystem. Specifically, two concepts - personas and better stories - are used in this PDW as learning tools. Discussions will be based on 'story telling' using ecosystem actors - international female and male personas of entrepreneurs and best practices 'Better Stories' from the four countries involved in the initial research: Sweden, Norway, Israel, and Ireland. After a brief introduction of key research and practice in this area, there will be breakout sessions to build new personas (real and ideal) based on participants' experience and knowledge. There will be a second sharing of "local" best practices that will then be collated and shared with the entire group in a lively debate and discussion. The anticipated outcome of this PDW is the expansion of the database of stories and partners adopting the workshop by adding additional personas and best practices that can be used in research and industry. The workshop will be beneficial for policymakers and practitioners as well as provide insights for researchers and entrepreneurship educators. We believe that this PDW aligns with the aims ENT Division and is both timely and relevant with regard to promoting inclusive entrepreneurship ecosystems.

Presenter: **Elias Janssen**, *Radboud U. Nijmegen*

Managers are facing turbulent times with the introduction of high uncertainty and complexity into labour markets and employment relations. One challenge presenting itself is the increasing diversification of the workforce and the need for more inclusion at the workplace, strengthened by characteristics of the post-pandemic world, such as increased social inequalities and talent shortages that are both quantitative and qualitative in nature (IMF, 2022a,b). This is reflected in a growing popularity of Diversity, Equity and Inclusion (DEI), with many organisations publicly stating their DEI vision and objectives (Jansen, Kröger, Van der Toorn & Ellemers, 2021). Next to moral and economic motivations driving the popularity of DEI, there is a growing consensus on the business imperative for developing diversity, with positive effects on innovation (e.g., O'Leary & Weathington, 2006), increased business performance (e.g., Mc Mahon, 2010) and better team performance (e.g., Bowers, Pharmer & Salas, 2000). Moreover, DEI is not only gaining momentum in business: also the academic world is giving the topic consistent and increasing attention since the term 'workforce diversity' was first coined in the 1990s, with over 30 years of research contributing to evolving conceptualisations and operationalisations (Roberson et al., 2017). This PDW contributes to putting all workers front and center by introducing research projects aimed at improving our DEI understanding in a local context and by elaborating on learnings for both academics and practitioners to craft new avenues for DEI research and interventions.

Presenter: **Betina Agata Szkudlarek**, *U. of Sydney Business School*
Presenter: **Lena Zander**, *Uppsala U.*

As organizations operate in and expand to multiple countries, employees must work across geographic, cultural, linguistic, and institutional boundaries. To be effective and compete in these diverse contexts, organizations need employees with global leadership skills. Such skills include, among others, multicultural competence, boundary spanning, influencing stakeholders, leading change, making ethical decisions, building community, managing oneself, valuing people, and empowering others (Bird, 2018; Steers & Osland, 2020). Despite their importance, the shortage of global leaders has been well documented from the mid-1990s to the present, and few business schools have courses or programs on global leadership. The purpose of this PDW – returning to AOM due to popular demand – is to share valuable teaching knowledge from highly experienced global leadership professors and practitioners who have taught courses and developed programs related to global leadership. This highly interactive PDW is designed to provide participants with several benefits, including: 1) a summary of best practices for developing global leaders, 2) round-table discussions (with handouts) of teaching tools and exercises in developing class sessions, modules, or courses on global leadership, and 3) a forum for participants to discuss their own ideas and concerns related to applying best practices in their own settings. Participants will leave this workshop with practical information on best practices along with a variety of different approaches and exercises for teaching global leadership and related concepts (e.g. cross-cultural management, diversity).

MED Junior Faculty and Doctoral Students Consortium

Session Chair: **Preeti Wadhwa**, *Cal Poly Pomona*
Coordinator: **Robert Lee Bonner**, *San Francisco State U.*
Organizer: **Gerard Beenen**, *California State U., Fullerton*
Organizer: **Arran Caza**, *U. of North Carolina, Greensboro*
Organizer: **Christine Rivers**, *U. of Surrey*
Organizer: **Mairead Brady**, *Trinity Business School, Trinity College Dublin*

The goal of MED's consortium is to facilitate the professional development of junior faculty (five years or less since the first faculty position) and doctoral students who are aiming for a successful career as a management faculty which involves management education, research, and development. This consortium is open to all AOM attendees across divisions. As a part of this consortium, participants would choose to attend at least three MED's professional development workshops (PDWs) from a range of thematic categories that focus on skill development in areas including pedagogical innovation, teaching with technology, participation and engagement strategies, turning pedagogical research into intellectual contribution, creating inclusive classrooms, etc. In addition to attending select MED PDWs, participants will be attending two bookend events. The first bookend (pre-bookend) event, an introductory reception and mixer is tentatively scheduled on the evening of Friday, August 4. The post- bookend which includes a reflection is scheduled during the MED breakfast on the morning of Monday, August 7. A participation certificate from MED will be awarded on successful completion of this consortium. Registration is required. Please use the link below to register for the event: https://forms.gle/yzwxnzYjwRYSv59Q7

Enacting Leaders' Capacities for Mindfulness, Authenticity, Purpose and Love

Participant: **Dana H. Born**, *Harvard Kennedy School; Center for Public Leadership*
Participant: **Julita A. Haber**, *Fordham U.*
Participant: **Gerhardus J.A. Hummels**, *Maastricht U., School of Business & Economics*
Participant: **Ayse YEMISCIGIL**, *Fordham U.*
Participant: **Sophia Town**, *Fordham U.*
Participant: **Michael Andreas Pirson**, *Fordham U.*

The widespread declines in worker well-being are concerning for social good, as well as employers' abilities to maintain engagement and retention. Leaders can play a role in addressing languishing among workers and to do so, they will need to move beyond demonstrating effective leadership and shift their 'being' and the way they show up to others. We propose that mindfulness, authenticity, purpose, and love are some of those critical dimensions of being that leaders need to enact to effectively support workers' well-being. In this interactive professional development workshop, participants will i) learn about cutting-edge science and practice on mindfulness, authenticity, purpose, and love and reflect on how leaders who embody these dimensions of being can contribute to the flourishing of workers, ii) participate in exercises to enact these dimensions of being in themselves which can improve teaching effectiveness and well-being of educators as well as students, iii) ideate how they can cultivate these dimensions of being in their students to inspire and enable future business leaders to promote worker well-being. The format of the proposed session includes a stimulating introduction by scholars on mindfulness, authenticity, purpose, and love and cutting-edge pedagogy. This is followed by interactive sessions of enactment and discussion and roadmap sessions for applying the learnings from the workshop to participants' being and educational practices.

Demonstrating the Societal Impact of Business School Research

Organizer: **Olga Igorevna Ryazanova**, *Maynooth U.*
Distinguished Speaker: **Herman Aguinis**, *George Washington U.*
Presenter: **Peter McNamara**, *Maynooth U.*
Presenter: **Tatiana Andreeva**, *Maynooth U.*
Presenter: **Julie Davies**, *U. College London*
Presenter: **Stefan De Jong**, *Erasmus U. Rotterdam*
Panelist: **Kamal Gulati**, *All India Institute of Medical Science*

Academy of Management Learning and Education's special issue on learning and education strategies for scholarly impact (Haley et al., 2022) reflected a growing expectation for business schools to demonstrate positive social impact beyond the academy based on high-quality management research. While this is welcome in a context of public health, cost of living, energy, climate and other on-going crises, this development raises important questions about institutional, team and individual capacity building. If we are to position management scholars as workers more 'front and center' in debates about societal impact, we need to understand the implications of this new expectation for academic careers at all stages. How do management scholars develop a balanced impact portfolio, craft impact narratives and develop tools to connect research with societal benefit? This PDW will provide participants with opportunities to develop skills that may support them in societal impact production and communication. The participants will engage with the panel of experts in societal impact development and assessment. After short introductions by the presenters on leadership perspectives, DEIB (diversity, equity, inclusion and belonging) aspects of the UK's Research Excellence impact cases, and differences between different countries, participants will be engage in exercises focusing on (1) metrics and organizing the societal impact of business school research, (2) pitching an impact narrative and (3) societal impact planning.

What Would it take to Change an Inference? Quantifying the Robustness of Causal Inferences

Participant: **Kenneth Frank**, *Michigan State U.*
Participant: **Derek Harmon**, *U. of Michigan*
Participant: **Timothy David Hubbard**, *U. of Notre Dame*

Participants in this PDW will learn several approaches for quantifying the robustness of a causal inference. These provide a more precise language for producers and consumers to talk about potential concerns to inferences (e.g., omitted variables). The Impact Threshold for a Confounding Variable (ITCV) will be introduced to show participants how they can quantify how strong the correlations associated with an omitted variable must be to overturn an inference. The Robustness of Inference to Replacement (RIR) will be introduced to show participants how they can quantify what percentage of cases would have to be replaced with cases for which there was no effect of the predictor of interest to change the inference. Participants will learn to use the on-line application, spreadsheet, and the konfound macros in Stata and R. We will discuss guidelines for the application of sensitivity analysis in management research. These approaches allow researchers across a broad range of topic areas to debate the strength of evidence in intuitive and concrete terms.

Scholars in the field of strategic management are developing an analytical approach to stakeholder governance that has the potential to yield foundational insights about how organizations orchestrate stakeholder interaction to deliver superior organizational performance. In this PDW, we aim to present five leading speakers who are working in this domain, and to conduct roundtable discussions among the participants that are led by these speakers, the organizers, and five roundtable leaders. We will conclude with a panel of Q&A from the audience. The purpose of the roundtable discussions will be to identify promising areas for future research on stakeholder governance, including particularly the development of theory and empirical insights. We anticipate that each roundtable will be staffed with both a speaker and a round-table discussant, and that each will address one of five specific issues: philosophical foundations of stakeholder management, stakeholder and shareholder value, data and measurement challanges, qualitative and qualitative stakeholder analyses, and managerial implications. The goal will be to use the PDW to support the development of participant papers and to promote a collegial conversation on these topics among scholars at all stages of their careers.

We welcome any member of the SMS to this session. No pre-registration is required.

Despite both its scholarly and practical importance, research on organizational design has received relatively little attention since the 1980s. However, it has recently gone through a renaissance with scholars. Despite this upsurge in popularity, a study on organizational design can be highly challenging to publish. Theoretically, it is often perceived as an “old topic,” requiring scholars to tease out a novel contribution and demonstrate the need for new research. Empirically, it is difficult to collect large-sample data and accurately measure various dimensions of organizational design, as this sensitive information is often not publicly available. Furthermore, as firms tend to endogenously choose their organizational design, scholars face challenges in finding a source of exogenous variation in these dimensions and causally identifying their effects. To help scholars navigate these challenges, we have gathered editors of leading management journals with expertise in this topic and authors who have recently published an organizational design paper. In the first part of our PDW, these editors and authors will share their experiences and advice on how to successfully publish papers in this area. In the second part, attendees will undertake roundtable discussions to discuss their research project ideas receiving feedback from the PDW organizers and panelists.

Panelist: **Paul Tracey**, *U. of Cambridge*
Panelist: **Cameron Verhaal**, *Tulane U.*
Panelist: **Alexander Vossen**, *Tilburg U.*
Panelist: **Filippo Carlo Wezel**, *USI Lugano*

Optimal distinctiveness (OD)—being both “similar to” and “different from” peers—is an important imperative of organizational life and has attracted significant attention from various communities of scholars (e.g., strategy, organization theory, and entrepreneurship) in the past few years. Reflecting and bolstering this interest, we organized four professional development workshops (PDWs) at the AOM annual conferences between 2017 and 2021, aiming to systematically review the theoretical foundations and recent developments of OD. These PDWs attracted a large number of participants and helped build a growing community of scholars studying this topic. While generative, previous PDWs have fallen short of explicitly accounting for and synthesizing the most contemporary methodological innovations (e.g., qualitative comparative analysis, topic modeling, neural networks, recommender systems, morphing technology) introduced and employed in recent OD research. These methodological innovations have become increasingly important in advancing a more enriched and accurate understanding of OD. As such, we believe that time is ripe for another PDW where scholars gather to discuss how a better appreciation of contemporary empirical methods will help to enrich our understanding of OD. We hope that our PDW will not only stimulate some specific research questions, but also serve as a conducive platform to engage scholars from different disciplines who may draw on different methodological approaches to further extend the OD scholarship.

Panelist: **Helen Shipton**, *Human Resources*
Panelist: **Wolfgang Mayrhofer**, *WU Vienna*

The HR division ambassadors PDW returns for the third time, to bring together current and (potential) future ambassadors, to celebrate successes of the ambassadors' program, and to imagine the future together. We will start the PDW by celebrating recent achievements, including the publication of the 3rd edition of the Global Human Resource Management Casebook, and the 4th edition HR Division's International Conference (HRIC) in South Africa (May-June 2023). We will use these successes as a springboard to discuss the future of the ambassadors' program and upcoming initiatives such as the 2024 HRIC in New Zealand. First, members from the HR Division Ambassadors Committee will present opportunities for current and future ambassadors to become involved in the development of the program, with some time for Q&A with the PDWs attendees. Then, we will break into roundtables to generate ideas for new ambassadorial initiatives - projects which will make a lasting impact on the HR Division and our international members. Finally, we will discuss a process through which the list of Ambassadors is refreshed with new members, including the launch of a "Junior Ambassador" program. Participants can expect to leave the PDW with new connections, new ideas, and (if they wish) an active role in shaping the experience of international members into the future.

Developing Teaching Ideas into Impactful Intellectual Contributions

Host: **Kathleen J. Barnes**, *Salem State U.*
Presenter: **Rita J. Shea-Van Fossen**, *Nova Southeastern U.*
Presenter: **Jennifer Leigh**, *Nazareth U.*
Presenter: **Vicky Anne Lester**, *The Case Centre*
Presenter: **Michael Ablassmeir**, *McGraw-Hill/Irwin*

Most management academics have been trained to do rigorous research in their chosen field, but few receive any guidance about how to translate that research into learning activities or create impactful intellectual contributions from their classroom activities. This professional development workshop is intended for authors, experienced or new to the management education and learning discipline, who are interested in developing their teaching and/or learning technique(s) into management education and learning academic conference presentations, publishable case studies, peer reviewed journal publications, and other intellectual contributions. This workshop brings together experienced management education teaching-scholars, teaching and learning journal editors, and publishers in a collegial environment that will allow participants to learn about and discuss ideas on converting research into classroom activities and the scholarship of teaching and learning, as well as build participants' networks and resources in this area of scholarship.

While it is easy to come up with a rough or vague idea about a research topic, it is not easy to refine, implement, and publish the idea. Every one of us needs help from others, particularly those who have successful publishing experience. However, many of us lack access to colleagues with relevant expertise or hesitate to ask for feedback from experts in relevant domains. Sometimes we are not even sure what kinds of expertise we would need to move the idea forward. In the OB Research Incubator, participants are paired with renowned scholars who have successful publishing experience and can help participants move their ideas forward. Participants also have an opportunity to connect with other OB scholars who share similar research interests. This PDW is open for any member of the OB Division who would like to seek and exchange advice or feedback on research projects in any stage prior to publishing. Prior to participation in this PDW, participants must submit a summary (5-6 pages, double spaced) of their research idea by June 4, 2023. These briefs will be reviewed by the session organizers. Those whose briefs receive favorable evaluation will receive a registration code for the session. Complete details regarding the research brief will be made available in early April, 2023, via online adverts.

Pre-approval of a research proposal is required for registration and attendance. Research proposals (as per the OB Listserv announcement and requirements) must be submitted online through the provided online form.

Behind the Publication: Insights from the Publication Process

Organizer: **Stephanie Chan-Ahuja**, *London Business School*
Organizer: **Laura Maria Giurge**, *London School of Economics and Political Science*
Panelist: **Lindred L. Greer**, *U. of Michigan, Ross School of Business*
Panelist: **Jill Perry-Smith**, *Emory U.*
Panelist: **Letian Zhang**, *Harvard Business School*
Panelist: **Joyce He**, *U. of California, Los Angeles*

Following the success of the inaugural year of the Behind-the-Publication PDW in 2022, we continue the series with a new group of panelists to share their experiences with publishing at top management journals. We contend that navigating the publication process is a crucial yet under-discussed part of the academic training. This is surprising given that publishing academic papers is a necessary skill in a successful academic career and often used as a metric to determine career outcomes. To that end, the aim of this PDW is to go behind the scenes of published papers and learn about the publication journey from prolific academics. Our panel of distinguished scholars will share how they developed one of their papers from initial journal submission to the final publication. To facilitate learning about different publication processes, we have invited scholars with experience across different top management journals including Academy of Management Journal, Management Science, Organization Science, and Administrative Science Quarterly. By going "Behind the Publication", this PDW will bring valuable insights especially for early career academics. Participants will leave our PDW with a better understanding of what happens behind the scenes of a published article, including the challenges involved in the process and how to overcome them. On a broader level, our PDW could help participants feel less lonely about the academic publishing process: as one of our previous participants said while thanking the panelists, "Many of us in the audience feel happier that we're not the only ones going through these publication problems."

Using Formal Models in Management Research

Panelist: **John S. Chen**, *Baylor U.*
Panelist: **Tobias Kretschmer**, *LMU Munich*
Panelist: **Catherine Maritan**, *Syracuse U.*
Panelist: **Michael D Ryall**, *Florida Atlantic U.*
Panelist: **Arkadiy V. Sakhartov**, *U. of Illinois at Urbana-Champaign*
Panelist: **Sandy Yu**, *U. of Minnesota*
Organizer: **Elena Plaksenkova**, *The Ohio State U. Fisher College of Business*
Organizer: **Liyue Yan**, *BI Norwegian Business School*

The purpose of this PDW is to enhance participants' understanding of formal models in management research, to compare and connect formal modeling with other methods, and to share the best practices for developing, writing, publishing, and reviewing formal model papers. The PDW aims to promote the effective use and consumption of formal modeling to a larger audience, examine the role of formal modeling as a method of management research, provide advice to those interested in this method, facilitate a conversation between experts and learners, and foster a community of researchers. To this end, we invite panelists who have extensive experience in formal modeling as producers, editors, and reviewers, as well as in other research methods. The in-person PDW consists of two parts: a 90-minute panel session and two rounds of roundtables, 40 minutes each.

The panel session is open to all participants of AoM. To participate in the roundtables, please register through the online form (https://forms.gle/TsLAXx1s4n8o62QF9) by August 1st, 2023. We will have limited space in the roundtable session, so the places and preferences will be accommodated on a first-come, first-serve basis. We will have three roundtables:

(1) Developing models (Tobias Kretschmer and Arkadiy Sakhartov),
(2) Publishing formal model papers (John Chen and Catherine Maritan),
(3) Leveraging formal models for empirical research (Michael Ryall and Sandy Yu).

For any questions, please contact Elena Plaksenkova at plaksenkova.1@osu.edu or Liyue Yan at liyue.yan@bi.no

Healthier Lives Before Tenure: The Role of Agency in the Junior Faculty Stage

Organizer: **Payal N. Sharma**, *U. of Nevada Las Vegas*
Organizer: **Kyle J. Emich**, *U. of Delaware*
Organizer: **Tyler Sabey**, *Arizona State U.*
Presenter: **Elizabeth Margaret Campbell**, *U. of Minnesota*

Panelist: **Ozias Moore**, *Lehigh U.*
Presenter: **Nathan Pettit**, *New York U.*
Panelist: **Kristie Rogers**, *Marquette U.*
Presenter: **Dana McDaniel Sumpter**, *Pepperdine Graziadio Business School*
Presenter: **Michele Williams**, *U. of Iowa*

Being a junior faculty member involves managing multiple pressures – from research, teaching, and service to personal commitments, to one's mental and physical health and interpersonal relationships. Accordingly, this workshop offers an innovative, skill-based opportunity for junior faculty members to understand how to find and exercise their agency towards leading healthier lives before tenure. To facilitate interactive learning, the session brings together faculty across different career stages who conduct research in relevant domains and/or have had meaningful personal and professional experiences related to enacting healthier careers; and draws on multiple forums for dialogue including presentations, a panel discussion, and small group breakouts. Attendees will leave with an action-oriented toolkit to navigate their careers and handle current future pressures.

Panelist: **Shelley Price**, *Gustavson School of Business, U. of Victoria*
Panelist: **Sergio Wanderley**, *Unigranrio Afya*
Panelist: **Fahreen Alamgir**, *Monash U.*

“Nihil de nobis, sine nobis” or “nothing about us without us” (Ferndale, 2018). This refrain has been used to shape more enlightened engagement and discussion of representation and inclusive practices. Often, it is applied to policy statements regarding diversity, inclusion, accessibility, and equity. It also the catchphrase of many rights movements, which seek to address oppression, historical underrepresentation and exclusion, or systemic discrimination. In academia the discourse remains silent on systemic barriers for certain intersectional identities. Narratives from intersectional identities within the ivory tower critique practices which seek to objectify, dehumanize, marginalize. They also critique tokenism and performativity while seeking an elusive sense of authentic belonging, respect, and visibility (Gabriel & Tate, 2017). In this PDW, we attempt to open the discourse by engaging in a conversation about lived experience. Our discussion will span a variety of barriers, including religion, disability, geography, race, gender identity and language as well as the experiences of those who navigate a mixture of these complex barriers in an academic context.

Award-Winning Innovative Teaching in HR Analytics: The Case of Mr. Macky's Cajun Cuisine

Speaker: **Michael Sturman**, *Rutgers U.*
Speaker: **Hanbo Shim**, *U. of Texas At Arlington*
Organizer: **Karen Landay**, *U. of Missouri, Kansas City*
Organizer: **Tae-Youn Park**, *Sungkyunkwan (SKK) U.*
Organizer: **Kang Yang Trevor Yu**, *Nanyang Technological U.*

The purpose of this professional development workshop (PDW) is to offer AOM members the opportunity to learn about innovative approaches to teaching HR analytics from the winners of the 2022 HR Division Innovative Teaching Award – Michael Sturman (Rutgers University) and Hanbo Shim (University of Texas at Arlington). In this interactive session, the winners will first share the details of their innovation, Exercises in HR Analytics: The Case of Mr. Macky's Cajun Cuisine, and then facilitate a Q&A with the audience on more generalized approaches to teaching HR analytics. Additionally, all case materials – the workbook, a sample dataset, blank answer sheets, and a completed example answer sheet for the sample dataset – are available online through OSF so that PDW attendees may work through them ahead of or during the session and use them in their own teaching.

Materials for this session are available at https://osf.io/rw824/.

Contribution of the External Consultant to the Problems of Personnel Recruitment and Integration

Organizer: **Veronique Zardet**, *U. of Lyon, IAE Lyon , MAGELLAN, ISEOR, FRANCE*
Session Chair: **Therese F. Yaeger**, *Benedictine U.*
Discussant: **Peter Sorensen**, *Benedictine U.*
Panelist: **FADI MAHMOUD**, *Med Surg Solutions*
Panelist: **BENOIT HUBERT**, *PGF CONSULTANTS*

The objective of this PDW session is to discuss the role, the added value and the contribution of external consultants to face the growing problems encountered by companies in recruiting and even more so in retaining their employees. In a first step, the PDW will analyze the nature and specificity of the recruitment, integration and retention of employees, depending on the sector or business. In a second step, it will study innovative recruitment and integration practices implemented by companies with the help of consultants. In the third and final step, the methods and tools for dealing with these problems will be identified.

Teaching with Technology: In the Shadow of AI.

Organizer: **Mairead Brady**, *Trinity Business School, Trinity College Dublin*
Organizer: **Martin R. Fellenz**, *IMD*
Facilitator: **Stuart A. Allen**, *Robert Morris U.*
Presenter: **Leonardo Caporarello**, *SDA Bocconi and Bocconi U.*
Presenter: **Anna Holland**, *U. of Surrey*
Facilitator: **Catherine Denise Cawley**, *Trinity Business School, Trinity College Dublin*
Facilitator: **David Lefevre**, *Imperial College Business School*
Presenter: **Cynthia Fukami**, *U. of Denver*

Teaching with technology has slowly evolved in management education (ME) but many questions are left unanswered. The first question is what is or what should be the level of adoption and acceptance of technology/AI in the teaching arena and what evidence base do we have for that? Secondly, we need to ask what does the low level of technology adoption mean? Does it mean that we are teaching about technology/AI rather than teaching with technology/AI? Our third question will ask, do we appreciate that we now engage with a digitalized student self-managing their technology/AI adoption in the absence of its use in the classroom, and to what pedagogical impact on their learning? This PDW will conclude with an exploration of new business models, aligned to the drivers for change and focus on what we should or could deliberately create as optimum going forward.

Reviewing is a critical “professional responsibility” and an integral part of participating in the academic community (Trevino, 2008). Yet Tsang and Frey (2007: 129) noted that “there is no formal training for referees who usually pick up their review skills through learning by doing.” This raises a perplexing question for doctoral students and junior faculty: how can one develop critical reviewing skills with so few opportunities to practice the art of reviewing? This PDW provides participants with a rare opportunity to learn and practice the art of reviewing. Prior to the conference, participants will be asked to prepare a practice review of the manuscript by Gabriel, Lanaj, and Jennings (2021) titled, “Is one the loneliest number? A within-person examination of the adaptive and maladaptive consequences of leader loneliness at work”, published in the Journal of Applied Psychology. The actual workshop will consist of two parts: (1) presentations and (2) group discussions. The panel will offer key insights about the review process and quality reviewing from scholars who have served as Associate Editors and Editorial Board Members at leading journals in our field. Allison Gabriel will provide background information about the original submission of their manuscript. Participants will then break into small groups, each facilitated by an experienced faculty member, to discuss and receive feedback on their formal reviews. The PDW will conclude with Dr. Gabriel sharing actual reviews the author team received and how they helped shape the final manuscript.

Participants will be required to conduct a review of a paper to be able to register for the session. Please contact the organizers at j.zhu@rsm.nl to request for a copy of the paper to be reviewed. Please use "MOC RIR" in the subject of your email. Thank you.

A wonderful aspect of the Academy of Management (AoM) Annual Meeting is the developmental opportunities it provides for doctoral students. The Organizational Behavior (OB) division serves a large and diverse group of doctoral students and seeks to provide opportunities to help the students and members better connect by supporting micro- communities with the OB division. As a micro-community focused on helping support leadership scholars in their careers, the Network of Leadership Scholars has put together this Leadership Doctoral Student Consortium to provide a connection for leadership doctoral students to the leadership micro-community and the OB division. Our doctoral consortium serves to complement those that focus on program stages (i.e., “Halfway There” and “New Student Doctoral Consortium) and is open to all doctoral students interested in studying leadership. It will give them an opportunity to connect with and learn from junior and senior leadership scholars as well as other doctoral students interested in studying leadership. In addition, attendees will learn about topics that are particularly relevant to leadership scholars such as developing their “brand” as a leadership scholar and multilevel methods. Several prominent OB division members have agreed to participate in the 2023 PDW and provide students with their insights such as (1) advice based on their career as a leadership scholar (2) how to brand yourself as a leadership scholar, (3) conducting multilevel analyses, and (4) the role of the Network of Leadership Scholars.

Participants interested in attending, please contact amy.bartels@unl.edu for the registration form.

The purpose of this professional development workshop (PDW) is to provide advice and information on how to navigate the PhD Admissions process, with a specific emphasis on: 1) The Keys to a Successful Application, 2) Defining Your Research Interests, and 3) Finding Your Fit with PhD Programs. As competition for admission to PhD programs grows, applicants need to understand how to succeed in the PhD admissions process and more importantly, how to find the PhD program that will help them achieve their career goals. Individuals applying to PhD programs in the next 1-2 years will benefit from this PDW by learning more about the PhD admissions process through presentations, panel discussions, and round table discussions. The three-part PDW will provide ample opportunities for attendees to ask questions of current PhD coordinators, faculty, and PhD students. Attendees will walk away equipped with a greater understanding of the PhD admissions process as well as a network of both peers and faculty to help them further navigate the process.

Speaking Science

Organizer: **Katelyn Zipay**, *Purdue U.*
Organizer: **Theresa M. Glomb**, *U. of Minnesota*
Organizer: **Elizabeth Margaret Campbell**, *U. of Minnesota*

Experts acknowledge that the relationship between science and the public is at a precarious stage (Public Face of Science Initiative, 2018). In this critical moment, it is imperative that we engage in relevant conversations directly and deliberately to positively impact the future of society and build cultures that value science. . This workshop, returning for a second year after a successful inaugural session in 2022, focuses on "speaking science" by promoting the effective translation of research and developing additional skills for sharing science in an accessible and provocative way. This PDW aims to equip attendee with broader skills necessary for communicating science with varied non-academic audiences and, ultimately, seeks to promote greater impact of our scholarship. We will discuss key skills in effective science communication: saying “yes” to sharing your knowledge, crafting a coherent and compelling story, tailoring the message to your audience, and navigating the opportunities and obstacles in science communication. Throughout the interactive workshop, there will be “cameos” from renowned voices in our field to share advice, encouragement, and an invitation to join them in “speaking science.” We will couple best practices in media communications with improvisation skills to provide participants with the opportunity to learn and practice science communication strategies. We welcome all faculty interested in building their confidence and capabilities to broadly speak about their science and expect the session will be especially valuable to junior faculty and they prepared to say “yes” to opportunities as they advance in their careers.

We are so excited to bring back “Speaking Science” this AOM for its second year. The co-organizers are partnering with two amazing Improv Coaches (affiliated with Second City Chicago!) to lead this session. The PDW focuses on building the necessary science communications skills for researchers in our field to actively and successfully share our research with important broader non-academic audiences. We will practice improvisation techniques that build these critical skills and discuss how to put these practices to action. It will be fun, engaging, and challenging. The session is capped at 100 participants and it will fill quickly. A link to register will be sent via OB listserv and other communication platforms. You can also email Kate Zipay (kzipay@purdue.edu) directly for the link to register. It was a hit last year and it's only getting better!

Experiments in Institutional Theory and Strategy Research

Organizer: **Oliver S. Schilke**, *U. of Arizona*
Organizer: **Alex B. Bitektine**, *JMSB, Concordia U.*
Facilitator: **Mark Bolinger**, *Appalachian State U.*
Facilitator: **Stefano Brusoni**, *ETH Zürich*
Facilitator: **Matthew Josefy**, *Indiana U. - Kelley School of Business*
Facilitator: **Ronald Klingebiel**, *Frankfurt School of Finance & Management*
Facilitator: **Sheen S. Levine**, *U. of Texas at Dallas*
Facilitator: **Nevena Radoynovska**, *EMLYON Business School*
Facilitator: **Andy Wu**, *Harvard Business School*

This workshop provides the opportunity for institutional theory and strategy researchers with interest in experiments to engage in dialogue, discuss research agendas and methods, and receive feedback on their ongoing work. The workshop begins with a panel discussion addressing the potential of experimental methodology to facilitate novel research and providing an overview of recent contributions of experimental methods to the advancement of our knowledge on institutions and organizational strategy. The workshop will also comprise a showcase presentation of an experimental research project as well as a paper development workshop, where participants will have the opportunity to get an in-depth feedback and mentoring on experimental research projects in progress from experienced facilitators.

If you are interested in participating in the second segment (paper development), please submit your work by email to the workshop organizers, Oliver Schilke (oschilke@arizona.edu) and Alex Bitektine (alex.bitektine@concordia.ca), no later than July 24, 2023.

Participant: **Emily Landry**, *Washington and Lee U.*

The B Corp movement, which includes both a certification and a legal form, offers a sandbox for researchers of social and environmental issues to answer new questions in novel ways. B Corps encompass a rigorous certification, a new legal form, and a values-based social movement. B Corp certification allows organizations to express commitments to responsible business practices. By incorporating as a benefit corporation, businesses embed a dual purpose into their corporate charter. As a social movement, B Corps and their stakeholders come together to advance the institutional and systemic narrative of business as a force for good and broader efforts seeking to remake capitalism. In this PDW, we explore how B Corps, as a research context, can help scholars to move conversations forward on systems and sustainability. We will explore how the B Corp certification and benefit corporation legislation allow us to re-conceptualize impact from business-centric to society-centric metrics, and shift from exploring independent social/environmental issues to seeing them as a system. We will also inquire into the interconnected of actions, people and events that is at the heart B Corps as a social movement. We have invited B Corp researchers to present their research and participate in panel discussions. We will also organize small group table discussions to help participants develop B Corp related papers. The organizing team and table facilitators have conducted similar workshops in other settings, such as the Global B Academics Roundtable, and have the experience to skillfully facilitate such discussions.

Please note that Part 1 of this PDW is open to all. Part 2 of this PDW is a paper workshop session that will be by invitation only.

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the annual meeting of the Academy of Management (AoM) in Boston, MA, USA. This event will be held from 8:30 AM to 4:30 PM on Friday, August 4th, 2023. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty. Doctoral students are asked to give a short (15 minute) presentation about their research proposal to a panel of senior and junior faculty who then provide feedback and guidance on each proposal. Subsequently, the junior faculty will have an opportunity to present their research programs describing how they are extending their dissertation research and/or starting new research streams. The doctoral students are expected to ask questions and learn about building a research identity. In addition to the research incubator session, several panel sessions will further elaborate on publishing, the development of research streams, and the job market. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

Everything You Wanted to Know About Moderated Regression (But Were Afraid to Ask)

Presenter: **Jeremy F. Dawson**, *U. of Sheffield*
Presenter: **Andreas Wilhelm Richter**, *U. of Cambridge*
Presenter: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*

Although the testing of interaction effects via moderated regression is commonplace in management research, many misunderstandings and gaps in knowledge persist, and knowledge of recent methodological developments is slow to catch on. This workshop is aimed at researchers, reviewers, and PhD students alike, with a basic understanding of moderation, but who would like to advance their knowledge beyond this point. It will use a series of examples to refresh the basic principles of testing two-way and three-way interactions, focusing on how (and when) these should be interpreted based on various post-hoc probing and plotting techniques. In particular, it will cover different approaches to describing interaction effects, and offer guidance as to when and how post-hoc probing techniques such as simple slope testing should (and shouldn't) be used. It will also cover the testing, plotting and probing of some more complex types of interactions, in particular those involving curvilinear effects, and those where the underlying regression model is nonlinear (e.g. logistic or Poisson regression). Participants will have the opportunity to request topics and ask specific questions on moderation by sending an email to j.f.dawson@sheffield.ac.uk at least a week before the workshop. The final section of the workshop will discuss these questions, and others generated in the workshop itself. Participants will be provided with resources (including data files and syntax for R, SPSS, and Stata and screencasts) to replicate the methods demonstrated in the workshop.

MTurk-Based Research That You Can Trust: Best-Practice Recommendations For Authors and Reviewers

Organizer: **Isabel Villamor**, *IESE Business School*
Organizer: **Ravi Ramani**, *Morgan State U.*
Organizer: **Herman Aguinis**, *George Washington U.*

Amazon's Mechanical Turk (MTurk) is the most widely-used online marketplace for conducting research in management and related fields. However, significant concerns call into question the validity of research conclusions based on MTurk data. Our professional development workshop (PDW) aims to offer best-practice recommendations regarding designing, implementing, and reporting MTurk studies. Our recommendations are aimed at researchers planning on using MTurk and those who evaluate manuscripts describing MTurk-based research (i.e., journal reviewers and editors). Based on a review of 146 sources, our PDW will provide a summary of MTurk's practical and logistical benefits and a detailed analysis of 10 particularly salient features of MTurk research and their associated threats to internal, external, construct, and statistical conclusion validity (e.g., participant inattention and misrepresentation, vulnerability to web robots, MTurker non-naiveté, perceived researcher unfairness). We will then offer 10 best-practice recommendations to address those threats during research planning, research implementation, and reporting of results (e.g., decide qualifications used to screen MTurkers, formulate compensation rules, approve or deny compensation). In addition, our session will offer participants opportunities to discuss specific questions or concerns about conducting research on MTurk. Finally, we will provide a hands-on demonstration of how to implement each of these recommendations and conduct an MTurk study that minimizes the validity threats of associated with this data collection method.

Qualitative and Quantitative Analysis of Visual Data 3rd Edition

Organizer: **Siyin Chen**, *U. of Toronto, Rotman School of Management*
Organizer: **Stine Grodal**, *Northeastern U.*
Panelist: **Stoyan Vassilev Sgourev**, *New Bulgarian U.*
Panelist: **Anders Dahl Krabbe**, *King's Business School*
Panelist: **Mitali Banerjee**, *HEC Paris*
Panelist: **Sylvaine Tuncer**, *King's College London*

Our world is becoming increasingly visual. Organizations and individuals alike increasingly communicate through visual means by posting images, photos and memes on social media, websites, and embedding them in emails. Organizational scholars are therefore faced with a new challenge: How do we make sense of visual data? In particular how do we collect, analyze, and theorize visual data? All of the methods that organizational scholars have at their disposal to engage in data analysis takes for granted that data are textual or numerical in nature. However, a large literature in the social sciences suggests that visuals process very differently than text. The goal of the third edition of this PDW is to further provide some needed assistance and sharing of best practices for both qualitative and quantitative scholars who would like to use visual data to generate and test theory about organizational phenomena.

Paradox and its Methodological Underpinning: Where We Are and What is Next

Organizer: **Angela Greco**, *TU Delft*
Organizer: **Eriselda Danaj**, *IESE Business School*
Organizer: **Camille Pradies**, *EDHEC Business School*
Panelist: **Linda L. Putnam**, *U. of California, Santa Barbara*
Panelist: **Gail T. Fairhurst**, *U. of Cincinnati*
Panelist: **Jane Kirsten Le**, *WHU Otto Beisheim School of Management*
Panelist: **Josh Keller**, *UNSW Sydney*
Panelist: **Jennifer Linda Sparr**, *U. of Zurich*
Panelist: **Simone Carmine**, *IESEG School of Management*
Discussant: **Wendy K. Smith**, *U. of Delaware*

Paradox scholarship has developed exponentially in the past years, attracting a growing, broader audience. Recent special issues, conferences, and AOM PDWs on the topics have consistently broken submission and attendance records with always more than 100 participants. Despite this vibrant expansion, paradox scholars confront a vast array of methodological challenges in seeking to unpack and explore interdependent opposites. By offering a paradox PDW within the RM division, we aim to provide both novice and experienced scholars insight and tools to deepen their methodological approach to studying tensions by identifying key challenges, unpacking traditional approaches, and introducing innovative possibilities. We will address a diversity of methods for studying paradox, including both qualitative and quantitative approaches. To engage a broad audience, our PDW design is interactive. Helped by experienced panelists well-versed in both qualitative and quantitative methods, we will disseminate and generate novel insights with the participants. Participants will also have the possibilities to discuss key methodological issues they face in roundtable discussions and receive feedback on their specific research project. By exploring methodological questions around tensions and paradox, our PDW appeals to members of the RM division while expanding to an always broader audience interested in paradox studies.

Sequence Analysis for Management Research

Organizer: **Walter J. Ferrier**, *U. of Kentucky*
Organizer: **Stephen Thomas Downing**, *U. of Missouri*
Organizer: **Jin-Su Kang**, *NYCU*

Sequence analysis captures the ordinal and temporal structure of discrete data, such as the progression of jobs in a career path, stages of a negotiation, or longitudinal patterns of rivals' competitive attacks. Although the value of sequence analysis for organizational research was introduced over three decades ago, the adoption of sequence-related methods in management remains limited. We believe that this is due to a combination of unfamiliarity (with sequence concepts) and inaccessibility (of sequence analysis computations). Accordingly, this professional development workshop (PDW) is designed to tackle both challenges for scholars within the fields of strategic management, organizational theory, and organizational behavior. The PDW is formatted around a tutorial structure, which will be preceded by a phenomenological and theoretical background on sequences, and followed by an engaging, discovery-oriented discussion of the usefulness of sequence analysis in future research. The main tutorial contents of the PDW will incorporate two learning tools that facilitate hands-on practice with sequence analysis: (1) sets of colored toy blocks, representing discrete organizational events, aid in building intuition about sequence concepts; and (2) a user-friendly (graphical user interface) software program, SequenceR, aids in computing sequence measures. Thus, the key takeaway for participants will be the development of a new skill: understanding and computing sequence analysis measures. We expect that this tutorial format is suited not only to delivering a quality learning experience but also to fostering cross-divisional interactions for participants' professional development.

How do I register? There is no charge to attend, but pre-registration and conference registration are required. Attendance is limited to 50 participants. Please fill out the PDW registration form at this link by Friday July 21 to receive confirmation of registration from the session organizers: https://missouri.qualtrics.com/jfe/form/SV_a3GMyQ8NFw4cNEO. What should I bring? Participants should bring their laptop with a downloaded copy of the SequenceR program to use during the workshop. As this is in iterative development, please download the program only during the week before the session, August 1 – 4: https://github.com/sdownin/sequencer#download. Tutorial data files will be made available to admitted participants before the workshop. Questions? Please contact: Stephen Downing (sdowning@missouri.edu) and Walter Ferrier (walter.ferrier@uky.edu). Please include "[AOM Sequence PDW]" in the email subject line.

Facilitator: **Angela Pei Ju Chen**, *U. of Melbourne*

This PDW will help researchers develop and expand their qualitative data analysis skills by focusing on intermediate processes using “analytic artifacts” during qualitative data analysis (Locke, Feldman, & Golden-Biddle, 2022). Analytic artifacts can include: case narratives/composites; chronologies/temporally bracketing data; visual maps and other drawing; use of sensitizing concepts; identification of critical events or conversations; a-day-in-the-life composite; vignettes; hyperlinking between data sources; written accounts from different organizational or team member perspectives; and other non- coding approaches. Our PDW opens up the discussion of the practice and relevance of analytic methods that go beyond textual coding and its limitations. Data analysis with analytic artifacts offers a different approach to qualitative analysis, one that translates knowledge from raw data into observed patterns or networks of relationships and helps derive theoretical insights. Furthermore, analytical artifacts might help a project get unstuck. There are many times when a researcher might get lost in their data once coding is underway. Analytical artifacts are a way to see patterns, to step back and create data representations to explore different angles and alternative ways of seeing and understanding. The session will begin with a panel of experienced qualitative scholars reflecting upon their practice of undertaking qualitative data analysis to enable the publication of interpretive qualitative research that aims at theory building. The second half of the session will be spent in round tables working through ways to explore the data through analytical artifacts to generate early theoretical ideas. We will discuss implications for meaningful theorizing using this analytic approach.

Please register here: https://forms.gle/2tMQksYedGysFm9j9. There is no preparation but there will be hands on exercises at each roundtable.

Participant: **Angelique Slade Shantz**, *U. of Alberta School of Management*
Participant: **Marleen Wierenga**, *Nijmegen School of Management*
Participant: **Sophie Catherine Bacq**, *International Institute for Management Development - IMD*

The phenomenon of using businesses and markets to address complex social issues such as poverty in Base of the Pyramid (BoP) contexts continues to expand. In addition to pioneering work in this area to shape the foundations for a cohesive research agenda (London & Hart 2004; 2010; London, Sheth & Hart 2014), the current state of academic literature is comprised of a multitude of concepts (e.g. corporate social innovation, informal economies), theoretical frameworks (institutional theory, strategy, entrepreneurship, marketing) and terminology (subsistence marketplaces, social business, informal economy, social entrepreneurship), each with different antecedents, conceptual boundaries and empirical focuses (Webb, Bruton, Tihanyi & Ireland, 2013; Kolk, Rivera-Santos & Rufín, 2014; Dembek, Sivasubramaniam & Chmielewski, 2020).

The surge of interest among scholars in studying how enterprise and markets can address poverty and human development has expanded our understanding of the value proposition for businesses and for people living in BoP contexts. However, the continued expansion and diversity of scholarly work over the last 25 years has led to the increased value for PhD students, junior scholars and other scholars of a robust review of where the field has been, where it is now, and the directions in which it is headed. This has important implications for scholars in both their research agendas and their field-based interactions with BoP entrepreneurs and enterprise leaders.

The Business of Space: Recent Developments and Opportunities for Management Research

Organizer: **Petteri Leppänen**, *IE Business School*
Presenter: **Melissa Schilling**, *New York U.*
Presenter: **Matthew Weinzierl**, *Harvard Business School*
Presenter: **Sen Chai**, *McGill U. - Desautels Faculty of Management*
Presenter: **Raja Roy**, *New Jersey Institute of Technology*

Recent developments in the exponentially growing new space (i.e., the commercial activity in the development of space technologies and applications) have led to a rapidly decreasing cost of launching satellites and other spacecrafts into Earth orbits and beyond. Space has become relevant to a multitude of industries from pharmaceuticals to consumer goods, representing great opportunities for business and regulatory challenges for competition and common rules. Yet, the academic management community has so far used space only as an empirical setting although space technologies are strongly present in our everyday lives. Because the new space is not just another industry but a frontier that connects established industries and facilitates the creation of new ones, the proposed workshop aims to provide a platform for discussion around how new and established firms will need to adapt and develop novel space strategies to remain competitive. The workshop brings together experienced scholars to discuss the implications for theories in strategic management research, innovation, and entrepreneurship. Four panelists will share their experiences in space-related research and discuss three questions: (1) What lessons have they learned from their research, teaching, or other types of experiences related to space? (2) Is space different, i.e., do we need new theories to explain business in space? (3) What are the most interesting and relevant research opportunities for management scholars interested in space? The four presentations are followed by the opportunity for the audience to ask questions and interact with the panelists.

TIM Doctoral Research Development Workshop

Participant: **Astrid Marinoni**, *Georgia Tech Scheller College of Business*
Participant: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*

The workshop is designed as an idea-, paper-, and dissertation- development meeting for PhD students interested in technology, innovation, creativity, product development, and related topics. Students may be at any stage of a PhD program, and similarly the ideas brought to the workshop can range from initial ideas of a paper or dissertation to a fully-developed paper. The workshop will be comprised of a panel discussion of what makes quality research, as well as extensive time dedicated to round table conversations about submitted research ideas from doctoral students. Workshop facilitators will include a mix of junior, mid- career, and senior scholars whose research focus on TIM-related areas. Many of the facilitators have served as members of the TIM leadership committee or have been finalists of different TIM Awards including TIM Dissertation Award. Participation is limited to 30 students. To apply, please visit https://forms.gle/UtE1Pz71NHSRUhK26 and upload a 3-page extended abstract of your doctoral research and your resume.

Participation is limited to roughly 30 students. To apply, please visit https://forms.gle/UtE1Pz71NHSRUhK26 and upload a 3-page extended abstract of your doctoral research and your resume.

Building a Successful Mentoring Program: Insights from the Careers Division Mentoring Program

Organizer: **Hayuta Yinon**, *Oranim College of Education*
Presenter: **Hayuta Yinon**, *Oranim College of Education*
Organizer: **Vivek G. Nair**, *IIT Delhi*
Presenter: **Vivek G. Nair**, *IIT Delhi*
Session Chair: **Vivek G. Nair**, *IIT Delhi*
Panelist: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*
Panelist: **Bert Schreurs**, *Vrije U. Brussel*
Panelist: **Mami Taniguchi**, *Waseda U.*
Panelist: **Corinne A. Post**, *Villanova U.*
Presenter: **Noemi Nagy**, *U. of South Florida*
Presenter: **Kira Choi**, *EMLYON Business School*
Presenter: **Jeffrey Yip**, *Simon Fraser U.*
Presenter: **Janine Bosak**, *Dublin City U.*

In line with the main theme for this year's conference "Putting the worker front and centre", how organizations support employees is a topic of interest. One of the common effective practices for supporting employees is mentoring. Years of research on mentoring have shown that mentoring is beneficial for mentees, mentors, and organizations. As such, many AOM divisions offer support and mentoring initiatives for their members. One of these initiatives is the Careers Division Junior Scholar Mentoring Program. This is an international year-long program that is conducted virtually. It divides the participants into smaller groups of two mentors and four to six mentees. The groups meet four times a year. Guided by a detailed workbook, the mentees are responsible for setting up, leading, and summarizing the meetings. This program is unique in terms of being mentee-led, community-based, and flexible to accommodate mentees' needs during the mentoring sessions and year-long in duration, thus providing mentees and mentors with the opportunity to build long-term relationships and collaborations. In so doing, this program has become a great case study for all AOM divisions to learn from. After two cycles of the mentoring program, the main goal of the PDW would be to reflect on its key aspects by all the relevant stakeholders (organizers, mentors, and mentees) and to gain insights for improving future cycles and for designing similar mentoring programs in other divisions.

Students as Workers: the Future of Co-ops, Internships, Apprenticeships, & Nomadic Experiences

Organizer: **David Boughey**, *U. of Exeter Business School*
Participant: **Robert Litchfield**, *Washington and Jefferson College*
Participant: **Esther Chewning**, *Northeastern U.*

Very many students undertake paid employment while studying, and for some experiential learning is a formal component of their degree. The value of these structured co-ops, internships and the like is often assumed, yet is harder to quantify. Technological disruptions, especially the potential of IA (and the alarm in some quarters caused by ChatGPT), might again ask us to consider the relevance of existing curriculum and assessment means, bringing the potential for experiential learning into focus once again, making review timely. Experiential learning has many formats, and in this workshop we'll hear about some very different approaches from the US and UK. These include institutions where experiential learning is a core component of the mission, those using year-long placements to boost graduate employability, those adopting apprenticeships schemes that invert the usual university-employer relationship, and experiential approaches at teaching intensive institutions and liberal arts colleges. Working with the workshop's participants, we'll explore the varieties of experiential learning, and question the enduring efficacy and legitimacy of this type of education, as well as confronting the conundrum of whether a student is studying business or training for business. The overarching goal is that all participants will be better informed about implementing and revising experiential schemes, and able to question their value and impact whether as an academic manager or a researcher. Placing these students "front and centre" as current and future workers enables us to better reflect on the purpose of management education.

Panelist: **Terri A Scandura**, *Miami Herbert Business School*
Panelist: **Maurice Schweitzer**, *U. of Pennsylvania*

The Organizational Behavior (OB) Mid-Career Faculty Workshop is designed for faculty members who consider themselves to be mid-career. This generally includes scholars who have earned tenure but are not yet a full professor (i.e., are at the associate-level) or the equivalent if working in a non-tenure granting institution. The goal of the workshop is to provide a forum for attendees to connect with senior Faculty Fellows to receive advice and ask questions related to navigating the challenges and opportunities of this career stage. The discussion topics will be finalized based on input solicited from attendees but potentially include: (1) administrative roles; (2) career enablers (e.g., joint appointments, sabbaticals, changing institutions); (3) enabling research (e.g., finding new collaborators, securing grants, expanding publication portfolio to writing and editing books); (4) service and engagement (e.g., department chair, center director, professional service); and (5) planning for promotion. The Faculty Fellows include a mix of senior faculty from different countries and with varied career experiences. The format of the workshop is highly interactive with a combination of both panels and small group discussions. Participation will be limited to 50 attendees who must attend in person. Pre-registration will be required. We are requesting the workshop be held on Friday afternoon.

Facilitator: **Marvin Washington**, *Portland State U.*
Facilitator: **Rongrong Zhang**, *The Chinese U. of Hong Kong, Shenzhen*

This proposed PDW continues the tenure of AOM PDWs focused on organizational stigma research. These PDWs have been held at AOM from 2016-2022 and have been facilitated by the growing stigma research community. In the last decade, there has been an increase in organizational research on stigma, stigmatization, and stigmatized contexts, which can be partially attributed to this supportive community, reenergized each year at the AOM PDW. In 2022, there were 90+ panel attendees, eight virtual roundtables, and a packed virtual discussion room, demonstrating the keen interest in stigma. In 2023, we aim to continue this success and engender rigorous, novel, collaborative stigma research among attendees. We aim to enhance our collective understanding of stigma's role in influencing organizations, identities, fields, and societies. This research PDW includes three components. First, we will offer an overview of organizational stigma research. Next, three, leading organizational scholars will discuss emerging perspectives on organizational stigma, with an emphasis on how new perspectives can enhance our understanding of stigma's implications across levels of analysis. Finally, we will facilitate eight participatory roundtables/breakout sessions across four themes, and bring established stigma scholars together with researchers interested in joining the area for discussions regarding their ongoing projects. The opening overview and expert dialogue are open to all attendees, but the roundtables/breakout sessions will each have three participants and two facilitators to encourage focused discussion. To participate in the roundtables/breakout sessions, participants will pre-register and submit a project abstract and research challenge statement to aomstigma@gmail.com by July 1st, 2023.

All are welcome to join the opening overview and expert dialogue portion of this PDW, however participation in the roundtables are limited to those who have applied with submissions and have been accepted. Roundtable participants must submit a project abstract and research challenge statement to aomstigma@gmail.com by July 1st, 2023.

The Great Resignation: Putting the People Front and Centre

Moderator: **Sanjay Kumar Singh**, *U. of Dundee, UK*
Panelist: **Arpana Rai**, *Indian Institute of Management, Udaipur*
Panelist: **Graeme Martin**, *U. of Dundee*
Panelist: **Tachia Chin**, *School of Management, Zhejiang U. of Technology*
Panelist: **Muhammad Usman**, *NUST Business School, National U. of Sciences and Technology, Islamabad*
Panelist: **Prakriti Soral**, *O. P. Jindal Global U., Sonipat, India*

The Great Resignation is a post-widespread vaccination phenomenon that has touched every industry across the globe. Millions of employees resigned from their jobs globally, which is set to accelerate. This novel phenomenon has attracted the scientific community's attention and researchers and practitioners have been investing considerable efforts to delineate the causes and effects of great resignation and preventive measures. This Professional Development Workshop (PDW) intends to discuss the drivers of the Great Resignation, its impacts, and organizational strategies to manage it with a particular focus on employees in and from the Asia Pacific region and explore critical research agendas.

Side-Hustle Entrepreneurship in Africa: Implications for Research, Teaching, and Management Practice

Facilitator: **Anastacia Mamabolo**, *GIBS / U. of Pretoria*
Facilitator: **Kerrin Myres**, *GIBS / U. of Pretoria*
Panelist: **Caren Brenda Scheepers**, *U. Pretoria Gordon Institute of Business Science*
Panelist: **Dorothy Ndletyana**, *Organisation Behaviour*

The importance of side-hustle entrepreneurship, known as income-generating business activities in addition to formal employment, is gaining traction from a scholarship perspective and entrepreneurial practice. Due to its significance and nascency in theoretical development in certain contexts, there needs to be more understanding of side-hustle entrepreneurship, especially in the African context, which is already undertheorized on general entrepreneurship. The proposed Professional Development Workshop (PDW) aims to review the development of side-hustle entrepreneurship in Sub-Saharan Africa. The PDW will explore four main themes on side-hustle entrepreneurship, thus conceptual development, teaching practices, human resource practices, and entrepreneurial leadership implications. The PDW's main sponsor is the Africa Academy of Management (AFAM), and potential co-sponsors are Entrepreneurship and Human Resources interest groups. The PDW will be face-to-face and interactive. The session will be facilitated by two experts in entrepreneurship research and practice. Their facilitation method will be integratory, creating opportunities for linkages, debates, and discussions. The selected expert panelists, including two practitioners, will briefly share their allocated topic to set a foundation for the roundtable discussions. The panelists' presentations will be followed by roundtable discussions, allowing attendees to interact with each other. More than 70% of the PDW is dedicated to peer-to-peer interactions. In addition, the PDW will make sure of Kahoot, a gamified interaction and learning platform, to determine the pre- and post-workshop impressions on side-hustle entrepreneurship. The PDW will positively contribute to AFAM's focus on showcasing business and management in Africa. Additionally, it will ignite discussions on the role of the African context in shaping and theorizing side-hustle entrepreneurship. Thus, the debates within the workshops will reveal intellectual development on side-hustle entrepreneurship, teaching methods, human resource practices, and leadership implications. These focal areas of discussion will provide theoretical implications, entrepreneurial practice recommendations, and suggestions for future research. Lastly, the insights arising from the PDW will be relevant to scholars from other interest groups and emerging markets seeking to advance side-hustle entrepreneurship.

Inclusive Approaches to Workplace Equity: Strategies for Supporting Neurodivergent Workers

Session Chair: **Helen Chung**, *Seattle Pacific U.*
Session Chair: **Mesaley Alemseged**, *Seattle Pacific U.*
Organizer: **David Dietrich**, *Seattle P*
Organizer: **Lauren Kronenberg**, *Seattle Pacific U.*
Presenter: **Kelsie Colley**, -
Presenter: **Christine Nittrouer**, *Texas Tech U.*
Presenter: **Amy Hurley-Hanson**, *Chapman U.*
Presenter: **Cristina Marie Giannantonio**, *Chapman U.*

This PDW will explore the topic of neurodiversity, a critical aspect of workplace diversity, equity, and inclusion (DEI) that is often overlooked in the broader DEI literature. Participants will be invited to explore the workplace experiences of neurodivergent individuals, discuss emergent research and organizational practices related to more fully including and supporting these workers, and generate ideas for future research and practice. Several experts in the fields of neurodiversity and disability will present current research related to the experiences of neurodivergent workers and inclusive organizational practices that can be leveraged to better support them.

ENT Doctoral Student Consortium Part 2

Organizer: **Veroniek Collewaert**, *Vlerick Business School & KU Leuven*
Organizer: **Will Drover**, *Texas Christian U.*

Designed to launch doctoral students into their research career, the Consortium brings together young scholars and experienced faculty to discuss opportunities for advancing academic understanding of entrepreneurship. As such, the Doctoral Consortium's primary objective is to help prepare students for a successful career as a researcher/professor in academic institutions of higher education. This year's program will include discussions on the challenges of pursuing an academic career, the publication process, and a host of other relevant topics. Furthermore, students will have the opportunity to receive constructive feedback about a research article on which they are currently working.

Only open to those pre-approved by the Consortium organizers.

Hybrid entrepreneurs, entrepreneurs that hold a paid job, are a large and economically impactful part of the entrepreneurial population. While studies of hybrid entrepreneurship have stimulated important contributions to entrepreneurship theory (e.g., on timing, entry, and uncertainty), related research has been slow to develop. Research on the context of hybrid entrepreneurs, and particularly their employers, is even more nascent. This slow development is due in part to many challenges: lack of awareness of the phenomenon in the Academy, barriers to publication, overlapping use of the word "hybrid" with scholars studying social entrepreneurship, lack of suitable datasets, lack of integration into the related broader literatures (e.g., multiple jobholding, corporate entrepreneurship, cultural and academic entrepreneurship), a lack of reconciliation with related terms (multiple-job holding, side gig, freelancing), and a perceived lack of theoretically grounded (and therefore publishable) research questions. This 75-minute PDW brings together experienced researchers active in the field, prospective researchers interested in studying hybrid entrepreneurship, and the editors evaluating their work to stimulate conversations about these challenges, spread knowledge of best practices, and ultimately proliferate more high-quality research on hybrid entrepreneurship.

Emerging Scholars Consortium (Part 2)

Session Chair: **Deirdre McCaughey**, *U. of Calgary*

Are you a junior faculty member, post-doc, or doctoral student with research and/or teaching interests in health care management? Join us for the Health Care Management (HCM) division Emerging Scholars Consortium (ESC) on Friday, August 4th in Boston, where a diverse group of outstanding faculty will facilitate a highly interactive series of sessions geared towards emerging health care management scholars. In addition to the content, the ESC's highly collaborative format is a fantastic opportunity to create relationships with other HCM emerging scholars from around the globe. Many long-time HCM members attest to the ESC as an origin for major research collaborations and employment pathways. HCM Emerging Scholars Consortium day will be divided into individual sessions, so you may attend one or all. We have also built "hallway time" into the schedule, which is time between sessions where people can meet informally. Normally the consortium content is curated for students and junior faculty, however, everyone is welcome to attend any session!

As global economic competition becomes increasingly innovation-driven, policymakers in both government and business are actively searching for ways to increase innovation across industry sectors, particularly as it relates to tech startups. Past research on innovation policy tends to take a piece-meal investigative approach with focus on a single or narrow-set of explanatory variables, resulting in limited or ineffective policy recommendations. The proposed PDW seeks to develop a programmatic, cross-national research agenda to investigate the respective roles of a nation's formal and informal institutions, knowledge infrastructure, and firm capabilities in affecting innovative performance at multiple levels of analysis (country, region, city, company, individual). The session will be highly interactive with keynote speakers, panelists, and participants engaging in small group discussions to develop an agenda for future research with aim to form a global network for follow-on collaboration.

Teaching in No Time: Strategies for Efficient, Effective, and Excellent Teaching

Facilitator: **Trevor Foulk**, *U. of Maryland R.H. Smith School of Business*
Facilitator: **Nicole M. Coomber**, *U. of Maryland*

Teaching effectively is the key to promotion and tenure for many faculty. Yet the time spent teaching can also become a burden, as faculty at all levels have taken on more students and more courses. In this workshop, we will discuss three strategies for being both effective and efficient in the classroom. These strategies will be presented by two award winning faculty who consistently receive high student evaluations, and who have significant responsibilities in research and service. We will review the simple yet effective techniques creating repeating patterns, being hyper responsive to students, and automating grading. We will facilitate faculty in brainstorming how they can incorporate these techniques into their own classrooms.

Understanding the Role of Non-Tenure Track Professors

Organizer: **Natalie Liberman**, *Indiana U., Bloomington*
Organizer: **Erik Gonzalez-Mule**, *Indiana U.*
Panelist: **Jennifer Dinger**, *Indiana U. - Kelley School of Business*
Panelist: **P Roberto Garcia**, -
Panelist: **Sheryl Walter**, *Indiana U. - Kelley School of Business*
Panelist: **Will Geoghegan**, -
Panelist: **Andrew Hosmanek**, *U. of Iowa*
Panelist: **David Lanier Major**, *Carnegie Mellon U. - Tepper School of Business*

The number of terminally trained (i.e., holding Ph.D. or equivalent degrees), non-tenure track (NTT) teaching-focused professors working in American business schools and universities has grown dramatically in recent years. Despite this growth, there is little guidance available to scholars interested in pursuing career paths as NTT professors, including information on the various types of NTT professor positions in business schools, possibilities for long-term career growth, and strategies for pursuing a career as NTT professors. Accordingly, this PDW is designed to provide a deeper understanding of what it means to be an NTT professor and to provide guidance on the aforementioned career issues. Our panel is comprised of NTT professors at different stages of their careers with a variety of areas of expertise (including Organizational Behavior and Human Resource Management, Strategy, International Business, and Entrepreneurship) from different universities, and includes faculty in administrative roles. The discussion will be moderated by an Associate Department Chair who is closely involved with hiring NTT professors and who works with NTT professors on their career development. In the panel, we will discuss our journeys to becoming NTT professors, with a focus on the different career paths that our panelists took which ultimately led them to careers as NTT professors. We will then open the floor to PDW participants with a moderated panel discussion and Q&A aimed at providing career guidance to aspiring NTT professors.

Four Yogic Pathways of the Bhagavad Gita for Workers in Pandemic Times

Session Chair: **R Ray Gehani**, *The U. of Akron*
Participant: **Anil K. Maheshwari**, *Maharishi International U.*
Participant: **Satinder Dhiman**, *Woodbury U.*
Participant: **Scott Myers**, *Good Place Myers Industries*

Two key challenges confront us today in pandemic turbulent times. How has the COVID-19 global pandemic significantly disrupted and altered the ethics of workers and workplaces in our turbulent times? And, how can organizational leaders and workers adapt or innovate their actions and workplaces to face their new persistent challenges? A wide variety of responses have been observed. LEVINSON (2020) investigates the extent of price gouging amid the pandemic. Others have explored if it is morally legitimate to stockpile essential resources, raw materials, and supplies, or should the leaders share these empathically with others? FRIEDMAN (2020) sought common ground that we can seek and pursue in and beyond a pandemic. These seismic shifts demand innovative fresh new approaches to lead our workers' actions, and to re-architecture our workplaces. With the engagement of our AOM participants, our shared purpose for this exploratory professional development workshop (PDW), is to collectively translate some key lessons of GITA in ancient times, to our day-to-day workplaces today in 2023 in the context of an enterprise or a university of higher education. In this timely and innovative PDW we, with our PDW participants, will be taking a scriptural path, by drawing lessons from the ancient Indian text par excellence, the Bhagavad Gita (c.800 B.C.). We present and then collectively explore how four yogic pathways proposed in BG can guide our workers and workplace in turbulent times. Their implications will be examined. KEYWORDS: The Bhagavad Gita, Karma Yoga, Gyan Yoga, Dhyan Yoga, Bhakti Yoga, Covid-19, global pandemic, workplace spirituality

Welcome to an exciting exploration of Four Yogic Pathways to Enloghtenment! No additional Fee required - Enjoy. No Pre-approval required - ALL are invited and welcome. Preferred Presentation Day: Saturday AUG 5, PM.

Publishing Inductive Qualitative Research in Prominent Academic Journals

Host: **Quy Nguyen Huy**, *INSEAD*
Panelist: **Julia DiBenigno**, *Yale School of Management*
Panelist: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*
Panelist: **Davide Ravasi**, *UCL School of Management*

This PDW workshop is aimed at fostering information exchange among practitioner scholars interested in publishing inductive qualitative research in prominent academic journals. Practitioner scholars are individuals who pursue rigor in their research process and output as well as produce knowledge that is useful for improved managerial practice. This PDW has been offered for many years now and keeps attracting hundreds of scholars each time. The content offered is not predetermined and varies every year depending on the audience's questions and evolving norms in the field. The workshop will feature scholars with a track record of publishing qualitative research in premier journals. The goal will be to build help practitioner scholars to disseminate their ideas through prominent journals, while still encouraging these scholars' focus on managerial relevance. The conference presenters will lead exchanges around topics such as understanding the expectations of premier journals; conducting a literature review; designing data collection and analysis processes; selecting and working with co-authors; writing a first research draft; refining a manuscript before journal submission; and dealing with the editor and reviewers during the review process.

Qualitative Comparative Analysis (QCA): A Set-Analytic Approach to Studying Configurations

Organizer: **Johannes Meuer**, *KLU Hamburg*
Organizer: **Ruth V. Aguilera**, *Northeastern U.*
Organizer: **Donal Crilly**, *London Business School*
Organizer: **Peer Fiss**, *U. of Southern California*
Organizer: **Santi Furnari**, *City, U. of London*
Organizer: **Thomas Greckhamer**, *Louisiana State U.*
Organizer: **Rodney Lacey**, *Arizona State U.*
Organizer: **Joanna Tochman Campbell**, *U. of Cincinnati*
Organizer: **Vilmos F. Misangyi**, *Pennsylvania State U.*

During the past decade, interest in set-analytic methods such as Qualitative Comparative Analysis (QCA) and configurational thinking in management research has grown exponentially. QCA's more widespread use has been driven by both growing scholarly interest in capturing causal complexity as well as improvements in its methodological application and software. By now, QCA has become a more established approach in management researchers' toolbox. Given the feedback from previous years' PDWs, we have designed this year's proposed PDW to serve the needs of three different audiences. Part 1 serves management researchers and practitioners with no (or only little) knowledge of, and experience with, QCA who want to learn the basic "nuts and bolts" of QCA and understand if this might be the right tool for their research project. Part 2 serves more advanced management researchers and practitioners interested in current methodological issues and advances in QCA. Part 3 serves all participants who seek to discuss their ongoing QCA research with other participants and the experienced PDW organizers. Participation in this PDW is open to all conference attendees and requires no registration except for Part 3, for with researchers should submit an extended abstract. Participants who wish to receive a list of recommended pre-readings and resources may contact Johannes Meuer (johannes.meuer@the-klu.org) before the meeting.

Microhistory in Strategy, Entrepreneurship & Innovation

Speaker: **Rajshree Agarwal**, *U. of Maryland*
Coordinator: **Jay Habegger**, *U. of Maryland R.H. Smith School of Business*
Speaker: **Andrew Hargadon**, *U. of California, Davis*
Speaker: **David A. Kirsch**, *U. of Maryland*
Speaker: **Lamar Pierce**, *Washington U. in St. Louis*
Speaker: **Mary Tripsas**, *U. of California, Santa Barbara*
Speaker: **Daniel Wadhwani**, *U. of Southern California*

Microhistory isn't vignettes or anecdotes, and it's more than a case study. We bring together microhistory theorists with history-engaged scholars to explore the application of microhistory to contemporary managerial research questions in strategy, entrepreneurship, and innovation.

How to do An Effective Peer Review: A PDW for Early Career Researchers

Presenter: **Gloria Barczak**, *Northeastern U.*
Presenter: **Abbie Griffin**, *U. of Utah*

Peer reviewing is an essential component of the academic research process. As noted by Tsang (2013), "A competent, well-crafted review provides constructive comments that help authors to strengthen their paper, regardless of whether the paper is eventually accepted for publication" (Tsang, 2013, p. 168). Unfortunately, most PhD students and junior faculty have not received formal training in how to do an effective peer review: they learn by the trial and error of doing or by working with their advisor who is likely to be an experienced reviewer, though not necessarily a good one (Tsang and Frey, 2007; Smith, 2006). Raelin (2008) argues that more workshops on crafting peer reviews should be conducted for early-stage academics. This workshop is designed to provide an interactive experience for early- career researchers to enhance their skill at delivering high quality, professional, and constructive reviews to academic peers. This 2.5- hour workshop will be divided into two parts. The first part will cover why reviewing is important and why high-quality reviewers are needed, the definition of a high-quality review, how reviewing benefits one's research and career, the expectations (5 R's) of high- quality reviewers, and a reviewing template to guide one's review. The second part of the workshop will focus on facilitated evaluation and discussion of a manuscript submitted for publication consideration to demonstrate the principles covered.

All participants need to register for this PDW as about 2 weeks prior to the workshop, we will send an anonymous paper to all registrants. Registrants need to read and prepare reviewer comments on the paper which will be discussed in the 2nd half of the workshop. To register for this PDW, please email g.barczak@northeastern.edu with your name, email address, academic level, and affiliation.

Experimentation for Future-Making

Organizer: **Stefano Magistretti**, *Politecnico di Milano*
Organizer: **Jeanne Liedtka**, *U. of Virginia*
Organizer: **Claudio Dell'Era**, *Politecnico di Milano*
Panelist: **Alfredo De Massis**, *Free U. of Bolzano, IMD Business School and Lancaster U.*
Panelist: **Dimo P. Dimov**, *U. of Bath*
Panelist: **Gerda Gemser**, *Faculty of Business and Economics, U. of Melbourne*
Panelist: **Jelena Spanjol**, *Ludwig Maximilian U. of Munich (LMU)*
Panelist: **Marcelo De La Cruz**, *Ludwig Maximilian U. of Munich (LMU)*
Panelist: **Nico Klenner**, *Aalto U.*
Panelist: **Silvia Sanasi**, *Free U. of Bozen-Bolzano*

Experimentation is often adopted to answer current market needs and opportunities (Augustine et al., 2019) to test different options and increase the probability of success (Kindermann et al., 2022). What if we adopt experimentation for future-making? What might be the role of experimentation in crafting a desirable future for our society and tackling grand challenges (Gümüsay and Reinecke, 2022)? Research on the role of practices and approaches to future-making, such as narratives (Rindova and Martins, 20221), languages (Liuberte and Dimov, 2021), and artifacts (Thompson, 2018), is growing. Nonetheless, we know little about the role of experimentation (Thomke, 2020) in future-making (Wenzel, 2022). This session explores how experimentation can be developed as an organization-wide capability for the creation of desirable futures and how managers and scholars from across disciplines can and should adopt such an approach in their endeavors. In light of this year's theme on the inclusion of workers, as well as management, in our teaching and research, we want to highlight the challenge of translating strategic organizational capabilities into new behaviors at the front-line. We plan to accomplish this by bringing together a collection of scholars, each well-recognized in their own field, to share their perspectives, with a goal to identify collectively opportunities to work together across disciplines.

Mentoring Students Online: Best Practices and New Horizons

Organizer: **Mai P. Trinh**, *Arizona State U.*
Panelist: **Stacy Lyn Astrove**, *U. of Delaware*
Panelist: **Robert Chico**, *U. of Washington, Seattle*
Panelist: **Christine Dongell**, *Arizona State U.*
Panelist: **Chantal Van Esch**, *Cal Poly Pomona*
Panelist: **Esther Sackett**, *Santa Clara U.*
Panelist: **Sophia Rose Thomas**, *Texas Tech U.*
Panelist: **Mai P. Trinh**, *Arizona State U.*
Panelist: **Tejal Wagadia**, *Arizona State U.*

Recent increases in online enrollment in leadership, business, and management classes have raised questions about how to effectively mentor students online, whether in formal capacities such as thesis or dissertation advising or in other informal capacities. Student characteristics, contexts, needs, program specifics, available tools, and technologies are all important factors to consider. In this professional development workshop, we bring together a faculty panel and a student panel. Faculty panelists will share their experience mentoring undergraduate and graduate students in online contexts, best practices in mentoring, and thoughts on what is coming in the future of management education. Student panelists will share their needs regarding online mentoring and what have worked for them. Participants will walk away with a strengthened understanding of the mentoring process in general as well as specific tips and tricks that they can implement immediately with their students.

Distinguished Speaker: **Martin Ruef**, *Duke U.*

Some 'extraordinary new companies' – at least in terms of business results, e.g., Uber, Airbnb, Tesla, ByteDance, and others – dominate our economies and have definitively changed our lives thanks to their disruptive products and services. According to their performance and some inner features, these high-growth start-ups have been named 'unicorns', 'gazelles', or taken another biological label (narwhals, dedacorns, zebras, etc.) to define their business anatomy. Should these 'new entrepreneurial species' be considered just as new organizational forms, or are they a new paradigm in the history of entrepreneurial evolution? This PDW aims to discuss this question and provide tentative theoretical and methodological answers for investigating this 'entrepreneurial zoo', its historical roots, and its prospective future. We use a format of discussion/lecture to encourage scholars to discuss such a topic.

Navigating Business Schools Without a Business Background… Mission (Im)possible?

Organizer: **Richard Longman**, *The Open U., United Kingdom*
Organizer: **Paulina Segarra**, *U. Anáhuac México*
Participant: **Florence Villeseche**, *Copenhagen Business School*

Careers in Business Schools (or equivalent) often presuppose that professors have business-related backgrounds; however, we know from our own experience that this is not always the case. In this workshop, we bring together scholars with unconventional backgrounds and scholars who have taken a more mainstream career path. In doing this, we are enhancing inclusivity by raising awareness of scholars with unconventional backgrounds and foregrounding how their experiences bring richness to business schools, academic teams, publications, projects, and teaching. Our aim is to show scholars who have chosen a career in a Business School, despite an unconventional background, that they are not alone in their academic journey. This will create a sense of community and, potentially, a support network as well as exploring how alternative academic journeys can be supported (or stymied) by scholars who have taken a more conventional route.

Panelist: **Susana Correia Santos**, *Rowan U.*

Over the past few centuries, the peer review process has supported the production of rigorous scientific knowledge within the business and management academic community worldwide. Despite its undeniable utility, frustrations over the nature and outcomes of peer reviews still persist among scholars. In line with the theme of this year’s conference, we wish to shed light on the role of the reviewers in the peer review process. The purpose of this professional development workshop (PDW) is to prepare junior scholars – late-stage PhD students and early career entrepreneurship scholars– to become excellent reviewers by making explicit the main rules of high-quality peer reviewing in the best journals and by sharing best practices of writing review letters. We realize this purpose by: (1) addressing some of the critical shortcomings experienced by scholars over the peer reviewing process, (2) creating an open forum in which both junior and senior scholars could share their thoughts and experience regarding the peer reviewing process, and (3) establishing a strong Community of Practice (CoP) for writing peer reviews to which scholars affiliated with a range of journal outlets could contribute. Editors in chief, associate editors and action editors from nine entrepreneurship journals namely, Entrepreneurship Theory and Practice, Entrepreneurship and Regional Development, International Small Business Journal, International Journal of Entrepreneurial Behavior and Research, Journal of Business Venturing, Journal of Developmental Entrepreneurship, Journal of Small Business Management, Small Business Economics, and Strategic Entrepreneurship Journal have agreed to serve as panel members and mentors in this session.

Part 1 - All are welcome. Part 2 - round table interaction with a panelist, by prior registration only.

Participant: **Rene Bakker**, *Erasmus U. Rotterdam*

In this professional development workshop (PDW), we explore the topic of entrepreneurship and race, with particular, though not exclusive, attention to underrepresented minorities (URM), those with a disproportionately low presence in positions of power and status (i.e., African, Hispanic, and Native Americans). Although we explicitly attend to race in North American contexts, which are particularly racialized, racial hierarchies are present in most multiethnic societies. This PDW will introduce the audience to an important yet distressingly neglected area of research and provide the audience an opportunity to discuss pre-submitted extended abstracts with editors from top entrepreneurship journals. The ultimate goal we have for this PDW is to encourage a broad research agenda on race and entrepreneurship that captures both the structural qualities of marginalization and the agentic qualities of entrepreneurship.

This PDW will allow division members to participate in research discussions moderated by accomplished HR scholars, as well as network with other scholars researching similar topics. Attendees will have an option to participate in two 40-minute roundtable discussions from a variety of research areas. The tables research themes span a range of 17 HR topics: Alternative Work/Work Arrangements, Compensation, Diversity, Global HRM, HR & Entrepreneurship, HR Analytics, Leadership & Followership, Legal Issues (safety, discrimination, harassment), Onboarding & Socialization, Organizational Culture & Climate, Performance Management (performance appraisal and feedback), Recruitment/Job Search, Selection/Staffing, Sex & Gendered Work Disparities, Stigma and Status, Strategic HR, and Turnover/Absenteeism/Withdrawal.

Contributions of Workers/Employees in Making an Enterprise Sustainable

Participant: **David Horan**, *Trinity Business School, Trinity College Dublin*
Participant: **Silvester Ivanaj**, *ICN Business School*
Participant: **Vera Ivanaj**, *Institut National Polytechnique de Lorraine*
Participant: **John McIntyre**, *Georgia Institute of Technology*
Participant: **Raymond Saner**, *CSEND research SDGs RBC*
Participant: **Lichia Saner-Yiu**, *Centre for Socio-Eco-Nomic Development*
Participant: **Irena Zubcevic**, *Stakeholder Forum for a Sustainable Future*
Participant: **Jan-Gustav Strandenaes**, *Stakeholder Forum for a Sustainable Future*

It is widely recognized that sustainable business requires meaningful engagements with a wide range of stakeholders – internal and external – to effectively contribute through partnerships to address the complex challenges posed by the SDGs (van Tulder, 2022; Yiu et al., 2020; Stibbe and Prescott, 2020; Saner and Yiu 2022; Horan 2022, 2019). To be effective SDG contributors and partners, enterprises need to leverage the full range of organizational resources – networks, supply chains, workers/employees – to become sustainable (Voegtlin et al., 2022; Maak et al., 2016). This panel will focus on the workers/employees channel – their internal/external engagements - and how enterprises can generate partnerships with stakeholders in the interest of inclusive, transparent, just and sustainable solutions. For instance, workers through their external engagements, defined here as any work-related or private activity with an external organization at local, national or international level, including work-related placements/internships/ secondments or privately-undertaken volunteering and activism, etc., offer a potential resource for enterprises and workers/employees to contribute more effectively to the SDGs (Saner & Yiu, 2022; Dempsey-Brench, 2021; Rodell et al., 2016; Muthuri et al., 2009). Key questions to be addressed include: what is the nature of the resources that workers/employees hold as a result of their internal/external engagements, to what extent are company's underutilizing these resources, should management offer employees greater opportunities to engage in these activities related to sustainability, what are the risks and opportunities involved in doing so, what types of partnerships between managers, workers and employers could contribute most to corporate sustainability and the SDGs.

Panelist: **Katja Einola**, *Stockholm School of Economics*

Workplaces are changing rapidly, and so are concepts of work. Work is increasingly organized beyond the boundaries of individual organizations, shifting the attention from traditional hierarchies to ecosystems of work and organization. This poses a challenge for human resource management and corporate strategy. In this workshop we will be developing theoretically rigorous and practically relevant collaborative research projects to address the ecosystem of work and organization from multiple theories, fields, and levels of analysis. We will break the group into three sub-groups to work on developing an agenda for the following three research topics: (1) technological mediation – Technological developments and digital online platforms influence the way tasks are designed, improving the robustness of information and data analytics, facilitating the relational exchanges that underlie collaboration, and altering the configuration of organizations. Technology is no longer seen simply as an add-on or enhancement of work; it is increasingly influencing how work gets done. (2) impermanence and adaptation – Traditional models of strategy and organization have emphasized the achievement of protected positions of differentiated value that cannot be competed away. While these time-honored frames have been useful, they are less compelling in environments of continuous change where innovation and agility are key to value creation. (3) shared governance – In contrast to traditional governance models of centralized and hierarchical authority, workforce ecosystems reflect a more democratized approach that involves mutual influence among related parties in the key decisions about how they operate, requiring a renewed focus on shared purpose, transcending traditional notions of organizational purpose.

We share a range of insights from positive organizational scholarship to enhance management teaching and learning (Cameron & Spreitzer, 2012; Cameron, Dutton & Quinn, 2003). We highlight approaches to strengthen relational dynamics to improve educational outcomes and focus on strengths and resilience to foster learner growth. This session is designed to equip colleagues with actionable practices they can use and adapt. We have also designed a highly interactive opportunity for discussion where attendees can identify challenges and opportunities to infuse positive organizational scholarship into their educational practice. The POS lens in the classroom has been a revitalizing force in management education and discussion and exchange of these practices can enliven management educators and support innovation in management teaching and learning. The workshop uses a roundtable design to allow attendees to select multiple roundtables of their choosing during the workshop. The roundtables focus on themes of relationships (how to more skillfully and mindfully communicate and coordinate) as well as how to use strength and virtue-based approaches to improve and teach about leadership. Roundtable leaders include David Bright,Wright State University; Corey Crossan, Mary Crossan, Cassie Ellis, University of Western Ontario; Mary Dunn, St. Edwards University; Jody Gittell, Brandeis University; Darren Good, Pepperdine University; Lauren Hajjar, Suffolk University; Chris Lyddy, Providence College; Ninna Meier, Aalborg University. Tim Peterson, North Dakota State University. Marc Lavine, University of Massachusetts Boston, is the organizer.

Entrepreneurial Cognition PDW

Organizer: **Kristian Johan Sund**, *Roskilde U.*
Organizer: **Jacqueline Csonka-Peeren**, *Entrepreneurship*
Organizer: **Sergei Mozheiko**, *Roskilde U.*
Panelist: **Denis A. Gregoire**, *HEC Montreal*
Panelist: **Yuliya Snihur**, *TBS Education*
Panelist: **Erkko Autio**, *Imperial College Business School*

Are you a doctoral student or faculty member who studies cognition within the context of entrepreneurship and is looking for ways to connect with other similar researchers? The Entrepreneurial Cognition PDW returns for a fourth consecutive year. The Entrepreneurial Cognition PDW will be conducted in two parts — a series of Pecha Kucha-style paper presentations followed by a best paper award ceremony, and a moderated panel discussion. A call for papers will be announced in May 2023, whereby 10 papers (5 faculty-led, 5 student-led) will be pre-selected for presentation at the PDW. The Kauffman Foundation has graciously funded 2 best paper awards of $1000 each for the best student-led and faculty-led papers. An established group of scholars in the field of entrepreneurial cognition will act as judges, and then in the second part offer their own insights into the past and future development of this topic. Finally, a small reception, again sponsored by the Kauffman Foundation, will allow participants and attendees to connect. Again this year, we plan for this to be an exciting PDW with a lively, interactive, and developmental atmosphere.

Participant: **Wendy Tate**, *U. of Tennessee*
Participant: **Diego Alfonso Vazquez**, *Portsmouth Business School*
Participant: **Jose Ignacio Pineda-Mendoza**, *U. Privada San Juan Bautista*

This PDW is designed to expose management scholars from the ONE division and other AOM divisions (e.g., OSCM, SIM, STR, OMT, PNP, ODC, ENT, CMS, and AFAM) to the opportunities for research examining the circular economy (CE) and biodiversity. CE is an alternative to traditional, linear systems that use natural resources indiscriminately; it emphasizes reducing waste and pollution, reusing materials, and regenerating nature. Biodiversity management research is complementary to this area of research, yet there is little headway being made in advancing the connection between these two streams. The first part of the PDW will provide a basic overview of the field, including examples of ongoing research at the intersection of CE and biodiversity. Then, the PDW will progress to a round-table and open discussion format to discuss challenges, identify unexplored questions, and pinpoint opportunities for collaboration on CE and biodiversity research. This PDW will conclude with a reflection on discussed topics.

What Constitutes Data (Un)Conventionality? An Interactive PDW on Unconventional Archival Data

Organizer: **Devin Burnell**, *Neeley School of Business - Texas Christian U.*
Organizer: **Christi Lockwood**, *U. of Virginia - McIntire School of Commerce*
Organizer: **Alex Michael Murray**, *U. of Oregon*
Panelist: **Mary Ann Glynn**, *Research Associate, Harvard U. Sociology*
Panelist: **Jeffery S. McMullen**, *Indiana*
Panelist: **Henning Piezunka**, *INSEAD*

Unconventional sources of archival data include novel and unorthodox sources of information that exist in the world and can be used to build, elaborate, and test theory in management, organizational, and entrepreneurship research. While some researchers have thrived in identifying, accessing, and using unconventional sources of archival data, other researchers may find this research approach relatively opaque. We propose a PDW in which management scholars from various disciplines come together to unpack the black box of data (un)conventionality and the identification, access, and use of unconventional archival sources, samples, and settings.

Endogeneity: Myths, Legends, and Facts – Third Annual

Organizer: **Elle Hyunjung Yoon**, *Iowa State U.*
Organizer: **Daniel Gamache**, *U. of Georgia*
Panelist: **John R. Busenbark**, *U. of Notre Dame*
Panelist: **Aaron Hill**, *U. of Florida*
Panelist: **Matthew Semadeni**, *W. P. Carey School of Business, Arizona State U.*
Panelist: **Sarah Wolfolds**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*

Management scholars are increasingly concerned about biases in empirical analyses from endogeneity. When endogeneity is present, any model that does not account for the source of endogeneity will provide biased coefficient estimates. Thus, scholars strive to address endogeneity concerns in their research. Yet, scholars do not share a common understanding of endogeneity and often implement questionable solutions in response to their perceived concerns. Our target audience is Academy members who lack confidence in dealing with endogeneity or who want to improve their methodological 'tool kit.' This PDW will provide a learning opportunity about different topics related to endogeneity and how to address it correctly. To do so, we explore the myths, legends, and facts about endogeneity. The PDW will be divided into two parts. Part 1 consists of a selection of presentations on different issues related to endogeneity. Specifically, Dr. Sarah Wolfolds will discuss instrumental variables and the Heckman model, Dr. John Buesnbark will discuss internal/synthetic instruments, Dr. Matthew Semadeni will discuss the importance of using theory to help address endogeneity, and Dr. Aaron Hill will share editor's view of endogeneity in the field and discuss the best practice we can apply moving forward. In Part 2, the panelists will answer questions from the audience, from which we will facilitate a scholarly conversation about their views on endogeneity. With this PDW, we hope scholars will understand endogeneity better and learn when and how to account for endogeneity in producing high-quality, credible, and replicable scientific research.

New Data and Methods In Strategic Management Research

Organizer: **Arianna Marchetti**, *London Business School*
Organizer: **Viktorie Sevcenko**, *INSEAD*
Panelist: **Paul Vicinanza**, *Stanford Graduate School of Business*
Panelist: **Milan Miric**, *U. of Southern California -Marshall School of Business*
Panelist: **Daniel Fehder**, *USC Marshall School of Business*
Panelist: **Lynn Wu**, *The Wharton School, U. of Pennsylvania*

Based on the very successful attendance we experienced at AoM 2021 and 2022 (100+ attendees), we propose a third edition of this PDW, which aims to expose researchers in strategic management to novel and cutting-edge data and methodologies to address relevant questions in the field that are still missing an answer often due to empirical limitations. In this year's edition of the PDW, we focus on showcasing novel datasets and empirical approaches that can help researchers address issues related to competitive strategy, innovation, and executives' behaviors and preferences. The first part of the PDW will focus on presentations by the invited panelists, who will showcase the use of novel data and methodologies within specific research projects. This year, we will also feature a co-editor from the Strategic Management Journal, to share her reflections on the peer-review process for papers that leverage novel methods and data sources. The panelists' presentations will be followed by a Q&A session with the audience and by a series of roundtables where participants can interact among each other and with the panelists and discuss ongoing research projects. With this PDW, we aim to create and nurture a community of scholars interested in using cutting edge methods and novel data sources to advance our understanding of fundamental questions in management research. We have thus compiled the content of past editions of the PDW on a website (https://newmethodsanddata.com/), which we will make available to the broader AoM community in due time, to stimulate a fruitful conversation around the topic.

Women and Under-Represented Minorities in High-Growth Entrepreneurship & Innovation

Organizer: **Ming Zhu Wang**, *U. of Washington*
Organizer: **Amisha Miller**, *NYU Stern*
Presenter: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*
Presenter: **Sekou Bermiss**, *U. of North Carolina, Chapel Hill*
Presenter: **Melody Chang**, *USC Marshall School of Business*
Presenter: **Daniel Walter Elfenbein**, *Washington U. in St. Louis*
Presenter: **Christopher Law**, *Texas A&M U.*
Presenter: **Matt Marx**, *Cornell U.*
Presenter: **Amisha Miller**, *NYU Stern*
Presenter: **Minah Park**, *U. of Wisconsin, Madison*
Presenter: **Susan Perkins**, *NYU Stern School of Business*
Presenter: **Ethan Poskanzer**, *U. of Colorado*
Presenter: **Gauri Subramani**, *Lehigh U.*
Panelist: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*

Questions around the persistent underrepresentation of women and racial minorities in high-growth entrepreneurship and innovation contexts have drawn substantial scholarly interest in the last decade. Much of the focus envelops two inquiries: what are the root causes of these disparities, and how might they be effectively addressed? In this session, we bring together a panel of leading and rising scholars to share their recent work and diverse perspectives on these issues. The presentations will showcase areas of active research and latest empirical methodologies used to explore open research questions in this domain. Roundtable discussions will support the exploration of multiple perspectives, development of new and on-going research among participants, and promote the formation of collaborative ties among scholars at all stages of their careers.

How to Design a Consultant's Program to Train on Improvisational Skills?

Organizer: **Pierre El Haddad**, *MACH Consultants*
Panelist: **Rana Sawaya**, *U. College of BAhrain*
Panelist: **Marwa Halwani**, *MACH Consultants*
Discussant: **Mireille Daaboul**, -
Discussant: **Gabriel Habib**, *NODE Network of Organization Development Experts*

As crises in the world layer upon each other and become more frequent and brutal, organizations need to adapt to the reality that they should improvise. The objective of this PDW is to inform the design of a training program for companies and organizations who wish to enhance their improvisational capacity.

Teaching History and Fiction in a Business School

Organizer: **David Boughey**, *U. of Exeter Business School*
Participant: **Alison Truelove**, *U. of Exeter Business School*

This workshop reviews approaches to integrating business and management history into the curriculum, and presents the case for the inclusion of literary texts as sources. The presenters draw on their experiences of teaching not just conventional business history from the industrial revolution to the near past, but also how the study of business networks and communication practices as far back as the medieval period can usefully inform our understanding of contemporary commercial activity. As business schools increasingly lean towards STEM – shifting away from economics, area studies and the liberal arts – students remain interested in the storytelling that brings organisations to life. The use of case studies taps into this interest and can be augmented by judicious use of historical and literary materials to throw new light on recurring issues that resonate throughout the business world. These sources can also encourage students to appreciate the importance of context, empathy, and critical judgement: all key skills for future responsible leaders. As the UN's Sustainable Development Goals become a core driver in curriculum design, the success of our role as educators depends on a deep understanding of the past in order to better appreciate what is possible in the future. Ultimately, we argue, the liberal analytical tradition has considerable value to current business school programmes, and this workshop seeks to reassure, illustrate possibilities, and promote a creative – and perhaps even disruptive – approach to business education.

Getting Your Writing Done: Crafting a Generative Writing Practice

Presenter: **Rena Seltzer**, *Leader Academic*
Panelist: **Modupe Akinola**, *Columbia U.*
Panelist: **Michael Norton**, *Harvard U.*
Panelist: **Adam Galinsky**, *Columbia Business School*
Panelist: **Mabel Abraham**, *Columbia Business School*

Whether you are an assistant professor looking to publish your way to tenure, or a seasoned faculty member who wants to re-invigorate your writing process, this interactive PDW will support you in crafting a more productive writing practice. The workshop will be facilitated by a coach who supports professors at major research universities to accelerate their rate of writing and publishing, along with a panel of successful professors who will share concrete examples of how they craft their writing habits to get more done. Participants will also work cooperatively to plan specific strategies they will use following the conference to become more prolific writers. The program draws on research about the patterns of the most generative academic writers, ideas from positive organizational scholarship, and the experiences of scores of professors who have overcome challenges and achieved their writing goals. The format includes individual presentations, small group discussions, and large group dialogue.

Participation is limited to 75 participants. Please pre-register at this link: https://form.jotform.com/231165171012037

In this workshop we collect globally representative voices sharing research, teaching and collaboration opportunities connected with the theme of putting people front and center. We will hear about ongoing research in various areas of humanistic management such as humanistic tourism, love and organizing, wisdom and flourishing, arts and sustainability, and many other areas. We will discuss and share opportunities to transform teaching and learning via the humanistic leadership academy. We will also share various opportunities for collaboration around research, teaching and service in a global context.

Social impact of Academia – From the Ivory Tower to beyond the SDGs (Sustainable Development Goals)

Coordinator: **Adrian Zicari**, *ESSEC Business School*
Organizer: **Anne-Claire Pache**, *ESSEC Business School*
Organizer: **Mário Aquino Alves**, *FGV EAESP*
Organizer: **Armand Bam**, *U. of Stellenbosch Business School*
Organizer: **Concepcion Galdon**, *IE U. - IE Business School Madrid, Spain*
Organizer: **Daniel Malan**, *Trinity Business School, Trinity College Dublin*
Organizer: **Aarti Ramaswami**, *ESSEC Business School*

In the midst of this Decade of Action to deliver the Sustainability Development Goals (SDGs), this workshop provides an occasion for reflecting on our collective contribution as scholars, making meaningful connections among: • our research: what we research, its "so what", its impact • our pedagogy: to whom we teach, what we teach, how we teach • our citizenship: how we serve our community, voluntary projects beyond conventional roles We look for an inspiring conversation about what we should do to contribute to society from our current roles of scholars, and in some cases concomitantly, business school leaders. This workshop is the natural continuation of a fruitful conversation began in the Council on Business & Society (CoBS), a global alliance of eight business schools, dedicated to increase the social impact of academia both in research and in pedagogy. This workshop intends to expand this ongoing conversation to the larger community of scholars at the AoM. Session attendees will briefly present their reflections about their research, their pedagogy, and their different engagements in their respective business schools. Then, in roundtable discussions, session participants will discuss their experiences of impact. Organizers will strive to gently challenge, propose, and motivate participants to think out of the box. This PDW will conclude with a graphic representation to illustrate the potential paths for intitiatives in pedagogy, actionable research, and school leadership. The organizers will gladly share contact information among attendees and engage themselves in providing follow up for further discussions.

Attendance is open to all. For better organizing our PDW, we kindly invite you to register in this link https://forms.gle/sjPxyAv7o1AFRvQ2A

From Lab to Business School (2nd Edition): Leveraging STEM in Management

Organizer: **Kaushik Bagchi**, *U. Ramon Llull, ESADE Business School*
Organizer: **Raquel Pruna**, *ESADE Business School*
Organizer: **Angelo Romasanta**, *ESADE Business School*
Panelist: **Elizabeth Pontikes**, *UC Davis*
Panelist: **Luis Diestre**, *IE Business School*
Panelist: **Rembrand Michael Koning**, *Harvard Business School*
Panelist: **Jaideep Anand**, *Ohio State U.*

Scholars from science, technology, engineering and math (STEM) backgrounds are increasingly entering the field of management. However, transitioning to management is challenging as it requires a change in mindset, uses an unfamiliar language and views research impact differently. Additionally, navigating the social dynamics in the management field requires unique skills. Thus, as we attempt to launch the second edition of our professional development workshop (PDW), we aim to build upon the immensely well-received and insightful conversations of our first PDW and delve deeper into how scholars with previous science experience can surmount the challenges in transitioning to management. In this edition, we hope to go beyond discussions on how to survive and turn our focus more explicitly on how to leverage the unique opportunities that a STEM background offers to thrive in management research. With the current crisis surrounding the value and impact of management research, this PDW will also serve as an avenue to discuss the impact of management research in comparison to the tangible outcomes from laboratory work. This PDW will ultimately strive to create a supportive community for management scholars with STEM backgrounds.

Speaker: **Erika V. Hall**, *Emory U., Gozuieta Bus Sch*
Speaker: **Erika Kirgios**, *U. of Chicago Booth School of business*

The 2022 All-academy theme, putting the worker front and center, highlights the imperative for management scholarship to consider changing sociocultural dynamics and focus on research that adeptly reflects the organizational landscapes we reside in. Whereas management scholarship is increasingly centered on reflecting the growing reality of the workforce, methodological hurdles burden this advancement. A clear example of this is studying intergroup biases in organizations; while scholarship understands the potential costs of bias further explorations of the phenomenon is limited due to the difficulty of measuring biases. In this professional development workshop (PDW) we focus on identifying, defining, and proposing measures to deal with sources of methodological hurdles related to measuring bias. We hope to start the conversation on best-practice study design for intergroup bias research. Moreover, this PDW will serve as a space to generate dialogue on how these methodological decisions affect the interpretation of empirical findings and implications for practice. Workshop attendees will have an opportunity to receive feedback about specific challenges related to current and future research projects from the expert panelists and other participants.

Creative-Spiritual Agency and Meaningful Work: An Emerging Theoretical Framework

Presenter: **Jeannel King**, *Saybrook U.*

Organizations tend to view creativity and innovation as performative outcomes, that is, a way of *doing* to further company goals. But employees are human *beings* who make meaning through their creativity and whose actions, decisions, and sense of purpose are guided by deeply held spiritual values. When employees are required - either explicitly or implicitly - to leave these parts of their authentic selves at the door when they go to work, employees feel less fulfilled. Workplace culture and mores may conflict with an employee’s deeply held values, leading the employee to compromise or otherwise betray that which they hold most dear. Creativity becomes a performative tool and strategy for organizationally acceptable innovation rather than a source of curiosity, joy, and experimentation for the creator. Over time and under these conditions, one’s sense of personal agency at work may erode. This lively PDW session introduces an emerging framework for creative-spiritual agency (CSA) as a personal path toward fostering meaning and well-being at work. First, guests will be introduced to CSA as a new cross-disciplinary construct in the organizational change research space. Next, guests will encounter the emerging framework as well as its context, background, and theoretical foundations. From there, guests will be engaged in a spirited discussion of the construct and emerging framework. The group will be encouraged to pressure-test the framework, ask questions, share insights, and offer suggestions for improvement.

Action Research Lab: Foundations for Putting the Worker Front and Center

Moderator: **David Coghlan**, *U. of Dublin, Trinity College*
Presenter: **Danielle Zandee**, *Nyenrode Business U.*
Presenter: **A.B. Rami Shani**, *California Polytechnic State U.*

Action research has a long tradition of involving workers and employees in generating knowledge through collaborative change (e.g., Pasmore & Friedlander, 1982). Accordingly, it offers an invaluable perspective on Putting the Worker Front and Center precisely because it engages organizational members in meaningful action and knowledge generation in a collaborative manner. One of the premises of this PDW is that action research can play an important role in addressing today's pressing issues by developing new knowledge for organizational and societal change. It does so by taking daily work as an important site of knowing. This PDW is directed to doctoral students, faculty and practitioners who undertake action research out of a desire to address 'red and hot' organizational/management challenges. Participants will be invited to focus on their own action research experiences, ambitions and questions, as a starting point of an exploration of action research principles, design choices and potentials for knowledge creation. They will leave with an increased awareness of how to undertake and/or supervise action research as a mode of impactful research while increasing understanding of how to conduct inquiry in a collaborative and egalitarian way

Tradition: Resource or Constraint? Rediscovering the Role of Tradition in Organizations

Organizer: **Innan Sasaki**, *Warwick Business School*
Organizer: **Gino Cattani**, *New York U.*
Organizer: **Simone Ferriani**, *U. of Bologna*
Panelist: **Ann Langley**, *HEC Montreal*
Panelist: **Tina Dacin**, *Queen's U.*
Panelist: **Eero Vaara**, *U. of Oxford*
Panelist: **Sofiane Baba**, *U. of Sherbrooke*
Panelist: **Laura E. Dupin**, *Amsterdam Business School, U. of Amsterdam*

This PDW builds on the recent revival of research on the role of tradition in organizations. The convoluted challenge that organizations, managers, and workers face is how to leverage traditions as a resource while simultaneously pursuing innovation and organizational renewal. Therefore, the PDW addresses the challenges that organizations face in framing tradition as a ‘resource or constraint’. Although existing research has started to address this challenge, there are many unresolved questions such as: To what extent can tradition go hand in hand with innovation? How to accommodate the renewal of a cherished tradition without stifling it? Can traditions from different cultural spheres be combined? What are the ethical considerations in using traditions?, and many more. In the first half of the PDW, we have put together five panelists with diverse backgrounds, gender, nationalities, and research contexts who have conducted theoretical and/or empirical work on how tradition shapes organizational life. After the Q&A session, in the second half of the PDW, we provide each participant 20 mins time to gain high-quality feedback from the mentors and panelists. In this way, the participants will have the opportunity to address their questions about specific issues encountered when writing/publishing their papers, exchange novel theoretical and methodological ideas, and start novel conversations that go beyond the current assumptions in the literature, setting agenda for future research.

The first half of the PDW is open to everyone. Registration is required for the second half. The deadline to register online is June 15, 2023. Extended abstracts are welcome, however, we will prioritize full-paper submissions. Extended abstracts should be at least 5 pages (excluding references) and should describe a) the purpose of the study and the research question, b) the data collection and analysis, c) an executive summary outlining the main empirical findings of the study, and d) proposed theoretical contributions. The deadline for proposal submissions is June 15, 2023. The proposal should be sent to the organizers (innan.sasaki@wbs.ac.uk; gc59@stern.nyu.edu; Simone.Ferriani.2@city.ac.uk).

Video Methods in Organizational Studies

Organizer: **Marlys K. Christianson**, *U. of Toronto*
Organizer: **Curtis LeBaron**, *Brigham Young U.*
Facilitator: **Zhike Lei**, *IMD Business School*
Facilitator: **Feng Liu**, *Saint Mary's U., Canada*

Management scholars have increased their use of video as a research tool in organizational studies. It helps them to see, understand, codify, and make sense of the strategizing process. Video methods uncover the micro-interactions of organizational actors and allow insights into actors' implicit practices that emerge in their moment-to-moment exchanges. Consistent with the interests of many divisions of AOM, video makes explicit the links between micro-dynamics and broader organizational outcomes. This PDW affords an opportunity to revisit the recent progress scholars have made using video-based research. The PDW also aims to encourage newcomers to video methods. It will help them understand the benefits and challenges of video methods and how they might use these methods in their research, include them in their teaching, spark debate in their scholarship, and generate further innovation. We aspire to co-create good practices and build a community of engaged scholars.

If you are new to the Organization and Management Theory (OMT) division, are interested in joining OMT, or are an established member who has been away for a while, then this forum is for you! This forum was created especially to help members to feel "at home" in the OMT division. We have designed the forum so that you can meet leading scholars in the OMT division, meet other new members of the division, and discuss research with other scholars who share similar interests. The forum will include a welcome and overview of the OMT Division and research discussions moderated by renowned scholars who actively conduct research in a particular area of interest.

How Business Leaders Build Stories to Change Their Organization's Culture Change and Strategy

Participant: **Jay B. Barney**, *U. of Utah, David Eccles School of Business*
Participant: **Manoel Amorim**, *MXF Investments, LLC*
Participant: **Carlos Julio**, *HMS*

Organizations where culture and strategy align outperform organizations where culture and strategy do not align. But, how do business leaders change their cultures when culture and strategy are not aligned. This session focuses on how business leaders can build stories that change their organization's culture, and the kinds of stories they need to build to accomplish this. It will include eight managers from diverse organizations who have changed their organization's culture to align it with their strategy.

Panelist: **Rosemarie Ziedonis**, *Boston U.*

Patents, and intellectual property (IP) more broadly, are not only measures of knowledge and innovation, but also institutional phenomena in their own right. Our aim in this paper development workshop (PDW) is to provoke a discussion of firms' strategic management of IP for cross-disciplinary community building. The panelists in this PDW draw from different backgrounds (e.g. law and business), use a variety of data sources, and employ diverse methodologies. We hope this diversity of observations and perspectives will foster a rich discussion. To achieve our goal, we will structure the conversation around several key topics. First, the PDW will explore how technological development and the rise of large multinational corporations (MNCs) has changed the optimal legal and institutional arrangements for IP portfolios. Second, the PDW will examine how policy coordination (or lack thereof), legal precedent, and regulatory changes across and within different IP regimes affects firms' IP strategies. In discussing these, we will also address foundational issues related to how firms value IP rights, especially in light of differences across and within jurisdictions.

Almost all business schools (99%, 481/483) in the United States (U.S.) accredited by the Association to Advance Collegiate Schools of Business (AACSB) that award doctoral degrees are classified as primarily white institutions (PWIs). Consequently, most management scholars in the U.S. learn about the three pillars of academic careers (i.e., research, teaching, and service) from a PWI viewpoint. While valuable, this perspective does not adequately represent the varied and very rewarding career paths available to management scholars in minority-focused institutions, such as the over 94 Historically Black Colleges and Universities (HBCUs) in the U.S. Accordingly, the goal of this professional development workshop (PDW) is to shine a light on career opportunities available to management scholars in HBCUs and other minority-focused institutions. Participants will hear from and engage in discussion with a diverse panel of management scholars about building successful and fulfilling academic careers at HBCUs. Topics of discussion include a better understanding of the vision and mission of HBCUs, differences in student populations between PWIs and HBCUs and how they impact teaching, and how HBCUs offer unique possibilities to make societal impacts through community engagement. By highlighting this oft-overlooked scholarly path, our PDW is valuable not only for future management scholars but also for junior faculty and perhaps even seasoned scholars who wish to develop their careers outside the dominant research-intensive (i.e., R1) paradigm promulgated by PWIs.

Global Scholar Development Workshop

Organizer: **Yuliya Snihur**, *TBS Education*

Global Scholar Development Workshop is the catalyst for the development of international scholarship. It empowers academics worldwide to better understand, navigate, and connect with the academic community of entrepreneurship scholars. During the workshop we invite journal editors from top journals that publish entrepreneurship-related research such as AMJ, JBV, ETP, SEJ, JMS, and FBR to present their journals and facilitate discussion and collaboration among attendees.

The goal of this professional development workshop is to provide a session in which attendees receive constructive feedback and advice on health care management related research projects that are in progress, but not ready for journal submission. Projects may range from early conceptual stages to later stages (i.e. writing a manuscript). Participants will receive feedback, in a collegial setting, from health care management researchers in the field on key issues attendees are facing in their projects. Participants will be matched with two research mentors based on the nature of their research project and the expertise of our esteemed panel. While this workshop is open to researchers at all stages of their career, priority will be given to early-stage participants (i.e. doctoral students and junior scholars). Each participant will discuss their research projects with each of their assigned mentors, rotating in timed increments. This workshop is highly interactive, and uses experiential learning to make a potential impact on the professional success of participants. This workshop is presently designed as for an in-person conference, but is flexible if needed can be run as a hybrid .

The Health Care Management (HCM) Division invites researchers to participate in a highly interactive, in-person research PDW during the 2023 Academy of Management Annual Meeting. Accepted applicants must have an active AOM membership and be registered for the 2023 annual meeting. The session is designed to provide researchers with all levels of experience (doctoral students, early careerists, senior scholars) with constructive feedback on their in-progress research projects, ranging from early-stage conceptualization to later-stage manuscript preparation. Each participant will discuss, one-on-one, their research projects with each of their 2 mentors, rotating in timed increments. The application form will provide an opportunity to provide a brief synopsis of the project (abstract-length) and specific aspects of their project for which they would like input and discussion. Applicants should not submit full manuscripts or presentations.

All applicants must submit an application by June 15th, 2023. To submit an application, please go to: https://forms.gle/89Mgao8RCfMeivnM9. Applicants will be notified no later than July 15th, 2023, if accepted.

Please direct any questions to Dori at dcross@umn.edu. We look forward to your participation!

Negotiating an Academic Job: Components, Strategies, and a Simulation ☯

Organizer: **Ming-Hong Tsai**, *Singapore Management U.*
Organizer: **Estelle Archibold**, *Pennsylvania State U.*
Panelist: **Michael Gross**, *Colorado State U.*
Panelist: **Nicholas Hays**, *Michigan State U.*
Panelist: **McKenzie Rees**, *Brigham Young U.*
Panelist: **Jamie L. Perry**, *Syracuse U. Whitman School of Management*
Panelist: **Dejun Kong**, *U. of Colorado, Boulder*
Panelist: **Deborah A. Cai**, *Temple U., Klein College of Media and Communication*

This PDW is open to all Academy members—including junior and senior faculty members, postdoctoral researchers, and PhD students—who would like to learn how to successfully negotiate academic job compensation packages. This session will provide a unique perspective on academic job negotiations by including panel discussions that provide information about how each side tends to view the process. One panel will comprise senior faculty who will offer information from the perspective of deans, department chairs, and other administrative roles often involved in negotiations with job candidates. Another panel will comprise relatively more junior faculty members who will shed light on the negotiation process from the perspective of job candidates based on their recent experiences moving into tenure-track and/or tenured positions. The goals of this PDF are to (1) identify components of contracts that tend to be negotiable for rookies on the job market, (2) identify components of contracts that may become negotiable for more senior hires or experienced faculty taking on a new role or responsibilities, (3) provide suggestions about strategies and tactics that candidates should use or avoid, (4) familiarize participants with the general structure of the negotiation process and how it feels to go through each part. The format will include two panel discussions, Q&A, and an experiential exercise.

Please register here: https://forms.gle/hkivScpoV5ELuJaX8

Session Type: **PDW Workshop**
Program Session: **258** | Submission: **14301** | Sponsor(s): **(CMS, SIM)**

Advancing Research on Violence and Inequality

Organizer: **Fahreen Alamgir**, *Monash U.*
Participant: **Ajnesh Prasad**, *CMS*
Participant: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*
Participant: **Kathleen Riach**, *U. of Glasgow*
Participant: **Rashedur Chowdhury**, *U. of Essex*
Discussant: **Raza A Mir**, *William Paterson U.*

This PDW aims to facilitate discussions on how to advance research on violence and its material consequences in the field of management and organization studies within a globalized context that both perpetuates segregation, sanctions, suspension and silencing in societies and thereby hinders the development and freedoms of marginalized people in the workplace and beyond. The question may arise why do we need to discuss violence? There are several reasons why such discussion is vital across geographies. First, the Global South has been experiencing an increasing number of refugees and a challenge to accommodate them by focusing on its management of poverty. Second, in the Global North, we notice how unemployment, discrimination, and psychological disorientation of immigrants and their descendants have become entrenched as structural conditions. Third, we lack theoretical and empirical ways and methods to understand and conceptualize the mechanisms that organize and perpetuate violence in organizations and around organizing. Finally, we need to identify the politico-ontological and epistemic modalities that both threaten and provide possibilities for challenging and dismantling the existence of violence. Through the workshop, we will explore the possibilities of what theory and modalities we can offer in a politically, racially and economically contested global context.

Facilitator: **Emmanouil Gkeredakis**, *IESE Business School*

The artificial intelligence (AI) revolution in academic research has been on the horizon for years. Recent advancements in tools such as the recently released ChatGPT, has spurred both excited experimentation and cautious nail-biting about how AI technology may be transforming social science research in both small and transformative ways (Agrawal, Gans and Goldfarb, 2018; Brynjolfsson and Mitchell, 2017; Hutson, 2022). Of key consideration is the "generative" nature of modern tools, resulting in highly adaptable and robust models that can be seamlessly put to work at multiple steps of the research process. While research practices have benefited from other notable technological advancements, such as video conferencing software for data collection and open source software for data analysis, recent advancements in AI are suggesting a revolutionary shift in how to conduct organizational research and what it means to be a member of the academy. In this PDW, we will first showcase multiple AI tools openly available for researchers to implement in their research practices. Then, we will break into small group conversations, led by experienced scholars, to engage in brainstorming and discussion of these tools and their impact on our profession. This workshop is intended to advance the awareness and understanding of cutting-edge AI research tools and to initiate discussion and debate regarding the limitations and transformative potential of AI in the research process.

Panelist: **Wendy J. Casper**, *U. of Texas At Arlington*

We are planning two professional development events, a consortium for junior faculty and a separate mentor-match for doctoral students. The 2023 junior faculty consortium will include a diverse mix of speaker panels and participative roundtable discussions designed to provide junior faculty with a realistic, open, and honest understanding of the tenure-track process, including: publishing diversity research; tips and takes on having impact in areas such as teaching/mentorship, research, media, and public policy; and navigating work-life balance. Participants will also have the opportunity for more personalized connections and feedback through a mentor-match to be held after the consortium (or at another mutually agreed upon time), in which participants are paired with a more senior scholar based on the participant's research interests. In addition to the junior faculty consortium, we will also run a separate mentor-match for doctoral students, giving students an opportunity to be paired with a more senior scholar based on their research interests.

Diversity, Equity, and Inclusion (DEI) in Organizations in South Asia

Organizer: **Samina M. Saifuddin**, *Morgan State U.*
Organizer: **Rana Haq**, *Laurentian U.*
Organizer: **Isis Olimpia Gutierrez Martinez**, *U. de las Américas Puebla*

"Global shifts in the geopolitical, environmental, demographic, and technological landscape are introducing unprecedented levels of uncertainty into labor markets and employment relations" (Academy of Management [AOM], 2022). The unprecedented global shift calls for greater attention to Diversity, Equity, & Inclusion (DEI) research and practices in businesses and organizations. Research on DEI has been conducted primarily on mono-cultural Western-oriented countries (Nishi & ?zbilgin, 2007; Rad, Martingano, & Ginges, 2018). However, legislative frameworks, political, societal, religious, and governance factors result in DEI practices that vary from country to country and differ from the West (?zbilgin & Syed, 2010; Klarsfeld et al., 2022). By understanding the contextual background, leadership, and management styles within which policies are formulated and devised, local and multinational organizations can better structure themselves to effectively implement DEI policies and programs designed to create a diverse, equitable, and inclusive organization for workers and employees. Thus, the PDW aims to focus on the research and practices on DEI policies and outcomes in the non-Western context of South Asia. This PDW is directly related to the AOM 2023 conference theme for this year, Putting Workers Front and Center. Through the PDW, we envision encouraging attendees to engage in DEI research and contribute to the scholarship on the South Asian region, which is otherwise under-researched. This PDW will be of interest to the Diversity, Equity, and Inclusion (DEI), Human Resources (HR), International Management (IM), and Social Issues in Management (SIM) divisions in explicating and bridging the theory-practice gap in DEI policies and practices.

Panelist: **Siyu Yu**, *U. of Michigan*
Panelist: **Le Zhou**, *Texas A&M U.*

The topic of social class has gained increasing attention from scholars across micro and macro management research as a hidden form of diversity that shapes significant inequalities in organizations and labor markets. However, while a community of scholars in organizational behavior studying social class has emerged, the communities in organization theory, strategy, and entrepreneurship remain relatively few and disparate. This PDW brings together a diverse set of scholars studying social class to stimulate cross-disciplinary discussions on the divergent approaches taken and areas for integration going forward. Two panel discussions will synthesize insights from the story behind some of the most impactful research on social class and discuss exciting recent developments and future directions on this topic. Panel discussions will be followed by roundtable sessions in which participants will receive feedback from panelists on their research ideas related to social class. Together with our audience, we aim to leave the workshop having generated impactful research questions that have the potential to stimulate cross-disciplinary scholarship going forward.

If you are interested in the roundtable sessions, we encourage you to sign up in advance here: https://survey.smith.queensu.ca/jfe/form/SV_6FIAU2wF9fmsgDQ. We look forward to seeing you at the PDW!

Exceptionalism & outliers: Advancing Theory & Policy From Power Law Distributions of Growth

Session Chair: **Daniel Richard Clark**, *Ivey Business School*
Distinguished Speaker: **Christopher Crawford**, *U. of Tampa*
Panelist: **Robert J. Pidduck**, *Old Dominion U.*
Presenter: **Veronique Ambrosini**, *Monash U.*
Participant: **Christian Lechner**, *LUISS Business School & U.*
Participant: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*
Participant: **Per Davidsson**, *Jönköping International Business School*

In support of forthcoming special issues, the following Professional Development Workshop is being provided. There is a rarified class of so-called “exceptional” or “star” or “outlier” entrepreneurs whose names are synonymous with entrepreneurial success and who have a resonating impact on future entrepreneurs long after their firms are no longer considered “entrepreneurial.” These outlier entrepreneurs stand as icons that inspire and educate the next generation of entrepreneurs; as such, their philosophies and actions are the “canary in the coalmine” for future behaviors. In this SI we seek to explore the theory and policy implications of exceptional growth performance. Be it new ventures, internationalization, financial or organizational growth, productivity, etc.; our goal is to see what we can learn from those that outperform their peers at exceptional levels. While the definition of outperformance will vary based on the distribution curve of the growth phenomena, these are the firms that represent a disproportionate amount of the net growth. The focus of this PDW is to assist authors in identifying topics, boundary conditions, data, and structure papers appropriate for submission.

The HR Division Late-Stage Doctoral Student Consortium will take place at the Academy of Management annual meeting, in-person in Boston, on Saturday, August 5th, 2023. Highlights of this year's Consortium include a free networking and dinner event on Friday, August 4th (separate submission); a keynote address by Chu-Hsiang (Daisy) Chang (Michigan State University); a presentation and panel on navigating the job search process; an assembly with editors of major journals in HR; roundtable sessions with leading scholars and educators in the field on research, teaching, and service; and a research feedback session on dissertation/research project. Ideal candidates are doctoral students who are members of the HR division, have finished all required coursework, and are on track to have their dissertation/thesis proposal approved by their supervising committee before the conference. There is no attendance fee. To participate in this session, the applicants will have to: 1) sign up for this PDW session, 2) sign up for the separate Friday night networking and dinner PDW session (session 10357), and 3) complete a pre-registration form by May 14th, 2023. In the pre-registration form, applicants will be asked to upload a 1-2 page CV with contact information, education, research/teaching interests, publications, and conference presentations for distribution to all participants. The applicant's faculty advisor or doctoral program supervisor will also need to endorse the application. Once selected for the consortium, the participants will be asked to submit their paper/dissertation (maximum of 40 pages) via the pre-registration form or via email to the PDW organizer (Tae-Youn Park; tpark@cornell.edu).

This workshop is geared toward HR doctoral students in the middle of their program. The goal of this workshop is to help these students navigate the collection of career issues that begin to emerge when students are about halfway through a doctoral program. In many PhD programs, the middle stage is critical point. Students are expected to begin the transition into independent scholars, start building professional networks, move beyond the structure of courses and exams, and develop skills as an instructor. The workshop topics are designed to help these students develop the knowledge and skills required to be successful at this middle-stage and continue their development into strong researchers and teachers. It is also a way for HR doctoral students to build connections with others and become more involved in the HR Division.

To register, please contact Dr. Crystal Harold (crystal.harold@temple.edu) and provide a copy of your CV, your affiliation, and year in your current program. Attendance is limited to the first 45 registrants.

The New Faculty Consortium (NFC) provides a developmental forum for junior faculty to interact with peers and senior colleagues about how to survive and thrive in their academic careers. The consortium is open to all HR Division junior faculty members with less than 4 years of post- PhD experience who have been recently hired to research and/or teach in HR. The consortium includes a combination of panels, facilitated discussions, small roundtable sessions and as well as the opportunity to network with peers and leading global faculty.

Despite calls to mark this the 'decade of action' and the priority of responsible leadership to take centre stage, business schools are still lagging in demonstrating that the education and learning that they foster does lead to marked improvements in action. The prospect that education itself may be responsible for the limited sense of responsibility is becoming more alarming. This is especially so, given education is heralded as central to social change necessary for sustainable development. If we are to put the worker front and centre and the manager back into management, this is a critical juncture to shift the contribution of business school education towards supporting 'human flourishing'. This PDW provides the space for the Academy membership to galvanize the redesign of the learning and education that business schools provide so that cultivating responsibility is not merely the ability to respond but also the capacity to add value – where values and actions are closely aligned to avert the perennial chasm between what is 'espoused' and what is 'in use'. This marks a new agenda in advancing learning leadership that seeks to understand the human condition and the ways in which learning needs to be supported to bring insight, collaborative inquiry and reflexivity more centrally both in the education and leadership development business schools provide. This allows a fresh understanding of why the diverse definitions and associated concepts of reflection, that are offered in the extant literature on management and leadership learning, call for a fresh positioning of reflexive practice.

This PDW addresses the 2023 AOM annual meeting theme with a doctoral consortium for practice-oriented doctorate programs such as DBA or executive Ph.D. programs, thus "Putting Practice-Oriented Doctoral Students Front and Center." The focus is on professional development by giving doctoral students tools to improve their dissertation writing and publication skills. This PDW is interactive, inclusive, innovative, energizing, and?relevant to several divisions. It provides value to practice-based doctoral students through feedback on their doctoral projects and to faculty by highlighting the impact of such programs. The takeaway for students will be actionable advice for diagnosing and solving research problems, writing their dissertations, and publishing their work. The "unique value propositions" of this PDW are 1) the inclusion of both academics and practitioners through faculty and practice-oriented doctoral students, 2) the inclusion of practice-oriented doctoral students from the USA, Europe, and China, and 3) a focus on student-driven and practice-driven outcomes. This PDW delivers novelty and originality through personalized one-on-one feedback to practice-oriented doctoral students. The PDW enables exchange between participants through the dissertation topics brought by practice-oriented doctoral students from around the globe, challenging faculty to find ways to simultaneously facilitate dissertation writing and publication as problem-solving in organizations. Finally, the PDW will be of interest to a large audience based on the prior engagement of over 100 AOM members in the 2022 and 2021 AOM meetings for the all-academy practice-based doctoral consortiums that we organized.

all AOM members from all divisions: welcome to our session !

The Fostering International Education and Research Collaborations with Underrepresented Nations PDW is intended to foster and create new diverse collaborations with colleagues around the world through sharing experiences and best practices of international teaching and research endeavors, with the inclusion of colleagues from institutions in countries of widely differing economic situations. A number of presenters in our session will be pitching collaborative projects directly aligned with the theme of this year's conference, "Putting the Worker Front and Center." Bringing together scholars and academics from nations that have been underrepresented in cross-country partnerships with those from well-funded and experienced institutions will enhance the way our discipline of Management is taught. The workshop will focus on collaborations among teachers, their students, and educational institutions and will work to locate and develop new ways and methods of collaboration among them in a situation of increasing access to information technology in developing nations. It is hoped that these exchanges will lead to future collaborations among the presenters that will be productive and successful both in teaching as well as research endeavors.

What Do Today's Executives Want to Know From Management Educators?

Presenter: **Konstantin Korotov**, *ESMT Berlin*
Presenter: **Zoltan Antal-Mokos**, *ESMT Berlin*

This PDW offers participants an opportunity to engage directly with executives from leading global companies on exploration of key challenges with which they want to get help from management educators. Forty-five managers with an average of 14 years of experience, who are also Executive MBA students at a leading business school, got together to prepare micro-vignettes with challenges related to expertise of AoM members from disciplines related to OB, STR, EMT, CAR, DEI, ODC, SIM, TIM divisions. These vignettes and related questions are offered for examination during the workshop. Participants will learn firsthand what today's executives want to know from management educators. They will be able to practice their skills of relating to the needs of managers based on their research, teaching, and consulting expertise by reacting to the questions and challenges presented. They will receive immediate feedback from a challenging audience in a safe environment of a PDW. Participant will work in an "unconference" format interacting with several groups of managers. They will get access to a collection of micro-vignettes prepared by executives that can further inspire their teaching, practitioner-oriented writing, or new research.

The Genie's out of the Bottle: Preventing Cheating, and Exploring the Creative Potential of ChatGPT

Session Chair: **Asha Rao**, *California State U., East Bay*
Panelist: **Lynn Bowes-Sperry**, *California State U., East Bay*
Panelist: **dt ogilvie**, *Rochester Institute of Technology*
Panelist: **Stacie Chappell**, *Vancouver Island U.*

ChatGPT is a variant of the popular GPT (Generative Pre-trained Transformer) language model developed by Open AI. It is designed to generate human-like text based on a given prompt, and has been used in a variety of applications, including chatbots and language translation. ChatGPT is a gamechanger that has the potential to alter the very nature of our work. In this workshop, we put ourselves, the academic workers, front and center to explore how this AI changes our profession, both how we teach and conduct our research. Faculty are both amazed and appalled by the GPT's ability to write sonnets, essays and responses to prompts used in education, as also PDW proposals like this one, all in mere seconds! This PDW will engage faculty in a hand-on exploration of ChatGPT and a discussion of course assessments, surveillance, ethics and creativity in order to develop strategies for faculty to implement in the classroom and outside. We will also discuss possible research projects with this free tool to explore questions raised because of participants experiences in this workshop.

Presenting in the Rough: Leveraging Insights from Management and the Performing Arts

Organizer: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*
Organizer: **Dejun Kong**, *U. of Colorado, Boulder*
Participant: **Mabel Abraham**, *Columbia Business School*
Participant: **Christopher Bauman**, *U. of California, Irvine*
Participant: **Ashley E. Martin**, *Stanford Graduate School of Business*
Participant: **Peter Belmi**, *U. of Virginia*
Participant: **Ashleigh Reade**, *Boston U.*

The purpose of this PDW is to bring together a group of scholars and experts from relevant fields who are interested in finding new, innovative, and compelling ways to craft and deliver presentations. This forum offers participants an opportunity to hear from both academics and performing arts practitioners, focusing on practicing and crafting effective presentations. The session will include a panel discussion, integrating insights from academics and learnings from other industries that focus on presentation skills, followed by small group discussions during which participants will have the opportunity to engage with panelists. Panelists will present on topics including how to hone in on what to present, prepare and rehearse, engage a multi-disciplinary audience, and navigate virtual and in-person settings. Separately, there will be several slots available by application to work with the practitioner coaches.

Learn Simple Yoga That You Can Do at Work

Organizer: **Tracy F. Chang**, *Rutgers U.*

Learn a series of simple and yet powerful practices that you can do during breaks at work. At the physical level, these practices exercise the muscles, lubricate the joints, activate energy nodules, and improve flexibility. At the mental level, these practices improve focus, memory, peace of mind, and intellectual sharpness. Please arrive at the workshop on time, late comers may be admitted between practices. Comfortable clothing and light stomach condition are recommended.

Brain Imaging for Organizational Research: Hands-on Training for fMRI Studies

Organizer: **George Christopoulos**, *Nanyang Business School, NTU Singapore*
Presenter: **Rongjun Yu**, *Hong Kong Baptist U.*
Presenter: **Glenn Fox**, *U. of Southern California*
Presenter: **Shengchuang Feng**, *Nanyang Business School, NTU Singapore*

fMRI Studies Co-Chairs and Organizers: Georgios Christopoulos (NTU); Rongjun Yu, Ph.D. (HKBU); Glenn R. Fox. (USC); Shengchuang Feng (NTU) Proposed primary sponsor: Organizational Neuroscience (NEU) Division Other sponsors: Research Methods (RM); Managerial and Organizational Cognition (MOC); Entrepreneurship (ENT) Abstract Functional Magnetic Resonance Imaging (fMRI) is one of the most widely used methods for cognitive and decision neuroscience, giving us the ability to record brain responses in vivo. Despite that the method is mature enough and has been very widely adopted by many disciplines, its usage in organizational research is limited. Aim of the course is to give the foundations for students to properly theorize, design and analyse their own experiments using functional Magnetic Resonance Imaging (fMRI). Specifically, the PDW will (i) introduce to basic principles of brain function (ii) analytically present basic experimental principles and designs for fMRI (iii) explain how to report and interpret results, avoiding common misinterpretations and (iv) offer a hands-on analysis of a typical experiment. Finally, (v) participants will be invited to discuss their own research questions, designs and experiments; organizers will offer verbal feedback and recommendations to participants. The PDW is interactive and built using andragogical (adult-learning) principles, open to any divisions that want to use fMRI in their research, developmental (as we offer customised advice), flexible (by including sufficient time for discussion), and offers obvious value as it significantly expands the methodological toolboxes of participants.

Please email cgeorgios@ntu.edu.sg with the subject line "AOM 2023 PDW FMRI". When the list of attendees is finalized, we will send you a link with a form to fill in to help us prepare the PDW.

Publishing in Top International Journals – Why and How?

Organizer: **Monica Sharif**, *California State U., Los Angeles*
Organizer: **Marylene Gagne**, *Curtin Uni*
Panelist: **Tomoki Sekiguchi**, *Kyoto U.*
Panelist: **Mark Learmonth**, *Nottingham Trent U.*
Panelist: **Jonathan Pinto**, *Imperial College London*
Panelist: **Hannes Leroy**, *Erasmus Research Institute of Management*
Panelist: **Claudia Buengeler**, *Kiel U.*
Panelist: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*

Publications in top-tier journals are an important means by which our work is disseminated to our colleagues, as well as improved through the review process. Such publications are additionally important for career purposes, namely for the tenure and promotion process. While many scholars are familiar with the US-based top-tier journals and consider them as a primary outlet, several international management journals have also developed a reputation of excellence. These journals have thus evolved into outlets equally attractive for rigorous and impactful research. At the same time, international journals differ from US-based journals in subtle but important ways. Awareness of these differences is important for scholars who consider these international journals as a potential conduit for their work. The goal of this PDW is to share information and have a discussion regarding publishing in top international management journals. We bring together a panel of editors/associate editors from six top international journals. Each will introduce their journal's editorial policies, as well as highlight differences between their journals and leading US-based journals. This session will combine individual presentations by panelists, a general Q&A session with the audience, and breakout discussions.

Discussant: **Isabel Villamor**, *IESE Business School*
Discussant: **Andrew Yu**, *U. of Melbourne*

The annual Organizational Behavior Doctoral Consortium is designed for late-stage doctoral students who have successfully completed their coursework, fulfilled most of their program's milestones, and are preparing to be on the academic job market. The consortium includes a mix of presentations, discussions, and interactive sessions designed to help doctoral students navigate the job market, build connections with their cohort as well as invited experts, and launch them into their academic careers. The consortium will be held in person on Saturday, August 5, 2023, from 8:00AM-6:00PM local time. The in-person program includes faculty presentations and roundtable sessions on topics such as crafting the right academic job, acing the job talk, succeeding in research and publishing from the perspective of a panel of editors, and starting or participating in effective and inclusive collaborations. We will host a networking reception after the program sessions. More than 50 faculty members have volunteered to speak and/or host roundtable discussions. Students who want to attend must be nominated by their programs and endorsed by their advisors. Selection decisions will be based on students' stage in their programs (e.g., progress on their dissertation, on the academic job market). This session is part of broader OB Division doctoral programming designed to provide attendees with support and advice related to navigating key career transitions, as well as strengthening connections among members within their cohort and other peers in the field. For other OB doctoral student resources, digital content, and off-cycle events, please visit our site here: https://z.umn.edu/OBDocProgramming2023

Participant: **Michael Parke**, *The Wharton School, U. of Pennsylvania*

How can work be accomplished while sustaining the human capital that enables it? Researchers across a broad range of subdisciplines within management have answered this question, yielding piecemeal findings (Barnes, Wagner, Schabram, & Boncoeur, in press). What could be accomplished if we as researchers were to organize our research and findings within a cohesive framework? How could our research impact society by "putting the worker front and center" in our design, execution, and dissemination of research? What would happen if scientific evidence within our field were coordinated in such a way that the tradeoffs between various subdisciplines and the relative impact of findings were presented and understood through a consistent and comprehensive lens? This participant-driven workshop addresses such questions by bringing together a vibrant group of scholars and participants and first integrating research streams into a coherent framework, then mapping paths toward more effective and impactful scholarship, teaching, practice, and administration. Workshop participants will engage these questions in a democratic manner, exploring their own streams of research, and identifying ways in which they are already contributing to human sustainability, and how we all can better advance the topic of human sustainability. As a group, we will devise a map forward to help us advance understanding (research), dissemination (teaching), and application (practice) of knowledge related to human sustainability.

Halfway There, But Now What? Advice for Pre-Dissertation Doctoral Students (15th Annual)

Organizer: **Michael Parke**, *The Wharton School, U. of Pennsylvania*
Organizer: **Lauren Rachel Locklear**, *Texas Tech U.*
Organizer: **Anna Connors Lennard**, *Oklahoma State U.*
Presenter: **Maryam Kouchaki**, *Northwestern Kellogg School of Management*
Presenter: **Gabrielle Adams**, *U. of Virginia*
Presenter: **Margaret M. Luciano**, *Penn State U.*
Presenter: **Angelica Leigh**, *Fuqua School of Business, Duke U.*
Presenter: **Kristie Rogers**, *Marquette U.*
Presenter: **Natalie Liberman**, *Indiana U., Bloomington*
Presenter: **Allison S. Gabriel**, *Purdue U., West Lafayette*

A wonderful aspect of the Academy of Management (AoM) Annual Meeting is the developmental opportunities it provides for doctoral students. For example, the New Doctoral Student Consortium helps new doctoral students begin to feel more comfortable in our field. In addition, the Organizational Behavior (OB) division sponsors a Senior Student Doctoral Consortium to help prepare more advanced doctoral students for the job market. The purpose of the “Halfway There” PDW is to bridge the gap between these consortia by providing information and advice relevant to doctoral students starting the 3rd or 4th year of their programs. “Halfway There” is designed to help these students begin establishing themselves as independent scholars. Student attendees will be exposed to a number of prominent faculty members in this PDW who will provide students with their insights on topics such as (1) launching one’s dissertation (2) crafting a research project, (3) understanding the “job market” process, and (4) accomplishing your career goals.

Rise and Shine! How to Present Your Academic Research

Presenter: **Christine Moser**, *Vrije U. Amsterdam*
Presenter: **Thorsten Grohsjean**, *Bocconi U.*
Presenter: **Alexandra Gerbasi**, *U. of Exeter Business School*
Presenter: **Dirk Deichmann**, *Erasmus U. Rotterdam*
Presenter: **Markus Perkmann**, *Imperial College London*
Organizer: **Christine Moser**, *Vrije U. Amsterdam*

With this workshop we continue our successful AOM PDW and draw attention to the importance of presenting academic research in the best possible way. In academia, presentations at conferences or during seminars are key to communicating one's work. Conference presentations are a great way to reach a large audience, and seminar presentations are often required when on the job market. Yet, presentation skills receive scant attention during PhD programs and academic careers in general. To address this gap, in this PDW we identify the best (and worst!) ways to present academic research by focusing on the content and design of academic presentations, as well as presenter skills. In addition, we will address the important role of the context, or setting, in which the presentation takes place. The presenters, who have ample experience in presenting their research in different settings and to different audiences (academic and practitioner conferences, workshops, companies, television, YouTube, radio), will shed new light on the art of presenting using illustrative data from a dedicated survey among academics. Workshop participants will gain an understanding of the important components of an academic presentation and will gain hands-on experience in applying their new knowledge. With this PDW, participants will broaden their sight and learn how to develop academic presentations that are tailored to their own discipline, preferred design style, and personal skills.

The relationship between social movements and markets has become increasingly complicated over the past decade. Our rapidly shifting socio-economic and political climate, with a looming recession, ongoing tensions over Russia's invasion of Ukraine, and the protests in Iran, has given rise to new ways of organizing. At the same time, firms have become more politically and socially involved, engaging in activities from CEO activism to more hands-on organizing efforts. Understanding the growing complexities of this relationship will require scholars to broaden their theoretical lenses and explore new contexts. In the first five years of this professional development workshop (PDW), we focused on integrating the various research lenses through which social movements and markets have been traditionally studied. Starting with last year, our new five-year focus is on how well our joint scholarly efforts address the "grand challenges" currently influencing nearly all aspects of organizational life. Continuing in that vein, this year's PDW theme is on bridging the knowledge and engagement gaps necessary for understanding these new social movements and markets dynamics, as well as increasing our impact as scholars. The objective of this year's proposal is to explore the micro foundations of the relationship between social movements and firms and to consider how we can more responsibly engage with the communities we study. We aim to increase the inclusivity of our community by inviting the participation of scholars who have not yet studied social movements and markets, but who would like to contribute to this area in the future.

The PDW will include round table discussions of research proposals addressing "grand challenges" in the areas of Climate Change, Income Inequality, Corporate Wrongdoing, Technology, Deforestation & Biodiversity, Energy, Justice, Diversity, Equity, & Inclusion, Organizational Change & Internal Movements, and Public Health. We encourage participants to submit research proposals (up-to 5 pages) in these areas. Proposals are due on June 30th. Please use this link for submissions: https://forms.gle/7UDcs8aQcgFD8zwa9

Craft & Organizations

Organizer: **Jose Antonio Cerecedo-Lopez**, *U. of Texas At San Antonio*
Organizer: **Jochem Kroezen**, *Rotterdam School of Management, Erasmus U.*
Speaker: **Innan Sasaki**, *Warwick Business School*
Speaker: **Michael G. Pratt**, *Boston College*
Discussant: **Jo-Ellen Pozner**, *Santa Clara U.*
Discussant: **Silviya Svejenova**, *Copenhagen Business School*
Discussant: **Tobias Pret**, *Illinois State U.*

We are witnessing a revival of craft in contemporary society. While craft has been equated by some with a primitive and largely obsolete mode of organizing and working, recent research has shown how craft has surprisingly reappeared to reconfigure entire sectors, with examples ranging from beer brewing (Kroezen & Heugens, 2019) and watch-making (Raffaelli, 2019) to urban services like barbering (Ocejo, 2017) and supermarket work (Endrissat, Islam & Noppeney, 2015). The appeal of craft lies in its perceived potential to create meaningful jobs in contradistinction to the disenchanted work typical of industrialized work environments (Bell, Mangia, Taylor & Toraldo, 2018; Pratt, Pradies, & Lepisto, 2013) putting the craftsperson and their craft front and center. Whilst it thus appears that craft will play an increasingly important role in society across the globe, research on the subject has been historically fragmented and marginalized. The ultimate goal we have for this PDW is to introduce the audience to the topic of craft and organizations in a way that emphasizes both its theoretical and practical significance and provide the audience with an opportunity to discuss pre-submitted extended abstracts with editorial board members of diverse management journals.

This PDW will be divided into halves. In the first half, guest speakers will introduce the topic of craft and organizations. In the second half, participants who submitt abstracts will be grouped at a table with editorial board members of diverse management journals that have affinity with craft-related research. The abstracts of those in each group will have been shared beforehand, and participants will have access and the opportunity to read all abstracts before the PDW. Each participant will have an opportunity to introduce their abstract with the rest of the table and receive developmental feedback from the editorial board member on its table. We want to provide a friendly and developmental environment for everyone interested on this line of research. We invite interested participants that are currently engaged or interested in engaging in craft and organizations research to submit extended abstracts (Max 900 words) for research on craft and organizations, both broadly defined. Submission deadline for extended abstracts is June 12th in order to categorize the themes from the abstracts and assign them to the editorial board members. Please email your abstracts for consideration to jose.cerecedolopez@utsa.edu In addition, the organizers of this PDW are planning a private workshop and meet & greet in partnership with a local craft store in Boston. If you are interested in being a part of this special event please reach out to jose.cerecedolopez@utsa.edu for more information.

Panelist: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*

We tolerate the fact that field researchers often invest years of uncertain effort to collect their data, then produce one - or perhaps two - theoretical contributions as a result. This workshop aims to develop new understanding and connections that allow field researchers to make additional scholarly use of their data through collaborative, comparative analysis across independently collected data. To accomplish this, we will bring together leading scholars with participants in an interactive format to advance perspectives on this growing area of management research. The goals of this professional development workshop are three-fold: (1) provide contemporary perspectives on leveraging independently collected field data for comparative analysis; (2) develop new research at the cutting edge of this practice; and (3) build a community of researchers who are interested in such analysis. Through presentations from a mix of coauthoring junior and senior scholars, interactive panel discussions, and roundtable breakouts where faculty and PhD students can receive feedback on ongoing research projects, we seek to advance this important, underutilized mode of scholarship while simultaneously building community.

Indigenous Research, Teaching and Collaboration in Management and Organization Studies

Organizer: **Matthew Murphy**, *U. of Victoria*
Panelist: **Francois Bastien**, *U. of Victoria*
Facilitator: **Shelley Price**, *Gustavson School of Business, U. of Victoria*
Facilitator: **Emily Salmon**, *U. of Victoria (PhD Student)*
Organizer: **Juan Francisco Chávez R.**, *Smith School of Business, Queen's U.*
Panelist: **Kiri Dell**, *U. of Auckland*
Facilitator: **Christine Woods**, *U. of Auckland*

Following a surge of new Indigenous-related research over the past decade and widespread efforts within the academe to decolonize and Indigenize research, teaching and the institution of business education more generally, this PDW aims to deepen awareness among non-Indigenous scholars of the ethics, common pitfalls, challenges, and good practices related to Indigenous research, teaching and collaboration. The workshop will also provide opportunities for Indigenous and Indigenous-engaged scholars to share and build on their knowledge, experience and professional networks. Indigenous-related research and teaching within the management academe frequently imposes Western knowledge systems and structures on Indigenous peoples and contexts. Meanwhile, as business schools seek to decolonize and indigenize the academe, they frequently employ performative and tokenistic approaches that fail to create supportive and safe spaces for Indigenous students and scholars to thrive in ways that are inclusive of Indigenous knowledge and practices. Emphasizing Indigenous agency, knowledge, relational practices and strengths, this workshop, guided by Indigenous and Indigenous-engaged scholars, will share ethical foundations, pitfalls, challenges, good practices and opportunities for Indigenous research, teaching and collaboration that is aimed at cultivating an academe that is inclusive of Indigenous students, scholars, and peoples.

How History Affects Management and Organizations

Organizer: **Christopher Marquis**, *Cambridge Judge Business School*
Organizer: **Roy R. Suddaby**, *U. of Victoria*
Organizer: **Kunyuan Qiao**, *Georgetown U.*
Discussant: **Geoffrey Jones**, *Harvard Business School*
Panelist: **Rohin Borpujari**, *London Business School*
Panelist: **Robert A Burgelman**, *Stanford U.*
Panelist: **Andrew Hargadon**, *U. of California, Davis*
Panelist: **Mary Tripsas**, *U. of California, Santa Barbara*
Panelist: **Christopher W. J. Steele**, *U. of Alberta*

Management scholars have been increasingly interested in how history and historical processes affect current organizational behaviors. Recognizing this trend, several leading management journals have recently devoted special issues to urge researchers to pursue more historically oriented work, including the Academy of Management Review, Strategic Management Journal, Journal of International Business Studies, Journal of Management Studies, Organization Studies, Strategic Entrepreneurship Journal, and Family Business Review. Despite the significant advances, scholars have also noted that much work remains to be done to realize the full potential of historical processes in management research and we still have limited and fragmented knowledge on how to leverage history to understand management phenomena. Through a combination of panel presentations by distinguished scholars with significant work on this topic and interactive round table discussions with workshop participants, we seek to bringing together a diverse group of scholars whose work helps delve into this active area of organizational research, identifies important questions and interesting phenomena in this area, and points out future directions. The proposed workshop is built on the success of last year's PDW and will likely grow into a series. It is of interest to researchers working in the areas of organization and management theory, strategic management, entrepreneurship, international management, and management history.

Facilitator: **Viktorie Sevcenko**, *INSEAD*

This hackathon aims to foster the development of macro-level research on topics associated with organization design, careers, and work performance. Participants will come together for a focused effort to collaboratively nurture a set of specific research "seeds": a research question looking for a viable empirical strategy; a bleeding edge method looking for possible applications in management research; a dataset that may be of interest for management scholars. Contributors that are experts in their respective fields kickstart the event by providing the seeds. All participants will have the opportunity to brainstorm solutions to common empirical problems and develop new research designs to tackle challenging research questions. The event involves a high level of collaboration and creativity, as participants work quickly and intensively to generate new insights or solutions. Our goal is to offer an interactive and developmental session, fostering research collaborations between scholars at different stages of their careers and from different disciplinary and demographic backgrounds.

Pre-registration is recommended for facilitating interactions during Part 2 (prospective attendees will be kindly asked to fill in a short survey on their research interests, empirical approaches, and motivations), but all AOM attendees are welcome to attend the entire PDW without pre-registration. See https://github.com/enricoforti/orgshackathon for further information and specific instructions.

Organizational Misconduct: Developing an Operations Management-Based Research Agenda

Organizer: **Rachna Shah**, *U. of Minnesota Twin Cities*
Presenter: **Finn Petersen**, *U. of Minnesota Carlson School of Management*

Organizational misconduct is generally defined as "behavior in or by an organization that a social-control agent judges to transgress a line separating right from wrong; where such a line can separate legal, ethical, and socially responsible behavior from their antitheses" (Greve et al., 2010). Numerous examples of organizational misconduct exist – Ford Pinto’s flawed fuel tank design, British Petroleum’s Deepwater Horizon oil rig explosion, and Bangladesh’s Rana Plaza explosion. These and many other similar tragedies occur because the organization and its management ignore established ethical, moral, and social norms. Research on organizational misconduct is relatively new and is being conducted by researchers in criminology, strategy, finance, and economics. These include concept and construct development type of papers which focus on describing misconduct and differentiating it from mistakes/disaster, and other similar terms (Greve et al. 2010, Tenbrunsel and Smith–Crowe 2008, Vaughan 1999). There are also a handful of empirical papers that examine conditions under which organizations misbehave, e.g., type of firms, and environmental and competitive context of the firm. Although we did not find any papers in operations management journals that invoked the notion of organizational misconduct, the definition and the concept are well-suited to operations management. For instance, delayed product recalls (Ball et al., 2018), spill and pollution accidents due to regulatory violations (Hardcopf et al., 2021, Muthulingam et al. 2022), employee injury due to safety violations (Pagell et al. 2000) lend themselves well to the Greve et al., 2010 definition. We believe that the concept is ripe enough to be examined more broadly, and systematically (Osigweh, 1989). In this PDW, we will 1) present a research framework encompassing existing literature on organizational misconduct, 2) identify the necessary elements of the definition when applied to operations management, 3) outline an operations management-based research agenda related to misconduct The PDW will consist of a short presentation to review the existing literature and the tentative framework. The remaining time will be hands-on interactive exercises where the audience will contribute towards developing the research agenda.

How to Design, Conduct and Publish High-Quality Replication Studies

Participant: **Maria Kraimer**, *Rutgers U., School of Management and Labor Relations*
Participant: **Jose M. Cortina**, *Virginia Commonwealth U.*
Participant: **Tine Koehler**, *U. of Melbourne*
Participant: **Xavier Martin**, *Tilburg U.*
Participant: **Andreas Schwab**, *Iowa State U.*
Participant: **William H. Starbuck**, *U. of Oregon*

This workshop will introduce participants to best practices on how to select studies to replicate, execute their replications, and publish their findings. Replication of prior research is a necessary instrument to establish and refine quantitative management theories. The workshop will also discuss the important role of senior scholars, journal editors, academic departments and associations to create an academic ecosystem that promotes and supports replication research. Beyond presentations and panel discussions, Q&A segments and round-table discussions will offer participants opportunities to receive specific hands-on advice and recommendations. Participation in this workshop will not require prior application.

Panelist: **Isabel Villamor**, *IESE Business School*

Interest in experimenting is fueled by an emphasis on establishing causality, which is desirable for publishing academic research in top journals. A recent methodological revolution in the social and behavioral sciences is not only changing the way in which scholars approach experimental design and data analysis, from pre-registering studies to making data and materials available on public repositories, but also raised new critical issues concerning methodological practices to achieve the rigor required in top journals. The purpose of this PDW is to elucidate best-practice recommendations and future directions for designing and conducting different types of experiments (i.e., online, laboratory, field, and quasi-experiments), with the overall goal of discussing current and future approaches for using experiments to advance theory across management fields including organizational behavior, leadership, human resources, entrepreneurship, organizational theory, and strategy. To this end, the PDW is designed to cover both methodological and statistical issues germane to conducting and publishing rigorous experiments that meet top journals' requirements as well as address emerging research trends for directing future scholarship that bridges micro-, meso-, and macro- fields of management. This PDW will also include a Q&A session to encourage questions and reflections from all participants, and an interactive session with roundtable discussions to offer pre-registered participants opportunities to discuss specific questions with the panelists.

If you are interested in participating in the second part of the session (roundtables) to discuss questions specific to your experimental research, please register here by July 23, 2023, 11 pm EDT time: https://gwu.qualtrics.com/jfe/form/SV_3VnZSmCJ2dgGtIq You will be asked to answer a short questionnaire about your research interests and indicate some issues/questions related to your experimental research that you have encountered in a project and that you want to discuss with the panelists.

Host: **Krista Pettit**, *Ivey Business School*
Host: **A. Paul Spee**, *U. of Queensland*

This Professional Development Workshop (PDW) is a forward-looking event that aims to nurture emerging topics in Strategizing Activities and Practices (SAP) scholarship and incubate nascent research projects of SAP scholars, including PhD students, early-career and senior scholars. This PDW provides an open space for discussing nascent topics, dilemmas, development and research as well as teaching ideas, which fall mostly outside the scope of other parts of the conference program. The first part of the PDW follows a Bar Camp format, where participants set the topics for three series of open round-table discussions. The second part of the PDW follows a Demo Day format, where in short, time-boxed presentations, participants can accelerate their early-stage research projects through feedback and reflection from the SAP community. Overall, Unconferencing SAP & Beyond aims for participants to jointly make sense of topical opportunities and challenges for SAP research, to facilitate the onboarding of junior scholars in the community, and to spur new connections and collaborations between participants. Furthermore, the PDW is an innovative format for the AOM meeting, as it allows for nurturing new ideas, topics, and themes on the Division/Interest Group level through serendipity and ‘structured structurelessness’.

Board and TMT Diversity: A Paper Development Workshop

Organizer: **Elena Doldor**, *Queen Mary U. of London*
Organizer: **Cathrine Seierstad**, *U. of South-Eastern Norway*
Organizer: **Corinne A. Post**, *Villanova U.*
Organizer: **Ruth Sealy**, *U. of Exeter Business School*

This PDW builds on and expands the PDW On-Boarding Diversity in Corporate Boards Research: A Paper Development Workshop, which ran successfully in 2018 and 2019 but was in hiatus during COVID years. It is designed for researchers in the field of diversity, corporate governance, and upper echelons/top management teams (TMT). The workshop's topic and format align with AOM's 2023 theme, as business elites like boards and TMTs shape worker outcomes and organizational engagement with the post-pandemic world of work. Highly experienced scholars, many with editorial experience, will mentor and provide feedback to more junior scholars on papers close to journal submission (not under review). Consideration will be given to a wide range of topics, including but not limited to studies that: (1) consider wider outcomes of board / TMT diversity beyond firm financial performance, such as sustainability, workplace diversity and inclusion, employee well-being, or pandemic-related changes to employee relations (2) develop novel explanations for how and when board and TMT diversity affects firm outcomes; (3) consider novel conceptualizations of board and TMT diversity; (4) provide international comparisons or new methodological approaches. At AOM, each paper receives detailed oral feedback from two experienced scholars, who will highlight strengths and areas for development, and address related questions. This PDW responds to calls from journal editors and review boards who increasingly highlight the beneficial role of "friendly reviews" in the publishing process and offers a unique opportunity for AOM members to receive high quality in person feedback on their work.

Crowdfunding Research: Theoretical, Empirical, and Geographical Perspectives

Organizer: **Riitta Katila**, *Stanford U.*
Organizer: **Anna Lukkarinen**, *Stanford U.*
Panelist: **Gary Dushnitsky**, *London Business School*
Panelist: **Martin Ganco**, *Wisconsin School of Business*
Panelist: **Ethan Mollick**, *The Wharton School, U. of Pennsylvania*

The purpose of this PDW is to advance opportunities for integration in crowdfunding research, a field that has grown exponentially over the past decade. Following this growth, the crowdfunding research field finds itself fragmented. As the field transitions from an emergent stage towards maturation, we see a threefold opportunity for integration. First, as scholars have used a multitude of theoretical lenses, there is room for building theoretical coherence. Second, the current empirical setups offer an opportunity for advancing empirical rigor and consensus. Third, the presence of active researcher communities on different continents pinpoints an attractive opportunity for more cross-continental researcher collaboration. This PDW will bring together leading international experts on applicable theoretical lenses and empirical approaches, all united by a strong interest in crowdfunding. The aim is to engage and inspire participants with an interactive session that consists of panelist speeches, a moderated discussion, and revolving roundtables. We trust the PDW will offer participants inspiration and momentum for advancing high-quality theoretical and empirical contributions which together will build an increasingly coherent and consistent crowdfunding research field. This PDW aligns aptly with the AOM 2023 theme of "putting the worker front and center", as the users of crowdfunding are not top executives but rather individuals who roll up their sleeves to work in a variety of roles needed to build and run a new venture.

Strategy and Innovation in the Biopharmaceutical and Healthcare Sectors

Organizer: **Sukhun Kang**, *U. of California Santa Barbara*
Organizer: **Sandip Bisui**, *Purdue U.*
Panelist: **Francisco Polidoro**, *U. of Texas at Austin*
Panelist: **Anita McGahan**, *U. of Toronto*
Panelist: **Thomas M. Klueter**, *IESE Business School*
Panelist: **Umit Ozmel**, *Purdue U., West Lafayette*
Panelist: **Jennifer Kao**, *UCLA Anderson School of Management*
Panelist: **Sungyong Chang**, *London Business School*

While the biopharma and healthcare sectors have received substantial attention from management scholars, the recent event of Covid-19 has highlighted the importance of these sectors in our every day lives. The purpose of this PDW is to foster and deepen scholarly conversations around important strategic themes of the biopharmaceutical and healthcare sectors that are of interest to a broad group of scholars at the academy but also practitioners, and policymakers. Our goal is to discuss cutting edge research ideas in light of recent events, including Covid-19 and innovative advancements. We bring together a group of leading scholars to discuss issues of corporate and business strategies , innovation and entrepreneurship, and how regulations and institutional policies shape strategies. Overall, the goal of this PDW is to provide a lively forum where scholars can develop a shared understanding of research on various topics in the biopharmaceutical and healthcare industries and provide important insights into how next-generation scholars may employ novel theories and methods to develop future research. We also hope to exchange knowledge on novel datasets in these sectors. This two and a half hour PDW will follow a three-part format. In the first part, six leading scholars (Francisco Polidoro, Anita McGahan, Thomas Klueter, Umit Ozmel, Jennifer Kao, and Sungyong Chang) will share insights on each of the key current topics in the biopharmaceutical sectors. The second part will consist of a semi-structured panel discussion among the presenters. The last part will contain two roundtable discussions with each one focused on different topics and methods. Prospective participants will apply to the PDW by submitting a brief description of a research idea to be explored with the discussants and other participants.

Participation is open for the panelist presentation and discussion, but pre-registration is required for the round table discussion. To Participate in the round table discussion, please fill in this form prior to Friday July 7, 2023: https://forms.gle/UWJb224gFt8MqSie8. Acceptance will be notified by Mid July, 2023. If you have any questions, please contact skang@london.edu or Sandip.Bisui@colorado.edu.

Advances in Patent Research: New Data, Measures, and Methods

Organizer: **Sina Khoshsokhan**, *U. of Colorado, Boulder*
Organizer: **Lucy Xiaolu Wang**, *Assistant Professor at UMass Amherst*
Speaker: **Myriam Mariani**, *Department of Management and Technology, Bocconi U.*
Speaker: **Dietmar Harhoff**, *Max Planck Institute for Innovation and Competition*
Speaker: **Reinhilde Veugelers**, *KU Leuven*
Speaker: **Kenneth Guang-Lih Huang**, *National U. of Singapore*
Discussant: **John P. Walsh**, *Georgia Institute of Technology*

This workshop focuses on the empirical analysis of patent data, emphasizing the use of patents both as a measure of knowledge and innovation, and as an institutional phenomenon worthy of research in its own right. The goals of the PDW are twofold. First, it will provide an introduction to patent data for management scholars new to the field, including a discussion of data sources, data limitations, and methods for effectively analyzing patent data. Second, it will provide examples of in-depth analyses using patent research. The panelists will engage in discussions with the audience to address the current state of patent research and future directions for research.

Global actions on environmental preservation have become strong forces limiting the use of ecosystems across the world. However, developing countries continue to rely on the primary sector in their often fragile economies. This conflict is of particular concern for Sub-Saharan African nations, their local companies, and ultimately most of workers. Environmental harm, primarily caused (directly or indirectly) by foreign actors, endangers the lives and future of local workers and local communities who often fight against these practices and the loss of their basics. Various African societies disagree with mainstream Global North dominated approaches that fight global environmental problems by creating economic, and thus social, problems in developing countries. Unfortunately, the literature is scarce on alternative proposals that are based on African experience in dealing with environmental problems. African societies require approaches to transition into a regenerative economy given that they are saddled with economic, technological, and geopolitical development challenges. The PDW draws on a project by the OECD for Brazil that explores the bioeconomy potential to create shared and sustainable value, transfers its results to the African context, and explores how research could enable better policy development. It takes up the discussions facilitated by various academic and governmental organizations on advancing research on the particularities of business organizations in Africa. Participants work with scholars from different disciplines in open roundtables to develop ways to address these challenges. The PDW ends with a future research-oriented discussion with all participants, based on results generated in four parallel roundtable discussions.

Doctoral students are confronted with a plethora of challenges, which can be both daunting and exciting. This consortium is intended to help PhD students navigate various challenges and chart a course for successful academic careers. This year's CAR Doctoral Consortium will provide a forum for early to mid-stage doctoral students to meet, connect, and learn from each other, guest speakers, and a panel of distinguished career scholars. Our aim is to bring together scholars from a broad range of national cultures and institutions that mirror the diversity of the CAR Division's membership. For instance, our speakers represent distinguished junior and senior international faculty who will share insights on the following seven topics: (1) Finding your first academic job; (2) Surviving: Accessing and leveraging formal and informal resources during your doctoral program; (3) Thriving: Recruiting mentors and collaborators for your network; (4) Make it happen: Effectively navigating the dissertation process; (5) Head of the class: Preparing for your first course assignment and teaching role; (6) Balancing act: How to juggle demands of academic life during your doctoral program and beyond; (7) Need field data: Find out how to get it. The PDW will include two additional elements—a session on ethics within the academy and a panel discussion with highly published career scholars along this year's AoM theme of "Putting the Worker Front and Center."

How to Register. You must register for both the Academy of Management Conference and this particular professional development workshop (PDW). If you plan to attend please email your: 1. Name 2. School 3. How many years of your program have you completed? 4. Copy of your CV 5. Please confirm that you are able to attend in person. Please send these details to Alex Newman (a.newman@deakin.edu.au) by July 1. Participants are capped at 40—register now! We hope to see you in Boston (face-to-face) Career Doctoral Consortium Committee Prof. Alex Newman Prof. Noemi Nagy Prof. Mel Fugate

The Academy of Management asks us in 2023 to put the individual front and center. The bottom line for entrepreneurial ecosystems is to help entrepreneurs and help those who help entrepreneurs. Building that more entrepreneurial world requires connecting and leveraging a diverse array of experts (and newcomers) from multiple disciplines (even beyond b-schools), multiple countries, and from scholarly, practical, and policy perspectives. You cannot do great ecosystems research from an armchair; you need to be immersed in all stakeholders, especially entrepreneurial champions from practice and from policy. Such "Meetings of the Minds" grew out of the Kauffman Foundation's ESHIP initiative to nurture grassroots efforts that support healthy entrepreneurial ecosystems. These conclaves have happened at the last 4 AoMs, at ICSB, and at practitioner events. Why not bring together top entrepreneurial champions (drawing on Boston's fascinating ecosystem), top policy experts like Victor Hwang, experts from OECD and UN, even the very best global educator experts like Andy Penaluna? Bring them together with a diverse roster of top scholars (stars and rising stars). Isn't again time to "Assemble the Avengers"? Bring together all the right people to co-create the right research questions? To again have intense, joyous conversations about this? Key Themes: In soliciting participants, we gathered their top interests and identified four central themes, Publishing, Policy, Performance/Metrics, and People. For example: * Publishing: Help colleagues take advantage of the many special issues in 2023-24 * Policy: Help develop policy insights/tools to grow entrepreneurs and their champions * Performance/Metrics: Can we build predictive metrics? Can we banish vanity metrics? * People: Developing human capital; new roles for entrepreneurial training.

We are not asking for pre-registration but PLEASE sign up here if you have not already: https://docs.google.com/forms/d/164DOxw186AcUTCclJzq-eHLaL6q8w2tXsTLVjRDzXCM/edit All are welcome [subject to the Bob Sutton Rule ;)] Thanks, Norris, Christina & Maribel.

OB Division Junior Faculty Workshop

Organizer: **Sreedhari Desai**, *U. of North Carolina*
Organizer: **Cecily Cooper**, *U. of Miami*
Facilitator: **Zhiying Ren**, *The Wharton School, U. of Pennsylvania*
Facilitator: **Benjamin G. Perkins**, *U. of Arizona*
Panelist: **Hajo Adam**, *Rice U.*
Panelist: **Peter Belmi**, *U. of Virginia*
Panelist: **Jia Hu**, *Ohio State U.*
Panelist: **Jessica Alynn Kennedy**, *Vanderbilt U.*
Panelist: **Anat Rafaeli**, *Technion Israel Institute of Technology*
Panelist: **Sunita Sah**, *Sunita Sah*
Panelist: **Alexis Nicole Smith**, *Oklahoma State U.*
Panelist: **Isaac Smith**, *Brigham Young U.*
Panelist: **Gretchen Marie Spreitzer**, *U. of Michigan*
Panelist: **Batia Mishan Wiesenfeld**, *New York U.*
Panelist: **Kai Chi Yam**, *National U. of Singapore*

The Organizational Behavior (OB) Junior Faculty Workshop is held annually and is designed for faculty members who consider themselves junior (e.g., are untenured). The goal of the workshop is to provide a forum for junior faculty members to cultivate meaningful relationships with each other and with senior Faculty Fellows as well as to receive useful insight into career-related issues facing junior scholars. Participants must attend in person. The program will begin with Faculty Fellows sitting on two different topic panels. In the following segment, Fellows will sit at tables and have more focused discussions with smaller groups of Junior Faculty participants around specific topics. These tables will rotate after 30 minutes so that each participant will join two different topic tables. The goal of the panels and topics tables is for junior faculty participants to learn from senior faculty members how to manage their careers in terms of research, teaching, and service but with a particular emphasis on research issues such as being a productive scholar and getting known in the field. Fifty junior faculty members may participate; pre- registration through the PDW registration system is required. We are requesting the workshop be held on Saturday morning.

SIM Research Development Workshop

Coordinator: **Mark P. Sharfman**, *U. of Oklahoma*
Organizer: **Jegoo Lee**, *U. of Rhode Island*

This workshop brings together researchers to aid colleagues in their efforts to publish Social Issues in Management (SIM) topics in high- quality management journals such as AMJ, AMR, SMJ, B&S, BEQ, etc. The workshop will assemble a team of scholars who successfully have published research on ethics, corporate responsibility, stakeholders, or related work in high quality management journals. The organizers will pair these experienced scholars with SIM members who would like to explore how their manuscripts-in-progress might be refined to achieve publication in their target journal(s).

See listserv posts for information about how to apply or contact the session organizers. https://sim.aom.org/sim/discussion/sim-mansucript- development-workshop-call-for-participants? ReturnUrl=%2fcommunities%2fcommunity- home%2fdigestviewer%3fcommunitykey%3d63f3d465-5e1e-4f49-b60e-d0272edf240b

Integrating SDGs Into Management Courses, Curricula and Programs

Presenter: **Neil M. Boyd**, *Bucknell U.*
Presenter: **Eric C. Martin**, *Bucknell U.*
Presenter: **Melissa L. Intindola**, *Bucknell U.*
Presenter: **Andre Martinuzzi**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Presenter: **Angelo Spörk**, *WU Vienna U. of Economics and Business*

Management education that is focused on the United Nations Sustainable Development Goals (SDGs) has certainly increased in the past decade, and recent AACSB standards toward social impact will likely accelerate this trend. minute PDW offers an opportunity to learn about designing courses, curricula and programs with SDG content, and provides a platform for transforming your pedagogy to align with social and environmental goals. The session will begin with a brief presentation by scholars who have significant experience in implementing SDGs into their classes, and will then turn to a guided open dialogue with audience participants on the current state and future direction of SDG integration in management education. We will also discuss some techniques and structures for doing so that have proven effective. Our multidisciplinary and international team of organizers and facilitators will cover a broad diversity of SDG related and perspectives. We encourage attendees to participate and share what is happening at their universities so we can all benefit in learning how to integrate the SDGs into management courses, curricula and programs

Accessing and Publishing with Chinese Data: Researching Chinese Organizations in Uncertain Times

Organizer: **Winslow Ariel Robertson**, *IESE Business School*
Organizer: **Chenjian Zhang**, *U. of Bath*
Organizer: **Wenjie Liu**, *City U. of Hong Kong*

This PDW aims to introduce practical resolutions to the challenges of Chinese data access and publishing in management journals with China as the research context. Up to date, no dedicated PDW exists to address the issues of Chinese data access in a context of research uncertainty in China. We propose this PDW to start a conversation among scholars to discuss how research uncertainty around traveling and working in China impacts scholarly work and output and propose potential solutions to these challenges. This PDW will connect participants to an interdisciplinary group of scholars with a common interest in the Chinese context, and the PDW will consist of three parts: (1) an overview of the issues faced by scholars; (2) two panel discussions with leading scholars on overcoming data access challenges, analyzing their data, and publishing their findings; and (3) individual roundtable/breakout sessions tailored for interactive discussion between speakers, facilitators, and participants.

From Symbols to Rules: New Perspectives on Language in Entrepreneurship and Innovation Research

Organizer: **Donato Cutolo**, *IE Business School*
Organizer: **Simone Ferriani**, *U. of Bologna*
Organizer: **Gino Cattani**, *New York U.*
Organizer: **Denise Falchetti**, *George Washington U.*
Panelist: **Pedro Aceves**, *Johns Hopkins U.*
Panelist: **Ryan Boyd**, *Stony Brook U.-State U. of New York*
Panelist: **Donal Crilly**, *London Business School*
Panelist: **Wei Guo**, *China Europe International Business School (CEIBS)*
Panelist: **Semi Min**, *New York U.*
Panelist: **Tieying Yu**, *Boston College*

This PDW discusses the opportunities and challenges of shifting the focus from the symbolic nature of language to its structural properties, drawing more heavily (and rigorously) on linguistics to advance our understanding of how language can help entrepreneurs rally key audiences' support around their novel ideas, products, or projects. The PDW also explores how scholars can leverage the increasing availability of text data and advances in methods to capture variations in linguistic styles, structures, and meanings. In the first half of the PDW, we have put together six panelists with diverse backgrounds, gender, nationalities, and research focus who have conducted theoretical and/or empirical work on how language can shape understanding and perception, thereby influencing entrepreneurial success. After the Q&A session, in the second half of the PDW, we provide registered participants with the opportunity to gain high-quality feedback from the organizers and panelists. In this way, the participants will have the opportunity to address their questions about specific issues encountered when writing/publishing their papers, exchange novel theoretical and methodological ideas, and start novel conversations that go beyond the current assumptions in the literature.

The Role Of Consulting In Revealing The Human Potential Of Employees In A Change Process

Session Chair: **Melissa Sanchez**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*
Panelist: **Sophie Claire Le Lédan**, *U. of Lyon, IAE Lyon , MAGELLAN, ISEOR, FRANCE*
Panelist: **Thibaut .. Duboisy**, *CORHIS & U. Paul Valery, Montpellier*
Panelist: **Rida Elias**, *American U. of Beirut*
Panelist: **FADI MAHMOUD**, *Med Surg Solutions*
Panelist: **Therese F. Yaeger**, *Benedictine U.*
Panelist: **Peter Sorensen**, *Benedictine U.*

Nowadays, many CEOs, managers, consultants and researchers agree with the idea that teams in companies have a huge human potential that can be mobilized in a change process. However, CEOs and managers can be braked by change resistances and a lack of energy. They could also have the prejudice that poorly qualified employees would not involve in a change process. The objective of this PDW session is to explore the role of an external actor, the consultant, in revealing the human potential of employees in a change process, regarding those difficulties. In a first phase session, the PDW will focus on the need to involve employees in a change processes and difficulties CEOs and managers have to deal with. In a second phase, we will identify the impacts of a consultant intervention to go through those limits. In a third phase, we will propose methods and tools to enhance the consultant and CEOs/managers cooperation in order to reveal the human potential of employees.

Transfer of Agency – From the Consultant to the Client

Organizer: **Philip N. Brown**, *Six Points Consulting*
Organizer: **Tonya L. Henderson**, *Software Engineering Services*

Organization Development (OD) methodologies interact boldly and frequently within the space jointly occupied by academia and management consulting systems and practices. However, a schism exists between the employment of expert consulting (outsourcing for technical skills and specific advice) and process consulting (where facilitators frame organizational problem-solving). In fact, both tend to present applications which work through and solve the issues defined before, during, and after a consultation intervention; but miss the opportunity to strengthen the client's skills, knowledge, and capacity. We submit that this transfer of agency is central to putting the worker front and center. Process consultation leverages theoretical concepts from bodies of research ranging from complexity theory to positive psychology to facilitate problem-solving and impart process-oriented skills into the workers who comprise the client system. Groups of stakeholders typically participate in forums where the consultant shapes the process and helps contain anxiety for the team as they develop organic solutions (both technical and social) that they, the workers, must implement after the fact. Organization Development practitioners typically apply intervention techniques in organizations where participants learn them by engaging in the processes without a consistently overt educational focus. Here we propose a brief exploration of ways to make the instructional component of process consultation interventions more deliberate, better transferring agency, particularly with remote work or using hybrid modes of engagement.

The Critical Biography Methodology in Management History Scholarship

Organizer: **David Jacobs**, *American U., Kogod School of Business*
Organizer: **Fernanda Filgueiras Sauerbronn**, *U. Federal do Rio de Janeiro - UFRJ*
Participant: **Ellen Shaffner**, *Mount Saint Vincent U.*
Participant: **Garance Christine Marechal**, *U. of Liverpool Management School*
Participant: **Todd Bridgman**, *Victoria U. of Wellington*

We propose to explore the potential contribution of a "critical biography" methodology to management history scholarship. Critical biography situates a thinker or practitioner in a social and historical context, examining identity, roles, values, and contributions. In order to avoid homogenizing disparate perspectives, critical biography distinguishes between "humanist-participatory" and "functional elite" paradigms. Our fundamental concern is identifying the elements of practice and theory that reinforce invidious hierarchies and perpetuate the most exploitative and socially irresponsible forms.

Faith-Based ERGs as an Expression of DEI: Connecting Practice with Research and Teaching

Participant: **Denise Daniels**, *Wheaton College*
Participant: **Helen Chung**, *Seattle Pacific U.*
Participant: **Annie Kato**, *Seattle Pacific U.*
Participant: **Paul Lambert**, *Brigham Young U.*

In this Professional Development Workshop, we invite participants to explore the connection between faith-based employee resource groups (ERGs) and DEI strategy and practice, and how such efforts impact business outcomes. In a three-part session we will discuss the need for and challenges associated with faith-based ERGs in organizations; engage with a panel of employees from diverse faith traditions who are participants in their organizations' faith-based ERGs; and work collaboratively to generate ideas for future research and teaching.

The OMT Global Consortium is a forum for organizational scholars from around the world to obtain advice, tools, and networks to conduct research across different institutional, cultural, and geographic settings. It includes panel discussions, feedback sessions, and facilitated conversations on topics such as: (1) developing organizational scholarship using global settings, (2) mentoring for research based in international contexts, and (3) strategies for overcoming challenges and exploiting opportunities for high quality organizational research using diverse settings. We particularly welcome scholars who would like to expand their research to underrepresented regions of the world as well as those who may be less familiar with international and/or American research traditions. In the spirit of global collaboration, the PDW is also supported by the Asia Academy of Management.

Facilitator: **Johannes Meuer**, *KLU Hamburg*
Facilitator: **Sunny Mosangzi Xu**, *Copenhagen Business School*
Facilitator: **Philipp Trotter**, *U. of Oxford*

'Net zero' as a concept refers to a state in the future at which the world will have met a balance between the sources and sinks of greenhouse gas emissions. The Paris Agreement signed in 2015 is a legally binding international treaty on climate change and requires states to achieve net zero in the second half of this century to limit global heating. In the last few years, organizations across sectors and industries have been setting net-zero targets as the urgency of making progress towards the global goal has been rising. However, there are serious concerns that there is an insurmountable gap between targets and action. Organizational and management scholars have much to contribute in closing this gap, but doing so will require new conceptual approaches. The proposed PDW focuses on three key conceptual problems: (1) Socio-ecological systems: How can organizations focus on net-zero while simultaneously recognising other systemic problems including biodiversity loss and social injustice? (2) Scale and scaling of innovation: How can organizations scale innovations through standardization while simultaneously adapting them to local contexts? (3) Time and temporality: How can organizations and managers focus on the distant future, for example through setting targets for 2030 and beyond, without delaying action in the present? In a first, public part, this PDW will address these questions through short presentations by our panelists. In a second part, requiring prior submission of a proposal/abstract, roundtables will provide participants with an opportunity to discuss their research in light of these questions.

Registration is required for part 2 of the workshop. To register, participants must submit: - An abstract (max. 200 words) for a paper or research idea related to net-zero and organizations - A short description of the stage of your paper/research idea and an indication of the type of advice you are looking for Please submit your abstract using the following link: https://docs.google.com/forms/d/e/1FAIpQLSf06uxeObwHreKypHX3G4m6Y-XLgQVXvbx78L0lSBIuYyIYZQ/viewform by June 23rd. Please note that you need to be registered for the AoM conference in order to participate in this PDW. We will notify participants about the acceptance of their submissions by early July 2023. If you have any questions, please contact Aoife Brophy, Aoife.brophy@sbs.ox.ac.uk or Jonathan Feddersen, jfe.ioa@cbs.dk

PNP Division 2023 Doctoral Student Professional Development Consortium

Organizer: **Kate Albrecht**, *U. of Illinois at Chicago*
Organizer: **Obed Pasha**, *U. of North Carolina, Chapel Hill*

The Public and Nonprofit Division Doctoral Student Professional Development Consortium is an intensive workshop that seeks to provide doctoral students in public and nonprofit administration with guidance on the job market, the publication process, presentation skills, and dissertation research. Doctoral students at any stage are welcome to apply to the consortium, and the consortium is especially beneficial for students who are in the dissertation proposal development stage or later. The Consortium will give participants the opportunity to a) get tips on finding an academic job, b) present their research or a proposal to get feedback from accomplished scholars, and c) network among peers, future colleagues, and potential employers. Participants must apply to participate in this PDW. Please direct questions to the PNP Doctoral Consortium Co-Chairs, Obed Pasha (pasha@unc.edu) or Kate Albrecht (kalbrech@uic.edu).

Strategy for Nonprofits

Participant: **Jennifer Kuan**, *California State U., Monterey Bay*
Participant: **Aseem Kaul**, *U. of Minnesota*
Participant: **Lyda S. Bigelow**, *U. of Utah*
Participant: **Emily Nwakpuda**, *The U. of Texas at Arlington*
Participant: **Jasjit Singh**, *INSEAD*

Objective: Scholarship involving nonprofit organizations has been gathering steam in management journals for several years now. This PDW follows up on last year's PDW, which drew a diverse and enthusiastic crowd. Our goal is to help scholars develop ideas on using nonprofits in their management research. Relevance: While specialized journals have long published research on nonprofits, nonprofits are appearing more frequently in management and strategy journals for several reasons. First, nonprofits are increasingly recognized as interacting with for-profits as competitors, complementors, and customers. Second, heterogeneous types of nonprofits are thus getting their analytical due, including member nonprofits that promote cooperative strategies. Third, nonprofits and social enterprises can be focal organizations in addressing social and environmental grand challenges, including those involving new technologies and innovation. Audience Engagement: We will present diverse perspectives on nonprofit scholarship in management journals and then conduct breakout groups to bring participants together to share and develop research ideas. Included among the organizers are scholars who have successfully published nonprofit research in top management and strategy journals, including those who serve in editorial positions. Thus, we hope this workshop will provide a high-quality experience for participants from across the Academy's divisions. We propose a short format for the workshop, with the first half involving presentations by organizers and the second half involving roundtables.

Ask the Experts: Qualitative Research

Organizer: **Sanjay Jain**, *California State U., Northridge*
Organizer: **Raza A Mir**, *William Paterson U.*
Organizer: **Thomas Greckhamer**, *Louisiana State U.*
Distinguished Speaker: **Dennis A. Gioia**, *Pennsylvania State U.*
Discussant: **Santi Furnari**, *City, U. of London*
Panelist: **Joelle Evans**, *Bayes Business School*
Panelist: **Anna Kim**, *McGill U.*
Panelist: **Cheng Gao**, *U. of Michigan, Ross School of Business*
Panelist: **Rene Wiedner**, *Warwick Business School*

In this workshop, we will use the metaphor of cooking to describe the act of qualitative research. The metaphor is apt on several counts. First, like the labor of cooking, qualitative research is often "feminized" in the management academy. Unlike the more valorized research methods that use quantitative data, qualitative methods are often consigned to the periphery of academic research (though this is rapidly changing!). Second, quite like cooking, qualitative research requires a lot of thought, initial preparation, improvisation, and waiting for diverse elements to mix. Also, just like a meal, the acceptance and appreciation of qualitative research often depends on the style in which it is presented. In the proposed session, we will have six participants, discussing various types and aspects of qualitative research. The methodologies they will cover include ethnography, grounded theory, process analysis, case studies and qualitative comparative analysis. Moreover, they will provide insights on pre-fieldwork aspects of the qualitative research process including philosophical conundrums associated with inquiry (“Preparing the ingredients"), as well as the actual act of fieldwork (“Lighting the fire"). Time will also be set aside to discuss the act of data analysis, and making sense of qualitative data (“Simmer and stew"), as well as the publication of papers based on qualitative research ("Setting the table"). The workshop also attempts to relate to the theme of the 2023 meetings, by discussing how qualitative research can be deployed to improve the lives of workers.

Hands-On Introduction to Open Science Practices in Empirical and Experimental Management Research

Organizer: **Gernot Pruschak**, *Bern U. of Applied Sciences*
Presenter: **Nicolas Bastardoz**, *KU Leuven*
Presenter: **Jermain Christopher Kaminski**, *Maastricht U., School of Business & Economics*
Presenter: **Stefan Rose**, *Bern U. of Applied Sciences*

Emergences and detections of questionable research practices and misconduct cases have shattered public trust in business research. Open science practices help in restoring this trust by ensuring transparency and replicability. To foster open science practices in management re-search, this PDW offers hands-on introductions and applications of registered reports, study pre-registration and open research data sharing. The PDW comprises short input lectures for each of the open science practices. After each input lecture, we hand out an exercise to participants in which they apply the respective open science practice. We divide participants in small groups for solving the exercises. Every group has at least one assigned coach who guides the process, provides support, and answers questions. However, simply demonstrating and learning open sci-ence practices does not automatically lead to them being embraced in everyday research. The PDW therefore also includes a presentation by two journal editors discussing the “does and don’ts” of submitting open science papers to increase acceptance chances. The PDW concludes with a general discussion in which participants can ask questions about and share their thoughts on open science practices in management research.

Novel Methods and Data in Studying Industry Emergence and Evolution

Organizer: **Mahka Moeen**, *U. of Wisconsin*
Organizer: **Sandeep Pillai**, *Department of Management and Technology, Bocconi U.*
Participant: **Prithwiraj Choudhury**, *Harvard U.*
Participant: **Sergio Giovanetti Lazzarini**, *Ivey Business School*
Participant: **John Paul MacDuffie**, *U. of Pennsylvania*
Participant: **Elizabeth Pontikes**, *UC Davis*
Participant: **Martin Ruef**, *Duke U.*
Participant: **Henry Sauermann**, *ESMT European School of Management and Technology*

This PDW aims to advance the potential use of novel methods and data-generating processes to guide inference when studying strategic management questions pertaining to industry emergence and evolution. These approaches include machine learning, emerging market data analytics, computational text analysis, forecasting tournaments, historical approaches, and surveys. The panelists open the conversation about how each approach can be utilized to tackle questions related to industry studies that remain unanswered due to data scarcity or methodological obstacles. Further, the PDW will encourage the participants to share and gain feedback from the panelists and their peers on methodological challenges encountered in their research process and on possible data collection strategies that may be used to advance their theoretical interests.

The TIM doctoral consortium seeks to mentor Ph.D. candidates interested in conducting leading-edge research and teaching in topics related to technology and innovation management. The consortium will be led by a panel of faculty members with proven research and teaching records who will address key issues in academic life such as finishing your dissertation, creating a research program, publishing in top journals, and navigating the academic job market. We will solicit applications from PhD candidates from across the globe who are researching topics related to technology and innovation management. Acceptance and pre- registration are required.

Participation the consortium is limited to admitted applicants ONLY. To qualify, applicants must be at least entering their first post-PhD role (assistant professor or postdoc), and ideally have at least one full year of experience as an assistant professor (or post-doc) in an academic institution. They must have no more than six years of experience by AOM. To apply, participants will have to complete an online registration (Google Form) and email their curriculum vitae to colleen.cunningham@eccles.utah.edu and mroche@hbs.edu using the header TIM Junior Faculty Consortium 2023. Our deadline is June 30, 2023. However, we encourage participants to apply early. We will take applications on a rolling basis until enrollment is full. Please note that we require participants to attend the entire Consortium. Accepted participants will be required to submit a write-up regarding their research trajectory with tenure requirements at their respective universities for the Research Trajectory Exercise by July 10, 2023.

Interdisciplinary Conversations on Platforms: Strategic Roles of Digital Resources

Organizer: **Kimmo Karhu**, *Aalto U., Department of Industrial Engineering and Management*
Organizer: **Mikko Heiskala**, *Aalto U., Department of Industrial Engineering and Management*
Organizer: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*
Organizer: **Christina Kyprianou**, *IE U.*
Facilitator: **Andrey Indukaev**, *Aalto U. School of Science*
Discussant: **Carliss Baldwin**, *Harvard Business School*
Discussant: **Annabelle Gawer**, *U. of Surrey*
Presenter: **Ola Henfridsson**, *U. of Miami*
Presenter: **Martin Kenney**, *U. of California, Davis*
Presenter: **Christian Peukert**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Discussant: **Christopher L. Tucci**, *Imperial College Business School*
Discussant: **Marshall Van Alstyne**, *Boston U.*
Discussant: **Geoffrey Parker**, *Dartmouth College*

This PDW aims to facilitate interdisciplinary conversations on platforms by bringing together experts from innovation, economics, strategy, information systems, and entrepreneurship. As the second PDW in the series, this year's event spotlights how digital resources bring strategic value to platforms. For instance, we envision discussions addressing digital boundary resources as the user interface for governing supply-side side production; how interoperability of digital infrastructures reshapes platform competition; and how data, artificial intelligence (AI), and machine learning (ML) not only help build data network effects, but also foster innovation in platforms. Conversations around these topics will be facilitated through a combination of chats with neighbors (within the audience), followed by a townhall conversation led by the discussants with the whole audience.

Networks Front and Center: Commencing a Community Studying Contemporary Health Service Delivery

Organizer: **Thomas D'Aunno**, *New York U.*
Organizer: **Larry R. Hearld**, *U. of Alabama, Birmingham*
Organizer: **Kimberley Roussin Isett**, *Biden School, U. of Delaware*
Organizer: **Amanda Brewster**, *U. of California, Berkeley*
Organizer: **Genevra F. Murray**, *New York U.*
Organizer: **Daan Westra**, *Maastricht U.*
Organizer: **Robin Peeters**, *Maastricht U.*

High value health services are typically delivered through various types of inter-organizational networks, rather than by a single professional or within a single organization. Consequently, the healthcare management field has a strong tradition of studying inter-organizational networks, as well as related concepts such as coordination and collaboration across organizational boundaries. Despite the practical relevance however, the healthcare network field lacks a coherent research community. As a result, research around inter-organizational healthcare networks is highly fragmented and only sparsely connected to related healthcare management topics, limiting its scientific advancements and real-world policy impact alike. Therefore, the main aim of this PDW is to foster a research community around inter-organizational networks in health care and in doing so, ignite the first community of practice within the HCM division. More specifically, this PDW seeks to establish a common vocabulary around inter-organizational networks in health care, formulate the most pertinent research questions in the field, address the methodological challenges associated with studying healthcare networks, and identify ways in which the community can be leveraged going forward. The PDW consists of two main parts: 1.) two rounds of roundtable dialogues (i.e. around network vocabulary, research questions, methods, and community activities), following a collective knowledge-production approach and facilitated by leading scholars in the healthcare network field and 2.) a moderated plenary discussion, with all attendees, of the main roundtable takeaways, charting the course for the research community.

The purpose of this PDW is to provide a forum and foster a community in which health care management scholars can discuss pertinent issues about teaching, from common questions and challenges that educators confront to helpful practices, tips, and ideas to becoming more effective instructors. The PDW will be conducted as a series of discussions, with participants receiving advice and helpful guidance on challenges and issues confronted in a range of educational settings. Each discussion will focus on a specific theme and include assigned "teaching mentors" who can provide expert guidance and feedback on topics relating to a variety of themes.

Session Type: **PDW Workshop**
Program Session: **323** | Submission: **14082** | Sponsor(s): **(CAR, HR, OB, DEI)**

Transitioning From a Faculty to an Administrator Role

Organizer: **I. M. Jawahar**, *Illinois State U.*
Panelist: **Steve H. Barr**, *North Carolina State U.*
Panelist: **Bert Schreurs**, *Vrije U. Brussel*
Panelist: **Julia Richardson**, *Curtin U.*
Panelist: **Gillian Warner-Søderholm**, *USN School of Business, U. of South-Eastern Norway*

The purpose of this Professional Development Workshop (PDW) is to help faculty moving into administrative roles, such as a department chair or head of school, program director, an associate dean. Faculty members selected or asked to serve in administrative roles have very little formal training or background and often struggle through the assignment. In this PDW, we will discuss key issues that confront administrators and provide participants with the opportunity to share experiences with - and learn from - other experienced administrators.

Do We Know It All? New Perspectives On Studying Knowledge Behaviors In Organizations

Organizer: **Anne Burmeister**, *U. of Cologne*
Organizer: **Fabiola Heike Gerpott**, *WHU Otto Beisheim School of Management*
Organizer: **Ulrike Fasbender**, *U. of Hohenheim*
Presenter: **Tatiana Andreeva**, *Maynooth U.*
Presenter: **Matej Cerne**, *School of Economics and Business, U. of Ljubljana*
Presenter: **Karin Sanders**, *UNSW Business School, Australia*
Presenter: **Matthias Spitzmueller**, *Smith School of Business, Queen's U.*

The management of knowledge behaviors that enable (or inhibit) the movement of knowledge between different actors within organizations is pivotal for the exploitation and development of organizational knowledge assets. An important role of human resource management (HRM) is to create conditions that facilitate positive (e.g., knowledge sharing, seeking) and discourage negative (e.g., knowledge hiding, manipulation) knowledge behaviors. Whereas HRM scholars have made much progress to understand the antecedents, benefits, and challenges of knowledge behaviors within organizations, studies so far have mainly relied on a narrow set of contexts, theories, practices, and methods. As a result, research on the management of knowledge behaviors is in desperate need of innovation. This PDW aims at bringing topic experts and interested scholars together to develop an innovative future research agenda that challenges and advances our understanding of the contextual, theoretical, practical, and methodological landscapes of managing knowledge behaviors in organizations. Through introductions to the field, elevator pitches of topic experts, and roundtable breakouts moderated by topic experts, participants will gain new perspectives into knowledge behaviors in organizations and develop actionable strategies to advance their own research. The PDW will be open for all participants.

Presenter: **Robynn Joyce Afi Cox**, -
Presenter: **Adriana Clomax**, *U. of Southern California*
Presenter: **Ian MacFarlane**, *EA Engineering, Science, and Technology, Inc., PBC*

Management research has devoted significant attention to workers as wage employees. It has paid far less attention to workers as shareholders. This PDW will examine companies that really do put workers front and center, by making them owners. The PDW will introduce and explore “employee ownership” as a human resource strategy and a tool of organizational development of change. Combining worker voices, practitioner perspectives, and descriptions of innovative new research, the PDW will share a baseline level of knowledge about employee ownership, examine how it benefits workers, and provide attendees the opportunity to dialogue with one or more leaders of employee-owned companies. Finally, the PDW will introduce cutting-edge worker-centered research on employee ownership and its organizational effects, and share links to public datasets available for future research on the subject.

Challenges and Opportunities of Teaching DEI in 2023

Organizer: **Joy E. Beatty**, *Eastern Michigan U.*
Organizer: **Alison M. Dachner**, *John Carroll U.*
Moderator: **Alison M. Dachner**, *John Carroll U.*
Participant: **Joy E. Beatty**, *Eastern Michigan U.*
Participant: **Ruth Bernstein**, *Pepperdine U.*
Participant: **Susan S. Case**, *Case Western Reserve U.*
Participant: **Lindsay Dhanani**, *Rutgers U., School of Management and Labor Relations*
Participant: **Richa Saxena**, *Institute of Management Technology Ghaziabad, India*

The aim of this session is to discuss current issues, challenges, and recent changes in teaching DEI. We will incorporate research on what inclusive instructors do to enhance student learning experiences (Addey, T.M., et al., 2021; Oleson, K. 2021) and facilitate dialogue on promoting inclusive classroom dynamics and managing the tensions in the DEI space in higher education. Our panel and roundtable format includes brief comments from the experts, and discussion questions will be managed in smaller groups at roundtables to ensure whole audience collaborative participation. We intend that participants will leave this session with ideas about the what and why of inclusive college teaching, ways to increase equity in the college student experience, and ideas for enhancing their effectiveness in teaching DEI and integrating DEI in college classes within the current environment.

Making the Paradigm Shift Happen: Following the Lead of Business Associations

Panelist: **Sandra A. Waddock**, *Boston College*
Panelist: **Nicholas Poggioli**, *Appalachian State U.*
Panelist: **Irene Henriques**, *York U.*
Panelist: **Steffen Boehm**, *U. of Exeter Business School*
Panelist: **Martina K. Linnenluecke**, *U. of Technology, Sydney*

Abstract: How can business schools catch up to companies on transforming business and economies towards a flourishing world for all? We convene a discussion of this question in the context of an increasing gap between how business schools research and teach and how companies practice business. Business schools lag practice, remaining focused on frameworks like triple bottom line and corporate sustainable development that have largely disappeared from practice. Meanwhile, companies and business associations push forward with frontier methodologies for empirically linking practices to environmental impacts and with collaborative strategies for transforming industry-wide production and consumption systems. The World Economic Forum, Ellen McArthur Foundation, and the World Business Council for Sustainable Development describe and organize for fundamental transformations in business practice that scholars arguably need to catch up with. As the business transition accelerates, business schools need to transition our own research and teaching systems to match what’s happening in practice. We convene an interactive PDW using a design-based approach to catalyze research and increase collaboration and ideas on ways management research can achieve change and social impact. Provocations include: Sandra Waddock (Boston College) framing the discussion as above, Nicholas Poggioli (Appalachian State U) discussing structural changes needed, Irene Henriques (York U) on measuring social impact, Steffan Boehm (Exeter U) outlining circular economy, and Martina Linnenluecke (Macquarie U) speaking to sustainable finance. The PDW will develop specific actions management scholars can take to keep business schools important and relevant during a time of rapid, systemic change in business practice.

Innovations in Management Teaching: A Workshop

Presenter: **Ashley DePace**, -
Presenter: **Samantha Lewis**, *Pearson*
Presenter: **Simon Jacobs**, -

Management instructors from all backgrounds and teaching experiences are invited to join Pearson's Business Product Management team for this collaborative, hands-on workshop.

Get a glimpse into the latest innovations from Pearson across the Management curriculum and connect with your peers and Pearson's product management team to share teaching strategies, best practices, and shared challenges, while helping to inform the next generation of digital learning experiences.

Focus areas include:
Teaching employability skills and career readiness.
Teaching with simulations and experiential learning.
Innovative pedagogy for student engagement.

Facilitator: **Kathy Lund Dean**, *Gustavus Adolphus College*
Facilitator: **Tyler Burch**, *Idaho State U.*

Cognition is a central concern in organizations, and courses in management (e.g., entrepreneurship, strategy, and organizational behavior) repeatedly deal with topics that involve understanding the cognition of individuals and groups. A challenge for instructors is to find exercises, activities, and methods for teaching in ways that students can better appreciate the challenges of cognition "in the rough" (i.e., situated, in real-time, influenced by organizational politics and time constraints, and emotions among other contextual influences). The purpose of this PDW is to bring together expert instructors to share classroom-tested experiential exercises, activities, and lesson plans for teaching about cognition in the rough. The PDW will proceed in a "round-robin" workshop format, whereby participants will have the opportunity to rotate to three different breakout rooms in which expert instructors provide interactive, 20-minute explanations/demonstrations of their exercise/activity/lesson. Thus, participants will have the opportunity to take home three unique activities or instructional ideas that they can use in their own classes.

The Journey from Submission to Acceptance at the Journal of Operations Management

Organizer: **Tyson Browning**, *Texas Christian U.*
Organizer: **James Abbey**, *Texas A&M U., College Station*
Presenter: **Suzanne De Treville**, *U. of Lausanne*
Presenter: **Tyson Browning**, *Texas Christian U.*
Presenter: **James Abbey**, *Texas A&M U., College Station*

This PDW will present and discuss the expectations regarding rigor and relevance, theoretical contributions, methodological scope and rigor, and developmental reviews (on the part of reviewers) for publishing in one of the top empirical journals in the OSCM field. JOM's co-EICs will discuss ongoing efforts to expand the areas of contribution to management research, and they and several department editors (DEs) will provide informative details about the review process. A key part of the PDW will take the audience through the progression of an example paper from its initial submission to its final acceptance, detailing the concerns along the way and how these were addressed, highlighting what it takes to publish a manuscript in the journal.

Presenter: **Hani Safadi**, *U. of Georgia*
Panelist: **Stefan Seidel**, *U. of Cologne*
Panelist: **Emmanuelle Vaast**, *McGill U.*

Computational methods that allow to identify patterns in social systems, such as social network analysis, sequence analysis, text analysis, and agent-based simulations, are now increasingly used in organizational and information systems research. Some scholars leverage these methods for the explicit purpose of constructing theory by combining them with manual approaches known from grounded theory and case study research methods. Organizational and information systems scholars use various terms to refer to this genre of research including “computational grounded theory,” “interpretive data science,” and “computationally intensive theory construction.” There are multiple perspectives guiding the understanding, and methodological applications of this emerging genre of research which we call computational theory construction (CTC) research. This PDW is a follow-up workshop to the previous AOM PDWs on “Computational Methods for Theory Building: Practices & Struggles” in 2022 and “The Rise of Computational Methods for Theory Development,” in 2021 which focused on helping participants and providing a collaborative forum to help establish legitimacy for this new genre of research. In this follow-up workshop, we aim to (a) clarify what computational theory construction (CTC) research is and what it is not, (b) provide guidance on conducting CTC research, (c) discuss the need for a cumulative CTC research tradition, and (d) provide a forum to discuss the next steps in developing this new methodological stream.

Part I of the PDW – the keynotes and panel discussion are open to all AOM registrants. Part II – roundtable discussions are only for participants who would like to receive feedback on their ongoing or planned projects and have been accepted to attend the roundtables. For those who are interested in participating in roundtables, please submit a short vignette on or before July 21st (max 2 pages in PDF format to ctcpdw21@gmail.com). The organizers will send out the notification of acceptance at end of July. Your vignette should cover the following aspects. • Brief introduction of the research project • How have you combined computational and manual analysis techniques in your research? • What struggles you have faced in understanding, using, or considering using computational methods in your theory development work? Those who have not conducted any such research, but are planning to do so, can submit short descriptions of your intended work, also focusing on your planned combination of manual and computational techniques or related questions. We look forward to seeing you and engaging in fruitful discussions during the PDW!

Presenter: **Chris Zhang**, *York U.*

Members of non-dominant groups such as women, people of color, or sexual and gender minorities have sometimes faced difficulties and barriers navigating the Academy of Management (AoM). In this Professional Development Workshop (PDW) we aim to offer support to members of the LGBTQ+ community and its allies in navigating AoM in two respects: the development of a support network, and the development of LGBTQ+ focused research. The session is organized around two panels, with one focused on “Being Queer at the Academy” and another on “Doing LGBTQ+ Focused Research.” This PDW is being organized to take advantage of the breadth of the LGBTQ community within the Academy. Senior scholars from this community will act as facilitators to the panels, while junior scholars will serve as panelists. The goal is to give voice to junior faculty, those who are relative newcomers to the Academy, to highlight their concerns and interests. Senior scholars, on the other hand, will guide the conversation to uncover and develop strategies to successfully navigate the Academy.

Participant: **Alfons Trompenaars**, *Vrije U. Amsterdam*

To bring workers front and center, the focus of this PDW is on empowerment in the workplace. Using case studies, empirical studies, and demonstration models, we will show how certain organizations have been successful in bringing historically neglected workers into the mainstream of organizational thought and to prominence in their enterprises. We include the application of RARE leadership among the Fungwe people of Zambia; the promotion of historically disadvantaged workers into management ranks in South African farms; young entrepreneurs being assisted to make breakthroughs in Sierra Leone and Morocco; and servant leadership promoted by the Servant-Leadership Research center at VU Amsterdam. In 'We Shall Overcome' refugee students awaiting their status in an asylum center are facilitated to reconnect with the academic world, practicing diversity, inclusion and dignity in the classroom. "Worker-centric workplaces" demand appreciating and leveraging workers' diversity with equity. A growing number of scholars and consultants call for organizations to embrace diversity for organizational commitment and performance. Along with the desirability of greater organizational diversity has come a reaction against it, and prejudice against workers from diverse backgrounds. The growth of remote digital workspaces has worsened the digital divide. COVID-19 has fostered homophilic networks on various social media platforms. These factors obstruct the welcoming, and inclusive workplace that diversity, equity, and inclusion promises to deliver. This session will call for research and practice to move quickly to advance sincere understanding and identification with workers, and to bring them 'front-and-center' in organizational discourse and human experience.

ENT Mid-Career Consortium

Organizer: **Philipp Sieger**, *U. of Bern*
Organizer: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*

The Mid-Career Consortium (MCC) is designed to meet the needs of those scholars who are midway through their academic careers (e.g., post- tenure). More specifically, the objective of the MCC is to help individuals who have achieved tenure, or significant career advancement, to develop a strategy and give guidance for the next stages of their careers. To achieve this, leading entrepreneurship scholars will provide practical advice and mentorship in various regards (e.g., research, teaching, outreach, networks, etc.). The MCC adopts a highly interactive and personalized approach (e.g., through small group discussions, personalized Q&A, etc.). For instance, the attendees will gather at roundtables with senior scholars, based on their main interests, and will engage in intensive discussions to receive otherwise hard-to-obtain feedback and input. Potential topics include, but are not limited to, career opportunities and directions, maximizing research output, branching out to other scholarship and education options, or service and engagement opportunities. To register for the consortium, please send an email to philipp.sieger@unibe.ch where you ideally also indicate the main questions you would like to discuss.

Digitalization and Technology in International Business. How Are They Affecting Emerging Markets?

Session Chair: **Gaston Fornes**, *U. of Bristol*
Session Chair: **Maria Altamira**, *UBI Business School*
Participant: **Alvaro Mendez**, *ESIC Business & Marketing School*

In this PDW, the authors propose to analyse: (i) the potential gap in the adoption and implementation of new technologies between emerging vs developed countries, companies and workers, and the further consequences in international business (Lippoldt, 2022), (ii) following this idea, the effect of new technologies becoming mainstream, following the path of Artificial Intelligence (AI), in the world economy and in the possibilities for the international expansion for companies from emerging countries (Alan, Noemi, Yelnur, Rudolf, & Nikolay, 2022; Bughin, Seong, Manyika, Chui, & Joshi, 2018); and finally (iii) the impact of the disputes between China and the United States over the dominance of new technologies on knowledge flows and their influence on global growth (The Economist reporters, 2022; Weinland, 2022). The objective of the PDW is to analyse the issues presented from the different perspectives of this emerging research field, while at the same time blazing trails for continuing the development of a strong, self-sustaining body of literature on digitalization, technology, and international business with a focus on emerging markets.

Multinationals' Solutions to Grand Challenges

Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Panelist: **Jonathan P. Doh**, *Villanova U.*
Panelist: **Xufei Ma**, *Chinese U. of Hong Kong*
Panelist: **Grazia D. Santangelo**, *Copenhagen Business School*
Panelist: **Laszlo Tihanyi**, *Rice U.*
Organizer: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

The symposium analyzes multinationals' solutions to Grand Challenges. Grand Challenges are complex problems with no easy solutions, which transcend national borders and affect future generations. Multinationals are in a unique position to help with Grand Challenges as global firms with multiple operations dispersed worldwide whose managers have to think in global terms. Additionally, cross-sector collaborations among multinationals, governments, transnational organizations, and not-for-profit organizations can also contribute. In this symposium, the panelists will provide some suggestions and explore with the audience how multinationals can help address Grand Challenges.

The Role of India in the Economic Development of the MENA Region

Panelist: **Vijay Edward Pereira**, *NEOMA Business School*
Panelist: **Arup Varma**, *Loyola U. Chicago*
Presenter: **Yama Temouri**, *Khalifa U., Abu Dhabi, UAE*
Participant: **Shlomo Yedidia Tarba**, *U. of Birmingham, UK*
Presenter: **Amir Shoham**, *Fox School of Business, Temple U.*
Presenter: **Abdul-Nasser El-Kassar**, *Lebanese American U.*
Presenter: **Abhishek Behl**, *Management Development Institute Gurgaon*
Presenter: **Daicy Vaz**, *NEOMA Business School*

The role of India in the economic development of the region i.e., the countries surrounding its borders has been significant since its independence since 1947. The MENA region comprising of approximately 21 countries has been dependent on India for its economic development (Santos-Paulino & Wan, (Eds.) (2010). Aspects here include the large diaspora and expats from India working in the MENA region, who have spent many years of their lives in the economic development of the region. Other aspects also include foreign direct investment (FDI), exports and imports (to & from the two regions i.e., India and MENA) (Saidi et al., 2020), knowledge sharing (Nair, Demirbag & Mellahi, 2016), academic involvement, technology sharing, collaboration between the two governments (Ortega-Ruiz, Mena-Nieto & García-Ramos, 2020) etc., to name a few. However not much work has been captured to portray the role of India in the economic development of the MENA region. This PDW will throw light on how India has traditionally and economically helped develop the MENA region.

Dark Side in Inter-Organizational Relationships in High-End Nanotechnology & Disruptive Technologies

Panelist: **Surender Munjal**, *U. of Leeds*
Panelist: **Swetketu Patnaik**, *Anglia Ruskin U.*
Panelist: **Shubhabrata Basu**, *IIM Indore*
Panelist: **Ashish Malik**, *Newcastle U. Business School*
Discussant: **Paresha N. Sinha**, *U. of Waikato*
Discussant: **Nandakumar Mankavil Kovil Veettil**, *Indian Institute of Management, Kozhikode*

Managing the dark side is considered an essential and integral part of the successful functioning of inter-organizational relationships that range from routine business-to-business (B2B) relationships to specialized projects, especially those that are focused on new research and development (R&D) for creating disruptive technologies such as nanotechnology and artificial intelligence, among others. The evolving body of research has explored several reasons why a dark side often arises in an inter-organizational relationship and governance mechanisms through which the dark side can be managed. However, scholarly attention on high-end technology projects especially in an emerging market context such as India, where major foreign multinational enterprises focus for exploiting the pool of talent and to tap opportunities offered by the growing economy are sparse. Managing dynamics of the dark side in high-end technology projects in emerging markets is difficult due to dynamics of R&D in technology projects and weaknesses in the institutional environment in emerging markets. This PDW aims to deliberate upon the causes and governance mechanisms of the dark side in these contexts and propose a rich agenda for future research.

As workers in higher education, faculty need to continually adapt their teaching methods in response to ever-evolving demands from students, administration and other higher education stakeholders. For example, students expect more leniency and understanding from their instructors, administration expect faculty to take on heavier workloads without a corresponding increase in resources, and future employers and government officials want to be more involved in the work of higher education. This 5th Annual Teaching Bootcamp at AOM addresses these challenges and provides the opportunity to obtain tools and resources to help you effectively and efficiently meet and manage these demands. This lively, interactive session features a variety of topics related to teaching across all management disciplines and presented by experienced instructors in a roundtable format. In alignment with the conference theme of "Putting the Worker Front and Center," this PDW focuses on what we can do to assist faculty in completing their work as it relates to teaching. We will provide teaching resources to help faculty effectively manage their classes in today's environment supporting the AOM vision to "inspire and enable a better world through our scholarship and teaching…" We anticipate an interactive and informative session, so come join the fun as we explore the basics from experiential learning to increasing engagement in today's environment.

Research Impact: What It Is, Why It Matters, and How You Can Increase Your Impact Potential

Moderator: **Burak Oc**, *Lee Kong Chian School of Business, Singapore Management U.*
Panelist: **Berrin Erdogan**, *Portland State U.*
Panelist: **Alicia A. Grandey**, *Pennsylvania State U.*
Panelist: **Glenn Hoetker**, *Melbourne Business School, U. of Melbourne*
Panelist: **Jenny M. Hoobler**, *NOVA School of Business and Economics*

We, management and organizational scholars, traditionally, have thought of research impact as that classic academic impact via number of publications, the level of citations, our influence on the thinking and theorizing of our academic peers and the literature. However, we are now increasingly being tasked with demonstrating the impact of our research on the professional and the practice community. This poses an interesting challenge for us, scholars, as well as the schools and universities we work for, to adapt or retrofit the idea of research impact into the way we operate. Whereas research is one of the core activities of academic institutions, and only recently, the very same institutions have been incorporating the word "impact" into their mission statements or extensively discussing as part of their research strategy. However, questions remain around what we should understand by impactful research. More importantly, the management and organizational scholars have been mostly absent from these conversations. Meaningful discussions are needed that pay attention to sensemaking (i.e., exploring the current elements, themes, and meanings constituting different elements of impactful research) and sensebreaking (i.e., discussing, disrupting, critiquing, and refreshing what impactful research can mean to scholars). Several important questions arise as we try to adapt to new pressures juggling multiple responsibilities in this rapidly changing world. A panel of four scholars who have meaningful experience in producing impactful research is brought together. Each panelist will bring a new perspective to our discussion evident in their (cultural) background, areas of areas, previous and current experience in editorial roles (i.e., editor-in-chief and associate editors) as well as their active role in ESG-related topics. The final part of this PDW is devoted to the panelists working together with participants to discuss and find ways to increase their potential for impactful research.

Purpose as a Catalyst: Driving Clarity, Confidence and Commitment to Influence Innovation Capacity

Participant: **Patty Ann Lindstrom**, *Living the Brand® Academy & Innovation Foundry, CVDL Benedictine U.*
Participant: **Michael Manning**, *Benedictine U.*

Leaders today are faced with the challenge of motivating and orchestrating the efforts of the members of their organization to achieve the organization's strategic objectives. By understanding the rationale for the work organization members are asked to perform, costs can be reduced, focus can be enhanced, and work can take on further meaning by tying its value to a broader context. Purpose, mission, and vision statements contain these definitions leaders wish to propagate, both internally and externally. The purpose of this workshop is to engage in a highly interactive program that examines the research underlying the history of purpose in the workplace, its influence on individuals and teams and how it can increase an organization's ability to affect change and influence innovative environments. These exercises assist in fostering cultures which allow employees to feel more connected to their work (meaning in their work), their organization and society, and thus less likely to check out of their current work situation. A recently developed model and set of tools will be used as a framework to lead activities.

Cultural entrepreneurship research, i.e., work on the cultural and institutional dynamics of entrepreneurship, innovation, and change, has grown in recent years. This growth has been generative, inviting and benefiting from the contributions of scholars from diverse backgrounds, traditions, and perspectives. Building on this momentum, this PDW seeks to encourage the many early-career scholars and other researchers new to the cultural entrepreneurship community, and help them develop and ultimately publish their work. The first part of the workshop, open to all, will feature brief presentations addressing the opportunities and challenges of publishing cultural entrepreneurship related studies. The second part of the workshop, by invitation only, will feature roundtable discussions to provide tailored feedback on the research projects of selected participants. Ultimately, we aim to equip participants with practical knowledge on publishing cultural entrepreneurship related work, and offer them targeted, actionable feedback on their own research project to invigorate and advance ongoing scholarship in this area.

Ethnographic research provides a way to align our theories of organizations with the activities and practices that actually take place in a variety of empirical settings. This PDW will be organized into two parts. Part (A) will provide a hands-on and interactive learning opportunity around the mechanics of conducting an ethnography, focusing on observations and field notes. Part B will give participants an opportunity to hear from accomplished researchers in round table discussions organized around two thematic topics, ethnography for the future of work, and research in extreme contexts and behind the scenes. Part A is by invitation only.

Part A: Mechanics of Conducting Ethnography In the first part of this PDW, we will provide selected participants with exposure and experiential training in carrying out field observations and learning how to document these observations in ways that facilitate rigorous analysis. This workshop aims to help researchers interested in ethnographic methods learn a crucial aspect of data collection that is often considered a virtuoso skill that scholars develop on their own. By doing so, we hope that scholars can yield more valuable insights into organizational practices. Participants for this part of the PDW will be pre-selected through an application process, with a maximum capacity of 50 individuals. Interested candidates will be asked to submit brief applications indicating their research interests, motivation for conducting ethnographic research, and prior experience with conducting field observations. Once confirmed, selected participants will be put in groups of 5-6 members and will be provided with options for different observation sites in and around the designated conference venue. After conducting a short observation, participants will expand their field notes and discuss them in the larger group - all guided by expert faculty members.

Part B: Thematic Round Table Discussions with Expert Ethnographers In the second part of this PDW, participants will get an opportunity to participate in two roundtable discussions on thematic topics, the future of work, and extreme contexts and behind the scenes of highly cited ethnographies. Senior faculty members/expert ethnographers are assigned tables, and participants can join the discussions. This part of the PDW would be open to the public and start with a panel discussion among selected faculty members.

Shifting Towards SDGs within PBs Integration: The Case for Academic Private Sector Partnerships

Session Chair: **Jorge Alexis Arevalo**, *William Paterson U.*
Presenter: **Jose M. Manuel Alcaraz**, *ESDES, U. Catholique de Lyon*
Presenter: **Keary Shandler**, *Murdoch U. Dubai*
Facilitator: **Fara Azmat**, *Deakin U.*
Facilitator: **David Collste**, *Stockholm U.*
Presenter: **Christian Hauser**, *Swiss Institute for Entrepreneurship*

This 2023 Professional Development Workshop (PDW) provides a discussion platform which aims to explore, examine, and collectively extend an integration model for Sustainable Development Goals (SDGs) within Planetary Boundaries (PBs), for management educators. Based on a global inquiry among sustainability business consultants, academic partnerships for sustainability, and faculty engaged in sustainability teaching and research; we identify five common issue areas - integration resistance, strategy and orientation, change of mindsets, research limitations, and lack of measurement in programs, in integrating SDGS within PBs. Whether new to SDGs, PBs (or SDGs within PBs) integration, or currently advancing in these domains, all participants are invited to join this conversation as we identify and discuss pathways to transition into more effective conceptualization and contextualization of SDGs within PBs. The workshop promises to be informative, interactive, and full of networking possibilities for those interested in developing and enhancing their teaching, research, and academic private sector partnership capabilities.

What Does it Mean to Test Theory?

Participant: **Maria Kraimer**, *Rutgers U., School of Management and Labor Relations*
Participant: **Xavier Martin**, *Tilburg U.*
Participant: **William S Schulze**, *U. of Utah*
Participant: **Scott Seibert**, *Rutgers U., School of Management and Labor Relations*

Organizational/management scholars have recently lamented the concern that management researchers have increasingly emphasized novel theoretical contributions at the expense of validating existing theories. Journal of Management Scientific Reports (JOMSR) was launched to directly address this imbalance by having the following mission “to move management science forward by publishing research aimed at theory testing and refinement.” The aim of this PDW is for the editorial team of JOMSR to provide guidelines for authors on the different types of empirical papers that would be consistent with this mission, including designing studies to test theoretical models or assumptions, studies that test competing theories or constructs, and designing reproducibility and replication studies. Time will be provided for audience questions to generate a thought-provoking discussion on what it means to test theory in the social sciences. Following the panel presentations and discussion, authors who pre-submit a short proposal describing a study that fits the mission of JOMSR, will be provided with feedback from one of the editorial team members. Specific advice for publishing in JOMSR will be provided, however, the general content of this PDW is relevant to designing rigorous empirical studies testing theory to publish in any journal. Pre-registration is not required to attend this session. Those interested in receiving feedback on a specific proposal will need to submit their proposal (no more than 5-pages double-spaced) by June 15, 2023, to Bill Schulze (bill.schulze@eccles.utah.edu).

Attendees may choose to pre-submit a short proposal describing a study that fits the mission of JOMSR to receive feedback from one of the editorial team members during the second half of this session. Those interested in receiving feedback on a specific proposal will need to submit their proposal (no more than 5-pages double-spaced) by June 15, 2023, to Bill Schulze (bill.schulze@eccles.utah.edu). Pre-registration, is not required, nor is a short proposal, to attend this session.

Who are you? And More Nuanced Methods of Eliciting Identity in Qualitative Organizational Research

Organizer: **James Hughey**, *U. of Utah, David Eccles School of Business*
Organizer: **Devin Rapp**, *U. of Utah, David Eccles School of Business*
Organizer: **Glen E. Kreiner**, *U. of Utah, David Eccles School of Business*
Participant: **Davide Ravasi**, *UCL School of Management*
Participant: **Mathew Laurence Sheep**, *Florida Gulf Coast U.*
Participant: **Chad Benjamin Murphy**, *Oregon State U.*
Participant: **Tiona Zuzul**, *Harvard Business School*

Research on identity and identification has exploded in the organizational sciences in recent years, evolving to the point where it is now considered a root construct of organizational study. Explorations of identity in organizational scholarship span across a myriad of levels—from the personal, to the occupational/professional, to the organizational, and on up to market/industry levels. The use of qualitative methods has been particularly generative for the development and expansion of identity-related theories. In these efforts, a diversity of qualitative methods have been employed to elicit identity and identifications. Such methods encompass the analysis of discourse, archival records, historical narratives and artifacts, and ethnographic observation. In this professional development workshop, we profess two principal purposes: 1) to survey a variety of qualitative methods for eliciting identity and identification in organizational studies, and 2) to suggest additional and/or supplemental methods of qualitative inquiry that may contribute to identity and identification scholarship in the organizational sciences. To do so, we will engage a panel of scholars who have effectively employed a wide variety of approaches to study identity and identification. We aim not only to review current approaches, but to inspire future qualitative work and identity scholars for generations to come.

Studying Technology Without Patent Data? A PDW on the Promise & Perils of the BuiltWith Database

Organizer: **Bryan Kaiser Stroube**, *London Business School*
Organizer: **Gary Dushnitsky**, *London Business School*
Presenter: **Maria Roche**, *Harvard Business School*
Presenter: **Rembrand Michael Koning**, *Harvard Business School*
Presenter: **Natalie Jane Burford**, *INSEAD*

The purpose of this PDW is to inform scholars who seek to advance our understanding of strategy, technology management and entrepreneurship. To that end, the PDW will introduce a novel technology profiling database - the BuiltWith database - which forms the basis of exciting new research, including works recently published in Management Science and the Strategic Management Journal (Burford, Shipilov and Furr, 2022; Koning, Hasan and Chatterji, 2022). Specifically, the BuiltWith database tracks technology adoption and usage for internet-based companies and thus sheds light on the critical technology, strategy and organizational choices of both large and small firms. The PDW will bring together scholars who have successfully utilized the database and are familiar with its advantages and shortcomings. Our key motivation with this PDW is to help set viable foundations for academic work using these data. By analogy, the introduction of the NBER Patent Database (Hall, Jaffe and Trajtenberg, 2001) led to volumes of works in economics, entrepreneurship and strategy. It marked a significant period of knowledge creation. At the same time, subsequent work revealed the opportunity for greater coordination or “standards of use and interpretation” to avoid the shortcomings and mis-interpretation of these data (Alcácer and Gittelman, 2006). Accordingly, our PDW will equip participants with technical insight on how to manipulate and augment the database and the key fields therein. The PDW will be structured as follows. First, it will open with brief presentations summarizing recent works using the database to inform contemporary research questions. Each presenter will also underscore key limitations, or ‘red flags,’ that scholars should heed if we are to facilitate careful interpretation of the results. The goal is to avoid misuse of the data and further facilitate the construction of a cumulative body of knowledge. Second, we will proceed with input from attendees who will have the opportunity to share their research projects as well as questions about the data. Finally, we will convene roundtable discussions to explore these issues in detail and identify fertile groups to advance future work.

Accelerating and Democratizing Artificial Intelligence Upskilling for Workforce Digital Inclusion

Speaker: **Shameem Farouk**, *INSEAD*

Many organizations globally are implementing Artificial Intelligence (AI) and Machine Learning (ML) algorithms as part of their digitalization efforts; however, recent reports have indicated that many data science projects have failed to deliver business impact (Joshi et al., 2021; Bean & Davenport, 2019). Additionally, a lack of data science talent and skills in existing employees have been cited as a top barrier to AI adoption (Kazakova et al., 2020). This Professional Development Workshop (PDW) aims to share AI and ML workforce upskilling strategies, which a financial services firm in Asia had implemented that had resulted in Return on Investment (ROI) in training of over 300% in its first year of implementation, and which saw more female staff attaining certifications in ML compared to its male staff, which is a reverse of the typical gender gap trend in technology. Additionally, new learning tools developed by the firm has enabled its non-technical workforce to learn and apply ML algorithms within five days of training. This PDW will be an interactive session where participants will be able to experience the learning tools and discuss upskilling needs and challenges in their respective contexts. Participants will also be invited to be part of a post-workshop Learning Guild to enable continuous collaboration and professional exchange support. Anyone who is interested in approaches that can increase strategic alignment of AI and ML upskilling programs to business needs and in creating digital inclusion for their respective context is highly encouraged to join.

If you would like to try the tool that will be introduced in the session, please bring a laptop with Microsoft Excel loaded and you will need Administrative rights to your laptop to install the tool.

Entrepreneurial Ventures in Multiethnic Environments: The Case of Sub-Saharan Africa

Organizer: **Constant D. Beugre**, *Delaware State U.*
Organizer: **Jean Dibondo Kabongo**, *U. of South Florida, Sarasota-Manatee*
Presenter: **James Calvin**, *Johns Hopkins U.*
Presenter: **Sarah Kimakwa**, *California State U., Chico*
Presenter: **Moses Acquaah**, *U. of North Carolina, Greensboro*

Most sub-Sharan African countries are plagued by issues of tribal identity and tribal affiliation that are so pervasive that people identify themselves first as members of certain ethnic groups before considering themselves as citizens of their respective countries. However, in this PDW, we contend that entrepreneurship could be a tool to foster diversity, equity and inclusion because entrepreneurs are very interactive people who heavily depend on other people, resources and opportunities in their respective context (Audretsch, Dohse, & Niebhur, 2010, p. 56). Hence, entrepreneurship can reduce fractionalization and push governments to improve institutions.

Performativity, Academic Activism, and Critical Management Education

Coordinator: **Jennifer Manning**, *Technological U. Dublin*
Coordinator: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*
Coordinator: **Alexandra Bristow**, *The Open U. Business School*
Coordinator: **Ozan Nadir Alakavuklar**, *Utrecht U., School of Governance*
Coordinator: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*

The purpose of this professional development workshop (PDW) is to provide space to discuss the ways in which Critical Management Studies (CMS) academics can integrate a critical pedagogy into their teaching and explore how we can embody the values of CMS in different aspects of academic life. A critical pedagogy means understanding management education as political, ethical and even radical. It engages students to critically and reflexively take seriously the history of exploitation and oppression reproduced by different forms of political economy and mainstream management education, including, for example, neoliberalism, White heteropatriarchy, colonialism and environmental destruction. In this PDW we seek to explore the ways critical management pedagogy can engage students' critical and social consciousness, encouraging them to create alternative versions of what is possible, while also unpacking the 'activist turn' in CMS by questioning what a performative CMS should mean in the context of a critical management education. The PDW is organised into three parts: first, brief thematic presentations by the workshop organisers; followed by small groups work with targeted thematic questions; and closing with a plenary debrief feeding back the key points of the working groups, drawing conclusions with an action plan. The PDW aims to offer productive insights into debating critical management education and what it means to be a CMS academic embodying the values of collegiality, empathy, activism, and criticality in different aspects of our academic lives.

Developing a Research Dissemination Strategy: Reaching a Wide Range of Stakeholders

Facilitator: **Daniel M. Walker**, *Ohio State U.*
Facilitator: **Joanna Veazey Brooks**, *U. of Kansas Medical Center*
Facilitator: **Olena Mazurenko**, *Indiana U.*
Facilitator: **Leeann Comfort**, *Agency for Healthcare Research and Quality*
Panelist: **Timothy Huerta**, *Ohio State U.*
Panelist: **Sara Singer**, *Stanford U.*
Panelist: **Sunita Sah**, *Sunita Sah*

Disseminating research findings to key stakeholders is critical to translating health care management (HCM) research into practice and amplifying a study's impact. Moreover, many funders, including the National Institutes of Health, require a research dissemination plan. This professional development workshop (PDW) aims to guide participants through developing a research dissemination strategy that can effectively communicate findings to appropriate stakeholders beyond academic audiences. This session will introduce the Agency for Healthcare Research and Quality (AHRQ) Dissemination model to identify and target relevant stakeholders. Specific tools and resources will be provided that can assist in the dissemination process. The PDW will also include a panel of brief presentations from HCM scholars who have successfully developed a dissemination strategy to communicate research findings to organizational leaders, community partners, policymakers, and the general public. Panelists will describe the process of identifying stakeholders and using different media outlets (e.g., webinars, social media, community advisory boards, and mass media publications) to engage these audiences. Finally, attendees will discuss their real-world dissemination challenges with panelists. Scholars of all career stages are welcome to attend this interactive PDW, which is designed to increase participant's professional success and influence in healthcare management-related fields. The PDW is designed as a hybrid session. Still, delivery is flexible, and the organizers will work with AOM HCM leadership to modify as needed.

The Power of Play: the Overlooked Potential of Play for Management Learning and Development

Coordinator: **Tina Miedtank**, *Nijmegen School of Management*
Coordinator: **Tina Davidson**, *Erasmus U. Rotterdam*
Coordinator: **Tracy F. Chang**, *Rutgers U.*
Panelist: **Carolin Ossenkop**, *Nijmegen School of Management, Radboud U. Nijmegen*
Panelist: **Aurora Díaz Soloaga**, *Almaty Management U.*
Panelist: **Meredith Conlin Storey**, *PRME Secretariat / United Nations Global Compact Office*
Panelist: **Marina Anna Schmitz**, *IEDC-Bled School of Management*

Scholars and practitioners agree that effective leadership in today's complex and ambiguous business environment requires more than learning about and mastering particular sets of leadership behaviors. Rather, effective leadership is rooted in being able to lead from one's true self, as well as being able to effectively apply such complex and multi-faceted self-understandings adaptively to changing demands and circumstances. A critical question scholars have coined is: To what extent are traditional leadership development approaches–generally based on logic and rationality–conducive to effective leadership development in today's workplace? Our proposed PDW aims to heed calls for frame-breaking, non-traditional approaches to leadership development by exploring play as an innovative tool for developing leaders. Specifically, this PDW involves discussions and experiences that showcase how different forms of play (i.e., improvisational theater, LEGO, yoga play, and equine-assisted experiential learning) can contribute to learning and development processes because of the way in which play provides a safe space in which we can explore how things work, who we can be, how best to (re)act to new situations and adapt to and integrate changes. Our proposed PDW consists of two parts. First, PDW panelists discuss the usefulness and potential of play for innovative business education and development programs. During the second part–which takes a roundtable set-up–participants can experience, explore, and discuss two of the four play-based interventions which panelists have designed with the intention to viscerally make sense of the potential of play for their research and teaching.

Global Research Collaboration PDW

Organizer: **Constanze Eib**, *Uppsala U.*
Organizer: **Yuka Fujimoto**, *Sunway Business School*
Organizer: **Robert Litchfield**, *Washington and Jefferson College*
Organizer: **Hongxia Peng**, *Rouen U.*
Panelist: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*
Panelist: **Andreas Wilhelm Richter**, *U. of Cambridge*
Panelist: **Tomoki Sekiguchi**, *Kyoto U.*

Numerous societal grand challenges (George et al., 2016), such as climate change, sustainable development, eradication of poverty, decent working conditions, and economic growth, require global collaboration. To meet these challenges, management scholars may increasingly require not just content knowledge but also skill in collaborating with one another across national and cultural boundaries. The 'Global Research Collaboration PDW' centers around questions related to how to initiate, organize, coordinate, and maintain a global research collaboration, as well as how to overcome obstacles and manage different institutional and cultural logics in the global context. By recognizing research collaborations as an explicit area where scholars may develop and exercise skills, this workshop will foster reflection and practice exchange amongst researchers. This workshop will encourage global and/or early career management scholars interested in global collaboration projects to learn from established researchers and ask questions about global collaboration projects. We will accomplish these goals through a hybrid workshop with two interlocking features. First, a selected group of experienced scholars share their global research collaboration experiences. Second, PDW attendees will engage in roundtable discussions to help identify success factors for global collaboration and discuss practices to facilitate and improve existing and future projects.

Hatching New Ideas Through Conversation: A Research Incubator on Positive Relationships at Work

Organizer: **Melissa Chamberlin**, *Iowa State U.*
Organizer: **Lyndon Earl Garrett**, *Boston College*
Organizer: **Beth Schinoff**, *Boston College*

The development of positive relationships at work is important to both employees and organizations. Individuals who maintain positive work relationships tend to experience more positive emotions and have higher job and life satisfaction. Within academia, the study of positive relationships at work is rapidly growing, incorporating new methodologies, theories, and approaches that build upon existing knowledge. The purpose of our proposed PDW is to facilitate the continued growth of positive relationships at work scholarship by offering participants the opportunity to share and incubate research ideas. In preparation, participants will submit a brief synopsis describing a current project or idea (our PDW is open to work at any stage; i.e., theory development, data collection, analysis) and how it fits under the broad theoretical umbrella of positive relationships at work. Based on their synopses, individuals with similar interests will be organized into small groups. During the session, participants will have the opportunity to receive feedback on their projects from knowledgeable peers and experts. In addition to helping individuals develop their own unique research ideas, we also intend our PDW to be a forum for continuing to build and grow a community of scholars passionate about positive relationships at work.

To participate in this session, please e-mail a brief description of your project (limit of 1,000 words) to Melissa Chamberlin (mc6@iastate.edu) by JUNE 30, 2023. Your description should include the following: primary research questions or hypotheses, how your research broadly connects to the theoretical umbrella of relationships at work, methodology, current stage of the project/idea, and what you hope to gain from the session.

Participant: **Eric Quintane**, *ESMT Berlin*
Participant: **Leroy White**, *Warwick Business School*
Participant: **Songqi Liu**, *National Science Foundation*
Participant: **Le Zhou**, *Texas A&M U.*

This workshop aims to provide participants (in particular junior faculty and PhD students) with an understanding of how to publish organizational network studies in management journals. The study of networks within and between organizations is a growing field of research with its own unique opportunities and challenges. It is unusual in that it has theoretical relevance at the individual, team, organizational, and industry level; and can be integrated with a broad range of management theories. Therefore, it has broad applicability across the members of many of the academies divisions and interest groups. The opportunity to apply an organizational network framework across a broad range of topics also provides challenges. For example, understanding what research questions are relevant for a broad management audience is not always obvious. Network analysis has seen new statistical methods that provide opportunities and challenges, such as how to convey these new models to a wider management audience. This workshop sees the unique opportunity to bring together a number leading academics from the LINKS Center for Social Network Analysis of the University of Kentucky, the University of Exeter Centre for Social Networks, and other leading universities, who have published in a wide range of top management journals. The format of the workshop includes a panel session and small roundtable discussions where individual papers from participants (submitted prior to the workshop) will be discussed.

Step ONE: Starting Your Sustainability PhD Journey with ONE

Organizer: **Anja Grüll**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Organizer: **Sara Graves**, *Simon Fraser U.*
Organizer: **Lucrezia Nava**, *Bayes Business School (formerly Cass), City, U. of London*
Organizer: **Ash Ganzoury**, -
Speaker: **Kevin Chuah**, *Northeastern U.*
Panelist: **Junghoon Park**, *Loyola Marymount U.*
Organizer: **Svetlana Ivanova**, *Vienna U. of Economics and Business*
Speaker: **Sukhbir Kaur Sandhu**, *U. of South Australia*

Step ONE is a moderated PDW to support early-stage sustainability PhD students to begin and bolster their journey with the Organizations and the Natural Environment (ONE) Division. It complements and is a precursor to the ONE Doctoral Consortium, which is targeted at later- stage students. It is especially challenging for early-stage PhD students to not only get involved with academic communities, but also to stay involved, while sustaining their own resilience and well- being. Thus, as a group of five doctoral researchers and early-career scholars, we wish to create a vibrant and inclusive space to welcome these individuals, as they navigate their first moments with AOM in the ONE Division. Building on the success of its previous two editions during AOM 2021 and AOM 2022, we aim to help (1) cultivate a sense of confidence and community, particularly through shared insights and advice; (2) guide early-stage PhD students in navigating, participating in, and thriving at AOM and in the ONE Division; and (3) develop their interests in ONE-related topics, while helping them articulate their interests and impact in sustainability, as well as to identify potential theoretical lenses, collaborators, and pathways that might amplify that purpose. With Sukhbir Sandhu (ONE Chair), Junhoon Park (PhD Sustainability Community) and Kevin Chuah (recipient of the 2022 Best Thesis Award) as invited speakers, we offer opportunities for participants to find and build their home, within an inclusive, open-minded, and openhearted global academic community.

Corporate Strategy: Creating and Capturing Value with Strategic Interdependencies

Organizer: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Participant: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Participant: **Valerie Isakova**, *U. of Illinois at Urbana-Champaign*
Participant: **Michael J. Leiblein**, *Ohio State U.*
Participant: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Participant: **Lalit Manral**, *U. of Central Oklahoma*
Participant: **Jeffrey J. Reuer**, *U. of Colorado, Boulder*
Participant: **Arkadiy V. Sakhartov**, *U. of Illinois at Urbana-Champaign*

Corporate strategy is one of the central areas of strategic management, and there is a strong demand for emerging research insights on corporate strategy among strategy scholars. The objective of the present professional development workshop is to discuss novel directions of corporate strategy research as well as demonstrate a scope of emerging and under-researched questions that make for a great number of research opportunities in this area. Specifically, the workshop focuses on the following three novel research directions, which are of great interest to strategy researchers: (1) allocation of resources across businesses in a dynamic perspective; (2) demand/revenue-side synergies and integration of corporate strategy and competitive strategy; and (3) strategic interdependencies across distinct corporate strategic moves. The workshop's attendees will have an opportunity to discuss the above topics with top scholars in an interactive way, get a better understanding of novel directions, and upgrade their research agenda.

Artificial Intelligence in Health Care: Setting a Research Agenda for Management Scholars

Organizer: **Abi Sriharan**, *Schulich School of Business, York U.*
Organizer: **Jane Banaszak-Holl**, *U. of Alabama, Birmingham*
Panelist: **Cheryl Mitchell**, *Gustavson School of Business, U. of Victoria*
Panelist: **Attila J. Hertelendy**, *Florida International U.*
Moderator: **Tracy Hopkins Porter**, *Cleveland State U.*

There is increased enthusiasm for the potential of artificial intelligence (AI), machine learning, and related technologies in the health-care sector. These new and emerging technologies present opportunities to improve clinical care delivery, business processes, and patient experience, yet these technologies have been criticized as cost-cutting measures that can negatively impact care delivery by reducing staffing and replacing professionals. Both proponents and critics recognize that these emerging technologies will fundamentally change the tasks and roles of health-care professionals and managers. This professional development workshop (PDW) aims to bring scholars together to discuss the benefits and drawbacks of implementing AI and related technologies in health care and to further develop the research agenda for leading AI-related digital transformation in the health-care sector. This PDW will begin with a brief overview of emerging research on AI innovation and implementation in health care. This will be followed by a presentation of selected case studies of AI implementation and leadership experiences. After a Q and A session with the panelists, participants will move to breakout sessions, where they will discuss AI implementation, opportunities, and challenges and develop research agendas for collaborative research.

Building an AI-First Organization that Prioritizes Organizational Health

Presenter: **Claudy Jules**, *McKinsey & Company*
Presenter: **Nicolette Rainone**, *McKinsey & Company*

Artificial intelligence (AI) is the capability of machines to perform cognitive tasks typically associated with humans. The business and social value of this technology have become increasingly apparent. To capture this value, companies will need to adopt an AI-first mindset that amplifies the performance of individuals and teams. AI-first organizations reinvent the company's future based on AI instead of using AI solely as an optimization tool. Although most organizations are transitioning to being AI-first, companies often face substantial barriers to adopting AI, which affect how the organization operates. To build a successful AI-first organization, companies must prioritize the organization's health and put people front and center. AI-first organizations prioritizing organizational health enable people to focus on uniquely human capabilities, such as judgment and empathy. Furthermore, these organizations overcome the barriers mentioned above by taking a human-centered approach to strategy and decision-making, organizational and work design, talent, and risk mitigation and learning.

Consulting Practices Involving the Workers on Developing Socio-Economic Performance

Organizer: **Maite Rateau**, *ISEOR*
Discussant: **Laurent Cappelletti**, *LIRSA-Cnam Paris*
Discussant: **María Angeles Rastrollo-Horrillo**, *U. of Málaga*
Panelist: **Bryan McCusker**, *Management Consultant*
Panelist: **Kortney Peagram**, *Elmhurst U.*

Everyone in the world can say that “we need each one to create value in this world”, and most of people agree with this idea. However, the organizations, through the management level, are facing difficulties to make people work together and work with them on enhancing the performance. Even if consultants are used to work with managers, directors and CEOs, there is a need to support them into making work people together on performance: indicators, meaning, and levers of action... This PDW purpose is to present and discuss about how consultants in their practices, tools and methodologies are involving workers into the process of developing performance they are leading and how to steer the socio-economic performance. Presenters are consultant-researchers in such organizations and can share the lessons and knowledge from their interventions.

Holding Space—Facing Our Fears: Generative Mindfulness, Dialogue, and Inclusion for a Healthy World

Facilitator: **Kathryn Goldman Schuyler**, *Alliant Intl U. / Coherent Change*
Facilitator: **Lemuel Watson**, *Antioch U. Graduate School of Leadership and Change*

Bringing together dialogue and generative mindfulness with a sense of underlying love can support all of us who wish to create inclusive workplaces in service to a healthy world. Few of us feel strong enough to sit quietly, sensing the presence of fear or anger, and just let it be as it is—yet this is a core skill for leaders today. A short workshop cannot change lifelong habits; however, it can offer insight into how such practice yields a path. You may leave with fresh insights into yourself and how your awareness practice can support you in times of crisis. How often have you reflected on how tough it is to hold space for dialogue among people who need to talk, yet have deep differences? When difficult moments happen at work, despite our practice, meditation, or spiritual path, it can be hard to be present. It is challenging to allow space for what we and others are feeling and experiencing in the moment, let alone being patient enough to understand the context, audience, and "temperature." Yet we need to listen and react in ways that build respect, acknowledgment, and integrity during such moments of conflict and crisis. This PDW will support us in moving beyond the surface learning of "skills" into the realm where we sit with ourselves and face the people we are with, openly, in the moment, in service of collaboratively remembering our deepest intentions for our organizations, society, and the Earth.

Analysis of Heart Rate Responses for Management Research

Organizer: **George Christopoulos**, *Nanyang Business School, NTU Singapore*
Presenter: **Sebastiano Massaro**, *Surrey Business School*
Presenter: **Alvin Lee**, *Nanyang Business School*

Heart rate (HR) responses have been associated with numerous variables, constructs and factors of central interest to organizational and management research. Key examples include emotions, fatigue, stress, decision-making, sleep quality, as well as more generic outcomes, such as health and well-being. Moreover, recent technological developments have allowed for measuring some aspects of heart-rate fluctuations using wearable devices. However, the design of HR-based experiments and/or field studies, data collection, and data analysis require careful planning, dedicated statistical tools, and cautious interpretation. The aim of the present Professional Development Workshop (PDW) is to introduce HR measurements and analyses (especially Heart Rate Variability (HRV))to the uninitiated management researcher who might wish to know more about and employ this versatile methodology. The PDW will: (i) quickly introduce the physiology of HR and its association with human brain function and behavior; (ii) review previous exemplary studies using HRV associated with typical managerial concepts; (iii) discuss principles of lab-based HR experiments; (iv) explain the basic principles of analysis and interpretation of actual HR data; and, (v) invite participants (in groups) to discuss their own research questions and designs. This PDW builds on theory, moves to real applications, and ends up with hands-on involvement to motivate participants to use HRV methods in their future research.

Please email cgeorgios@ntu.edu.sg with the subject line "AOM 2023 PDW HRV". When the list of attendees is finalized, we will send you a link with a form to fill in to help us prepare the PDW.

From Coping to Flourishing in Academia: A Critical Perspective on Recognition and Rewards

Organizer: **Svetlana Khapova**, *Vrije U. Amsterdam*
Speaker: **Dilek Uslu**, *Vrije U. Amsterdam*
Speaker: **Wenjing Cai**, *Vrije U. Amsterdam*

A neoliberalisation of academia has been redefining academic work. Increasingly academic work has become market-driven and focused on performance, excellence, competition, project-based working, entrepreneurialism, and cost reductions. Not surprisingly, therefore, there is an increase in signals pointing out that contemporary academia is not a happy place to work. Recent research shows that in many countries, academia is over-competitive and makes academic jobs precarious. Consequently, a growing number of academics report mental and physical health issues. Endless competition and job uncertainty, and a need for performance to meet the publication requirements create much stress, damage health, and undermine academic well-being. In addition, feelings of being an imposter and burnout have been identified as common experiences in academia. Many scholars raise questions about whether this “new” neoliberal academia does not begin to kill the very nature of what academic work is: sense, imagination, and thought. Internationally, science foundations and, alike, have begun to search for avenues to change the recently emerged principles of academic work. One example is the nationwide initiative in the Netherlands, referred to as “Recognition and Rewards”. It already gained a nationwide debate and actions by universities to create a better balance between teaching and research duties, greater recognition of team performance, and eliminating simplistic research assessment criteria, such as journal rankings. This session aims to share recent research findings about academics’ perception of rewards and recognition systems in the Netherlands and China and to engage participants in a discussion of how together we can create a better academic work environment where academics flourish.

Session Type: **PDW Workshop**
Program Session: **371** | Submission: **10523** | Sponsor(s): **(HCM, OB, HR, MED, OMT)**
Scheduled: **Saturday, Aug 5 2023 11:30AM - 12:30PM ET (UTC-4)** at **Sheraton Boston Hotel** in **Gardner A**

Flipping the Formula: Writing for Mainstream Audiences

Organizer: **Amber Stephenson**, *The David D. Reh School of Business, Clarkson U.*
Organizer: **Yuna Lee**, *Columbia U.*
Panelist: **Timothy Hoff**, *Northeastern U.*
Panelist: **Kathleen M. Sutcliffe**, *Johns Hopkins U.*
Panelist: **Christopher G. Myers**, *Johns Hopkins Carey Business School*
Panelist: **Amanda Brewster**, *U. of California, Berkeley*
Panelist: **Alden Lai**, *New York U.*

Scholars often find it difficult to make their research applicable for audiences outside of academia (Brazzell, 2021). Regardless of how valuable, influential, or even transformative the scholarship is, researchers often are challenged to clearly articulate their ideas in a manner that launches their work from the pages of an academic journal to outlets with more generalized readership or mainstream audiences (e.g. Harvard Business Review, The New York Times, The Conversation, The New Yorker, etc.). Yet, as recent events such as the Covid-19 pandemic has shown, sharing research insights with the public can be a critical public service, offering important knowledge about crucial topics ranging from public health to labor and workforce challenges. In some cases, for instance with pre-tenure faculty who have a laser-like focus on publishing in top-tier academic journals, individuals are hesitant to allocate the time it takes to disseminate their work for fear that it may not benefit their tenure candidacy. However, far more commonly, faculty may not know how to write and communicate in the ways that mainstream media sources require because it is truly a different genre than the academic writing that was ingrained in all of us during our doctoral training (Weldon, 2022). Still, developing this skill has become more relevant as institutions are encouraging faculty to broadly share their work due to reputational boosts and potential financial implications for both the institution and scholar (Weldon, 2022) as well as broader impacts to society. Likewise, learning how to write for mainstream audiences can yield rich professional opportunities, invitations for speaking engagements, enhanced expert reputation, it can connect research to policy makers and executives, and even attract more readership to academic publications (Taylor and Francis, n.d.). In this PDW, participants will first engage in a writing workshop that explicitly shows how to convert an academic abstract to a plain language summary that may be used in the development of a pitch or could be further expanded into a commentary or op ed piece for mainstream audiences. After the writing tutorial segment, a panel of HCMD leaders will share insights on their own experiences in deciding to write for mainstream publishing outlets as well as the rewards and challenges they experienced in the process. Participants will have the opportunity to ask questions of those who have successfully written in this genre, to engage in rich discussions about successful approaches to writing for popular media type sources, to share insights on pursuing or accepting such opportunities, and to gain better understanding and appreciation of what the transition from academic writing to mainstream writing realistically looks like. Thus, attendees at all stages of development would find relevant insights in the writing workshop and moderated discussion.

We invite attendees to bring an abstract from a paper that they have written (published or unpublished) for the writing workshop segment of the PDW. However, while bringing an abstract is strongly recommended, it is not required for attendance. We look forward to seeing you there.

Teaching Social Networks

Organizer: **Demetrius Lewis**, *U. of California, Riverside*
Organizer: **Blaine Landis**, *U. College London*
Presenter: **Weihua An**, *Emory U.*
Presenter: **Travis Grosser**, *U. of Connecticut*
Presenter: **Matt Cummins**, *ESSEC Business School*

The purpose of this PDW is to create an ongoing forum for Academy members interested in teaching social networks to undergraduate, MBA, and executive audiences to share and learn practical insights on how to prepare and deliver individual sessions or entire courses on the topic. The PDW will be organized into three modules – substantive topics, an open innovation session, and an introduction to network analysis – that are designed to assist participants in transforming research on social networks into effective educational experiences. The substantive topics module will focus on how experienced faculty have leveraged network concepts to develop and deliver thematic courses. The open innovation module will focus on the issues, challenges, and questions that the participants have experienced or anticipate with teaching social network modules or courses. Last, the network analysis module will include a hands-on, interactive learning session with case studies and R code provided.

Putting the Worker First: A Conversation Around DEI

Panelist: **Priyank Arora**, *Darla Moore School of Business, U. of South Carolina*
Panelist: **Vikram Bhakoo**, *U. of Melbourne*
Panelist: **Barbara B. Flynn**, *Indiana U.*
Panelist: **Sriram Narayanan**, *Michigan State U.*
Panelist: **Wendy Tate**, *U. of Tennessee*
Panelist: **Katie S. Wowak**, *U. of Notre Dame*

This session focuses on how faculty can strive to create a better world together through diversity, equity, and inclusion (DEI) research. The intent is to hold a positive, candid conversation about DEI research topics and trends to foster a more diverse, equitable, and inclusive environment for all workers (i.e., factory workers, managers, executives, students, faculty, etc.). The session will be partitioned into two segments. During the first portion of the session, a panel of distinguished faculty members will share their insights on DEI research trends and opportunities. The objective of this portion of the session is to craft a broad DEI research agenda. For the second portion of the session, participants will join breakout groups for more in-depth discussions around various DEI research topics, trends, and opportunities. The objective of this portion of the session is to populate the broad DEI research agenda generated from the first portion of the session with specific research questions scholars should investigate. This session is sponsored by the Operations and Supply Chain Management Division, but participants from all areas are welcome.

Speed Networking with the SIM Division

Organizer: **Sarah Stephen**, *U. of Liverpool Management School*
Organizer: **Pushpika Vishwanathan**, *U. of Amsterdam*

Networking can be daunting. It may feel tempting to avoid a room filled with strangers in favor of seeking out more comfortable conversations with those you know. But wait! – What if that room is filled with established and future SIM thought-leaders, who are passionate about the same kinds of scholarly topics, research methods, teaching innovations, and impact that you are? How about a space dedicated to warm introductions, energetic idea-sharing, and the spirit of community? What if you could plan on lively facilitated opportunities to meet extraordinary global colleagues, discuss existing research, and consider developing new projects? Spoiler alert: you can!! SIM Speed Networking is exactly that space with exactly those people and exactly these opportunities! This annual event in collaboration with the SIM Division's Research Committee aims to facilitate connections among scholars interested in topical issues linking business and society, professional development, and impactful research incubation. All are welcome. Sign up for this PDW by filling out the following form and selecting a networking slot with your preferred senior faculty member: https://form.jotform.com/220888033625054. Slots will be allocated on a first come, first serve basis.

Now in its twelfth year, the Junior Faculty Paper Development Workshop aims to provide junior scholars with the opportunity to receive developmental feedback on their current research projects. The workshop features a panel of distinguished scholars with expertise in a diverse range of topics and methods. It targets junior faculty who are struggling with one of their papers, as for instance the paper has been rejected or has received contradictory reviews. Junior scholars will meet with senior mentors to discuss their paper and get advice on how to advance it.

If you hold a faculty position as an Assistant Professor or comparable rank and your research focuses on STR-related topics, we encourage you to apply to the JFPDW. Applications should include (1) your curriculum vitae (including name, email address, title, and institutional affiliation), (2) the paper you want to receive feedback on (a new working paper or even a paper that's been through the review process already), and (3) an indication of three faculty mentors who are of most interest to you. We will do our best to facilitate matches, but this will depend a little on demand. Please submit your application online by June 1st to STR.PaperDevelopmentWorkshop@gmail.com. If you have any questions, please get in touch with one of the organizers: Elie Sung (sung@hec.fr), Pavel Zhelyazkov (pzhelyazkov@ust.hk), Aline Gatignon (galine@wharton.upenn.edu), or Daniel Keum (dk2721@columbia.edu).

DEI's Global Ambassadors Broadening the AOM Experience for Emerging International Members

Organizer: **Raymond Trau**, *Macquarie U.*
Organizer: **Anna Katherine Ward**, *Virginia Tech*
Panelist: **Fida Afiouni**, *American U. of Beirut*
Panelist: **Nasima Mohamed Hoosen Carrim**, *GDO*
Panelist: **Tania Casado**, *U. of Sao Paulo*
Panelist: **Marta M Elvira**, *IESE Business School*
Facilitator: **Shehla Riza Arifeen**, *Lahore School Of Economics*
Facilitator: **Farzana Ashraf**, *Macquarie Business School, Macquarie U.*
Facilitator: **Elena Doldor**, *Queen Mary U. of London*
Facilitator: **Bernadeta Gostautaite**, *ISM U. of Management and Economics*
Facilitator: **Huong Le**, *Central Queensland U.*
Facilitator: **Mihwa Seong**, *U. of St. Gallen (HSG)*
Facilitator: **Radha Rani Sharma**, *New Delhi Institute of Management (NDIM)*

Our broad goal is to connect and support emerging international members from emerging economies, the global South, and other geographies where our AOM/DEI membership is under-represented. The DEI's Global Ambassadors will partner with AOM-partner organizations to identify and invite Management scholars around the world to take part in our PDW. Participants will request and be matched with mentors who will help them feel more supported at future AOM conferences and more confident in their future AOM paper development efforts. Four panelists with connections to/in underrepresented/emerging economies will present ideas, and Global Ambassadors will facilitate a roundtable discussion on overcoming outsider status at AOM and developing high-quality conference submissions. In alignment with AOM's four driving goals, our PDW aims to (1) connect and support members of the global management/organization community who might otherwise be overlooked at AOM, (2) enhance the diversity of the membership to which AOM provides indispensable value, (3) advance knowledge relevant to an even more diverse set of stakeholders/institutions around the world, and (4) enhance AOM's standing as a globally-led association. Key take-aways to participants of the PDW include stronger (1) connection to and belonging within the DEI community, and (2) honing of paper development skills, making future AOM attendance more likely. PDW participants will also be invited to a Welcome Coffee on the morning of this PDW to network with mentors and panelists.

Diversity and Inclusion in the Curriculum: What Can Teachers Teach?

Coordinator: **Millicent F. Nelson**, *Middle Tennessee State U.*
Facilitator: **Jennifer M. Collins**, *Florida A&M U.*
Facilitator: **Matrecia James**, *St. Bonaventure U.*
Facilitator: **Angela K. Miles**, *North Carolina Central U.*

Some of the dialogue and actions taken recently in the United States have many teachers in higher education baffled on what they can and cannot teach/discuss in the classroom. In some states, topics such as Diversity, Equity, Inclusion (DEI) and Critical Race Theory (CRT) have come under attack. Critics of these topics state that these issues make students feel ashamed or take personal responsibility or feel guilt or some other psychological distress. Proponents for these topics, especially for Critical Race Theory, state that it helps students to understand how racism has shaped U.S. laws and continue to impact the lives of those in minority groups. Both sides have relevancy that needs to be considered as we navigate business and management education. Politics and political agendas have escalated this issues in ways that have implications for what can be taught in the classroom and provided sanctions for those who violate those directives. Historically, professors have had academic freedom that shielded them from retribution for their choices in and out of the classroom. Professors were seen as owners of the curriculum, and they had the autonomy of designing courses according to their own understanding of their philosophy of knowledge. In this workshop, we will deal objectively with these topics and provide guidance for instructors on how to navigate teaching relevant concepts without providing harm to our shareholders. This PDW will explore strategies/techniques for optimizing the discussion and instruction of DEI, CRT, etc. in a manner that is acceptable to all sides.

Pursuing a Relevant Research Agenda Appropriate for an Entrepreneurship Scholar-Practitioner

Session Chair: **Kenneth A. Grant**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Participant: **John Martin Mueller**, *None*
Participant: **Lincoln Brown**, *Southwestern Oklahoma State U.*
Participant: **Thomas J. Mierzwa**, *U. of Maryland*
Participant: **Andrea Lane**, *Edinburgh Business School, Heriot Watt U.*

This Professional Development Workshop will help entrepreneurship scholars and industry practitioners determine research agendas appropriate for Scholar Practitioners, particularly those with significant industry experience who are at early stages of their academic careers. It supports the overall theme of this year's conference, "Putting the Worker Front and Center" by considering how Scholar-Practitioners can draw on their prior work experience to bring this key perspective to their teaching and research. Participants will hear from journal editors and successful authors, on how prior practical experience could be leveraged into a research agenda that results in publishable research.

Participant: **Elisa Alt**, *King's College London*

This PDW brings together, and seeks to grow, the community of scholars who share an interest in mental health/well-being and entrepreneurship. In this session, we aim to take stock of what we know, and co-create where we should go next by pondering how new research on mental health/well-being and entrepreneurship can inspire relevant, actionable, scholarly activity and more generally a fitter workforce. We will explore how research on mental health/well-being and entrepreneurship can offer novel forward-looking insights on this years' academy theme, especially about how the future of work—growing uncertainty, changing workplace dynamics, and increasing responsibility—involves opportunities for both precarity and self-actualization for workers. During our annual, interactive, gallery walk—which this year includes an innovative, crowdsourced, final integrating discussion with leading researchers and journal editors—this PDW will examine the mental health/well-being of "entrepreneurial workers." Thus, this year we broaden our focus by referring to entrepreneurs in terms of self-employed individuals, gig workers, and high-impact founders as well as employees, leaders, and managers, who are increasingly required to act entrepreneurially. We approach this PDW from different academic perspectives facilitating cross-disciplinary learning, enabling scholarly networking, and initiating collaborative research projects. We invite scholars researching mental health/well-being from entrepreneurship, OB, and related fields to this exciting PDW!

To register, email Jeff Pollack ((jmpolla3@ncsu.edu). Please include your name, email, affiliation, and whether you will be a presenter (bring a poster) or observer on the gallery walk.

The landscape of organizations is changing very rapidly. From technological advancements to shifting organizational processes, there have been unprecedented changes influencing how workers collaborate, resulting in the need to re-examine existing approaches to talent management. This is particularly evident in global teams, which are increasingly prevalent due to factors such as lower cost, access to expertise, among others. There are several established challenges associated with working in a global team environment stemming from collaboration over time zone, geographical, cultural, national, and organizational boundaries, to name a few. Employees also differ in functional backgrounds, experience, team tenure, and expertise, potentially exacerbating team dynamics. Given the increasing importance of talent management of global teams, it is imperative to understand how to address current challenges associated with the modern organizational environment to gain the benefits of having exceptional talented team members (e.g., High Potentials, Stars, "A" Players). Consistent with this year's Academy of Management Meeting Theme of Putting the Worker Front and Center, this professional development workshop presents an opportunity to extend scholarly engagement in talent management research by focusing on a key area of managing exceptional talent in global teams, in response to today's uncertainty in the global organizational environment. In this interactive PDW, five panelists will prompt innovative considerations in the potential role of talent management in facilitating the greater effectiveness of global teams. Participants will contribute to an active discussion of challenges, solutions, and research opportunities through the lens of talent management, focusing on global teams to mitigate uncertainty.

Over the past decades, research on compensation has broadened our knowledge of the relationship between compensation and productivity from the organizational perspective, yet the field calls for a more nuanced approach grounded on a greater understanding of contexts and mechanisms. On the other hand, it is relatively recent that compensation scholars acknowledge the importance of extending the scope to examine the impact of compensation from the employee perspective or that on various outcomes other than productivity. In addition to discussing what research questions have been investigated and need to be addressed, the proposed PDW aims to address how such research can be better designed and conducted. In sum, the purpose of PDW is to hear insights and prospects from compensation scholars on various issues under the three themes: (1) compensation and productivity from organization and employee perspectives; (2) compensation and beyond productivity from organization and employee perspectives; and (3) methods and study design issues. Following the panel discussions, roundtable sessions will be held where attendees can interact directly with the panelists under each theme.

We highly recommend pre-registration due to limited capacity (walk-in might be allowed, but not guaranteed). For pre-registration, please submit the form by August 1st (https://bit.ly/3TXcw3W).

Workers of the Future: Challenges & Opportunities of Comparative-Collaborative Research in Africa

Organizer: **Leonardo Liberman**, *ABS-UM6P*
Participant: **Natasha Winkler-Titus**, *U. of Stellenbosch Business School*
Participant: **Laurent Béduneau-Wang**, *Africa Business School, Mohammed VI Polytechnic U.*
Participant: **Anne Crafford**, *U. of Pretoria, South Africa*
Participant: **Jan Alewyn Nel**, *U. of Pretoria*

By 2050, a quarter of the total workforce will be in Africa, and the region will likely be the world's manufacturing center. Despite its potential, we know very little about the characteristics of the African worker across this vast, multifaceted and intricate continent. There is scant comparative regional research addressing work cultures, practices, and institutions and how managerial and organizational systems should be adjusted according to the varying contexts across African countries. This issue is not only academically warranted but also relevant for firms, organizations, entrepreneurs, and managers working within and across the continent. In this line, this PDW will be focused on the challenges, opportunities, and priorities of conducting comparative research in the African region. With the participation of scholars that have carried out research in the region in the past and others interested in doing research in the future, we will explore, discuss and learn about the most salient challenges while doing collaborative research in the region. We will also uncover opportunities to conduct comparative research and shed light on the best ways to capture these possibilities. We will finally discuss and agree on a research agenda in the field of management and organization from a comparative perspective in Africa for the incoming years. To accomplish these goals, this PDW will organize short scholarly presentations and a roundtable for discussions addressing these topics of inquiry.

Education at the Intersection of History, Culture and Theology: Havruta, Gurukula, Vihara & Socratic

Organizer: **Prof (Dr) Mujtaba M. Momin**, *College of Business Administration Americal U. of the Middle East Kuwait*
Presenter: **Krishna Priya Rolla**, *Dr. Babasaheb Ambedkar Marathwada U.*

History and ancient wisdom have been long recognized as sources of teaching-learning methodologies; may it be the Socratic Method (Greiner et al., 2003; Hurlow, 2022; Oliva & Capdevielle, 1980), Havruta cooperative learning method (Hertz-Lazarowitz & Zelniker, 1995; Teomim Ben-Menachem & Livnat, 2018) or the Gurukula system (Patel, 1994). Besides these the modern classroom system considerably relies on games to develop strategic thinking amongst the incumbents' (Reeves & Wittenburg, 2015) (Camerer, 2003). Despite the presence of theological and archaic tools of learning; adoption of these in a classroom set-up is sparsely witnessed, and largely tardy. Though antiquated, these teaching–learning methodologies are largely pristine. The proposal aims to proliferate these ancient methods to the audience, which can be adopted in modern classrooms for developing business and management acumen. Further, this session is a humble attempt to rescue this ancient educational wisdom from annihilation and extinction. With these borrowings from history, theology and culture; their timely adoption can aid scientific mindset, collaborative education, and learning effectiveness. These methods are evinced to accommodate learning diversity and develop inclusiveness (Bandyopadhyay et al., 2022), mitigate the effects of remote education (Shai, 2021). Vividly, these ancient borrowings have evinced to develop intellectual and socio-emotional development (Garcia & Betancort, 2012), besides resolving the challenge of learning consciousness, understanding, retention and execution gap (Penczynski, 2016). The proposed theme aims to re-introduce an assortment of teaching methodologies for business management studies; with illustrations of modes and methods to execute it in a classroom.

Teaching Relationally: Building Community and Connection in Our Classrooms

Organizer: **Jane E. Dutton**, *U. of Michigan*
Organizer: **Arne Carlsen**, *BI Norwegian Business School*
Organizer: **Sally Maitlis**, *U. of Oxford*
Presenter: **Emily Dunham Heaphy**, *U. of Massachusetts, Amherst*
Presenter: **Hooria Jazaieri**, *Leavey School of Business, Santa Clara U.*
Presenter: **Miha Skerlavaj**, *U. of Ljubljana, School of Economics and Business*
Presenter: **Jason Kanov**, *Western Washington U.*
Presenter: **Gianpiero Petriglieri**, *INSEAD*
Presenter: **John Paul Stephens**, *Case Western Reserve U.*

This PDW on Teaching Relationally is designed as an immersive experience in creating and implementing classroom practices with an ethic of care. Drawing from a variety of relational theories, we invite participants to experience and learn small moves to engage each other in and beyond the classroom in ways that foster flourishing and growth, while also acknowledging the deeper social and systemic roots of interactions in class. We welcome six skilled teacher-researchers who will demonstrate a variety of ways to incorporate relational practices in our teaching in order to build a relationship-centric classroom. At the same time, the PDW is designed as an immersive experience that illustrates how a relationship-centric gathering looks and feels. Our aim is to inspire experimentation and optimism about how small changes in our teaching practices can seed connections that enliven classroom learning and deliver positive outcomes for all. By making these practices visible, demonstrable, and discussable, as well as embodily experienced, we seek to strengthen our community of practice and expand our imagination of how to teach relationally. Our aim is for attendees to leave feeling more connected, cared for and inspired themselves, and thereby enabled to experiment and institutionalize efforts to create their own relationship-centric classroom.

In the spirit of building early connection, we strongly encourage you to pre-register if you are planning to attend this PDW. Please use this link to do so: https://www.eventbrite.com/e/teaching-relationally- building-community-and-connection-in-our-classrooms-tickets-643182083927

Research on collectives in management studies, which are self-asserting groups and organizations, such as activist and informal business networks, and open-source communities that form to address social, economic, and environmental challenges has been ubiquitous. However, given the number and increasing popularity of collectives operating today around the globe, more work needs to be developed to explore the heterogeneity of forms and theorize how collectives are organized in and across time and space, especially in the context of new platforms and technologies. This PDW seeks to unpack this research and offer insights into the role of collectives in carving out the future by imagining possibilities of world-building. Through a panel presentation and round table discussions, the goal of the PDW is to develop a more nuanced understanding of the various contexts, experiences, and possibilities of collectives for making new worlds. Thus, we contribute to drawing awareness of the role collectives to shed light on the spatial and temporal dynamics and forms of world-building, by bringing together experts in a PDW designed to: (1) uncover and document the variety of aims, forms and tactics used by collectives to imagine futures, (2) promote greater scholarship on the link between world-building collectives, and time and space, (3) develop a research program that sheds light into new and critical aspects of collectives across different contexts and geographies, and (4) foster opportunities to build a community of scholars with an interest in world-building collectives.

This workshop is aimed at PhD students at the early stages of their dissertation work. Participants explore with experienced scholars how OMT scholarship and the OMT Division can help them turn their research ideas into robust and impactful academic knowledge. Through the OMT Meet Up initiative, they are invited to meet one-on-one with scholars who share their research interests and who can help them navigate the early stages of their PhD. They also share with other participants their experiences of being a doctoral student and begin to build their own international network. This workshop will run annually as a replacement for the OMT Doctoral Dissertation Proposal Workshop.

NEW! For PhD students in their first or second year of study. Space is limited. Nomination deadline: May 15th. Students must be nominated by their PhD supervisor or PhD program coordinator. Contact OMT’s Division Chair, Eva Boxenbaum, at eb.ioa@cbs.dk for further instructions.

Personally Relevant Research on Grand Challenges

Organizer: **Haitao Yu**, *IESEG School of Management*
Organizer: **Lucas Amaral Lauriano**, *IESEG School of Management, LEM-CNRS 9221*
Panelist: **Pratima Bansal**, *Ivey Business School*
Participant: **Juliane Reinecke**, *Oxford U., Saïd Business School*
Panelist: **Andrew J. Hoffman**, *U. of Michigan*
Panelist: **Ana Maria Peredo**, *U. of Ottawa*
Panelist: **Jamie Jocelyn Ladge**, *Northeastern U.*
Panelist: **Rachel Le Marois**, *EMLYON Business School*

In this PDW, we intend to discuss how personally relevant research can provide significant theoretical and practical contributions to grand challenges, as well as the possible tensions (and their solutions) that might emerge in this process. By personally relevant, we mean the research "addresses questions in which scholars are personally invested or involves a population to which they belong or in which they hold a personal interest." In personally relevant research, questions are motivated by scholars' own experiences, identities, interests, and communities. We argue that grand challenges connected to social and environmental aspects can be leveraged when scholars are personally interested in such a topic. In this sense, there may be potential synergies between academic research and engagement to drive academic and real-world impact simultaneously. Likewise, there might also be tensions when scholars do research close to them, such as potential bias, or emotional exhaustion. To discuss the contribution and caveats of personally relevant research on grand challenges, we invited six accomplished and seasoned researchers who have conducted personally relevant research on grand challenges. They have conducted numerous research projects, whose outcomes have been published in top-tier peer-reviewed journals and have significantly contributed to practice.

Panelist: **Benjamin Shestakofsky**, *U. of Pennsylvania*

Individuals, organizations, and institutions around the world are increasingly grappling with the promise and perils of Artificial Intelligence (AI) including machine learning. The intent of this PDW is to help scholars develop ideas to advance research - particularly interdisciplinary research - on AI, organizations, and management. The PDW will begin with a facilitated discussion with panelists from diverse disciplinary and practitioner backgrounds currently engaged in research on AI, organizations, and management. The second half of this interactive PDW will provide participants the opportunity to develop their own research ideas through facilitated small breakout groups and large group discussions with the panelists.

Visualizing Qualitative Data and Theory

Organizer: **Elizabeth Long Lingo**, *Worcester Polytechnic Institute*
Organizer: **Ann Langley**, *HEC Montreal*
Organizer: **Karen Jansen**, *Henley Business School, U. of Reading*
Organizer: **Ozumcan Demir Caliskan**, *Imperial College London*
Presenter: **Martha S. Feldman**, *U. of California, Irvine*
Presenter: **Victor Seidel**, *Babson College*
Facilitator: **Preeti Varma**, *INSEAD*
Facilitator: **Felipe Massa**, *U. of Vermont, Grossman School of Business, US*

Building on recent calls to consider the role of visual artifacts in qualitative research (Feldman, 2016; Langley and Ravasi, 2019), this interactive session will explore key challenges faced by scholars seeking to use visualization to analyze and present complex, multi-level qualitative data and theory in a compelling and parsimonious way. We seek to create a space for discovery and elaboration around such questions as: what are potential untapped opportunities to utilize visualization to drive theory development in qualitative research? What common challenges arise when scholars attempt to use visualization to communicate their emergent theory to audiences, editors, and reviewers? What unique nuances need to be considered when attempting to visualize time and temporality or iterative, intersecting, and recursive processes? How can we bring play and imagination to our visualization to meet the increasing complexity of the theories we seek to illuminate and understand? What are possible new best practices that could be adopted among scholars? Bridging both theory and practice, this hands-on PDW seeks to: (1) strengthen participants' awareness of the challenges and opportunities of visualizing complex, multi-level qualitative data and theory; (2) offer participants the opportunity to receive feedback on their work-in-progress visualizations/emergent theory and to learn from others' visualization process efforts; (3) crowdsource and articulate new best practices and technological tools available for designing more effective visualizations; and (4) forge new research collaborations and possibilities among scholars interested in visualization as a subject of theoretical and methodological inquiry.

The first part of our workshop will involve presentations by our organizers and presenters around challenges and best practices related to qualitative data visualization. The second part, Small Group Working Sessions, will offer participants the opportunity to present and/or to learn from others' work-in-progress visualizations, feedback and constructive discussion. Both parts are open to all participants of the AoM Annual Meeting. Participants who wish to get feedback on their visualizations during the Small Group Working Sessions will be asked to "pre-register/apply" for the PDW (call for pre-registrations/applications published separately). Our call will invite participants to share their abstract, working visualizations (e.g., diagrams, models, drawings), and the challenges they are facing in their visualization efforts.

Necessary Condition Analysis (NCA): Logic, Theory, Methodology, and Publications.

Participant: **Jan Dul**, *Rotterdam School of Management, Erasmus U.*
Participant: **Tatiana Andreeva**, *Maynooth U.*
Participant: **Nicole Richter**, *U. of Southern Denmark*

In this workshop you will learn how to conduct Necessary Condition Analysis (NCA) and how to publish with NCA. This emerging method was recently published in the journal Organizational Research Methods (2016, 2020) and in the Sage book Conducting Necessary Condition Analysis (2020). NCA is now used in many fields including International Management, HRM, Strategy, Organizational Behavior, Operations, and Entrepreneurship. NCA understands cause-effect relations as “necessary but not sufficient” and not as additive and average logic that is used in regression analysis. “Necessary” means that an outcome will not occur without the right level of the condition, independently of the rest of the causal structure (thus the condition can be a “bottleneck”, “critical factor”, “constraint”). In practice, the right level must be put and kept in place to avoid guaranteed failure, and to allow the outcome to exist. NCA can be used as a stand-alone tool or in combination with regression and other approaches. By adding a different logic and data analysis approach, NCA adds both rigor and relevance to theory and data analysis. This interactive session familiarizes scholars with the method and has two parts. Part 1 is a general introduction discussing the diffusing of NCA and the importance of necessary conditions, illustrated with examples from different fields. Part 2 helps participants to become the first users of NCA in their field, with a practical demonstration about the application of NCA on how to build necessity theories, and how to analyze data for testing such theories using the NCA software and how to report the research in journal publications.

Openness in the Context of Crises: A New Paradigm for Organizational Crisis Management

Participant: **Julia Hautz**, *U. of Innsbruck*
Participant: **Richard Whittington**, *U. of Oxford*
Participant: **Louise Comfort**, *U. of California, Berkeley*
Participant: **Stephen Brammer**, *U. of Bath*
Participant: **Layla Jayne Branicki**, *School of Management, U. of Bath*
Participant: **Alfredo De Massis**, *Free U. of Bolzano, IMD Business School and Lancaster U.*
Participant: **Lorenz Graf-Vlachy**, *TU Dortmund U.*

Organizations and societies alike are confronted with new external challenges. The COVID-19 pandemic, complex geopolitical events, and accelerated information (and misinformation) flows have the potential to result in sudden, unexpected and massive disruptions with sometimes devastating impact. This requires management to reconsider traditional closed or ‘circle the wagons’ responses to crises. In this PDW we seek to examine “openness” as an alternative organizational response in the face of crises. “Openness” has become an organizational leitmotif of our time echoing contemporary trends in many societal domains and responds to widespread tendencies. This PDW aims to (1) engage with the questions if and how openness as recent societal paradigm can critically help and support organizations to move beyond established dogmas and to respond to and manage severe crises more successfully, (2) link the disparate literatures currently grounded in multiple separate disciplines, (3) broaden, challenge, and unite existing theoretical discourses and empirical advancements in crises management in the context of openness, (4) discuss the suitability, advantages and disadvantages of selected perspectives and methods to further advance corresponding research; and (5) synthesize and share with the scholarly community the PDW outcomes to sharpen the future research agenda on openness in the context of crises. It will provide PDW participants with new insights, inspiration, and advice to further develop their work-in-progress on the nexus of openness and crises management.

This PDW is set up in two parts. Part I is a panel discussion which is open without registration. Part II includes roundtables. For participants need to express their interest via e-mail to julia.hautz@uibk.ac.at by stating what might be their relevant work-in progress (research question, theoretical perspective, 250 words) and give two preferred roundtables. Based on their preferences, participants will be allocated to a roundtable.

Fundamental Issues in Digital Strategy

Organizer: **Anparasan Mahalingam**, *Syracuse U. Whitman School of Management*
Organizer: **Richard Makadok**, *Ohio State U.*
Panelist: **Nicolai J. Foss**, *Copenhagen Business School*
Panelist: **Ranjay Gulati**, *Harvard U.*
Panelist: **Marvin B Lieberman**, *UCLA Anderson School of Management*
Panelist: **Phanish Puranam**, *INSEAD*
Speaker: **Riitta Katila**, *Stanford U.*
Speaker: **Tony Tong**, *U. of Colorado, Boulder*
Speaker: **Andy Wu**, *Harvard Business School*

In order to help to build a community of scholars interested in studying digital businesses through the lens of classic core strategy questions, we organized popular PDWs at AOM 2020, 2021 and 2022 conferences, all of which attracted over 200 live participants. These three past PDWs used the theoretical lenses of corporate-level strategy, organization governance, and resources and capabilities to help understand digital businesses. This year, as an extension of this series, we propose to examine digital businesses through the classic "Fundamental Issues in Strategy" questions posed by Rumelt, Schendel and Teece (1995). We will focus on both how these fundamental issues in strategy can inform research on digital business phenomena, and how novel features of these phenomena may require adapting those fundamental questions.

Participation in the PDW is open to all individuals who have registered for the AOM conference, and a separate registration is not required. To take part in the breakout group section of the PDW, please register using the following link: https://forms.gle/ScYDMwQhRKRYBdsz9. For any inquiries, please contact us at StrategicManagementWorkshop@gmail.com.

Session Type: **PDW Workshop**
Program Session: **393** | Submission: **11913** | Sponsor(s): **(STR, OMT, TIM, ENT)**

Absorptive Capacity in the Digital Area

Organizer: **Barak S. Aharonson**, *U. of Guelph*
Organizer: **Shaker A. Zahra**, *U. of Minnesota*
Organizer: **Felix Arndt**, *U. of Guelph*
Organizer: **Seemantini Madhukar Pathak**, *U. of Missouri, St. Louis*
Organizer: **Tatiana Romanova Stettler**, *Kent State U.*
Organizer: **Peter J. Lane**, *U. of New Hampshire*

The digital era is characterized by dynamic technological evolution, and rapid knowledge diffusion entwined by extreme social changes. The challenges facing companies in this era raise questions regarding the role of absorptive capacity within the organization's strategy. With persistent environmental changes, can investments in building absorptive capacity capabilities pay off and help the organization achieve a sustainable competitive advantage? This important question adds controversy to a concept surrounded already by conceptual and empirical polemics which have not yet been fully resolved. The dominant framing by Cohen & Levinthal (1990) has been challenged by scholars who offered ways to reconceptualize it (Lane, Koka, and Pathak, 2006; Todorova and Durisin, 2007; Zahra and George, 2002) and delineate it from other concepts (e.g., organizational learning (Sun & Anderson, 2010; Vera, Crossan, and Apaydin, 2012), learning orientation, ambidexterity, and other dynamic capabilities). However, these conceptualizations have been based on a different industrial setting that differs from the emerging digital environment. Therefore, in this PDW we will revisit the utility of absorptive capacity in the digital era; identify conceptually conflicting assumptions; and offer new pathways revitalizing the concept of absorptive capacity and how it can help organizations' strategy in the new environment. Together, the panel and the audience can creatively generate future directions for scholars who are interested in further exploring and developing this field.

"Hot Methods" In Health Care Management: Research Methodology Roundtables

Organizer: **Wiljeana Jackson Glover**, *Babson College*
Organizer: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*
Organizer: **Soo-Hoon Lee**, *Old Dominion U.*
Facilitator: **Gary J Young**, *Northeastern U.*
Facilitator: **Tinglong Dai**, *Johns Hopkins Carey Business School*
Facilitator: **Nataliya Ivankova**, *U. of Alabama, Birmingham*
Facilitator: **Michelle Li**, *Babson College*
Facilitator: **Soroush Saghafian**, *Harvard U.*
Facilitator: **Christina T. Yuan**, *Johns Hopkins Bloomberg School of Public Health*

As the health care industry undergoes dramatic shifts in response to changes in population needs, policy reform, fiscal constraints and technological developments—in addition to the unfolding COVID-19 pandemic—the need for more research methodologies to answer important research questions has become apparent. This PDW invites participants to engage in discussion of four of the "hot topics in research methodologies" in health care management research and practice: 1) artificial intelligence and machine learning; 2) mixed methods; 3) eliminating bias and strengthening rigor in methods, and 4) network analysis. There will be two rounds of discussion. During each round, participants will gather at specific research methodology roundtables where they will meet other researchers who share similar interests and discuss with them the research methodologies that could facilitate measurement and testing to answer important health care research questions. Discussion at each roundtable will be facilitated by two accomplished scholars, with active research on the hot topic. Participants will self-select into the topic area of their choice at the beginning of the session. This PDW offers participants the opportunity to engage in rich research discussions, share new ideas, and make meaningful connections with potential collaborators.

Putting the Latinx Worker Front and Center

Organizer: **Carlos B. Gonzalez**, *Cal Poly Pomona*
Organizer: **Patricia G Martinez**, *Loyola Marymount U.*
Organizer: **Monica C. Gavino**, *San Jose State U.*

There are now more than 60.9 million Latinx -identified individuals in the U.S., making up more than 18% of the population, and trending to be approximately 30% by 2050. Even with this demographic trend, management and organizational research on the Latinx work experience has been limited and has yet to gain a level of attention commensurate with this population's statistics, let alone be "front and center." To address this issue, this PDW is a call for scholarship that meets the moment and acknowledges the unique organizational experiences of Latinx workers. The vision for this PDW is to more intentionally develop a research agenda that acknowledges and incorporates Latinx people, with all their complexities and similarities, within the study of organizations and workplaces. Our aim is pragmatic. Participants will pre-register, submit a working paper for peer review and commit to reviewing and preparing detailed feedback for two papers. During this session, participants will receive feedback. All papers will focus on the Latinx experience in organizations and the workplace within a U.S. context.

Are you looking to refine your research identity or develop your career plans? If so, Diamonds in the Rough (DIR) is for you! For the last 11 years, DIR has offered career guidance for junior scholars (doctoral candidates, postdocs, assistant professors) across a wide variety of theoretical perspectives and methodologies. DIR strives to meet junior scholar's needs for professional development in a warm, welcoming, and inclusive environment. The PDW contains two components. 1) Asynchronous Feedback Sessions (registration required): Registrants will be paired with an influential scholar and 2-3 other registrants for a friendly chat and personalized feedback on their individual portfolios. These personalized sessions will be arranged at various times at the convenience of the facilitating scholar and their designated registrants. Participants who complete this session receive an MOC division "Bright Diamonds" certificate. 2) Live Synchronous Session (open to all): This live session features presentations, panel discussions, and networking opportunities for facilitators and participants. Come to be treated to stories about how prominent scholars forged their paths, advice on how to best navigate your own, and networking opportunities with colleagues with similar goals. Please visit https://moc.aom.org/intherough/dir for the most up to date details about DIR. To register, please complete our brief survey here and submit your CV and a one-page overview of your research identity for feedback. MOC prides itself in being a 'bridging division' and we consider DIR the ultimate 'bridging PDW'- we're excited to help you "think it through".

This PDW contains two components. 1) The in-person session in Boston (open to all, no registration required) will feature presentations and networking opportunities for facilitators and attendees. 2) Personalized Feedback Sessions (registration required): Registrants will be paired with an influential scholar and 2-3 other registrants for a friendly chat and feedback on their individual portfolios. These personalized sessions may be held in Boston or virtually before or after the conference at the convenience of the facilitating scholar and their designated registrants. Participants who complete this session receive an MOC division "Bright Diamonds" certificate. Registration link: https://byu.az1.qualtrics.com/jfe/form/SV_3V0FubEByDxFHaS

Entrepreneurship, Inequality, and Society: Implications for Organizations and Policy

Participant: **Timothy B. Folta**, *U. of Connecticut*
Participant: **Robert Neal Eberhart**, *UCLA Anderson School of Management*
Participant: **William S Schulze**, *U. of Utah*
Participant: **Jeff York**, *U. of Colorado, Boulder*
Participant: **Cristina Cruz**, *IE Business School*
Participant: **Lisa Mali Jones Christensen**, *Brigham Young U.*

This PDW aims to help spur and develop ideas for papers addressing how the phenomenon of entrepreneurship shapes society far beyond the spawning and success of individual new ventures – it is shaping how we deal with problems such as climate change, income inequality, work-life balance, and economic development. This topic is the focus of an upcoming special issue of Academy of Management Perspectives, and this PDW may serve to draw attention to the special issue and improve paper readiness. Following the dis-establishment of large conglomerates, labor unions, and political largesse, the example of Silicon Valley led policy-makers and scholars to emphasize entrepreneurship to replace older ways of employment and innovation. As a result, research came to emphasize studying entrepreneurship to drive at determinants of entry, exit, or performance. Today, entrepreneurship has become pervasive, and entrepreneurs are viewed as a key protagonist to deal with other societal issues such as poverty, climate change, family well-being, and economic development. This expanded view of entrepreneurial impact, however, may be misplaced as new research shows both increases in inequality, continued social harms, and a declining rate of entrepreneurship. It might also be misplaced by encouraging unsustainable business models. This PDW aims to encourage research trying to understand the bounds of how and when entrepreneurship might transform society – whether it is useful to produce social good or if it has unintentional effects or even is an appropriate solution for non-commercial ends. Round-table discussions around themes will provide the basis for advancement.

The Power of Humble Teaching

Participant: **Elena Lvina**, *Saint Joseph's U.*
Participant: **C. Ken Weidner**, *Saint Joseph's U.*
Participant: **Sujit Sur**, *Carleton U.*
Participant: **Catalin Ratiu**, *California State U., San Marcos*
Author: **Edgar H. Schein**, *MIT Sloan School of Management*

This workshop will be of interest to attendees who believe that teaching should help students grow as much as it should educate by transferring some functional knowledge. Building upon the groundbreaking work of Edgar Schein (Lambrechts, Bouwen, Grieten, Huybrechts & Schein, 2011) on Process Consulting, Humble Leadership, and Humble Inquiry, this workshop will enable further understanding and adoption of Humble Teaching – a personalized relationship-based process of constant inquiry, reflection, helping and adaptation internalized by the instructor to facilitate learner's empowerment and long-lasting personal learning. The PDW assumes that participants believe in the value of student-oriented learning and mainly focuses on the question "What does it take to become a Humble Teacher?" We will discuss some pre-requisites of Humble Teaching, such as the instructor's inquisitiveness, commitment to help, and tolerance for ambiguity. In this workshop, we will provide examples and practice behaviors enabling personized (voluntary and mutually dependent as per Schein & Schein, 2018:130) instructor-student and students' peer relationships. Applying Schein's findings for leadership (Schein & Schein, 2018), and consulting (Schein, 2016), we aim to demonstrate the value of Humble Inquiry (Schein & Schein, 2021) in teaching, and help develop participants' appreciation of the "art of asking instead of telling." We will also share some of our teaching tools and class assignments, designed with the premises of Humble teaching in mind. Finally, this workshop will address faculty aspirations and concerns in the areas of "Humble Teaching and grading," and "Humble Teaching and cheating/absenteeism/class participation".

The topic of this PDW — Humble Teaching — was inspired by Ed Schein's seminal work in humble leadership and process consulting, and a series of conversations the first author had with him in 2022. Dr. Schein committed as a co-presenter when this PDW was proposed before his passing earlier this year. We aspire to further commemorate his legacy as a teacher and scholar and his generosity as a colleague and mentor by exploring humble teaching with workshop participants.

Publishing in HBR, SMR, CMR, PSJ, & I by IMD to Impact Workers

Organizer: **Brad Winn**, *Utah State U.*
Organizer: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*
Panelist: **Ania Wieckowski**, *Executive Editor at Harvard Business Review*
Panelist: **Elizabeth Heichler**, *MIT Sloan Management Review*
Panelist: **David Vogel**, *U. of California, Berkeley*
Panelist: **David Reimer**, *HR People + Strategy*
Panelist: **Delia Christina Fischer**, *169332*
Panelist: **Ethan Scott Bernstein**, *Harvard Business School*

Many research studies have commenced with the hope they will have both theoretical and practical implications. In addition to making a difference within their scholarly communities, many academics want to impact managers and workers in companies. All too often important academic insights are not read by "real world" professionals. In our quest to be more inclusive in sharing our research and impact workers, it is increasingly important to consider new ways of providing managers and workers greater access to our research findings. This PDW focuses on how researchers can have a greater impact on practice by publishing in journals that are circulated beyond the Academy. Senior editors representing "bridging" journals (Harvard Business Review, MIT Sloan Management Review, California Management Review, People + Strategy Journal, and I by IMD) will share insights on how to publish in venues that impact both academics and practitioners. In addition, researchers will share ideas for how they have translated their academic work for these journals. Researchers and editors will lead a highly interactive and participative session on this topic, which will include audience dialogue and roundtable discussions.

Practicing Dialogic OD In a World of Linear Change Frameworks

Presenter: **Keith Ray**, *Fielding Graduate U.*
Presenter: **Joan Goppelt**, *Act Too Consulting*

Scholars and consultants applaud efforts to create change frameworks that simplify organizational life and ignore the complexities of change. These frameworks are sometimes marketed as straightforward, linear ways to address change and transformation. Often the retrospective meaning created through case studies, from which some frameworks are created, omits the messy reality of what managers and employees experienced in change efforts and substitutes neat, idealized prescriptions that fit dominant narratives of manager and leader agency. Organizational change frameworks become attractive for managers anxious to address their issues. They find comfort in a set of steps advertised to have worked for another organization. However, managers may avoid the critical thinking, sense-making, way-finding, and hard work required to create change within their context when strictly attempting to follow the prescribed steps. (Sarra, et al., 2023) Practitioners and researchers involved with some dialogic methods, such as Dialogic Process Consultation, eschew rigid linear frameworks and opt for emergent conversations (Goppelt, et al., 2015). How can such practitioners engage with clients attempting to use a prescriptive change framework? How do we keep the conversation grounded within the context and interactions that create the day-to-day organizing and work? Can frameworks help meaning making, or do they inhibit it by forcing a particular perspective? When and in what contexts can frameworks be helpful, when can they be harmful, and how can we identify the difference? This workshop will bring together scholars and practitioners to explore these questions and expand their knowledge, thinking, and practice of creating change in organizations.

Foregrounding, Backgrounding, and Dropping: Challenges and Opportunities of Incorporating Diversity

Organizer: **Vanessa Conzon**, *Boston College*
Organizer: **Audrey Holm**, *HEC Paris*
Organizer: **Mary Miata Struzska-Tyamayev**, *Boston College*
Presenter: **Sarah Kaplan**, *U. of Toronto*
Presenter: **Damon J. Phillips**, *The Wharton School, U. of Pennsylvania*
Presenter: **Lakshmi Ramarajan**, *Harvard U.*
Presenter: **Miguel Unzueta**, *U. of California, Los Angeles*
Moderator: **Kyle Dobson**, *U. of Virginia*

While there has been an increase in the number of publications related to diversity, scholars vary in how they write and incorporate diversity in their research. In this workshop, we ask when, how, and why scholars “foreground,” “background,” or “drop” diversity and inequality when moving from real-world observations to research accounts in papers and publications. Foregrounding entails making diversity the focus of published research; backgrounding entails making diversity a secondary focus of scholarship; and dropping entails severely limiting or entirely excluding concerns about diversity from research. In bringing attention to the issue of foregrounding versus backgrounding versus dropping, we ask related questions such as: What challenges, pushback, and missed opportunities do scholars face when trying to include diversity in their papers and research? What are authors’ experiences when trying to publish research that includes a diversity component? What are editors’ views on positioning such research? The workshop will include a plenary discussion and multiple opportunities for participants to share their questions and observations. Leading scholars in organizational theory and organizational behavior will share their experiences as they try to address these questions, and help participants reflect on how to move forward individually and collectively to advance the integration of diversity and inequality in management research.

Culture & Technology: Building Bridges across Entrepreneurship & Innovation Research Contexts

Organizer: **Hyejun Kim**, *HEC Paris*
Organizer: **Mitali Banerjee**, *HEC Paris*
Panelist: **Giacomo Negro**, *Emory U.*
Panelist: **Aleksandra Joanna Kacperczyk**, *London Business School*
Panelist: **Noah Askin**, *U. of California, Irvine*
Panelist: **Mary J. Benner**, *U. of Minnesota*

Cultural industries are sites of innovation and entrepreneurship. However, scholarly research on innovation and entrepreneurship is often confined to technology industries. The two contexts – culture and technology – have much in common but are separated by a chasm. The goal of this PDW is to bridge the chasm that separates the research in these contexts. In the context of their own research, the PDW panelists will demonstrate how cultural industries can be rich contexts for developing and testing theories of innovation, entrepreneurship, and creativity. The panelists will also share insights and advice, based on their role as authors, reviewers and editors, to help scholars successfully navigate the challenges of publishing work in unique cultural contexts.

Developing and Publishing Research in Management Learning and Education

Presenter: **Dirk Lindebaum**, *Grenoble Ecole de Management*

Research in Management Learning and Education has gained increased prominence within the Academy as external stakeholders demand evidence of student learning, accreditors require institutions to show evidence of impact and recent crises have set numerous practical challenges and theoretical puzzles. In this session, a panel Editors and Associate Editors from the three major Management Learning and Education publications (i.e., Academy of Management Learning and Education, Journal of Management Education, and Management Learning) will discuss and provide advice on how to design and conduct novel, impactful, and meaningful research in management learning and education. The goals are to obtain a better understanding of core characteristics and quality criteria of good research in our field and knowledge of opportunities for developing publications. More specifically, we want to provide current and prospective authors with a supportive, encouraging and interactive platform where they might share their ideas for designing and conducting management learning and education research projects and gain initial feedback and direction from experienced editors. All are welcome to attend.

Distinguished Speaker: **Paolo Aversa**, *City U. London*
Distinguished Speaker: **Trenton A. Williams**, *BYU Marriott School of Business*

This professional development workshop (PDW) features innovative approaches to teaching strategy using in-person and online classes. We seek to provide PDW participants with different perspectives on teaching strategy and strategic management and how to integrate "big topics" into these classes. The primary objectives of this PDW are twofold. First, it will introduce and provide examples on how to integrate current challenges into the core strategy courses and how to use different pedagogical approaches into our core courses. Second, it will provide participants with the opportunity to engage with our highly experienced presenters during an interactive Q&A. The PDW will conclude with summary comments from the presenters and organizers.

Fostering Sustainability Among Small Businesses in Informal Economies

Organizer: **Baniyelme D. Zoogah**, *DeGroote School of Business, McMaster U.*
Presenter: **Baniyelme D. Zoogah**, *DeGroote School of Business, McMaster U.*
Presenter: **Constant D. Beugre**, *Delaware State U.*
Presenter: **Sherwat Elwan Ibrahim**, *American U. in Cairo*
Presenter: **Felicity Tanoe**, -

Africans were among the hardest hit by the COVID-19 pandemic leading to increased poverty rates for the first time since 1990. Conditions worsened especially for the unemployed and underemployed poor, who often work for unstable micro enterprises with no social protections or sense of community. Given the dearth of knowledge that focuses on the needs of small enterprises, especially in rural areas, we discuss how entrepreneurs in such conditions can be enabled in opportunity management and leadership that facilitate high quality, sustainable job creation to build flourishing businesses and communities.

Mental Health in Academia: At the Intersection of Doing a PhD and Personal Health and Well-Being

Facilitator: **Paulina Segarra**, *U. Anáhuac México*
Facilitator: **Kristin Samantha Williams**, *Acadia U.*
Panelist: **Nadia C. DeGama**, *AFG College with the U. of Aberdeen*
Panelist: **Fatima Ali Junaid**, *Massey U. New Zealand*
Panelist: **Rima Hussein**, -

Much has been said about mental health in academia; however, we believe a more powerful conversation is needed to create a sense of community between those who have similar struggles and concerns. The aim of this workshop is to hear the testimonies of those who have experienced issues with their mental health and attribute said issues to a PhD program or academic career. We believe this will foster normalization of these experiences which have long carried an immense amount of stigma. This will also allow for a community to be formed and for those going through a difficult time in academia to know that they are not alone and that there are others who have experienced similar situations and have found a way to cope with those difficulties. Attendees will hear different personal stories from the panelists on specific topics while also being able to share their own struggles. A stronger sense of community is much needed, and we believe we can help create new peer support networks through this workshop.

Design of Digital Experiments and Research Platforms

Organizer: **Aron Lindberg**, *Stevens Institute of Technology*
Organizer: **Jia Lin Cheoh**, *Purdue U.*
Organizer: **Jingyi Sun**, *Stevens Institute of Technology*
Organizer: **Jordan William Suchow**, *Stevens Institute of Technology*
Presenter: **Noshir Contractor**, *Northwestern U.*
Presenter: **Kevin Boudreau**, *Northeastern & NBER*
Presenter: **Mads Kock Pedersen**, *Aarhus U.*
Presenter: **Julien Clement**, *Stanford U.*
Presenter: **Alice Jang**, *Virginia Tech*

With the prevalence of digital traces of human actions and interactions on and with digital platforms, scholars are increasingly able to leverage rich, highly granular ground-truth data for developing and testing hypotheses related to individuals, groups, crowds, collectives, as well as artifacts and platform architectures. However, because such platforms are not often devised or controlled by researchers themselves, they do not necessarily lend themselves to randomized, experimental research. Of course, the use of randomized controlled experiments has long been considered the gold standard of scientific research. Further, advances in data-collection techniques for large-scale digital experiments combined with machine learning offer new ways of developing and testing theory. To enable experimental research on online communities and crowds of various kinds, some scholars have started to build their own digital platforms for conducting experiments, thus enabling them to assess various treatment effects. While conducting digital experiments with customized infrastructure design opens up opportunities for research on online communities and crowds, there are also many challenges, such as participation incentives and ethical concerns. Therefore, it is important for scholars working in this area to collectively leverage resources and ideas to enable digital experimental research. Through presentations of empirical work, group discussions, and conversations with a panel of scholars, this workshop is intended to contribute a nuanced and grounded view of the opportunities and obstacles to building and designing digital platforms for implementing digital experiments.

ENT Late-Career Consortium

Organizer: **Isabel C. Botero**, *U. of Louisville*
Organizer: **Matthew Allen**, *Manchester Metropolitan U. Business School*

The Late Career Consortium focuses on the discussion of career and life questions of faculty members that finished their doctoral education 15 or more years ago. The aim of this session is to help scholars in any discipline explore possibilities available for later career faculty members, manage the new demands of this career stage and identify ways to continue to grow professionally later in one's career. The consortium will start with an opening presentation by an eminent career/life stage scholar and then distinguished panelists will offer insights about a wide variety of specific topics and address questions from attendees. The consortium is open to all AOM attendees and will run for 90 minutes. It includes extensive Q&A and discussion among panelists and attendees. Live!

Teaching Soft Skills to Our Students: A Why, When, and How to Guide

Organizer: **Timothy Hoff**, *Northeastern U.*
Panelist: **Timothy Hoff**, *Northeastern U.*
Panelist: **Erin Sullivan**, *Suffolk U.*
Panelist: **Amber Stephenson**, *The David D. Reh School of Business, Clarkson U.*
Panelist: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*
Panelist: **Shivani Gupta**, *U. of Houston - Clear Lake*

The proposed Professional Development Workshop will focus on the why, when, and how of teaching our students to appreciate and master a range of soft skills (i.e. teamwork, communication, adaptability, empathy, listening, time management, and critical thinking). The "why" centers on the importance employers and industries place on soft skill usage and mastery in recruiting, deploying, and promoting workers. The effects of the COVID-19 pandemic and its changes in work structures (e.g., hybrid and virtual arrangements) on the need for students to have additional soft skill mastery will be discussed. The "when" of teaching soft skill mastery involves the best times within a course or curriculum to inject soft skill training. The "how" aims at better understanding the needed pedagogy behind teaching soft skills to students, including how to build such training into course syllabi and assignments; how to teach soft skill mastery in the classroom through experiential and simulation learning; and how to evaluate soft skill mastery among students. The PDW workshop will employ a panel of individuals who will address the when, why, and how through summaries of their experiences teaching these soft skills, followed by small group conversations among PDW attendees that focus specifically on a given soft skill and teaching it within a course or curriculum (e.g., teamwork, time management). The teaching of soft skills is an underappreciated and increasingly important imperative for both graduate and undergraduate students. Yet, many students leave their academic training with less exposure to such training and less confidence in employing soft skills in the workplace.

Gandhi's Dignified Approach to Work and Workers

Session Chair: **Anil K. Maheshwari**, *Maharishi International U.*
Session Chair: **R Ray Gehani**, *The U. of Akron*
Participant: **Satinder Dhiman**, *Woodbury U.*
Participant: **Nisha Pandey**, *Vivekanand Education Society's Business School, Mumbai, India*
Participant: **Vikram Gulati**, *Maharishi International U.*

On Mahatma Gandhi's martyrdom, the Nobel-prize winning scientist Albert Einstein declared that "Generations to come will scarce believe that such a one as this ever in flesh and blood walked upon this earth." . Gandhi transcended narrow mindedness and parochiality, and operated from a higher consciousness, which made him a global inspiration (Dhiman, 2015; Gehani & Maheshwari, 2020; Maheshwari, 2021). Gandhi was a champion of the dignity of work and workers. He approached work as worship, as an offering to the Divine. No work was too small for him, be that of the street cleaner or the statesman. Everyone deserves to earn a livelihood for themselves and their family through honest work and fair compensation. Gandhi encouraged local village economies to be self-sufficient, and social entrepreneurs should create meaningful paying work. His foundational principles of truth and non-violence relate directly to dignity and respect for all life. He carried all communities together in a peaceful manner in the pursuit of universal human flourishing. The notion of work and action has rapidly evolved over the last few decades. During turbulent pandemic times, Gandhi's liberating wisdom can help uplift the workers and the organizations. This workshop brings together a panel of management researchers with rich perspectives on Gandhian approach to work and management. Through dialog and exercises, this PDW seeks to engage attendees to explore pathways to creating a sustainable world through selfless service, as envisaged by Mahatma Gandhi.

Foregrounding Workers 3 Ways: Consultant-Guided, Worker-Driven, and Conversational Storytelling

Presenter: **Grace Ann Rosile**, *New Mexico State U.*
Presenter: **Gerardo Reyes**, *Coalition of Immokalee Workers*
Presenter: **Henri Savall**, *ISEOR, U. of Lyon*
Presenter: **David M. Boje**, *Emeritus*
Presenter: **Harry J. Van Buren**, *U. of Tennessee, Chattanooga*
Presenter: **Marc Bonnet**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*
Facilitator: **Maite Rateau**, *ISEOR*
Facilitator: **Richard Herder**, *Southwest Minnesota State U.*
Facilitator: **R. Duncan M. Pelly**, *Fisk U.*
Facilitator: **Kenneth E. Long**, *Colorado Technical U.*
Facilitator: **Pamela K. Caldwell**, *Jilin U. Lambton College*

Putting workers front and center means their true voices must have the opportunity to be heard. When this occurs, the results can be unprecedented. The Coalition of Immokalee Workers uses their “worker-driven” approach to rid its agricultural fields of decades of entrenched abuses including enslavement practices. The ISEOR consultants use sophisticated ethnographic interviewing methods to put worker voices front and center. Boje and Rosile use Conversational Storytelling to allow for a co-created story between interviewer and interviewee. In this workshop-type PDW, we will explain the theory behind these methods, and demonstrate the methods. Then all participants will have an opportunity to practice these techniques. The practice interviews will be observed by the workshop faculty with developmental feedback provided for participants. We have a large group of experienced faculty to provide plenty of opportunity for coaching and questions. If time permits, participants will be able to practice interviews in more than one of these three methods. We will conclude by offering two brief case examples designed for classroom use to demonstrate the importance of worker voice. One is the “Rana Plaza” case example, and the other is the “Forklift Case” based on ISEOR consultants’ actual experience. Both have been designed for, and used successfully, in classroom situations over many years.

The Emergence of Distance Management Consulting in the Dichotomy of Scholar Practitioner

Organizer: **Wanda Tisby Cousar**, *Colorado Technical U.*
Participant: **Joanne Preston**, *Joanne C. Preston & Associates*
Participant: **Tonya L. Henderson**, *Software Engineering Services*

How has the emergence of distance management consulting become reflected in the different marketing approaches that appeal to new and existing clients in the.dichotomy of scholar practitioner. Methods used that have been most effective in protecting intellectual property in virtual space will be discussed. In this PDW Scholar practitioners will elucidate changes in methodology and evidence based approaches in management consulting using technology and the impacts on marketing and operational strategy from the scholar practitioner dichotomy.

Tales of The Field: Lessons Learned While Collecting and Interpreting Historical Data

Organizer: **Gabie Durepos**, *Mount Saint Vincent U.*
Organizer: **Nicholous Mark Deal**, *Mount Saint Vincent U.*
Panelist: **Ellen Shaffner**, *Mount Saint Vincent U.*
Panelist: **Amon Barros**, *FGV EAESP Sao Paulo School of Business Administration*
Panelist: **Mairi Maclean**, *U. of Bath*
Panelist: **Charles Edward Harvey**, *Newcastle U.*
Panelist: **Diego Coraiola**, *U. of Victoria*
Panelist: **Francois Bastien**, *U. of Victoria*
Discussant: **William Foster**, *U. of Alberta*

The goal of this PDW is to foster a practical discussion on methodology in historical organization studies (HOS). By methodology (in HOS), we mean the variety of techniques, methods and ideologies on offer to collect, handle and interpret historical data in order to emplot it into one of many narrative forms (White, 1985). In this PDW, HOS scholars will share their unique experiences, novel insights, and lessons learned while collecting and interpreting historical data. HOS is on the rise in Organization and Management Theory as well as Critical Management Studies. Much research inspired by the historic turn (Clark & Rowlinson, 2004) has focused on whether a fusion of management and organization studies with history is possible and what avenues can be fruitfully entertained for doing so (Mills, Suddaby, Foster, & Durepos, 2016). However, we argue that practical, hands-on discussions on how to collect and interpret historical data are lacking. The rationale for the development of this PDW is to bring together ideologically heterogenous researchers to have practical discussions on collecting and interpreting historical data. The PDW will have two parts. In the first part, a group of researchers will share their tales of the field of HOS. The second part will focus on providing feedback and methodological advice to scholars doing HOS research. Pre-registration for the PDW is not required however, participants wishing to get feedback in the second part of the PDW will be required to pre-submit a 750-word abstract.

Participant: **Dina Van Dijk**, *Ben Gurion U. of the Negev*
Participant: **Frankie Jason Weinberg**, *Loyola U. New Orleans*
Participant: **Angelina Zubac**, *AIM Business School, Australian Institute of Management*

This inclusive PDW will provide students and junior faculty from diverse backgrounds the opportunity to discuss their leadership research in a collegial setting with prominent leadership scholars. The junior scholars are required to submit brief research proposals prior to the conference, and will be matched with a more senior scholar with similar research interests (not from their home university). At tables organized by themes, the senior scholars will then discuss these proposals with the 1-3 junior scholars they are matched with, providing insights and suggestions for future research directions. A general networking session with all participants will follow, whereby current and former editors of top leadership journals will discuss how to transform the proposals into publishable journal articles. The focus will be on developing theoretical foundations and designing high quality empirical studies. This is a great opportunity for the junior scholars to develop their ideas, and it may even lead to future academic collaborations. This PDW has been held every year since 2008 and it has resulted in the development of numerous ongoing mentoring relationships between scholars from around the globe.

Potential participants must email a brief research proposal to Dr. Marie Dasborough. Email: m.dasborough@miami.edu

AMR: Writing Theoretical Papers - A Workshop with the Editors

Presenter: **Kris Byron**, *Georgia State U.*

This interactive workshop will help participants write clear theoretical articles that make a contribution to the literature. The session consists of two parts. First, we offer participants insights on how to structure a manuscript to showcase its theoretical contribution, we also discuss some of the major challenges in writing theoretical articles and potential avenues for address these challenges. Second, participants will have the opportunity to engage in small group discussions on these topics with current and past AMR Editors, Associate Editors, and Editorial Review Board members. All are welcome to attend on a first come, first served basis. (No Pre -Registration is required.) Contact AMR@aom.org for details.

The Methodological Frontier of Causal Inference

Organizer: **Simone Santoni**, *Bayes Business School*
Organizer: **Jost Sieweke**, *Vrije U. Amsterdam*
Speaker: **Amirhossein Zohrehvand**, *Leiden U., The Netherlands*
Speaker: **Luis Ballesteros**, *Boston U. Questrom School of Business*
Speaker: **Nicolas Bastardoz**, *KU Leuven*
Speaker: **Jost Sieweke**, *Vrije U. Amsterdam*
Speaker: **Yinji Zhou**, -
Panelist: **Tobias Kretschmer**, *LMU Munich*
Panelist: **Raffaele Conti**, *ESSEC Business School*
Panelist: **Sirio Lonati**, *NEOMA Business School*
Panelist: **Michael C. Withers**, *Texas A&M U.*

Over the past ten years, the community of management scholars has become more cognizant of the importance of pursuing causal empirical evidence. However, the methodological frontier of empirical identification has advanced, too, creating further research opportunities for management scholars. By adopting a multi-month and problem-driven approach, this PDW aims to help participants appreciate the scope of application and distinctive features of innovative empirical identification tools and use these tools in practice.

Qualitative Research with Archival Data

Organizer: **Stine Grodal**, *Northeastern U.*
Organizer: **Anders Dahl Krabbe**, *King's Business School*
Organizer: **Micah Rajunov**, *Boston U. Questrom School of Business*
Presenter: **David A. Kirsch**, *U. of Maryland*
Presenter: **Andrew Hargadon**, *U. of California, Davis*
Presenter: **Andrew Carton**, *The Wharton School, U. of Pennsylvania*
Presenter: **Raghu Garud**, *Pennsylvania State U.*

Archival research has for a long time been used to supplement qualitative research. However, recently the use of archival research—the analysis of textual traces that actors (e.g. people, organizations or markets) leave behind when they go about their daily business— in qualitative analysis has dramatically increased due to the digitalization of textual data. The availability of archival data raises new methodological opportunities and challenges for qualitative researchers who aim to generate organizational theory particularly in terms of the abundance and the heterogeneity of the data. To rise to this challenge, this PDW aims to bring together qualitative scholars who work with archival data to both create a community of scholars engaged in these methods and to begin a collective conversation about the tools and methods that we need to develop to push research forward in this domain.

Bayesian Statistics: How to Conduct and Publish High-Quality Bayesian Studies

Presenter: **Andreas Schwab**, *Iowa State U.*
Presenter: **William H. Starbuck**, *U. of Oregon*
Presenter: **David Krackhardt**, *Carnegie Mellon U.*
Presenter: **Mark H Hansen**, *Brigham Young U.*
Presenter: **Jeffrey P. Dotson**, *Brigham Young U.*
Presenter: **Anup Menon Nandialath**, *U. of Wisconsin, La Crosse*

This workshop introduces the opportunities of Bayesian statistics for empirical management research and provides guidance on how to execute high-quality Bayesian studies. The workshop will cover the following topics: (1) fundamental conceptual nature and potential advantages of Bayesian approaches compared to statistical significance tests; (2) Step-by-step execution of a Bayesian study and comparison to a regression analysis; (3) How to develop meaningful prior distributions; (4) Execution of Bayesian analyses: Markov-Chain Monte Carlo Simulations using available software solutions; (5) How to communicate Bayesian analyses and results in research manuscripts and (6) How management scholars can support the more extensive use of Bayesian statistics in the field of management research. A secondary objective of this workshop is to provide a platform for knowledge transfer between researchers engaged in Bayesian research and support related community-building efforts. In the end, this workshop will enable and inform participants on how to better incorporate advanced Bayesian statistics in their future research.

Facilitator: **Saeid Kazemi**, *Bocconi U.*

Strategists and entrepreneurs often make decisions under uncertainty. Particularly, strategic problems related to highly impactful decisions, as the launch of a startup or of a potentially disruptive innovation, are not often addressable using traditional decision-making tools. Thus, a growing perspective in strategy advocates for cognition-based approaches as a source of competitive advantage: decision-makers facing complex and uncertain problems should formulate theories and imagine novel representations of realities, ultimately using them as a basis for experimentation. The result is an increase in knowledge ultimately leading to superior strategies, which becomes a key competitive advantage. This PDW aims to foster the debate between scholars advocating for different, but complementary, perspectives on decision-making under uncertainty as to identify unanswered questions and relevant avenues for future research and impact. To this purpose, it combines two parts. The first brings together leading scholars providing their perspectives on the problem, as to develop a common language and identify research opportunities. In the second part, participants play a novel business game simulating a strategic decision under uncertainty, offering the opportunity to engage in theory making in a decision-making context. The purpose of introducing participants to the game is twofold. First, it offers an opportunity to bridge research and education by providing a novel way to bring the topic into the classroom. Second, it exposes participants to a customizable platform for conducting research on the topic. Organizers will collect in a report the main insights from the discussions following both parts, suggesting potential research opportunities and collaborations.

Part 1 (Panel discussion) is open to all, without registration. Part 2 (Simulation game) is open to pre-registered participants only (limited slots). To register for Part 2, please complete this online form: https://bocconi.eu.qualtrics.com/jfe/form/SV_bHrKEyCp9EQg570 Additional information on the PDW are available at: https://www.andreacoali.com/pdw-aom-2023

Private Equity and Alternative Ownership/Governance: Research Opportunities for Strategy Scholars

Organizer: **Vikas A. Aggarwal**, *INSEAD*
Organizer: **Paul Nary**, *The Wharton School, U. of Pennsylvania*
Speaker: **Gautam Ahuja**, *Cornell U.*
Speaker: **Mary J. Benner**, *U. of Minnesota*
Speaker: **Aseem Kaul**, *U. of Minnesota*
Speaker: **Ivana Naumovska**, *INSEAD*
Speaker: **Prothit Sen**, *Indian School of Business*
Speaker: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

This PDW will bring together a community of scholars interested in issues of strategy and organizations to better understand forms of ownership and governance under the umbrella of private equity and private capital. These forms represent either alternatives or challenges to public corporate ownership. While many of the prominent scholars studying this topic have been from the finance discipline, we feel that: (1) a strategy and organizations lens would be of unique value in understanding alternative ownership and governance forms as phenomena; (2) the emergence and continuing evolution of various ownership and governance forms such as PE, VC, SPACs, etc., bear important implications for firm strategies and outcomes; and (3) using these contexts for research can help us more deeply understand key questions related to corporate scope, firm capabilities, corporate governance, alliances, ecosystems, and so on. In our view, there can and should be significantly more work on these topics in the mainstream strategy, organizations, and management journals. This PDW will serve as a "primer" for scholars interested in using this industry as a context for strategy research. We will have a panel of both senior and junior scholars who can speak to potential research directions and current work in this area, and will include a set of roundtable discussions for scholars interested in doing research in this domain. The ultimate goal is to build a vibrant research community oriented around these issues.

Pre-registration strongly encouraged but not required. Please contact aom.pe.pdw@gmail.com with any questions.

More than 20 years since the publication, in 2000, by Carliss Baldwin and Kim Clark of "Design Rules: The Power of Modularity," this PDW offers a forum to further consider the architecture of complex systems. We draw on the recent publication of a special issue of Industrial and Corporate Change on modularity, early 2023, and the impending publication of "Design Rules II" by Carliss Baldwin. The PDW brings together leading scholars in the field, editors and contributors of the special issue to take stock of modularity research in management, showcase recent research, offer perspectives on key themes that emerge from contributions in this issue, and foster the development of research in a true PDW spirit. Specific topics are, the relationship between modularity and organizational design; modularity as a driver of industry evolution and competitive dynamics; and the role of individuals in modular systems. Furthermore, the PDW shall highlight opportunities to apply the theory in Design Rules to new phenomena and puzzles that have emerged in the past 20 years, and to the changes that loom large with the onset of digitization. More important, the PDW will offer a constructive forum to support researchers who are working on the field. Registration is strongly recommended at https://forms.gle/z4zY27192HUrRgdn9.

Registration is not required, but strongly recommended, at https://forms.gle/z4zY27192HUrRgdn9. In case demand exceeds the available space, preference will be given to registered participants.

Presenter: **Daniel Obermeier**, *NYU Stern School of Business*
Presenter: **Robert Channing Seamans**, *NYU Stern*

The blockchain phenomenon has received substantial attention over the past decade. While initially applied to digital currency, this technology has become common in a variety of settings, including logistics, healthcare, and art. In fact, many scholars and practitioners increasingly view the blockchain as a general purpose technology. This PDW explores the multifaceted role of the blockchain in management. We are joined by an outstanding group of innovation scholars, who will provide a diverse and complementary set of perspectives on this phenomenon. In particular, the discussion combines “depth” and “breadth”, seeking to both illustrate some of the current and most relevant applications of the technology and to contextualize it within the broader innovation literature. The PDW is designed to be developmental and interactive, in order to promote cross-pollination of perspectives and generation of new research directions.

We will be sharing information about how to participate in the interactive component of the PDW in the Early Summer through the TIM Division Newsletter.

Maps for Search: The Impact of the Data Revolution on Innovation

Organizer: **Matteo Tranchero**, *Haas School of Business, UC Berkeley*
Organizer: **Abhishek Nagaraj**, *UC Berkeley & NBER*
Presenter: **Ryan Allen**, *U. of Washington*
Presenter: **Hyo Kang**, *U. of Southern California*
Presenter: **Lynn Wu**, *The Wharton School, U. of Pennsylvania*
Discussant: **Alfonso Gambardella**, *Bocconi U.*
Discussant: **Hong Luo**, *HBS*

In a broad range of contexts, decision-makers must engage in strategic experimentation where they explore multiple high-stakes choices under significant uncertainty. Examples include venture capitalists evaluating different startups, pharmaceutical firms deciding between drug candidates, retailers picking from a set of candidate store locations, mineral exploration firms choosing among different early-stage targets, and many more. In such settings, the availability of data signals on those options can help clarify uncertainty about some alternatives and affect exploration outcomes. We offer the analogy as data as a “map for search”, insofar as it can be leveraged to rule out bad choices and find promising ones. The consequences of the “data revolution” are increasingly being investigated in a variety of disciplines, including strategic management, organization theory, entrepreneurship, information systems, and economics. However, there strands of literature are mostly self-contained, and lack a broader perspective to connect them. A conversation across disciplinary boundaries would be especially beneficial for a holistic assessment of what we have learned about data and analytics, and what questions remain unanswered. For this reason, we assembled a unique program that blends cutting-edge research presentations from early-career scholars, in dialogue with the perspectives of experienced researchers, and with industry leaders actively reshaping how firms leverage data-driven innovation to achieve competitive advantage. This PDW is a unique opportunity to generate new research directly relevant to managerial practice. Through the break-out room discussions, we aim to allow participants to interact with the panelists, exchange research ideas, and foster a research network with shared interests.

What's in a Name? Heritage Branding, Legacies and Business Schools in 2023

Moderator: **Belgin Okay-Somerville**, *U. of Glasgow*
Host: **Robert Alexander Paton**, -
Panelist: **Kathleen Riach**, *U. of Glasgow*
Panelist: **Himanshu Rai**, *Indian Institute of Management, Indore*
Panelist: **Paul M Olk**, *U. of Denver*
Panelist: **Andre Spicer**, *City U. London*

This 90-minute session will form part of the series of global discussions, events and debates marking the 300 Year Anniversary of Adam Smith. In this session, we bring our own reflections and experiences on the surrounding marking history and heritage into the contemporary business school identity, curriculum into dialogue with the experience of similar business schools whose names or brands can evoke powerful and sometimes problematic connotations. In doing so, we suggest some of the key challenges and that emerge and possible strategies that enable the opportunity for critical but constructive ongoing debate.

This interactive session will be in the fireside chat format with panellist from four business schools drawn from different international contexts (Adam Smith Business School (University of Glasgow), Bayes Business School (City, University of London), Daniels College of Business (Denver University) and Indian Institute of Management (IIM) Indore. We will question 'what's in a name' in business school branding focusing on how the prominent figures' legacy shape universities and the societies they serve, as well as contributing to marketisation and commercialisation of higher education through such branding.

Lunch will also be served during the session.

Find out more about Tercentenary celebrations here: https://www.gla.ac.uk/explore/adamsmith300/

Careers in the Rough is a workshop in which accomplished scholars will mentor PhD students and/or junior scholars who submit careers papers that are in the formative stages. Research in the careers domain includes topics such as: people's lifelong succession of work experiences, individual career development, career management strategies, the relationship between careers and other aspects of life, the structure of opportunity to work, relationships between human resource systems and careers, career outcomes (e.g., success, plateauing, discouragement, derailment), life cycle interactions with work, gender, culture, and race effects on careers, labor force diversity, internal labor market structures and functions, cross-cultural careers, and effects of demographic and social changes on work. Participants are asked to submit a manuscript that is close to submission for a refereed journal. They can also write up to 250 words on a challenge they want help addressing. Each participant will get detailed feedback regarding (a) the positive aspects of their paper; and (b) how to improve the paper further from two accomplished scholars. This PDW thus aims to foster the design and development of good careers research into valuable careers publications.

Participant: **Elizabeth Wolfe Morrison**, *New York U.*

Behavioral business ethics research thus far has focused primarily on understanding the causes and consequences of (un)ethical behavior within organizations. But as society is becoming more concerned about social justice issues such as the treatment of underrepresented minorities, behavioral business ethics scholars are increasingly interested in studying issues of diversity, equity, inclusion, and belonging. With the goal of developing and generating future scholarship, this PDW showcases frontiers in behavioral ethics research. With that in mind, the theme of this year's behavioral ethics PDW is "Extending the Behavioral Ethics Literature by Building Connections with Diversity, Equity, Inclusion, and Belonging (DEIB) Research." In the first part of the PDW, scholars who are conducting research on DEIB issues (some clearly overlapping with behavioral ethics) will offer eight timed, 5-minute, Pecha Kucha presentations on their areas of expertise, such as gender biases, DEIB programs and implicit bias, DEIB in general and in practice, obesity or body fatness in the workplace, racialized context at work, and women's health at work. These presentations will be followed by a panel of four behavioral ethicists who will consider the connections between these DEIB topics and future scholarship in behavioral ethics, with a subsequent plenary discussion. The second part of the PDW will consist of roundtable networking discussions, where attendees can foster connections and engage in conversations with experts on these and other DEIB-related behavioral ethics topics (e.g., neurodiversity in the workplace).

Everyone interested is welcome to attend the first 1.5 hours of the PDW, but attendance for the second, networking, part is capped at 100 and registration is required. Registration is on a first-come first-served basis. Email niki@ku.edu for any questions. Please register at the following link: https://kusurvey.ca1.qualtrics.com/jfe/form/SV_7NILug2Nx58ElHE

Are Firms Sabotaging their Sustainable Supply Chains: Strategic and Political Misalignment?

Organizer: **Hale Kaynak**, *U. of Texas Rio Grande Valley*
Participant: **Muratcan Erkul**, *Kutztown U. of Pennsylvania*
Participant: **Subhajit Chakraborty**, *Coastal Carolina U.*

This professional development workshop is intended to highlight misalignment between corporate leader actions and/or words and their published sustainability goals and sustainable supply chain management (SSCM) practices on one hand, and how it affects the SSCM practices, thereby motivating attendees to ponder over the important question: are (some) firms sabotaging their own sustainable supply chains? By using transaction cost economics and agency theory lenses, we offer a conceptual framework that brings the company worker (including his/her personal issues such as childcare) to the center of our discussion which is in line with the AOM 2023 theme. Our primary aim of this PDW is to encourage and motivate participants and spur their thinking with several SSCM research questions based on a holistic and overarching consideration of the strategic fit between the corporate leaders' actions/words and the avowed goals of the organization related to SSCM.

We welcome all attendees who are highly interested in this topic and are ready for an interactive session.

Meeting the Editorial Team of Asia Pacific Journal of Management (APJM)

Organizer: **Chinmay Pattnaik**, *U. Of Sydney*
Organizer: **Liqun Wei**, *Hong Kong Baptist U.*
Organizer: **Victor Cui**, *U. of Waterloo*
Participant: **Maoliang Bu**, *Nanjing U.*
Participant: **Han Jiang**, *Chinese U. of Hong Kong, Shenzhen*
Participant: **Peng Zhengmin**, *Hong Kong Shue Yan U.*
Participant: **Wendong Li**, *Chinese U. of Hong Kong*

Asia Pacific Journal of Management (APJM) is the official journal of the Asia Academy of Management published by Springer. The mission of the journal is to provide a platform for the communication of rigorous scientific management research with Asia relevance among interested researchers. The most recent APJM citation impact factor (i.e., year 2021) as stated in the ISI Journal Citation Reports is 4.5 with a five-year citation impact factor of 6.075. Researchers who interested in academic research that has Asia relevance can attend this workshop to meet the Editor-in-Chief, Senior Editors, and Editorial Review Board members. The editorial team will explain the mission and editorial policy of the journal. Statistics of the journal (e.g., number of submissions received per year, acceptance rate) will be presented. Editors will present the scope of the journal (e.g., strategic management, human resource management, organizational behavior, and international business) and the meaning of "Asia Relevant Management Research". Examples of accepted papers will be discussed and participants are welcome to discuss whether their research projects are suitable for the journal.

Qualitative Research Methods for the Study of Conflict Management: New Research Approaches

Organizer: **Estelle Archibold**, *Pennsylvania State U.*
Organizer: **Ming-Hong Tsai**, *Singapore Management U.*
Panelist: **Kimberly Rocheville**, *Creighton U.*
Panelist: **Udayan Dhar**, *Bucknell U.*
Panelist: **Randall S Peterson**, *London Business School*
Panelist: **Amanda Ferguson**, *Northern Illinois U.*
Panelist: **Leigh Anne Liu**, *Georgia State U.*

Conflict management scholars could benefit from forums that explore how qualitative methodologies provide unique discoveries and insights when developing and conducting management research. Many scientific breakthroughs advancing theory in management studies have resulted from the use of rigorous qualitative methods. There has been recent vigorous dialogue in management studies about the transparency, quality, and trustworthiness of qualitative methodologies and research approaches. We offer a PDW that aims to raise the value of qualitative methodologies in the study of conflict phenomena in management research, while providing substantive opportunities for junior and senior management scholars to exchange best practices in qualitative approaches to management research (broadly) while exploring the unique ways in which qualitative research approaches can support more whole and rigorous research in conflict management subfields. Finally, we will provide opportunities for management scholars to discuss the inclusion of qualitative approaches in emerging research studies and get feedback on their inclusion of qualitative methodologies in current research studies.

On "Doing" Inclusion: An Inclusive Behavior Training

Facilitator: **Hans Van Dijk**, *Tias Business School*
Facilitator: **Jasmien Khattab**, *Erasmus U. Rotterdam*
Facilitator: **Bertolt Matthias Meyer**, *Technische U. Chemnitz*
Facilitator: **Jamie Breukel**, *Tilburg U.*
Facilitator: **Jason Jie**, *Tilburg U.*
Facilitator: **Denise Lewin Loyd**, *U. of Illinois at Urbana-Champaign*

Decades of research on diversity and inclusion has established that inclusive environments are crucial for diversity to thrive. However, to date there is very little insight in how to "do" inclusion. That is, most research focuses on practices and leadership, but very little on specific behaviors underlying experiences of in- and exclusion. Based on the principles of experiential learning, in this training we simulate a psychologically safe environment in which participants can display as well as experience inclusive and exclusive behaviors. Participants will reflect on their experiences and how they apply to the workplace in small groups as well as plenary. Participants as well as facilitators will share lessons learned regarding the theoretical understanding of the notions of inclusion and exclusion, as well as actionable suggestions to behave more inclusively and create more inclusive workplaces.

Teaching about Markets and Free Enterprise

Participant: **John Parnell**, *U. of North Alabama*
Participant: **Siri Ann Terjesen**, *Florida Atlantic U.*
Participant: **Per L. Bylund**, *Oklahoma State U.*
Participant: **Amanda Brickman Elam**, *Babson College*
Participant: **Michael D Ryall**, *Florida Atlantic U.*
Participant: **Sebastian Vaduva**, *Emanuel U. of Oradea*
Discussant: **Peter G. Klein**, *Baylor U.*

This workshop will explore teaching practices associated with free- market thinking and market-based management. Free markets promote competition, innovation, private ownership of productive enterprises, and limited government intervention. Each presenter in this workshop will share an exercise, case vignette, or another classroom approach grounded in a market orientation, emphasizing eliciting class interactions and discussions. Pre-registered participants will receive an electronic packet of selected readings in the months before AOM to aid in preparation for the event. Participants who do not register are also welcome.

To pre-register, participants can e-mail John Parnell: jparnell@una.edu and Siri Terjesen: sterjesen@fau.edu

Mentoring for Meaning: Preparing for a Spiritual Approach to Mentoring

Organizer: **Kevin David Frick**, *Johns Hopkins Carey Business School*
Facilitator: **Paul W. Schmidt**, -
Facilitator: **Benito Teehankee**, *De La Salle U., Manila, Philippines*
Facilitator: **Payal Kumar**, *Indian school of hospitality*

High-quality mentoring involves bidirectional relationships in which both individuals are engaged, each acts with authenticity while showing empathy, and empowerment is shared. Empowerment to find meaning in the mentoring experience and in the activities (e.g., career or work) that are the focus of the mentoring discussions requires preparation. To prepare for an engaging and empathetic mentoring relationship in which there is great trust, an individual must first know themselves, both the mentee and mentor need to have a great deal of awareness about themselves, what brings them meaning, and what they have struggled with when it comes to finding meaning. This professional development workshop is designed to present a model of a process that can be used to identify values, explore the degree to which one’s actions align with values, delineate one’s intrapersonal identity network or set of roles, state one’s personal mission, clarify what one believes about meaning and connection with a greater good, identify the goals of participation in a mentoring relationship and whether one sees a need for predetermined boundaries on the relationship, and consider how the unique benefits of both online (zoom) meeting and physical meeting can be maximized to support ideal communication. This hybrid session (which could be switched to fully online presence) will include time for reflection on and discussion of these points with an exchange among members with varying levels of life experience.

Acting on Climate Risk: What role for the Change Practitioner?

Organizer: **Bradley J. Hastings**, *U. of New South Wales*
Organizer: **David Grant**, *UNSW Business School, Australia*
Discussant: **Danielle Zandee**, *Nyenrode Business U.*
Discussant: **Ignacio Pavez**, *Pontificia U. Católica de Chile*
Presenter: **Rae Andre**, *Northeastern U.*
Presenter: **Hilary M. Bradbury**, *Action Research Plus AR+ Foundation*

Global warming and the increased frequency of extreme weather events has made everyone – from small business owners to large corporations and governments – acutely aware of the need to effectively mitigate for, or adapt to, the risks associated with climate change. These risks take many forms – from the physical to the economic and social – and can impact business cultures, strategy, structure, or processes in a multitude of ways. Successfully addressing these risks involves organizations shifting to new, more sustainable, and resilient business models. This situation suggests an important role for the Organizational Development and Change practitioner; one in which they assist organizations in building their capacity and effectiveness to change in response to climate risk through developing, improving, and reinforcing. This workshop will bring together practitioners and scholars, with a view to identify both existing and emerging best practice in these respects.

Globalizing Paradox Theory and Research: Exploring New Approaches, New Theories, and New Contexts

Organizer: **Soniya Rijal**, *U. of New South Wales (UNSW), Sydney*
Organizer: **Iris Seidemann**, *U. of Hamburg*
Organizer: **Rima Al Hasan**, *U. of Jordan*
Discussant: **Marianne W. Lewis**, *U. of Cincinnati*

Panelist: **Garima Sharma**, *American U., Kogod School of Business*
Panelist: **Xin Li**, *Newcastle U. Business School*
Panelist: **Nkosana Mafico**, *U. of Edinburgh*
Panelist: **Josh Keller**, *UNSW Sydney*

This PDW aims at bringing together scholars from diverse backgrounds to discuss novel avenues, approaches, and contexts for paradox theory in organization and management studies explicitly focusing on a non-WEIRD (WEIRD = Western, European, Industrialized, Rich, and Democratic) perspective and ancient philosophical traditions. The PDW will be designed as an in-person, highly interactive workshop building on moderated small-group discussions being followed by an open expert panel discussion. By bringing together scholars with expertise in different cultural, traditional, and philosophical contexts, we intend to foster a richer and more nuanced understanding of paradoxes and encourage the development of more innovative and inclusive approaches to understanding and addressing complex entanglements of interrelated tensions. Although this workshop is momentous for paradox scholars, it is likely of particular interest to scholars who already work on or aim at integrating different traditions, philosophical contexts and cultures in their concepts, ideas, and methods. One of the expected key outcomes of this PDW is to facilitate the building of a community of scholars committed to advancing the development of new and innovative approaches to understanding and addressing paradoxes in organizations that take an account of non-WEIRD perspectives and philosophical traditions.

Rationality in the Era of Artificial Intelligence

Organizer: **Mayur Prataprai Joshi**, *Alliance Manchester Business School, U. of Manchester*
Organizer: **Stella Pachidi**, *U. of Cambridge*
Panelist: **Luciana D'Adderio**, *U. of Edinburgh*
Panelist: **Richard Hunt**, *Virginia Tech*
Panelist: **Marleen Huysman**, *Vrije U. Amsterdam*
Panelist: **Paolo Quattrone**, *Alliance Manchester Business School, U. of Manchester*
Panelist: **Christopher L. Tucci**, *Imperial College Business School*
Panelist: **Mark J. Zbaracki**, *Ivey Business School*
Moderator: **Ricky Leung**, *NUS / U-Albany*
Moderator: **Terence Ping Ching Fan**, *Lee Kong Chian School of Business, Singapore Management U.*

This PDW aims to provide a forum for participants to reconsider theories of rationality and how they may be informed in the era of artificial intelligence (AI). The PDW will start with a panel discussion in which six senior scholars will present different perspectives on rationality: Luciana D'Adderio will offer a perspective on rationality as interactions among artifacts and routines grounded in the routine dynamics tradition. Richard Hunt will conceptualize rationality as reasoned foresight grounded in the entrepreneurship tradition. Marleen Huysman will conceptualize rationality from a knowing in practice perspective. Paolo Quattrone will conceptualize rationality as calculative procedures, blending the history of rhetoric, with science and technology studies and an institutional perspective. Christopher Tucci will conceptualize rationality as configurations of business models grounded in the strategic management tradition. Finally, Mark Zbaracki will conceptualize rationality in the context of other approaches to decision making, including interpretation and sensemaking, power and politics, and garbage can dynamics. After putting forward their own perspectives, the panelists will address relevant questions prepared by the organizers on AI and rationality to collectively reflect on the phenomenon. The second part of the PDW will consist of roundtable discussions facilitated by the panelists, in which participants will have an opportunity to share relevant research insights and deeply reflect on how to advance organization theory in the era of AI. In summary, this PDW provides an opportunity for organizational scholars to think about core topics of rationality in a new way, and an opportunity to build new connections, outside the core community.

Dear Attendees, we are looking forward to interacting with you all during our PDW. If you would like us to ask any specific questions to the panelists on thinking and theorizing about rationality in the era of AI, please feel free to share them with us using this Google Forms link ahead of time: https://forms.gle/qvQ3xdEDbWBtoN3SA We will collate the questions and try to include the common themes during the PDW. If you need more information or wish to seek any clarification, please feel free to contact the organizers, Stella Pachidi and Mayur Joshi. See you in Boston!

Discussant: **Min-Hsuan Tu**, *U. at Buffalo, The State U. of New York*
Panelist: **Gillian Yeo**, *U. of Western Australia*
Panelist: **Zhen Zhang**, *Southern Methodist U.*

This workshop is for those who are interested in within-person research—both from a theoretical and empirical perspective. Part 1 will include a panel discussion from experienced experts, focused on how theory can inform the choice of when and how to adopt a within-person study design. Part 2 of the session will utilize a roundtable format, pairing experts with participants to present best-practices for conducting within-person studies, as well as to answer related participant questions. As part of the registration process, participants will be asked to provide any questions that they would personally like answered during the session. These responses will be used to identify common issues and concerns that will be discussed in the panel as well as roundtable conversations. The goal of this workshop is to not only advance the use of within-person designs and strengthen the relationship between theory and such designs, but also to further the development of participants and provide them with actionable steps to better utilize within-person studies.

A Technology-Enabled Meta-Analysis: Making Large-Scale Meta-Analysis Studies Manageable

Participant: **Hadi Fariborzi**, *Mount Royal U.*
Participant: **Piers Steel**, *U. of Calgary*

Making sense of and using a massive sea of academic results is one of the biggest scientific difficulties and opportunities of the digital era. Meta-analysis, a type of systematic review with statistical foundations in multilevel modelling (MLM), helps answer this need. These quantitative summaries are currently some of the most referenced and highly regarded publications due to the exponential increase in publishing rates. Unfortunately, despite how beneficial they are, they are difficult to do. Searching through the literature, acquiring empirical data relevant to a discovery, converting it to a standard measure, collaborating with a team, analyzing large datasets of articles, interpreting the data, and openly presenting the findings are all necessary steps in the process. Traditionally, a four-person team needs 67 weeks to complete a typical meta-analysis. We want to make this significantly lower, such that a 1000 study meta-analysis is manageable within 12-15 weeks. This PDW offers a theoretical overview of meta-analysis as well as a practical guidance, with a focus on the latter. We will specifically discuss how using technology, such as integrated online platforms that make use of OCR, machine learning, and automatic error detection, researchers can minimise coding time by a factor of ten. Real-time replication and analysis of earlier tier-1 meta-analyses will be conducted, with the possibility to extend and collaborate for a subsequent publication. The PDW's objective is to empower participants to easily conduct their own projects. All tools covered in the PDW are open-science and free to use for all researchers.

Facilitator: **Christina Angelika Wawarta**, *Warwick Business School*

This Professional Development Workshop (PDW) aims to gather researchers interested in impact work. We are motivated by the observation that, while there has been much theoretical debate on the topic, the management community still lacks practical tools to create impact for and in collaboration with the organisations they are working with. To this end, we bring together leading scholars who will reflect and share how they have successfully created impact through their empirical research. Accordingly, we wish to provide a space for discussing best practices, past failures, and hand-on advice. The PDW will include a panel of experts but also facilitated roundtable discussions where participants can get feedback on their impact work from experts in the field. We see this PDW as the first step to jumpstart a long-term community on the topic, for instance through the establishment of online standing groups.

If you would like to participate in Part 2 of the bootcamp, please submit 1-2 pages to madast@btech.au.dk. Your submission should outline a short summary of your research or research idea and include anything you would like to get feedback on regarding impact towards from the roundtable participants. This can include for example: a report, a power point or even a description of your case where you would like ideas for helping out your organization.

Formal and Psychological Contracts in Corporate Strategy

Discussant: **Nicholas Argyres**, *Washington U. in St. Louis*
Panelist: **Emilie Feldman**, *U. of Pennsylvania*
Panelist: **Libby Leann Weber**, *U. of California, Irvine*
Panelist: **Zhe Xing**, *Santa Clara U.*
Panelist: **Beverly Rich**, *U. of Utah*
Organizer: **Dongil Daniel Keum**, *Columbia Business School*

This PDW builds upon the premise that a firm is “a nexus of contracting relationships” and aims to highlight the importance of exploring the role of formal and psychological contracts in firm scope decisions to the community of corporate strategy scholars. Corporate strategy research examines the transactions used to adjust firm scope, such as alliances, acquisitions, divestitures, and resource redeployment. Despite extensive research, the varied nature of contracts for executing these inter- and intra-organizational transactions has received much less attention from corporate strategy scholars. In particular, whereas formal contracts have been extensively studied by strategy scholars, much less attention has been paid to informal contracts, which support these corporate strategic actions. Looking at the psychological underpinnings of informal contracts and their influence on formal contracts can uncover novel insights into firm scope and governance decisions. To this goal, we bring together leading scholars of contracts and corporate strategy and showcases the benefits of integrating these two streams of research.

Teaching Platforms and Ecosystems

Organizer: **Cameron Miller**, *Syracuse U.*
Organizer: **Richard Wang**, *Babson College*
Panelist: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*
Panelist: **Feng Zhu**, *Harvard U.*
Discussant: **Marvin B Lieberman**, *UCLA Anderson School of Management*

In recent years, as the research on platforms and business ecosystems continues to flourish, the development of corresponding teaching materials pales in comparison. Although the terms “platforms” and “ecosystems” have received some coverage in contemporary textbooks, educators often find the depth of the theory component coverage inadequate to prepare students for today’s business environment where many of the largest or fastest-growing companies operate in ecosystems anchored by platforms. To generate robust discussions on what are the essential platforms and ecosystem principles, concepts, and frameworks to teach, this PDW invites two leading scholars to share their ideas and teaching experiences, and a senior Strategy scholar will contribute as the discussant. Participants can engage in Q&A discussions with the presenters as well as with other participants. In addition, participants will receive teaching materials that they can use in their classroom.

No registration required; this will be a first come first serve session. We will make a link to a website available at the session that will host teaching materials.

Practice Incubator Professional Development Workshop Practice Incubator Professional Development

Organizer: **Tracy Hopkins Porter**, *Cleveland State U.*
Organizer: **Jennifer Gutberg**, *U. of Toronto*
Presenter: **Jessica Peck**, *Cleveland State U.*
Presenter: **Gina Phelps Thoebes**, *U. of Akron*
Presenter: **Cheryl Mitchell**, *Gustavson School of Business, U. of Victoria*
Presenter: **Rebecca Ojo**, -
Presenter: **Michael Richard Cauley**, *Vanderbilt U.*
Presenter: **Matthew John DePuccio**, *Rush U.*
Presenter: **Leeann Comfort**, *Agency for Healthcare Research and Quality*

The academic-practitioner gap is a well-recognized and continually growing issue for management scholars. This gap is especially prominent in healthcare contexts, where hospitals, systems, and entire jurisdictions are often subject to wide-spread organizational (and system-level) interventions and restructurings. Given the fundamentally applied nature of healthcare management research, scholars in the field must find assurance that their work is equal parts theoretically insightful and practically relevant. We propose a contributing factor to this academic-practitioner gap is a lack of emphasis on drawing from practitioner perspectives to inform research agendas. This sets a foundation for scholars to minimize practitioner-research partnerships, both due to a lack of knowledge in how to initiate these processes and, often, a lack of incentive for academicians. The aim of this professional development workshop is to provide researchers with a platform to receive mentorship and exchange ideas about practice-oriented careers. This could include academic researchers interested in partnering with practice organizations, those looking to shift to a practice-oriented career themselves, or early career scholars interested in exploring a practice-oriented trajectory. The PDW will adopt a roundtable approach, where participants will be able to move between designated topics at each table.

The Cognition in the Rough workshop (CIR) provides an opportunity for authors to discuss their cognition-related research in an informal, collegial roundtable setting. Each roundtable will have 2 facilitators to give feedback on 3-4 early-stage research papers. CIR offers senior and junior researchers alike an invaluable opportunity to receive detailed feedback from scholars who are often editors or on the editorial board of top journals.

The Future of Stakeholder Management

Organizer: **Sergiy Dmytriyev**, *James Madison U.*
Organizer: **Robert Edward Freeman**, *U. of Virginia*
Panelist: **Jay B. Barney**, *U. of Utah, David Eccles School of Business*
Panelist: **Flore Bridoux**, *Erasmus U.*
Panelist: **Sinziana Dorobantu**, *NYU Stern School of Business*
Panelist: **Robert Edward Freeman**, *U. of Virginia*
Panelist: **Jeffrey S. Harrison**, *U. of Richmond*
Panelist: **Witold Jerzy Henisz**, *U. of Pennsylvania*
Panelist: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Panelist: **Kirsten Edrie Martin**, *U. of Notre Dame*
Panelist: **Robert A. Phillips**, *Schulich School of Business, York U.*
Panelist: **Jan-Willem Stoelhorst**, *U. of Amsterdam*
Moderator: **Sergiy Dmytriyev**, *James Madison U.*

This workshop aims to explore how the future of stakeholder management can unfold in scholarship, teaching, and practice. In doing so, the event comprises three parts: an interactive panel discussion among 10 prominent scholars in the stakeholder area, a Q&A session with the audience, and mini-group workshops with the participants from the audience and the panelists culminating in idea sharing with the larger audience. In the end, we may or may not come up with a unified vision, but what matters is that we openly share our aspirations and concerns, learn from each other, and collaboratively trace future pathways for the development and applications of stakeholder management.

On Making Management Research Influential in the African Context

Organizer: **Baba Vishwanath**, *DeGroote School of Business, McMaster U.*
Presenter: **Bruce Lamont**, *Florida State U.*
Presenter: **Moses Acquaah**, *U. of North Carolina, Greensboro*

This workshop will explore mechanisms that make a research paper interesting to its audience from an editor's perspective. Couched within a theory of business, it will focus on what makes business scholarship influential. It will present a framework to combine several attributes of influential scholarship and provide a model for producing compelling research. Examples of thought-provoking African scholarship will be presented, and a break down of characteristics that make them interesting and influential will be provided. The workshop will offer suggestions as to what academics and institutions in Africa can do to develop and sustain influential scholarship that is relevant in a global context.

Becoming an Impactful Reviewer

Organizer: **Janet H. Marler**, *U. at Albany, State U. of New York*
Participant: **Pawan S. Budhwar**, *Aston U.*
Participant: **Fang Lee Cooke**, *Monash U., Australia*
Participant: **John E. Delery**, *U. of Arkansas*
Participant: **Howard Klein**, *The Ohio State U. Fisher College of Business*
Participant: **Emma Parry**, *Cranfield U.*
Participant: **Geoffrey T. Wood**, *U. of Western Ontario*
Participant: **Zhen Zhang**, *Southern Methodist U.*

Often underappreciated and taken for granted, a robust supply of diverse trained peer reviewers is crucial to the future of the HRM journal publication process and by extension the future career success of many scholars. Most scholars agree that key to career success is being able to publish in peer-reviewed journals (Petrescu & Krishen, 2022). Yet while the demand for peer-evaluated submissions is growing, the needed supply of peer reviewers is declining. Moreover, there is a lack of diversity in peer reviewers. Peer reviewers come predominately from the US and male participation is higher than female (Publons, 2018). The goal of this workshop is to help develop impactful paper-reviewing skills and to encourage more diverse participation in peer reviews to advance HRM scholarship and support HR Division members' academic publication success. The session will be a mix of presentations from HRM, HRM Journal, Human Resource Management Review, International Journal of Human Resource Management, and Personnel Psychology Editors, round table discussions with these journals' Associate Editors and Editorial Review Board members, and the opportunity to evaluate and critique examples of paper reviews. Specifically, attendees will (a) gain a better understanding of the importance and career relevance of paper reviewing, (b) learn more about how to write an impactful review efficiently and effectively and (c) participate in a discussion on what constitutes a good review, and (d) have the opportunity to interact with Editors, Associate Editors, and Editorial Review Board members from the primary outlets for HRM manuscripts.

Leading Social Impact and Sustainability Centers

Organizer: **Susanna Kislenko**, *Oxford U., Saïd Business School*
Panelist: **Jason Jesurum Jay**, *Massachusetts Institute of Technology*
Panelist: **Anne-Laure Fayard**, *NOVA School of Business and Economics*
Panelist: **Jury Gualandris**, *Ivey Business School*
Panelist: **Gary Painter**, *U. of Cincinnati*
Panelist: **Katherine Klein**, *U. of Pennsylvania*
Panelist: **Rodolphe Durand**, *HEC Paris*

The purpose of this PDW is to foster dialogue and build community among leaders of social entrepreneurship, social impact, and sustainability centers and institutes. The institutional context in which these centers operate has evolved considerably since the first such entities were founded several decades ago, as issues of impact and sustainability have moved from the margins to the mainstream within management education and business practice. As a result, leaders of social entrepreneurship, social impact, and sustainability centers face new challenges and opportunities: How should they respond to the growing interest in "impact" from scholars, students, and practitioners? How can they balance a focus on student education and public engagement with attention to and support for research? And what do these challenges entail for the individual faculty members who lead these centers and institutes, in terms of how they build and manage their own careers? The PDW will bring center and institute leaders together to share experiences and insights about these issues and different approaches to addressing them. In doing so, the PDW will foster a community of practice among current and future center leaders, enabling knowledge exchange and mutual support that helps to advance research, teaching, and public engagement around questions of impact and sustainability.

The Behavioral Theory of the Firm (BTOF) has had a foundational impact on the development of much work in both organization theory and strategy. This PDW will link past research with future opportunities, both narrowly within the BTOF, and more broadly, reaching out to research domains in which the BTOF is a substantive building block. The goal is to provide a discussion forum where scholars can develop a shared understanding of past BTOF research and insights into how they may develop future research to advance theory and applications. AOM Boston 2023 will represent the third edition of this PDW. This year, 2023, is perfect timing to celebrate the 60th anniversary of Cyert & March's book. In the spirit of linking past research with future opportunities, our aim is to discuss the impact of this book's core ideas, the ways in which the field has extended them, and the ways in which these ideas can continue to evolve. We want this session to serve as a catalyst for new thinking that can help fuel the next 60 years of work on the BTOF.

The purpose of this professional development workshop is to give conference attendees an opportunity to learn about various survey design and application topics, such as item development, technology use, validity, participant motivation, data analysis, etc., while promoting the forthcoming (summer of 2023, prior to AOM) SAGE Handbook of Survey Design and Application (co-editors Terri Scandura and Lucy Ford). Surveys are ubiquitous in our field, used by scholars ranging from micro domains such as organizational behavior, to macro domains such as strategy. As such, this workshop is likely to appeal to a wide audience. Furthermore, effective survey design is at the heart of "putting the worker front and center" as without sound survey practices the recommendations we make based on the results from survey data may not reflect what is actually best for the worker. The PDW will consist of two components: 1) a representative of each section from the handbook will introduce their section's theme and briefly discuss the chapters within their section; 2) first-authors from chapters in the handbook will host roundtables to discuss the topic of their chapter and answer attendee questions.

Panelist: **Sarah Kaplan**, *U. of Toronto*

There is often a great disconnect between qualitative and quantitative scholarship in management research - they use distinct types of empirical evidence (text and visual data versus numeric data) and adopt different modes of theorizing (inductive versus deductive). Yet, precisely because of these distinctions, combining both methodologies could generate unique insights that would otherwise be impossible to produce. This PDW aims to shed light on how to combine the two methodologies by bringing together a set of prolific scholars who have productively used and successfully published mixed method research in top management journals, to share their great insights on the challenges and opportunities of mixing qualitative and quantitative methodologies.

Putting Simulations Front and Center: The How and What of Implementing Simulations in the Classroom

Organizer: **Michele Heath**, *Cleveland State U.*
Organizer: **William Opoku-Agyeman**, *U. of North Carolina, Wilmington*
Organizer: **Daan Westra**, *Maastricht U.*
Organizer: **Tera Webb**, *U. of Alabama, Birmingham*
Organizer: **Michelle Brown**, -

Traditional teaching and learning environments are often static, unchallenging, and, at times, dull. Simulations, on the other hand, are versatile tools to provide students with real-life experience within the controlled environment of a classroom. Such experiential learning is not only a requirement for CAHME accreditation, but also allows students to better connect with theories and knowledge taught in a class. Over the past year, various home-grown and third-party simulations for Health Administration topics have surfaced within the HCM Division. While they are thus evidently of interest to HCM faculty, the question of how to actually implement simulations in the classrooms has been largely overlooked in previous sessions. As a result, faculty have had to face this daunting task on their own. The aim of this PDW is therefore to exchange approaches and best practices to implementing simulations in the classroom. The proposed workshop consists of three main components; an introduction to using simulations in the classroom, a roundtable / breakout room component in which attendees share and discuss their experiences, reservations, and challenges regarding the implementation of simulations in their classes, and a panel discussion in which panelists reflect on how they have addressed the main issues raised during the roundtables. In doing so, participants will leave the session with a range of practical pointers that better equip them to successfully implement simulations in their classes.

Trust is a fundamental characteristic of organizational relationships and one of the most frequently studied concepts in management research today. This annual PDW is aimed at advancing research on trust by serving as a platform for scholars to discuss critical issues, engage in dialogue, and help further research-in-progress. The workshop consists of three segments: (1) The first segment starts off with a panel discussion, in which leading scholars share their thought- provoking ideas on this year's focal topic of “impersonal sources of trust”; (2) For the second segment, attendees break into roundtables to discuss various relevant issues in current trust research. Each table will start out with a particular topic but may move on to other issues as the discussion unfolds. Topics may include (but are not limited to): trust asymmetries, trust violation and recovery, trust in teams, trust in interorganizational relationships, trust across levels of analysis, trust in networks, trust dynamics, and trust and contracts; (3) The third segment consists of a paper development workshop, in which the facilitators provide in-depth feedback on work- in-progress trust research previously submitted by workshop participants. These papers should be in an advanced developmental stage, targeted at a scholarly management journal, and no more than 40 double-spaced pages in length. If you are interested in participating in the third segment (paper development), please upload your manuscript while completing your preregistration no later than July 28, 2023.

Critical Visual Pedagogies

Organizer: **Fahreen Alamgir**, *Monash U.*
Organizer: **Michelle Greenwood**, *Monash U.*
Organizer: **Gavin Jack**, *Monash U.*
Organizer: **Susan E. Mayson**, *Monash Business School*
Organizer: **Kathleen Riach**, *U. of Glasgow*
Organizer: **Laura Visser**, *Monash U., Australia*
Organizer: **Julie Wolfram Cox**, *Monash U.*

This PDW aims to create a space for participants to assess the potential for critical visual approaches to denaturalize mainstream assumptions about teaching and learning in management education with implications for the nature of work, workplaces, management and organization. To do this, we will invite conversation, share insights and expertise, and raise questions about the use of critical visual pedagogies in management education. We place this PDW in the context of the visual turn in education and the imperative to address grand challenges through PRME and the SDGs, drawing on selected relevant literatures (e.g., critical management pedagogies, visual and arts-based education, reflexivity and situated learning) to stimulate debate and collective conversation by posing key questions. Visual pedagogies invite the co-creating of new/critical insights and capabilities with our students into underexamined aspects of managing and organizing. However, this comes with challenges for students and instructors as well as consideration of our responsibilities as educators to deliver on our PRME commitments. For example, how might critical visual teaching and learning promote students' appreciation and (dis)comfort with change, uncertainty and competing perspectives on grand challenges? We further invite interrogation of how a discussion of critical visual pedagogies may propagate inequalities and its own inclusion/exclusion dynamics whilst perhaps also tackling the hierarchical natures of situated perspectives. Finally, we ask participants what other critical pedagogies beyond the visual can be put to use to promote alternative organizational futures.

Strategies For Fostering Industry Collaboration in To Drive Innovation, Impact and Scalability

Host: **John Wannemacher**, *Riipen*

Many students face the “experience paradox”, where entry-level jobs require years of professional experience - can’t get a job without experience, can’t get experience without a job. In this session, we will explore strategies adopted by higher education leaders and innovators to deliver inclusive, flexible and scalable experiential learning and work-based learning opportunities to future-proof business education. This session will also highlight the impact of these industry collaboration models on meeting diverse students' needs,and achieving employment outcomes to align with employer needs and the changing workforce. Join us to learn from higher education leader and to explore several case studies.

Panelist: **Melissa Sanchez**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*
Panelist: **Mélanie Giraudet**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

The focus of this PDW is to highlight the ins and outs of the quality of management within management consulting companies. Indeed, management consultants also have to put workers front and center. They also have to practice their preach if they were willing legitimacy and crediblity. The focus is on professional development by giving management consultants tools and skills to improve their performance while delivering higher value added to their clients. Indeed, many dysfunctions have been observed in the industry, such as overwork, low quality, staff turnover and poor product or service innovation. To enhance relevant and scientific approaches to management consulting, it is key to explore innovative management practices in consulting firms regarding several domains: -Sound HR practices aimed at improving working conditions and enabling and better loyality while safeguarding know-how. -Organizational development methodologies implemented in management consulting firms.

Panelist: **Rebecca Piekkari**, *Aalto U. School of Business*

Academic performance is judged in part on one's level of linguistic competence in English. As a consequence, scholars who wish to succeed on the academic field must be able to write in English not only fluently but also eloquently. This places non-native English scholars in a disadvantageous position. The goal of this PDW is therefore to have a discussion regarding the various challenges that non-native English scholars face when writing and publishing in English and share concrete tips on improving academic writing in English. We bring together a panel of experienced and well-published management scholars who approach the theme from diverse perspectives. In the first part of the PDW, our six panelists will share their experiences and insights into the art of writing, publishing, and collaborating with non-native English scholars in these processes. In the second part of the PDW, we will continue with a practice-oriented roundtable discussion. We will conclude the PDW with a session-wide Q&A and a summary of lessons learned.

The Innovations in Teaching Teamwork PDW is a practical, highly interactive workshop designed for faculty and students interested in learning more about the latest tools, techniques, and topics for teaching others how to effectively lead teams. We have assembled a range of experts willing to share their insights, activities, and teaching materials with the AoM community. The intent of this PDW is to support the teamwork teaching capability of the Academy and to ensure that the science of team effectiveness is translated to the variety of organizational leaders and managers that we teach. This will be an interactive workshop consisting of three parts: 1) team activities, 2) team projects and lessons, and 3) team tools and resources. Each part will include a panel of experts making short presentations about the related topic area. After each panel, we will open up the session for a discussion with the audience that can address any questions, as well as allow members of the audience to share additional resources and insights. We hope that the session facilitates a collective learning experience where both panelists and attendees gain new actionable strategies for teaching teams.

Facilitator: **Mary Hausfeld**, *U. of Zurich*
Facilitator: **Jennifer Linda Sparr**, *U. of Zurich*
Facilitator: **Anand Prema Aschwin Van Zelderen**, *U. of Zurich*
Panelist: **Stacey Messier**, *Cambridge Innovation Center*

The future of work, or how work will change in the next decades because of advances in technology (e.g., robotics, artificial intelligence), demographic changes (e.g., aging populations), and other societal trends (e.g., shifting values), is a topic of increasing importance to practitioners and policymakers. The goal of this PDW is to advance research from management scholars on the future of work by collectively setting a promising research agenda, so that scholars can add to ongoing dialogues and offer solutions that positively shape the world of work. The PDW includes both an academic and a practitioner perspective, so that we shape the research agenda on the future of work to be both scientifically and practically relevant. Participants will leave the PDW with a shared understanding of how management scholars can contribute to research on the future of work and an awareness of the possible opportunities and pitfalls of publishing on the topic. The PDW will involve several components that utilize different formats to facilitate engagement, including a panel with scholarly experts who have editorial experience at top journals (ASQ, AMR, AMD) as well as practitioners who are shaping the future of work in their companies, followed by themed round-table discussions that allow attendees to connect on different future of work topics based on their research interests. To spark collaboration that continues after the Academy meeting, the PDW will feed into a research grant competition sponsored by the University of Zurich to fund promising research proposals related to the future of work.

Please complete this form in order to submit questions to the panelists and register for the themed discussion sessions (deadline July 25th): https://uzhbusinessadminlab.eu.qualtrics.com/jfe/form/SV_bd2DqSg7hmhUabA

Facilitator: **Margarethe F Wiersema**, *U. of California, Irvine*

In 2003, in response to a growing separation between strategic management and organizational scholarship, the journal Strategic Organization was created to encourage cross-pollination across the two fields. Some 20-years on, such research has flourished, as demonstrated by the 16 essays in the 20th anniversary special issue, which provide new insights for both fields across multiple themes, levels, and theoretical lenses. These essays by 31 leading scholars outline provocative new agendas to further strengthen links between the two and pursue enhanced theoretical contributions and increased societal impact. This Professional Development Workshop (PDW) brings together the distinguished authors of these papers with participants across different AOM DIGs to reflect collectively on where research at the intersection of strategy and organization can go next. The workshop has two parts: Part 1 will feature a short presentation by the founding editors, Joel Baum, Royston Greenwood, and Devereaux Jennings, to showcase the current state of strategy and organization research and imagine its future. In Part 2, 128 pre-registered scholars (early-, mid-career and senior) will join roundtables with leading scholars in discussing specific future strategy and organization research agendas, moving across three of the 16 topic areas identified by these leading scholars. The goal of this workshop is to discuss (1) important issues and gaps at the intersection of strategy and organization theory, and (2) develop joint research agendas for future research. The interactive format will enable participants to reflect on the broader context of these issues and on their own research.

We can only provide a limited number of spots. Please register for the event and the roundtable discussions here: bit.ly/PDWStrategyOrganization. You will be allocated to 3 round tables according to the topics/authors in the PDW. Please identify up to 4 preferred topics so that we can try to meet your preferences. In case of any questions, please email skade@europa-uni.de.

This workshop will inspire audience members and presenters to continue and/or initiate new efforts to contribute to meeting the grand challenges of the 21st century -- (1) to deal urgently with global warming and other aspects of global unsustainability, (2) to avoid nuclear Armageddon, (3) to become the kinds of people who can flourish on this planet without destroying it, (4) to develop ways to heal our broken planet as we produce the goods and services all of us need to flourish, and (5) to create a social, economic, political, cultural, and environmental global system that works for everyone. The workshop focuses on how transforming business school research, activism, and teaching to meet those challenges is happening in the presenters' schools and how it might be the best possible vehicle for addressing at least four of those five grand challenges.

Quality Reviews, Quality Articles: Editor Panel of PNP Journals

Session Chair: **Erynn Beaton**, *Ohio State U.: John Glenn College of Public Affairs*

The Public and Nonprofit Division’s Editor Panel offers an opportunity for members and other conference attendees to learn about potential outlets for their work. The Editor Panel offers journal editors the opportunity to provide an overview of their journals to the audience which is followed by a discussion. This year we will discuss a key issue facing editors – procuring high-quality reviews. We will consider these challenges and hear tips from the editors about how to provide high-quality reviews in a time-efficient manner. This panel provides conference attendees with the opportunity to learn about public and nonprofit management journals and ask questions about the peer review and publication process. Participation in this PDW is open to all conference attendees.

Publishing in Academy of Management Collections

Presenter: **Benjamin Martell Galvin**, *BYU*
Presenter: **Elizabeth L. Rose**, *Indian Institute of Management, Udaipur*

Academy of Management Collections (AMC) is a new and exciting publication that will make an important contribution to the AOM's portfolio of publications. AMC has a unique format, in that each issue consists of a selection of articles from AOM publications, tied together by an original paper that serves to curate the collection. In this session, the AMC editors will introduce you to the publication, share its mission, and talk about how AMC will benefit both scholars and practitioners. They will also provide an overview of what a collection – including the curating essay – will look like, how a successful proposal can be developed and submitted, and how the review process works. There will also be time to ask questions and obtain insights directly from the AMC editors.

Interacting with One Million Management Findings: A MetaBUS Project Tutorial and New R Package

Participant: **Isaiah James Lynch**, *Virginia Commonwealth U.*
Participant: **James Field**, *West Virginia U.*
Participant: **Frank A. Bosco**, *Virginia Commonwealth U.*

To conduct a systematic review is highly time consuming. The metaBUS platform (metaBUS.org) augments the review process through a web-based search engine containing the largest collection of manually-classified findings across the social sciences – more than one million findings. Since the 2016 metaBUS PDW, the number of findings contained in metaBUS has increased by 25% and a new R package has been developed for advanced functions. Like the 2016 metaBUS PDW, we will provide an overview of the platform's development, database format, and organization (e.g., taxonomy of nearly 5,000 topics). As before, PDW attendees will be guided through several demonstrations using the web-based platform in which constructs are selected on-the-fly and then instantly meta-analyzed. In addition, we will introduce and provide a tutorial for the newly developed metaBUS R package that offers access to database fields (e.g., reliability values, response rates, sample type) that are not displayed in the web-based metaBUS platform. Finally, we provide analyses of the roughly 19,000 queries that have been conducted thus far at metaBUS.org. Like the prior PWD, ours will allow participants to gain hands-on experience of metaBUS so that they can easily apply it in their own work. The deliverables of the session are (1) a tutorial on how to effectively use the metaBUS taxonomy and methods, (2) a tutorial on the R package for more advanced functions, and (3) an understanding of how metaBUS is used through current publications using metaBUS, and popular queries and query modalities.

Session Type: **PDW Workshop**
Program Session: **471** | Submission: **11625** | Sponsor(s): **(RM, OMT, STR, ENT, OB)**

Diaries: Reflections and Methodological Considerations

Organizer: **Madeleine Stefanie Rauch**, *Stanford U.*
Organizer: **Carina Hartmann**, *U. of Mannheim*
Facilitator: **Melissa Mazmanian**, *U. of California, Irvine*
Facilitator: **Ingrid Erickson**, *Syracuse U. School of Information*
Facilitator: **Teresa M. Amabile**, *Harvard U.*
Facilitator: **Marilyn Ang Uy**, *Nanyang Business School, NTU Singapore*
Facilitator: **Leo Dana**, *Rowe School of Business, Dalhousie U.*

This Professional Development Workshop (PDW) will reflect on the growing interest in diaries for collecting and analyzing process-data in organizational research. The first part of the PDW is a facilitated panel discussion with leading academics who have conducted award-winning diary research in strategy and entrepreneurship from different theoretical backgrounds covering both qualitative and quantitative approaches. The aim of the panel discussion is to highlight the variety and advantages of diaries as research data and will elaborate on multiple domains of application. This PDW is intended to inspire further epistemological interest, as well as to develop methodological guardrails that help navigating the data collection, data management and data interpretation with diaries. The PDW is structured in two parts: The panel discussion of Part 1 is open to all participants and does not require a pre-registration. Part 2 will focus on roundtable discussions facilitated by leading scholars who are experienced with diary research. Participants who wish to participate in Part 2 will need to submit a proposal (2 pages). We will limit the number of participants to 42-50 in the second part (individualized advice) of the PDW.

The PDW is structured in two parts: The panel discussion of Part 1 is open to all participants and does not require a pre-registration. Participants who wish to engage in Part 2 will need to submit a proposal (2 pages) and your CV. We will limit the number of participants to 42-50 in the second part to allow for individualized discussions. Deadline for application is July 23! If you have questions, please contact Madeleine (rauch@stanford.edu) or Carina (hartmann@uni-mannheim.de). Link for registration until July 23: https://bit.ly/3o0FFPF

Leveraging the Healthcare Context to Examine Important Management Questions

Organizer: **Daniel Albert**, *Drexel U.*
Organizer: **John Eklund**, *U. of Southern California*
Organizer: **Melissa Staha**, -
Panelist: **Pooria Assadi**, *California State U. Sacramento*
Panelist: **John Joseph**, *U. of California, Irvine*
Panelist: **Sunkee Lee**, *Carnegie Mellon U. - Tepper School of Business*
Panelist: **Jisoo Park**, *Clark U.*
Panelist: **Shoshana Schwartz**, *Christopher Newport U.*

The purpose of this PDW is to explore how the healthcare context can be utilized to examine important managerial issues. In this PDW, we aim both to illustrate the importance of the healthcare sector, but also how this context can help scholars contribute to ongoing scholarly discussions. We will examine a selection of management issues within a healthcare setting ranging from how firms' structures can shape their pricing decisions and strategy, to understanding career progression pathways, to learning from mistakes. These will all serve to illustrate the strengths and limitations of the healthcare context to examine important managerial questions. Following the presentation and discussion element of the PDW, we will split into roundtable discussion groups where the PDW participants will discuss pre-submitted extended abstracts of research ideas that they are developing within a healthcare setting. We have three goals in organizing this PDW. First, to draw out the importance of healthcare as an empirical context for examining important management issues. Second, to illustrate the various theoretical lenses that have been used in this context in examining relevant management phenomena. Finally, to spark interest in the healthcare setting within other management scholars and develop new research networks.

The Evolutionary Dynamics of Corporate Strategy

Organizer: **Lalit Manral**, *U. of Central Oklahoma*
Presenter: **Robert A Burgelman**, *Stanford U.*
Presenter: **David J. Collis**, *Harvard U.*
Presenter: **Nicolai J. Foss**, *Copenhagen Business School*
Presenter: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Presenter: **Michael J. Leiblein**, *Ohio State U.*
Presenter: **Brian Silverman**, *U. of Toronto*
Presenter: **Lenos Trigeorgis**, *Durham U.*

What role can evolutionary theory play in the analysis of the dynamics of corporate strategy? The primary objective of the third edition of this PDW is to further explore how research in corporate strategy can adopt the continuous disequilibrium approach of Modern Evolutionary Economics (MEE). We will first review the extant literature that takes an evolutionary perspective to identify unaddressed – conceptual, methodological, and phenomenological – issues concerning the dynamics of Corporate Strategy. We will then examine the characteristics of those unaddressed issues that require analytical tools currently unavailable to researchers who are guided by evolutionary thinking. We will then explore how the emerging sub-field of Evolutionary Strategy Dynamics can provide fruitful analytical tools for Corporate Strategy researchers to expand the scope of their research into uncharted territories. The structured and interactive panel discussions of the proposed PDW will be of interest and benefit anyone with an interest in either Corporate Strategy or Evolutionary Theory.

Developing Management Theory from Historical Research

Panelist: **Andrew Nelson**, *U. of Oregon*
Panelist: **Roy R. Suddaby**, *U. of Victoria*
Panelist: **Daniel Wadhwani**, *U. of Southern California*
Panelist: **JoAnne Yates**, *MIT Sloan School of Management*
Organizer: **Rohin Borpujari**, *London Business School*
Organizer: **Chelsea Lei**, *Boston College*

This PDW is aimed at stimulating an interactive and developmental exchange between scholars engaged in theory-building research using historical data, who are aiming to publish in prominent management journals. The workshop will feature a panel of experts with a track record of publishing historical work in premier management and organizational studies journals. The goal of the workshop will be to help scholars learn how to develop and publish management theory from historical research. To this end, the core question that this PDW aims to unpack is – how do you build timeless theory from the study of time-bound historical cases? In the first half of the workshop, the panelists will lead exchanges around topics such as which research questions may be best suited to historical research; how to balance the needs for contextualization vs. generalization in their theorizing; and how to write up a historical study for publication in management journals. In the second half of the workshop, shortlisted participants will have the opportunity to engage in quick, entrepreneur-style “pitches” to one of the experts, with a view to receiving developmental feedback specific to their projects.

Facilitator: **Barbara Koerner**, *U. of Leeds*
Facilitator: **Hannah Weisman**, *Harvard Business School*

The concept of career proactivity began drawing research attention two to three decades ago. It has been studied under two distinct research streams: individual proactivity in organizational behavior research, and career development and management in vocational research. While divergent conceptualizations and theoretical lenses under the two different research streams have enriched studies in career proactivity, they have also created fragmented literature, which has not been properly synthesized to guide the field to move forward. To advance the domain of career proactivity, we seek to use this PDW to bring together scholars to discuss how to synthesize and advance studies on career proactivity. This PDW consists of two parts. The first part includes a presentation that provides a review of career proactivity literature to date, and five presentations that provide reflections on the existing approaches to studying career proactivity as well as directions for future research. The second part consists of roundtable and plenary discussion sessions. The audience will be guided to discuss career proactivity research in four aspects: a) conceptualization, b) theoretical lens, c) methodological challenges, and d) practical implications. We expect this PDW will evoke scholars' attention and effort into synthesizing research on career proactivity and stimulate ideas for future studies. This PDW is related to the theme for the meeting, “Putting the Worker Front and Center” because the discussion in the PDW helps address the concern of how workers can look after themselves and how employers and governments can put the worker front to support workers’ career development.

Discussant: **Ashli Carter**, *Columbia Business School*
Discussant: **Evan P. Apfelbaum**, *MIT Sloan School of Management*

Delving into conversations around diversity, equity, and inclusion (DEI) can be challenging. For those involved, these conversations often require patience, flexibility, and perspective-taking. This is especially true for those who facilitate these conversations in the classroom. Serving as an instructor for topics that focus on DEI presents an array of experiences and opportunities, some rewarding and some challenging, that are unfamiliar to novice DEI instructors. Building on the success of our 2022 PDW at the Academy of Management Meeting in Seattle, the purpose of this PDW is to prepare faculty members of all levels and demographic backgrounds to manage and facilitate classroom discussions related to DEI. This includes direction on how to introduce sensitive topics, how to engage with students, how to handle difficult questions, and more. This PDW utilizes an array of session formats (i.e., teaching demonstrations, panels, and roundtable discussions) and involves faculty who have extensive experience leading DEI sessions and courses. we see this PDW as an opportunity to further the goal of cultivating connection among those who value and contribute to DEI-related conversations in the classroom.

This PDW is designed to continue to build a community of scholars who are focused on expanding research related to health in the context of entrepreneurship. This PDW will (1) provide round-table discussions lead by scholars who have published work related to health in entrepreneurship and (2) highlight a new annual conference related to health in entrepreneurship . In this PDW session, we aim to highlight multiple unique directions in understanding how health plays a role in the entrepreneurship process. Our PDW is unique in providing not only a discussion of research related to mental health and well-being, but we also will include roundtables on (a) entrepreneurial passion and physical health, (b) clinical health and physiological indicators, (c) post-traumatic healing, (d) stress, play, and burnout (e) minority entrepreneurship and growth mindset, (f) life-threatening events, (g) eudaimonia, and (f) utilizing experience sampling methods (ESM) to study entrepreneur health. Each of these topics will be covered in roundtables led by scholars who have published work in this area, with the goal being to help build a larger community of scholars engaging in health-related research. Our session includes leaders in the burgeoning field of health-related entrepreneurship research. We believe this session will provide a clear means of building a stronger research community around this important topic and build meaningful research collaborations among the session participants.

Strengthening Networks for Equitable and Integrated Healthcare

Session Chair: **Ingrid Nembhard**, *The Wharton School, U. of Pennsylvania*
Session Chair: **Kathryn M. McDonald**, *Johns Hopkins U.*
Presenter: **Sara Singer**, *Stanford U.*
Presenter: **Michaela Kerrissey**, *Harvard U.*
Presenter: **Hao Gong**, *UCL School of Management; Orchestration Capital*
Presenter: **Christina T. Yuan**, *Johns Hopkins Bloomberg School of Public Health*
Presenter: **Robert Kahn**, *Cincinnati Childrens*
Presenter: **Heba Naim Ali**, *Brandeis U.*
Presenter: **Jody Hoffer Gittell**, *Brandeis U.*
Discussant: **Stephen M. Shortell**, *U. of California, Berkeley*
Discussant: **Glen Mays**, *CU Anschutz*

It is increasingly apparent that success in a highly interdependent world depends on identifying and strengthening the networks through which value is created. In this workshop, we will take stock of knowledge about the use of relational coordination and social networks to build multi-sector partnerships that span healthcare and social services, identify gaps needing research exploration, and explore how to better use relational coordination and social networks in practice. We will assess pathways to strengthen networks of high quality communication supported by shared goals, shared knowledge and mutual respect among these diverse stakeholders to achieve systems change. Additionally, we will explore more specifically how to advance multi-sector approaches to health equity.

The Emerging Role of Professional Development with Professional Sports Teams

Presenter: **Jeffrey Daniel Frey**, *Weatherhead School of Management, Case Western Reserve U.*
Presenter: **Daryl Jones**, *Case Western Reserve U.*

In 2017, a scholarly research project was completed within global sports organizations through the lens of global sports leaders. Management Consulting in the Sports Industry was conducted; specifically through the lens of executive and professional development. Data pertaining to the behaviors, processes, and emotions (BPE) of global sports leaders was analyzed pursuant to a deeper understanding of primary factors contributing to organizational crisis in sports organizations. Primary, secondary, and tertiary codes were developed that informed the identification of emotional triggers and critical characteristics associated with sport leaders. Results showed that, in an environment characterized by high risk and difficulty, sports leaders develop a proclivity to operate in self-preservation mode; ultimately leading to organizational crises. the 6 BPE most frequently associated with crisis were Self-preservation (32%), Strategy (27%), Codes of conduct / policy / regulations (22%), Executive leadership (15%), Industry effect (3%), and Job Performance (1%).

This PDW was created especially for members to feel “at home” in the Organizational Behavior (OB) Division by expanding their network of scholars interested in similar research areas. We designed the forum to provide members a platform to meet leading scholars in specific OB research topic areas, get to know other members of the Division, and discuss research ideas. The PDW will include three rounds of discussion that are moderated by accomplished scholars who serve as experts in a particular topic area. As a participant in the forum, members can self-select into three research themes of their choice, one choice for each round of discussion. Research themes span a wide range of OB topics, including: alternative work arrangements; contextual aspects of work (e.g., culture, & climate); creativity & innovation; dark side of OB; diversity (e.g., gender, race, ethnicity, religion, cognitive styles, etc.); emotions, affect and attitudes; experience sampling methodology; identity & identification; justice/fairness, trust, and ethics; leadership (3 tables for relational leadership, behavioral leadership, destructive leadership); motivation and engagement; personality and individual differences; stress, well-being, and mindfulness; team composition; team processes; time and temporal dynamics; social networks; voice and proactivity; work-life interface. We anticipate in-depth research discussions and the facilitation of many meaningful connections among the participants and members of the OB Division.

Can measuring the impact of business on society and the planet lead to a more socially and environmentally-oriented style of capitalism? This is the main hope and assertion of impact measurement and valuation (IMV). This PDW introduces participants to the key processes of IMV and critically examines the ethics and politics of IMV and its standardization. While proponents of these methods call on organizations to measure their negative and positive impacts (externalities) on their stakeholders and the environment, the PDW brings together leading experts in the field in an Oxford-style debate to discuss IMV's potential merits and risks. In the second half of the PDW, attendees will join the experts in thinking through potential narratives of change beyond more measurement in an open-dialogue format. The purpose of this PDW is to place IMV under deep investigation and envision new processes that work with or replace organizations' desire for management via quantification.

Social systems and organizational structures are under stress as they struggle to address increasingly complex and interdependent challenges such as affordable health care, tackling global pandemics, and the transition from fossil to renewable energy. New structures such as inter-organizational collaborations emerge to overcome these grand challenges by integrating internal and external knowledge to develop and implement innovative solutions. However, this organizational diversity is like a double-edged sword - while it can be a fountain of creativity and knowledge creation, it can also be a hotbed of coordinating challenges that fuel conflict and cause ecosystems to fail. Digital technologies like platforms, blockchain technologies, and AI play a key role in developing these ecosystems, but simply adopting them is not a recipe for success. New networked technologies offer new affordances for facilitating collaboration and establishing networks that span countries or industries. But organizations enact affordances differently in ways that reflect power differentials, commercial strategies, digital readiness, and pressure for economic success, to name a few. A great challenge for organizations is developing collaborative models for value creation and capture that leverage these affordances. Drawing on our academic and practitioner insights from working with business leaders and policymakers, we unpack how organizations address this challenge. We will partner with PDW attendees to understand how digitally enabled relational ecosystems are established, and how they evolve in response to multi-level, complex societal challenges. Our goal is to: 1) co-create a conceptual framework that is useful for research, policy, and practice, and 2) create a community of practice for interdisciplinary, collaborative research on this topic.

Bot Theory, Methods, and Ethics

Organizer: **Carolina Salge**, *U. of Georgia*
Organizer: **Anna Priante**, *Rotterdam School of Management, Erasmus U.*
Organizer: **Aaron Schecter**, *U. of Georgia*
Presenter: **Lior Zalmanson**, *Coller School of Management, Tel Aviv U.*
Presenter: **Jason Thatcher**, *Fox School of Business, Temple U.*
Participant: **Jerry Kane**, *U. of Georgia*

Bots, automated accounts in online social networks, have a significant presence on platforms such as Facebook and Twitter. They post messages rapidly and on a large scale and potentially impact communication processes and information diffusion on these platforms. Scholars have associated bots with political propaganda (Caldarelli et al. 2020) and the spread of false news (Shao et al. 2018), suggesting that their deployment imposes major threats to organizations and society (Ferrara et al. 2016). In addition, bots can threaten the validity of online social network research, especially if scholars fail to control for and eliminate confounding effects caused by the presence and activity of these bots (Salge and Karahanna 2018). After a successful PDW on "Researching Bots in Online Social Networks" at the Annual Meeting of AOM 2022 in Seattle, we look forward to continuing the conversation at AOM 2023 in Boston with a new PDW proposal on "Bot Theory, Methods, and Ethics." In this PDW, we seek to: (1) Facilitate theory development on bots. (2) Discuss how bots can be used as tools for conducting research across fields. (3) Explain the technical limitations of non-rule-based bot design, autonomy, and intelligence. (4) Debate ethical dilemmas involving bot research. This PDW also seeks to maintain the interdisciplinary community of scholars researching bots, which we started last year in Seattle.

AOM Fellows Information Session for Journal Editors and Boards

Presenter: **Carrie R. Leana**, *U. of Pittsburgh*
Presenter: **Sim B. Sitkin**, *Duke U.*
Presenter: **Alan D. Meyer**, *U. of Oregon*

Articles nominated for the AOM Fellows Responsible Research in Management Awards have involve many of our journals, but not all editors or board members are aware of the process and criteria. This brief session is to provide information and answer questions to encourage journals to make full use of the opportunity to promote the recognition of work that enhances responsible research and thus enhance the impact of our research.

The Student First!?: Limits and Responses to the Consumer Model in Health Administration Education

Organizer: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*
Organizer: **Peter F. Martelli**, *Suffolk U.*
Organizer: **Daan Westra**, *Maastricht U.*

Businesses often espouse a “customer first” ethos. In an attempt to ensure healthy enrollments, academia is also trying to lure “customers” to campus. The consumer model assumes that the customer’s specifications are well defined and stable, but in higher education two main customer groups (students and employers) have very different (and changing) expectations. The “customer is always right”-approach has generated dissatisfaction for both students and faculty. This PDW aims to identify the problems that this approach generates for teachers in Health Administration classrooms. Subsequently, it looks to identify tangible solutions for these problems by applying the patient engagement model to the classroom setting. In the patient engagement model, there is an assumed informational and power differential. The clinician (or faculty) knows more about the condition, has more skills to address the technical issues, and has a professional responsibility to offer “good care”. Patients (or students) are thus seeking advice from a learned other and have goals that are often hard to articulate. The patient engagement model seeks to understand these goals and offer sage guidance through shared decision making, which requires that the clinician and the patient collaborate. The patient engagement model thus assumes that the patient has the ability and cognitive capacity to participate in the decision making discussion. In this PDW, we explore what could happen if faculty approached students in this way, how it would benefit the teaching experience, and how that can be done in practice.

The acquisition process spans a wide variety of activities from setting acquisition strategies, to searching, analyzing, comparing acquisition targets, to negotiating the deal and setting a price, and to implementing post-merger integration. It is a very complex and challenging process that continues to attract much attention from scholars and practitioners, and bears important consequences for organizational performance. To deepen our understanding of the process, this PDW brings together scholars from diverse sub-disciplines along with executives that manage and live through the M&A process. The goal of this workshop is to share cutting edge research and teaching and reflect on recent contributions of the field, gain deeper insight from thoughtful practitioners, identify topical research questions, and thus bridge scholars from various sub-disciplines and practitioners to advance our understanding of the pre- and post-merger phases. This year we celebrate the 10th anniversary edition of the PDW under the auspices of the Academy of Management. To celebrate the sustained scholarly interest, we invited all the speakers from the previous sessions to have a much more largely interactive version of the workshop. We would like to take three hours, starting each hour with an invitation to the audience to discuss in groups of about four or five members the themes/topics on their minds, and then (quite quickly) come up with at least one important finding and a question about the research/practice in that area. As organizers, we will then quickly organize all questions and channel questions to our panel of M&A experts.

Unsilencing Images in Qualitative Research: Giving Voice to Photographs with Two Hands-on Activities

Organizer: **Ace Beorchia**, *Kennesaw State U.*
Organizer: **Anne D. Smith**, *U. of Tennessee, Knoxville*
Panelist: **Benjamin Nathan Alexander**, *California Polytechnic State U.*
Panelist: **Sara R. S. T. A. Elias**, *U. of Victoria*

This PDW focuses on delving deeply into how photographs can be analyzed and included in qualitative research to further rich theoretical insights. While the use of visual data in qualitative research is highly valued and increasingly encouraged, more work is needed to develop analytical approaches with this data. In this session, participants will learn two techniques situated in photographic analysis: grounded visual pattern analysis (GVPA) (Shortt & Warren, 2019) and participant-engaged photographic analysis (PEPA) (Cassell et al., 2020; De Molli, 2021). Participants will be involved in hands-on learning with time to reflect how to use these techniques in their research. The session begins with expert qualitative researchers describing how photographs have been used in contemporary research, followed by brief presentations about the two photographic data analysis approaches. Then, in smaller groups, participants will "try their hand" at GVPA after reviewing a one-page narrative about an organization going through a strategic change. Next, participants will engage in a second activity applying PEPA in a group activity. After both exercises are completed, participants will reflect and discuss how these techniques might be included in their research projects. During this debrief, organizers will reiterate key learning points and steps forward for incorporating photographs into qualitative studies. This session targets new and experienced scholars alike who will gain practical tools to conduct higher quality qualitative research. From these hands-on activities, participants will leave with unique insights that are difficult to extract from research articles or other methodological literature.

The Strategy Capstone: One Class to Rule Them All

Participant: **Carl Vieregger**, *Drake U.*
Participant: **Peter Jack Gallo**, *Creighton U.*

The Strategy Capstone is a unique course at colleges of business around the world because it is expected to reinforce students' prior learning in core business disciplines, to introduce theories and tools of strategic management, and to provide experiential learning opportunities that prepare students for their future careers. The Capstone plays an integral role in the undergraduate business and MBA experience, but this role of the Capstone has been underexplored in the Academy to date. The PDW on the Strategy Capstone seeks to foster a community of teaching scholars where we can share experiences, explore best practices, and brainstorm innovations to assure the best learning outcomes for our students. Please join us for this interactive discussion session, regardless of your capstone teaching experience, and help us improve the Strategy Capstone learning experience.

Please contact session leader Carl Vieregger (carl.vieregger@drake.edu) with any questions.

Using Computational Models in Behavioral Strategy Research

Organizer: **Dong-Nghi PHAM**, *ESSEC Business School*
Organizer: **Maciej Workiewicz**, *ESSEC Business School*
Organizer: **Chengwei Liu**, *ESMT Berlin*
Panelist: **Daniel Levinthal**, *U. of Pennsylvania*
Panelist: **Jerker C. Denrell**, *U. of Warwick*
Panelist: **Hart E. Posen**, *Dartmouth College, Tuck School of Business*
Panelist: **Marlo Raveendran**, *U. of California, Riverside*
Panelist: **Michael D Ryall**, *Florida Atlantic U.*

Computational models are gaining increasing attention in the management literature. They allow modeling and analyzing the behavior of complex systems of interacting agents and experimenting with different interaction structures, such as markets, networks, and organizations. As such, they are an excellent tool for studying the aggregation of distributed action, a central topic of interest in behavioral strategy. In its third installment, this workshop will give the participants an opportunity to interact with prominent scholars in the field and to work and practice modeling in an interactive session. In the first part of the workshop, the panel will discuss the role of formal models in behavioral strategy, address the process of designing and implementing a computational model, and outline the most interesting and challenging future applications of computational models. In the interactive session, attendees will have a chance to discuss and practice modeling mutual learning in organizations. The workshop is open to participants with or without prior experience in programming and modeling.

Broadening the Agenda of Science of Science for Innovation Scholarship in Management

Organizer: **Michael Ernst Rose**, *Max Planck Institute for Innovation and Competition*
Organizer: **Jacqueline Lane**, *Harvard U.*
Organizer: **Nur Ahmed**, *MIT Sloan School of Management*
Panelist: **James Evans**, *U. Of Chicago*
Panelist: **Ina Ganguli**, *U. of Massachusetts, Amherst*
Panelist: **Neil Thompson**, *Massachusetts Institute of Technology*
Participant: **Yian Yin**, *Northwestern U.*

The advancement of science and technology is a core topic of interest to management scholars. The emergence of new data sources of scholarly inputs and outputs–including research funding, productivity, collaborations, citations, and mobility–as well as recent methodological advances, are creating unprecedented opportunities to broaden our understanding of the structure and evolution of science and innovation. Science of Science is an emerging interdisciplinary field that relies on big data to understand the conditions underlying creativity and scientific discovery for the purposes of accelerating innovation and breakthroughs. The workshop's main objective is to provide an introduction to Science of Science to management scholars, which will include an overview of the field from leading experts, who will present novel data sources, discuss state-of-the-art methodologies, review applications to research, and offer unique perspectives on agendas for future work, including opportunities for inclusive pathways to innovation. The workshop continues to provide a forum to foster a community of management scholars in Science of Science.

The first part of the PDW is open to everybody and will feature a panel of experts. The second part of the workshop will be organized into round tables with pre-registration. Participants have to send a one-page research sketch to the organizers via the following Google form by July 10th EOD: https://forms.gle/6Ubs7YmwEVdDPiM67 Each round table features a facilitator and up to four participants.

This ceremony will announce and celebrate the winners of the 2023 Responsible Research in Management (RRM) Award, sponsored by the AOM Fellows Group. Selected authors of the 10 papers and 1 book will reflect on the challenges and rewards if conducting research that is beneficial to society and useful to practitioners. Executives who helped select the winners will be invited to explain what makes these research studies valuable to them. Since its founding in 2018, the RRM Award has assembled a canon of "responsible research" which now contains 70 exemplary articles and 13 books that are academically credible, practically useful and beneficial to society. Amidst the drumbeat of calls for research that is relevant to practice, TRRM is the one award signifying that practicing executives regard research findings as actionable. Please join us to learn about and celebrate management research that can move the world.

Members will facilitate a discussion around the main conference theme. Mindful that, across the Academy, there are conversations about Putting Workers Front and Center, this is a chance for us to pause, reflect, and renew ourselves, focusing on what being it means to be critical scholars in relation to workers. We warmly invite members of the Division - old and new - to join our plenary discussion as we connect up our past, present, and look to the future.

Meet the ENT Division: New Member Meeting Point

Organizer: **Annelore Huyghe**, *U. Ramon Llull, ESADE Business School*
Organizer: **Wadid Mohamed Lamine**, *Telfer School of Management, U. of Ottawa*

The New Member Meeting Point is a unique opportunity for new members to ask any questions they may have about the ENT division and to get to know fellow members. During this annual event, we pair our newest members with experienced members of our division with similar research interests. Roundtable discussions will focus on diverse topics such as publishing, teaching, division activities, and ways to engage with or contribute to the entrepreneurship scholarly community! If you are interested in participating in this social event for new members of the Entrepreneurship Division, please sign up using the following link https://tinyurl.com/ywmsn5ep

Publishing in top tier management journals is a primary means by which our research work is disseminated as new knowledge to scholarly 'conversations'. Publishing in top journals is also critically important to career success in academia. Yet careers scholars may still find it challenging to decide which mainstream journal to target to best place their career-focused papers. Awareness of how these journals vary in their positioning, review processes and appetite for careers research are important subjects for careers scholars making tough choices about where to submit their work. The goal of this PDW is therefore (a) for the panellists to share information regarding the publishing of careers research in top generalist journals from management and HRM (here, AMJ, JOB, JOM, JAP, Human Relations, HRM); and (b) for participants to have their burning questions answered. The panel will consist of four editors-in-chief, one associate editor and one senior editor. Each editor will provide a short overview of their journal (e.g., vision, scope, characteristics of an 'ideal' paper, review process), followed by Q&A in order to engage the audience. Following the Q&A, we will have breakout groups to ask more specific questions, time permitting. This format will allow participants to ask the editors more targeted questions, while in a comfortable and psychological safe environment.

Utilizing Critical Biographies & Storytelling About Historic Black Women's Enterprises & Activism

Organizer: **Leon Prieto**, *Clayton State U.*
Presenter: **Carolyn Denise Davis**, *Morehouse College*
Presenter: **Holly Slay Ferraro**, *Villanova U.*
Presenter: **Simone Trixie Allison Phipps**, *Middle Georgia State U.*
Presenter: **Rasheda Weaver**, *Rutgers U., Camden*

Historic Black women entrepreneurs and activists such as Maggie Lena Walker, Mary Bibb, Annie Turnbo-Malone, Madam CJ Walker, and others have advocated for and created opportunities for greater representation in politics, education, business establishments, and other institutions traditionally dominated by white men (Knight, 2016; Phipps & Prieto, 2018; Phipps & Prieto, 2021). Their efforts have pushed for policy changes that help close the gender gap across all industries while bringing attention to the issues of racism, sexism and other forms of discrimination. By learning about Black women's contributions to entrepreneurship and activism, we can gain an understanding of how their work has helped create a more equitable world for all, and draw educative inspiration in terms of purposeful, strategic approaches for the continued advancement of Black women in business and other organizations (Ferraro, 2022). Through their dedication to survival, however, Black women entrepreneurs are able to persevere, defy stereotypes that may push them towards particular industries associated with their race and gender despite their skills, and dare to expand beyond the expected. Knight (2016) found that a feminized, service-typed industry (e.g., the bra business, pastry shops etc.) often induced approachability, while the discursiveness of the female Black body sometimes did not coincide with her profession (e.g., consulting, accounting, technology etc.). Yet, Black women entrepreneurs persisted. Dedication to survival also empowers them to utilize unique approaches and create innovative solutions (Knight, 2016; Smith, 2005) that not only benefit them, but others in similar situations, as well as the community at large.

OSCM: **Balancing the Exploitation-Exploration Paradox During Major Geopolitical Disruptions**

Author: **Hamid Moradlou**, *U. of Warwick*
Author: **Heather Skipworth**, *Cranfield School of Management*
Author: **Lydia Bals**, *Mainz U. of Applied Sciences*
Author: **Emel Aktas**, *Cranfield School of Management*
Author: **Samuel Roscoe**, *U. of Sussex Business School*

We answer the question "How do companies develop and deploy supply chain structural ambidexterity to effectively manage geopolitical disruptions?" by investigating three significant geopolitical disruptions: Brexit, the US-China trade war, and the Covid-19 pandemic. We use an inductive theory-elaboration approach to build on Organisational Learning Theory and Dunning's eclectic paradigm of international production. We conducted 29 elite interviews with senior supply chain executives across 14 multi-national manufacturing firms and validated the analysis by triangulating secondary data sources, including standard operating procedures, annual reports, and organizational protocols. When faced with significant geopolitical disruptions, companies develop and deploy supply chain structural ambidexterity by (1) developing parallel supply chains; (2) significantly reconfiguring their supplier networks, and (3) restructuring their internal sub-units. We contribute to Organisational Learning Theory and Dunning's eclectic paradigm by empirically examining how companies reconfigure supply chains to pursue exploration and exploitation activities in response to geopolitical disruptions. During significant geopolitical disruptions, managers make decisions in tight timeframes. Therefore, we propose three types of supply chain structural ambidexterity based on the transition time available. We conclude with a managerial framework to assist firms in developing supply chain structural ambidexterity in response to geopolitical disruptions.

OSCM: **Sub-suppliers' Customer Share of Production and Sustainability Compliance in Apparel Supply Chains**

Author: **Enrico Fontana**, *Cranfield School of Management*
Author: **Mohammad Atif**, *EDC Paris Business School*

In this paper we argue that sub-supplier sustainability compliance in developing countries' apparel supply chains can be better achieved by accounting for what we conceptualize as sub-suppliers' customer share of production, e.g., the share of production that sub-suppliers sell to 'exporting' direct suppliers that target the international market vis-à-vis 'local' direct suppliers that target the domestic market. Through a qualitative study in the Pakistani apparel supply chain, we theorize a model indicating that the more sub-suppliers sell to exporting direct suppliers, the more they face coercive, competitive and collaborative pressures for sustainability compliance, and the more they are incentivized to invest in sustainability compliance. Correspondingly, sub-suppliers' customer share of production can explain why some sub-suppliers are likelier to invest in sustainability compliance, some to decouple it, and others to invest proactively beyond it. Our article extends the multi-tier sustainable supply chain management literature and offers practical guidance to purchasing managers to attain sub-supplier sustainability compliance in developing countries' apparel supply chains.

OSCM: **Mandatory CSR Disclosure Regulation, Sustainable Operations Strategies, and Environmental Innovation**

Author: **Chuang Wu**, *Xi'an Jiaotong U. School of Management*
Author: **Alfred Marcus**, *U. of Minnesota*

Drawing upon optimal distinctiveness theory, this paper examines the effects of Chinese mandatory corporate social responsibility (CSR) disclosure policy on firms' sustainable operations strategies and environmental innovation performance. Our database covers seven years and 11753 observations of Chinese publicly listed firms. Using a quasi-natural experiment research design, we find that mandatory CSR disclosure regulation in China encourages firms to carry out sustainable operations strategies that provide legitimacy and competitive advantages. The practices firms adopt to achieve these ends include environmentally friendly product development, the implementation of emission reduction and energy-saving technologies, and the introduction of circular business models. Our results reveal that mandatory CSR disclosure regulation also has a positive impact on environmental innovation patents and citations. Before reaching conclusions and drawing implications, we explore the moderating roles of pollution level and market competition intensity on these relations.

OSCM: **Operational Foundation for TPS Implementation: Toyota's Three Pillar Activity**

Author: **Katsuki Aoki**, *Meiji U.*
Author: **Toshiro Nomura**, *Kagoshima Prefectural College*

This study aims to build a theoretical model of operational foundation for TPS implementation by analyzing qualitative data collected from 48 interviews and "go and see" (genchi-genbutsu) observations at Toyota Japan and its seven overseas plants. Our analysis focuses on Toyota's Three Pillar activity, through which plants conduct kaizen (continuous improvement) in the following four categories—4S plus Shitsuke, standardized work, ownership maintenance, and process point management. Our analysis reveals that this activity allows Toyota to strengthen its operational foundation by eliminating muda (waste), as far as possible, in relation to work environments, people, equipment, and products. It further uncovers that Toyota utilizes hoshin kanri (policy deployment) and FMDS (Floor Management Development System) to integrate its strategy management into the operational foundation. Toyota also encourages zeninsanka (full participation), and provides all employees with education and training in order to integrate its human resources into that foundation. Our emerged model consists of three foundations—operational foundation at the center, which is supported by strategy management and human resources foundations. This allows organizations to maintain a just-in-time production flow by eliminating muda and conducting kaizen in a continuous manner.

OSCM: **The Role of Strategic Consensus for Effective Sub-supplier Management Practices**

Author: **Elisabeth Altmayer**, *U. of St. Gallen*
Author: **Jörg Grimm**, *Bern U. of Applied Sciences*

Previous research on sub-supplier management still lacks empirical results regarding the effect on sub-supplier performance. Previous findings established the relevance of a buyer-sub-supplier strategic consensus for sub-supplier management performance. Within this paper, we are testing the role of a strategic consensus at the level of sourced material/product group between buyer and sub-supplier regarding its influence on the link between sub-supplier management practices and sub-supplier performance (regarding on-time delivery and quality). The authors analyze empirical connected multi-tier data (matched-triplets) within a structural equation model applying Bayesian estimation of parameters. The analysis includes 17 different sub-supplier management practices. Our results strongly support a model of a mediated effect of sub-supplier management practices on sub-supplier performance through buyer-sub-supplier strategic consensus at the level of sourced material/product group. By reflecting our findings with the supply chain practice view (SCPV), we contribute to and extend the existing frameworks regarding the effects of practices in multi-tier supply chains.

Women academics face challenging circumstances in their professional lives. Relative to their male colleagues, they can expect longer review times (Hengel, 2016), less credit for their research contributions when working in a team (Sarsons, 2017), biased evaluations of their teaching from students (Mengel, et al., 2017, Boring, et al., 2016), and cultures that are more likely to frame men through a professional lens and women through personal and physical lenses (Wu, 2017; Wolfers, 2017; Rivera, 2017). Many of these effects have been shown to be heightened where gender intersects with other marginalized demographics such as race (Miller and Roksa 2020). In the face of this rough terrain facing women in academia, it can be easy to lose sight of the institutionalized barriers to success as a woman academic and personalize negative experiences. We can also lose sight of the allies, supporters, and mentors who catalyze our ability to persist. Through this PDW, we offer a three-pronged approach to helping women academics and allies broaden their sight to develop and grow a feeling of community, support, and self-efficacy. We will share stories of persistence, highlight work by academics on this area, and work towards recommendations for leadership to support women academics. This PDW builds off the success of the past five years of "Nevertheless she persisted" PDWs to emphasize the ways in which women and their allies working together help each other to succeed.

Panelist: **Sherwat Elwan Ibrahim**, *American U. in Cairo*
Panelist: **Marcellus Mbah**, *U. of Manchester, UK*
Panelist: **Kara Johnston**, -

Climate change mitigation research has mostly focused on systemic change, strategic net zero targets for organisations, and the transformation of societies and consumers as decision makers, however little attention has been given to managers, employees, and individual workers in organisations as to how they could achieve climate solutions with multiple benefits including improved health and mobility. In this symposium, we will explore how 'CoachingOurselves', a program developed by Henry Mintzberg, Philip LeNir and others, can be employed to empower everyone—workers, employees, managers—to explore possible climate solutions in order to choose and enact the appropriate ones for their work. We will also discuss how Indigenous Knowledge Systems could feature in this endeavour, how managers and farmers in the supply chain could become part of climate solutions and highlight several research gaps with regard to managerial training, change theory, and professional development.

Participant: **Dina Van Dijk**, *Ben Gurion U. of the Negev*
Presenter: **Brooke A. Gazdag**, *U. of Amsterdam*
Discussant: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*

A recent shift away from the large hierarchical organizations with long-term full-time jobs toward shorter-term alternative work arrangements led to the rapid rise of the gig economy. Previous research suggests that the gig economy is very diverse in terms of the work gig workers are doing and the types of individuals undertaking this work. However, within the gig workforce, it is not clear whether gig work may reduce inequalities for workers from underrepresented groups and backgrounds. This symposium aims to investigate the influence of various diversity dimensions (gender, race, ethnicity, work experience, and educational background) on the experiences of gig workers. Employing theoretical concepts and perspectives from risk management, knowledge management, regulatory focus theory, feminist science, and technology studies and applying them to a variety of conceptual, qualitative, and quantitative studies, we illustrate the specific challenges diverse gig workers face in the gig economy as well as zoom in on strategies that help diverse gig workers to succeed and thrive in the new world of work.

CEO Job Demands, Characteristics, and Mental States: Implications for Top Executive Research

Organizer: **Daniel Zyung**, *Southern Methodist U.*
Organizer: **M. K. Chin**, *Indiana U., Bloomington*
Panelist: **Sydney Finkelstein**, *Dartmouth College*
Panelist: **Aaron Hill**, *U. of Florida*
Panelist: **Michael J. Mannor**, *U. of Notre Dame*
Panelist: **Matthew Semadeni**, *W. P. Carey School of Business, Arizona State U.*
Panelist: **James D. Westphal**, *U. of Michigan*

Chief executive officers (CEOs) face immense pressure to deliver sound financial performance and actively promote the interests of a broad group of stakeholders. On top of these demands, CEOs constantly strive to manage their relationship with the board of directors as well as their top team. Broadly speaking, CEOs work long hours, often make high-stakes decisions, and, especially as we have seen in recent years, face massive uncertainty in times of crisis. Such job environment poses various mental challenges to CEOs. Yet, CEO mental health appears to have been a less salient issue for both practitioners and researchers perhaps due to the perception that CEOs are strong, independent and in control, and capable of handling such mental challenges. Yet, recent evidence shows that higher job demands lead to stress, fatigue, and emotional exhaustion that can lead them to become anxious, depressed, paranoid, and angry, which escalates health risks for CEOs, as revealed in more visible aging and shorter lifespans. At the same time, when they experience mental difficulties, evidence shows that CEOs often turn to self-medication methods with substance use, such as alcohol and drugs. Given CEOs' centrality to firm performance, their responses to high job demands as well as their mental states as a result have potentially substantial implications for the firm. Further, research suggests that the effect of CEOs' job demands on their anxiety, stress, decision making, health risk, and substance use may further depend on their cognitive and personality characteristics. The findings from this stream of research reveal that we need a comprehensive and close look at such attributes to gain a better understanding of CEOs and their impact on firm outcomes. In this panel symposium, we assemble a group of experts who have done research on the organizational implications of CEOs' job demands (which include their relationship management with boards and top teams), traits, and states. We expect that insights from their research as well as experience working with corporations will promote a rich conversation about how such factors can further strategic leadership and corporate governance scholarship.

Female Leadership and the Four-Frame Organisational Model

Organizer: **Katarzyna Bachnik**, *Hult International Business School*
Organizer: **Lisa Critchley**, *Kirk Partners Consulting*

Drawing upon Bolman and Deal's (2014) four-frame organisational model, we analyse women's lived crucible leadership experiences to understand the organising processes and practices that render intersectionality invisible and reinforce and perpetuate inequality regimes. We propose adding EDI (equity, diversity, and inclusion) as the fifth frame to expand leadership awareness.

Participant: **Bob Chapman**, *Chairman and CEO Barry-Wehmiller*

The humanistic management approach rests on two pillars: 1) the protection of dignity (as that which is intrinsically valuable) and 2) the promotion of well-being (common good). Putting the dignity of work and the dignity of the worker front and center is a central research and pedagogical focus. The bigger aim is to develop and support practices that allow an economic system to work for 100% of humanity (Buckminster Fuller) through life-conducive management approaches. The main goals of the Humanistic Management Caucus are to stimulate, develop, and co-create: 1) interdisciplinary scholarship 2) pedagogical training and material as in case studies, exercises, activities etc. 3) communities of practice with practitioners, policy makers and civil society members (including media). 4) conferences, workshops and research seminars around the humanistic management theme.

Using a Career Lens to Unify AOM Disciplines

Participant: **Mel Fugate**, *Mississippi State U.*
Participant: **Caitlin M. Porter**, *U. of Memphis*

This Caucus uses a variety of current career issues to motivate research collaborations within and between divisions in the Academy of Management (AoM), such as OB, HR, CAR, DEI, STR, ENT, and PNP. The caucus also includes the exploration of commonalities and differences within and between countries of AoM members.

The following career-themed questions will facilitate inter-disciplinary answers/solutions from researchers with diverse interests, experiences, and nationalities. 1. Do You Feel Valued? What employer characteristics (e.g., policies and practices) make—young, mid-career, and older—employees feel valued? How do employee perceptions compare to those of employers? Impact of DEI initiatives? 2. What Are Your Expectations Related to Social Justice? What role do employers have in social justice issues? What are best practices for how to address employees' social justice interests/concerns? 3. How Much Virtual is Enough? What do employees actually want? Employers need? What are the key implications for virtual work on employees' job opportunities and careers? 4. Is All Success Created Equally? How do employees in different industries, occupational sectors, and countries define career success in today's career landscape? 5. Corporate, Public, and Non-Profit—How Are They Similar and Different? If any, how do current models and theories of careers need to change to accurately describe the career experiences of employees in public and non-profit sectors? 6. What Do the Careers of Entrepreneurs Look Like in Different Countries? What key factors predict entrepreneurial motivations, success, and other outcomes within and between different countries? We intend for this Caucus to live beyond the 2023 conference. Participants, therefore, will be asked to leave the Caucus with (high-level) outlines of actual research projects, including specific plans/commitments to follow-up and advance their ideas and work after the conference.

Teaming Up! Maximizing Employees' Potential through the Assembly of Teams

Organizer: **Pol Solanelles**, *U. of Mississippi*
Organizer: **Kristin Cullen-Lester**, *U. of Mississippi*

Moving beyond a focus on staffing human capital to maximize productivity, workers are increasingly viewed as central actors in team assembly and dynamic team composition. This caucus "puts the worker front and center" to understand how employees experience and how organizations can maximize employees' potential when implementing these practices.

Putting Worker Surviving and Thriving Front and Center: GLOBE Exploratory Incubator

Organizer: **Richard Cotton**, *U. of Victoria*
Organizer: **Mansour Javidan**, *Thunderbird School of Global Management at ASU*

This caucus aims to mobilize Careers, HR, OB and IB researchers for the recently approved, grant-funded study, GLOBE 2025: Buffering the Suffering & Driving the Thriving in the New World of Work: A Study of How Societal Context Affects Capabilities, Jobs, Meaningfulness and Key Work-Life Outcomes around the Globe. In this caucus, we will describe our conceptual model, theoretical underpinnings, research design, goals, and Co-Country Investigator (CCI) responsibilities and benefits by facilitating an interactive dialogue with the goal of informing and enlisting a diverse, inclusive set of global researchers building on the success of GLOBE 2020 which included data from 144 countries/societies. In this study (a.k.a., "GLOBE 2025"), we will target gathering human, social and positive psychological capital, job design, job crafting, meaningfulness, engagement, employability, stress, burnout, loneliness, career success, retention, well-being and other data from front-line workers, managers, and leaders from 130+ countries representing more than 90% of the world's population and GDP, making this, as far as we know, the largest careers study ever attempted.

The Critical Management Studies Division Doctoral Student and Early Career Scholar Consortium is aimed at meeting the needs of both doctoral students and early career scholars interested in critical research. The consortium provides a great opportunity for participants to connect with like-minded individuals, from varied nationalities and backgrounds, and explore ideas, share knowledge and contribute to the discussion on a diverse range of topics and issues. Also, the consortium affords participants the opportunity for one-on-one discussion with more experienced critical management scholars.

Digital Organizing: Tacking Stock and Moving Forward

Organizer: **Ali Aslan Guemuesay**, *Ludwig Maximilian U. of Munich (LMU)*
Organizer: **Georg Reischauer**, *WU Vienna U. of Economics and Business*
Facilitator: **Luciana D'Adderio**, *U. of Edinburgh*
Facilitator: **Marleen Huysman**, *Vrije U. Amsterdam*
Facilitator: **Stella Pachidi**, *U. of Cambridge*
Facilitator: **Henri Schildt**, *Aalto U. School of Business*

Under the umbrella term digital organizing, scholars across disciplines are increasingly interested in how digital technologies such as platforms and algorithms are reshaping the ways individuals coordinate within and across organizational boundaries. By bringing together distinguished organizational theory and information systems scholars, this PDW aims to 1) give an overview of recent advancements on digital organizing and to 2) discuss how different theoretical perspectives and methods can advance future research.

Participation is based on first come, first serve basis

Discussant: **Robert P. Gephart**, *U. of Alberta*

Following our tradition in every AOM's annual meeting program, the Management Consulting Division will sponsor its Doctoral Consortium during the pre-conference period of the Academy of Management 2023 Annual Meeting. The objective of this Consortium is to provide support to students working on subject under the wide umbrella of management consulting in their PhD, Dba, Exec-PhD DM … programs. The organizers, faculty members, and panelists will focus on providing participating students with opportunities to discuss their dissertation proposals in small groups, and to learn about various academic and professional steps and tasks they will encounter in the senior years of their doctoral studies and professional career afterwards.

The Role of Temporality in Innovating with Nature

Panelist: **Dror Etzion**, *U. of Vermont, Grossman School of Business, US*
Panelist: **Raghu Garud**, *Pennsylvania State U.*
Panelist: **Sylvia Grewatsch**, *Brock U.*
Panelist: **Gail Whiteman**, *U. of Exeter Business School*
Discussant: **Juliane Reinecke**, *Oxford U., Saïd Business School*
Organizer: **Miriam Feuls**, *Copenhagen Business School*
Organizer: **Sunny Mosangzi Xu**, *Copenhagen Business School*

In the Anthropocene, organizations are confronted with high levels of human activity that are essential for organizations to survive and thrive, while at the same time massively impacting nature and the ecological environment (Ansari, Wijen, & Gray, 2013). Over a long period of time, nature and the ecological environment are often viewed as external resources that organizations can conquer, exploit, and manipulate for innovation (Banerjee & Arjaliès, 2021). To a large extent, organizations have been innovating against nature. As Secretary-General António Guterres stated in his opening remarks at the UN Biodiversity Conference on December 6, 2022, "We are waging war on nature". However, the current ecological crisis we face, such as climate change and biodiversity loss, urgently requires a shift in how organizations manage and organize their relations with nature when innovating for a sustainable future (Bansal & Grewatsch, 2020; Howard-Grenville & Lahneman, 2021; Whiteman, Walker, & Perego, 2013). Implicit in most studies of managing and organizing innovations is the role of temporality. In this symposium, we bring together a panel of organization and innovation scholars to cast light on the role of temporality in rethinking innovation and establish a discussion on disparate aspects of innovating with nature through a temporal lens. Specifically, how the temporal lens can bring an alternative approach to better understand the organization-nature relations, and provide new ways for organizations to innovate with instead of against nature. We grasp temporality as an overarching term comprising time in its sequential flow of time but also in its non-sequential ongoing iteration of meaning created in between past, present, and future. Recent debates have recognized that innovations cannot be defined by a clear beginning or an end but are rather processual, nor are they linearly developing due to their temporal complexity, developing diachronically to the original plan. According to Garud, Tuertscher, and Ven (2013: 795), "Innovation processes are characterized by multiple temporal rhythms and experiences rather than by a single linear conception of time." We argue that foregrounding the temporality of innovations enables us to capture the dynamics of ongoing socio-ecological transformations when innovating with nature and the ecological environment. Innovating with nature is a matter of navigating multiple temporalities; that is, for example, engaging in material temporality inherent in nature (Hernes, Feddersen, & Schultz, 2021), or utilizing the potential reservoir of past practices of working with nature to reimagine and co-create the future (Sharma & Bansal, 2020). In this symposium, we intend to establish the dialogue on how different temporalities further our understanding of the managing and organizing innovations with nature.

Solving Societal Grand Challenges: Emerging Frameworks and Practical Implications

Panelist: **Paul S. Adler**, *U. of Southern California*
Panelist: **Olga Hawn**, *U. of North Carolina, Chapel Hill*
Panelist: **Dovev Lavie**, *Bocconi U.*
Panelist: **Sergio Giovanetti Lazzarini**, *Ivey Business School*
Panelist: **Anita McGahan**, *U. of Toronto*
Moderator: **Kerstin Neumann**, *U. of Innsbruck*

The study of societal grand challenges has drawn increasing attention in management research. Despite the various remedies that were proposed, challenges such as economic inequality and the concentration of wealth, climate change, overuse of resources, hunger, and social divide and unrest, have worsened. This symposium takes stock of extant approaches and offers novel approaches for overcoming these challenges. The panelists will share their views and research findings concerning the limitations of established approaches in management research for solving societal grand challenges and highlight the prospects of some emerging approaches. Finally, the panelists will engage in discussion with the audience to encourage and direct further research on possible solutions to these challenges.

STR 2023 Irwin Outstanding Educator Award in honor of Aks Zaheer

Organizer: **Marie Louise Mors**, *Copenhagen Business School*

Please join us in honoring Professor Aks Zaheer of the Carlson School of Management, University of Minnesota as the recipient of the 2023 STR Irwin Outstanding Educator Award. The 2023 award recognizes Aks for his outstanding commitment to Ph.D. student education, and ongoing development of junior colleagues. We will hear from some of Aks' former and current students and colleagues as we celebrate his dedication to PhD student development. Please join us for light breakfast and coffee before the formal event.

STR Irwin Award Light Breakfast: 8:00AM - 9:00AM ET (UTC-4) (sponsored by STR and University of Minnesota)

The International Management Division Junior Faculty Consortium is designed for junior and early career scholars who have defended their dissertations in the last 1-5 years and are building their academic careers in the IM fields. The consortium provides a unique opportunity for the junior faculty to engage in a conversation around the critical issues of carers, research, publishing, teaching and service with leading IM scholars from around the world. These IM scholars have diverse and international backgrounds with various academic, leadership and editorial experiences. The consortium will include a combination of structured panels on many themes, round table discussions on pressing issues, and informal interactions. We will debate the challenges and opportunities of an academic career in IM, getting tenure, building a scholarly reputation, developing a research/publishing strategy for a more significant impact on the field, and maintaining a healthy balance between research, teaching, and service.

The International Management Division Doctoral Student Consortium is designed for PhD students with an interest in international management as either the primary or a secondary field of inquiry. We welcome participants from all areas related to international management and all stages of their PhD program to attend. The consortium provides a unique opportunity for doctoral students to engage in a conversation around the critical issues of careers, and PhD research in particular. Participating panellists have diverse and international backgrounds with various academic, leadership and editorial experiences. The consortium includes a combination of structured panels on many themes, round table discussions on pressing issues, and informal interactions. A substantial amount of time will be set devoted to dissertation development, featuring feedback from faculty in small groups. This is both an excellent opportunity for doctoral students to receive feedback on their work, and to network with fellow doctoral students and leading scholars in the International Management field.

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest-running and most well-attended pre-conference activities. The NDSC's mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. The NDSC is an interactive environment in which doctoral students can learn skills to succeed in a doctoral program and enter the academic profession. Participants will meet representatives from Academy of Management divisions and interest groups, network with fellow doctoral students from around the world, and learn how to get the most out of the Academy of Management Meeting. The NDSC is committed to facilitating doctoral students' initial experience with, and further integration into, the Academy of Management and the academic community at large.

Registration is limited to individuals who are either (1) PhD Students entering their first or second year in the program, or (2) a pre-doc student. To register, go to this link: https://z.umn.edu/ndsc_registration. If you have any questions, please reach out to Chris Winchester at winch092@umn.edu

From Less Unsustainable to Regenerative Supply Chains: Advancing Theory for Positive Change

Session Chair: **Miriam Michiko Wilhelm**, *WU Vienna U. of Economics and Business*
Participant: **Kevin Dooley**, *Arizona State U.*
Panelist: **Jury Gualandris**, *Ivey Business School*
Panelist: **Martina K. Linnenluecke**, *U. of Technology, Sydney*
Panelist: **Mark Pagell**, *U. College Dublin*
Panelist: **Anne Quarshie**, *Turku School of Economics, U. of Turku*

Discussant: **Wendy Tate**, *U. of Tennessee*
Discussant: **Andreas Wieland**, *Copenhagen Business School*
Discussant: **Miriam Michiko Wilhelm**, *WU Vienna U. of Economics and Business*

Sustainability is becoming more pervasive across businesses as issues such as climate change and biodiversity loss have entered the mainstream psyche. This also affects the design and functioning of supply chains that cannot simply aim at minimizing their harmful impact on the environment but need to operate in harmony with or even regenerate nature. But what principles, processes and outcomes characterize supply chains that function in sync with nature? And how does regenerative organizing apply to supply chains? The purpose of this PDW is to provide a platform for a collective effort to advance new knowledge about how supply chains could transition from being unsustainable to being regenerative. With the help of invited speakers and roundtable discussions, the workshop will act as a forum for those interested in the topic to learn from experts from different disciplines, share ideas and receive feedback from experts.

The Application of Gandhian Ahimsa or Nonviolence in Pedagogy (CANCELLED)

Presenter: **Smita Dayal**, *16473*
Presenter: **Ishmeeta Singh**, *Lal Bahadur Shastri Institute of Management, New Delhi, India*
Presenter: **Vikas Rai Bhatnagar**, *Lal Bahadur Shastri Institute of Management, New Delhi, India*

Gandhian Ahimsa or non-violence means causing no injury to another living being through the actions of one's mind, speech, or body. It has a strong application in teaching because educators have an influence on the minds and the lives of learners even beyond the classrooms. In this TLC, we acquaint the participants with the key principles of Gandhian Ahimsa and its application in pedagogy. We discuss the current violent pedagogical practices extracted using a grounded theory approach, abduct implications on the well-being of the learners, and develop an alternative non-violent pedagogical framework by employing the Gandhian Ahimsa with a distinct alignment to the OECD Learning Compass 2030 and Principles of Responsible Management Education. The proposed workshop holds the promise to trigger introspection, sharing of a few best practices, and a reminder to participants to purposefully design non-violent practices in their pedagogy, enabling equity, nurturing diversity, and promoting inclusion.

Psychological Safety in The Classroom

Presenter: **Kelly Fisher**, *West Chester U. of Pennsylvania*

Psychological safety is a concept that has growing traction within the field of organizational learning as well as within the classroom. In a psychologically safe environment, people feel free to ask questions, be inquisitive and curious, and share ideas freely. In the classroom, students who feel safe are more apt to engage, connect, change, and learn. The focus of this workshop is to apply the principles of psychological safety to co-create pedagogical strategies and learning conditions that are specific to the higher education classroom. This session will be particularly useful to faculty who integrate challenging discussion topics or experiential activities in the classroom. This session is also useful to faculty who work with underserved student populations. This session aligns with the TLC submission topic, Equity, diversity, and inclusion in education with its focus on effective, inclusive teaching practices.

Let's Have Some Fun with Team Building: A Game-Based Icebreaker

Presenter: **Gabriella Lewis**, *Georgia State U.*

This activity is a new, adapted, game-based method of encouraging students to speak up in the classroom and getting them more comfortable with their teammates. This team-based game allows students to get acquainted in a fun, interactive way. In addition to the new team members learning about each other's interest and personality, others in the classroom (including the instructor) will get to hear from each team after every turn, therefore increasing overall class engagement. The leading questions (prompts) can be modified from one semester to the other, and depending on the number of questions, the activity can suit any timeframe or class size. The session will have a hands-on approach. After describing the rationale and the steps of the activity, participants will experience how the game is conducted in the classroom.

Developing Purpose-Driven Graduates; Supercharge your Teaching and their Employment Outcomes

Presenter: **Heather J. McGregor**, *Heriot-Watt U.*
Presenter: **Mushtak Al-Atabi**, *Heriot-Watt U.*
Presenter: **Kerstin Maier Barcroft**, *Heriot Watt U.*

The effectiveness of university programmes is often measured, especially by higher education stakeholders such as students, parents, employers, accreditation bodies and policy makers, by employability outcomes. In this presentation, we will share an innovative course that was piloted at our Malaysia campus and then scaled up to our business school around the world. In this course students are invited to develop a personal Impact Statement as part of their preparation for their entry to the job market. The objectives of this course include the discovery, development and articulation of a deep sense of purpose and the design of an action plan to mobilise this purpose into positive impact on the world. This was very well received by employers and the students alike, with many of them finding this exercise to be transformative and even life changing. Research has shown that individuals who are clear about their purpose are happier, healthier and more successful and motivated, and our initial findings from this work support this. The course was developed and delivered by both academic and professional services colleagues who volunteered as Impact Coaches to guide the students through this journey. Participants who will attend this session will be able to develop the first part of their own Impact Statement and will be shown how to incorporate purpose into their own teaching.

Building a Culture of Inclusive Innovation for Front-Line Workers

Presenter: **Ginger Grant**, *Humber College Institute of Technology and Advanced Learning*
Presenter: **Sharon McIntyre**, *Humber College Institute of Technology and Advanced Learning*

Front-line workers are often excluded or marginalized in organizational research initiatives and management-backed innovation programs – (token employee surveys, digital suggestion boxes, and sporadic idea contests notwithstanding). Further, much innovation education in business schools emphasizes extraordinary people and projects – from the rapid idea spinning in tech startup incubation, to the fast-growth goals of innovation acceleration, to venture funding "pitch" labs, and case studies of "unicorn" billion-dollar valuation startup founders. However, the reality is that many of our most celebrated business innovations emerged from more ordinary efforts to address everyday needs, annoying inefficiencies, and operational pressures. Three useful business examples of this practical source of innovation are Amazon Web Services (initially addressing internal IT infrastructure inefficiencies), Shopify (crafting a streamlined e-commerce system for their online snowboard shop), and Slack (initially a simple team collaboration tool for their game design employees). Guided by this insight and grounded in participatory innovation research, this 2022 pilot of an inclusive innovation education program engaged staff at a major Canadian polytechnic to design and run an innovation program for the school's non-faculty front-line workers. Conference participants will be invited to experience three key aspects of the inclusive innovation program's workflow. The curriculum design framework and research resources will be shared. Pilot program outcomes, including triple bottom line impacts, will be provided. Next steps for implementation with industry partners will be discussed.

Bringing Live Cases into the Classroom

Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Presenter: **Karin Schnarr**, *Wilfrid Laurier U.*
Presenter: **Brent D. Beal**, *U. of Texas at Tyler*

This session will introduce case writers to the concept of live cases, clearly describe how they differ from traditional case writing, provide a step-by-step guide to creating a live case, and suggest how they are most effectively used in a classroom. Our interactive session will cover both live cases based solely on secondary data as well as those based on proprietary data provided by a live case partner company. Writing live cases with companies provides opportunities for live case writers to tailor the case to mimic real world examples, better preparing business students for scenarios they could face upon entering the workforce. Importantly, we will outline how live cases can also be done remotely.

How to Design a Simple, No-Code Business Simulation for $0

Presenter: **David Halliday**, *George Washington U.*

Simulations are a critical part of management education. When using simulations, students are more motivated and cognitively engaged, have more flexibility to experiment with different approaches, and better retain management concepts and context (Connoly et al., 2012; Li & Tasai, 2013; Carenys & Moya, 2016). In this teaching practicum, we will explain how to build a simple simulation, composed of only two variables, using only free widely available spreadsheet software with no software engineering required. We will walk through both the theory and practical aspects of building a simulation directly. The management simulation that we model, in real time, will show the dynamic competition between bicycle repair shops that have only two choices for investment each year: product quality or service efficiency. Participants will leave with spreadsheet instructions and a practical understanding of how to build and test a simulation that uses continuous, measurable variables.

The Global Classroom: Strategies to Engage Learners Who Know-It-All

Presenter: **Sharon C. Ward**, *Nanyang Technological U.*
Presenter: **Catherine Wu**, *Nanyang Technological U.*

One common challenge global leadership educators face is students who think they already know it all and who express skepticism about the knowledge presented to them. This is especially common among adult learners (e.g., MBA students) who may have accrued significant prior experience and workplace success in global environments. These learners often resist change, preferring to remain with their tried-and-true ways. While research has documented how learning interventions can increase learner confidence, it has also recognized that too much confidence can be detrimental to learning motivation and outcomes. In this workshop, we go beyond strategies to increase learner confidence and introduce evidence-based strategies to engage learners according to their unique experience and learning needs. In the first part of the workshop, we will introduce six learner profiles that we identified from a qualitative study of 100 leaders from 28 nationalities participating in a global leadership training program, and evidence-based strategies to engage these learners. Next, we will chair a roundtable session to discuss how we can use these strategies to provide more inclusive classrooms for learners with diverse levels of experience and learning needs. Finally, we will summarize key insights and learning points and formulate actionable recommendations to implement in our classrooms following the workshop.

Faculty-Enacted Theatrical Case Study Pedagogy for Developing Humane Managers (CANCELLED)

Presenter: **Vikas Rai Bhatnagar**, *Lal Bahadur Shastri Institute of Management, New Delhi, India*
Presenter: **Saloni Sinha**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*

In current times of reduced attention span and many sources of distractions for learners, engaging learners for developing them into humane managers who create sustainable futures is challenging. The experiences learners have in the class contribute a lot to how learners will act in the future workplace. This calls for mindfully designing the experiences of learners. Art, particularly faculty-enacted theater- based pedagogy contributes to enriching learners' experiences by engaging many senses (visual and auditory) and faculties (emotional, cultural, cognitive, and spiritual) of learners that are not made possible by case studies discussed in a prose form. This proposal demonstrates the writing of a theater-based case study, supported with detailed teaching notes, based on the reflections of the lived experience of the faculty, resulting in higher identification and involvement of faculty while discussing the case study, and enhanced engagement of students. The demonstration of pedagogy involves providing experiential learning to participants by enacting one Act and discussing a few questions with the participants. The faculty-enacted theatre case study is a low investment, ie., "no stage" act with only PowerPoint slides as props, and high returns in terms of enhanced learner engagement, aminated discussions, and resulting in constructive learning. This adult learning transformative pedagogy holds the promise of developing learners into more humane managers through the active engagement of their multiple senses and faculties and connecting them to the real world.

Experience is the Best Teacher (But You Can Help!)

Presenter: **Tawnya Means**, *U. of Illinois at Urbana-Champaign*

As an instructor, there are certain experiences that I know, if learners just engage in them, they will have learned something valuable, regardless of whether or not I am involved in the assessment. Given this knowledge, I designed an Experiential Learning Log for learners in an undergraduate business strategic management class to select activities that fit their interest (allowing agency and choice), complete the activities on their own (supporting autonomy and gaining experience), and then reflect on their experience. Based on Dewey's philosophical approach to learning and Kolb's theory of learning through experiences, activities in the log are aligned with learning objectives and provide learners with choices. The log can be used in large-scale or small-scale courses and overcomes many of the challenges associated with experiential learning. The log activities leverage specifications grading and mastery learning. Activities in the log are scalable, personalized, and experiential, encourage reflective behaviors, and improve overall performance in an associated business simulation. Teaching with a focus on experiential learning requires instructors to identify meaningful activities. Learning with the Experiential Learning Log supports putting the worker front and center by engaging learners in real experiences. In this session, the presenter will share the conceptual background, context, and design of the log, along with lessons learned from implementing the log. Attendees will receive access to templates, grading rubrics, and planning documents, as well as gain insight into the value learners gain from engaging in the log activities. Redesigning a Course with Higher-Level Thinking Course Objectives (CANCELLED)

Presenter: **Frank Lee**, *Georgia State U., J. Mack Robinson College of Business*

Artificial Intelligence (AI) is an emerging technological domain altering every aspect of our social interactions. AI has begun producing enormous teaching and learning solutions that facilitate teaching and learning. Integrating AI technology solutions into academics can benefit both educators and students. Using AI solutions in the classroom may reduce lower-level thinking in-class activities, so faculty can spend their efforts on activities that require higher-level thinking. AI can also assist students in recognizing their areas of weakness and strengths and identify areas of specialization where they can provide maximum impact. Most educators use the Revised Bloom's Taxonomy to determine the thinking level of objectives, assessment, and instruction. The key to creating higher-level objectives, instruction, and assessment is understanding the cognitive processes that students experience when interacting with the content or curriculum. According to Bloom's taxonomy, it's critical to start from the bottom level and work your way up in any learning environment. Redesigning a course with higher-level thinking course objectives by integrating AI solutions can be a great way to improve the quality of learning. This presentation will provide insight into the future direction of integrating AI into the higher education curriculum by demonstrating and sharing the practice of redesigning a course with higher-level thinking course objectives.

Panelist: **Michael Gross**, *Colorado State U.*

This Conflict Management Division doctoral and post-doctoral consortium is designed for those interested in developing an academic identity, thinking more strategically about the research process, planning for the job market, and transitioning to faculty. Specifically, we will focus on five main topics important for successfully completing a doctoral or post-doctoral program and launching an academic career: 1) becoming a conflict management and negotiations scholar, 2) managing the dissertation and publication process (for students), 3) managing research and teaching (for post- docs), 4) preparing for the job market, and 5) transitioning to becoming faculty. The PDW will be led by a mix of early, mid-career, and senior scholars, each offering their unique perspective. There will also be a segment led by 6) the AOM Ethics Education Committee. The format will include short presentations, Q&A, and small group discussions.

This workshop has been an asset to the job-seeking community at Academy of Management for the last three years and strives to continue the tradition of providing crucial knowledge and timely insight to those hoping to broaden and deepen their knowledge about the academic job market. The PDW will consist of three parts: 1) presentations by academics who recently and successfully navigated the job market on best practices and recommendations; 2) a panel consisting of faculty who serve on their schools' search committees on their experiences reviewing candidate applications; and 3) roundtable discussions for an informal deep-dive into relevant market-related topics such as dissertation completion, creating a support system, balancing family needs, and international considerations. In addition to advancing understanding of job market topics, the workshop has been designed to create an interactive and inclusive space for prospective job seekers to connect with each other before, during, and after the conference. Pre-registration will be required.

Due to limited capacity, those interested in participating in this PDW must apply for a spot using the following link: https://forms.gle/icWFveD2R62kE2FJ8. All are welcome to apply, however, because spots are limited we will be prioritizing those applicants who: (a) are late-stage doctoral students, (b) who have not participated in this PDW before, (c) who are currently on the job market, and (d) who are members of the sponsoring or supporting division(s). If you have any questions, please email the PDW organizers: Ray Wu (i-hengwu@southalabama.edu) or Daniya Kamran-Morley (dak173@pitt.edu).

How to Manage Academic Collaborations: Tips and Strategies from Team Scholars (4th Annual)

Organizer: **Ulrich Leicht-Deobald**, *Trinity Business School, Trinity College Dublin*
Organizer: **Stefan Berger**, *U. of Groningen*
Organizer: **Hendrik Johan Van De Brake**, *U. of Groningen*
Speaker: **Astrid Carlotta Homan**, *U. of Amsterdam*
Speaker: **Leslie A. DeChurch**, *Northwestern U.*
Speaker: **Steve W J Kozlowski**, *U. of South Florida*
Discussant: **Deborah Ancona**, *Massachusetts Institute of Technology*

In this PDW, we draw from current research on team diversity, multi-teaming, and virtual teams, to learn how we can successfully manage complex academic collaborations. The primary goals of this PDW are (1) to enhance participants' awareness of how they can effectively work together in diverse, multiple and/or virtual teams, and (2) to derive practical strategies they can use after the PDW to increase their own success in academic collaborations. The PDW will begin with an introduction to recent and relevant developments in team science, followed by small group discussions in which participants reflect on when they were most successful in their academic collaborations. Drs. Astrid Homan, Leslie DeChurch, and Steve Kozlowski will then present their cutting-edge research in this field, proposing a set of practical strategies to help participants find opportunities to make their academic collaborations more rewarding and fruitful. Afterwards, participants will develop an action plan for incorporating strategies in their daily lives to make their collaborations more effective and share them with other participants. Finally, the practical and theoretical insights will be discussed and put into perspective by Dr. Deborah Ancona. The PDW will conclude with a summative discussion of key learnings.

Teaching in and about Web3: Virtual Worlds, AI and Blockchain

Presenter: **Ted Ladd**, *Hult International Business School*

Virtual worlds and artificial intelligence empower increasingly complex interactions between humans and machines. This technology – collectively known as Web3 – provides a potentially enormous opportunity for business professionals, for business students, and for business educators. However, these same technologies pose challenges for teachers attempting to illustrate, explain, and apply these ideas to students. This session demonstrates several of these technologies live, along with some brief non-technological explanations. Together, we will discuss the opportunities and challenges for teaching in and/or about Web3.

Profiting Students: Project-Based Learning in an Entrepreneurship Course

Presenter: **Steven Austin Stovall**, *Southeast Missouri State U.*
Presenter: **Edward Andrew Crowley**, *Southeast Missouri State U.*

Teaching entrepreneurship in a classroom setting is fraught with challenges. It is easy to lecture on topics such as ideation, start-up financing, operations, and exit strategies, but it is never the same learning experience as actually engaging in these activities. Further, the retention of material from the course is usually applied only to a series of exams or a business plan for an imaginary company – and rarely retained once the course ends. To provide a rich, hands-on learning experience, one Midwestern university implemented a project-based activity across multiple sections of the Principles of Entrepreneurship course. In this activity, the entire class worked together to build a business from start to finish. They were also able to share in the profits made from their venture – thus profiting in real dollars, but also profiting from the learning experience. This workshop explores how the project was developed and implemented as well as how seed money was garnered to provide initial funding. The presenters will also discuss both challenges and successes of the activity. Finally, data collected from students upon completion of the course will demonstrate what students learned and liked/disliked about the project.

Finding and Creating Experiential Learning Activities for your Classroom

Presenter: **Vicki L. Taylor**, *Shippensburg U.*
Presenter: **Karen MacMillan**, *U. of Western Ontario*

Although many educators are convinced of the benefits of experiential learning and are interested in including such activities in the classroom, they may lack the resources needed to incorporate experiential activities into their teaching practice. This session offers participants a path to designing and implementing experiential learning activities that fulfill specific course learning objectives. Experienced experiential educators will guide participants working in groups through the process of finding, creating, aligning, and debriefing experiential learning activities intended to meet targeted learning objectives. This session will interest members from every division and interest group in the Academy – anyone motivated to improve teaching outcomes through experiential learning.

Design Sprints, Writing Retreats and Mindfulness: Energising Learning Communities

Presenter: **Anna Holland**, *U. of Surrey*
Presenter: **Christine Rivers**, *U. of Surrey*

Falling levels of in person student attendance has been challenging for Higher Education Institutions even before the recent impact of the Covid19 pandemic (Oldfield et al, 2017; Sloan et al, 2020). While reduced attendance was understandable due to pandemic and social distancing measures, it is noticeable this continues to be problematic, specifically in Business and Management subjects with lesser need for in person labs or practicals. Thus, learning and teaching has become a fragmented blended-learning experience with a reduced sense of social interaction (Sadeghi, 2019), belonging and an almost absent learning community. In conversations students expressed they feel anxious, less motivated and confident to study on their own, feelings often compounded by a sense of loneliness (Händel et al, 2020), leading us to consider how, as educators, we could facilitate community building in our teaching and learning practice. In this symposium we introduce three alternative and interactive techniques: design sprints, writing retreats and mindfulness sessions. The purpose of designing these sessions was to create a learning community by focusing on increasing emotional energy and interaction (Collins, 2005), and learning together. Initial findings showed that students felt more motivated to learn. They felt energised mentally, physically, and emotionally reducing feelings of anxiety and loneliness. The sessions were well attended in contrast to the regular lectures and seminars, which was surprising yet confirmed the need for learning together as part of a community. We invite participants to explore how they could integrate such approaches in their own teaching practice.

Hybrid Teaching For an International And Culturally Diverse Audience

Organizer: **Katarzyna Bachnik**, *Hult International Business School*
Organizer: **Pamela Campagna**, *Hult International Business School*
Organizer: **Robert Neer**, *Hult International Business School*
Organizer: **Rajendra Shirole**, *Hult International Business School*

Considering that COVID-19 continues to mutate, hybrid teaching can no longer be viewed as a temporary format for delivering business education. If we assume that this is as valid a format as in person, or fully online learning, it makes sense to uncover its full potential, and associated risks. The aim of the session is to share best practices from our experience with hybrid teaching dating back to September 2020. Over the past two years, we have designed, implemented, and tested multiple approaches to identify the most efficient and interactive hybrid learning techniques. Our efforts have been rewarded by strong course evaluations and positive student feedback. We believe that when designing and launching courses, we must always consider the nature of our audience. This is particularly true when, as in our case, 85% of our student body is from outside the United States. International and cultural diversity plays a central role in our course design and delivery. Thus, the practices we will discuss in our session capture diversity and inclusion from both cultural and geographic perspectives. The structure of our session will therefore address both the hybrid and international dimensions of online teaching.

Gardening: a New Way of Soft Skills Development for Entrepreneurship Teachers?

Presenter: **Christian Makaya**, *CEROS - U. of Paris Nanterre*

Research conducted on the role of entrepreneurship teachers indicates an evolution from the transmissive posture to a posture of support, mentoring and facilitation of access to resources and networks and a lack of professional training for them (Neck & Corbett, 2018). This new posture implies greater individualization of the relationship with learners and more interactions within the classroom and with counterparts during the course. The aim of this TLC session is to explore how teachers can develop skills in interaction management and adapt to this new role. This exploration is based on the metaphor of the "teacher gardener" proposed by Carrier (2009) in her study on alternative entrepreneurial education strategies: "the teacher must stop seeing himself as a transmitter and instead learn to become a good gardener." The attendants will be invited to co-build a conceptual analysis on what we currently know about the role of the gardener while cultivating a garden, guided by an animator. The animator will give restitutions on interviews of 10 gardeners and the attendants will be invited to identify analogies and potential links between the concepts emerging from the interviews and entrepreneurship education tools, teaching strategies and postures. They will finally be invited to draw the profile of the "teacher gardener" and identify concrete potential practices of soft skills development for entrepreneurship teachers that can emerge from the practice of gardening.

The “Good Enough” Tutor: Winicottian Psychodynamics to Support Entrepreneurship Education Coaching

Presenter: **Laëtitia Gabay-Mariani**, *ESSCA School of Management*
Presenter: **Sandrine LE PONTOIS**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*
Presenter: **Stéphane Foliard**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*

The purpose of this workshop is to discover the ‘Good enough tutor’ wheel through practice to both: - support Entrepreneurship teachers/coaches in their professional development by using a tool to identify the good enough coaching styles linked with the typical events and emotions lived by the nascent entrepreneur coached; - support nascent entrepreneurs in the development of KSAs and competences involved in their entrepreneurial experience. The PDW make the participants experiment four activities: 1/ Activity 1: Understand coaching postures and styles Short presentation of the ‘Good enough tutor’ wheel. 2/ Activity 2: Identify proper coaching posture Individual testimonials analysis using the ‘Good enough tutor’ wheel (3 short videos combining coaches and coachees point of view). 3/ Activity 3: Identify individual ‘natural’ coaching posture style Presentation of ‘The Good enough tutor styles test’. 4/ Integration Finally, the participants are working on how to integrate this tool to their professional practice. Expected Outcomes - Understand the main principles and challenges of teamwork; - Turn student group into teams thanks to learning situations supporting teamwork KSAs and competences by using various types of tools (tests, card games…); - Elaborate a formal feedback for students regarding their individual teamwork softskills - Support the professional development of teachers working with student groups/teams

Back (From) the Future: Incorporating Futures into Entrepreneurship and Innovation Disciplines

Organizer: **Charles Kirschbaum**, *Insper Institute of Education and Research*
Presenter: **Lawrence Aronhime**, *Johns Hopkins U.*
Presenter: **Alexander Cocron**, *Johns Hopkins U.*
Presenter: **Flavia Piazza**, *Insper Institute of Education and Research*

Recent applications of Problem-Based learning to Entrepreneurship, Innovation and Product Development disciplines have assumed that innovators and designers imagine proximate and distant futures, thereby avoiding presentist bias. This proposal addresses the need of reemphasizing future thinking within these disciplines. This effort entails several challenges throughout the teaching and learning processes. Instructors will need to adapt their problem-based learning tools, processes and curricula to articulate proximate and distant projected futures. Further, they will need to engage students in creatively projecting distant futures in order to detect problems worth solving. Finally, instructors will support students in developing the skills in bridging distant projected futures to present actions. The session entails understanding the relationship between identification of trends and recognition of problems worth solving; discussing the challenges in adopting an imagined future perspective within Entrepreneurship, Innovation, and Product Development disciplines; sharing past experiences tested at Management and Engineering courses.

Developing Students' Professional Skills through Authentic Learning and Assessment.

Presenter: **Georgy Petrov**, *Queen Mary U. of London*

This interactive session discusses the design of authentic learning and assessment in partnership with real employers, and the value this approach can bring to the development of students' academic and professional skills. Drawing on our experiences of working with employers and first year Business and Management undergraduate students at Queen Mary University of London we demonstrate that embedding authentic tasks and assessments in learning and teaching enables students to become independent and confident learners. Furthermore, through working on tasks from and in partnership with real employers students begin to apply their theoretical knowledge to the 'world of work', and by doing so start developing professional attributes, skills and competencies early on in their studies. The session outlines our theoretical and practical approaches to authentic learning, our reflections and key takeaways.

Futures Studies for Sustainability: A New Approach to Management Education

Presenter: **Marina Anna Schmitz**, *IEDC-Bled School of Management*
Presenter: **Miguel Cordova**, *Pontificia U. Católica de Perú*

Management education needs to equip students with adequate methods, skills, and competencies to deal with complexity and uncertainty. By integrating courses such as "The Futures of Business" in the curriculum, students and lecturers go beyond critically reflecting the status quo (i.e., various problems in specific industries) by exploring probable, possible, and preferable visions and working towards the implementation of these respective futures. In this workshop, we will provide insights into the journey of the different "futures literacy laboratory (FLL) methodology" phases and deliver further application possibilities. Navigating through these phases provides participants with fertile ground to create compelling narratives for sustainable business development by learning about and experiencing selected exercises reaching from trends analysis, foresight, and scenario planning to backcasting and prototyping and how to combine these with workshop elements such as, e.g., improv and Lego® Serious Play®.

The Global Classroom: Developing Cultural Intelligence through Podcasting

Presenter: **Catherine Wu**, *Nanyang Technological U.*
Presenter: **Hui Teng Hoo**, *Nanyang Technological U.*

For years, podcasting has been a popular tool in education. As more educators move away from written assignments due to the integrity threats posed by the emergence of AI supported writing tool such as ChatGPT, the interest in podcasting in education will only continue to grow. There are many benefits to involving students in podcasting for communication skills and engagement. In international and culturally diverse classrooms, we believe that podcasting can also be used to develop soft-skills such as cultural intelligence—the capability to work effectively in culturally diverse settings. In this workshop, we will share how we have introduced podcasting in our own teaching to help students translate intercultural experience into cultural intelligence. The workshop will have three parts. In part one, we will present three podcasting assignments that we have used in our classes. In part two, we will guide participants through the technical steps of creating a podcast. In part three, we will allocate time to answer questions on podcasting for education. Participants joining this workshop will walk away with three templates of podcast assignments to use in their classes and a practical guide for creating podcasts.

Ethics Forum: Unions and Graduate Student Work

Organizer: **Lucy Leety-Wheeler**, *Academy of Management*
Organizer: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*
Organizer: **Jessica Peck**, *Cleveland State U.*

In the spirit of this year's theme of "Putting the Worker Front and Center," and the AOM Code of Ethics which requires us to build trust, avoid harm, and recognize individual dignity and merit, the Ethics Education Committee will focus this session on helping graduate students navigate unionized and non-unionized workplaces. Although unionization in the United States is at an all-time low, unionization within public universities remains high and recently there have been increased unionization efforts among graduate students. This forum will focus on some of the differences in unionized and non-unionized environments for graduate students as well as for faculty members. The goal of this in-person session is to promote a better understanding of what students can expect, particularly when on the job market and interviewing at both unionized and non-unionized workplaces. We hope this session will leave graduate students feeling more informed about both environments when seeking employment.

Empowering Diverse Workers through Conscious Leader Sunita Singh Sengupta & Payal Kumar

Session Chair: **SUNITA SINGH SENGUPTA**, *Professor Faculty of Management Studies U. of Delhi*
Moderator: **Payal Kumar**, *Indian school of hospitality*
Panelist: **Arup Varma**, *Loyola U. Chicago*
Panelist: **Meredith A. Newman**, *Florida International U.*
Panelist: **Ashish Malik**, *Newcastle U. Business School*
Panelist: **Jon P. Briscoe**, *Northern Illinois U.*

The changed global scenario because of COVID -19 has put challenges before business leaders. The pandemic taught us the importance of wellbeing of the employees and the great resignation movement has also put the workers in the front as lots of people are leaving jobs because they want more fulfillment in life and they are looking for different personal and career directions. Conscious Leadership is based on higher human possibilities and creates an environment of work that is 'inclusive' and 'worker-centric.' The Conscious Leader is an integral leader who is ethically and spiritually mature…able to understand inherent interconnections with others, awareness of the unity in all living things resulting in the care and concern for all. (Pappas, 2010; Singh Sengupta, 2021). For decades literature has placed the leader at the centre of the model of leadership, be it trait theory, charismatic theory, or transformational leadership. Only recently the 'other' actor - namely the follower or the worker - has become a focus of scholarly work (Baker, 2007; Bligh, 2011), and yet even then the follower is seen as a recipient of a leader's influence rather than an organizational agent in his own right (Uhl-Bien, Riggio, Lowe, & Carsten, 2014). Even the word 'follower' subservience and passivity, rather than free agency. After decades of leadership-centric research, there appears to be more and more interest in worker-centric literature, for example, the 5 volumes produced in the series Palgrave Studies in Leadership and Followership (Kumar, 2017) had 95,000 chapter downloads. Increasingly, studies acknowledged that the worker identity is not necessarily static and is more multifaceted than was earlier presumed (Collinson, 2006). Furthermore, one aspect that leader-centric literature perhaps does not consider is that there is an interrelation between the leader and the worker in which both can and do impact each other: it is not only the leader that influences the worker but there is an upward influence also at play in organizations, in which there is sense-making at different levels of the hierarchy. "Clearly, it is difficult to separate the roles of authentic follower and authentic leader from the processes whereby individuals who occupy these roles." (Gardner, W. L. 2017). The workers are no longer silent recipients of orders, they want to be a partner. The facilitative uses of power enable to the creation of a worker-centric organizational culture. Marry Parker Follett's management theory (Fox 1968) talks about Power With, i.e., instead of establishing a strict hierarchy and delegating power to specific individuals over others, Follett believed that workers should practice co-active power. Powering with their team is better than power over them; this way, each member feels just as valued as the next. When leaders and workers operate from a deep awareness of their consciousness – they naturally behave responsibly beyond what appears to be their own self-interest (Singh Sengupta, 2001; 2007, p. 11). The high-performing organization is reported to have high people alignment and high people engagement. Organizations today need to create a culture of love and truth for wellness and happiness at the workplace so that people flourish together by helping and nurturing each other. The question arises how can we have a HUMAN framework of leadership in the workplace that binds all irrespective of what their personal beliefs and perceptions are? How can we align and engage each and every employee to work towards a common goal with the same enthusiasm and effort? How can we dig deep into human consciousness and find the common meaning and purpose that puts that human advancement and mutual growth at the forefront? The challenge is to focus on pure human consciousness and find the elements that make us human and bring us together as a collective force. Therefore, the purpose of this Panel Symposium is to engage a group of panelists in a formal, moderated, interactive discussion of (1) the context of empowering a diverse workforce and the role of conscious leadership; (2) the panelists' interpretation of them; (3) the relationships among them; (4) the implications of their use in a culturally diverse work environment; and (5) how they can be measured.

Sounding Off for Social Good: An Examination of Voice Behaviors for Social and Moral Issues

Organizer: **McKenzie Preston**, *The Wharton School, U. of Pennsylvania*
Organizer: **Preeti Vani**, *Stanford Graduate School of Business*
Discussant: **Dave Mayer**, *U. of Michigan, Ross School of Business*
Presenter: **Zachariah Berry**, *Cornell U.*
Presenter: **Merrick Osborne**, *Haas School of Business, UC Berkeley*
Presenter: **Mohammad Atari**, *Harvard U.*
Presenter: **Morteza Dehghani**, *U. of Southern California*

Voice is a critical mechanism through which organizations can address important issues in organizations. As such, it seems relevant to understand voice pertaining to social and moral issues to understand how organizations can address and improve matters ranging from diversity, equity, and inclusion (DEI) to organizational misconduct. To this end, the focus of this symposium is to understand the circumstances that encourage or discourage employees from speaking up about social and moral issues in the workplace, as well as the circumstances under which employees view themselves and others positively (or negatively) after voicing their thoughts and concerns about social and moral issues. The projects collectively focus on two key stakeholders related to voice behaviors—voice actors (i.e., individuals who use their voice) and voice bystanders (i.e., individuals who witness and make judgments about others who use their voice). Through these presentations, we hope to deepen our understanding of how social and moral issues are addressed in organizations through voice behaviors.

The Employees of Self-Managing Organizations: Free as a Bird, Chained to the Ground, or in Between?

Organizer: **Julian Jonathan Markus**, *WU Vienna*
Organizer: **Rebecca Hewett**, *Rotterdam School of Management, Erasmus U.*

Self-managing organizations (SMOs) are radically decentralized and flat entities that provide high freedom and flexibility to employees. Research has shown contradictory results regarding the experiences of SMO workers. Therefore, robust empirical evidence is needed. This caucus aims to connect members and encourage the development of research ideas and opportunities.

For any questions regarding the topic, discussions, caucus format, and your participation, please feel free to contact Julian Jonathan Markus at julian.jonathan.markus@wu.ac.at. We look forward to hosting you at the caucus!

Building A Micro-Community for Studying Virtual and Remote Work

Organizer: **Barbara Zepp Larson**, *Northeastern U.*
Organizer: **Erin E. Makarius**, *U. of Akron*
Speaker: **N. Sharon Hill**, *George Washington U.*
Speaker: **Elana Feldman**, *UMass Lowell*
Speaker: **Daniya Kamran-Morley**, *U. of Pittsburgh*

Virtual and remote work scholarship is growing, and has accelerated dramatically in recent years. Yet this research spans a wide range of domains and disciplines, and therefore can be siloed. This Caucus connects researchers across AOM divisions to initiate a virtual/remote work micro-community to foster collaboration and advance the field.

This interactive caucus will allow researchers studying different aspects of virtual/remote work to learn about the broader field and network outside their traditional research communities. Participants will help shape a plan for a micro-community representing the interests of virtual/remote work scholars across the Academy.

Platform Workers' Voice Management Practices

Organizer: **Maria Kapsali**, *UWE Bristol*
Organizer: **Rea Prouska**, *London South Bank U.*

This Caucus addresses this year's Academy of Management "Putting the Worker Front and Center" conference theme as it brings the emerging topic of platform workers' voice at the forefront of academic debate. The discussion is planned to encourage the free exchange of ideas with the aim to expand collaboration and create a community that works to this topic.

The aim of this Caucus is to encourage the development of a community that creates new ideas about voice in non-traditional employment relationships that take place in the digital environment. In this Caucus, we will, first, discuss the lack of conceptualization of a digital employment relationship that now involves a triad between worker-platform-client rather than the traditional 'employee-employer' relationship; second, problematize the meaning of 'voice' for platform workers; and third, debate the role of HR in creating voice avenues for these workers.

Participant: **Sebastian Krakowski**, *Stockholm School of Economics*
Participant: **Marleen Huysman**, *Vrije U. Amsterdam*

Artificial intelligence (AI) is increasingly common and important across multiple industries, in settings as varied as drug development, healthcare, music composition, and food production. Constantly advancing in its capabilities, AI can generate knowledge and perform activities on par with, if not surpassing, humans in many domains, as it increasingly informates, automates, augments, alters, and creatively generates key aspects of work. This is to say, AI can do more than assist, as most technologies do; rather, AI-based technologies can be fully agentic contributors to work done across contemporary organizations, producing contributions beyond what previously was thought possible. Consequently, there is generally widespread hope that AI can and will improve how work is done, but whether this comes to pass in practice will depend on how practitioners engage with AI and the tools, technologies, and information systems that constitute them. Hence, we need to understand how AI is developed and used "in the wild." In this PDW, we seek to examine the development and use of AI in several different work settings and domains of work. Through presentations of empirical work, group discussions, and conversations with a panel of senior scholars, this workshop is intended to contribute a nuanced and grounded view of the opportunities and obstacles to using AI in practice.

Macro Talent Management (MTM), a stream of research emerging within the field of scholarly Talent Management (TM) literature, has been described as the talent systems which exist nationally and globally (Khilji, Tarique & Schuler 2015) at the macro level. Micro talent management, the management of talent which takes place at the firm level, is heavily influenced by the macro talent context, process and conditions. Adopting a nested systems approach (King & Vaiman 2018), scholars have argued that the interaction of the micro-macro talent systems creates both strategic opportunity and potential risks or constraints to the effectiveness of firm-level strategic management of human capital through talent management (King & Vaiman 2019). Scholars have argued that MTM offers opportunities for increased management agency in leveraging talent as a strategic human capital resource (King & Vaiman 2019). Management effectiveness can be supported through deeper understanding as to how the micro-macro systems interact and thereby what levers are available and have utility for management to employ in seeking to optimize talent management at the firm level, existing within one or more macro talent contexts in which the firm operates nationally and globally. To develop the macro level talent management literature, further research is needed. Consistent with this year's Academy Meeting theme – Putting the Worker Front and Center – this presenter symposium considers the talent which is at the heart of business performance, innovation, and advantage through presenting compelling views as to what we know about macro talent management and where future research offers potential to address some of the most compelling questions in this topic. This symposium brings together leading scholars in macro talent management for a series of presentations which raise questions of key priority to the development of knowledge in the MTM field followed by informal and interactive Café-style roundtable discussions which will sharpen our focus on priorities towards advancing research in MTM.

Talent Management Café: Exploring Priorities for Future Research in Macro Talent Management

A Potent New Vein of Research: The History of Entrepreneurship

Coordinator: **Jeffrey Muldoon**, *Emporia State U.*
Participant: **Derek Lidow**, *Princeton U.*
Participant: **Howard Aldrich**, *U. of North Carolina*
Participant: **Daniel Wadhwani**, *U. of Southern California*
Participant: **William B. Gartner**, *Babson College*

The recent assembly and analysis of artifacts concerning the emergence and evolution of entrepreneurial impact on society has led to the publication of conclusions that challenge core tenants of management history. These challenges include ‘where’, ‘when’, and ‘how’ entrepreneurship emerged as a distinct behavior, distinctions between entrepreneurial and managerial motivations and actions, critical differences between the innovation generated under entrepreneurial leadership and that caused under professional management, crucial differences between the frequency and magnitude of unintended consequences developed by entrepreneurial leaders and professionally managed organizations, among others. The panel will discuss and debate the relevance of these challenges and suggest fertile avenues for future research.

Participant: **Jackson Lu**, *MIT Sloan School of Management*

What does it take to be an effective leader? This is a fundamental question that intrigues management scholars across the world. Featuring four papers by research teams from 14 different institutions across four countries (i.e., Canada, China, the UK, the US), the proposed symposium aims to advance discussions on the cultural determinants of effective leadership with a focus on three interconnected themes: (1) the changing dynamics of globalization, (2) cultural differences in effective leadership, and (3) universality of effective leadership across culture. By incorporating theories and evidence from multiple levels (societal level, team level, individual level), diverse contexts, and mixed methodologies, the present symposium offers important theoretical and practical insights into the development and identification of effective leaders on a global stage.

Across disciplines, the majority of publications in top journals are authored by males in Western high-income countries. This panel symposium aims to increase the range of voices heard as authors on sustainability topics and represent concerns too often marginalized or excluded from management journals. Geographic diversity is particularly important for research on organizations and the natural environment, as regions worldwide have different perspectives on sustainable development. To seek and recognize the contributions of researchers working in and on under-represented contexts, a panel of authors from diverse geographic locations outside North America and Europe will share their experiences in publishing in sustainability management journals, and the challenges they had to overcome in their work to break through barriers. An Editor will share recommendations on how to get research from different parts of the world published in management journals.

The detrimental consequences for general economic and social well-being as a result of biodiversity loss and the subsequent degradation of natural ecosystems are emerging as a wicked challenge that the whole societal and economic system must urgently faces. The severity of the impacts of incremental biodiversity depletion calls for substantial and imperative action by all actors and in particular by companies and institutions. Moreover, it is also pivotal an in-depth reflection that allows the management studies to develop as a scientific branch and to play its part in the fundamental transition to a biodiversity embedded future for companies. To further stimulate academic debate, this Symposium aims to encourage discussions on how companies can manage their relationship with the natural environment so as not to destroy the very life-supporting foundations provided by biodiversity.

PNP Scholarly Development: Writing Impactful Research Narratives

Session Chair: **Erynn Beaton**, *Ohio State U.: John Glenn College of Public Affairs*

This consortium is designed for nonprofit and public administration scholars, as well as others, that are interested in better conveying the impact of their research through narrative. The workshop will cover how to develop an effective and impactful research narrative for job applications and tenure/promotion dossiers. During the workshop, participants will hear from scholars who have written such a narrative as well as those that have read many (as advisors, search committee members, letter writers, or faculty members). We will discuss how to effectively frame research and how to convey impact within academia as well as beyond it (public/community impact). Part of the session will be spent breaking out into groups according to participants' career stages to address the unique questions that arise at different stages of the scholarly career from job application to promotion to full professor.

Participant: **Niron Hashai**, *Arison School of Business, The Interdisciplinary Center (IDC), Israel*
Participant: **Hyunjin Kim**, *INSEAD*
Participant: **William M. Emmons**, *Harvard Business School*

This consortium focuses on core business- and corporate-level strategic management teaching concepts, methods, and class management topics. The content will be most impactful to those early in their career, and the topics should be of particular interest to those relatively new to teaching strategic management. Our target audience is both research- and teaching-oriented Junior Faculty who are 0-5 years out. In particular, the consortium is organized around a series of topics: a) designing your syllabus; b) combining teaching and research; c) experiential teaching; d) online teaching; d) practical issues such as student engagement and class management; e) teaching with simulations; and f) teaching to different audiences.

Join us for a thought-provoking plenary session that delves into the urgent concept of "climate justice". With a focus on the ethical dimension of climate action, this session will challenge existing economic, social, and political institutions as contributors to the unfair and unrepresentative nature of climate change. Explore the intricate links between climate change and rising global inequality, as climate justice identifies the interconnectedness of these issues. Discover how climate change serves as a symptom of systemic injustices and how addressing it necessitates addressing broader societal challenges. Engage in discussions on building fair and inclusive solutions, fostering a more just and sustainable future for all.

Ethics Forum: AI, Ethics, and Academia

Organizer: **Lucy Leety-Wheeler**, *Academy of Management*
Organizer: **Rachel McCullagh Balven**, *Arizona State U.*
Organizer: **Rebecca Wendy Frankel**, *Sage Publications*
Organizer: **Deborah M. Mullen**, *U. of Tennessee, Chattanooga*

Artificial intelligence platforms such as Chat GPT are changing the academic landscape. As universities embark on handling the transformation that AI brings to the classroom, we can see that their approaches are widely varied. While some colleges are opting for a full ban on the use of AI within the classroom, others are taking a more nuanced approach. In this forum, the Ethics Education Committee hosts a debate-style presentation on different approaches to managing AI in the classroom. The forum will include small group discussions as well as a presentation on best practices with respect to ethics and AI in academia.

The Current Upsurge in Worker Organizing and Activism: Flash in the Pan or Transformational Moment

Participant: **Thomas A. Kochan**, *Massachusetts Institute of Technology*
Participant: **John Ahlquist**, *U. of California, San Diego*
Participant: **Jacob Grumbach**, *U. of Washington*
Participant: **Tashlin Lakhani**, *Cornell U.*
Participant: **Chris Tilly**, *UCLA*
Participant: **Sean O'brady**, *DeGroote School of Business, McMaster U.*
Participant: **Alex Kowalski**, *ILR at Cornell*
Participant: **Ariel Avgar**, *ILR at Cornell*

We address the meeting's Theme of "Putting the Worker Front and Center" by reporting on and discussing research of the "Worker Empowerment Research Network". We focus on surveys of employees in five industries and explore how the upsurge in worker organizing and activism in the US is evolving and whether it will be just a temporary "flash in the pan" or a transformational moment for restoring worker voice, power, and representation. We will suggest directions for future research and invite AOM members to take up these issues and participate in this new research network.

AOM Scholars On… Teaching Management Best Practices

Panelist: **Elena Obukhova**, *McGill U.*
Panelist: **Todd Bridgman**, *Victoria U. of Wellington*
Panelist: **Mary Gentile**, *U. of Virginia Darden School of Business*
Panelist: **Carol T. Kulik**, *U. of South Australia*
Panelist: **Margaret E. Heffernan**, *School of Management, RMIT U.*

Higher education at large and its students have experienced massive change and disruption in recent years and have had to adapt through a pandemic and a changing business landscape. How can we best approach the curriculum and pedagogy to prepare them to be our next business leaders? Join AOM Scholars as they share their expertise and research-based insights for a discussion on these topics.

This panel will provide research-based actionable insights on best practices on teaching management to develop the best future business leaders.

Specific topics include:
• Pedological best practices and examples of successes in management education in today's classroom.
• Challenges of the increasingly multigenerational workforce and realities facing current graduates.
• What business schools in the U.S., Australia and New Zealand can learn from one another.
• The demand for scholar educators to create moral and ethical future scholars and practitioners.
• How the current social climate impacts management education and how business schools can have an impact.
• The evolving role of Artificial Intelligence and other technology tools like Chat GPT in teaching management—positives and challenges.

Visit AOM's Subject Matter Expert page (aom.org/sme) for additional information.

Closing the Gap in Responsible Management Education Through Student-Led Extracurricular Activities

Presenter: **Lilian Ngozi Schofield**, *Queen Mary U. of London*
Presenter: **Xue Zhou**, *Queen Mary U. of London*
Presenter: **Lisa Diane Morrison**, -

Developing students' competencies in sustainable development has become an important part of responsible education incorporated into the learning outcomes in Business and Management postgraduate programmes. The topic explores how to close the gap in responsible management education through extracurricular skills development activities such as the postgraduate student-led case competition and undergraduate collaborative student-led symposiums. We explore how the activities can be mapped to indirect measures for measuring students' assurance of learning. The authentic pedagogic approach lends itself to developing competencies for sustainable development through extracurricular activities, which links to the direct measures for measuring assurance of learning. The extracurricular nature of the two cases makes this proposal unique. For example, with the student-led case competition, the student sustainability champions plan, advertise, recruit student participants for the case competition and deliver the event. They are supported by the programme director and the school by providing resources, partner organisations, support with developing ideas linked to the programme learning outcomes and a platform to host the event. The gap we attempt to explore is mapping the activities to learning outcomes and how these activities contribute to indirect measures for the assurance of learning. The two cases are aligned with the University's sustainability mission and relevant to the objectives of UK Principles for Responsible Management Education PRME as students are exposed to sustainability issues, and develop and proffer ideas, which ultimately link to integrating sustainability into the curriculum.

The Global Classroom: Engaging Students through Collaborative Online International Learning (COIL)

Presenter: **Hui Teng Hoo**, *Nanyang Technological U.*
Presenter: **Catherine Wu**, *Nanyang Technological U.*
Presenter: **Chie Misumi**, *Amsterdam U. of Applied Sciences*
Presenter: **Brenda Choo**, *Nanyang Technological U.*

To increase diversity in classrooms, instructors can consider the incorporation of collaborative online international learning (COIL) into their curriculum design. COIL promotes web-based learning between students from different institutions around the world, thereby increasing the cross-cultural interaction without placing burden on too much fiscal resources for travelling and accommodation. In this workshop, we share a body of literature on COIL design and processes, as well as opportunities and challenges of COIL implemented in different institutions of higher learning. We then examine an empirical study on COIL which the presenters have designed and implemented. The workshop will have three parts. First, we will share research studies on COIL via a scoping review; and our practical application via an empirical study to develop cultural intelligence and teamwork competencies in students through COIL. Second, we will chair a roundtable discussion to collect wisdom from TLC participants and brainstorm ideas to incorporate collaborative online international learning (COIL) in the curriculum so that students get the chance to learn with culturally diverse others, and thereby increase their cultural intelligence and teamwork competencies. In part three, we will summarize key insights and learning points from the discussion and formulate actionable recommendations to implement in our classrooms following the workshop.

Learning 'Futuring under Ambiguity' in Large-Scale Teaching Contexts

Presenter: **Tony Wall**, *Liverpool Business School, Liverpool John Moores U.*
Presenter: **Olatunde Amoo Durowoju**, *Liverpool Business School, Liverpool John Moores U.*
Presenter: **Laura Dixon**, *Liverpool Business School, Liverpool John Moores U.*

Post-pandemic work sustains the pressure for graduates to positively and collectively deal with difficult situations in real-time, ambiguous contexts. Drawing from a Swedish Research Council funded study to examine high impact teaching practices, this session illustrates a highly novel and innovative teaching model for 'futuring' in large-scale teaching (e.g. in classes of 140+ students). 'Futuring' is the act of understanding or influencing 'the future' and can involve predicting, scenario-exploring, and critical perspective-taking techniques. The session demonstrates key aspects of the teaching model: (1) fast-paced cycles of emergent and ambiguous (fictional) events in a large lecture theatre followed by collective reflection and theorizing, (2) the students' existing (implicit and intuitive) knowledge of futuring techniques and building on them with facilitated group dialogue around the limitations and extensions of that knowledge, (3) the recording of student decisions practically in the form of a shared group diaries (emphasizing the practical nature of futuring), and (4) an environment framed with positive affect and humor to reinforce points (1), (2) and (3). The emergent events reflect sustainability challenges (e.g. extreme weather events) and encourages the consideration of wider impacts of responding as a group of workers with limited resource and within the context of ambiguity. Evaluation of the teaching model indicates that students reported positive changes in 7 of the 8 eight indicators of sustained behavior change and self-generated practical ways to take positive collective action. As such, we argue that the teaching model can develop practical capabilities to 'put the worker front and center'.

Teaching in the Age of Machines

Organizer: **Tawnya Means**, *U. of Illinois at Urbana-Champaign*
Organizer: **Dante Di Gregorio**, *California State U., Monterey Bay*

Generative AI tools such as ChatGPT have sparked debates about their impact on education, from fears of job loss and academic dishonesty to opportunities for personalization and fostering essential skills in students. While early versions of generative AI existed in the form of chatbots since the 1960s, recent advancements in transformers and large language models have led to explosive growth in these tools, including ChatGPT as released in November 2022 by OpenAI. These developments have raised questions about assessment and learning design and the need to prepare students for a future working alongside AI. Universities and faculty have responded to these concerns by advocating for policies and guidelines to limit or combat the use of generative AI tools in the classroom. However, there is also growing excitement and optimism about the potential of these tools to transform teaching practices. This session will provide an overview of the latest advancements in generative AI and foster discussion on its possible uses in teaching contexts. The presenter will offer guidance to instructors on how to leverage these tools to personalize learning experiences for students and encourage the development of curiosity, creativity, critical thinking, and collaboration skills. While there are legitimate concerns about the impact of generative AI on education, this session will explore its potential to enhance teaching practices and better prepare students for the future workforce.

Why Write Cases? A Panel Discussion on Cases as Research, Pedagogy, and Community Connection

Panelist: **Eric Dolansky**, *Brock U., Canada*
Panelist: **Karin Schnarr**, *Wilfrid Laurier U.*
Panelist: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Moderator: **Raymond L. Paquin**, *Concordia U.*

The purpose of this panel discussion is to present the perspective that case research is not only a worthwhile endeavor for business faculty, but also a way to fulfill the role of the professor (research, teaching, and service) and the strategic plan of a college or university. Through short presentations and a question-and-answer period, the panelists will present research, evidence, and learnings from experience to the audience, making the overall point that case research is a valuable tool for any professor. Leading journals in several different management fields have repeatedly suggested that different forms of research, particularly those that are more proximate to business practice, are necessary for our field to remain vibrant and relevant. Case research accomplishes this. The panel is focused on three themes: cases as academic research; cases as experiential and valuable classroom content; and cases as a bridge to the business community.

How Clients in Experiential-Learning Consulting Projects Envision Their Roles

Presenter: **Heather Swenddal**, *U. of Illinois at Urbana-Champaign*
Presenter: **Heejin Kim**, *U. of Illinois at Urbana-Champaign*
Presenter: **Kari Keating**, *U. of Illinois at Urbana-Champaign*

Higher-education business schools are increasingly integrating experiential-learning components into their curricula, complementing traditional lecture-based courses with activities designed to provide students with hands-on experience in their disciplines. A prominent experiential course model involves client-based projects (CBPs), in which students use their emerging business expertise to conduct consulting work for actual organizations. CBPs supply authenticity for students' learning, exposing them to real-world challenges that their business skills can help to address. Engagement with live clients in CBPs is valuable for student learning, yet clients' involvement can also complicate a course's pedagogical dynamic. With their range of backgrounds, beliefs and styles, project clients introduce ambiguity to the learning landscape, moving learning interactions beyond the structured purview of instructors. How these professionals approach their work with students will vary from project to project, impacting students' learning and development in different ways. Despite the critical role that clients play in CBPs, surprisingly little research has explored how clients envision their involvement in this enterprise. The current presentation will help to address this knowledge gap. The presenters—all experienced CBP course educators—will discuss their ongoing research on CBP client perspectives, sharing insights from their interviews with clients about their orientations to student projects. In this interactive session, presenters will analyze the complex pedagogical positioning of CBP clients, outline their working theories about CBP client role orientations, and discuss ways that instructors might successfully engage CBP clients in their experiential-learning course activities.

Course Dev. for User-Centered Research and Design Innovation: A Hands-On Workshop for Educators

Presenter: **Abby Fifer Mandell**, *U. of Southern California*

BAEP 471: Social Innovation Design Lab, winner of the 2018 AOM Entrepreneurship Division Innovation in Pedagogy Award, is an undergraduate course that guides multidisciplinary teams of students in developing sustainable solutions to challenges faced by under-resourced communities. Students learn and apply user-centered design (aka human-centered design or "design thinking"), a systematic approach to problem solving that starts with consumer empathy and iterates toward more effective solutions. Now in it's eleventh year, BAEP 471 was the first design course offered to non-design students at USC. For several years, students in BAEP 471 investigated the needs of farmworkers in the Central Valley of California and developed businesses and business approaches that respond to workers' needs. In this session, attendees will review the fundamentals of user-centered design, learn how to design and implement a graduate or undergraduate course or program in which students identify the needs of workers (or any other marginalized population), identify a population that they wish to explore, and obtain teaching materials with which to craft a syllabus.

Emotions in the Classroom – How to Use Emotions Meaningfully to Aid Student Learning and Engagement

Presenter: **Anita Boey**, *Trent U.*
Presenter: **Binhua Eva Huang**, *Wilfrid Laurier U.*

Depending on one's cultural background, showing emotions in a professional setting is often viewed as taboo. However, it is these emotions that can enrich learning experience. Therefore, it is beneficial for instructors to know how to cultivate a supportive learning environment to help students establish and build confidence in embracing their emotions as they learn and engage with learning content. This dynamic, interactive session will provide practical suggestions on how to build activities that encourage students to recognize and express their emotions to enhance their learning experience, through various activities of group discussions, participants will learn how to: 1) create space in the classroom for expressing emotions, 2) build activities that incorporate/evoke emotions with the learning content; and 3) how to debrief an activity to cement the learning after an emotional ride. Participants will takeaway slides and information on various in-class activities and strategies. These takeaways will be useful for participants to foster their own meaningful emotion-embracing engaging classes.

Creative Praxis in the Classroom: Using the Impactful-five (i5) Pedagogy with the PRME Community

Host: **Meredith Conlin Storey**, *PRME Secretariat / United Nations Global Compact Office*
Presenter: **Dirk C. Moosmayer**, *Kedge Business School*
Presenter: **Mette Morsing**, *professor*
Presenter: **John Goodwin**, *Lego*
Presenter: **Jeremy Williams**, *Zayed U.*

Considering the sustainable development issues facing our world, it has become increasingly clear that leaders with holistic skill-sets are in scarce supply. Our education system is struggling to equip young learners with the breadth of skills they need to navigate uncertain times. Following this trend into adulthood, the need to educate for creative and impactful skills development is well documented across various disciplines. A recent Microsoft report highlights the gap in "sustainability skills" that are needed to empower the workforce to support sustainability transformations. These skills include developing systems thinking, futures thinking, circular thinking, design thinking, sustainability science, digital skills, transdisciplinary, and change management. The Principles for Responsible Management Education (PRME) initiative is building on The LEGO Foundation research to apply lessons in pedagogical development. The Impactful Five (i5) are five practices that can be used to infuse more joy, meaning, active engagement, social inclusion, and iteration to pedagogy and praxis in business schools. The (i5) project seeks to bridge the skills gap that exists in graduates who have experienced 'business education as usual' in the hopes of influencing the sustainability skills needed in today's workforce. In this PDW, participants will have the opportunity to learn the (i5) process for integrating values of creativity in their pedagogy and praxis; learners will be invited to join the global community of PRME (i5) educators actively making changes in their classrooms, business school, research, and practice.

Learning Through Mini Cases; An Effective and More Affordable Experiential Option

Presenter: **Alex Tawse**, *Georgia State U.*

The experiential benefits of the case method have been highlighted in management education literature for decades. In my proposed activity/exercise session, I introduce an effective and more affordable way to apply the case method through Fast Company Magazine articles in undergraduate and graduate courses in a variety of management class contexts. Specifically, I elaborate on the pedagogical benefits of using articles as "mini cases", walk attendees through an example exercise, and share data regarding the assignment's effectiveness. Participants will be provided with instructions on how to facilitate the exercise, a list of potential benefits, and a link to a discounted student subscription to the magazine.

Understanding the Antecedents and Influences of Family Supportive Supervisor Behaviors in Workplace

Organizer: **Wenjuan Guo**, *Valdosta State U.*
Organizer: **Julie Irene Hancock**, *U. of North Texas*
Panelist: **Tori Crain**, *Portland State U.*
Panelist: **Matthew B. Perrigino**, *Zicklin School of Business, Baruch College, City U. of New York*
Panelist: **Hoda Vaziri**, *U. of North Texas*
Panelist: **Jamie Warner**, *Lincoln Financial Group*

The last several years have placed a significant burden on employee work-life balance. In order to help employees balance their work and family responsibilities, companies are encouraged to create a family supportive organizational culture. Supervisors play a critical role in creating the family supportive organizational environment. Work-family scholars have proposed a concept specifically highlighting supervisor behaviors that support employee work-family balance, namely family supportive supervisor behavior (FSSB). FSSBs are associated with many individual and organizational outcomes, such as lower work-family conflicts, turnover intentions, perceived stress, as well as greater satisfaction with work-family balance, job satisfaction, work engagement and employee performance. Yet, gaps in the research about FSSB remain. The purpose of this panel symposium is to gather established work-family scholars and practitioners to discuss the gaps in our understanding of FSSBs and its influences in the workplace, and to provide scholars with insights regarding future research directions for areas of FSSB research. Topics include, but are not limited to, the factors that influence FSSBs, FSSBs' influences on supervisors themselves, and navigating FSSBs in virtual work environments.

The Metaverse and the Future of Work: Challenges and Opportunities for Workers and Organizations

Organizer: **Pamela Lirio**, *U. of Montreal*
Organizer: **Marco Marabelli**, *Bentley U.*

We will discuss the opportunities and challenges for workers interacting in and organizations adopting the metaverse. We aim to connect scholars and practitioners from various disciplines and backgrounds, who share an interest in brainstorming around how the metaverse will change work practices and the associated ethical implications that will arise.

Keywords: immersive experience, metaverse, virtual reality, ethics, DEI. The caucus will be organized as follows: 1) The organizers introduce the caucus (10 minutes); 2) Talk by industry leader involved in metaverse projects focused on the future of work (30 minutes); 3) Panel involving the caucus organizers, industry partners and academics with topical expertise/knowledge (30 minutes); 4) Broader discussion (Q&A session) with attendees (30 minutes); 5) Concluding remarks (caucus organizers).

Catalyzing New Pathways for MSR and AOM Research on Social Issues: Worker as Sacred Human Being

Organizer: **Judith A. Neal**, *Edgewalkers International*
Organizer: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*
Host: **Julia Storberg-Walker**, *George Washington U.*

The purpose of this caucus is to explore new collaborations, research orientations, and contexts of action and inquiry for AOM and MSR members committed to making our world a more peaceful, equitable, flourishing, and conscious planet. We offer provocative questions about our relationship to the planet and society for discussion.

This caucus offers a special invitation to the wider AOM community to engage in the conversation about amplifying management research impact on critical social issues. The caucus aims to be interactive, with table discussions generated by provocative questions about our relationship to each other, the planet, and society. Questions, for example, might be: what should we accomplish, as AOM citizens and scholars, in this period of increasing social, economic and political volatility? How might spirituality, religion or higher consciousness amplify the impact of secular research and practice? (See other questions below). The caucus will be facilitated by scholars aiming to amplify the impact of MSR research across the Academy and in the world, grounded by the belief that being human—a C-suite leader, laborer, homemaker or peasant—includes an element of mystery, awe, consciousness, spirituality, or religion. Further, by acknowledging the significance of intrinsic experience in organizational life, we suggest the emerging first-person research methods within the MSR research community contribute towards expanding management research. As noted by Peter Bamburger in the 2023 AOM Conference Theme, "Management research has paid a lot of attention to…workers as objects. We have paid far less attention to workers as subjects." There is no one size that fits all to find the answers. Workers--human beings—present management scholars with a wide diversity of belief systems with a multiplicity of options, avenues, and routes towards equity, wholeness, and flourishing for all. This caucus is a space for discussing these diverse pathways and the social, economic, political, and environmental fractures we are collectively facing. It is an opportunity for scholars and practitioners to confirm how our individual and collective research and activism have the potential to shift global consciousness towards integration rather than exclusion, exploitation and extraction. Questions this caucus asks might include: • What social issues are you most passionate about? Is there a story behind your passion? What should be the role of passion in management research? In management practice? How does passion show up in your work? • What is your experience in first-person research? How might first-person research expand your capacity to impact management research? Management practice? • How should management research expand a conceptualization of 'worker' to include more human and humane elements, such as dignity, connection to purpose, consciousness, or the sacredness of being human? • What does global consciousness mean to you? Is your work related to global consciousness in any way, or if it isn't yet, in what ways does this topic interest you? • How might spirituality or religion catalyze new thinking in your domain of management research expertise? Caucus Agenda (90 minutes total—exact timing of each element TBD based on number of participants). 1. Welcome & meeting the room 2. Brief description of global consciousness & first-person research 3. First conversation: Participants select one question from a list on each table 4. Full group discussion 5. Second conversation: participants select a second question from the list 6. Full group discussion and next steps

Extreme Uncertainty in Entrepreneurship: Characterizing Working Conditions of Extreme Uncertainty

Session Chair: **Jacqueline Csonka-Peeren**, *Entrepreneurship*
Organizer: **Qifan Chen**, *U. of Nevada*
Panelist: **Sharon Alvarez**, *U. of Pittsburgh*
Panelist: **Viktor Dorfler**, *U. of Strathclyde Business School*
Participant: **Peter G. Klein**, *Baylor U.*
Participant: **Michael D. Meeks**, *Louisiana State U. Shreveport*
Panelist: **Mark D. Packard**, *Florida Atlantic U.*
Panelist: **J C. Spender**, *Kozminski U.*
Moderator: **David Matthew Townsend**, *Virginia Tech*
Participant: **Russ McBride**, *U. of California, Merced*

Both front-line workers and entrepreneurs work under conditions of extreme uncertainty, with potential for great personal loss. In keeping with AoM's 2023 theme of Putting the Worker Front and Centre, this caucus considers research methods to characterize the extent to which the entrepreneur is subjected to extreme uncertainty.

Entrepreneurs operate under conditions of extreme uncertainty, characterized by many as "Knightian uncertainty" (Knight, 1921). Under these conditions, entrepreneurs must make decisions that can lead to entrepreneurial outcomes with potential for great personal gain or loss. Can empirical research help us describe (or quantify) entrepreneurial uncertainty and its effect on entrepreneurial outcomes? To what extent is experimental design important? The purpose of this caucus is to exchange points of view on our understanding of extreme uncertainty and stimulate new ideas about characterizing working conditions of extreme uncertainty for a variety of contexts, including that of front-line workers.

Panelist: **Laura McAndrews Little**, *U. of Georgia*
Panelist: **Shimul Melwani**, *U. of North Carolina, Chapel Hill*
Panelist: **Alexis Nicole Smith**, *Oklahoma State U.*

As in organizational life, there are numerous barriers that detriment female scholars in academia generally and in the field of organizational sciences, specifically. Indeed, akin to the ‘glass ceiling’ phenomenon within organizations, women in academia suffer from similar gender inequities (e.g., field-level structural barriers, lack of organizational support, social support concerns, and limited allyship). As such, the aim of the proposed professional development workshop (PDW) is to shed light on the challenges that female scholars face in our field and generate ideas and solutions for changes that can help women overcome some of these barriers. To do so, this session invites leading scholars to apply insights from their own, and others’, research and knowledge on gender and organizational bias to the field of management. The panelist presentations will be followed by breakout sessions where participants are able to have open conversations with the panelists and engage in a discussion of possible solutions to the barriers women scholars face. Combined, this PDW seeks to broaden our understanding of women’s experiences in the Academy and find solutions to better meet the needs of female scholars and facilitate their success in the field. This PDW is slated to be one of the flagship PDWs of the OB Division.

When you register to attend, please also invite a male ally to attend with you! Ideally, this ally would also register to attend the workshop given the maximum capacity of 150.

Panelist: **Cindy Muir-Zapata**, *U. of Notre Dame*
Panelist: **Lamar Pierce**, *Washington U. in St. Louis*
Panelist: **Andre Spicer**, *City U. London*

Dealing with failure is one of the most common challenges scholars face in their academic careers. Failure might concern the publication process, one's career path, or the ability to disseminate knowledge to students and the broader society. In general, scholars encounter more failures than successes; yet, in public, we mainly talk about successes and often form narratives of negativity around failure. In this Professional Development Workshop (PDW), we aim to rebalance this discussion and to add nuance to the stories of success putting failure experiences 'front and center'. This PDW provides an opportunity to hear from a diverse and distinguished panel of scholars about their failures, ranging from dry spells in publishing, to not getting tenure, the acceptance of the 'wrong' job, and much more. Through these personal stories from our panelists and participants, we aim to (a) normalize failure and initiate an open and honest discussion about it, (b) illustrate how to ask for help if one needs it, and (c) offer ways to overcome or even embrace failure sometimes. Interactive roundtable discussions and dialogues follow the panel presentations. Panelists and panel organizers lead each roundtable. The roundtable sessions allow participants to suggest strategies to build resilience, share ideas and become more comfortable talking about failure in a safe environment.

Putting The Worker Front and Center by Honoring the Dignity of Work and Workers

Session Chair: **Michael Andreas Pirson**, *Fordham U.*
Distinguished Speaker: **Bob Chapman**, *Chairman and CEO Barry-Wehmiller*
Distinguished Speaker: **Rajendra Sisodia**, *Conscious Capitalism Inc*
Distinguished Speaker: **Sandra A. Waddock**, *Boston College*
Distinguished Speaker: **Donna Hicks**, *Harvard U.*

We argue that when you put the worker front and center you honor the dignity of work and that of the worker. By dignity we refer to the intrinsic value of people as invaluable, i.e. priceless. In this symposium several leading scholars and practitioners will explore the concept of dignity as the “highest common denominator” and how it can inform leadership practices that put the human being front and center. Michael Pirson will set the conversation in the context of humanistic organizing practices. Donna Hicks, a leading dignity expert will share the conceptual background and why dignity is such a critical element for good leadership. Bob Chapman, CEO of a Multi-Billion Dollar manufacturing business will share his practical experience putting workers front and center and share insights on how this contributed to a better, more performing organization where "everybody matters." Raj Sisodia, his co-author of a book with the same title will reflect from a scholarly perspective and Sandra Waddock will share ideas on how we can align the needs of workers with that of the environment to address the polycrisis successfully.

Europe, with its numerous highly ranked universities and business schools and ease of mobility between countries, is an attractive location for pursuing an academic career. However, navigating different recruiting and selection processes, cultures, and languages can be challenging. Although this PDW is particularly targeted towards late-stage PhD students and junior faculty who are interested in starting or continuing their academic careers at a European university, it is also relevant for all AOM members interested in finding an academic job in the European market, regardless of career level and country where they completed their PhD. Our panelists currently work at European universities and are either involved in and/or have recently gone through the recruiting process in a country different from where they completed their PhD. Our discussion will include topics such as where to search for job openings, how to manage the application process and how to build an academic profile for the European market. The PDW begins with panelists sharing their individual experiences with the application and recruiting processes, a joint discussion, and a short Q&A session. These will be followed by roundtable discussions focusing on job search strategies and recruiting processes in the six European countries. The workshop will conclude with a final Q&A session.

Post-doc positions in management can be a critical stepping-stone for academic positions. Notably, an increasing number of successful management scholars are starting their careers in post-doc positions. However, the conversation about post-docs is mostly absent from The Academy of Management (AOM) Annual Meeting. This PDW seeks to provide an essential opportunity for Ph.D. students to learn more about such positions. It can also benefit current post-docs by creating a community through building connections. Specifically, this PDW is designed to help Ph.D. students who are considering (or starting) a post-doc position as well as current post-docs. It is intended to provide informal career advice from a diverse set of academic scholars on how to be successful during, and after, a post-doc position. Notably, this PDW will address three main questions: (1) What are the long-term career benefits of post-doc positions? (2) What does it mean to be successful as a post-doc, including being productive and becoming well-positioned to find an academic job? and (3) How can Ph.D. students obtain post-doc positions? All invited presenters have previously held or currently hold academic post-doc positions. They also represent a diverse set of career stages, geographic locations, research interests, academic institutions, and therefore are well-positioned to provide a rich set of perspectives on post-doc positions and beyond.

Speaker: **Dominik Gutt**, *Erasmus U. Rotterdam*

This Professional Development Workshop (PDW) focuses on collaboratively exploring research into video game ecosystems, emphasizing how this context helps us to understand organizing in the digital age. Video game ecosystems are leading practice in various digital domains, such as autonomous design (procedural generation with AI), virtual, augmented, and immersive technologies, user engagement, communities, gamification, and the Metaverse. Video game organizations are continually experimenting with various business and revenue models, pioneering many areas of data-driven design and innovation management and blurring the lines between work and leisure. Video games provide a compelling context for studying important organizational issues relating to ethics, creativity, engagement, strategy, and other timeless topics in exciting and novel ways. The PDW aims to inspire research and ignite collaborations in this exciting context.

Finding Voice, Identity, Purpose and Belonging at Work Using Extended Epistemologies

Session Chair: **Kerrie Fleming**, *Ashridge Executive Education at Hult International Business School*
Discussant: **Donna Ladkin**, *Birmingham Business School, U. of Birmingham*
Presenter: **Sibylle Erdmann**, *Ei SMART Early Intervention for Infants and Young Children*
Presenter: **Elana Haviv**, *Antioch U.*

In this symposium, we will showcase a qualitative approach using action research which puts the worker front and centre, creating new insights into how the authors have developed a way of working in their respective organisations and practice. Action Research as an approach asks questions concerning “knowledge-in action”, “human flourishing”, “practical issues” and “participation and democracy” (Reason and Bradbury, 2008, pg.2). It presents a truth telling which usually has no place in more traditional paradigms and although is not revolutionary, it focuses on the natural behaviour of people and their perceptions of the social world (Denzin and Lincoln 2005; Yin, 1994). This symposium demonstrates how to shift the current focus away from systems and structures which dominate how organisations and their people are organised. We offer some empirical examples of these cycles of inquiry from technology and healthcare sectors. we offer extended epistemologies and presentational form (art, poetry, voice, journaling, photography) within qualitative methods to explore, scrutinise and navigate the personal and professional practice of the presenters and how it has helped to make small but important changes in the world of work (Anderson, R., & Braud, W. (2011). This use of qualitative methods for evaluation purposes in social policy and health care is something which has been a powerful medium for us to closely investigate the practice of ‘being’ alongside the ‘doing’ at work.

Digital Ethnography in Management Research

Organizer: **Micah Rajunov**, *Boston U. Questrom School of Business*
Organizer: **Arvind Karunakaran**, *Stanford U.*

Fundamental shifts in digital technology present novel forms of social action. However, traditional ethnographic methods were developed when co-location and/or physical presence was a requirement to conduct any form of field research. With the changing nature of work, how can ethnographers more fully capture contemporary organizational life in a digital world?

Come join us for this landmark plenary, celebrating the 50th anniversary of the division. We have come a long way since our founding as the (Status of) Women in Management Interest Group and Minorities Interest Group in 1973/74. This is an important foundation from which we have grown and changed. Ten years later, in 1983, we became an official Division of AOM--Gender and Diversity in Organizations. This year we also celebrate our new division name: Diversity, Equity, and Inclusion (DEI). We hope you will join us for this special plenary that will take the form of a panel discussion with members from different horizons, longstanding members and more recent joiners.

Integrating Sustainability into Every Course: Insights from ONE Distinguished Educator Award Winners

Organizer: **Shelley F. Mitchell**, *Hult International Business School*
Organizer: **Stuart A. Allen**, *Robert Morris U.*
Panelist: **Andrew J. Hoffman**, *U. of Michigan*
Panelist: **Rae Andre**, *Northeastern U.*
Panelist: **Christopher Craig**, *Murray State U.*
Organizer: **Georg Reischauer**, *WU Vienna U. of Economics and Business*

Sustainability has become a core part of graduate and undergraduate programs in business schools across the globe. However, in many instances this integration means that courses dedicated to this topic are offered as either electives or core courses. This symposium aims to push the boundaries of this current academic practice by focusing on how sustainability can be integrated into every course to prepare future workers and managers. For this purpose, past ONE Distinguished Educator Award winners will reflect upon this approach as well as share best practices and tips for how participants can incorporate sustainability into their teaching strategies.

Specialized Educational Programs to Enhance Students' Well-Being and Soft Skills

Session Chair: **Andrea Honal**, *DHBW Mannheim / Germany*
Presenter: **Alexandra Advani**, *DHBW Mannheim / Germany*
Presenter: **Dorothee Beez**, *DHBW Mannheim / Germany*
Presenter: **Volker M. Rundshagen**, *U. of Applied Sciences Stralsund*

Advances in globalization, digitalization, and emerging new technologies have placed entirely new demands on students and their required skillsets to succeed in professional fields charactarized by uncertainty, complexity, and ambiguity. Although the Covid-19 crisis has increased the importance of this debate, turning the attention of universities towards the question of how to integrate soft skills and mental health training into the curriculum, there is still hesitation when it comes to its implementation in the classroom. Within the PDW, the impact of programs offering mental health support will be shown, and how well-being formats influence the positive development of soft skills of young people, such as critical thinking, problem-solving, collaboration, and agility, which are considered key factors in the future workplace. Moreover, the PDW demonstrates different educational formats that have already been successfully implemented in German universities. By offering both an interactive presentation as well as a discussion segment, in which participants can share the specific problems they face regarding how to prepare students for the future workplace and the solutions they have adopted consequently, an inspiring idea-set of practical approaches and innovative methods will be achieved.

Workplace Harassment in a Virtual Reality: Preparing Students for Reality by Using Virtual Reality (CANCELLED)

Presenter: **Robert Steinbauer**, *Brock U.*

We are in midst of a technological revolution that has the potential to revolutionize management education. I propose Virtual Reality (VR) as a pedagogical tool that can live up to and exceed the expectations of today's students. Specifically, I argue that experiencing the impact an organizational climate has on personal decision making can help students transform from being a bystander to becoming an upstander when observing workplace harassment in VR. In this session, I will discuss lessons learned from developing two open access VR simulations that let students observe and experience workplace harassment in a controlled environment and allow them to apply their knowledge and intervene. In addition, I will elaborate how to use VR in the classroom and present the results of a pilot study that indicates that students clearly prefer the VR simulations to traditional text-based cases as they are impactful, engaging, immersive, and realistic.

Bubble-Hopping. A Method to Bridge Differences

Presenter: **Emma Stenstrom**, *Stockholm School of Economics*

The session will introduce a pedagogical method called bubble-hopping, where we encourage students to have curious conversations with people unlike themselves. To bridge differences, which is important in society as well as in organizations - and in the classroom. To prepare the students, we give them both a theoretical foundation and practical skills training. We teach and practice listening, asking, sharing, non-verbal communication, overcoming cognitive biases, handling conflicts, calming down, and many other helpful skills. So far, we have used the method with over 2 000 students at the undergraduate, master- and executive levels at a business school. Afterwards, we collected and analyzed their stories to improve the method. In this session, we will share the research behind the method and our experiences using it in different contexts. We will pay special attention to how to turn research into embodied learning experiences and practice some of the many exercises we use in bubble-hopping. Two specific skills that can be useful in teaching, non-verbal communication and socially sustainable storytelling, will be practiced. The session will be conducted in an interactive, co-creative way, where all participants will be encouraged to share their best practices and, of course, build bridges.

Stay Ahead of the Disruption: Managing Hybrid Learners to Feel Present, Engage, Connect and Perform

Presenter: **Bert Verhoeven**, *Flinders U.*
Presenter: **Theodore L. Hill**, *Fox School of Business, Temple U.*
Presenter: **Bora Ozkan**, *Fox School of Business, Temple U.*
Presenter: **David C. Nash**, *Fox School of Business, Temple U.*

Hybrid teaching and learning uses technology to create a variety of student learning environments and interactions that enhance flexibility, reach, connectivity and immediacy. The post-Covid-19 demand for hybrid learning and the disruptive implications for schools and universities creates a competitive advantage for teachers, managers and institutions that develop best practice experience. Hybrid learning, done well, offers more opportunities for collaborative interaction and connection as well as flexibility and cost savings. But what does hybrid learning "done well" look like? We involve participants in a co-learning discussion about hybrid learning done well, drawing on the experiences of four educators at two universities across two continents conducting experiential classes on design thinking, finance and strategic management with undergraduate, masters-level, doctoral, and executive-education students. We will discuss and facilitate interactive activities about: 1. Challenges with hybrid delivery model and experiential learning pedagogy. How to provide same engaging student experience and learning outcomes across face to face and online students? Topics include interactive activities and finding the right technologies, including virtual reality. 2. Designing and facilitating the hybrid classroom experience: Topics include the challenge of managing self-directed experiential design thinking and research projects in a hybrid learning setting; facilitating effective group work; managing the cognitive overload of toggling between face-to-face and online; involving students in management; and navigating our own transition from "sage on the stage" to a behind-the-scenes designer and nimble facilitator. 3. Disruption potential following increased student demand and economics of hybrid teaching: what are challenges for the future?

Case Writing 101: Building a Case that Works

Session Chair: **Karen MacMillan**, *U. of Western Ontario*
Presenter: **Brent D. Beal**, *U. of Texas at Tyler*
Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Presenter: **Karin Schnarr**, *Wilfrid Laurier U.*

Educators who can write effective cases have the power to: fill in worrisome voids in a teaching plan; engage students with relevant, current material; gain a competitive edge by tailoring executive education programs; develop research ideas with practitioners; and, increasingly, receive publishing credit applicable to tenure decisions. Royalty payments can also make writing best-selling cases lucrative. This dynamic, interactive session will offer practical advice on how to tackle each step of the case writing process, including: determining what kind of case to write; finding leads in the field; collecting data; writing a well-liked case and teaching note; getting the case released and tested; and publishing the case.

Student-Focused Inclusive Teaching

Organizer: **Shoshana Schwartz**, *Christopher Newport U.*
Presenter: **Elizabeth A. Adair**, *California State U., Monterey Bay*
Presenter: **Pooria Assadi**, *California State U. Sacramento*
Presenter: **Emily Rosado-Solomon**, *Babson College*

In this session on student-focused inclusive teaching, participants will gain exposure to three different approaches within the broad domain of inclusive teaching. The session will begin with each of three faculty members introducing a specific inclusive teaching practice. The three specific practices are as follows: 1) fostering inclusive participation assessment to promote student learning and engagement while overcoming barriers experienced by traditionally marginalized groups, 2) utilizing service learning in course redesign to achieve equitable outcomes for students from historically disadvantaged groups, and 3) creating accessible and equitable digital content for students with visual disabilities. Participants will then split into interactive breakout groups for a deeper dive into whichever of the three approaches they would like to explore further. Participants will be left with actionable takeaways and relevant teaching resources to consider whether and how to incorporate specific inclusive teaching tactics into their own pedagogy.

Beyond Reflection: Learning Logs as a Feedback Tool for Teachers During (Large) Online Classes

Presenter: **Sunitha Tumkur**, *Assistant Professor (Management Communication), IIM Visakhapatnam*

The COVID-19 pandemic and the abrupt transition to online courses in higher education posed new problems to the teaching-learning process. While students battled with the expectation that they would remain glued to the computer screen from session to session, teachers had to make numerous adjustments to their instructional strategies to ensure student participation and engagement. Following their online classes, 190 students in management filled out a semi-structured learning log on a weekly basis. The 923 learning logs collected over a 5-week period were analysed thematically to determine how learners perceived the relationship between what was taught and its applicability in managerial jobs. Few students demonstrated this meta-skill of reflection, with the majority of students merely providing a list of topics presented during the sessions. In addition to serving the function of what the students appear to have learned, some students used this as an opportunity to provide feedback to the instructor, as well as to request clarification, express concerns, and set expectations for future sessions. A post-hoc analysis was conducted by analysing end-of-term student feedback to understand the relevance of this exercise. Few students viewed this as an opportunity to provide feedback to the instructor and alter course content, while the majority viewed it as a burdensome activity of limited value. This research is essential for instructors who seek to engage students in post-class reflection and who must anticipate how this activity may affect students' views of learning.

Don't Try This in the Classroom: Reflections on Failing and Adapting

Presenter: **Belgin Okay-Somerville**, *U. of Glasgow*
Presenter: **Adina Dudau**, *Adam Smith Business School, U. of Glasgow*
Presenter: **Alvise Favotto**, *U. of Glasgow*
Presenter: **Paul Hunter**, *Adam Smith Business School, U. of Glasgow*

During this session, we will share our teaching mistakes/failures and encourage the participants to do so as well. A great part of improving our teaching practice involves reflecting on what worked well and what didn't work so well. TLC@AOM offers a brilliant opportunity to learn from others and share our own practice. Over the years, the presenters have taken away and applied many positive lessons from attending the TLC@AOM sessions – some more successfully than others. Understandably, discussions are often focused on what works well – offering viable solutions to our teaching dilemmas or keeping up with the latest developments. However, we know from experience, there is a darker (and sometimes somewhat challenging) side to teaching when we realise that some of our teaching practices did not work, or when we adapted in response to unexpected changes in higher education! In this session, we will be reflecting on such instances and aim to learn from each other's mistakes and adaptations. In doing so, we will also aim to consider some of the constraints that impact on our teaching practice – e.g., institutional policies, culture, or more external issues, such as a global pandemic.

Designing a Super Course by Using Seven Research Based Best Learning Practices

Presenter: **Elina Ibrayeva**, *Associate professor of practice management*

This presentation discusses the seven best learning practices that can be incorporated into the design of any management course. These best learning practices are: repeated practice, use of frameworks, application, integration, storehouse vs snakeskin model of learning, use of stories and analogies, and multimedia. These practices are universal to good course design and can be used in any course format (online, hybrid, or on-campus) and at any level (graduate and undergraduate). The goal of employing these practices is to create more thought-provoking, creative, and engaging assignments. The presenter will illustrate the use of these practices within several original assignments which had proved successful with students from three online MBA courses. Participants will be asked to share the use of these learning practices in their own teaching practice. The goal of the presentation is to help the session participants become more skillful, confident, and pedagogically savvy teachers of their disciplines.

Queering Management Education: The Value of Inclusion of 2SLGBTQ+ People & Perspectives

Presenter: **Susan Charlene Graham**, *U. of Prince Edward Island*

Within management education, cisheteronormativity is a dominant perspective and foundation, and the field is falling behind other professional programs in terms of being more inclusive and representative of historically marginalized communities, including 2SLGBTQ+ people. This is problematic for two broad reasons. First, these practices exclude significant groups of people who are unable to see aspects of themselves reflected in management programs and who may experience harm(s) as a result of these practices. Second, management students of all backgrounds and identities may fail to develop the skills and knowledge they will need to effectively work with and for diverse people in myriad contexts. This proposal will consider ways to be more inclusive and representative of 2SLGBTQ+ people in management education curricula and pedagogies, physical spaces that management education occupies, and relationships among peers and faculty members. By examining common, but problematic, management teaching practices, attendees will be better able to identify cisheteronormativity in their teaching practices, understand why it is important to develop 2SLGBTQ+ inclusive programming and practices, begin developing their own toolbox to suggestions, tips, and strategies for greater 2SLGBTQ+ inclusion, and know where to find supports, information, and strategies from a like-minded community of management educators.

Developing Leaders Cultural Intelligence Through Films

Presenter: **Marco Aponte**, *U. of Southern California -Marshall School of Business*

Cultural intelligence is the ability to interact effectively across cultures. It is often defined in terms of three factors: having knowledge of other cultures, being mindful about cultural differences, and being able to behave according to other cultures' norms. Cultural intelligence is a critical leadership skill when working in cross-cultural settings. In this session, we discuss how short films from other cultures can be used to develop leaders' cultural intelligence. Drawing from Hofstede's framework on cultural differences, we propose a film-based three-step approach to develop cultural intelligence: watching the film, analyzing the culture in the film according to Hofstede's framework, and reflecting on the cultural differences noted in the film.

Presenter: **Krzysztof Dembek**, *Centre for Social Impact, Swinburne U. of Technology*
Presenter: **Ashish Pandey**, *Indian Institute of Technology, Bombay*
Presenter: **Indu Rao Kaveti**, *Pandit Deendayal Energy U.*

The primary objective of this PDW is to provide Academy Members from different divisions the opportunity to work together to address the challenge of designing organizational systems, designs and work practices that put workers front and center. Given the renewed attention on employment practices due to unionization attempts at progressive companies and "quiet quitting," it is critical to address the meaning of employee-centric work systems from multiple theoretical perspectives and knowledge traditions. Subject matter experts, video and other multimedia information will be available to participants to work through and develop new research ideas to examine the theme. The PDW will conclude with a summary of research design outcomes. The participants will leave with a broader understanding of the theme and a set of new research ideas to further inform research and practice.

Craft, Inequality, and the Future of Work

Organizer: **Monika Zebrowska**, *U. of Cambridge*
Organizer: **Charmi Patel**, *Henley Business School, U. of Reading*
Moderator: **Monika Zebrowska**, *U. of Cambridge*
Moderator: **Charmi Patel**, *Henley Business School, U. of Reading*
Panelist: **Howard Aldrich**, *U. of North Carolina*
Panelist: **Sophie Alkhaled**, *Lancaster U. Management School*
Panelist: **Candace Jones**, *U. of Edinburgh*
Panelist: **Jochem Kroezen**, *Rotterdam School of Management, Erasmus U.*
Panelist: **Aruna Ranganathan**, *Haas School of Business, UC Berkeley*

In this panel symposium we collectively explore the relationship between craft organizing and inequality, and its consequences for the future of work. While management scholars have long paid attention to various craft contexts such as: beer brewing, heritage crafts, or textile crafts, more recently we also see increased number of attempts that propose craft as an alternative approach to organizing. Typically, such conceptualizations, depict craft in overwhelmingly positive manner bringing attention to the meaningfulness of craft work, its more sustainable nature, or its accessibility and importance for local communities and cultures. As such, craft is often depicted as a potential pathway to solving issues caused by social processes such as globalization, or industrialization. Yet, perhaps unsurprisingly, there seems to be also a dark side to craft organizing. Insights from other disciplines and empirical reality suggest that craft can also perpetuate social inequality – a relationship which remains largely understudied phenomenon in management and organization literature. The purpose of this symposium is to bring together a diverse panel of scholars to rebalance the conversation around craft work and craft organizing by drawing attention to both their light and dark sides. By bringing more nuance to conceptualizations of craft, we hope to spark a conversation about opportunities and challenges stemming from adopting craft-based approaches and their consequences for the future of work.

Many management scholars are interested in taking their career to a new culture and context. Although the opportunities to teach and conduct organizational research at business schools around the globe have significantly increased, first-hand information on business schools outside of North America and Europe can be hard to come by. This PDW is designed for both junior and senior OB scholars who would like more information regarding academic careers at reputable business schools outside of North America and Europe. It will bring together eight panelists currently working at schools in Australia, mainland China, Hong Kong, and Singapore. The panelists include junior and more senior faculty, who are 'international hires" themselves, and/or have experience in recruiting and hiring international faculty for institutions in this region. The panel will provide information, highlight challenges, and share distinctive features for academic careers in each country/region, including tacit knowledge and unspoken rules that applicants should be aware of. Topics for discussion include: What does the hiring and job application process look like? How are faculty evaluated, and what types of tenure and contracts are used? What are key challenges that international faculty experience in adapting to the national culture and university system? What was most surprising for international faculty, so far? What are norms of professional conduct (e.g., dos and don'ts in presenting oneself and one's work)? The PDW includes individual presentations by panellists, country-specific roundtable discussions, and a closing Q&A.

Geographic Diversity, Gender Diversity and Psychological Safety in Global Student Teams

Presenter: **Pamela Campagna**, *Hult International Business School*
Presenter: **Thomas Sullivan**, *Hult International Business School*

Working conditions in today's classrooms and workplaces usually include challenges in communication, collaboration and performance, which makes working in teams more important than ever before. In most higher education classrooms around the world, students understand that, to succeed in the global labor marketplace, they need to prepare themselves for working across borders and cultures. Business students pursuing master's degrees will often choose to leave their home countries and pursue degrees abroad. These students presume they are going to widen their network, perfect language skills and deepen and develop the required analytical and interpersonal skills to become strong individual contributors as well as managers and leaders in their work settings. What they may not realize and appreciate until they arrive, is how much they are going to rely on teams and teaming in the academic setting, which will prepare them for the opportunities and challenges that they will face when they are in a workplace setting. In our university, students work together in at least five different diverse teams made up of students from around the world, over the course of their one-year graduate program. The aim of this interactive session is to share insights and observations about student work in global teams, based on our research from hundreds of graduate student teams, and compare best practices with our colleagues. How does our experience in working with students in a global, diverse educational environment compare to others'? Are there "best practices" that we can identify in a consistent way?

Giving MBA Students a Seat at the Table: Public Policy as a Critical Element of Business Education

Presenter: **Aimee Williamson**, *Suffolk U.*
Presenter: **Tammy MacLean**, *Suffolk U.*

Businesses are subject to a growing number of nonmarket forces, including government regulations and other public policies. Such government activities have a significant impact on companies and the economy more broadly, serving simultaneously as both opportunities and threats, yet many business leaders have relatively little understanding of the public policy process compared with other strategic imperatives. The speed at which recent public crises have generated government activity impacting day-to-day business processes has heightened awareness of these issues. It is critical that business leaders of today and tomorrow understand the implications of government affairs and social issues for their companies, including how they can play a role in the policy process, but these functions and skills are often excluded from business education programs. This session will engage the audience in a discussion of the importance of government affairs and nonmarket forces as a critical element of business education today. We will share background on a dedicated course, the Washington Policy Seminar, as a required course for EMBA students that leverages interdisciplinary collaboration, experiential learning, and alumni engagement. We will facilitate a discussion on the role of nonmarket forces, public policy, and government affairs in the broader business school curriculum, engaging the audience to identify other ways to embed such topics in the curriculum and discuss the future of public policy content in business school curriculum.

Learning with Intention: Using Free Digital Resources to Encourage Mindful Learning

Presenter: **Rashimah Rajah**, *National U. of Singapore*

Research on mindfulness has been expanding rapidly in the past decade. With certified programs and structured courses in place, evidence-backed mindfulness training has been incorporated as legitimate interventions at the workplace in various countries around the world. Research has also shown that mindfulness increases leader effectiveness and reduces individual work stress. In the classroom, mindfulness does not have to be a concept that is merely taught for students' future success in employee or management roles. Instead, mindfulness can be practiced in the classroom itself to increase individuals' cognitive resources for learning and reflection. While there are mindfulness courses, and even full-time degrees on the topic, we are suggesting that mindfulness be integrated in general management classes, where it is not typically discussed at length. In this proposal, we illustrate how three elements can be consciously incorporated into lectures and seminars to set the intention for learning and to further concretize concepts learnt. These three elements are: i) guided meditation, ii) individual written reflection, and iii) call to action. Free digital tools and resources can be leveraged to poll students and play free videos or sounds for guided meditations. This method has been tried at both undergraduate and graduate levels, for local and international students, as well as in physical and online/hybrid classes. Prior rapport between teachers and students is crucial. Effectiveness of this method vary depending on student level and background knowledge. These results, as well as various student feedback, will be shared with other TLC participants during the conference.

Rethinking Class Projects During COVID-19

Organizer: **Opal Leung**, *St. Francis Xavier U.*
Organizer: **Shoshana Schwartz**, *Christopher Newport U.*
Organizer: **Lisa T. Stickney**, *The U. of Baltimore*

During the COVID-19 pandemic, instructors were forced to rethink how they assigned projects in the new remote learning environment. Simultaneously, COVID-19 has changed many work environments with a rapid increase in hybrid and remote work. While many instructors adapted their class projects or created entirely new class projects suitable for the COVID-19 circumstances, some projects created due to necessity during COVID-19 may be well-suited for preparing students for the new post-pandemic world of work. In this interactive session, we will present some of the projects created out of necessity and kept after the pandemic. Our session will leave participants with a deeper understanding of how to design class projects that will effectively prepare students for the post-pandemic world of work.

How to Get Your Case Published: Case Writing Tips and Topic Insights from Ivey Publishing and Guests

Organizer: **Candis McInnes**, *Director Ivey Publishing*
Panelist: **Violetta Gallagher**, -
Panelist: **Karen MacMillan**, *U. of Western Ontario*

Join us for an informative session where we will delve into the case publishing process, providing practical tips and best practices. We will explore the key elements of effective case writing, from selecting a compelling topic to crafting a well-structured and engaging case and teaching note. We will also provide insights into the publishing process, including how to navigate the submission and review process, understand the expectations of a case and teaching note, and getting your case accepted for publication. Afterwards there will be time for a brief Q&A. This session is ideal for educators, researchers, and authors who are eager to learn strategies to successfully publish their cases and make a meaningful impact in class. Looking for feedback for your case ideas? After the session, we invite participants to sign up at our booth for a free 30-minute feedback consultation on their case proposals.

Enhancing Learning Experiences with use of AI/ML in Virtual Learning Environments

Presenter: **Suchitra Veera**, *Snayu Inc*

Colleges and Universities were quick to adopt new and innovative learning approaches including flipped classrooms, MOOCs, hybrid and virtual learning in response to the challenges of the Coronavirus pandemic. Even as the impacts of the Coronavirus pandemic are now controlled, the digital tools and technologies and innovative teaching methods that came into play during the pandemic are here to stay. Student engagement and achievement in a flipped format classroom, including hybrid and/or online learning environments can be enhanced with the use of AI (artificial intelligence) /ML (machine learning) based adaptive learning systems. Understanding these new developments in available tools and technologies can be helpful for all those involved in higher education. The presenter will begin with an overview of basic AI/ML concepts relevant to this discussion, followed by describing AI/ML based techniques for purposes of enhancing teaching and learning, and benefits that each can provide. Next, the presenter will present some of the AI-based learning solutions that are available in the market, and go into details of the AI/ML models, providing some research and experience-based insights. The presentation will end with an overview of how these technologies are continuing to evolve and key takeaways from the presentation.

Think Like a Manager: Cognitive Apprenticeship in Management Education

Presenter: **David Brown**, *Ohio U.*

One of the challenges of management education is aiding students in developing the proper mindset for analyzing and executing managerial decisions. Particularly at the novice level, students cannot effectively learn to consider the needs of diverse stakeholders, plan multiple steps ahead, or exhibit the soft skills necessary in management simply by being passive consumers of knowledge. Rather, we teach these behaviors by having students actively engage in them. This session will give attendees the theoretical grounding and tools to evaluate and improve their own teaching practices using Cognitive Apprenticeship—an instructional approach that illuminates thought processes that often remain hidden. Included will be sample activities incorporating Cognitive Apprenticeship that undergraduate and graduate students have, over several years, identified as transformative experiences in introductory-level management courses. Participants can expect to leave this session with actionable design strategies that can be applied in creating new teaching materials or improving existing ones across a variety of management topics at both the undergraduate and graduate levels.

Introducing a Board Game to Promote Experiential Learning in the Teaching of Research Philosophy

Presenter: **Madeleine Stevens**, *Liverpool Business School, Liverpool John Moores U.*

This submission discusses the development of a new teaching resource in research philosophy: the Research Methods Roadmap © (RMR) game. Research methods are notoriously difficult to teach and understand and thus the need was identified to provide a solution to address these difficulties for research methods lecturers and students. The resource is aimed at undergraduate, intermediate, and advanced postgraduate students. The game was developed by gaining student and expert data which resulted in five iterations, underpinned by participatory action research (PAR) methodology. The game helps students navigate the challenging journey of deciding and understanding ontology, epistemology and research methodology including qualitative, quantitative, and mixed methods. Students use small electric cars to follow an experimental journey which essentially represents a decision tree through choosing a research philosophy paradigm and moving their little cars along the road to park at each of the 5 key stops. At each stop, students rationalize their own research journey relevant to the topic at the stop. Gameplay is facilitated through interactive cards and dice rolling to help stimulate discussion. Students are awarded 'electric charges' via a token by the lecturer, based on their explanation at each stop and the student with the highest total of token charges at the end of the roadmap wins the game. Through the use of the gameboard, student satisfaction has increased to a 100%. Currently, there is no other similar, pedagogical approach available to help lecturers and students to learn this complex topic in a fun, playful engaging environment.

The Impact Lab: Co-creating the Design and Implementation of Educational Innovations

Presenter: **Amanda Porter**, *Vrije U. Amsterdam*
Presenter: **Damla Diriker**, *Vrije U. Amsterdam*
Presenter: **Philipp Tuertscher**, *Vrije U. Amsterdam*

Impact Lab is an engaged research initiative that offers a bottom-up approach for educational managers to design and implement educational innovations. Our novel ‘challenge-driven co-creation’ process combines an online collaborative platform with face-to-face workshops to create scalable education solutions that integrate diverse stakeholder knowledge. Students and other stakeholders gain the unique opportunity to directly shape their learning environment by having their voice heard and exercising decision-making power regarding the design and implementation of educational innovations. This presentation will share our blueprint for challenge-driven co-creation, along with evaluation data on two Impact Lab pilots at a large university in the Netherlands. Participants will be engaged to experience ‘challenge-driven co-creation’ first-hand in a fun innovation brainstorm that utilizes our unique collaboration tools.

Participant: **Robert M. Verburg**, *Delft U. of Technology*
Participant: **George Benson**, *U. of Texas At Arlington*

While Artificial intelligence (AI), algorithmic management, process automation and new communication technologies are improving productivity and efficiency for organizations, these technologies have also incited fear of job loss and loss of control for many employees (Cooper et al 2022). These technologies are being increasingly adopted in highly skilled and professional jobs as companies seek to promote efficiency and create competitive advantage. However, the successful implementation of these technologies for the professional workforce often means workers will be expected to embrace these technologies and use them to support their work. The purpose of this symposium is to bring scholars together to investigate how technology innovations such as AI, people analytics and algorithmic management impacts employees and provide recommendations for organizations to optimally support workers through the adoption of these new technologies. We aim to provide insights into approaches for organizations and institutions to better support the workforce amid technological innovations. Together, our session dives deeper into the relationship between technological advances, the employees, and how their professional lives are likely to be impacted.

Sustainability: Got it, What's Next?

Participant: **Philip H. Mirvis**, *Babson Social Innovation Lab*
Participant: **Bradley Googins**, *Boston College*

The sustainability agenda in business is set and scholars have addressed why companies embrace sustainability, barriers to and success factors in implementation, and associated social and economic costs/benefits. But as currently defined, "sustainable means 100% less bad." What would it take for business to smartly address "grand challenges" and become a "force for good" in the world? What should be on this next agenda for our theorizing and research? Let's caucus together and set a new course--for business and our doings!

Sexual Harassment Research Following #MeToo: Opportunities in the Shadows and Spotlights

Organizer: **Anne M. O'Leary-Kelly**, *U. of Arkansas*
Organizer: **Shannon Rawski**, *Ivey Business School*

The #MeToo Movement created significant changes in awareness and perceptions of sexual harassment (SH). In this caucus, we will discuss aspects of SH phenomena that were spotlighted and those that fell into the shadows as a result of #MeToo. Organizers will lead the caucus in identifying shadow and spotlight research topics and will facilitate development of a research network among caucus members so that this research may commence.

ONE ISC Impact Safari

Host: **Sylvia Grewatsch**, *Brock U.*
Host: **A. Wren Montgomery**, *Ivey Business School*

The Impact Scholar Community (ISC) would like to invite ONE and other division members to join us on a neighbourhood tour as we make our way to visit Haley House (haleyhouse.org), an organization at the frontlines of addressing Boston's food justice and housing crisis. We will engage with Haley House's leadership team to see impact in action and to discuss and co-create solutions together. Our objective is to show participants what impact work looks like in practice. Please meet Sylvia Grewatsch and Wren Montgomery no later than 5pm in the Westin Copley Place main lobby. Participation will be limited to the first 50 arrivals due to space constraints at Haley House. We thank Ivey Business School for generously sponsoring refreshments and speaker honorariums to make this special event possible.

Building on the insights from seven previous AOM caucuses and publications from this group, this caucus considers how workers with different backgrounds, training and propensities to apply different discretionary schemas interact when implementing a strategy and if these interactions are critical for achieving strategic success or a timely strategic reorientation. This work has the potential to inform strategic management, strategy as practice, organizational change, organizational behavior, organizational theory, human resource and project scholarship. Previous caucuses have already led to a special issue, edited book of chapters involving 17 scholars and symposia on the subject. Other collaborative projects are currently being planned. We believe this caucus would be of great interest to practitioners too, as much still needs to be learned about how employees apply themselves and use their discretion to solve their organisations' strategic problems.

We plan to serve light refreshments. All welcome.

Lessons Learned by Management in the Wake of Covid, the Great Resignation, and Antiwork

Organizer: **Ari Stillman**, *U. of Edinburgh*

: This caucus seeks to understand the lessons learned by management since the beginning of the Covid-19 pandemic. Compounding a meteoric rise in remote work and blurred work-life boundaries (Manohka, 2020), physical and mental health concerns of employees (Hamouche, 2020) and management (Graf-Vlachy, 2020), global inflation adding financial stress (Fetzer et al., 2021), and other socioeconomic phenomena, management has had to rewrite the playbook to adroitly handle exigent worker needs during an extended crisis (Kirchner et al., 2021). This caucus seeks to draw from a variety of perspectives to illuminate learnings from this tipping point in employee-management relations.

Management has had to adapt to many changing norms and worker values over the years, from the 'new' spirit of capitalism (Boltanski and Chiapello, 2018) taking hold in the 60s in which employees desired more personal meaning from their work to corporate citizenship (Windsor, 2017) and more recent diversity, equality, and inclusion initiatives (Moon and Ogbonna, 2020). While institutional isomorphism will continue to inform corporate norms (Dimaggio and Powell, 1983), a confluence of socioeconomic phenomena over the last few years has precipitated restlessness and malcontent among workers at a scale that has caused widespread disruption and forced management to adapt with alacrity while wrestling with the issues themselves (Rodrigues et al. 2021; Hamouche, 2021). What has been effective for decreasing attrition during this time? In what ways have employees responded positively to managerial interventions directly or indirectly stemming from Covid-19? How have managers balanced their own mental health with increased pressure to shepherd the well-being of their employees? This caucus seeks to answer such questions by engaging in the intersection of various topical areas broached by attending members. Participants will begin by discussing how their research expertise illuminates lessons learned by management before opening the floor to other members. Thomas Kochan will speak about recent changes in industrial relations, organizing efforts, and worker collective actions (Kochan et al. 2022). Jackie Coyle-Shapiro will speak to the psychological contract between workers, managers, and their companies in light of changes since Covid (Coyle-Shapiro, 2019). Other perspectives that would enrich this discourse include the rise in work and life precarity (Kalleberg, 2021), work-life boundary management with the rise of remote work (Golden and Jorgenson, 2022), as well as the role of social discourse and knowledge exchange surrounding the Great Resignation, Antiwork movement, and other forms of protest of capitalism (Stillman, 2023). Attending members will openly be asked how their research and expertise further contributes to lessons learned before attempting to synthesize our shared findings at the conclusion of our caucus. In drawing from multifarious literatures and addressing contemporary social forces, this caucus hopes to facilitate a greater understanding of both theoretical and empirical approaches to effective management in unprecedented times.

Shift(ing) Work: Let’s Talk about Changing Professionalism in the Post-Pandemic Workplace

Organizer: **Sidika Nihal Colakoglu**, *Norfolk State U.*

This caucus is designed to encourage a scholarly discussion about professionalism in post-pandemic workplaces. The caucus will focus on the factors contributing to the changing definition of professionalism; changes to professionalism over time; challenges faced by organizations/workers in this transformation; and possible strategies to address professionalism challenges in today's workplaces.

Recent technological advancements and the coronavirus outbreak have led to a tremendous shift in the ways companies conduct their day-to-day operations. The pandemic has disrupted workplaces by normalizing remote work and enforcing hybrid work models. These new work models are here to stay because majority of millennials and Gen-Z workers prefer to remain in flexible, remote, and hybrid work arrangements after the pandemic (Moore, 2021). These changes consequently have challenged how organizational members view and experience professionalism in the modern workplace. This caucus is designed to encourage dialogue and discussion in the following areas: 1. Factors contributing to the shift in the definition of professionalism (e.g., technological advancements, desire for flexibility, and generational differences in attitudes/perceptions). 2. Changes in professionalism over time (e.g., conforming to traditional standards of appearance, etiquette, and the rules of engagement; strict separation of work from non-work; hiding emotions; perfectionist attitude; work being central part of one's life). 3. Challenges faced by organizations and workers regarding the new definition of professionalism (e.g., differing values, beliefs, and expectations about professionalism, acculturating to work during the pandemic with limited resources). 4. Strategies/solutions used to inspire and encourage new professionalism norms in today's workplaces. This discussion is timely and important because the change is inevitable and stakes are high for multiple stakeholders (e.g., business students, professors, college administrators, business owners, workers, and managers). Organizations need to adapt to the new workplace models to attract and retain today's digitally inclined workforce. Workers are required to learn the rules of new professionalism to achieve personal fulfilment and career success. The universities are expected to provide a pipeline of graduates who are ready to succeed in this new world of business. Thus, the topic of this caucus invites and benefits from a diverse group of conference attendees, namely, the academicians, administrators, researchers, business owners, and managers. The caucus is related to the theme of the conference “Putting the Worker Front and Center” because it deals with the topic of professionalism which impacts today's workers significantly. When workplaces go through structural changes (e.g., remote or hybrid models) the workers and organizations are required to adapt by learning the revised rules of engagement in these new organizational structures. Our hope is that the caucus participants will share experiences and successful adaptations learned during the pandemic, as they relate to maintaining a professional demeanor, appearance, and environment at work. Another outcome for caucus attendees will be to take away insights and ideas to initiate new research streams and strategies to use in their workplaces to promote professionalism. To achieve the proposed outcome, the caucus will be designed with three parts: Part 1. Introduction of the topic with a power point presentation. Participants will also introduce themselves and note their questions/concerns for the caucus. Part 2. Round-table discussions—the tables will be grouped according to the four topics presented above. Part 3. Reporting of each table, followed by a big group discussion, and wrap-up. Plans for future research collaborations will be shared as they emerge.

Working It Out: A Caucus on The Study of Work in and Around Organizations

Organizer: **Pedro Monteiro**, *Copenhagen Business School*

The study of work is foundational for research and practice in management, organizations, careers, and related areas. After some years of decline, it is resurging. Yet there seems to be some fragmentation in the debate, which may lead to missed opportunities, such as overlooking broader literature and developing a less rich conversation on the topic. Thus, this caucus aims to bring together scholars exploring—or interested in doing so—work as a topic in AOM in order to strengthen our collective research agenda.

Politics at Work: Challenging "Politics-Blind" Perspectives

Organizer: **Jeffrey Martin Lees**, *Princeton U.*
Organizer: **Brittany Solomon**, *U. of Notre Dame*
Discussant: **Jesse Graham**, *U. of Utah, David Eccles School of Business*
Presenter: **Hannah Benner Waldfogel**, *Princeton U.*
Presenter: **Devon Proudfoot**, *Cornell U.*
Presenter: **Charles Adam Dorison**, -

"Politics" means different things to different people. The goal of this symposium is to expand upon the conception of what is "political" in the workplace, whether it's perceived as good or bad, and challenge the assumption that "politics" in the workplace are experienced uniformly by all people and groups. We seek to challenge the common refrain "politics should be kept out of the workplace." While the sentiment is understandable, it is also frequently deployed in opposition to DEI initiatives, reforms to combat workplace sexual harassment, and demands for greater workers' rights and protections. Like "color-blind" perspectives, scholarship which adopts this "politics-blind" ideology may incorrectly assume that people in organizations have a narrow conception of politics-at-work and experience politics-at-work uniformly and negatively, and as such may inadvertently reinforce existing inequalities.

Active Career (Self)Management and Career Outcomes

Session Moderator: **Francisco Wilhelm**, *U. of Bern, Work and Organisational Psychology*

CAR: **The Multidimensional Career Self-Management Behavior Scale: Measurement Development and Validation**

Author: **Francisco Wilhelm**, *U. of Bern, Work and Organisational Psychology*
Author: **Andreas Hirschi**, *U. of Bern, Work and Organisational Psychology*
Author: **Dawa Schläpfer**, *U. of Bern, Work and Organisational Psychology*

Career self-management (CSM) is an umbrella term for various activities that individuals use to direct their career. Existing measures of CSM behavior have several problems, including a non-systematic selection of behaviors and a lack of consideration of the relation of the individual behaviors to the general construct. In the present study, we develop and validate a new multidimensional measure of CSM. Evidence over three employee samples provides support that (a) the proposed 7-factor CFA solution fits better than alternative solutions in the original and replication samples; (b) the measure has adequate reliability; (c) a bifactor model represents the relation of the general construct to the better than alternative models; (d) the measure demonstrates evidence for convergent and discriminant validity with constructs in CSM's nomological network; and (e) the measure demonstrates incremental validity in the prediction of important outcomes over and above prior measures of CSM behavior and related constructs. The results suggest that CSM behavior should be seen as a multidimensional construct with multiple specific behaviors and a general construct dimension. Furthermore, the developed measure provides a comprehensive but succinct tool for researchers and practitioners aiming to understand how individuals shape their careers through various CSM behaviors.

CAR: **Workplace Participation and Career Success**

Author: **Thomas Ng**, *U. of Hong Kong*
Author: **Haoran Xu**, *Department of Management and Strategy, The U. of Hong Kong*
Author: **Yinuo Zou**, *U. of Hong Kong*
Author: **HAOYANG CHEN**, *U. of Hong Kong*

In this paper, we examine how workplace participation, in terms of voice and participative decision-making, is related to career success. Through a meta-analysis we found that most previous studies reported that workplace participation was positively correlated with objective (corrected correlation = .26) and subjective career success (corrected correlation = .32). The effect size for subjective career success was stronger in recent years. The cultural dimension of power distance did not have a moderating effect. These results provide initial evidence that workplace participation should be further considered in career success research. We demonstrate that the greater the degree to which an individual participates in work, the more likely he or she will be to have a successful career, which extends current theories on careers.

CAR: **Living a Values-Based Work Life: Individual Values as Predictors of Career Outcomes**

Author: **Marne Lynn Arthaud-Day**, *Kansas State U.*
Author: **Joseph Charles Rode**, *Miami U. Ohio*
Author: **Kyle J. Bradley**, *Kansas State U.*
Author: **Laurens Bujold Steed**, *U. of Cincinnati*

We use Schwartz's theory of universal human values as an integrative framework for testing relationships between values and career success. Utilizing a longitudinal study design, we collected values data from a sample of undergraduate students prior to graduation and re-surveyed the same subjects approximately 10 years later to collect data on career outcomes. We analyzed the data using hierarchical linear regression, controlling for known covariates such as cognitive ability, academic performance, personality, socioeconomic status, gender, and race at Time 1 as well as marital status and number of children at Time 2. Five of our eight hypotheses were supported. Achievement values positively predicted compensation and job level; stimulation values positively predicted job level; benevolence values positively predicted work engagement; and security values were negatively related to number of international locations. We discuss the implications of these findings for values theory and the literature on career choice and development.

CAR: **Building Bridges Between Work-Related Learning Approaches: Insights From a Secondary Meta-Analysis**

Author: **Carolin Graßmann**, *VICTORIA International U. of Applied Sciences*
Author: **Julian Decius**, *U. of Bremen*
Author: **Laura Elisabeth Creon**, *SRH Berlin U. of Applied Sciences - Institute for New Work and Coaching*

In this study, we quantitatively summarize the results of 43 primary meta-analytic studies that have investigated the relationship between different workplace learning approaches and learning outcomes. By using a secondary meta-analytic approach, we aim to build bridges between disconnected research silos to help inform current and future research in the realm of workplace learning. We found positive and significant relationships between work-related learning on all learning outcome levels: reaction ($k = 3$, $r = .29$, 95% CI [.25, .34], $p < .001$), learning ($k = 14$, $r = .43$, 95% CI [.32, .54], $p < .001$), behavior ($k = 10$, $r = .26$, 95% CI [.19, .32], $p < .001$), results ($k = 26$, $r = .23$, 95% CI [.18, .27], $p < .001$), and overall outcomes ($k = 6$, $r = .36$, 95% CI [.25, .48], $p < .001$). The results highlight standardization as a moderator to the learning-outcomes relationship. We therefore provide a systematic synthesis of almost 30 years of research on the effects of workplace learning by synthesizing the current state of knowledge, critically assessing its strengths and weaknesses, and pointing towards directions for future research. Our findings emphasize the beneficial role of work-related learning in organizational practice.

Top-Down Approaches to Careers Research

Session Moderator: **Patricia Cristiana Guragata**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

CAR: **Fostering Callings in Organizations: Trickle-Down and Mediation Effects**

Author: **Sophie Gerdel**, *U. of Padova*
Author: **Sabine Bergner**, *U. of Graz*
Author: **Michelangelo Vianello**, *U. of Padova*

Career calling is a pervasive, purposeful and passion driven way to approach work that is central to individuals' identity, contributes to the greater good, transcends their selves and for which employees are willing to make sacrifices. Research on outcomes of career calling has grown, yet little is known about the antecedents of calling. This paper proposes that leaders' calling foster employees' calling through the mediating effects of perceived leaders' support and quality of the leader-member exchange. We found empirical evidence supporting our model by employing a multi-source study with 87 leaders and 360 employees working for Italian organizations. Theoretical and practical implications are discussed.

CAR: **How Top Management Team Career Variety And Turnover Influence Firms' Effectual Orientation**

Author: **Patricia Cristiana Guragata**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

Growingly, scholarship has encouraged established firms to reap the benefits of effectuation at corporate level, elevating it to a firm-level strategic orientation. Yet, there is still little understanding of the fundaments of large organizations' effectual orientation. Drawing on upper echelons and human capital literature, we theorize that both the career variety of the top management team (TMT) and their turnover offer limited benefits for firms' effectual orientation. We propose a curvilinear relationship between the average TMT career variety and firms' effectual orientation. Also, we put forward a curvilinear relationship between TMT turnover rates and firms' effectual orientation. Further, we suggest that the latter relationship is moderated by market turbulence. We test and find support for both inverted U-shape relationships using a secondary panel dataset comprising 3,021 firm-year observations from 373 firms listed in the S&P 500 between 2006 and 2018. Our research sheds light on the intersection between the TMT and corporate effectuation literature streams. We validate key managerial antecedents to firms' effectual orientation, providing insights into the underexplored antecedents of effectuation at corporate level.

CAR: **Sick of Leading? Supervisory Responsibility and its Consequences for Sickness Absence & Presenteeism**

Author: **Stephanie Funk**, *U. of Augsburg*

This research investigates how a leadership position with supervisory responsibility impacts the two labor-market related health behaviors – sickness absence and presenteeism, i.e. working while being sick. Drawing on the job demands-resources (JD-R) model, this article argues that the ambiguity of supervisory responsibility being a job resource as well as a job demand increases an employee's work engagement. This, in turn, reduces sickness absence but increases presenteeism behavior. Moreover, this study argues that permanent availability and time pressure, as two aspects of a leadership position with supervisory responsibility that classify it as a challenge job demand, mediate these relationships. Using German linked employer-employee data, the empirical results show that while having supervisory responsibility reduces the number of sickness absence days, it increases the probability of engaging in presenteeism. In addition, both associations are partially mediated by a leader being permanently available as well as by the time pressure experienced in leadership positions with supervisory responsibility. Finally, the results further reveal that the reduced sickness absence among leaders is not attributable to the higher rates of presenteeism. Briefly, this study enriches our understanding of job characteristics of leadership positions, as it shows that job demands can also result in desirable consequences.

CAR: **Revisiting the Impact of Career Plateau on Job Performance: A Social-Cognitive Perspective**

Author: **Wei-Ning Yang**, *King's College London*
Author: **Yu-Hsuan Wang**, *National Sun Yat-Sen U.*
Author: **Wiebke Doden**, *King's College London*
Author: **Pei-Yun Wang**, *National Sun Yat-Sen U.*

Prior research has sought to understand the impact of career plateau on job performance mostly either from a social-exchange or from a conservation-of-resources perspective, but empirical support for these theoretical perspectives is limited. This study goes beyond extant theoretical approaches and takes a social cognitive perspective by proposing self-efficacy as a key mechanism through which two forms of career plateau (i.e., hierarchical and job content plateau) affect job performance, and that these effects may be moderated by career stage. Bayesian path analysis based on 152 supervisor-subordinate dyads across two time point results in two important findings. First, reaching a hierarchical plateau (which reflects a state with a lack of past accomplishments such as promotions), results in decreased self-efficacy and in turn poor job performance for employees at the maintenance career stage. Second, job content plateaued employees (who, although feeling unchallenged at work, have achieved work mastery) reported high sense of self-efficacy and consequently attain good performance consistently throughout different career stages. This research contributes to the field by taking a novel theoretical perspective to understand career plateau, by offering new explanations for the plateau-performance relationship, and by providing insightful evidence that job content plateau can be good for employee productivity.

People high on dark personality traits (narcissism, Machiavellianism, psychopathy) are very prevalent and often also successful in contemporary organizations. They often influence organizational outcomes in negative ways (e.g., CWB); however, more recent research also points to positive effects (e.g., performance, career success). Therefore, this symposium focuses on new insights into dark triad research in organizations, integrating outcome- and individual-focused research while also considering workplace context. More specifically, two papers focus on dark traits, organizational context, and career success by investigating how psychopathy relates to career success via enterprising job demands, and how narcissistic rivalry interacts with perceived organizational politics. One paper focuses on a negative outcome, deviance, and compares the influence of toxic traits to the influence of destructive leadership. Finally, one paper takes a person-centered approach to investigate how profiles of dark traits change over time. Collectively, the papers included in this symposium advance knowledge of how the dark triad traits unfold in organizations both in terms of outcomes and stability over time.

Apologies and Relationship Repair

Session Moderator: **Sarah Jensen**, *U. of Utah, David Eccles School of Business*

CM: **Third-party Forgiveness in Organizations**

Author: **Sarah Jensen**, *U. of Utah, David Eccles School of Business*
Author: **Kristina Diekmann**, *U. of Utah*
Author: **Jesse Graham**, *U. of Utah, David Eccles School of Business*

Forgiveness in organizations is receiving increased attention in the literature due to its relevance to conflict management. The majority of this, and other work on forgiveness more broadly, examines dyadic forgiveness (i.e., when the victim forgives the transgressor). In this paper, we explore third-party forgiveness, a process distinct from dyadic forgiveness that has important implications for the maintenance of interpersonal relationships at work. We also begin to examine the possible antecedents of this behavior, identifying interpersonal behaviors and the organization's ethical infrastructure based on previous theorizing about dyadic forgiveness and ethical behavior in the workplace. Altogether, we find evidence that transgressor apologies, victim forgiveness, and strong sanctioning systems (i.e., ethical infrastructure) lead to more forgiveness by third parties. This work has implications for understanding forgiveness as a process that happens beyond the dyad and emphasizes the importance of the third-parties in managing workplace conflict.

CM: **Timing is not Everything: The Effects of Pre-Negotiation Trust, Apologies, and Time in Trust Repair**

Author: **Jonathan Lee**, *U. of Minnesota Duluth*
Author: **Rachel Lea Campagna**, *U. of New Hampshire*

Trustworthiness is critical for successful negotiations, but it is often broken. Apologies have been proven to be a useful approach to repair trustworthiness; however, it remains unclear whether their effectiveness holds over time, and if they are more effective for individuals who trusted the transgressor prior to the incident. Across two studies, we examined whether apologies remained effective for repairing the relationship when parties have a pre-negotiation trusting relationship versus when they do not. We found that following the violation and apology, trustworthiness was most successfully repaired, and commitment enhanced, when the victim trusted the transgressor prior to the negotiation. However, when assessed two days following the apology, trustworthiness and commitment were lower. In a second study, we found that delaying the apology could be an effective way to maintain trust repair and commitment following a violation, particularly when transgressors are trusted prior to the negotiation, because the time that has passed allows anger to subside. Overall, these findings highlight the importance of accounting for time and pre-negotiation trust in understanding apologies' effectiveness following a trust violation during a negotiation.

CM: **Forgiveness and Affiliative Responses to Workplace Incivility**

Author: **Jin Wook Chang**, *Korea U. Business School*
Author: **Jeeyoon Jeong**, *Korea U. Business School*
Author: **Jae Uk Chun**, *Korea U. Business School*

Workplace incivility is a near-ubiquitous phenomenon and typically engenders behavioral responses that impair relationships at work. In the present research, we theorize and empirically demonstrate that targets of incivility might engage in relationship-enhancing, rather than relationship-eroding, responses, directed to both other uninvolved third parties as well as to instigators. Drawing on and integrating insights from research on incivility, forgiveness, and emotion regulation, we develop and test a theoretical model that identifies when and why such affiliative responses to incivility are likely. Across two time-lagged studies (one preregistered), we find that experienced incivility is positively associated with a negativity-reduction motive when the incivility target's task interdependence is high; when incivility target's social identification is high, experienced incivility is positively associated with a positivity-enhancement motive as well. Results also indicate that the negativity-reduction motive is related to affiliative efforts directed to non-instigator third parties, whereas the positivity-enhancement motive is related to increased affiliative efforts toward the instigator. Our theory and findings offer a more comprehensive account of behavioral responses to experienced incivility and how to better deal with incivility, a phenomenon that appears undesirable yet prevalent in the workplace.

CM: **Please Apologize! The Negative Consequences of Soliciting Apologies**

Author: **Carlina Conrad**, *IE Business School*
Author: **Kelly Nault**, *IE Business School*
Author: **Kriti Jain**, *IE Business School*

One way that victims can restore their threatened sense of agency after a conflict is through the power of being able to decide whether or not to accept an apology. However, despite us being in the "age of apologies", such apologies might not always be given immediately post conflict. In line with the increased norm of apologizing, apologies are not just increasingly expected, but they can also be demanded explicitly from victims. In this research we demonstrate that victims asking transgressors to apologize is indeed a phenomenon occurring at the workplace. Furthermore, via a mixed-method approach focusing on both the perspective of the victim and the transgressor, we are able to explore the downstream consequences of victims soliciting an apology. Drawing upon the needs-based model of reconciliation as well as social distance theory, we propose that a victim soliciting an apology will increase avoidance behavior of the transgressor, driven by an increased feeling of powerlessness. The first two studies utilizing a micro-narrative approach suggested that while victims generally feel better after soliciting an apology, transgressors feel more negative and want to avoid the victim more. Study 3 using an experimental design found support for our full proposed model – a victim soliciting an apology fosters increased interaction avoidance in the transgressor, mediated by felt powerlessness. This study contributes to the emerging literature on downstream consequences of post-conflict behaviors and identifies an unexplored way in which victims address their lack of agency – namely by decreasing the power of the transgressor.

Participant: **Akshina Banerjee**, *Ross School of Business, U. of Michigan*
Participant: **Linhui Wu**, *U. of Minnesota Carlson School of Management*

Impression management is a fundamental characteristic of social interaction that plays an essential role in maintaining social harmony. The present symposium seeks to understand how to foster effective workplace communication by identifying the consequences of common strategies for managing impressions. Ruttan, Adams, and DeCelles examine the unintended consequences of espousing neutrality on divisive political and moral issues. Abel, Rosenblum, and Zlatev contend that concealing an opposing stance on a political issue harms observers' perceptions of integrity but boosts perceptions of benevolence. Slepian redefines the concept of secrecy, illuminating new paths for understanding the experience of secrecy in people's lives. Finally, Chaudhry, Banerjee, and Wu examine the efficacy of strategies used by managers to make amends following organizational transgressions. Together, these papers provide a novel and unique perspective on impression formation and management, both inside and outside organizations.

Gender-based violence (GBV) refers to acts of violence that are rooted in gender inequality and that are used to reinforce gender inequality. GBV manifests in various ways, including physical, sexual, psychological, and economic violence. While it is complex to understand GBV and its different manifestations, working toward its prevention is even more challenging. Through an ethnographic engagement with a women's court in India that works to prevent and solve cases of GBV in rural areas with feminist principles, we tried to explore the challenges in GBV prevention with the victims' and women's court members' perspectives. We adopted a postcolonial feminist lens in the study, where we applied intersectionality and subaltern theories. While victims' agency and their perspectives on violence and justice often have been ignored, women's courts in rural areas work with a restorative justice approach to prioritize women's voices and provide a platform to share their points of view. The findings of the study uncover challenges in attaining gender justice and reveal loopholes in the justice system. Further, the study discusses the role of solidarity and resistance in gender justice-related work. The discussion of the study contributes to the literature on intersectionality and postcolonial studies and extends research in the areas of gender, work, and violence in the Global South.

CMS: **Contextualize Social Responsibility or Credible Responsibility in Global Production Network?**

Author: **Fahreen Alamgir**, *Monash U.*
Author: **Glen Croy**, *Monash U., Australia*
Author: **Amrik Sohal**, *Monash U.*
Author: **Tharaka De Vass**, *Monash U.*
Author: **Kazi Mahmudur Rahman**, *Independent U. Bangladesh*

The garment global production network (GPN) is founded on an unrecognized gendered manufacturing workforce. While these women's work conditions and welfare have been the focus of numerous civil society organizations' (CSOs) efforts, substantial and widespread improvement has not been realized. The emergence of multilevel-stakeholder-initiative (MSI) compliance regimes, based on relational engagements between CSOs, and garment brands and manufacturers, were seen as the new age for workers. MSI compliance regimes were argued to demonstrate relational responsibilities, which grounds their legitimacy. We examine ethical sourcing practice focussing on situatedness of commitments regarding the materialization of social development goals in the context of post compliance regimes in Bangladeshi garment industry. Our findings show that the necessity of safe, secure, and stable work and entitlements of workers are contingent on brands' unpredictable and exploitative procurement practices, revealing the lack of business accountability. Drawing on Sen and Drèze, we argue that accountability is innately linked with the perspectives of rights. However, the realization of workers' rights is contingent on democratic means and actions that lead to public debate and the strength of public actions. We argue for a critical evaluation of how different actors contribute to democratizing the governing of GPNs, and showing how accountability intersects with credible responsibility. Keywords: Global production networks, credible responsibility, accountability, rights-based approach, public debate and actions, Apparel industry

CMS: **Transnational CSR: A postcolonial feminist reading of women's experiences at the workplace**

Author: **WAN NUR AMIRA BINTI RAHMAT**, *U. of Edinburgh business school*

This paper explores corporate programmes from the Global North disseminating a particular gender diversity agenda across transnational and organisational contexts. The programmes travel from the Global North to increase awareness and sharing of 'best practices' in achieving gender equality goals in countries in the Global South. Specifically, the paper argues that there is a hegemonising agenda on gender equality and women empowerment that travels and assimilates the local context. The paper proposes bringing together a postcolonial feminist methodology of reading up and otherwise the power structure and reading texts and women's experiences responsibly through the feminist solidarity model (Mohanty, 2003) and transnational literacy (Spivak, 1999) to refuse and resist hegemonic discourse of neoliberal feminist ideas propagating in transnational gender equality CSR programmes. Drawing on the case of a transnational corporate women advocacy group, the 30% Club Malaysia and interviews with women working in the corporate sector, I address the issues of overidentifying the 30% agenda, technology of representation, and erasure of subaltern agency. Finally, I reinforce the need for responsibility and governance structures to be informed by understanding locally grounded discourses and women's circumstances.

CMS: **Decolonizing Feminist ‘Knowledge’: ‘The Modern Woman’ in Kazakh Influencer Culture**

Author: **Nandita Roy**, *Indian Institute of Management, Calcutta*
Author: **Anjan Ghosh**, *Suleyman Demirel U., Kazakhstan*
Author: **Paromita Chakravarti**, *jadavpur U.*
Author: **Nurlykhan Aljanova**, *Graduate School of Business, Nazarbayev U.*
Author: **Nazym Baskynbayeva**, *al-Farabi Kazakh National U.*

This paper seeks to deepen the understanding of gendered influencer cultures and the construction of women’s subjectivities through their relationships with religion, work, family, motherhood and the state. We situate our research in Post-Soviet Kazakhstan and study three most popular female influencers and their followers. We question existing dominant and universalist Western feminist frameworks (post-feminist and neoliberal) of reading women’s roles in influencer cultures and their imbrications in the market. Deploying theories of decoloniality and epistemic reconstitutions, this paper uncovers underlying forms of imperialism in knowledge construction. This epistemic reconstitution is necessitated by our respondents’ ambivalent identification and disidentification with feminism, which our respondents see as Western, neo-colonialist and imperialist. Instead, they choose to use the idea of the modern woman, which is a complex amalgam of their historical legacies and lived realities. Exploring modalities of border thinking, we analyse this category of the modern woman, to think beyond ideas of Anglo-American modernity to better understand the realities and aspirations of Kazakh women within influencer cultures. This paper reads this idea of ‘alternative modernity’ in the light of the construction of the ‘new woman’ in colonial India. To this end, the paper brings together the two discursive fields of post-colonialism and post-socialism to decolonize Western feminist theoretical paradigms of reading women dominated influencer cultures. Thus, this paper contributes to widening the notions of transnational intersectionality in constructions of gendered influencer culture.

Critical Perspectives in Research

Session Moderator: **Paul Hibbert**, *U. of St Andrews*

CMS: **Research for the Workers: Rethinking Evaluation and Recognition**

Author: **Dirk Lindebaum**, *Grenoble Ecole de Management*
Author: **Paul Hibbert**, *U. of St Andrews*

In this essay, we question journal standing as sole proxy for research excellence. We argue that craving for the next 'hedonic hit' in an 'A journal' – and the recognition that comes with it – obstructs researchers' eudaimonic flourishing associated with meaningful work. While research must be reliable or trustworthy, we advocate the use of complementary evaluative practices that involve those most affected by management research – the workforce, represented by Trade Unions – to offer an evaluation on 'meaningful research'. This engagement may also redress the imbalance of overwhelmingly favouring performance over social outcomes in management and organisation studies. While our target audience is ultimately university managers, we seek to influence relevant policies also through change from within ourselves, plus the involvement of Trade Unions, to add evaluative practices designed to capture 'meaningful' research and promote social outcomes. Doing this will enables researchers to demonstrate impact, while organisations can benefit from exposure to ideas proposed by researchers that can lead to greater wellbeing and pro-worker outcomes at work.

CMS: **Relational Perspectivism and The Case for Slow Theorizing in Critical Temporal Studies**

Author: **Julie Wolfram Cox**, *Monash U.*
Author: **John S Hassard**, *U. of Manchester*

Within management and organizational studies (MOS), the growth of temporal studies - research broadly concerning both the nature of time and its structuring, or temporality - has resulted in considerable conceptual development but also in instances of confusion and contradiction, with associated need for greater concept clarity. In response, we introduce relational perspectivism to argue that critical, empirical applications of particular temporal concepts should be informed by complementary theoretical perspectives such as critical realism (which arguably focuses on past-present relations), practice theory (on reconsiderations of the present), and American pragmatism (on present-future relations). We focus our discussion outside the hypothetico-deductive logic that typifies mainstream research in MOS. Here, rather than comparing theories on a general topic and then leaving such comparisons behind to apply a theory-specific concept from within an a priori theory base, relational perspectivism promotes a new form of concept clarity through comparing and selecting relevant concepts from a range of theoretical perspectives. We argue that such slow theorizing can also assist modest, mid-range theory development, in contrast to metatheoretical strategies such as paradigm sequencing, bridging, extension, and triangulation.

CMS: **Bean-Counting Research and the Mismanagement of Knowledge Production in Business Schools**

Author: **Alejandro Agafonow**, *ESSCA School of Management*
Author: **Marybel Perez**, *ESSCA School of Management*

Notorious cases of corporate misconduct often revolve around the misapplication of pay sensitivity to performance. Yet many business schools have too easily given themselves up to these kinds of high-powered incentives in the management of research. This practice is contrary to the teachings of the very management knowledge taught in business school classrooms and it can wreak havoc with business schools' mission of knowledge production. The reduction of managing research to a bean-counting performance evaluation, that is, keeping count of discrete units of research output like journal hits and citation counts, has arguably tilted the balance in favor of form and against content, thus undermining both the quality of knowledge produced and the autonomy that academics need to create knowledge. Similar to how combat sports, football or soccer, and democratic societies prevent certain traits and actions from conferring an unfair advantage, academics need to reclaim the principle of a level playing field to prevent practices inimical to the academic enterprise.

CMS: **From Neoliberal Standards of Care to Ethical Standards of Care: The Role of Numbers**

Author: **Ludivine Perray-Redslob**, *EMLYON Business School*
Author: **Nathalie Clavijo**, *Toulouse Business School, TBS Education*
Author: **Wafa Ben Khaled**, *ESCP Business School*
Author: **Mattia Anesa**, *U. Of Sydney*

Numbers have been studied as governance and domination tools in the neoliberal order. In this study, we take a different stance and study the ethico-political power of numbers. Relying on the burgeoning literature on counter accounts and Statactivism, we analyze how numbers can be mobilized to reassert a work ethos through counter accounts. Our study investigates French public-health professionals' action to denounce New Public Management practices. We use Facebook content (March 2019-21) from two groups of health professionals as data sources. Our preliminary results show that through quantification, health professionals objectify their situation and make visible how they are pushed outside their "ethical-comfort zone". This research answers to recent calls to investigate the ethics of numbers. More precisely, the aim of this research is to contribute to the literature on the use of numbers and statistics in activism by outlining that numbers are not only "political" but can also become 'ethical'

Author: **J. Nils Foege**, *Leibniz U. Hannover*

In this study, we examine the relationship between the digital transformation and the sustainability transformation. While recent studies suggest that these transformations are interrelated, the literature does not clarify whether they attenuate or amplify one another. Drawing on Socio-Technical Systems (STS) Theory, we argue that digitalization only enhances firms' financial and ecological performance if accompanied by firms' internal corporate social responsibility (CSR), i.e., the extent to which firms care for their employees' well-being. This argument follows an STS logic suggesting that a technical subsystem needs to be embedded in a social subsystem to bring about organizational change, and ultimately contribute to firm performance. To test our theorizing, we collected data from more than 800 firms listed in the S&P 1,500 over a period from 2015 to 2020. The results of our random-effects regression analysis support our theorizing that firms' digitalization increases firms' financial and ecological performance if firms care for their employees by means of internal CSR activities. Our study contributes to research at the intersection of digitalization and sustainability by providing novel insights into the interplay of the corresponding transformations.

CTO: **IT-Enabled Purposeful Diversification of Pool of Participants When Opening up Important Decisions**

Author: **Liucen Pan**, *Warwick Business School*
Author: **Mo Moeini**, *Warwick Business School*
Author: **Joao Baptista**, *Lancaster U. Management School*

The paper proposes "purposeful diversification of pool of participants" as a new organisational capability necessary for diversity and inclusion management in opening up important decisions. The analysis of several examples based on in-depth semi-structured interviews with managers with experience in opening up decision-making, and analysis of publicly available case material indicate that managers can purposefully include participants into the decision-making pool, subject to their context specific diversity attributes, to improve diversity and inclusion. Looking for need- affordance-features we capture how IT can be a useful resource for participants pool development by facilitating muti-need, multi-affordance, and most likely, multi-tool. The findings also imply that organisations require historically neglected but valuable voices into the participant pool of decision making to drive meaningful decision outcomes.

CTO: **Reinforcing Inequalities: Evidencing the Third-Level Digital Divide**

Author: **Marcelo Henrique De Araujo**, *Álvares Penteado School of Commerce Foundation (FECAP)*
Author: **Luisa Veras De Sandes-Guimarães**, *USCS - U. Municipal de São Caetano do Sul*

This paper examines the relationship between the different levels of digital divide and the effect of sociodemographic factors and autonomy of use on the level of digital skills, and how these elements influence the harnessing of online opportunities. The Correspondent Field Model proposed by Helsper (2012) was used as theoretical framework to operationalize the concept of online opportunities in the economic, social and personal domains. Microdata from the 2014 and 2016 editions of the ICT Households Survey in Brazil were used to test the hypotheses, resulting in a sample of 9,902 and 9,995 of Internet users respectively. The findings support the hypothesis of sequentiality between the different levels of digital divide, so that internet users with greater use autonomy tend to have a higher level of digital skills and this, in turn, has a positive impact on harnessing online opportunities. The findings also point out that, even among people who have overcome the initial barrier to access the Internet, their digital inequalities in autonomy, digital skills, and uses (opportunities) still reflect existing social inequalities, reinforcing the existence of a Matthew Effect in harnessing online opportunities (the richer get richer, the poor get poorer). These findings can also contribute to the discussion of initiatives of mobile leapfrogging, as our results indicate that mobile-only Internet access has a negative impact on the level of informational skills, essential for harnessing online opportunities. Thus, this may result in a more superficial use of the Internet, collaborating to the formation of a second-class digital citizen.

CTO: **Expanding Organizational Attention to Environmental Issues**

Author: **Jaemin Kim**, *Oakland U.*

Firms often expand organizational attention from core-business domains to environmental issues and blend the two topics, rather than viewing them separately. However, less is understood about how organizational attention expands from their core domains to environmental issues. Thus, this study aims to improve the understanding of how firms expand their attention toward environmental issues. To observe this phenomenon, I use the transportation manufacturing industry and examine how the two topics of technology as a business core and environmental issues are blended and why communications with stakeholders affect attentional expansion. I use LDA topic modeling to detect the progression of the topics across years in those industries and panel-data analysis to test the impact of communications with stakeholders on organizational attention. This study will explore the role of communication with stakeholders in shaping subsequent organization attention to environmental issues.

Digital Transformation 1

Session Moderator: **Ruth Sloot**, *U. of Twente*

CTO: **Making Sense of Tensions and Equivocalities in Digital Transformation**

Author: **Ruth Sloot**, *U. of Twente*
Author: **Johannes Voordijk**, *U. of Twente*
Author: **Leentje Volker**, *U. of Twente*

Digital transformation is a process in which digital technologies play a central role in creating and reinforcing disruptions. Although considerable research has been devoted to potential strategic responses to these disruptions, only limited attention has been paid to the equivocalities that persistently disrupt the digital transformation process. In this paper, we present the results of a three-year longitudinal single-case study on a digital transformation program as it was implemented and revised in a public infrastructure agency. We uncovered three major categories of equivocality – scope, needs, and priorities – that the organization needed to overcome to develop new digital tools and standards. We also revealed that entangled paradoxical tensions explain why such equivocalities emerged. By relating tensions and equivocalities, we contribute to further understanding why change is incremental and sensemaking is slow in digital transformation journeys of public infrastructure agencies.

CTO: **Anticipatory Organizing and the Predictive Scoping of Digital Transformation**

Author: **Virginia Leavell**, *Cambridge Judge Business School*

In this study I advance the thesis that technological anticipation shapes both structure and action in organizations long before the technologies themselves arrive on site. I provide support for this thesis by with an ethnographic study of two organizations conducted before an expected technological change was to take place. The findings are drawn from a three-year study that included over 830 hours of observations, more than 90 interviews, and more than 13,000 pages of documents. With my study of two water agencies that managed the production and distribution of drinking water, I show how field workers anticipated a new automated and digital metering system. I find that not only do actors not need to interact with new technologies for the process of technologically induced organizational change to begin, but that the changes brought about, in part, by technological anticipation are themselves a significant phenomenon for the organizations. Specifically, I show how anticipatory discourse about the metering technologies and the organizations' future states shaped action in ways that influenced the budget and application of the projects at the time of approval, a process I call anticipatory technological framing. These findings contribute to the study of organizational anticipation and technological frames and help us to reconsider the process of technologically induced organizational change more broadly.

CTO: **Digital Transformation of Micro-Enterprises in Resource-Constrained Environments: A Digital Bricolag**

Author: **Stan Karanasios**, *U. of Queensland*
Author: **Aljona Zorina**, *IESEG School of Management (LEM-CNRS 9221)*
Author: **PK Senyo**, *Southampton Business School, U. of Southampton*
Author: **John K. Effah**, *U. of Ghana*

While research on digital transformation has received a lot of scholarly attention, our understanding of how digital transformation unfolds beyond conventional organizational settings and technologies has remained undertheorized. This paper provides insights to emergent and non-linear processes shaping digital transformation of micro- enterprises that operate in resource-constrained environments. Building on theories of bricolage, making do making do by applying combinations of resources at hand, and insights from 52 interviews with micro-enterprises and technology ecosystem actors in Ghana, our findings offer a processual model of micro-enterprise digital transformation with bricolage in resource-constrained environments, and suggest links between digital transformation, bricolage processes, and micro-enterprise long-term success and growth. We discuss implications of our findings for theories of DT, bricolage, and practitioners.

CTO: **From Artificial Design to Artificial Intelligent Design: Process Model of Digital Reinvention**

Author: **Fei Shen**, *Shanghai Jiao Tong U.*
Author: **Weiru Chen**, *China Europe International Business School (CEIBS)*
Author: **Jiexiang Wang**, *School of Business Administration, Zhejiang Gongshang U.*

In this longitudinal qualitative study, we explore how established firms undertake digital transformation toward reinvention. We found that the change leader took actions of Schemed Shocking, Embedded Digitizing, and Templated Empowering in the first phase which we frame as purposeful "episodic change". Then followed by the business units to execute "continuous change" which are Improvisational Orienting, Regenerative Digitalizing, and Super-modular Evolving. Our paper unfolds the processes for organizations to achieve reinventive consequences during digital transformation by fusing digital characteristics with change theory.

Healthcare Information Technology

Session Moderator: **Sriram Somanchi**, *U. of Notre Dame*

CTO: **Empirically Investigating How EHR Adoption Impacts Mergers and Survival in the US Healthcare System**

Author: **Sriram Somanchi**, *U. of Notre Dame*
Author: **Brad Greenwood**, *George Mason U.*
Author: **Corey Michael Angst**, *U. of Notre Dame*

How does the adoption of enterprise information systems (EIS) affect M&A activity in large organizations? Prior scholarship suggests EIS dramatically increases the agility of the firms and facilitates streamlining the organization around competitive advantages. However, recognizing that EIS is costly, practical considerations would suggest that such systems would incentivize the merging of organizations to distribute fixed costs via economies of scale. We examine whether such systems contribute to the contraction or expansion of organizations by examining M&A activity in the US healthcare system after the adoption of electronic health records (EHR). In doing so, we investigate the effect of EHR adoption on both the survival of hospital systems and their acquisition decisions. Analysis of 699 mergers between 2007 and 2014 suggests that while EHR adoption significantly increases a hospital's likelihood of survival, it also makes them less desirable acquisition targets. Thus, interested acquirers prefer to target non-EHR adopting hospitals, likely because of the challenges of re-integrating an established EIS. Secondary dyadic analysis shows that if there is a match between vendors of the EHR between the acquirer and acquiree, this increases the likelihood of merging; thus, acquirers prefer hospitals that have not digitized, unless they share vendors.

CTO: **Examining the Impact of Governance Structure and Health Information Technology Enabled Capabilities**

Author: **Qidi Xing**, *U. of Oklahoma Price College of Business*
Author: **Rajendra Singh**, *U. of Oklahoma Price College of Business*

Absorptive capacity reflects an organization's ability to identify, assimilate, and exploit valuable knowledge from the environment to improve business performance. The IS literature has provided important insights into how an organization's internal and external IT-enabled capabilities influence its absorptive capacity. However, the current literature has not considered how the assimilation of new knowledge may be hampered if the organizational partners have divergent interests that limit strategic cooperation and operational coordination. Drawing on a large dataset from the American Hospital Association, we empirically examine the impact of specific governance structures (multihospital system members and individual hospitals)—that can shape divergent interests among the constituent members—may influence a hospital's absorptive capacity. We also examine the role of internal and external IT-enabled capabilities on absorptive capacity of hospitals. We found that a multihospital system membership has a positive association with absorptive capacity of the member hospitals. We also found that a multihospital system membership positively moderates the relationship between IT-enabled capability and absorptive capacity. Thus, this study extends the IS literature on absorptive capacity by theoretically and empirically establishing links between governance structure, IT-enabled capability, and absorptive capacity.

CTO: **Electronic Health Record (EHR) System Use and Antecedent Influences on Cognitive Load**

Author: **Curtis Merriweather**, *Weatherhead School of Management, Case Western Reserve U.*

We explore the level of cognitive load and the other factors influencing it while using electronic health records (EHR) systems. Federal incentives, such as the HITECH ACT, have mandated EHR system use, and we have identified EHR system use as the culprit towards adverse use effects of EHR systems. However, more research is needed which examines the antecedents of cognitive load, such as EHR data usability, general information overload, and system usability. Usable EHR data, including its completeness and higher quality, have been touted as critical usability factors improving the use of EHR systems (Kim et al., 2019a). A quantitative survey was conducted among 564 physicians regarding their experiences of using EHR systems at clinical work. The results indicate that EHR use significantly influences cognitive load. In summary, the results confirm that usable EHR patient data reduces information overload and cognitive load. Therefore, healthcare organizations must work to ensure data completeness, data-driven usefulness, and data quality standards are enacted. The effects of information overload and EHR use are complex; as information overload increases, cognitive load also increases. Generally, the user interface in EHR systems is confusing, leading to increased cognitive load. Therefore, EHR usability improvements reduce cognitive load.

CTO: **Modeling the Evolution of Interhospital Transfer: A Longitudinal Network Analysis**

Author: **Wenwen Li**, *School of Management, Fudan U.*
Author: **Yao Li**, *southern U. of science and technology*
Author: **Yukun Yang**, *southern U. of science and technology*

Interhospital transfers aim to provide super-specialty care and maintain patients' optimal health by transferring the patient to another hospital facility. As a complex undertaking, the interhospital transfer involves a multitude of factors that influence transfer formation, and transfer relationships among hospitals evolve over time. Although an extensive body of literature exists on factors determining where patients get transferred, less attention has been paid to understanding how interhospital transfer networks evolve and what important factors influence the evolution process. In this study, we empirically model the evolution process of the interhospital transfer network using a stochastic network modeling approach and identify key factors determining the network evolution. In particular, we consider digital health technologies that have great potential to assist coordinated healthcare delivery and demonstrate the role that three representative digital health technologies play in interhospital transfer. Using data from multiple databases on 178 hospitals over five years in the State of Florida, we find that both exogenous factors and endogenous network interactions influence the evolution of the interhospital transfer network. Besides identified factors, such as efficiency, distance, and relationship, digital health technologies significantly impact interhospital transfer networks' tie formation during the evolution process. Our study contributes to the literature on patient routing in healthcare operations by uncovering mechanisms of the evolution of interhospital transfer networks.

Social Media & Organizations

Session Moderator: **Robert Gregory Ji-Won Park**, *Ivey Business School*

CTO: **A Typology of Social Media Drifting**

Author: **Robert Gregory Ji-Won Park**, *Ivey Business School*
Author: **Yasser Rahrovani**, *Ivey Business School*

Social media drift occurs when users use a social media platform too often for goals other than those originally intended by the platform owner, such that the platform eventually and primarily serves alternative users or needs. This can lead to change in a platform's purpose and nature. Much of our understanding of drift is limited to negative consequences in traditional technologies. Meanwhile, social media is particularly susceptible to drift due to platform openness and interaction among users. Extant social media research focuses mostly on organizational contexts for usage within an organization and usage to communicate with external parties. There is a lack of research on how external parties can impact social media platforms and cause drift. This creates a research gap for understanding the nature of drift on public-facing or externally focused social media where phenomena are emergent, diverse, and potentially more complex than what is known, given drift's simplistic negative reputation. We draw on IS alignment and control literature to develop a new framework and make observations regarding real-life examples in industry to conceptualize the states that can be exhibited by a platform, as well as a typology of corresponding drifts. Our framework contributes to IS alignment and control literature by demonstrating that social media drift can be diverse in typology and that drift may be not only positive in some cases but also possibly necessary for a platform's future. Keywords: social media; drift; control; IS alignment; platform governance

CTO: **Social Media and Startup Innovation: A Human Capital Perspective**

Author: **Gavin Wang**, *Wharton OPIM*
Author: **Lynn Wu**, *The Wharton School, U. of Pennsylvania*

Private companies including startups are important contributors of innovations in the United States. However, innovation activities often require human capital with diversified sources of domain knowledge, which is hard to access for early-stage companies whose networks are usually constrained. In this paper we examine the effect of social media activities on startup innovation performances. Using company funding information from Crunchbase, social media activities from Twitter, patent and inventor information from USPTO and employee trajectories from LinkedIn for 6,000 startups from 2007 to 2020, we find that the usage of social media is associated with more patens and more patent inventors in the startup. We document two major benefits of social media in startup innovation performance: (1) Social media can break through the network constraints faced by startups and bridge company with potential employees, so that the startup can hire from a more diversified network and obtain more technology spillovers. Consistent with this mechanism, we find that after using social media, the startup's hiring network positions are improved faster, and the applied patents are associated with more diversified technologies. (2) Social media can demonstrate the corporate culture of startups and attract people with a sense of identity, so that the coordination cost within the company is lower. Consistent with this mechanism, we find that after using social media, the startups are more likely to hire inventors who share similar cultural backgrounds with existing inventors in the company. Together, our research underscores the importance of human capital management in innovation and entrepreneurship, and how social media can facilitate information transmission and improve startup human capital.

CTO: **Ventures' Social Media Presence,Innovation Performance,Financial Aspirations,on Return-Based Funding**

Author: **Shifang Zhao**, *Xi'an Jiaotong U. & City U. of Hong Kong & National U. of Singapore*
Author: **Yoojung Ahn**, *Korea U. Business School*
Author: **Zelin Lyu**, *National U. of Singapore*

With the growth of entrepreneurship, return-based investors seek entrepreneurial firms that indicate a high return on investment. In parallel, entrepreneurial firms attract financial capital in different ways, and utilize social media platforms is as one such way to communicate the value of the firm. As such, in this study, we seek to understand better the relationship between ventures' social media presence and return-based funding (i.e., equity and debt) they can acquire. We additionally explore how start-ups showcase their attractiveness by communicating the venture's innovation performance and financial aspirations on social media. Based on early-stage start-ups that applied to accelerators from 2013 to 2019, we find that start-ups' social media presence is positively associated with the amount of return-based funding acquisition. Furthermore, we find a positive moderating effect of ventures' innovation performance and financial aspirations on the relationship between start-ups' social media presence and return-based funding. This study contributes to our scholarly and practical understanding of how start-ups' social media presence, innovation, and financial aspirations are associated with return-based funding outcomes.

CTO: **The Development and Validation of a Scale Measuring Social Media Surveillance from Colleagues**

Author: **Hamnah Rahat**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*
Author: **Sadia Nadeem**, *National U. of Computer and Emerging Sciences, Islamabad, Pakistan*

Employees' personal social networking accounts are increasingly being monitored on social media by employers and colleagues. Despite the existence of the phenomena and its potential to impact employee and organizational-related outcomes, empirical research in this area is limited. A full understanding of this phenomenon and its implications for possible outcomes requires psychometric-based measurements. Therefore, this study aimed to develop and validate a scale for social media monitoring through workplace contacts (SMWC). Using the theoretical foundation of Foucault's panopticon and Botan's concept of the panoptic effect, a 15-point scale was constructed that is divided into four factors including perception, potential, management policy, and maturity. The scale is tested for factorial validity, discriminant validity, criterion-related validity, and scale replication. To summarize, SMWC is a short, psychometrically sound scale that holds promise for use in research and practice.

Prejudice, Agency, and Relations at Work

Session Moderator: **Sharmeen Merchant**, *U. of Cincinnati*

DEI: **Do You Catch More Flies with Honey than Vinegar? Adopting Agency and Communality in Negotiations**

Author: **Sharmeen Merchant**, *U. of Cincinnati*
Author: **Scott Dust**, *U. of Cincinnati*

Research primarily suggests that masculine, agentic-focused characteristics such as aggression and competitiveness facilitate negotiation success. Alternatively, feminine, communal-focused characteristics such as warmth and helpfulness are generally considered to detract from negotiation success. Interestingly, there are a few studies that highlight specific circumstances whereby exhibiting these communal traits can add value in negotiations. We offer a conceptual model that brings this research to the forefront, highlighting a more comprehensive view of how women and men are likely to fare during negotiations when they engage in gender-congruent or gender-incongruent behaviors. To do so we draw from job-demands resources theory, self-regulation theory, and paradox theory to offer several propositions. Specifically, we posit that women can leverage both agentic and communal tactics through behaviors we call agentic-communal switching and agentic-communal paradox management. We also posit that adopting such tactics will be psychologically taxing in the form of ego depletion. We offer several theoretical and practical implications that stem from our ideas that are relevant for negotiation and gender and work research.

DEI: **Second-Order Prejudice: Development and Validation of a Construct and Scale**

Author: **Chelsea Lide**, *Stanford Graduate School of Business*

Despite the seemingly widespread endorsement of egalitarian values, discrimination nevertheless persists. This paradox has inspired a bourgeoning perspective in discrimination research that considers how people's beliefs about others' prejudices may compel their own discriminatory behavior, even when such behavior contradicts their personal values and beliefs. Building on this research, this work presents a theory-based definition of second-order prejudice, or our beliefs about the prejudices of others. Then, using four independent samples (N = 1,810) across one exploratory and three pre-registered studies, I develop and validate a 10-item second-order prejudice scale to measure beliefs about third-party discriminatory behavior. Results are presented to support the scale's dimensionality along with its content, convergent, and discriminant validity. When used in conjunction with existing measures adapted to assess a third-party's feelings (affect) and stereotypes (cognition) about members of their ingroup and outgroup, the second-order prejudiced behaviors scale can serve as a comprehensive method for measuring beliefs about third-party prejudice. As a result, this work contributes a novel framework and tools for exploring an exciting new frontier in the study of workplace discrimination.

DEI: **The Hen House Effect: The Negative Repercussions of Working in Women-Only Teams**

Author: **Mallory Decker**, *PhD student at CU Boulder*
Author: **David R. Hekman**, *U. of Colorado, Boulder*

This research developed and tested a model of a proposed "hen house effect" in which women who work in all-women teams are perceived as socially competitive and therefore deserving of less pay. In one field study of 967 international athletic events, and in a second of 682 medical providers, we found that women who worked with other women failed to reap the same pay benefits as men who worked with other men. We then conducted two controlled experiments in which participants rated individuals who worked alone or exclusively on same-gender teams, and analysis revealed that women who work exclusively on all-women teams were perceived as more socially competitive, which, in turn, led participants to view such women as deserving less pay. Broadly speaking, these results suggest that women who work exclusively with other women are viewed negatively, resulting in a gender pay gap. Implications for the gender bias and glass ceiling literatures are discussed.

DEI: **A Woman's Status Opportunity: Examining the Interaction of Gender and Status on Knowledge Sharing**

Author: **Birke Laubinger**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Lukas Vogelgsang**, *Ludwig Maximilian U. of Munich (LMU)*

Interpersonal relationships contain valuable resources for knowledge creation and exchange. In the present study, we explain how the value of relational resources in knowledge sharing processes also depends on the unique roles individuals enact in groups. We draw on identity and expectation states theory to argue that the relative salience of status and gender identities in relational contexts tends to promote members' capitalization on knowledge embedded in these relationships. Thus, women, compared to men, are more able to receive knowledge from low-status contacts, while both men and women receive most knowledge from strong connections to high-status individuals. Hypotheses are tested on an individual level based on data of 343 interpersonal relationships, deriving from 50 ego-alter networks acquired from health professionals in Western Europe. Implications are made for practitioners who aim to promote knowledge sharing behavior in their organization and for future research to investigate further the interaction of role identities on knowledge sharing.

Improving DEI Practices for Firms and Employees

Session Moderator: **Ramsha Naeem**, *U. of Central Punjab*

DEI: **The Impact of Demographic Faultlines on Group Performance**

Author: **Ramsha Naeem**, *U. of Central Punjab*

Drawing on subgroup theory, we hypothesized that entitlement beliefs converted dormant faultlines into activated faultlines, which positively and negatively affected group performance. To this effect, we identified two separate pathways that transferred the effects of activated faultlines on group performance. On one side, activated faultlines resulted in increased power struggles which mediated the negative effects of activated faultlines on group performance. On the other side, activated faultlines—in the presence of a strong justice climate—triggered group communication, which mediated the positive effects of activated faultlines on group performance. We tested these hypotheses first through an experimental approach and then through a field study. Data supported most hypotheses, resulting in important theoretical and managerial implications.

DEI: **Women in Leadership: Examining Individuals' Perceptions of Algorithms**

Author: **Jessica Ochmann**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Leonard Michels**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Sven Laumer**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Women are still underrepresented in management. One reason for this inequality are gender stereotypes that lead human decision makers to prefer men over women for leadership roles. To overcome these issues, we propose using algorithms as a promising approach to promote gender equality in management. Given that algorithms are appropriately designed, they can remove gender discrimination by maximizing the predefined outcome of balanced gender ratios. We extend prior research on women in IT by investigating the perceptions regarding IT applications aiming to balance management staffing across all industries. In an online experiment with HR expert from a multinational science and technology company, we find that maximization perceptions increase fairness perceptions in the context of women in leadership. In addition, we examine how the disclosure of an algorithmic (versus human) decision maker's underlying maximization strategy affects maximization perceptions and show that perceptions depend on whether purpose or process explanations are communicated.

DEI: **Mind the Way you Frame It! Interplay of Vision Framing and Diversity Practice on (Non)Target Support**

Author: **Anastasia Kieliszek**, *LMU Munich*
Author: **Rouven Kanitz**, *Rotterdam School of Management, Erasmus U.*

Organizations launch diversity initiatives to promote diversity and increase representation of underrepresented groups (e.g., women as targets and men as so-called nontargets). While typically welcomed by the target group, the most effective diversity practices may be compromised by nontargets withholding their support. It remains unclear, however, how organizations—particularly those dominated by nontargets—can successfully implement diversity initiatives while preserving nontarget initiative support. To address this critical question, we take a social identity perspective and examine the interactive effects of diversity practice type (identity-conscious vs. -blind) and top leader vision framing (high vs. low vision of continuity) on nontarget initiative support. Using data from a 2 x 2 between-person field experiment in a firefighter organization, we find that framing the initiative under a vision of high (relative to low) continuity alleviates nontargets' distributive justice concerns in the face of identity-conscious (rather than identity-blind) practices and thereby preserves nontarget initiative support. However, supplementary analyses reveal that visions of high continuity may in fact be a double-edged sword: whereas nontargets respond favorably, targets perceive identity-conscious practices as more unjust. Our work has important implications for managing the initiation of diversity initiatives in a way that preserves (non)targets' perceived justice and initiative support.

DEI: **Woke and Anti-Woke Diversity Strategies: Diversity, Equity, and Inclusion in the Culture War**

Author: **Nancy DiTomaso**, *Rutgers Business School*

Because diversity is always associated with inequality, diversity, equity, and inclusion (DEI) programs often raise issues about redistribution and change to the status quo that has benefited some groups over others. As such, DEI is also a prime target for political controversy, especially in the current political environment where intergroup relations are at the heart of many political issues about which the two main political parties in the U.S. diverge in their policy agendas. In this paper, I address a recent characterization of DEI programs as pursuing "woke" strategies associated with critical race theory (CRT) and which are claimed to generate a vicious cycle that threatens organizational effectiveness in contrast to "anti-woke" strategies that combine paradox theory and positive organizational behavior theory and which are claimed to generate a virtuous cycle that will benefit all organizational members. In the paper, I challenge the claims of this argument and explain why the characterization of DEI programs as woke and ineffective is wrong-headed and misleading, and I also highlight broader issues that are raised for the DEI field about what constitutes effective strategies for a positive future and suggest possible pathways to addressing these issues.

Gender, Representation, and Performance

Session Moderator: **Mariasole Bannò**, *U. of Brescia*

DEI: **Why So Slow? Gender Quotas Are Not Enough To Enhance Gender Equality**

Author: **Mariasole Bannò**, *U. of Brescia*
Author: **Emilia Filippi**, *U. of Brescia*
Author: **Tommaso Fornasari**, *U. of Brescia*

Drawing on institutional theory, this study explores whether Italian mandatory gender quotas for corporate boards of listed firms are associated with a greater presence of women on boards of their subsidiaries, which are not directly subject to the law. We aim to understand the reactive behavior of firms' under formal institutional pressure through regulatory intervention (namely, mandatory gender quotas) at the affiliate level. The analysis is based on a database composed of 28,000 Italian firms, of which 371 listed firms, 1,233 subsidiaries of listed firms, and 26,384 non-listed, non-subsidiary listed firms. We adopted the propensity score matching proposed by Rosenbaum and Rubin (1983) to match firms in the treatment group (i.e., listed firms and subsidiaries of listed firm) with firms in the control group (i.e., non-listed and non-subsidiary of listed firms) that are similar in all relevant characteristics. The analysis revealed that the mandatory quota had increased the presence of women directors in listed firms, but its impact does not extend to their subsidiaries.

DEI: **A Sweet Spot for Gender Diversity? The S-Curve Relationship Between Gender Diversity and Performance**

Author: **Pamela Gu**, *U. of Wisconsin, Madison*
Author: **Orlando C. Richard**, *UMass Amherst*
Author: **Derek R. Avery**, *U. of Houston*
Author: **Marcus Stewart**, *Bentley U.*
Author: **Patrick F. McKay**, *East Carolina U.*

By integrating theories of social identity, the resource-based view of the firm, and status hierarchies, we propose an S-curve model of the relationship between gender diversity and firm performance. We test our hypotheses using two retail store samples and a third sample of Fortune 500 companies. Across all three samples, we find support for an S-shaped relationship between gender diversity and firm performance where moderate levels of gender diversity serve as a "sweet spot" for the effect of gender diversity on firm performance. Further, we find that this relationship is dependent upon gender equality management such that effective gender equality management is necessary to realize the benefits of gender diversity. Theoretical and practical implications are discussed.

DEI: **Work-Life Balance in Engineering and Construction and Their Effects on Women's Representation.**

Author: **Marzena Baker**, *U. Of Sydney*
Author: **Erica French**, -
Author: **Muhammad Ali**, *Queensland U. of Technology*
Author: **Mahshid Tootoonchy**, *U. Of Sydney*

The gender pay gap identified by the Global Gender Equality Report 2022 as substantially unaddressed or under addressed worldwide has resulted in further calls for an increased focus by organizations on the design and implementation of work-life programs to reduce the gender pay gap and achieve gender parity. The purpose of this study is to investigate how work-life programs, motivated by workplace consultation, influence women's representation and lead to improved organizational financial performance in male-dominated industries of engineering and construction. A time-lagged research design using data collected from an archival database tested the study's predictions in 205 construction and engineering organizations operating in Australia. In addition, thirteen semi-structured interviews were conducted with HR professionals and senior managers working in these industries to generate descriptions of the design and implementation issues experienced in their efforts to address the gender pay gap using work-life policies and strategies. The findings indicate that workplace consultation has a positive impact on the offering of work-life programs. Work-life programs partially mediate the relationship between (1) workplace consultation and women's representation in non-management, and (2) workplace consultation and financial performance. The results have several theoretical, research and practical implications.

DEI: **Gender Diversity in the R&D Team and the Abandonment of Innovation Projects**

Author: **Bettina Becker**, *Durham U. Business School*

The lack of gender diversity remains an unsolved issue in firms' R&D teams. However, gender diversity influences strategic human and social capital and has been shown to be beneficial for firm innovation. At the same time, a large share of firms' innovation projects gets abandoned. This paper examines whether there is a link between gender diversity in the R&D team and the firm's abandonment of innovation projects. The 'value-in-diversity' perspective proposes that gender diversity will enhance the diversity of ideas as well as the quality of decision-making. We argue that, given an a priori fixed innovation budget, the increased innovation capability will lead to more innovation abandonment. Applying non-parametric matching methods to a sample of Spanish manufacturing firms during 2009-2016, we find evidence in support of our theoretical framework. The results are particularly robust if the increase in the R&D team's gender diversity takes place among the researchers, as compared with technicians and assistants. The positive association between the R&D team's gender diversity and abandonment is stronger at the conceptual stage of the innovation process than at the implementation stage. In the light of the learning-from-abandonment literature, these findings imply that gender diversity may improve firms' learning to prevent abandonment.

Participant: **Nick Turner**, *U. of Calgary*
Discussant: **Ivona Hideg**, *Schulich School of Business, York U.*

Addressing inequity is a pressing societal concern. For example, numerous studies have provided consistent evidence for gender inequities as well as barriers and adverse workplace experiences women face. In this symposium, we aim to shed light on factors that can help accelerate social progress in the domain of gender and leadership. The papers in this symposium showcase how leaders can effectively facilitate women's leadership advancement (Bajet Mestre & Gloor; Lyubykh, Alonso, & Turner) and help manage team diversity (Yang, Li, van Knippenberg, & Pieterse), offer a psychometrically robust scale to measure leader allyship (Mercer et al.), and explore how female leaders navigate tensions between gender expectations and leadership expectations (Khattab & Hentschel). We will conclude with a discussion (Hideg) to suggest directions for future research a well as takeaways for leaders, organizations, and policymakers.

Organizational Culture and Behavioral Norms

Session Moderator: **Dana Kanze**, *London Business School*

DEI: **Just Call Me Megan: Who Benefits and How from Un-Titling?**

Author: **Dana Kanze**, *London Business School*

Institutions can convey a sense of warmth by cultivating an informal culture. One way to communicate the institution's cultural informality is for employees to use first names rather than earned titles ("title references"). But which institutional constituents benefit from this practice of "un-titling" and how? Research suggests lower status members—such as female and junior faculty members in business schools—rely on legitimacy cues like titles in order to obtain evaluations that are comparable to higher status peers. Four studies (N = 1,815) provide survey, archival, and experimental evidence for gender and occupational rank distinctions in title references, as well as the role that institutional culture informality plays in how faculty members are perceived and ultimately evaluated. Title references are associated with more favorable evaluations from students, but female faculty members are less apt to receive them and struggle to title themselves by "self-titling" in the absence of formal norms. There is a warmth versus competence trade-off when faculty express a preference of address, such that faculty members requesting to be called by their first names (vs. self-titling) benefit from students' increased perceptions of warmth but are disadvantaged by perceived lack of competence. Benefits accrue to seasoned, full professors (rather than unseasoned, assistant professors) who opt for first name basis, leveraging the increased perception of warmth without incurring a perceived competence cost at that higher occupational rank. Female full professors requesting to be called by their first names (e.g., "Just call me Megan") derive the most benefit among all examined conditions, effectively navigating the double bind of gendered expectations.

DEI: **Period Pain Presenteeism: Investigating Correlates of Working While Experiencing Dysmenorrhea**

Author: **Alexandra Cook**, *U. of Amsterdam*
Author: **Robin Van Den Hoek**, *U. of Amsterdam*

Although menstrual pain (dysmenorrhea) is common and can have detrimental effects on workability and social functioning, little is known about how people manage dysmenorrhea in their professional life. Existing evidence indicates that people with dysmenorrhea often engage in presenteeism, meaning they work despite experiencing symptoms and report perceptions of social stigma around menstruation. In this study, we investigated individual health-related factors, psychosocial factors, and work factors associated with period pain presenteeism in a cross-sectional survey study including N = 664 employed people with experiences of dysmenorrhea. Our results show that symptom severity, disclosure of menstrual pain to the leader, and remote work are directly associated with period pain presenteeism. Also, we found that disclosure to the leader was associated with leader gender, leader-member exchange (LMX), and the absence of a medical diagnosis, indicating a potential mediating effect. We did not, however, find the perceptions of public beliefs regarding the concealment of menstruation to be related to presenteeism or disclosure. Our findings have important implications for theory building and research on menstruation in occupational contexts, occupational health management and communication, diversity management in organizations, and leadership training.

DEI: **Escalation of Destructive Leader Perceptions and Attributed Motives by Leader Gender**

Author: **Regina Dutz**, *Technical U. of Munich*
Author: **Armin Pircher Verdorfer**, *Amsterdam Business School, U. of Amsterdam*
Author: **Claudia Peus**, *Technical U. of Munich*

Addressing and preventing destructive leadership is a priority in research and practice. However, its assessment is complex because implicit beliefs and stereotypes about leaders may influence followers' and evaluators' subjective perceptions of destructive leaders, specifically in traditional male domains such as STEM academia. While previous research suggests that gender stereotypes induce greater backlash towards female leaders, we lack evidence of how they drive female leaders' devaluation, especially for destructive leadership perceptions. We conducted a field survey to investigate how destructive leader perceptions escalate for female versus male leaders from exceedingly passive behaviors to highly intense behaviors (study 1). We theorize that attributions drive the escalation and are more harmful for female than male leaders, which we tested in a subsequent experimental study focusing on attributed injury initiation versus performance promotion motives for showing destructive leadership (study 2). Study 1 suggests spill-over effects of destructive leader perceptions from "milder" to more intense forms, which were more pronounced for female than male leaders. Substantiating and extending the pattern of gender bias, study 2 indicates that the gendered construal of highly intense and more hostile forms of destructive leadership (i.e., abusive behaviors) towards male followers strongly depends on the attributed injury initiation motive. This was not supported for more subtle forms (i.e., exploitative behaviors) and destructive leadership towards female followers. We discuss the implications of our findings.

DEI: **How Two Megatrends Affect Each Other: Studying the Interplay of Remote Work and Workplace Inclusion**

Author: **Magdalena Schertler**, *U. of St. Gallen*
Author: **Nicola Glumann**, *U. of St. Gallen*
Author: **Stephan Alexander Boehm**, *U. of St. Gallen*

The modern working world is characterized by two mega-trends. First, remote work has become the "new normal" with many employees working from home. Second, increasing diversity has made the case for inclusion, i.e., opportunities for authenticity and belongingness that employees have to perceive to be performant. However, as both constructs are typically investigated by different literatures, it is unclear if their relationship is positive or negative and if it is a unidirectional or reciprocal impact that they exercise on each other. Further, it is unresolved if diversity dimensions such as gender have a moderating impact. To address these questions, we collected a large-scale, longitudinal dataset (N = 2380) and used an advanced methodology (RI-CLPM) to derive causal conclusions. Our results show that an increase in remote work has a negative impact on inclusion. Regarding belongingness, significant effects were found in both directions, with increasing remote work negatively influencing belongingness and reduced feelings of belongingness leading to an increase in remote work. For opportunity for authenticity, strong gender effects were found, with only women showing significant effects in both directions. Our findings are highly relevant for practice as companies have to foster inclusion while allowing for remote work.

Marginalised Voices and Diversity Climate

Session Moderator: **Yunyue Yang**, *Yokohama National U.*

DEI: **Gender Difference in Perceived Voice Climate and its Consequences: A Cross-Cultural Examination**

Author: **Yunyue Yang**, *Yokohama National U.*
Author: **Jie Li**, *Xi'an Jiaotong-Liverpool U.*
Author: **Tomoki Sekiguchi**, *Kyoto U.*

Scholars have emphasized the importance of understanding workplace climates that support gender diversity. However, research on sexist climates (i.e., perceptions of negative climates for women) is surprisingly limited. Building on role theory perspectives and social exchange theory, we develop and test a multilevel moderated mediation that links gender to perceived voice climate and job attitudes, depending on the cultural values. From a sample of 9,990 employees in 14 societies, we found that women's perceived voice climate is lower than men, and that low levels of voice climate perceptions lead to low levels of job attitudes. Furthermore, we found that these relationships were more salient in individualistic societies than in collectivistic societies. We discuss the implications of our findings for the literature on climate, gender, and culture.

DEI: **Towards Trans-Inclusive Workplaces: When Do Female Directors Matter?**

Author: **J. Yo-Jud Cheng**, *U. of Virginia*
Author: **Dwaipayan Roy**, *U. of Virginia Darden School of Business*

Transgender people face distinct challenges with respect to accessing employer-based health benefits. While prior research suggests a positive relationship between female board representation and LGBT-inclusive workplaces, it may not be easy for female directors who are underrepresented in most boards to influence the provision of trans-inclusive health benefits, a socially contested issue. We theorize that external factors like state-level trans-inclusive health laws and internal factors like proportion of young directors contribute to the ability of female directors to influence a firm's decision to provide trans-inclusive health benefits. We use a hand-constructed dataset of Fortune 500 firms from 2008-2020 to investigate whether, and under what circumstances, female directors influence the provision of trans-inclusive health benefits. We find no association between the proportion of female directors and a firm's likelihood to provide trans-inclusive health benefits. However, firms with a higher proportion of female directors are more likely to provide trans-inclusive health benefits when they are headquartered in states with higher number of trans-inclusive health laws and when they have more young directors on their boards. This study contributes to our understanding of the role of corporate boards in providing trans-inclusive health benefits.

DEI: **Diversity in Words, Diversity in Deeds**

Author: **Jean Sohn**, *Teachers College, Columbia U.*
Author: **Caryn J. Block**, *Teachers College, Columbia U.*
Author: **David Mendelsohn**, *McKinsey & Company*

In an organizational context, individuals encounter multiple contextual cues that signal how their organization approaches diversity. These cues include diversity ideology espoused by the organization, as well as enacted diversity in representation at the most senior levels of the organizational hierarchy. The present study investigated how these two distinct diversity cues, when presented in conjunction, differentially affect Whites' and racial minorities' perceptions of organizational authenticity and their predictions of success. Our findings demonstrate that when diversity ideology claimed to value difference (vs. equality or merit) but, in reality, racial minorities were underrepresented at the executive level, both Whites and racial minorities perceived the organization as being inauthentic. In terms of predictions of success, diversity ideology that highlighted value in equality (vs. difference or merit) had a particularly positive impact on racial minorities, while the lack of diversity among senior executives was particularly detrimental to racial minorities' predictions of success. In contrast, neither diversity ideology nor leadership diversity influenced predictions of success of their White counterparts. These findings demonstrate that it is critical for organizations to walk the talk by increasing diverse representation across the ranks in order to signal authenticity and to increase racial minorities' perceived chances for achieving success.

DEI: **An Examination of Workplace Demands and Resources Among Trans/Nonbinary Employees**

Author: **Adam Pervez**, *Mississippi State U. Meridian*
Author: **Mateo Cruz**, *Bentley U.*
Author: **Noemi Nagy**, *U. of South Florida*
Author: **Kevin Lo**, *U. of San Francisco*

Although research identifies inclusion as a critical workplace experience for transgender and nonbinary (TNB) employees, less is understood about the mechanisms that explain why and how inclusion drives outcomes. To address this gap, we draw from Conservation of Resources (COR) theory to identify and test which workplace resources explain TNB people's experiences with inclusion and their relationship to engagement and burnout. Specifically, we asked TNB participants (N = 200) to describe their experiences at work and the actions their employers could take to improve inclusion. Using the same sample, we designed and tested two double moderation-mediation models concentrated on the types of support described by participants and the value placed on each. Our findings suggest the most negative experiences TNB people face at work occur in interactions with coworkers and customers, more so than with management or human resources. We also found three types of resources – coworker support (interpersonal), managerial support, and perceived organizational support (POS) (institutional) – explain why inclusion matters and under what circumstances. This study extends our understanding of the mechanisms for workplace inclusion to occur and provides organizations direction on where to place emphasis on much-needed resources for TNB employees.

Harassment and Discrimination

Session Moderator: **Amit Kramer**, *U. of Illinois Urbana-Champaign*

DEI: **Discrimination Against Asian Immigrants to the US: Quality of the First Organizational Placement**

Author: **Amit Kramer**, *U. of Illinois Urbana-Champaign*
Author: **Kwonhee Han**, *U. of Illinois at Urbana-Champaign*
Author: **Yun-Kyoung Kim**, *Salisbury U.*
Author: **Karen Kramer**, *U. of Illinois at Urbana-Champaign*

Hiring decisions are complex and subjective and for the most part, unobservable to researchers. In this study we try to overcome this limitation by studying whether nationality influences the evaluation of workers at time of hiring using data collected on all newly hired assistant professors of management and business administration in research-intensive (R1) universities in the Unites States between 2010 and 2021 (N = 452). We focus on the quality of the university into which recently graduated Ph.D. are placed and examine whether first-job placement quality is lower for individuals who were born in East, South and Southeast Asia (Asian nationals henceforth). We coded the publication record of assistant professor at time of hiring as well as a set of demographic characteristics of these hires. As expected, the ranking of the Ph.D. granting institution and the quality and quantity of the publication record are positively related to the quality of the placement. In addition, we find that conditional on Ph.D. granting institution and publication record, Asian nationals are placed at lower-quality universities relative to their peers. We also find that applicants who are Asian nationals require a strong performance signal, in the form of first or second authorship on a paper to narrow the placement gap. Overall, our results are best explained by a combination of direct discrimination against applicants of Asian nationality and a requirement of a higher performance "burden of proof" from these applicants, compared to other applicants.

This paper analyzes the market reaction to reported discrimination or harassment against LGBT stakeholders (i.e., employees and customers) using a unique hand-collected sample consisting of 167 events worldwide. The results show a negative and significant average effect following the announcement of an LGBT misconduct, with around 0.5% abnormal decrease in market value over the event day and the next trading day. The average magnitude of impact is significantly lower after the #MeToo movement, suggesting that investors tend to be less indulgent even regarding inappropriate behavior based on sexual orientation. We also find that firms experiencing large negative magnitude of impact perform concrete corrective actions to repair their tarnished reputation.

DEI: **A Journey from Crisis to Advocacy: A Bibliometric Review of LGBTQIA+ Scholarship**

Author: **Matteo Montecchi**, *King's College London*
Author: **Maria Rita Micheli**, *IESEG*
Author: **Mario Campana**, *U. of Bath*
Author: **Hope Schau**, *U. of Arizona*

Although governments and organizations are increasingly addressing the importance of diversity and inclusion policies, LGBTQIA+ individuals still experience discrimination and stigmatization in the market. It is, therefore, imperative that research identifies barriers and struggles that LGBTQIA+ and other marginalized individuals face in order to inspire more inclusive marketplace practices. This article systematically reviews the existing scholarship on LGBTQIA+ issues at the intersection of management and public policy. By combining bibliometric and automated text mining methods, this research profiles a sample of 156 articles and identifies five thematic clusters: consumer experiences, marginalized consumer identities, imagery creation in advertising, marketplace policies, and minority targeting strategies. Further, this article plots the temporal evolution of the literature and identifies three substantive phases: crisis, marketization, and advocacy. The outcome is a recursive phasic framework that unpacks how marginalized consumer markets emerge and evolve. This conceptual framework can be used to understand and strategically invigorate management research that leads to more inclusive markets and public policy efforts.

DEI: **Workplace Sexual Harassment – A Structural Inequality Perspective**

Author: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*
Author: **Mohsin Bashir**, -

In this article we argue that sexual harassment is neither unusual nor an anomaly. Contrary to mainstream MOS literature which focuses on individual character traits, cultural differences and other antecedents of sexual harassment, we apply a structural perspective to sexual harassment at the workplace. To do so we conducted in-depth interviews of survivors across industries and organizational forms in urban Pakistan, triangulating them with content analysis of media reports of sexual harassment and case files from the Office of the Ombudsperson for workplace sexual harassment in Pakistan. Using Joan Acker's theory of inequality regimes in organizations and Catherine MacKinnon's sociopolitics of male dominance, we contribute to the scholarship on the subject by demonstrating that organizations, rather than merely individuals, are inherently gendered and sexualized. Second, we show how the systematic subordination of women in organizational and social hierarchies serves to institutionalize sexual harassment even where there are policies and processes meant to prevent it. This is because there is a gender and class nexus that makes sexual harassment at the workplace inescapable. These conclusions have important implications for activism and action against workplace sexual harassment, which is often focused on tokenistic interventions such as awareness campaigns directed at women and employee sexual harassment trainings.

Although there has been a growing literature on diversity and inclusion, some minorities or stigmatized persons have been overlooked and understudied. There has been relatively little research on veterans (e.g., Minnis, 2017), and immigrants (e.g., Al Ariss et al., 2012), and almost no research on Native Americans and the working poor. Thus, the primary purposes of the proposed symposium are to: present the research results of these overlooked groups, foster additional research on their access to jobs and careers, and provide strategies for human resources to increase the inclusion of these groups in organizations.

Historically, disability employment has been recognized as a human rights issue of major concern in our society. Seminal research finds that people with disabilities are underemployed, underpaid, and consistently face barriers to productivity and advancement at work, including often finding themselves being "last hired, first fired" (Schur, Kruse, & Blanck, 2013). Of central concern is disability disclosure and the associated need for workplace accommodations. Requesting accommodations and has been known to be a pain point among employees with disabilities (Gold, Oire, Fabian, & Wewiorski, 2012). Even the decision about when and how to broach the topic, whether during the interview or after the job has been acquired and launched is controversial. Some say that disability disclosure and the conversation about accommodations should be held until after the job is secured, while others advocate for the benefits of sharing this information up front, which include honesty, transparency, and the ability the control the narrative (Ameri & Kurtzberg, 2022). From the employer's standpoint, accommodations are similarly a gray territory. Though some employers have reported workplace accommodations to be worthwhile (Unger, 2002), with anecdotes including improved productivity, retention, and culture (Kaye, Jans, & Jones, 2011; Hartnett, Stuart, Thurman, et al., 2011), all while incurring minimal costs (Soloveiva, Dowler, & Wall, 2011), others feel apprehension and discomfort (Hernandez, McDonald, Divilbiss, et al., 2008; Lengnick-Hall, Gaunt, & Kulkarni, 2008; Domzal, Houtenville, & Sharma, 2008). The trepidation among cautious employers is typically driven by (1) fears of egregious costs (even if unfounded), (2) a poor understanding of what accommodations are and how they might help, (3) difficulty in setting up proper accommodations, and (4) little support from the outside world to guide these decisions and processes (Schur, Nishii, Adya, et al., 2014; Gamble, Dowler, & Orslene, 2006). The papers in this presentation symposium explore the topic of accommodations from several different perspectives. In the first presentation, the authors ask, how do accommodations specifically associated with Assistive Technologies (AT) come across to potential employers? They study hypothetical job candidates with and without disabilities and with and without requests for accommodations to evaluate reaction on trust, risk, and employability. Quantitative and qualitative results show that the request for accommodations, in general, is problematic. And while using AT seems to have some benefits for perceptions of trust, it is still perceived as risky and does not categorically improve employability ratings. This paper highlights that there is still work that needs to be done to minimize the fears associated with accommodation requests. In the second presentation, the authors ask, what are the ethical concerns associated with assistive devices? For example, camera-based devices that convert visual information into auditory input for a blind employee may be resisted by the user's workgroup if they see it as a potential source of surveillance that can cause career and social repercussions for them (Denning, Dehlawi, & Kohno, 2014). Or, in sports-related employment, devices (e.g., prosthetic legs) that might confer added advantages are likely to be viewed as unethical by able-bodied competitors (Burkett, McNamee, & Potthast, 2011). The provision of such devices raises questions of fair eligibility versus entitlement. This question is further complicated by assistive devices, such as cochlear implants, that become a part of the person themselves (Christie & Bloustien, 2010). Business, legal, and ethical arguments arise when considering such accommodation requests. In the third presentation, the authors ask, what types of workers are most likely to request and receive workplace accommodations? Using an intersectional lens, the authors explore differences in particular for those with multiple marginalized identities such as older women and people of color (POC). This study compares the results from a survey of legal professionals to a representative sample of 38,000 employed people in the US. Using the 2021 Current Population Survey (CPS) Disability Supplement, the authors investigate who is more likely to request workplace accommodations and have such requests granted. In the fourth presentation, the authors ask, do workplace accommodations help workers with Long Covid maintain their attachment to and advance in the labor force? The analysis will use data from the American Community Survey and Current Population Survey to track the absolute and relative incidence of people with cognitive and mental health impairments, with a focus on differentials by gender and race/ethnicity. The authors triangulate this analysis with data on Long Covid from the Household Pulse Survey and the Patient-Led Research Collaborative. The paper concludes with a close investigation of relevant accommodations in the workplace, including remote work, shorter workdays, and flexible scheduling.

Examining Gender Disparities Across Cultural Levels

Session Chair: **Charlotte Townsend**, *Haas School of Business, UC Berkeley*
Session Chair: **Laura Kray**, *U. of California, Berkeley*
Presenter: **Elinor Flynn**, *The Wharton School, U. of Pennsylvania*
Presenter: **Ashley E. Martin**, *Stanford Graduate School of Business*
Participant: **Seval Gündemir**, *U. of Amsterdam*
Participant: **Astrid Carlotta Homan**, *U. of Amsterdam*
Presenter: **Malia Mason**, *Columbia Business School*

In this symposium, we explore gender effects across all cultural levels. At the ideas level, Flynn will present the effect of the narrative that the gender gap persists as a result of women's choices and address how this aligns with women's actual experience. Martin and colleagues will explore possible gender-inclusive policies at the institutional level. Next, Mason will present on how expectations for women's interactions with others become internalized. Last, Townsend and Kray contribute to understanding how individuals' beliefs about whether gender roles can change affect their behavioral intentions, reducing women's work-family conflict in the process. By examining gender across cultural levels, we can better understand each factor's interconnectedness in the existing gender system. Disrupting the current gender system requires looking at gender effects and policies at all levels of the system.

Promoting Diversity, Equity and Inclusion (DEI) is an important goal for many academic institutions. Many universities engage in a myriad of actions to promote DEI. The effectiveness of these actions is not always visible; progress is gradual, well-intentioned efforts are -at times- met with resistance and backlash and can even create unintended negative effects. This panel examines the challenges and opportunities related to (promoting) DEI in academia. An international group of academic leaders representing a range of institutions, who play a central role in this subject matter both as scholars and academic leaders, will offer their unique perspectives on as well as share their experiences with DEI-related challenges and opportunities in academia.

Participant: **Linda Chang**, *The Wharton School, U. of Pennsylvania*
Participant: **Katherine Milkman**, *U. of Pennsylvania*

In recent years, organizations across all industries have taken steps toward improving their diversity, equity, and inclusion (DEI) practices. While scholarship in this area has made substantial strides in developing theoretical accounts that enhance our understanding of the underlying causes of inequity in organizations, progress in improving DEI outcomes has been modest. One reason why meaningful and sustained progress in this area is challenging is due to its multifaceted nature. As a result, researchers and organizations must consider a range of factors so that DEI initiatives can be designed and conveyed effectively to meet the unique challenges encountered by underrepresented and disadvantaged groups. In this symposium, we contribute to this effort by presenting a set of papers that collectively examine some of these multi-layered aspects of diversity, such as overlapping stigmatized identities and understudied diversity dimensions. Taken together, our symposium aims to: (1) identify challenges to diversity and inclusion initiatives, and (2) highlight practical solutions organizations can implement in their DEI efforts. Thus, the papers in this symposium address key open research questions in this area, including: for whom signaling lower social class is most costly in the workplace, why managers fail to consider socioeconomic status as a diversity dimension, and what are the most effective ways for organizations and managers to frame diversity narratives. Following the presentations, Dr. Lisa Leslie, a leading scholar in the fields of organizational diversity and social justice, will facilitate a discussion about the papers and potential research avenues for improving diversity, equity, and inclusion in organizations.

Entrepreneurship and COVID

Session Moderator: **Wu Lai**, *South China Agricultural U.*

ENT: **Adverse Effects of Entrepreneurs' COVID-19 Representation on Entrepreneurial Passion for Developing**

Author: **Wu Lai**, *South China Agricultural U.*
Author: **Feng Xu**, *South China Agricultural U.*
Author: **Linlin Jin**, *Guangdong U. of Technology*

COVID-19 has disrupted operational efficiency of businesses and negatively affected people at workplaces. Entrepreneurship has been more severely impacted and entrepreneurs are working in the pandemic while encountering more job stressors. Research has provided ample evidence on the impact of the pandemic as a socioeconomic crisis on entrepreneurs and their ventures. However, recognized as a highly infectious disease, COVID-19 is also a personal crisis that poses a health threat to entrepreneurs. This research aims to develop and test a model of how and when entrepreneurs' psychological responses to COVID-19 can affect essential motives based on the job demands-resources theory. Using a time-lag design, results reveal that entrepreneurs' COVID-19 representation can thwart their long-term passion for developing and effort through arousing fear of failure. Further, entrepreneurs' psychological resilience impact changes in these negative, indirect effects. These findings provide important implications for the literature on the linkage between entrepreneurship and crisis and the developmental process of entrepreneurial motivation from the demands-resources process perspective.

ENT: **The Impact of COVID-19 on New Venture Teams: Role Ambiguity and Power Hierarchy** ☯

Author: **Wen Feng**, *Renmin U. of China*
Author: **Melody J. Zhang**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Author: **Xi Wang**, *Renmin U. of China*

This paper aims to understand the impact of COVID-19 on new venture teams (NVTs) and new venture outcomes. Integrating the event system theory and role theory, we develop a moderated-mediation model showing: (a) NVT role ambiguity mediates the effect of COVID-19 event novelty on new venture ambidextrous strategic orientation, and (b) NVT power hierarchy moderates this mediated effect. We tested our model through a multi-source survey study of 284 members from 87 NVTs in China. The results showed that COVID-19 event novelty negatively affects new venture ambidextrous strategic orientation via NVT role ambiguity, and this mediated effect is stronger when NVT power hierarchy is low than high. These findings offer theoretical and practical insights into how NVTs deal with COVID-19 crisis to maintain competitive advantages of new ventures.

ENT: **How Co-Working Spaces Self-Adapt to Tremendous Shocks? Empirical Evidence Under the COVID-19**

Author: **Wanyue Wei**, *Chengdu U.*
Author: **Zheng He**, *U. of Electronic Science and Technology of China*
Author: **Lez Rayman-Bacchus**, *Winchester Business School, U. of Winchester, SO22 HT UK*
Author: **Qianyou Zhang**, *Chengdu U.*
Author: **Danish Junaid**, *Bahria U. , Islamabad Pakistan*

Although co-working spaces have attracted much attention as a type of entrepreneurial support organization, few researchers explore their resilience. To fill this gap, we employ grounded theory to establish a two-stage self-adaptation model that explain how co-working spaces adapt to the sudden shock of COVID-19 and then further empirically examine this framework. Our findings suggest that (1) the adaptive process is comprised of two stages - namely the first stage network recovery and the second stage network reconfiguration - which highlight the pivotal roles of legitimacy acquisition and value co-creation. (2) In the network recovery stage, crisis response capability positively influences network recovery through legitimacy acquisition, and industry characteristics and inter-organizational trust play moderating roles. (3) In the network reconfiguration stage, dynamic capability positively affects network reconfiguration, and value co-creation plays a partial mediating role, while institutional support does not significantly moderate the relationship between dynamic capability and value co-creation. This paper constitutes contributions to co-working space research and entrepreneurial support organization literature.

ENT: **Performance and Resilience of Entrepreneurial Ventures During the COVID-19 Pandemic**

Author: **Alvaro Cyrino**, *Fundação Getúlio Vargas/EBAPE*
Author: **Luiz Gustavo Barbosa**, *Fundação Getúlio Vargas/EBAPE*
Author: **Cinara Gambirage**, *U. of Groningen*
Author: **Jaison Caetano Da Silva**, *Fundação Getúlio Vargas/EBAPE*
Author: **Ronaldo C. Parente**, *Florida International U.*

In this study, we examine the effects of the COVID-19 pandemic and both entrepreneur and enterprise characteristics on entrepreneurial ventures' performance and resilience. We adopted exploratory approach and use a dataset with 10 surveys waves from 2020 to 2021, with an average of 7,000 Brazilian entrepreneurial ventures in each wave. We use a pooled model to analyze performance and a pooled logit model to analyze resilience, with standard errors clustered by state in all models. Our findings suggest that the increase of virus contagion per se does not severely affect entrepreneurial ventures' performance and resilience. However, the worsening of the COVID-19 pandemic does weaken entrepreneurial ventures' performance and resilience. Moreover, the findings suggest that entrepreneur education has an inverted U-shaped relationship with entrepreneurial ventures performance. Indigenous, Brown, and Black entrepreneurs experienced decreased entrepreneurial ventures resilience compared to White entrepreneurs. While entrepreneurial ventures that adopted digital technologies and had access to loans increased their performance and resilience during the COVID-19 pandemic, those who failed in these aspects saw negative effects on their performance and resilience. The paper sheds light on a little understood topic: the COVID-19 pandemic's effects on entrepreneurial ventures performance and resilience.

Entrepreneurship and Uncertainty

Session Moderator: **Pascal Olivier Wild**, *HEG School of Management Fribourg / HES-SO // U. of Applied Sciences Wes*

ENT: **The Survival of Internationalizing SMEs: The Liabilities of Newness, Smallness and EO**

Author: **Pascal Olivier Wild**, *HEG School of Management Fribourg / HES-SO // U. of Applied Sciences Wes*

Different theories regarding the process of SME internationalization yield in conflicting predictions of whether an early age at internationalization is threatening or beneficial for their survival. Furthermore, little is known about the effects of entrepreneurial orientation (EO) on firm survival as well. We analyze 980 internationalizing SMEs from 2010 to 2022 using survival analysis and find that both, an early age at internationalization as well as EO, increase the risk of business failure. However, the effect of EO on business failure decreases, the more the SMEs age and size increases. This paper contributes to a better understanding of the factors threatening SME survival, an increasingly important though often neglected topic of research.

ENT: **Late to the Party: Who Could Have Predicted the 100th Anniversary of Knight's True Uncertainty?**

Author: **Sophia Braun**, *ESCP Business School*
Author: **Nicholas Dew**, *Naval Postgraduate School*
Author: **Yi Jiang**, *ESCP Business School*
Author: **Rene Mauer**, *ESCP Business School*

Uncertainty is one of the core constructs in entrepreneurship theory. It is defined as a probability situation in which there is no base for classifying potential outcomes (Knight, 1921). Entrepreneurs act in situations of uncertainty since the outcome of their ventures is unknowable. However, the entrepreneurship field does not have a consistent understanding of uncertainty. There is no agreement on uncertainty measurement, uncertainty valuation, and the role of uncertainty perception. In fact, the concept of "true" Knightian uncertainty seems to be drifting in meaning over time. This is problematic because it means that entrepreneurship as a field fails to properly capture one of its core phenomena. By conducting an in-depth analysis of 52 theory papers that represent state-of-the-art research on Knightian uncertainty, we show four distinct perspectives on uncertainty. They differ in terms of action (agents search or judge) and valuation (positive or negative). We coin these four perspectives, or models of future states, novelty, possibility, ignorance, or unknowability. We argue that entrepreneurs interact with uncertainty depending on how they perceive it. The ability to evaluate and interact with situations of uncertainty gives entrepreneurs an advantage in realizing opportunities. Hence, we suggest that uncertainty is a necessary condition for opportunity.

ENT: **Risk, Uncertainty & Leaps of Faith: How Institutional Non-Compliance & Trust Affect Entrepreneurship**

Author: **Maria-Irene Angelidis**, *Baruch College & The Graduate Center, CUNY*
Author: **Romi Kher**, *City U. of New York, Baruch College*
Author: **Scott L. Newbert**, *City U. of New York, Baruch College*

Entrepreneurship is a function of risk and uncertainty and, thus, is shaped by the institutional environment in which it emerges. Institutions, or the codifiable and normative rules that underly transactions, mitigate risk by setting minimum standards of acceptable behavior with other entities, such as that which might be outlined in a contract. However, no institutional environment is perfect, and entrepreneurs must also be reliant on trust, or the willingness to be vulnerable to an entity even with no monitoring or control mechanism. Because entrepreneurship is a product of individual judgment, some entrepreneurs may not only be risk- and uncertainty-tolerant but also risk- and uncertainty-seeking, suggesting that depending on the kind of entrepreneurship, the individual is likelier to take on the risk of breaking from institutional rules and the uncertainty of trusting in unknown alternates of whom the individual has only incomplete information. Employing a multilevel model on World Values Survey data collected between 2010 and 2016, we analyze over 4,000 self-employed respondents across 60 countries. We find that, on average, entrepreneurs are more tolerant of breaking institutional rules and trusting in unknown alternates, but with important boundary conditions – namely, the wealth of the country, ethnolinguistic fractionalization, and control over corruption.

ENT: **How Fuzzy Set Theory Informs Strategic Representations Under Knightian Uncertainty**

Author: **Farley Simon Nobre**, *Federal U. of Paraná*
Author: **Mark D. Packard**, *Florida Atlantic U.*
Author: **Brent Clark**, *U. of Nebraska, Omaha*

Recent studies on small-world representations and entrepreneurs-as-scientists reinforce the thesis that managers and entrepreneurs' decisions rely on incomplete information in strategic situations of Knightian uncertainty. However, the bounded rationality framework of strategic decision-making that currently prevails implicitly makes unrealistic assumptions about the nature of the categories that underlie decision criteria, i.e., as if they were conceptually sharp or well-defined. We draw on fuzzy set theory to explain that the liminal boundaries between perceptual categories that shape partial knowledge and judgment are typically 'fuzzy' and have unsharp frontiers. We take a step toward strengthening the analysis of the strategic representations that rule managerial and entrepreneurial thinking. We proffer fuzzy logic as a more approximate representation of the actual reasoning that underlines the remarkable ability of the human brain to solve ill-defined and abstract problems without crisp or quantifiable measurements, such as those faced in business. These fuzzy representations are captured with natural language (rather than bivalent logic) to better exploit uncertainty and convey more meaningful decisions. Finally, we revisit heuristics, small-world representations, and the processes of belief formation, testing, and feedback as capturing nuance and gradation in the elements of judgment. We discuss several implications for strategic heuristics and entrepreneurship theory.

Session Moderator: **David Wunder**, *Aalto U.*

ENT: **Harvesting or Nurturing? Corporate Venture Capital and Startup Green Innovation**

Author: **David Wunder**, *Aalto U.*
Author: **Markku Maula**, *Aalto U.*

Corporate venture capital (CVC) has been shown to influence portfolio firm behavior and outcomes. However, the current urgency of both corporations and the venture capital market to address global sustainability challenges, e.g., develop solutions to mitigate climate change, has raised a new previously unanswered question of what role CVC plays in startup green innovation. To address that question, we examine young innovative ventures in Europe that received VC investments from 2004 to 2019 and employ multiple methods to distinguish the selection and nurturing effects of CVC investors on venture green innovation. Regarding selection effects, our findings reveal that CVC investors select greener ventures, with this effect being more substantial for CVCs with parent firm green innovation (green CVCs). Regarding nurturing effects, overall, we find no evidence of CVCs increasing the green innovation of their portfolio firms after the initial investment. However, not all CVCs are alike, and green CVCs add to the venture's green innovation beyond their selection effects compared to nongreen CVCs. We discuss the implications of these findings through post-hoc analyses and by leveraging additional qualitative insights from interviews conducted with startup founders and CVC investors.

ENT: **A Conceptual Model for Contextualising Corporate Entrepreneurship**

Author: **Zerihun Girma**, *PhD Candidate @ Addis Ababa U. & Jönköping International Business School*
Author: **Kajsa Haag**, *Jonkoping International Business School*
Author: **Massimo Bau**, *Jönköping International Business School*

Corporate entrepreneurship (CE) is an important concept in entrepreneurship research. Many scholars have shown the theoretical and empirical implications of CE for organizational performance. This paper aims to review and contextualize the enablers of entrepreneurial opportunities resulting in different CE activities. We use a systematic literature review approach, considering over 35 years of CE research in top-tier journals. The review discusses future research opportunities about business, social, spatial, institutional, organizational, and ownership contextual aspects of CE. We contribute by adding a conceptual model organized based on the reviewed literature and identifying research gaps for future research on the various contexts of entrepreneurship.

ENT: **The Effect of Indirect Ties to Competitors on New Ventures' Intention to form Investment Ties**

Author: **Qingyun Lu**, *School of management, Zhejiang U.*
Author: **Rui Shen**, *School of management, Zhejiang U.*
Author: **Zhijian Yang**, *Zhejiang U.*
Author: **Yuxuan Dai**, *School of management, Zhejiang U.*

The study investigates the impact of new ventures' indirect ties to competitors via shared VC firms on their intention to form investment ties by jointly considering the information access and leakage mechanisms. Drawing on a longitudinal analysis of VC investments in China between 2001 and 2016, we find an inverted U-shaped relationship between the number of a new venture's competitors in a VC firm's investment portfolio and its intention to form ties with the VC firm, who act as an intermediary between the new venture and its competitors. Moreover, we argue that the information mechanisms are contingent on the intermediary VC firm's motivation, which varies across the market heat, new ventures' development stage, and the degree of the VC firm's diversification. Our study enriches the literature on new ventures' tie formation by revealing how the role of potential indirect ties in altering new ventures' preference for the intermediary. It also adds insights into the VC literature by highlighting VC firms' dual roles of accessing and leaking information, which ultimately influences new ventures' intention to form investment ties.

ENT: **Middle Managers' Career Aspiration and Entrepreneurial Identity Construction in South Korea (WITHDRAWN)**

Author: **Jin Lee**, *The Catholic U. of Korea*

The purpose of this study was to explore the process of Korean middle managers' identity construction as a corporate entrepreneur. Despite the recent scholarly attention to entrepreneurs' identity process, little attention has been paid to the process of identity construction of corporate entrepreneurs. Since identity explains the motivational aspect of why and how an individual behaves in a certain way, an investigation of middle managers' entrepreneurial identity construction can provide insights into how individuals are motivated and developed to be corporate entrepreneurs. Using the constructivist grounded theory methods, I explored the experiences of 12 Korean middle managers' corporate entrepreneurial activities. Findings demonstrate that as for a middle manager, becoming a corporate entrepreneur is not just a role transition; rather it is a career transition through an identity change and learning process. The participants engaged in a CE activity seeking a good opportunity to learn knowledge and skills, establish a business network, and even test new ideas that might benefit their own business in the future. Findings from this study reveals the role of corporate entrepreneurship in entrepreneurial career choice. The continuum of organizational employees, corporate entrepreneurship, and entrepreneurship under the overarching entrepreneurial career concept is discussed.

Crowdfunding 1

Session Moderator: **Dominik Reuter**, *TUM School of Management, Technical U. of Munich*

ENT: **So Sad! Entrepreneurs' Emotions caused by Crowdfunding Campaign Failures**

Author: **Dominik Reuter**, *TUM School of Management, Technical U. of Munich*
Author: **Siddharth Vedula**, *TUM School of Management, Technische U. München*
Author: **Michael Wessel**, *Copenhagen Business School*
Author: **Ferdinand Thies**, *Bern U. of Applied Sciences*

Failure is commonplace in entrepreneurship, and can impact an entrepreneur's mental health. We collected a unique individual-level dataset for 33,000 entrepreneurs that combines data from 45,000 crowdfunding campaigns from Kickstarter and approximately 20 million social media posts from Twitter for the period 2009-2021. Applying a machine learning approach for natural language processing, we show that entrepreneurial failure can lead to an increase in expressed negative emotion, namely, sadness. We also theorize and demonstrate that entrepreneurial experience can act as an "emotional buffer," decreasing both the magnitude and duration of sadness associated with failure. Our study contributes to the theoretical literature on affect and entrepreneurship while also offering a novel non-obtrusive way to measure entrepreneurial emotions using big data.

ENT: **Visual Totality: The Impact of Peak Negative Affective Visual Expression on Crowdfunding Outcomes (WITHDRAWN)**

Author: **Yi Huang**, *Nanyang Business School, NTU Singapore*
Author: **Marilyn Ang Uy**, *Nanyang Business School, NTU Singapore*
Author: **Chang Liu**, *Nanyang Technological U.*
Author: **Maw-Der Foo**, *Nanyang Technological U.*
Author: **Zhuyi Li**, *Renmin U. of China*

We introduce the visual totality of a crowdfunding pitch video which considers not only visual segments with human faces but also segments without human faces. Drawing from Emotions as Social Information (EASI) theory and expression theory, we analyze more than 4 million frames in 2,548 Indiegogo rewards-based crowdfunding pitch videos using the ResNet 50 deep neural network. Results indicate that the impact of peak negative affective visual expression on funding performance is stronger than that of its positive counterpart for both segments with and without human faces. Additionally, the influence of peak negative affective visual expression from human faces was stronger in the first half (vs. the second half) of the pitch video. Further, we found a substitute-moderation effect between the peak negative affective visual expression from segments with and without human faces on funding performance. We discuss the theoretical and practical implications of our study to the crowdfunding literature and the broader research on affective expressions in resource mobilization.

ENT: **Gender-Based Familiarity in Equity Crowdfunding**

Author: **Christina Koutouroushi**, *Durham U. Business School*
Author: **Mona Mensmann**, *U. of Cologne*
Author: **James C. Hayton**, *Warwick Business School*

We examine the role of gender-based familiarity on equity crowdfunding investments. Archival and experimental data largely confirmed the hypothesis that familiarity with a firm's target market motivates lay investments. This effect was partially enhanced by gender-based ingroup bias. We found that stereotyped warmth perceptions may drive female (but not male) investors' willingness to fund familiar firms. A post-hoc eyetracking study confirmed that amateur investors pay attention to gender cues when they review firm campaigns. Overall, our studies showed that female lay investors were consistently influenced by gender-based heuristics, with positive implications for female-oriented firms.

ENT: **The Best of Both Worlds: The Effects of "Compensatory Signals" on Entrepreneurial Financing**

Author: **Mark Bolinger**, *Appalachian State U.*
Author: **Katie Brownell**, *U. of Southern California -Marshall School of Business*
Author: **Jeff Covin**, *U. of Wyoming*

Entrepreneurs send signals to reduce information asymmetry, attract stakeholders, and access resources. This study identifies and defines a specific signaling approach, termed "compensatory signaling," in which entrepreneurs intentionally issue negative signals accompanied by mitigating positive signals. We suggest that compensatory signaling allows entrepreneurs to appropriate the benefits of negative signals (e.g., demonstrating honesty and realism to potential contributors) while avoiding the adverse consequences that normally accompany such disclosures. Using the "Risks and Challenges" section from Kickstarter campaigns, we not only show that compensatory signals are positively associated with crowdfunding success, but that they outperform campaigns that refrain from negative signaling.

Digital Technology

Session Moderator: **Felix Honecker**, *Adam Smith Business School, U. of Glasgow*

ENT: **How Artificial Intelligence Shapes Legitimacy Judgement Formation**

Author: **Felix Honecker**, *Adam Smith Business School, U. of Glasgow*
Author: **Dominic Michael Chalmers**, *U. of Glasgow*

We explore how the rapid adoption of artificial intelligence affects new venture legitimacy. Our theoretical focus is on the perceptual inputs at the center of legitimacy judgement formation processes. We present three ways in which AI shapes venture legitimation: 1) it can subvert traditional sensemaking processes, 2) it can distort validity beliefs, and 3) it creates the potential to obscure a ventures' properties and behaviors. By describing how AI creates novel challenges around how new ventures confront, manage, and overcome the liabilities of newness, we contribute to the burgeoning strand of literature at the nexus of digital technologies and entrepreneurship.

ENT: **Charting the "Where" of Artificial Intelligence: A Scoping Review of AI Entrepreneurial Ecosystems (WITHDRAWN)**

Author: **Philip T. Roundy**, *U. of Tennessee, Chattanooga*
Author: **Subin Im**, *U. of Tennessee, Chattanooga*
Author: **Arben Asllani**, *U. of Tennessee, Chattanooga*

A burgeoning literature seeks to understand the geographic differences in the creation of artificial intelligence (AI) technologies. However, this literature is fragmented across academic and practitioner boundaries and unconnected disciplines because of disparate and ill-defined concepts. We consolidate research on the "where" of AI technology creation through a scoping review, a methodology designed to rapidly evaluate the state of knowledge of a nascent and emerging phenomenon. We synthesize the geography of AI literature, increase conceptual precision by introducing and defining an umbrella concept—AI entrepreneurial ecosystem—and propose an agenda of research opportunities to spur further insights about the contexts of AI entrepreneurship and innovation.

ENT: **Toward a Theory of Entrepreneurial Action in Blockchain: Approach and Avoidance** ☯ 💻

Author: **Yanto Chandra**, *City U. of Hong Kong*
Author: **Qian Jin**, *City U. of Hong Kong*

Blockchain is a relatively new way to engage in entrepreneurship. Despite the frenzy on blockchain yet the stigma that tainted it, research on "blockchain entrepreneurship" has only recently entered scholarly realms and we know very little about why and how individuals are attracted to blockchain entrepreneurial opportunities and act on them. By embracing the approach-avoidance perspectives under the framework of the theory of entrepreneurial action, we conducted two surveys on blockchain entrepreneurship that examined the opportunity recognition-feasibility-desirability and start-up motivation-evaluation-action toward blockchain (n=492 and n=500) using samples from the United States. Overall, the results underlined the centrality of factors such as lead usership, affordance logic, perceived stigma, entrepreneurial imaginativeness as predictors of blockchain entrepreneurship self-efficacy and perceived legitimacy of blockchain which in turn predicted opportunity recognition, feasibility, desirability. Results also confirmed the importance technology neophobia, perceived stigma, and technology laggardness as predictors of perceived blockchain legitimacy, which in turn predicted blockchain start-up motivation-evaluation-action. Our study makes a novel contribution to the emerging field of blockchain entrepreneurship by confirming the mechanisms of approach/avoidance-based entrepreneurial action in blockchain and their underlying factors.

ENT: **New Language and the Diffusion of Innovation: The Case of Bitcoin**

Author: **Jesse-Burton Nicholson**, *U. of Pittsburgh*
Author: **Arielle M. Newman**, *Syracuse U. Whitman School of Management*
Author: **Narayan Ramasubbu**, *U. of Pittsburgh*

Existing language is often insufficient to express a new-to-the-world idea. In order to make meaning and understand new to the world innovations new language must be created in order to build a common ground. New language, the creation of new words, the co-opting of existing words into a new context, new meanings being ascribed to existing words, or the combination of existing words in a new way, is essential for the development of mutual understanding and the creation of a common ground; shared beliefs, knowledge, language, and values. In this paper we explore how the creation of new language as part of a new common ground formed around an innovation reduces the uncertainty surrounding the new innovation, and lessens or resolves tensions associated with a new-to-the-world innovation. We find that new language is likely needed in order to create the meaning and understanding required for a new to the world innovation to diffuse. This new language assists members of the common ground surrounding a new to the world innovation to negotiate the tensions that exist within it, reducing uncertainty and facilitating the continuing diffusion of the innovation.

Entrepreneurial bricolage

Session Moderator: **Marvin Aundrup**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

ENT: **Grit and Bricolage: The Impact of Chronic Health Challenges on New Venture Performance**

Author: **Congcong Zheng**, *San Diego State U.*
Author: **Michael Gyensare**, *Edith Cowan U.*
Author: **SAMUEL ADOMAKO**, *Birmingham Business School*
Author: **Mujtaba Ahsan**, *San Diego State U.*

This study investigates the influence of grit on the performance of new ventures through bricolage behaviors. We draw on both grit and bricolage literature, as well as insights from the Uncertainty in Illness Theory (UIT), to propose that grit affects new venture performance via bricolage, and that the impact of grit on bricolage depends on the level of illness uncertainty (IU). Using a unique time-lagged data set of entrepreneurs with chronic health issues , we find substantial support for our hypotheses. The findings of the study and their practical implications are discussed.

ENT: **Resourcefulness Beyond Necessity: How Resilience Relates to Resourceful Entrepreneurial Behavior**

Author: **Marvin Aundrup**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*
Author: **Andrea Greven**, *WHU Otto Beisheim School of Management*
Author: **Malte Brettel**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*

Entrepreneurial resourcefulness plays an essential role in entrepreneurial success, especially in times of uncertainty. The present study aims to complement current perspectives of entrepreneurial resourcefulness, which focus on resourceful behavior in response to firms' resource constraints. As individual-level characteristics are underexplored, we introduce entrepreneurs' psychological resilience as an influencing factor of resourceful behavior above and beyond environmental contingencies. This aims to enable a more holistic view of resourceful behavior. Our postulated relationship between the individual psychological resource of resilience and entrepreneurial behavior is theoretically grounded in the broaden-and-build theory. Investigating survey data of >850 entrepreneurs, collected from July to October 2022, we find empirical evidence for our proposed relation between psychological resilience and several resourceful behaviors (i.e., effectual modes of action and bricolage). We control, inter alia, for resource scarcity and environmental dynamism and results are robust to different alternative model specifications (e.g., alternative independent variable construct). Our study contributes to research on entrepreneurial resourcefulness by adding theoretical and empirical insights to the emerging efforts of shifting the focus of resourcefulness research to the individual entrepreneur.

ENT: **The Effect of Resource Constraints and Bricolage on Dynamic Capabilities and New Venture Performance**

Author: **Andrew E. F. Fultz**, *U. of Texas at El Paso*
Author: **Keith Hmieleski**, *Neeley School of Business - Texas Christian U.*
Author: **Ted Baker**, *Rutgers U.*

This study examines the joint effect of resource constraints and entrepreneurial bricolage on the formation of dynamic capabilities and new venture performance. Drawing on the microfoundations perspective, our model examines the interactive effect of resource constraints and bricolage behaviors on dynamic capabilities during the early development of new ventures, and, in turn, the performance-enhancing effects of dynamic capabilities. Results from a sample of 156 United States-based startups indicate that dynamic capabilities and new venture performance are at their highest when highly resource-constrained new ventures engage in high levels of entrepreneurial bricolage. These findings highlight an important early pathway through which startups may begin to form firm-level dynamic capabilities and achieve enhanced performance, even while lacking the stocks of experience and resources usually associated with dynamic capabilities in established firms.

ENT: **A Meta-Analysis of Entrepreneurial Bricolage: Determinants and its Comparison with EO**

Author: **Mehrsa Ehsani**, *U. of Calgary*
Author: **Hadi Fariborzi**, *Mount Royal U.*
Author: **Mohammad Keyhani**, *U. of Calgary*

This study represents the first effort to meta-analytically summarize and aggregate the results of quantitative research on entrepreneurial bricolage, with a focus on its impact on firm performance. We also employ meta-analysis in the service of conceptual development, suggesting that there are potential problems of discriminant validity between entrepreneurial bricolage, opportunity pursuit, and entrepreneurial orientation. These three variables were relatively highly correlated. We found bricolage to be a significant determinant of performance, although its effect size diminishes when we control for opportunity pursuit or entrepreneurial orientation. When we control for both, the effect of entrepreneurial bricolage effectively vanishes completely while both opportunity pursuit and entrepreneurial orientation remain as significant determinants of performance.

Entrepreneurial Incubation and Acceleration 1

Session Moderator: **Andreas Leubner**, *TUM School of Management, Technical U. of Munich*

ENT: **Goliath Dates David: Navigating Institutional Complexity and Arbitrage in Corporate Accelerators**

Author: **Andreas Leubner**, *TUM School of Management, Technical U. of Munich*
Author: **Siddharth Vedula**, *TUM School of Management, Technische U. München*
Author: **Cristobal Garcia Herrera**, *Imperial College Business School*

Institutional arbitrage has been recently introduced as novel approach to creating benefit in hybrid organizational settings, by purposefully inducing institutional complexity. While this is still a theoretical construct, we seek to empirically investigate how organizations might be able to actively shape institutional arbitrage mechanisms and influence value creation. In an inductive multiple case study on corporate accelerators (CA), this paper sheds light into how organizations may leverage and navigate institutional complexity to create value for new ventures and incumbents. We develop a model for how institutional arbitrage mechanisms in CAs might be altered, based on the incumbent's willingness to bear uncertainty. This model suggests that in CAs, a stricter goal specificity via pilot projects might favor a corporate logic, while exploratory programs support an entrepreneurial logic. It further suggests that governance control of in-house programs might enhance bi-directional exchange between ventures and incumbents, while externally managed programs might involve the broader ecosystem and therefore facilitate multi-directional exchange.

ENT: **A Multidimensional Framework of Corporate Acceleration: Review, Propositions, and Research Agenda**

Author: **Benedikt Unger**, *Free U. of Bozen-Bolzano*

Acceleration is a phenomenon that plays a pivotal role in the engagement of corporate firms with innovative startups. However, apart from its popularity, corporate acceleration still poses a puzzle, as there is a lack of clarity about the multitude of associated strategic stances, especially as the phenomenon continues to evolve and diversify. In addition, the functionalities to achieve these various strategical goals are also far from understood, as it is a multidimensional phenomenon that involves a large number of stakeholders and demands coordinated processes and resources. Hence, the purpose of this review paper is to present a multidimensional yet integrated framework organizing and synthesizing our current knowledge about the phenomenon, both from a strategy and execution perspective. This paper first explores the antecedents and evolving strategic role of corporate acceleration practices. Secondly, a model for the structured acceleration of startups is presented. Managerial implications and generalizable propositions for the effective execution and development of the acceleration principle in corporate firms are derived. Future research endeavors should assess these propositions. Thirdly, a research agenda is presented to guide further exploration of the topic and accelerate related research.

ENT: **Paradoxical Execution for New Ventures' Scalability: Evidence from Y Combinator** ☯ ✈ 💻

Author: **Michele Pinelli**, *U. Ca' Foscari of Venice - Dept. of Management*
Author: **Luca Pistilli**, *U. College Dublin*
Author: **Alessio Cozzolino**, *U. College Dublin*

Accelerators have emerged as important organizational sponsors capable of hastening new ventures' development by helping founders acquire entrepreneurial capabilities. Research has provided evidence that accelerated ventures, on average, develop more rapidly, attract more capital, have more employees, and receive higher evaluations. Yet, we know little about how accelerators foster new ventures' scalability. To develop theoretical insights that might help fill this gap, we conduct an inductive case study of Y Combinator (YC), the first modern accelerator that specifically focuses on helping ventures achieve a large scale. Through a unique combination of 64 video interviews and 7,283 pages of archival material, we find that the strategic goals and methodological guidelines of YC's acceleration program pressure founders to pursue conflicting priorities simultaneously, thus forming a pattern that we termed Paradoxical Execution. We reveal that those paradoxes must be addressed in a simultaneous rather than sequential way, and for this reason accelerators urge startups to develop a paradoxical mindset. Hence, we unveil how contrasts and paradoxes are likely to manifest from the very early stage of new ventures' life cycle, contrariwise to what existing literature suggests. Altogether, our findings contribute to the literature on entrepreneurial ecosystems, paradox theory, and organizational scaling.

ENT: **The Liminality of Accelerators** ✈ 💻

Author: **Yabo Octave Niamié**, *148853*
Author: **Olivier Germain**, *UQAM U. of Quebec in Montreal, Canada*

The importance of business accelerator in the entrepreneurial process is growing and is the subject of numerous investigations. But most of this research is atheoretical and leads to a limited understanding of this new phenomenon. Knowing that education and mentoring are at the heart of accelerator activities, we analyzed them using the liminality framework as a theoretical lens to produce new knowledge and we use an ethnographic approach to study the case of an accelerator in Canada. Our study contributes to the accelerator literature by theoretically describing education and mentoring as liminal experiences, and we highlight both their objective and subjective components and show how they influence entrepreneurs and their business concepts. Our article also contributes to the literature on liminality. From our case, we discover that alongside approaches showing liminality as highly institutionalized experiences, or as a continuum from highly institutionalized to under-institutionalized, a liminal space could be paradoxical, being both highly institutionalized and under-institutionalized.

Family Firm and Resilience

Session Moderator: **Anne Heider**, *U. of Witten/Herdecke*

ENT: **Family Firm Specific Resource Bundles as Drivers of Resilience**

Author: **Anne Heider**, *U. of Witten/Herdecke*
Author: **Marcel Huelsbeck**, *Hochschule München*
Author: **Julian Grunewald**, *Witten/Herdecke U.*

Resilience in family firms stems from family capital as a combination of the unique human, social, patient capital, and governance resources distinctive to a family firm as a result of family involvement. These resources are idiosyncratic to each specific family firm and bundled in a specific way. It distinguishes family firms significantly from non-family firms since non-family firms are unable to create or imitate this type of capital. Based on the conceptual model of family firm specific resources, the notion of family capital, and a unique and hand collected dataset based on 149 German Mittelstand firms in existential distress, we explore if and how family specific resource bundles increase family firm resilience. Unsurprisingly, family firms with low resource endowments exhibit low resilience, while a high endowment across family firm specific resources leads to high resilience. Between those two extreme cases two additional combinations can be identified which raise resilience in family firms. Our results clearly show that different bundles offer different pathways to increase resilience and, notably, that financial capital is a necessary but not sufficient resource to weather a crisis.

ENT: **The Importance of Owner-Manager Resilience - Empirical Evidence from Family Business**

Author: **Yasin Yilmaz**, *Doctoral Candidate - WHU Otto Beisheim School of Management*
Author: **Julia Katharina de Groote**, *WHU Otto Beisheim School of Management*

The owner-manager has significant control over the day-to-day operations and thus over the strategic decisions of their business, i.e., firm-level outcomes, which leads to the business taking up a very large amount of the owner-managers personal time and resources. However, the personal resources, especially the individual resilience of the owner-manager and its influence in medium-sized and large organizations have hardly been researched so far. We, therefore, want to recalibrate the focus of the owner-manager and examine their resilience and impact in the organizational context of a family business setting. We do so by conducting a qualitative study, collecting 64 interviews from a total of 13 family businesses. Our results show that the resilience of the owner-manager is the nucleus for organizational resilience and, thus for firm-level resilience. Through a social contagion effect, we show that personal resilience influences managers and employees by three mechanisms: i. Attitude, ii. Decision-making, and iii. Value transmission. This results in increased commitment among these stakeholders, which ultimately contributes to firm-level resilience. Through our holistic view on the multi-level effect of owner-manager resilience, we contribute to resilience and family business research.

ENT: **Family Firms in Times of Crisis: A Systematic Literature Review (WITHDRAWN)**

Author: **Nina Schweiger**, *U. of Innsbruck*

Research on crises and their effect on organizations has over recent years grown and gained importance. In particular, the global COVID-19 pandemic has been the subject of several studies on how firm's respond to exogenous shocks. Past research has shown that family firms behave differently than non-family firms due to several family specific characteristics, which also assumes a different behavior in times of crises. In order to gain a better overview on the existing knowledge on family firms and crises, this study provides a systematic literature review on the topic. Based on the analysis of 48 articles, the strategic behavior is categorized along three different crisis responses. Further, I offer an overview of studied antecedents that influence the behavior of family firms in times of crisis as well as discussing studied outcomes after the crisis. Finally, I provide several future research opportunities.

ENT: **Navigating Family Firm Tensions in Times of Crisis: Exploring Resilience and Innovation**

Author: **Vanessa Diaz Moriana**, *U. Pablo de Olavide*
Author: **Eric Clinton**, *Dublin City U.*
Author: **Catherine Faherty**, *Dublin City U.*
Author: **Colm O'Gorman**, *Dublin City U.*

There is an increasing acknowledgment that that family firms are driven by tensions, having to manage two desirable (and seemingly opposing) options. Family firms are often depicted as conservative and investing less in innovation yet at the same time more resilient, with the intention to pass down the firm to future generations. Drawing on the paradox perspective, we employ a multiple case study approach to investigate how resilience affects the innovation behavior of family firms in times of crisis. The data collection process drew upon five in-depth cases comprising 37 semi structured interviews, participant observations, and hundreds of pages of historical data. Our analysis reveals that while it is acknowledged that family firms are long-term oriented and that orientation acts as a stimulus for innovation, when hit by an exogenous shock, such as the recent pandemic, their resilience behavior exacerbates short termism with regards to innovation as the long-term focus the firm had on innovation shifts towards attending short-term needs. Additionally, we found that the decisions made by the owner-manager's ancestors highly influenced later generations' resilient actions. As such, we contend that path dependency plays a key role in the resilience behavior of family firms and subsequently, on their innovative behavior in times of crisis. Our research thus contributes to a more fine-grained understanding of paradoxical behavior in family firm innovation research and the tensions they face.

Organizational context: Self-employment and SMEs 1

Session Moderator: **Andac T. Arikan**, *Florida Atlantic U.*

ENT: **Does misery love company? Clustering and small business owners' development of psychological capital**

Author: **Andac T. Arikan**, *Florida Atlantic U.*
Author: **Juliet Oriaifo**, *North Carolina A&T State U.*
Author: **Sam Ekwuribe**, *Path to Growth Entrepreneurship Centre*

In this study, our overarching goal is to examine if geographical clustering can improve small business performance by providing small business owners (SBOs) with psychological benefits, specifically in relation to their ability to deal with stress-generating adversities typically associated with small business ownership. We take our starting point from sociological research on small business clusters that suggests that geographic proximity increases the frequency of interactions between small business owners. Then, drawing from three bodies of social psychological research from the broader stress literature informing how social interactions may influence individuals' stress processes – perceived social support, community psychology and social comparison - we develop a conceptual model that outlines two paths (the 'Psychological Sense Of Community Path' and the 'Informational Path') through which increased frequency of interactions with other SBOs facilitates an SBO's development of 'Positive Psychological Capital' (a multi-component psychological resource whose significance for SBOs' coping with stress and well-being as well as small business performance is well-established), ultimately resulting in improved business performance. A structural equation model using survey data from the Aba Industrial Cluster in South East Nigeria provides strong support for our proposed model.

ENT: **Self-Employment and Life Satisfaction: The Contingent Role of Formal Institutions**

Author: **Xiaoyu Yu**, *Shanghai U.*
Author: **Xiaotong Meng**, *Shanghai U.*
Author: **Laura June Stanley**, *UNC Charlotte*

Life satisfaction, a key indicator of well-being, is an important outcome of engagement in entrepreneurship. An exploration of the boundary conditions of the relationship between self-employment and life satisfaction is in its infancy. Drawing on uncertainty management theory, we develop a model in which property rights and government activity serve as contingency effects. Our multi-level study of 23,354 respondents in 27 countries/regions demonstrates secure property rights positively, and government activity negatively moderate the relationship between self-employment and life satisfaction. Implications for theory and practice are discussed.

ENT: **Retaining Employees When Startups Professionalize**

Author: **Martin Murmann**, *Bern U. of Applied Sciences*
Author: **Nathan Rietzler**, *Copenhagen Business School*
Author: **Wolfgang Sofka**, *Copenhagen Business School*

The delegation of decision-making authority from founders to dedicated managers is an important step in the professionalization of startups. However, such delegation changes the distinct nature of startups as workplaces with frequent interaction between founders and their employees. We build on theory of relational disruption in workplaces and theorize how delegation of decision-making authority affects employee retention. We reason that through delegation, employees lose opportunities to learn from founders and influence startup decisions. As a result, relational advantages of startup employment decrease, leading to employee mobility. Moreover, employees are particularly likely to leave after decision-making has been delegated when they are early in their careers and when founder teams are small. Using a sample of 13,737 employees in 1,797 German startups, we find support for our conjectures.

ENT: **Memory Boxes: Accounting for Social Change by Reflecting on Artifacts**

Author: **Marieshka Barton**, *Durham U. Business School*
Author: **Pablo Munoz**, *Durham U. Business School*
Author: **Edward N. Gamble**, *Montana State U.*
Author: **Haley Allison Beer**, *U. of Warwick*

We examine how social entrepreneurs in micro and small enterprises learn personal accountability for processes of social change interventions. Conventional outcome accountability frameworks tend to poorly fit these enterprises operating under severe constraints with ad hoc, informal social accounting practices. This is a problem because micro and small organizations represent most social enterprises, constituting an under-explored population with significant aggregate impact. As our theoretical framework, we used the learning theory of the reflective professional to explore learning to become accountable. We worked with 15 social entrepreneurs in informal contexts to understand bottom-up accountability practices and used life-story interviews and interpretive analysis, exploring how they account for processes of social change interventions. Against current accountability conceptions emphasising positivistic measures and outcomes, we found social entrepreneurs making sense of their work through artefacts. We refer to the accounts of critical junctures memorialised in artefacts as "memory boxes", with memory-box making understood in psychology as the act of collecting artefacts used to make sense of experiences and learn about oneself. We show how social entrepreneurs use artefacts as informal tools to reflect and make meaning of experiences, and we leverage memory-box making to theorise the learning process of becoming accountable to social change.

Women Entrepreneurs in the Face of Adversity

Session Moderator: **Samira Nazar**, *Australian National U.*

ENT: **Women Entrepreneurs' Resource Mobilization in Fragile Contexts**

Author: **Samira Nazar**, *Australian National U.*
Author: **Frederik Von Briel**, *U. of Queensland*
Author: **Henri Burgers**, *U. of Queensland Business School*

Entrepreneurship provides women a way to overcome poverty, gender inequality, and poor working conditions. However, women in fragile contexts face substantial barriers such as a lack of security, gender-based violence, and restricting socio-cultural norms when trying to mobilize the resources they require to engage in entrepreneurship. Based on a qualitative inductive study of 24 women entrepreneurs in Afghanistan, one of the world's most fragile contexts, we identify how women entrepreneurs overcome the barriers imposed upon them to successfully mobilize resources. Our data analysis suggests that women entrepreneurs adopt four mechanisms – spatial dispersion, spatial bridging, family inclusion, and camouflaging – to overcome the barriers of fragile contexts to successfully mobilize required resources. Our findings make important theoretical contributions to the literatures on women entrepreneurship and resource mobilization.

ENT: **Entrepreneurial Skills Amidst Institutional Voids: Insights From Female Entrepreneurs in West Africa**

Author: **Bede Akorige Atarah**, *U. of Professional Studies, Accra*
Author: **Augustine Awuah Peprah**, *Southampton Business School, U. of Southampton*
Author: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*
Author: **Obi Berko Obeng Damoah**, *U. of Ghana Business School, legon*

The question of how entrepreneurs develop entrepreneurial skills and managerial capabilities remains critical for researchers and policymakers, particularly in developing countries, exemplified by the lack of or weak institutions that train individuals wishing to tow the path of entrepreneurship. We use interviews and observation data on female entrepreneurs in two West African developing countries – Ghana and Ivory Coast to theorise where and how these entrepreneurs acquire their entrepreneurial skills and managerial capabilities, given the void in entrepreneurial training institutions. Our findings suggest that entrepreneurs rely on family ties, the informal external context, and some organized external sources to acquire the needed skills to start and run their entrepreneurial initiatives. Further, they develop their entrepreneurial skills through listening to instructions, observing qualified persons, practising, and imitating their mentors. We propose a grounded model that shows the female entrepreneurs' sources and entrepreneurial and managerial training processes amidst institutional voids in developing countries.

ENT: **The Stories of Resilience and Passion for Redefining Success by Female Entrepreneurs**

Author: **Kris Irwin**, *Old Dominion U.*

Female entrepreneurs often experience additional challenges when starting their own business compared to their male peers. Prior research outlines how female entrepreneurs are less likely to obtain external financial funding, grapple with overcoming gendered expectations or beliefs about women's leadership, and face difficulties balancing work/life demands. While prior literature has focused on how and why female entrepreneurs are at a disadvantage in entrepreneurial ventures, we instead focus on the characteristics that lead to success including the roles of resilience, entrepreneurial passion, and how one defines success. Using a mixed-methods, case study approach, we build upon the entrepreneurial and adaptive capacity literatures to capture how female entrepreneurs redefine success and extend our knowledge about what it means to positively adapt during a crisis, contributing to both research and practice.

ENT: **The Impact of the Arab Spring on Female Entrepreneurship**

Author: **Essam M. Boraey**, *U. of Connecticut*

While it is well-documented that social movements give rise to entrepreneurial opportunities in new and established economic sectors, the impact of these movements on the acceptability of entrepreneurship for marginalized groups is yet to be explored. I argue that social movements challenge the existing societal norms and practices and create new venues and opportunities for marginalized groups to establish formal entrepreneurship. To examine this idea, I study female- and male-owned new entrepreneurship in Jordan before, after, and during the Arab Spring. Using regression discontinuity design on a novel Jordanian entrepreneurship dataset, I show that the Arab Spring caused a significant increase in the number of female business ownership. In contrast, the number of male business ownership remained relatively stable. I complement these empirical findings with qualitative interviews I conducted in Jordan, which supports my theory that the increase in formal female entrepreneurship in the aftermath of the Arab Spring is a result of the norms changes and the increased financial support from both public and private sectors. This research deepens our understanding of the relationship between social movements and entrepreneurship by demonstrating how access to entrepreneurship among marginalized communities increases as a result of social movements. This paper contributes to the formal entrepreneurship literature by highlighting the relationship between social movements and normative flexibility in terms of the source of funding and financing.

Entrepreneurial Performance and Outcomes 1

Session Moderator: **Smita Srivastava**, *Wichita State U.*

ENT: **Dissecting User Entrepreneurs: A Cross-Disciplinary Examination of Factors, Processes, and Outcomes**

Author: **Smita Srivastava**, *Wichita State U.*
Author: **Stephanie Brooke Escudero**, *Ph.D Student*
Author: **Pyayt Phyo Oo**, *U. of Texas At Arlington*

Scholars have widely argued that users are a critical source of innovation and entrepreneurship. In recent years, we have witnessed the growth of user entrepreneurs, making significant contributions to the entrepreneurial ecosystem. Although academicians and practitioners have acknowledged the nuances of the user innovation and entrepreneurship fields independently, we lack an integrated understanding of their complementarities and overlap. Moreover, extant research investigating user entrepreneurship is characterized by a diverse school of thought and remains fragmented across multiple disciplines. To reconcile this disjointed body of research, we use two bibliometric techniques, co-citation analysis of references and bibliometric cartography, combined with qualitative coding to review 173 articles published from 2000 through 2022. Our systematic review uncovers the seminal work and distinct key ideas that have been instrumental in establishing the field of user entrepreneurship. This study advances our understanding of the factors, processes, and outcomes prevalent in the user entrepreneurship domain. We also shed light on the relational linkages among various themes that have evolved in the user entrepreneurship field and chart a roadmap for future research.

ENT: **The European Disadvantage(s) at Startup Growth: Evidence from Startups Migrating to the U.S.**

Author: **Stefan Weik**, *Technical U. of Munich*

This paper uses novel data on the U.S. migration of European startups to understand the main European disadvantages at startup growth. I test alternative views on the shortcomings of Europe's startup ecosystem by analyzing the decision to migrate and post-migration performance. Results show that U.S. migrants receive much more venture capital (VC) funding, produce more innovation, and reach much bigger scale by exit than startups staying in Europe. Despite their funding advantage, however, U.S. migrants do not increase revenues for many years after migration, incur higher losses for an extended period of time, and do not have a higher likelihood of successful exit than European stayers. Moreover, a main part of U.S. migrants' innovation and scale advantage can by explained by their funding advantage. Overall, these results suggest that product and exit markets do not hinder European startup growth much, if at all, but that Europe's VC financing market is likely its major disadvantage.

ENT: **Teach Them to Fish: When Does Business Training Improve SMEs' Management and Business Practices?**

Author: **Ona Akemu**, *Amsterdam Business School, U. of Amsterdam*
Author: **Cinzia Colapinto**, *Ca' Foscari U. of Venice*
Author: **PKV KISHAN**, *Institute of Rural Manangement Anand (India)*

High-quality management and business practices, such as keeping formal financial records, inventory management and formal strategic planning, have a strong and significant positive effect on the revenues, profits, and survival of small and medium-sized enterprises (SMEs) across many developing countries. Yet, business training programs, justified to improve the stock of SMEs' business knowledge, have had no significant effect on the adoption of innovative "best practices." We investigate whether business training improves the business and management practices of SMEs. Further, drawing on the teams and groups literature, we hypothesize that the complexity and the degree to which the tasks constituting best practices can be spelt out in advance significantly influence the adoption of the practices in people management, marketing, finance and record keeping. We test our hypothesis in a quasi-experiment involving 424 trained (treated) SMEs and 371 control group (untrained) SMEs in Kazakhstan. We find support for our hypotheses: management and business practices whose constituent tasks can be more readily spelt out in advance and/or which require lower levels of coordination within SMEs are more likely to be adopted than those that cannot be spelt out and/or which require high levels of coordination. Thereafter, we discuss the implications of our findings for the design of training programs.

ENT: **The Impact of Serial Entrepreneur's Technological and Financial Experience on Venture Exploration**

Author: **Yoon-Kyung Kim**, *KAIST*
Author: **Hyun Ju Jung**, *KAIST*

This study examines learning from novelty creation and its interplay with financial success in the context of serial entrepreneurship. Specifically, we highlight how the novelty creation and financial success of serial entrepreneurs' prior ventures influence the exploratory behavior of their subsequent ventures. By conceptualizing two separate types of venture exploration—entry into new knowledge domains and the search for distant knowledge—we examine the multifaceted features of how entrepreneurs learn from their prior ventures' technological and financial experiences. We hypothesize that the novelty creation of prior ventures will facilitate subsequent ventures' entry into knowledge domains different from those of prior ventures and will increase the propensity of subsequent ventures to search for knowledge distant from their technology space. This relationship is contingent on prior ventures' financial success. When the prior venture experienced financial success, serial entrepreneurs have the financial slack to accelerate their ventures to enter new knowledge domains but simultaneously fall into the success trap that develops cognitive inflexibility, preventing distant search. Thus, under the condition of prior ventures' financial success, the positive effect of novelty creation on entering new knowledge domains will be strengthened, and the positive effect of novelty creation on searching for distant knowledge will be weakened. We find broad support for our hypotheses using Crunchbase for entrepreneur and venture data worldwide from 1967 to 2018 and patent data from USPTO. The results have important implications for research on entrepreneurial learning and, more broadly, on what makes entrepreneurs more exploratory.

Signaling in Crowdfunding:Role of Context, Entrepreneurial Attributes in Manipulating Interpretation

Organizer: **Ankita Kulkarni**, *Drexel U.*
Discussant: **Michael P. Ciuchta**, *U. of Massachusetts, Lowell*
Presenter: **Norbert Steigenberger**, *Umeå School of Business and Economics, Umeå U.*
Presenter: **Chien-Sheng Richard Chan**, *Stony Brook U.-State U. of New York*
Presenter: **John Berns**, *U. of Mississippi*
Presenter: **Ankita Kulkarni**, *Drexel U.*

Signals provide objective information about the underlying qualities of an actor (e.g., people voluntarily choose to acquire education which provides information about one's competencies) (Connelly, Certo, Ireland, & Reutzel, 2011; Spence, 1973; Spence 2002). The intuitive appeal of signaling theory is why it is popular in various domains such as economics, finance, industrial organization, and management. In contexts such as crowdfunding or new ventures, entrepreneurs can showcase their venture ideas to obtain financial resources and advice from backers (Mollick, 2014). As these backers do not have sufficient knowledge about the product or the qualities of the entrepreneurs, signals which communicate the characteristics of entrepreneurs have a predominant role in acquiring support from backers (Allison, Davis, Webb & Short, 2017). Traditionally signaling scholars have argued that while actors choose which signals they want to acquire (e.g., education), nevertheless once acquired, these signals cannot be manipulated (Spence, 1973). On the other hand, many researchers in the management domain argue that signal manipulation is possible (e.g., narrative style which can be changed) (Allison, McKenny, & Short, 2013; Steigenberger & Wilhelm, 2018). In this symposium, we aim to resolve these conflicting viewpoints by providing boundary conditions for where (context) and how (process) signal interpretation can be manipulated. To do so we investigate the concept of signal costliness which is an important characteristic of signaling theory since it is inversely proportional to individual's quality and helps in differentiating between low quality and high-quality actors. Additionally, we argue that when signals are grouped into a portfolio, then their interpretation by the audience can be manipulated. This manipulation can be done by choosing to emit appropriate signals in a context and by choosing the right mix of signals to display as some signals reinforce one another whereas others diminish each other. Overall, this symposium aims at contributing to signaling theory by providing boundary conditions to signal manipulation and the literature of crowdfunding by focusing on the relevance of the context.

Entrepreneurial Process: New Venture Formation and Growth 1

Session Moderator: **Ryan Scott Coles**, *U. of Connecticut*

ENT: **Size Matters: The Moderating Impact of Firm Size on Formalization and Performance for New Firms**

Author: **Ryan Scott Coles**, *U. of Connecticut*
Author: **Wesley Sine**, *Cornell U.*
Author: **Jeremi Brewer**, *Cornell SC Johnson College of Business*
Author: **Walker Ray Dornisch**, *U. of Connecticut - Storrs*

Prior research on formalized organizational structure and entrepreneurship argues that new firms with formal structure perform better than new firms with less formal structure in dynamic contexts. However, research on teams finds that formal structure leads to poor performance when teams are small, suggesting that the benefits of formal structure for new firms operating in a dynamic environment is contingent on the size of the new firm. In this paper, we examine the moderating effect of firm size on the formalization–new firm performance relationship using a randomized controlled experiment with a sample of 600 new firms founded in Peru during a period of high market dynamism. In contrast to past research on formalization and entrepreneurship in dynamic contexts, we find that small new firms with less formal structure perform better than small new firms with more formal structure.

ENT: **Scientific versus intuitive entrepreneurial action: Antecedents and performance outcomes**

Author: **Henrik Wesemann**, *IE Business School*
Author: **Anna Paulina Schröder**, *HSG U. of St. Gallen*
Author: **Thomas Markus Zellweger**, *U. of St. Gallen*
Author: **Vangelis Souitaris**, *Bayes business school and U. of St. Gallen*

Our study investigates the antecedents and performance consequences of scientific versus intuitive entrepreneurial action. Applying a mixed-method approach, we first use qualitative data from 50 interviews to develop a conceptual model that links the entrepreneurs' imprints—formative experiences in life with either positive or negative connotation—to the adopted entrepreneurial action (intuitive versus scientific), and finally to the venture's success. We then conduct a quantitative analysis with 233 ventures that tests and lends empirical support to the propositions derived in the qualitative study. We find that positive imprints are linked to intuitive action, which is related to limited venture success. In contrast, negative imprints are linked to scientific action, which is related to pronounced venture success. Our study contributes to the literatures on the micro-foundations of entrepreneurial action, new venture strategy, and imprinting theory.

ENT: **The Influence of Corporate Growth on Credit Constraint in European SMEs (WITHDRAWN)**

Author: **Geoffroy Enjolras**, *U. Grenoble Alpes, Grenoble INP, CERAG*
Author: **Caroline Tarillon**, *U. Grenoble Alpes, Grenoble INP, CERAG*

This research seeks to understand the influence of growth on credit constraint in European SMEs. It examines the roles of different types of growth (short-term versus medium-term and past versus future) on both entrepreneurs' discouragement and bank denials for credit. The study was conducted on 58,043 Eurozone SME owners between 2015 and 2019. The use of three logit and one multinomial logit models reveals that growth has different influences, according to its dynamics: (1) medium-term past growth, considered as hard information, influences both discouragement and denial; (2) short-term past growth is not valued because of its ambiguous nature between soft and hard information; (3) future growth only influences the entrepreneurs' ambitions to apply for a loan but does not affect credit denial because of its soft nature. This research therefore invites both bankers and entrepreneurs to simultaneously consider past short- and medium- term growth as well as growth ambitions in order to benefit from additional hard and soft information. This might facilitate financing decisions from both sides and thus limit credit constraint for SMEs.

ENT: **Towards a Theory of Investment Ties: How Tie Strength Affects Venture Performance**

Author: **Sascha Neumann**, *EBS Business School*
Author: **Magnus Schückes**, *U. of Mannheim*
Author: **Tobias Gutmann**, *EBS Business School*
Author: **Christian Landau**, *EBS Business School*

We explore the effects of investment ties on venture performance. By examining the value-adding functions of equity investors such as the financial and non-financial resources, we conclude that investment ties involve a fundamental interpersonal component that has been overlooked in prior research. We propose that the degree of resource exchange and the condition of the interpersonal relationship are two dimensions of an investment tie that influence one another, resulting in a dynamic relationship that evolves over phases of a tie. To capture this evolution, we introduce the concept of "investment tie strength". We draw from social exchange theory to develop a theoretical framework that explains how different factors influence investment tie strength, which in turn explains fluctuations in venture performance. We also discuss the implications of investment ties and strength for future research on nascent ventures and for investment managers and entrepreneurs.

Entrepreneurship Under Different Regimes

Session Moderator: **Ishtiaq Pasha Mahmood**, *NUS Business School*

ENT: **Surviving Communist Revolutions: Entrepreneurship Across Generations**

Author: **Na Zou**, *Goethe U.*

This paper uses the Chinese communist revolutions to explore the intergenerational transmission of entrepreneurship. I find that the offspring of pre-revolution entrepreneurial families are more likely to be entrepreneurs nowadays compared with their peers from pre-revolution non-entrepreneurial families. This outcome is unlikely driven by genetic transmission. Moreover, I show that risk preferences, strong work ethics, and favorable attitudes to learning are transmitted across generations despite shocks and disruptions. Further analyses highlight social learning within the family—through cohabitating with the father as well as assortative matching in marriage—being a plausible mechanism for how these pro-entrepreneurial values are transmitted across generations. This study contributes to explaining family influence on entrepreneurship and the persistence of entrepreneurial culture.

ENT: **Optimal Firm and Regulator Strategies in the Presence of Regulatory Ambiguity**

Author: **Ishtiaq Pasha Mahmood**, *NUS Business School*
Author: **Sadat Reza**, *Nanyang Business School*
Author: **Xiaoteng WU**, *NUS Business School*

Regulatory ambiguities have been the hallmark of many recent innovations from ride sharing to social media platforms to cryptocurrencies. While regulations are generally designed to address the boundaries of operations for an existing set of products and services, existing regulations may not always be applicable to innovations that fundamentally alter the way products and services are delivered to the end-users. Since it takes time for a new set of regulatory frameworks to emerge, innovators and regulators often need to operate or even adjust their approaches while navigating through evolving regulatory ambiguities. This leads to questions as to what the optimal regulatory engagement strategies for innovators might be and how regulators might respond. We develop a simple analytical model that generates insights on the nature of entrant and regulator choices in the presence of such regulatory ambiguities. We further highlight how the optimal choices for entrants and regulators vary depending on specific characteristics of entrants and regulators. While we attempt to provide a positive analysis of various outcomes that we observe in practice, the results have normative implications.

ENT: **Founders' Political Ties, Legal Registration and New Venture Failure**

Author: **Ahmed Adel Tantawy**, *U. of Kent, UK*
Author: **Joseph Amankwah-Amoah**, *U. of Kent, UK*
Author: **Pushyarag Puthusserry**, *U. of Kent*
Author: **Wesley Sine**, *Cornell U.*

Previous research has obtained mixed findings on how political ties affect new venture performance. We posit that this discrepancy is the result of the failure of previous studies to consider how the benefits of establishing political ties differ across various levels of government. Although such ties enhance the legitimacy of ventures by providing authoritative signals to stakeholders, which is a critical asset for new venture performance, we posit that legitimacy via legal registration may hinder the survival of new ventures early in their formation. To test our arguments, we examine the effect of both types of political ties, local and central, on new venture failure. In addition, we examine how legal registration affects the relationship between such ties and new venture failure during the first two years of formation. Unique to our study, we tested our theoretical contention based on panel data of 5127 new ventures founded between 2003 and 2010 in Jordan. The analysis reveals that new ventures with local ties are less likely to fail than those without such ties, whereas central ties have no significant effect on failure. In addition, new ventures that are both registered and have local political ties are more likely to fail than those without such ties and are not registered. The theoretical contributions and implications are discussed.

ENT: **Better Shelter, Worse Entrepreneurial Performance: Evidence from China's One-Child Policy**

Author: **Yanhong Ding**, *Department of Management and Technology, Bocconi U.*
Author: **HONGXIN XIE**, *Ferryman Education Co. Ltd*

Using evidence from China's one-child policy, we investigate whether and how one of the entrepreneurs' most important individual traits and family characteristics, i.e., being the only child, affects entrepreneurial performance. We use the heterogeneity in the enforcement of the one-child policy between urban and rural areas and between parents who worked in public and non-public sectors to identify the effect of the one-child policy. Generally, we found that only-child entrepreneurs perform worse than non-only-child entrepreneurs. In particular, the higher risk aversion of only-child entrepreneurs serves as a mechanism that explains their lower revenue; higher reliance on family resources is another mechanism but it only applies to firms outside of high-tech industries and self-employed businesses. Our analyses show significant disadvantages of the only-child entrepreneurs in terms of entrepreneurial performance, and, importantly, the effects can be attributed to the two traits mentioned above.

Panelist: **Erin L. Scott**, *Massachusetts Institute of Technology*
Panelist: **Ethan Mollick**, *The Wharton School, U. of Pennsylvania*
Panelist: **Henrik Berglund**, *Chalmers U. of Technology*

The past decade has seen a massive increase in entrepreneurship education at the graduate and undergraduate level. Yet, despite the flowering of new classroom and co-curricular offerings, key questions remain in terms of what entrepreneurship means and how it can (or should) be translated to academic contexts. For example, prior academic research examines the impact of classroom education on venture formation, yet many educators today emphasize entrepreneurship in terms of mindset and critical thinking. How might this broader conceptualization affect the design and delivery of classes? Similarly, questions around appropriate topics and templates, emerging technologies and experiential learning, integration with broader campus ecosystems, and more broadly how to promote "frame-breaking" behavior in a traditional classroom context are hotly debated in the literature. In this symposium, we bring together a group of entrepreneurship scholars and educators to examine the state of a field in flux, with the goal of facilitating a discussion among scholars engaged in studying or practicing entrepreneurship education.

Foundations of a Theory-Based View of Strategy, Entrepreneurship, and Innovation

Organizer: **Jens Schmidt**, *Aalto U., Department of Industrial Engineering and Management*
Organizer: **Chiara Spina**, *INSEAD*
Panelist: **Riitta Katila**, *Stanford U.*
Panelist: **Timothy Ott**, *U. of North Carolina, Chapel Hill*
Panelist: **Hart E. Posen**, *Dartmouth College, Tuck School of Business*
Panelist: **Violina Rindova**, *U. of Southern California*
Panelist: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

This symposium brings together a diverse set of leading scholars to discuss the foundations of a theory-based view of strategy, entrepreneurship, and innovation. The literature on managerial theories is still in its infancy and important issues remain unaddressed and many questions remain to be answered. Various definitions of the key construct of a theory exist, and the relationships between the theory construct and other constructs are largely unclear. Managerial theories are intimately linked with experimentation and thus also with pivoting in the sense of changing direction. More generally, theories guide managerial learning processes while at the same being themselves subject to learning and being revised. However, there is little research that examines the role of theories in learning and experimentation. Finally, there is yet very little empirical work on managerial theories. This symposium seeks to provide different perspectives on these topics, including economics, behavioral, socio-cognitive, innovation and entrepreneurial perspectives.

With a Little Help From My Friends: Organizational Support & Community

Session Moderator: **Amber Stephenson**, *The David D. Reh School of Business, Clarkson U.*

HCM: **Nurses' Experiences of Ethical Value Conflicts: The Role of Perceived Organizational Support**

Author: **Maria Skyvell Nilsson**, *Department of Health Sciences, U. West, Trollhättan, Sweden*
Author: **Christian Gadolin**, *School of Business, Economics and IT, U. West, Trollhättan, Sweden*
Author: **Pernilla Larsman**, *Department of Psychology, U. of Gothenburg, Gothenburg, Sweden*
Author: **Anders Pousette**, *Department of Psychology, U. of Gothenburg, Gothenburg, Sweden*
Author: **Marianne Törner**, *Sahlgrenska Academy, U. of Gothenburg, Gothenburg, Sweden*

A specific threat to nurses' health and retention, and the quality of care, is nurses' experiences of moral distress stemming from value conflicts comprising ethical dimensions. In this study, we investigate the role that Perceived Organizational Support (POS) plays in providing fundamental support for nurses in handling and resolving ethical value conflicts in their daily work. The aim of this study was to explore (1) the impact that POS has on the frequency of ethical value conflicts at work among registered nurses, and on the intensity of the resultant perceived moral distress; and (2) how POS may improve nurses' ability to handle and resolve ethical value conflicts. A mixed methods design, comprising a longitudinal questionnaire survey (n= 711) and focus group interviews (n=21), was utilized. The results indicate that a climate of POS prospectively decreased the frequency of ethical value conflicts, but not the perceived moral distress when conflicts did occur. POS was furthermore empowering, enabled resolution of value conflicts, and created pride and joy in nurses' work. Hence, this study suggests that POS may reduce nurses' ethical value conflicts and moral distress through facilitating nurses' role security.

HCM: **The Mediating Effect of Reciprocating Responses between Organizational Support and Quality of Care**

Author: **José Facundo García**, *U. of Barcelona*
Author: **Jorge Matute**, *Institut Quimic de Sarrià*

Past research examines how organizational support directly affect the quality of care. However, less is known about the mediating role of social exchange reciprocating responses in this relationship and the moderating effect of the educational level. The aim of this paper is to examine the mediating role of social exchange reciprocating responses such as citizenship behavior towards organization (OCB-O) and organizational deviance between perceived organizational support (POS) and quality of care, and to assess if those effects are similar among nurses with different educational levels. The study uses partial least squares and multigroup analysis with a sample of 228 nurses. Our results show that OCB-O and organizational deviance play a mediating role in the relationship between POS and quality of care. Moreover, the mediating role of OCB-O is moderated by the educational level. Finally, OCB-O and organizational deviance help explain how POS affects the quality of care, and that educational level plays a relevant role to explain how the quality of care is enhanced. This study also implies that nurse managers should pay attention to the reciprocating responses that mediate the effect of POS on the quality of care, and design strategies to encourage nurses to achieve a better education.

Author: **Catherine Battaglia**, *Veterans Health Administration, VA Eastern Colorado Healthcare System*

Background Despite the Veterans Health Administration (VA) efforts to become a learning health system (LHS) and high reliability organization (HRO), evidence-based interventions to build supportive learning environments within teams are not reliably implemented, contributing to high levels of burnout, turnover and variation in care. Supportive learning environments build capabilities for teaching and learning, empower teams to safely try new things, and adopt highly reliable work practices (e.g., debriefs). Innovative approaches to create supportive learning environments are needed to support the VA LHS and HRO efforts, clinician well-being and Veteran care. Methods To guide the identification and implementation of evidence-based interventions that cultivate supportive learning environments in VA teams, the authors used a longitudinal, sequential, mixed-methods design and LHS and HRO frameworks. The authors partnered with the 81 VA cardiac catheterization laboratories (CCLs) and conducted surveys and interviews to identify supportive learning environment best practices. A Relational Playbook was developed from these data and literature from the fields of positive psychology, team science, servant leadership, the VA Whole Health Framework, and the VA Clinical Team Training Framework. Results The Relational Playbook was completed in 2022 and was rated by a panel of clinical, LHS, and HRO experts as acceptable, appropriate, and feasible for implementation. The Relational Playbook resources and 50 evidence-based interventions is organized into five interconnected chapters: (1) Creating a Positive Culture; (2) Teamwork; (3) Leading Teams (4) Creating Joy in Work, and (5) Communication & High Reliability. Conclusions LHS and HRO frameworks describe how organizations can continually learn and deliver nearly error free services. In healthcare, the process of learning and high reliability is important for the development of high quality, equitable and safe care systems, and employee well-being. The Playbook resources and interventions translate LHS and HRO frameworks for the real-world. Clinical teams who implement the Playbook interventions will create supportive learning environments. This will provide insights and direction for LHS and HRO theory and research.

HCM: **Liminal Workers: The Role of Voice as a Resource for Well-being?**

Author: **Yaminette Diaz-Linhart**, *Massachusetts Institute of Technology*

How might worker voice be related to worker well-being? Worker voice captures how workers attempt to influence their work to meet individual and collective interests. Recognizing the stressors faced by frontline health care workers amidst the strain of the ongoing COVID-19 pandemic, the purpose of this study is to understand voice as a potential predictor for well-being within the health care sector. In particular, this paper investigates the relationship between voice systems (at the organizational level) and voice behaviors (at the individual level) and workers' self-reported well-being? Using data on experiences of Community Health Workers (CHWs), I test whether workers' organizational opportunities to voice (systems) and workers speaking up (behaviors) are associated with their global well-being. Because these workers operate at the intersection of health care and social services and embody a liminal space as boundary spanners, it is particularly important to understand work conditions that support their well-being generally and during the COVID-19 period. Findings indicate that workers with more opportunities to voice and workers who speak up have significantly better global well-being. These findings suggest the importance of both voice systems and behaviors in promoting the well-being of health care workers.

HCM: **Building Community at Work: An Exploratory Study in Healthcare System Management**

Author: **Neil M. Boyd**, *Bucknell U.*
Author: **Sharon Larson**, *Main Line Health System*

Recent scholarship has demonstrated that experiences of community (i.e., a sense of community and a sense of community responsibility) can enhance employee psychological and behavioral outcomes. Recent evidence also shows that experiences of community are better able to predict employee outcomes compared to long-regarded management and public management constructs. However, very little empirical evidence exists on antecedent conditions that help build community experiences at work. To evaluate¬ this gap, we conducted interviews with executive leaders, and focus groups with administrative leaders, across four major facilities in a large non-profit healthcare system in the Eastern part of the United States. The study confirmed propositions of the Community Experience Model, and explored organizational conditions that appear to build community experiences. The findings help frame factors that scholars can empirically test in future studies, and assist executives, HR professionals, and managers throughout an organization, in building community at work.

You Can't Buy Me Love: Financial Performance, Process, & Outcomes

Session Moderator: **Lesley Clack**, *Florida Gulf Coast U.*

HCM: **Healthcare Associated Infections and Financial Performance in U.S. Hospitals** ☯ 💻

Author: **Soumya Upadhyay**, *U. of Nevada Las Vegas*
Author: **Dean Smith**, *Louisiana State U.*

Healthcare associated infections (HAIs) are a concern to patients, hospital administrators and policy makers. For more than a decade, efforts have been made to hold hospitals accountable for the costs of HAIs. This study uses contingency theory as a framework to examine the association between HAIs and hospital financial performance. We use publicly available data on 2,059 hospitals in 2014-2016 that include HAIs, financial performance, and hospital and hospital market characteristics. The key independent variables are available infection rates and nurse staffing. The dependent variables are indicators of financial performance: operating margin, total margin, and days cash on hand. We find nearly identical negative direct associations between infections and operating margins and total margins (-0.07%), that are almost completely offset by the interaction between infections and nurse staffing (0.05%). The associations between HAIs and days cash on hand were significantly different from zero.

HCM: **Service Mix and Financial Performance in Rural Hospitals: A Contingency Theory Perspective**

Author: **Amy Yarbrough Landry**, *U. of Alabama, Birmingham*
Author: **Philip Cendoma**, *U. of Alabama, Birmingham*
Author: **Devdutt Upadhye**, *U. of Alabama, Birmingham*
Author: **Robert Landry**, *Jacksonville State U.*
Author: **Kristine Ria Hearld**, *U. of Alabama, Birmingham*

Rural hospitals are increasingly at risk of closure. Closure reduces the availability of hospital care in rural areas, resulting in a disparity in health between rural and urban citizens, and it has broader economic impacts on rural communities as rural hospitals are often large employers and are vital to recruiting new businesses to a community. To combat the risk of closure, rural hospitals have sought partnerships to bolster financial performance which often results in a closure of services valuable to the community, such as obstetrics and certain diagnostic services, which are viewed as unprofitable. This can lead to poor health outcomes for citizens in the community as they are not able to access care in these areas. Employing contingency theory, which posits that rural hospitals will seek alignment between internal structure and the external environment to best meet the needs of the communities they serve and maximize financial performance, it argued that rural hospitals should select services demanded by individuals in the market to drive up volume and increase revenues. Services unprofitable in urban or suburban settings may be beneficial to rural hospitals by increasing volume and revenues, while meeting the needs of communities. This study analyzes rural hospital service offerings and financial performance from 2015-2019 to illuminate if specific service offerings are associated with positive financial performance in a rural setting. The findings suggest that some services deemed unprofitable in urban and suburban hospital settings – such as obstetrics and drug/alcohol rehabilitation – are associated with higher margins in rural hospitals. And, similar to prior studies, other unprofitable service lines – such as psychiatry and long-term care – are associated with lower margins in rural hospitals. These findings support the need of rural hospitals to choose services that align with environmental circumstances to maximize financial performance.

HCM: **Administrator Turnover and Financial Performance: The Case of US Nursing Homes** ☯ 💻

Author: **Akbar Ghiasi**, *U. of the Incarnate Word*
Author: **Rohit Pradhan**, *Texas State U. San Marcos*
Author: **Ganisher K. Davlyatov**, *U. of Oklahoma Health Sciences Center*
Author: **Gregory N. Orewa**, *U. of Texas At San Antonio*
Author: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*

Nursing Home Administrators (NHAs) oversee the daily operations of long-term care facilities, play an integral part in managing direct care staff, and set the strategic direction of the facility. As such, NHAs can affect the overall performance of the nursing facility. However, nursing homes have faced perennially high administrator turnover rates. Using a national sample of US nursing homes, the purpose of this study was to examine the relationship between NHA turnover and financial performance. Our conceptual framework is based on tenets from the upper echelons theory and the resource-based view of the firm (RBV). The study used secondary data sources from the Centers for Medicare and Medicaid Services' (CMS) Cost Report, Long-Term Care Focus, Care Compare: Skilled Nursing Facility Quality Reporting Program, 2021, the CMS Payroll Based Journal (PBJ) data, and the Area Health Resource File. The dependent variable consists of the operating margin as a measure of profitability and efficiency of the nursing home operations. The independent variable for NHA turnover represents the number of administrators that left the organization during the last year (2020): 0= no administrators left; 1= 1 administrator left; 2= 2 or more administrators left. Other organizational and market variables related to financial performance are included as control variables. Given that the effect of NHA turnover on financial performance may be more gradual, we lagged the NHA turnover variable by one year. We used a linear regression model to test our hypothesis. Nursing homes with one nursing home administrator turnover are associated with 1.6% decrease in operating margin, compared to nursing homes without any turnover. Similarly, nursing homes with two or more administrators' turnover have 3.2% lower operating margin, compared to nursing homes without any administrator turnover. Findings from the study may have important implications for policymakers concerned with the financial viability of this critical part of the US healthcare system. Strategies such as increasing the educational standards of the profession, and providing competitive salaries and compensation and appropriate reward and recognition systems could be helpful in reducing administrator turnover and, ultimately, improving the performance of the nursing home industry.

HCM: **Predictor of Hospital Closure Operating in the United States between 2005 and 2019**

Author: **Haniyeh Shariatmadari**, *UNLV*
Author: **Soumya Upadhyay**, *U. of Nevada Las Vegas*
Author: **Djeto Assane**, *UNLV*

Hospital closures have recently been more common and a crucial concern in the United States since they can influence many aspects of patients' health conditions. This situation has led many scholars to investigate the adverse effect of a hospital closure. Previous research has well-documented the effects of a hospital closure. However, there is a lack of studies on the predictor of a hospital closure. To fill this gap, this longitudinal study explores organizational and market factors associated with hospital closure. We used Data from the American Hospital Association (AHA), the Centers for Medicare and Medicaid Services (CMS) Cost Reports, and the Area Health Resource Files (AHRF) for this analysis. This study includes all medical/surgical acute care hospitals operating in the United States between 2005 and 2019. We used an unbalanced panel design with logistic regression and marginal effects to explore the probability of our predictor variables on hospital closure. SAS version 9.4 and STATA version 13 were utilized. Our multivariate logistic regression indicated that hospitals in more affluent counties had a lower probability of closing (0.04%, p=0.05). Compared to smaller hospitals; larger hospitals had a (marginally significant) lower likelihood of closing (1.99%, p=0.1). Hospitals with higher financial performance had a lower probability of closing with respectively (0.02%, p=0.0001) for operating and (0.03%, p=0.0001) for total margin. Unlike for-profit hospitals, not-for-profit hospitals and non-federal government hospitals had a lower probability of closure (2.54%, p=0.0001 and 3.35%, p=0.0001 respectively). After the full implementation of the ACA, hospitals had a lower probability (0.87%, p=0.0001) of closing. Finally, hospitals with higher occupancy rates had a lower probability of closing (0.03%, p=0.001). Our study findings will give policymakers and hospital leadership teams tools to design effective policies and strategies to help prevent hospital closure.

HCM: **The Effect of Federally Qualified Health Centers Prevalence on Uncompensated Care in U.S. Hospitals**

Author: **Kena Norris**, *U. of Alabama, Birmingham*
Author: **S Robert Hernandez**, *U. of Alabama, Birmingham*
Author: **Amy Yarbrough Landry**, *U. of Alabama, Birmingham*
Author: **Nathan Carroll**, *Virginia Commonwealth U.*
Author: **William Opoku-Agyeman**, *U. of North Carolina, Wilmington*

Over the past two decades, uncompensated care in U.S. hospitals has grown at a staggering rate and reached $46.4 billion in 2013. It began to decline in 2014, due to the passage of the Patient Protection and Affordable Care Act (ACA) but is now on the rise again. Uncompensated care is typically affected by policy and market factors such as legislative changes and an increase in the number of uninsured. While hospitals continue to serve as critical safety net providers, they are often not the only or most appropriate facility to serve the indigent. Instead, federally qualified community health centers (FQHCs) were designed to provide care for the poor and uninsured. Accordingly, studies have shown that FQHCs reduce the number of costly emergency department visits and preventable hospitalizations. However, little work has been done showing the effect of FQHC penetration on hospitals' uncompensated care in a shared geographic area. In this study, FQHCs were studied to determine the effect of FQHC presence on uncompensated care in U.S. hospitals. Structural equation modeling was employed to compare uncompensated care in counties with FQHCs versus counties without an FQHC. In the final model, FQHCs, Medicaid expansion, race, high school education, uninsured population, household, unemployment rate, ED visits, and HMO penetration were statistically significant. The findings revealed that counties with FQHC presence had higher uncompensated care. Further research is needed to understand why FQHCs' presence increases uncompensated hospital care.

All You Need is Leadership

Session Moderator: **Geoffrey Silvera**, *U. of Alabama, Birmingham*

HCM: **Physicians as Leaders: A Systematic Review through the Lens of Expert Leadership**

Author: **Gina Phelps Thoebes**, *U. of Akron*
Author: **Tracy Hopkins Porter**, *Cleveland State U.*
Author: **Jessica Peck**, *Cleveland State U.*

A systematic review was conducted on the current state of physician leadership in the United States. The theory of expert leadership (TEL) (Goodall 2009, 2012) was utilized to explore the effects of physician inherent knowledge, industry experience, and leadership capabilities on physician leader behaviors and leadership outcomes. This systematic review spanned from August 2011 – February 2022 and applied the Preferred Reporting Items for Systematic Review and Meta-analysis (PRISMA) strategy. Our initial search began with 3,537 studies and the final sample consisted of 12 articles. The findings offer a number of studies which note the relationship between physician leadership and the three dimensions of TEL. How influential these are to leader behaviors and health related outcomes varies. We also found a number of studies which described general physician leadership behaviors which were not directly linked to factors of TEL, as well as two additional themes: leader identity and trust. These findings offer healthcare organizations insight into the potential strengths of having physicians in leadership positions and offer insight into potential challenges that should be addressed. This is the first systematic review which has applied a theoretical framework to the data and the first which focused solely on a U.S. population.

HCM: **In the Eye of the Storm: Hospital Leaders' Resilience During the COVID-19 Pandemic**

Author: **Nina Fuereder**, *Johannes Kepler U. Linz*
Author: **Charlotte Foerster**, *U. of Technology Chemnitz*

While health care leaders were already at a high risk for psychological and physiological illnesses long before the pandemic, COVID-19 only exacerbated this situation. Recognizing the crucial role of leaders in organizational crises and building on the conservation of resources theory, our study examines how hospital leaders cope with difficulties that endure over an extended period of time. By using the COVID-19 pandemic as an example for prolonged adversity in hospitals, we provide insight into the different responses to a given adversity and further expand knowledge about the role of time in crisis and for resilience. Qualitative expert interviews were conducted with 44 hospital leaders in Austria between December 2020 and November 2021. For data analysis, we used a hybrid approach, consisting of both deductive and inductive coding. Our empirical study shows that during prolonged adversity, hospital leaders use two types of resilience, namely acceptance and strategic resilience, in which suitability depends on both the duration of exposure and severity of the adversity. Our findings further show that when immediately confronted with adversity, leaders rely on resource-preserving acceptance resilience, while when dealing with the longer-lasting adversity, leaders rely on resilience-enhancing strategic resilience. Even though leaders rely on both types of resilience, our findings also imply that if opportunities to build strategic resilience are limited, higher burnout and turnover rates might be the consequence.

HCM: **Determinants and Effects of Hospital CEO turnover in Germany**

Author: **Marius Hermes**, *U. of Wuppertal - Schumpeter School of Business and Economics*
Author: **Vera Winter**, *U. of Wuppertal - Schumpeter School of Business and Economics*
Author: **Eva Maria Wild**, *U. of Hamburg*

CEOs shape the development of the hospitals they manage and thus make a significant contribution to their sustainment and success. According to the general CEO turnover literature, CEOs may be dismissed because the organization needs a scapegoat, because CEO turnover is seen as a means to bring the organization back on track in case of underperformance, or because the organization is stuck in a vicious circle of organizational instability, CEO turnover, and underperformance. While reasons for CEO turnover may hence be varying and hospital CEO turnover rates are above the average of other industries, the determinants and effects of CEO turnover have not been fully investigated. Especially findings regarding the impact of hospital CEO turnover on important outcomes such as efficiency and patient satisfaction are scarce and mostly rely methodologically on cross-sectional data, limiting causal inference. The purpose of this study is to bridge this research gap by empirically investigating the antecedents and consequences of hospital CEO turnover using a longitudinal dataset. This study draws on a comprehensive longitudinal dataset of 826 German hospitals from 2012 to 2020 based on various data sources such as annual financial statements (for CEO names and financial outcomes), structured quality reports (to calculate hospital efficiency scores), and the Weisse Liste (for patient satisfaction). Using a logistic regression we examine the determinants of hospital CEO turnover. The effects of CEO turnover are analyzed in a difference-in-difference design with a matched control group consisting of hospitals with similar structure and no CEO changes. We compare changes in different outcomes like efficiency, patient satisfaction, and financial metrics between treatment and control group at different times. Results indicate that for-profit hospitals have a significantly higher CEO turnover rate compared to public and non-profit hospitals. Furthermore, poor financial performance measured by the EBITDA margin and low patient satisfaction are significant indicators for a pending turnover of CEOs. Regarding the effects, CEO turnover in hospitals has significant negative effects on patient satisfaction. In addition, significant positive effects of CEO turnover on EBITDA margin two years after the turnover were also identified. In summary, on average, hospital CEO turnover shows a short-term deterioration in hospital performance. However, the deterioration is not persistent and for the longer observation periods the results point to an improvement in performance, suggesting a curvilinear relationship.

HCM: **Emotion Management among Clinical Leads under Leader Identity Threat: A Moderated Mediation Model**

Author: **Phatcharasiri Ratcharak**, *U. of Greenwich, Business School*

This longitudinal study investigates mediating effects of emotional management strategies among clinical leads on their well-being through social validation from subordinates, which is moderated by the presence of leader identity threat. With the integration of the literature on emotional labor, social functions of emotions, leader identity work and identity threat, the study explores functions of social validation from subordinates as a resource gain and loss in emotional management processes under the condition in which leader identity threat is present in leader-follower relationships. Using structural equation modeling to analyze the dyadic data from clinical leads and their subordinates over three consecutive time points, the results reveal that in the presence of leader identity threat, clinical leads consider social validation from subordinates to be psychologically harmful to their well-being. Thus, they conduct surface acting as a defense mechanism to protect their own well-being through the reduction of social validation from subordinates. The study makes several contributions to theory and research on emotional labor and its outcomes through the lens of leader identity work and identity threat.

Subsidiary-HQ Relationships

Session Moderator: **Chin-Ju Tsai**, *U. of London*

IM: **Modes of Cross-Cultural Leadership Adjustment Revisited: A Replication Study**

Author: **Chin-Ju Tsai**, *U. of London*

In this study, we replicated Tsai et al.'s (2019 in IJHRM) qualitative study, which had explored the modes of cross-cultural leadership adjustment, and extended it to a different cultural setting with a larger sample. Consistent with Tsai et al., we found that most of our sample expatriate senior managers had adopted the exploration mode of adjustment (i.e., they had simultaneously adjusted their own leadership approaches and tried to change their host country subordinates) and that their employees' characteristics and their own perceptions had played key roles in influencing their modes of adjustment. Nevertheless, diverging from Tsai et al., we found that the expatriates had displayed four, as opposed to three, modes of adjustment and that a combination of various internal and external factors had exerted a strong influence on the adoption of each such mode. Based on the findings of our replication study, we further developed the theoretical model proposed by Tsai et al. In this paper, we also discuss the contributions of our study.

IM: **Need Both Wings to Fly? The Implications of Local Staffing and Autonomy Delegation for Performance**

Author: **Joonghak Lee**, *Gachon U.*
Author: **Jongmin Lee**, *Yonsei U. School of Business*
Author: **Rita Fontinha**, *Henley Business School, U. of Reading, United Kingdom*

Although many studies have examined the implications of management localization for subsidiary performance, the empirical evidence is rather contradictory and inconclusive. Previous studies have typically focused on either local staffing or autonomy delegation to capture the degree of subsidiary management localization. However, we argue that the levels of both local staffing and autonomy delegation should be considered together to fully understand the degree of management localization in multinational enterprises (MNEs) and its impact on subsidiary performance. This study presents a novel model to evaluate the subsidiary management localization considering the levels of both local staffing and autonomy delegation. Using survey data from Korean MNEs, we empirically investigate our model and its implications for subsidiary performance. Our results suggest that local staffing and autonomy delegation do not substitute but complement each other, meaning that higher levels of both local staffing and autonomy delegation are associated with a higher level of subsidiary performance. Overall, this study extends our understanding of management localization and its impact on subsidiary performance by uncovering the collective role of subsidiary local staffing and autonomy delegation.

IM: **Choosing Face: How Subsidiary Leaders Manage Headquarters' Impression of their Subsidiary**

Author: **Deborah Mireles**, *U. of Galway*
Author: **Josephine Igoe**, -
Author: **Pamela Sharkey Scott**, *Dulin City U.*
Author: **Sumit Kumar Kundu**, *Florida International U.*

Subsidiary leaders often attempt to impress headquarters to obtain resources and desired attention, but how do they manage the impression they make on headquarters? We conducted in-depth qualitative research across five MNCs subsidiaries. Our findings suggest that subsidiary leaders manage headquarters' impressions of their subsidiaries through their different interactions. We identified four main interactions: hero interactions, facilitator interactions, strategic partner interactions, and good scout interactions. This paper extends theories on subsidiary roles and adds to our understanding of subsidiary leaders' interactions to achieve impression management.

IM: **Host-host Country Linkages as an Emergence and Determinants of MNEs' Foreign Consecutive Investment**

Author: **Xinjie Yu**, *U. of Chinese Academy of Sciences*
Author: **Rian HJ Drogendijk**, *U. of Groningen*
Author: **Ping Lu**, *Chinese Academy of Sciences*

MNEs conducted foreign direct investments sequentially. In some case, a certain host country is chosen to be the stepstone for the future, as there are host-host countries linkages. However, the interdependence and interaction among countries have been scarce in literature. Therefore, we propose a consecutive investment network formed among countries as a reflect countries linkages through MNEs' sequential FDI. Based on liability of Outsidership, we also extend bilateral distances to distance networks. Moreover, we hypothesis that distance network will affect the formation of consecutive investment network and apply Multiple Regression Quadratic Assignment Procedure (MRQAP) to examine how distance networks influence the investment network. Result shows that larger economic and technological distances and smaller cultural and administration distances between two host countries stimulate more sequential investments.

Culture, Gender, Trust and Global Performance

Session Moderator: **Congcong Zhang**, *Cornell U.*

IM: **Unpacking Different Approaches to Understanding Cultural Variations in Attribution Patterns**

Author: **Congcong Zhang**, *Cornell U.*
Author: **Yu Yuan**, *Cornell U.*
Author: **Lu Wei**, -
Author: **Joo-Young Jung**, *INTERNATIONAL CHRISTIAN U.*
Author: **Jack Qiu**, *National U. of Singapore*
Author: **Seongbin Hwang**, *Rikkyo U.*
Author: **Yunya Song**, -
Author: **Yong-Chan Kim**, *Yonsei U.*

Existing studies showed inconsistent results about whether and how attribution patterns differ across cultures. To generate a systematic understanding of the complexities of cultural variations in making causal attribution, we reviewed three different theoretical approaches in this study: the relative perspective of self-enhancement, the universal perspective of self-enhancement and cultural cognition, and found that each theoretical approach has received empirical support and informed competing hypotheses. Hence, the main goal of this study is to investigate the three theoretical approaches simultaneously using experimental data and explore how these approaches explain attribution behavior across cultures in a qualitatively different manner. In Study 1, we recruited participants from the U.S., mainland China and Hong Kong of China for an online experiment. In Study 2, we recruited participants from the U.S., mainland China, Singapore and Japan, and introduced alternative measures to assess attribution behavior. Results suggested that: a) attribution behavior can be influenced by both self-enhancing motives and cognitive processes, along with measurement instruments. Specifically, the cultural cognition approach was supported when attribution was assessed with Likert scales. In contrast, when attribution was measured by rank-order questions, the relative perspective of self-enhancement approach was supported; b) attribution decisions diverged within East Asian countries but converged between the East (e.g., mainland China, Singapore) and the West; c) acknowledging the idiosyncrasy of each cultural group and investigating each group as a separate cultural unit are necessary and important for theoretical development in attribution. Future directions and management implications were also discussed.

IM: **Dissecting Generations of Migrant Identities Within a Diaspora**

Author: **Audra I. Mockaitis**, *Maynooth U., Ireland*
Author: **Lena Zander**, *Uppsala U.*

The dissection of migrant identities is like a complex puzzle. Although cultural values comprise an integral component of cultural identity, the personal values of migrants are still understudied. This study examines the individual-level cultural values held by migrants who share a single ethnicity. Migrants are compared across age cohorts, ethnic generations and emigration waves as well as to nonemigrant home country nationals. The similarities between the groups lends support to the stability of cultural values. However, the differences revealed across the various migrant groups are also surprising insofar as they are not as large as might be expected given the physical, political and age separation between many of the groups. As migrant groups differed from nonemigrants, we question whether the timing of emigration is as important as the act of migration itself in shaping the cultural identities of migrants.

IM: **When does Job Embeddedness Protect Against Shocks? A Gender Perspective on Working Abroad**

Author: **Christian Linder**, *SKEMA Business School - U. Côte d'Azur*
Author: **Sonja Sperber**, *Vienna U. of Economics and Business*

Mounting evidence suggests mitigating organisational and community embeddedness effects on turnover intention when shocks occur. Our study demonstrates that female expatriates face different challenges when going abroad, which necessitates the development of specific identities as expatriate manager compared to their male counterparts. Consequently, the embeddedness pattern in organisations and communities differs between genders, with severe implications on how job embeddedness protects against shocks. Our main contribution is to demonstrate why and how the number and the type of shock, the effective pattern of job embeddedness, and the relation to organisation and community differs between genders, as well as the consequence for turnover intentions.

IM: **The Role of Trust and Humility in the Perception of Leadership Among Rwandan Cooperative Members**

Author: **Jennifer Jukanovich**, *Pepperdine U.*

Trust is in decline across the globe at a time when complex problems require people to work together across borders. Humility is known to be a predictor of trust between followers and leaders, but few studies connect the two constructs, and very few are from Sub-Saharan Africa. Rwanda has one of the fastest-growing GDPs in Africa but is still deeply affected by a breakdown in trust due to a history of genocide. This qualitative ethnographic case study conducted interviews among Rwandan cooperative members to ask how trust and humility inform their perception of leadership. The findings reveal the significance of the character of a leader, affirm the concept of ubuntu, highlight members' self-perception as leaders, and define the conditions necessary for trust and humility to promote effective leadership. Insights into the leadership styles and strategies utilized in the cooperative suggest positive connections between a follower's perception of a leader's humility, trustworthiness, and the leader's effectiveness. The study contributes ideas for leadership development, emphasizing the significance of nurturing humility to foster greater trust among leaders and followers. It could also provide a foundation on which others learn to better recognize, honor, and nurture humble leadership that restores trust among disenfranchised communities.

Cross-Border Knowledge Flows in MNEs

Session Moderator: **Alexander Nikola Gorgijevski**, *Vrije U. Amsterdam, School of Business and Economics*

IM: **Bottom-up Initiatives: The Role of Managerial Micro-Political Behaviors**

Author: **Alexander Nikola Gorgijevski**, *Vrije U. Amsterdam, School of Business and Economics*

This study aims to investigate managerial actions in detail; how managers micro-politically maneuver in the organization that allows their initiatives to strive and survive. Specifically, the paper examines the initiative process and addresses the behaviors of managers seeking approval/recognition of initiatives bottom-up. A qualitative case study of a European automotive manufacturer is used to empirically showcase an ongoing industrial transformation into the digital domain which has called for new ways of innovating products, methods, and services, accenting in the creation of new structures where new knowledge is needed at a rapid rate. Although initiatives that cause a high degree of dissonance in the organization suffer disadvantages in acquiring resources from decision-makers compared to better-adjusted alternatives, they seem to continue surviving within the organization due to the micro-political behaviors of individual managers. Thereby presenting an alternative explanation to the innovative success of bottom-up initiatives, explicating a micro-political process. Thus, developing the perspective of the MNC by addressing the role of micro-politics within it; consequently, contributing to a more dynamic view on the management of bottom-up initiatives.

IM: **Defending Firm Knowledge against Industry Rivals**

Author: **Heather Berry**, *George Washington U.*
Author: **Roisin Donnelly**, *Tilburg U.*

In this paper, we explore how technological similarity across multimarket contact with industry rivals impacts the knowledge defense decisions of multinational corporations (MNCs). Not all rivals represent the same threat to firms and our paper highlights the imitation threat that comes from industry rivals who are more similar in technology focus and their technological success (with leaders tending to focus on other leading industry rivals and laggards focusing on other lagging industry rivals). Our results also suggest that foreign-based MNCs with high technological similarity that are active in a focal firm's home country represent an important threat to firms, given that these firms can use and exploit a firm's knowledge assets across countries. Overall, this paper contributes to both the multimarket contact and the global knowledge management literatures by examining which industry rivals present more credible threats to firms to better understand the knowledge management and defense decisions of MNCs.

IM: **Manage Innovation Activities Outsourcing to Developing Countries: A Knowledge-Based View**

Author: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*

Drawing upon the knowledge-based view (KBV), we explore why firms take the risk on outsourcing innovation activities to developing countries often characterized by high legal risk and weak intellectual property right (IPR) protection. We also examine how the firms manage their outsourcing activities. We hypothesize that the availability of low-cost and high-skilled human capital in a country, even with weak IPR protection, increases the likelihood that a firm outsources an innovation activity to that country. In addition, we further propose that the main effect of human capital can be positively moderated by the designed mechanisms – task specificity and project modularity. Using the data from Offshoring Research Network, Index of Economic Freedom, and World Economic Forum to test these hypotheses, we find our premises supported.

IM: **Unfolding and Developing Disseminative Capacity**

Author: **Harun Emre Yildiz**, *Uppsala U.*
Author: **Jingzi Zhou**, *Nottingham U. Business School China*
Author: **Carl Fey**, *BI Norwegian Business School*

Despite its critical role in knowledge transfer and the development of multinational corporations (MNCs), disseminative capacity has received limited attention compared to the mirror concept of absorptive capacity. This paper suggests and conceptualizes four staged dimensions of disseminative capacity – identification, articulation, association, and continuous support. We further distinguish different types of knowledge senders in MNCs (headquarters vs. subsidiaries) and explore how structural and social integration mechanisms could shape the disseminative capacities of headquarters and subsidiaries, respectively. Our conceptual model shows that these mechanisms might produce different results for headquarters' and subsidiaries' disseminative capacities. Our fine-grained approach recognizes asymmetries between units within MNCs and explains how integration mechanisms could create tradeoffs between the efficiency and effectiveness of cross-border knowledge transfer.

Institutions and Internationalization

Session Moderator: **Irina Stoyneva**, *Thomas Jefferson U.*

IM: **The Effect of Institutional Ownership Types and Institutions on Innovation**

Author: **Irina Stoyneva**, *Thomas Jefferson U.*

The impact of different institutional investor types and two institutional environment dimensions on innovation investment and performance were studied. Professional investment fund ownership was positively related to investment in innovation while negatively related to innovation performance. Pension fund equity exhibited no direct relationship with both innovation investment and innovation performance. Executive ownership was positively related to the innovation investment but unrelated to innovation performance. Results further suggest that the impact of professional investment fund ownership on innovation investment and innovation performance is contingent upon the degree of minority investor protection and the strength of the rule of law.

IM: **Subnational Institutional Differences, R&D-Performance Relationship, and FDI Spillovers in Russia**

Author: **Sergey Lebedev**, *Kennesaw State U.*

This study explores how subnational institutional differences in a large emerging economy influence the relationship between research and development (R&D), foreign direct investment (FDI) spillovers, and firm performance. Using a sample of Russian firms, we find that subnational institutional development significantly alters the link between R&D and firm performance. Specifically, we find that this relationship is positively moderated by better market-supporting institutions in a region and negatively moderated by higher levels of corruption in a region. Furthermore, we find that FDI will more positively moderate the relationship between R&D and firm performance if subnational institutional development is also higher, thus showing that subnational institutional development may foster the positive spillover effect of FDI on local firms.

IM: **Emerging Multinationals Escaping from Pro-market Reversals (WITHDRAWN)**

Author: **Mirko Benischke**, *Erasmus U. Rotterdam*
Author: **Elisabet Garrido Martinez**, *U. of Zaragoza*
Author: **Minerva González**, *U. of Zaragoza*

We analyze how pro-market reversals in emerging home markets affect firms' outward foreign direct investment (OFDI). By integrating the new institutional economics and the springboard perspectives, we propose three main arguments. First, pro-market reversals in the home country increase the incentives of emerging firms to escape through OFDI. Second, to accelerate the escape from pro-market reversals, we propose that emerging multinationals prefer acquisitions to greenfields. Finally, as emerging multinationals seek strategic assets to catch up with firms from advanced markets, there is even a higher pressure to escape through acquisitions when perform OFDI in advanced economies. We test our arguments on a sample of 22,546 OFDI operations referred to 9,579 emerging firms from 104 emerging markets from 2003 to 2016.

IM: **Navigating the Link Between Informal Institutions and Emerging Market Foreign Direct Investment**

Author: **Xuchang Chen**, *Peking U.*
Author: **Mengzi Jin**, *Peking U.*
Author: **Roy Yong Joo Chua**, *Singapore Management U.*

Drawing on the cultural perspective and institution-based view, this paper seeks to understand the effect of heterogeneity in informal institutions within a country on outward foreign direct investment (OFDI). Using a large sample of emerging market firms' outward foreign direct investment activities, we find that culture at the subnational level, as an important dimension of informal institutions, is a driver of firm's international expansion. Further, we identify how variations in regional-level support, namely governmental R&D investment and inward FDI spillover, weaken the effects of subnational culture on firms' OFDI. Overall, the cultural perspective sheds new light on firms' OFDI strategy and enriches international business research.

Sustainability and CSR Practices in MNEs

Session Moderator: **Peng Wang**, *BNU-HKBU United International College*

IM: **Subnational Environmental Regulatory Pressure and Foreign Divestment from an Emerging Market**

Author: **Peng Wang**, *BNU-HKBU United International College*
Author: **Teng Niu**, *Xi'an Jiaotong U.*

The pollution haven hypothesis (PHH) is widely used to explain the relocation of foreign investors to emerging markets. Economic and environmental institutions are then shaped by an influx of foreign direct investment (FDI), which leads to more stringent environmental mandates in emerging markets. However, the literature remains silent on whether and how FDIs respond to the increasing environmental regulatory pressure in an emerging market. Grounded in the legitimacy perspective, this paper proposes that the likelihood of foreign divestment is higher when the regional environmental regulatory pressure is more stringent. The formulated hypotheses are empirically tested with a Cox proportional hazard model of 402 international joint ventures (IJVs) established in China in 2000 whose foreign divestment status is traced until the end of 2017. A positive relationship between environmental regulatory pressure and the likelihood of foreign divestment is revealed. Furthermore, contingency effects are explored based on the political-economic legitimacy framework: State ownership and the distance to the provincial capital shape political legitimacy, while innovative capability and the local unemployment rate alter economic legitimacy.

IM: **Institutional Work in the Transfer of Sustainability Practices Within a Multinational Company**

Author: **Cristina Leone**, *U. of Palermo*
Author: **Arabella Mocciaro Li Destri**, *U. of Palermo*
Author: **Pasquale Massimo Picone**, *U. of Palermo*

Drawing on studies regards institutional work carried out by specific actors to prompt practice transfer, this paper explores the practice work and boundary work required to transfer sustainability practices within a Multinational Company (MNC). To address this purpose, we perform a single case study on an MNC headquartered in the USA that transfers “Diversity & Inclusion” practices to a division operating in Italy. We shed light on the work necessary to transfer sustainability practices originating from an advanced institutional context to another context with weaker institutions. Our findings reveal that local champions and boundary spanners play a key role in the MNC practice transfer, while emerging symbolic boundaries may hinder it. Hence, we offer conceptual and practical insights that can alert scholars and managers to the specific works and actions necessary to transfer sustainability practices between different country contexts on behalf of MNCs.

IM: **The Impact of Varieties of Institutional Systems on Forms of Corporate Diplomacy on SDG 16**

Author: **Catherine Erica Alexina McDonald**, *U. of St. Gallen*
Author: **Michelle Karen Westermann-Behaylo**, *U. of Amsterdam*

Why have scholars of corporate diplomacy proposed such different conceptual approaches concerning why and how firms engage in corporate diplomacy? This study suggests that the differences can be explained by the variety of institutional settings (VIS) in which corporate diplomacy is carried out. Using a qualitative multiple case study approach, propositions are made about the way that home and host country institutions impact the nature of corporate diplomacy engagement. Future research questions and pathways are recommended to enrich the corporate diplomacy research stream.

IM: **Impact of Green Innovation on Emerging Market Multinational Enterprises’ Foreign Direct Investment**

Author: **Ruosu Gao**, *U. Of Sydney*
Author: **Yi Li**, *U. of Sydney Business School*
Author: **Huan Zhang**, *U. of Sydney Business School*

By combining stakeholder and institutional perspectives, this paper examines the causal relationship between corporate social responsibility (CSR) and foreign direct investment (FDI) in tax havens by emerging market multinational enterprises (EMNEs). Using a panel dataset of Chinese listed firm FDI from 2005 to 2016 and an initial sample of 26,975 observations from 3,277 firms, our empirical analysis shows that stakeholder expectations drive EMNE burden and prompt them to raise awareness of investing in tax havens. However, EMNE's investments in tax havens have declined as corporate culture has changed due to increased CSR levels. Green innovation has an inverted U-shaped effect on EMNE's tax haven investments, an unusual internationalization strategy and motivation beyond traditional research. Furthermore, local green institutional support strengthens the causal relationship between green innovation and EMNE FDI in tax havens, leading to a steeper inverted U-shaped relationship. This study complements the tax haven literature by analysing the role of CSR in tax haven investments and contributes to the CSR literature by integrating stakeholder perceptions of risk management and corporate culture.

Firms and governments across the world face pressure to address climate change concerns. The International Energy Agency's latest report suggests that global economic recovery after the Covid-19 pandemic, the war in Ukraine and the associated energy concerns in a fragile geopolitical context, and increased regulations to curb climate change have heightened the central role of energy as an important issue in its own right. Moreover, it is apparent that the projected energy demands are unsustainable for the global climate goals, which makes the shift towards renewable energy sources and low carbon solutions one of the most important global grand challenges of our time. Energy producers—from large multinational enterprises to clean tech startups—are at the center of this energy transition, but must make the transition from fossil fuels to renewables in the context of changing regulations, geopolitical tensions, and increasing energy demand. This panel symposium brings together leading scholars on this topic to share a lively discussion on management theory and practice related to the energy transition. The purpose of this panel symposium is to encourage diverse perspectives on the energy transition and stimulate research on this global grand challenge.

Session Moderator: **Elisa Alvarez-Garrido**, *U. of South Carolina*

IM: **The Liability of Foreignness in the Capital Market: A Legitimacy Perspective**

Author: **You-Xiang Song**, *U. of Texas at Dallas - Jindal School of Management*

Foreign initial public offerings (IPOs) play a significant role in the stock market worldwide. Although foreign IPO firms differ from domestic IPO firms in important aspects and their survival can be driven by distinct mechanisms, prior research has typically focused on domestic IPO firm survival yet overlooked foreign IPO firm survival. This paper aims to disentangle how and when foreign IPO firms face a higher failure rate in the host stock market than similar domestic counterparts. Building on the international business research and the legitimacy perspective, we develop a moderated-mediation model showing: (1) stakeholder support (i.e., analyst coverage) in a host country mediates the effect of IPO firms' country of origin on their delisting hazard (how), and (2) the firm's geographic diversification moderates this mediated effect (when). This paper advances IPO research by attending to important yet understudied foreign IPO firm survival.

IM: **Business Group Affiliation and Cross-border Acquisition Completion: A Study of Indian Firms**

Author: **Sumit Chakraborty**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Despite the dominance of business group (BG) affiliated firms in emerging economies and their superior group-level international presence compared to standalone firms, we have little understanding of the impact of business group affiliation in successfully concluding cross-border acquisition (CBA) deals. This is a gap in the literature for two reasons. First, the pre-deal phase of CBA deals needs more scholarly attention, as the success rate for such deals is low and failure in concluding initiated CBA deals leads to high economic costs. Second, BG-affiliated firms are endowed with more resources, so it is important to study whether such resource advantages play a role in successfully concluding CBA deals. Drawing on the information asymmetry perspective, we argue that BG affiliation provides affiliated firms with information-based advantages, which play a significant role in the pre-deal phase, resulting in a higher likelihood of deal completion. Hypothesis test conducted on a sample of 1376 CBA deals initiated by Indian firms between 2003 and 2017 provides empirical support to our argument. We further find that industry-relatedness and acquirer public status strengthen BG-affiliated firms' higher likelihood of CBA deal completion. Our study contributes to both business groups and international business literature.

IM: **Populism and MNE Performance**

Author: **Markus Liebmann**, *WU Vienna*

This study examines how host-country populist governments have an influence on the performance of multinational enterprises (MNEs) and their foreign direct investment (FDI) projects. Leveraging institutional theory, we elaborate how populist governments change the overall institutional environment for firms and thereby affect their operations. Thereby, populism breaks the notion of a quasi-static institutional environment, making the mechanisms and consequences of change visible. We also investigate what role the experience of MNEs plays in this relationship, building on organizational learning theory. Taking a sample of 5,036 FDI observations from 2007 to 2019 as a basis, we perform a long-run event study with the FDI as the main event, followed by a three year event window. We find that the overall performance in terms of buy-and-hold abnormal returns (BHAR) is more negatively affected, the more power a populist government has amassed in the host-country of the FDI. We cannot find any support for a moderating effect of (relevant) experience in this regard. Our results highlight the need to dig deeper into the implications of populism for MNEs and their (international) operations.

IM: **Aligning Business Interests with National Goals in Industrial Policy: The Finnish Case, 1952-2014**

Author: **Christian Stutz**, *U. of Jyväskylä School of Business*
Author: **Saara Matala**, *Chalmers U. of Technology*

International business (IB) researchers have long studied how multinational companies use political tactics to shape policies in their home and host countries. Yet, this literature has largely ignored the return of industrial policies—i.e., governmental plans and activities to allocate public resources to private firms aligned with national objectives—as a new avenue for political activities. In this article, we redress this oversight from an IB perspective by examining Finnish industrial policy-making concerning export-oriented shipbuilding from 1952 to 2014. Drawing from neo-institutional theory, the empirical findings challenge the idea that the current rise of industrial policy is a temporary triumph of state interventionism over market ideology. Instead, the findings show the persistence of the operation over time although it occasionally took more hidden forms. We identify the industry's multi-generational political strategy to work with political leaders to legitimize and coordinate industrial policy-making under the influence of multiple institutional pressures (geopolitics, supranational institutions, local society). Our primary contribution is to unpack the corporate political activity nature of industrial policy-making from an IB perspective. Moreover, the study responds to calls for incorporating historical methods in IB scholarship and demonstrates a key methodological potential: Exposing biases in current research paradigms.

The concept of cultural intelligence was introduced to the management literature in 2003 (Early & Ang, 2003). Since then, hundreds of articles and dozens of books (see Caputo & Kargina, 2023) have drawn on this concept to help explain cross cultural interactions in organizational settings. In the first quarter of 2023 the Handbook of Cultural Intelligence Research (Thomas & Liao, 2023) will be released, which includes 27 chapters from 55 different authors representing 55 different countries. A subset of 12 authors will provide the panel for this symposium. The goal of the symposium is to build on the themes reflected in the handbook and to facilitate a discussion among the participants as to the future opportunities that each theme presents for cultural intelligence research. We hope to inspire the next generation of researchers to move beyond the mundane and repetitive mode that so often creeps into a field of study as it matures. The concept of cultural intelligence addresses one of the most pressing issues of our time; the understanding of intercultural interactions among individuals in groups, organizations, and society.

Inclusivity in Organizational Design

Session Moderator: **Eric Sanders**, *Elmhurst U.*
Session Moderator: **Shola Ajiboye**, *Case Western Reserve U.*

MC: **Rewriting Our Story: Working-Class People in Elite Institutions**

Author: **Sandra Ool**, *Cambridge Judge Business School*

In this dissertation review, I provide a summary of the empirical and theoretical findings and implications of my study. Moving beyond macro level socio-economic statistics, my dissertation explores the complex and often misunderstood lived experiences of working-class people in elite institutions. I use a qualitative cross-organisational case study approach, interviewing people who come from a working-class background and have built their careers in the City of London, either within management consulting and / or financial services. I explore what it is like to clash with the surrounding environment on a daily basis and what people choose to do about it. The purpose of my dissertation was to explore how working-class people's views of themselves and their elite work environment change throughout their career. I use the concept of class work to bring institutional classism to life and reveal how it manifests in the day to day. More importantly, I connect the status quo with the promise of disruption through examples of class-destroying work. My findings confirm the prevalence of class-based norms in the workplace, while also providing surprising insights regarding the potential for change through lifelong crafting of individual working-class people. As a management consulting practitioner, who also happens to come from a working-class background, it was essential for me to relate my findings to practice. As such, I outline practical implications to encourage management consulting firms to begin their journey in addressing class-based differences in their organisation.

MC: **Inclusive Co-Design in Management Consulting through Power, Place and Time Work**

Author: **Taisa Ballantyne**, *Cambridge Judge Business School*

In this short paper, I focus on how management consultants can culturally adapt co-design processes for greater inclusion of beneficiary groups. To do so, I draw on the case of the Design by Doing 2.0 Bhutanese Employment Lab, a social innovation lab co-created and designed by community-based consultants and the Bhutanese refugee community in Edmonton, Canada. Using qualitative data from in-depth interviews and lab documents, I reveal how power, place, and time considerations are integral to building more inclusive processes when engaging and designing solutions with culturally diverse beneficiary groups. This paper is adapted from my master's dissertation and subsequent research summary. It presents practical insights for management consultants who wish to adapt co-design and innovation processes to be more aware of unequal power dynamics in their engagements. This research also supports literature on inclusive innovation by revealing how practitioners can engage in power, place, and time work to enact greater inclusivity in co-design processes.

MC: **From Human Capital to Social Capital: Putting Humans at the Center in Designing the Organization**

Author: **Tiffany J. McDowell**, *Ernst and Young LLP*

Today's organizations are unable to deal with rapid change nor to innovate consistently at scale. Worse, individuals are not engaged in their work, nor with the organizations to which they belong. We know we must dismantle current organization designs and restructure for today's environment, but to date organization design solutions have been incomplete for three reasons. First, organization designs are not linked to how humans behave in groups and in systems. Second, design solutions are focused primarily on the individual unit of analysis, not the group and system level. And third, design has historically ignored the power of horizontal networks, which account for approximately 80% of how information flows and work is done in an organization. This paper introduces the Peopletecture model, demonstrating through qualitative methods how the six elements in the model (hierarchy, networks, measurement, membership, responsibility, and teaming) provide academics, leaders, and practitioners with a purposeful set of tools that improve consulting outcomes, and advance management theory by applying new methods to help improve the lives and experiences of workers. Using a consistent qualitative method to document case studies from two organizations facing real and tangible workforce challenges, the paper describes new and innovative approaches to resolving these challenges, designing intentional collaboration patterns around how humans behave in social settings, thereby positively impacting management consulting theory and practice.

Human Resource Management, Training and Workers Front and Center

Session Moderator: **Uzonna Olumba**, *U. of Illinois at Urbana-Champaign*
Session Moderator: **Shola Ajiboye**, *Case Western Reserve U.*

MC: **Is Training People the Most Profitable Investment ?** 💻

Author: **Carole Bousquet**, *IDRAC Business School & ISEOR*
Author: **Miguel Delattre**, *IAE - U. of Lyon 3*

Any organization, whatever its size or sector of activity, experiences dysfunctions linked to problems of training/job mismatch and a lack of development of individual and collective skills. Although companies are aware of the need for professional training, in reality, they have difficulty overcoming the related dichotomous reasoning: training is mainly seen through its "social" benefits, while its economic impact is mainly reasoned as a cost to the employer, disconnected from the company's strategy and concrete performance objectives. How can we measure the return on investment of training initiatives? How to better manage them? This paper, based on 24 case studies, aims to present a method for managing and calculating the ROI of training actions, or "Intangible Investment on Qualitative Development of Human Potential" (Savall & Zardet, 1987, 2018), accessible to both academics and practitioners.

MC: **Let's Talk About Silence: Preventing and Reducing Employee Silence in Professional Service Firms** ☯ 🗨

Author: **Henrik Maria Bienstein**, *WFI - Ingolstadt School of Management*

The phenomenon of employee silence – especially in the context of professional service firms (PSFs) like management consultancies or auditing firms – has recently gained increasing attention in organizational research. However, there is a lack of studies on organizational measures that can prevent or reduce this unfavorable employee behavior. Twenty-five semistructured expert interviews with partners of PSFs were conducted to address this topic. I develop a framework consisting of 30 measures and resulting in six fields of action to reduce employee silence in the specific organizational context of PSFs. The findings contribute to a further understanding of professionals and their workplaces as well as opening an academic discourse on measures to prevent or reduce silence in organizational research. By implementing the measures developed, PSFs can reduce employee silence and prevent negative impacts of the phenomenon, such as performance declines or terminations.

MC: **Putting Women Front and Center: An Integrated Literature Review of Working Women Post Pandemic**

Author: **Joanne Roehm**, *Doctoral Student*

ABSTRACT Recognizing advances in women's workforce participation and pay overtime, particularly in the last several decades, we know that before the COVID-19 pandemic several entrenched, systemic issues existed that impacted the volume of women in the workforce across all sectors and played a role in women's career advancement and pay. As we move out of said pandemic, what is the future of women and work? In this integrated literature review, recent literature (2020 to 2022) was searched using keywords that include workplace, gender, working women, workplace climate, employment, COVID-19, pandemic, gender inequality and many combinations thereof. An overview of themes from the current body of literature around women at work and the COVID-19 pandemic and our current understanding of them will be presented and analyzed, and then end with conclusions, their implications, limitations of the current literature, and by sharing opportunities for additional future research. The pandemic has given us the opportunity to learn from the experiences of women leaders and this literature review synthesizes published research to date and hypothesizes specific strategies for organizations to better accommodate female leaders who are working mothers. Specifically, we put women front and center, and address how the pandemic has disrupted the nature of work for these valuable workers. Keywords: Women, work, COVID-19, pandemic, gendered work, gender equity

---

MC: **Orchestrating Diverse Schedules at Work: A Framework of Coordination for Flexible Work Schedules**

Author: **Cana Karaduman**, *Tilburg U.*

Organizations increasingly adopt hybrid work arrangements to reduce costs and attract talent. Flexible working schedules are one of the features that come with the change. Such flextime applications allow employees to exercise their autonomy over their work, provide them with a better work-life balance, and increase their job satisfaction. On the other hand, synchronizing the actions of a team of employees with diverse schedules can pose a challenge for managers. In this paper, I argue that an encompassing understanding of employees' divergent time preferences (i.e., subjective time preferences) can help us understand under which conditions we need certain coordination modes. I propose a conceptual model that, a) synthesizes the literature on different subjective time taxonomies, b) proposes means to coordinate different conditions related to employees' subjective time, and c) introduces temporal complexity, consisting of temporal interdependence and temporal uncertainty, as an important construct to understand the coordination of time in organizations. The paper aims to provide a framework for coordinating diverse time preferences of employees, that can stem from the diversity of personality, age and culture.

MC: **Relationship Between Trait Emotional Intelligence & Burnout Among Workers in the Humanitarian Sector**

Author: **Raghida Abdallah Yassine**, *Adelphi U.*
Author: **Najoie Nasr**, *Haigazian U.*
Author: **Hiba Antoun**, *Haigazian U.*

This study investigated the relationship between trait emotional intelligence and burnout among managers and non-managers in the humanitarian sector in Lebanon. We explored trait emotional intelligence as it relates to burnout whilst controlling for status (managerial and non-managerial) and working from home. The results of the study suggest a significant inverse relationship between the average score of trait emotional intelligence and burnout as total score. That is the higher the trait emotional intelligence score reported, the lower is the burnout score. Further analysis suggested that there is a significant relationship between trait emotional intelligence as a total score as well as the subscales burnout. This aligns with the studies on positive psychology and linkages between well-being and positive emotions. While controlling for employment status, results indicated that emotional exhaustion was not affected by employment status (manager and non-manager), which was unexpected. Finally, those working from home had higher levels of burnout than those who did not.

Technology in Teaching

Session Moderator: **Wlamir Goncalves Xavier**, *Biola U.*

MED: **Conventional versus Fully Online Flipped Learning Environments**

Author: **Sabrina Wittmann**, *Philipps-U. Marburg*
Author: **Torsten Wulf**, *Philipps-U. Marburg*

Due to restrictions related to the COVID-19 pandemic, fully online higher-education classes were implemented around the world, which reinforced existing trends towards the adoption of online and blended learning formats, such as flipped learning. The few studies that have compared the effects of conventional and fully online flipped learning environments on student learning outcomes offer mixed results. Thus, with pandemic restrictions being lifted, researchers and practitioners are seeking to understand whether conventional flipped learning or fully online flipped learning is preferable. Drawing on flipped learning, educational-psychology, and management-education research, we argue that fully online flipped learning is associated with increased flexibility and decreased interaction, leading to less flow and, thus, poorer student learning outcomes. The results of an experiment involving 136 graduate students enrolled at a German university support our hypotheses. We contribute to management-education research on flipped learning environments by shedding light on the effects of fully online flipped learning compared to conventional flipped learning by analyzing the key characteristics of flipped learning. Thus, our paper also offers practical tips on the design of flipped learning classes.

MED: **Pedagogical and Andragogical Approaches to Distance Learning**

Author: **Wlamir Goncalves Xavier**, *Biola U.*
Author: **Jake Aguas**, *Biola*
Author: **Cinara Gambirage**, *U. of Groningen*

This article investigates and explores if best practices for adult (andragogical) online teaching, differ from the pedagogical practices recommended for children. Research-based online teaching standards developed and tested by Quality Matters (QM) were used to address this specific question. Findings indicated a significant similarity between Higher Education and K-12 best practices. However, the comparative analysis of the QM standards for Higher Education and K-12 identified three dimensions: regulation, cognitive development, and maturity.

MED: **Examining the Role of Psycho-Social Motivators on MOOC Adoption: Moderating Effect of Gender**

Author: **Rahul Rajan Lexman**, *Indian Institute of Technology Madras*
Author: **Rupashree Baral**, *Indian Institute of Technology, Madras*
Author: **Nimitha Aboobaker**, *Assistant professor Cochin U. of Science and Technology*

This paper aims to examine the effects of intrinsic psychological and extrinsic social and institutional motivators influencing individuals' behavioral intention to use MOOCs. Further, the study also aims to explore if there exists a moderating effect of gender on the relationships between the independent and dependent variables under study. Drawing upon the findings from social cognitive theory (SCT), and the technology acceptance model (TAM), our study developed a theoretical model and further conducted an empirical study with the student population in India. In total, 622 valid data were collected from undergraduate, postgraduate, and doctoral-level college students through an online survey. We used the structural equation modeling technique to examine the research model. The empirical results from our study suggest that, while intrinsic psychological motivators such as self-efficacy, technology innovativeness, valence, and self-development are positively associated with individuals' behavioral intention, extrinsic motivators such as social norm and management commitment have little influence on behavioral intention. The moderation test further revealed that males are more likely to be influenced by valence, self-development, and perceived usefulness (PU) as compared to females. Our study can provide insights to the MOOC administrators on various learner-centric attributes that enhances learner participation.

MED: **Indigenous Peer Learning in a Digital Third Space**

Author: **Christine Woods**, *U. of Auckland*
Author: **Billie Lythberg**, *U. of Auckland*

This paper explores learning in the context of Indigenous entrepreneurship education from the perspectives of non-indigenous academics engaged in Maori entrepreneurship education at the University of Auckland Business School. Specifically, it considers how a digital third space provided opportunities for a postgraduate class of Maori adult students to work together to understand entrepreneurship and explore its relevance for their community.

The Democratization of Coaching

Panelist: **Richard E. Boyatzis**, *Case Western Reserve U.*
Session Chair: **Melvin L. Smith**, *Case Western Reserve U.*
Panelist: **Nicky Terblanche**, *Stellenbosch U.*
Panelist: **Jonathan Passmore**, *Henley Business School, U. of Reading, United Kingdom*

People want and need development. In surveys of MBAs, the most frequent reasons as to why they chose a company to work for and why they stayed were opportunities to develop and engage in novel activities (Boyatzis, Smith & Van Oosten, 2019). In these surveys, development was a higher ranked reason that compensation. More recent surveys suggest that purpose and investing in their development are features Millennials seek in potential employers (American Express, 2017; Manpower 2016). At the same time, we know that the human organism requires constant adaptation or it atrophies and dies (Wilson, 2000). At the same time, there was an engagement crisis pre- COVID showing that most people with full time jobs were not motivated and engaged in their work from every country surveyed. It was followed by the Great Resignation and Quiet Quitting movements following two years of remote work, financial and social and political turmoil during the pandemic. The motivating power of development opportunities at work have risen to become a major factor in retention and productivity at work. In addition, there are billions of people who do not work in companies or for government organizations but still seek growth and development. There are three major approaches to development: education, training, and developmental assignments. Formal degree based education does not have a track record of providing retained learning. One study showed that the half-life of knowledge from the first required accounting course at a top 20 ranked full time MBA program was 6 ½ weeks (Specht & Sandlin, 1991). Outcome assessment studies of 4-year college or graduate school programs suggest little is remembered and needed skills for job performance are not often developed (Astin, 1993; Winter & McClelland, 1982; Boyatzis, Cowen & Kolb, 1995). Training programs in organizations do not appear to provide sustained development either, mostly suffering from what has been called the “honeymoon effect” of noticeable behavior changes that last 3 weeks to 3 months and then atrophy (Campbell, Dunnette, Lawler & Wieck, 1970; Boyatzis, 2008). Developmental assignments provided through formal career pathing or temporary project/task team assignments have been used for hundreds of years and are believed to work well, but there is little evaluative research to support its efficacy. Clearly, it works for some people, but that does not account for thousands or millions of people for whom such assignments have yielded little development of their capability. The positive benefits appear more haphazard and probably wasteful in terms of lost motivation and engagement. Coaching is emerging as a quite popular form of development in organizations, education and for individuals wanting to change. It is personalized and more acceptable than training programs in hierarchal cultures (Hofstede, 1984). The early results and outcomes from random assigned, control group studies are promising (Boyatzis, et al., 2022; DeHaan, et. al., 2019). Coaching, however, is highly labor intensive and as a result costly. This results in a relatively select number of individuals being able to access the benefits of coaching. To pursue the theme of the 2023 AOM Annual Meeting of Putting the Worker Front and Center, we contend that development has to be available, provided and encouraged for all. This symposium addresses three key issues that could broaden the use of coaching as a means of development, not just for the select few, but for the masses in our society. The three key questions we are addressing in this symposium are: 1. How can we bring the benefits of coaching to the hundreds of millions of individuals who work in organizations but are not executives or individuals identified as high potential talent? 2. How can we bring the benefits of coaching to the billions of people who do not currently work in organizations with development programs, as well as those who do not work in organizations at all? 3. How can coaching help with mental and social health, as well as career and educational guidance for people in all walks of life, regardless of their race/ethnicity, the type of work they do, their socioeconomic status, or their level of formal education achieved?

Deeper Understanding of Management Learning & Education

Session Moderator: **Richard J. Arend**, *U. of Southern Maine*

MED: **The Contrasting Impacts of Entrepreneurship Education and the Likely Explanations**

Author: **Richard J. Arend**, *U. of Southern Maine*
Author: **Ali Fehmi Unal**, *U. of Southern Maine*
Author: **Richard Bilodeau**, *U. of Southern Maine*

We consider the overarching issue of whether entrepreneurship education matters by empirically studying the more focused question of whether it matters to personal, organizational, and societal performance based on what organization that training is applied in. We do so to better understand the contrast between entrepreneurial education's significant positive micro-level effects and its lack of significant effects at the macro-level (e.g., in start-up rates). We do so by surveying students who graduated from formal entrepreneurship programs in the last decade about their education, their individual entrepreneurial performance at whatever organizations they then contributed to, that organization's performance, and several other outcomes of interest to society (e.g., innovations). We find not only the usual contrast in micro- and macro-level effects, but also new results based on our simultaneous multi-level analysis approach (e.g., that includes insights at the organizational level where it appears that educational benefits begin to dissipate). We use these results to: generate a set of relevant possible explanations; offer a novel narrative for the current conundrum based on a solid analogy; and, propose several new recommendations to improve the outcomes.

MED: **Survival Learning and Organizing Despite Disaster and Misery in Fukushima**

Author: **Nobuyuki Chikudate**, *Hiroshima U.*

This study reports on the nature of the learning and organizing practices that played a significant role in harnessing survival and resilience among survivors and refugees of the catastrophic events of March 2011 in the northeastern region of Japan, especially Fukushima. Based on an eleven-year in-depth qualitative study, the research reveals the nature of learning and organizing among those who suffered from these events.

MED: **Deterring Cheating Online: Passive versus Active Proctoring through a Social Facilitation Lens**

Author: **Gerard Beenen**, *California State U., Fullerton*
Author: **Sinjini Mitra**, *California State U., Fullerton*

The abrupt transition to online teaching and exams has made business schools especially vulnerable to a surge in cheating behavior. To address this problem, we conducted two studies investigating cheating behavior and motivation from a social facilitation perspective. Study 1 explored how alternative interpretations of social facilitation (mere presence vs. virtual presence) might predict potential cheating for online proctoring approaches ranging from more passive to more active. We found indirect evidence that active proctoring was more effective at reducing cheating behavior. Study 2 extended the continuum of passive to active proctoring with a scenario study that explored motivational factors to deter cheating through a social facilitation lens (evaluation apprehension, negative arousal, self-awareness, distraction). Consistent with study 1 results, cheating intentions were highest for passive proctoring (instructor monitoring an online Zoom room) and lowest for active proctoring (instructor monitoring in-person). We also found evaluation apprehension and self-awareness were effective cheating deterrents in different proctoring scenarios. We discuss the implications and suggest future research directions.

MED: **The Relations Between Leader Development, Self-awareness, and Mindfulness**

Author: **Sari Johanna Laine**, *Turku School of Economics, U. of Turku*

Leader development has traditionally emphasized formal training of particular task-related skills, rather recently, the focus has shifted towards self-learning and developing one's cognitive and affective skills such as self-awareness and emotional intelligence. In this respect, voluntary mindfulness practice has increased popularity among leaders. To explore this phenomenon, this study aims to find out how leaders' voluntary mindfulness practice has impacted their felt sense of self-awareness development. The study is based on interviews with 43 leaders engaged in mindfulness practice. The findings imply that mindfulness practice accelerates the process of becoming more self-aware of one's unproductive tendencies and thinking patterns and seeing more (e.g., optimistic and resilient) thinking and behaving options. This study contributes to research on leader development and self-awareness and aims to clarify the mindfulness-related processes that may influence leader self-awareness development.

The Historical Analysis of Industries and Corporations

Session Moderator: **David Foord**, *U. of New Brunswick*

These papers examine how external factors have influenced industries and corporations. Each article of this proposed set takes a different industry or company and examines how it has changed over time.

MH: **Leisure Jobs: Recreating Family and Social Life in Canadian Electric Utility Marketing, 1920-1970**

Author: **David Foord**, *U. of New Brunswick*

This paper contributes to debates of how technological and cultural change occurred in twentieth century homes. It is framed in the context of the seemingly contradictory views about modernizing technology and housework in the twentieth century. One view is that the transformation of homes with electric power created more work for mothers. The other is that electric appliances saved time and led to fewer hours of housework and family care. I reconcile these views in an examination of the history of marketing of technological and cultural change in the Canadian electric power industry from 1920 to 1970.

MH: **Strategy and place: Understanding the Decline and Failure of a Multi-generational Family Business**

Author: **Tom McGovern**, *Newcastle U.*
Author: **Nicholas Wong**, *Newcastle Business School, Northumbria U.*

Rushworth Music House Limited (RMHL) was a family-owned business that operated in the music industry in Liverpool for over 160 years. The company had been very successful but under the ownership of the fifth generation of the family it faced a financial crisis that led to a radical restructuring of the business. The strategic and operational changes that were implemented provided only a temporary respite for the business. We examine the external and internal factors that led to the crisis and why the family directors were unable to turnaround the business. The case study shows the difficulties of achieving a sustained turnaround when facing financial difficulties and unfavourable external conditions.

MH: **The Ability to Reconfigure: A Historical Study of Corning**

Author: **Sean Simoes**, *Haskayne School of Business, U. of Calgary*
Author: **Olga Petricevic**, *U. of Calgary*

The ability to reconfigure refers to firms redeploying assets and changing routines as markets emerge and evolve and is viewed as a firm's Dynamic Capability (DC). We investigated reconfiguration through a historical study of Corning, including books and articles on Corning, annual reports, and letters to shareholders, and identified key themes that were enablers of reconfiguration such as a strong top-management desire to find the "next big hit", consistent investment in fundamental research in an area of core-expertise, partnerships with customers and external parties, and successful combination/reuse of resources. We categorized these enablers into four aggregate dimensions of reconfiguration: aspiring, investing, partnering, and harnessing, and developed a model linking these enablers. These results help explicate reconfiguration in a manner conducive to empirical testing and practical application.

MH: **Craft in Engineering**

Author: **Mirva Peltoniemi**, *U. of Jyväskylä School of Business*
Author: **Antti Sihvonen**, *Jyväskylä U. School of Business and Economics, Jyväskylä, Finland*

Research on the engineering profession has devoted substantial attention to engineers' political role, while the content of engineering work has received limited attention. In this study, we shed light on engineering work by studying its craft dimensions since engineering combines both craft and science. Our empirical fieldwork focuses on the development of analysis and testing methods and equipment at Central Laboratory, the R&D alliance of the Finnish pulp and paper industry, from 1920 to 1972. By using grounded theory and process research techniques, we analyzed 56 engineering projects to understand the dimensions and processes of engineering craft. Our findings reveal three dimensions of engineering craft: 1) mastery of transformation techniques that enable translating ideas and scientific principles into methods and equipment, 2) balancing scientific accuracy and practical application to steer work towards practical usefulness, and 3) interacting with the engineering community to determine standards of quality and manage their position. During crafting processes, these three dimensions generate cycles of problem-finding and problem-solving that focused either on routinized problem-solving or the creation of novel solutions. The creation of novelty suggests that engineering involves creativity, and these creative acts focus on the production of effective solutions. Together the different dimensions of engineering craft and how they are used in crafting processes help engineers to resist mechanization of their work because engineering work requires human judgment and ingenuity.

Making Sense of Gender and Diversity

Session Moderator: **Susan Biancani**, *Netflix*

MOC: **Women Perceive Incivility from Men as Gender Bias: Coping Responses and Boundary Conditions**

Author: **Grisel Lopez-Alvarez**, *U. of Illinois at Urbana-Champaign*
Author: **Teresa Cardador**, *U. of Illinois at Urbana-Champaign*
Author: **Simon Lloyd D. Restubog**, *U. of Illinois at Urbana-Champaign*

Women are more likely than men to be targets of incivility in the workplace. Scholars have referred to this pattern as selective incivility and suggest that incivility directed toward women is a form of modern sexism in the workplace. However, it remains unclear whether women themselves make sense of incivility from men as a form of gender bias, whether workgroup context affects these perceptions, or whether women engage in unique responses to incivility perceived as selective. We draw on social identity theory to develop a conceptual model to better understand these relationships. Across three studies with working women, we show that although women perceive largely similar forms of incivility from men and women, they perceive male-instigated incivility as a form of gender bias; however, the gender composition of the workgroup does not moderate this relationship. Further, our findings show that women are more likely to engage in problem-focused-responses (i.e., direct confrontation and formal reporting), rather than emotion-focused responses (i.e., avoidance) in response to incivility perceived as selective. Our research advances the literature on incivility, selective incivility, and gender bias in the workplace, has practical implications for managers seeking to foster inclusion in the workplace, and suggests novel directions for future research.

MOC: **Do We See It As It Is or As We Are? The Mismatch Between Actual and Perceived Diversity**

Author: **Bianca Sá**, *Brazilian School of Public and Business Administration*
Author: **Ishani Aggarwal**, *Brazilian School of Public and Business Administration*

The perceived diversity literature has grown during the past decade. Despite the emphasis given to its contribution towards understanding diversity on teams' outcomes, less has been explored on the factors influencing the perception of diversity. Existing research indicates that actual diversity may not always align with perceived diversity; in this sense, we investigate which factors contribute to the potential mismatch between actual and perceived diversity. We integrate the literature on social perception, social cognition, and team diversity to highlight the role of the perceiver's attributes and group composition in shaping the perception of diversity and how time interacts with them. Moreover, we develop a novel Diversity in Salience perspective to explain the proposed effect.

MOC: **Time Policing, Work, and Personal Attributions for Absence and Gender in Professional Roles**

Author: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*

Pressures to spend long hours working are a powerful behavioral dynamic in contemporary professional and managerial workplaces. We build and test novel theory about the gendered ways that people monitor and make attributions about others' time use at work. Analyzing a survey of 100 managers, we develop a new construct, time policing: the everyday practice of monitoring and making attributions about others' time use at work. Participants' qualitative responses suggest time policing is gendered, with women's time away from the office more likely than men's to be attributed to personal commitments, and men's more likely to be attributed to work commitments. We explore time policing through two surveys and eleven experiments, including a preregistered replication, with a total of 2,710 participants. The results reveal two ways that time policing is gendered: first, the gender of the person evaluated changes whether he or she is noticed as taking time away from work; second, attributions about reasons for these absences are also gendered. We find that gendered time policing generalizes across industry gatekeepers, the lay public, and also occurs in online work environments. Further, our studies show that gendered time policing is shaped by the occupation's demographic composition: in gender-balanced or male-dominant occupations, time policing associates women with personal responsibilities, but in a female-dominated occupation, men are associated with personal responsibilities. These studies offer novel insights into relationships between time, gender, and inequality that are especially important given the push to return to the office.

MOC: **Organizational Event Sensegiving in the Wake of Mega-Threat Events and the Psychological Contract**

Author: **Adaora Ubaka**, *Northeastern U.*

Mega-threat events are adverse, highly publicized events, in which people are harmed, threatened, or targeted because of their membership within a specific social identity group (Leigh & Melwani, 2019). In the aftermath of such events, many organizations grapple with whether to issue a response to their employees, and if they do respond, how to respond in a way that is credible and sensitive to the needs of employees whose social identity group is most impacted. While there is burgeoning scholarship on mega-threat events and their impact on organizational life, there is a theoretical need to understand the mechanisms by which organizations can fulfill their psychological obligations to employees when these events occur. Integrating signaling and strength of signal theories (Spence, 1973; Suazo et al., 2011) across three experimental studies (N = 1, 100), we address this dilemma. First, we find that organizational communication response to a mega-threat event is a contemporary obligation within the employee-employer relationship as measured by psychological contract violation. In Study 1 we show how organizational event sensegiving as a communication approach generates perceptions of psychological contract fulfillment. This relationship is mediated by identity safety for those whose social identity group is affected by the mega-threat event (i.e., Asians), and perceived organizational support (POS) for all participants. In Study 2 (pre-registered replication), we replicate Study 1 findings. Implications for theory are discussed.

Sensemaking and Meaning at Work

Session Moderator: **Patricia Caulfield Dahm**, *U. of Kansas*

MOC: **My Story to Tell: The Meaning(fulness) of a Moment**

Author: **Patricia Caulfield Dahm**, *U. of Kansas*
Author: **Spencer Harrison**, *INSEAD*
Author: **Kylie Rochford**, *U. of Utah, David Eccles School of Business*
Author: **Njoke Thomas**, *Boston College*

Drawing on interview data from 60 employees of a technology company, we employ grounded theory methodology and induce a theory of establishing authority over meaningful moments at work. Our analysis reveals that individuals carefully share and withhold stories of meaningful moments from enmeshed, empathetic, and equivalent audiences in order to achieve authority over meaningfulness. By shifting our analysis of meaningfulness from the overall gestalt of work to moments, both positive and negative experiences emerged as meaningful.

MOC: **Virtual Collaboration Affects Tacit Knowledge Acquisition: the Role of Observation and Storytelling**

Author: **Qi Zhang**, *Erasmus U. Rotterdam*
Author: **Gianluca Carnabuci**, *ESMT Berlin*

Acquiring tacit knowledge is critical at work and often requires interactions, strong ties, and trust. However, it is unclear how the advent of virtual collaboration influences this process. Integrating research on virtual work, tacit knowledge, social learning, and vicarious learning, we propose that relative to face-to-face collaboration, virtual collaboration hinders the acquisition of tacit knowledge, mainly by reducing people's observation of others' behaviors but not the storytelling from others. We found evidence for our theory in a survey study and a critical incident study. According to the experiences from a range of professions requiring on-the-job-learning, virtual collaboration indeed hampers tacit knowledge acquisition via the reduction in observation. However, virtual collaboration is as effective as face-to-face collaboration in facilitating the acquisition of tacit knowledge via storytelling. Additionally, we find that whenever the tacit knowledge being transferred is task-based, virtual collaboration is a more effective conduit than face-to-face collaboration. When the tacit knowledge is more contextualized or embodied, such as interpersonal skills, personal development, and socialization, virtual collaboration becomes a less effective conduit than face-to-face collaboration. Our research unravels how and what people learn from others as tacit knowledge in virtual collaboration compared to face-to-face collaboration, which has important theoretical and practical implications.

MOC: **Sensemaking and SubjectiveTime: The Role of Mental Time Travel's Functions in Prospective Sensemaking**

Author: **Syed Hassan Naveed**, *U. of Strathclyde, Scotland, UK*
Author: **Efstathios Tapinos**, *U. of Strathclyde*
Author: **Dilshod Makhmadshoev**, *U. of Strathclyde*
Author: **Laura Fernández-Méndez**, *U. Pontificia Comillas, ICAI-ICADE*

Prospective sensemaking invokes multiple temporalities (past, present, and future) and thus the concept of time becomes pivotal in its realm. Extant studies have galvanized around the retrospective sensemaking and objective time, while prospective sensemaking and the actions of subjective time have remained undertheorized with a distinct lack of empirical evidence. One important action of subjective time is mental time travel in which the past, present, and future are experienced within the current moment. This paper examines the ways in which the individuals at the top-level management make sense of uncertainty by utilizing the three functions of the mental time travel (Attending, Preparing and Comprehending). Deeper understanding between sensemaking and these three functions of mental time travel has been made using 23 semi-structured interviews with the managers working in top positions within their respective organizations. Our study contributes to the theory of the sensemaking and the concept of subjective time by providing a comprehensive framework in which these three functions of the mental time travel are used across the past, present, and future in making the prospective sense of uncertainties and crafting and implementing strategies against them.

MOC: **Let Me Entertain You – How Entertainment Practices Support the Construction of Narratives**

Author: **Maren Vakilzadeh**, *U. of Kassel*
Author: **Peter Eberl**, *U. of Kassel*

Leaders often rely on narratives to positively influence their followers' attitudes toward change processes. In our paper, we explore how such narratives are constructed and how rhetoric elements can be used to convey a compelling narrative for change. Although it is acknowledged that entertainment is an essential component of narratives, little is known about the specific entertainment practices and their influence on narrative rhetoric. Using an in-depth qualitative study of Donald Trump's 2016 presidential campaign, we examine the rhetoric and the entertainment practices used for narratives to enhance the audience's willingness to change. Our analysis suggests that five interconnected rhetorics, namely legitimizing, delegitimizing, dissatisfying, futurizing, and empowering, are communicatively embedded in three entertainment practices, interruption, uncomplying, and embellishing. These entertainment practices are used to amplify the rhetoric which in turn enhances the acceptance of the narrative.

Morality and Ethics in the Workplace

Session Moderator: **Li Huang**, *INSEAD*

MOC: **To Thine Own Self Be True, Or The Organization Would Seem False Too: Inauthenticity Triggers Cynicism**

Author: **Li Huang**, *INSEAD*
Author: **Eric Yuge Lou**, *INSEAD*

Influenced by a classical philosophical notion that a person's authentic self is their fount of happiness, organizational scholars have adopted an affective and introspective lens and studied employees' experience of personal inauthenticity as an obstacle to their own wellbeing and work engagement. Overlooked is a parallel notion corroborated by recent psychology research that people also see their authentic self a source of virtue and inauthenticity a threat to their moral self-concept. Drawing from the distancing account of the self-concept protection theory in social psychology, the current research proposes a two-stage, organization-specific defense response through which organizational members experiencing personal inauthenticity are motivated to espouse organizational cynicism, a negative attitude comprising of the belief that the organization lacks integrity as well as organization-directed negative affect and disparaging behaviors. Adopting a full-cycle research approach, we conducted a cross-lagged survey study, an experiment, and three multi-wave survey studies (with one of them pre-registered) to provide consistent support for our theoretical model and exclude trait cynicism and negative affectivity as alternative explanations. We discuss implications of this defense response for the personal authenticity of organizational members and the moral legitimacy of organizations.

MOC: **Using Mentorship and Codes of Conduct to Support Individuals' Internal Motivation to Report Honestly**

Author: **Pujawati Gondowijoyo**, *U. of Melbourne*
Author: **Susan E. Brodt**, *Smith School of Business, Queen's U.*

Despite extensive investment in organizational controls to prevent dishonesty, fraud statistics continue to rise. We take a different approach, one designed to promote honesty. Building on Self-Determination Theory (Ryan & Deci, 2000) and set in the context of reporting accounting information, we examine how codes of conduct and mentor relationships can be used to leverage employees' internal motivation to report honestly, in two experiments with managers. Experiment 1, set in a solo-reporting setting, manipulated code autonomy support (high/low) and mentor relatedness support (high/low), measured participants' trait-like internal motivation to report honestly and assessed their effects on honest reporting behavior. We found that individuals with low motivation to report honestly were more likely to report honestly when codes convey low (versus high) autonomy support. Experiment 2, set in a group-misreporting setting, manipulated code autonomy support (high/low), measured participants' internal motivation to report honestly, and assessed their effects on refusal to join group misreporting. We found that individuals with high motivation to report honestly were more likely to refuse to join others to misreport when codes convey high (versus low) autonomy support. Our results suggest managers tailor these anti-fraud controls to fraud risk and employees' motivation.

MOC: **Organizational Moral Disengagement: Suspending Morality at Work**

Author: **Irene Skovgaard-Smith**, *Norwich Business School, U. of East Anglia*
Author: **Roberta Fida**, *U. of East Anglia, Norwich Business School*
Author: **Claudio Barbaranelli**, *Sapienza U. of Rome*
Author: **Marinella Paciello**, *International Telematic U. Uninettuno*
Author: **Rosalind Searle**, *Centre for Trust, Peace and Social Relations, Coventry U.*
Author: **Mamoona Arshad**, *De Montfort U.*
Author: **Matteo Ronchetti**, *Department of Occupational and Environmental Medicine, Epidemiology and Hygiene*

While individual's wrongdoing through mechanisms of moral disengagement has grown in study, limited attention has been paid to collective moral disengagement. Although this has been mentioned in relation to well-known cases of corporate scandals and harmful industry practices and products, a distinct concept of organizational moral disengagement has not previously been theoretically developed or empirically operationalized. This is what we aim to do in this paper. Drawing on Bandura's moral agency theory, we conceptually define organizational moral disengagement (OrgMD) as individual's perception of the organizational suspension of morality which justifies and exonerates unethical activities. Using three studies, we develop and test the concept of OrgMD, devising a valid measure with demonstrable conceptual and empirical distinctiveness from personal moral disengagement, and showing a specific relationship with unethical pro-organizational conduct. Study 1 and Study 2 followed a two-wave design with the participation of UK employees (N=301 and N=297 respectively). Study 3 followed a cross-sectional design with the participation of 297 Italian employees. OrgMD is confirmed as unidimensional, with all the items loading onto one latent dimension (Hypothesis 1). OrgMD, although correlated, is different from personal moral disengagement (Hypothesis 2), and found to better predict unethical pro-organizational behavior (Hypothesis 3), compared to personal MD. We also show cross-cultural invariance of OrgMD based on data from two countries. Overall, in this paper we advance understanding of the role of perceptions of organizational disengagement mechanisms which justify malpractices and valorize unethical activities as permissible or even desirable.

MOC: **In Integrity We Trust: Organizational Crisis Elevates the Importance of Leader Integrity**

Author: **Eric Yuge Lou**, *INSEAD*
Author: **Li Huang**, *INSEAD*

Organizational members' trust in leaders is a foundation of adaptive crisis responses. We propose and test an integrity heuristic which differentiates leader trust development in times of crisis from leader trust development in non-crisis times. Four studies, including one field survey study during COVID-19, two classroom experiments, and one scenario-based online experiment (total N = 975), showed that three types of organizational crises all led organization members to rely more on leader integrity to trust leaders, but not ability and benevolence, and state anxiety drove this effect. Two additional studies explored the effect of leader integrity on crisis management effectiveness: A field study using survey and archival data (n = 111) and a classroom experiment (n = 131) found that leader integrity, compared to competence or benevolence, relieved employee anxiety, resulted in greater employee performance increase during COVID-19 and facilitated employees' adaptive responses. Marrying the threat literature and the trust literature, this work sheds much-needed light on how leaders can foster trust and inspire adaptive responses in times of crisis.

Deviance and Incivility

Session Moderator: **Michele N. Medina-Craven**, *Mississippi State U.*

MOC: **Some Rules are Meant to be Broken: Individual Differences and Rule-Breaking Behavior**

Author: **Michele N. Medina-Craven**, *Mississippi State U.*
Author: **Kathryn Ostermeier**, *Bryant U.*
Author: **Meagan Eleanor Baskin**, *Florida Gulf Coast U.*
Author: **Julie Irene Hancock**, *U. of North Texas*
Author: **Maria Bracamonte**, *Mississippi State U.*

Through a multi-wave design with co-worker ratings (n = 115), we advance current knowledge on rule-breaking in organizations by exploring the relationship between essential personality traits and pro-social rule-breaking (PSRB) behaviors while examining organizational structure as a moderator. Our results indicate that individuals high in honesty-humility are less likely to engage in PSRB behavior. In contrast, individuals high in moral disengagement are more likely to engage in PSRB behavior. Organizational structure – when the organization is more organic and free-flowing – is also positively related to PSRB behavior, indicating that when an organization does not have solid rules or guidelines (a "weak situation"), individuals are more likely to rely on their predispositions and engage in PSRB behaviors. Organizational structure also moderated the relationship between moral disengagement and PSRB behavior, enhancing this negative relationship. Overall, this study illuminates the types of individuals more likely to engage in PSRB behaviors and the role that the organization plays in creating an environment where these behaviors can flourish, providing important implications for managers.

MOC: **Experienced Incivility Variability: Victims' Responses from an Adaptation Perspective**

Author: **Xiaowan Lin**, *U. of Macau*
Author: **Shanshan Gao**, *U. of Macau*

Recognizing the dynamic nature of employees' experienced incivility, we consider experienced incivility variability as an important source of interpersonal uncertainty in the workplace. By identifying the critical role of uncertainty from an adaptation perspective, we hypothesized that, beyond the level of experienced incivility, experienced incivility variability increases victims' emotional exhaustion (i.e., affective reaction) and decreases their reflective learning (i.e., cognitive response), which consequently influence their engagement in destructive and constructive behaviors. In addition, we propose that experienced incivility variability also plays a moderating role in the relationship between victims' daily experienced incivility and their daily reactions. To test the model, we adopted a multilevel experience sampling study of 222 employees over ten consecutive work days. Results supported most of our hypotheses. The implications of experienced incivility variability for theory and practice are discussed.

MOC: **Servant Leadership and Constructive Deviance: A Moderated Mediation Model**

Author: **Bowen Shi**, *National U. of Singapore (NUS)*
Author: **Menghuan Wang**, *Beijing Normal U.*
Author: **Yongjuan Li**, *Chinese Academy of Sciences*

Servant leadership has gained increasing attention as an emerging form of positive leadership in organizational research and practice. Previous research has suggested that servant leadership inhibits employee work deviance. However, no distinction has been made between different types of deviance. It is unclear whether servant leadership promotes employees to go beyond organizational norms to help the organization and its members and when it happens. Based on social exchange theory and the normative conflict model, we propose felt obligation as a mediating mechanism and psychological entitlement and normative conflict as boundary conditions. As a result of field and experiment studies involving 829 participants, we found that: 1) servant leadership positively affects constructive deviance; 2) felt obligation mediates the relationship between servant leadership and constructive deviance; 3) normative conflict moderates the relationship between felt obligation and constructive deviance. This study contributes to a more comprehensive understanding of how servant leadership influences employee deviance, and practical implications for how managers could facilitate subordinates' constructive deviance.

MOC: **I Cannot Yell at my Boss: The Spillover Effect of Supervisor Incivility on Work and Family Domains**

Author: **Hassan Imam**, *Kyoto U.*
Author: **Naveed Bilal**, -
Author: **Tomoki Sekiguchi**, *Kyoto U.*

The present study draws on the frustration-aggression hypothesis to investigate how supervisor incivility leads to work-family conflict and employee interpersonal deviance towards customers and co-workers. Multi-source daily surveys were collected from service employees for two consecutive weeks from Monday to Friday (N = 750) and analyzed through multilevel structural equation modeling. The results confirm that supervisor incivility increases work-family conflict and employees' interpersonal deviance towards customers and co-workers. Further, results of indirect effect highlighted that employee interpersonal deviance to co-workers positively mediates between supervisor incivility and work-family conflict. The study findings highlight that supervisor-initiated incivility is detrimental to the workplace and negatively impacts employees' personal lives. The study draws important implications for organizations who wish to mitigate the negative effects of supervisor incivility. For example, an organization should implement a comprehensive hiring and promotion process, in which personality checks an essential requirement. Workplace incivility is often framed as a generic low intensity deviant behavior. The present study suggests that workplace incivility from specific sources, particularly from supervisors, should be addressed because it is detrimental to business and equally damaging to the employees' well-being.

Identity and Understanding the Self

Session Moderator: **Edgar E. Kausel**, *Pontificia U. Católica de Chile*

MOC: **Increasing Savings Behavior by Affecting the Connection With the Future Self: A Field Experiment**

Author: **Edgar E. Kausel**, *Pontificia U. Católica de Chile*
Author: **Francisco Larach**, *Pontificia U. Católica de Chile*
Author: **Alvaro Chacon**, *U. Técnica federico santa maría*
Author: **Gonzalo Enei**, *Fintual Administradora General de Fondos S.A*

Individuals tend to have difficulties saving enough for retirement. Not saving enough for retirement can negatively affect retirees' quality of life. Many strategies have been developed to try to solve this issue. Besides the classical approaches of awarding monetary rewards or tax benefits to those who save for their pensions, researchers have explored complementary ways to increase the connection with the future self. The argument is that by increasing the vividness in the thought process of the future self, individuals tend to act more in their future interests. In the present study, we test this idea through a field experiment with real users from an investment company. We have three conditions, one with no future self-reference, another with a text referencing the future self, and the last with a text referencing the future plus an aged picture of themselves. Our results show that the more the intervention triggers a vivid connection to the future self, the more likely people will save for retirement.

MOC: **The Antecedents & Consequences of Perceptual Fit: How Employees Come to Understand Culture**

Author: **Brian Gregory**, *Northern Arizona U.*

Purpose: This research explores a rarely studied form of person-organization fit, perceptual fit, which captures the accuracy of an employee's understanding of their organization's culture. The managerial antecedents as well as the behavioral and attitudinal consequences of perceptual fit were examined theoretically and empirically. Methodology: Survey tools were used to measure multiple workplace cognitions, attitudes and values from employees of three small healthcare organizations. Organizational culture was measured for each organization so that perceptual fit could be ascertained, which represents an accuracy score of each individual's comprehension of culture. Regression analyses measured the hypothesized associations between perceptual fit and its proposed antecedents and consequences. Findings: The results suggest that leader-member exchange (LMX) and perceived organizational support (POS) are both associated with perceptual fit. In terms of the outcomes of perceptual fit, the regression analyses provide support for an association between perceptual fit and psychological empowerment, job satisfaction and organizational commitment. Originality: This study contributes to the literature by exploring how employees come to understand their organization's culture, and the consequences of differing levels of understanding (i.e., perceptual fit). The study results suggest that managerial action such as LMX and POS can enhance the chances that an employee is able to understand their organization's culture accurately. Further, this research adds psychological empowerment as an important outcome of perceptual fit.

MOC: **Latent Identities: Assuming and Sustaining Identities Independent of Roles**

Author: **Elise B. Jones**, *US Coast Guard Academy*
Author: **Judith R Gordon**, *Boston College*

The vast majority of research on identity work – the means by which identities are formed, sustained, and revised – addresses role identities, or identities for which an individual holds a corresponding role. Yet identity research illustrates that some identities, including lingering identities, possible selves, and alternative identities, exist independent of a related role. Little is known about how individuals conduct identity work pertaining to these identities which, although often overlooked, play an important role in shaping individual well-being and the future of the workforce. In this paper we bring together under the umbrella of latent identities the range of identities scattered through the literature that exist independent of a corresponding role and address the substance of identity work pertaining to them and the vehicles by which individuals conduct it. In so doing, we foster clarity and integration within the identity literature, address the unique nature of identity work pertaining to latent identities, clarify the position of roles in the identity lifecycle, and further illuminate the transitory nature of individual identity. Together, these contributions support a broader, more parsimonious view of individual identity than can be represented by role identities alone.

MOC: **Leveraging Identity to Drive Curiosity Externtization at the Michlin-starred Restaurant Alchemist**

Author: **Nicole Alexandra Rosenkranz**, *Ecole hôtelière de Lausanne, HES-SO UAS and Arts Western Switzerland*
Author: **Marc B. Stierand**, *Ecole hôtelière de Lausanne, HES-SO UAS and Arts Western Switzerland*
Author: **Vlad Glaveanu**, *School of Psychology, Dublin City U.*

Curiosity has increasingly been deemed to hold pivotal influence over the ventures founders create. While this growing body of knowledge has helped us understand the origins of a venture, what is less well understood is the process by which founders' curiosity gets externalized to the organizational level. Yet, the externalization of curiosity has been recognized as central for rallying organizational members behind innovation initiatives. To understand how curiosity externalizes and thereby translates into a venture's collective property, we conducted an in-depth case study of Rasmus Munk and his two Michelin-starred restaurant Alchemist for both the founder and venture's exceptional and continuously demonstrated level of curiosity. Our empirically grounded model draws attention to the pivotal role identity mechanisms assume in externalizing curiosity in a venture: Promoting originality through "unfamiliarizing the familiar" at the individual is counter-balanced by "familiarizing the unfamiliar" into a coherent venture story at the organizational level, thus creating a self-reinforcing curiosity cycle.

Our presenter symposium seeks to address the mental health crisis at work by introducing four projects that all contribute to better understanding and addressing the stigma surrounding mental illness and intellectual disabilities in the workplace. We do this by presenting the history and state of mental illness stigma, including some important measuring issues. Additionally, we highlight two inductive studies and one deductive field study that examine different dynamics of workers and leaders related to navigating the stigma of mental illness and intellectual disabilities. Our findings present theoretical and practical implications that can be used for future research and effective policy and organizational guidelines to better reduce the effects of stigma and encourage a more inclusive and healthy workplace.

NEU: **The Hormonal Bias to Responsible Leadership**

Author: **Christian Voegtlin**, *ZHAW School of Management and Law*
Author: **Andreas Walther**, *U. of Zurich*

While responsible leadership is becoming increasingly relevant in our globalized world, we lack knowledge about the influence of individual hormonal determinants on responsible leadership. Such knowledge can help us to become more cognizant of the basic neurological constraints and enablers of complex responsible leadership behavior; behavior that is increasingly expected by organizational stakeholders. While research on the hormonal determinants of behavior and attitudes is well advanced, it has so far neglected to investigate the potential relation between behaviorally influential steroid hormones and responsible leadership. The results of our study testing for these relations show that higher total cortisol output and estradiol levels were associated with complex responsible leadership behavior. For testosterone, a negative trend with responsible leadership emerged. We discuss the implications of our findings for theory and business practice.

NEU: **The Habitual Entrepreneur Brain – A Voxel Based Morphometry Study**

Author: **Frédéric Ooms**, *HEC Liege*
Author: **Bernard Surlemont**, -
Author: **Jitka Annen**, *Coma Science Group, GIGA Consciousness, U. of Liège Centre du Cerveau2*
Author: **Rajanikant Panda**, *Coma Science Group, GIGA Consciousness, U. of Liège Centre du Cerveau2*
Author: **Steven Laureys**, *Coma Science Group, GIGA Consciousness, U. of Liège Centre du Cerveau2*

The recent empirical studies conducted in neuroentrepreneurship have not yet accounted for the potential structural particularities of the entrepreneurs' brains. This study explores the anatomical difference in the brain between habitual entrepreneurs and managers using voxel-based morphometry. Our results show a higher gray matter volume in the left insula in habitual entrepreneurs as compared to managers. This difference is associated with higher cognitive flexibility in divergent thinking measured using a self-reported scale. These findings suggest new avenues in the research of individual differences and the potential influence of experience on the neurological underpinnings of divergent thinking.

NEU: **Fake Smiles for the AI Boss? A Study of Employees' Emotional Labor Performance Under AI Supervision**

Author: **Yasheng Chen**, *School of Management, Xiamen U.*
Author: **Xin Xu**, *Sun Yat-Sen U.*
Author: **Ziwei Liang**, *Xiamen U.*

This study experimentally investigates how artificial intelligence (AI) supervision systems influence the effect of performance-contingent incentives on emotional labor. The face recognition API developed by face++ and an electrodermal activity device are used to measure participants' emotional expressions and emotional arousal, respectively. We provide neurobiological evidence that employees who are evaluated by an AI system demonstrate more desirable emotional expressions than those under outcome-based incentive contracts. However, not all smiles are created genuinely. Employees are less likely to invoke emotional arousal and they exhibit less authentic smiles when their emotional behavior is evaluated by an AI system rather than by humans, which in turn lowers customer satisfaction. Our study generates new insights into the performance-contingent incentives literature in the emotional labor setting and provides evidence of the pros and cons of introducing AI supervision systems into the workplace.

NEU: **Managers' Perceptions of and Behavioral Responses to COVID-19 Threats: A Role of Ethical Leadership**

Author: **Khalid Mehmood**, *School of Economics and Management Hubei Engineering U.*
Author: **Yaser Iftikhar**, *Armed Forces Post Graduate Medical Institute, National U. of Medical Sciences*
Author: **Zhang Hui**, *School of Economics and Management Hubei Engineering U.*
Author: **Hina Rehman**, *National U. of Modern Languages, Islamabad, Pakistan*
Author: **Chenglong Zhang**, *School of Economics and Management Hubei Engineering U.*
Author: **Fauzia Jabeen**, *Abu Dhabi U.*

Drawing on affective events theory, this study framed and tested a model examining the process of sequential mediating roles of managers' anxiety and frustration on the link between managers' perception of COVID-19 threats and two negative behavioral outcomes, customer-directed deviant behavior, and coworker abuse. We conducted two empirical studies in tourism-related service settings in Pakistan. In Study 1 (i.e., data collected from frontline managers of tour operators), the results supported our proposed model that the relationships between managers' perception of COVID-19 threats, and customer-directed deviated behavior and co-worker abuse are each sequentially mediated first by managers' anxiety and then by frustration. Study 2 (where the data were collected from hotel frontline managers using a time-lagged approach) supported our sequential mediation process when predicting customer-directed deviant behavior and coworker abuse. Moreover, ethical leadership moderated the sequential indirect effects on these relationships. We conclude by discussing implications for research and practice.

Feeling the Burn: Novel Strategies for Fighting Burnout in the New World of Work

Organizer: **Marissa Shandell**, *The Wharton School, U. of Pennsylvania*
Moderator: **Adam Grant**, *The Wharton School, U. of Pennsylvania*
Panelist: **Susan J. Ashford**, *U. of Michigan*
Panelist: **Amy C. Edmondson**, *Harvard U.*
Panelist: **Tracy Dumas**, *Ohio State U.*
Panelist: **Laura Maria Giurge**, *London School of Economics and Political Science*

As we enter a post-pandemic working world, understanding how to reduce and prevent burnout is a pressing and timely issue—one that is paramount to putting the worker front and center. Our symposium will examine how and why fighting burnout will look different in this new world of work, with an explicit focus on novel work contexts ranging from independent and gig jobs to virtual and hybrid organizations. The session will convene a group of organizational behavior experts with different lenses on burnout to expand our view and identify future directions for research and practice: Susan Ashford, Amy Edmondson, Tracy Dumas, Laura Giurge, and Adam Grant. In an interactive and structured panel discussion, our panelists will collectively address the following three objectives: (1) Understand the state of the science and unanswered questions about burnout in the new world of work; (2) Define strategies for individuals to fight burnout; and (3) Explore how organizations and occupations can change the cultural and structural conditions that promote burnout.

It's Not Easy Being Green: The Role of Envy in Organizations

Session Moderator: **Jaewoo Kim**, *U. of Houston*

OB: **A Dynamic Model of Constructive and Destructive Reactions to Job Search Envy**

Author: **Jaewoo Kim**, *U. of Houston*
Author: **Daniel Judson Beal**, *Virginia Tech*
Author: **Leanne Atwater**, *U. of Houston*
Author: **Jamie Belinne**, *U. of Houston*

Although envy has been examined most often as the precursor to a wide range of negative reactions, recent evidence demonstrates that envious reactions can also be functional. Drawing on a diverse set of literature, we theorize that the self-threatening implications of envy may produce negative consequences for individuals seeking jobs, even when envy sets those individuals on a functional path toward self-improvement. The result is the presence of two paradoxical paths in which individuals may level up (i.e., experience self-improvement and improved outcomes in response to envy) and also bottom out (i.e., experience social isolation and reduced negative mental and physical health). Furthermore, we leverage evolutionary theory to hypothesize that male job seekers in a competitive job search context are likely to exaggerate their reactions to both paths of envy compared to female job seekers. We examine these hypotheses by assessing job seekers on a weekly basis over an intensive job search season. Using Dynamic Structural Equation Modeling, our results demonstrate that individuals experiencing envy do indeed level up and bottom out over time and that male job seekers, relative to female job seekers, exhibit greater reactivity to envy when leveling up as well as greater overall levels of social isolation. Discussion emphasizes the long-suspected but rarely documented effects of envy on physical and mental well-being—even while pursuing functional ends—and the roles that self-relevance and perceived control may play in exacerbating these effects.

OB: **Dark Side of Competitive Psychological Climate: The Role of Workplace Envy and Trait Self-Esteem**

Author: **Muhammad Imran Rasheed**, *The Islamia U. of Bahawalpur Pakistan*
Author: **Muhammad Hamid Murtza**, *The Islamia U. of Bahawalpur Pakistan*

Organizations and managers create competitive climate at workplace in order to enhance employees' efforts. Psychological competition however is not always healthy. We argue competitive psychological climate may envoke envy feelings among employees which can further affect their performance at jobs. Drawing on social comparison theory, we collected here wave data from 318 employees working in the star hotels in Pakistan. Our results revealed that competitive psychological climate is positively associated with benign and malicious envy, while benign envy is associated positively with employee performance and malicious is associated positively with deviance at workplace. Further, benign envy mediates the association between competitive psychological climate and job performance while malicious envy mediates the association between competitive psychological climate and deviance. In addition, trait self-esteem has been found a boundary condition on the first stage of our model such that trait self-esteem moderates the associations between competitive psychological climate and benign and malicious envy. Trait self-esteem has also shown moderated mediation effect on the indirect association between competitive psychological climate and job performance through benign envy and on the indirect association between competitive psychological climate and deviance through malicious envy. This research is important in understanding negative impact of competitive psychological climate on employee outcomes specifically the feelings of envy and its outcomes at workplaces. Limitations and future research directions are discussed.

OB: **Envy can be Empowered! The Impact of Benign Envy and Desiring to Gain Face on Bootleg Innovation**

Author: **Xiaomei Li**, *Tianjin U.*
Author: **Di Wang**, *College of Management and Economics, Tianjin U.*

Drawing upon social comparison theory and self-esteem maintenance theory, this paper developed and tested a model to examine positive reactions toward individuals with dispositional and state benign envy. It theorized that an individual with benign envy is positively related with desiring to gain face, which in turn motivates an individual to conduct bootleg innovation. Moreover, it theorized that an individual who desire to gain face is positively related to benign envy, which also in turn motivates an individual to conduct bootleg innovation. Dispositional and state benign envy have different results in our research. Hypotheses were generally supported in 2 field studies, 280 valid samples in study 1 from online questionnaires and 80 valid samples in study 2 are from a large logistics company by daily diary study. This research contributes to a more completed and balanced view of benign envy, desiring to gain face and bootleg innovation in organizations.

OB: **Feeling Underqualified: The Role of Hope in Relation to Adaptive and Maladaptive Behaviors**

Author: **Gamze Koseoglu**, *U. of Melbourne*
Author: **Sejin Keem**, *Portland State U.*
Author: **Aysegul Karaeminogullari**, *Pontificia U. Javeriana*
Author: **Berrin Erdogan**, *Portland State U.*
Author: **Talya N. Bauer**, *Portland State U.*
Author: **Eyup Burak Sancak**, *Canakkale Onsekiz Mart U.*

Drawing from Social Comparison Theory (Festinger, 1954), we predicted that perceived underqualification would have motivational and affective implications for employees, in the form of higher levels of envy and help seeking, to indirectly affect interpersonal deviance and job performance. Further, we hypothesized that a state of hope would serve as a moderator of the relations between perceived underqualification, envy, and help seeking. We tested our hypothesized model with a sample of 150 medical school students who were undergoing the start of a clinical rotation and their rotation coordinators at a university hospital located in northwestern Turkey. Data collection spanned 4 waves, from the first day to the end of the 1-month rotation. Results were supportive of positive indirect effects between perceived underqualification and job performance via help seeking, and between perceived underqualification and interpersonal deviance via envy. Further, the emotion of hope was a moderator of the perceived underqualification – help seeking relationship. Theoretical and practical implications derived from our findings are offered.

In recent years, researchers have made consistent calls and provided direction to refine leader development scholarship (Day & Dragoni, 2015; Vogel et al., 2021). In the service of these ongoing interests, this symposium presents four papers, each with unique strengths, to collectively expand our understanding of leader self-views and their role in leader development. Specifically, the papers offer development-related insights with longitudinal and multi-source data, construct refinement through a bibliometric review and content analysis, and new explanatory and moderating mechanisms regarding the relationships between leader self-views and behavior. Through the presentations and accompanying discussion on leader self-views, this symposium is designed to stimulate new and compelling directions for future research and practice in the field of leader development.

Advancements in Cognition and Affect Research

Session Moderator: **Katarzyna Adamska**, *BI Norwegian Business School*

OB: **Perceiving Manager's Mindset as Growth or Fixed and Employees' Goal Preferences. A Vignette Study**

Author: **Katarzyna Adamska**, *BI Norwegian Business School*

This study explored the link between perceptions of managers' fixed vs. growth mindsets and employees' preferences for learning vs. performance goals in the work setting. Using an experimental vignette method, the study found that employees who endorse a fixed mindset might particularly benefit from being exposed to a manager who expresses growth mindset beliefs. However, this influence was small and overall employees preferred performance goals in this sample. Supplementary analysis revealed that participants exposed to the vignette which described the fixed manager (in comparison with the growth and neutral manager) were less likely to volunteer for an unspecified work task if asked by this manager and less likely to say they would like to work with this manager. Implications for theory and practice are discussed.

OB: **Loyalty Without a Fair Reward** ☯

Author: **Yang Zhao**, *London Business School*
Author: **Kun Wang**, *UCL School of Management*

Despite loyalty being an admirable and desirable employee quality, loyal employees are not properly rewarded. Prior research has identified the negative correlation between employee loyalty and wage, but the mechanism leading to such improper treatment has remained generally less understood. This study focuses on a different but critical reward—job promotion—to explore the mechanisms of unfair promotion decisions for loyal and sufficiently capable employees. We propose that the positive effect of loyalty on promotion likelihood will be mitigated by replacement cost concerns as managers are eager to prevent talent loss. Additionally, we argue that loyalty will be further disregarded in the promotion scenario where the new position requires fewer managerial responsibilities. Hence, we point to two barriers to proper and fair rewards for loyal employees. Using data from an experimental study in an online panel of 80 US-based workers experienced in making promotion decisions, we found support for our hypotheses. We discuss the implications of our research for theory and practice.

OB: **The Paradox of Explaining: Feeling Unknowledgeable Hinders Engaging in Effective Learning Strategies** 💻

Author: **Stav Atir**, *U. of Wisconsin-Madison*
Author: **Jane Risen**, *U. of Chicago Booth School of business*

People often need to learn complex information as part of their professional and personal lives. However, learners are often reluctant to engage in effective learning strategies. We propose that one overlooked reason is that when learners feel unknowledgeable about the material, the situation feels self-threatening. We focus on the learning strategy of explaining, i.e., explaining learned information to a hypothetical other person. Although this is an effective strategy (Pilots 1-2), we find that learners prefer more superficial learning strategies (Study 1). Critically, their reluctance to explain is tied to their subjective knowledge of the material; people who feel less knowledgeable about what they learned are most reluctant to explain it, despite the strategy being as effective for them (Study 2). An intervention that increased subjective knowledge (by having learners answer a few easy questions), increased learners' choice to explain, which was mediated by learners believing that explaining would be more pleasant and effective (Study 3). Finally, because Studies 1-3 incentivized performance financially, we replicated key results in the classroom with students, finding improved scores on a class quiz (Study 4). The paradoxical implication of these findings is that those who need effective learning strategies the most are the ones least likely to use them. Put together, we find that subjective knowledge plays a key role in learning decisions, and that boosting subjective knowledge is a simple intervention that can improve learning-related choices.

OB: **Organizational Dehumanization as a Predictor of Unethical Workplace Behavior** 💻

Author: **Annika Hillebrandt**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Despite a general tendency to value morality, employees often engage in self-interested unethical workplace behavior that has the potential to harm their own organization. Drawing on social cognitive theory, the present research contributes to our understanding of this phenomenon by proposing that organizational dehumanization can serve as a specific mechanism of moral disengagement in organizational settings. More precisely, whereas employees typically anthropomorphize their organization (i.e., attribute human qualities to it), we propose that dehumanizing one's organization (i.e., denying it human qualities) can facilitate unethical workplace behavior by reducing one's anticipatory guilt for such behavior. Hypotheses were supported across two studies with different methodologies. Theoretically, this research answers repeated calls in the literature to identify a specific mechanism of moral disengagement that can account for unethical behavior in organizational settings, highlights how moral disengagement processes can be initiated and facilitate unethical workplace behavior, and advances our understanding of organizational anthropomorphism as a motivated phenomenon. Practically, this research offers insight into the relationship between anthropomorphism and morality, and identifies a novel potential strategy for reducing unethical behavior in organizational settings.

OB: **Pride Contagion Between Leaders and Followers in Computer-mediated Communication** 💻

Author: **Yoonjin Choi**, *London Business School*

In this research, we propose that a leader's display of pride in the collective achievement of a group can elicit pride among group members and, as a result, motivate them to work harder and perform better. In Study 1, a pre-registered online experiment (N=400), we found that team members reported feeling greater pride when their team leader expressed pride in the team's achievement than when the leader expressed enjoyment. In Study 2, we replicate and extend these findings through a pre-registered field experiment at an actual company (N=479). We found that employees experienced pride when their leader expressed pride in their collective achievement and, as a result, showed a significant increase in the number of hours worked and the quality of their work. These findings contribute to our understanding of how a leader's expressed emotions influence followers and, more broadly, how emotions in the workplace regulate social behavior.

Identity Research in the Gig Economy

Session Moderator: **Neveen Mohamed**, *Vlerick Business School*

OB: **Enhancing Independent Workers' Thriving Through Disidentification**

Author: **Neveen Mohamed**, *Vlerick Business School*
Author: **Katleen De Stobbeleir**, *Vlerick Business School*

Research on independent work has provided key insights into the identity challenges that gig workers face, and the identity processes they engage in to overcome those challenges. While understanding how gig workers develop a sense of identity is important, in this research we suggest it is just as important for gig workers to come to an understanding of who they are not, and that disidentification with targets are also a key dimension of the work-self. To better understand the disidentification processes that gig workers engage in, we develop a grounded model of how workers use disidentification to thrive in the gig economy. Using qualitative data from 69 independent workers, we find that workers cultivate a repertoire of "unwanted selves" (i.e., who and what they are not) based on their states of disidentification with targets. This repertoire helps workers to free their work-self by understanding who and what they are not; and protect their work-self through engaging in boundary work tactics. Together, this contributes to enhancing workers' thriving in the gig economy. Our grounded model thus offers an initial exploration of the role of disidentification in cultivating positive identity outcomes, and complements the research that has predominantly explored the identification processes that gig workers engage in.

OB: **Paths of Identity Development and Identity Archetypes in Platform-Based Gig Driving**

Author: **Jenna Van Fossen**, *Michigan State U.*
Author: **Paige Watson**, *Clemson U.*
Author: **Amy Schuster**, *Clemson U.*
Author: **Nathan Baker**, *Michigan State U.*
Author: **Chu-Hsiang Chang**, *Michigan State U.*
Author: **Shelia Cotten**, *Clemson U.*

Theory and research on work identity has focused on stable careers and the influence of the organizational setting on identity. However, recent decades have seen the rise of alternate career models. Gig work is diverse, and platform-based gig work in particular is defined by features that may present difficulties to forming a work identity, including precarity, reduced autonomy, the lack of clear occupational title or role, and potential stigma. To better understand the growing sector of platform-based gig workers, organizational behavior scholars must put workers front and center to gain insight into their experiences and how the changing nature of work may challenge traditional assumptions about workers. As such, we sought to identify the driving forces of identity development and resulting forms of identity within platform-based gig work. We conducted focus groups with gig drivers (N=53) and analyzed our data with a grounded theory approach. Our derived model of identity management in platform-based gig work suggests that elements of precarity both function as a threat to self-image and necessitate self-directed behaviors to meet subsistence needs. Image threat and perceived goal conflict with the platform company motivate workers to engage in identity development to defend the self, whereas engaging in behavioral strategies can generate feelings of self-efficacy. These psychological and behavioral processes could lead to one of three distinct identity archetypes: entrepreneurial, dis-identified, and prosocial identities. These identities are characterized by different emotions and attitudes towards the gig work role.

OB: **A Diary Study in Gig Workers' Psychological Detachment After Receiving Complaints**

Author: **Yijue Liang**, *George Mason U.*
Author: **Tianjun Sun**, *Kansas State U.*
Author: **Ze Zhu**, *U. of Nebraska, Omaha*

The recently booming gig economy, in which gig workers provide on-demand and short-term service to clients in exchange for monetary rewards via online gig platforms, creates opportunities for workers to receive immediate and instantaneous feedback from clients, especially negative feedback such as client complaints. Considering the arising controversy concerning gig workers' well-being, the present study strives to understand how and when complaints from clients can influence gig workers' well-being and subsequent work outcomes. Grounded in the resource perspective, we took an intrapersonal lens and hypothesized that gig workers might find it more difficult to psychologically detach from their daily work after receiving complaints from clients and, in turn, have a lower level of resources to maintain their job performance and positive job attitudes on the following day. In addition, we expected gig workers with a higher rate of pay to perceive higher job security, which can consequently alleviate the detrimental impact of received complaints on the workers' psychological detachment. With the experience sampling method (ESM), we collected data from 147 gig workers for five consecutive workdays to test our theoretical model, and most of our hypothesized paths were supported. By examining gig workers' daily work experiences and well-being, this research provides potential responses to challenges faced by the growing workforce and helps put the workers front and center.

OB: **A Job's Worth: Examining the Links between Job Insecurity and Multiple Jobholding**

Author: **Himani Singh**, *U. of Mannheim*
Author: **Claudia Rossetti**, *U. of Mannheim*

We integrate the concepts of resource conservation, resource investment, and resource value from the Conservation of Resources theory to explore how job insecurity relates to becoming a multiple jobholder. Prior research has focused on how individuals respond to job insecurity by looking at traditional work arrangements in which individuals work a single job at a time. Yet, individuals may deviate from these traditional paths by entering multiple jobholding, i.e., starting side jobs alongside a primary job. Analyzing longitudinal secondary data of real workers and experimental data in two studies, we consistently find that individuals attributing higher value to their primary job are less likely to become multiple jobholders in response to higher job insecurity. To better understand the interplay between multiple jobholding and job insecurity, we further explore how starting side jobs reciprocally affects future job insecurity in a third study and find that starting side jobs is associated with higher levels of future job insecurity. Our findings on this bidirectional relationship advance existing research on job insecurity and multiple jobholding by identifying the conditions under which job insecurity (de)motivates multiple jobholding and pointing toward a potential cost of multiple jobholding in terms of increased job insecurity.

Family Matters: Understanding the Impact of Family Motivation on Work Outcomes

Session Moderator: **Juhui Geng**, *Shanghai Jiao Tong U.*

OB: **For The Sake of My Family at Any Cost: Why and When Family Motivation Predicts Unethical Behaviors**

Author: **Juhui Geng**, *Shanghai Jiao Tong U.*
Author: **Limei Zhang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Yujia Li**, *School of Economics & Management, Tongji U.*

As a strong motivational force stemming from family, family motivation may cause employees to stop at nothing to benefit their dependents at home; however, little research has examined this phenomenon. Drawing upon the goal shielding theory, we explored why and when family motivation predicts unethical behaviors. We proposed that family motivation increases unethical pro-leader behavior and social undermining toward coworkers by triggering a bottom-line mentality (BLM). We further posited that leaders' performance-avoidance goal orientation strengthens the positive relationship between family motivation and employee unethical outcomes (i.e., unethical pro-leader behavior and social undermining toward coworkers) through employee BLM. We collected multisource, three-wave field data to test the theoretical model; further, the results supported all hypotheses. Our findings advance the family motivation and BLM literatures and caution team leaders about the detrimental consequences of exploiting family motivation to boost employee performance.

OB: **Being Proactive for My Family: An Examination of the Impact of Family Motivation on the Proactivity**

Author: **Cui Zilong**, *Jilin U. of Finance and Economics*

his study aims to advance the understanding of the consequences of family motivation by investigating how family motivation affects proactivity through psychological meaningfulness and the moderation of such mediation by FSSB (family-supportive supervisor behaviours). Research data were collected from 588 blue-collar employees of 5 Chinese companies with a three-wave and leader-follower dyad design to examine the hypothesized moderated mediation model. The results of indirect analysis suggest that family motivation promotes the likelihood of proactivity through psychological meaningfulness. The findings also show how the effects of family motivation are further amplified by FSSB. Organizations can improve job design and enhance human resource management flexibility to enhance employees' family motivation. Organizations should also select and provide specific courses and training for leaders based on FSSB. The results deepen our theoretical understanding of the consequences of family motivation by demonstrating the positive associations between family motivation and proactivity. The current study also contributes to the literature by identifying the mediating mechanism of psychological meaningfulness to explain the relationship between family motivation and proactivity. Furthermore, the results show that FSSB moderates the above mediation.

OB: **Is Family Motivation Family-Friendly? How and When Family Motivation Leads to Work-Family Conflict**

Author: **Feng Gao**, *School of Business, Renmin U. of China*
Author: **Yuqing Sun**, *U. of Washington*
Author: **Zhicheng Li**, *Jiangxi U. of Finance and Economics*

Research has identified family as an important motivator for employees to work. Challenging the intuition that family motivation functions in the best interests of the family, we draw on self-determination theory to argue that high family motivation may lead to employees feeling more anxious at work, which in turn increases their work-to-family conflict. We further propose that intrinsic motivation can mitigate this positive effect of family motivation on workplace anxiety and work-to-family conflict. Results from a three-wave field survey study supported our hypotheses. Our study provides a novel view of family motivation and offers a more balanced account of how family motivation interacts with intrinsic motivation to influence employees' psychological well-being and subsequent outcomes regarding the family domain.

OB: **Using Strengths to Secure One's Job: A Serial Mediation Model of Family Motivation on Job Security**

Author: **Changhong Lyu**, *Shanghai U. of Finance and Economics*
Author: **Yufei Liu**, *College of Business,Shanghai U. of Finance and Economics*

Research has shown that supporting one's family is an important reason why employees are motivated to work. Compared to other motivators, family motivation focuses on beneficiaries who are affected by one's employment itself. In other words, job security itself is a critical work goal. Yet, little research has examined the implications of an employee's family motivation on his/her job security. Building on recent developments in job crafting literature, this paper integrates individuals' goals to understand how employees with family motivation exert agency to shape their jobs to achieve job security. Specifically, we argue that employees could conduct job crafting toward strengths and job crafting toward interests based on their abilities and needs. Results from a four-wave longitudinal study found that high levels of family motivation led to high levels of perceived job security. This relationship was mediated by individuals' job crafting toward strengths and subsequent job performance. Job crafting toward interests led to work engagement and job security. However, family motivation did not influence job crafting toward interests. The findings contribute to family motivation research by focusing on the energizing effect of family motivation on the proactive behaviors of employees.

Listen to Your Heart: Passion and Calling at Work

Session Moderator: **Marina Astakhova**, *U. of Richmond*

OB: **A Self-Serving Perspective on the Obsessive Work Passion-to-Helping at Work Relationships**

Author: **Marina Astakhova**, *U. of Richmond*
Author: **Violet Ho**, *U. of Richmond*
Author: **Ruo Mo**, *Montpellier Business School*

To reconcile inconsistent past findings as well as to underscore that obsessive passion (OP) for work can impact not only the focal individual but others around them, we adopt an interpersonal perspective to examine when and why obsessively passionate workers will shy away from helping others at work. We test a two-stage moderated mediation model in which self-serving motives serve as an explanatory mechanism translating OP into helping at work, and servant leadership and help visibility serve as two boundary conditions that, respectively, modify the relationship between OP and self-serving motives, and between self-serving motives and helping. In two studies, we found support for a positive link between OP and self-serving motives, but also an unexpected amplifying (rather than dampening) role of servant leadership. Additionally, Study 2 offered mixed support for the hypothesized second-stage moderation, in that the relationship between self-serving motives and helping was negative when help visibility was low, but did not become positive when help visibility was high. Overall, the indirect relationship between OP and helping via self-serving motives was negative only when servant leadership was high and help visibility was low, and did not become positive at high levels of servant leadership and help visibility as predicted. The findings offer a more nuanced view of OP and helping than expected, and we discuss their conceptual and practical implications.

OB: **Take Me Back to Old Days: The Upward Passion Transfer through Mentoring**

Author: **Tao Zhou**, *U. of British Columbia*
Author: **Jonathan Evans**, *U. of British Columbia*

Research on the interpersonal impact of passion focuses primarily on the downward passion transfer—from employees higher in the organizational hierarchy (leaders) to those lower in the hierarchy (followers). While we acknowledge the value of studying passionate leadership, we argue that the understated potential of upward passion influence also deserves scholarly attention. Drawing from temporal self-appraisal theory, we propose a moderated mediation model depicting how observed newcomer passion for work may impact leader self-perception and behavioral outcomes. Results from an online vignette study suggest that for leaders at higher job levels, observing newcomer passion can induce the leader’s passion remembrance, giving rise to their organizational citizenship behavior and enhancing their work engagement. In conducting this research, we extend theory on the interpersonal impact of passion and contribute to the literature of self-regulation and followership.

OB: **Unpacking How Individuals’ Event Perceptions Affect the Collective Development of a Calling**

Author: **Jingzi Zhou**, *Nottingham U. Business School China*
Author: **Émilie Lapointe**, *BI Norwegian Business School*
Author: **Shijin Zhou**, *U. of Nottingham, China*
Author: **Yuntao Bai**, *Xiamen U.*

This paper explores how calling spread among hotel employees during a sudden lockdown caused by the detection of COVID infections among guests. We interviewed 19 employees who worked during the lockdown and analyzed the data inductively. By bringing event system theory (EST) into the literature of extreme context research and combining it with insights from research on sensegiving and sensemaking, we show that employee perceptions of an extreme event change as they unfold and that calling develops, contingent on these evolving perceptions. This paper contributes to the literature by showing that calling can be developed and transmitted collectively during an extraordinary event. We also contribute to the EST literature by integrating the comprehensive dimensions of event strength, time, and space and applying both feature- and process-oriented perspectives to development of our theory.

OB: **In Search of Meaning From Work – A Study of Quantum Career Movers**

Author: **Sharath Baburaj**, *Doctoral Student Indian Institute of Management Ranchi*
Author: **Gaurav Marathe**, *Assistant Professor, Indian Institute of Management Ranchi*

Scholarly articles have described the role of work in helping people overcome existential vacuum to establish meaning in life (MiL). However, we lack clarity on the underlying mechanism and the temporal processes that lead to the feeling state of MiL across the tripartite aspects of coherence, purpose, and significance. This study aims to bridge this apparent gap in the literature by studying Quantum career movers (QCMers), i.e., individuals who have left successful careers and opted for novel paths in search of MiL. The quantum career moves (QCM) indicate a precondition of 'lacking meaning' and a postcondition of 'experiencing meaning.' Through multiple rounds of interviews with forty-two QCMers, we found that QCMers encountered an existential vacuum as the pre-QCM work failed to provide a larger purpose and the flexibility to maneuver life goals, referred to by us as career volition. In contrast, the QCM careers offered opportunities for career volition and a sense of "existential vitality," characterized by coherence, purpose, and significance, through immersive experiences. Existential vitality further invigorated existential narrativity acclaimed through narratives concerning the prosocial impact of work, imbuing an external sense of coherence, purpose, and significance. Together, the QCM journey fostered MiL across the internal and external manifestations of the tripartite aspects, with the internal feelings facilitating the external ones. Further studies analyzing QCMers over a longer term or based on individuals who derive meaning in their current career without seeking QCM can revalidate our findings and offer newer insights into the search for meaning from work.

OB: **When a Job Is a Calling: The Meanings of Money for Meaningful Work**

Author: **Samuel Mortimer**, *Saïd Business School U. of Oxford*
Author: **Katherine Klein**, *U. of Pennsylvania*

Some people experience work as a calling, working for passion and to make a valuable contribution to the world. Other people experience work as a job, working for the remuneration and other material benefits that work provides. According to conventional wisdom, people cannot have both a calling and a job orientation to their work—working for both the meaningfulness and the money. But despite its prevalence in the literature, this claim is supported by remarkably little empirical evidence. We conducted a three-year longitudinal qualitative study that challenged this assumption: the teachers we interviewed were highly motivated by both their pay and their passion to make a positive difference to the lives of their students. Yet they also experienced a tension between their prosocial and financial motivations, going to lengths to explain and justify their choices. We identified two processes through which they resolved this tension: the first, balancing, involves affirming a tension between prosocial and financial motivations in general, while explaining why it does not apply in this case. The second, integrating, involves rejecting a tension between prosocial and financial motivations by making financial reward part of what makes their work meaningful.

I Quit: Modern Perspectives on Employee Turnover

Session Moderator: **Linwei Gan**, *Chinese U. of Hong Kong*

OB: **Free Myself: Investigating the Impact of Employees' Turnover Intention on Job Embeddedness**

Author: **Linwei Gan**, *Chinese U. of Hong Kong*
Author: **Kenneth S Law**, *Chinese U. of Hong Kong*
Author: **Jane Jiang**, *Nanjing U. School of business*
Author: **Xueqi Chen**, *Chinese U. of Hong Kong*

While previous studies mainly emphasize how employees with high job embeddedness are tied to their organizations, much less is known about employees' willingness and initiation to become embedded in the organization. Based on the conservation of resources theory, we propose that people could actively adjust their job embeddedness according to their turnover intention. We collected cross-lagged panel data, followed by an experimental study to test our hypotheses. Data from 135 newcomers in Study 1 and 143 subjects in Study 2 supported our hypotheses, showing that turnover intention has a cross-lagged effect on job embeddedness. We discussed the theoretical and practical implications of our studies, as well as limitations and future research directions.

OB: **Migrant Worker Turnover: The Role of Retention Decision Satisfaction and Geographic Distance**

Author: **Qingyue Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Jingqiu Chen**, *Shanghai Jiao Tong U.*
Author: **Weiyue Yang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Intracountry migrant workers contribute to the development of global supply chains as well as economic growth in many emerging economies, such as China, Mexico, India and Vietnam. However, the high turnover of migrant workers poses a threat to their productivity and imposes substantial costs on the supply chain. The current study aims to investigate the psychological processes underlying migrant workers' turnover decisions. Based on the multiphase data of 512 Chinese migrants working in one of two factories, this study adopts a "push-pull" perspective to clarify how migrant workers make turnover decisions. This study finds that the organizational embeddedness of migrant workers is positively related to their retention decision satisfaction and negatively related to their turnover intention. Moreover, it is the retention decision satisfaction of migrant workers, rather than their turnover intention, that mediates the negative relationship between organizational embeddedness and voluntary turnover. Furthermore, migrant workers with jobs closer to home have higher levels of general adjustment and are subsequently more likely to have enhanced retention decision satisfaction and reduced turnover intention as a result of high levels of organizational embeddedness than those working in distant host cities. Overall, this study highlights how retention decision satisfaction arising from organizational embeddedness explains why migrant workers make retention decisions and how geographic distance weakens the effects of organizational embeddedness on retention decision satisfaction and turnover intention through general adjustment.

OB: **Losing Faith in Job? How Supportive HRM Prevents Employee Detachment in Times of High Housing Prices**

Author: **Jih-Yu Mao**, *U. of Nottingham Ningbo China*
Author: **Ran Huang**, *U. of Nottingham Ningbo China*

Housing prices and organizational management at first glance may seem unrelated. However, we suggest declining local housing affordability to trigger employee loss of faith in job, therefore posing a threat to organizational human resource management (HRM). This research investigates how organizations can prevent employees from losing faith in and subsequently quit on their jobs in times of high housing prices through HRM. Results based on four-year longitudinal data on employees' job income and local housing prices in a western Chinese city and a survey reveal that the slower the growth in employee job income relative to the growth in local housing prices, the more employees lose faith in their jobs, leading to more job withdrawal and higher job change intentions. However, these relationships are weakened when employees perceive supportive HRM in their organizations, suggesting that supportive HRM is effective at counteracting the negative influences of the larger external environment. This research illuminates the organizational impact of housing prices and calls for organizations to attend to their HRM.

OB: **I Embed Myself for Affection: Investigating Employees' Proactive Job Embeddedness**

Author: **Linwei Gan**, *Chinese U. of Hong Kong*
Author: **Kenneth S Law**, *Chinese U. of Hong Kong*
Author: **Jane Jiang**, *Nanjing U. School of business*

Employees' discretions in making retention or turnover decisions implicates that their willingness of and initiation in embedding themselves has been overlooked in the job embeddedness literature. This study aims at unfolding employees' initiatives in their embedding process, and we conceptualize their mindful job embeddedness adjustment as proactive job embeddedness based on the conservation of resources theory. We further propose that people could initiatively adjust their resources investment in job embeddedness to prosper their careers, which is mainly driven by their affective organizational commitment. We first operationalized proactive job embeddedness as average job embeddedness and job embeddedness trajectory and conducted a longitudinal survey study with 83 participants in Study 1. Data showed that affective commitment positively predicts both average job embeddedness and job embeddedness trajectory, and further exerted a positive indirect effect on career success through these two job embeddedness constructs. We then directly tested proactive job embeddedness in an experimental study, and data from 100 employees confirmed the predictability of affective commitment on proactive job embeddedness. We discussed the theoretical and practical implications of our studies, as well as limitations and future research directions.

Don't Crowd Me! How Leader Intrusions Affect Employees and Their Families

Session Moderator: **Muhammad Usman**, *NUST Business School, National U. of Sciences and Technology, Islamabad*

OB: **Leader Family Ostracism and its Repercussions for Leaders' Work Role and Frontline Employees**

Author: **Muhammad Usman**, *NUST Business School, National U. of Sciences and Technology, Islamabad*
Author: **Adeel Khalid**, -
Author: **Thomas Garavan**, *Garavan*
Author: **Malik Imran Ahmad**, *Lancaster U. Management School*

Acknowledging the permeability of boundaries between work and family domains, a few studies have shown that stressors in employees' family domain (e.g., family ostracism) influence their outcomes in the work domain. However, one of the important questions that have been left unaddressed so far in the literature including service literature is: Do stressors from leaders' family domain, such as feelings of being ostracized affect their work role and followers' work-related outcomes? Thus, the present study foregrounds how and when leader family ostracism influences FLE service recovery performance in the service context. Data (328 responses) collected from three sources revealed that leader family ostracism was positively associated with laissez-faire leadership, which in turn negatively affected FLE service recovery performance. The study also showed that leader political skill acted as an important boundary condition of the relationship between leader family ostracism and laissez-faire leadership, as well as the indirect negative association between leader family ostracism and FLE service recovery performance. Other than theoretical contributions, this study offers several imperative practical implications that can help service managers compensate for their lack of resources from the family domain and mitigate related destructive outcomes at work.

OB: **How Supervisory ICT Demands After Hours influence Employee Work Behavior via Employee Attributions**

Author: **Wenqing Yu**, *Zhejiang U.*
Author: **Yanran Fang**, *Zhejiang U.*
Author: **Shenjiang Mo**, *Zhejiang U.*
Author: **Yi Su**, *Zhejiang U.*

With the widespread use of information communication technologies (ICTs), being required by supervisors to keep accessible and responsive to work out of regular work time, termed as supervisory ICT demands after hours, has been prevailing and controversial. Yet, we have limited knowledge about the effects of such demands on employee work behavior. To fill this void, we draw on attribution theory to examine the constructive attribution (i.e., employee attribution of supervisory performance-promotion) and the destructive attribution (i.e., employee attribution of supervisory self-serving) as key mechanisms that transmit the positive indirect effects of supervisory ICT demands after hours on employee proactive and unethical behavior, separately. We further examine the moderating role of ICT centrality perceived by each employee in shaping the indirect impacts. Three-wave data was collected from 493 employees working at a retail corporation. Results showed that supervisory ICT demands after hours indirectly triggered employee proactive behavior via employee attribution of supervisory performance-promotion, whereas such demands indirectly triggered employee unethical behavior via employee attribution of supervisory self-serving. Furthermore, when employees perceive higher ICT centrality (vs. lower), the indirect positive relationship between supervisory ICT demands after hours and employee proactive behavior was more salient. Theoretical and practical implications are discussed.

OB: **Unexpected Message from the Boss: How Supervisor Work Intrusion Leads to Subordinate Work Engagement**

Author: **WEICHENG LU**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Guiquan Li**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **JIEYING HAN**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Haixin Liu**, *Beijing Jiaotong U.*

Work intrusions, defined as unexpected encounters by others that disrupt recipients' concentration and work flow, have been well documented on its downstream effects on work outcomes. Yet, it is still unclear if the source (supervisor vs. coworker) of intrusion makes a difference. Drawn from affective events theory (AET) and cognitive appraisal theory (CAT), we theorize and test a within-person level model that links supervisor intrusion to work engagement of subordinates via a positive and discrete emotion-alert. We also posit that this within-person process is moderated by subordinate agreeableness at the between-person level. Results of a 2-week experience sampling study with 81 participants supported our theoretical model that supervisor intrusion uniquely stimulated subordinate alert emotion, which lead to increased work engagement of subordinates. For subordinates with a higher level of agreeableness, the indirect effect was stronger. Interestingly, when supervisor intrusion was replaced by coworker intrusion, the effects diminished. Theoretical and practical implications for work intrusion, discrete emotion, and AET and CAT were discussed.

OB: **The Spillover Effect of Supervisor Bottom Line Mentality for Family Area: A Multipath Test**

Author: **Shuwei Zong**, *Southwestern U. of Finance and Economics*
Author: **Geng Liu**, *Jiangxi Agricultural U.*
Author: **Mingwei Liu**, *School of Management, Huazhong U. of Science and Technology*

The growing literature on supervisor bottom-line mentality provides a clear understanding of its positive and negative consequences in the work domain, but its spillover effects on the family domain have been less discussed by scholars. Based on stress-as-offense-to-self theory and conservation of resource theory, we focus on how supervisor bottoms-line mentality affects employees' family domain (work-family conflict) and how employees subsequently act on it. By analyzing data from a survey of 209 leader-employee pairs, this study reveals the following findings: supervisor bottom-line mentality enables employees to experience the psychological experience of work-family conflict; illegitimate tasks transmit the effect of supervisor bottom-line mentality on employees' work-family conflict, i.e., illegitimate tasks play a mediating role; after undergoing work-family conflict, employees tend to implement unethical pro-family behavior for the benefit of the family; supervisor bottom-line mentality indirectly and orderly influences unethical pro-family behavior through illegitimate tasks and work-family conflict. On the whole, our findings reveal that supervisor bottom-line mentality can serve to induce unethical pro-family behavior of employees. Theoretical contributions and practical implications are discussed.

OB: **Beyond the Workplace: How and When Authoritarian Leadership Leads to Follower Family Undermining**

Author: **Suosuo Jia**, *U. of International Business and Economics*
Author: **Xiongying Niu**, *U. of International Business and Economics*
Author: **Siheng Li**, *U. of International Business and Economics*
Author: **Baofang Zhang**, *U. of International Business and Economics*

Prior studies have extensively discussed the negative effects of authoritarian leadership, but these studies have limited the outcomes of authoritarian leadership to the work domain. By integrating the moral disengagement theory with work-home resources model, we investigate the impact of authoritarian leadership on follower family undermining behavior by examining the mediating role of follower moral disengagement and the moderating role of work-home segmentation preferences. We test our model in a two-wave field survey of 205 employees in China. The results show that authoritarian leadership is positively related to follower moral disengagement, in turn eliciting follower family undermining. In addition, work-home segmentation preferences attenuate the mediating effect of follower moral disengagement on the relationship between authoritarian leadership and follower family undermining. The theoretical and managerial implications of these findings are discussed.

Brave New Worlds: Positive Effects of Artificial Intelligence in the Workplace

Session Moderator: **Alexander Emmanuel Eng**, *National U. of Singapore*

OB: **Automation and Wellbeing: Topic Modelling Literature Review**

Author: **Alena Valtonen**, *Lappeenranta-Lahti U. of Technology LUT*
Author: **Jaan-Pauli Kimpimäki**, *LUT U., School of Business and Management*

There is a growing interest in employee wellbeing in managerial research. In increasingly automated workplaces, employee wellbeing is influenced by new technologies and evolving ways of work. These influences have not yet been thoroughly understood or explored in extant literature. Considering the high implicit value of employee wellbeing, in this paper we review how automation and automation-enabling technologies have been associated with employee wellbeing. We use topic modelling to elicit latent topics from the broader literature intersecting automation and general human wellbeing (n=4,095), interpreting and extrapolating implications of our findings onto workplace settings. We found that automation carries the potential to improve employee performance, including job satisfaction and meaningfulness, relationships in the workplace, as well as physical and mental wellbeing. Based on our findings, we outline major emergent directions of research in the automation-employee wellbeing discussion.

OB: **Joint Effects of Accuracy and Equity on Fairness: Judgments of Algorithmic and Human Decisions**

Author: **Alexander Emmanuel Eng**, *National U. of Singapore*
Author: **Wei Jee Ong**, *National U. of Singapore*
Author: **Tianyu He**, *National U. of Singapore*

While there is an increasing focus on notions of fairness in algorithmic decision-making, there remains little understanding of how fairness judgments of algorithmic and human decision-makers may systematically differ. We investigate this question by examining how accuracy and equity – commonly treated as objectives to be traded off – are jointly important input criteria into fairness judgments. Using a policy-capturing experiment where we manipulate the accuracy of hiring decisions and gender composition of hired workers, we find that both criteria positively affect fairness judgments, and that the effect of accuracy is stronger when there is greater inequity. This interactive effect of accuracy and equity is stronger for algorithmic (versus human) decision-makers when they are judged on the fairness of procedures, but not outcomes. After accounting for both accuracy and inequity, there are no differences in judgments of human and algorithmic decision-makers. Our findings reveal the importance of treating both accuracy and equity as primary criteria for fairness that may differ in importance when evaluating different decision-makers, but beyond which there is little evidence for overall algorithmic aversion or preference.

OB: **Investigating When and Why AI Stress Promotes Employee Learning and Subsequent Positive Outcomes**

Author: **Qiwei Zhou**, *Ocean U. of china*
Author: **Keyu Chen**, *School of Economics and Management Tsinghua U.*

Employees encounter increasing technostress as enterprise digital transformation becomes prevalent. While predominate literature has viewed artificial intelligence (AI) stress as a hindrance, we highlight the developmental nature of employee knowledge and capability, and probe employee learning as an active response to such challenge. Relying on the learning perspective of the Job Demand-Control Model, we investigate how and when AI stress induces employee learning, and the positive outcomes of such coping behavior in the context of digital transformation. We theorize that AI stress would evoke more opportunities and willingness for employees to learn, and in turn facilitate subsequent job performance and digital transformation supportive behavior. Further, employee AI trust plays a moderating role not only in the relationship between AI stress and learning, but also in the indirect effects. High AI trust guarantees employees to respond to AI stress with the active learning approach. Findings from a two-wave survey data of 224 Chinese employees supported our predictions. This work advances our knowledge of AI adoption, digital transformation and stress learning.

OB: **Let's Talk about AI: Talking about AI is Positively Associated with AI Crafting**

Author: **Xiaowei Dong**, *Business School, Sun Yat-Sen U.*
Author: **Luyuan Jiang**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Li Wanlu**, *Business School, Sun Yat-Sen U.*
Author: **Yuqing Gan**, *School of Business, Sun Yat-sen U.*
Author: **Jingtian Xia**, *Sun Yat-Sen U.*

Artificial intelligence (AI) is becoming increasingly common in organizations, and more and more employees are talking about AI with their coworkers (i.e., AI talk). However, we have limited knowledge of what effects AI talk has on employees' psychological states and subsequent behaviors. Drawing on self-efficacy theory, we propose that talking about AI is positively associated with AI self-efficacy (i.e., the degree to which individuals think they can successfully complete AI-related tasks), which in turn increases proactive coping behavior to adapt to AI (i.e., AI crafting). Furthermore, we suggest that leader AI-focused attention moderates these positive indirect effects such that these relationships are strengthened when leaders focus more attentional resources on AI (i.e., leader AI-focused attention is high). To test our theoretical model, we conducted an experiment and a multi-wave field study in organizations that use AI. This research reveals the effects of AI talk on AI crafting via AI self-efficacy, which expands the existing AI literature and job crafting literature and provides a more comprehensive understanding of AI in the workplace.

Team Diversity

Session Moderator: **Xinxin Lu**, *Hunan U.*

OB: **Is A Heterogeneous Configuration Favorable for Agentic Traits?**

Author: **Xinxin Lu**, *Hunan U.*
Author: **Donald H. Kluemper**, *Texas Tech U.*

Researchers have reported inconsistent findings of the effect of team personality diversity on team outcomes. It is debatable whether heterogeneity or homogeneity is more favorable for team personality. Integrating the agency-communion framework and socio-analytic theory, we propose that team agency is compatible with a heterogeneous configuration and integrate magnitude and configural approaches to explore the optimal configuration for team agency. The data were collected from 597 employees of 116 diverse teams across three waves. Path analysis results did not support the moderation of team dispersion on the effect of team agency leading to accomplishment striving. But the results supported the moderation of team agency configurations on the effect of team agency on accomplishment striving and its indirect effect on team performance via team accomplishment striving, such that the effects are strongest in a fragmented configuration and weakest in a bimodal configuration. The research findings suggest that dispersion and configurations play differential roles in the effects of team agency.

OB: **Gender Diversity and Team Effectiveness**

Author: **June Shin**, *Rutgers U., School of Management and Labor Relations*

The rapid diversification of the workforce has driven significant attention to the study of team diversity—variation among team members on attributes in which they may differ (e.g., gender, age, race, tenure, personality; van Knippenberg & Mell, 2016). Curiously, this research persistently shows mixed effects on a key outcome: team performance (e.g., Horwitz & Horwitz, 2007; Webber & Donahue, 2001). To help resolve the inconsistencies regarding the association between team gender diversity and team performance, I draw from the categorization-elaboration model (van Knippenberg et al., 2004) to examine the mediating effect of information elaboration—the exchange, processing, and integration of information and perspectives among team members (Homan, Van Knippenberg, Van Kleef & De Dreu, 2007)—and two contextual moderators—leader's diversity belief and leader's network heterogeneity. In a study of 94 teams from several entrepreneurial organizations in South Korea, results showed that team gender diversity had a non-significant indirect effect on team performance through information elaboration. However, leader's diversity belief had significant positive moderating effect on the association between information elaboration and team performance. Collectively, this study adds precision to unpacking the team diversity's positive and negative effects, highlights two boundary conditions that can impact the nature of team diversity and its outcomes, and advances the research on the role of information elaboration in the categorization-elaboration model (van Knippenberg et al., 2004).

OB: **Cognition Diversity, Repeated Cooperation and Collective Intelligence in Dynamic Cooperative Network**

Author: **Ziqiu Lin**, *School of Public Policy and management Tsinghua U.*
Author: **Jar-Der Luo**, *Tsinghua U.*

The interaction between science and technology gives rise to an urgent need for interdisciplinary knowledge to study dynamic cooperative network as an organizational structure. Based on an Agent-Based Model, this paper studies the influence of members' cognitive diversity on collective intelligence, and explores the moderating effect of network members' repeated cooperation in above relationship. The research has three findings. First, members' cognitive diversity has a positive effect on an organization's mean outcome of collective intelligence but also increases its variance. Second, increasing the probability of repeated cooperation can alleviate the impact of huge variance and help the organization achieve high collective intelligence in the long run. Third, in an organization with a high probability of repeated cooperation, the collective intelligence of low cognitive diversity organizations is better than that of high cognitive diversity organizations in the early stages of development, but as time goes on, high cognitive diversity organizations will exceed low cognitive diversity organizations, and finally reach the highest level in the long run. To overcome the simulation's shorthand of reality particularities in empirical evidence, we test our key findings in simulation by using empirical data from one of China's largest internet companies. The fixed effect panel model shows that employees' cognitive diversity indeed promotes collective intelligence when the probability of repeated cooperation exceeds a certain threshold, which confirms our simulation results.

OB: **The Consequence of Within-Team Social Hierarchy: Power vs. Status Matters**

Author: **Fenghao Wang**, *Deakin U.*

Whether within-team social hierarchy benefits or diminishes team functioning remains a debate in management literature, with scholarly support for both standpoints. Importantly, existing attempts to reconcile the mixed findings are theoretically incomplete, substantially overlooking the nature of social hierarchy as well as peculiar hierarchical characteristics. Following the multiplicity perspective of social hierarchy, and building on the research differentiating power and status as two bases of social hierarchy, in this study, we propose that the conflicting findings may be attributed to the valued social dimensions based on which social hierarchy is established. Particularly, power hierarchy benefits team performance because it promotes team structure clarity, which further facilitates information and workload sharing. In comparison, status hierarchy diminishes team performance because it blurs team structure clarity, which reduces information and workload sharing. In addition, time pressure strengthens the above effects because team members rely more on both power and status hierarchies to guide their interactional behaviors. Results from a field study involving 1428 dyads from 478 participants and 122 teams provide general support for the hypotheses. Overall, this research contributes to the hierarchy functionality debate by highlighting the critical role of hierarchical basis and articulating the underlying mechanisms.

Job Design and Organizational Policy Effects

Session Moderator: **Lu Xing**, *U. of Auckland*

OB: **It's Not My Job. . . But a Challenge? Perceiving and Reacting to Illegitimate Tasks**

Author: **Lu Xing**, *U. of Auckland*
Author: **Peikai Li**, *Ghent U.*

More than ever, organizations are asking employees to do ever more duties that employees think they should not have to carry out (known as "illegitimate tasks"). The added workload can be a significant source of work stress. While previous studies often view illegitimate tasks as a hindrance stressor, we highlight the importance of employees' appraisals and reveal the potential for appraising such tasks as challenges. Based on the transactional theory of stress, we explain how and when individuals appraise and react to illegitimate tasks in an adaptive manner (i.e., increasing job crafting and reducing procrastination). Our study considers employees' organizational identification as a critical contingency. We collected data from a three-wave survey of 481 Chinese employees. Results showed that when organizational identification was at a high level, illegitimate tasks positively related to employees' challenge appraisal while negatively relating to the challenge appraisal when organizational identification was at a low level. In turn, the challenge appraisal positively relates to job crafting and negatively relates to procrastination. Our findings contribute to a deeper understanding of the effects of illegitimate tasks and provide insights into how organizations can mitigate the negative influences when such tasks are unavoidable.

OB: **Are Job Rotation Programs Worth The Effort? How Job Rotation Influences Newcomers' Adaptation Proces**

Author: **Wei Wu**, *Hong Kong Polytechnic U.*
Author: **Wu Liu**, *Hong Kong Polytechnic U.*
Author: **Wen Wu**, *Beijing Jiaotong U.*
Author: **Yuhuan Xia**, *Shandong U.*

Although job rotation is a popular program for training newcomers, our understanding of its influence is limited. Drawing from adaptation theory and self-regulation theory, we propose that job rotation, as a planned disruptive event to newcomers' adaptation process, will cause a discontinuous socialization process and trigger newcomers' transition adaptation and reacquisition adaptation. Using a field quasi-experiment with twelve waves of longitudinal data, we tracked changes in newcomers' task mastery and social integration before, during, and after job rotation. We find that newcomers with job rotation experience an immediate decrease in task mastery after job rotation. Unexpectedly, newcomers without job rotation experienced an increase in social integration after rotation point compared to newcomers with job rotation. We also found that newcomers with higher learning orientation experienced a smaller decrease in task mastery during job rotation, and that newcomers with a more proactive personality experienced an increase in social integration during job rotation. Newcomers with initial challenging work experience had a greater increase in task mastery after job rotation but not in social integration. Our findings provide theoretical implications for socialization literature and adaption literature and practical implications for designing job rotation programs.

OB: **From Strategic Ambidexterity to Employees' Task Performance? The Intermediary Role of Job Design**

Author: **Tomislav Hernaus**, *Faculty of Economics & Business, U. of Zagreb*
Author: **Alesa Sasa Sitar**, *School of Economics and Business, U. of Ljubljana, Slovenia*
Author: **Matija Maric**, *U. of Zagreb, Faculty of Economics and Business*

Because ambidextrous organizations as dual-core systems in practice experience performance variability, we revisited the strategy–structure–performance paradigm by introducing multiple and multilevel perspectives of fit. Specifically, we hypothesized and explored the interplay among strategy–structure fit, job demands–resources fit, and individual-level performance. A time-lagged two-source field survey was conducted on a nested sample of 874 employees from 49 large organizations. A downward multilevel mediation showed that jobs with congruent cognitive demands and task resources represent an underlying design mechanism that translates the strategic ambidexterity–process integration fit into employees' task performance. Our results advise organizational design scholars to consider the importance of microfoundations (e.g., job characteristics) for achieving individual-level performance, as well as human resource management (HRM) practitioners and line managers to contextualize job design within organizational settings (e.g., organizational design) and, thus, integrate multilevel design practices.

OB: **People Over Politics: The Narrative Themes Influencing Judgements of Harmful Worker Policies**

Author: **John Jamison**, *Marymount U.*

During the Covid-19 pandemic, policy discussions around worker wellbeing have repeatedly degraded into polarized political debates rather than judgements of the policy's ultimate harm or benefit for the workers themselves. Leaders who feel that they will be judged by the political implications of their policy decisions may be influenced to make policy decisions with undue deference to political orientations rather than actual worker outcomes. Participants in our study confirmed this bias by judging a fictional leader's harmful masking policy based overwhelmingly on their pre-existing political orientation on masking rather than on the content of the policy itself. However, we followed-up this initial analysis with an exploratory text analysis method to investigate what other themes besides political orientation participants considered in assigning responsibility to the leader for the harmful policy. We find that even controlling for political orientation, participants were strongly preoccupied with the people involved in the policy outcomes. Participants' discussions of the moral complexities of the case showed preoccupations with the workers themselves above even the legal, business, and societal aspects of the case. This study suggests that discussions of harmful employer policies do not need to be abandoned to political debate. Rather, harmful employer policies can be most effectively recognized as harmful when discussions center around the workers themselves. Results of this study suggest that those wishing to influence employer policies towards greater worker wellbeing would do well to focus on messages about the workers themselves rather than on polarized political orientations alone. Similarly, those wishing to hold leaders accountable for harmful employee policies would also want to move beyond political orientations to also put the workers themselves into the spotlight.

Mean People Suck: New Perspectives on Ostracism and Bullying at Work

Session Moderator: **Joshua Nagel**, *The Graduate Center & Baruch College, CUNY*

OB: **Why So Quiet? Investigating Effects of Coworker Interdependency and Incivility on Use of Ostracism**

Author: **Joshua Nagel**, *The Graduate Center & Baruch College, CUNY*
Author: **Kristin Sommer**, *Baruch College & The Graduate Center, CUNY*

This research study aimed to investigate two seemingly related but theoretically distinct antecedents of workplace ostracism - task interdependency (cooperative/competitive tasks) and level of coworker civility (civil/uncivil). These antecedents were expected to interact to predict coworker ostracism by way of either the motive to punish or to avoid. Participants worked on a cooperative or competitive task with a confederate who behaved either civilly or uncivilly toward them. Social interactions were coded for the degree to which participants ostracized their partners, as defined by how talkative they were during the interactions. Participants also reported on their motives to punish or avoid their partners. In support of predictions, participants exhibited higher levels of ostracism towards uncivil compared to civil partners. Contrary to predictions, task interdependency did not moderate the effects of partner civility on degree of ostracism or motives. Possible reasons for this lack of hypothesis support – including a weakness in the interdependency manipulation and the tendency for people to perceive uncivil coworkers as more competitive – are discussed. The present experiment improves meaningfully on past correlational work by isolating partner civility as a direct cause of ostracism and by assessing ostracism using objective, behavioral measures.

OB: **Bystander's Reactions to Witnessing Ostracism: The Role of Social Identity and Social Dissimilarity**

Author: **Kayleigh Harris**, *U. of Massachusetts Amherst*
Author: **Nicolina Leeann Taylor**, *U. of Kentucky*
Author: **Seong Won Yang**, *U. of Kentucky*
Author: **Giuseppe Labianca**, *U. of Massachusetts, Amherst*

Bystanders are important to the experience of workplace ostracism (intentional or unintentional social exclusion when inclusion would normally be expected) as they have the power to intervene, either diffusing the situation by reducing the ostracism and supporting the victim, or to worsen it by joining in with the perpetrator. This study examines the effects of group co- membership on a bystander's decision on whether and how to intervene when witnessing ostracism. There are three intervention types that a bystander may enact: joining in, supporting the victim, or opposing the perpetrator. We hypothesize that a bystander's choice to intervene and their chosen type of intervention can be predicted by whether members of the triad (i.e., the perpetrator, victim, and bystander) share same-group membership. Our findings suggest that shared group membership most significantly affects both the decision to intervene, and a specific type of intervention -- whether to support the victim. These findings further our understanding of why and how a bystander might exacerbate or mitigate the detrimental effects of ostracism.

OB: **Defining Workplace Bullying and Related Concepts Using a Hierarchical Typology**

Author: **Nam Gyu Ryu**, *UNSW Business School, Australia*
Author: **Will Felps**, *UNSW Business School, Australia*

Workplace bullying is a pervasive and harmful problem. In this paper, we suggest that the workplace bullying literature has three major limitations as the literature has a very narrow definition of bullying. First, workplace bullying is defined by its repeated nature. Second, previous studies tend to rely on victims' subjective experience and does not consider much about other involving parties such as bystanders or perpetrators. Third, the predominant measure of workplace bullying confounds several aspects of bullying such as severity and number of perpetrators. Drawing on the review, we provide a hierarchical typology to address this issue and offer new directions for research and suggest different bullying types. Implications and different measures for each type of bullying are discussed.

OB: **Validation of the Workplace Emotional Blackmail Scale (WEBS)**

Author: **Yen-Yu Chen**, *National Yang Ming Chiao Tung U.*
Author: **Mai Pham**, *Department of Business Administration, National Chengchi U.*
Author: **Sheng Wang**, *U. of Nevada, Las Vegas*
Author: **Shihui Zhang**, *National Chengchi U.*

Recent years have seen a growing body of research on the effectiveness of workplace influence tactics. This study aimed to validate the Workplace Emotional Blackmail Scale (WEBS), which was originally developed in Chinese (Chen et al., in press), with an employee sample (Study 1) and a supervisor sample (Study 2) from organizations in various industries in the U.S. We followed Chen et al.'s approach and operationalized workplace emotional blackmail as an affect-based influence tactic. Consistent with Chen et al.'s research, the confirmatory factor analysis results of both samples provided support to the two-factor structure of the workplace emotional blackmail construct: intimidation and appealing. Moreover, both samples showed satisfactory reliability and criterion-related validity (employee resistance, compliance, and commitment). The results of measurement invariance analysis between the two samples further demonstrated full configural, metric, and scalar invariance, indicating that both supervisors and employees conceptualized workplace emotional blackmail similarly. The study findings suggest the appropriateness of using WEBS to examine the nomological network of emotional blackmail in the workplace in the U.S. Keywords: workplace emotional blackmail, factor analysis, psychometrics, reliability, validity

OB: **A Review of Witnessed Workplace Mistreatment: Boundary Conditions and Relative Importance**

Author: **Zhanna Lyubykh**, *Beedie School of Business Simon Fraser U.*
Author: **Rui Zhong**, *Penn State Smeal College of Business*
Author: **The Ton Vuong**, *Haskayne School of Business, U. of Calgary*
Author: **Sandra Robinson**, *U. of British Columbia*
Author: **Sandy Hershcovis**, *U. of Calgary*

This study aims to understand the role of observers in the dynamic of workplace mistreatment. Through a meta-analytic review, we examine the conditions under which observers respond more or less constructively to mistreatment incidents and the relative importance of witnessed versus experienced mistreatment in terms of overall impact on employees. The results show that observers tend to have negative responses towards perpetrators, though responses towards targets are mixed. Furthermore, these observer responses are contingent on the study design, mistreatment source, and mistreatment ambiguity. The study also finds that experienced mistreatment has a stronger impact on employees than witnessed mistreatment, although witnessed mistreatment still has a sizable impact. The implications of these findings and future directions for research on witnessed mistreatment are discussed.

I'm Here For You: Examining the Effects of Authentic and Empathetic Leadership

Session Moderator: **Gustavo Tavares**, *Insper Institute of Education and Research*

OB: **Enjoying Rivals' Pain: A Conceptual Framework of Strategic Leaders' Schadenfreude**

Author: **Sachinthanee Dissanayake**, *U. of Wollongong*
Author: **Mario Fernando**, *U. of Wollongong*
Author: **Kumar Krishna Biswas**, *U. of Wollongong*

While researchers recognize empathy in leadership, can strategic leaders empathize with their rivals' misfortune when it could benefit their organizations? This paper explores how strategic leaders emotionally respond to rivals' misfortune. Given the vulnerability, uncertainty, ambiguity, and competition in the business environment, strategic leaders may experience schadenfreude at rivals' misfortune. Schadenfreude is the emotion of having pleasure at others' misfortune. Based on a critical review of the schadenfreude literature using bibliometric analysis of publications from 1962 to 2022 and applying organizational identification and social comparison theory, we develop a comprehensive theoretical framework delineating the emergence and consequences of strategic leaders' schadenfreude in business. In response to rivals' misfortune, we argue that strategic leaders' strong organizational identification and downward comparison elicit schadenfreude via organizational-based self-esteem. Further, the influence of downward comparison will be intense if the rival is previously understood as a great achiever. We further argue that the experience of schadenfreude depends on the leaders' trait of guilt-proneness. In addition to schadenfreude emergence, our theoretical framework suggests three possible consequences: unethical pro-organizational behavior, emotional sharing with close others at work, and safer options in decision-making. Our novel theoretical framework extends the current research investigating strategic leaders' schadenfreude.

OB: **Authentic and One of Us: The Interaction between Leader Authenticity and Group Prototypicality**

Author: **Gustavo Tavares**, *Insper Institute of Education and Research*
Author: **Filipe Sobral**, *EBAPE/FGV*

We draw on socio-cognitive and social identity theories of leadership to propose that perceived authenticity predicts leader endorsement and social influence in groups, especially when the target group member is seen as a representative of the group's values and beliefs (i.e., when he or she is group-prototypical). We tested our hypotheses in two independent studies: (i) an experiment in which we manipulated the level of authenticity and group prototypicality of a stimulus group member and measured leader endorsement and (ii) a two-wave social network field study with Air Force Cadets in which we measured not only leader endorsement but also the level of influence each cadet exerts over his or her peers. Our approach differs from previous Authentic Leadership (AL) studies in that we use a psychological conceptualization of authenticity (rather than the AL construct) and focus on leader endorsement and social influence as our main dependent variables. Our findings support the premise that authenticity can be an important source of social power and that group prototypicality is a boundary condition for its effects. This study contributes to the ongoing debate on the role of authenticity in leadership processes.

OB: **The Impact of Authentic Leadership on Followers' Being Themselves**

Author: **Shengjun Zhang**, *Shanghai U. of Finance and Economics*
Author: **Gang He**, *Guanghua School of Management, Peking U.*
Author: **Yahua Cai**, *Shanghai U. of Finance and Economics*
Author: **Sun Xiuli**, *Capital U. of Economics and Business*

Although the effectiveness of authentic leadership is well documented, our understanding of how authentic leadership influences followers' self-concept or identity is limited. Drawing on self-verification theory, we argue that authentic leadership triggers followers' self-verification, and this psychological experience contributes to followers' creativity and voice behavior. We also argue that the relationship between authentic leadership and followers' experienced self-verification is strengthened when followers' need for self-verification (i.e., self-verification striving) is higher. Using a time-lagged research design with responses from 647 leader–follower dyads, we found support for our proposed model. We then discuss the theoretical and practical implications of our findings and suggest directions for future research.

OB: **Stories of Leadership: Leading with Empathy Through the COVID-19 Pandemic**

Author: **Jennifer Sue Linvill**, *Purdue U.*
Author: **Gloria Oghenebruphiyo Onosu**, *Georgia State U., J. Mack Robinson College of Business*

During the COVID-19 pandemic, many organizations worldwide have witnessed an unprecedented need for organizational change that rapidly transformed the work environment and operational procedures. This study focuses on leaders' experiences during COVID-19 as an opportunity for complexity leadership scholars to apply new ways of thinking to leadership practices. This study attends to the concepts of leading with empathy and fostering organizational environments where individuals feel a sense of belonging. This is important because the COVID-19 pandemic has further exacerbated the need for organizations to create a supportive environment for employees. Specifically, this study focuses on how individuals' leadership experiences during a time of complexity (i.e., COVID-19) serves to examine and shift leadership paradigms in organizations.

New Directions in Servant Leadership Research

Session Moderator: **Jialing Xiao**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*

OB: **Servant Leadership and OCB, The Relational and Motivational Mechanisms**

Author: **Jialing Xiao**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*
Author: **Shuisheng Shi**, *Hunan U.*

We investigate the relationship between servant leadership, followers' perceived LMX, work engagement, and organizational citizenship behaviors. Using a social exchange and motivation perspective, we examine how servant leadership influences followers' OCB by fostering followers' perceived LMX and work engagement. We further compare the magnitude of the two mechanisms. With a multisource time-lag study from an international logistics company, we conducted multi-level Hierarchical linear modeling and find that servant leadership influences followers' OCBO and OCBS through LMX and work engagement. And LMX is a more effective mechanism for explaining the relationship between servant leadership and OCBS.

OB: **The Effects of Servant Leadership on Performance and Health: A Multilevel and Multisource Study**

Author: **Anthony Perrier**, *TBS Business School*
Author: **Assâad El Akremi**, *U. of Toulouse I, Capitole*
Author: **Caroline Manville**, *U. of Toulouse I, Capitole*
Author: **Mathieu Molines**, *ESCE International Business School*

How and under what conditions does servant leaders' behavior influence both performance (individual and collective) and health within dynamic and extreme environments such as firefighters' context? We develop and test a multilevel model that integrates principles of servant leadership with social exchange theory to explore how servant leadership positively influences collective task performance, and how and when it strengthens adaptivity at the individual level and reduces emotional exhaustion. Our four-wave and three-source study sample comprised 303 firefighters nested in 45 fire stations. Multilevel Structural Equation Model analyses results indicate that, at the individual level, servant leadership significantly predicts high adaptivity, and low emotional exhaustion through the mediating influence of firefighters' felt trust and trust climate. Implications of our results to theory and practice are discussed.

OB: **Leadership Influence and Newcomer Socialization: Dual-path Model of Servant and Directive Leadership**

Author: **Changjun Li**, *School of Economics and Management of Wuhan U.*

Although past research has shown how organizational and personal efforts contribute to successful newcomer socialization, the influence of leaders and their leadership behaviors on newcomers' socialization process and performance is less clear. By integrating leadership and socialization research, I proposed a dual-process model in which servant leadership and directive leadership promote newcomer socialization performance through a social exchange mechanism—leader-newcomer exchange—and a social cognitive mechanism—self-efficacy, respectively. I also proposed newcomers' length of socialization (i.e., the number of months since organizational entry) as a crucial boundary condition. By collecting multi-wave, multi-source data from 369 newcomers, I found that leader-newcomer exchange mediated the positive relationship between servant leadership and newcomer socialization performance, self-efficacy mediated the positive relationship between directive leadership and newcomer socialization performance, and these mediation effects were more salient for newcomers with shorter (vs. longer) length of socialization. These findings not only enrich our knowledge of the leadership influence in the context of newcomer socialization, but specifically reveal how and when relationship-focused (i.e., servant leadership) and task-focused (i.e., directive leadership) leadership styles shape the process and effectiveness of newcomer socialization. The present research, thus, offers a host of implications useful for newcomer management.

OB: **The Relationship Between Mentors' Servant Leadership and Hotel New Employees' Affective Commitment**

Author: **Shuaijun Zhang**, *UTRGV*
Author: **Xiaoman Zhou**, *Chongqing Normal U.*

This study investigated the impacts of the dual role of servant leadership and mentorship on hotel employees' affective commitment. We used structural equation modeling and hierarchical multiple regression analysis to analyze two waves of self-reported data collected from 370 new employees in 13 hotels in five regions of China. Inspired by self-determination theory, we developed an integrated model, and the results showed that the link between servant mentorship and new employees' affective commitment is mediated via psychological capital. In addition, we found a moderating effect of new employees' feedback-seeking behavior on the relationship between the mentor's servant leadership and the new employee's psychological capital. We provided relevant theoretical and practical contributions.

OB: **Effects of Servant Leadership on Languishers' Social Functioning and Organizational Identification**

Author: **Nabi Ebrahimi**, *UMass Lowell Manning School of Business*
Author: **Tamara Montag-Smit**, *UMass Lowell Manning School of Business*

This article sheds light on the way servant leadership (SL) helps reduce the adverse impacts of languishing in the work context and promote languishers' social functioning. In a scenario-based study (Study 1, n = 135), the negative relationship between followers' languishing level and their serving behaviors was significantly attenuated by higher levels of their perception of manager SL effectiveness. Drawing upon social learning theory and based on the proposition that servant leaders develop followers who also engage in serving behaviors, Study 1 showed that when manager SL effectiveness was perceived to be high, languishers were encouraged to engage more socially and showed more serving behaviors than flourishers. A survey among 220 real-world employees (Study 2) extended the results of Study 1 by showing that greater manager SL attenuates the negative relationship between languishing and organizational identification and the effect of SL on organizational identification was significantly stronger for languishers than flourishers. It appears that the manager's leadership style may be especially helpful to improve their languishing employees' well-being in the organization, especially in cases when it might be difficult for the employees to do this on their own.

Even before the Covid 19 Pandemic careers were in great flux. Since the onset of the pandemic they have become even more malleable being shaped primarily by employees and freelancers, but also by organizations and leaders. This symposium samples empirical work from academia, and conceptual work from academia and the consulting world to propose some directions for how careers might be changing--and might be managed--for individuals, organizations, and their leaders.

Gender Gaps and Disparities in Organizations, Negotiations, and Conflict Management

Organizer: **David P. Daniels**, *NUS Business School*
Participant: **David P. Daniels**, *NUS Business School*
Participant: **Laura Kray**, *U. of California, Berkeley*
Participant: **Christine Nguyen**, *Columbia Business School*
Participant: **Oliver Hauser**, *U. of Exeter Business School*
Participant: **Solene Delecourt**, *Haas School of Business, UC Berkeley*
Participant: **Rembrand Michael Koning**, *Harvard Business School*

This symposium examines how gender gaps and disparities are evolving and/or persisting within organizations, negotiations, and conflict management settings. First, Daniels, Koval, and Neale theorize that both a “female penalty” (a gender pay gap) for most women, and also a “female premium” for high-potential women, may emerge from the interplay between first offers and gender in job negotiations. The authors analyze a unique field dataset from an online labor marketplace where all workers (n=19,878) must propose a first offer when negotiating their hourly wages for freelance jobs, and they find support for their hypotheses. In addition, the authors provide causal evidence that workers’ first offers influence their negotiation outcomes, by taking advantage of “left-digit bias” (Wiltermuth, Gubler, and Pierce, 2022); when workers make a first offer that is just above (vs. just below) a “left-digit threshold” such as $10.00/hr. or $20.00/hr., it causally improves their negotiation outcomes (i.e., hourly wages) by 15% for men and by 24% for women. Second, Kray, Kennedy, and Lee explore whether “women don’t ask” is myth or reality and show that, in contrast to lay beliefs, women negotiate their salary more often than do men among people holding MBA degrees (in a 2019 survey). The authors also examine historical data and show that men reported negotiating their salaries more often than women prior to the twenty-first century, but since then, the trend has reversed, suggesting it is time to update beliefs about gender and negotiating propensity. Third, Nguyen, Yeomans, and Gino revisit how conversational receptiveness can improve interpersonal evaluations in the midst of conflict (Yeomans et al., 2020) by examining gender differences in communication strategies and whether communicators are aware of such gender differences. The authors found that female writers were rated to be more receptive, both by themselves and by other gender-blind raters; additionally, female raters perceived others’ text as more receptive. Theoretically, the authors seek to build on and add nuance to the literature on conflict management, receptiveness, and gender; practically, the authors hope to give communicators a better understanding of the profiles and efficacy of their communication strategies in disagreement contexts. Fourth, Bohnet, Chai, Hauser, and Louw study the effects of behaviorally-informed, scalable interventions to close the gender gap in re-application rates to senior roles. Their results suggests that positive feedback and encouragement can reduce the gender gap in re-applications, while communication of diversity targets may not change behavior. Their results inform future research on interventions to reduce gender gaps and offer a practical and scalable solution for organizations aiming to achieve gender parity in leadership positions. Fifth, Delecourt, Chopra, and Koning use both observational data and a field experiment to explore how the gendering of a startup idea impacts its appeal to the startup’s male and female workers. Core to their analysis is the idea that a startup idea can be gendered for systemic reasons (e.g., when the startup focuses on biological differences) or direct reasons (i.e., when the “genderness” of the startup’s target market can be redirected or shifted while holding many other aspects of the idea—from the market potential to the idea’s technical difficulty—relatively constant). Overall, the symposium explores how gender gaps and disparities are evolving and/or persisting, providing new answers and new questions about gender differences in contexts that are both theoretically important and practically relevant.

The #MeToo movement, the Equal Pay Pledge, and the United Nations' "HeForShe" campaign are part of a worldwide reckoning around gender. Yet women are still paid less than men, earning 83 cents for every dollar on average (Bureau of Labor Statistics, 2022), and are underrepresented in upper-level jobs (Catalyst, 2022) offering greater power, prestige, and influence. Since the 1990s, progress on closing the gender wage gap has slowed substantially, and the rate at which occupational segregation has declined has also slowed markedly. The lack of progress despite increased corporate and societal initiatives indicates that there is more to be learned. In this symposium, we will take a deeper dive into several important topics in gender and work to further our understanding of why – in this era of increased focus on gender equity – substantial gender gaps in work-related outcomes remain. In the first presentation, Kossek et al. further our understanding of work-life inclusion, demonstrating how firms' work-life inclusion profiles relate to firm equality and work and non-work wellbeing. Subsequently, Lambert et al. explore how strong organizational diversity climates buffered women from increased anxiety and increased turnover intentions during COVID-19. Next, de Janasz and Scandura examine gender differences in negotiation-related behavior, a key contributor to workplace gender disparities. Finally, Sitzmann et al. move beyond conceptualizing gender equity as a women's issue by demonstrating how gender egalitarian practices benefit firms' performance. Collectively, the four papers in this symposium present novel insights into the causes and consequences of persistent gender disparities in workplace outcomes.

Participant: **Ann-Kristin Menhardt**, *U. of Bamberg, Germany*

This symposium aims to provide different theoretical approaches and evidence-based insights that can be used to tackle the pressing need for sustainable and effective management of health and well-being in organizations. Specifically, given the crucial impact of leaders on organizations' optimal functioning, four papers bring together diverse perspectives on the topic of leadership and well-being. First, Sievers, Buengeler, Den Hartog, Boer, and Bellingrath provide a comprehensive examination of the causal effects of constructive and destructive leadership on follower psychological and physical well-being using an innovative range of methodological approaches. Second, Rex, Granger, Weatherhead, and Turner put the spotlight on the mechanisms through which transformational leadership affects follower psychological well-being and their relative strengths using a two-study approach. Third, Güntner, Ingold, Heimann, and Kleinmann illuminate the crossover processes from leader well-being to follower well-being while focusing on leaders' perceptual, cognitive skills across two studies. Fourth, Volmer, Otto, and Menhardt draw attention to coaching as a measure that can increase health-related work outcomes in leaders and test its effectiveness and moderating mechanisms in an experimental, longitudinal study. The insights gained from this symposium expand our understanding of the positive and negative impact of leadership on follower well-being and the mechanisms underlying this relationship. The papers also highlight the crucial role of leaders' own well-being and ways to foster it. The discussant, Hannes Leroy, will synthesize these theoretical and empirical contributions, highlight avenues for future research directions, and lead an interactive discussion between presenters and the audience.

In recent years, contact with nature has received the attention from both researchers and practitioners (Klotz & Bolino, 2021). Companies have increasingly adopted the biophilic work design to bring greenspace to the workplace (Prigg, 2018; Sears, 2016; Wilson, 2019) or encouraged employees to go outdoors into nature (Klotz, McClean, Yim, Koopman, & Tang, 2022). One explanation has to do with Wilson's (1984) biophilia hypothesis, which argues that contact with the natural world enhances human well-being. Although this biophilia effect has received both theoretical and empirical attention, management research has just begun to explore the effects of nature on employees. Papers in this symposium aim to address several important unanswered questions, using a mixed of methods, ranging from qualitative field study, to experienced sampling, and to randomized controlled experiments.

Participant: **Min Yu**, *Arizona State U.*

As more organizations begin to realize the importance of acting responsibly in the broader society, research has been emerging on employee voice that is driven by ethical principles or super organizational interests (i.e., ethical voice). Given that the focus of ethical voice is different from that of voice aimed at improving organizational efficiency and productivity, their antecedents and consequences are likely to differ. However, our understanding of the antecedents and consequences of ethical voice is rather limited and is much needed. In this symposium, we seek to offer new insights into antecedents and consequences of ethical voice and discuss practical implications for organizations wishing to encourage employee ethical voice.

Organizational Growth and Change: Drivers, Trajectories, and Impacts

Session Moderator: **Theresa M. Welbourne**, *U. of Alabama*

ODC: **Toward a Theory of Long-Term Post-Initial Public Offering Growth Trajectories**

Author: **Theresa M. Welbourne**, *U. of Alabama*
Author: **Miranda Welbourne Eleazar**, *U. of Iowa*
Author: **Joshua Victor White**, *U. of Dayton*

An initial public offering (IPO) provides firms with a significant infusion of capital that facilitates growth and scaling. However, despite the opportunity presented by the IPO, many firms fail not long after ringing the opening bell. Even if they survive, firms often fail to grow to the extent they hoped. Thus, it is important to understand how firms grow post-IPO and what makes firms grow differently after the IPO. This question of how firms grow is ideally studied in the context of IPOs because IPOs equalize the stage of firm development. At this milestone event, each firm has decided that it is ready for to go public and obtains capital through the IPO to fuel continued growth. We choose to explore a sample of IPOs from the largest cohort to date, doing an in-depth exploration of the 20 years following the 1996 IPO cohort to contribute toward the development of a theory of post-IPO growth trajectories. Specifically, we identify patterns of growth trajectories, their outcomes, and their antecedents through the digital age; the 20 years includes times of economic prosperity and upheaval. We contribute to the entrepreneurship and change management literatures on growth and scaling, risk, and IPOs.

ODC: **Employee Pass: A Consequence of Disregarding Organisational Growth**

Author: **Roman Golotovskiy**, *Faculty of Management, Prague U. of Economics and Business*
Author: **Vera Kralova**, *Prague U. of Economics and Business*
Author: **Pavel Kral**, *Prague U. of Economics and Business*

Organisational growth is a challenge for management and has a significant impact on the organisation. Extant organisation growth theories suffer from two biases. Pro-growth bias stems from focusing attention on organisations that implement changes during growth and ignoring those who do not. Survival bias results from drawing conclusions that fail to account for unsuccessful organisations. Thus, the literature does not inform well on what happens organisation doesn't react to organisational growth and maintain its practices. This study employs a single-case study to investigate how disregarding organisational growth affects an organisation. Specifically, we explore, how unchanged organisational structure influences internal communication after significant organisational growth. The negative impact of neglected organisational structure adaptation appears on both organisational and individual level and culminates through employee pass – employee mental separation and organisational silence. The employee pass model represents an organisational and individual transition to the separation and silence. The results provide a suggestion to eliminationg the pro-growth and survival biases of the endurance and change narratives. The study also contributes to organisational silence research by revealing the process of silencing.

ODC: **Transparadoxical Enactment and Multivocal Paradox Knotting In Managing Growth Disequilibrium**

Author: **Changwei Guo**, *School of Business, Renmin U. of China*
Author: **Yuan Li**, *Saint Mary's College of California*
Author: **Fengbin Wang**, *School of Business, Renmin U. of China*
Author: **Yuening Liu**, *Peking U. HSBC Business School*

Knotted paradoxes are discursively constructed and multiple interweaving tensions that can tilt a system out of balance. We examine the knotting of intra-organizational paradoxes in the context of the development of an online sales strategy within a large industrial multinational company. Based on six rounds of in-depth interviews over a period of eight years, we explicate the negotiation between the corporate management and middle management around tensions of identity, coordination, capability, and strategy. We demonstrate how the corporate management's transparadoxical messaging opened a malleable space for growth, and how the middle management creatively interpreted the messages and took innovative initiatives. This elastic enactment pushes the boundaries of the malleable space and, together with transparadoxical messaging, often intensifies some poles of the knotted paradoxes and generates imbalance. We elucidate the multiplicity of paradox by tracing the surfacing of primary and secondary paradoxes and their entanglement with latent tensions. The knotted paradoxes form a complex web of multivocal contradictions instead of binary oppositions. Our longitudinal case study shows that the metamorphosis of knotted paradoxes manifests in a perpetual state of disequilibrium, which fosters strategic growth and innovation.

HR Matters: Strategic HRM and HR Practices Driving Organizational Renewal and Change

Session Moderator: **Lauri Juhani Paavola**, *Aalto U. School of Business*

ODC: **Making HR Matter – Organizing FCEs to Create Impact**

Author: **Lauri Juhani Paavola**, *Aalto U. School of Business*

To examine how Field-Configuring Events (FCEs) create change, we conduct an inductive longitudinal study on how an annual event known as the HR days impacted a Finnish retail ecosystem, the S-Group. Our analysis shows how the impact of the HR days, a relatively stable FCE intended to develop and transform human resource management (HRM) practices within the S-Group, changed from being a mere routine annual event to being influential. We were able to trace the reasons behind the varying impact to a restructuring that the ecosystem underwent that created different pressures within the entity. By elucidating how factors beyond the organizing of the event had an impact on its outcomes, we show that FCEs cannot only be conceived as stable settings providing change, but as relational systems providing varying outcomes. Accordingly, our findings underline the importance of studying FCEs in their networks within and across organizations over time.

ODC: **The Interactive Effects of HPWP and Adaptive Leadership on Readiness and Commitment to Change**

Author: **Saima Naseer**, *Brock U.*
Author: **Muhammad Salman Chughtai**, *Faculty of Management Sciences, International Islamic U., Islamabad*
Author: **Fauzia Syed**, *Associate Professor (FMS)*

Utilizing the Social cognitive theory, this study suggests that organizations that promote high performance work practices are instrumental in fostering an individual's affective commitment to change. We also hypothesize that an individual's readiness to change is an explanatory mechanism through which high performance work practices lead to an affective commitment to change. Additionally, the high performance work practices and readiness to change relationship would be strengthened in the presence of high adaptive leadership. We tested our hypotheses using a temporally segregated research design across three-time waves (n=337). We found support for our direct, mediating, moderating, and mod-med hypotheses. Our results corroborate that a high adaptive leadership and an organization implementing high performance work practices set the stage for creating an individual's affective commitment to change via their readiness to change. The current study integrates the change management, leadership, and HRM literature by suggesting unique mechanisms and boundary conditions that advance research and practice in an individual's willingness and acceptance to change. We suggest theoretical and practical implications for research and practice based on our study's findings.

ODC: **Organizational Renewal during Crisis: Impact of CEO Succession and SHRM as Change Agents**

Author: **Indu Ramachandran**, *Texas State U.*
Author: **Vishag Badrinarayanan**, *Texas State U.*
Author: **Kim Clark**, *Saint Mary's College of California*

Organizational renewal can be broadly described as a process that entails a significant change in managers' mental models and strategic direction of an organization, facilitating value creation within an organization during times of organizational crisis, and thus, reversing declining performance. Organizational renewal is often characterized by varying degrees of crisis. Drawing from the literature on organizational renewal and CEO succession, this paper identifies various CEO retention and replacement options that correspond to different degrees of crisis severity. Subsequently, for each crisis situation, strategic actions that contribute to organizational renewal are proposed. Additionally, given that employees are key to implementing any kind of strategic change, this paper discusses the role of strategic human resource management (SHRM) in aligning human resource management with an organization's strategies and tactics thereby allowing employees to embrace necessary changes, understand the new objectives of the organization and shift their behaviors to meet the new demands.

ODC: **Performance Feedback and Strategic Change: The Moderating Effects of Firm Visibility and Firm Slack**

Author: **Tushar Ravindra Shah**, *Northeastern State U.*
Author: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*
Author: **Soumendra Banerjee**, *Misericordia U.*

Multiple studies of the relationship between performance feedback and strategic change have generated mixed evidence, triggering an increasing scholarly interest in various dimensions of performance feedback and contingency factors that shape and affect firm's strategic change efforts. We focus on two well-accepted component dimensions – historical and social performance feedback; and two contingent variables – firm slack and visibility. We find that negative and positive historic aspiration gap both have a higher effect on strategic change under high visibility as well as high slack. But under low visibility and low slack, the effects were different. Low visibility did not have any impact on the relationship between performance feedback (historic or social) and strategic change, but with positive historic aspiration gap, low slack firms reduced their strategic change efforts. Overall, we show that both slack and firm visibility play an important role in moderating the relationship between performance feedback and strategic change efforts.

Organizational Learning Processes and Outcomes

Session Moderator: **Jisoo Park**, *Clark U.*

OMT: **How Using Contractors Affects Organizational Learning: Evidence from U.S. Hospitals**

Author: **Jisoo Park**, *Clark U.*

This study examines the conditions under which using contractors facilitates organizational learning in terms of organizations' adoption of an industry's new best practices. Contractors—those who contract with clients/contracting firms to provide services—often work simultaneously across multiple firms. While contractors can bring diverse knowledge from other firms to facilitate implementing new practices, contractors lack firm-specific knowledge about implementing those practices. By contrast, although full-time employees have firm-specific knowledge, they typically have less exposure to diverse knowledge possessed by other firms. Drawing from minority-majority relations theories, I hypothesize that organizational learning will peak when firms employ a moderate proportion of contractors. This is because the relationship between full-time employees and contractors will be the most positive at this point, facilitating the transfer of firm-specific knowledge and diverse knowledge between the two. I test this hypothesis in the healthcare context where an important guideline on using stents was promulgated in 2006, and hospitals had to learn this new best practice. I find evidence for my hypothesis using data on 85,567 patients treated in 40 New York state hospitals in 2004-2007. In addition, I test my theorized mechanisms by showing that firms with a low or high proportion of contractors can facilitate learning by using specific contractors that can mitigate their knowledge transfer barriers. This paper contributes to the literature on knowledge transfer, organizational learning, and strategic human capital.

OMT: **Employee Composition and Organizational Learning: When Self-selection Organizations Outperform**

Author: **Junjie Zhou**, *National U. of Singapore*
Author: **Jungpil Hahn**, *National U. of Singapore*

Self-selection organizations delegate the decision about task allocation to individual employees. Despite the widespread adoption of self-selection in organizations, our understanding of this organization form still needs to be improved concerning two aspects. First, although self-selection behaviors are driven by different motivations, it is not clear how employees' motivation will affect the performance of self-selection organizations. Second, different motivations not only shape which tasks employees initially select but also determine how continuous task reallocation circulates employees within the organization and influence how they learn from each other. This study investigates how and under what conditions self-selection organizations with different compositions of employee motivations perform better (or worse) than traditional hierarchies from an organizational learning perspective. Using simulation experiments, we find that a mixture of fit- and payoff-driven employees enables self-selection organizations to achieve better performance compared to traditional hierarchies. Variances in factors such as task size, employee knowledge breadth, and environmental dynamics are examined to test the boundary conditions under which self-selection organizations with a mixture of employee motivations outperform hierarchies. These findings provide new theoretical and practical implications for organization design.

OMT: **On Praise for Knowledge-sharing**

Author: **Yongha Kwon**, *U. of Wisconsin-Madison*
Author: **Ji-hyun Kim**, *Yonsei U.*
Author: **Mooweon Rhee**, *Yonsei U.*

Knowledge-sharing, individuals' behavior to share their knowledge to improve others' knowledge, has received much praise for its normative and practical benefits. This study revisits the praise for knowledge-sharing from the perspective of organizational learning theory. We consider knowledge-sharing as selectively realizing potential conduits of knowledge transfer provided by the organizational structure. Employing a computational model, we show that the structural pattern of knowledge transfer realized by knowledge-sharing promotes the recombination and appropriation of diverse individual knowledge and in turn improves the firm's long-term performance. This benefit of knowledge-sharing complements or even substitutes managerial capabilities to design and implement an effective organizational structure for long-term organizational learning. In contrast to the usual praise for knowledge-sharing, our model analysis also demonstrates cases in which managerial practices to introduce knowledge-sharing may disrupt organizational learning. We discuss implications for organizational learning, prosociality, network dynamics, and managerial practices.

OMT: **And Waiting is not Easy…… The 4 Types of Organizational Waiting**

Author: **Bernadine Johnson Dykes**, *Shenandoah U.*

In this paper, we develop the construct of organizational waiting by suggesting that it is comprised of two dimensions (anticipation and preparation) and thus has four types (engaged waiting, passive waiting, distressed waiting and secure waiting). We show how the four types of waiting impact organizational learning, decision-making under uncertainty and strategic renewal. We offer avenues for future research for scholars and managers.

OMT: **Peers Who Help You Learn More: Three Virtues of Peer-hub Relations in Via-hub Vicarious Learning**

Author: **Hitoshi Mitsuhashi**, *Waseda U.*
Author: **Naoki Yasuda**, *Rikkyo U.*

Via-hub vicarious learning occurs when the focal organization learns from the experiences of other organizations (i.e., peers) through common hubs with which they have exchange relations, such as manufacturers and service providers. Seeking to enhance our understanding of this form of collective intelligence, this study investigates how the experiences of peers linked through hubs present more learning benefits to the focal firm. In doing so, this study proposes hypotheses regarding the virtues of non-dependent, recallable, and in-honeymoon peers in vicarious learning. This study uses aviation safety data to test these hypotheses, viewing the focal airline operator's fatal accident as an outcome of learning. Results show that the focal airline operator is less likely to have fatal accidents when peers accumulate more operating experiences. Moreover, this baseline effect is more pronounced when peers are not dependent upon hubs, when the resources exchanged in peer-hub relations are those that hubs (and peers) can fully recall since the beginning of peers' resource usage, and when peers have a short relational history with hubs. This study advances the theory of vicarious learning by providing conceptual and empirical evidence of how external environmental factors, such as peer-hub relations, shape an organization's rate of vicarious learning and how collective intelligences emerge in populations.

Investigating the Role of Managers in Organizations

Session Moderator: **Dongil Daniel Keum**, *Columbia Business School*

OMT: **Hanging on for Employees: Managerial Prosocial Preferences, Firm Exit Thresholds, and Risk-Taking**

Author: **Dongil Daniel Keum**, *Columbia Business School*
Author: **Xin Lucy Liu**, *Columbia Business School*

When facing economic setbacks, managers may continue operating due to the concern that exiting harm employees who lose their jobs. We propose that managers with higher prosocial preferences set lower exit thresholds and avoid risky investments that increase the risk of having to exit. These hypotheses are tested using a multi-method design. Our field study shows that, in responding to intensifying Chinese import competition, more prosocial managers (e.g., those who maintain employee-friendly policies, volunteer at charitable organizations, lean non-Republican in political orientation, or are promoted internally) are less likely to exit, divest, and lay off workers as well as invest in R&D. A manager's concern for employees mediates the negative effect of prosocial preferences on exit thresholds and risky investments (Experiment 1) and has larger effects when employees face a greater cost of job loss due to less generous unemployment insurance or the loss of medical insurance (Experiment 2). We show that anticipated guilt is a key component of the prosocial cost (Experiment 3). Our study revises the prevailing view of managers as selfish actors and presents managerial prosocial preferences as a critical input to corporate strategy and risk-taking.

OMT: **Consequences of Collaborative Managers on Inequality**

Author: **Letian Zhang**, *Harvard Business School*
Author: **Shinan Wang**, *Northwestern Kellogg School of Management*
Author: **Xuege (Cathy) Lu**, *U. of Minnesota Carlson School of Management*

This paper argues that the changing role expectation of managers could help explain the rise of women managers in the United States. Traditionally, a major impediment to women's advancement into management has been role incongruity: the communal stereotype ascribed to women is inconsistent with the agentic expectation for ideal managers. To explain women's recent progress into middle management, this paper underscores the changing expectations for middle managers. Instead of commanding and controlling their employees, today's middle managers are increasingly expected to be collaborative and empathetic, qualities that align more closely with the communal stereotype about women. Through analyzing millions of managerial job ads and detailed firm demographic data, we find that managerial expectations have become increasingly collaborative and that firms expecting more collaborative managers have a much higher proportion of women in management. We conducted several placebo tests to account for endogeneity concerns, and an additional survey and experiment to identify mechanisms. Together, these findings suggest that the changing expectations for managers contributed to women's rise into middle management, indicating that women's advancement into traditionally authoritative positions remains a challenge.

OMT: **Investigating How Managers Shape Risk Understandings to Catalyze Inter-organizational Cooperation (WITHDRAWN)**

Author: **Suresh Cuganesan**, *U. of Sydney Business School*

Inter-organizational cooperation (IOC) is risky. Accordingly, prior literature focuses on how managers mitigate IOC risks through governance. However, conceptualizations of risk as objective, and implicit assumptions of organizations as monolithic, have underplayed the important role of managers in shaping operational-level understandings of risk to catalyze IOC. I investigate how managers do this, utilizing a social constructionist perspective on risk. Through a longitudinal study of a firm seeking to develop IOC with two other entities, I make two contributions. The first is the development of a managerial risk work model that explains how IOC can build over time from being minimal to expansionary in nature as managers engage in risk work of different types. Second, I show how problematic between-partner goal differences can be rendered constructive if risk understandings across organizations can be reshaped to intersect with, rather than oppose, each other.

OMT: **Re-hiring Long-term Unemployed Individuals: The Role of Boundary Work Among Managers**

Author: **Celine Flipo**, *IESEG School of Management*
Author: **Maria Castillo**, *IESEG School of Management*

The covid-19 and post-covid crisis that has seen unemployment rates rise around the world will also have an impact on long-term unemployment. Research on long-term unemployment suggests that long-term unemployed individuals (LTU) face difficulties to return to work and are often stigmatized because of their situation. Through 40 interviews with managers from different companies, this paper seeks to explore the role of managers in fostering reemployment of LTUs. It posits that managers can resist the stigma associated with long-term unemployment through boundary work. We find that managers negotiate and redefine the boundary between LTUs and job seekers to overcome the stigma and recruit LTU individuals. We organize managers hiring LTU individuals into three types: contesters, catalyzers, and integrators.

OMT: **The Future Isn't What It Used to Be: Anticipatory Control and Digital Change in Water Infrastructure**

Author: **Virginia Leavell**, *Cambridge Judge Business School*

In this study I ask how managers anticipate future technological change as a means of organizational control. When organizations face conditions of increasing uncertainty, people rely less on past experiences and more on their anticipation of possible future events to make decisions. Thus, a perennial question for managers in conditions of uncertainty is what they can and cannot control. In this longitudinal, ethnographic study of two water agencies that managed the production and distribution of drinking water, I show how managers developed and acted on predictions of the future in an attempt to align present organizational structures and practices to the future they both expected and hoped to bring about. The findings presented in this paper draw on an extensive dataset that included over 830 hours of observations, more than 90 interviews, and more than 13,000 pages of documents. Rather than explaining output, or what "eventually happens" during the implementation and use of new smart metering technologies at either of the organizations examined in this paper, I explore instead how predictions of possible futures shaped work and material infrastructure before (if ever) the anticipated future came about. In my findings, I show how discourse and the positioning of technologies in relation to strategic planning processes shaped managers' predictions of their organizations' technological futures. Despite the fact that both agencies were anticipating what could nominally be understood as the same technology, their anticipatory processes shaped markedly different trajectories. Managers enacted an unpopular and major departmental reorganization at one agency, while at the other, they ushered in a poorly received defunding of infrastructure repair. By developing our understanding of anticipatory control, we may better understand how organizations operate in times of uncertainty, when actors are looking even more to the future than the past.

Stigma and the Stigmatization Process in Organizaitons and Occupations

Session Moderator: **Anastasiya A. Zavyalova**, *Rice U.*

OMT: **The Origins of Stigma: Russian NGOs Under the 2012 "Foreign Agents" Law**

Author: **Anastasiya A. Zavyalova**, *Rice U.*

Most organizational research on stigma focuses on preexisting stigma, leaving the question "where does stigma come from?" largely unexplored. The few studies that have examined stigma emergence, position transgression as a trigger for the stigmatization process and focus mainly on the actions of external stakeholders at the expense of the agency of the stigmatized. I address these voids by explicating the process of stigma emergence in the context of the 2012 "foreign agents" law in Russia and its application to NGOs. I used an inductive approach–by relying on archival data, online sources, and interviews–to uncover deliberate attempts of the government to stigmatize select NGOs by assigning to them a newly created "foreign agent" label. I present a three-phase process model of stigma emergence and detail the iterative manner, through which the stigmatizer amended enforcement tactics as the stigmatized devised new coping strategies. The ironic outcome was that the quest to stigmatize and exert formal control over "foreign agent" NGOs led to NGOs' deformalized existence. I discuss the critical roles of power imbalance, limited action by higher authority, and low media attention during the early phase of stigma emergence. These findings may generalize to other countries with authoritarian regimes.

OMT: **In the Eyes of the Beholder: When Broad vs. Local Perception of Occupational Stigma Differ**

Author: **Pulum (Eunice) Kim**, *Boston U. Questrom School of Business*
Author: **Michel Anteby**, *Boston U. Questrom School of Business*

In this paper, we explore how an occupational membership may signify varying meanings across different social contexts, resulting in disparate experiences of stigmatization amongst members. Our population of interest are instructors in supplementary education in South Korea: a generally non-stigmatized line of work. Through an inductive study, we find that even when the broad, outside audience's evaluation of the occupation is overall positive or neutral, some members experience localized stigma. Furthermore, we show how members' own past social (educational) context – college peers they compare themselves to (i.e., their local audience) – shapes these perceptions. Some instructors indeed prioritize their local audience's perception of their work over the dominant external one. In doing so, we contribute to the extant literature on occupational stigma by considering the interaction between occupational members and diverse subgroups of outsiders—the audiences who evaluate the meanings and social value associated with the occupational membership. Whereas the extant literature on occupational stigma treats occupational members as the stigmatized and non-members as the stigmatizers, we spotlight the need to account for local audiences, alongside broader ones, to better understand occupational stigmatization processes.

OMT: **Saving Thunderbird: Stakeholder Stigmatization and Social Media Communities**

Author: **Andrew Inkpen**, *Thunderbird School of Global Management at ASU*
Author: **Kerttu Kettunen**, *U. of Agder*
Author: **Kimmo Alajoutsijärvi**, *U. of Agder*
Author: **Ilan Alon**, *U. of Agder*

This study focuses on a stigmatization process initiated by an organization's stakeholders. We examine the impact of alumni stigmatization actions that followed the announcement of an alliance between Laureate Education, a for-profit company that operated a portfolio of degree granting higher education institutions (HEI), and the Thunderbird School of Global Management, a small, well-respected but struggling private business school. We contribute to the present understanding of stigmatization as a process by elaborating in detail how early phases of collective negative evaluations and stigmatization actions by stakeholders develop into organization-level outcomes. We also contribute to the understanding of the dynamics of social media communities and show how macro level stigmas are mediated by group level actions and interactions into organization-level stigmatization and disapproval in a way that is extremely difficult for organizations' strategic management to respond to and manage. We add to earlier studies on social evaluations by examining the stigmatizers' perspective and by showing the rapid, blended, and overlapping nature of different types of social evaluations.

OMT: **The Moral Dirtiness of Human Resource Management: A Film Study**

Author: **Luca Carollo**, *U. of Bergamo*
Author: **Marco Guerci**, *U. degli Studi di Milano*
Author: **Edoardo Della Torre**, *U. of Milan, Italy*
Author: **Giuseppe Previtali**, *U. of Bergamo*

It has been claimed that the HR 'profession' suffers from a chronic lack of social legitimacy. In this paper we advance the idea that not only does HR work lack social legitimacy but it is also openly stigmatized for being immoral. In other words, we maintain that HR work can be conceptualized as morally dirty work. We provide empirical support for this contention by analyzing a sample of 22 international films representing HR practitioners at work. The research results show that HR work in filmic representations comprises both immoral tasks and immoral methods, thus furnishing a comprehensive and nuanced picture of the immoral aspects that can affect the HR profession. Furthermore, films show that HR practitioners can take their distance from the moral dirtiness of their work by either exiting the role, trying to reform it, or openly raising resistance against their employer. These research results highlight the need to integrate dirty work scholarship into study of the HR profession, while they provide important indications in terms of future HR research, practice and education.

Accounting for Pay Disparities in the Workplace

Session Moderator: **Shiya Wang**, *Harvard Business School*

OMT: **Offers versus Wages: Gender Differences in Pay at the Point of Hire**

Author: **Shiya Wang**, *Harvard Business School*
Author: **Adina D. Sterling**, *Columbia Business School*

One of the primary explanations for the gender gap is that there are different negotiation preferences and outcomes for women and men that suppress women's wages. Problematical for understanding the contribution of such supply-side behavior, however, is that initial wages are a product of not only negotiation behavior but initial offers from employers. Yet to date, all studies of the gender wage gap have studied wages, or what individuals make when they are hired, and not initial offers. In this study we use data from PayScale, a large-scale, proprietary data set of initial salary offers that job seekers received between 2017 and 2020 from all 50 states in the U.S. to study initial salary offers, initial wages, and the relationship between the two. Examining over 1.3 million initial salary offers, we find a statistically significant female penalty on initial salary offers with the inclusion of all observable differences in human capital, job, firm, and industry characteristics. We also find systematic differences in initial offers across labor market segments, occupations, jobs, and career stages. Overall, our study suggests caution should be taken when using negotiation outcomes to explain candidate behavior, and instead suggests the origin of the gender pay gap arises from the offers provided to candidates by employers.

OMT: **Blue and Red Fields: Political Segregation and Pay Inequity in the Labor Market**

Author: **Ray Fang**, *Boise State U.*
Author: **Felice Klein**, *Boise State U.*
Author: **Chi Nguyen**, *Oklahoma State U.*
Author: **Jeff Lingwall**, *Boise State U.*

In this paper, we explore the relationship between political segregation (the tendency for liberals and conservatives to work in different industries and occupations) and the persistence of gender and racial pay gaps in the labor market. We propose that pay gaps tend to be smaller in fields with higher proportions of liberals because workers in these fields are more likely to support practices that promote gender and racial equity. We tested this theory with a pre-registered analysis of two nationally representative archival samples of U.S. employees and managers. In Study 1, we used the General Social Survey (N = 15,498) and found that workers in more liberal fields are more supportive of organizational efforts to create equity. In particular, the more ideologically liberal someone's field is, the more likely they support the preferential hiring and promotion of women and racial minorities. In Study 2, we used the Current Population Survey (N = 1,031,335) and found that gender and racial pay gaps tend to be smaller in liberal fields than in conservative fields. We also found that progress toward pay equity was faster in more liberal fields between 2000 and 2020. Overall, this paper suggests that political segregation has important implications for our understanding of inequality in the labor market.

OMT: **The Paradox of Individual Equity: How Employers Explain the Fairness of Unequal Pay**

Author: **Laura Adler**, *Yale School of Management*

An employee who learns she is paid less than her colleagues is likely to be more dissatisfied and less motivated at work. Yet current pay-setting practices routinely produce pay inequality among coworkers, often with identical jobs. Research shows that narrative accounts can resolve tensions between expectations for fairness and actual inequalities. This paper examines how employers use accounts to explain pay inequality and how these accounts influence employees. Data from 98 interviews with human resources practitioners and experts show that, to explain pay inequality, organizations mobilize an individual equity account: an explanation that proposes that the fair thing to do is to treat everyone differently. Individual equity accounts allow employers to resist equity claims by decommensurating, asserting that employees are fundamentally incomparable to one another. I identify three versions of the individual equity account that are used in practice, rooted in ideas about performance, the market, and intangible value. To test the effect of the individual equity account on workers, I use a survey experiment, which shows that individual equity accounts hinder the ability to evaluate equity. These findings contribute to organizational theory by developing insight into a widespread lay conception of equity—individual equity—and using the case to highlight how narrative accounts can constrain moral reasoning by individualizing conceptions of justice.

OMT: **Cross-National Differences in Managerial Pay Dispersion: A Configurational Approach**

Author: **Thomas Greckhamer**, *Louisiana State U.*

Compensation and its inequality across organizational ranks is a central aspect of modern organizations. To contribute to our understanding of cross-national differences in compensation systems, in this study I explore how institutional differences across countries shape the typical compensation received by a country's top executives as compared to that of lower managerial ranks. Building on a configurational approach that considers countries' institutions as inherently intertwined with rather than isolated from one another, I synthesize the literature into a configurational model that captures key institutions that should explain similarities and differences in managerial pay dispersion. I explore this model by analyzing a country-level data set using fuzzy-set Qualitative Comparative Analysis (fsQCA). These analyses identify institutional configurations that are consistently linked to high pay dispersion (as well as its absence) between CEOs and senior and middle-managers, respectively. I conclude by discussing the study's implications for our understanding of cross-national differences in managerial pay dispersion and by highlighting promising directions for further research on this important phenomenon.

Authenticity in the Study of Organizations and Industries

Session Moderator: **Amna Chaudhry**, *U. of Edinburgh business school*

OMT: **Authenticity Scaffolding Across Temporal and Spatial Planes: The Scottish Ginaissance**

Author: **Amna Chaudhry**, *U. of Edinburgh business school*
Author: **John Matthew Amis**, *U. of Edinburgh*
Author: **Tina Dacin**, *Queen's U.*

Over the last twenty years, gin production in Scotland has exploded. This rapid and recent growth in Scottish gin distillation raises interesting questions regarding how a new industry strives for authenticity and how firms founded at different times seek to define themselves in an evolving and increasingly contested market. Our research finds that the answers to both of these questions centre on the development of authenticity. We thus contribute to authenticity theory by addressing two major questions that have erstwhile been inadequately explored by existing literature: First, we assess how are different interpretations and meanings of authenticity enacted and performed? Second, we examine how and why these meanings change over time? The case study provides insights into the ways in which multiple meanings of authenticity, centred on places, historical myths and materiality, become socially constructed, repeatedly disrupted and institutionally memorialized over time. We label this polygonal framework of recursively defining, invoking and deconstructing authenticity meanings as 'authenticity scaffolding' – the process by which varied meanings of authenticity coexist or collide with each other over time. In developing this framework, this research aims to contribute to existing authenticity literature by delineating the micro-processes that drive the evocation of multiple meanings of authenticity and elucidating the ways in which these authenticity constructs evolve and adapt to changing industry trends over time.

OMT: **Creating Immersive Experiences through Interactive Narratives: A Study of LARP Games in China**

Author: **Rongrong Zhang**, *The Chinese U. of Hong Kong, Shenzhen*
Author: **Yuqing Yang**, *Chinese U. of Hong Kong, Shenzhen*
Author: **Guo Zhan**, *Chinese U. of Hong Kong, Shenzhen*

Authenticity is essential to the creation of immersive experiences. Prior research examines how organizations use narratives to construct authenticity. However, less is known about how audiences can actively participate in the construction of authenticity. In this qualitative study, focusing on Live Action Role-Playing (LARP) games in China, we adopted the idea of "interactive narratives" to explain how immersive experiences are constructed. We found that a script is at the core of immersive experiences. Producers used interactive narratives in the script, including "three-act-structure" and "The Hero's Journey" to create settings for game participants. Following the script, participants actively perform their constructed identities in an immersive theatre. We also identified consequences of participants' immersive experiences, including escaping from reality and building social bonds. This study advances our understanding of how interactive narratives contribute to authenticity construction. We also discussed the broader implications of constructing immersive experiences for organizations and management.

OMT: **"Aligned, Misaligned, or Maligned?": How Identity Alignment Governs Authenticity Perceptions**

Author: **Susie Choe**, *U. of Michigan*

I propose that audiences evaluate a producer's authenticity based on their ascribed identity. Specifically, I argue that production choices (i.e., "how one produces") featured in prior work compensate for inauthentic identities but that such strategic choices—and their authenticity implications—are conditional on producer identity (i.e., "who produces"). This Conditional-Compensatory Framework is tested in a two-part study. An archival study establishes a positive correlation between identity alignment (e.g., ethnicity) and authenticity perceptions; audiences perceive Japanese-owned restaurants as more authentic than those owned by producers of other ethnicities. An experimental study further shows that identity governs authenticity perceptions directly (i.e., independent of production choices) and indirectly by conditioning the returns of choices. Thus, authenticity is not shaped by "how" but rather the effects of "who" in both the "how" and the returns to "how." I discuss conditions under which authenticity perceptions constitute socially legitimated discrimination and implications for producer stratification within markets, calling for a distinctly sociological view of strategy.

OMT: **The Multiplicity of Attributions of Authenticity and Audience Evaluation**

Author: **Zhongyuan Sun**, *City U. of Hong Kong*
Author: **Yutian REN**, *Hong Kong Baptist U.*
Author: **Yongquan YANG**, *City univercity of Hongkong*

The study of authenticity has grown rapidly in recent decades, along with the proliferation of various concepts of authenticity. Although recent frameworks have emerged that attempt to integrate these studies, they are fraught with problems. To this end, this paper establishes a more systematic and comprehensive framework and examines the relationships between different attributions of authenticity and audience evaluation. Drawing on millions of online reviews from the Chinese film market from 2002 to 2022 and a state-of-art language representation model, BERT, our results show that almost all types of authenticity (except type authenticity) increase audience evaluation. Besides, ethical, craft, and realism authenticity can exert a stronger positive influence on audience evaluation than moral, type, and essentialism authenticity, respectively. The study advances authenticity literature by clarifying the attributions of authenticity and their distinct impact on the audience and introducing a new approach to quantify authenticity.

OMT: **Organizational Authenticity: How Craft Ventures Manage Authentic Identities and Audience Appeal**

Author: **Stanislav D. Dobrev**, *Lubar College of Business*
Author: **Cameron Verhaal**, *Tulane U.*

Commercial success in craft-based industries requires projecting authentic identities but direct claims of authenticity can backfire and raise suspicions of pecuniary motivation, an antithesis to authenticity. Managing authentic identities is thus central to the success of new craft-based ventures. We argue that aligning an organization's core features to its audience can make its authenticity claims effective. Specifically, organizations can shape their audience's perceptions of authenticity and appeal by tacitly and indirectly conveying a resonant identity meaning with visibility and credibility. We model two outcomes: a producer's authenticity perceptions by its audience and a producer's appeal to its audience. Our empirical analysis, set in the U.S. microbrew industry, reveals strong support for the idea that craft ventures can raise authenticity and appeal through managing the meaning, visibility, and credibility of their identity claims. We discuss the implications of our theory and findings for the social construction of authenticity and authenticity-based appeal.

Full-Cycle Organizational Research: Status and Opportunities

Organizer: **Aruna Ranganathan**, *Haas School of Business, UC Berkeley*
Panelist: **Jennifer Chatman**, *U. of California, Berkeley*
Panelist: **Ethan Scott Bernstein**, *Harvard Business School*
Panelist: **Justin M. Berg**, *Stanford Graduate School of Business*
Panelist: **Kimberly D. Elsbach**, *U. of California, Davis*
Discussant: **Robert Cialdini**, *Arizona State U.*

Full-cycle research is often described by researchers as the cyclical use of diverse methodologies. It begins with observing naturally occurring phenomena and then taking steps to establish the power, generality, and conceptual underpinnings of the phenomenon of interest (see Cialdini 1980, 1995; Chatman & Flynn 2005). We view the growing prevalence of this methodology as an essential development for organizational research because of its unique potential to address the phenomenological nature of behavior in organizations, the internal and external validity and generalizability of a concept or relationship, and the interdisciplinary nature of the field. Researchers have not, however, developed a unified set of criteria for defining full-cycle research. Many papers claim to adhere to a full-cycle approach, but a close look at their methods shows significant divergence. Conversely, some scholars using a full-cycle approach do not identify it as such in their papers. This lack of clarity slows the accumulation of knowledge and undermines the robustness of organizational research findings. The goal of this symposium, therefore, is to bring together prominent scholars who are using full-cycle methods to help develop a common definition and standards for conducting full-cycle organizational research. Subsequent questions about the value of full-cycle research and ways to promote its usage hinge on the generation of a consistent working definition and a more standardized approach.

Corporate Purpose: What's Really at the Heart of Business?

Organizer: **Nathania Ancheta Chua**, *WU Vienna*
Organizer: **Christof Miska**, *WU Vienna U. of Economics and Business*
Speaker: **Luke Hedden**, *U. of Miami*
Speaker: **Gerald F. Davis**, *U. of Michigan*
Speaker: **Joel Gehman**, *George Washington U.*
Speaker: **Ju Young Lee**, *Ivey Business School*

What is the purpose of business? Scholars and practitioners continue to ask this question particularly in today's multi-crises environment, which has challenged the relevance of for-profit companies and has led to the rise of alternative forms of business. While research on corporate purpose has grown in recent years, with underlying constructs being developed and defined, knowledge gaps still remain regarding its characteristics, composition, scope and limitations. Our invited panel's expertise in business ethics, sustainability and organization theory will provide a nuanced and multi-perspective discussion of the purpose of business to the Academy.

Panelist: **Matthew A. Cronin**, *George Mason U.*
Panelist: **Caroline Jane Gatrell**, *Liverpool U.*
Panelist: **Elizabeth George**, *Cambridge Judge Business School*
Panelist: **Zeki Simsek**, *Clemson U.*
Panelist: **Alain C. Verbeke**, *U. of Calgary*

Review research including integrative reviews and meta-analyses has become a staple of knowledge production in management and organizational sciences. In this symposium, a panel comprised of editors of some of the most influential journals that publish review articles will discuss how to publish this form of scientific inquiry including the types of review research, their roles for the production of new knowledge and advancing theory and methodological approaches. They will provide scholars across all AOM divisions with advice and guidance for conducting and eventually publishing rigorous and impactful reviews.

Organizer: **Adina D. Sterling**, *Columbia Business School*
Organizer: **Jiwon Byun**, *Stanford Graduate School of Business*
Discussant: **Ezra Zuckerman**, *Massachusetts Institute of Technology*

Path dependency has long been viewed as fundamental aspect of organizational behavior, with scholars largely viewing social networks as a constraint on path dependency (Merton 1968; Granovetter 1985). In this symposium, we bring four papers together that challenge this conceptualization. Each paper interrogates the ways social structure may or may not enable actors to 'break free' from their present trajectories. Negro, Kovacs, and Carroll study how receiving a major career award influences the reconfiguration of musicians' networks and their future projects. In a study on VCs in China, Aven, Shen, and Zhang study how network configurations influence funding success among innovative, young start-ups. Using an agent-based model, Byun studies the way organizations may come to negate the influence of social structure in labor markets through various hiring designs (aka "logics"). Finally, Choi, Ierokomos, and Sterling place a field experiment that suggests that there are limits to how actors behave based on information retrieved outside of embedded relationships. Taken together, these papers reveal new mechanisms through which the presence and absence of social networks may lead economic actors to remain on the same path or arrive on a new trajectory.

Shareholder Activism: Threats, Responses, and Innovation

Session Moderator: **Maria Ruiz Castillo**, *U. of Granada*

ONE: **Threats from Shareholder Activism and Implications on Corporate Socio-Environmental Performance**

Author: **Maria Ruiz Castillo**, *U. of Granada*
Author: **Juan-Alberto Aragon-Correa**, *U. of Granada*
Author: **Nuria Hurtado-Torres**, *U. of Granada*

Socio-environmental shareholder activism (SOSA) has gained attention due to increasing concerns about the negative impacts of firms on society and their corporate implications. Executives often view SOSA as a threat, because activism may bring negative attention to the firm and its management team, and may weaken managerial discretion. The literature on SOSA has grown and focused on factors that affect the number of shareholder proposals received, but there is debate about the effectiveness of activism in improving firms' socio-environmental performance. Using the Awareness-Motivation-Capability (AMC) framework, this study analyzed whether the corporate socio-environmental performance (CSEP) of firms targeted by SOSA differs from that of non-targeted competitors, and how interactions between activist shareholders and executives after receiving shareholder proposals affect proposal effectiveness. The study included 14,717 firm-year observations of 1,048 S&P1500 firms from 2006 to 2020. The results showed that targeted firms' awareness of the SOSA threat significantly increases their subsequent CSEP. In addition, the number of withdrawn shareholder proposals resulting from negotiations with executives had a positive impact on CSEP, but there was no significant effect of the number of voted and rejected proposals or the SEC's omission of proposals. This study contributes to the emerging literature on SOSA by examining the potential for activism to be a successful source of socio-environmental progress in firms. It also connects the AMC literature to socio-environmental research by examining how executives may react to socio-environmental issues based on the potential threat to their managerial interests.

ONE: **Stock Market Reactions to Climate Activism - An Event Study of the Fridays For Future Movement**

Author: **Mario Schuster**, *Leuphana U. Lüneburg*
Author: **Sophie Bornhöft**, *Leuphana U. Lüneburg*
Author: **Rainer Lueg**, *Leuphana U. Lüneburg*
Author: **Yassin Denis Bouzzine**, *Leuphana U. Lüneburg*

The substance of this research lies in answering whether and how the European and U.S. stock markets react to the upheaval caused by climate activists. Accordingly, we perform an event study on firms included in the Stoxx Europe 600 and S&P 500 to examine reactions to Global Climate Strikes by Fridays For Future. We analyze the significance of abnormal returns utilizing three event windows covering anticipation, short-term, and lagged effects and divide the sample according to environmental performance grades. Our findings reveal that climate strikes cause a general loss in firm value, exposing no profiteers. We identify differences in market reactions among both examined regions, particularly concerning the promptness of reactions. Enriching literature on stock market reactions, we prove that investors' reaction is not limited to primary stakeholder events but also encompasses secondary stakeholder pressure. Furthermore, we provide evidence that climate activism has a processual character causing recurring effects on the stock market.

ONE: **Shaping Sustainable Innovation through Shareholder Activism**

Author: **Clea Roth**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*
Author: **Carsten Christian Guderian**, *FAU Erlangen-Nürnberg / LexisNexis IP Solutions*

It is generally recognized that society can only overcome its grand challenges by investing in new sustainable innovation, which requires funding, for example, from hedge funds (HFs) or venture capitalists (VCs). HFs and VCs exert influence on corporate strategies as shareholder activists. While this influence also comprises innovation, there is no knowledge about shareholder activists' influence on sustainable innovation. Moreover, prior research on shareholder activism is primarily associated with HFs. However, other forms of shareholder activism, for example, by VCs, exist that are best investigated in isolation in prior research. Using panel data comprising 84 VC activism and 378 HF activism campaigns from 2010 to 2018, we trace shareholder activism via the principal-agent theory and reveal that both VC and HF activism negatively impact sustainable innovation activity and sustainable innovation quality. Herein, we contribute to the extant literature by recognizing shareholder heterogeneity, depicting HFs and VCs' varying shareholder activist motivations, and extending the scope of innovation focus in shareholder activism research to sustainable innovation.

Environmental and Carbon Disclosure: Drivers and Methods

Session Moderator: **Himanshu Shekhar**, *Doctoral Student at Indian Institute of Management Bangalore*

ONE: **From Seat to Say: Do National Cultures Influence the Voluntary Disclosure Expectation from Boards?**

Author: **Himanshu Shekhar**, *Doctoral Student at Indian Institute of Management Bangalore*

Independent Directors are considered the primary conduit for realizing better corporate governance. Given this, institutional actors, regulators, and investors push for higher number of independent directors with greater power in the corporate boards. The presence of independent directors has been associated with better firm oversight and higher transparency with stakeholders through voluntary disclosures. However, this agency theory explanation may not apply equally well in different country contexts. We analyse the relationship between independent directors on corporate boards and firm-level voluntary environmental disclosures in an informal institutional (national culture) context. The findings suggest that national cultures could provide a backdrop through which we can better understand independent directors' role in influencing board outcomes like voluntary disclosures. We find that increasing the proportion of independent directors may be positive, neutral, or counterproductive in improving voluntary environmental disclosures in different cultures. Therefore, national cultures might be seen as a potential boundary condition for agency theory's expectation of greater transparency with higher board independence. These findings also provide a peek into board and independent director's influence on firm's voluntary initiatives.

ONE: **Transparency is Not a Donkey Work: Board Political Orientation and Firm Carbon Disclosure**

Author: **Anne Jacqueminet**, *Bocconi U.*
Author: **Eun-Hee Kim**, *Fordham U.*
Author: **Valerio Pelucco**, *Department of Management and Technology, Bocconi U.*

Firms are increasingly expected to communicate on their climate impacts, as well as the actions they implement to mitigate them. We argue that the political orientation of a firm's board, because it influences its stakeholders' expectations as well as the firm's concerns about meeting them, shapes its disclosure strategy in a somewhat paradoxical way. While liberal orientation may increase the publicity and extensiveness of the carbon disclosure, we expect that it also increases the extent to which firms will attempt to attenuate negative environmental news through more abundant justifications and recourse to obfuscation. Our empirical study, based on a sample of 410 US firms over 8 years, provides evidence for these effects as well as the fact that negative news is penalized by environmental raters, in particular when delivered by a firm with a more liberal orientation, and when justification and obfuscation tactics are employed. These results therefore highlight a complex relationship between board political orientation and environmental transparency.

ONE: **Comparing Textual Analysis Tools To Classify Sustainability Information In Corporate Reporting**

Author: **Frederik Maibaum**, *Leibniz U. Hannover*
Author: **Johannes Kriebel**, *U. of Muenster*

Quantitative sustainability research depends on sustainability information that is often unavailable in a structured and comprehensive way for large samples of firms. Textual analysis can, hence, leverage sustainability information from unstructured text data. However, while there is a variety of different approaches to textual analysis, researchers rarely reflect on and validate their method choice, which might influence the results. Therefore, we study the choice of textual analysis techniques to extract sustainability information. For this purpose, we first develop models for textual analysis based on topic modeling, word embeddings (WE), and state-of-the-art bidirectional encoder representations from transformers (BERT) models. Regarding the BERT model, we suggest an approach to train a BERT model to identify sustainability information without manual labeling using categories from Wikipedia data. To benchmark the natural language processing models, we conduct an experiment with 75,000 sentences from 10-k annual reports that are triple-coded by researchers regarding whether there is information related to sustainability contained. Our results show that the BERT model outperforms the established approaches and generally shows a strong performance in identifying sustainability information. Therefore, our work contributes to measuring sustainability based on text data facilitating future research that can use the studied approaches.

The Latest on Greenwashing: Analyses and Reviews

Session Moderator: **Chih-An Lin**, *Fu-Jen Catholic U.*

ONE: **Exploring the Antecedents of Employee Greenwashing**

Author: **Chih-An Lin**, *Fu-Jen Catholic U.*
Author: **Shin-Cheng Yeh**, *National Taiwan Normal U.*
Author: **Yu-Yuan Shih**, *National Taiwan Normal U.*

The literature finds corporate social responsibility a global branding theme and a risk management instrument. Under stakeholders' expectations and pressure to look good, enterprises' voluntary disclosure of voluntary betterment of society becomes hotbeds for CSR-washing or greenwashing. Organizational greenwashing refers to an organization's not walking the talk or selective disclosure of its environmental performance for its own interests. To help prevent greenwashing and to bridge the current research gaps, including lacking the individual level of analysis, treating employees as mere implementors, and disproportionately focusing on Western or emerging countries, this paper explores the antecedents of employee greenwashing with a government survey regarding climate change in Taiwan. The results find that psychological immediacy, organizational immediacy, climate change knowledge proficiency, climate change management self-efficacy, persuasive advocacy, and phlegmatic advocacy are all significantly correlated with employee greenwashing. Implications are put forth and future studies are encouraged since the post COVID-19 era demands more resilience and sustainability efforts, which makes greenwashing even a more pertinent theme in the future.

ONE: **Irresponsible Families: Analysis of Greenwashing in Family Firms**

Author: **Svetlana Flankova**, *U. of Liverpool*
Author: **Jeroen Neckebrouck**, *IESE Business School*

There is growing evidence that environmental disclosures are often misaligned with firms' actual impacts on the natural environment. This study investigates family firms' propensity to selectively disclose environmental information, or in other words, to greenwash. By drawing on agency theory and the socio-emotional wealth perspective, we first compare greenwashing patterns in family and non-family firms. Then, following recent research on family firm heterogeneity, we explore two socio-emotional wealth dimensions that may influence family firms' propensity to greenwash - family control and influence, and family firm identity. Results from a sample of 1, 574 firms from 40 countries between 2007 and 2017 reveal that family firms are more prone to greenwashing compared to non-family firms. Results also indicate that family firms with a greater degree of family control and influence are particularly likely to selectively disclose environmental information. Overall, the results suggest that family firms are willing to face the risks of greenwashing being exposed in the future, indicating that they do not always make decisions based on long-term considerations when it comes to environmental disclosures.

ONE: **No End in Sight? A Greenwash Review and Research Agenda**

Author: **A. Wren Montgomery**, *Ivey Business School*
Author: **Thomas Peyton Lyon**, *U. of Michigan*
Author: **Julian Barg**, *Ivey Business School*

Greenwashing is more virulent than ever. A profusion of ESG and net zero commitments are becoming fraught with questionable and misleading claims. At the same time, we are no closer to solving the pressing environmental and social issues of our time. In this review we seek to examine this shift and summarize changes in greenwash research across time into a framework, identifying three key phases: 1.0 Where We Started; 2.0 Where We Are; and, 3.0 Where Next? We analyze current key areas of developing literature and point to numerous open questions for future research. Next, we go beyond much of the published work to examine emerging issues and lay out a forward-looking agenda for future research. We also propose a model of Corporate Miscommunication, integrating various streams in greenwash research. In doing so, we seek to lay a pathway for greenwashing researchers to finally find that elusive "end" to greenwashing

ONE: **Symbolic and Substantive Climate Action: A Review and Synthesis of Definitions**

Author: **Xinyi Gu**, *Georgia Institute of Technology*
Author: **Daniel Matisoff**, *Georgia Institute of Technology*

A growing number of companies have made climate pledges, joining organizations such as Science Based Targets, to demonstrate their commitment to emissions reductions. There is uncertainty as to whether these pledges are merely symbolic declarations or lead to substantive results. Furthermore, the environmental management literature does not differentiate symbolic from substantive climate action consistently, which presents challenges towards understanding the role and effects of climate pledges. We address this gap with a systematic literature review that compiles definitions of symbolic and substantive action, synthesizing them into a new conceptual model. We propose three main components that distinguish symbolic from substantive action: results (whether company action led to tangible emissions reductions or operational changes), effort (whether changes were superficial or extensive), and intent (whether the company was genuinely committed to climate performance as opposed to social expectations for compliance). Future studies could analyze the relationship between these three components, such as how symbolic vs. substantive intent translates into the type of effort and results realized by a company. Doing so would allow policymakers to understand why companies engage in climate pledges and the factors that influence their success or lack thereof.

Climate Change Adaptation: From Sensemaking to Strategies

Session Moderator: **Lucrezia Nava**, *Bayes Business School (formerly Cass), City, U. of London*

ONE: **The Impact of Organizational Heuristics on Firms' Sensemaking for Climate Change Adaptation**

Author: **Mercedes Bleda**, *Alliance Manchester Business School, U. of Manchester*
Author: **Elisabeth Krull**, *Alliance Manchester Business School, U. of Manchester*
Author: **Eleni Christodoulou**, *Alliance Manchester Business School, U. of Manchester*
Author: **Jonatan Pinkse**, *U. of Manchester*

The complexity and uncertainty of climate change pose unique challenges to the development of corporate adaptation strategies. Climate change adaptation requires organizations to rely on sensemaking to understand climate events, the implications for their operations, and develop the required responses. In this context, organizational heuristics can support sensemaking by simplifying decisions and reducing cognitive effort but can also hinder it by creating biases and errors that lead to inefficient decisions. This paper identifies and analyzes organizational heuristics used when making decisions on climate change adaptation by empirically investigating the climate change adaptation responses of key infrastructure providers in the UK. Looking at selection, prioritization, procedural, and temporal heuristics, we examine how organizations make sense of climate change events and develop their responses accordingly. The analysis shows that while these rules-of-thumb are sensible in some instances, they can also create biases that may deflect responsibility or create a false sense of security leading to inefficient adaptation decisions.

ONE: **Die Now of Hunger or Later of Thirst: Vulnerable Decision-Makers' Adaptation to Climate Change**

Author: **Lucrezia Nava**, *Bayes Business School (formerly Cass), City, U. of London*
Author: **Jorge Chiapetti**, *jo1812*
Author: **Maja Tampe**, *ESADE Business School*
Author: **Rui Barbosa Da Rocha**, *U. Estadual de Santa Cruz*

Studies on decision-makers' responses to climate change focus on industrialized nations. Despite the greater vulnerability of tropical countries to the effects of climate change, little is known about climate change adaptation in these contexts. Drawing on a unique, longitudinal dataset of over 3,000 agricultural producers in Brazil, a particularly vulnerable context, and using a mixed-methods approach, we develop and test a framework to understand what explains the responses to climate change that decision-makers in vulnerable contexts pursue. In contrast to the evidence from industrialized countries, we find that experiencing the effects of climate change is likely to increase maladaptive rather than adaptive responses, generating vicious cycles that intensify vulnerability due to cognitive, emotional, and ecological factors.

ONE: **Firm-level Strategies for Climate Change Adaptation: Sectoral and Geographic Influences**

Author: **Charles Backman**, *Northwestern Polytechnic (Alberta, Canada)*
Author: **Alain C. Verbeke**, *U. of Calgary*
Author: **Bob Schulz**, *U. of Calgary*

We apply the natural resource-based view (RBV) of the firm to a 17-year longitudinal data set of 117 FT500 companies to understand the influence geography and sector have on firms integrating a climate change focus into their business model. We base our analysis on information derived from the Carbon Disclosure Project (CDP). Our RBV-model captures a two-stage transformation process, which includes Walk I and Walk II. This process identifies the firm's changes in governance, information gathering, and managerial systems as an 'intermediate' step, i.e., Walk I. This step often precedes firms actually investing in changing products and production processes to complete the transition towards a more proactive state, i.e., Walk II. We find that firms with a head office in Europe have initiated investments earlier along Walk I than firms with a head office in North America and this extends to Walk II as well. However, by the end of the period included in our data set, there appears to be little difference anymore in the degree to which a climate change focus has been integrated into firm-level strategy along Walk I and Walk II. The sectoral affiliation also influences firm-level strategy and the speed and depth with which a climate change focus materializes over time. For instance, energy-related firms have integrated a climate change focus earlier than firms in business-to-consumer (B2C) sectors and have made deeper changes to their business models in terms of dedicated investments. Firms in B2C sectors have also added a climate change focus, but the changes they have made typically did not require the same depth of dedicated investments. Firms not included in either of the two above groups have somewhat lagged in the start of transition and occupy an intermediate position as to the level of change required for a Walk II transformation. Keywords Resource-Based View, Dynamic capabilities, Carbon Disclosure Project, Dynamic GISTe model, Data driven climate change strategies, FT500 longitudinal data base, Walk I and Walk II model, GISTe model, geographic and sectoral influences

ONE: **Organizational Scaffolding for Climate Adaptation: How Intermediaries Manage Evaluative Tensions**

Author: **Nichole Kay Wissman**, *U. of San Diego*
Author: **Amanda Bertana**, *Southern Connecticut State U., Department of Sociology*
Author: **Stephan Davys Manning**, *U. of Sussex*

The grand challenge of preparing for climate impacts through climate adaptation relies on intermediaries, including local NGOs, consulting firms, and government agencies. Climate adaptation elicits evaluative tensions coming from what we call the dual organizational complexity. The dual organizational complexity includes evaluation ambiguity in (1) the interconnectedness and co-evolutionary dynamics of locally bounded social and ecological systems and (2) an increasingly complex network of interconnected organizations, including a diverse set of public, private, and semi-private actors who provide funding, market power, and expertise. We find that intermediaries address evaluative tensions through organizational scaffolding or building socio-material infrastructures that can support resilience and increase evaluative and adaptive capacity for future projects, albeit imperfectly. Importantly, we argue that climate adaptation needs facilitators with the capacity to connect very localized bottom-up needs to top-down resources in a continuous cycle of resource allocation, communication, and accountability, especially in the face of the increasing organizational complexity involved.

Buyer-Supplier Relationship III

Session Moderator: **Sihan Jiang**, *Dalian Maritime U.*

OSCM: **Whistleblowing Intensity and Distributor Compliance in Marketing Distribution Channels (WITHDRAWN)**

Author: **Sihan Jiang**, *Dalian Maritime U.*
Author: **Lu Shen**, *Dalian Maritime U.*
Author: **Chuang Zhang**, *Dongbei U. of Finance and Economics*
Author: **Xubing Zhang**, -

This research examines how whistleblowing in a marketing distribution channel affects distributors' compliance to the manufacturer's request and how that impact is influenced by institutional environment. Drawing on signaling theory, we propose that observing whistleblowing incidents, distributors use whistleblowing intensity as a signal of channel morality, based on which they decide whether or not to comply with a manufacturer's request. Using a dataset comprising both dyadic survey data and archival data, we find that channel whistleblowing intensity has an inverted U-shaped effect on distributor compliance. In addition, this curvilinear effect is stronger in regions with more effective legal systems and higher social trust. But we do not find vertical channel control moderating the effect of whistleblowing intensity on compliance. Overall, our research highlights the bright and dark sides of whistleblowing as a horizontal monitoring tool and uncovers situations in which it works or fails to promote peer compliance.

OSCM: **Unpacking Cultural Impacts on Long-Term Manufacturer-Supplier Relationships in the Arab Middle East**

Author: **Noor Al-Ma'aitah**, *Mutah U.*
Author: **Ying Ying Liao**, *Hamdan Bin Mohammed Smart U.*
Author: **Professor Ebrahim Soltani**, *Hamdan Bin Mohammed Smart U.*
Author: **Chin-Wen Ting**, *Nanhua U.*
Author: **Pervaiz K Ahmed**, *Monash U., Malaysia*

This study's specific objectives study are (i) to examine the impact of cultural facets of the Arab Middle East region on long-term manufacturer-supplier relationships (LTR) and (ii) to uncover how trust functions as their moderator. The literature has largely focused on Western cross-country and macro-regional inter-firm manufacturer-supplier relationships; research on non-Western national cultural effects on LTR is sparse. We test the effect of six Arab cultural values: Ta'arof (meeting someone, ?????), Wasta (who you know, ?????), Wa'ad (promise, ???), HifzMa'aWajh (saving face, ??? ??? ?????), Qada-Qadar (fatalism, ?????? ??????), and Shura (consultative, ????). Data from 302 matched manufacturer-supplier dyads in the Jordanian manufacturing sector are used to analyse the hypothesized relationships through partial least square structural equation modelling and multi-group analysis. Our study shows the need to consider cultural and trust issues in building LTR. The PLS path estimates provide support for all hypotheses except for the impact of ta'arof on LTR, which varies between different cultural norms and manufacturers and suppliers. The findings contribute to the increasing shift of focus towards macro-organizational research and contextualizing organizational research beyond Hofstede's cross-cultural paradigm to encompass context-specific religious-cultural values of the Arab Middle East region.

OSCM: **Learning to Contract while Digitalizing: Joint Intra-Contract Learning to Develop Data Clauses**

Author: **Tom Aben**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*
Author: **Wendy Van Der Valk**, *Tilburg U.*
Author: **Henk Akkermans**, *Tilburg U.*

Digitalization entails using digital technologies to fundamentally transform both intra- and inter-organizational processes of organizations, and as such also greatly impacts inter-organizational governance. A challenging aspect of digitalization is the rapid rate with which new digital technologies are developed. Moreover, organizations typically need time to develop insights into how (new) technologies can best be leveraged. Since digitalization also requires organizations to learn process about the new (upcoming) technologies and their possibilities, the effective support of digitalization in using contractual and relational governance mechanisms is likely to require learning as well. This learning usually occurs within a single contract period because of the pressure on organizations to reap the benefits of their digitalization efforts within the current, often long-term, contract. A single longitudinal case study was investigated with two embedded cases, each focusing on a maintenance outsourcing contract that was to be digitalized. These two embedded cases illustrate that intra-contract learning regarding digitalization involves significant post-formation adjustments to both contractual governance through the (re)design of contractual data clauses and relational governance through increased formalization of cooperative norms with the relationship.

OSCM: **Effective Public Procurement and Strategic Onshoring in Specialised Markets with Limited Buyers**

Author: **Christopher James Day**, *U. of Sydney Business School*
Author: **Rico Merkert**, *U. of Sydney Business School*
Author: **Bo Nielsen**, *U. Of Sydney*

Public procurement in developed economies has sought to improve efficiency through competition and outsourcing functions, drawing on private sector expertise and utilising private capital. Whilst these measures have reduced cost, they can be detrimental to supply chain resilience and the achievement of government's growing desire to use procurement more strategically to onshore industrial capability. In the context of rail rolling stock manufacturing, our document review and interview program results inductively identify how four fundamental tenets of contemporary public procurement undermine the health and competitiveness of strategic onshore industries when government is a major, or the only, buyer of specialised equipment. We argue that, in order for onshoring efforts to be effective within a highly competitive global market, scope exists for government agencies and firms to draw on strategic management to restructure procurement practices in a manner which supports the health of local industry to create public and private value.

PNP: **Toxic Solidarity in AmeriCorps*VISTA**

Author: **Meghan Kallman**, *U. of Massachusetts, Boston*
Author: **Anne Antoni**, *Grenoble Ecole de Management*

In an increasingly unstable global politics – amidst challenges ranging from refugee crises to rising authoritarianism worldwide – organizational scholars have started considering how solidarity emerges in response to the economic and human crises of our time. Adopting a practice-based orientation and building on interview data from a case study of AmeriCorps*VISTA, a US National Service program, we unpack how solidarity may be made inoperative in organizations in the neoliberal space. We theorize this phenomenon by developing the concept of "toxic solidarity". Building on a conception of solidarity as bridging differences, this research contributes understanding the reproduction of inequalities. We find that AmeriCorps*VISTA very often produces differences when it claims (or aims) to be producing solidarities, and this strain is a driving force behind the transformation from solidarity to toxicity, as well as the reproduction of the neoliberal moral order. This transformation occurs, in our data, via organizational and programmatic mechanisms.

PNP: **Work, Family, and Volunteering: Managing Demands Across the Triple Domains by Young Adults**

Author: **Uthpala Senarathne Tennakoon**, *Mount Royal U.*
Author: **Gabrielle Symbalisty**, *Mount Royal U.*

This paper examines volunteer motivations and how individuals manage cross-domain demands of work, family, and volunteering, using twenty in-depth interviews with young adults aged 18-35 from Canada. By examining the interaction of all three domains, this study addresses a long-standing gap in the work-family literature in identifying the cross-domain implications of volunteering. The results revealed six distinct motivators for volunteering along the intrinsic-extrinsic motivation spectrum. These categories align with the volunteer functional inventory (VFI), providing external validation for VFI and connecting the functional analysis to the underlying motivations. This paper specifically adds to the literature by presenting the Matrix of Motivators and Resource Investment (MMRI), which identifies different volunteer types with the drivers for volunteering and resource prioritization in relation to work and family domains. Study also highlights practical implications and future research directions.

PNP: **Fostering Resilience and Commitment among COVID-19 Volunteers in Nonprofit Organizations**

Author: **Susan Schwarz**, *King's College London*
Author: **Gary Schwarz**, *Queen Mary U. of London*
Author: **Zhou Jiang**, *RMIT U.*
Author: **Qing Miao**, *Zhejiang U.*
Author: **Alexander Newman**, *Melbourne Business School, U. of Melbourne*

While researchers have usually found a negative link between job demands and work outcomes such as commitment, some studies have found a positive link or insignificant results, raising questions as to how volunteers coping with job demands maintain commitment in the face of difficult conditions. Drawing on the job demands-resources (JD-R) theory, the current study hypothesizes and tests a model examining the link between challenge and hindrance job demands and work commitment, and the extent to which individual resilience and job autonomy mediate and moderate this link respectively. In a three-wave study of 504 voluntary workers in China during the COVID-19 pandemic, we find a positive link between job demands and resilience, which in turn is positively associated with commitment. Autonomy accentuates the positive link between hindrance demands and resilience, as well as the link between hindrance demands and work commitment through resilience. However, autonomy does not accentuate the link between challenge demands and resilience or between challenge demands and work commitment through resilience. The findings contribute to JD-R theory by indicating that different demands can increase resilience, while the provision of autonomy is more effective for volunteers experiencing hindrance demands than challenge demands.

PNP: **The Roles of Socially Responsible HRM in Fostering Public Service Motivation and Volunteering**

Author: **Tong Xu**, *Central U. of Finance and Economics*
Author: **Zhen Wang**, *Central U. of Finance and Economics*
Author: **Yao Song**, *Central U. of Finance and Economics*

Although the literature suggests that civil servants' volunteering behaviors have a significant impact on a nation's wealth and well-being, little is known about how such behaviors are fostered in public administration. This study proposes the roles of socially responsible human resource management (SR-HRM) and investigates how and when it drives the volunteering behaviours of civil servants in the government sector. Drawing on signalling theory, we speculate that civil servants will respond to SR-HRM by shaping a high level of public service motivation (PSM) and further demonstrating volunteering behaviours. Moreover, the effect will be stronger when civil servants make altruistic attributions toward SR-HRM. We tested hypotheses using three-wave, time-lagged data from 412 civil servants from China. The results indicated that SR-HRM could elicit civil servants' stronger PSM, which further increases both the generic volunteering behaviours and the volunteering behaviours for COVID-19, especially when they make altruistic attributions toward SR-HRM.

Decision-Making and Information

Session Moderator: **Julia Andrea Trautendorfer**, *Johannes Kepler U. Linz*

PNP: **Culture of Compliance? How FOI Laws impact Public Organizations' Responsiveness**

Author: **Julia Andrea Trautendorfer**, *Johannes Kepler U. Linz*
Author: **Lisa Schmidthuber**, *WU Vienna U. of Economics and Business*
Author: **Dennis Hilgers**, *Johannes Kepler U. Linz*

Freedom of information (FOI) should legitimize citizens to request public information from public organizations and thereby increase government transparency and accountability. Previous literature has evaluated the level of government transparency by the degree to which information is proactively released or to which governments respond to information requests. Building on this approach, this study aims to analyze government compliance with the prevailing FOI law by examining German public organizations' responsiveness to information requests. Due to different legislation in the federal states (Länder), we can analyze the effects of six different elements of FOI acts on government responsiveness to citizen information requests. By investigating over 150,000 requests sent to more than 8,000 German public sector organizations, we find that a clear regulation for FOI exemptions and comprehensive regulations for access and right to information increase public sector organizations' likelihood of processing an information request. This study contributes to literature on public sector transparency and draws policymakers' attention to the effect of different natures of FOI regulations.

PNP: **Information Processing Style and Information-seeking Behavior in Organizational Decision-making**

Author: **YANG EUNJIN**, *Seoul National U.*
Author: **ByeongJo Kim**, *Seoul National U.*

This study aims to examine the relationship between information processing style and information-seeking behavior of public institution workers in South Korea and the moderating effect of organizational trust using cognitive-experiential self theory and Wilson's information seeking behavior model. We found that rational information processing style is positively related to an information seeking behavior, and intuitive information processing style is negatively related to an information seeking behavior. Also, the interaction effect of organizational trust was statistically significant, only intuitive information processing style. Our contributions suggests ways to better understand the meaning and importance of evidence-based decision-making processes conducted in the public sector by presenting empirical results related to evidence-based decision-making.

PNP: **Individual Risk Aversion in the Public Sector: A Systematic Review**

Author: **Ivan P. Lee**, *Arizona State U.*

For a long time, the term "risk averse" has been commonly used as an adjective to describe civil servants and those who work in the public sector. However, individual risk aversion in the public sector has received limited scholarly attention, and there is little effort to synthesize existing knowledge. This paper discusses the concept of risk aversion and uses the method of systematic review to examine how this concept has been studied in the public administration literature. It addresses three research questions: 1) What is/are the definition(s) of risk aversion in public administration research? 2) How does prior research in public administration operationalize and measure the concept of risk aversion? 3) What are the antecedents or underlying factors of individual risk aversion identified in the study of public administration? The findings of a review of 26 articles suggest that more than half of the prior studies in this area did not clearly define the concept of risk and risk aversion. When operationalizing and measuring this concept, prior studies commonly relied on self-reports and direct observations of risk-taking behaviors. There is also limited knowledge about the antecedents or underlying factors of individuals' risk aversion among public sector employees. A future research agenda is suggested based on these findings.

PNP: **Overcoming Barriers to Knowledge Sharing in Public Organizations**

Author: **Arlyson Sales**, *Fundação Getúlio Vargas/EBAPE*
Author: **Juliana Carvalho**, *Fundação Getúlio Vargas/EBAPE*
Author: **Marco Zanini**, *Brazilian School of Public and Business Administration*

Public organizations are knowledge intensive. Therefore, knowledge sharing among employees is an important organizational capability that needs to be fostered. Yet, the typical characteristics of the public sector can present significant barriers to collaboration and knowledge sharing. Previous research in Public Administration has pointed to factors that may limit such effects but has not provided empirical evidence of their impact. To address this gap, this study examines how transformational leadership can facilitate knowledge sharing in public organizations. Empirical findings suggest that transformational leaders can facilitate knowledge sharing, and that they do so by developing a positive organizational climate.

Using Social Media and Text Data in Management Research

Session Moderator: **Yan Yi Lance Du**, *U. of Illinois at Urbana-Champaign*

RM: **"That's Interesting!": Using Facebook Language to Predict Vocational Interests**

Author: **Yan Yi Lance Du**, *U. of Illinois at Urbana-Champaign*
Author: **Devansh Jain**, *U. of Pennsylvania*
Author: **Sharath Chandra Guntuku**, *U. of Pennsylvania*
Author: **Xin (Daphne) Hou**, *Purdue U., West Lafayette*
Author: **Lyle Ungar**, *U. of Pennsylvania*
Author: **Louis Tay**, *Purdue U.*

Language analysis is gaining momentum in organizational and social science research for its ability to automatically analyze and predict human attributes, behavior, and cognition. Specifically, social media linguistic data has been used to predict psychological constructs, such as Big Five personality traits. However, little work has applied the use of social media language to predict vocational interests — individuals' trait-like preferences for different work activities and environments. In the present study, we examined how accurately language used on Facebook predicts individuals' vocational interests. To this end, we used closed-vocabulary (Linguistic Inquiry and Word Count 2015; LIWC 2015) and open-vocabulary approaches (Latent Dirichlet Allocation; LDA topics) to analyze Facebook posts from 2834 participants, who completed a self-report measure on vocational interests. Our study makes three main methodological contributions. First, we found that the predictive accuracies of our linguistic models (mean $r = .24$; LDA) in assessing vocational interests are comparable to previous language research predicting personality traits ($r = 0.27$; Tay et al., 2020). In addition, we showed that the open-vocabulary approach demonstrated better predictive accuracies than the closed-vocabulary approach. Finally, our study revealed the unique language markers which characterizes different vocational interests. Taken together, our findings represent a novel methodological advancement in vocational interest assessment. Our results further suggest that automated language-based assessments may complement traditional self-reports to match people's interests to their ideal occupations. We discuss the implications of our findings for organizational research methods and applied settings (e.g., career guidance, diversity recruitment, and employee development).

RM: **Qualitative Text Comparative Analysis (QTCA): A Mixed-method Approach to Large Text Data**

Author: **Marie Madeleine Meurer**, *Jönköping International Business School*

Existing analytical approaches to large-scale text data have prompted concerns about the theoretical meaning of patterns, relationships, or identified constructs and emphasize new analyses in creating meaning from large amounts of unstructured text data. On their own, methods such as Computer-Aided Text Analysis and Qualitative Comparative Analysis cannot resolve these issues as they either lack the means to create configurations or grasp meaning within large bodies of text data. We, therefore, propose a methodological approach that we call Qualitative Text Comparative Analysis (QTCA), combining Computer-Aided Text Analysis and Qualitative Comparative Analysis. Rooted in critical realism, QTCA iterates between theory and empirics, structurally generating deep insights from texts. We propose a four-step road map for engaging in QTCA as a general guide for scholars interested in understanding complex causal conditions using large amounts of text.

RM: **NLP for Qualitative Analysis: Leveraging Deep Learning to Capture Contextual Meaning**

Author: **Diana Garcia**, *ESCP Business School*
Author: **Anna Glaser**, *ESCP Business School*
Author: **Caroline Verzat**, *Novancia Business School*

Online data is constantly increasing, providing a wide range of opportunities to explore social phenomena. New advances in Deep Learning (DL) algorithms applied to Natural Language Processing (NLP) capture the inherent structure of language and the contextual meaning and nuance of human language overcoming the limitations of previous NLP algorithms. We leverage these new technologies while cautioning on the positivist assumptions of these algorithms to create a method for qualitative research using three NLP tasks: Sentiment Analysis, Topic Modeling, and Information Retrieval. Applying DL algorithms into NLP tasks, the method helps qualitative researchers to efficiently analyze large amounts of online data while allowing deep contact with the data and preserving the richness of qualitative analysis. We illustrate the usefulness of our method using 1309 social media posts of nine women entrepreneurs that adhere to an environmental mission (ecopreneurs) and validate those results with a manual qualitative analysis of the same dataset. The proposed method expands the methodological toolbox for qualitative research when analyzing online data.

RM: **The Use of Organizational Social Media Data in Qualitative Research**

Author: **Mislav Radic**, *Bocconi U.*

The proliferation of social media technologies as internal and external communication channels has led to a dramatic increase of computer-mediated interactions among organization members. Despite mounting interest by organization and management scholars in studying these interactions, there exists little reflection and guidance for the use of this relatively new kind of data in qualitative research. We address this shortcoming by elaborating the characteristics of organizational social media (OSM) as qualitative data and we subsequently show how organization and management scholars have taken advantage of the specific characteristics of this kind of data to examine organizational phenomena. Our analysis reveals how researchers used OSM to gain insight into different organizational phenomena, including the roles of emotions within organizations, employee resistance, identity negotiation, and value claims. In studying such topics, OSM data as permanent record of visible interactions and connections allowed researchers to gain longitudinal and processual insight from a multivocal and informal perspective, as well as relational insights. We discuss how social media as a data source can help scholars to overcome some methodological challenges associated with conventional qualitative methods. While doing so, we also problematize the limitations of OSM data.

Openness and Inclusion in Strategy Making

Session Moderator: **Julia Hautz**, *U. of Innsbruck*

SAP: **Participatory Strategy Making as Dual Sensemaking Process**

Author: **Theresa Langenmayr**, *U. of Zurich*
Author: **David Nils Seidl**, *U. of Zurich*
Author: **Paula Jarzabkowski**, *U. of Queensland*

Existing studies on strategic sensemaking have focused on traditional top-down strategy-development processes where senior managers select cues and apply their knowledge frames during activities of strategy formulation (i.e. sensemaking) and later attempt to impose this sense on others during activities of strategy implementation (i.e. sensegiving). Over the last few years, we can observe a trend towards increasing participation of change recipients in the strategy-development process, often also referred to as “Open Strategy”, which is likely to have profound implications for the strategic sensemaking process. Thus, we will focus on the following exploratory research question: How does strategic sensemaking unfold in participatory strategy processes? To address this research question, we draw on data from a 13-month longitudinal, in-depth case study of an international financial company, which introduced Open Strategy by including 20 lower-level employees throughout the strategy process. We report three main findings which contribute to both the strategic sensemaking as well as the Open Strategy literature: First, we find that strategic sensemaking is a dual process which consists of two distinct types of sensemaking, sensemaking of the strategy content and sensemaking of the strategy process, and we reveal how these two sensemaking types are interrelated. Second, we identify different sensemaking patterns (i.e. (re-)framing participation, displacing cues, aligning cues) which strategy actors initiate to align the two sensemaking processes and enable strategy work. Third, we show that resistance in strategic sensemaking is not only related to sensemaking of the strategy content, as extensively discussed by previous literature, but also to sensemaking of the strategy process.

SAP: **Inclusion Practices in Open Strategy: Qualitative Case Study in Two Companies in Latin America**

Author: **Laura Alzate-Aguirre**, *U. EAFIT*
Author: **Luz Maria Rivas**, *U. EAFIT*
Author: **Martha Reyes**, *mreyess*

Open strategy refers to the incorporation of a greater number of people in strategic conversations through “inclusion practices”. These practices are presented as purposeful actions that occur repeatedly and can be analyzed from four dimensions: motivation, strategy process stages, inclusion scope, and methods. However, the strategy-as-practice perspective provides additional elements that allow a deeper understanding of such practices. This article contrasts two companies to analyze how inclusion practices occurred in two scenarios: the definition of organizational purpose in one of the organizations and the response to the challenges generated by Covid-19 in the other. Our results show that these practices reflect patterns of inclusion in both organizations in terms of stages prior to the strategic process and identification of the capabilities of the people to be included. In the previous stages, the importance of designing the spaces for participation in accordance with the organizational culture is highlighted, while in the identification of the people to be included, the importance of recognizing their capabilities and skills is emphasized. Based on the patterns identified, we present a tool based on questions that allow practitioners to think about inclusion processes in organizations and the expectations generated around them.

SAP: **Open Strategy as Turnaround: The Impact of Openness in Restructuring in Times of Crisis**

Author: **Kristina Stoiber**, *U. of Innsbruck School of Management*
Author: **Daniel Degischer**, *MCI - The Entrepreneurial U.*

Multiple concurrent crises continue to be in control of the world’s economy that are expected to accelerate insolvencies on a global scale. In response, distressed companies must undertake corporate restructuring to mitigate potential insolvencies and address the issues affecting their survival in the post-crisis reality. Yet, restructuring success has been limited due to traditional hierarchies and top-down strategizing. Particularly in crisis situations, when resources are scarce and time is limited, strategy development is left to upper management. Thus, a great opportunity lies in shifting the dominant paradigm towards a more open approach when engaging in a restructuring strategy. Recent literature recognizes the potential of open strategy in making strategic information accessible to a broader range of stakeholders and increasing inclusion in a strategic conversation. At the same time, however, greater openness entails potential drawbacks for the restructuring strategy as it could disclose sensitive information or slow down the restructuring process, leading to competitive disadvantages. In this paper, we point out shortcomings of C-suite strategy development to explore how more openness in restructuring can support companies in coping with crisis-induced financial distress. Based on an integrative framework, we conceptualize the paradoxical tensions between benefits and challenges of openness and highlight ten propositions on the potential effects of openness on turnaround strategies. Our framework results in firm-level policy implications that inform both, management scholars and policymakers to harness the benefits and navigate the challenges of openness and contribute to successful formulation and implementation of turnaround strategies in the event of insolvency risk.

SAP: **Recycling, Mimicking, and Sidestepping: How Organizations Strategize Open Science**

Author: **Leonhard Dobusch**, *U. of Innsbruck*
Author: **Konstantin Hondros**, *U. of Duisburg-Essen*
Author: **Milena Leybold**, *U. of Innsbruck*
Author: **Sigrid Quack**, *U. of Duisburg-Essen, Germany*

Literature on open science has elaborated how organizations treat emerging and potentially novel knowledge as an output of their scientific research. Yet, the input side, the usage and creation of knowledge as an input for disseminating results along an open science strategy is widely overlooked. Mobilizing a strategy-as-practice lens to theorize the phenomenon of ‘doing open science’, this paper investigates organizations’ practices of handling knowledge as an input instead of solely the output of an open science research process. Empirically looking at the context of pharmaceutical vaccine production during the Sars-CoV-2 pandemic, we investigate five organizations that strategize open science for global vaccine access. After analyzing activities and practices of vaccine research and development within the cases, we conducted an across-case comparison and identified overarching practices all organizations employ when strategizing open science on the input side of knowledge usage and creation. They recycle existing and available knowledge input, mimic vaccine technologies, and sidestep regulatory approval processes. We unpack these three practices of strategizing open science and outline their different facets and recursivenesses. We discuss how these practices of strategizing open science on the input side of knowledge usage and creation shape knowledge sharing as the output side.

Routine Dynamics, Breakdowns, and Strategic Change

Session Moderator: **Katharina Dittrich**, *Warwick Business School*

SAP: **Digital Empowerment: A Routine Dynamics Perspective on HR Transformation**

Author: **Dina Myllymäki**, *Aalto U.*
Author: **Kathrin Sele**, *Aalto U. School of Business*

HR transformation processes aimed at increased efficiency and elevating the HR function to a strategic level often underperform in practice. The separation of administrative and strategic tasks between different professional groups following the implementation of HR technologies is particularly difficult. This paper builds on a routine dynamics perspective to study the introduction of a new HRM software in a large higher education institution. Zooming in on the changes of routines performed by different HR professionals, we show how the implementation of the new technology led to an unexpected situation in which HR secretaries destined for monotonous administrative tasks experienced an elevation of their role, while HR partners supposed to turn into strategic partners stalled within their existing role. We identify each professional group's mode of engagement with the new technology as a key driver of this counterintuitive empowerment and discuss how the digitalization of the HR function may empower unexpected professional groups depending on their involvement in and enactment of changing routines. Our paper contributes to the HRM literature by viewing HR transformation as a dynamic and unfolding process during which roles evolve through actors' use of technology. We also contribute to research on routine dynamics by enhancing our understanding of the mutual constitution of organizational routines and professional roles.

SAP: **Strategic Adaptation: Understanding the Effects of Engagement Practices on Dynamic Capabilities**

Author: **Emmanuel Quansah**, *U. of Houston, Victoria*
Author: **Dale E. Hartz**, *Barry U.*
Author: **Paul F. Salipante**, *Case Western Reserve U.*

Employee engagement practices are infrequently associated with strategy, yet they are micro-foundations of dynamic capabilities for strategic adaptation that shape employee participation vs. resistance in adaptive change. This research addresses two core issues raised concerning dynamic capabilities: 1) How do dynamic capabilities span the levels of upper- and lower-echelon organizational members? 2) How can routines provide reliability, necessary for survival, while also providing dynamism, necessary for adaptation? This paper proposes that the two issues converge around the dynamic interplay over time of motivated actors at different levels. Emerging from a practice perspective and comparative case analysis of successful and unsuccessful adaptations in four enterprises, we develop propositions conceptualizing that employee engagement practices contribute to a simultaneity of reliability and change through an evolution of learning. Three engagement practices – empowerment, positive culture, and the organization's greater purpose –influence interpersonal interactions at the meso-level, connecting organizational- and micro-level actions for the adaptive transforming of resources.

SAP: **Routines Breakdown and Remaking in the RAF: A Temporal Perspective of Org Response to Covid Lockdown**

Author: **Alessandro Alvarenga**, *U. of Edinburgh business school*
Author: **Mehdi Safavi**, *Cranfield School of Management*

In a 22-month ethnographic research in the Royal Air Force Regiment before, during, and after the COVID-19 lockdowns, we build on, and contribute to, managing unexpected events and routine dynamics literature by analysing a high-reliability organization's responses to its long-established routines breakdown. Studying these routines beyond the lockdowns allowed us to examine how temporal orientation in improvising and enacting temporary routines defines permanent changes in those patterns of actions: when the dominant temporal orientation in improvising was projective (geared towards the future and new possibilities), the improvisations converged into temporary routines and became permanent to serve revised goals after the lockdowns; however, when the dominant temporal orientation in improvising was iterational (geared towards the past iterations), despite converging into unified temporary routines, the improvisations did not last beyond the lockdown period, and the routines reverted to their pre-pandemic patterns of action, serving pre-pandemic goals.

SAP: **That's the Way the Routine Crumbles - Why Breakdowns do not Materialize in Routine Change**

Author: **Daniel Gaeckle**, *U. of Stuttgart*
Author: **Christian Alexander Mahringer**, *U. of Stuttgart*
Author: **Birgit Elisabeth Renzl**, *U. of Stuttgart*

We investigate breakdowns in routine performances and how these breakdowns influence the patterning of routines. Drawing on a year-long ethnographic study in a high-tech company that operates a Supercomputer, we analyzed breakdowns that routine participants experienced. These breakdowns, however, did not materialize in routine change. Our analysis found three practices that stifled impulses for change: delegitimizing, defocusing, and deprioritizing. We thus argue that breakdowns in organizational routines can lead to routine inertia. We further show that organizations that incorporate a complex artifact can form a context in which impulses for change in routines stifle.

The symposium focuses on advancing research on misconduct and negative organizational events in two ways. First, a set of papers highlight the role of social arbiters and examine the attributes of the misconduct or acts of the leaders that are judged by audiences as irresponsible or negative acts and the social processes by which such evaluations take place. Second, another set of papers shed light on new conduits of misconduct, i.e., what other types of relationships transmit stigmatization and to what extent, and the existence of any other unintended consequences to entities beyond the organizational population, such as local communities. Such insights will be of relevance to scholars from diverse domains, including SIM, OMT, and STR divisions.

CSR Reputation and Legitimacy

Session Moderator: **Laura Blake**, *Nichols College*

SIM: **Differentiated CSR as a Source of Competitive Advantage: Theorizing CSR's Role on Firm Performance**

Author: **Laura Blake**, *Nichols College*
Author: **Noushi Rahman**, *Pace U.*

We join the recently started scholarly conversation on firms pursuing differentiated as opposed to generic CSR to achieve additional advantage (Wang et al., 2020; Nardi et al., 2022). Building on the logic of distinctive competence, we theorize that firms can command a higher CSP if they pursue CSR initiatives demonstrating distinctive competence and differentiating their CSR from other industry competitors. We further argue that the positive impact of differentiated CSR in achieving higher CSP will be accentuated in industries with higher CSR density. Our longitudinal analysis of data from 256 firms from four different industries (Energy, Healthcare, Real Estate and Utilities)) support all the hypotheses advanced.

SIM: **Celebrity in Action: TheI Impact of Organizational Celebrity on Corporate Social Responsibility**

Author: **Yeonji Seo**, *U. Of Sydney*
Author: **Chuljin Park**, *U. of New South Wales*

This paper examines the relationship between organizational celebrity and firms' heterogeneous strategic choices for corporate social responsibility (CSR) practices. Building on the celebrity and CSR literatures, our theory and analysis provide support for the notion that organizational celebrity acts as an interpretive frame for internal managers when they make strategic decisions about CSR. Celebrity firms generally did not engage in more symbolic CSR activities and avoided overdoing impression management, but firms in sin industries did show stronger engagement in symbolic CSR. Celebrity firms—apart from those in sin industries—did engage more with respect to their substantive CSR activities. These findings demonstrate that celebrity firms, as a preemptive tactic to protect their celebrity, tend to be cautious in making nonconforming strategic decisions that have significant emotional and moral components.

SIM: **The Spillover Effects of Competitors' Financial Restatements on CSR Decoupling**

Author: **JIAWEN MA**, *Lee Kong Chian School of Business, Singapore Management U.*
Author: **Qiwen YU**, *Lee Kong Chian School of Business, Singapore Management U.*

This paper investigates whether and how firms change their corporate social responsibility (CSR) decoupling practices in reaction to their competitors' financial restatements. We argue that the great attention in financial restatements of competitors raises spillover effects and increases the focal firms' awareness and concern on possible reputation loss related to information disclosure accuracy. Thus the focal firms will be motivated to improve its quality of disclosures by reducing CSR decoupling practices. Using the data of 1065 firms as competitors of restating firms, we found consistent results that competitors' financial restatements are negatively related to a focal firm's subsequent CSR decoupling. Moreover, we theorize why the main relationship becomes stronger when the focal firms, as competitors of restating firms, have more visibility and have higher-status CEOs. Overall, our findings contribute to CSR decoupling literature by showing the spillover effect of competitors' financial restatements from a new perspective.

SIM: **Corporate Legitimacy via Digital Ethicswashing? A Systematic Review on Misleading AI Communication**

Author: **Mario Schultz**, *Franklin U. Switzerland*
Author: **Ludovico Giacomo Conti**, *U. della Svizzera Italiana*
Author: **Peter Seele**, *USI Lugano*

The term "ethicswashing" was coined recently to describe the phenomenon of instrumentalising ethics by misleading communication creating the impression of ethics, while no substantive ethical theory, argument or application is in place. The term, therefore, is similar to greenwashing for environmental issues and has become an issue particularly, since 2019 with the harsh criticism of Thomas Metzinger as member of the EU panel for the development of ethical guidelines for AI. In light of the scattered literature body and the various manifestations of digital ethicswashing that previous research describes, we recognise the need for a comprehensive assessment of the existing literature. To fill this gap, this research systematically reviews current knowledge about digital ethicswashing to contributes an up-to-date assessment of its underlying characteristics to the field of CSR communication. Applying content analysis allows us to present five thematic clusters mapping the field and providing an overview. We conclude by deriving theoretical implications proposing a detrivialisation of ethics to prevent future ethicswashing.

CEOs, Social Responsibility and Legitimacy

Session Moderator: **Jiangtao Xie**, *Trinity Business School, Trinity College Dublin*

SIM: **How CEO Intrapersonal Identity Heterogeneity Affects Corporate Social Responsibility?**

Author: **Jiangtao Xie**, *Trinity Business School, Trinity College Dublin*
Author: **Tanusree Jain**, *Copenhagen Business School*

While micro-CSR literature has made a remarkable process to understand how a singular CEO identity (e.g., demographic, or psychological identities such as tenure or narcissism) affects corporate social responsibility (CSR), we still know very little about how CEO intrapersonal identity heterogeneity impacts CSR despite the fact CEOs hold multiple identities simultaneously. Drawing on social identity theory, we argue that CEOs hold multiple identities simultaneously that can not only challenge CEOs' cognitive abilities, but also result in incongruencies on complex decision making. Accordingly, we hypothesize that CEO intrapersonal identity heterogeneity can lead to internal ambiguity thereby negatively affecting firms' CSR performance. Using a novel language-based approach to capture CEO intrapersonal identity heterogeneity on a sample of S&P 1500 firms between 2005 and 2021, we find empirical support for our hypotheses. We also uncover the importance of gender as a critical moderating variable such that female CEOs with high intrapersonal identity heterogeneity outperform their male counterparts in mitigating the negative association between intrapersonal identity heterogeneity and CSR. Our findings highlight the the relevance of multiplicity of identities within top management for micro-CSR research.

SIM: **To be Distinctive in CSR? Get a CEO with Unique Surname**

Author: **Jiasi Fan**, *U. of International Business and Economics*
Author: **Yuanyuan Hu**, *Tongji U.*
Author: **Shouming Chen**, *Tongji U.*

Building upon recent theories and studies about relational self, this study investigates how a CEO's surname uniqueness may be related to a firm's differentiation versus conformity in corporate social activities. Our theory explains why CEOs with unique surnames tend to increase their differences from and reduce similarity to peers, thereby increasing their firms' differentiation and decreasing conformity in corporate social activities. We further suggest that the relationships between CEO surname uniqueness and differentiation versus conformity in corporate social activities are moderated by performance feedback. Using data of Chinese public firms over a 13-year period, we find support for our theoretical predictions.

SIM: **Response Strategies and CEOs' Perception about Moral Legitimacy of Hybrid Organizations**

Author: **Adrien Billiet**, *KU Leuven*
Author: **Matthias Staessens**, *KU Leuven*

We explore how different strategies for dealing with institutional plurality influence CEO's perception about moral legitimacy of their non-profit social enterprise that is navigating between social and economic logics. Taking advantage of a unique dataset covering different response strategies and their legitimacy outcomes, we provide an empirical analysis of the organizational legitimacy of 105 WISEs. Our results show that, for achieving higher moral legitimacy, the response strategies of combining or compromising are superior to strategies of decoupling or, what we call, non-confirming. Overall, our study contributes to a better understanding of the relationship between strategies for dealing with institutional pluralism and the legitimacy of hybrid organizations as an outcome.

Humanistic Management, Wellbeing, and Justice

Session Moderator: **Lisa Chamberlain**, *U. of Liverpool Management School*

SIM: **Work Quality as a Spiral: A New Dynamic and Integrated Multi-level Framework**

Author: **Lisa Chamberlain**, *U. of Liverpool Management School*
Author: **Emma Hughes**, *U. of Liverpool*
Author: **Rory Donnelly**, *U. of Liverpool*

Changes to the world of work continue to drive academic debate over how new practices and contexts impact work quality for individuals, organizations, and societies. Analyses are typically based on assessments of either job quality or job satisfaction, entrenching conceptual and disciplinary divisions and complicating efforts to develop integrated understandings of work quality. Quality of working life research may be able to bridge these gaps, but recent publications expose a tension between normative theoretical and prescriptive empirical approaches. We attempt to incorporate these diverse but interrelated concepts and perspectives via a multidisciplinary integrative review, proposing an analytical spiral framework which demonstrates the complex, dynamic, and multi-level nature of work quality. We suggest the framework will help work quality scholars from diverse disciplinary traditions develop and communicate nuanced understandings of contemporary challenges to work quality, which we hope in turn contribute to ongoing efforts to improve the quality of working lives.

SIM: **Creating Virtuous Humanistic Managers and Organisations with Polycentric Corporate Charters**

Author: **Michael Andreas Pirson**, *Fordham U.*
Author: **Shann Turnbull**, *International Institute for Self-Governance*

This paper explains how the virtue of managers and organizations can be promoted with corporate constitutions that distribute power with polycentric governance as described by Ostrom. It allows paradoxical humanistic behavior described as “tensegrity” to emerge. DNA generates behavioral variety, like approach ~ avoidance, suspicious ~ trusting, cooperative ~ competitiveness, and so on to drive adaption and survival. This can likewise become embedded in organizations with corporate charters that introduce bottom-up stakeholder polycentric governance. The introduction of dynamic humanistic behavior means that the static dominant models reviewed by Meckling & Jensen lose their relevancy. We identify how a self-funding tax incentive for shareholders could introduce both polycentric governances with systemic re-birthing of enterprises over the life of a patent. This neglected process to distribute corporate ownership and control to bioregional citizens creates a process to form circular self-governing economies. A universal well-being dividend income becomes established to sustain all citizens with fewer taxes and government. This provides a way for simplifying on a bottom-up basis the complexity of managing both operating and existential risks to humanity locally and globally. UN SDGs are promoted. Democracy is enriched to self-determine population levels for the eternal well-being of people and the planet.

SIM: **Too Close or Too Distant: Perceived CSR Distance and Employee Justice-Based Evaluations**

Author: **Syed Eraj Hassan**, *Gustavson School of Business, U. of Victoria*

Over the last decade, there has been an increasing focus on how employees respond to their employer’s CSR activities targeted at external groups. Considered a form of third-party justice, scholars have tried to unpack the processes and outcomes by which external CSR affects employee-level outcomes. In this paper, I aim to extend this literature by looking at the differences in third-party justice evaluations by employees based on the perceived psychological distance of each CSR activity. Drawing on construal-level theory (CLT), I argue that employees form varying mental construals based on perceived psychological distance and this influences the nature of third-party justice evaluation undertaken by the employee. Specifically, I argue that these varying mental construals lead to different aspects of justice being invoked (distributive, procedural, interactional) and as a result different employee needs (instrumental, relational, moral) are fulfilled based on these third-party justice evaluations.

Modern Slavery in Context

Session Moderator: **Marcia Annisette**, *York U.*

SIM: **The Persuasiveness of Accounting Records in the Context of Modern Slavery**

Author: **Marcia Annisette**, *York U.*
Author: **Christina Stringer**, *U. of Auckland*
Author: **Kam Phung**, *Simon Fraser U.*

Accounting records and audits are an institutionalized and ubiquitous part of the modern business environment around the world. In this paper, we draw on the reports of the audit investigation of the Sajo Oyang Corporation, specifically in the context of its offshore fishing operations in New Zealand waters, to capture the regulatory voids, multinational supply chains, wide power differentials, state complicity, management deception and deflection that enable contemporary slavery. In doing so, we show how these features, combined with auditor rules-based approaches, management bias, and lack of expertise in human rights issues work to stultify audit verification practices rendering them ineffective in detecting incidences of contemporary slavery. Based on these findings, we argue that the reality of the business of modern slavery inherently defies the logic of the audit and discuss this paper's contributions to the literature on the global audit regime and the business side of forced labour and slavery in contemporary society (i.e., "modern slavery").

SIM: **Power and Limits to Institutional Work: Organizing in Oppressive Regimes**

Author: **Jay Joseph**, *American U. of Beirut*
Author: **Harry J. Van Buren**, *U. of Tennessee, Chattanooga*

The paper extends theory on institutional work by examining the interactions among power, boundaries, and institutional work in oppressive regimes. Oppressive regimes remain a constant presence in today's globalized economy; however, understanding how organizing dynamics change within such settings remains limited. Oppressive regimes illustrate cases of unilateral power that fundamentally undermine the plural assumptions that underpin institutional work. Unilateral power can have a determinative effect on the boundaries of institutional work, illustrating how subordinate actors are limited to maintenance work in the presence of unilateral power, with traditional forms of creation and disruptive work becoming incompatible in some situations. While examining the theoretical implications for institutional work and its application, we also illustrate the distinct normative and strategic realities for actors that engage with oppressive regimes.

SIM: **The Psychological Distance of Modern Slavery**

Author: **Selim Cakir**, *U. of Birmingham, UK*
Author: **Jamie Wardman**, *Nottingham U. Business School*
Author: **Alexander Trautrims**, *U. of Nottingham*

Despite the growing risks modern slavery poses to business and society, microfoundations of modern slavery remains underexplored. There are no validated measures presently available to examine people's attitudes and behaviors regarding modern slavery. Addressing this gap in the literature, we develop and test a model linking people's psychological distance to modern slavery to their mitigating behaviors in the workplace. Drawing on a survey data of 511 working adults from the UK, we find that closing psychological distance to modern slavery increases concern about modern slavery and in turn mitigating behaviors in the workplace. We also find that ethical organizational climate moderates the impact of concern about modern slavery on mitigating behaviors. Our findings show that psychological microfoundations such as psychological distance has considerable potential to promote anti-slavery behaviors in the workplace.

Participant: **Kevin Zheng Zhou**, *U. of Hong Kong*

Management and organization scholars have increasingly directed their attention to the study of grand challenges such as socioeconomic inequality, job losses, climate change, and the resurgence of populism. A core aspect of these interrelated challenges concerns an accelerated decline of trust in core societal institutions such as science, the law, and democracy itself. Research on trust or institutions has a long history in the field of management and organization studies. However, relatively few scholars have adopted an institutional approach to trust. To understand trust as a complex, macro-level phenomenon, we propose a research agenda that focuses on studying the dynamic relationship between institutions and trust. This symposium includes four papers that explore important aspects of these dynamics—including how global crises endanger the perceived trustworthiness of social institutions, how the erosion of trust in institutions unfolds, how institutionalization affects the level of trust, how organizations strategically use institutions to address the loss of trust, and how they use digital technologies as a governance institution to construct trust. Our agenda opens up new opportunities for research on the co-constitution of trust and institutions.

Institutional trust in the age of global crisis

The Corporate Role in Peace, Democracy, and Inclusion

Session Moderator: **Rajiv Maher**, *EGADE Business School, Tecnologico de Monterrey*

SIM: **Business and Peace in Post-Coup Myanmar: Limitations and Opportunities**

Author: **Julia Croce**, *GSEM - U. of Geneva*
Author: **John E. Katsos**, *Queen's U. Belfast*

Business can have a key role to play in staving off, minimizing the effects of, and resolving conflicts. It can also make conflicts worse. Business for peace scholarship seeks to identify those activities, structures, and opportunities for the private sector to have positive influences on conflict and violence in society and to provide warnings for how business can make conflicts worse. Two research gaps have been identified by scholars in this field: On the one hand, there is a lack of evidence on the impact of business in general in active, high-intensity conflict zones. On the other hand, there is a dearth of evidence on the impact of small and medium enterprises in conflict contexts. This paper addresses these literature gaps. We use the unique setting of post-coup Myanmar to examine the complex interlinkages between small and medium enterprises and an active, high-intensity violent conflict. In the paper, we investigate the combination of economic rationality and civic duty that contributes to building peace and democracy when there is a lack of a functioning government and a collapse of the rule of law.

SIM: **The Role of Business in Democracy Building: Drivers and Management Practices**

Author: **Julia Croce**, *GSEM - U. of Geneva*
Author: **Rajiv Maher**, *EGADE Business School, Tecnologico de Monterrey*

Political corporate social responsibility refers to the role that business has taken such as providing goods and services that have traditionally been under state authority. Scholars stress the rising expectations towards business to participate in political and democratic processes. However, existing scholarship has not examined what this political participation looks like. The objective of the paper is to explore the role of business in democracy building. We propose a framework that details the prerequisites of and motivations for internal and external democracy building practices of business. Based on our framework, we advance implications for management theory and practice, and provide suggestions for future research.

SIM: **Same Grand Challenge, Different Tensions: Competing Impact Logics in a CSSP**

Author: **Stephanie Elizabeth Raible**, *U. of Delaware*
Author: **Tina Miedtank**, *Nijmegen School of Management*

Multi-organization, cross-sectoral social partnerships (CSSPs) are a mechanism to approach grand challenges, as such collaborative efforts help to increase the capacity of the individual actors and address perceived institutional and regulatory voids. This research presents a case of multi-national CSSP to explore the members' logics tensions, as experienced during their impact efforts on migration and inclusion. Through qualitative, semi-structured focus groups and individual interviews, surveys, reflection diaries, observational field notes, and organizational documents, the research found seven, interconnected impact logics tensions held by the CSSP members: industry orientation, personal philosophies and mindset, contextual environment, impact scope, impact time horizon, and the perceived role of the target population. These multi-level tensions have the potential to add to the complexity of the CSSP members' social innovation efforts, which can slow down or hinder their practice. The research contributes to grand challenges literature by providing empirical data at the micro level on a multi-national, civil sector-governmental CSSP.

SIM: **Stakeholder Inclusion Failure and Global Legal Norms: The Case of Oxy and the U'wa People**

Author: **Stephanie Villadiego De La Hoz**, *U. of Neuchatel*
Author: **Emmanuelle Reuter**, *U. of Neuchatel*

Recent research has advanced stakeholder inclusion, referred to as the presence of stakeholders in organizational activities to ensure that their perspectives and knowledge are considered, as a key mechanism to overcome firm-community conflict. While prior research has investigated into the firm-level voluntary initiatives, little is known about the legal institutional initiatives for facilitating stakeholders' inclusion and about the conditions in which they succeed. We conducted an inductive qualitative study of a stakeholder inclusion failure with Oxy's implementation of the global legal norm of free prior consultation with the U'wa indigenous community over land use decisions between 1992 and 2020. We found the critical role of a means-ends decoupling process, according to which the firm complied with the formal policies, but eventually failed to achieve the policy's intended stakeholder inclusion objectives. It entailed the three practices of reinforcement of the status quo, depoliticization of the territory, and bargaining with the communities. We contribute to the literatures on firm-community relations, on decoupling, and on transnational institutionalism.

Political Influence and Lobbying

Session Moderator: **Václav Ocelík**, *U. of Amsterdam*

SIM: **Shifting Battlegrounds: Corporate Political Activity in the General Data Protection Regulation**

Author: **Václav Ocelík**, *U. of Amsterdam*
Author: **Ans Kolk**, *U. of Amsterdam*
Author: **Kristina Irion**, *U. of Amsterdam*

The impressive body of literature on corporate political activity (CPA) has remained largely silent on the substance of information strategies that firms utilize to influence policymakers. To address this deficiency, our study is situated in the European Union (EU), where political scientists have noted information strategies to be central to achieving lobbying success; the EU also provides a context of global norm-setting activities, especially with its General Data Protection Regulation (GDPR). Aided by recent advances in the field of unsupervised machine learning, we performed a structural topic model analysis of the entire set of lobby documents submitted during two GDPR consultations, which were obtained via a freedom of information request. Our analysis of the substance of information strategies reveals that the two policy phases reveal 'shifting battlegrounds', where firms first seek to influence what is included and excluded in the legislation, after which they engage the interests of other stakeholders. We thus identify two distinct information (sub)strategies, and point at the need for more attention for institutional procedures and for the role of other stakeholders' lobbying activities in CPA research.

SIM: **Political Influence and Lobbying in Transition Economies: The Role of Reference Points**

Author: **Jinsil Kim**, *College of New Jersey*

Firms observe the level of political influence of their referents—dominant firms and competitors—which may in turn affect their decision to lobby to gain political influence. We find that the perceived high level of dominant firms' political influence leads to a higher likelihood of firm lobbying to catch up, due to the information dynamics. When it comes to a higher political influence of competitors, this also increases the probability that the focal firm engages in lobbying, from rivalry-based imitation. We also find that these effects are observed only for those captor firms—firms that have private payments to officials to influence the rules of the game in transition economies.

SIM: **The Paradox of Political Connections in Firms' CSR Engagements and Firm Value**

Author: **Yusen Dong**, *China Europe International Business School (CEIBS)*
Author: **Haijian Liu**, *Nanjing U.*

This study builds on insights from multi-stakeholder perspective literature to examine the effect of political connection on firms' CSR and firm value. We extend the literature on the relationship between CSR and firm value by considering the role of various and competing demands from different stakeholders. In particular, we differentiate between the political stakeholders (i.e., government agencies) and market stakeholders (i.e., employees and shareholders). We argue that while firms with more political connections will engage in more CSR to attend to the demands of their political stakeholders, these connections will paradoxically weaken the positive effect of their CSR engagements on firm value because such engagements are more likely to meet the expectations of political stakeholders but less likely to meet the expectations of market stakeholders. We find support for our ideas using a sample covering Chinese listed firms' CSR from 2008 to 2018.

Organizing for Purpose

Session Moderator: **Rebecca Carballo**, *GSEM - U. of Geneva*

SIM: **Hybridization: Re-designing Organizations to Pursue Purpose and Profit**

Author: **Rebecca Carballo**, *GSEM - U. of Geneva*

Organizations today are increasingly being called upon to address society's escalating grand challenges, but traditional, profit-centric organizations are not up to the task as they are designed primarily for profit maximization. It requires social-commercial hybridization: integrating purpose into the core of the organization along with profit motivations, which necessitates organizational redesign towards the dual goals. Yet, we know little about this hybridization process. Extant literature predominantly considers hybrids as born, static organizations and discusses specific design elements but not the process. Drawing on organization design as well as paradox and dialectics theories, this conceptual paper takes a dynamic, process view of social-commercial hybridity. This paper proposes a framework for how the social-commercial hybridization redesign process unfolds in a traditionally profit-centric organization newly striving for dual purposes of achieving profit and addressing grand challenges. The conceptualization proceeds in five parts: antecedents triggering hybridization; the three phases of design: planning, implementation, and performance; and how hybridization unfolds longitudinally in an iterative learning spiral. The paper aims to demonstrate how redesign can enable an organization to successfully hybridize and improve multidimensional organizational performance.

SIM: **Corporate Purpose and Early Disruption Response**

Author: **Diego Arias Padilla**, *U. of Detroit Mercy, CBA*
Author: **Xabier Barriola**, *INSEAD*
Author: **Cristian R. Loza Adaui**, *THI Business School*

Corporate purpose has increasingly become an interest in management research. However, empirical studies on the topic are scarce, arguably due to the challenges that operationalization and measurement of this complex construct generate. In this paper, we utilize the upheaval generated by the COVID-19 pandemic to understand the relationship between corporate purpose and corporate disruption response. To that aim, we use a novel dataset generated by JustCapital's COVID-19 response tracker that characterizes the early responses of 928 companies included in the Russell 1000 Index to the disruption generated by the COVID-19 pandemic. We marry this data to the list of the Business Roundtable corporate purpose statement signatories, which includes 210 firms that declared "a fundamental commitment to all stakeholders" as their corporate purpose. We estimate the differential impact of purpose-driven firms on the rest. After controlling our results with financial indicators and ESG data, we convey that purpose-driven firms were more likely to develop strategies that benefited their surrounding communities and other stakeholders. Moreover, corporations with high ESG were less likely to have an early response that directly benefited stakeholders other than shareholders, except for layoffs and unpaid leave. We discuss the outcomes in light of the corporate purpose literature and its relation to authenticity and stakeholder management.

SIM: **Exploring the Role of the Purpose and Configuration of Resources Amid Grand Health Crisis**

Author: **Prem Sagar Menghwar**, *Luiss Guido Carli U.*
