Scheduled: **Friday, Aug 9 2024 12:00AM - 11:59PM CT (UTC-5)** at **Sheraton Grand Chicago** in **Fountainview Foyer**

AOM Networking Hub - Sheraton

AOM Networking Hubs are in each of the main hotels and will be open all day. They offer seating and charging stations, allowing attendees to take a break, recharge their devices, pick up their attendee badges, or meet with colleagues. Additionally, the Networking Hubs will host morning coffee breaks from 7:30 AM to 9:00 AM. If you're staying at one of the following hotels where meeting sessions are held—Swissôtel Hotel, Sheraton Grand, Fairmont, Marriott Downtown, or Hyatt Regency—you can save time by picking up your badge at the AOM Self Check-In Kiosk before your first session.

ENT Doctoral Student Consortium

Coordinator: **Christina Theodoraki**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

Organizer: **Will Drover**, *Texas Christian U.*

Organizer: **Gabriella Cacciotti**, *Baylor U.*

Designed to launch doctoral students into their research career, the Consortium brings together young scholars and experienced faculty to discuss opportunities for advancing academic understanding of entrepreneurship. As such, the Doctoral Consortium's primary objective is to help prepare students for a successful career as a researcher/professor in academic institutions of higher education. This year's program will include discussions on the challenges of pursuing an academic career, the publication process, and a host of other relevant topics. Furthermore, students will have the opportunity to receive constructive feedback about a research article on which they are currently working. Only open to those pre-approved by the Consortium organizers.

This PDW focuses on the multifaceted realm of intrapreneurship within university settings. In contrast to conventional views, intrapreneurship in academia extends beyond established frameworks, embodying a dynamic fusion of entrepreneurial activities within the academic landscape. Recognizing academics as capable intrapreneurs, this workshop explores how they can leverage novel ideas and opportunities to enrich their academic contributions and, subsequently, enhance their professional capacities and prospects. While existing studies have touched upon intrapreneurial capabilities in areas such as remote education, employee commitment, and behaviors in the university setting, the broader context of intrapreneurship within academia remains largely unexplored. Our PDW aims to bridge this gap by fostering insightful discussions on embedding intrapreneurial mindsets within university management teams and cultivating an intrapreneurial identity among students and researchers. From intrapreneurial education to the commercialization of tech-initiatives, the workshop seeks to unravel the potential of intrapreneurship in research, education, knowledge transfer, and societal collaboration. We aim for an international discussion round, since university systems are very different all over the world. And so are intrapreneurial strategies and realities.

Those of you who are speakers at our PDW, please be present 30 minutes before we start our workshop.

Panelist: **Geoffrey Silvera**, *U. of Alabama at Birmingham*

Panelist: **Ren Lovegood**, *UMass Boston College of Management*

Are you a junior faculty member, post-doc, or doctoral student with research and/or teaching interests in health care management?

Join us for the Health Care Management (HCM) division Emerging Scholars Consortium (ESC) on Friday, August 9th in Chicago, where a diverse group of outstanding faculty will facilitate a highly interactive series of sessions geared towards emerging health care management scholars. In addition to the content, the ESC's highly collaborative format is a fantastic opportunity to create relationships with other HCM emerging scholars from around the globe. Many long-time HCM members attest to the ESC as an origin for major research collaborations and employment pathways.

The HCM ESC is divided into Part I (morning) and Part II (afternoon) with each containing individual sessions. We welcome you to attend one or all based on your interests and professional needs. While the consortium content is curated for students and junior faculty, everyone is welcome to attend!

Emerging Scholars Consortium (Part I – Morning, #XXXX) includes the following sessions and participants:

• **LinkedUp: Mastering the Art of Professional Networking** (Approx. 8:00 AM - 9:15 AM)

Presented by:

Robin Peeters, Maastricht U.

Pejmon Noghrehchi, The Ohio State U. College of Public Health

Kevin David Frick, Johns Hopkins Carey Business School

Genevra F. Murray, New York U.

Bram Fleuren, Maastricht U.

Tory H. Hogan, Ohio State U.

• **Becoming an HCM Scholar: Demystifying HCM's Hidden Curriculum** (Approx. 9:30 AM - 10:45 AM)

Presented by:

Daan Westra, Maastricht U.

Yuna Lee, Columbia U.

Robin Peeters, Maastricht U.

Pejmon Noghrehchi, The Ohio State U. College of Public Health

Alden Lai, New York U.

Gordon Shen, UTHealth Houston School of Public Health

Breanna K. Wodnik, U. of Toronto

Xiao Li, U. of Texas Health Science Center at Houston School of Public Health

• **Addressing Equity, Diversity, Inclusion, Justice & Reconciliation: A Doctoral Student Perspective – Part 2** (Approx. 11:00 AM - 12:15 PM)

Presented by:

Andrew Daniel Scarffe, Telfer School of Management, U. of Ottawa

Robin Peeters, Maastricht U.

Charleata Battle, California State U., Los Angeles

Geoffrey Silvera, U. of Alabama at Birmingham

Ren Lovegood, UMass Boston College of Management

Emerging Scholars Consortium (Part II – Afternoon, #XXXX) includes the following sessions and participants:

• **Evaluating Team Based Learning: Bridging the Classroom and Workplace** (Approx. 2:00 PM - 3:15 PM)

• **Strategizing for a Life in Academia: Long-term Plan or Emergent**

Sense-making (Approx. 3:30 PM - 4:45 PM)

(More detailed information about ESC Part II available in Annual Meeting Program under session #XXXX.)

Responsible AI at Work: Opportunities and Challenges for People Management

Organizer: **Na Fu**, *Trinity Business School, Trinity College Dublin*
Organizer: **Steven McCartney**, *Maynooth U., Ireland*
Presenter: **Wei He**, *Nanjing U.*
Presenter: **Anne Keegan**, *U. College Dublin*
Presenter: **R H. Searle**, *Adam Smith Business School, U. of Glasgow*
Presenter: **Anna A. Tavis**, *nyu*
Presenter: **Kang Yang Trevor Yu**, *Nanyang Technological U.*

Artificial intelligence (AI) is currently exerting its influence on human resource management (HRM) and holds the promise of reshaping the future landscape of HRM. This emerging theme has garnered increased attention, with ongoing research revealing both progress and persistent uncertainties, divergent perspectives, and ongoing debates. The purpose of this Professional Development Workshop (PDW) is to establish a platform and forum for AOM attendees, including scholars and practitioners, to collaboratively exchange ideas on this subject. The PDW aims to delve into various topics such as AI governance, trust, and the implementation of AI, offering insights into the potential advantages and challenges faced by both HRM professionals and employees when incorporating AI in the workplace. Through group discussions, the workshop seeks to identify HRM strategies, policies, and practices that promote ethical, effective, transparent, and fair use of AI at work. Additionally, the event will highlight new avenues for research and practical initiatives that contribute to advancing the management of AI in the workplace through the lens of HRM.

Leading the Boat: Discussing Teamwork, Resilience, and Purpose Through the Lens of Competitive Rowing

Participant: **Erica Helena Salvaj**, *U. del Desarrollo*

Participant: **Monica Franco-Santos**, *Cranfield School of Management*

Participant: **Luis R. Gomez-Mejia**, *Arizona State U.*

Sports are like "living laboratories", providing fresh settings to study critical management issues outside traditional industrial environments. Among all the sports investigated, rowing has received special attention due to its versatility. Rowing requires meticulous coordination, seamless teamwork, and extreme mental stamina to succeed. Previous research has examined how rowing can contribute novel insights to key organizational puzzles, such as the cooperation-competition paradox, the enablement of performance, the plasticity of institutions, and organizational sensemaking. In business schools, deans and managers must deal with competitive and demanding scholars. These scholars are expected to work cohesively and excel collectively, like the way high-performance rowing athletes must operate in unison to achieve success. Drawing parallels from rowing, in this PDW intended for founders and board members (current and previous) of the Iberoamerican Academy of Management (IAOM) and Deans of Business Schools based in Iberomerica, we plan to question and critically review organizational phenomena that are currently affecting business and management schools in this context. To enhance the quality of the discussions, the strength of the personal relationships, and the overall learning and development of participants, we will also engage in a private learn-to-row experience at the Chicago Rowing Foundation, followed by a debrief session to discuss relevant topics for management based on this sport.

Managing Innovative Tools Through Ethical Management Consulting

Organizer: **Emmanuel Beck**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Distinguished Speaker: **Eric Sanders**, *Elmhurst U.*

Participant: **Marc Bonnet**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Participant: **Rida Elias**, *California State U., Dominguez Hills*

Participant: **Olivier Voyant**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Participant: **Fransoise Chevalier**, *HEC Paris*

Participant: **Najoie Nasr**, *Haigazian U.*

The objective of this PDW session is to explore the motivation and deep values of the Consultants through different innvating experiments of organizational change. The working out of new innovating strategies based on the deep values of consulting/intervention-research methodologies will be underlined. The PDW will focus on the need to find out new tools and methods through values and beliefs of Consultants. These new methods will be identified in a first phase of the PDW session. Diagnoses and Methods will be presented by the panelists and participants. In a second phase, we'll propose ways of improving processes and tools to enhance the quality of cooperation in a change process that involves different stakeholders, especially putting the Consultants "front in the center", mainly in case of organizational and technical change.

Innovative Approaches in Management Consulting: Insights from the Practitioners

Session Chair: **Therese F. Yaeger**, *Benedictine U.*

Discussant: **Peter Sorensen**, *Benedictine U.*

Presenter: **David Anderson**, *Benedictine U.*

Presenter: **Heather Jarvis**, *Benedictine U.*

Presenter: **Sharon Jeanetta Darno**, *Doctoral Student Benedictine U.*

Presenter: **Bryan McCusker**, *Management Consultant*

Presenter: **Veronique Zardet**, *U. of Lyon, IAE Lyon, MAGELLAN, ISEOR, FRANCE*

Presenter: **Emmanuel Beck**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

The purpose of this session is to present innovative consulting approaches used in six different industries. These cases include: a) the use of a multi-method approach to necessary changes in a law enforcement agency; b) the use of positive change techniques in a French organization; c) the use of ERGs for DEI efforts in a healthcare setting; d) the corporate change events that a manager undertook as an internal business consultant, which included downsizing and new system implementation; e) the use of employee survey data within a small manufacturing company; and f) the use of the SEAM approach in a French company. These six unique cases are presented by expert consultants and provide innovative ideas for a broader exploration of the fields of consulting, organization development, and diversity, equity and inclusion. After the initial panelists' case presentations, and consistent with the AOM theme, a second portion of the session involves the future opportunities based on lessons learned from each initial innovative case. Finally, the session allows for the attendee's voice with adequate time for audience participation and discussion.

Studying Emotion in Strategy Research

Organizer: **Christopher Golding**, *U. of Manchester*
Organizer: **Gerard P. Hodgkinson**, *U. of Manchester*
Organizer: **Mark P. Healey**, *U. of Manchester*
Panelist: **Timo Olavi Vuori**, *Aalto U.*
Panelist: **Paul Momtaz**, *Technische U. München, TUM School of Management*
Panelist: **Feng Liu**, *Saint Mary's U., Canada*
Panelist: **Jean-François Harvey**, *HEC Montréal*

Given its ability to shape how individuals and groups think and act, the study of emotion in strategy is important. Yet, theoretical and methodological pluralism means that planning, executing and publishing such studies can be challenging, particularly for newcomers to the field. Building on last year's successful PDW on this topic, we convene a panel of experts who have studied and published research on emotion in strategy in leading journals to discuss the theoretical and methodological options that scholars might utilize. Experts will share their experiences and tips on using approaches such as appraisal theory and the affective circumplex model, as well as diverse methods such as the coding of facial expressions, micro-ethnography, and experiments. The intention of this PDW is to provide participants—particularly doctoral students and early career researchers—with insights into, and perspectives on, how to best plan, execute, and publish studies on emotion in strategy, by: (1) hearing from leading scholars in the field about their experiences of conducting and publishing their research on emotion in strategy; (2) participating in interactive roundtables to discuss their own work/ideas with their peers and leading scholars; (3) meeting fellow researchers who share their interests thus enabling them to develop and extend their scholarly networks beyond the AOM 2024 conference.

Organizer: **Antonio Carlos Jansch Porto**, *U. of Wisconsin - Milwaukee*
Organizer: **Jordan Sanders**, *U. of Pittsburgh*
Organizer: **Justin Peyton Woodall**, *U. of Georgia*
Organizer: **Sophia Miri Yoo**, *U. of Minnesota*

A mini-conference within the AOM conference, the New Doctoral Student Consortium (NDSC) is one of the longest-running and most well-attended pre-conference activities. The NDSC's mission is to provide a professional development outlet for doctoral students entering the first or second year of a doctoral program, as well as those considering entering a doctoral program. The NDSC is an interactive environment in which doctoral students can learn skills to succeed in a doctoral program and enter the academic profession. Participants will meet representatives from Academy of Management divisions and interest groups, network with fellow doctoral students from around the world, and learn how to get the most out of the Academy of Management Meeting. The NDSC is committed to facilitating doctoral students' initial experience with, and further integration into, the Academy of Management and the academic community at large.

Presenter: **Tiffany Dawn Johnson**, *Georgia Institute of Technology*
Presenter: **Katelyn Zipay**, *Purdue U.*
Participant: **Ji Koung Kim**, *Michigan State U.*
Participant: **Harshad Girish Puranik**, *U. of Illinois at Chicago*
Participant: **Stefan Berger**, *U. of Groningen*
Distinguished Speaker: **Joyce Bono**, *U. of Florida*

This Professional Development Workshop (PDW) conceptualizes work and research productivity as a process that can consistently and continuously be improved through learning. Thus, the main goal of this PDW is to help develop an awareness of the processes used by prolific faculty. Although most PDWs use esteemed senior scholars as panelists, we propose a model that uses peer junior faculty members who have established track records of productivity and bring new perspectives on this topic. Presenters will discuss their work habits and how they go about their work (e.g., time allocation, co-authorships, writing blocks, and revise-and-resubmit strategies) as well as other “life” factors that influence their productivity (e.g., exercise, work/family balance). This session uses a number of formats including individual presentations, panel discussions as a group, small group roundtables where participants are able to have conversations with each of the panelists, and a keynote address. We encourage Ph.D. students, as well as faculty across all stages of their careers—Assistant, Associate, and Full—to join this session, to collectively reflect on, learn from, and share productivity-related strategies. This PDW is organized by members of the OB Division’s Making Connections Committee (MCC).

Panelist: **Marilyn Ang Uy**, *Nanyang Business School, NTU Singapore*

Sponsored by the Kauffman Foundation, the aim of this PDW is to stimulate and help develop research at the interface of organizational behavior and entrepreneurship. To do so, this PDW invites researchers interested in participating to submit a short description of their research at this interface that they seek to further develop. During the PDW, presentations by Gilad Chen outlining the value and promise of research bridging organizational behavior and entrepreneurship and by Denis Grégoire on publishing behavioral entrepreneurship research in one of the primary outlets in management, *Academy of Management Journal*, will set the stage for the more interactive part of the workshop. Accepted participants will be matched with one of the expert panelists prior to the Academy of Management meeting, and they will gather in small groups at the PDW for feedback and discussion of their research. Finally, we will have a forward-looking discussion on main themes with all panelists and participants.

Panelist: **Justin Weinhardt**, *U. of Calgary*

If you joined the Organizational Behavior (OB) division within the last three years and want to learn more about the OB division and starting out in the field of OB, then this forum is for you! This PDW was created to answer your questions about the “essentials” of the AOM conference, the OB division, and the field of OB. The session is organized around a panel discussion between established members of the OB division and new OB members like yourself. The PDW will include a welcome and overview of the OB Division, a networking ice breaker, and a panel discussion prompted by questions from participants. As a participant in the forum, you can ask questions of your choice. Finally, there will be time to network with other new members of the division. Participants can register here: https://unlv.co1.qualtrics.com/jfe/form/SV_6u5xEceTsu0YZeu

The OMT Junior Faculty Consortium provides a forum for junior scholars interested in organization and management theory to get practical advice and build relationships that will help them prosper in their academic careers. It includes feedback sessions, panels, and facilitated discussions focused on three key topics: 1) developing research for publication with the help of seasoned scholars, 2) strategies for impact and growth as a researcher and teacher, and 3) navigating the pre-tenure years of building a successful faculty career in diverse institutional settings.

Like every year, the OMT doctoral consortium aims at providing late-stage doctoral students with research interests in the areas of organization and management theory practical advice on finding jobs, managing their careers, doing and publishing research, and teaching. It will also provide an opportunity for students to form relationships with others at the same stage in their career and with more senior scholars who share their research interests. The event consists of a series panel presentations, round-table conversations, and mentoring sessions.

Participant: **F Katelynn Boland**, *Columbia Business School*
Participant: **Nicole Abi-Esber**, *Harvard Business School*

The PDW will highlight applications of natural language processing and other machine learning techniques to answer theoretical questions germane to management and organizations. In particular, we highlight studies that extract insights from conversational and interactional data in order to theorize about constructs including gender norms, shared understandings of cultural beliefs, and the evolution of categories over time. Across a range of online empirical settings, the panelists will combine these techniques with creative research design to also address a range of phenomenologically important questions such as the implications of gendered linguistic styles, the cultural precursors to social movement mobilization, and the evolution of genres in creative industries. The PDW not only speaks to key themes across several AOM divisions but also speaks directly to the AOM 2024 theme. In their presentations and subsequent Q&A with the audiences, the panelists will share their insights on methodological best practices, the role of computational techniques in advancing theory and their experiences going through the review process.

Novel Perspectives on the Emergence of Fields, Markets and Categories

Organizer: **Nina Granqvist**, *Aalto U.*
Organizer: **Michael Lounsbury**, *U. of Alberta*
Organizer: **Timothy Hannigan**, *Telfer School of Management, U. of Ottawa*
Panelist: **Callen Anthony**, *New York U.*
Panelist: **Raghu Garud**, *Pennsylvania State U.*
Panelist: **Stine Grodal**, *Northeastern U.*
Panelist: **Andrew Nelson**, *U. of Oregon*

Bringing together a group of well-established scholars in market, category and field emergence, this Professional Development Workshop aims to facilitate discussion about new directions in the study of how new kinds of technologies, practices and ideas come about and shift from the margins to the mainstream—often through the creation of new markets, categories or fields. The purpose of this PDW is to synthesize some of the current thinking on empirical and conceptual work on emergence, build a community around these topics, and foster novel conversations and interactions across the different approaches. The PDW discusses the distinct approaches to emergence in the organization and management theory, takes an inventory of what has been accomplished so far with established scholarship, and maps out unanswered questions and future research directions led by the panelists as well as the round table discussions.

The round table discussions following the panel session aim to foster conversations and interactions across the different approaches on emergence and map directions for future research. No preregistration or advance submissions are required to attend as we opt for an inclusive participation to foster conversations about the phenomenon of emergence.

Facilitator: **Anthony Goerzen**, *Queen's U.*
Facilitator: **Ruth V. Aguilera**, *Northeastern U.*
Facilitator: **Simone Carmine**, *IESEG School of Management*

In this PDW we intend to discuss how organizations struggle to address the tensions between economic gains and socio-environmental impact emerging when innovating toward sustainability. Despite widespread pressures for change, indeed, a number of firms are still perpetuating wrongdoing or are not implementing change at the needed scale. While the presence of tensions is no new concept, more research is needed to understand how organizations might tackle tensions and trade-offs emerging when introducing new products, processes, organizational models – i.e., what strategies enable achieving economic and socio-environmental positive outcomes and what instead finally inhibit change or even reinforce wrongdoing. Tracking organizations' challenges and tensions, however, is far from easy, and this is especially the case if we consider that often firms are embedded in international contexts where power dynamics and different institutional environments might challenge their willingness to balance diverging goals. In this PDW we aim at spurring an interdisciplinary discussion on methods and approaches meant to understand strategies to tackle tensions. In particular, we want to do that by learning from cases of organizations that struggle with tensions every day, or even that have surrendered and chosen greenwashing or wrongdoing. Panelists will open the PDW by discussing different approaches for this purpose – spanning different theoretical background and empirical contexts – which will then fuel group discussions with participants on how to identify and assess tensions and the practices adopted to tackle them.

Participation is open to all. You can find the pre-registration form here: <https://forms.gle/h5sEM3Hn8KSwxViB8> Up-front registration will help us ensure organizing the PDW experience at best, however we are open to last minute participants - in case, do write an email to the organizers

Role of Management Scholars in Influencing Public Policy for the UN SDGs

Coordinator: **Rumina Dhalla**, *U. of Guelph*
Participant: **Swati Nagpal**, *La Trobe U.*
Participant: **Sheila Killian**, *U. of Limerick*
Participant: **Anne Magro**, *George Mason U.*
Participant: **Carole Parkes**, *PRME Secretariat/United Nations Global Compact Office*

This PDW will explore the role of management scholars and business schools in influencing public policy in response to global challenges. This PDW will use the United Nations Sustainable Development Goals (SDG) framework and the experiences of past and present Principles of Responsible Management Education (PRME) Champions in influencing public policy aimed to increase integration of the SDGs into research, teaching, and service—the three pillars of scholarship—to accelerate and amplify the achievement of SDGs. We argue that the lack of progress in the global achievement of the SDGs requires greater engagement and collaboration between higher education institutions and public policy and policy makers. We also argue that while business schools are expert in teaching and researching public policy, they are much less active and expert in the influencing and actioning of public policy.

What Would it Take to Change an Inference? Sensitivity Analysis to Inform Innovation in the Future

Participant: **Kenneth Frank**, *Michigan State U.*

Participant: **Sirio Lonati**, *NEOMA Business School*

Participant: **Jesper Wulff**, *Aarhus BSS, Aarhus U.*

Participants in this PDW will learn several approaches for quantifying the robustness of a causal inference. These provide a more precise language for producers and consumers to talk about potential concerns to inferences (e.g., omitted variables). The Impact Threshold for a Confounding Variable (ITCV) will be introduced to show participants how they can quantify how strong the correlations associated with an omitted variable must be to overturn an inference. The Robustness of Inference to Replacement (RIR) will be introduced to show participants how they can quantify what percentage of cases would have to be replaced with cases for which there was no effect of the predictor of interest to change the inference. Participants will learn to use the on-line application, spreadsheet, and the konfound macros in Stata and R. We will discuss guidelines for the application of sensitivity analysis in management research including how to create and interpret benchmarks based on observed covariates. These approaches allow researchers across a broad range of topic areas to debate the strength of evidence in intuitive and concrete terms necessary to inform innovations in the future.

Qualitative Comparative Analysis (QCA): A Set-Analytic Approach for Studying Configurations

Organizer: **Johannes Meuer**, *KLU Hamburg*
Organizer: **Joanna Tochman Campbell**, *U. of Cincinnati*
Organizer: **Donal Crilly**, *London Business School*
Organizer: **Peer Fiss**, *U. of Southern California*
Organizer: **Thomas Greckhamer**, *Louisiana State U.*
Organizer: **Rodney Lacey**, *Arizona State U.*
Organizer: **Vilmos F. Misangyi**, *Pennsylvania State U.*

Over the last decade, there has been a significant surge in interest surrounding set-analytic methods within management research, notably Qualitative Comparative Analysis (QCA) and configurational thinking. The exponential growth in the adoption of QCA can be attributed to a dual impetus: a burgeoning scholarly fascination with capturing causal complexity and continuous enhancements in its methodological application and supporting software. QCA has now solidified its status as a well-established approach in the toolkit of management researchers. Building on feedback from previous Professional Development Workshops (PDWs), this year's proposed PDW aims to cater to three distinct audiences. Part 1 is tailored for individuals with limited exposure to QCA, providing them with foundational knowledge and insights into the practical applications of QCA for their research projects. Part 2 is designed for more advanced management researchers and practitioners keen on delving into current methodological issues and the latest advancements in QCA. Part 3 is open to all participants seeking a platform to discuss their ongoing QCA research with fellow participants and experienced PDW organizers. Participation in this PDW is open to all conference attendees, with no registration required, except for Part 3, where researchers should submit an extended abstract. For those interested in receiving a list of recommended pre-readings and resources, please contact Johannes Meuer (johannes.meuer@klu.org) before the meeting.

Organization studies, functioning as an applied field, reside at the crossroads of various disciplines such as sociology, psychology, and economics, among others. The interdisciplinary blend of events happening in organizations and around organizing is recognized as a pivotal factor in coming up with interpretations and explanations of complex phenomena in the world. Technology, for one, was introduced into this conversation from multiple perspectives. Researchers have persistently endeavored to unravel the intricate interplay between technology and organizations — whether technology augments or ameliorates inequality. However, the rapidly evolving dynamics of technology relationships are reshaping organizations, impacting fundamental values, practices, identities, and jurisdictional boundaries within occupations, organizations, and society as a whole. These factors set the stage for the PDW to inquire into the shifting organizational dynamics within and between itself, given the increasing use of AI systems. In this PDW, we explore whether our community or discipline is prepared to analyze the negative impacts and repercussions caused by AI and initiate a public discussion on the matter. And if we are doing so, how do we problematize the AI harms by challenging the very assumptions of our current theoretical positioning? The challenges posed by AI systems need to be addressed beyond questions of gender, race, and class by treating these inequality regimes intersectional to compose new research agendas when the prominent discourse in AI centers around the paradoxical notion of augmentation and automation. We need to ask what kinds of jobs and who among us will be subjected to this disruption and, if so, how that impact will be felt across different strata of society.

In this PDW, we explore whether our community or discipline is prepared to analyze the negative impacts and repercussions caused by AI and initiate a public discussion on the matter. And if we are doing so, how do we problematize the AI harms by challenging the very assumptions of our current theoretical positioning? The challenges posed by AI systems need to be addressed beyond questions of gender, race, and class by treating these inequality regimes intersectional to compose new research agendas when the prominent discourse in AI centers around the paradoxical notion of augmentation and automation. We need to ask what kinds of jobs and who among us will be subjected to this disruption and, if so, how that impact will be felt across different strata of society. The PDW will engage in these topics and share where the topics are and the possibilities of moving forward.

Program Session: **43** | Submission: **14459** | Sponsor(s): **(SIM, PNP, MSR, CMS)**
Scheduled: **Friday, Aug 9 2024 8:00AM - 10:00AM CT (UTC-5)** at **Marriott Chicago Downtown - Magnificent Mile** in **Salon B**

Publishing Sustainability Research in SIM Journals

Panelist: **Kai N. Hockerts**, *Copenhagen Business School*

Panelist: **Ralf Barkemeyer**, *Kedge Business School*

Panelist: **Mollie Painter-Morland**, *Nottingham Trent U.*

Panelist: **Colin Patrick Higgins**, *Deakin U.*

Facilitator: **Anne-Karen Hueske**, *Copenhagen Business School Department of Management, Society and Communication*

Submissions of sustainability research to SIM journals are growing. While many authors expect that these fit well in SIM journals, they often find their papers (desk) rejected due to a “lack of fit with the journal”. In the absence of clear guidance on how sustainability scholars can frame their research in a way that is relevant for SIM scholars, some sustainability researchers may withdraw and look for outlets elsewhere. While this might be the right approach in some cases, as the SIM community we risk, however, to miss out on rich data sets that if analyzed appropriately would offer much to business ethics research. In order to help attract a more diverse and interdisciplinary audience to the SIM community, this PDW invites (associate) editors from several leading SIM journals to share what they expect from sustainability research submitted to their journals. They will outline what their criteria are and how sustainability scholars can best speak towards an audience of business ethics scholars and social issue in management researchers. The panel of editors will share practice examples of why papers are (desk) rejected and more importantly they will outline how sustainability scholars can craft a SIM contribution in their sustainability papers. They will point at helpful editorials, answer questions from the audience, and give feedback on exemplary papers during the roundtable phase. The session will include panelists from: *Business and Society*, *Business Ethics Quarterly*, *Business Ethics*, *the Environment & Responsibility*, and *the Journal of Business Ethics*.

We do encourage pre-registration. However, pre-registration is not required, and walk-ins are explicitly encouraged. However, should space in the room be limited, preference will be given to participants who have pre-registered. Moreover, pre-registration is required if you want to receive feedback on one of your paper ideas. As part of the pre-registration participants can submit questions to the panel as well as a paper idea that they would like to discuss with one of the panelists during the roundtable phase. Each editor will select 2-3 paper ideas to receive feedback that they feel are good case examples of illustrating the topics discussed in the PDW. Interested scholars are invited to pre-register with the following survey link: https://copenhagenbusiness.eu.qualtrics.com/jfe/form/SV_3qNk40mOzZF4qXk

Fostering Publications from Around the World in Leading Organization and Strategy Journals

Organizer: **Martina Pasquini**, *IE Business School*
Organizer: **Sandro Cabral**, *Inspire Institute of Education and Research*
Organizer: **Theresa Idenyi Onaji-Benson**, -
Organizer: **Edgar Ramirez Solis**, *ITESM*
Organizer: **Wei Guo**, *China Europe International Business School (CEIBS)*
Organizer: **Mariano L.M. Heyden**, *Monash Business School*
Panelist: **Samina Karim**, *Northeastern U.*
Panelist: **Annamaria Conti**, *IE U.*
Panelist: **Oliver T. Alexy**, *Technical U. of Munich*
Panelist: **Glenn Hoetker**, *Melbourne Business School, U. of Melbourne*
Panelist: **Amy Y. Ou**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*
Panelist: **Yanbo Wang**, *HKU*
Panelist: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*

Strategic management scholars not part of major schools in the United States, Canada, and other developed countries face several barriers to breaking the glass ceiling and communicating their research in leading (strategic) management journals. This PDW intends to help scholars outside leading schools improve their research manuscripts by providing helpful guidance to succeed during the publication process. We aim to do this with the support of prominent scholars in editorial positions and proven track records of publications in leading journals. The PDW is divided into three sections. The first-panel includes editors with vast experience in international scholarship and an active understanding of the main problems faced by researchers from disenfranchised settings. The second panel will count on global scholars with a proven record of publications and accumulated experience advising scholars for the international job market. The last PDW section will be restricted to registered participants with pre-selected working papers. These papers will receive detailed comments and suggestions from leading scholars in the field. The session will also serve as a unique opportunity for scholars from disenfranchised regions to get mentoring support

Pre-registration is required, details will be shared in the AOM STR Discussion Board.

Strategic Management Division (STR) Junior Faculty Consortium 2024

Organizer: **Anu Wadhwa**, *Imperial College Business School*
Organizer: **Francisco Polidoro**, *U. of Texas at Austin*
Panelist: **Vikas A. Aggarwal**, *INSEAD*
Panelist: **Sharon Alvarez**, *U. of Pittsburgh*
Panelist: **Paolo Aversa**, *King's College London*
Panelist: **Sandro Cabral**, *Inspire Institute of Education and Research*
Panelist: **Xavier Castaner**, *U. of Lausanne*
Panelist: **Martin Ganco**, *Wisconsin School of Business*
Panelist: **Koen Heimeriks**, *Warwick Business School*
Panelist: **Umit Ozmel**, *Purdue U., West Lafayette*
Panelist: **Sai Krishna Yayavaram**, *Indian Institute of Management, Bangalore*
Panelist: **Anthea (Yan) Zhang**, *Rice U.*

The STR Division is pleased to sponsor the 2024 Junior Faculty Consortium. The objective of the consortium is to enhance the scholarship, teaching, and professional development of faculty in the early stages of their careers. The consortium provides a forum for exchanging ideas concerning teaching and research as well as for expanding one's academic network. The Co-Chairs for the 2024 Consortium are Anu Wadhwa (Imperial College London) and Francisco Polidoro Jr. (The University of Texas, Austin). During the consortium, senior faculty panelists and mentors from top global research and teaching universities will share their expertise with participants. Priority will be given to STR members who have completed their dissertation by September 2023 and are in the first through the fourth year of their academic career. In addition, a participant should have a record of teaching and research in strategic management or closely related fields and not have participated in prior STR Junior Faculty Consortia. The application deadline will be May 31, 2024. Applicants selected for participation will be notified by the end of June 2024.

Pre-registration is required, details will be shared in the AOM STR Discussion Board.

Publishing Organization Design Papers: An Editor and Author Perspective

Organizer: **John Eklund**, *U. of Southern California*
Organizer: **Michael Yanche Lee**, *INSEAD*
Organizer: **Saerom Lee**, *The Wharton School, U. of Pennsylvania*
Organizer: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*
Panelist: **Rodrigo Canales**, *Boston U.*
Panelist: **J.P. Eggers**, *New York U.*
Panelist: **Claudine Madras Gartenberg**, *The Wharton School, U. of Pennsylvania*
Panelist: **Samina Karim**, *Northeastern U.*
Panelist: **Brian Silverman**, *U. of Toronto*

Despite both its scholarly and practical importance, research on organizational design has received relatively little attention since the 1980s. However, it has recently gone through a renaissance with scholars. Despite this upsurge in popularity, a study on organizational design can be highly challenging to publish. Theoretically, it is often perceived as an “old topic,” requiring scholars to tease out a novel contribution and demonstrate the need for new research. Empirically, it is difficult to collect large-sample data and accurately measure various dimensions of organizational design, as this sensitive information is often not publicly available. Furthermore, as firms tend to endogenously choose their organizational design, scholars face challenges in finding a source of exogenous variation in these dimensions and causally identifying their effects. To help scholars navigate these challenges, we have gathered editors of leading management journals with expertise in this topic and authors who have recently published organizational design papers. In the first part of our PDW, these editors and authors will share their experiences and advice on how to successfully publish papers in this area. In the second part, attendees will undertake roundtable discussions to discuss their research project ideas receiving feedback from the PDW organizers and panelists.

Strategic Management of Intellectual Property

Organizer: **Catherine Magelssen**, *London Business School*
Organizer: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*
Panelist: **Lee Branstetter**, *Carnegie Mellon U.*
Panelist: **Aija Elina Leiponen**, *Cornell U.*
Panelist: **Catherine Magelssen**, *London Business School*
Panelist: **PuayKhoon Toh**, *U. of Texas at Austin*
Discussant: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*

Intellectual Property (IP) strategy has become an increasingly vital component in the global economy, demanding a reevaluation in the face of rapid changes in technology, firm organizations, and international landscape. This PDW aims to encourage exchange of ideas on the strategic management of IP in the context of such dynamics. It connects with the conference theme of Innovating for the Future: Policy, Purpose, and Organization by examining how IP policies influence innovation and firm strategy. We are building on the Strategic Management of Intellectual Property PDW from last year, which attracted a large audience and generated fruitful discussions. Our goal is to develop an ongoing series at AOM that seeks to foster a cross-disciplinary community on IP-related research. The panelists come from diverse backgrounds and utilize various data sources and methods. The diversity of insights should spark more in-depth discussions and debates. We structure the conversation around three key topics. First, we will explore the balance between local regulations and global market dynamics, focusing on the impact of policy on IP strategies. Second, we will discuss the challenges and opportunities that emerging technologies pose, and scrutinize the implications of platforms and technological standards. Finally, we will address how IP assertion across countries affects global strategy, examining the dual role of IP in promoting and impeding innovation. Across these themes, the panelists will delve into the complex interplay amongst institutions, technological changes, and international competition. The discussions on current challenges will also help identify future avenues of research.

This workshop aims to explore the growing role of Artificial Intelligence (AI) in accelerating scientific innovation. AI's transformative impact on industries, organizational structures, and innovation processes presents opportunities to advance management research. This workshop will integrate insights from various disciplines including economics, sociology, computational social science, and management, to deepen our understanding of AI's role in shaping scientific and technological progress. One of the objectives is to examine how AI tools and methodologies are transforming the landscape of scientific inquiry and innovation. This workshop aims to address critical aspects of AI in the context of scientific and technological innovation by offering a multidisciplinary view on the specialized role of AI, human-AI interaction, the impact of institutions, and strategic interactions in the commercialization of new technologies. Participants will gain comprehensive insights into how AI-enabled and augmented processes may shape the future of innovation trajectories, policy implications, and societal welfare.

Machine Learning in Innovation Research: From Measurement to Causal Inference

Organizer: **Mariano Mastrogiorgio**, *IE Business School*
Organizer: **Mario Daniele Amore**, *HEC Paris*
Panelist: **Sam Arts**, *KU Leuven*
Panelist: **Natalie Carlson**, *The Wharton School, U. of Pennsylvania*
Panelist: **Arianna Marchetti**, *London Business School*
Panelist: **Milan Miric**, *U. of Southern California - Marshall School of Business*
Moderator: **LI Liu**, *U. Carlos III de Madrid (UC3M)*

Machine learning has gained increasing attention owing to the latest advancements in natural language processing, especially those based on transformers, such as OpenAI's ChatGPT and Google's BERT. Transformers are large language models built upon deep learning neural networks, harnessing some key underlying components, notably attention modules and contextual word embeddings. This PDW features several presentations by leading scholars who will share their knowledge and research insights into the latest developments in machine learning of text data, and address some of the key challenges for measurement and causal inference. The PDW is scheduled to run for one hour and thirty minutes, consisting of two segments: Part 1, featuring a general introduction and guest speakers (lasting 70 minutes), and Part 2, dedicated to a Q&A session and open debate (lasting 20 minutes). The goal of the PDW is to raise awareness on how scholars can leverage machine learning in innovation research.

The session is open to anyone interested. Registration and additional fees are NOT required.

Facilitating Sustainable Business Development: Shaping an Innovation Ecosystem in Africa

Organizer: **YIRUI JIANG**, *Cranfield U.*
Panelist: **Victoria Sabula**, *Africa Enterprise Challenge Fund*
Panelist: **Gary Fox**, -
Panelist: **Tao Xu**, *School of Economics & Management, Tongji U.*
Participant: **Alphonsus Neba**, *Science for Africa Foundation*
Participant: **Flackson Tshuma**, *Stellenbosch U., South Africa*
Participant: **Assumpta Okolo**, *OLTRONLTD*

The emergence of innovation ecosystem opens up fresh business prospects. This workshop invites scholars and professionals to delve into the complex interplay of factors within the African innovation ecosystem through engaging panel discussions and presentations. It explores the effects of international political dynamics, economic disparities, and the ever-evolving technologies on sustainable business development in Africa. Attendees participating in gaming sessions have the chance to step into the shoes of different stakeholders in the innovation ecosystem. Through a sanitation ecosystem case study, this workshop enriches their comprehension of innovation ecosystem in Africa, promoting interdisciplinary insights.

Welcome, attendees! If you are interested in the "Facilitating Sustainable Business Development: Shaping an Innovation Ecosystem in Africa". Please email your CV or contact the organizer to [Email Address: yirui.jiang@cranfield.ac.uk] with [Email Title: AOM-AFAM-Your Name-Your Affiliation] no later than [1st August, 2024]. This will facilitate our preparations and enhance networking opportunities during the event. Should you have any questions or require assistance before or during the event, please feel free to contact our event coordinator, DR YIRUI JIANG, at [Email Address: yirui.jiang@cranfield.ac.uk]. We look forward to welcoming you and ensuring an enjoyable experience for all attendees. Thank you for your participation!

Sequence Analysis: Techniques and Practical Applications

Organizer: **Katja Dlouhy**, *U. of Mannheim*

Organizer: **Torsten Biemann**, *U. of Mannheim*

This is an introductory workshop on sequence analysis, specifically on optimal matching analysis. Optimal matching analysis can be used to assess similarity of sequence data, and to find patterns in longitudinal nominal data. The workshop is targeted at researchers and doctoral students who want to get started with this method. The objective of the workshop is to encourage and enable participants to apply sequence analysis in their own research. After introducing fundamentals of the method, we will provide examples of its use in empirical research. Attendees will then develop practical, hands-on skills for using optimal matching analysis by analyzing a sample data set. We will discuss important practical issues and introduce some advanced applications, giving enough room for discussion and questions. Participants will receive a download link to the free software R, sample data, and some syntax for R that can serve as a blueprint for their own future analyses.

This year MED Ambassadors' PDW will explore Futures Literacy to help building a stronger community of MED ambassadors and work collectively on innovative solutions to prepare management education changes and challenges all around the world. In order to increase impact from the field of Management Education Development, we need to actively listen to those colleagues from diverse geographical regions. We need to pause and reflect upon experiences from those all around the world, who have solved problems differently. The MED Ambassadors PDW offers this opportunity and the space for exchanging and building up a strong international community. With a network of ambassadors from 23 countries on almost every continent, our ambition is to further expand MED's representation in the international management education community. Not only does this PDW enable to share international know-how in management education teaching, research and practice, it also supports educators to develop and inculcate the capability to address the challenges in management, in particular through innovative teaching practice for educating responsible leaders and managers. This year, following the AOM 2024 theme "Innovating for the Future", we will share a "all around the world" poster session of the most innovative teaching practices in management and we will also offer our ambassadors and all other MED members an interactive workshop on Futures Literacy to reflect on how to shape a sustainable future and develop futures capabilities for our students in management, innovation and entrepreneurship. Finally, following on from last year's workshop and based on the results of our foresight workshop, we will take a moment to define together two or three concrete measures to be implemented within the community of MED ambassadors during the year.

The Sustainability Mindset Indicator: How Professors Develop a Mindset for Innovation and Resilience

Organizer: **Beate Klingenberg**, *FOM Hochschule fuer Oekonomie & Management*
Organizer: **Isabel Rimanoczy**, *PRME Working Group on the Sustainability Mindset*
Presenter: **Albachiara Boffelli**, *U. of Bergamo*
Presenter: **Giselle Rentería Núñez**, *Tecnológico de Monterrey*
Presenter: **Louis W. Fry**, *Texas A&M U. Central Texas*
Presenter: **Emmanuelle Reuter**, *U. of Neuchatel*
Presenter: **Ngoc Quynh Dao**, *U. of Neuchatel*
Presenter: **Ruben Burga**, *U. of Guelph*
Presenter: **Isabel Rodriguez Tejedro**, *U. de Navarra*
Presenter: **Amelia Naim**, *Sekolah Tinggi Manajemen IPMI (IPMI International Business School)*
Presenter: **Rachel Fichter**, *Columbia U.*
Presenter: **Ekaterina A. Ivanova**, *HSE U. Graduate School of Business*

Attending a session on developing a sustainability mindset at the AOM Annual Conference (2014), a professor asked how we would know if such a mindset was successfully developed, and how it could be assessed. This question prompted exploring if an appropriate tool existed, or how to develop it (Kassel, Rimanoczy, & Mitchell, 2018; Rimanoczy & Llamazares 2021, Rimanoczy & Klingenberg, 2021). The resulting Sustainability Mindset Indicator (SMI[®]) maps where students are in the development of their sustainability mindset, providing educators with resources to further develop it. Students receive a thought-provoking report for their own personal growth. Aggregated results can be used for research, comparing the profile of a group pre and post a course in sustainability, training, or other interventions, measuring impact and effectiveness. The components associated with a sustainability mindset are ecological worldview, systems perspective, emotional and spiritual intelligence, and are critical for developing readiness to think, innovate and implement sustainability actions (Rimanoczy, 2021). Acting in new ways means developing resiliency, one of the most important skills in uncertain times (European Union Skills Agenda, 2020).

Strategy and Innovation in the Biopharmaceutical and Health Care Sectors

Organizer: **Charu Gupta**, *UCLA Anderson School of Management*
Organizer: **Sukhun Kang**, *UC Santa Barbara*
Organizer: **Sandip Bisui**, *Purdue U.*
Organizer: **Sungyong Chang**, *London Business School*
Panelist: **Colleen Cunningham**, *U. of Utah, David Eccles School of Business*
Panelist: **John Eklund**, *U. of Southern California*
Panelist: **Anita McGahan**, *U. of Toronto*
Panelist: **Lamar Pierce**, *Washington U. in St. Louis*
Panelist: **Francisco Polidoro**, *U. of Texas at Austin*
Panelist: **Ariel Dora Stern**, *Hasso Plattner Institute*

The biopharmaceutical and health care sectors, consistently significant in management scholarship, have gained renewed importance as a result of the COVID-19 pandemic, emphasizing their critical role in our daily lives and global economy. The purpose of this PDW is to foster and deepen scholarly conversations around important strategic themes of the biopharmaceutical and health care sectors that are of interest to a broad group of scholars at the Academy, as well as practitioners and policymakers. Based on our last iteration of the PDW at AOM2023, our goal is to continue our discussion of cutting-edge research ideas in these sectors and how scholars studying these questions can make meaningful theoretical and managerial contributions. To do so, we bring together a group of six leading faculty to discuss and engage with scholars studying cutting-edge research in the biopharmaceutical and health care sectors and help them both navigate the development of their research ideas and make meaningful theoretical and managerial contributions. Overall, the goal of this PDW is to provide a forum where scholars can develop a shared understanding of research on various topics in the biopharmaceutical and health care industries and provide important insights into how next-generation scholars may employ novel theories and methods to develop future research. We also hope to exchange knowledge on new datasets in these sectors. This two and half-hour PDW will follow a three-part format. In the first part, six leading faculty (Francisco Polidoro, Anita McGahan, Lamar Pierce, Ariel Stern, Colleen Cunningham, and John Eklund) will share insights on important aspects of research in the biopharmaceutical and health care sectors. The second part will consist of a semi-structured panel discussion among the presenters. The last part will contain two roundtable discussions, each focused on different topics and methods. Prospective participants will apply to the PDW by submitting a brief description of a research idea to be explored with the discussants and other participants.

Participation is open to all for the panelist presentations, but pre-registration is required for the round table discussion. To participate in the round table discussion, please fill in this form by Monday July 1, 2024: <https://forms.gle/hzdD57tjsSwKnYwU8>. Acceptance notifications will be sent by Mid July. If you have any questions, please contact Sukhun Kang (sukhunkang@ucsb.edu) or Sandip Bisui (sbisui@purdue.edu).

Participant: **Lynn Sitanimezi**, *Doctoral student at Fielding graduate U.*

Diversity, Equity, and Inclusion (DEI) work is often viewed as work conducted within organizations through policies, processes and practices designed and administered by various actors like DEI officers, Chief Diversity Officers, and HR-DEI leads. While internal organizational efforts by people with DEI in their job title or as part of their job description remain crucial, recent research increasingly shows that furthering DEI efforts also relies on a broader range of change agents who spearhead these initiatives, both in and around organizations. Such change agents can be external DEI consultants, role models, activist groups and social movements, but also include those within organizations without formal responsibilities for DEI, like allies and sponsors. In this PDW, a panel will begin this conversation by taking a closer look at these more 'unusual suspects' who shape DEI work in and around organizations, understanding who they are and what they do to help change the workplace for the better. Following the panel, all participants will have a chance to debate these actors' roles further in roundtable discussions. This would enable us to foster collaborations and develop a research agenda regarding how the efforts of DEI change agents in and around organizations intersect, combine or have conflicting interests or priorities.

Facilitator: **I-Heng Wu**, *U. of South Alabama*

Our broad goal is to connect and support emerging international members from emerging economies, the global South, and other geographies where our AOM/DEI membership is under-represented. The DEI's Global Ambassadors will partner with AOM-partner organizations to identify and invite Management scholars around the world to take part in our PDW. Participants will request and be matched with mentors who will help them feel more supported at future AOM conferences and more confident in their future AOM paper development efforts. Four panelists with connections to/in underrepresented/emerging economies will present ideas, and Global Ambassadors will facilitate a roundtable discussion on overcoming outsider status at AOM and developing high-quality conference submissions. In alignment with AOM's four driving goals, our PDW aims to (1) connect and support members of the global management/organization community who might otherwise be overlooked at AOM, (2) enhance the diversity of the membership to which AOM provides indispensable value, (3) advance knowledge relevant to an even more diverse set of stakeholders/institutions around the world, and (4) enhance AOM's standing as a globally-led association. Key take-aways to participants of the PDW include stronger (1) connection to and belonging within the DEI community, and (2) honing of paper development skills, making future AOM attendance more likely. PDW participants will also be invited to a Welcome Coffee on the morning of this PDW to network with mentors and panelists.

Attendees of this PDW are welcome to attend DEI's Welcome Coffee event. For further information, please contact the lead co-organizer of this PDW (raymond.trau@mq.edu.au)

ENT Early Career Development Consortium

Coordinator: **Christina Theodoraki**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

Organizer: **Magdalena Cholakova**, *Erasmus U. Rotterdam*

Organizer: **Marcus Wolfe**, *U. of North Texas*

The Early Career Development Consortium (ECDC) is specifically designed to meet the needs of those scholars who are early in their career such as tenure-track assistant professors (pre-tenure packet submission). The format for the consortium is intimate and interactive (small group discussions, personalized Q&A, etc.), where we pair small groups of attendees with mentors. Leading entrepreneurship scholars (serving as mentors) will interact with participants, guiding the discussion that will include practical advice to help early-stage academics manage the pre-tenure phase of their career. The goal of this format is also to allow participants to ask specific questions, meet with and interact with individuals in their similar situation, and develop relationships with other participants that (we hope) will continue to be beneficial as they move through their career. Specific topics include: building a successful research pipeline, navigating the publication process, and developing a reputation within a given field.

The AI Disruption of Entrepreneurship: A Setback or Breakthrough for Innovation? Research Incubator

Organizer: **Frédéric Ooms**, *HEC Liège - Management School of the U. of Liège*
Organizer: **Moren Levesque**, *York U.*
Organizer: **Boris Nikolaev**, *Colorado State U.*
Organizer: **Martin Obschonka**, *U. of Amsterdam*
Organizer: **Francesco Ferrati**, *U. of Padova*
Organizer: **Phillip H. Kim**, *Babson College*

Entrepreneurship is a major mechanism through which innovation production and adoption is accelerated. With the rise of powerful AI tools, including but not limited to generative AI, we witness a disruptive transformation of entrepreneurship practices and research, with potentially far-reaching implications for innovation. A recent editorial in the *Academy of Management Journal (AMJ)* provocatively suggests a future where scholars might transition from being creators to curators, overseeing a vast expanse of AI-generated academic content, fundamentally challenging our traditional roles in knowledge production. (Grimes et al., 2023). Here is particularly unclear whether the AI disruption of entrepreneurship is a setback or breakthrough for innovation production and adoption. At the same time, research in the space of AI entrepreneurship, and effects on innovation, is very nascent, both in the theoretical and empirical literature. Likewise, research communities and networks in this space are emerging but fragmented. This PDW aims to spark a conversation and build a community that will serve as a catalyst for critical and much needed dialogue on the implications of AI for the fields of entrepreneurship and innovation. The workshop will take a developmental approach to identify the most pressing research questions, plan concrete study designs, and discuss how the research community and research process at large can be promoted in this field. To these ends, the workshop is designed to connect scholars interested in the intersection of AI and entrepreneurship, which we view as an important foundational step in creating a vibrant community of scholars interested in this topic. We seek to foster a community that is invested in understanding what AI means for entrepreneurship practice and research, collectively shaping the direction of future research, and to also offer a creative space for brainstorming ideas through a research incubator. This format is chosen to promote active collaboration and networking among participants, laying the groundwork for a shared vision on the future of AI in entrepreneurship research, and forming new networks and communities.

Please ensure you pre-register to attend the Professional Development Workshop (PDW). The online form is available at <https://www.entrepreneurship-ex-machina.org/>

The Future of U.S. Healthcare: Improved Effectiveness and Efficiencies to Move Us Forward

Organizer: **Cassandra R. Henson**, *Widener U.*
Organizer: **Randyl Cochran**, *U. of North Carolina, Wilmington*
Organizer: **Wendy Whitner**, *Towson U.*

The current state of U.S. healthcare reflects the successes and challenges of satisfying the ever-changing healthcare needs of an increasingly complex society. Contemporary healthcare systems must continuously evolve to incorporate health policy updates, financial regulations for reimbursement and revenue recognition, prioritized patient experience and sustainability. There is no 'one size fits all' operations model in healthcare to implement these changes, but all stakeholders must make concerted efforts to maintain effective, efficient healthcare systems. This workshop discusses the key elements of systems effectiveness and efficiency and suggests innovative ways to move the healthcare sector forward.

Corporate Social (Ir) Responsibility: Communicating and Mitigating the Darker Side of CSR

Session Chair: **Anil K. Maheshwari**, *Maharishi International U.*

Presenter: **Payal Kumar**, *Indian school of hospitality*

Presenter: **Anil Kumar**, *U. of Delhi*

Presenter: **Tanuja Sharma**, *MDI, Gurgaon, India*

Presenter: **Anita Mendiratta**, *Keshav Mahavidyalaya, U. of Delhi*

In the wake of the ongoing climate and other crises globally, the debate around the proposition that the only social responsibility of a firm is to earn profits does not appear to hold. A firm's financial decisions often contradict the choice of corporate social responsibility (CSR) actional, and they might face tough choices between CSR and performance. Nations attempt to implement CSR voluntarily or mandatorily. CSR is mandatory in India through section 135 of the Companies Act. It creates incentives and opportunities to do some clever management of CSR initiatives. However, management scholarship has long ignored this counterpart of CSR, or corporate social irresponsibility (CSiR). Literature has shown that CSR and CSiR can co-exist simultaneously (Kölbel et al., 2017; Lange & Washburn, 2012). Even bonafide social entrepreneurship organizations may opportunistically engage in CSiR (Pandey & Maheshwari, 2023). CSiR is often communicated to stakeholders through media and third-party reporting. This workshop brings together a panel of management researchers with rich perspectives on the interplay of CSR and CSiR. Through dialog and exercise, this PDW seeks to engage participants controversial questions such as i. Should businesses be involved in CSR in the first place iii. If so, need this be made mandatory by law? iii. Have CSR activities turned into more brand-building exercises? iv. How can one call out CSiR practices?

Professional Development Workshop Chair: **Hana Johnson**, *Washington State U.*
Session Chair: **Teresa Cardador**, *U. of Illinois at Urbana-Champaign*

The MOC-DOCS (Management and Organizational Cognition Development and Outreach for Conference Success) Social event aims at becoming a central and welcoming initiative within the Academy of Management meetings, specifically tailored to newcomers seeking guidance and connection within the complex conference environment. This event serves as a friendly and inclusive space where attendees, particularly those new to the Academy of Management, can navigate the complexities of the conference with ease. Designed to foster a sense of community, MOC-DOCS provides a platform for individuals to find a supportive "conference buddy," facilitating meaningful connections and easing the initial challenges of navigating the conference landscape and networking opportunities. Moreover, the event offers newcomers the opportunity to be introduced to more senior MOC members, providing valuable mentorship and fostering a sense of belonging within the division. Beyond social connections, MOC-DOCS serves as a gateway for attendees to discover and to get involved with the MOC division, encouraging active participation and contribution to the vibrant scholarly community. In essence, MOC-DOCS embodies the spirit of inclusivity, mentorship, and community building, making the Academy of Management experience more accessible and enriching for all.

Presenter: **Modupe Akinola**, *Columbia U.*
Presenter: **Brandi Pearce**, *U. of California, Berkeley*
Presenter: **Derek Harmon**, *U. of Michigan*

This interactive PDW is designed for anyone researching and teaching leadership. The PDW aims to elevate the importance of linking our research with our practice through building on our research findings to produce evidence-based tools which can be used to develop leaders in organizations. Through a mix of interactive presentations, panels, and roundtables, we will discuss and share best practices in building novel, evidence-based tools for leadership development and build community among those researching and teaching leadership. New tools highlighted will range from new AI-enabled technologies for behavioral leadership assessments to new interactive technology-enabled simulations for leading teams. Scholars will share the tool with the audience, allowing participants to engage and participate with the tool, as well as provide thoughts on how they built on research to develop their tool. Afterwards, we will host a series of roundtable discussions among presenters and audience on the future of evidence-based tools for leadership development. Finally, we will host a panel on how we can continue to develop and foster the usage of evidence-based interactive tools for leadership development in our teaching.

Bridging the Gap: Aligning Academic Insights with Practical Excellence in Organizational Change

Organizer: **Gediminas Baublys**, *Vilnius U.*
Panelist: **Clifford Oswick**, *City U. London*
Panelist: **David Bright**, *Wright State U.*
Panelist: **David Coghlan**, *U. of Dublin, Trinity College*

Panelist: **Ronald Fry**, *Case Western Reserve U.*
Panelist: **Greg Voeller**, *Association of Change Management Professionals*

In the fast-paced business world, implementing sustainable, meaningful organizational change is crucial. However, a significant disconnect exists between academic research and its practical implementation in change management. This gap, underscored by the lack of agreement on essential change management processes and principles within the academic community, poses a challenge to effective change implementation. Professional Development Workshop "Bridging the Gap: Aligning Academic Insights with Practical Excellence in Organizational Change" addresses these issues by offering a unique combination of research-based insights and practical wisdom. It represents a joint effort of scholars and practitioners, committed to innovating and reshaping the field of organizational change. This initiative goes beyond traditional methods, promoting new, innovative approaches to drive impactful and relevant advancements in the field. It also encourages active audience engagement and serves as a platform for collaborative knowledge sharing and networking, fostering new avenues for both research and practical innovation. Participants will leave equipped with actionable strategies, innovative ideas, and inspiration for new research in organizational change. Ultimately, this workshop aims to unite management scholars and practitioners in a collective effort to address the grand challenges of our era, providing insightful and actionable strategies for effective organizational change management and impactful research.

Panelist: **Ashleigh Shelby Rosette**, *Duke U.*
Panelist: **Katina Sawyer**, *U. of Arizona*

A comprehensive understanding of diversity within organizations is essential. While the number of publications related to diversity has increased, scholars vary in how they write about and incorporate diversity in their research. The workshop will include three parts – parts 1 and 2 are open to all and will involve panel presentations and plenary discussions and are open to all. Part 3 will build on and extend part 2, with participation restricted to participants who have submitted a 2-page proposal ahead of time. Our first panel (part 1) will ask when, how, and why scholars foreground, background, or drop diversity and inequality when moving from real-world observations to research accounts in papers and publications. Panel presentations and Q&A will help us address questions such as: What challenges, pushback, and missed opportunities do scholars face when trying to include diversity in their papers and research? What are authors' experiences when trying to publish research that includes a diversity component? What are editors' views on positioning such research? Our second panel (part 2) will explore how diversity has been included across research in organizational theory, strategy and entrepreneurship. The panel will address questions such as: How do institutional pressures shape organizational DEI strategies? How do firms respond to such institutional pressures? What features of a firm influence a firm's pursuit of DEI Initiatives? What are some organizational-level consequences of DEI initiatives? To further discuss questions on how diversity has been included across research in organizational theory, strategy and entrepreneurship (part 3), preregistered participants will be divided into groups to discuss their research ideas with panelists. Throughout the PDW, leading scholars in organizational theory and organizational behavior will discuss their experiences as they try to address these questions and will help participants reflect on how to move forward individually and collectively to advance the integration of diversity and inequality in management research.

OSCM Division Junior Faculty and Doctoral Consortium (Part 1)

Organizer: **Annachiara Longoni**, *ESADE Business School*
Organizer: **Iana Shaheen**, *U. of Arkansas*

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the annual meeting of the Academy of Management (AoM) in Chicago, IL, USA. This event will be held from 8:30 AM to 4:30 PM on Friday, August 9th, 2024. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty grouped in roundtables of two to three participants. Doctoral students and junior faculty are asked to submit their research proposal in advance that will be discussed by a panel of senior and junior faculty providing feedback and guidance during the consortium. Participants are expected to ask questions and learn about building a research identity. In addition to the research incubator session, several panel sessions will further elaborate on publishing, the development of research streams, and the job market. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

Panelist: **Florencio F. Portocarrero**, *London School of Economics and Political Science*

Panelist: **Daniel Milner**, *Oklahoma State U.*

Panelist: **Malia F. Mason**, -

Early career academics face many challenges – how to move from doctoral student to post-doc or tenure – track positions? How to create and sustain positive relationships and collaborations with colleagues or mentors? How to authentically distinguish oneself from the crowd? Crafting an identity narrative to share with others is a central strategy to overcome these hurdles (Ibarra & Lineback, 2005) yet it is not without difficulties. For instance, how can early careers strategically weave their research, teaching, and service work into a coherent and compelling narrative? How can they work through the inherent tensions between identity maintenance and change (Bloom, Colbert, & Nielsen, 2020; Sugiyama, Ladge, & Dokko, 2022)? How do they create coherence and continuity when by nature transitions are discontinuous (see Linde, 1993)? In this PDW, an international panel of organizational scholars will share the techniques they used throughout their academic identity crafting journey to navigate these difficulties (Brickson, 2011), discussing and providing personalized feedback on how early-career scholars can craft an identity narrative that is authentic and appealing, and how they can leverage their crafted narrative/identity to advance their careers. This PDW is “hands-on”; participants will leave with tangible advice on how they can craft their academic identity to facilitate their academic journey.

The goal of this PDW is to conduct a doctoral student consortium (DSC) to connect, inspire, and inform doctoral students about elements leading to success in their scholarship, teaching, service, and lives as academics, especially in the area of Social Issues in Management (SIM). To follow tradition, we anticipate kicking off the DSC by hosting an off-site fireside chat and dinner the evening before the daylong event. The DSC is designed to be interactive, with ample time for students to ask questions of the panellists and interact with each other, building the SIM community. SIM-affiliated scholars will share their knowledge, participate in panel discussions, and engage with students. Participating students will develop a toolkit for successfully finishing their doctoral programs and entering their professional career.

Panelist: **Kira Franziska Schabram**, *U. of Washington*

In our Professional Development Workshop (PDW), we aim to explore the emotional aspects of researching topics that are deeply meaningful to us. When we say "personally relevant," we're referring to research that tackles questions deeply connected to the researcher's own life, involving communities or subjects they are a part of or have a strong interest in. This kind of research is driven by the researcher's own experiences, identity, interests, and community ties. We believe that when researchers are emotionally invested in their work, particularly in areas related to social issues, it can enhance their motivation, help sustain them in their challenging careers and contribute to the production of impact for positive change. However, focusing on issues that are close to one's heart can also bring unique emotional challenges, such as the risk of emotional exhaustion. To explore, map and prepare researchers to face these emotional impacts, we've invited six experienced researchers who have a track record of engaging in research that matters personally to them. These researchers have worked on numerous projects related to significant challenges, with their findings published in leading peer-reviewed journals and having a substantial impact on real-world practices.

Publishing in Top-Tier US journals for Non-US Scholars

Organizer: **Liza Castro Christiansen**, *U. of Reading*
Presenter: **Elaine Farndale**, *Penn State U.*
Presenter: **Ingrid Fulmer**, *U. of Illinois at Urbana-Champaign*
Presenter: **Bard Kuvaas**, *BI Norwegian Business School*
Presenter: **Wolfgang Mayrhofer**, *WU Vienna*
Participant: **Sabine Bacouel-Jentjens**, *ISC Paris Business School*
Participant: **Pawan S. Budhwar**, *Aston U.*
Participant: **Audrey Chia**, *National U. of Singapore*
Participant: **Denise Mary Jepsen**, *Macquarie Business School, Macquarie U.*
Participant: **Clare Kelliher**, *Cranfield U.*
Participant: **Sewon Kim**, *State U. of New York Empire State College*
Participant: **Sunghoon Kim**, *U. of Sydney Business School*
Participant: **Janet H. Marler**, *U. at Albany, State U. of New York*
Participant: **Scott L. Martin**, *Zayed U.*
Participant: **Ariane Ollier-Malaterre**, *UQAM U. of Quebec in Montreal, Canada*
Participant: **Jacobo Ramirez**, *Copenhagen Business School*
Participant: **Astrid Reichel**, *U. of Salzburg*
Participant: **Gary Rees**, *full professor*
Participant: **Karin Sanders**, *UNSW Business School, Australia*
Participant: **Tomoki Sekiguchi**, *Kyoto U.*
Participant: **Eleni Stavrou**, *full professor*
Participant: **Karina Van De Voorde**, *Tilburg U.*
Participant: **Gillian Warner-Søderholm**, *USN School of Business, U. of South-Eastern Norway*

Once a research project has been completed, one of the most prestigious forms of publication is a journal paper. There is not only increasing pressure to publish, but to publish in 'top tier' journals. There is vast and comprehensive information about the range and scope of refereed research journals in every field. Through this Professional Development Workshop, the HR Division intends to provide insight to – and engage with – non-US scholars who plan to publish in top tier US journals in the HR field.

Geopolitics in International Management Research: Strengthening Theoretical and Empirical Approaches

Organizer: **Jesper Edman**, *Waseda U.*
Organizer: **Qingqing Chen**, *U. of Texas, Dallas*
Participant: **Michael A. Witt**, *King's Business School*
Participant: **Gerhard Schnyder**, *Loughborough U.*
Participant: **Ari Van Assche**, *HEC Montreal*
Participant: **Srividya Jandhyala**, *ESSEC Business School*
Participant: **Jing Li**, *Simon Fraser U.*
Participant: **Olivier Bertrand**, *Fundação Getúlio Vargas/EBAPE*
Participant: **Marie-Ann Betschinger**, *HEC Montreal*

Geopolitics represents rapidly growing research areas in business and management research, with numerous empirical and conceptual articles devoted to the topic. If you are working on related subjects and seeking opportunities to engage with leading experts in this field, the Geopolitics in Business Professional Development Workshop (PDW) is here for you!

The PDW will be held at the 2024 Academy of Management meeting, sponsored by the International Management division of the Academy. It consists of four themed speeches, an active panel, and small-group table discussions. Speakers and panelists are outstanding scholars in the field, including Michael Witt, Gerhard Schnyder, Ari Van Assche, Srividya Jandhyala, Jing Li, Marie-Ann Betschinger, and Olivier Bertrand.

While the themed speeches and the interactive panel are open to all members, the round-table sessions will focus on pre-selected proposals. Selected participants will receive detailed feedback on their proposals and research ideas from both the invited speakers and panelists, while also having the opportunity to build networks with scholars holding similar research interests.

To apply for the round-table sessions, please submit a 2-page research summary using the [Qualtrics link](#) by June 10th, 2024. The summary should clearly articulate the research questions, clarify its contribution to the literature, briefly introduce the methodological approach and the preliminary findings. We welcome research in any stage of development. Submitted proposals will undergo a review process by the PDW organizing committee. Accepted applicants will be notified by Mid July. The round tables will be assigned based on the applicants' preference and the match of their research interests.

We look forward to receiving your proposals and engaging in fruitful discussions at the Geopolitics in Business Professional Development Workshop. Should you have any questions, please don't hesitate to contact us at qingqing.chen@utdallas.edu and jesper.edman@waseda.jp.

ONE Doctoral Consortium

Organizer: **Lucrezia Nava**, *City U. of New York, Baruch College*
Organizer: **Kevin Chuah**, *Northeastern U.*
Speaker: **Stuart A. Allen**, *Robert Morris U.*

The ONE Doctoral Consortium aims to offer a networking, learning, and research reflection opportunity to doctoral students engaged in organizations and the natural environment (ONE) research. A maximum of 24 doctoral students will be selected based on their research quality and to represent a diversity of academic institutions, geographic interests, and research topics. The aim of the doctoral consortium is to provide doctoral students with feedback on their work, insights on key areas of the profession, and connections to other junior and senior scholars pursuing similar work. The consortium will be cross-disciplinary and open to different theoretical perspectives, involving faculty members from different geographic and methodological backgrounds. The format of the doctoral consortium is informal and open, but doctoral students will come prepared to optimize the interaction with other doctoral students and faculty. The design for this year's consortium will enable doctoral students to engage with ONE faculty from various parts of the world who will share their knowledge and experiences related to their research, teaching, and careers.

The PhD Experience: A PDW for Doctoral Students, by Doctoral Students

Organizer: **Natalie Schneider**, *U. of Wisconsin, Milwaukee*
Organizer: **Megha Yadav**, *U. of Wisconsin, Milwaukee*
Organizer: **Xiaoxia Zhu**, *U. of Wisconsin-milwaukee*
Panelist: **Rui Zhong**, *Penn State Smeal College of Business*
Panelist: **Victor Chen**, *Tulane U.*
Panelist: **Xin Zhang**, *College of Business, Shanghai U. of Finance and Economics*
Facilitator: **Yingge Li**, *Florida State U.*
Facilitator: **Surendra Babu Talluri**, *Indian Institute of Management Bangalore*
Facilitator: **Kun Wang**, *UCL School of Management*
Facilitator: **Molly Schmidt**, *U. of Wisconsin, Milwaukee*
Coordinator: **Lin Deng**, *U. of Wisconsin-milwaukee*
Coordinator: **SARTHAK SINGH**, *U. of Wisconsin, Milwaukee*
Coordinator: **Antonio Carlos Jansch Porto**, *U. of Wisconsin - Milwaukee*

No PhD student graduates without difficulty. The PhD student experience is intricate, with highs and lows that differ for every individual. Although support from senior scholars is vital to a PhD student's success, connection with fellow PhD students who are undergoing the same experiences is a powerful and necessary form of support. This PDW aims to offer mentorship and support to PhD students, by fellow PhD students. Through panel discussion and roundtable group work, participants will build support resources and strategies for gaining teaching skills, developing dissertation research, addressing dissertation committee relationships, building healthy work-life balance, entering the job market, and more. All PDW organizers, panelists, and facilitators are current PhD students or have graduated within the last year, with a wide variety of institutions. They offer their experiences as examples for mentorship. After all, no one else understands the concerns of doctoral students better than current doctoral students.

Transitions in Mentoring Relationships from Early to Mid-career

Presenter: **Tory H. Hogan**, *Ohio State U.*

Presenter: **Kevin David Frick**, *Johns Hopkins Carey Business School*

Presenter: **Jill A. Marsteller**, *Johns Hopkins Bloomberg School of Public Health*

Join us for an engaging and insightful professional development workshop centered on the evolution of mentoring relationships from early to mid-career stages. This workshop will delve into the reciprocal nature of mentoring, exploring how individuals transition from being mentees to mentors while still benefiting from guidance themselves. Our goal is to understand what makes these relationships valuable and sustainable over time. We'll evaluate the characteristics of successful mentoring dynamics and explore potential adaptations as relationships evolve, whether they become more reciprocal, peer-based, or take on a collegial nature. Additionally, we'll focus on practical strategies to facilitate, encourage, and manage these transitions effectively. This workshop will be interactive, featuring introspective sessions, participant contributions, brainstorming activities, and reflective discussions. We'll explore themes such as defining mentoring goals, identifying key attributes of successful mentoring relationships, sharing experiences of ending or evolving mentorships, and strategies for maintaining value in mentoring connections beyond their initial 3-5 years. Ultimately, participants will gain actionable insights into fostering mutually beneficial and enduring mentoring relationships. This knowledge will prove invaluable in managing or participating in mentoring programs, empowering professionals to nurture ongoing growth and collaboration within their professional networks.

Presenter: **Jarrood Haar**, *Massey U. Business School*
Presenter: **Stefan Jooss**, *U. of Queensland*
Presenter: **Jordi Trullen**, *ESADE Business School*

In a turbulent world, organizations must be ready to anticipate changes in the economical and societal context, urging managers to adjust business priorities and dynamically redirect resources, specifically talent. As this requires a certain level of flexibility from many, companies must reevaluate their talent strategies to stay successful (e.g., Gallardo-Gallardo & Collings, 2022), and the interest in the field of talent management is growing. This is reflected in an increasing number of talent management publications (e.g., Pagan-Castaño et al., 2022), the introduction of new talent philosophies (e.g., Meyers et al., 2020), a call for total talent management that expands its scope to flexible workers (e.g., McKeown & Pichault, 2021) and an overall need for more agile approaches to managing talent (e.g., Cappelli & Tavis, 2018; Harsch & Festing, 2020) that are better suited for the new and deconstructed nature of work, characterised by new complexities (e.g., Rogiers & Collings, 2023). Hence, strategic workforce planning (SWP; Sparkman, 2018), skill-based talent management practices (e.g., Ammerman, Groysberg & Rometty, 2023; Collings & McMackin, 2023) and other concrete actions are adopted by organizations as avenues to become more proactive from a talent perspective. This PDW will explore how to reimagine the future of talent management by looking into avenues aimed at strengthening a dynamic view on talent and expanding proactive talent interventions. Research insights and reflections will be shared to identify opportunities for co-creation at the intersection between (1) innovative talent practice and research (2) dynamic talent policies, and (3) purpose-driven talent management.

Innovation Through Conflict: Managing Divergent Exchanges Between Cross-Sector Partnerships

Organizer: **Ivory Simms**, *Weatherhead School of Management, Case Western Reserve U.*
Organizer: **Pierre El Haddad**, *INSEEC Grande Ecole*
Organizer: **Marc El Haddad**, -

This workshop explores the strategies that transform conflict into innovation in cross-sector partnerships. Cross-sector (non-profit, public, and private) organizations join partnerships to address complex societal and management challenges. They are good for business, government, and society at large. However, cross-sector partnerships are not without controversy - they involve multi-sector stakeholders with diverging interests and opinions on how to achieve shared goals. As cross-sector groups enter partnerships, conflict emerges through difference of expectations and outcomes. The workshop focuses on the tradeoffs that occur between cross-sector groups, and how to leverage conflict for innovation. The workshop also focuses on the role a consultant should play in moderating conflict and mediating innovation, and whether this role should be confined to the mandate of the consultant or remains at their discretion. This workshop benefits management consultants, scholars, and practitioners in non-profit, public, and government sectors.

- Participant: **Tova Sanders**, *Western Michigan U.*

In the spirit of “Innovation for the Future,” our PDW delves into the dynamic landscape where management consulting meets cutting-edge digital technology. In this PDW, we explore how forward-thinking management consultants can leverage advances in AI to shape stakeholder interactions, redefine consulting approaches, and provide expert insights that transcend the capabilities of Generative AI. This session delves into the practice strategies for refining consulting methodologies through the integration of digital tools, emphasizing the indispensable role of human intuition and judgment to guide our organizational consulting journeys. We invite those who have been experimenting with the use of various AI-driven Methodologies to exchange ideas on how to leverage these tools across the five phases of consulting. The interactive workshop will focus on lessons from the field, provide a forum for exchange with participants, and then culminate in a plenary session that explores the research agenda and practices needed to innovate for the future. The session brings together researchers, consultants, and doctoral students with seasoned scholar-practitioners and practitioner-scholars, creating a forum through which ideas can be shared and plans can be drafted to apply and disperse the research and practice achievements of scholars and practitioners in the field of management and organization consulting with the overarching goal of innovating for the future.

Empirical & Methodological Examinations of the Past in Family Business & Entrepreneurship Research

Organizer: **William Foster**, *U. of Alberta*

Presenter: **Vern Glaser**, *U. of Alberta*

Presenter: **Ashley Hockensmith**, *U. of Massachusetts, Amherst*

Presenter: **Trevor Lyle Israelsen**, *Penn State Smeal College of Business*

Presenter: **Christina Lubinski**, *Copenhagen Business School*

Presenter: **Matthew CB Lyle**, *Binghamton U.*

Presenter: **Jennifer Sloan**, *Alberta School of Business*

Presenter: **Kwelina Thompson**, *Massachusetts Institute of Technology*

The goal of this PDW is to interrogate and discuss how the past has been, and might be, empirically and methodological examined by researchers interested in family businesses and entrepreneurship. There is a growing awareness that the past is important to management and organizational scholars. Over the past decade, there has been an increasing focus on the way that managers use history strategically, how memories are negotiated and developed in and around organizations and how historical research can illuminate our understanding of multigenerational companies and the evolution of entrepreneurship across time. This PDW aims to create a setting where scholars from management history, entrepreneurship, and family business can share their approaches for engaging with history and memory, either methodologically or empirically, to study the past of family businesses and/or entrepreneurship. The intention is to expose these studies as viable and exciting sites for current research and to demonstrate how research about the past can help illustrate new findings and theoretical developments in family business and entrepreneurship.

Participant: **Melissa Valentine**, *Stanford U.*

Management departments have largely fallen into camps that center on either “micro” or “macro” research even if scholarship that spans those camps is commonly espoused as valuable. In this boundary-spanning Professional Development Workshop (PDW), we will present brief introductory talks on the past, present, and prospects for “meso” research(ers); solicit thoughts from each PDW attendee; cultivate discussion through a set of well-organized roundtables; consider report-backs from the roundtables; and, hear integrative thoughts from senior editors and deans. While acknowledging evidence and experiences that indicate the challenges that “meso” research(ers) can face, the PDW will focus constructively on ways that individuals and institutions (e.g., departments, schools, and journals) can do a better job enacting the popular espousal of research that is integrative of “micro” and “macro” perspectives, approaches, and tools.

Organizer: **Barbara Galleli**, *Federal U. of Parana*

In line with the AOM 2024 theme, "Innovating for the Future," and the ONE Division's commitment to guiding organizations toward sustainability, this PDW tackles the pressing issue of aligning Circular Business Models (CBM) with Sustainable Development (SD). Tailored for scholars specializing in sustainable business practices, CBMs and sustainable entrepreneurship, our interactive PDW fosters an exchange among experts to discuss and develop novel sustainability-oriented research ideas. Going beyond theory, we want to explore the relation between CBM and SD, guided by three key objectives: (1) create scientific knowledge on CBM alignment with SD, (2) derive practical pathways through methodological insights, and (3) build an international community of CBM researcher to exchange knowledge, conduct joint research and support paper development. The PDW unfolds in two phases, commencing with a panel led by leading scholars in the fields and moderated by PhDs from about 10 different countries. Distinguished speakers discuss sustainable CBM solutions on inter- and intra-organizational levels, with a particular focus on real-world application. Themes include a conceptual discussion of the circular economy and SD, CBM sustainability strategies and innovation, circular supply chains, sustainable ecosystems, and suitable research frameworks. In the following topic-specific roundtables, hosted by the panellists, attendees can discuss in more depth their key interests, research and topics, exchange insights and empower each other.

1. Pre-registration is highly encouraged to facilitate smooth organization. We will distribute a Google Forms link through various social media platforms for pre-registration. The questionnaire provided in the Google Forms will assist us in assigning participants to thematically suitable roundtables within the PDW. Participants can also use the questionnaire to indicate topics they consider important for discussion in the panel. Here you can find the Google Forms Survey: <https://forms.gle/dFwefYk8qCfv4xfT6>. For further inquiries you can reach us at cbm4sd@gmail.com. 2. Walk-ins are explicitly encouraged and welcomed! 3. In the event of space constraints, preference will be given to registered participants. We aim to accommodate all attendees to the best of our ability while ensuring a conducive environment for meaningful engagement.

Management scholars have started to suggest a diverse set of actions to tackle an ongoing crisis of integrity, robustness, and ultimately the impact of scientific findings. These include, but are not limited to, pre-registration, registered reports, causal identification, better measurement, or data sharing. Yet, many of these approaches are still used scarcely. In addition, despite these measures serving the common goal of increasing the credibility of management research, so far very little exchange between advocates for different solutions has taken place. Accordingly, this PDW aims to accomplish two goals: First, it provides PDW participants with a hands-on introduction to developments and best practices in management research that have the goal of improving research credibility. Second, the PDW contributes to developing a “credibility community” in which researchers from different fields and with different backgrounds come together to shape a future of management research characterized by high trustworthiness, robustness, and transparency. Ultimately, the PDW’s topic contributes to more rigorous theory testing and a greater policy impact of management research.

We warmly invite all conference attendees to join us for this PDW - no prior registration is necessary, so feel free to come along and engage in this enriching experience.

Session Chair: **Robert A. Phillips**, *Schulich School of Business, York U.*

This PDW explores the concept of Corporate Sustainability (CS), specifically its meaning and its imperatives & challenges for innovation, policy and purpose of corporations, and thus for business & management researchers and educators. The presenters are editors and authors of a recent graduate level text (Rasche et. al. Eds. 2023 Corporate Sustainability: Managing Responsible Business in a Globalised World Cambridge; review in AMLE <https://doi.org/10.5465/amle.2023.0320>). The PDW addresses the imperatives & challenges that CS brings which go well beyond those of the conventional business models of shareholder and stakeholder capitalism. These include engagement with full societal and planetary responsibility, the integration of market approaches, and a more collaborative relationship with regulators, public and private. The imperatives and challenges are addressed in respect of four key questions: how does CS relate to corporate social responsibility?; how does CS relate to government policy?; how does CS relate to international development?; what are the leadership and governance challenges of sustainability transitions? The Panel Discussion brings in questions arising in neighboring fields and from the global South. PDW participants frame the concluding discussion with their questions about the teaching and research issues and skills raised by CS. It is suggested that participants familiarize themselves with the opening chapter of the text, 'Corporate Sustainability – what is it and why it matters': <https://www.cambridge.org/highereducation/books/corporate-sustainability/1D6311AD91139D896E6A119FEB82DB7C/resources/instructor-resources/1922634DC8EBFE635EBF38EA27E51498> (go to 'General Resources')

From Stress to Success: Empirical Insights and Coping Strategies in Academia

Presenter: **Melanie Vilser**, *U. of the Bundeswehr Munich*
Presenter: **Irmgard Mausz**, *ISM International School of Management*
Presenter: **Annabelle Hofer**, *U. of Cologne*

Academics face unique challenges that put them at risk of developing stress and mental health problems. These challenges include null results, rejected articles, publication pressure, and dependence. Moreover, academics are facing high levels of job and career insecurity (Barthauer et al., 2020; Spurk et al., 2016; Spurk et al., 2022; Spurk et al., 2021; Vilser et al., 2022). Such challenges are linked to harmful consequences such as low objective and subjective career success (e.g., small number of publications and low levels of career satisfaction, respectively). Surprisingly, little has been done to address these issues and promote well-being among academics to foster their sustainable career development in academia. To bridge this gap, we are pleased to offer a 2-hour professional development workshop for 25 participants aimed at enhancing mental health and well-being in academia. Our primary goal is to equip academic professionals (1) with theoretical and empirical insights as well as (2) coping strategies that can be directly applied in academia drawing from the Effort-Reward Imbalance Model (Siegrist, 1996; Vilser et al., 2022), Transactional Stress Model (Lazarus & Folkman, 1984; Shen & Slater, 2021), and Sustainable Careers Framework (De Vos et al., 2020). We aim to contribute meaningfully to the conference's theme by fostering resilience and innovation within academia, thereby shaping a future that prioritizes the well-being and sustainability of academic careers.

Guided Meditation Practices Toward Inner-Balance, Inclusion, and Innovation

Facilitator: **Joan F. Marques**, *Woodbury U.*

Facilitator: **Satinder Dhiman**, *Woodbury U.*

Facilitator: **Gerald Biberman**, *U. of Scranton*

Facilitator: **Sharda Nandram**, *Nyenrode Business U.*

Over the past decades, meditation has gained the prominence it long deserved in societies throughout the world. As dissatisfied workers called for more attention to their wellbeing, many contemporary workplaces have created facilities for employees to meditate, and while this may partly be attributed to leaders' open-mindedness and their will to facilitate employees' needs, the effects of allowing meditation for organizations should not be overlooked. Meditation is known to enhance employees' self-directed learning (SDL) readiness, leading to a surge in their organizational innovative ability as well as improved organizational performance (Li-An, 2011). With today's organizations facing a steady flood of surprises in a multitude of areas, they are in high need of continuous improvement and innovation to sustain competitive advantages. Among its many advantages, meditation calms the nerves, enhances breathing, increases brain functions, soothes pain, results in better sleep, improves focus and concentration, and balances mental and emotional health (Lugo, 2020). Understanding that meditation leads to numerous personal and performance-related benefits (Marques & Dhiman, 2009), we aim to use this PDW to jointly engage in short meditative practices, each with a different focus, but all aimed at increased wellbeing and collective improvement.

Platform Organizations and Societal Change

Organizer: **Georg Reischauer**, *WU Vienna & JKU Linz*
Facilitator: **Cristina Alaimo**, *Luiss U.*
Facilitator: **Annabelle Gawer**, *U. of Surrey*
Facilitator: **Stefan Haefliger**, *Stockholm School of Economics*
Facilitator: **Evelyn Rita Micelotta**, *Telfer School of Management, U. of Ottawa*
Facilitator: **Georg Reischauer**, *WU Vienna & JKU Linz*

More and more scholars have started to examine the role of platform organizations in societal change. Despite advances, we still know too little about (1) the processes, practices, and rhetoric through which platform organizations promote new knowledge paradigms, social structures, and culture; (2) how, when, and with what effects platform organizations alter established organizations and forms of organizing; and (3) the responses to platform organizations, and the dynamics these responses set in motion. Against that background, this PDW aims to inspire future research (Part 1) and to give feedback on working papers on this topic (Part 2). Part 1 can be attended by everyone. Part 2 requires the submission of a short paper. The PDW is linked to a special issue in Organization Studies.

Please apply for Part 2 until Monday July 22 2024 by filling out a short form and uploading a short paper (max. 5 pages without references and tables/figures) here: <https://forms.gle/Utc8YmfzJy3ebTYe9>

Strategic Management Teaching Clinic: Balancing Excellence in Teaching, Research, and Service

Organizer: **P. Konstantina Kiouisis**, *Washington U. in St. Louis, Olin Business School*

Organizer: **Craig Armstrong**, *U. of Alabama*

Panelist: **Jay B. Barney**, *U. of Utah, David Eccles School of Business*

Panelist: **Melissa Schilling**, *New York U.*

Panelist: **Nicholas Argyres**, *Washington U. in St. Louis*

Panelist: **Russell Coff**, *Wisconsin School of Business*

Achieving a balance between teaching, research, and service is vital for both career advancement and personal well-being in academia. This workshop aims to provide perspectives on this challenge, emphasizing the synergies between excellence in teaching and other academic roles. The session will discuss integrating research into teaching and offer strategies for managing and improving teaching effectiveness. It will also provide actionable approaches for achieving and maintaining excellence in teaching, particularly given the increasing demands of other professional areas throughout an academic career. Enriched by four distinguished speakers from diverse academic backgrounds, the session will encourage an interactive environment where participants can engage directly with the panel.

Innovative Strategies to Unmask and Eliminate White Delusion in the Organization

Participant: **Stacey Morin**, *Marymount U.*

Participant: **Jennifer Robin Bishop**, *Impact of Gender Diversity on work Performance at Work place*

Participant: **Sherida Haughton**, *Marymount U.*

Presenter: **Stacey Morin**, *Marymount U.*

Presenter: **Jennifer Robin Bishop**, *Impact of Gender Diversity on work Performance at Work place*

Presenter: **Sherida Haughton**, *Marymount U.*

The professional development workshop (PDW) illustrates the need for corporations to apply strategies for unmasking and eliminating white delusion in the organization by innovating for the future with policy and purpose. In the dynamic landscape of contemporary organizations, the pursuit of diversity, equity, and inclusion (DEI) is indispensable for success. The PDW explores the phenomenon of white delusion, a term coined by the author, Stacey Morin, which signifies a lack of awareness and denial of systemic racial disparities in marginalized communities (Morin, 2023a). This research critically examines white delusion within organizational settings, seeking to unravel its complexities and understand its impediments to progress toward a more inclusive and equitable culture. The unique contribution lies in Morin's, Haughton's, and Bishop's conceptualization of white delusion, leading to the development of the Unmasking White Delusion: DEI Model (Morin, 2023b). Grounded in the framework of critical race theory (CRT), this model explores the denial, evaluation, and implementation phases to address and eliminate white delusion within organizations. The innovation of this research lies in its comprehensive examination of manifestations of white delusion, encompassing biases, stereotypes, and systemic issues, thereby contributing to the ongoing discourse on diversity and inclusion and filling a knowledge gap. The PDW provides proactive measures and strategies for effectively addressing and eliminating white delusion and tangible actions across the three distinct phases.

Accreditation Values and Reporting: The Impactful Five Pedagogy as a Tool

Host: **Meredith Conlin Storey**, *PRME Secretariat / United Nations Global Compact Office*
Facilitator: **Samantha Thompson**, *PRME Secretariat / United Nations Global Compact Office*
Facilitator: **Cheyenne Maddox**, -
Participant: **Zein Tarek Ibrahim**, *PRME Secretariat / United Nations Global Compact Office*

As the world changes, the standards for accreditation are evolving. There is a need for change in higher education and accreditation institutions are noticing. The Association to Advance Collegiate Schools of Business (AACSB), the Association of MBAs (AMBA), and the European Foundation for Management Development's (EFMD) are the three leading international accreditation bodies for many business schools. Over the years, there has been a notable shift in the content of criteria for accreditation towards focusing on impact, teaching, and developing of skills. These three components are the foundation on which the Impactful Five (i5) project is built. The i5 project was developed by The Principles for Responsible Management Education (PRME) initiative of the UN Global Compact. PRME's mission is to transform management education and develop the responsible decision-makers of tomorrow to advance sustainable development. The i5 project focuses on integrating five characteristics into the pedagogy and teachings of business schools. The five characteristics- meaning, joy, social interaction, active engagement, and iteration –will provide graduates with the holistic skill set needed to create the largest impact in their careers, society, and on the world. In this PDW, participants will be engaging and discussing how the i5 can be used as a tool to aid business schools with reporting as well as acquiring and maintaining accreditation.

In line with the conference theme of "Innovating for the Future," our workshop offers a hands-on exploration of the dynamic AI landscape and its impact on management education. We aim to unlock fresh insights and evidence-based contributions that will shape a brighter future for both management educators and learners. As management educators, we stand at the forefront of this transformative AI wave, facing the challenge of aligning our pedagogical approaches with rapidly evolving technology. To address this challenge, our PDW provides practical insights and a comprehensive AI toolkit that participants can seamlessly integrate into their educational practices. Throughout this workshop, we will delve into the practical applications of AI in the classroom, offering valuable opportunities to explore and adopt best practices. Our goal is to equip MED members with the knowledge and tools needed to enhance student engagement, encourage innovative teaching methods, and navigate the AI-driven educational landscape effectively. This immersive experience will empower delegates to embrace AI's potential in education, providing them with a ready-to-use toolkit of AI applications to enrich their teaching and enhance their students' learning journey. In an era of AI-enabled learning, we guide educators on how to consider and integrate AI into management education processes, delivering value to students, and creating engaging learning experiences.

Presenter: **In-Sue Oh**, *Fox School of Business, Temple U.*
Presenter: **Stephen Hyrum Courtright**, *U. of Iowa*
Presenter: **Shannon G. Taylor**, *U. of Central Florida*
Presenter: **Kelly Schwind Wilson**, *Purdue U., West Lafayette*
Presenter: **Joyce Bono**, *U. of Florida*

This PDW is organized by the OB Division's Making Connections Committee. It is geared toward providing an opportunity for those who have been promoted to full professor (or will in the near future) to gain insights from experienced full professors on how they can continue to develop themselves and contribute to academia in various ways. This PDW will feature insights from more senior full professors in the field with established reputations and varied experiences of being a full professor. We will have short presentations from a panel of full professors followed by a moderated question and answer session with the more experienced professors and conclude with a keynote speaker. The panelists will share their experiences of being engaged in various service roles within their departments and colleges, as well as service to the broader scholastic community, such as editorial roles with journals or professional association leadership. Panelists will also share their experiences with mentoring PhD students and other junior faculty members as a source of meaningful contributions. This PDW will provide encouragement and guidance for recently promoted full professors as they strive to make impactful contributions to their institutions and the broader academic community.

The Behavioral Theory of the Firm (BTOF) has had a foundational impact on the development of much work in both organization theory and strategy. We seek to build an annual PDW that will be the touchstone of BTOF theoretical development (AOM 2024 will represent the fourth edition). The PDW will link past research with future opportunities, both narrowly within the BTOF and, more broadly, reaching out to research domains in which the BTOF is a substantive building block. We provide a discussion forum where scholars can develop a shared understanding of BTOF research and insights for developing research to advance theory. This year's theme is AI. We will engage in a theory-focused discussion of AI's implications for organizations — how recent AI developments will cause us to revisit, revise, and potentially reconstruct core building blocks of the BTOF. As in previous years, the PDW will follow a two-part format: (1) Keynote speakers. Zur Shapira (NYU), Dan Levinthal (Wharton), Anne Miner (Wisconsin), and Hart Posen (Dartmouth) will focus on how the emergence of AI in the wild, within the processes and practices of organizations, will impact our understanding of the foundational building blocks of the BTOF. (2) Roundtable discussions. Each table discussion will be focused on a different domain of BTOF research. Prospective participants will apply by submitting a 2-page description of a research idea to be explored with the discussants and other participants. Each roundtable discussion will be guided by two experienced scholars who work in the BTOF tradition.

Participation in Part 1 of the PDW does not require registration. To participate in the roundtable discussion, please fill out the short registration form on this link (https://umich.qualtrics.com/jfe/form/SV_ellaPlmA2RznNOK) by July 14, 2024. This will help us assign participants to roundtables based on your research interests. We will confirm the registration to this PDW by late July. If you have any questions, please contact btow.pdw@gmail.com.

From Theory to Empirics: On the Opportunities and Challenges of Using Public Datasets

Session Chair: **Konstantin Felix Scheuermann**, *UCL School of Management*
Organizer: **Sarah Wolfolds**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*
Organizer: **Angela Aristidou**, *UCL SoM & Stanford CASBS*
Panelist: **Matt Marx**, *Cornell U.*
Panelist: **Yian Yin**, *Cornell U.*
Panelist: **Kristina Steffenson McElheran**, *U. of Toronto*
Panelist: **Leandro Nardi**, *HEC Paris*

The academic discipline of strategy has a strong history of developing comprehensive theories to explain business phenomena. However, there is a relatively younger history of empirically validating these theories with robust, quantitative methods. Traditional approaches in strategic management research often involve using specialized, proprietary data, such as datasets from Compustat, or relying on scholars collecting their own specialized data. These approaches, while valuable, limit the replicability and generalizability of research findings. In addressing this limitation, this workshop explores the potential of underutilized, publicly available datasets provided by scholars and governmental entities. The workshop is organized around three critical questions: 1.) What is the value of public datasets in enhancing strategic management research? 2.) How can the intentional data collection, with accessibility in mind, contribute to the field's advancement? 3.) What opportunities and challenges do researchers encounter when using public datasets in strategy research? We will reflect on these questions with panel presentations from scholars (junior and senior) with past and current research programs using publicly available data and public data teams. These presentations will be followed by interactive sessions, including Q&A and roundtable discussions, to facilitate deeper exploration and discourse on the topics presented. To ensure a focused and engaging discussion, registration will be required for participation in the workshop.

Professional Doctorates: Addressing Challenges in Program Design, Management and Student Supervision

Presenter: **Volker M. Rundshagen**, *U. of Applied Sciences Stralsund*
Presenter: **Sascha Albers**, *U. of Antwerp/Antwerp Management School*
Presenter: **Jenny Gibb**, *U. of Waikato*
Presenter: **Steffi Weil**, *Antwerp Management School*
Presenter: **Markus Raueiser**, *Cologne Business School*

With an emphasis on international perspectives and interaction geared towards the sharing of experiences and ideas, we will elaborate on the practices, guidelines and challenges in the field of professional doctorate programs in management education. Seasoned professors from different types of European and Oceania higher education institutions will share their experiences through the respective lenses of promoters, program managers, department heads, doctorate students and mediators in practitioner PhD/DBA education. The combination of different backgrounds and roles in doctorate education allows for a multi-faceted debate and rich roundtable interaction with workshop participants. This PDW is of interest to both faculty members of early to senior career stages, faculty managers and PhD students, especially in dedicated positions or projects at the academia-practice interface. Envisioned key takeaways are the elaboration of common ground, best practices, and jointly sketched ideas—even potential remedies—for some of the pressing issues encountered in professional doctorate education.

Digital Technologies as Catalysts for Entrepreneurial Activities

Organizer: **Marie Madeleine Meurer**, *Jönköping International Business School, Incoming Rotterdam School of Management*
Host: **Jan Recker**, *U. of Hamburg*
Facilitator: **Lucia Naldi**, *Jonkoping International Business School*
Facilitator: **Jiyoung Kim**, *Jonkoping International Business School*
Distinguished Speaker: **Per Davidsson**, *Jönköping International Business School*
Facilitator: **Sarfraz Ali Kyani**, *Queensland U. of Technology*
Panelist: **Sirkka Jarvenpaa**, *U. of Texas at Austin*
Panelist: **Hannes Rothe**, *U. of Duisburg-Essen*
Panelist: **Howard Aldrich**, *U. of North Carolina*
Host: **Dominic Michael Chalmers**, *U. of Glasgow*
Facilitator: **Samira Nazar**, *Australian National U.*
Panelist: **Satish Nambisan**, *Weatherhead School of Management, Case Western Reserve U.*

There is a growing interest to understand better how digital technologies enable entrepreneurial activities (Nambisan, 2017). The literature points to digital technologies making entrepreneurial processes and outcomes less bounded, compressing, conserving, or otherwise impacting resource requirements in venture creation, or providing other entrepreneurially beneficial affordances when being at the core of a new venture idea. However, these studies often exist in theoretical silos, with information systems and entrepreneurship literature approaching digital technologies from distinct, and often disconnected angles. The theoretical perspective of 'external enablement' (EE), which views digital technologies as actor-independent factors that foster entrepreneurial activities (Davidsson, 2015; Davidsson et al., 2020; von Briel et al., 2018), offers a promising avenue to bridge these divides. Hence, focusing on digital technologies as EE, this PDW aims to foster a more integrated perspective on how digital technologies catalyze entrepreneurship. In particular, this PDW explores the usefulness of the EE framework to stimulate multidisciplinary research on digital technologies and entrepreneurial processes and outcomes. To accomplish these objectives, this PDW includes two group activities and a panel discussion. While the first part of the PDW engages participants in exploring the EE construct and framework for studying digital technologies, the second part mixes up participants in multidisciplinary groups and encourages them to apply the EE framework in generating empirical research questions related to given EEs (e.g., AI, blockchain). Lastly, a multidisciplinary panel discussion will be facilitated, triggering research at the intersection of information systems and entrepreneurship in connection to EE.

HCM Implementation Science

Organizer: **Michael Richard Cauley**, *Vanderbilt U.*
Presenter: **Cheryl Mitchell**, *Gustavson School of Business, U. of Victoria*
Presenter: **Gina Phelps Thoebes**, *U. of Akron*
Presenter: **Curtis Merriweather**, *Duke U.*

The gap from research to implementation in healthcare settings is well-recognized and has advanced the scientific study of methods and strategies known as implementation science over the last two decades. However, many management scholars lack an understanding of what implementation science is and how to apply these theories, models, and frameworks to problems of practice. We propose a contributing factor to this academic-practitioner gap is a lack of understanding of how management science and systems engineering have informed implementation science. The aim of this professional development workshop is to provide researchers with an understanding of the theories, models, and frameworks that are the sine qua non of implementation science. Building on this, the workshop will delve into practical applications of implementation science within healthcare settings. Following a presentation on theories, models, and frameworks foundational to implementation science, we will use round table discussions where participants can learn to apply theories, models, and frameworks to their research and/or healthcare management challenges. Additionally, the workshop will facilitate collaborative learning, encouraging researchers and practitioners to share experiences and insights to foster a deeper mutual understanding of the interdisciplinary nature of implementation science. By bridging the gap between academic research and practical application, the workshop aims to equip participants with the tools and knowledge necessary to understand implementation science frameworks, as well as effectively translate implementation science principles into tangible improvements in healthcare settings.

Facilitator: **Patrick Wright**, *U. of South Carolina*

The purpose of this professional development workshop (PDW) is to offer AOM members the opportunity to learn about teaching HR using case studies. The case method occupies an important role in HR and management education. We aim to facilitate discussions between experienced expert educators of the case method and AOM members desiring to use this instructional approach more effectively. This session will give attendees insight to how some of the most experienced teachers navigate the challenges of using cases in their classes. To achieve this, we have assembled a stellar panel of world-renowned academics and teachers to share their advice by leading roundtables catering to specific topics relevant to case teaching. Topics will include course design, setting student expectations, teaching cases online, selecting cases, using your own cases, working with local companies, using video clips, and incorporating current events. Attendees will have the opportunity to visit four roundtables to interact with our experts during the session.

Dynamics of Institutional Embeddedness in International Alliances: An Emerging Market Perspective

Participant: **Ashish Malik**, *Ashish Malik, Professor, Queen's U. of Belfast, UK*
Participant: **Surender Munjal**, *Aston Business School*
Participant: **Swetketu Patnaik**, *Anglia Ruskin U.*
Participant: **Shubhabrata Basu**, *IIM Indore*
Participant: **Sujay Sinha**, *U. of East London*
Participant: **Paresha N. Sinha**, *U. of Waikato*
Participant: **Nandakumar Mankavil Kovil Veettil**, *Indian Institute of Management, Kozhikode*
Participant: **Pawan S. Budhwar**, *Aston U.*
Participant: **Ramakrishnan Raman**, *Symbiosis international (Deemed U.)*

Institutional theorists enunciate that strategic and economic activities are embedded in social and normative contexts, that influence social actors to seek legitimacy or approval for their actions. Fundamentally, social and regulatory embeddedness is an important condition to fulfil for organizational survival and success. Whereas most studies in international business explore the dynamics of institutional arrangements in the context of issues relating to host countries, there is lack of insights into implications of embeddedness of partner firms in their respective home country institutions on international strategic alliances, particularly as alliances evolve over time. We conclude the paper by discussing how embeddedness of individual organisations in their national institutional contexts influence behaviour of partnering firms, which impacts both the compatibility and complementarity issues between them. Put simply institutional complexities in emerging economies, in particular, create conditions for tension and instability in international strategic alliances.

Annual Meeting Career Fair Meet & Greet Networking Day

Organizer: **Wendy A. Kramer**, *Academy of Management*

For the first time, AOM Career Services is offering an open college-fair format event for both those on market and those recruiting new faculty/PhD students. This Meet & Greet provides a great way to speak with those recruiting faculty and/or PhD students without an appointment. Recruiting teams who sign up to participate will be noted on the Career Fair Event page. This event is open to all AOM Annual Meeting participants.

Publishing in AMD: The Premier Journal for Empirical Exploration in Management

Presenter: **C. Chet Miller**, *U. of Houston*

Curious about exploring new or unexplained phenomena? Have interesting findings that you can't explain using existing theories? Have a desire to be more creative in presenting your research? If so, join us to learn more about publishing in Academy of Management Discoveries (AMD). In this session, Chet Miller (Editor in Chief), Sue Cohen (Deputy Editor), and Prithviraj Chattopadhyay (Deputy Editor) will provide the inside story on publishing in a journal that has been capturing the collective imagination of our research community, and having effects on policy and practice as well. Participants' specific questions on paper ideas will be taken up.

New Frontiers of Mixed-Methods Research

Organizer: **Matteo Devigili**, *Bayes Business School*
Organizer: **Mara Guerra**, *Bayes Business School (formerly Cass), City, U. of London*
Presenter: **Audra Wormald**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Presenter: **Santi Furnari**, *City, U. of London*
Presenter: **Giada Di Stefano**, *Bocconi U.*
Presenter: **Milan Miric**, *U. of Southern California - Marshall School of Business*
Panelist: **Stefano Brusoni**, *ETH Zürich*
Panelist: **Oliver T. Alexy**, *Technical U. of Munich*
Panelist: **Benjamin L. Hallen**, *U. of Washington, Seattle*
Panelist: **J.P. Eggers**, *New York U.*

The ever-growing complexity of organizational and managerial phenomena necessitates innovative and rigorous empirical research designs. Mixed-methods research harnesses the strengths of both qualitative and quantitative methodologies to enhance conceptual rigor and problem-solving capabilities while also stimulating novel research questions. Mixed-methods research is an exciting and rapidly evolving methodological area, where new and innovative designs are continuously being developed and tested. This Professional Development Workshop aims to help scholars familiarize themselves with emerging mixed-methods designs, encourage community-level discourse on opportunities and challenges, and align the expectations of authors, reviewers and editors on what is sound mixed-method research.

The PDW has three components. The first component -- open to all AoM-ers without registration -- consists of a series of presentations on innovative mixed-method designs from a selected group of speakers: Audra Wormald (University of North Carolina at Chapel Hill); Santi Furnari (Bayes Business School); Giada di Stefano (Bocconi University); Milan Miric (Marshall School of Business). In the second component, a panel of journal editors comprising Stefano Brusoni (ETH Zurich), Oliver Alexy (TUM School of Management), Benjamin Hallen (University of Washington), JP Eggers (NYU) will discuss what makes for robust and publication-level research using mixed methods. Like the first one, this component is open to all AoM-ers without registration. In the third component, participants registered for the PDW will part-take in a round-table, paper discussion session. Each mentor -- chosen among presenters and panellists -- will be assigned a few projects sharing the same mixed-method design and provide participants with feedback comments on their work. Info and Registration Send a message to mixedmethodsfrontiers@gmail.com to contact the PDW organizers, Mara Guerra and Matteo Devigili. If you want to part-take in the round-table session, register using the Google form available <https://forms.gle/HPrdkvATktgUVhDc9> by July 26th. We will review the submitted applications and notify participants on a rolling basis.

Innovating How We Teach Innovation: Innovation at the Extremes

Organizer: **Tucker James Marion**, *Northeastern U.*

Organizer: **Sebastian Fixson**, *Babson College*

Organizer: **Victor Seidel**, *Babson College*

Presenter: **Frank T. Piller**, *RWTH Aachen U.*

Presenter: **Elizabeth Gerber**, *Northwestern U.*

In this PDW, we will explore three topics related to teaching innovation at the extremes. We take different perspectives on how innovation is being pushed in different directions in the context of new challenges and technological affordances. The first topic is centered on how we can best equip our students to address wicked problems and grand challenges. As management educators, how might we develop better approaches to help our students frame problems to address such challenges, and how would we teach related skills? The second topic is how to manage teaching in an era of exceptionally rapidly advancing technology like Generative AI. How do we stay current and adjust our teaching to effectively accommodate and integrate these advances? Lastly, we explore the emerging interdisciplinary topic of Extreme Design and its implications for teaching. Extreme Design occurs in settings that demand very high-performance levels, force considerable truncation of design tasks, or ask to design for uncommon users and environments. How do we manage these scenarios that require new technologies and methods that span disciplines, and how do we prepare our students for them? There will be short presentations from faculty actively engaged in each area for each of the three topics, followed by a Q&A. In the second half, the PDW features round-table discussions among presenters and PDW attendees to exchange experiences around these topics and report findings to the group.

Crossing Over: Building Cross-Connections Between Innovation and Non-market Strategy

Organizer: **Nur Ahmed**, *MIT Sloan School of Management*
Organizer: **Nicole West**, *U. of Texas at Dallas*
Panelist: **Brian Silverman**, *U. of Toronto*
Panelist: **Nan Jia**, *U. of Southern California*
Panelist: **Aija Elina Leiponen**, *Cornell U.*
Panelist: **Shon R. Hiatt**, *U. of Southern California*

While it has long been recognized that the political environment may help or hinder firms' innovation activities, and that innovation may, in turn, have social impacts that shape the political environment, this topic is receiving renewed and growing interest in light of emerging technologies like AI and global political turbulence. This PDW seeks to build cross-connections between innovation and technology entrepreneurship scholars and non-market strategy scholars with an interest in the interdependence between innovation and non-market strategy. It will introduce scholars to both the fundamental (i.e. national policy, litigation, and regulation) and newly emerging (i.e. political polarization, populism, and employee activism) ways in which the political environment is affecting innovation and technology entrepreneurship, and consider the non-market strategies firms use to mitigate policy uncertainty and the unintended consequences of innovation.

As we start the third decade of Open Innovation (OI), this year's PDW at the Academy of Management marks its tenth edition and a special milestone by exploring the evolution and future of OI. As this PDW continues to be a cornerstone for fostering knowledge exchange, and bridging theoretical insights with practical applications, this year, we delve deeper into the realm of OI, with a focus on four key domains: OI and theory development, OI and new methodologies, OI phenomena, and OI practice. As always, this PDW gathers a large number of very experienced and active scholars conducting research related to OI. These scholars will share and build on their experiences in researching OI to identify some key challenges—and associated opportunities—to help advance research in this domain. The facilitators will introduce and discuss these challenges, which cover a broad range of levels of analysis, various theoretical perspectives, and methodological approaches. Following this, they will moderate roundtable discussions with interested participants. Pre-registration (by submitting a short text with research interests) is recommended for the roundtables, which have pre-defined topics, but attendance is open as long as space permits.

Please register online before the 31st of July, 2024 at <https://tinyurl.com/AOM2024OIPDW>

Teaching and Application of Reflective Practices for Executives and Other Adult Learners

Facilitator: **Konstantin Korotov**, *ESMT Berlin*
Facilitator: **Elizabeth Florent-Treacy**, *INSEAD*
Discussant: **Frank Owen**, *U. of Canterbury Business School*

This PDW focuses on how educators may 1) use reflective practices as part of an experiential learning approach; and 2) help adult students become more confident as they introduce reflective practices into their organizations. Business organizations increasingly seek to establish informal or unstructured meetings for debriefs and reflection in the workplace. Their objective is to create a so-called “safe space” for open-ended review of interpersonal and business challenges. In parallel, management education research has underscored the value of reflective practices for on-going organizational development, and highlights the role of business schools as well-adapted for experimentation and learning related to the internal experience and boundary conditions of “reflective spaces” (Florent-Treacy, 2023; Petriglieri & Petriglieri, 2010; Kets de Vries & Korotov, 2007; Korotov, 2007; Long, 2004). However, establishing constructive reflective practices, in the classroom and in organizations, requires more than simply dedicating time and space. The fundamental question remains: how do adult learners experience such practices, and how might they go on to organize such spaces and work with what emerges? This PDW addresses the challenges inherent to the facilitation of reflective workspaces, for educators as well as business leaders. Participants will be offered an opportunity to engage first-hand with a spectrum of reflective activities. The objective is to show how these activities may be used by PDW participants in their own teaching or organizational work (e.g. Master-level degree programs, continuing education, professional development, short-term in-house training courses, etc.).

Conceptual or theory papers are notorious among management scholars for being difficult to write and publish. Additionally, a perceived scarcity of high-impact outlets for theoretical work leaves many scholars skeptical of their prospects for successfully publishing theory papers. With this 90-minute Professional Development Workshop (PDW), we aim to dispel the myth and mystique around writing and publishing theory papers by bringing PDW participants face to face with (a) editors of several renowned journals that publish theory papers and (b) scholars who have recently published theory papers in top-ranked management journals. The workshop will be divided into two parts. The first segment will be devoted to discussion with a panel of editors from *Journal of Management Studies*, *Journal of Management*, and *Organization Science*. Topics include journal-specific interests and expectations related to conceptual papers, acceptance criteria, and common pitfalls in publishing theory at these specific journals. The editor panel will be followed by a Q&A session. The second part of the workshop will comprise rotational roundtable discussions with scholars who have recently published theory papers in leading management journals. Topics include idea development and refinement, paper planning and writing, review processes, and authors' experiences across various journals.

Pre-registration for this session is required. Applicants will be asked to respond to a few brief questions and specify their roundtable preferences. Space will be allocated on a first-come, first-served basis. Session organizers will review your registration and notify you of your acceptance prior to AOM. Pre-register by July 15 at: <https://forms.gle/yCwheAzvcMw5ZGB6>

This is a two-part PDW. Part 1 provides an introduction to content and text analysis as a research methodology. Presenters will discuss appropriate applications, reliability and validity concerns, complementarities with other methods, data curation, programming, and different computer-aided content analysis tools. Experts will also walk through examples of content analysis techniques from published research and offer publishing tips. Part 1 is open to all AOM attendees and does not require pre-registration. Part 2 of the PDW models MOC's successful "Cognition in the Rough" PDW. Experts and authors will interact in small groups to discuss the content, structure, techniques, and potential journal outlets of submitted proposals. Part 2 requires pre-registration and a submission of a 2-3 page proposal. The deadline for proposal submissions is July 15. Details are available via AOM's Online Communities (e.g., Connect@AOM, Interest Group listservs) or by contacting the organizers at contentanalysis1@gmail.com.

Part 2 of the PDW models MOC's successful "Cognition in the Rough" PDW. Panelist: **Ying Li**, *Hong Kong U. of Science and Technology*
Panelist: **Giacomo Negro**, *Emory U.*
Participant: **Paola Cillo**, *Bocconi U.*

The study of creative industries in the field of management has provided insights on issues that range from institutional transformation to innovation to the entry and expansion of entrepreneurial ventures. Creative industries are both economically and culturally important and they represent a critical area of inquiry for academic research. Indeed, the phenomenological richness and pragmatic significance of various creative industries highlight that there are a range of key issues that can help us to address core research questions within diverse areas of management. Provided the opportunities for future work in this space, this Professional Development Workshop brings together leading scholars who have engaged in the study of creative industries so they can share their perspectives and experiences for others who are working on related research. This will engender an engaging discussion that will appeal to scholars who are already active or may be newly interested in research within this broad domain. Provided the broad scope of the creative industries and the diverse expertise and experiences of our panelists, this workshop expects to deliver a rich intellectual experience for all AOM members and for those members of the OMT, ENT, and STR divisions, in particular.

Historical Injustices in Business & Society

Organizer: **Diego Coraiola**, *U. of Victoria*
Organizer: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*
Organizer: **Sébastien Mena**, *Hertie School of Governance*
Organizer: **François Bastien**, *U. of Victoria*
Organizer: **Nimruji Jammulamadaka**, *Indian Institute of Management, Calcutta*
Organizer: **Colin Patrick Higgins**, *Deakin U.*

This PDW aims to bring together management and organizational researchers interested in the study of historical injustices. We define historical injustices as wrongs committed against individuals and groups in the past that have lasting negative effects in the present (Meyer, 2022). Well-known examples include the colonization of Indigenous peoples in the Americas, the Atlantic slave trade, the Holocaust during Nazi Germany, and Apartheid in South Africa. This PDW will provide an opportunity for scholars developing research on social injustices to think about issues of time and history in relation to their field studies and an invite for researchers looking at historical injustices to connect. This PDW is connected with the Business and Society forthcoming special issue titled “Historical Injustices: Organizational Responsibility, Regret, and Redress”. Participants will be able to learn from one another’s experience researching injustices and receive feedback on their short papers from the guest editor team of the special issue (Diego M. Coraiola, Colin Higgins and François Bastien). We hope the workshop will help sensitize other academics for the importance of the research on sociohistorical injustices and bring together likeminded scholars invested in developing a community of researchers interested in the study of injustices from a business society perspective.

On Making Management Research Interesting in the African Context

Coordinator: **Baba Vishwanath**, *DeGroote School of Business, McMaster U.*

Discussant: **Bruce Lamont**, *Florida State U.*

Discussant: **Moses Acquah**, *U. of North Carolina, Greensboro*

This workshop will explore mechanisms that make a research paper interesting to its audience from an editor's perspective. Couched within a theory of business, it will focus on what makes business scholarship influential. It will present a framework to combine several attributes of influential scholarship and provide a model for producing compelling research. Examples of thought-provoking African scholarship will be presented, and a break down of characteristics that make them interesting and influential will be provided. The workshop will offer suggestions as to what academics and institutions in Africa can do to develop and sustain influential scholarship that is relevant in a global context.

Panelist: **Sarah Wittman**, *George Mason U.*

An estimated 15-20% of the world population is neurodiverse, while over 1 in 8 struggle with some kind of mental disorder (and sometimes both). By providing a frank discussion of how life in academia can be affected by either a neurodiverse condition or a mental disorder, this PDW intends to offer insights and support for faculty and PhD students who struggle with mental health and/or neurodiverse impairments. Panelists, all of whom are successful academics with either neurodiversity or mental health challenges, will share stories from their lives and thoughts regarding best practices.

De-Coupling, Divesting, De-Internationalization: The Role of Sanctions and Stakeholder Pressure

Organizer: **Alexander Settles**, *U. of Florida*
Session Chair: **Ajai Singh Gaur**, *Rutgers U.*
Panelist: **Luis Alfonso Dau**, *Northeastern U.*
Discussant: **Juha Väätänen**, *LUT U., School of Business and Management*
Panelist: **Yannick Thams**, *Florida Atlantic U.*
Participant: **Christopher Hartwell**, *ZHAW School of Management and Law*
Panelist: **Andreja Jaklic**, *U. of Ljubljana*
Panelist: **Tymofiy Mylovanov**, *Kyiv School of Economics*
Panelist: **Nataliia Shapoval**, *Kyiv School of Economics*

International pressure on states that divert from the established world order has increasingly been used to reshape state, firm, and individual behavior. The reaction of MNEs to government and stakeholder pressure to divest or de-internationalize is a phenomenon that has received limited attention in the IB literature (Meyer & Thein, 2014, Soule, et. al. 2014). Using sanctions, political pressure, and stakeholder pressure to modify state decisions and behavior has a long history of use in international relations and trade. There have been over 1300 identified sanctions imposed by governments (Syropoulos et al., 2023) since 1950. The effectiveness of sanctions in negatively affecting sanctioned firms is questionable (Gaur et al., 2023). However, firms have responded to these sanctioning actions by reorganizing their supply chains and restructuring their international holdings and ownership structures. Stakeholders have also pressured multinational firms to exit from states violating the international order. MNEs and their CEOs have recognized the pressure that stakeholders have played in applying pressure to exit Russia (Katsos et al., 2022), and there is evidence that the decision to exit Russia is connected to the political affiliations of the CEO (Thams & Dau, 2023). This PDW panel discussion aims to discuss the types of pressure placed on MNEs, including how sanctions and stakeholder pressure work to disrupt international business ties, how firms respond to these actions, and to review current research on this phenomenon. In so doing, the panel responds to the call for reexamining MNEs' role in the political response to international conflict.

The pervasive impact of colonial legacies on management theory and practice is profound and multifaceted, encompassing issues such as slavery, racism, caste systems, the criminalization and genocide of Indigenous peoples, ecocide, gender binary, patriarchy, and heteronormativity. These legacies manifest in entrenched mindsets, resource inequalities, power dynamics, and management structures that mirror and sustain the asymmetric relationships inherited from the colonial era. The first part of this workshop will feature presentations from scholars with experience researching colonial legacies who will reflect on the current and future state of the field, concluding with a senior scholar as discussant. The second part will open the conversation to all participants, engaging them in roundtable discussions with the panelists and facilitating an open forum for questions. The workshop will conclude with closing remarks from the organizers.

MSR Retreat: Think Less, Think Better

Organizer: **Christina M. Walker**, *Lenoir-Rhyne U.*

Participant: **Soumya Dutta**, *Doctoral Student at Indian Institute of Technology Bombay (IIT Bombay), India*

Participant: **Chandraketan Sahu**, *Indian Institute of Management, Calcutta*

Participant: **Gerald Biberman**, *U. of Scranton*

Participant: **Lisa RaQuel Elliott**, *Management, Spirituality, and Religion*

Participant: **Muhammad Kamran**, *Collegium Civitas, Warsaw, Poland*

This PDW is built on the historical foundations of the Management, Spirituality, and Religion division (MSR) retreat, which was designed to build integrative relational connections that would generate productive collaborations amongst interdisciplinary scholars and practitioners. Through the process of engaging with “unfamiliar ideas,” a key concept in the AOM Theme “Innovating for the Future.” participants will be experimenting with embodied tools in an atmosphere of shared discovery. If successful, this PDW will launch new projects that combine previously disparate approaches into innovative ways of solving key global challenges. The theme of this PDW is taken from the title of a piece, “Think Less, Think Better.” It invites us to engage in spiritual and religious practices that reduce mental overload (think less), so that we can have a stronger ability to engage with the ideas and concepts that we encounter at the AOM conference (think better). Structured over 5.5 hours, participants will be invited to co-create the PDW through sharing spiritual and/or religious practices followed by dialog around how our experiences relate to topics of human flourishing in research, teaching, and practice.

Research Methodology: Best Practices for Rigorous, Credible, and Impactful Research

Participant: **Herman Aguinis**, *George Washington U.*

This PDW covers the entire research process from the beginning (i.e., generating and testing theory) to the end (i.e., enhancing research impact). It is useful for (a) research producers and (b) research consumers, including doctoral students, junior and senior researchers, and journal editors and reviewers. It includes checklists, tables, flowcharts, “how-to,” and “dos and don’ts” guidelines so participants can understand the extent to which methodological best practices are being followed—and so that they can follow best practices in their own research and evaluate the research by others.

Using Philosophical Methods to Explore Purposeful Innovation in Polycrisis

Organizer: **Wim Vandekerckhove**, *EDHEC Business School*
Participant: **Helet Botha**, *U. of Virginia*
Participant: **Mollie Painter-Morland**, *Nottingham Trent U.*
Participant: **Marian Eabrasu**, *EM Normandie Business School, Métis Lab, France*

The purpose of this workshop is to explore how philosophical methods can broaden the sight of management research into the topic area of purposeful innovation in polycrisis. Today's context has been described as in 'polycrisis', a term used to denote how the world is facing its most complex and simultaneously unfolding set of challenges in modern history. The co-occurrence and relationships between climate change, renewed geopolitical tensions, a pandemic and a global market downturn imply compounding effects. A general sense of helplessness and loss of agency is emerging. Therefore, broadening our vision about managing in polycrisis becomes a priority. The workshop is designed to encourage participants to imagine potential, alternative futures that are actionable through purposeful innovations in policy and organization, by inviting them to brainstorm ways in which specific philosophical methods (e.g., thought experiments, axiological analysis, critical theory, discourse ethics, phenomenology, and existentialism) can management studies to help meet social and environmental challenges and face the polycrisis. The organizers invite colleagues to examine questions such as: How can philosophical methods enhance the agency the management discipline to purposefully impact organizations and society? How can philosophical reflection illuminate policy-based solutions to systemic organizational and social problems? How can empirical research broaden our perspectives about innovation in a way that is consistent with moral principles? How can philosophical methods inform the normative-ethical assessment of possible futures and their implications for organizations and society?

New Perspectives on Experimental Strategy

Organizer: **Orie Shelef**, *U. of Utah, David Eccles School of Business*

Organizer: **Robert Joseph Wuebker**, *U. of Utah*

Panelist: **Lyda S. Bigelow**, *U. of Utah*

Panelist: **Arnaldo Camuffo**, *Bocconi U.*

Presenter: **Rebecca Karp**, *Harvard Business School*

Panelist: **Hart E. Posen**, *Dartmouth College, Tuck School of Business*

Panelist: **Scott Stern**, *Massachusetts Institute of Technology*

Presenter: **Jana Thiel**, *EDHEC Business School*

A central finding in the recent work on business experimentation in entrepreneurship and strategy is that experimentation is, fundamentally, a strategic decision. This work has directed attention to several critical choices actors face when crafting an experimental strategy including the design of the experiment, what to do after running the experiment, and the role of stakeholders, theories, the nature of the decision, and the quality of the idea. In this session, we aim to present N leading scholars who are working in this domain, allowing each to share emerging insights from their particular point of view on the topic; conduct a dialogue with the participants as a collective; and field questions from attendees. The purpose of the presentation will be to showcase areas of active research and illuminate opportunities for future work, in particular the elaboration of new theory and how current theory could be further developed through empirical insight. We anticipate that the first part of our panel discussion will be driven primarily through structured questions that encourage dialogue and constructive engagement between the panelists, orchestrated by the organizers. The overarching goal is to use the session to support the development of participant papers and to promote intellectual interchange on the topic of experimental strategy from the most nascent of entrepreneurs to the most established large firms.

The Invisible Career Companion: Committing to Academia with Physical Health Constraints

Organizer: **Anne Steinhoff**, *U. of Essex Business School*
Facilitator: **Richard Longman**, *The Open U., United Kingdom*
Facilitator: **Martyna Sliwa**, *Durham U. Business School*

The prevailing image of an academic often defaults to that of a healthy and able-bodied individual. Yet, experience and research indicate an increasing number of individuals entering academia with health considerations. For example, a US-based study estimates that 39% of employees have a chronic illness (Tu & Cohen, 2009), while in the UK it is estimated that up to 20% of the working age population live with a chronic illness (Munir et al., 2007). These numbers are rising, with employees with health considerations in the UK twice as likely to leave the workforce (Department for Work and Pensions, 2022). Particularly salient are the experiences of those whose physical health considerations that do not fit the duality of being fit or unfit for work (Ciuk et al., 2022). We believe the experiences of these individuals need to be shared more widely to develop a better understanding of health at work, to advance organizational policies and practices, and to create acts of collegiality and solidarity. This workshop is designed to offer a platform bringing together scholars who are present, in-person, at the annual meeting and those who are unable to attend it because of health-related considerations, focusing on strategies to raise awareness and drive change. Participants will engage with testimonies from panelists, prompting reflection on their awareness and potential actions. The workshop will provide a forum to discuss strategies for increasing the visibility of these struggles and fostering positive change within academia and, importantly, within the Academy of Management.

While it is easy to come up with a rough or vague idea about a research topic, it is not easy to refine, implement, and publish the idea. Every one of us needs help from others, particularly those who have successful publishing experience. However, many of us lack access to colleagues with relevant expertise or hesitate to ask for feedback from experts in relevant domains. Sometimes we are not even sure what kinds of expertise we would need to move the idea forward. In the OB Research Incubator, participants are paired with renowned scholars who have successful publishing experience and can help participants move their ideas forward. Participants also have an opportunity to connect with other OB scholars who share similar research interests. This PDW is open for any member of the OB Division who would like to seek and exchange advice or feedback on research projects in any stage prior to publishing. Prior to participation in this PDW, participants must submit a summary (5-6 pages, double spaced) of their research idea by June 2, 2024. These briefs will be reviewed by the session organizers. Those whose briefs receive favorable evaluation will receive a registration code for the session. Complete details regarding the research brief will be made available in early April 2024, via online adverts.

Behind the Publication: Insights from the Publication Process

Organizer: **Stephanie Chan-Ahuja**, *London Business School*

Organizer: **Laura Maria Giurge**, *The London School of Economics and Political Science (LSE)*

Panelist: **Bo Cowgill**, *Columbia Business School*

Panelist: **Lindsey Cameron**, *The Wharton School, U. of Pennsylvania*

Panelist: **N. Sharon Hill**, *George Washington U.*

Panelist: **Tristan L. Botelho**, *Yale School of Management*

The Behind-the-Publication PDW was attended by over 200 attendees at the Annual Meeting of the Academy of Management (AOM) in 2023 in Boston. Following the growing interest in this PDW across the past two years, we continue the series with a new group of panelists to share their experiences with publishing at top management journals. We contend that navigating the publication process is a crucial yet under-discussed part of the academic training. This is surprising given that publishing academic papers is a necessary skill in a successful academic career and often used as a metric to determine career outcomes. To that end, the aim of this PDW is to go behind the scenes of published papers and learn about the publication journey from prolific academics. Our panel of distinguished scholars will share how they developed one of their papers from initial journal submission to the final publication. They will also share general learnings that they have accumulated through years of publishing and reviewing at top management journals. To facilitate learning for the diverse audience who attends AOM, we have invited scholars with experience across different top management journals including Academy of Management Journal, Management Science, Organization Science, and Administrative Science Quarterly, as well as disciplinary journals, such as The Quarterly Journal of Economics and Personnel Psychology. Participants will leave our PDW with a better understanding of what happens behind the scenes of a published article, including the challenges involved in the process and how to overcome them. On a broader level, our PDW could help participants feel less lonely about the academic publishing process: as one of our previous participants said while thanking the panelists, “Many of us in the audience feel happier that we’re not the only ones going through these publication problems.”

Facilitator: **Ava Haddox**, -

This PDW will help researchers develop and expand their qualitative data analysis skills. While previous bootcamps have focused on coding data, this session focuses on intermediate processes using “analytic artifacts” during qualitative data analysis. Data analysis with analytic artifacts offers a different approach to qualitative analysis, one that translates knowledge from raw data into observed patterns or networks of relationships and helps derive theoretical insights. Our PDW opens up the discussion of the practice and relevance of analytic methods that go beyond textual coding and its limitations. The session will begin with a panel of experienced qualitative scholars who will discuss their analysis process and use of analytic artifacts during the analysis process, zooming in on the practical nature of the process, followed by ample time for questions from the audience. The second half of the session will be spent in round tables working through ways to explore the data through analytical artifacts to generate early theoretical ideas. We will discuss implications for meaningful theorizing using this analytic approach.

Panelist: **Wolfgang Mayrhofer**, *WU Vienna*
Panelist: **Marijke Verbruggen**, *KU Leuven*
Panelist: **Jelena Zikic**, *York U.*

In order to move the research on sustainable careers forward, this professional development workshop brings together leading scholars to share their competencies and experiences with designing state-of-the-art research projects in their respective fields and connect them with the topic of sustainable careers. The goal of this PDW is to create an inventory of various opportunities from different research areas in order to build sound research designs to study sustainable careers. Moreover, the workshop should result in concrete action plans to start doing interdisciplinary research on career sustainability. The format of this PDW is built upon the World Café design principles (Brown & Isaacs, 2010), an approach that encourages participants to raise their views about a particular topic within a relaxed and comfortable setting. The expert speakers will exchange ideas with participants at six different tables: (1) work-nonwork interface, (2) vulnerable groups, (3) aging and retirement, (4) HR practices and policies, (5) individual and organizational career management, and (6) careers in non-standard work. All tables' participants will discuss opportunities to integrate their disciplines and research designs within the framework of sustainable careers. Across three sessions, the expert speakers and participants will create plans for future research in this area. As such, the workshop will also be an opportunity to create a research network with scholars from various disciplines, including human resources, organizational behavior, and DEI research.

There is no need to register for this workshop beforehand. Please feel free to join us if you are interested in researching sustainable careers, and want to help us craft solid research in this area!

Relaunching the Ambassador Program

Facilitator: **Rebecca Hewett**, *Rotterdam School of Management, Erasmus U.*

Facilitator: **Mila Borislavova Lazarova**, *Simon Fraser U.*

Facilitator: **Helen Shipton**, *Human Resource Management*

Participant: **Jarrold Haar**, *Massey U. Business School*

This PDW sets out to bring together current and potential HR division ambassadors from around the globe, to welcome new ambassadors, and to generate new ideas for ambassador-led initiatives. Our plan is to further develop our vision, to celebrate successes of the ambassadors programme, discuss challenges (and how to overcome them) and to develop an action plan for 2024 and beyond. Participants can expect to leave the PDW with new connections, new ideas, and (if they wish) an active role in shaping the experience of international members into the future.

The purpose of this professional development workshop (PDW) is to offer AOM members the opportunity to learn innovative and experiential approaches to teaching topics in human resources. In this highly interactive “potluck” session, a diverse panel of faculty from different universities will share experiential approaches to teaching human resources for the audience of all levels (undergraduate, graduates, professional students). Attendees will have the opportunity to choose a topic of their interests (e.g., compensation, diversity, staffing, etc.) and to learn about innovative experiential teaching methods in round tables each led by one or two members of the panel. This PDW will provide the audience opportunities to expand their repertoire of experiential exercises that they can implement immediately into their classrooms.

Ever Used O*Net? A Primer on O*Net for Management Research

Organizer: **Gavin Joseph Williamson**, *U. of Tennessee, Knoxville*

Organizer: **Emily D. Campion**, *U. of Iowa*

Organizer: **Janelle Bremer**, *U. of Tennessee, Knoxville*

Speaker: **Chad Van Iddekinge**, *U. of Iowa*

Speaker: **Timothy P. Munyon**, *U. of Tennessee, Knoxville*

Speaker: **Rong Su**, *Tippie College of Business, U. of Iowa*

The Occupational Information Network, better known as O*Net, is a database of occupational descriptors created through collaboration between work researchers and the US Department of Labor. O*Net is open access and has myriad uses in HRM and other organizational research, including (but not limited to) appending occupational constructs to archival and meta-analytic datasets, mitigating common method bias, and designing job description-based manipulations. The purpose of this workshop is to introduce unfamiliar scholars to O*Net. Our goal is that participants from diverse divisions of the Academy can leave this workshop with the ability to apply O*Net in their own work. To that end, we will facilitate guided interaction with the data and ideation about immediate potential applications to the participant's research pipeline, informed by hundreds of studies in our field incorporating O*Net into their research methodology. Topics in service of this objective include (50 min): An introduction to the O*Net content model; uses in primary/archival/meta-analytic data studies (including examples); how to merge O*Net with primary/archival/meta-analytic data sources; and what we can measure using O*Net data, including measures scholars have created to extend O*Net's utility. We will close with a discussion O*Net's role in future research and emerging topics, featuring esteemed keynote speakers (40 minutes).

Exploring Scale in “Grand Challenges” -- Developing the Indian Perspective (CANCELLED)

Organizer: **Swapnil Garg**, *Indian Institute of Management, Indore*
Organizer: **Sushanta Kumar Mishra**, *Indian Institute of Management, Bangalore*
Organizer: **Gerard George**, *Georgetown U., McDonough School of Business*
Organizer: **Kannan Srikanth**, *The Ohio State U. Fisher College of Business*

Solutions to Grand Challenges often lie in pragmatic replication of simplistic solutions, over space, time and people. This has been studied as the ‘scale’ construct, with numerous scaling options theoretically identified and studied. With a focus on India, the PDW intends to discuss the numerous at scale solutions to societal problems being practiced in India, opening up rich contexts for theoretical explorations. India has successfully implemented numerous development programs at scale, like skilling, cleanliness, infrastructure, identity, and health. As different scaling strategies have been adopted, India emerges as an ideal laboratory for exploring scale in grand challenges. Some of the questions the PDW seeks to raise are The validity of existing theories and frameworks in implementing large scale interventions. The validity of the existing scale theories in emerging economy context. What role does time, person and context play in managing at scale? Through this workshop we propose to bring policy makers, practitioners and academics together to deepen the academic understanding of how scale is achieved to catalyze exchange of ideas and research. A systematic exploration and explanation is aimed at Development projects where large means LARGE (in millions and billions), by distilling a practitioner’s insights. Academic projects that have studied scale. Does the literature need adjustments when scale is redefined in millions and billions. Emerging research agenda, when scale (and not wicked problem) is the primary attribute. The envisaged output of the workshop is an agenda for studying scale in tackling grand challenges, and open up research opportunities.

We invite and implore grand challenge scholars to explore the idea of 'SCALE' in addressing societal grand challenges. Herein, India, the most populous country on earth provides a great context for study where all attempts are addressing grand challenges have a scale far larger than what we are used to in management studies. The PDW aims to builds an appreciation of how SCALE issues have been tackled while addressing societal issues like poverty, cleanliness, identity, water, power, vaccinations, and the like. We welcome all interested explore this interesting idea.

Mobilizing Dysfunction and Mirror Effect: An Innovative Approach to Change Management

Organizer: **Veronique Zardet**, *U. of Lyon, IAE Lyon, MAGELLAN, ISEOR, FRANCE*

Discussant: **Peter Sorensen**, *Benedictine U.*

Discussant: **Therese F. Vaeger**, *Benedictine U.*

Session Chair: **María Angeles Rastrollo-Horrillo**, *U. of Málaga*

Panelist: **FADI MAHMOUD**, *MedSurgSolutions*

Panelist: **Robert P. Gephart**, *U. of Alberta*

Panelist: **Mélanie Giraudet**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Panelist: **Iliass KANBAR**, *Jean Moulin U.*

The start of a SEAM change process is based exclusively on dysfunctions. Positive points are not identified in the initial diagnosis. Then, the results of the interviews are presented to all the interviewees before the search for solutions begins: this is the mirror effect. The mirror effect is a mix of phrases expressed by the interviewees and generic ideas formulated by the consultant. The only criterion for selecting dysfunctions is to avoid touching people's integrity. This powerful approach nevertheless demands courage on the part of all concerned: the consultant, top management, executives and employees. Why this methodological choice? What difficulties does it present for the consultant and the stakeholders? How should they react? What precautions need to be taken during the interviews and the mirror effect? What positive effects have been observed in the change process? What methodological adaptations are possible in different cultural contexts?

Pracademic Reflections: Role of Real-Life Consulting Projects in Advancing Adaptive Competencies

Presenter: **Jan A.C. Klakurka**, *Huron U. College*
Presenter: **Candice Chow**, *McMaster U.*

As the management academy seeks to deliver relevant, applicable knowledge in an ever-changing world, strengthening meaningful relationships is a goal that consulting-based learning strongly supports. This session will share pedagogical approaches and lessons from 200-plus real-life, student-led consulting engagements that bridge the gap between theory, practice and hands-on strategy-as-practice to help faculty think and act not just as educators, but as de facto consulting firm partners. In doing so, students develop and hone adaptive competencies, including Futures Literacy (Miller, 2007), that can make them effective in VUCA (Volatile, Uncertain, Complex, and Ambiguous) environments and are sought by dynamic organizations. Through real-life interactions, students and organizations co-create meaningful learning in ever-changing contexts. In this session, seasoned full-time tenured faculty with years of executive experience illuminate how managerial education can advance its true purpose, enhance relevance, build brand, and drive impact through term-long, “consulting-firm-equivalent” real-world challenges. Students’ desire to begin or reinvigorate careers through the consulting profession or strategy discipline is enhanced by projects going beyond pro bono, many-students-to-few-clients experiences, hypotheticals/simulations, and third-party outsourced client acquisition rendering schools undifferentiated. This session will show that quite superlative outcomes are within reach of any experiential-oriented faculty, including client accolades equating output to that of Big 4 firms, obtaining school donations, replicating true consulting firm team size/structure, being entrusted with tough – if not wicked – problems, and building true partnership with communities. Supported by consultative process theory, deep client engagement, and “pracademic” mentoring, such experiences drive positive win-win outcomes for students, academia and industry alike.

Healthcare Response Through Artificial Intelligence and Blockchain: Practical Perspectives

Participant: **Nabil G. Badr**, *Grenoble Graduate School of Business*
Participant: **Pierre El Haddad**, *INSEEC Grande Ecole*

Healthcare response requires the availability of comprehensive information in an actionable format. Mending for the decentralized nature of data elements warrants the exploitation of technology. In this Professional Development Workshop, we explore the use of artificial intelligence and distributed ledger technology to deliver trustworthy, immutable, and secure data sources. In a collaborative activity to ideate from scholarly and practice-based interaction, our proposed workshop encourages deliberation on exploiting technology tools to support decision-making in healthcare response among issues of data management, ethics, and compliance while ensuring adherence to governance and policy. Our workshop will identify and share several paths of institutionalization while ensuring adherence to governance rules.

Please join us based on the instructions in the program, we are looking forward to seeing you!

Future-Ready Education: Blending Well-Being with Professional Soft Skills Development

Speaker: **Andrea Honal**, *DHBW Mannheim/Germany*

Speaker: **Volker M. Rundshagen**, *U. of Applied Sciences Stralsund*

Participant: **Dorothee Beez**, *DHBW Mannheim/Germany*

The rise of globalization, digital transformation, and cutting-edge technologies have reshaped the expectations placed on students, preparing them for professions marked by unpredictability, intricacy, and vagueness. Instable political situations across the globe have further amplified this discourse, prompting educational institutions to deliberate on integrating soft skills and mental well-being into their courses. However, there remains a reluctance to actualize this in educational settings. This PDW session will highlight the efficacy of programs that offer mental health assistance and how such initiatives foster the growth of essential soft skills in students, including critical analysis, problem resolution, teamwork, and adaptability - attributes being crucial for modern work environments. Additionally, it will showcase diverse educational approaches successfully adopted by different universities. By offering both an interactive presentation as well as a discussion segment, in which participants can share the specific problems they face regarding how to prepare students for the future workplace and the solutions they have adopted consequently, an inspiring idea-set of practical approaches and innovative methods will be achieved.

Gamification in Management Education: Incorporation of AI and Advanced Technologies

Organizer: **Mai P. Trinh**, *UTRGV*
Panelist: **Andreas Janson**, *U. of St. Gallen*
Panelist: **Sofia Schöbel**, *U. of Osnabrueck*
Panelist: **Jan Super**, *Murray State U.*
Panelist: **Mai P. Trinh**, *UTRGV*

Gamification is the use of video game elements such as badges, leaderboards, quests, and resources in non-game contexts (Deterding, 2012). In recent years, the use of gamification has been on the rise due to its ability to use “game-based mechanics, aesthetics, and game thinking to engage people, motivate action, promote learning, and solve problems” (Kapp, 2012, p. 125). In education, the use of gamification has been associated with positive results in student performance, motivation, engagement, attitude towards gamification, collaboration, and social awareness (Antonaci et al., 2019). In this PDW, we aim to provide higher educators, especially those who are teaching hybrid or online courses, with insights regarding how to gamify their classes. This year, the session will focus on the incorporation of artificial intelligences (AI) and other advanced technologies in the gamification process. The organizers have gathered a diverse panel of experts in gamification with a wide range of experience using gamification in teaching, research, and practice in different settings. We propose a gamified PDW that will last for two hours, divided into two parts. In part I, our diverse panelists will briefly introduce how they have applied gamification in their own teaching and research. In part II, we will ask panelists to each lead a roundtable discussion to help participants brainstorm gamification ideas that they can readily apply in their own classes.

Reviewing is a critical “professional responsibility” and an integral part of participating in the academic community (Trevino, 2008). Yet Tsang and Frey (2007: 129) noted that “there is no formal training for referees who usually pick up their review skills through learning by doing.” This raises a perplexing question for doctoral students and junior faculty: how can one develop critical reviewing skills with so few opportunities to practice the art of reviewing? This PDW provides participants with a rare opportunity to learn and practice the art of reviewing. Prior to the conference, participants will be asked to prepare a practice review of the manuscript by Gabriel, Lanaj, and Jennings (2021) titled, “Is one the loneliest number? A within-person examination of the adaptive and maladaptive consequences of leader loneliness at work”, published in the *Journal of Applied Psychology*. The actual workshop will consist of two parts: (1) presentations and (2) group discussions. The panel will offer key insights about the review process and quality reviewing from scholars who have served as Associate Editors and Editorial Board Members at leading journals in our field. Allison Gabriel will provide background information about the original submission of their manuscript. Participants will then break into small groups, each facilitated by an experienced faculty member, to discuss and receive feedback on their formal reviews. The PDW will conclude with Dr. Gabriel sharing actual reviews the author team received and how they helped shape the final manuscript.

Participants will be required to conduct a review of a paper to be able to attend Part 2 of the session. Please contact the organizers at j.zhu@rsm.nl to request for a copy of the paper to be reviewed. Please use “MOC RIR” in the subject of your email. Thank you.

Panelist: **Anthony Klotz**, *UCL School of Management*
Panelist: **Ronald F. Piccolo**, *U. of Central Florida*

Experts acknowledge that the relationship between science and the public is at a precarious stage (Public Face of Science Initiative, 2018). In this critical moment, it is imperative that we engage in relevant conversations directly and deliberately to positively impact the future of society and build cultures that value science. This workshop, returning for a third year after a successful inaugural session in 2022, focuses on “speaking science” by promoting the effective translation of research and developing additional skills for sharing science in an accessible and provocative way. This PDW aims to equip attendees with broader skills necessary for communicating science with varied non-academic audiences and, ultimately, seeks to promote greater impact of our scholarship. We will discuss key skills in effective science communication: saying “yes” to sharing your knowledge, crafting a coherent and compelling story, tailoring the message to your audience, and navigating the opportunities and obstacles in science communication. We will couple best practices in media communications with improvisation skills to provide participants with the opportunity to learn and practice science communication strategies. We welcome all faculty interested in building their confidence and capabilities to broadly speak about their science and expect the session will be especially valuable to faculty as they prepared to say “yes” to opportunities as they advance in their careers.

The purpose of this professional development workshop (PDW) is to educate potential PhD students about a career in academia and provide advice and information on how to navigate the PhD Admissions process. The PDW will emphasize: 1) A Career in Academia, 2) Finding Your Research Fit, 3) The Keys to a Successful PhD Application, and 4) A Day in the Life of a PhD Student. As competition for admission to PhD programs grows, applicants need to understand how to succeed in the PhD admissions process and more importantly, how to find the PhD program that will help them achieve their career goals. Individuals applying to PhD programs in the next 1-2 years will benefit from this PDW by learning more about the PhD admissions process through presentations, panel discussions, and round table discussions. The four-part PDW will provide ample opportunities for attendees to ask questions of current PhD coordinators, faculty, and PhD students. Attendees will walk away equipped with a greater understanding of a career in academia and the PhD admissions process. Attendees will also expand their network of peers and faculty to help them further navigate the PhD application process.

This session will be IN-PERSON in Chicago. Register at the following link: https://uiowa.qualtrics.com/jfe/form/SV_4VFqdzTVv34RB9c For pre-doctoral students wanting to attend this PDW, scholarships are available to cover registration fees for the conference. You must register for the PDW using the above link by July 15th to be considered for a scholarship. Questions? Contact Jennifer Nahrgang at jennifer-nahrgang@uiowa.edu

A wonderful aspect of the Academy of Management (AoM) Annual Meeting is the developmental opportunities it provides for doctoral students. The Organizational Behavior (OB) division serves a large and diverse group of doctoral students and seeks to provide opportunities to help the students and members better connect by supporting micro- communities with the OB division. As a micro-community focused on helping support leadership scholars in their careers, the Network of Leadership Scholars has put together the 2nd Annual Leadership Doctoral Student Consortium to provide a connection for leadership doctoral students to the leadership micro-community and the OB division. Our doctoral consortium serves to complement those that focus on program stages and is open to all doctoral students that have completed their first year of the doctoral program but are not yet on the job market and interested in studying leadership. It will give them an opportunity to connect with and learn from junior and senior leadership scholars as well as other doctoral students interested in studying leadership. In addition, attendees will learn about the intricacies of publishing in top leadership journals. Several prominent OB division members have agreed to participate in the 2024 PDW and provide students with their insights such as (1) advice based on their career as a leadership scholar (2) the current state of leadership topics and where they might go in the future, (3) publishing in leadership journals, and (4) the role of the Network of Leadership Scholars.

To registration, please fill out the registration form: https://unlcba.az1.qualtrics.com/jfe/form/SV_ezFLPuOeGc7WvX0 Participants will be emailed their acceptance and registration information based on the above form in early July.

Impactful ‘Early Career’ Research: What’s Holding Junior Scholars Back?

Organizer: **Julian Jonathan Markus**, *WU Vienna*
Organizer: **Bradley J. Hastings**, *U. of New South Wales*
Presenter: **Jean M. Bartunek**, *Boston College*
Presenter: **Sylvia Grewatsch**, *Brock U.*
Presenter: **Nicholas Poggioli**, *Appalachian State U.*
Presenter: **Diana Lauer**, *WU Vienna*
Presenter: **Martin Sehner**, *WU Vienna*

Over 1,000 sessions at the 2023 Academy of Management Annual Meeting focused on research impact. Yet, these discussions and, to some extent, research impact itself seem reserved for ‘senior’ scholars. For instance, where impact is an important personal goal for many junior scholars, they are often excluded from conversations with decision makers and they lack training in the means to connect research to practical insights. Junior scholars often encounter environments where impact is considered a secondary outcome – compared to broadening existing theory. The session aims to promote voice among junior academics on research impact. Specifically, this PDW addresses three key topics, (1) the conceptualization of research impact; (2) challenges and opportunities in generating research impact; and (3) the means and tools for early career scholars to conduct impactful research. After a brief introduction, these topics will be addressed in a plenary session, where participant responses will be gathered through presenter software. The inputs will inform themes, which will then be covered in roundtable discussions, with discussion outputs consolidated by the organizers as an essay.

None.

OSCM Division Junior Faculty and Doctoral Consortium (Part 2)

Organizer: **Annachiara Longoni**, *ESADE Business School*

Organizer: **Iana Shaheen**, *U. of Arkansas*

The Operations and Supply Chain Management Division is pleased to announce a joint Junior Faculty and Doctoral Consortium at the annual meeting of the Academy of Management (AoM) in Chicago, IL, USA. This event will be held from 8:30 AM to 4:30 PM on Friday, August 9th, 2024. The primary focus of the joint consortium involves an intensive research incubator session for doctoral students and junior faculty grouped in roundtables of two to three participants. Doctoral students and junior faculty are asked to submit their research proposal in advance that will be discussed by a panel of senior and junior faculty providing feedback and guidance during the consortium. Participants are expected to ask questions and learn about building a research identity. In addition to the research incubator session, several panel sessions will further elaborate on publishing, the development of research streams, and the job market. Experts in the field are invited to provide their input and engage participants in Q&A sessions.

What Does it Mean to Test Theory?

Organizer: **Maria Kraimer**, *U. at Buffalo*
Presenter: **Scott Seibert**, *U. at Buffalo School of Management*
Presenter: **Xavier Martin**, *Tilburg U.*
Presenter: **William S Schulze**, *U. of Utah*

Organizational/management scholars have recently lamented the concern that management researchers have increasingly emphasized novel theoretical contributions at the expense of validating existing theories. Journal of Management Scientific Reports (JOMSR) was launched to directly address this imbalance by having the following mission “to move management science forward by publishing research aimed at theory testing and refinement.” The aim of this PDW is for the editorial team of JOMSR to provide guidelines for authors on the different types of empirical papers that would be consistent with this mission, including designing studies to test theoretical models or assumptions, studies that test competing theories or constructs, and designing reproducibility and replication studies. Time will be provided for audience questions and thought-provoking roundtable discussions to generate specific study ideas to test theory in the management discipline. Specific advice for publishing in JOMSR will be provided, however, the general content of this PDW is relevant to designing rigorous empirical studies testing theory to publish in any journal. Pre-registration is not required to attend this session.

TIM Doctoral Research Development Workshop

Organizer: **Ying Li**, *Hong Kong U. of Science and Technology*
Organizer: **Jungkyu Suh**, *NYU Stern School of Business*
Facilitator: **Jung H. Kwon**, *U. of Denver*
Facilitator: **Manav Raj**, *The Wharton School, U. of Pennsylvania*
Facilitator: **Audra Wormald**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

The workshop is designed as an idea-, paper-, and dissertation- development meeting for PhD students interested in technology, innovation, creativity, product development, and related topics. Students may be at any stage of a PhD program, and similarly the ideas brought to the workshop can range from initial ideas of a paper or dissertation to a fully-developed paper. The workshop will be comprised of a panel discussion of what makes quality research, as well as extensive time dedicated to round table conversations about submitted research ideas from doctoral students. Workshop facilitators will include a mix of junior, mid- career, and senior scholars whose research focus on TIM-related areas. Many of the facilitators have served as members of the TIM leadership committee or have been finalists of different TIM Awards including TIM Dissertation Award.

Panelist: **Mung Ki Woo**, *COO Financial Services at Sopra Steria, former creator and Head of Orange*

Money as we know it, is rapidly metamorphosing into a digital form in tandem with the current trajectory of global digitalization. This PDW will bring together AOM scholars and leading industry experts (Telcos, Banks, and FinTechs, consultants etc.) to create a dialogue on this subject of immediate relevance and its implication for practice and research. We intend to leverage on the case of the African digital money market as a starting point for the discussion, owing to the pioneering role that Africa has played in digital financial innovation and the emerging digital money market, for example by being the first to launch a larger digital currency market (Mobile Money), and one of the first to launch central bank digital currency. We will contrast the learning from Africa with the experience from other contexts (e.g. Europe, Asia and North America) because this trend is global and impacts all continents and all banking sectors. In addition to the mainstream digital currencies, we introduce a complementary currency perspective into our discussions. We will examine the broader implications of the digital money revolution, especially in terms of fostering inclusive growth and financial inclusion. We expect the discussions to provide insights on this topic from varying angles and generate a plethora of future streams of research in the areas of strategy, entrepreneurship, digital transformation, and innovation, as well as societal grand challenges.

Leveraging AI to Bridge the Research-Practice Divide

Organizer: **Liza Castro Christiansen**, *U. of Reading*

Organizer: **Adam C. Stoverink**, *U. of Arkansas*

Speaker: **Heng Xu**, *U. of Florida*

Scholars have long faced the challenge of translating complex research into accessible, practical insights for managers. With the recent widespread adoption of artificial intelligence, scholars now have at their fingertips, a powerful new tool for tackling this challenge. This session focuses on harnessing AI to bridge the research-practice divide. We delve into innovative methods where AI can transform scholarly research into actionable knowledge for practitioners. Attendees will engage in a dynamic, interactive environment, gaining firsthand experience in utilizing AI tools. This workshop not only highlights the theoretical aspects of AI in academic research but also offers a unique, hands-on learning experience. Participants will leave equipped with practical skills and insights to effectively apply AI in disseminating their research to a broader, practitioner-oriented audience.

OB Division Mid-Career Faculty Workshop

Organizer: **Sreedhari Desai**, *U. of North Carolina*

Organizer: **Jia Hu**, *Tsinghua U.*

The Organizational Behavior (OB) Mid-Career Faculty Workshop is designed for faculty members who consider themselves to be mid-career. This generally includes scholars who have earned tenure but are not yet a full professor (i.e., are at the associate-level) or the equivalent if working in a non-tenure granting institution. The goal of the workshop is to provide a forum for attendees to connect with senior Faculty Fellows to receive advice and ask questions related to navigating the challenges and opportunities of this career stage. The discussion topics will be finalized based on input solicited from attendees but potentially include: (1) administrative roles; (2) career enablers (e.g., joint appointments, sabbaticals, changing institutions); (3) enabling research (e.g., finding new collaborators, securing grants, expanding publication portfolio to writing and editing books); (4) service and engagement (e.g., department chair, center director, professional service); and (5) planning for promotion. The Faculty Fellows include a mix of senior faculty from different countries and with varied career experiences. The format of the workshop is highly interactive with a combination of both panels and small group discussions. Participation will be limited to 50 attendees who must attend in person. Pre-registration will be required.

Participant: **Christopher Gohl**, *Global Ethic Institute*

The call for management scholarship to Innovate for the Future (2024), put the worker front and center (AOM 2023), to broaden its perspective (AOM 2020), improve lives (AOM 2018) and organize more inclusively (AOM 2019) manifests a crisis of management theory, practice, and pedagogy. Traditional research, practice, and teaching seemingly do not address the current global crises and therefore fail to improve lives and exclude many key stakeholders. On one hand, the challenge for management scholars is to build a better theoretical framework from which to engage with the world at large, in the wake of corporate scandals and recent economic crises. On the other hand, management educators are challenged to fundamentally rethink their fundamental purpose in delivering management education. A focal point of criticism has been the dominant economic paradigm of business which manifests itself in 1) the assumptions of amoral actors that 2) are only maximizing individual level utility, 3) often in a short term oriented manner. The role of social embeddedness and the importance of the future do play a marginal role and therefore much traditional management research and practice do often NOT contribute to improved lives and organize inclusively. In this PDW we wish to broaden our collective understanding of what kinds of future are possible and how we can innovate collectively. We do so by bringing together global thought leaders that have worked on developing an alternative paradigm for management: humanistic management and leadership. In a first part, we will present the universal foundations of the humanistic paradigm which draws on global, cultural and spiritual insights, and then highlight local and regional permutations of its theorizing and practice. We highlight how such humanistic management is aimed at improving lives, be more inclusive, and put workers and people front and center. In a second part of the workshop we will discuss the consequences of such an alternative paradigm on management scholarship, management education and management practice. Drawing on the work of the International Humanistic Management Association, we will have global representatives from Asia, North and South America, Australia, as well as Europe lead roundtable discussions leading to next steps and potential collaborations.

Discussant: **Michael E. Johnson-Cramer**, *Ithaca College*
Discussant: **Antonella Angelini**, *U. of Geneva*

The primary objective of this workshop is to advance our knowledge about the dynamic field of business and human rights (BHR) scholarship and more specifically discuss future BHR research pathways that can lead to better societal outcomes. This workshop provides a unique and developmental forum for fostering connections among the growing community of human rights scholars within the Academy, facilitating discussions on the evolving conceptual and empirical dimensions of the field. Recognizing BHR's interdisciplinary approach, we also seek to understand and clarify the boundaries of BHR to identify impactful interventions in practice that lead to positive societal impact. We will approach this in two ways. Firstly, we have invited a panel of leading human rights experts from several different countries, to share their insights and perspectives about pivotal issues shaping the boundaries of BHR research. Following their short presentations, the audience will be invited to participate in a plenary Q&A session to further discuss BHR topics and identify priorities for a future BHR agenda. Secondly, we will conduct research development incubators/roundtables designed for scholars at all stages, including doctoral students, early-career and/or later-career academics, who want feedback from a BHR experts on their research. The primary goal for the second part of the workshop is to discuss and strengthen the BHR research projects of the participants. Moreover, we hope to further develop our growing community of BHR scholars in SIM, IM and OMT, who are committed to exploring how firm's policies and practices can lead to positive societal effects.

Participant: **Laurie R. Weingart**, *Carnegie Mellon U.*
Participant: **Ting Zhang**, *Harvard Business School*

The Conflict Management Division doctoral and post-doctoral consortium is designed for those interested in developing an academic identity, thinking more strategically about the research process, planning for the job market, and transitioning to faculty. Specifically, we will focus on three main topics important for successfully completing a doctoral or post-doctoral program and launching an academic career: 1) publishing and dissertations, 2) preparing for the job market, 3) negotiating the job offer. The PDW will be led by a mix of early, mid-career, and senior scholars, each offering their unique perspective. There will also be a segment led by the AOM Ethics Education Committee. The format will include short presentations, Q&A, and small group discussions.

The Care and Feeding of Co-Authors

Facilitator: **Jill R. Kickul**, *USC Marshall School of Business*
Participant: **Sönke Mestwerdt**, *ESCP Business School*
Participant: **Mark D. Griffiths**, *Retired*
Participant: **Katrina Brownell**, *U. of Southern California*
Participant: **Colleen Robb**, *Florida Gulf Coast U.*

One of the most challenging times in a young academic's career occurs when just starting out as a newly minted Assistant Professor. While still a PhD student, the academic focused on preparing for her/his career usually by working closely with a senior faculty member serving as a dissertation advisor. Once graduated however, it becomes important to establish a network of reliable co-authors with whom the young academic can publish. This professional development workshop will be of interest to AOM members who are PhD students or newly hired junior faculty members looking to increase their research outlook. It aims to advance the discourse beyond simply identifying top research journals or emphasizing the need for increased readability (Kickul et al., 2023a, 2023b). In particular, we address strategies for ensuring responsible co-authorship behavior, the role of co-author across multiple papers, tools for the self-assessment of responsible research behavior, and methods to increase co-authorship opportunities.

How to Teach Social Business Modeling – An Example for Experiential Entrepreneurship Education

Panelist: **Kai N. Hockerts**, *Copenhagen Business School*

Panelist: **Nikolay Anguelov Dentchev**, *Vrije U. Brussel*

Panelist: **Abel Díaz Gonzalez**, *Maastricht U., School of Business & Economics*

Panelist: **Michel Ehrenhard**, *U. of Twente*

Panelist: **Magnus Torfason**, *U. of Iceland*

Panelist: **Caroline Julie Demeyere**, *Copenhagen Business School*

Facilitator: **Svenja Damberg**, *U. of Twente*

Facilitator: **Anne-Karen Hueske**, *Copenhagen Business School Department of Management, Society and Communication*

Social entrepreneurship education is rapidly expanding. Given its often hands-on characteristics it lends itself to experiential teaching in which students research actual social or environmental problems, identify solutions for these, and then design their own business model, business plan, or start-up idea. Educators in such courses face several challenges. They need to make sure that the student work is well aligned with their syllabus, while at the same time they want to keep a close eye on student progress allowing them to give feedback when it is most useful, and finally they want to encourage peer learning between student teams. This PDW will share best practice examples and will allow participants to explore how they can implement these in their own course work. The PDW will first feature a panel of social entrepreneurship educators sharing their pedagogical approaches and best practices. A next segment introduces the SEISMIC App, an ERASMUS-funded project tool designed for collaborative social business model development, which has been successfully piloted across ten European universities. Finally, the workshop will conclude with interactive roundtable discussions, where participants can receive personalized guidance on integrating these methodologies and tools into their own curriculum. This PDW not only aims to enhance teaching strategies in social entrepreneurship but also strives to foster a community of practice among educators in this evolving field.

We do offer the possibility to pre-register. However, pre-registration is not required, and walk-ins are explicitly encouraged. Should space in the room be limited, preference will be given to participants who have pre-registered. In its last part, the interactive format of the PDW permits participants to apply learnings to their own teaching. An (optional) pre-registration allows participants to suggest questions and to volunteer their own course syllabi for discussion during the roundtable phase. Interested participants are invited to pre-register with the following survey:

https://copenhagenbusiness.eu.qualtrics.com/jfe/form/SV_01bPJ3MollsufeC Pre-registration is not required and walk-ins are explicitly encouraged. However, should space in the room be limited, preference will be given to participants who have pre-registered. As part of the pre-registration, participants can submit questions to the panel. They can also suggest a course syllabus of their own as an exemplar to be discussed with one of the panelists during the roundtable phase. We will select ca. 6-12 course syllabi that will receive feedback. The panelists will select topics that they feel are good case examples of illustrating the topics discussed in the PDW.

The 2024 Academy of Management theme, "Innovating for the Future: Policy, Purpose, and Organizations", is perfect to facilitate a dialogue amongst multiple stakeholders (policymakers, academics, entrepreneurs, civil society, and ecosystem agents) who all play a critical role in driving innovation and entrepreneurship forward. By facilitating dialogue between them, the AoM ecosystem community hopes to empower entrepreneurs not only to develop groundbreaking solutions but also to find mechanisms to enhance their entrepreneurial and innovative abilities, equipping their organizations to face future challenges with greater confidence. Our Ecosystem Community is truly a community, comprised of global experts (and newcomers) from multiple disciplines (beyond b-schools) and roles (scholars, entrepreneurs, ecosystem agents/intermediaries, policymakers), stimulates this PDW proposal as a platform for "Meetings of the Minds", where we can debate about urgent matters as the alienation of organizational purposes (social, economic, digital, technological, sustainable), policies and initiatives (metrics, capacity building, follow-up), ecosystem professional roles (builders, intermediaries, specializations), and different types of disseminating publications (policy briefs, reports, academic). We will bring together all of these important voices and focus on vigorous, creative discussions to help co-create the future of entrepreneurial communities that advance these disparate stakeholders of the entrepreneurial ecosystem. The heart of healthy ecosystems is passionate, proactive, and professional connectors. Imagine 50+ passionate, proactive professionals in one room, identifying the most important questions we need to ask... and answer. Provoking intense, joyous conversations about these themes in the context of a vibrant ecosystem like Chicago! And co-create innovative partnerships to do that. And co-create innovative partnerships to do that.

If you are planning to attend, please register and notify us at norris.krueger@gmail.com (and please whitelist that address).Thanks!

HCM Emerging Scholars Consortium (Part II)

Facilitator: **Amber Stephenson**, *The David D. Reh School of Business, Clarkson U.*

Organizer: **Shivani Gupta**, *U. of Houston - Clear Lake*

Organizer: **Erin Sullivan**, *Suffolk U.*

Panelist: **Jane Banaszak-Holl**, *U. of Alabama, Birmingham*

Panelist: **Matthew John DePuccio**, *Rush U.*

Panelist: **Steven W. Howard**, *UAB Health Services Admin. Dept*

Organizer: **Victoria Parker**, *U. of New Hampshire*

Organizer: **Alden Lai**, *New York U.*

Panelist: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*

Panelist: **Zhanna Novikov**, *UTHealth School of Public Health*

Are you a junior faculty member, post-doc, or doctoral student with research and/or teaching interests in health care management?

Join us for the Health Care Management (HCM) division Emerging Scholars Consortium (ESC) on Friday, August 9th in Chicago, where a diverse group of outstanding faculty will facilitate a highly interactive series of sessions geared towards emerging health care management scholars. In addition to the content, the ESC's highly collaborative format is a fantastic opportunity to create relationships with other HCM emerging scholars from around the globe. Many long-time HCM members attest to the ESC as an origin for major research collaborations and employment pathways.

The HCM ESC is divided into Part I (morning) and Part II (afternoon) with each containing individual sessions. We welcome you to attend one or all based on your interests and professional needs. While the consortium content is curated for students and junior faculty, everyone is welcome to attend!

Emerging Scholars Consortium (Part II – Afternoon, # XXXX) includes the following sessions and participants:

- Evaluating Team Based Learning: Bridging the Classroom and Workplace (Approx. 2:00 PM - 3:15 PM)

Presented by:

Shivani Gupta, U. of Houston - Clear Lake

Erin Sullivan, Suffolk U.

Jane Banaszak-Holl, U. of Alabama, Birmingham

Matthew John DePuccio, Rush U.

Steven W. Howard, UAB Health Services Admin. Dept

- Strategizing for a Life in Academia: Long-term Plan or Emergent Sense-making (Approx. 3:30 PM - 4:45 PM)

Presented by:

Victoria Parker, U. of New Hampshire

Alden Lai, New York U.

Yaminette Diaz-Linhart, Massachusetts Institute of Technology

Robert J Weech-Maldonado, U. of Alabama, Birmingham

Emerging Scholars Consortium (Part I – Morning, # XXXX) includes the following sessions and participants:

- LinkedUp: Mastering the Art of Professional Networking (Approx. 8:00 AM - 9:15 AM)
- Becoming an HCM Scholar: Demystifying HCM's Hidden Curriculum (Approx. 9:30 AM - 10:45 AM)
- Addressing Equity, Diversity, Inclusion, Justice & Reconciliation: A Doctoral Student Perspective – Part (Approx. 11:00 AM - 12:15 PM)

(More detailed information about ESC Part I available in Annual Meeting Program under session #XXXX.)

Should DEI DIE?: Critiques and Responses to DEI Initiatives

Organizer: **Gordon Shen**, *UTHealth Houston School of Public Health*

Organizer: **Victoria Parker**, *U. of New Hampshire*

Organizer: **Peter F. Martelli**, *Suffolk U.*

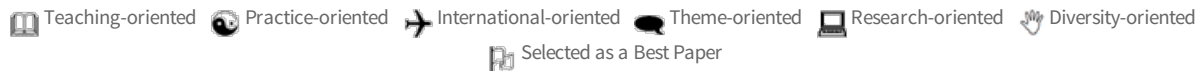

Facilitator: **Lihua Dishman**, *A. T. Still U.*

Facilitator: **Chinue Uecker**, *Jack Welch Management Institute*

Facilitator: **Nitish Patidar**, *Quinnipiac U.*

The future of diversity, equity, and inclusion (DEI) is at stake. Critics argue that DEI interventions not only fail to achieve equality but also inadvertently perpetuate workplace discrimination. The backlash against DEI emanates not only from external stakeholders but also internal ones. For instance, health care personnel often lack confidence and feel unsafe when providing culturally responsive care to patients from historically marginalized communities. These tensions necessitate a reevaluation of organizational DEI goals and the identification of best practices to effectively achieve them. This professional development workshop (PDW) is structured as a dual-format session: a town square forum and a scenario planning exercise. The town square forum enables PDW participants to collectively take stock of recent developments that have triggered backlash against DEI. The PDW will then transition into roundtable discussions. At each table, participants will engage in scenario planning, identifying critical uncertainties for a “prototypical” organization, developing plausible DEI scenarios, and discussing implications and strategies in response to anticipated opportunities and threats. The PDW will conclude with a segment where the organizers facilitate a discussion aimed at integrating the scenarios generated at from across tables and making a comprehensive examination of DEI ideology and interventions. This PDW align with the Academy of Management 2024 theme “Innovating for the Future” since the organizers encourage participants to expand upon the innovations that can be embedded in organizations to address the societal issue of inequality. It draws primarily from the health care industry, but the takeaways may be generalizable to other industries.

Teaching about Globalization and International Business: A Global Value Chain Perspective

Presenter: **Tommaso Ferretti**, *Telfer School of Management, U. of Ottawa*

Discussant: **Gerald A. McDermott**, *U. of South Carolina*

Presenter: **Andrew Spicer**, *U. of South Carolina*

Presenter: **Gilbert Kofi Adarkwah**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*

Teaching about global issues and processes is complicated by their abstract nature. Students cannot easily “see” or “touch” the global systems to which they are subject in their personal lives and careers. To overcome these challenges, we examine the possibilities of using “global value chains” (GVCs) as the primary concept by which to transform abstract conversations about complex and distant topics into more concrete discussions. Students’ everyday lives involve the use of familiar products – T-shirts, sneakers, coffee, mobile phones, etc. – that are the end products of complex global production processes at the core of economic globalization. To make these global processes more visible and tactile, we explore in this PDW how unbundling GVCs into their component parts allows students to explore important but frequently invisible questions in their lives: How is my stuff made? Who makes it? Where are they located? Who is responsible for the environmental and social conditions in the GVCs? And what is my role in these GVCs as a consumer, citizen, employee, and future corporate leader?

Theories of State Capitalism

Organizer: **Ilya Okhmatovskiy**, *Nova SBE, U. Nova de Lisboa*

Panelist: **Brian Boyd**, *Northern Arizona U.*

Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

Panelist: **Anna Grosman**, *Loughborough U.*

Panelist: **Jette Steen Knudsen**, *Tufts U.*

Panelist: **Gerhard Schnyder**, *Loughborough U.*

Panelist: **Geoffrey T. Wood**, *U. of Western Ontario*

The resurgence of various manifestations of state capitalism led to renewed scholarly interest in deriving, developing, and extending theoretical explanations for the behavior of state-owned firms, statist policy turns, and new forms of business-government relations. Management scholars have responded to this demand often through the application of familiar management theories. However, most management theories are firmly rooted in the experience of advanced economies, and many assume declining state interventions in markets. To explain modern forms of state capitalism – including those that have gained prominence in emerging economies, as well as the statist turn in a number of mature economies – more theoretical and empirical studies are needed to develop a contextual, contingent, and nuanced view of state capitalism that is management- and firm-centered. The participants of this PDW will discuss relevant theoretical perspectives from management, international business, and adjacent social science disciplines to identify boundary conditions of existing theories and opportunities for theory sequencing, proliferation, extension or development. The ultimate goal of this PDW is to stimulate theorizing about firm behavior in the context of active state involvement in the functioning of markets.

No registration is required for this PDW.

The Biodiversity Moonshot: Innovating for an Embedded Future Between Business and Nature

Organizer: **Alberto Di Minin**, *National Biodiversity Future Center (NBFC)*
Organizer: **Francesco Testa**, *Scuola Superiore Sant'Anna*
Organizer: **Valentina Cucino**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Organizer: **Gianmaria Ontano**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Organizer: **Duccio Tosi**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Distinguished Speaker: **Rajat Panwar**, *Oregon State U.*
Distinguished Speaker: **Sandra A. Waddock**, *Boston College*
Facilitator: **Nicole Darnall**, *American U., Kogod School of Business*
Facilitator: **Andrea Filippetti**, *CNR Explora*
Facilitator: **Gordon P. Rands**, *Western Illinois U.*
Facilitator: **Michael V. Russo**, *U. of Oregon*
Facilitator: **Mark Starik**, *U. of Wisconsin Extended Campus*
Facilitator: **Philip Shapira**, *Alliance Manchester Business School, U. of Manchester*
Facilitator: **Jean Garner Stead**, *East Tennessee State U.*
Facilitator: **Fabrizio Tuzi**, *ISSIRFA-CNR*
Facilitator: **Kerrigan Marie Machado Unter**, *U. of St. Gallen*

The challenges of biodiversity loss and ecosystem degradation require immediate action from companies and institutions. Companies, integral to the social-ecological system, partake in impact-dependence dynamics with the environment, where disruptions in one system inevitably reverberate within this complex framework. The absence of short-term economic benefits for companies adopting restoration practices, the lack of comprehensive metrics to guide decision-makers, and the lack of tools and capabilities to grasp the complexity of the relationship between business and biodiversity emphasize the distinguishing factors of this relationship from other environmental issues. While existing literature has primarily focused on biodiversity practices within specific industries, the systemic nature of biodiversity loss calls for a broader exploration across and within value chains. An open, collaborative approach to innovation is crucial, encouraging business models accountable for biodiversity conservation and inspiring new solutions capable of driving a durable sustainability equilibrium. Despite increasing recognition from governments, a significant research gap persists in management studies concerning organizations' involvement in biodiversity conservation. This PDW aims to address this gap, fostering discussions on organizational competencies, strategic dynamics, managerial tools, and business models for a successful transition to a biodiversity-embedded model. The objective is to promote interdisciplinary collaboration among participants, addressing multifaceted challenges in biodiversity research. Additionally, the aim is to facilitate discussions on how companies can effectively manage their relationship with the environment, ensuring the conservation of the life-supporting foundations of biodiversity.

Building Actionable Theories of Ecosystem Harm

Organizer: **Annabelle Gawer**, *U. of Surrey*
Organizer: **Michael G Jacobides**, *London Business School*
Participant: **Cristina Caffarra**, *UCL / CEPR Competition RPN*
Participant: **Carmelo Cennamo**, *Copenhagen Business School*
Participant: **Chiara Farronato**, *Harvard Business School*
Participant: **Frederic Jenny**, *OECD & ESSEC*
Participant: **Ioannis Lianos**, *U. College London / Greek Competition Commissioner*
Participant: **Daniel Sokol**, *USC*
Participant: **Dina Srinivasan**, *Yale Law School*
Participant: **Marshall Van Alstyne**, *Boston U.*
Participant: **Mike Walker**, *Competition and Markets Authority*

Digital platforms and ecosystems have become critically important forms of organization of economic activity, playing an increasingly central and structuring role in the global digital economy. They have created value in novel ways, but also also generated new types of failures and harms. Regulators and policy-makers around the world have become increasingly interested in new regulation focused on ecosystems. The intellectual apparatus used by courts, regulators, and policy-makers has principally come from industrial organization economists, yet there has been a recognition that relying exclusively on I/O approach for competition and innovation within and across ecosystems may be limiting. Insights from management scholars on ecosystems have begun to attract the attention of regulators and policy-makers, but these actors also indicated that they have faced difficulties in applying these insights in an actionable manner. This PDW aspires to expose scholars in the AoM, who do not usually engage with policy-makers, with some key regulators and participants in the critical debate on regulating digital platforms and ecosystems. It also aspires to connect policy-makers with some of the leading scholarly voices and encourage others to develop actionable research whose output will affect the evolution of policy in this critical context. In particular, we aim to make progress on the crucial, recognized issue of how to define and measure firm-inflicted harm that would be specific to the context of digitally connected ecosystems, in a way that complements existing economic theories, and in a way that is actionable for regulators, policy-makers and courts.

Strategic Management of Enabling Technologies: Challenges for Firm Innovation & Value Appropriation

Organizer: **Nur Ahmed**, *MIT Sloan School of Management*
Organizer: **Xirong Shen**, *McCombs School of Business, U. of Texas at Austin*
Panelist: **Elena Novelli**, *Bayes Business School*
Panelist: **Jeffrey J. Reuer**, *Purdue U.*
Panelist: **Mahka Moeen**, *U. of Wisconsin*
Panelist: **Gautam Ahuja**, *Cornell U.*

Enabling technologies, such as machine learning, robotics, and internet technology, are generic technological inventions that can be applied to, and drive radical technological changes in a wide range of application sectors. While economists and policymakers have long documented the profound impacts of enabling technologies on our economy and society, strategy and organizational scholars are just beginning to investigate the implications of these technologies for firm innovation and value appropriation. On the one hand, the development and adaptation of an enabling technological invention often requires the development of complementary inventions in neighboring technology fields and application sectors, thereby creating a coordination challenge in the firm innovation process. On the other hand, the commercialization of an enabling technological invention requires complementary assets in a variety of downstream application sectors, creating significant hurdles for firm value appropriation. In this workshop, we bring together prominent scholars in the fields of strategy and organizational studies who are at the forefront of research on these topics. In this workshop, the panelists will discuss the new questions that arise with enabling technologies, and introduce theoretical perspectives as well as data and methods that can be employed to make inroads into these questions. Overall, this workshop aims to delve into the unique challenges and research opportunities that enabling technologies pose for strategic management research and enrich the theoretical grounding for studying enabling technologies.

Scaling Up Accelerator Research:

Session Chair: **Violetta Gerasymenko**, *Oregon State U.*
Participant: **Siddharth Vedula**, *TUM School of Management, Technische U. München*
Session Chair: **Susan L. Cohen**, *U. of Georgia*
Participant: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*
Participant: **Lyda S. Bigelow**, *U. of Utah*
Participant: **Markus Andreas Fitzta**, *Frankfurt School of Finance & Management*
Participant: **Rebecca Preller**, *U. of Bayreuth*
Participant: **Amy Zhao-Ding**, *Technical U. of Munich*
Participant: **Sandy Yu**, *U. of Minnesota*
Participant: **JungYun Han**, *National Taiwan U.*

Over the past decade, accelerators have become an important feature of the global entrepreneurial landscape. Over the past four years, in our PDW, we focused on (1) discussing the effects of accelerators on the emergence of entrepreneurial identity, (2) considering different venture-specific factors that determine the extent to which ventures will benefit from participation in accelerators, (3) re-examining the effects of different mechanisms of accelerators on ventures' performance, and (4) identifying lessons for generating novel theory by discussing the implications from accelerator research beyond accelerators. The goal of this PDW will be to take a much deeper dive into the key three areas of accelerator research such as "pre-accelerator", "acceleration", and "post-acceleration". We aim to deepen our inquiry and understand how various stakeholders such as nascent entrepreneurs, accelerator managers, and accelerator sponsors contribute to the selection process, accelerator program design, and potential long-term impact of accelerator programs. Specifically, we aim to unveil (1) how accelerator managers navigate multiple and heterogeneous goals of entrepreneurs and corporate stakeholders and how founders' background determines the potential selection and benefits of accelerator programs, (2) how accelerators shape entrepreneurial learning and experimentation as well as competition and collaboration processes within accelerators (3) whether accelerators have long-term performance implications by using rigorous methodologies to isolate selection effects from heterogeneous accelerator treatment effects and. Our discussion will emphasize the role of accelerators in startup learning and growth and falls squarely in line with the 2024 AOM theme "Innovating for the Future."

Impactful Approaches for Ensuring the Relevance of Business Schools and Tackling Grand Challenges

Presenter: **Vikas Rai Bhatnagar**, *Hyperspace Action Research Services*
Participant: **Payal Vasudeva**, *Hyperspace Action Research Services*

Business schools seem to have lost their way and need to reinvent themselves to be relevant and contribute to tackling the grand challenges of our times. The “triumph of emptiness”—a phrase used by Mats Alvesson—is evinced by the near-obsession displayed by business schools for institutional rankings carried out by journalists and stage-managing accreditations by neglecting the core processes of business schools. No longer can efforts to address symptoms work; the root causes require tackling by carrying out impactful shifts in our beliefs to create humane, socially sensitive, and ecologically evolved leaders. In the proposed PDW, I share two innovative approaches—practiced and proven—of a) drawing from Vedic literature, exercising dharmic leadership by visualizing ideally what the position should do and acting based on this realization, and b) instead of viewing people as rational economic, conceptualizing them as systemic economic with multiple faculties in dynamic interaction and influencing each other. These two approaches fuel three paradigm shifts in the practices of managing business schools: a) making the vision, mission, and values functional from being ornamental; b) focusing on the core business school processes rather than going for journalists-led rankings and stage-managing accreditations; and c) practicing the management principles we teach students, enabling them to learn by experiencing them. The PDW is designed to trigger the imagination of participants while the activities will enable participants to have a few impactful takeaways that they can implement when they get back to work and improve the functioning of their business schools.

Maximizing the Impact of Professional Doctorates

Organizer: **Richard Breese**, *Sheffield Business School, Sheffield Halam U., UK*
Host: **Olga Polyakova**, *Sheffield Business School, Sheffield Halam U., UK*
Session Chair: **David Wagner**, *Munich Business School*
Distinguished Speaker: **Jean M. Bartunek**, *Boston College*
Facilitator: **Ekin K. Pellegrini**, *U. of Missouri, St. Louis*
Facilitator: **Svetlana Khapova**, *Vrije U. Amsterdam*
Facilitator: **Jeanette K. Miller**, *Penn State Smeal College of Business*
Coordinator: **Samah Issa**, *Sheffield Business School, Sheffield Halam U., UK*

Universities and researchers are under increasing pressure to showcase the impact of their work. There is a lively academic debate on what constitutes research impact and how traditional notions of impact need to be broadened in order to include a more holistic view that serves researchers, educational institutions and society. Professional doctorates, such as the Doctorate in Business Administration (DBA), offer unique opportunities for achieving impact which are different from those of traditional PhDs in some important aspects. As an experienced management practitioner, the DBA researcher usually identifies a management problem or opportunity as their research topic, which is then refined and developed during the taught element of the DBA program, before they embark on their primary research. The requirement for a contribution to management practice in a DBA means that the impact is usually more immediate than for a PhD, but the challenges for the researcher lie in achieving rigor as well as relevance in their doctoral thesis and managing potential tensions between their professional and academic roles (which they hold in parallel). The evidence base on maximizing impact from doctoral qualifications - and specifically professional doctorates - is growing, but is still relatively underdeveloped, given the significance of the issue. This PDW will explore how the impact of professional doctorates can be maximized, addressing the unique opportunities, challenges, development trajectories of the degree. Spearheaded by a distinguished keynote, the PDW is facilitated by a team of academic directors from six international DBA programs and a professional organization (EDBAC).

There is no formal registration process. However, a quick email expressing interest to attend would be appreciated: david.wagner@munich-business-school.de

Unpacking Quality In Decolonising MOS Research

Participant: **Nimruji Jammulamadaka**, *Indian Institute of Management, Calcutta*
Participant: **Alison Pullen**, *Macquarie Business School, Macquarie U.*
Participant: **Shaun Denvor Ruggunan**, *U. of KwaZulu-Natal*
Participant: **Alexandre Faria**, *EBAPE/FGV*
Participant: **Abhoy Kumar Ojha**, *Indian Institute of Management, Bangalore*
Participant: **Pushkala Prasad**, *Skidmore College*
Participant: **Ramya Tarakad Venkateswaran**, *Indian Institute of Management, Calcutta*

This PDW focuses on unpacking the idea of quality in decolonising management and organization studies from multiple viewpoints and geo- historical locations. It brings together editors and authors, well established and early career scholars as well as scholars from different geo-historical locations of experiencing gendered racialized coloniality, i.e, South America, Africa, India, US and Australia. By bringing together these diverse viewpoints it attempts to articulate how the idea of rigor functions to silence alternate view points and it inaugurates conversations of how the idea of rigor and quality as to transform to inaugurate ecologies of knowledges that overcome hegemonic Eurocentric management.

Firm Responses to Populism: Historical Approaches and Lessons for Today

Coordinator: **Christopher Hartwell**, *ZHAW School of Management and Law*
Facilitator: **Timothy Michael Devinney**, *Alliance Manchester Business School, U. of Manchester*

Since the global financial crisis, populism has become a more successful electoral strategy than during the Cold War or in the heyday of globalization in the 1990s and early 2000s. In particular, its success in developed, as well as developing, countries, has transformed populism from a political curiosity into an area of serious enquiry for economics and business scholars. The purpose of this professional development workshop (PDW) is to bring together scholars working on populism to develop papers on examples from history that can help to answer this question. As part of a planned special issue of *Business History Review*, we hope to examine just how firms have dealt with prior waves of populist governance in the past, looking to understand responses at the firm level across various vectors. While we understand that much of the historical context for such an examination may come from mainly developed countries (and, in particular, the rich literature and material from the United States), we encourage submissions that especially focus on a non-Western context, as in the Global South, which has been a potent breeding ground for populism for decades.

Multi-Method and Multi-Perspective Investigation of Early-Stage New Ventures

Organizer: **DEVIKA RAJ**, *Bocconi U.*

Organizer: **Moran Lazar**, *Tel Aviv U.*

Panelist: **Sonali Shah**, *U. of Illinois at Urbana-Champaign*

Panelist: **Brent Goldfarb**, *U. of Maryland*

Panelist: **Andrew Pierce Knight**, *Washington U. in St. Louis*

Panelist: **Travis Howell**, *Arizona State U.*

Panelist: **Shinjinee Chattopadhyay**, *U. of Illinois*

The study of new ventures poses unique methodological challenges compared to established organizations owing to the fluid nature of startups regarding the idea, team, and capital structure, especially in the early stages of the new venture creation process. This PDW aims to advance the potential use of novel methods and perspectives while investigating the early stages of a new venture. These approaches to studying new ventures include generative AI, field experiments, computer analysis of virtual meetings, archival methods, surveys, interviews, QCA, and conjoint analysis. This PDW brings together leading scholars who have utilized these methods in studying the early stages of new venture creation. The panelists will converse about how each approach can be utilized to understand questions pertaining to the early stage of new ventures but also provide insights into the advantages and limitations of using these approaches in general. Further, the PDW will encourage the participants to share and gain feedback from the panelists and their peers on methodological challenges encountered in their research process and possible data collection strategies that may be used to advance their theoretical interests in this area.

Adding Value with Intuitive Intelligence in Age of AI

Participant: **Eugene Sadler-Smith**, *U. of Surrey*

The 'Adding Value with Intuitive Intelligence in Age of AI' PDW rethinks conventional ways of management learning and development by showing how intuition can be developed, educated, and trained so as to contribute to business organizations in unique and valuable ways that cannot be captured in an algorithm or imitated by machines. This PDW will use a 90-minute workshop format to give a practical demonstration of an innovative pedagogy for developing intuition which attendees can use in their own MLE practice. It will be original and provocative by challenging a management education orthodoxy which has thus far overlooked intuition; it will be inclusive, integrative and interactive, by appealing to a wide range of participants and involving them experientially; it will be based on andragogical principles of learning and will be logistically sound. The topic of this PDW is of potential interest to a large and diverse audience across the Academy because intuition applies across most sub-fields of management, including entrepreneurship, marketing, human resources, finance, etc. The workshop will generate insights based on interaction and exchange between participants and cross-fertilizations across fields and methodologies. 'Take-ways' will be formulated in the course of the workshop for use in participants' own teaching and learning practices.

Effective Experimental Methods: Vignette Studies and Thought Experiments

Organizer: **Jose R. Beltran**, *Rutgers U.-Camden*
Organizer: **Kyle J. Bradley**, *Kansas State U.*
Organizer: **Ursula Martin**, *George Washington U.*
Organizer: **Herman Aguinis**, *George Washington U.*

Vignette studies and thought experiments are effective experimental methods with distinct characteristics and applications that can advance multidisciplinary management research. Vignette studies involve creating scenarios to manipulate variables, facilitating real-time decision assessment, and enabling the exploration of complex phenomena. Despite being underutilized, they have significantly contributed to decision-making, strategic alliances, employee turnover, and leadership. Our PDW addresses perceived complexity, making vignette studies more accessible. Conversely, thought experiments occur within the researcher's mind, offering unparalleled flexibility in manipulating imagined variables without sample size or participant-related constraints. They are ideal for sensitive topics, particularly ethical and legal issues. Our PDW equips participants with the knowledge to comprehend thought experiments' idiosyncrasies and apply them effectively, transcending specific management branches. Thought experiments' versatility extends to various fields of science, making them universally applicable.

Building Identities Brick by Brick: A LEGO® SERIOUS PLAY® PDW on Identity-Threats

Coordinator: **Yoy Bergs**, *Nyenrode Business U.*
Facilitator: **Xander Lub**, *Hogeschool Utrecht*
Organizer: **Pascale Peters**, *Nyenrode Business U.*
Organizer: **Robert Blomme**, *Blomme*

Given the accelerated pace of life, many individuals are confronted with uncertain, dynamic, conflicting, and multiple identities. Identity threats, such as career shocks, can throw individuals in unexpected directions and set larger identity work processes in motion. This interactive Professional Development Workshop (PDW) uses LEGO® SERIOUS PLAY® as a facilitating tool and asks participants to construct 3D models that represent their work and non-work identities and the changing relationships between them after experiencing an identity threat (i.e., job loss). The workshop is structured around four foundational pillars: constructivism/constructionism, the theory of flow, play, and the use of metaphors. The workshop includes four different LEGO® challenges that progress from simple tasks to a simulation of an identity-threat. The PDW is designed around the primary scientific aim of providing insights into how LEGO® SERIOUS PLAY® can be used as an innovative research tool to explore, for example, the dynamics of identity work and career shocks. In addition, the PDW will provide an opportunity for participants to (1) deepen their understanding of how the method and processes of LEGO® SERIOUS PLAY® can be used by trainers, managers, and educators for a variety of practice-oriented, organizational, and instructional purposes; and (2) engage in reflective thinking about how to navigate identity-related challenges themselves by fostering deeper insights into the multiple layers of their work and non-work identities. All in all, this PDW is designed to stimulate creativity and enhance engagement, and the LEGO bricks make this PDW a playful experience.

The maximum capacity for this PDW is 12-14 attendees on a first-come, first-served basis. Please register using the link below:
<https://datumprikker.nl/p9xg9v3h64wqgbbe> The exact date and time will be determined by the PDW time slot scheduled for the conference.

Crafting Special Issue Proposals for Top Entrepreneurship Journals

Session Chair: **Thomas Houston Allison**, *Texas Christian U.*
Session Chair: **Moren Levesque**, *York U.*
Session Chair: **Johan Wiklund**, *Syracuse U.*
Panelist: **Richard Hunt**, *Virginia Tech*
Panelist: **Sarah Jack**, *Lancaster U. Management School*
Panelist: **Jeffrey M. Pollack**, *NC State U.*
Panelist: **Maija Renko**, *DePaul U.*
Panelist: **Friederike Welter**, *U. Siegen / IfM Bonn*
Panelist: **Trenton A. Williams**, *BYU Marriott School of Business*

The purpose of this PDW is to expand the pool of candidates submitting special issue proposal to top entrepreneurship journals such as Entrepreneurship Theory & Practice (ETP), Journal of Business Venturing (JBV), Journal of Small Business Management (JSBM), Small Business Economics Journal (SBEJ), and Strategic Entrepreneurship Journal (SEJ), to name a few. The overarching goal is to enhance quality, thereby ensuring excellence, diversity, and representation among special issue proposals. This 120-minute PDW will bring together scholars interested in potentially submitting special issue proposals with experienced editors. Participants will pitch proposals in a Dragons' Den-style session in which the editors pose questions and offer constructive comments. To encourage scholars to push the envelope of the field, the special issue pitches will be followed by roundtables where the 'pitchers' and other participants with special issue ideas, will have the opportunity to advance the discussion under the guidance of an editor. This PDW thus promises to deliver a high quality and high-level learning experience to open the 'black box' of what it takes to submit winning special issue proposals for top entrepreneurship journals.

Gandhi's Experimentation and Innovations for Managers

Session Chair: **Anil K. Maheshwari**, *Maharishi International U.*

Session Chair: **R Ray Gehani**, *Kent State U.*

Participant: **Tanuja Sharma**, *MDI, Gurgaon, India*

Participant: **Anita Mendiratta**, *Keshav Mahavidyalaya, U. of Delhi*

Mahatma Gandhi relentlessly experimented and innovated his way to achieve freedom for the three hundred million people of India through being grounded in the higher moral realm of yamas and niyamas of Yoga Sutras (Maheshwari & Pandey, 2022). With tremendous humility and determination, he tapped into the moral and spiritual inner fiber of himself as well as the Indian masses and converted them into an indomitable unified force. The success of his signature technique of satyagraha non-cooperation mass movement shook the British empire to the core. This innovative masterstroke alone inspired leaders such as Dr. Martin Luther King and Nelson Mandela to achieve great success for their peoples. His autobiography relates his many open experiments across all realms of life, including health, education, food, clothing, shelter, community, self-control, local government, law, gender and caste upliftment, production, consumption, economic equality, and more. These experiments generated several successful innovations, such as the charkha, to educate, empower, and enrich the masses. Can Gandhi's scientific yet practical approach to experimentation grounded in a higher purpose inspire and guide the business managers of tomorrow? This workshop brings together a broad panel of management researchers who will discuss Gandhi's approach to open and relentless experimentation from multiple perspectives. Through small group exercises, this workshop aims to create a rich, coherent, and practical approach to effective experimentation that can empower managers in adapting to and profiting from a rapidly changing world.

Navigating Ethical Challenges in HR Consulting Amid Innovations

Organizer: **Raghida Abdallah Yassine**, *Adelphi U.*

Presenter: **Mark Fogel**, *Clifton Larson Allen*

Panelist: **Lu Yu**, *Missouri State U.*

Panelist: **Raghida Abdallah Yassine**, *Adelphi U.*

In today's changing work environment, HR consultants are constantly faced with complex challenges such as balancing innovation with ethical practices as well as navigating the complexities of a diverse and global workforce while at the same time addressing issues such as quiet quitting. This PDW proposal poses a critical question: "What are the challenges of maintaining ethical practice while embracing innovation from the Consultant perspective, in the context of a diverse and evolving workforce?" In this workshop, our aim is to discuss the ethical implications of technological advancements such as AI technologies, how to best navigate DEI practices in this every changing business environment as well as the best strategies that can be used mitigate quiet quitting in the era of AI. The aim of this workshop is to provide HR professionals and researchers a platform to engage in these thoughtful discussions in the hopes of developing practical solutions to these issues in a business world that is being transformed daily with the introduction of AI technologies. Participants in this workshop will gain a better understanding of the dynamics currently at play in the workplace and develop a better understanding of how to apply ethical frameworks in their day-to-day activities including but not limited to decision-making as well as in their strategies to ensure an inclusive work environment and increasing engagement among employees. HR consultants will gain insights from this workshop and become better equipped with the tools needed to lead change effectively and ethically in a dynamic business world.

Are you a doctoral student or faculty member who studies cognition within the context of entrepreneurship and is looking for ways to connect with other similar researchers? The Entrepreneurial Cognition PDW returns for a fifth consecutive year. The Entrepreneurial Cognition PDW will be conducted in two parts — a series of Pecha Kucha-style paper presentations followed by a best paper award ceremony, and a moderated panel discussion. A call for papers will be announced in March 2024, whereby 10 papers (5 faculty-led, 5 student-led) will be pre-selected for presentation at the PDW. The Kauffman Foundation has graciously funded 2 best paper awards of \$1000 each for the best student-led and faculty-led papers. An established group of scholars in the field of entrepreneurial cognition will act as judges, and then in the second part offer their own insights into the past and future development of this topic. There will be a social following the PDW, which will allow participants and attendees to connect. Again this year, we plan for this to be an exciting PDW with a lively, interactive, and developmental atmosphere.

Session Type: **PDW Workshop**
Program Session: **182** | Submission: **14984** | Sponsor(s): **(OB, CAR)**
Scheduled: **Friday, Aug 9 2024 3:00PM - 5:30PM CT (UTC-5)** at **Swissotel Chicago** in **Lucerne I**

Paving Your Golden Brick Road: How to Craft a Long, Happy, and Illustrious Academic Career

Facilitator: **Chad Hartnell**, *Georgia State U.*
Presenter: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*
Presenter: **Miriam Erez**, *Technion - Israel Institute of Technology*
Presenter: **David A. Hofmann**, *U. of North Carolina, Chapel Hill*
Presenter: **Angelo J. Kinicki**, *Arizona State U.*
Presenter: **Thomas Arthur Conklin**, *Georgia State U.*

The academic career can be a gift to help us master the art and experience the joy of lifetime learning. At the same time, it can be a grueling profession in which negative reviewer feedback, student critiques, and a strenuous path to promotion can dull the purpose and passion that brought once bright-eyed and aspiring thought leaders into the field. The purpose of this PDW is to inspire attendees to develop a growth mindset toward their work and discern a deliberate strategy to experience their professional craft as a calling so they arrive at the end of their career purpose-filled, happy, satisfied, and content, rather than bitter and burnt out. Participants will hear personal narratives from five seasoned academics who have successfully paved a “golden brick road” in their career via different approaches to job crafting. Participants will then engage in self-reflection, take surveys to identify where they land on growth mindsets, calling, and job crafting, and engage in strategic personal planning to chart a new or improve the current course of their career. Finally, participants will have an opportunity to engage with the presenters in a smaller roundtable format to ask questions and seek advice about the tradeoffs and tensions associated with different career paths.

Attendees must register for this PDW via the following Google form: <https://forms.gle/B7bxAWwk6SGDgNBe7>. For any questions related to the session or problems registering for this PDW please email Chad Hartnell at chartnell@gsu.edu.

Enhancing the Credibility of MTurk in Management Research: A Guide for Authors and Reviewers

Organizer: **Isabel Villamor**, *IESE Business School*
Organizer: **Ravi Ramani**, *Morgan State U.*

Amazon's Mechanical Turk (MTurk) is a pivotal online platform for research in management and related fields. Yet, the validity of findings derived from MTurk data remains a concern. This Professional Development Workshop (PDW) is designed to impart essential guidelines for creating, executing, and documenting studies utilizing MTurk. Suitable for both prospective MTurk researchers and evaluators of MTurk-based scholarly work (such as journal reviewers and editors), our workshop is anchored in an extensive analysis of 146 scholarly sources. We offer a comprehensive overview of MTurk's practical and logistical advantages and an in-depth discussion of 10 critical aspects of MTurk research, including their associated threats (e.g., participant inattention and misrepresentation, vulnerability to web robots, non-naïveté, perceived researcher unfairness) to internal, external, construct, and statistical conclusion validity. Our PDW will also present 10 best-practice recommendations (e.g., setting MTurker screening criteria, defining compensation policies, deciding on participant remuneration) for addressing these challenges across the stages of research design, execution, and result dissemination. Furthermore, our session will provide a forum for attendees to engage in discussions about specific MTurk research queries or dilemmas. Concluding with a practical demonstration, we will show how to effectively implement these best practices in an MTurk study, thereby mitigating the validity concerns inherent in this method of data collection. This PDW will rely, in part, on our highly attended RMD PDW on MTurk that we conducted at previous AOM meetings.

New Frontiers in Open Source: Implications for Strategy and Organization Research

Organizer: **Frank Nagle**, *Harvard Business School*
Organizer: **Tony Tong**, *U. of Colorado, Boulder*
Organizer: **Matteo Devigili**, *Bayes Business School*
Distinguished Speaker: **Eric Arthur Von Hippel**, -
Presenter: **Annamaria Conti**, *IE U.*
Presenter: **Sherae Daniel**, *U. of Cincinnati*
Presenter: **Stefan Haefliger**, *Stockholm School of Economics*
Presenter: **Helge JD Klapper**, *Purdue U.*
Presenter: **Nataliya Wright**, *Columbia Business School*
Presenter: **Ran Zhuo**, *U. of Michigan*

Open-source software (OSS) exerts a profound socio-economic influence across various dimensions of contemporary life. From a supply-side perspective, OSS initiatives have gained unprecedented significance, with a surge in contributions from profit-oriented companies. Concurrently, on the demand side, OSS has grown to play new and pervasive roles in contemporary organizations and society. Yet, OSS introduces distinct managerial challenges, prompting a critical reassessment of extant theories. This Professional Development Workshop (PDW) aims to help management scholars reassess and challenge established boundary conditions and design better theories with a particular focus on strategy research, including firm boundaries, knowledge sourcing, corporate strategy, innovation strategy, and strategic human capital, to name a few. This PDW also aligns closely with the theme of the 2024 AOM conference: Innovating for the Future.

The PDW includes three main parts: a keynote speaker, a panel of experts discussing their OSS research, and the paper development roundtables. The first two parts are open to all participants. The paper development roundtables are only open to participants who submitted an extended abstract and wished to receive feedback from the panelists. The PDW organizers will send out a call for extended abstracts in summer, and subsequently send invitations to participate in the roundtables at the AOM.

A Serious Game: Collaborating in a Healthcare Innovation network

Host: **Manon Roest**, *Tranzo, Tilburg U.*

Host: **Aafke Coopmans**, *Tranzo, Tilburg U.*

Host: **Anne Marie Weggelaar**, *Tilburg U. - Tranzo*

Host: **Remco Stefan Mannak**, *Tilburg U.*

This PDW introduces attendees to the complexities of network dynamics through a developed serious game. The healthcare landscape is uniquely challenging due to persistent boundaries between healthcare professionals, departments, and healthcare organizations (MacNeil, M., et al, 2019). These boundaries hinder the flow of critical innovative knowledge across healthcare systems and hamper the goal of achieving true healthcare transformation (Brown and Duguid, 1991, Leonard, 1992). Healthcare managers and policymakers struggle with the complexities of navigating across boundaries, especially in an inter-organizational collaboration (Kaats, 2014, Rudoler, 2019). Focusing on brokerage behavior can help networks to exchange (e.g., knowledge or innovations) in a more efficient and effective manner (Long, 2013). This rather abstract information on brokerage behavior in networks, can often feel distant and detached from real-world application. Playing a serious game about network dynamics for innovation management can bridge the gap by providing a practical context for theoretical concepts (Guillen-Nieto, 2012). By playing this game and discuss this in the light of our latest results on inter-organizational collaboration in healthcare networks we aim to provide attendees with an interactive gameplay on network dynamics and let them gain an understanding of knowledge brokering activities and roles and network collaboration in healthcare.

Discussant: **Christian E. Hampel**, *Imperial College Business School*

This PDW is aimed at anyone who wants to learn first-hand about the various ways that organizational theory topics can be integrated into teaching. Participants will get to sit down at roundtables of their choice with experts who teach a range of topics - from core classes such as Strategy, Management, and Entrepreneurship, to specialty areas such as People and Politics and People Analytics. Key questions will also be addressed by the discussants, such as how to teach the same topic to different audiences and how to use Generative AI in the classroom. This lively and interactive session will leave participants with real-world knowledge to inform their teaching.

Endogeneity: Myths, Legends, and Facts – Fourth Annual

Organizer: **Elle Hyunjung Yoon**, *Iowa State U.*

Organizer: **Daniel Gamache**, *U. of Georgia*

Panelist: **John R. Busenbark**, *U. of Notre Dame*

Panelist: **Lindsey Greco**, *Oklahoma State U.*

Panelist: **Timothy J. Quigley**, *U. of Georgia*

Panelist: **Sarah Wolfolds**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*

Management scholars are increasingly concerned about biases in empirical analyses from endogeneity. When endogeneity is present, any model that does not account for the source of endogeneity will provide biased coefficient estimates. Thus, scholars strive to address endogeneity concerns in their research. Yet, scholars do not share a common understanding of endogeneity and often implement questionable solutions in response to their perceived concerns. Our target audience is Academy members who lack confidence in dealing with endogeneity or who want to improve their methodological 'tool kit.' This PDW will provide a learning opportunity about different topics related to endogeneity and how to address it correctly. To do so, we explore the myths, legends, and facts about endogeneity. The PDW will be divided into two parts. Part 1 consists of a selection of presentations on different issues related to endogeneity. Specifically, Dr. Sarah Wolfolds will discuss post-estimation tests, sample size, and instrumental variable techniques, Dr. John Busenbark will discuss simulations as a means of sensitivity analyses for potential bias and efficiency associated with endogeneity, Dr. Lindsey Greco will discuss measurement error and endogeneity, and Dr. Timothy Quigley will share editor's view of endogeneity in the field. In Part 2, the panelists will answer questions from the audience, from which we will facilitate a scholarly conversation about their views on endogeneity. With this PDW, we hope scholars will understand endogeneity better and learn when and how to account for endogeneity in producing high-quality, credible, and replicable scientific research.

Unlocking Opportunities: AFCFTA and Its Implications for International Business and Entrepreneurship

Organizer: **Yamlaksira Getachew**, Babson College
Organizer: **Roger Fon**, London School of Economics and Political Science
Facilitator: **Amelia Santos-Paulino**, UNCTAD
Facilitator: **Charles Edward Stevens**, Rutgers U.
Facilitator: **Lilac Nachum**, City U. New York
Facilitator: **Michael J. Mol**, Copenhagen Business School
Facilitator: **Miguel Rivera-Santos**, Babson College
Facilitator: **Moses N. Kiggundu**, Carleton U.
Facilitator: **Phillip H. Kim**, Babson College
Facilitator: **Robert Nason**, McGill U. - Desautels Faculty of Management

The African Continental Free Trade Area (AfCFTA) is a landmark initiative that aims to create a single market for goods and services across the African continent. It represents a significant step towards regional integration at a time when the legitimacy of such integrations is being challenged elsewhere in the world. The AfCFTA has the potential to influence international business and entrepreneurship activities in Africa, as well as the relations between African countries and other regions. Therefore, international business and entrepreneurship scholars need to examine this phenomenon and contribute to the academic and policy discourse on its implications and opportunities. Such research can help inform policy decisions and support the successful implementation of the AfCFTA. The purpose of the PDW is to provide a forum for exchanging ideas on international business and entrepreneurship research opportunities related to AfCFTA as well as identifying opportunities for collaboration.

Panelist: **Chad Van Iddekinge**, *U. of Iowa*
Panelist: **Shad S. Morris**, *Brigham Young U.*

This PDW will allow division members to participate in research discussions moderated by accomplished HR scholars, as well as network with other scholars researching similar topics. Attendees will have an option to participate in two 40-minute roundtable discussions from a variety of research areas. The tables research themes span a range of 17 HR topics: Alternative Work/Work Arrangements, Compensation, Diversity, Global HRM, HR, Innovation & Entrepreneurship, HR Analytics, Leadership & Followership, Legal Issues (safety, discrimination, harassment), Onboarding & Socialization, Organizational Culture & Climate, Performance Management (performance appraisal and feedback), Recruitment/Job Search, Selection/Staffing, Sex & Gendered Work Disparities, Stressors, Strategic HR, HR Ecosystems and Turnover/Absenteeism/Withdrawal.

Progressing Theorizing Through Iterativity in Qualitative Research

Moderator: **Christina Hoon**, *Bielefeld U.*
Moderator: **Alina McCandless Baluch**, *U. of St Andrews Business School*
Presenter: **Dermot Breslin**, *Rennes School of Business*
Presenter: **Caroline Jane Gatrell**, *Liverpool U.*
Presenter: **Karen Golden-Biddle**, *Boston U. Questrom School of Business*
Presenter: **Lisa K. Hehenberger**, *ESADE Business School*
Presenter: **Tine Koehler**, *U. of Melbourne*
Presenter: **Maria Rumyantseva**, *U. of Sydney Business School*
Presenter: **Jorgen Sandberg**, *U. of Queensland*
Discussant: **Anne D. Smith**, *U. of Tennessee, Knoxville*

Essential for theory building, iterativity is a feature of making analytic progress in qualitative research. In these iterative efforts, method generates and shapes theory and vice versa through a back-and-forth character. At the microlevel of actions, iterativity forms the basis of the analytical ‘moves’ that scholars undertake in the research process. Linking iterativity to macro analytic work when iterating the research cycle itself, macro-iterativity constitutes a pattern of iterating across multiple cycles of research, unleashing the generative potential of theorizing. Even though current methodological conversations offer new avenues for thinking about iterativity (e.g., phenomena construction; review studies; coding practices and analysis; across research cycles; action research), limited guidance exists for the ways in which researchers can engage in iteration to advance theorizing. The purpose of this PDW is to explore the different approaches to iterativity, leading to more imaginative and original research in management. This workshop seeks to create a space for discovery and equip management scholars with the methodological tools needed for theorizing through iterativity. This PDW explores different avenues for thinking about iterativity in coding practices and analysis, in review studies, in cross-study re-examination, in inside-outside research and action research, and in the construction of phenomena from theory, empirics, and pre-understanding and the interrelated stages. Iterativity plays an important role in supporting more generative theorizing, producing more enduring expansive and transformative consequences for the development of ideas.

Strategic Framing in Multi-Stakeholder Settings: Tensions, Reconciliation Strategies, and Use of AI

Organizer: **Saeed Khanagha**, *Vrije U. Amsterdam*
Organizer: **Anna Plotnikova**, *Vrije U. Amsterdam, School of Business and Economics*
Facilitator: **Pourya Darnihamedani**, *Nyenrode Business U.*
Panelist: **Shahzad Ansari**, *U. of Cambridge*
Panelist: **Denise Falchetti**, *George Washington U.*
Panelist: **Janina Klein**, *Vrije U. Amsterdam, School of Business and Economics*
Panelist: **Andreas Sebastian Konig**, *U. of Passau*
Panelist: **Yuliya Snihur**, *IESE Business School*

Recent scholarship has emphasized the critical importance of framing in addressing multi-stakeholder collaborations. The workshop juxtaposes theoretical insights with empirical evidence, equipping participants with a comprehensive understanding of framing's pivotal role in navigating and resolving the diverse aspects of multi-stakeholder environments. This PDW intends to deepen participants' grasp of framing strategies, enhancing their effectiveness in orchestrating, and influencing stakeholder interactions towards positive outcomes in addressing these significant global issues. This PDW offers a focused exploration of how strategic framing influences framing dynamics and outcomes, especially when stakeholders interactions characterized by complex tensions. In the interactive part of the PDW, participants will engage with an AI tool to explore advanced tools and techniques and discover new research opportunities in framing. The participants will experience how AI-generated videos, images, and texts can shape perceptions across different audiences and learn how AI aids in framing research across management disciplines.

For any questions, please contact the organizers.

The third edition of our Professional Development Workshop (PDW) dedicated to helping scholars from Science, Technology, Engineering, and Mathematics (STEM) adapt to careers in Management research aims to build on the success of the previous two editions to explore new avenues for discussion and professional growth. While the first two editions focused respectively on delineating the challenges and the opportunities inherent in the career transition from STEM to Management, the forthcoming edition will delve deeper into the journey itself. It will extensively explore the transformation in mindset, language, and research purpose as scholars make the switch from STEM to Management research. Inspired by this year's theme of "Innovating for the Future – policy, purpose and organizations", our workshop will explore strategies for finding purpose and fulfillment in Management research. We aim to inspire our PDW attendees to discover and pursue their unique paths, equipping them with invaluable strategies and tools that allow them to both leverage their unique backgrounds while also embracing the freedom that the Management research field tends to offer compared to the more systematic and well-defined environment of the STEM world. Our overarching goal remains to nurture a community that supports and empowers Management scholars with STEM origins, amplifying opportunities for our past, present, and future panelists and attendees.

Toward Elevating the Contribution of Executive Doctorate Degrees to Innovating for the Future

Coordinator: **Jeanette K. Miller**, *Penn State Smeal College of Business*
Panelist: **Ekin K. Pellegrini**, *U. of Missouri, St. Louis*
Panelist: **Philip A. Cola**, *Weatherhead School of Management, Case Western Reserve U.*
Panelist: **Lynne Andersson**, *Temple U.*
Panelist: **John Mooney**, *Pepperdine Graziadio Business School*

Executive doctorate degrees are becoming increasingly prevalent in business schools across Asia, Europe, and North America. The emergence of new programs every year represents a great opportunity to enhance management scholarship and practice through the training of senior executive leaders to utilize rigorous academic research that bridges academic empiricism and theory with practitioner hands-on experience. Undoubtedly, the challenge is to ensure that the research completed in executive doctoral programs is relevant, rigorous, and impactful, and that graduates are equipped to be effective practitioner scholars in their future careers. The purpose of this PDW is to facilitate dialog and brainstorming between business school faculty, executive doctoral students and alumni to share experiences, discuss the features of executive doctorate degrees that contribute to executive development and business practice, and identify opportunities for improving the design and delivery of executive doctoral programs. In short, our goal is to reveal insights that will help forge a path for executive doctoral students to become practitioner scholars who bring unique perspectives and competencies to innovating for the future. Topics of discussion include learning outcomes and professional goals for executive doctoral programs, reasonable expectations of executive doctorate students, curricular design and content, research expectations for executive doctoral programs, fostering meaningful collaboration between students and faculty, and opportunities for the dissemination of executive doctorate research.

Innovating for the Future: Giving Voice to Stakeholders

Organizer: **Harry J. Van Buren**, *U. of Tennessee, Chattanooga*
Organizer: **Anna Hannula**, *Tampere U.*
Organizer: **Johanna Kujala**, *Tampere U.*
Organizer: **Sybille Sachs**, *U. of Applied Sciences in Business Administration Zurich*
Presenter: **Flore Bridoux**, *Erasmus U.*
Presenter: **Bidhan Parmar**, *U. of Virginia*
Presenter: **Nicholas Poggioli**, *Appalachian State U.*
Presenter: **Sandra A. Waddock**, *Boston College*

Voice is an implicit, inherent, and basic assumption in stakeholder theory (Freeman, 2009). The exercise of voice is how stakeholders express their identities and further their interests (Van Buren & Greenwood, 2009). Voice has also been linked to stakeholder engagement processes (Billiet et al., 2023), even in the very early stage of an endeavor (Alvarez & Sachs, 2023). Wicked issues such as social injustice, climate change, or migration call for innovating with stakeholders, which requires that managers are able and willing to listen to diverse stakeholder voices. Further, stakeholder voice also has normative implications. When stakeholders lack voice, there is a danger that their interests will be marginalized (Van Buren & Schrempf-Stirling, 2023). When stakeholders perceive themselves as lacking voice, distrust can be the result (Siebold et al., 2023). In practice, managers prioritize some stakeholder voices (generally, those stakeholders that possess power; see Mitchell et al., 1997), meaning that stakeholders who lack the capacity to exercise voice are often ignored by managers – with deleterious effects on the former’s interests. However, stakeholder voice has not been as well conceptualized and studied as is merited given its importance in various steams of social issues in management (SIM) research. Therefore, this research-oriented PDW aims to engage organization and management scholars to discuss how the concept of voice in stakeholder theory can be deconstructed and reconstructed through new ways of theorizing and conducting empirical research.

This professional development workshop is open to ALL and designed to assist authors in preparing their management education and learning manuscripts for publication. The submitted manuscript can be in any stage of completion, but must have sufficient content for review and comment. Management education and learning manuscripts submitted, but not accepted in the 2024 Academy of Management's Management Education and Development Division conference program, may be submitted since the manuscript title will not appear in the program. Manuscripts will be grouped with similar management education and learning manuscripts with each author expected to review the manuscripts prior to the workshop. A journal editor or experienced researcher will review each manuscript, provide feedback to participants and will facilitate a discussion of all participants' manuscripts at their assigned table. This workshop is co-sponsored by The CASE Journal, Journal of Management, Journal of Management Education, Management Learning, Management Teaching Review, Organization Management Journal and the Academy of Management Learning & Education.

Teaching with Business Simulation Games

Participant: **Tim Rogmans**, *Sim Institute*

In this workshop, participants practice and discuss the use of simulation games in business education. It is intended for faculty members who are interested to get started with simulations in class or who have some experience that they wish to share and build upon. The workshop will take participants through a 7-step process of the effective use of business simulation games, including an abbreviated brief-play-debrief session of a popular simulation game. Business simulation games are effective learning tools that help students to practice their skills in a risk-free environment, increase student engagement, improve learning outcomes, and serve as a bridge between course contents and the real world. Although the use of innovative business simulation games in higher education has been increasing, there are still many instructors who are reluctant to teach with them, despite showing interest in novel and experiential learning methods. Common reasons to postpone the adoption of simulations include suitability ('I don't think there is a simulation available that fits my class'), resources ('I don't have time') and risk ('it could all go wrong'). The objective of the workshop is for participants to have the enthusiasm and confidence to start using business simulation games in their courses.

If possible, attendees should bring a laptop or tablet device to the session to play the simulation game. Attendees without a device will be invited to share with someone else.

The PDW offers a space for AOM members to reflect on the role of the management practitioner within Management Education (ME) as part of an overall challenge to rethink strategies of industry-academia collaboration, and reinvent our current partnerships with practitioners. This PDW aims to address their diverse and often underrepresented roles within business schools, with a focus on bridging the gap between academia and industry. While scholar academics typically receive the most attention, this PDW recognizes the importance of acknowledging and empowering other key stakeholders who play crucial roles in business education. While open to all AOM members, the target audience is management practitioners who are contributing to management education in roles such as Adjunct Faculty, Professors-In-Practice, Executive in Residence, Executive Education Faculty, Teaching Fellows, practitioner-oriented faculty, online educators, DBAs, and others, and to also bring in practitioners within business schools like Academic Administrators, Technology Support, Learning Technologist and EdTech companies. These and many others practitioners are part of ME but could lack a voice or a home at AOM. Though they are critical contributors to ME, they are underrepresented at academic conferences like the AOM. This PDW is designed to be inclusive, to support these critical players and to share best practices in this domain. The PDW is organised around four perspectives: (1) The role of practitioners in Management Education; (2) Industry-academia integration in executive education; (3) Bringing best practices for practitioners into the management classroom; and (4) Innovative business models of industry-academia collaboration: multi-stakeholder perspective.

If you are new to the Organization and Management Theory (OMT) division, are interested in joining OMT, or are an established member who has been away for a while, then this forum is for you! This forum was created especially to help members to feel “at home” in the OMT division. We have designed the forum so that you can meet leading scholars in the OMT division, meet other new members of the division, and discuss research with other scholars who share similar interests. The forum will include a welcome and overview of the OMT Division and research discussions moderated by renowned scholars who actively conduct research in a particular area of interest.

Panelist: **Angela K. Miles**, *North Carolina Central U.*

Almost all business schools (99%, 481/483) in the United States (U.S.) accredited by the Association to Advance Collegiate Schools of Business (AACSB) that award doctoral degrees are classified as primarily white institutions (PWIs). Consequently, most management scholars in the U.S. learn about the three pillars of academic careers (i.e., research, teaching, and service) from a PWI viewpoint. While valuable, this perspective does not adequately represent the varied and very rewarding career paths available to management scholars in minority-focused institutions, such as the over 94 Historically Black Colleges and Universities (HBCUs) in the U.S. Accordingly, the goal of this professional development workshop (PDW) is to shine a light on career opportunities available to management scholars in HBCUs and other minority-focused institutions. Participants will hear from and engage in discussion with a diverse panel of management scholars about building successful and fulfilling academic careers at HBCUs. Topics of discussion include a better understanding of the vision and mission of HBCUs, differences in student populations between PWIs and HBCUs and how they impact teaching, and how HBCUs offer unique possibilities to make societal impacts through community engagement. By highlighting this oft-overlooked scholarly path, our PDW is valuable not only for future management scholars but also for junior faculty and perhaps even seasoned scholars who wish to develop their careers outside the dominant research-intensive (i.e., R1) paradigm promulgated by PWIs.

Going Global: The Fulbright Program

Organizer: **Thomas Kelemen**, *Kansas State U.*
Panelist: **Melissa S. Cardon**, *U. of Tennessee, Knoxville*
Panelist: **Nathan Eva**, *Monash Business School*
Panelist: **Cynthia S. Wang**, *Northwestern Kellogg School of Management*
Panelist: **Luis Alfonso Dau**, *Northeastern U.*
Panelist: **Markus David Taussig**, *Rutgers Business School*
Organizer: **Michael Matthews**, *U. of Texas Rio Grande Valley*

The Fulbright Scholars Program stands as a cornerstone for fostering international collaboration and cultural exchange among researchers and educators worldwide. This program serves a pivotal role in shaping the perspectives of management professors and researchers and provides career-defining and life-altering opportunities. Yet, many management scholars and teachers have little or no understanding of this program and its benefits. This PDW aims to bring awareness to this program and to delve into the transformative experiences of management professors who have participated in the Fulbright Scholars Program, exploring the program's impact on their professional development, careers, research, and teaching approaches. This PDW will bring together scholars from across the globe who have participated in Fulbright exchanges, sharing their insights on the challenges and opportunities encountered during their international assignments. They will discuss the program, application process, experience in their host country, and lasting relationships developed. Attendees will gain valuable perspectives on the program and develop connections with former Fulbright Scholars.

Preparing Graduates for a Digital Future – Management Education in the Driver’s Seat

Panelist: **Joan Richardson**, *College of Business and Law, RMIT U.*
Panelist: **Ana Hol**, *Western Sydney U.*
Panelist: **Margaret Hamilton**, *RMIT U., Melbourne, Australia*
Panelist: **Jim McGovern**, *Western Sydney U.*
Panelist: **Mathews Nkhoma**, *RMIT U.*
Facilitator: **Margaret E. Heffernan**, *RMIT U. + MED PDW Chair-elect*

There are several issues for universities seeking to assure professional accreditation, align program/course’s with work roles and most importantly assure Management graduates are suitably equipped with discipline specialist, digital and industry sector knowledge and skills. The 97 million new work roles the World Economic Forum expect to be in existence by 2025, demand a myriad of programs/courses, industry-based learning experiences and graduates capable of using specialist, digital and “soft” skills to generate innovative solutions to problems (Chee, 2023). The new work from home world demand has changed management cultural expectations of adult workers and learners. A demand for hybrid delivery modes that enables use of personalised digital skills to support learning activities, encased in authentic assessable learning experiences exists. The Australian Computer Society (ACS) accredit computing specialist programs/courses that deliver technical knowledge in-depth, “soft” skills and practice solving business problems in all industry sectors. However, digital graduate roles are no longer the solitary province of computing specialist discipline and sub-discipline graduates. Management graduates with specialist professional and digital knowledge and most importantly “soft” skills enable value-add business system innovations in the workplace and increasingly the incumbents of traditionally Computing cross-functional tactical roles. The number of different digital programs/courses, subjects and delivery modes is a rapidly moving target for educational organisations bound by complex policy and process environments. Higher Education institutions are geared to assuring learning and teaching (L&T) quality and industry driven changes to program/course content. Management graduates with strong digital skill sets are critical to lead innovation in the workplace. Rather than focus on what changes are required at a program/course level to address the plethora of graduate roles available. we are aiming to first look at what is needed to by all management graduates to be successful on a career trajectory that embraces business innovations underpinned by the use of Artificial Intelligence (AI) technologies like ChatGPT? Whether the work role destination is management, law, logistics or information systems graduates need to be able use emerging AI technologies to gather and analyse data, create business intelligence, innovate new procedures, systems and positions and finally communicate within and outside the workplace in question. Problem solutions need to be aligned with the industry needs of managers, ethical behavioural constraints, organisational policy and practices. A common need for all management graduates is digital literacy, and we need to work out what that means in today’s work environment. Management graduates build innovative systems using their professional understanding of how organisations and the people within them work. Digital specialist and “soft” skill foundations at a threshold level need to recognise a diverse suite of personal learning from device use in the home and workplace. Personalised learning journeys that traverse a career life-span that recognise diverse experiential starting points create a need for a variety of journeys through innovative accredited programs/courses in higher education, that call for flexible pathways. New ways of learning are critical to address Computing + Management (X) and Management (X) + Computing graduate roles, available in the marketplace (Chee, 2023). Government and industry describe graduate role specifications in terms of tech stacks that transcend the boundaries of traditional American Computing Machinery (ACM) / American Information Systems (AIS) specialist computing areas that include: Computer Engineering (CE), Computer Science (CS), Cyber Security (Cyb Sec), Data Science (DSc), Information Systems (IS)/Information Technology (IT) and Software Engineering (SE) (Artificial Intelligence (AI) curriculum soon) roles and form part of a Management digital career journey. The possibilities for Digital Management programs, courses, and units of study are enormous. This panel will describe the constraints of current program architectures using how Australian Computer Society (ACS) Information Systems (IS/IT) programs are implemented in Australia as a case study. Then the difficulty associated with the design and delivery of Digital Management university programs for the rapidly changing workplace and graduates needing to be able to use Artificial Intelligence (AI) applications to generate business intelligence from large disparate data pools, will be discussed. This session should be of interest to attendees with an interest in innovations that improve the work-readiness of graduates.

Participant: **Michael J. Morley**, *Kemmy Business School, U. of Limerick*
Participant: **Paolo Quattrone**, *Alliance Manchester Business School, U. of Manchester*

This interactive workshop builds on the successful session at the 2023 conference and involves a group of facilitators who have experience as Editors-in-Chief of major journals in the field of management and organization studies, and seeks to encourage participation from others with current or recent editorial leadership team experience at the Editor-in-Chief or Associate Editor level. Building on the agenda developed at the preceding conference, the workshop has three aims. First, to continue to develop editorial expertise through sharing our experiences, tools and techniques. Second, to develop approaches in these three priority areas: developing our collective mission as custodians of science and scholarship and making that role visible in our field; creatively developing editorial processes to make them more efficient and effective for authors, reviewers and editors; and building the agency and influence of editors, collectively, in response to the dominance of a small number of publishers. Third, to connect editors into an established and growing network in the field, to support ongoing learning and optimization our support for the field. We invite and encourage current Editors-in-Chief and Associate Editors in management and organization studies journals, and those that have demitted in the last two years, to join us in this workshop.

HR Division Late-Stage Doctoral Student Consortium IceBreaker and Networking Event

Organizer: **Brian W. Swider**, *U. of Florida*
Coordinator: **Shuang Ren**, *Queen's U. Belfast*

This is the start of the HR Division Late-Stage Doctoral Consortium. This icebreaker session is designed for individuals working on their doctoral dissertation who will be participating in the Saturday HR Late- Stage Doctoral Consortium for dissertation-level students.

This consortium is by invitation only. Logistical details are sent to invited participants. This event is for participants in the Saturday HR Division Late-Stage Doctoral Student Consortium (session #16813). If you have any questions about the consortium, please contact the consortium organizer (Brian Swider; brian.swider@warrington.ufl.edu).

AOM Networking Hub - Sheraton

AOM Networking Hubs are in each of the main hotels and will be open all day. They offer seating and charging stations, allowing attendees to take a break, recharge their devices, pick up their attendee badges, or meet with colleagues. Additionally, the Networking Hubs will host morning coffee breaks from 7:30 AM to 9:00 AM. If you're staying at one of the following hotels where meeting sessions are held —Swissôtel Hotel, Sheraton Grand, Fairmont, Marriott Downtown, or Hyatt Regency—you can save time by picking up your badge at the AOM Self Check-In Kiosk before your first session.

Computational theory construction (CTC) is a genre of theory development research in which researchers leverage computational tools, such as social network analysis, sequence analysis, text analysis, and agent-based simulations, to identify patterns within social systems and to theorize those patterns. In the organizational and information systems fields, this genre is also known as "computational grounded theory," "interpretive data science," and "computationally intensive theory construction." Rapid innovations in computational techniques such as the recent uptake of large language models are expanding the opportunities available for CTC. As this research genre evolves, the community of scholars engaging in CTC is growing. This PDW is a follow-up to the previous AOM PDWs on "Towards a Craft of Computational Theory Construction" in 2023, "Computational Methods for Theory Building: Practices & Struggles" in 2022, and "The Rise of Computational Methods for Theory Development" in 2021. In these prior workshops, we focused on establishing the legitimacy for this new genre of research and providing a collaborative forum to help participants. As computational techniques proliferate, in this follow-up workshop, we aim to unify the community of CTC scholars around a core set of CTC practices. Continuing the tradition of the CTC PDWs, we also connect computational and qualitative researchers, share review process insights from published CTC papers, and mentor junior scholars pursuing CTC projects.

Part I of the PDW – the keynotes and panel discussion are open to all AOM registrants. Part II – roundtable discussions are only for participants who would like to receive feedback on their ongoing or planned projects and have been accepted to attend the roundtables. For those who are interested in participating in roundtables, please submit a short vignette on or before July 21 (max 2 pages in PDF format to ctcpdw21@gmail.com). The organizers will send out the notification of acceptance at the end of July. Your vignette should cover the following aspects. • Brief introduction of the research project • How have you combined computational and manual analysis techniques in your research? • What struggles you have faced in understanding, using, or considering using computational methods in your theory development work? Those who have not conducted any such research, but are planning to do so, can submit short descriptions of your intended work, also focusing on your planned combination of manual and computational techniques or related questions. We look forward to seeing you and engaging in fruitful discussions during the PDW!

Our goal in this PDW is to offer a forum to flush out the (innovative) means that business families employ to influence the future (the family's future, the businesses' future, but also the future of society) through the creation or the adhesion to what we term satellite organizations such as foundations, trusts, think tanks, and family offices. Next to the traditional, positive, pro-social approaches, the Chairs are attentive to make space for critical approaches, the dark side, and the nefarious intentions or activities of families. The session is articulated around two key (interdependent) questions: "why" and "how". "Why" involves the motivations behind implementing these mechanisms/organizations. "How" explains the different satellite organizations families can resort to achieve these ambitions. In order to support this, our PDW will be organized by themed tables articulated by relevant motivations (family legacy, family heritage, SEW, philanthropy, emotions, guilt, transgenerational entrepreneurship, venture capital, and policy influence/poverty, for example). Attendees will have the opportunity to participate in two tables during the session. This session will provide first an excellent opportunity for researchers to connect, and second to collectively present a landscape view of motivations and means, precious for connecting disparate streams of research and enlightening practitioners of family entrepreneurship desirable to innovate for a better future.

Highlights of this year's Consortium include a free networking and hors d'oeuvres event on Friday, August 9th (separate submission); a keynote address by Dr. Connie Wanberg (University of Minnesota); a presentation and panel on navigating the job search process; an assembly with editors of major journals in HR; roundtable sessions with leading scholars and educators in the field on research, teaching, and service; and a research feedback session on dissertation/research project. Ideal candidates are doctoral students who are members of the HR division, have finished all required coursework, and are on track to have their dissertation/thesis proposal approved by their supervising committee before the conference.

This consortium is by invitation only. Logistical details are sent to invited participants. If you have any questions about the consortium, please contact the consortium organizer (Brian Swider; brian.swider@warrington.ufl.edu).

The New Faculty Consortium (NFC) provides a developmental forum for new faculty to interact with peers and senior colleagues about how to survive and thrive in their academic careers. The consortium is open to all HR Division new faculty members with less than 4 years of post-PhD experience who have been recently hired to research and/or teach in HR. The consortium includes a combination of panels, facilitated discussions, small roundtable sessions and as well as the opportunity to network with peers and leading global faculty.

To apply for the New Faculty Consortium, please complete the following survey: <https://rb.gy/2rsu37> Additional information reading the symposium will be provided to the confirmed attendees before the AOM meeting in Chicago

This workshop is geared toward HR doctoral students in the middle of their program. The goal of this workshop is to help these students navigate the collection of career issues that begin to emerge when students are about halfway through a doctoral program. In many PhD programs, the middle stage is critical point. Students are expected to begin the transition into independent scholars, start building professional networks, move beyond the structure of courses and exams, and develop skills as an instructor. The workshop topics are designed to help these students develop the knowledge and skills required to be successful at this middle-stage and continue their development into strong researchers and teachers. It is also a way for HR doctoral students to build connections with others and become more involved in the HR Division.

Innovating the Future of Relational Analytics: Bridging Relational Coordination and Social Networks

Organizer: **Scott Soltis**, *U. of Kentucky*
Organizer: **Jody Hoffer Gittell**, *Brandeis U.*
Presenter: **Anindita Roy Bannya**, *UNSW Sydney*
Panelist: **Kristin Cullen-Lester**, *U. of Mississippi*
Panelist: **Theresa M. Floyd**, *U. of Montana*
Panelist: **Michaela Kerrissey**, *Harvard U.*
Panelist: **Ajay Mehra**, *U. of Kentucky*
Panelist: **Stephen M. Shortell**, *U. of California, Berkeley*
Panelist: **Sijia Wei**, *Northwestern U.*

Despite serving as primary lenses through which relational analytics are explored, the fields of relational coordination and social networks rarely intersect (Gittell & Ali, 2021; Soltis, Methot, Gittell & Harris, 2023). The aim of this professional development workshop is to begin to bridge this gap and help to innovate towards a future of relational analytics that simultaneously employs the theories and methods related to relational coordination - the study of how groups communicate and relate to manage interdependent tasks - and social networks - the study of formal and informal structures of relationships in organizations. We hope to accomplish this goal by bringing leading scholars in each field together to interact with each other as well as other academics and practitioners with an interest in the role of relationships in human resource management and organizations, more broadly. The combination of relational coordination (Gittell, 2002; Gittell, Seidner, & Wimbush, 2010) and social networks (Borgatti, Mehra, Brass, & Labianca, 2009; Borgatti, 2006; Brass, 1981) has the potential to better describe, assess, and improve the coordination of work in complex organizational systems. We will start with primers on each field in isolation before discussing the criticality of cross-perspective views. Participants will then break into facilitated working groups to develop different approaches to integrating the two methods, conceptually and/or technically, building on examples from past, current or future work where relevant. We will come back together to share our ideas and to consider the research program going forward with a panel of experts in relational coordination and social networks.

Annual Meeting Career Fair Interviews

Organizer: **Wendy A. Kramer**, *Academy of Management*

Annual Meeting Career Fair Interviews allow those recruiting to meet one-on-one with those who are either on the market or soon to be on the market. All participating employers have active job postings on the Career Services Job Board along with contact information. These interviews are primarily arranged ahead of the Annual Meeting but can also be initiated on-site. Interested job seekers should visit the Annual Meeting Career Fair website or stop by the Career Services Registration table to check in with staff and ask questions.

Collegueship for Co-Innovation: Leading and Managing with Purpose in the Workplace

Session Chair: **Roxanne Jimenez**, *Weatherhead School of Management, Case Western Reserve U.*
Discussant: **Jennifer Robin Bishop**, *Impact of Gender Diversity on work Performance at Workplace*
Discussant: **Ruth Bernstein**, *Pepperdine U.*

This PDW will invite participants to role-play, in small groups (of six), various scenarios that will explore how effective management and leadership of organizations at various levels (macro, meta, and micro) of the firm use cross functional team collaboration to promote innovation, all with the end result of developing purposeful new solutions for sustainable growth of the firm. The second focus of the PDW will be to observe the subconscious behaviors of the participants as it pertains to the scenario outcomes. Following the role-play experience, participants will share in a “safe” discussion that allows them to formulate strategies that foster inclusiveness in the workplace. This experience supports the tough decisions participants have to grapple with as developing managers when dealing with complex policies and topics. Participants will be asked to perform an introspection of the experience that hopefully leads to their self-assessment of subconscious behaviors which drives decision making in their management roles.

Messages From the Street – Innovate and Accelerate Behavior Change

Organizer: **Philip N. Brown**, *Six Points Consulting*
Organizer: **Dawn M. Newman**, *Saint Louis U.*

Organization Development (OD) and Organization Development and Change (ODC) methods dwell within arenas cohabitated by academia and management consulting systems and practices. Importantly, messaging and messages receive some attention from both camps, more time and thought is required for future organizations to thrive. Both present models and applications which work through and solve communication issues and endeavor to elicit behavior change; but miss opportunities to strengthen, and quickly change the behavior, of both the dispatcher and the intended recipient of the message. We submit that a cacophony of noise surrounds this entire process and impacts meaningful engagement. We also submit that purposeful communication attempts at behavior change require innovative ideas to affect people, policy, and organizations. Management consultants and academics leverage concepts from myriad arenas to facilitate problem-solving and move people and organizations into a bigger space. This demands leadership from both to develop solutions to listening and behavior change into all policy and organization levels through engagement and education. Thus, we propose an innovative exploration scheme to examine several multi-modal models for communication and behavior change (Van Den Eertwegh et al., 2015; Michie et al., 2014) plus the presenters' in-development model. Participants will gain new insights to the cacophony of communication, receive hands-on experience with models, and receive coaching techniques to increase the speed, capacity, and power of behavior change to benefit them personally and within the future organizations where they interact and reside. Key words: Management Consulting, Practitioner, Innovation, Education, Organization Development, Communication, Behavior Modification

Presenting in the Rough: Leveraging Insights Across Management and the Performing Arts

Organizer: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*
Organizer: **Dejun “Tony” Kong**, *U. of Colorado, Boulder*
Panelist: **Hooria Jazaieri**, *Santa Clara U.*
Panelist: **Daniel Southwick**, *Brigham Young U. (BYU)*
Facilitator: **Clare Haden**, *UW-Madison*
Panelist: **Lumumba Seegars**, *Harvard Business School*

The purpose of this PDW is to bring together a group of scholars and experts from relevant fields who are interested in finding new, innovative, and compelling ways to craft and deliver presentations. This forum offers participants an opportunity to hear from both academics and performing arts practitioners, focusing on practicing and crafting effective presentations for both quantitative and qualitative research. The session will include a panel discussion, integrating insights from academics and learnings from other industries that focus on presentation skills, followed by small group discussions during which participants will have the opportunity to engage with panelists. Panelists will present on topics including how to hone in on what to present, prepare and rehearse, engage a multi-disciplinary audience, and navigate virtual and in-person settings. Separately, there will be several slots available by application to work with the practitioner coaches.

Publishing in Top International Journals – Why and How?

Organizer: **Minna Marinova Paunova**, *Copenhagen Business School*

Organizer: **Monica Sharif**, *California State U., Los Angeles*

Organizer: **Kyle Ehrhardt**, *U. of Colorado, Denver*

Panelist: **Serge P. Da Motta Veiga**, *NEOMA Business School*

Panelist: **Chia-Yen Chiu**, *U. of Adelaide*

Panelist: **Jonathan Pinto**, *Imperial College London*

Panelist: **Hannes Leroy**, *Erasmus Research Institute of Management*

Panelist: **Claudia Buengeler**, *Kiel U.*

Panelist: **Tammar B. Zilber**, *Hebrew U. of Jerusalem*

This Professional Development Workshop (PDW) sets the stage by acknowledging the significance of publishing in top-tier journals for academic dissemination and career advancement. While the prominence of US-based top-tier journals such as those published by the Academy of Management is widely recognized, a notable array of international management and organization journals has emerged, matching them in both rigor and impact. These international platforms offer nuanced yet significant differences from their US counterparts, essential for scholars aiming to diversify and broaden their publication portfolio. The objective of this PDW is to demystify the process of publishing in esteemed international journals of management and organization studies. A distinguished panel of editors and associate editors from six leading international journals will convene to elucidate their respective editorial policies and underscore the distinctions from major US-based journals. This session is designed to be dynamic and interactive, featuring individual presentations by the panelists, an inclusive Q&A segment, and focused breakout discussions for in-depth exploration. By attending, participants will gain valuable insights into the strategies for successful publication in international journals.

Presenter: **Isabel Villamor**, *IESE Business School*
Presenter: **Alexis Nicole Smith**, *Oklahoma State U.*

The annual Organizational Behavior Doctoral Consortium is designed for late-stage doctoral students who have completed their coursework, fulfilled most of their program's milestones, and are preparing to enter the academic job market. This in-person consortium comprises a blend of presentations, discussions, and interactive sessions aimed at aiding doctoral students in navigating the job market, establishing connections with their cohort and invited experts, and launching their academic careers. Notably, over 50 faculty members have volunteered to speak and/or host roundtable discussions on topics such as crafting a meaningful academic job, acing the job talk, achieving success in research and publishing from the perspective of journal editors, and fostering effective and inclusive collaborations. Doctoral students desiring attendance must be nominated by their programs and endorsed by their advisors. Selection decisions will be based on student's progress in their programs, including their dissertation stage and being actively on the academic job market. This session is part of the broader OB Division doctoral programming, intended to provide attendees with support and advice for navigating key career transitions, as well as strengthening connections among members within their cohort and other peers in the field.

Panelist: **Julianna Pillemer**, *New York U.*
Presenter: **Allison S. Gabriel**, *Purdue U., West Lafayette*

A wonderful aspect of the Academy of Management (AOM) Annual Meeting is the developmental opportunities provided for doctoral students. For example, the New Doctoral Student Consortium helps new doctoral students begin to feel more comfortable in our field. In addition, the Organizational Behavior (OB) division sponsors a Senior Student Doctoral Consortium to help prepare more advanced doctoral students for the job market. The purpose of the “Halfway There” PDW is to bridge the gap between these consortia by providing information and advice relevant to doctoral students starting the 3rd or 4th year of their programs. “Halfway There” is designed to help students begin establishing themselves as independent scholars. We have conducted this PDW at AOM each year since 2009, and it has been very favorably received. Despite increasing the attendance cap to 120, we have still had several potential attendees waitlisted each year. Due to positive feedback from prior attendees, we have decided to conduct the PDW again in 2024 leveraging the meaningful modifications to the format. These modifications focus on providing a more holistic experience for the participants as well as showcasing a more inclusive conceptualization of the various avenues toward career success. A number of prominent OB division members have agreed to participate in the 2024 PDW and provide students with their insights on topics such as (1) crafting a research identity, (2) launching your dissertation, (3), understanding the “job market” process and (4) setting a sustainable path through the PhD journey to accomplish your career goals.

The OMT Global Consortium is a forum for organizational scholars from around the world to obtain advice, tools, and networks to research understudied (non-western) institutional, cultural, and geographic settings across domains (micro and macro). It includes panel discussions, feedback sessions, and facilitated conversations on topics such as: (1) developing organizational scholarship using global settings, (2) mentoring for research based in international contexts, and (3) strategies for overcoming challenges and exploiting opportunities for high-quality organizational research using diverse settings. We welcome scholars who would like to expand their research to underrepresented regions of the world.

Facilitator: **Andrea Wessendorf**, *U. of Edinburgh*

The world of work is rapidly changing. New technologies and sweeping social and environmental issues can break down long-standing work boundaries, reconfigure and replace work tasks, and disrupt entire societies. How can scholarship on occupations and professions inform and enrich our understanding of pressing societal challenges? And how can scholars of occupations expand their methodological toolkits to study these phenomena? The goal of this professional development workshop is to stimulate scholarly conversations around these questions. An additional objective of this annual PDW—now in its fifth year—is to encourage community building among scholars engaged in theoretical and empirical research on occupations and professions. Through presentations from leading scholars, interactive panel discussions, and roundtable breakouts, we seek to advance scholarship in these important areas while simultaneously building community.

Spatial approaches have become increasingly popular among management scholars to address a wide range of empirical puzzles. The proliferation of remote work, platform technologies, and human mobility has required scholars to consider how work and organizing are fundamentally spatial. Over the past 20 years, management scholars have developed a range of theoretical approaches to examine organizational space that vary in assumptions, frameworks, and ways of engaging with empirical phenomena. In recent years, researchers have begun drawing on spatial theorizing to address grand challenges, such as the climate crisis, natural and human-made catastrophes, refugee and migrant crises, inequality, and decent work among many others. Although spatial approaches have helped scholars grapple with grand challenges, the diversity of theoretical foundations creates both problems and opportunities for the advancement of grand challenges research. Given the demand for spatial theorizing in addressing grand challenges, the time is right for management scholars to come together, examine the merits, opportunities, and limitations of various spatial approaches, and begin working together to address these complex problems. This PDW brings together many of the key theorists of organizational space as well as researchers who are deploying their concepts, frameworks, and assumptions to address grand challenges.

Participant: **Wenqian Wang**, *Hong Kong Baptist U.*

The decline and erosion of trust in core societal institutions have been significantly heightened by a broad range of global crises and societal challenges. While the study of trust and institutions is prevalent in organization and management research, the intricate relationship between the two concepts has received scant attention. In this PDW, we focus on developing a research agenda around the co-constitution of trust and institutions by bringing together a group of established scholars in this emerging area, directors at the Edelman Trust Institute, and junior scholars and doctoral students worldwide. We highlight a constitutive view of institutions as configurations of beliefs, norms, practices, and infrastructure, forming an essential basis upon which trust is constructed and governing trustful behavior during crises. This timely agenda will help participants develop a sophisticated understanding of formulating novel research questions on institutional trust, leveraging scholar-practitioner collaboration to enhance the impact and relevance of their work to practice and policy-making, and using such collaboration to make significant theoretical contributions to the further theorizing of trust and institutions.

This is a three-part PDW, consisting of an opening plenary, a breakout roundtable session, and a closing plenary. Formal registration is not required. However, to foster a more engaging roundtable discussion and receive targeted feedback from our distinguished panelists, we encourage you to send us a brief summary (2 pages max) of your research idea on the co-constitution of trust and institutions to milo.wang@asu.edu by July 15, 2024. If you're interested in participating but not ready to submit a summary, we strongly encourage you to indicate your preferred roundtable discussion topic (listed below) to milo.wang@asu.edu by July 15, 2024. This will help us convey your interest to our roundtable discussion leaders. Table #1: Trust and institutional theory (Michael Lounsbury, Renate Meyer, Oliver Schilke); Table #2: Trust and market institutions (Reinhard Bachmann, Rekha Krishnan); Table #3: Trust and political institutions (Charles Eesley, Kisha Lashley, Maxim Voronov); Table #4: Trust, science, and professions (David Bersoff, Claudia Gabbioneta); Table #5: Trust, innovation, and digital technology (Kirsimarja Blomqvist, Nicole Gillespie); Table #6: Trust and responsible/sustainable management (Guido Möllering, Tonia Ries); Table #7: Trust, measures, and methods (Melissa Graebner, Wenqian Wang)

The relationship between social movements and markets has grown increasingly intricate in recent years, driven by a complex interplay of socio-economic and political factors. Notably, the ongoing wars in regions like Ukraine and Palestine, coupled with the rapid advancement of disruptive technologies such as machine learning and social media, have catalyzed this complexity. These developments, fostered by the unprecedented flow of information, are exerting a profound and far-reaching impact on social movements and relevant markets. Market participants, particularly firms, are no longer mere bystanders but are actively embedded within these movements, engaging in diverse activities from CEO activism to direct organizing efforts. This evolving landscape necessitates a reexamination by scholars. To truly grasp the nuances of this relationship, there is a need to expand theoretical frameworks and delve into new contexts. While acknowledging the significant influence of social movements and markets on society at large, it is equally important to recognize the role of scholars in shaping these dynamics. In the initial five years of this Professional Development Workshop (PDW), our focus was on synthesizing various research approaches to study the interplay between social movements and markets. Now, in the third year of our renewed five-year plan, we are dedicated to evaluating how our joint scholarly efforts are addressing the 'grand challenges' – the pressing issues that are pervasive in almost all aspects of organizational life. This year's PDW theme continues this trajectory, with a specific emphasis on the reciprocal influences between movements and markets, the impact generated by both scholars and movements, and addressing insularity within the field. Our goal is to both acknowledge the influence of scholarly work on social movements and the broader society and to foster a more inclusive and responsible engagement with the communities we study. In pursuit of this objective, we are extending an invitation to scholars who, while new to the domains of social movements and markets, are keen to contribute to this evolving area of study. Our aim is to broaden the appeal and inclusivity of our community, fostering a diverse and multidisciplinary dialogue that enriches our understanding and engagement with these pressing global phenomena.

The PDW will feature two segments. The first is a panel discussion that centers on our core theme, Movements and Markets (M&M), with this year's special focus on triple I - Influence, Impact, and Insularity. This session will explore the symbiotic relationship between social movements and market dynamics, the transformative effects of academic research and social movements, and strategies for breaking down barriers within our field. This segment is open to all attendees, encouraging a broad exchange of ideas and perspectives. For the second part of the PDW, participants will engage in round table discussions based on submitted short papers in areas relevant to movements and markets, including but not limited to Justice, Equity, Diversity, and Inclusion (JEDI), Technology, Green Initiatives / Sustainability, Organizing Forms, Internal Movements and Organizational Change, Non- Market Strategy, Corporate Activism, Microfoundations. We aim to group participants by their research interests, facilitating in-depth discussions. Each table will be supported by 2-3 senior scholars, providing expertise and guidance throughout the discussions, with up to six participants each. Participants are invited to submit their short papers (about 3 pages or 1000 words) through the provided link by July 12th: Submission Link. This organization will help ensure a productive dialogue where every voice can be heard. Should you have any questions about the proposal submission process, please reach out to Jun Byun at JByun@iese.edu. We encourage you to share this call with colleagues who may find it of interest. We look forward to your submissions and to the insightful discussions that they will undoubtedly inspire!

Program Session: **257** | Submission: **16021** | Sponsor(s): **(ONE)**
Scheduled: **Saturday, Aug 10 2024 8:00AM - 10:30AM CT (UTC-5)** at **Marriott Chicago Downtown - Magnificent Mile in Lincolnshire 1**

Step ONE: Starting Your Sustainability PhD Journey with ONE

Organizer: **Anja Gröll**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*

Organizer: **Svetlana Ivanova**, *Vienna U. of Economics and Business*

Organizer: **Jozef Cossey**, *KU Leuven & UCLouvain*

Discussant: **Shiyang Wang**, *Cornell SC Johnson College of Business*

Organizer: **Valen Boyd**, *Ivey Business School*

Organizer: **Marloes Korendijk**, *Macquarie Business School, Macquarie U.*

Panelist: **Lucrezia Nava**, *City U. of New York, Baruch College*

Speaker: **Martina K. Linnenluecke**, *U. of Technology, Sydney*

Speaker: **Xuege (Cathy) Lu**, *U. of Minnesota Carlson School of Management*

Step ONE is a moderated PDW to support early-stage sustainability PhD students to begin and bolster their journey with the Organizations and the Natural Environment (ONE) Division. Complementing the ONE Doctoral Consortium, which is tailored for later-stage students, this PDW addresses the inherent challenges early-stage PhD students encounter in initiating and sustaining involvement within academic communities while safeguarding their resilience and well-being. Thus, as a group of six doctoral researchers and early-career scholars, we wish to create a welcoming and inclusive space and support the PhDs as they navigate their first moments with AOM in the ONE Division. Building on the success of three previous editions (AOM 2021, 2022, and 2023), our objectives are threefold: (1) cultivate confidence and community through shared insights and advice, (2) guide early-stage PhD students in navigating AOM and the ONE Division, and (3) develop their interests in ONE-related topics, and support them in identifying potential theoretical lenses, collaborators, and pathways. In this edition, we are co-organizing the PDW with the PhD Sustainability Community, a support network for doctoral students with more than 490 members. Through this collaboration, we aim to establish a sustainable framework for ongoing guidance to future PhD students. Featuring esteemed speakers Martina K. Linnenluecke (ONE Chair), Marloes Korendijk (PhD Sustainability Community), and Xuege Cathy Lu (recipient of the 2023 Best Thesis Award), we provide participants with unique opportunities to find and build their academic home within an inclusive, open-minded, and openhearted global academic community.

1. Pre-registration is highly encouraged to facilitate smooth organization. We will distribute a Google Forms link through various social media platforms for pre-registration. The questionnaire provided in the Google Forms will assist us in assigning participants to thematically suitable roundtables within the PDW. Participants can also use the questionnaire to indicate topics they consider important for discussion in the panel. Here you can find the Google Forms Survey: <https://forms.gle/jCcRCmVN84NkBqbz7>. For further inquiries you can reach us at stepone.aom@gmail.com. 2. Walk-ins are explicitly encouraged and welcomed! 3. In the event of space constraints, preference will be given to registered participants. We aim to accommodate all attendees to the best of our ability while ensuring a conducive environment for meaningful engagement.

Inference and Theoretical Contributions Workshop

Organizer: **Elliot Bendoly**, *Ohio State U.*

Organizer: **Rogelio Oliva**, *Texas A&M U.*

The goal of this PDW is to discuss what is entailed in developing theoretical contributions to research, consider alternative forms of inference designed build rather than test theory, and practice identifying and working alternative modes of inference (deductive, inductive and abductive) in developing research agendas and programs for scholars. The hope is to interweave discussion and definitions with hands-on activities and reference to examples of theory building and their contributions in opening up new avenues for inquiry. We will also discuss the expectations that should be set by reviewers and anticipated by authors when it comes to efforts to contribute theory-building manuscripts to the existing body of knowledge. Ideally, individuals will emerge from the workshop with an appreciation for the value of theory building, its distinction from theory testing, and best practices with which to approach it.

Everything You Wanted to Know about Moderated Regression (But Were Afraid to Ask)

Presenter: **Jeremy F. Dawson**, *U. of Sheffield*

Presenter: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*

Although the testing of interaction effects via moderated regression is commonplace in management research, many misunderstandings and gaps in knowledge persist, and knowledge of recent methodological developments is slow to catch on. This workshop is aimed at researchers, reviewers, and PhD students alike, with a basic understanding of moderation, but who would like to advance their knowledge beyond this point. It will use a series of examples to refresh the basic principles of testing two-way and three-way interactions, focusing on how (and when) these should be interpreted based on various post-hoc probing and plotting techniques. In particular, it will cover different approaches to describing interaction effects, offering guidance as to when and how post-hoc probing techniques such as simple slope testing should (or shouldn't) be used, and will include recommendations based on recent publications. It will also cover the testing, plotting and probing of some more complex types of interactions, in particular those involving curvilinear effects, and those where the underlying regression model is nonlinear (e.g. logistic or Poisson regression). Participants will have the opportunity to request topics and ask specific questions on moderation by sending an email to j.f.dawson@sheffield.ac.uk at least a week before the workshop. The final section of the workshop will discuss these questions, and others generated in the workshop itself. Participants will be provided with resources (including data files and syntax for R, SPSS, and Stata and screencasts) to replicate the methods demonstrated in the workshop.

Necessary Condition Analysis (NCA): Core Concepts and Latest Developments

Organizer: **Stefan Breet**, *Radboud U. Nijmegen*

Organizer: **Jan Dul**, *Rotterdam School of Management, Erasmus U.*

Presenter: **Ricarda B. Bouncken**, *U. of Bayreuth*

In this workshop, you will learn about the core concepts of Necessary Condition Analysis (NCA) and the latest developments of this increasingly popular research method. NCA has been adopted in many fields, including International Management, Human Resource Management, Strategy, Organizational Behavior, Operations and Supply Chain Management, and Entrepreneurship. NCA understands cause-effect relations as “necessary but not sufficient” and not as additive and average logic that is used in regression analysis. “Necessary” means that an outcome will not occur without the right level of the condition, independently of the rest of the causal structure (a necessary condition is a “bottleneck”, “critical factor”, or “constraint”). In practice, the right level must be put and kept in place to avoid failure, and to allow the outcome to exist. NCA can be used as a stand-alone tool or in combination with regression analysis, qualitative comparative analysis (QCA) and other methodological approaches. By adding a different logic and data analysis approach, NCA adds both rigor and relevance to theory and data analysis. This interactive session familiarizes scholars with the method and has two parts. Part 1 is a general introduction discussing the core concepts of NCA and the importance of necessary conditions, illustrated with examples from different fields. Part 2 helps participants to become the first users of NCA in their field, with a practical demonstration about the application of NCA on how to build necessity theories, and how to analyze data for testing such theories using the NCA software and how to report the research in journal publications.

The Building of a Successful Scholar: Mastering the Role of an Effective Reviewer

Organizer: **Vikas A. Aggarwal**, *INSEAD*
Panelist: **Mary J. Benner**, *U. of Minnesota*
Organizer: **Donal Crilly**, *London Business School*
Organizer: **Gary Dushnitsky**, *London Business School*
Organizer: **Martin Ganco**, *Wisconsin School of Business*
Panelist: **Samina Karim**, *Northeastern U.*
Organizer: **Aseem Kaul**, *U. of Minnesota*
Organizer: **Sonali Shah**, *U. of Illinois at Urbana-Champaign*
Panelist: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

The creation of knowledge is a central part of the academic profession. As scholars, we tend to focus on our contributions as ‘authors’ of scholarly work. A less celebrated yet equally important role we play is that of ‘reviewers.’ In fact, for every new study we publish, we are likely to impact dozens of other studies through our referee reports. Mastering our role as effective reviewers can catalyze our growth as successful scholars. First, an effective reviewer plays a pivotal role in the development of the literature. Through constructive observations and suggestions, referees contribute to the trajectory of work in their field. In doing so, each reviewer also gains timely insights on the latest research in their field. Second, the ability to develop a critical - yet constructive - perspective on a research project can directly enhance the quality of our own work. Reviewing enables us to better assess gaps or weaknesses in our own work, think of possible remedies or framing, and more powerfully assert our contribution. Third, over time, an effective reviewer becomes known as an ‘expert.’ This recognition garners the respect of senior colleagues and often leads to invitations to share their expertise, join Editorial Review Boards at reputable journals, and so on. The purpose of this PDW is to help junior scholars advance and grow by sharing practices and norms, mirroring recent discussions in our scholarly community (e.g., Bettis et al., 2016). Our objectives are twofold: first, the personal growth of participants as effective reviewers, and second, an overall enhancement in the quality of peer reviews across our scholarly community.

Value Creation, Value Capture, and Strategic Theories of Digitally Transformed Firms

Organizer: **Anparasan Mahalingam**, *Syracuse U. Whitman School of Management*

Organizer: **Richard Makadok**, *Ohio State U.*

Distinguished Speaker: **Olivier Chatain**, *HEC Paris*

Distinguished Speaker: **Melissa Schilling**, *New York U.*

Distinguished Speaker: **Manav Raj**, *The Wharton School, U. of Pennsylvania*

Panelist: **Russell Coff**, *Wisconsin School of Business*

Panelist: **Teppo Felin**, *Utah State U.*

Panelist: **Kathleen Eisenhardt**, *Stanford U.*

Panelist: **Christopher Forman**, *Cornell U.*

Panelist: **Michael D Ryall**, *Florida Atlantic U.*

Panelist: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

To foster a thriving community of scholars dedicated to investigating digital businesses through the lens of classic core strategy questions, we have organized series of popular PDWs at recent AOM conferences. These workshops have consistently garnered substantial attention, each boasting an audience of over 200 engaged participants. Our past PDWs have delved into diverse themes, covering corporate strategy in 2020, organizational governance in 2021, resources and capabilities in 2022, and fundamental issues in strategy in 2023. As we embark on our fifth installment in 2024, our focus will be on the theme "Value creation, value capture, and strategic theories of digitally transformed firms." This theme encompasses a broad spectrum, including digital ecosystems, platforms, artificial intelligence, and related phenomena. Our objective for this PDW is twofold. We will focus on both how digitization broadens the application of existing theories, and how its novel features require changes to the current theory.

STR Teaching Clinic: Unlocking the Potential of AI in Strategic Management Education

Organizer: **Craig Armstrong**, *U. of Alabama*

Organizer: **P. Konstantina Kiouis**, *Washington U. in St. Louis, Olin Business School*

Organizer: **Juan Santalo**, *IE Business School*

Speaker: **John Burr**, *Purdue U., West Lafayette*

Speaker: **Yong Li**, *U. of Nevada, Las Vegas*

The landscape of management education is shifting, and artificial intelligence (AI) is poised to reshape how we teach and learn, particularly in the complex, dynamic world of strategic management. This workshop brings together three leading academics who have already begun to make innovative use of AI in the classroom, offering insights into how this powerful technology can transform your classroom. Beyond merely automating basic tasks, AI holds the key to unlocking groundbreaking approaches to strategic management education. Imagine posing nuanced, real-time simulations to students, using data analysis to personalize learning journeys, or creating interactive case studies that adapt to individual decisions. These are just a few examples of what AI empowers. Pre-registration is highly encouraged to ensure you have a seat at this workshop.

TIM Junior Faculty Consortium

Organizer: **Maria Roche**, *Harvard Business School*
Organizer: **Daniel Erian Armanios**, *Oxford U., Saïd Business School*
Panelist: **Riitta Katila**, *Stanford U.*
Panelist: **Violina Rindova**, *U. of California-Irvine*
Panelist: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*
Panelist: **Glenn Hoetker**, *Melbourne Business School, U. of Melbourne*
Panelist: **Dietmar Harhoff**, *Max Planck Institute for Innovation and Competition*
Panelist: **Aleksandra Joanna Kacperczyk**, *London Business School*

The Consortium will provide junior members of faculty in Technology and Innovation Management with insights on how to thrive in the increasingly challenging academic environment. It focuses on strategies for building a career and increasing impact as a scholar and teacher. It will feature outstanding senior faculty members with proven research and teaching records, who will lead several interactive discussions about how to balance the competing pressures of teaching, research, and service. They will provide first-hand and detailed advice about how to build a successful academic career in a range of different institutional settings. Participants will also learn about strategies for publishing in top journals and engage with editors of prestigious journals in the field. Most importantly, participants will receive feedback on their “research trajectory” from their peers and senior faculty. The Consortium will also provide participants with opportunities for networking with new peers and senior colleagues with interests in technology and innovation. Note: Participation is limited to admitted applicants ONLY.

To apply, please complete the registration form (<https://forms.gle/DBYuJa2se6n2PDJi9>). Our deadline is June 10th, 2024; however, we encourage you to apply early. We will take applications on a rolling basis until enrollment is full. Accepted participants will be required to submit a write-up of their research trajectory with tenure requirements at their respective universities for the Research Trajectory Exercise by July 20th, 2024. Details on that will be sent out to accepted applicants in early July. For further questions, please contact the organizers.

Panelist: **Elicia Maine**, *Simon Fraser U.*
Panelist: **Bonnie Stanway**, *The U. of Sydney Business School*

This Professional Develop Workshop (PDW) is aimed at scholars interested in the latest advances in researching and teaching science commercialization and academic entrepreneurship, with an emphasis on how research and teaching can add unique value to university-based inventing teams when they intersect with inventors' practice in a timely manner. We will explore how organizational and management scholars with diverse interests may not only conceptualize, model, and theorize the impacts of universities on their economic and social environments, but also increase, speed, and shape them. As university funders and other stakeholders call for more positive societal impact from universities, it creates opportunities for innovative business school research and teaching that, in some forms, can directly influence practice in real-time to create impact. Because Early Career Researchers (ECRs) are increasingly expected to engage with practitioners and to generate impact, this PDW is designed not only to expose them to innovative research and teaching but also to opportunities for synergy and alignment of their research and teaching with their own and their institution's impact agenda. Experienced faculty, who may be positioned inside their university to champion, implement and institutionalize innovative practice-focused research and teaching programs, will also benefit. We therefore see this PDW as providing a one-stop-shop for both early career and senior researchers to gain an overview of recent innovations in research and teaching of science commercialization and academic entrepreneurship, including ones that intersect in bespoke, timely, value-adding ways with practice to realize impact.

The Impact and Future of the Case Method

Host: **Vicky Anne Lester**, *The Case Centre*
Organizer: **Hazel Walker**, *The Case Centre*
Presenter: **Antoine Duvauchelle**, *INSEAD*
Presenter: **Olga Kandinskaia**, *U. of Limassol*

This session focuses on the impact of the case method on business education across the world and how it has adapted to the 21st century classroom via initiatives such as LiveCase simulations and Live Case Projects (LCP). The session will illustrate that the method may be 100 years old but it remains a vital part of business education today. In this PDW, three presenters will speak on the case method and the way it has developed and adapted to fit the modern classroom. The three speakers are: • Vicky Lester, CEO of The Case Centre • Antoine Duvauchelle, Co-founder of LiveCase and an Adjunct Professor at INSEAD • Olga Kandinskaia, Associate Professor of Finance, University of Limassol. The PDW will explore the impact, effectiveness, and future of the case method, illustrating that it is not only relevant to the modern classroom but vital to it.

Educating Managers with Hands-on Teaching Tools that Link Research to Practice

Facilitator: **Elissa Perry**, *Teachers College, Columbia U.*

Organizer: **Carol T. Kulik**, *U. of South Australia*

Panelist: **Susan J. Ashford**, *U. of Michigan*

Panelist: **Hilary Marja Hoyt**, *Oxford U., Saïd Business School*

Panelist: **David Leonard Patient**, *Vlerick Business School*

Panelist: **Frankie Jason Weinberg**, *Loyola U. New Orleans*

Participant: **Mateo Cruz**, *Bentley U.*

Participant: **Frank D. Golom**, *Loyola U. Maryland*

Participant: **Katherine Penn**, -

Researchers have documented a persistent research-practice gap, the gap between what management scholars “know” based on research and what managers “do” in practice. Management educators play an important role in narrowing this gap by sharing evidence-based content (scientific principles and research evidence related to specific management topics) with managers and helping managers develop the skills to incorporate this content into their practice. This PDW begins with an overview of adult learning principles that can inform the design of educational experiences for managers so they are better able to link academic material to their day-to-day practice. Few management professors receive formal training on how to teach and even fewer learn about adult learning principles that are essential to effectively teaching managers. This PDW uses a “tell and show” format to demonstrate teaching tools that incorporate adult learning principles into management education. The panelists will deliver a series of brief presentations “telling” the audience about their tools. Then the panelists will host tables “showing” small groups how they use their tools. Audience members will have opportunities to ask questions and rotate across tables during the session. The facilitator will lead a full group discussion and conclude the session by summarizing how participants can use adult learning principles to develop their own instructional tools.

Practice-Based Sensitivity for the Study of Management Phenomena in Africa

Participant: **Mira Slavova**, *Warwick Business School*

Participant: **Michael Barrett**, *U. of Cambridge*

Participant: **Stephanie Nzekwu**, *Warwick Business School*

Participant: **Laurent Béduneau-Wang**, *Africa Business School, Mohammed VI Polytechnic U.*

Participant: **Anca Metiu**, *ESSEC Business School*

Participant: **Ekene Okwechime**, *Anglia Ruskin U.*

The symposium builds on three events focused on the use of practice-based approaches for the study of African organizational phenomena, and their decolonizing; carried out during and in conjunction with the Africa Academy of Management (AFAM) 2024 Conference in Cape Town. We seek to integrate conversations about the value of using practice-based approaches for the study of management phenomena in Africa; with conversations about decolonizing practice-based approaches in Africa into an articulation of a practice-based sensitivity suited to the study of management practices in Africa.

Doctoral students are confronted with various challenges, which can be both daunting and exciting. This consortium is intended to help PhD students navigate challenges and chart a course for successful academic careers. This year's CAR Doctoral Consortium will provide a forum for early to mid-stage doctoral students to meet, connect, and learn from each other, guest speakers, and a panel of distinguished career scholars. Our aim is to bring together scholars from a broad range of national cultures and institutions that mirror the diversity of the CAR Division's membership. For instance, our speakers represent distinguished junior and senior international faculty who will share insights on the following seven topics: (1) Succeeding: Finding your first academic job; (2) Empowering: Accessing and leveraging formal and informal resources during your doctoral program; (3) Thriving: Recruiting mentors and collaborators for your network; (4) Making it happen: Effectively navigating the dissertation process; (5) Head of the class: Preparing for your first course assignment and teaching role; (6) Balancing act: How to juggle demands of academic life during your doctoral program and beyond; (7) Need field data: Find out how to get it. The PDW will include two additional elements—a session on ethics within the academy and a panel discussion with highly published career scholars along this year's AoM theme: Innovating for the Future: Policy, Purpose, and Organization.

Transitioning From a Faculty to an Administrator Role

Organizer: **I. M. Jawahar**, *U. of New Mexico*

Distinguished Speaker: **Steve H. Barr**, *North Carolina State U.*

Panelist: **Julia Richardson**, *Curtin U.*

Panelist: **Gillian Warner-Søderholm**, *USN School of Business, U. of South-Eastern Norway*

The purpose of this Professional Development Workshop (PDW) is to help faculty moving into administrative roles, such as a department chair or head of school, program director, an associate dean. Faculty members selected or asked to serve in administrative roles have very little formal training or background and often struggle through the assignment. In this PDW, we will discuss key issues that confront administrators and provide participants with the opportunity to share experiences with - and learn from - other experienced administrators. We believe that knowledge and skills acquired through is PDW is essential for administrators to function effectively and to innovate for the future, this year's theme of the Academy. Participants will be required to pre-register. Registration is open to those who are currently serving as chairs, program directors, associate deans or individuals who will be taking on such administrative roles in the future. This two and half-hour workshop includes a leadoff plenary session with two speakers highlighting key challenges and issues that entry level administrators face today. Following the plenary session, there will be five breakout sessions, each of which will be moderated by one to two department chairs (listed below). While most of these administrators have many years of experience, some with less experience have been included to provide perspectives on the challenges that new administrators face. These breakout sessions will focus on the following topics: (1) putting faculty front and center, (2) evaluating and mentoring faculty on research and teaching, (3) dealing with low performing faculty, (4) recruiting and retaining a diverse faculty, and (5) managing time and conflict. Participants will rotate through these breakout sessions at 15-minute intervals. There will be a short break during these sessions, providing an opportunity for participants to have individual conversations with other participants. The workshop will end with a wrap-up session where the moderators (topic chairs) will recap and summarize the key issues discussed at their roundtables.

How to Navigate Difficult Challenges Regarding RTP Decisions vis a vis University Standards

Organizer: **Carolyn Wiley**, *Roosevelt U.*

Speaker: **Brian Major**, *Attorney and Counselor at Law*

Thousands of faculties throughout the USA and the world initiate and experience the stressful reappointment, tenure, and promotion (RTP) process at their colleges and universities each year. This workshop is needed to assist these faculty in finding resolutions to particular obstacles that are inherently a part of this process. Faculty need to know how to maintain their focus by tapping into competent resources to navigate this arduous process. Navigating this process while adhering to university standards is a clear route to success and advancement. However, not all faculty find it expedient for fulfilling their goals or expectations for reappointment, promotion, and tenure. Therefore, challenges may ensue. The management of these challenges is the focus of this session.

Please only sign up for this session if you plan to be an active participant. Active participants are faculty (not administrators) who have gone through, are currently going through, or are expecting to go through the reappointment, tenure, and promotion (RTP) process at universities in the USA. The number of attendees is restricted to 25 participating faculty. Each participating faculty will present their issue by June 30, 2024 (preferred) but not later than July 15, 2024 (strict deadline) to the session organizer. This would involve submitting their contact details (email address) and the following to the session organizer: cwiley@roosevelt.edu or carwilmgt@gmail.com. All submitted items will be held in the STRICTEST CONFIDENCE. A submission from a participating faculty would include the following: ***Articulate in detail what is the problem or issue to be addressed as recognized within University Policy or standards. ***Attach the (a) University or Faculty Handbook with excerpts pertaining to the issue; (b) University Constitution with excerpts pertaining to the particular problem; (c) the RTP Process Guidelines with excerpts pertaining to the problem; (d) attach any additional documentation concerning the issue. ***Categorize the problem within these areas: Performance Appraisal, Reappointment, Promotion/Tenure, and Promotion or Tenure. - --There will be an overall review and discussion of these submissions, with intervention techniques and navigation tips, and a more in-depth discussion of a selection of them, followed by Questions/Answers.

Paper Development Workshop JMSR

Organizer: **Kathryn Pavlovich**, *U. of Waikato Management School*
Participant: **Kathryn Pavlovich**, *U. of Waikato Management School*
Participant: **Charles Thomas Tackney**, *Copenhagen Business School*
Participant: **Orneita Burton**, *Abilene Christian U.*
Participant: **Peter McGhee**, *Auckland U. of Technology*

This paper development workshop provides potential authors with guidance and expertise from senior editors of the Journal of Management Spirituality and Religion (JMSR) in the development of their manuscripts for submission to JMSR. JMSR is a scholarly bridge journal in business and management, the social sciences and the humanities, and is the world's leading journal in this cross-field of management, organization and religious studies / new age spirituality (Singh & Singh, 2022). You may submit a draft manuscript for review to kathryn.pavlovich@waikato.ac.nz by July 1 2024; alternatively come along to the session and directly discuss with the editors.

Pathways to Philosophical Grounding in MSR

Organizer: **Konstantin Karl Weicht**, *Tzu Chi U.*
Session Chair: **I-Ting Chen**, *Tzu Chi U.*
Coordinator: **Nishant Garg**, *Indian Institute of Management, Lucknow*

What is the role of philosophy in management research, and why is this of particular relevance to (MSR) scholars? This live research session aims to bring relevance back into philosophy, and philosophy back into management research. It does so by introducing major philosophical commitments in management research and presenting an overview of tools that are available to scholars in orienting themselves between different philosophical traditions. The organizers then guide participants through the use of the 'Heightening your Awareness of Research Philosophy (HARP, Saunders & Bristow, 2014) tool'. Participants will not get a definitive answer to the question of 'What is my research philosophy?' but rather will get an indication of where their views are (dis)similar to five major philosophical traditions. The session will close with a reflection and discussion of both the HARP tool and participants' own philosophical indications and its implications on their scholarly works.

OB Division Junior Faculty Workshop

Organizer: **Jia Hu**, *Tsinghua U.*
Organizer: **Sreedhari Desai**, *U. of North Carolina*
Facilitator: **Daniel Kim**, *U. of Florida*
Facilitator: **Benjamin G. Perkins**, *U. of Arizona*
Panelist: **Andrew Carton**, *The Wharton School, U. of Pennsylvania*
Panelist: **Xiao-Ping Chen**, *U. of Washington*
Panelist: **Bryan D. Edwards**, *Oklahoma State U.*
Panelist: **Berrin Erdogan**, *Portland State U.*
Panelist: **Yaping Gong**, *The Hong Kong U. of Science and Technology*
Panelist: **Astrid Carlotta Homan**, *U. of Amsterdam*
Panelist: **Aparna Joshi**, *Ross School of Business, U. of Michigan*
Panelist: **Jessica Alynn Kennedy**, *Vanderbilt U.*
Panelist: **Sean E. Rogers**, *U. of Rhode Island*
Panelist: **Gretchen Marie Spreitzer**, *U. of Michigan*

The Organizational Behavior (OB) Junior Faculty Workshop, held annually, is designed for junior faculty, especially those on the tenure track. This event serves as a platform for building meaningful connections within the junior faculty community and with senior Faculty Fellows. It aims to explore the multifaceted challenges faced by early-career academics, emphasizing productivity, the balance of research, teaching, and service, and work-life integration. The workshop's primary goal is to provide junior faculty with practical strategies for navigating their academic careers, with a focus on maintaining an equilibrium between research, teaching, and service commitments. Participation requires physical presence and is essential. The program begins with two panel discussions led by Faculty Fellows, offering diverse perspectives. This is followed by smaller, topic-specific group discussions at tables hosted by the Fellows, designed to be interactive with a 30-minute rotation format, allowing participants to engage in two different areas of discussion. The workshop is exclusive, with a cap of fifty junior faculty members, necessitating pre-registration through the PDW system.

Teaching Social Networks

Organizer: **Demetrius Lewis**, *U. of California, Riverside*
Organizer: **Blaine Landis**, *U. College London*
Organizer: **Bill McEvily**, *U. of Toronto*
Participant: **Anne L.J. Ter Wal**, *Imperial College Business School*
Participant: **Kristin Cullen-Lester**, *U. of Mississippi*
Participant: **Stefano Tasselli**, *U. of Exeter Business School*
Participant: **Abraham Oshotse**, *Emory U., Goizueta Business School*

Now in its tenth consecutive year, the purpose of this PDW is to sustain an ongoing forum for Academy members interested in teaching social networks to undergraduate, MBA, and executive audiences to share and learn practical insights on how to prepare and deliver individual sessions or entire courses on the topic. The PDW will be organized into three modules – substantive topics, an open innovation session, and an introduction to network analysis lab session – that are designed to assist participants in transforming research on social networks into effective educational experiences. The substantive topics module will focus on how experienced faculty have leveraged network concepts to develop and deliver thematic courses. The open innovation module will focus on the issues, challenges, and questions that the participants have experienced or anticipate with teaching social network modules or courses. Last, the network analysis module will include a hands-on, interactive lab session with case studies and R code provided.

This workshop brings together researchers to aid colleagues in their efforts to publish Social Issues in Management (SIM) topics in high-quality management journals such as AMJ, AMR, SMJ, B&S, BEQ, etc. The workshop will assemble a team of scholars who have successfully published research on corporate responsibility, ethics, stakeholders, sustainability, or related work in high quality management journals, and have been serving on editorial boards for journals publishing SIM-related topics. Each of these experienced scholars (as mentors) will be paired with SIM members (as mentees) who would like to explore how their manuscripts-in-progress might be refined to achieve publication in their possible target journal(s).

This PDW is invitation-only, for members whose manuscript will be accepted. The call for manuscripts will be announced in May or June, 2024.

Participant: **Kristin Smith-Crowe**, *Boston U.*

This PDW provides a platform for participants to explore various methodological approaches in conflict management research, encompassing 1) experimental methods, 2) qualitative methods, 3) network analysis, and 4) strategies for eliminating bias and enhancing rigor in research methodologies. The session will begin with a general overview of these thematic areas, featuring insights from experienced panelists actively engaged in research within this domain. Next, the session will transition into roundtable discussions facilitated by two panelists and organized by specific research methods. The roundtables will allow participants to engage in rich research discussions, share new methodological ideas, and make meaningful connections with potential collaborators.

Panelist: **M. Gloria Gonzalez-Morales**, *Claremont Graduate U.*
Panelist: **Larry R. Martinez**, *UT Arlington*
Panelist: **Anna Katharina Bader**, *U. of York*

We are planning a doctoral consortium and a mentor-match. The 2024 doctoral consortium will include a diverse mix of speaker panels and participative roundtable discussions designed to provide doctoral students with a realistic, open, and honest understanding of how to build a research identity, navigate a career post Ph.D., and bring their ideas to publication in academic journals. Participants will also have the opportunity for more personalized connections and feedback through a mentor-match to be held after the consortium (or at another mutually agreed upon time), in which participants are paired with a scholar based on the participant's research interests.

Junior faculty face significant challenges in the early stages of their careers, and one of these challenges is to publish their work in refereed academic journals. This challenge is particularly amplified among faculty in under-represented groups. Accordingly, a core goal of this session is to advance the careers of junior colleagues – especially those in under-represented groups – by helping them publish diversity research in refereed academic journals. This assistance will come from leading senior scholars in the field who will review manuscripts submitted by junior faculty in an open discussion, roundtable setting.

Registration deadline for this PDW is July 1st, 2024. Junior faculty who wish to have their manuscripts reviewed need to submit their manuscripts by June 14, 2024, in order to provide adequate time for the review process. Please contact the organizer (raymond.trau@mq.edu.au) for registration and manuscript submission.

Organizer: **Andrea Marie Hodge**, *Florida State U.*

This professional development workshop (PDW) aims to foster a candid and transparent dialogue on the state of race research within the academy, where growing politicization has led to an intellectual divide over the role and importance of race within management scholarship. More than fifty years of management research on race has led to our theoretical and practical understanding of how race, and social identity more broadly, affects and is affected by organizational processes and outcomes (Crenshaw, 1989; Nkomo, 1997; Nkomo et al., 2019; Ray, 2019). Yet, within the current political and social climate, this line of research has faced backlash, becoming “less favorably received as a research topic” and, at times, considered inadequate for theoretical contribution (Avery et al., 2021, p.10). Under the 2024 AOM theme—Innovating For the Future, this session will feature perspectives from race scholars and editors from top journals on the challenges and opportunities of doing race research within socially and politically uncertain times and will engage participants in generative exchanges on innovative and supported future projects.

Discussant: **Susana Correia Santos**, *Florida State U.*

Manuscripts receive a rejection decision from editors for various reasons at different stages of the peer review process. The social and psychological consequences authors face after a manuscript rejection affect their well-being significantly. This professional development workshop (PDW) aims to engage scholars – from advanced doctoral students to research active scholars – in a dialogue on rejection as an editorial decision and its effects on well-being. We realize this purpose by (1) destigmatizing failure and educating the scholars on the nature of rejection decisions, (2) discussing how authors can bounce back after a rejection outcome, and (3) explaining the well-being consequences of rejection and providing recommendations on developing resilience. Editors from nine journals, namely, *Journal of Management*, *Journal of Business Venturing*, *Journal of Business Venturing Insights*, *Entrepreneurship Theory and Practice*, *Entrepreneurship and Regional Development*, *International Small Business Journal*, *Journal of Developmental Entrepreneurship*, *Journal of Small Business Management*, and *Small Business Economics* have agreed to serve as panel members and mentors in this session.

ENT Mid-Career Consortium

Coordinator: **Christina Theodoraki**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

Organizer: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*

Organizer: **Stephen Xu Zhang**, *U. of Adelaide*

The Mid-Career Consortium (MCC) is designed to meet the needs of those scholars who are midway through their academic careers (e.g., post-tenure). More specifically, the objective of the MCC is to help individuals who have achieved tenure, or significant career advancement, to develop a strategy and give guidance for the next stages of their careers. To achieve this, leading entrepreneurship scholars will provide practical advice and mentorship in various regards (e.g., research, teaching, outreach, networks, etc.). The MCC adopts a highly interactive and personalized approach (e.g., through small group discussions, personalized Q&A, etc.). For instance, the attendees will gather at roundtables with senior scholars, based on their main interests, and will engage in intensive discussions to receive otherwise hard-to-obtain feedback and input. Potential topics include, but are not limited to, career opportunities and directions, maximizing research output, branching out to other scholarship and education options, or service and engagement opportunities. To register for the consortium, please send an email to philipp.sieger@unibe.ch where you ideally also indicate the main questions you would like to discuss.

In the current landscape, crises manifest with an enduring and multifaceted nature that exceeds regional boundaries, indicating a transition into the 'new normalcy'. Within this developing crisis context innovation has arisen as a pivotal catalyst for entrepreneurial navigation and thriving. While entrepreneurs are adept at harnessing opportunities and transmuting them into innovative solutions that enhance competitiveness both routinely and during crises, the evolving nature of contemporary crises has catalyzed the emergence of a novel approach to innovation development. Entrepreneurs are developing innovative solutions specifically tailored to address arising crisis-related needs; accordingly, they are filling voids in responding to needs that would otherwise fall to government sectors to address. These innovation endeavors transcend predefined business innovation plans and roadmaps, as crisis-driven innovations were not the initial strategic priority for most enterprises. However, by galvanizing to innovate for community and societal needs, these undertakings harbor potential for longer-term business gains, like reputational benefits, goodwill, and exposure to new markets and partnerships. This PDW seeks to encapsulate these emergent facets of innovation development occurring amidst the transformative crisis contexts. It aims to convene comprehensive discussions and constitute a platform to cultivate a novel research community in this arena. Panelists will impart their distinct perspectives on the future innovation within the new normalcy of crisis contexts, while subsequent roundtable discussions will promote further dialogue to share experiences, thereby ultimately igniting novel research trajectories that explore diverse viewpoints on innovation amid adversity.

Facilitator: **Timothy J. Vogus**, *Vanderbilt U.*

The purpose of this PDW is to provide a forum and foster a community in which health care management scholars can discuss pertinent issues about teaching, from common questions and challenges that educators confront to helpful practices, tips, and ideas to becoming more effective instructors. The PDW will be conducted as a series of discussions, with participants receiving advice and helpful guidance on challenges and issues confronted in a range of educational settings. Each discussion will focus on a specific theme and include assigned "teaching mentors" who can provide expert guidance and feedback on topics relating to a variety of themes.

HCM Practice Incubator

Organizer: **Jennifer Gutberg**, *U. of Toronto*
Organizer: **Tracy Hopkins Porter**, *Cleveland State U.*
Participant: **Cheryl Mitchell**, *Gustavson School of Business, U. of Victoria*
Participant: **Michael Richard Cauley**, *Vanderbilt U.*
Participant: **Jessica Peck**, *Cleveland State U.*
Participant: **Leeann Comfort**, *Agency for Healthcare Research and Quality*
Participant: **Matthew John DePuccio**, *Rush U.*
Participant: **Andres A. Pinto**, *Weatherhead School of Management, Case Western Reserve U.*
Participant: **Gina Phelps Thoebes**, *U. of Akron*

The academic-practitioner gap is a well-recognized and continually growing issue for management scholars. This gap is especially prominent in healthcare contexts, where hospitals, systems, and entire jurisdictions are often subject to wide-spread organizational (and system-level) interventions and restructurings. Given the fundamentally applied nature of healthcare management research, scholars in the field must find assurance that their work is equal parts theoretically insightful and practically relevant. We propose a contributing factor to this academic-practitioner gap is both a lack of emphasis on drawing from practitioner perspectives to inform research agendas, and a lack of awareness or understanding of career options that span a hybrid research-practice continuum. The aim of this professional development workshop is to provide researchers with a platform to receive mentorship and exchange ideas about practice-oriented careers. These can include academic researchers interested in partnering with practice organizations, those looking to shift to a practice-oriented career themselves, or early career scholars interested in exploring a practice-oriented trajectory. The PDW will involve a brief introduction to the issues around practice-oriented careers, and then delve into a roundtable approach, where participants will have been paired up with mentors/experts from the HCM Practice Committee to receive concrete suggestions to help scholars better implement their practice-oriented projects, ideas, or partnerships.

Multiple Jobholding Research and Perspectives for Organizations

Session Chair: **Neharika Vohra**, *Indian Institute of Management, Ahmedabad*

Session Chair: **Chayanika Bhayana**, *Indian Institute of Management Calcutta*

Presenter: **K V Gopakumar**, *Indian Institute of Management, Ahmedabad*

Presenter: **Rya Ray**, *Indian Institute of Management, Ahmedabad*

Over the past few years, the conversation regarding multiple jobholding, MJH (holding a paid job alongside a full-time job, also referred to as moonlighting, side hustles, side gigs, etc.) has gained prominence in both research and practice. The current research has discussed the meaning and implications of MJH for multiple job holders (MJHers), its implications on careers in contemporary times (Bhayana et al., 2023; Bhayana & Vohra, 2022; Järvensivu & Pulkki, 2021; Panos et al., 2014; Singh & Rossetti, 2023), and enriching and depleting influences of MJH (Conen & Stein, 2021; Moss & Caza, 2023; Sessions et al., 2021). However, the research focusing on the consequences of MJH on organizations is sparse. Campion et al. (2020) highlighted in their review that it is important for organizations to refer to research which can guide them in understanding how MJH affects employee's behavior and involvement in their full-time work. So far, the responses of organizations regarding MJH have been driven by outright denial or hostility (Chaturvedi, 2022; Outlook Business, 2022; Trehan, 2023) and seem to be understood to have perspectives rooted in traditional ways of thinking about organizations as fully bounded entities. Focused research on impact of MJH can address the concerns of organizations (Bhayana & Vohra, 2022) in the ever-changing context defined by uncertainty of when and from where work gets done. As more organizations are confronted with decisions regarding MJH in contemporary times, research regarding MJH and what it means for organizations would be timely. In keeping with this motivation and the evidence regarding ambivalence of organizations towards MJH, through this PDW, we invite scholars using both qualitative and quantitative methodologies, as well as practitioners to participate in this conversation and shape the agenda for research on the organizational impact of MJH.

Inclusive Narratives of Management History

Organizer: **Leon Prieto**, *Clayton State U.*

Organizer: **Simone Trixie Allison Phipps**, *Middle Georgia State U.*

Speaker: **Amon Barros**, *FGVEAESP Sao Paulo School of Business Administration*

Speaker: **Holly Slay Ferraro**, *Villanova U.*

Speaker: **Joseph Scott Gladstone**, *Washington State U.*

Speaker: **Howard Jean-Denis**, *Pepperdine U.*

Speaker: **Nidhi Srinivas**, *The New School*

Speaker: **Baniyelme D. Zoogah**, *DeGroote School of Business, McMaster U.*

The landscape of management history has long been dominated by a narrative that primarily reflects Western perspectives, often overlooking the rich diversity of contributions from racialized communities and the Global South (Wanderley & Barros, 2019; Verbos, Gladstone, & Kennedy, 2011; Srinivas, 2012; Zoogah, 2021; Bastien, Coraiola, & Foster, 2023). To address contemporary challenges in social justice, social innovation, and sustainability, there is a pressing need to reshape these narratives, incorporating a more inclusive understanding of management history. This approach is not just about broadening the scope of history; it's about rethinking the foundation upon which we build future strategies and solutions. Incorporating diverse and inclusive perspectives in management history is not simply an exercise in representation; it profoundly impacts the development of new solutions and futures. By acknowledging the varied and rich contributions of different cultures, genders, and races to management history, we can foster a more holistic understanding of business practices. This inclusive approach challenges students and professionals to think beyond conventional frameworks, embracing innovation and creativity in tackling modern issues such as climate change, racial injustice, and other grand challenges. One key area where inclusive narratives can make a significant impact is in social justice. Management education that integrates diverse histories promotes an understanding of equity and justice as central to effective leadership (Phipps & Prieto, 2019). For instance, recognizing the historical role of Black women entrepreneurs in advocating for policy changes and equal rights (Knight, 2016; Ferraro, 2022) can inspire current and future managers to prioritize social justice in their decision-making processes. In terms of social innovation, a diverse historical perspective can reveal alternative business models and strategies that are more community-centric and sustainable. For instance, indigenous management practices, often sidelined in mainstream narratives, offer valuable insights into sustainable resource management and community engagement (Banerjee & Linstead, 2001). These practices challenge the prevailing profit-driven paradigms and open new avenues for social innovation. Sustainability, a critical concern in contemporary business, also benefits from an inclusive historical narrative. Understanding how different cultures have historically interacted with and respected the environment can provide crucial lessons for sustainable business practices today (Banerjee & Linstead, 2001). By learning from these diverse experiences, management education can equip future leaders with the tools to create more sustainable and environmentally conscious business models. Moreover, the inclusion of diverse narratives in the history of management is not just a matter of correcting historical oversights; it is an instrumental step towards envisioning and creating innovative solutions to the challenges of social justice, social innovation, and sustainability. By integrating these varied perspectives into management education, we can prepare future leaders to think critically and act empathetically, paving the way for a more equitable and sustainable future in business and beyond.

Facilitator: **Virginia Leavell**, *Cambridge Judge Business School*

The Cognition in the Rough workshop (CIR) provides an opportunity for authors to discuss their cognition-related research in an informal, collegial roundtable setting. Each roundtable will have 2 facilitators to give feedback on 3-4 early-stage research papers. CIR offers senior and junior researchers alike an invaluable opportunity to receive detailed feedback from scholars who are often editors or on the editorial board of top journals.

2024 Doctoral Student Professional Development Consortium

Organizer: **Kate Albrecht**, *U. of Illinois Chicago*
Organizer: **Bradley Johnson**, *U. of Nevada Reno*

The Public and Nonprofit Division Doctoral Student Professional Development Consortium is an intensive workshop that seeks to provide doctoral students in public and nonprofit administration with guidance on the job market, the publication process, presentation skills, and dissertation research. Doctoral students at any stage are welcome to apply to the consortium, and the consortium is especially beneficial for students who are in the dissertation proposal development stage or later. The Consortium will give participants the opportunity to a) get tips on finding an academic job, b) present their research or a proposal to get feedback from accomplished scholars, and c) network among peers, future colleagues, and potential employers. Participants must apply to participate in this PDW. Please direct questions to the PNP Doctoral Consortium Co-Chairs, Kate Albrecht (kalbrech@uic.edu) or Brad Johnson (bradjohnson@unr.edu).

Bayesian Statistics: How to Conduct and Publish High-Quality Bayesian Studies

Participant: **Andreas Schwab**, *Iowa State U.*

Participant: **David Krackhardt**, *Carnegie Mellon U.*

Participant: **Mark H Hansen**, *Brigham Young U.*

Participant: **Anup Menon Nandialath**, *U. of Wisconsin, La Crosse*

Participant: **Angie Moon**, -

This workshop introduces the opportunities of Bayesian statistics for empirical management research and provides guidance on how to execute high-quality Bayesian studies. The workshop will cover the following topics: (1) Fundamental conceptual nature and potential advantages of Bayesian approaches compared to statistical significance tests; (2) Step-by-step execution of a Bayesian study and comparison to a regression analysis; (3) Function and value of prior distributions in Bayesian analyses; (4) Estimation of Bayesian posterior distributions with Markov-Chain Monte Carlo simulations using available software solutions; and (5) Communication of Bayesian analyses and results in research manuscripts. A secondary objective of this workshop is to provide a platform for knowledge transfer between researchers engaged in Bayesian research and support related community-building efforts. For this purpose, we have already created internet platforms to distribute presentation material and provide links to additional readings and other resources. In the end, this workshop will enable and inform participants on how to better incorporate advanced Bayesian statistics in their future research.

Unconferencing SAP and Beyond: An Open Space for Emerging Topics and Nascent Projects

Organizer: **Anna Plotnikova**, *Vrije U. Amsterdam, School of Business and Economics*

Organizer: **Eric Knight**, *Macquarie Business School, Macquarie U.*

Organizer: **Madalina Pop**, *Aarhus BSS, Aarhus U.*

Participant: **David Oliver**, *U. Of Sydney*

Participant: **A. Paul Spee**, *U. of Queensland*

Participant: **Pikka-Maaria Laine**, *U. of Lapland*

Participant: **Fleur Deken**, *Vrije U. Amsterdam*

Participant: **Julia Hautz**, *U. of Innsbruck*

This Professional Development Workshop (PDW) is a forward-looking event that aims to nurture emerging topics in Strategizing Activities and Practices (SAP) scholarship and incubate nascent research projects of SAP scholars, including PhD students, early-career and senior scholars. This PDW provides an open space for discussing nascent topics, dilemmas, development and research as well as teaching ideas, which fall mostly outside the scope of other parts of the conference program. PDW follows a Bar Camp format, where participants set the topics for three series of open round-table discussions. Overall, Unconferencing SAP and Beyond aims for participants to jointly make sense of topical opportunities and challenges for SAP research, to facilitate the onboarding of junior scholars in the community, and to spur new connections and collaborations between participants. Furthermore, the PDW is an innovative format for the AOM meeting, as it allows for nurturing new ideas, topics, and themes on the Division/Interest Group level through serendipity and 'structured structurelessness'.

This session is open to everyone and doesn't require additional registration. Please note that due to limited space, we can only accommodate up to 50 people. Attendance will be on a first-come-first-serve basis. If you would like to suggest a topic for an open round-table discussion or discuss some nascent project, please, register your idea via this form - <https://forms.gle/vUvbXU8B4Qr8ZU3L6>

Innovating for the Present to Have a Future

Organizer: **Nagaraj Sivasubramaniam**, *Duquesne U.*
Organizer: **Tanvi H. Kothari**, *San Jose State U.*
Organizer: **Aarti Ramaswami**, *ESSEC Business School*
Presenter: **Dharm Prakash Sharma Bhawuk**, *U. of Hawaii at Manoa*
Presenter: **Robert Sroufe**, *Chatham U.*
Presenter: **Ashish Pandey**, *Indian Institute of Technology, Bombay*
Presenter: **Indu Rao Kaveti**, *Pandit Deendayal Energy U.*

The primary objective of this PDW is to provide Academy Members from different divisions the opportunity to work together to address the challenge for researchers, instructors, policy makers, business schools, and institutions at large, to remain innovative and relevant for now and into the future. What questions, frameworks, organizational systems, designs and work practices can catalyze positive change and transformation? In a dynamic landscape – market and consumer preferences, business uncertainties, education for future jobs that don't exist yet, environmental and societal interdependencies – it is imperative to address what it means to innovate for the future and the opportunities and challenges that accompany it, from both theoretical and pragmatic perspectives. The PDW will conclude with summary research, and inclusive and collaborative ideas on innovations in people, products, services, and processes. The participants will leave with a broader understanding of the theme and a set of new research ideas to further inform research, pedagogy, and practice.

Reviewing Papers in IM: The Power of Constructive Reviews

Organizer: **Jesper Edman**, *Waseda U.*

Organizer: **A Rebecca Reuber**, *U. of Toronto, Rotman School of Management*

Presenter: **Sjoerd Beugelsdijk**, *Darla Moore School of Business, U. of South Carolina*

Presenter: **Valentina Marano**, *Northeastern U.*

Presenter: **Liang Chen**, *Singapore Management U.*

Presenter: **Jesper Edman**, *Waseda U.*

Presenter: **A Rebecca Reuber**, *U. of Toronto, Rotman School of Management*

The peer review process is widely used by academic journals to evaluate the quality of manuscript submissions relative to the journals' scholarly goals. In a similar fashion, the major conferences, such as the Academy of Management Annual Meeting, all rely on peer reviews to determine which papers to accept. While often criticized as an imperfect process (e.g., Bedeian, 2004; Suls & Martin, 2009; Tsang & Frey, 2007), it remains the bedrock for ensuring academic quality. Yet, despite this, very few scholars are trained to review (Caliguirri & Thomas, 2013) and the process is often seen as a necessary evil (i.e. a service to the community). As important as the review process is in determining not only the progress of an academic field but also people's careers, it seems warranted to pay more attention to it (Miller, 2006). This workshop is designed to help scholars in general – and IB scholars in particular – unlock the power of constructive reviews and reap the benefits in terms of scholarly impact. We aim to have a rich discussion with the goal to educate IB (and others) scholars in the art of writing an excellent review. The discussion will be highly interactive, and will emphasize the exchange of ideas among members of the panel and the audience.

Cognition is a central concern in organizations, and courses in management (e.g., entrepreneurship, strategy, and organizational behavior) repeatedly deal with topics that involve understanding the cognition of individuals and groups. A challenge for instructors is to find exercises, activities, and methods for teaching in ways that students can better appreciate the challenges of cognition “in the rough” (i.e., situated, in real-time, influenced by organizational politics and time constraints, and emotions among other contextual influences). The purpose of this PDW is to bring together expert instructors to share classroom-tested experiential exercises, activities, and lesson plans for teaching about cognition in the rough. The PDW will proceed in a “round-robin” workshop format, whereby participants will have the opportunity to rotate to three different breakout rooms in which expert instructors provide interactive, 25-minute explanations/demonstrations of their exercise/activity/lesson. Thus, participants will have the opportunity to take home three unique activities or instructional ideas that they can use in their own classes.

The Junior Faculty Consortium (JFC) is an annual event that provides an opportunity for early career faculty members and postdocs that are members of the Social Issues in Management (SIM) division or the Organizations and the Natural Environment (ONE) division to network with senior faculty members and develop their research ideas. The 2024 Annual Meeting's theme "Innovating for the Future" invites us to think about how our research and teaching can help business organizations provide for the well-being of people and the planet. Furthermore, it is an opportunity to orient our attention to the role that organizations from the public, private, and plural sectors can play in shaping policies that address some of the most intractable challenges facing humanity including climate change.

We encourage you to apply early because the event is oversubscribed each year. We also invite deans, department chairs, and other senior or junior faculty members to nominate their colleagues. The application process is the following: - You must be in the first five years of your employment as a faculty member or post-doc. - Your application must include a short CV and an extended abstract of a working paper (not more than 5 pages). - Please also indicate two preferred senior scholars you would like to discuss your research with. We will do our best to respect your choices. - Please send your application to Jason Pattit (jmpattit@stthomas.edu), with a copy to Christina Bidmon (c.m.bidmon@uu.nl) by May 31st, 2024. - We will inform all applicants about the outcome of their application by June 30th, 2024. The organizers for this year's consortium are Jason Pattit (SIM), Sana Chiu (SIM), Christina Bidmon (ONE), and Ju Young Lee (ONE). The lead sponsor this year is the SIM Division. Please email any questions and comments to Jason Pattit (jmpattit@stthomas.edu).

This PDW aims to continue extant discussions of practical resolutions to the challenges of Chinese data access and publishing in management journals with China as the research context. Building on the success of last year's PDW which addressed issues of Chinese data access in a context of research uncertainty in China, we have sought feedback from that session to improve our offerings for 2024. This PDW will discuss how research uncertainty around traveling and working in China impacts scholarly work and output then propose potential solutions to these challenges. This PDW will connect participants with scholars who share a common interest in the Chinese context, and the PDW will consist of three parts: (1) an overview of the issues faced by scholars; (2) two panel discussions with leading scholars on overcoming data access challenges, analyzing their respective data, and publishing their findings; and (3) individual roundtable/breakout sessions tailored for interactive discussion between speakers, facilitators, and participants.

The occurrence and recurrence of extreme events such as the wars in Ukraine and Gaza, (domestic) terrorism events and school shootings, forced displacement in Myanmar, Syria, and Africa, and the increasingly intense draughts, wildfires, floods and earthquakes, and the Covid-19 global pandemic, have motivated, and documented, new forms and functions of entrepreneurship. This PDW takes stock of the contributions already made in studying entrepreneurship as a response to different types of extreme events, builds event-centric community of inquiry, and raises poignant questions regarding the theories and methodologies required to study forms and functions of entrepreneurship as they emerge and evolve under extreme conditions. To orient attention from the extreme events themselves to the unique entrepreneurial energy human suffering and thriving unleashes in response, we propose the term "extreme entrepreneurship". Extreme entrepreneurship has the potential to advance theory in four nested ways. First, by systematically integrating insights across different types of extreme events, new typologies of concepts and processes can emerge. Second, these typologies can inform new research programs, by setting up explicit contrasts among concepts or processes. Third, these explicit contrasts can motivate elaborations of established theories and/or extensions of available methodologies. Fourth, new collaboration opportunities can be crafted as entrepreneurship scholars deliberately borrow and build on each other's contexts, approaches, and insights. The PDW combines a rapid review (to leverage the former two goals) with a rapid response format (to catalyze the latter two goals), offering common ground for scholars bracing extreme entrepreneurship.

This workshop introduces the term "extreme entrepreneurship" and will cover the following topics: (1) Systematically integrating insights from different types of extreme events, enabling the emergence of new typologies of concepts and processes; (2) Establishing explicit contrasts among concepts or processes; (3) Extending available methodologies; (4) Crafting new collaboration opportunities as entrepreneurship scholars deliberately borrow and build on each other's contexts, approaches, and insights. The PDW combines a rapid review (to leverage the first two goals with PowerPoint presentations from panelists during the first half) with a rapid response format (to catalyze the last two goals in a roundtable discussion). If you want access to the presentation, please email: sadek.showkat@louisville.edu & nyakushk@vols.utk.edu. No registration required.

Panelist: **Jirs Meuris**, *U. of Wisconsin-Madison*
Panelist: **Anthony J. Nyberg**, *U. of South Carolina*
Panelist: **Ingo Weller**, *LMU Munich*

Compensation research has provided insights into how organizations can design compensation policies to manage invaluable human resources effectively and thus enhance productivity. However, observing the rapidly changing business environment and organizations confronting unprecedented challenges in attracting, hiring, and motivating their people, compensation scholars started questioning whether we are providing timely and meaningful scientific knowledge to organizations. To address this concern, the proposed PDW suggests three possible approaches to achieve a tighter research and practice relationship, which are each structured under three themes: (1) How can compensation research be integrated with other management topics to offer more comprehensive knowledge and speak to a broader audience? (2) How can we extend the existing theories, or should we come up with completely new theories that are more applicable to contemporary issues? (3) What kind of research methodological paradigm shifts are needed to provide meaningful implications? To better facilitate discussions under each theme, we propose our PDW to consist of (1) the roundtable sessions where the attendees interact directly with the panelists, followed by (2) the panel discussions of three themes.

We highly recommend pre-registration for this PDW due to the limited capacity of our venue (walk-in might be allowed, but not guaranteed). For pre-registration, please visit and submit the form no later than August 2nd, 2024: https://nus.syd1.qualtrics.com/jfe/form/SV_5sxcXetNknb1pli For any questions about the pre-registration or the workshop in general, please contact the PDW organizers- Ji Hyun Kim (jhkim@nus.edu.sg) or Hanbo Shim (hanbo.shim@uta.edu).

Empowering Line Managers in the Dynamic Process of HRM Implementation: New Insights & Future Avenues

Organizer: **Anna C. Bos-Nehles**, *U. of Twente*
Organizer: **Aneeqa Suhail**, *Human Resource Studies, Tilburg U.*
Discussant: **Kaifeng Jiang**, *Peking U.*
Speaker: **Jordi Trullen**, *ESADE Business School*
Speaker: **Na Fu**, *Trinity Business School, Trinity College Dublin*
Speaker: **Carol T. Kulik**, *U. of South Australia*
Speaker: **Jongwook Pak**, *U. of Auckland Business School*

Line managers play a crucial role in the implementation of HRM practices as they help shape employee attitudes, behaviors, and, ultimately performance (Trullen, Stirpe, Bonache, & Valverde, 2016). Despite this recognition of their impact, existing literature lacks a comprehensive understanding of the HRM implementation process, particularly the challenges, paradoxes, and strategies faced by line managers to effectively implement HRM practices throughout the implementation process (Kehoe & Han, 2020; Kurdi-Nakra et al., 2022). This professional development workshop is designed to emphasize the critical yet under-addressed role of line managers in HRM implementation in the strategic human resource management (HRM) literature. The PDW convenes scholars to highlight the multifaceted dimensions and factors for effective HRM implementation, emphasizing the role of organizational climate, value-fit, and paradoxes often disregarded in scholarly discourse. Finally, it will bring attention to the overlooked contributions of line managers in day-to-day HRM activities, the challenges encountered by them, and discuss strategies for empowering them for effective HRM implementation.

Dear participants, Since we have a maximum capacity of 25 spots only, please be on time to make sure to participate in the workshop. We are looking forward to meeting you there. Kind regards, Aneeqa Suhail and Anna Bos-Nehles

Panelist: **Florence Noguera**, *U. Paul Valery, Montpellier*
Panelist: **Muna Merghani**, *Haggar Group*

MC Division hosted a PDW at the 2022 AOM annual meeting in Seattle, focusing on “MC in Emerging Economies”, where presentations spanned topics on Africa, including Nigeria and Sierra Leone, as well as Taiwan. In light of this, we acknowledge this previous PDW and build upon its foundation to go further in the study of MC in African and Middle-East Countries. Thanks to case studies of MC interventions in Senegal, Gabon, Soudan, Rwanda, Ethiopia, Lebanon, Kuwait and Dubai the PDW to highlight their outcomes and to capture the local dynamics to cope with. Thus we could position the PDW as innovative strategies in management consulting adapting to cultural and economic diversity in Africa and the Middle East. This approach would allow to explore new dimensions while respecting past contributions. The key components of the PDW would include: • Cultural sensitivity and adaptation in consulting practices • Economic diversification and its impact on business strategies • Technology and innovation in consulting • Building local consulting capacities • Navigating political and regulatory landscapes

Presenter: **Suzanne C. De Janasz**, *Seattle U.*

As “the world spins faster, faster, faster...” faculty need to ensure their classes are keeping up with rapid technological change and increasing demands from students, administration, and other stakeholders. This requires continually adapting their teaching methods, often without a great deal of institutional support. This 6th Annual Teaching Bootcamp at AOM addresses these challenges, provides tools and resources to help you effectively and efficiently meet and manage these demands, and “take you to a better place.” This lively, interactive session features a variety of topics related to teaching across all management disciplines, presented by experienced instructors in a roundtable format. In alignment with the conference theme of “Innovating for the Future,” this PDW focuses on innovative course management practices and learning activities to help ensure management education remains purposeful and continues to serve stakeholders by providing the best classroom experience possible to equip students as current/future workers to meet future workforce and societal challenges. We will provide teaching resources to help faculty effectively manage their classes in today’s environment supporting the AOM vision to “inspire and enable a better world through our scholarship and teaching...” We anticipate an interactive and informative session, so come join the fun as we explore teaching fundamentals ranging from course design and mechanics to the use of AI in today’s classroom environment.

How Can I Get Students to Work Well in Groups When Teaching With Case Studies? The TaBLE Case Method

Organizer: **Sandra Pereira**, *U. of Warwick*

Organizer: **Gemma Irving**, *U. of Queensland*

Organizer: **Sandra Figueira**, *The U. of Queensland*

Organizer: **Lee Charles Jarvis**, *Warwick Business School*

This Professional Development Workshop (PDW) provides a solution to two problems that management educators often struggle with: (1) how to get students to learn in groups, and (2) how to get students to prepare for and discuss case studies in class. Finding an instructional method that embeds group learning in case teaching is especially relevant for scholars who teach courses in organizational behaviour, management and leadership, strategy and innovation, entrepreneurship, organizational theory, and ethics, among many others. In this PDW, participants will be introduced to the Team-Based Learning Engagement (TaBLE) Case Method and engage in a practical and interactive activity to trial for themselves how the method motivates individual preparation and group participation before, during and after class. Facilitators will debrief on the method's pedagogical principles and provide evidence of effectiveness and student feedback. They will also share illustrative examples of how the method has been adapted internationally for teaching different courses in different delivery modes. In roundtable discussions with facilitators, participants will gain practical insights for adapting TaBLE in their own teaching context and enhancing student learning by creating individual accountability for group goals, fostering critical thinking and creative debate, and making links between theory and practice more visible.

Analysis of Heart Rate Responses for Management Research

Organizer: **George Christopoulos**, *Nanyang Business School, NTU Singapore*

Presenter: **Sebastiano Massaro**, *Surrey Business School*

Presenter: **Kar Fye Alvin Lee**, -

Heart rate (HR) responses have been associated with numerous variables, constructs and factors of central interest to organizational and management research. Key examples include emotions, fatigue, stress, decision-making, sleep quality, as well as more generic outcomes, such as health and well-being. Moreover, recent technological developments have allowed for measuring some aspects of heart-rate fluctuations using wearable devices. However, the design of HR-based experiments and/or field studies, data collection, and data analysis require careful planning, dedicated statistical tools, and cautious interpretation. Building on the successful PDW conducted at the AoM Meeting in 2023, the aim of the present Professional Development Workshop (PDW) is to introduce HR measurements and analyses, with a focus on Heart Rate Variability (HRV)] to the uninitiated management researcher who might wish to know more about and employ this versatile methodology. The PDW will: (i) quickly introduce the physiology of HR and its association with human brain function and behavior; (ii) discuss principles of lab-based HR experiments; (iii) explain the basic principles of analysis and interpretation of actual HR data associated with typical managerial concepts; and, (iv) invite participants (in groups) to discuss their own research questions and designs. This PDW builds on theory, moves to real applications, and ends up with hands-on involvement to motivate participants to use HRV methods in their future research.

Presenter: **Wendy J. Casper**, *U. of Texas At Arlington*
Presenter: **Elizabeth Eve Umphress**, *U. of Washington*
Panelist: **Elizabeth Margaret Campbell**, *U. of Minnesota*
Panelist: **David Welsh**, *Arizona State U.*

Organized by members of the Making Connections Committee (MCC) on behalf of the OB Division, we seek to help scholars better understand and unlock the Revise and Resubmit process. This PDW will feature insights current and former Editors from top management journals such as Academy of Management Journal, Organizational Behavior and Human Decision Processes, and Journal of Applied Psychology. Such insight will help participants learn how to avoid common pitfalls within the review process, receive advice on how to understand and respond to common requests from the review team, and surface some of the pitfalls and best practices of the process that the Editors want you to know. Next, participants will get the chance to ask questions about the process from a panel of Editors with expertise in both qualitative and quantitative methods. Finally, to bring the experience to life, scholars will get the opportunity to see the Revise and Resubmit process in action as experienced scholars will lead small groups through the process by sharing each step and revision from a paper that was submitted to and eventually published in a top management journal. This PDW is not designed to help participants tackle any specific issues or comments in current R&Rs, but to help them expand their capabilities to successfully approach any R&R through increased understanding and insight of best practices.

Seeing the Whole Together: Relational Mapping for Theory, Research and Practice

Participant: **Jody Hoffer Gittel**, *Brandeis U.*

Participant: **John Paul Stephens**, *Case Western Reserve U.*

Participant: **Lauren Hajjar**, *Suffolk U.*

Participant: **Olawale Olaleye**, *Brandeis U.*

Successful change initiatives are rarely accomplished by a single stakeholder. In a world that is facing complex challenges such as wars, pandemics, authoritarianism, social injustice, and climate change, calls for holistic responses are increasing. Change efforts in complex systems rely on relationships at every level, spanning intra and interpersonal, cross-functional, organizational, cross-organizational, and institutional. Seeing the whole is challenging for participants in complex systems, yet doing so is essential for engaging effectively in systems change. To provide participants with the direct experience of expressing, testing, feeling, and reflecting as they engage in coordinating complex systems, relational mapping was developed as a practical embodiment of relational coordination theory. Relational mapping is often used to help diverse participants in complex health and social systems see the current state of coordination and identify opportunities for change. In this workshop, we introduce relational mapping as a method for engaging in theory-driven research and practice. We invite participants to use a case from their own context to develop a relational map. Based on these relational maps, facilitators will guide participants to engage in theorizing and hypothesis development in small groups.

Managerial Foresight: Unraveling the Enigma

Participant: **Felipe Csaszar**, *U. of Michigan*

Participant: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*

Participant: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*

Participant: **Pedro Aceves**, *Johns Hopkins U.*

Participant: **Warren Hatch**, *Good Judgment, Inc*

Facilitator: **Daniel Wilde**, *Indiana U. - Kelley School of Business*

While the concept of foresight has long played an implicit role in the strategy field, theoretical challenges and empirical complexities have largely relegated it to an understudied enigma. However, recent theoretical and methodological advancements have empowered management scholars to begin rigorously examining the behavioral nuances of managerial foresight. This PDW aspires to take stock of the current research and identify a future research agenda in terms of questions and methods by assembling a set of leading scholars and practitioners with diverse perspectives and expertise. We anticipate the session will inspire spirited debate and provide needed direction around the existence, limitations, boundaries, measurement, and utility of foresight across individuals, teams, and organizations. The event is poised not only to contribute to the theoretical and empirical foundations of managerial foresight but also foster new connections, collaborations, and the formation of a dynamic community dedicated to advancing our understanding of this pivotal concept.

Come be a valued part of this exciting conversation! You can pre-register for the session here: <https://forms.gle/9UJV5dLi8mVviTE16>

Using Formal Models in Management Research

Panelist: **Andrew Boysen**, *Kenan-Flagler, UNC - Chapel Hill*
Panelist: **Olivier Chatain**, *HEC Paris*
Panelist: **Gwendolyn Kuo-fang Lee**, *U. of Florida*
Panelist: **Jin Li**, *U. of Hong Kong*
Panelist: **Anparasan Mahalingam**, *Syracuse U. Whitman School of Management*
Panelist: **Michael D Ryall**, *Florida Atlantic U.*
Organizer: **Elena Plaksenkova**, *The Ohio State U. Fisher College of Business*
Organizer: **Liyue Yan**, *BI Norwegian Business School*

The purpose of this PDW is to enhance participants' understanding of formal modeling in management research and how the method can be used for theory building and empirical testing, to compare and connect formal modeling with other methods, and to share the best practices for developing, writing, publishing, and reviewing formal model papers. The PDW aims to promote the effective use and consumption of formal modeling to a larger audience, examine the role of formal modeling as a method of management research, provide advice to those interested in this method, facilitate a conversation between experts and learners, and foster a community of researchers. To this end, we invite panelists who have extensive experience in formal modeling as producers, editors, and reviewers, as well as in other research methods. The in-person PDW consists of two parts: a 90-minute panel session and two rounds of roundtables, 40 minutes each.

Oneness Culture in Action: Building Harmony, Bliss, and Achieving Profit and Efficiency

Presenter: **Pooja Shrivastava**, *U. of Oklahoma*

In today's rapidly evolving global landscape, society is increasingly fragmented by race, class, religion, and ideology. These divisions lead to grouping and conflicts due to restrictive worldviews. When these divisive ideologies invade the workplace, tremendous energy is needed to manage people and create a coherent and symbiotic workplace. Most HR trainings address the differences from outside while emboldening the idea that people are different, failing to establish people as one. Operating from oneness inspires an individual to feel emotionally connected and unified with everything around them, including objects of nature and living beings. The sense of self and others dissolves in oneness, and there is no duality. Oneness is seeing everyone as one being. The sense of oneness brings an inner transformation where the compulsion of getting along is not imposed from outside. At the spiritual plane, all individuals are the same and equal, yet in outer appearances, unique and different. Every individual is looking for love, peace, and social connectedness. Adopting a culture and worldview of oneness unites us as a coherent and symbiotic humanity, both within and outside the organization, distinguishing us from groups and ideologies that are divided and conflicting. A culture of Oneness respects individuals' uniqueness while promoting collaboration, empathy, and accountability toward common goals. This workshop is designed to showcase to business leaders how to build a oneness culture based on fundamental talents of oneness, including the principle of reciprocity, coherent mission, celebrations, empathy, and harnessing spiritual power through breathwork and meditation. This workshop establishes the power of oneness in creating a harmonious and blissful organization and society at large and accelerates efficiency. Individuals and organizations can benefit by fostering a culture of Oneness through policy, innovation, and purpose.

Distinguished Speaker: **Susan S. Case**, *Case Western Reserve U.*

Spirituality and religion are vital aspects of billions of people's lives, their societies, cultures, and work. Over the past few decades, pioneering management scholars have inquired into this vital aspect of human life and enterprise. There are a wide variety of methodological approaches that constitute the core foundations, that have remained largely absent from the Academy journals, being published instead in journals of the smaller sub-fields within the Academy, such as the Management, Spirituality and Religion (MSR) journal, the Humanistic Management journal or the journal of Organizational Aesthetics. This panel reports out the work that the panelists have done to argue that our research methods are US or Euro-centric, dominated by the English language and a cause for indigenous languages and cultural ways of knowing-doing-being not allowed. It will build a case for being inclusive, of many different ways of knowing, doing and being. This is an invitation to all who wish to explore beyond the language of text and ontology, epistemology, and axiology.

Using Sports Data To Advance Management Theory

Organizer: **Paolo Aversa**, *King's College London*
Organizer: **Dmitry Sharapov**, *Imperial College Business School*
Organizer: **Francesca Hueller**, *ULMS U. of Liverpool*
Panelist: **Christopher I. Rider**, *U. of Michigan, Ross School of Business*
Panelist: **Lorna Anne Downie**, *Vrije U. Amsterdam*
Panelist: **Patrick Hallila**, *Imperial College Business School*
Panelist: **Julien Clement**, *Stanford U.*

Publishing rigorous and relevant research in top management journals often requires rich and suitable data for investigating challenging and compelling research questions. The surge of accessible sports data in recent years has increased the number of studies that make use of such data to advance management theory. Beyond the fact that professional sports comprise multi-billion-dollar industries worthy of attention per se, sports also provide settings in which fundamental themes of competition and cooperation are at play, making it attractive for scholars seeking to advance management theories. However, sports settings combine research opportunities with non-trivial challenges and dichotomies that require further reflection: First, sports greatly differ in their nature, and it is not always easy to choose the most suitable sports contexts to respond to particular research questions. Second, in sports settings, the generalizability of results is less evident than in traditional industries, and readers and reviewers often display skepticism about external validity and generalizability of findings to business contexts. Building on successful editions of this workshop at AOM in the previous eight years, this two-part PDW will (1) bring together a panel of scholars to share experience in publishing management research with sports data and (2) provide developmental support in the second part of the workshop for scholars that are in the process of using sports data in their projects or who plan to use sports as a setting to study their research questions.

Facilitator: **Wendy K. Smith**, *U. of Delaware*

As paradox theory continues to grow exponentially, paradox scholars face increasing pressure to sharpen their methods toolbox and produce high-quality empirical research that strengthens the theory and is relevant to practice. Furthermore, as paradox research becomes more interdisciplinary, there is a higher need for guidance on how to harness the exciting opportunities for innovation, without sacrificing rigor. By offering once again a paradox methods PDW within the RM division, we aim to continue discussing the challenges and opportunities of adopting novel methodological approaches to studying tensions. This second edition of the PDW in addition to its interactive nature will offer more opportunities for brainstorming and engaging with the expert panelists. In the first part, our invited scholars, well-versed in both qualitative and quantitative methods, will generate and disseminate novel insights on various aspects of research methods. During the second part of the PDW, participants will also have the possibility to discuss key methodological issues they face in roundtable discussions and receive feedback on their specific research ideas. By exploring methodological questions around tensions and paradoxes, this PDW appeals to members of the RM division and an ever-expanding audience interested in investigating tensions, contradictions, and paradoxes in organizations.

Participant: **Mzamo P. Mangaliso**, *U. of Massachusetts, Amherst*

Participant: **Henrietta Ngozi Onwuegbuzie**, *Lagos Business School Pan Atlantic U. Nigeria*

As globalization and modernization transform business practices, there is increasing recognition of the immense untapped potential residing within Indigenous Knowledge Systems (IKS), especially within Africa (Beugré, 2023; Breidlid, 2009; Hoppers, 2001; Onwuegbuzie & Mafimisebi, 2021). IKS draw upon centuries of cultural wisdom and environmental stewardship, offering unique approaches and insights into entrepreneurship that often go unexplored by conventional education systems. This workshop seeks to bridge this gap by exploring how IKS can be incorporated into contemporary entrepreneurship education curricula (Kabongo & Okpara, 2010) to enrich it with culturally resonant sustainable business practices that would benefit contemporary entrepreneurship education curricula.

Organizing for Emerging Digital Technologies: Taking Stock and Moving On

Organizer: **Georg Reischauer**, *WU Vienna & JKU Linz*
Organizer: **Christine Moser**, *Vrije U. Amsterdam*
Organizer: **Ali Aslan Gümüşay**, *LMU Munich*
Distinguished Speaker: **Emmanuelle Vaast**, *McGill U.*
Facilitator: **Saeed Akhlaghpour**, *U. of Queensland*
Facilitator: **Ali Aslan Gümüşay**, *LMU Munich*
Facilitator: **Danielle Logue**, *UNSW Sydney*
Facilitator: **Christine Moser**, *Vrije U. Amsterdam*
Facilitator: **Georg Reischauer**, *WU Vienna & JKU Linz*

Emerging technologies are radically novel and rapidly evolving technologies with profound transformative potential for business and society. The sharp rise of emerging digital technologies (e.g., artificial intelligence, blockchain, quantum computing, 3D printing, smart manufacturing, augmented reality) is challenging insights on how to organize around these technologies on multiple levels, warranting new studies. Organized by the guest editors of a special issue on this very topic in *Information and Organization*, this two-part PDW aims to give an overview of recent advancements on the organization of emerging digital technologies and to provide feedback on working papers dedicated to this topic. Part 1 is open for all. Part 2 requires registration and the submission of a short paper.

Please apply for Part 2 until Monday July 22 2024 by filling out a short form and uploading a short paper (max. 5 pages without references and tables/figures) here: <https://forms.gle/mZ6XPACgRTzhEF5A>

How to Be Harassment-Free: Expert Insights & An Allyship (Micro)Training

Facilitator: **Jamie L. Gloor**, *U. of St. Gallen*
Coordinator: **Huong Pham**, *U. of St. Gallen (HSG)*
Session Chair: **Jenny M. Hoobler**, *NOVA School of Business and Economics*
Panelist: **Lilia Cortina**, *U. of Michigan*
Panelist: **Jennifer L. Berdahl**, *U. of British Columbia*
Panelist: **Shannon Rawski**, *Ivey Business School*
Panelist: **Brent John Lyons**, *Schulich School of Business, York U.*

This Professional Development Workshop (PDW) is intended for those who are interested in actively co-creating more respectful, harassment-free work and conference environments. In the spirit of Innovating for the Future, we integrate the newest evidence and interventions (e.g., allyship) in the harassment space to co-create better cultures for our cohorts of today and tomorrow. Our five expert panelists will present various evidence and approaches to stemming harassment and includes those who have published research on the topic and those who have been involved with the topic from a more practical perspective. Each panelist will discuss (sexual) harassment, what they have learned in their research and careers as academics, conference goers, group leaders, bystanders, and/or ethics representatives. Together, we will explore potentially overlooked examples (i.e., what constitutes harassment) and how to be an effective ally (e.g., when we have more privilege). Attendees will have a chance to ask questions, after which they will break out into small, facilitated groups for discussion, reflection, and practice application. Our goal is to help craft more respectful work and conference experiences by raising awareness of the often subtle and ambiguous examples of harassment, practicing how we can all play a role as active allies, and co-creating higher-quality organizational and academy experiences. In this way, we innovate together with cutting-edge insights and more effective action towards a harassment-free future.

Collectively Putting the Pieces Together: A Positive Relationships at Work Research Hackathon

Organizer: **Melissa Chamberlin**, *Iowa State U.*
Organizer: **Beth Schinoff**, *U. of Delaware*
Organizer: **Lyndon Earl Garrett**, *Boston College*
Organizer: **Jordan Nye**, *U. of Michigan, Ross School of Business*
Discussant: **Emily Dunham Heaphy**, *U. of Massachusetts, Amherst*
Discussant: **Kevin W. Rockmann**, *George Mason U.*

The development of positive relationships at work is important to both employees and organizations. Individuals who maintain positive work relationships tend to experience more positive emotions and have higher job and life satisfaction. Within academia, the study of positive relationships at work is rapidly growing, incorporating new methodologies, theories, and approaches that build upon existing knowledge. However, as new ways of working and relating come to fruition, it is increasingly clear that current management theory is somewhat ill-equipped to help us understand positive relationships at work, especially as conversations surrounding mental health and chronic loneliness come to the fore. The purpose of our proposed PDW is to facilitate the continued growth of positive relationships at work scholarship by engaging in a “hackathon” to collectively develop actionable research questions, designs, and applications that will help advance research and teaching on positive relationships at work. This hackathon will involve the generation of ideas and further development of these ideas through structured sharing. In addition, we intend our PDW to be a forum for continuing to build and cultivate a community of scholars passionate about positive relationships at work.

This workshop offers practical advice to doctoral students on completing their dissertations and transitioning to their first academic positions. It is anticipated that the workshop will be held in live on-site format. The workshop is open to all doctoral students. Pre-registration will be required. The workshop will be conducted in an informal setting where students will be able to interact with faculty and other students in small groups. The finalists for last year's STR Outstanding Dissertation Award share the coordination of the workshop. The format of the PDW will include presentations and perspectives from last year's finalists and a panel of senior faculty. Attendees will break out into groups to meet with faculty and Q&A will be held after all sessions.

PhD students will be able to apply for a spot through this link: https://docs.google.com/forms/d/e/1FAIpQLSdy7C9GwBle_oXCfi9Y6fnUxLqNc_iJh7fFxtSZ-dLcRGvmdA/viewform?usp=sf_link. The applications judged to be the best by the co-organizers will be granted a spot in the PDW. We plan to limit registrations respecting the capacity of 200 individuals in the same room. Pre-registration is required, details will be shared in the AOM STR Discussion Board.

The goal of this professional development workshop is to provide a session in which attendees receive constructive feedback and advice on health care management related research projects that are in progress, but not ready for journal submission. Projects may range from early conceptual stages to later stages (i.e. writing a manuscript). Participants will receive feedback, in a collegial setting, from health care management researchers in the field on key issues attendees are facing in their projects. Participants will be matched with two research mentors based on the nature of their research project and the expertise of our esteemed panel. While this workshop is open to researchers at all stages of their career, priority will be given to early-stage participants (i.e. doctoral students and junior scholars). Each participant will discuss their research projects with each of their assigned mentors, rotating in timed increments. This workshop is highly interactive, and uses experiential learning to make a potential impact on the professional success of participants. This workshop is presently designed for an in-person conference.

To participate in this PDW, you must have submitted an application to be a mentee or signed up previously to be a mentor.

This PDW was created specifically for members of the Organizational Behavior (OB) Division to expand their network of scholars interested in similar research areas. We designed the forum to provide members a platform to meet leading scholars in specific OB research topic areas, get to know other members of the Division, and discuss research ideas. The PDW will include three rounds of small-group discussions moderated by accomplished scholars who serve as experts in a particular topical area. As a participant in the forum, members can self-select into three research themes of their choice—one choice for each 20-minute round of discussions. Research themes span a wide range of OB topics, including contextual aspects of work (e.g., culture & climate); creativity & innovation; daily behaviors at work; dark side of OB; diversity; emotions, affect, & attitudes; future of work (e.g., gig work, multiple job holding); identity & identification; justice/fairness, trust, & ethics; leadership (behavior & characteristics; relational); modern team arrangements (e.g., multiple team membership, dynamic participation); motivation & engagement; personality & individual differences; relationships at work (e.g., friendship, loneliness, communities); social networks; stress, well-being, & mindfulness; teams (composition; states & processes); time & temporal dynamics; voice, proactivity, & OCBs; work-life interface. We anticipate in-depth research discussions and the facilitation of many meaningful connections among the participants and members of the OB Division.

Facilitator: **Jonathan Lee**, *U. of Minnesota Duluth*
Facilitator: **Rosalind Searle**, *Centre for Trust, Peace and Social Relations, Coventry U.*
Facilitator: **Xiaotong (Janey) Zheng**, *Durham U. Business School*

Trust is a fundamental characteristic of organizational relationships and one of the most frequently studied concepts in management research today. This annual PDW is aimed at advancing research on trust by serving as a platform for scholars to discuss critical issues, engage in dialogue, and help further research-in-progress. The workshop consists of three segments: (1) The first segment starts off with a panel discussion, in which leading scholars share their thought-provoking ideas on this year's focal topic of "trust & emotions"; (2) For the second segment, attendees break into roundtables to discuss various relevant issues in current trust research. Each table will start out with a particular topic but may move on to other issues as the discussion unfolds. Topics may include (but are not limited to): trust & emotions, trust asymmetries, trust violation and recovery, trust in teams, trust in interorganizational relationships, trust across levels of analysis, trust in networks, trust dynamics, and trust and contracts; (3) The third segment consists of a paper development workshop, in which the facilitators provide in-depth feedback on work-in-progress trust research previously submitted by workshop participants. These papers should be in an advanced developmental stage, targeted at a scholarly management journal, and no more than 40 double-spaced pages in length.

Innovating Research: Doing Methods Differently

Organizer: **Alexandra Bristow**, *The Open U. Business School*
Organizer: **Marco Distinto**, *The Open U. Business School*
Organizer: **Mariana Paludi**, *U. Tecnica Federico Santa Maria*
Organizer: **Alison Pullen**, *Macquarie Business School, Macquarie U.*
Organizer: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*

This PDW will be of interest to anyone already doing or wanting to do research methods differently from established norms and conventions. We will draw on and further develop the long-standing Critical Management Studies (CMS) tradition and expertise in questioning dominant expectations and proposing innovative alternatives. This includes proposals for doing research differently that are currently gaining momentum within CMS as part of the movement to reimagine academic praxis. Such proposals have a broad appeal and relevance to management researchers beyond as well as within CMS, and this PDW aims to attract participants from across AOM Divisions in the spirit of openness, dialogue, and forging new cross-divisional connections. The PDW will be structured in three parts. Firstly, the PDW will open with a series of brief talks from established and emerging expert researchers, sharing insights into doing methods differently. Secondly, roundtable discussions will provide participants with an opportunity to share their experiences, questions, and concerns about doing research methods differently with each other and with the PDW organisers and facilitators. Thirdly, we will come together again for a plenary debrief, sharing key insights from each roundtable. The overall aim of the PDW will be to provide participants with support, encouragement, knowledge, and inspiration, developing their overall capacity for research innovation through peer dialogue and learning.

Framing Novelty: New Perspectives on Language and Communication in Entrepreneurship and Innovation

Organizer: **Donato Cutolo**, *IE Business School*

Organizer: **Simone Ferriani**, *U. of Bologna*

Organizer: **Gino Cattani**, *New York U.*

Organizer: **Denise Falchetti**, *George Washington U.*

Panelist: **Greg Fisher**, *Indiana U.*

Panelist: **Aaron Anglin**, *Texas Christian U.*

Panelist: **Christi Lockwood**, *U. of Virginia - McIntire School of Commerce*

Panelist: **Stephan Davys Manning**, *U. of Sussex*

Panelist: **Semi Min**, *New York U.*

Running for the second consecutive year, this PDW seeks to foster interdisciplinary dialogue among scholars exploring the transformative power of language in entrepreneurship and innovation research. This year, the workshop will focus on the structural properties of language and the expectations of different audiences to advance our understanding of how language can help entrepreneurs rally key audiences' support around their novel ideas, products, or projects. In the first half of the PDW, we have put together five panelists with diverse backgrounds, genders, nationalities, and research focus who have conducted theoretical and/or empirical work on how language can shape understanding and perception, thereby influencing entrepreneurial success. After the Q&A session, in the second half of the PDW, we provide registered participants with the opportunity to gain high-quality feedback from the organizers and panelists. In this way, the participants will have the opportunity to address their questions about specific issues encountered when writing/publishing their papers, exchange novel theoretical and methodological ideas, and start novel conversations that go beyond the current assumptions in the literature.

Faculty Soft Skills and Online Learning: Why Do We Care?

Participant: **Ashleigh Allgood**, *U. of Alabama, Birmingham*

Participant: **Kristin Burton**, *Purdue U. Northwest*

Organizer: **Shivani Gupta**, *U. of Houston - ClearLake*

Organizer: **Michele Heath**, *Cleveland State U.*

Participant: **Gregory N. Orewa**, *U. of Texas At San Antonio*

Given that online learning continues to increase in popularity, this PDW will focus on providing the Emerging Scholars Consortium participants an overview of why faculty soft skills are important. Soft skills are personality traits that help you build interpersonal relationships effectively. Faculty are regularly faced with difficult situations that require a certain level of compassion, critical thinking, problem-solving, and conflict-resolution skills. This PDW would focus on personal qualities and traits that impact how one engages with students in online classes. Our PDW will provide an opportunity to discuss the challenges, experiences, and tips for developing soft skills.

Speaker: **Abhishek Behl**, *Keele Business School, Keele U., U.K*
Speaker: **Daicy Vaz**, *NEOMA Business School*

India has always been at the forefront when it comes to developing software technologies or extending IT support. The country positions itself at advanced stages of adopting AI in businesses and governance (Business Standard, 2023). Moreover, to keep up with the market needs, AI courses have also been introduced at school and university levels to train new graduates with AI skills (Nasscom, 2023). Use of robust AI technologies and cloud services have made India resilient towards crises. Day-to-day transactions, small and medium business have also completely transitioned onto digital platforms for ease. The Indian government strongly supports AI initiatives and funds several startups each year (Inc42, 2023). Although India has made significant progress in terms of digital transformation, little is known about how the country makes this happen. This PDW will throw light on how India has been adopting AI for resilience and agility.

Making Sense of Corporate Purpose: Charting New Conversations and Perspectives

Organizer: **Ricardo Gabriel Flores**, *U. of Victoria*
Organizer: **Luca Manelli**, *Politecnico di Milano*
Organizer: **David Chandler**, *U. of Colorado Denver*
Panelist: **Matthew Kraatz**, *U. of Illinois*
Panelist: **Juan Almandoz**, *IESE Business School*
Panelist: **Marya Besharov**, *Oxford U., Saïd Business School*
Panelist: **Claudine Madras Gartenberg**, *The Wharton School, U. of Pennsylvania*
Panelist: **David Chandler**, *U. of Colorado Denver*
Panelist: **Rodolphe Durand**, *HEC Paris*

This workshop seeks to use the momentum generated by a recent special issue on corporate purpose (Ocasio, Kraatz, & Chandler, 2023) to spur new ideas around this concept and phenomenon. In particular, the goal is to explore ideas at the intersection of two interrelated analytical perspectives on corporate purpose: inside-out (io), the meaningful, value-laden reason for being of a specific corporation, and outside-in (oi), the externally-imposed expectations bestowed upon corporations by society and stakeholders (Almandoz, 2023). Despite the widespread use and leveraging of corporate purpose among practitioners, the body of conceptual and empirical research to understand this phenomenon remains emerging at best. In response, the proposed PDW assumes the inherent tensions between the io/oi perspectives as a starting point for discussion. Then, it seeks to build on it to provide fresh new theoretical insights that can form the foundation for impactful research on corporate purpose at the intersection of organization theory and strategy. To do this, most of this PDW will be dedicated to roundtable sessions where junior scholars and doctoral students will present their emerging research on purpose and have the chance to receive feedback from eminent scholars in the field.

Methodological Pluralism in the Study of Rankings: RD, Experiments, Simulations, Qualitative Methods

Organizer: **Wooseok Jung**, *HEC Paris*
Organizer: **Amanda Sharkey**, *U. of Notre Dame*
Panelist: **Ben William Lewis**, *Brigham Young U.*
Panelist: **Giada Di Stefano**, *Bocconi U.*
Panelist: **Tristan L. Botelho**, *Yale School of Management*
Panelist: **David Tan**, *Johns Hopkins U.*
Panelist: **Rieneke Slager**, *U. of Groningen*

Third-party evaluations -- such as rankings, awards, and aggregated consumer reviews -- have grown in influence over the last decades. Understanding these sources of environmental influence is not only practically important for managers but also crucial for scholars in areas such as stakeholder theory and the social evaluations literature. This workshop responds to the increasing interest in ranking studies and contributes to future research by exploring diverse methodological approaches. Recent explorations have drawn from a wide range of methods, providing valuable empirical and theoretical insights. Quantitative research has employed experimental and quasi-experimental designs to separate the effects of third-party evaluation systems from unobservable factors, while qualitative studies have revealed a nuanced processual understanding of responses from ranked entities. The workshop features a panel of five scholars sharing their experiences in conducting cutting-edge empirical research in third-party evaluation systems. These scholars will discuss the application of regression discontinuity designs, field experimental approaches, online and lab experiments, simulation methods, and qualitative approaches. They will also offer guidance on effectively positioning research for reviewers and publication. Through these discussions, the workshop aims to enhance participants' understanding of these empirical approaches and their optimal application in producing high-quality research on third-party evaluations.

Unlocking Insights: The Power of Replications in Behavioral Experiments

Organizer: **Stephanie Eckerd**, *U. of Tennessee*
Organizer: **Llord Brooks**, *U. of South Florida*
Organizer: **Iana Shaheen**, *U. of Arkansas*
Organizer: **Craig R. Carter**, *W. P. Carey School of Business, Arizona State U.*
Panelist: **Rogelio Oliva**, *Texas A&M U.*
Panelist: **Edward McClain Wellman**, *Arizona State U.*
Panelist: **Tingting Yan**, *Texas Tech U.*

This PDW focuses on advancing research in Operations and Supply Chain Management (OSCM) by exploring the critical theme of replicating behavioral experiments. The primary goal is to equip attendees with advanced methodological skills for replicating experiments rooted in different foundations, including experimental economics and social psychology. The objectives encompass enhancing critical thinking skills, facilitating networking opportunities, enriching teaching resources, inspiring research funding initiatives, and contributing to the OSCM field's development. Attendees will gain valuable insights into addressing the challenges and opportunities associated with replication studies in OSCM research. The PDW aims to empower OSCM researchers to conduct robust and impactful replication studies, ensuring the reliability and validity of research findings. It provides a platform for doctoral students and faculty to engage in meaningful discussions and network with experts in the field, fostering a culture of rigorous research practices and knowledge exchange.

Environmental Sustainability and International Business Research: Opportunities and Challenges

Organizer: **Haitao Yu**, *U. of Macau*
Organizer: **Simone Carmine**, *IESEG School of Management*
Discussant: **Ruth V. Aguilera**, *Northeastern U.*
Discussant: **Jonathan P. Doh**, *Villanova U.*
Discussant: **Valentina De Marchi**, *ESADE Business School*
Participant: **Chang Hoon Oh**, *U. of Kansas*
Participant: **Maoliang Bu**, *Nanjing U.*
Participant: **Panikos G. Georgallis**, *U. of Amsterdam*
Participant: **Kerrigan Marie Machado Unter**, *U. of St. Gallen*

In this PDW, we intend to discuss how international business (IB) literature can advance its understanding of environmental sustainability by discussing the main questions IB should put at the center of its sustainability research. Current IB literature is moving toward a better understanding of how multinational enterprises (MNEs) can effectively deal with and contribute to solving the current environmental crisis. However, we argue that more research is needed to address the key challenges posed by climate and sustainability issues in IB context. Thus, we propose in this PDW to discuss how IB scholars can investigate and theorize on environmental sustainability. To discuss the possible direction to support IB in deeply engaging with environmental sustainability, we invited editors of leading IB Journals and researchers in the field to enlighten possible general and issue-related developments in the field. They have conducted numerous research projects, the outcomes of which have been published in top-tier peer-reviewed journals and have significantly contributed to the advancement of the IB and sustainability field.

Panelist: **Pinar Ozcan**, *Oxford U., Saïd Business School*

Panelist: **Fernando Suarez**, *Northeastern U.*

Panelist: **Shaker A. Zahra**, *U. of Minnesota*

The landscape of the global economy has undergone significant transformation in recent years due to the advent of innovative digital technologies, digital platforms, and their associated ecosystems. There is a pressing need to reevaluate and potentially adapt IB theories to better align with these emerging realities. Meanwhile, platforms and ecosystems have grown into a prominent topic in strategy research and also of significant interest to technology innovation scholars. While the platform literature revolves around the technological and organizational principles, less do we know about how the (institutional, geographic, cultural) context shapes platform and ecosystem strategy and their performance. The primary objective of this PDW is to explore the broader implications of digital platforms and ecosystems in the context of global business, and vice versa. It examines how theoretical perspectives, concepts, and ideas related to digital technology can be integrated into existing IB theories to render them more reflective of the contemporary global business environment, while seeking to strengthen the platform/ecosystem inquiries in accounting for the contextual influences that were traditionally assumed away in such research. The PDW not only offers a forum for cross-fertilizing IB and platform/strategy research but also provides concrete feedback on the relevant papers authored by division members.

Panelist: **Judith Stroehle**, *U. of St. Gallen, Switzerland*

Could the assessment of business impact on society and the planet pave the way for a business paradigm that prioritizes social and environmental considerations, fostering genuine transformation? This constitutes the core aspiration and claim of impact measurement and valuation (IMV). This Professional Development Workshop (PDW) not only familiarizes participants with the fundamental facets of IMV and meaningful approaches for measurement and assessment, but also scrutinizes its ethics, politics, and standardization. In response to IMV proponents' calls to internalize and monetize corporate impacts, leading experts will engage in a debate around IMV, discussing conceptual issues of impact (I), current measurement approaches and challenges of measurement (M), and potentials and merits of valuation (V). In the latter part of the workshop, attendees will engage with these experts in an open-dialogue format to explore alternative narratives of change that extend beyond mere measurement. The objective of this PDW is to subject IMV to thorough examination and conceive of novel approaches that either complement or supplant organizations' inclination for management through quantification.

Discussant: **Andrew Toole**, *USPTO*
Discussant: **Jeffrey Furman**, *Boston U.*

This workshop focuses on the empirical analysis of patent data, emphasizing the use of patents both as a measure of knowledge and innovation, and as an institutional phenomenon worthy of research in its own right. The goals of the PDW are twofold. First, it will provide an introduction to patent data for management scholars new to the field, including a discussion of data sources, data limitations, and methods for effectively analyzing patent data. Second, it will provide examples of in-depth analyses using patent research. The panelists will engage in discussions with the audience to address the current state of patent research and future directions for research.

AI's Kryptonite?: Using Student Cases to Teach Critical Thinking, Theory, and Essential Skills

Participant: **C. Ken Weidner**, *Saint Joseph's U.*
Participant: **Elena Lvina**, *Saint Joseph's U.*

This workshop will be of interest to attendees who want to design and facilitate learning experiences for their students that are highly resistant to manipulation through artificial intelligence (AI), a part of “the future that has already happened” (Drucker, 1997) Because AI tools are ubiquitous, more than ever, our students at all levels will need to develop the judgment and skills to evaluate situations and evidence and make sound and principled. We have found that teaching with cases written by students based on their own experience is an effective way to center learning on critical thinking and essential interpersonal skills while learning course content in a range of subjects and levels of students, from undergraduate to executive programs. Student-written cases provide compelling content for problem-based learning. Student-written cases are unique, often unstructured situations that require unique solutions. The “right” answer cannot be retrieved by a machine; instead, the “best” answer must come from a group of people in real-time, working to understand the presenting issues and addressing the most important underlying issues. The use of student-written cases calls upon students to do for themselves what AI cannot (as yet) do for them: critical skills including working in groups, applying course subject matter, critical thinking, problem identification, problem-solving, presentation, facilitation, and engaging in reflection. This workshop will address faculty interests and concerns about teaching with student cases — “AI's Kryptonite” — and provide resources to build faculty confidence in their exploration or application of student-written cases.

Writer's Workshop for Special Issue of Journal of Management Education on "Management Education in Africa"

Organizer: **April L. Wright**, *Warwick Business School*

Organizer: **Sandra Pereira**, *U. of Warwick*

Organizer: **Samuel Aryee**, *U. of Surrey*

Organizer: **Mira Slavova**, *Warwick Business School*

This PDW is being facilitated by the editors of the Special Issue of the Journal of Management Education devoted to the topic of 'Management Education in Africa'. The aim of the PDW is to support participants in developing and writing submissions for the Special Issue that engage, explore, and problematise issues related to management education in Africa. During the session, participants will receive targeted guidance, feedback and mentoring from the editors on project ideas and potential submissions for the Special Issue. Submissions can include: (1) research articles reporting quantitative and/or qualitative empirical studies conducted in the African educational context; (2) theoretical and conceptual articles that build new theories or critique existing ones about contemporary issues in African management education; (3) essays including first-person narrative accounts about lived experiences of teaching and learning in Africa; (4) instructional innovations that describe and evaluate teaching and learning approaches that have proven to be effective in the context of African educational systems and business schools; and (5) articles that describe, analyse and evaluate teaching or curricular change initiatives in African business schools. This session is also designed to help participants create collaboration opportunities among scholars from Africa, the diaspora and Western nations.

Coordinator: **LaStarr Hollie**, *UMass Amherst*
Coordinator: **Azure Cook**, *U. of Massachusetts Boston*
Panelist: **Eddy S. Ng**, *Queen's U.*
Panelist: **Enrica Nicole Ruggs**, *U. of Houston*
Panelist: **Laura Morgan Roberts**, *U. of Virginia Darden School of Business*
Panelist: **Claudy Jules**, *McKinsey & Company*
Panelist: **Bernardo M. Ferdman**, *Ferdman Consulting*
Discussant: **Erica Littlejohn**, *U. of Kentucky*

This exploratory PDW challenges faculty, students, and practitioners to consider and address the meaning of impact in the diversity, equity, and inclusion (DEI) space. Amid perpetually volatile environments, such as the dismantling of DEI offices and the targeting of scholars by political actors, we offer an arena to discuss how to confront these issues. The 2024 All-Academy Theme, Innovating for the Future: Policy, Purpose, and Organizations, encourages the academy to examine the interplay of innovation, policy, and purpose. Divisive events in higher education – including the ending of Affirmative Action, the rollback of DEI offices, and the dismissal of high-ranking, barrier breaking university presidents amongst other social issues – this PDW is germane to addressing the aforementioned interplay. By engaging faculty, students, and practitioner-scholars in interactive and collaborative discussions, the workshop will explore the impact of DEI on three levels: (1) department, (2) college, and (3) government and corporate. At the department level, we aim to discuss how to craft high-impact DEI research, specifically in the meso and macro settings, including field research. At the college level, we address strategies to identify grants and conduct cross-disciplinary research. Lastly, at the government and corporate level, we discuss the criticality of bridging the communication gaps between scholars and practitioners. This PDW will include an interactive panel, followed by roundtable discussions with critical reflection on these issues and their role in scholarship and practice. Finally, participants will be given the opportunity to continue the discussion and strategize around DEI in a series of post-PDW workshops.

Teaching About Markets and Free Enterprise

Session Chair: **John Parnell**, *U. of North Alabama*

Session Chair: **Siri Ann Terjesen**, *Florida Atlantic U.*

Presenter: **Sebastian Vaduva**, *Emanuel U. of Oradea*

Presenter: **Amanda Brickman Elam**, *Babson College*

Presenter: **Peter G. Klein**, *Baylor U.*

Presenter: **Mark D. Packard**, *Florida Atlantic U.*

Presenter: **Michael Louis Troilo**, *U. of Tulsa*

This workshop will explore teaching practices associated with free-market thinking and market-based management. Free markets promote competition, innovation, private ownership of productive enterprises, and limited government intervention. Each presenter in this workshop will share an exercise, case vignette, or another classroom approach grounded in a market orientation, emphasizing eliciting class interactions and discussions. Pre-registered participants will receive an electronic packet of selected readings in the months before AOM to aid in preparation for the event. Participants who do not register are also welcome.

Deciphering the Relationships of Co-Creation: Author, Reviewer, and Editor Roles in Peer Reviews

Participant: **Charleata Battle**, *California State U., Los Angeles*
Participant: **Geoffrey Silvera**, *U. of Alabama at Birmingham*
Participant: **Scott L. Newbert**, *City U. of New York, Baruch College*
Participant: **Andrew A. Hanna**, *U. of Nebraska, Lincoln*
Participant: **Timothy Huerta**, *Ohio State U.*

Early academic careerists are expected to swiftly build national scholarly reputations through the co-creation of academic literature published in top ranked peer-reviewed journals (McGrail et al., 2006). Although many new scholars have demonstrated mastery in numerous subject matters, some have limited academic acumen and understanding of the peer-review publication process. (Miller and Van de Ven, 2015) noted the peer review process involves inviting expert scholars in the field to assist in evaluating the quality and appropriateness of journal submissions. Decades of engaged scholarly debate have still insufficiently deciphered peculiar editor, reviewer, and author perspectives within the peer review processes their roles in the co-creation of new academic literature. Scholarly research is a life-long process whereby senior scholars play an invaluable role in modeling the tone of the peer review process for junior scholars (McMullen and Newbert, 2023). The challenge within publishing is to get published in places that are likely to be noticed (Kritchevsky, 2018). Academic institutions have historically indoctrinated the concept of 'public or perish' as the dominant credo in academia (Niles, et al., 2020) without providing early career scholars with interventions aimed to increase academic publication rates among new scholars. (McGrail et al., 2006) found only a small percentage of academics actively participated in the publishing process although some higher education institutions have launched creative interventions like writing coaches, writing courses, and engaged scholarship support groups to increase publication outputs.

Developing Theory From Historical Research

Organizer: **Rohin Borpujari**, *U. College London*
Organizer: **Thomas J. Roulet**, *U. of Cambridge*
Panelist: **Andrew Nelson**, *U. of Oregon*
Panelist: **Paolo Aversa**, *King's College London*
Panelist: **Roy R. Suddaby**, *U. of Victoria*
Panelist: **Daniel Wadhvani**, *U. of Southern California*

This PDW is aimed at stimulating an interactive and developmental exchange between scholars engaged in theory-building research using historical data, who are aiming to publish in prominent management journals. The workshop will feature a panel of experts with a track record of publishing historical work in premier outlets. The goal of the workshop will be to help scholars learn how to develop and publish management theory from historical research. To this end, the core question that this PDW aims to unpack is – how do you build timeless theory from the study of time-bound historical cases? In the first half of the workshop, the panelists will lead exchanges around topics such as which research questions may be best suited to historical research and potential for theoretical contributions; how to identify rich data sources and deploy historical research methods; how to balance the needs for contextualization vs. generalization, and boundary conditions in their theorizing. In the second half of the workshop, shortlisted participants will have the opportunity to engage in quick “pitches” of their research project to one of the expert facilitators, with a view to receiving developmental feedback.

Artificial Intelligence is not new. It has been part of our technological progress for many years. Yet it was not until November 2022 that it became ubiquitous to educators and the public in general. Over the past year, developments multiplied and new features were seen almost weekly, making visible our incapacity to anticipate the impacts of this technology, not even by their most savvy creators themselves. Educators have been discussing and improvising ways to incorporate Chat GPT and other AI applications into their classrooms and experimenting with ways of dealing with this new challenge. At the Global Deans Forum in Denmark organized by the accreditation institution AACSB in September 2023, AI was one of the two main themes. Business speakers shared the competencies they would like schools to develop to face the AI revolution, while educational institutions shared how they were trying to address the challenge. But there was a second main theme, and it was Purpose. This is the focus of this PDW: AI represents a technological tsunami that is hard to anticipate. So, we want invite the audience to shift the attention to an aspect little explored in management education: our human-ness, and how we are developing it. This interactive PDW is organized as a Gallery Walk, where colleagues from 9 different countries will share stories with participants of how they are developing students' 'human-ness'. Then we will invite all participants to reflect and share how they are (or could) intentionally develop human-ness in their own contexts.

Union of the Known-Unknown Realm of Existence for Enhancing a Future of Innovation

Participant: **Sharda Nandram**, *Nyenrode Business U.*

Participant: **Puneet Bindlish**, *Vrije U. Amsterdam*

Participant: **Julia Storberg-Walker**, *George Washington U.*

Participant: **Louis W. Fry**, *Texas A&M U. Central Texas*

Our innovative endeavors are steered by a holistic understanding of existence, uniting the knowledge to be known, the knowable aspect, and the knower. Envisioning a future of innovation propels us with an unwavering focus on the pursuit of the unknown. Nonaka's (1994) exploration of knowledge creation (4 types of knowledge conversion) and Polanyi's tacit-knowing (1958, 1969, 1983) sets the foundation for comprehending innovative practices. Lam (2000) delves into ontological and epistemological dimensions, catalyzing innovation. Beyond this, spirituality emerges as a bridge between the known and unknown (Nandram, 2022; Nandram & Bindlish, 2023), inspiring employees, leaders, and entrepreneurs toward future innovation. Our PDW proposal, influenced by Laszlo et al.'s synthesis of science and spirituality (2021), Storberg-Walker's quantum research (2021), being-centered leadership theory (TBCL) (Fry & Kriger, 2009; Allen & Fry, 2023), and Nandram et al.'s exploration of spirituality in the interconnected concepts of One, Zero, and Infinity (2023), explores the transformative potential of spirituality for global challenges. Emphasizing a paradigmatic-level shift, our proposal integrates Fry (2008) and Storberg-Walker's call for holistic understanding, combining analytical knowledge with non-rational experiences. Building on Storberg-Walker (2022), our PDW urges MSR researchers to critically reflect on diverse ways of knowing and enhancing transformative research practices through action-oriented approaches. Incorporating Allen and Fry's (2023) leadership framework, our PDW integrates TBCL's five ontological levels, framing leadership as a spiritual journey, aligning it with our K-continuum of Knowledge to present a comprehensive framework that enriches our understanding of how spirituality shapes actions, knowledge acquisition, devotion, and meditation within organizations to enhance a future of innovation.

Facilitator: **Kunyuan Qiao**, *Georgetown U.*

The evolution of business paradigms has witnessed a significant shift towards ethical, social, and environmental responsibility. From a Corporate Social Responsibility (CSR) approach, organizations started shifting their attention to the importance of “purpose” (George et al 2023). The unprecedented rise of the B Corp movement stands as a testament to this transformation, emphasizing a commitment to higher standards of corporate purpose, accountability, and transparency. Unique to the B movement is a multilayered approach for purpose-driven businesses: (1) the B Corp certification, (2) benefit corporation legislation, and (3) collective action in the form of social movement activity. This PDW focuses on the first two dimensions: the certification assessment and policy innovation of the new legal benefit corporation framework, which are mutually reinforcing. This PDW will deepen discussions about the role of institutional leadership and policy innovations for purpose-driven assessment schemes by highlighting the field of B Corps and the role of B Lab. B Lab oversees the B Corp certification assessment and led innovative policy work that resulted in a legal benefit corporation framework, which has been adopted by most states in the U.S. and several countries at their national level. B Lab’s leadership has allowed formation and support for over 8000 purpose-driven certified B Corp organizations and even more legal benefit corporations. We see B Lab’s institution-building efforts as a fruitful field for new discussions about how to ensure integrity of sustainability measurements. The workshop is divided into two parts. Part 1 is an open discussion. Part 2 is a paper development session requiring registration.

The first session of this PDW is open to everyone. The second session is a paper development session which is by invitation only. For details about submitting a paper for consideration in the second session, please see www.BAcademics.org under Events. The organizing committee will provide further details on the engagement for the second session through newsletters, social networks, and personal contacts in the following weeks.

The Alchemy of Qualitative Research: Letters From the Field, To the Field

Organizer: **Eliana Crosina**, Babson College
Organizer: **Tiffany Dawn Johnson**, Georgia Institute of Technology
Organizer: **Kam Phung**, Simon Fraser U.
Organizer: **Alexandra Rheinhardt**, U. of Connecticut
Organizer: **Anna Elise Roberts**, U. of Bath
Organizer: **Sarah Wittman**, George Mason U.
Panelist: **Kimberly D. Elsbach**, U. of California, Davis
Panelist: **Spencer Harrison**, INSEAD
Panelist: **Elaine Cahalan Hollensbe**, U. of Cincinnati
Panelist: **John Paul Stephens**, Case Western Reserve U.
Facilitator: **Barnini Bhattacharyya**, Ivey Business School
Facilitator: **Christi Lockwood**, U. of Virginia - McIntire School of Commerce
Facilitator: **Trenton A. Williams**, BYU Marriott School of Business

This Professional Development Workshop (PDW) aims to extend the 2023 AOM PDW, “The Alchemy of Qualitative Research: Crafts and Routines.” This PDW brought together junior and senior scholars to discuss their personal research practices and attracted more than 100 participants. For this year’s PDW, we invited four senior scholars, all experts in qualitative research, to serve as panelists (in addition to eight early and mid-career scholars as PDW facilitators). As the title of the proposed PDW suggests, panelists’ comments will include insights from letters that each wrote ahead of the PDW about their hopes for and advice for future qualitative scholars. In addition, participants will have the opportunity to share a planned or ongoing qualitative study and to gain personalized feedback. We envision that by July 1st, participants will submit a two-page summary of an upcoming or current qualitative research project to aomqualalchemy@gmail.com. These two-page summaries should include an abstract of their project and a statement that outlines their most pressing challenges. During the PDW, each participant will receive comments and feedback on their work from early to late-career qualitative researchers as well as from the organizers of this PDW. To promote rich discussion and feedback, the panel portion will be open to all attendees, but the personalized feedback portion will be limited to 40 participants (determined on a first-come, first-served basis).

Those who are interested in participating in the workshop component of the PDW should submit a 2-page summary of an upcoming or current qualitative research project to aomqualalchemy@gmail.com by July 1. This personalized feedback portion will be limited to 40 participants (determined on a first-come, first-served basis).

Linking Computational Models and Experiments in Behavioral Strategy Research

Organizer: **Dong-Nghi PHAM**, *U. Ramon Llull, ESADE Business School*

Organizer: **Mads Kock Pedersen**, *Aarhus U.*

Panelist: **Daniel Levinthal**, *U. of Pennsylvania*

Panelist: **Marlo Raveendran**, *U. of California, Riverside*

Panelist: **Scott Cohn Ganz**, *Georgetown MSB*

Panelist: **Oliver Baumann**, *U. of Southern Denmark*

Panelist: **Thorbjørn Knudsen**, *Frankfurt School of Finance & Management gGMBH*

Behavioral strategy has critical influences in the management literature. To investigate the behavioral aspects of strategic decision-making, two approaches are gaining increasing attention: computational models and experiments. Computational models enable developing theories about the behavior of complex systems of heterogeneous interacting agents across various structural contexts (e.g. organizations). Experiments test these theories empirically and sometimes reveal unexpected findings that inspire new theoretical insights. Therefore, both are powerful complementary tools for studying how distributed actions aggregate into strategic outcomes. In this workshop, we offer participants an opportunity to interact with prominent scholars who work on bridging computational models and experiment methods to advance behavioral strategy research, as well as hands-on training with modeling during an interactive session. The panel will discuss the role of models and experiments in behavioral strategy, address how to implement and bridge computational models and experiments, and outline the most exciting and challenging future applications. The interactive session will practice a model of mutual learning in organizations and discuss the links to experimental designs.

Speaker: **Do Yoon Kim**, *Boston College*

Speaker: **Frank T. Rothaermel**, *Georgia Tech*

Recent management studies in Artificial Intelligence (AI) have predominantly focused on organizational adoption and implementation of AI, leaving a noticeable gap in understanding how AI firms compete and innovate. This gap becomes even more critical with the emergence of Generative AI (Gen AI) and its profound impact on various industries. The purpose of this PDW is to address this gap by delving into the competitive landscape of Gen AI firms and exploring technology strategies in the era of Gen AI, drawing broader attention to how Gen AI is reshaping the nature of competitive strategy, including its impact on industry attractiveness, competitive advantage and its sources, and the boundaries of the firm. With a panel of leading scholars in AI, technology innovation, and competitive strategies, the PDW seeks to pave a new research direction. The speakers will contribute to three dedicated discussion tracks, introducing their research or sharing theoretical insights to stimulate promising research questions. The session will conclude with roundtable discussions between speakers and attendees, providing attendees with the opportunity to exchange thoughts, receive valuable feedback, and explore novel research ideas.

Participation in this session does not require prior registration or application. However, please note that seating is limited by the room's capacity and will be allocated on a first-come, first-served basis.

Presenter: **Sunyoung Park**, *Louisiana State U.*

Presenter: **Tim O. Peterson**, *TOPerformance, LLC*

Presenter: **Vance Johnson Lewis**, *Oklahoma City U.*

“You have only one chance to make a first impression.” The first class session of the term is an opportunity for faculty members to discuss the topics the course will cover and demonstrate their teaching style, philosophy, and expectations—to give students a sense of how the course will play out (a realistic course preview; see Wanous, 1973). Unsurprisingly, first impressions can affect not only relationships, but ideas (Kahneman, 2011). New semesters mark new beginnings. The first class can be an opportunity for faculty to thoughtfully reinvent themselves, rekindle their enthusiasm for teaching, and proactively reduce academic stagnation. This professional development workshop (PDW) will provide a variety of activities that instructors can use to clarify course content and objectives while engaging students. Presenters represent a variety of institutions (teaching- and research- oriented, private and public, small and large, etc.) and academic areas (human resources, organization behavior, leadership, strategy, and management). In an open-space format, presenters will share their original proven first-class, first class activities along with supplemental teaching materials. This interactive workshop will allow attendees to self-select activities that they can use immediately in their own classes.

Research Impact: What It Is, Why It Matters, and How You Can Increase Your Impact Potential

Moderator: **Ileana Stigliani**, *Imperial College Business School*
Panelist: **Kevin G. Corley**, *Imperial College London*
Panelist: **Berrin Erdogan**, *Portland State U.*
Panelist: **Alicia A. Grandey**, *Pennsylvania State U.*
Panelist: **Eva Boxenbaum**, *Copenhagen Business School*
Panelist: **Glenn Hoetker**, *Melbourne Business School, U. of Melbourne*

Scholars traditionally have thought of research impact in terms of classic academic impact via several publications, level of citations, influence on the thinking and theorizing of academic peers, and literature. Nevertheless, we are now increasingly being tasked with demonstrating the impact of our research on the professional and the practice community. This poses an interesting challenge for us, scholars, as well as the schools and universities we work for, to adapt or retrofit the idea of research impact into the way we operate. Whereas research is one of the core activities of academic institutions, only recently, the very same institutions have been incorporating the word “impact” into their mission statements or extensively discussing it as part of their research strategy. Yet, questions remain about what we should understand through impactful research. More importantly, management and organizational scholars have been mostly absent from these conversations. Meaningful discussions that pay attention to sensemaking (i.e., exploring the current elements, themes, and meanings constituting different elements of impactful research) and sensebreaking (i.e., discussing, disrupting, critiquing, and refreshing what impactful research can mean to scholars) are more needed than ever. Several important questions arise as we try to adapt to new pressures juggling multiple responsibilities in this rapidly changing world. A panel of four scholars who have meaningful experience in producing impactful research is brought together. Each panelist will bring a new perspective to our discussion. The final part of this PDW is devoted to the panelists working together with participants to find ways to increase their potential for impactful research.

Are you looking to refine your research identity or develop your career plans? If so, Diamonds in the Rough (DIR) is for you! For the last 12 years, DIR has offered career guidance for junior scholars (doctoral candidates, postdocs, assistant professors) across a wide variety of theoretical perspectives and methodologies. DIR strives to meet junior scholar's needs for professional development in a warm, welcoming, and inclusive environment. The PDW contains two components. 1) Asynchronous Feedback Sessions (registration required): Registrants will be paired with an influential scholar and 2-3 other registrants for a friendly chat and personalized feedback on their individual portfolios. These personalized sessions will be arranged at various times at the convenience of the facilitating scholar and their designated registrants. Participants who complete this session receive an MOC division "Bright Diamonds" certificate. 2) Live Synchronous Session (open to all): This live session features presentations, panel discussions, and networking opportunities for facilitators and participants. Come to be treated to stories about how prominent scholars forged their paths, advice on how to best navigate your own, and networking opportunities with colleagues with similar goals. Please visit <https://moc.aom.org/intherough/dir> for the most up to date details about DIR. To register, please complete our brief survey (click here) and submit your CV and a one-page overview of your research identity for feedback. MOC prides itself in being a 'bridging division' and we consider DIR the ultimate 'bridging PDW' - we're excited to help you "think it through".

Generative AI in the Workplace: Implications for Work, Occupations, and Inequality

Organizer: **Luca Vendraminelli**, *Stanford*
Organizer: **Arvind Karunakaran**, *Stanford U.*
Presenter: **Katherine C. Kellogg**, *MIT*
Presenter: **Paul Leonardi**, *UC Santa Barbara*
Participant: **Fares Ahmad**, *U. of California Santa Barbara*
Presenter: **Hyunjin Kim**, *INSEAD*

This Professional Development Workshop (PDW) seeks to explore the multifaceted impact of Generative AI (GenAI) on work, occupations, and inequality by highlighting cutting-edge empirical and conceptual work on this topic and facilitating a dialogue with audiences. GenAI poses significant challenges for managers and occupational groups in redefining job roles and responsibilities and integrating GenAI into their existing workflows. This PDW brings together experts engaged in qualitative (e.g., ethnography) and quantitative research (e.g., field experiments) to discuss the implications of the changes that GenAI is producing in the workplace. A central focus of this discussion is the paradox of AI augmentation: while AI can increase productivity and offer new opportunities to managers and employees, it may also change the task structure of jobs and occupations, with the potential to exacerbate workplace inequalities. Through research presentations, interactive panel discussions, and roundtable breakouts, we seek to advance scholarship in this important area of research while simultaneously building community.

Creative Minds and Organizations in the Artificial Intelligence Age

Organizer: **Stefano Magistretti**, *Politecnico di Milano*

Organizer: **George Kuk**, *Nottingham Trent U.*

Organizer: **Ileana Stigliani**, *Imperial College Business School*

Panelist: **Elizabeth Long Lingo**, *Worcester Polytechnic Institute*

Panelist: **Moran Lazar**, *Tel Aviv U.*

Panelist: **Jacqueline Lane**, *Harvard U.*

Panelist: **Sebastian Fixson**, *Babson College*

Studies of creative processes often focus on the core activities and competencies of creative individuals. However, within organizational settings, there are instances where actions taken by individuals lack logical coherence, deviating from established goals and strategic targets. Individuals engage in seemingly purposeless and spontaneous activities, such as play, serendipity, experimentation, and design, which can produce new combinations of ideas, activities, or routines that fulfill a need to create. Despite the significance of these unplanned creative works, there exists a notable gap in research when it comes to their relationship with digital technologies. While researchers in management and organizational studies have embraced the discourse on digital technologies and their implications for work and organizational processes, a notable gap in research persists regarding the influence of digital technologies, such as AI, platforms, and big data, on the unplanned creative processes. This interdisciplinary PDW aims to bridge these gaps by exploring the impact of unplanned and purposeless activities, specifically within the domain of digital technologies, including AI and Generative AI. Through an innovative blend of panel presentations and roundtable discussions, complemented by interactive activities and case studies, participants will gain fresh insights into the intersection of creativity and digital technologies, aiming to inspire future research agendas and foster an enduring community of interest in this emerging field.

Innovating in Data-Based Reality: New Perspectives on Data as a Research Object

Organizer: **Aleksi Aaltonen**, *Fox School of Business, Temple U.*

Organizer: **Marta Stelmaszak**, *U. of Massachusetts Amherst*

Speaker: **Sirkka Jarvenpaa**, *U. of Texas at Austin*

Speaker: **Jannis Kallinikos**, *Luiss U.*

Speaker: **Dorothy Leidner**, *U. of Virginia*

Speaker: **Natalia Levina**, *New York U.*

Speaker: **Jan Recker**, *U. of Hamburg*

Data are key cognitive resources and unique semiotic artifacts that permeate organizational settings and the socioeconomic life today. Recent literature debunks the idea that data are simply 'raw facts' that fuel analytics and algorithmic systems—but what's next? In this professional development workshop, we put forward the idea that data themselves should be an object of research and innovation, rather than just an accessory to digital innovation. We aim to push the boundaries of research on digital data and their role in contemporary innovation and organizing from different, complementary and sometimes competing, perspectives. We asked five expert speakers to introduce their own, diverse approaches to data as a research object and a key ingredient of innovation: How to study data in a thoroughly datafied environment? How can data innovation and innovation by and through data be theorized? What are the methods and kinds of evidence one should look for? What kind of knowledge can be useful for managers and policy makers to explore and exploit opportunities to innovate and organize with data? The experts will variously acknowledge or theorize, for instance, the characteristics of data artifacts, data-related practices, issues with data quality and governance, or the broader organizational configurations that emerge around them. After the experts' introductory remarks, participants will break into smaller groups with each expert to discuss in-depth the perspectives, methods, and directions for the growing research interest in data. Finally, we will consolidate a collective understanding of data research that can help answering important questions in the age when innovation is increasingly based on data.

Bridging the Rigor-Relevance Gap – The Role of the Practitioner-Scholar

Session Chair: **Kenneth A. Grant**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Panelist: **Lincoln Brown**, *Southwestern Oklahoma State U.*

Panelist: **Marcos Hashimoto**, *Bradley U.*

Panelist: **Norris F. Krueger**, *QREC/Kyushu U.*

Panelist: **Maribeth C. Kuzmeski**, -

Panelist: **John Martin Mueller**, *None*

Panelist: **Paul Sanchez Ruiz**, *Iowa State U.*

This Professional Development Workshop will help entrepreneurship practitioner-scholars build on their industry and entrepreneurial ecosystem community experience to contribute to bridging the rigor-relevance divide. It will provide guidance on how to draw on the academic work of others to better inform the practitioner community – within and beyond the classroom – working with entrepreneurship ecosystem players. It supports the overall theme of this year’s conference by considering how we can influence policies and ecosystem entities, as well as addressing how to apply in practice the specific Entrepreneurship Division research questions. Participants will first hear about, and then investigate through roundtable discussion, how they can identify ways to be the bridge to help individuals and organizations under how entrepreneurship research can help them be more innovative and successful. This workshop will also guide them in ways to better navigate the entrepreneurship academic body of knowledge.

Race and Entrepreneurship

Organizer: **Alexander Lewis**, *UTSA*

Panelist: **Juanita Kimiyo Forrester**, *Mercer U.*

Panelist: **Andrea Marie Hodge**, *Florida State U.*

Panelist: **Diana Maria Hechavarría**, *Texas Tech U.*

Participant: **Jeffrey M. Pollack**, *NC State U.*

Participant: **Brett Gilbert**, *American U.*

Participant: **Garry D. Bruton**, *Texas Christian U.*

In this professional development workshop (PDW), we explore the topic of entrepreneurship and race, with particular although not exclusive attention to underrepresented racial minorities (URM), racial and ethnic groups with a disproportionately low presence in positions of power and status. This PDW will introduce the audience to an important yet distressingly neglected area of research and provide the audience an opportunity to discuss pre-submitted extended abstracts with editors from top entrepreneurship journals. Our ultimate goal for this PDW is to encourage a broad research agenda on race and entrepreneurship that captures both the structural qualities of marginalization and the agentic qualities of entrepreneurship.

Following the growing interest and success of this professional development workshop (PDW) at the 2023 Academy of Management (AOM) Annual Meeting, which was attended by over 70 participants, we continue the series with a new group of panelists to share their experiences in post-doc positions. Post-doc positions can be critical yet under-discussed career opportunities for academics in management. This is surprising as an increasing number of successful management scholars are starting their careers in post-doc positions. This PDW aims to inform doctoral students about such positions and facilitate community building and networking among current and previous post-docs. Specifically, this session is intended to increase awareness of post-doc training and provide informal career advice from a diverse set of academic scholars on how to be successful during and after a post-doc position for those considering or currently undertaking these interim appointments. To this end, our PDW will address three main questions: (1) What are the long-term career benefits of post-doc positions? (2) What does it mean to be successful as a post-doc, including being productive and becoming well-positioned to find an academic job? and (3) How can doctoral students secure post-doc positions? Our interdisciplinary panel reflects a range of institutions, geographic regions, career stages, and research backgrounds. By bringing diverse perspectives, we hope to enrich the current conversation on post-doc positions as springboards toward faculty roles and empower attendees to make informed decisions while pursuing or continuing their academic careers.

Presenter: **Delia Christina Fischer**, *169332*
Presenter: **Ethan Scott Bernstein**, *Harvard Business School*

The world is changing in unprecedented ways and managers are yearning for new ideas to help them thrive and innovate in these challenging times. Tammy Madsen, this year's program chair, has stated, "In today's world, the intricacies of effectively leading and managing an organization demand a fresh perspective. And who better to continue to lead the charge than management scholars. We are uniquely positioned to question the status quo..." In addition to making a difference within their scholarly communities, many academics want to impact managers in companies. All too often important academic insights are published in academic journals, but are not easily accessible to "real world" professionals. It is increasingly important to consider new ways of providing managers greater access to our research findings. This PDW focuses on how researchers can have a greater impact on practice by publishing in journals that are circulated beyond the Academy. Senior editors representing "bridging" journals will share insights on how to publish in venues that impact both academics and practitioners. In addition, researchers will share ideas for how they have translated their academic work for these journals. Researchers and editors will lead a highly interactive session, which includes audience dialogue and roundtables.

Developing and Publishing Research in Management Learning and Education

Presenter: **Dirk Lindebaum**, *Grenoble Ecole de Management*

Presenter: **Martyna Sliwa**, *Durham U. Business School*

Presenter: **Ajnesh Prasad**, *EGADE Business School*

Presenter: **Melanie Ann Robinson**, *HEC Montreal*

Presenter: **Jennifer Leigh**, *Nazareth U.*

Presenter: **Paul Hibbert**, *Warwick Business School*

Research in Management Learning and Education has gained increased prominence within the Academy as external stakeholders demand evidence of student learning, accreditors require institutions to show evidence of impact and recent crises have set numerous practical challenges and theoretical puzzles. In this session, a panel Editors and Associate Editors from leading Management Learning and Education publications (i.e., Academy of Management Learning and Education, Journal of Management Education, Management Learning and BJM: Management Knowledge and Education) will discuss and provide advice on how to design and conduct novel, impactful, and meaningful research in management learning and education. The goals are to obtain a better understanding of core characteristics and quality criteria of good research in our field and knowledge of opportunities for developing publications. More specifically, we want to provide current and prospective authors with a supportive, encouraging and interactive platform where they might share their ideas for designing and conducting management learning and education research projects and gain initial feedback and direction from experienced editors. All are welcome to attend.

Ask the Experts: Qualitative Research

Organizer: **Sanjay Jain**, *California State U., Northridge*

Organizer: **Raza A Mir**, *William Paterson U.*

Organizer: **Thomas Greckhamer**, *Louisiana State U.*

Distinguished Speaker: **Roy R. Suddaby**, *U. of Victoria*

Panelist: **Matt Beane**, *U. of California, Santa Barbara*

Panelist: **Sara R. S. T. A. Elias**, *U. of Victoria*

Panelist: **Suntae Kim**, *Johns Hopkins Carey Business School*

Panelist: **Innan Sasaki**, *Warwick Business School*

In this workshop, we will use the metaphor of cooking to describe the act of qualitative research. The metaphor is apt on several counts. First, like the labor of cooking, qualitative research is often "feminized" in the management academy. Unlike the more valorized research methods that use quantitative data, qualitative methods are often consigned to the periphery of academic research (though this is rapidly changing!). Second, quite like cooking, qualitative research requires a lot of thought, initial preparation, improvisation, and waiting for diverse elements to mix. Also, just like a meal, the acceptance and appreciation of qualitative research often depends on the style in which it is presented. In the proposed session, we will have six participants, discussing various types and aspects of qualitative research. The methodologies they will cover include ethnography, grounded theory, process analysis, case studies and qualitative comparative analysis. Moreover, they will provide insights on pre-fieldwork aspects of the qualitative research process including philosophical conundrums associated with inquiry ("Preparing the ingredients"), as well as the actual act of fieldwork ("Lighting the fire"). Time will also be set aside to discuss the act of data analysis, and making sense of qualitative data ("Simmer and stew"), as well as the publication of papers based on qualitative research ("Setting the table"). The workshop also attempts to relate to the theme of the 2024 meetings, by discussing how qualitative research can be deployed to understand "innovating for the future".

Innovation & Social Impact of Academia - Contributing to the SDGs

Organizer: **Adrian Zicari**, *ESSEC Business School*
Facilitator: **DARREN Thomas BAKER**, *U. College Dublin*
Participant: **Mário Aquino Alves**, *FGVEAESP*
Participant: **Armand Bam**, *U. of Stellenbosch Business School*
Participant: **Steven Kilroy**, *Trinity Business School, Trinity College Dublin*
Participant: **Elsbeth Murray**, -
Participant: **Tommaso Ramus**, *ESSEC Business School*

As this Decade of Action to achieve the Sustainability Development Goals (SDGs) unfolds, this workshop provides an occasion for reflecting on our collective contribution as scholars. Being the SDGs targets both ambitious and urgent, we need to consider new ways, new ideas, new inspirations. This is innovation in the broadest sense, including technologies when necessary, but moreover addressing “policy, purpose and organizations”, as the conference theme well reminds us. In sum, we aim to make meaningful connections among: • our research: what we research, its “so what”, its impact • our pedagogy: to whom we teach, what we teach, how we teach • our citizenship We look for an inspiring conversation about what we should do to contribute to society from our current roles of scholars, and in some cases concomitantly, business school leaders. This workshop is the natural continuation of a fruitful conversation began last year during the Boston conference at the PDW “Social Impact of Academia”, organized by the same group of colleagues. All of them are affiliated to schools in the Council on Business & Society (CoBS), a global alliance of eleven business schools in five continents, dedicated to increase the social impact of academia both in research and in pedagogy. This workshop intends to expand this ongoing conversation to the larger community of scholars at the AoM. Session attendees will briefly present their reflections about innovations related to their research, their pedagogy, and their different engagements in their respective business schools. Then, in roundtable discussions, session participants will discuss their experiences of impact. Organizers will strive to gently challenge, propose, and motivate participants to think out of the box. This PDW will conclude with a graphic representation to illustrate the potential paths for innovatives initiatives in pedagogy, actionable research, and school leadership. The organizers will gladly share contact information among attendees and engage themselves in providing follow up for further discussions.

Making the Cut: Charting a Veteran's Path to Corporate Life

Panelist: **Pushpendra Priyadarshi**, *Indian Institute of Management, Lucknow*

Panelist: **Sanjay Kumar Singh**, *U. of Dundee, UK*

Panelist: **Abdul-Nasser El-Kassar**, *Lebanese American U.*

Panelist: **James Duggan**, *Cork U. Business School*

Panelist: **Surya Prakash Pati**, *Indian Institute of Management, Kozhikode*

From an HRD perspective, it is imperative that we recognize and improve the experience of veterans with health concerns stemming from their service. At the same time, we also cannot afford to ignore the transition experiences and adjustment challenges faced by those veterans who do not have these health issues. Although transitioning from the military to a civilian workplace can be challenging, veterans of the armed forces can offer a wealth of valuable skills to the employing organization. This Professional Development Workshop (PDW) intends to discuss what can employing organization do to help in the smooth transition of veterans to the corporate work life and at the same time explore critical research agendas.

Decolonizing Field Research in a Neoliberal Economy

Organizer: **Tathagata Bhowmik**, *Weatherhead School of Management, Case Western Reserve U.*

Organizer: **Ram Mahalingam**, *U. of Michigan, Ann Arbor*

Organizer: **Vijayta Doshi**, *Indian Institute of Management, Udaipur*

Organizer: **Pankhuri Agarwal**, *School of Management, U. of Bath*

Organizer: **Akhil S G**, *Weatherhead School of Management, Case Western Reserve U.*

Organizer: **Poonam Barhoi**, *Institute of Management Technology Ghaziabad, India*

This PDW aims to generate and sustain interest in a community of scholars, educators, and practitioners engaging in management research and teaching that focuses on the explicit and implicit effects of a neoliberal economy on social groups and organizations, in employing an intersectional approach to field research. Unlike research methods that emphasize detachment, distance, and objectivity from the phenomenon of interest, this workshop aims to generate dialogue on employing embodied experiences and demographic characteristics of the researcher like gender, social class, race, nationality, age, etc., as critical windows to generate research questions, engaging wholly and systematically within the natural context of the phenomenon of interest during data collection, decolonizing prior research and sources of information through deconstruction, addressing the logistical challenges that researchers might face during fieldwork in remote areas, and acknowledging the social, economic, and political dynamics every phenomenon of interest possesses in a neoliberal economy and intertwining those to generate an intersectional approach to fieldwork. This topic aligns with the Research, Teaching, and Diversity Orientation of the 2024 AOM Meeting along with the theme of the Meeting.

ENT Late-Career Consortium

Coordinator: **Christina Theodoraki**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

Organizer: **Matthew Allen**, *Manchester Metropolitan U. Business School*

Organizer: **Jerome Katz**, *Saint Louis U.*

The Late Career Consortium focuses on the discussion of career and life questions of faculty members that finished their doctoral education 15 or more years ago. The aim of this session is to help scholars in any discipline explore possibilities available for later career faculty members, manage the new demands of this career stage and identify ways to continue to grow professionally later in one's career. The consortium will start with an opening presentation by an eminent career/life stage scholar and then distinguished panelists will offer insights about a wide variety of specific topics and address questions from attendees. The consortium is open to all AOM attendees and will run for 90 minutes. It includes extensive Q&A and discussion among panelists and attendees. Live!

How Artificial Intelligence Will Change Teaching and Students

Organizer: **Timothy Hoff**, *Northeastern U.*

Panelist: **Timothy Hoff**, *Northeastern U.*

Panelist: **Patrick Shay**, *Trinity U.*

Panelist: **Kristine Ria Hearld**, *U. of Alabama at Birmingham*

Panelist: **Peter F. Martelli**, *Suffolk U.*

The proposed Professional Development Workshop focuses on identifying specific ways in which AI stands to revolutionize how we teach and how students learn. This PDW will address the early impact of AI on both teaching and students. The aims are to: (a) identify the range of possible student expectations both now and moving into the future related to how courses should be structured, taught, and learning assessed using AI; (b) link student expectations around AI in the classroom to specific pedagogical changes instructors of health care management and management will have to consider and implement; and (c) critique the various challenges which may arise in the evolution of course pedagogy in response to student AI expectations. At a general level, and in pursuing these aims, the PDW will explore how greater incorporation of AI into teaching will impact the overall classroom experience in health management and management courses. The PDW workshop consists of a panel of four individuals who will speak to the above aims. They will discuss specific ways they are beginning to use AI in coursework, what they see now in terms of student expectations for AI usage in both graduate and undergraduate courses and engage in prediction as to how such expectations may continue to evolve. They will cite key opportunities and challenges in using AI in ways that also meet student expectations. The remainder of the session will engage audience members in dialogue to further add to the ways instructors are now using AI, solidify our understanding of student expectations for using AI, and link that usage and its continued development to the needs and preferences of students.

Getting to Full Professor: A PDW for Mid-Career HR Scholars

Organizer: **Rebecca Hewett**, *Rotterdam School of Management, Erasmus U.*

Organizer: **Rebecca Rheinhardt Kehoe**, *Cornell U.*

Panelist: **John E. Delery**, *U. of Arkansas*

Panelist: **Deanne N. Den Hartog**, *U. of Amsterdam*

Panelist: **Ingrid Fulmer**, *U. of Illinois at Urbana-Champaign*

Panelist: **Jianmin Sun**, *School of Labor and Human Resources, Renmin U. of China*

This PDW provides opportunities for scholars at the Associate Professor (or equivalent) level to learn from senior scholars (who have “been there”), and from each other (who are “going there”) about navigating the path to Full Professor. A panel of senior scholars will share their insights on the journey to full professorship, including strategies for overcoming challenges and determining how to best allocate one’s time and effort among the many opportunities that arise in the mid-career phase. Following a panel discussion, the panelists will join participants in roundtable discussions, which will provide opportunities for participants to ask questions, share experiences, and develop connections with one another. In addition to providing an opportunity to discuss focused questions about the journey to Full Professorship, a key aim of this PDW will be to identify how the HR Division can better support members at this career stage. Pre-registration will be invited in spring/summer 2024.

Resource Constraints of Non-Profit Social Organizations – A Comparison of India and the West

Session Chair: **Nandakumar Mankavil Kovil Veettil**, *Indian Institute of Management, Kozhikode*

Panelist: **Ashish Malik**, *Ashish Malik, Professor, Queen's U. of Belfast, UK*

Panelist: **Amandeep Dhir**, *U. of Agder, Norway*

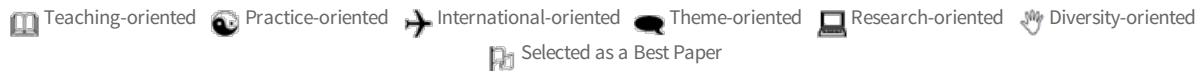

Panelist: **Shivinder Nijjer**, *Chitkara Business School, Chitkara U.*

Panelist: **Swetketu Patnaik**, *Anglia Ruskin U.*

Panelist: **Vijay Edward Pereira**, *NEOMA Business School*

Non-profit social organizations (NPSO) are generally small and medium-sized firms that include organizations delivering services, such as daycare centers for adults and children, rehabilitation and training services, and elderly and outpatient care services (Felicio, Goncalves, & Gonvalves, 2013). They generally rely on government grants and donations to provide the services. However, governments worldwide have reduced the provisions of grants to social organizations due to reasons like COVID-19 and weaker economic growth. Consequently, the NPSOs stretch their existing resources to address their challenges. They also identify additional resources that are cost-effective and combine them with their existing resources to fulfill their objectives. This process of creative resource acquisition, consistent with the principles of the bricolage (Baker & Nelson, 2005), has helped NPSOs achieve product, process, and business model innovations. Even in resource-constrained environments, many NPSOs have performed well through effective business model configurations. The NPSOs in India and Western countries have adopted strategies appropriate to their contexts, enabling them to overcome the resource challenges. In this professional development workshop (PDW), we examine the strategies adopted by NPSOs in India, Australia, and the UK and draw insights by synthesizing them. The topic discussed in our PDW will interest the Indian Academy of Management (INDAM) and Social Issues in Management (SIM) division of the Academy of Management. In addition, this topic will be of interest to the Management, Education, and Development (MED) division since the discussion presented could help develop pedagogical approaches for teaching social issues in management.

Examining Psychological Safety And Interaction Safety Constructs And Measurement Tools

Presenter: **Jennifer Seyler**, *Benedictine U.*

Presenter: **Ram Tenkasi**, *Benedictine U.*

Presenter: **Tara Whittle**, *The Kaleel Jamison Consulting Group, Inc*

ODC aims to improve an organization's effectiveness and capacity (Worley and Feyerherm, 2003). Previous research indicates that psychological safety (PS) can enable this process (Mogard, et.al, 2023). A PS organizational climate can also aid successful implementation and practices of Institution Diversity, Equity, and Inclusion (DEI) programs (Roper, 2003). Edmondson, a proponent of PS, has focused predominantly at the team level; her well-validated 7-item PS scale is widely popular (Adair, 2022). PS has also been viewed from the organizational (Schein and Bennis, 1965) and individual levels (Kahn, 2017). Hackman (2002) has suggested that teams exist within the context of a larger organization, and PS should also be considered at the organizational analysis level. Interaction safety (IS), a construct defined by Katz & Miller (2008), is when individuals throughout the organization feel they need each other, are open/willing to engage, strive to do their best together, which, in turn, improves organization performance. Katz and Miller (2008) express IS as an organizational level construct of the overall feeling of safety in an organization. We believe the IS construct can be a viable PS measure to extend the PS team construct to the organizational level (Schein and Bennis; 1965; Hackmann, 2002). This PDW explores and shares whether IS shows convergent/discriminant validity with PS. If convergent, it could elevate assessment of PS to the organization level. The PDW aims to: translate the Miller/Katz IS measurement to a scale and test for validity/reliability test convergent/discriminant validity between Edmondson's PS construct/scale and Miller & Katz IS construct/scale

The Internationally Collaborating for the Future PDW is intended to enable colleagues from 41 nations to come to understand and create opportunities for international teaching and research collaborations through sharing experiences and best practices. The inclusion of colleagues from institutions in countries of widely differing economic situations is a notable feature. Bringing together scholars and academics from nations that have been underrepresented in cross-country partnerships with those from well-funded and experienced institutions will enhance the way our discipline of Management is taught. A number of presenters in our session will be pitching collaborative projects directly aligned with the theme of this year's conference: "Innovating for the Future--Policy, Purpose, and Organizations." The workshop will encompass collaborations among teachers, their students, and educational institutions and will work to locate and develop new ways and methods of collaboration among them in a situation of increasing access to information technology in developing nations. It is hoped that these exchanges will lead to enduring future partnering among the presenters that will be productive and successful both in teaching as well as research endeavors.

In light of recent challenges surrounding the state of scientific rigor and transparency in OB research, the need for a PDW tailored to address these issues has never been more crucial. This workshop will offer a springboard for conversation around these issues with the goal of providing clarity and insight on the roles of professional organizations, journals, and author teams in ensuring rigor and transparency, and in generating strategies and best practices to uphold scientific rigor in the field. The workshop will include two 2-hour sessions. The first session will focus on the role of field leaders in maintaining and improving the quality of OB research. It will begin with a distinguished panel of recent and current journal editors—who also held relevant leadership positions in AOM and APA—sharing insights on the actions professional bodies can take to promote and enforce scientific rigor. This panel will be followed by a Q&A and roundtable discussion. The second two-hour session will delve into the experiences of researchers in navigating these issues when collaborating with others. This panel will include established scholars at various career stages to explore topics such as managing coauthor responsibilities and strategies to maximize transparency. This panel will also be followed by a Q&A and roundtable discussion. We hope this PDW empowers researchers to bolster the scientific rigor of their work and foster an environment of accountability and trust within their research teams.

This inclusive PDW will provide students and junior faculty from diverse backgrounds the opportunity to discuss their leadership research in a collegial setting with prominent leadership scholars. The junior scholars are required to submit brief research proposals prior to the conference, and will be matched with a more senior scholar with similar research interests (not from their home university). At tables organized by themes, the senior scholars will then discuss these proposals with the 1-3 junior scholars they are matched with, providing insights and suggestions for future research directions. A general networking session with all participants will follow, whereby current and former editors of top leadership journals will discuss how to transform the proposals into publishable journal articles. The focus will be on developing theoretical foundations and designing high quality empirical studies. This is a great opportunity for the junior scholars to develop their ideas, and it may even lead to future academic collaborations. This PDW has been held every year since 2008 and it has resulted in the development of numerous ongoing mentoring relationships between scholars from around the globe.

Organization Science: Building an Inclusive Journal Community

Organizer: **Lindred L. Greer**, *U. of Michigan, Ross School of Business*
Organizer: **Cindy Muir-Zapata**, *U. of Notre Dame*

This interactive PDW is designed for scholars aiming to engage with Organization Science as authors, reviewers, and potential editorial review board members. Our desire is to help deepen scholars' understanding of Organization Science and how to engage with our community as an author or reviewer, particularly scholars who might not otherwise have knowledge or experience with the journal or direct access to its editorial team. Through a mix of interactive presentations, roundtable discussions, and panels, we will share and discuss best practices for engaging with Organization Science. Specifically, current Organization Science editors will offer a series of short presentations on different topics relevant to publishing in and reviewing for the journal. Following the presentations, we will facilitate more intimate small-group discussions among editors, editorial board members, and the audience through roundtable discussions on different aspects of the publication process at Organization Science. We will close with a panel of editors and editorial board members to ensure the audience has full access to ask any and all questions they might have about the current state and future of Organization Science.

Action Research Lab: Foundations for Innovating for the Future Submitted By:

Facilitator: **David Coghlan**, *U. of Dublin, Trinity College*

Action research has a long tradition of engaging organizational and management scholars and practitioners in enabling change in organizations. It has been at the forefront in building collaborative and enacting approaches to respond to the VUCA (volatile, unpredictable, complex and ambiguous) challenges of our world. One of the premises of this PDW is that action research can play an important role in innovating for the future in addressing how we can develop new actionable knowledge for organizational and societal change. It does so by taking collaborative inquiry and action as an important site of knowing. This PDW is directed to doctoral students, faculty and practitioners who undertake action research out of a desire to address 'red and hot' organizational/management challenges. Participants will be invited to focus on their own action research experiences, ambitions and questions, as a starting point of an exploration of action research principles, design choices and potentials for knowledge creation. They will leave with an increased awareness of how to undertake and/or supervise action research as a mode of impactful research while increasing understanding of how to conduct inquiry in a collaborative and egalitarian way.

Polynomial Regression Analysis with Response Surface Methodology in Organizational Science

Organizer: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*

Organizer: **Yongheng Yao**, *Wilfrid Laurier U.*

Organizer: **Minyoung Cheong**, *Kyung Hee U.*

Presenter: **Rong Su**, *Tippie College of Business, U. of Iowa*

Presenter: **Yih-teen Lee**, *IESE Business School*

Presenter: **Chunghyun Oh**, *Binghamton U.-State U. of New York*

Presenter: **Jinhee Moon**, *Binghamton U.-State U. of New York*

Presenter: **Sheng-Bin Wang**, *National Sun Yat-Sen U.*

Panelist: **Jeffrey R. Edwards**, *U. of North Carolina*

Panelist: **Amy L. Kristof-Brown**, *U. of Iowa*

Panelist: **Lisa Schurer Lambert**, *Oklahoma State U.*

Since its introduction by Edwards and colleagues, polynomial regression analysis (PRA) combined with response surface methodology (RSM) has become a valuable research tool for investigating and exploring topics related to congruence, agreement, alignment, and similarity frameworks within organizational science. Over the past three decades, due to the inherent complexity of organizational settings, PRA and RSM have been utilized in various ways and often in conjunction with other complementary research methods. In this proposed PDW, we aim to introduce the origins of this method, address inconsistencies, and discuss its implications when combined with other research methods and designs. We hope to improve comprehension and utilization of PRA with RSM, address inconsistencies, and advocate for its effectiveness and reliability in theory testing and development across diverse research topics and domains within organizational science.

Responsible Digital Organizations: Leveraging Technologies for Inclusive & Greener Organizations

Organizer: **Stefanie Habersang**, *Leuphana U. Lüneburg*

Organizer: **Georg Reischauer**, *WU Vienna & JKU Linz*

Speaker: **Vern Glaser**, *U. of Alberta*

Speaker: **Julia Hautz**, *U. of Innsbruck*

Speaker: **Eric Knight**, *Macquarie Business School, Macquarie U.*

Speaker: **Attila Márton**, *Copenhagen Business School - Denmark*

Speaker: **Hannah Trittin**, *Leuphana U. Lüneburg*

In recent years, we have witnessed a rise in scholarship on digital organizations, firms whose strategy and structures are underpinned by digital technologies. At the same time, scholars have advanced our understanding of how to leverage digital technologies to make organizations more sustainable. As these conversations have progressed in isolation, our understanding of responsible digital organizations is limited. To bridge these highly relevant lines of inquiries, this PDW aims to (1) give an overview of perspectives and recent advances on responsible digital organizations and (2) nurture research on how organizations can strategically leverage digital technologies to become more inclusive and greener. Participants will gain a multidisciplinary understanding of conversations on responsible digital organizations and its challenges.

Helping the Helpers: A Multidisciplinary Approach to the Mental Health of Healthcare Workers

Organizer: **Erica M. Johnson**, *U. of Alabama, Birmingham*

Organizer: **Michele Heath**, *Cleveland State U.*

Organizer: **Tracy Hopkins Porter**, *Cleveland State U.*

Moderator: **Ekonkar Kaur**, *U. of Washington, Seattle*

Panelist: **Marie-Carmelle Elie**, *U. of Alabama, Birmingham*

Panelist: **David A. Rogers**, *UAB Medicine*

Panelist: **Whitney Turner**, *U. of Alabama, Birmingham*

Burnout, compassion fatigue, secondary traumatic stress, and vicarious trauma are disproportionately prevalent within the healthcare industry, damaging employee mental health and resulting in organizational consequences. Though COVID-19 illuminated the impact of psychological health on healthcare workers, the effects of workplace well-being interventions are still limited in practice and understudied within management research. In turn, the psychological well-being of healthcare workers is critical in maintaining patient care and organizational performance. This professional development workshop (PDW) addresses the practice and research gap on mental health among healthcare workers by exploring best practice individual and organizational level interventions.

Human-Centric Operations and Supply Chain Management Research – How to do Research and Get Published

Organizer: **Matthias Klumpp**, *Politecnico di Milano*

Organizer: **Marco Mandolfo**, *Politecnico di Milano School of Management*

Organizer: **Michela Guida**, *Politecnico di Milano School of Management*

Presenter: **Elliot Bendoly**, *Ohio State U.*

Presenter: **Beth Davis-Sramek**, -

Human-centric operations and supply chain management has gained traction and attention connected to concepts like Industry 5.0. This approach is based on neuroscience methods and insights about human physiology, psychology and behavior with the objective to improve well-being and performance. This is especially relevant in future human-technology interaction settings and therefore an upcoming field in OSCM research. Yet, methods and especially empirical research insights are not common knowledge and should be discussed in the AoM OSCM PDW, including connected issues like how to get published with such an innovative research approach.

Careers in the Rough is a workshop that offers junior scholars an opportunity to receive feedback from leading careers scholars on their careers-related research manuscripts. Prior to the PDW, participants are asked to provide a manuscript that is close to submission for a refereed journal and a 250-word description of a dilemma, question, or concern they would like to address in the PDW. Based on the manuscript topic, we will create mentoring groups, consisting of two junior and two senior scholars, who are then tasked with reviewing the junior scholars' manuscripts and providing constructive feedback, with the intention of facilitating junior scholars' progress towards publishing high-quality careers scholarship. During the two-hour long PDW, mentoring groups will meet to discuss their feedback on the manuscripts, devoting about 50 minutes to each paper. We have recruited 16 accomplished careers scholars with experience publishing high-impact research to serve as mentors for this session. This session offers junior scholars opportunities to receive feedback on their research and to discuss core principles and practices of publishing careers research. Participants will gain insights into the publication process and network with prominent careers scholars, who serve as review board members and journal editors. As such, this session fosters the development of the next generation of careers scholars.

From Mental Health to Physical Health to Quiet Quitting in Academia

Organizer: **Nicole C. Young**, *Franklin & Marshall College*
Organizer: **Tiffany Maldonado**, *Sam Houston State U.*

The COVID pandemic forced many academics to shift their research and teaching unexpectedly. The pandemic also exposed issues of faculty burnout, mental health, fatigue, and lack of work life balance. Initial institutional responses to these aforementioned issues was met with concern. However, the initial concern has faded while the issues remain, and in some cases, has compounded. This PDW will allow participants to explore how unaddressed mental health challenges can manifest into physical health challenges, ultimately resulting in negative workplace outcomes, such as quiet quitting. Participants will be asked to consider actual strategies to change aspects of their research, teaching, and service, which may result in more positive physical and mental health outcomes. This PDW contributes to the conference theme “Innovating for the Future”, because the current expectations of academic work are no longer aligned with the diverse faculty who occupy, and will continue to occupy, this space in the future. We anticipate an open exchange of ideas and community building related to self-care and managing feelings of overwork.

Organizer: **Danielle Van Jaarsveld**, *Sauder School of Business, U. of British Columbia*
Panelist: **Leigh Anne Liu**, *Georgia State U.*
Panelist: **Xiao-Ping Chen**, *U. of Washington*

This Conflict Management Division junior faculty consortium is designed for early career scholars interested in navigating various career paths in the global academic markets. Specifically, we will focus on three main topics important for launching and sustaining successful academic careers: (1) branding oneself with research identities, (2) productivity tips from fellow early-career scholars, and (3) strategies for getting tenure and promotion. The PDW will be led by a mix of early, mid-career, and senior scholars, each offering their unique perspective. The format will include short presentations and Q&A.

Developing Teaching Ideas Into Impactful Intellectual Contributions

Presenter: **Kathleen J. Barnes**, *Salem State U.*

Presenter: **Jennifer Leigh**, *Nazareth U.*

Presenter: **Vicky Anne Lester**, *The Case Centre*

Presenter: **Gordon Bruce Schmidt**, *U. of Louisiana Monroe*

Presenter: **Rita J. Shea-Van Fossen**, *Nova Southeastern U.*

Presenter: **Michael Ablasmeir**, *McGraw-Hill/Irwin*

Most management academics have been trained to do rigorous research in their chosen field, but few receive any guidance about how to translate that research into learning activities or create impactful intellectual contributions from their classroom activities. This professional development workshop is intended for authors, experienced or new to the management education and learning discipline, who are interested in developing their teaching and/or learning technique(s) into management education and learning academic conference presentations, publishable case studies, peer reviewed journal publications, social outreach and other intellectual contributions. This workshop brings together experienced management education teaching-scholars, teaching and learning journal editors, and publishers in a collegial environment that will allow participants to learn about and discuss ideas on converting research into classroom activities and the scholarship of teaching and learning, as well as build participants' networks and resources in this area of scholarship.

Participant: **Ann Tenbrunsel**, *U. of Notre Dame*
Participant: **David Welsh**, *Arizona State U.*
Participant: **Scott Wiltermuth**, *USC*

Behavioral business ethics research has thus far focused primarily on understanding the causes and consequences of (un)ethical behavior within organizations. But as ensuring ethical behavior and the ethical treatment of others is becoming increasingly important to organizations, research has also started to explore how to talk to and engage with each other on contentious, ethics-related topics. With the goal of developing and generating future scholarship, this PDW showcases frontiers in behavioral ethics research. With that in mind, the theme of this year's behavioral ethics PDW is "Traversing Difficult Conversations." In the first part of the PDW, scholars who are conducting research on how discuss challenging issues will offer eight timed, 5-minute, Pecha Kucha presentations on their areas of expertise. Topics will include honest conversations, ethical responses to challenging situations, difficult conversations related to race and diversity, equity and inclusion (DEI), the role of idea content in speaking up, moral framing and leaders' support for DEI issues, difficult conversations related to disability accommodations, difficult conversations with research subjects, and the challenges of ethical voice. These presentations will be followed by plenary discussion, after which we will host a networking reception where attendees can foster connections and engage in conversations with experts on these and other behavioral ethics topics.

Everyone interested is welcome to attend the first 1.5 hours of the PDW, but for attendance during the second, networking, part of the PDW we ask that you register at the below link. Registration is on a first-come first-served basis and once we hit 120 registrants, we will start waitlisting people. We will confirm your registration status starting mid July. Email niki@ku.edu for any questions. Please register at the following link:
https://kusurvey.ca1.qualtrics.com/jfe/form/SV_cNjVzbg8gY6aYwC

Panelist: **Meir Shemla**, *Erasmus U. Rotterdam*
Panelist: **Sebastian Harrer**, *Professional*
Panelist: **Hannes Leroy**, *Erasmus Research Institute of Management*

Field interventions offer significant opportunities for scholars and organizations alike, as they represent the “gold standard” of research designs, providing a rigorous tool to establish cause-effect relations, which can be translated into evidence-based tools for organizations. Yet, researchers are often reluctant to engage in field interventions. One reason for this is their complexity, as researchers must navigate the task of synchronizing organizational objectives with methodological rigor and the necessity to make a theoretical contribution. Providing an overview of key methodological, theoretical, and practical success factors to conduct and publish DEI field interventions can advance innovation in DEI research and make it more appealing to researchers. This PDW is designed to facilitate an exchange of best practices and cutting-edge methods among DEI field intervention experts and interested scholars. Our goal is to provide participants with essential tools and inspiration for impactful and innovative DEI research. The program includes a keynote presentation, a moderated panel discussion, and interactive roundtables. Participants will benefit from practical expert advice on DEI research and engage in discussions with both DEI field intervention experts and peers. This interaction aims to enhance their understanding of effectively designing and executing DEI field interventions, with an eye towards achieving high impact and securing publication in top management journals. The PDW welcomes all interested participants.

Mentoring with a Spiritual Angle

Organizer: **Kevin David Frick**, *Johns Hopkins Carey Business School*
Presenter: **Payal Kumar**, *Indian school of hospitality*
Presenter: **Joan F. Marques**, *Woodbury U.*

Mentoring is critical throughout the Academy of Management for scholars at various stages of their careers. Mentoring can sometimes occur in the form of an extended relationship and other times can occur in the form of “mentoring moments.” Some mentoring relationships are purposefully and voluntarily matched and others are developed organically. When relationships are not organically developed with the intention of a long-term relationship there is value in using a lens of spirituality to consider how to make the most use of the relationships to create value for both the mentor and the mentee. Spirituality is important for reminding the participants in a mentoring relationship that there is a larger whole of an individual’s existence and of a relationship and its place in the professional and personal development of both members into which each interaction fits. Mismatches in mentoring relationships in the Academy can occur for a variety of reasons: scholars come from different divisions of universities with different incentives for promotion and tenure, or demographic characteristics are not always perfectly matched, and core values are not always perfectly matched. Those who can give themselves the time to consider the spiritual, connected, and interconnected nature of mentoring moments and long-term relationships will find it easier to identify the value of mentoring moments and will find it easier to overcome conflicts that might arise or perceived mismatches in mentoring relationships.

Advancing Spirituality Through Consumeristic Society, Marketing, and DEI Lens

Participant: **Siddhartha Satish Saxena**, *Heriot Watt U.*

Participant: **Laura Lynn Jansen**, -

Participant: **Deepa Chaudhary**, *Other*

Spirituality and religion have attracted increasing interest in the field of management and social sciences. Alongside scholarly and practitioner dimensions of the growing body of work in MSR, the meaningfulness and impact, emerging from the link to other disciplines and lens, magnifies the scope of consideration of this field. The amalgamation of spirituality along with consumeristic society, marketing, and diversity, equity and inclusion (DEI), transcend the disciplinary boundaries. While approaching the contemporary context of spirituality, it is imperative to be cognizant of these lesser-discussed associated elements that impact individual and collective spirituality. With this objective, this PDW will bring to participants' awareness the broader picture of disciplines sharing common interests, probe them for ideas and personal involvement, and plan concrete changes enabling to transform members at the individual and collective level. A developed consciousness may lead to a greater sense of responsibility (Maheshwari, 2023). The outcome will focus on enhancing consciousness about spirituality by taking into account multiple lenses and integrating the learnings into research.

Studying Technology Without Patent Data? Pushing the Frontiers Using the BuiltWith Database

Organizer: **Bryan Kaiser Stroube**, *London Business School*

Organizer: **Stephen Michael Impink**, *HEC Paris*

Panelist: **Natalie Jane Burford**, *IESE Business School*

Panelist: **Rembrand Michael Koning**, *Harvard Business School*

Panelist: **Maria Roche**, *Harvard Business School*

Panelist: **Harshvardhan Ketkar**, *Bocconi U.*

The purpose of this PDW is to inform scholars who seek to advance our understanding of strategy, technology management and entrepreneurship. It will build on the successful 2023 version of the PDW and focus on a novel technology profiling database - the BuiltWith database - which forms the basis of exciting new research, including works recently published in *Management Science* and the *Strategic Management Journal* (Burford, Shipilov and Furr, 2022; Koning, Hasan and Chatterji, 2022). Specifically, the BuiltWith database tracks technology adoption and usage for internet-based companies and thus sheds light on the critical technology, strategy and organizational choices of both large and small firms. The PDW will bring together scholars who have successfully utilized the database and are familiar with its advantages and shortcomings. Our key motivation with this PDW is to help set viable foundations for academic work using these data. By analogy, the introduction of the NBER Patent Database (Hall, Jaffe and Trajtenberg, 2001) led to volumes of works in economics, entrepreneurship and strategy. It marked a significant period of knowledge creation. At the same time, subsequent work revealed the opportunity for greater coordination or “standards of use and interpretation” to avoid the shortcomings and mis-interpretation of these data (Alcácer and Gittelman, 2006). Accordingly, our PDW will equip participants with technical insight on how to manipulate and augment the database and the key fields therein. The PDW will be structured as follows. First, it will open with remarks from an expert panel on how the database is being used to inform contemporary research questions. Each panellist will also underscore key limitations, or ‘red flags,’ that scholars should heed if we are to facilitate careful use of the data. Second, we will proceed with input from attendees who will have the opportunity to share their research projects with the audience as well as questions about the data. Finally, we will convene roundtable discussions to explore these issues in detail and identify fertile areas to advance future work.

Do you have an early-stage project or working paper that uses BuiltWith data? We’d love to hear about it at the PDW! Please email Bryan Stroube (bstroube@london.edu) with a few slides describing your research question, how you’re using BuiltWith, and any questions you might have for the panel/audience.

Understanding and Building Stronger Supply Chain Research in Africa

Coordinator: **Ade Oyedijo**, *Baylor U.*

Coordinator: **Sherwat Elwan Ibrahim**, *American U. in Cairo*

Coordinator: **Samuel Wamba**, *TBS Business School Information, Operations and Management Sciences*

Academic and practitioner articles on supply chain issues have proliferated in the literature since the late 1980s. In many academic journals, the discourse on operations and supply chain management (OSCM) and logistics research has mainly focused on issues related to North America, Europe and certain developing countries in Asia. However, supply chain management and logistics issues have received little attention in Africa (Oyedijo et al., 2022). Therefore, it is likely that this uneven distribution of international research data representation has a negative impact on the current state of knowledge and understanding of various phenomena within logistics and supply chain management (Svensson et al., 2008). Africa is poised to become a major player in the global supply chain (World Economic Forum, 2023a), given its growing importance as a manufacturing hub for high-tech industries and a key link in global supply chains (UNCTAD, 2023). It is surprising that many studies have not focused on Africa, given that Africa has higher growth prospects and greater potential to influence global trade and the economy than other developed continents. With so many global supply chains starting and ending in Africa, it is therefore imperative to recognise the continent's critical role. The PDW builds on Africa's potential emergence as a global supply chain powerhouse, where many African economies can become major participants in the global value chain, and explores how SCM research could enable this. Through this PDW, we aim to continue the ongoing discussions by scholars (e.g., Ibrahim et al., 2021; Oyedijo et al., 2021; Oyedijo, 2022) and various stakeholders (e.g., UNCTAD, 2023; World Economic Forum, 2023; Maersk, 2023) on advancing SCM research in Africa. Participants will work with scholars from different disciplines in open roundtables to develop interdisciplinary and multi-methodological ways to address the many challenges associated with SCM in Africa. The PDW will conclude with a future research-oriented discussion with all participants, based on the results generated in the parallel roundtable discussions.

“There’s nothing so practical as a good theory.” – Lewin (1951, p. 169) ”There’s nothing so theoretical as good practice.” – Ployhart & Bartunek (2019, p. 493)
Aligned with the AoM conference theme, Innovating for the Future: Policy, Purpose, and Organization, this PDW tackles a pivotal dimension of innovation by actively bridging the gap between theory and practice to drive tangible real-world impact and drive innovation in our field. Despite being vital partners, researchers and practitioners often find themselves lost in translation – a challenge that frequently hampers the potential of collaboration. Central to this challenge is a disparity in goal alignment, originating from a fundamental divergence in the evaluative frameworks of research (differentiating between truth from non-truth) and practice (differentiating financial gain from non-gain) (Kieser & Leiner, 2009). This misalignment raises questions about the practical relevance of research findings and the effective involvement of career counselors, HR professionals, and organizational changemakers in advancing professional practice in their fields. However, the rewards and impact that may result from cooperation between research and practice are substantial, promising far more mutual benefits than the initial disparities might suggest (Bartunek & Rynes, 2014). In this PDW, we unravel the challenges and explore strategies to connect research and practice; we discover how collaborations can be not only fruitful but also powerful agents of meaningful transformation. By engaging in discussions and interactions, the PDW aims to raise awareness of the practitioner-researcher gap and provide actionable ideas for fostering successful collaboration.

Facilitator: **Sara R. S. T. A. Elias**, *U. of Victoria*
Facilitator: **Rebecca Franklin**, *New Mexico State U.*

Grand challenges, while global in nature, manifest and are experienced in local communities. This reality has given rise to a stream of research on the role of local contexts and community-based enterprises (CBEs) in addressing grand challenges. While this research field is growing, there remains an opportunity to further explore how existing and emerging theoretical perspectives can advance our understanding of how CBEs work in and with communities to address challenges and build local resiliency. This PDW aims to expand on a PDW we organized last year titled “Community-Based Organizing and Entrepreneurship to Address Grand Challenges,” which took stock of extant research on CBEs as vehicles for tackling grand challenges. We seek to expand last year’s conversation by examining how established and emerging entrepreneurship and organization theories can be harnessed to push the field forward. To build on the success of last year’s session, we plan to incorporate two panel discussions of prominent scholars, one that examines existing theoretical lenses and the other emergent perspectives, to further our understanding of community-based enterprise and entrepreneurship. These panels will be followed by roundtable discussions around future areas of research within CBE scholarship. Through these conversations, this PDW seeks to advance organization theory and research in entrepreneurship and social issues in management.

IM Division Paper Development Consortium 2024

Session Chair: **Daphne W. Yiu**, *Singapore Management U.*

Session Chair: **Pei Sun**, *Alliance Manchester Business School, U. of Manchester*

Panelist: **Jonathan P. Doh**, *Villanova U.*

Panelist: **Kenneth Guang-Lih Huang**, *National U. of Singapore*

Panelist: **Dana B. Minbaeva**, *King's College London*

Panelist: **Sun Hyun Park**, *Seoul National U.*

Panelist: **Gurneeta Vasudeva**, *U. of Minnesota*

Panelist: **Tammar B. Zilber**, *Hebrew U. of Jerusalem*

This is the 10th year when the IM Division has been organizing the Paper Development Consortium (PDC) at the AOM Annual Meeting. As one of the three consortia organized by the IM Division, this PDC aims to provide junior scholars with developmental and constructive feedback from a panel of seasoned and current editors at top tier management and international management journals on crafting and publishing international management research. This PDC starts with a panel discussion of crafting and publishing research with both local relevance and “global” impact, followed by a roundtable session in which each participant will receive paper feedbacks from designated panel members and other participants.

Teaching International Business (IB) in an AI World

Session Chair: **Andreas P.J. Schotter**, *Ivey Business School*

Presenter: **Charles Dhanaraj**, *Daniels College of Business, Department of Management*

Presenter: **Vas Taras**, *U. of North Carolina, Greensboro*

Presenter: **Ricarda B. Bouncken**, *U. of Bayreuth*

In recent years, Artificial Intelligence (AI) has begun revolutionizing various aspects of international business and trade, introducing significant benefits and triggering disruptions to traditional multinational enterprise structures and practices. AI already affects trade data analysis, supply chain optimization, trade facilitation, market intelligence, and beyond. While in fields like Information Systems, Management Science, Operations Management, and (very tentatively) Strategy, AI has received increasing interest in research and teaching, it remains a lacuna in International Business. In this PDW, we identify IB critical topics and emerging teaching materials, including cases and readings from our field or other relevant fields. We also develop a practical pedagogic pathway for incorporating and further developing AI in IB teaching. We seek to answer the question: How should we teach AI in IB courses today? Through this, we will understand (A) how the traditional Model of the MNE and its various forms is already / will be affected by AI and what this means for IB teachings; (B) identify existing cases, readings, and practitioner materials from IB and other fields that we can contextualize to IB; (C) We will look at crossover points, where multi-disciplinary, new innovative approaches may be feasible or even badly needed. Ultimately, PDW participants will walk away with a practical guide for incorporating AI into their IB teachings.

Environmental Sustainability: Hot Topic or Hot Air?

Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

Panelist: **Olga Hawn**, *U. of North Carolina, Chapel Hill*

Panelist: **Shon R. Hiatt**, *U. of Southern California*

Panelist: **Narae Lee**, *Korea Advanced Institute of Science and Technology (KAIST)*

Panelist: **Jasjit Singh**, *INSEAD*

Environmental sustainability has emerged as a significant topic capturing considerable managerial as well as scholarly attention. However, there is still a large debate over whether companies are doing much about it beyond pacifying stakeholder pressures and complying with sustainability rankings. This is part of a broader debate on who is responsible for the current state; is it primarily advanced economies and their firms? Or is the energy sector predominantly accountable? Questions surrounding the equitable distribution of responsibility for pollution reduction further intensify the ongoing debate. In this panel, we aim to delve into critical questions that define this ongoing discourse on corporate environmental sustainability strategy and performance. We propose hosting a TED talk-style discussion in which the panelists will present crucial arguments on the role of environmental sustainability on firms' strategy and behavior and try to elucidate which arguments are the basis of a hot topic that will have a real impact and which ideas are hot air and likely to be less relevant for the future research. The panelists will take extreme positions and provide concise arguments on the topic to generate a long discussion with the audience. This presentation style will help identify environmental sustainability issues that are relevant to firms and academics and better understand the role of the context on firms' sustainability strategies.

Unlocking Growth: How Purpose-Driven Leaders Demonstrate the Behaviors Needed for Innovation

Participant: **Shola Ajiboye**, *Case Western Reserve U.*

Participant: **Robert Glenn Hughs**, *Center for Values-Driven Leadership, Benedictine U.*

Participant: **Michael R. Manning**, *Benedictine U.*

Participant: **Patty Ann Lindstrom**, *Benedictine U.*

Bringing focus to purpose sets a challenge for all businesses in terms of promoting common good, linking purpose to larger values that promote the well-being of society and individuals within and outside of business (Hollensbe et al., 2014). Delivering value by serving society to support organizational purpose can also inspire innovation and energy directed toward achieving that focus or purpose alongside a financial return (Hollensbe et al., 2014). How innovation serves a larger purpose; therefore, how and where organizations choose to invest determines the value of their investment. Innovation requires an environment that supports human interactions and processes to achieve the desired outcome. Within their research and practicing environments these scholars have observed how purpose can enhance relationships between people and teams, teams to goals, and goals to organizational intent. The purpose of this workshop is to engage in a highly interactive program that examines the research underlying the history of purpose in the workplace, its influence on individuals and teams and how it can increase an organization's ability to affect change and influence innovative environments. These exercises build upon a recent empirical model built, assist in fostering cultures which allow employees to feel more connected to their work, their organization and society. A recently developed model (attached) and set of tools will be used as a framework to lead activities.

OMT Navigating the First Years of the PhD

Organizer: **Forrest Briscoe**, *Cornell U.*
Participant: **Emily S. Block**, *U. of Alberta*
Participant: **Eva Boxenbaum**, *Copenhagen Business School*
Participant: **Emilio J. Castilla**, *MIT Sloan School of Management*
Participant: **Shelby Gai**, *Michigan State U.*
Participant: **Joel Gehman**, *George Washington U.*
Participant: **Massimo Maoret**, *IESE Business School*
Participant: **Shubha Patvardhan**, *Indian Institute of Management, Bangalore*
Participant: **Wendy K. Smith**, *U. of Delaware*
Participant: **Kevin Woojin Lee**, *U. of British Columbia*

This interactive workshop is for PhD students in their first or second year of study. As a participant, you will explore with experienced scholars how OMT scholarship and the OMT Division can help you turn research ideas into robust and impactful academic knowledge. Participants will also make new connections to a diverse range of OMT community members--including senior, junior, and new members--through interactions both during the event and afterward. Early-stage PhD students are eligible to participate. To apply, have your PhD supervisor or PhD program coordinator submit a nomination letter. Contact OMT's Division Chair, Forrest Briscoe, at fbriscoe@psu.edu, for further instructions.

New Venture Resource Mobilization: Reflections and Opportunities for Future Research

Organizer: **Suho Han**, *Syracuse U.*

Organizer: **Alex Michael Murray**, *U. of Oregon*

Organizer: **Andy Wu**, *Harvard Business School*

Participant: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*

Participant: **Susan L. Cohen**, *U. of Georgia*

Participant: **Benjamin L. Hallen**, *U. of Washington, Seattle*

Participant: **Yong Li**, *U. of Nevada, Las Vegas*

Participant: **Balagopal Vissa**, *INSEAD*

To exploit opportunities and become successful, new ventures must mobilize several critical resources such as financial, human, and social capital. Research on new venture resource mobilization has gained increasing interest among strategy scholars, as it speaks to fundamental themes of firm performance and heterogeneity. The topic has also appealed to scholars across entrepreneurship, organizational theory, and organizational behavior. While the literature has made progress in understanding how entrepreneurs and new ventures gain crucial resources, several recent papers also highlight existing limitations and unexplored questions that hamper its progress (e.g., Clough et al., 2019; Dushnitsky & Matusik, 2019; Hallen et al., 2020). In this workshop, we provide an interactive forum to address current limitations and collectively find ways to advance the literature. To facilitate this aim, we bring together a panel of thought leaders with a track record of publishing research on new venture resource mobilization from diverse theoretical backgrounds, contexts, and methodologies. Through a panel session, audience Q&A, and intimate breakout roundtables, this PDW seeks to stimulate new research directions while promoting a community of scholars interested in this exciting domain.

Reject and Resubmit on the Research on Ecosystems and Platforms

Organizer: **Shiva Agarwal**, *U. of Texas at Austin*
Organizer: **Cameron Miller**, *Syracuse U.*
Panelist: **Carmelo Cennamo**, *Copenhagen Business School*
Panelist: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*
Panelist: **Gurmeeta Vasudeva**, *U. of Minnesota*
Panelist: **Yue Maggie Zhou**, *U. of Michigan*
Facilitator: **Elena Plaksenkova**, *The Ohio State U. Fisher College of Business*
Facilitator: **Sruthi Monica Thatchenkery**, *Vanderbilt U.*

Ecosystems and Platforms play an increasingly important role in the value proposition for many firms. It represents a vibrant and important research stream for management scholars. Given the explosion of research on ecosystems and platforms, it is time to discuss what makes these research topics different and how to approach the unique challenges they pose, which remain unclear to many interested scholars to publish papers in leading management journals successfully. As part of this Professional Development Workshop, we have assembled a panel of editors at various leading management journals to discuss these challenges and provide directions around how to avoid some of the common pitfalls. In addition, we will also run a workshop where a team of junior scholars who have successfully published on the topic can provide more targeted feedback on a set of solicited working papers.

Facilitator: **Hyunjin Kim**, *INSEAD*
Facilitator: **Frank T. Piller**, *RWTH Aachen U.*
Facilitator: **Dashun Wang**, *Northwestern Kellogg School of Management*

Identifying and selecting novel and relevant problems are pivotal initial steps in science and innovation projects. These initial choices not only shape the subsequent stages of the processes but also significantly influence the ultimate impact of the projects. Although management scholars have generated substantial knowledge on the nature of problem identification and on effective organizational mechanisms, many challenges remain. In this PDW, we plan to explore new opportunities but also challenges that may arise from using generative Artificial Intelligence (gen AI) for problem identification and selection. Among others, gen AI may facilitate inter- and transdisciplinary knowledge integration, address (but also introduce) biases, and help with the prediction of scientific and societal impact. We hope to achieve three main goals: First, PDW participants gain inspirational insights from cutting-edge “perspective talks” by six expert scholars working in relevant areas. Second, participants can self-select into roundtables moderated by the scholarly experts and the PDW organizers to deepen the discussion and generate their own project ideas. Each roundtable focuses thematically on the expertise of the host. Third, we challenge participants to gain first-hand experience with gen AI and problem identification and selection by including a small intervention, which will lead participants to think critically about the role of AI in this important stage in research and innovation. Roundtable discussions will provide the foundation for a plenary debrief at the end of the session. We particularly invite scholars from diverse backgrounds (e.g., different regions and disciplines).

Please pre-register for this PDW by August 2 using the following link: https://docs.google.com/forms/d/e/1FAIpQLScyCpKTGISIOF-B7A0G_JWEAq1ZULkXE0m_foRhZasNl721UQ/viewform?usp=sf_link Spaces will be allocated on a first-come, first-served basis and we also welcome unregistered participants on the day of the PDW in case space is left. If you have any inquiries, please contact Susanne Beck (susanne.beck@wbs.ac.uk).

AI as a Catalyst for Collaborative Value Creation in Teaching and Research

Participant: **Jean Gordon**, *U. of North Carolina, Wilmington*
Participant: **Eric Richardson**, *U. of North Carolina, Wilmington*
Participant: **Reid Oetjen**, *U. of Central Florida*
Participant: **Dawn Oetjen**, *U. of Central Florida*

The rapidly evolving landscape of healthcare management demands innovative solutions, making artificial intelligence (AI) an indispensable tool for education and research. Recognizing this, a specialized workshop has been designed specifically for healthcare administration and management faculty. This Professional Development Workshop (PDW) focuses on the pivotal role of AI in generating value through collaborative and interdisciplinary approaches in teaching and research. As a critical professional development opportunity, this workshop is dedicated to educators striving to lead in an AI-centric academic and professional world. The PDW is crafted to address the dynamic needs of education and research, equipping faculty members with the expertise to seamlessly integrate AI into their practices. The workshop promises an engaging and informative experience with several key learning objectives. Participants will explore and discuss innovative AI applications within healthcare management education and research. They will learn to identify and share these applications, enhancing collective knowledge and fostering innovation. The workshop will guide participants in developing AI-enhanced research clusters. Through mind-mapping techniques, participants will learn to establish interdisciplinary research groups within their institutions to tackle complex healthcare issues with AI-driven solutions. Finally, a significant focus will be on integrating AI into curriculum development. Participants will gain practical experience using AI tools to analyze educational data and apply these insights to curriculum enhancement. This aspect of the workshop ensures that healthcare management education aligns with the industry's evolving demands, preparing students for the future challenges of the healthcare sector.

The Innovations in Teaching Teamwork PDW is a practical, highly interactive workshop designed for faculty and students who are interested in learning more about cutting-edge tools and techniques for teaching others how to effectively lead teams. The 2024 session represents the fifth iteration of this popular workshop, and this year's session will focus on AI and other advanced technology. Experts at the intersection of technology and teamwork will share how they 1) teach about the role of AI and advanced technology in teamwork, and 2) incorporate AI and technology to support teaching about teamwork. The session will consist of three parts. In each part, presenters will share how they incorporate AI and advanced technology into their teaching, audience members will have a chance to ask questions of the presenters, and roundtable discussants will facilitate small group discussions on how the tools and insights from the panelists can be incorporated into attendees' future teaching. It is the intent of this session to facilitate a collective learning experience where panelists, discussants, and attendees gain practical strategies on how to effectively implement the use of AI and other advanced technology to further student understanding of the future of teaming and the workplace.

We are excited to offer another edition of our highly-anticipated and lively AOM Professional Development Workshop (PDW) on organizational stigma and stigmatization to enhance our understanding of stigma's role in influencing organizations, identities, fields, and societies, and to support emerging and established researchers in developing their work. The PDW will be comprised of three components: a keynote address, an open discussion by experts, and a series of facilitated research development roundtables. First, we are excited to welcome Dr. Glen Kreiner, renowned scholar of identity, stigma, and dirty work, as our keynote, who will offer insights and reflections that can inform research on stigma and related, yet understudied, concepts of marginalization, inclusion, and belonging. Next, experts will have an open discussion to galvanize our collective attention, and the field, towards future promising areas of research related to concepts often associated with stigma such as un/belonging, boundaries, borders, and marginalization. Finally, we will facilitate research development roundtables, each of which will be facilitated by two established stigma scholars who will lead a focused discussion regarding the challenges and opportunities that participants are facing in their work and support participants in developing their projects. Each roundtable will be focused on particular thematic challenges related to (i) theory, (ii) methods, (iii) data, or (iii) contributions. The keynote and discussion are open to all attendees, but roundtables will only be open to those that pre-register and submit a 1-2 page abstract and research challenge statement to aomstigma@gmail.com by July 1st, 2024.

All AOM attendees are welcome to join the keynote presentation and discussion portion of this PDW, but to participate in the facilitated paper development roundtables, participants must pre-register for the session and must submit a 1-2 page project abstract/research challenge statement to aomstigma@gmail.com by July 1st, 2024.

Artificial intelligence (AI) has become a vital and accelerating force across knowledge industries (industries such as law, journalism, software development, drug development and consulting). Its ever-evolving capabilities enable it to not only assist but actively contribute to and even exceed human performance in many fields. AI technologies are transforming the nature of work by generating knowledge, automating processes, enhancing capabilities, and fostering creative outputs. As AI redefines the boundaries of what is achievable, there is a widespread optimism about its potential to revolutionize work processes. However, the real-world impact of AI will hinge on the interaction between practitioners and the AI tools, technologies, and information systems they use. Understanding how AI functions and is utilized in real-world scenarios is crucial. This Professional Development Workshop (PDW) aims to delve into AI's application in various work environments and professional domains. We will explore AI's development and usage through empirical presentations, group discussions, and dialogues with experienced scholars, offering an insightful, realistic perspective on the challenges and prospects of implementing AI in practical settings.

Panelist: **Nicholas A. Pearce**, *Northwestern U.*

Delving into conversations around diversity, equity, inclusion, and belonging (DEIB) can be challenging. For those involved, these conversations often require patience, flexibility, and perspective-taking. This is especially true for those who facilitate these conversations in the classroom. Serving as an instructor for topics that focus on DEIB presents an array of experiences and opportunities, some rewarding and some challenging, that are unfamiliar to novice DEIB instructors. The purpose of this PDW is to continue the success of our initial 2022 PDW at the Academy of Management Meeting by preparing faculty members of all levels and demographic backgrounds to manage and facilitate classroom discussions related to DEIB. This includes direction on how to introduce sensitive topics, how to engage with students, how to handle difficult questions, and critically, how to implement new DEIB exercises in the classroom. This PDW utilizes an array of session formats (i.e., teaching demonstrations, panels, and roundtable discussions) and involves faculty who have extensive experience leading DEIB courses. We see this PDW as an opportunity to broaden our mindsets and approaches to teaching DEIB by continuing to innovate in the classroom and as a scholar.

To register for this session, please complete the following form <https://forms.gle/tupewKMuMtvYHqcFA> by July 22nd. Space is limited.

Training Leaders and Employees for Hybrid and Virtual Work: Interactive and Experiential Activities

Organizer: **N. Sharon Hill**, *George Washington U.*
Organizer: **Ellen Ernst Kossek**, *Purdue U.*
Presenter: **N. Sharon Hill**, *George Washington U.*
Presenter: **Ellen Ernst Kossek**, *Purdue U.*
Presenter: **Tatiana Andreeva**, *Maynooth U.*
Presenter: **Amy Breidenthal**, *Agnes Scott College*

Despite the growth in virtual and hybrid work arrangements, studies consistently show that most organizations fail to adequately train, develop, and socialize managers, leaders, and employees in this new way of working. This PDW aims to help Academy of Management members meet this critical need by sharing evidence-based, interactive, and experiential activities for teaching others how to lead and function effectively in virtual and hybrid work settings. The PDW includes activities specifically designed to teach this topic as well as activities from other domains adapted to address virtual and hybrid work. The activities target audiences at different levels: individual employees, team leaders, line managers, and senior managers. The audience will benefit from the insights and lessons from the presenters, who have extensive experience using active learning approaches to teach this topic in classes and workshops in multiple countries. In the first part of the PDW, the audience will participate in a full demonstration of a teaching activity. In the second part, the presenters will describe how to conduct three additional activities and share their teaching materials and other tips. The workshop participants will leave with everything required to teach the activities in their classes and workshops. There will also be opportunities for them to ask questions, discuss different ways to apply these activities in training interventions, and share their insights about other interactive and experiential activities for training and developing the virtual and hybrid workforce.

Navigating the Mid-Career Stage: Career Advancement and Impact in the OMT Field

Organizer: **Eunice Yunjin Rhee**, *Seattle U.*

Organizer: **Jade Lo**, *Drexel U.*

Organizer: **Sarah M. G. Otner**, *SPRU U. of Sussex UK*

Panelist: **Christine Beckman**, *U. of Southern California*

Panelist: **Forrest Briscoe**, *Cornell U.*

Panelist: **Eero Vaara**, *U. of Oxford*

Panelist: **Charlene E. Zietsma**, *U. of Michigan*

Panelist: **Joep Cornelissen**, *Erasmus U. Rotterdam*

We propose a Professional Development Workshop (PDW) for to address the developmental gap faced by mid-career academics in the Organization and Management Theory (OMT) Division. This workshop, a pilot initiative, targets OMT faculty grappling with the complexities of post-tenure life, including expanded administrative duties, mentorship roles, and heightened research expectations. The 90-minute PDW comprises an introduction, panel discussions with four esteemed OMT scholars, and interactive roundtable sessions, focusing on career development, leadership, balancing multiple roles, and research evolution. This format provides a dynamic environment for mid-career faculty to gain practical insights, forge peer connections, and learn strategies for navigating this demanding phase. The workshop also plans to incorporate the OMT café for extended discussions and community building, reinforcing a culture of continuous learning within the OMT Division.

We have limited spaces available for this PDW. Conference attendees interested in participating should complete the pre-registration form by June 30, 2024, to secure their spot: <https://forms.gle/bXwGwraGYpA6YZ5LA>. If you have any questions, please contact the organizers, Eunice Rhee (rhee@seattleu.edu), Jade Lo (yl663@drexel.edu) or Sarah Otner (s.otner@kingston.ac.uk).

Recent studies are devoting increasing attention to future-making practices as the methods that organizations can employ to make the future amenable, and the way they can translate it into new ventures, products, or services. However, little is known about how future-making can be empirically studied. Several conceptual, theoretical, and opinion pieces have been published over the last few years. The PDW aims to share renowned scholars' views on why researching future-making empirically is important and impactful and how such future-oriented research can rigorously be conducted. The PDW will thereby focus on sharing practices for studying, and researching future-making empirically, adopting a participatory approach that alternates speaker presentations and moments of discussion and reflection. The topic's cross disciplinarity will also enable the involvement of scholars and practitioners working in different areas, from design, innovation, strategic management, ethics, and future studies.

PDW participants can submit a one-pager of the research they would like to discuss (e.g., research design, model visualization, tables) at the following link https://polimi.eu.qualtrics.com/jfe/form/SV_6r2l8tnPASIXExw Participants who submitted a one-pager will be assigned to a table moderated by one of the convenors for discussion. Participants with no submission are also welcome to join the table as audience or bringing their one-pager directly at the table for discussion.

Do Social Media Harm Democracy? And if so, Who Should Care and Why?

Organizer: **Hannah Trittin**, *Leuphana U. Lüneburg*

Organizer: **Andreas Georg Scherer**, *U. of Zurich*

Speaker: **Cristina Neesham**, *Newcastle U.*

Organizer: **Itziar Castelló**, *Bayes Business School (formerly Cass), City, U. of London*

Speaker: **Michael Andreas Etter**, *King's College London*

Speaker: **Donato Cutolo**, *IE Business School*

Speaker: **Annabelle Gawer**, *U. of Surrey*

In recent years, social media platforms and their services have led to emergent phenomena that are detrimental to collective decision-making and societal stability, including the proliferation of fake news, disinformation, social division and polarization, that threaten democratic societies. However, the conversation on how to fight the risk of social media is inconclusive and there is a variety of potential answers to or remedies of social media's threat to democracy. Bringing together highly relevant lines of inquiry from management and organization studies, business and society research, and data and platform governance research, this PDW aims to a) allow for the provision of an overview of the scholarly debate on social media platforms and their social impact; and b) a debate as to which actors and what solutions are available to strengthen the resilience of democracies and to safeguard them against the detrimental effects of social media.

Integrating SDGs Into Management Courses, Curricula and Programs

Participant: **Neil M. Boyd**, *Bucknell U.*

Participant: **Udayan Dhar**, *Bucknell U.*

Participant: **Andre Martinuzzi**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*

Participant: **Angelo Spörk**, *WU Vienna U. of Economics and Business*

Management education that is focused on the United Nations Sustainable Development Goals (SDGs) has certainly increased in the past decade, and recent AACSB standards toward social impact will likely accelerate this trend. This PDW offers an opportunity to learn about designing courses, curricula and programs with SDG content, and provides a platform for transforming your pedagogy to align with social and environmental goals. The session will begin with a brief presentation by scholars who have significant experience in implementing SDGs in their universities and classes, and will then turn to a guided open dialogue with audience participants on the current state and future direction of SDG integration in management education. We will also discuss some techniques and structures for doing so that have proven effective. Our multidisciplinary and international team of organizers and facilitators will cover a broad diversity of SDG related and perspectives. We encourage attendees to participate and share what is happening at their universities so we can all benefit in learning how to integrate the SDGs into management courses, curricula and programs.

Innovating the Future (of Management Teaching): Psychoanalytic Perspectives on Anxiety and Defense

Coordinator: **Carrie M. Duncan**, *Center for Psychosocial Organization Studies*

Participant: **Sara R. S. T. A. Elias**, *U. of Victoria*

Participant: **Nathan Gerard**, *California State U., Long Beach*

Participant: **Eda Ulus**, *U. of the West of Scotland*

Participant: **Seth Allcorn**, *Columbia, Missouri*

This interactive workshop, which is based upon a very successful and well-attended PDW in 2022, uses psychoanalysis to disrupt the assumptions embedded in contemporary modes of teaching and learning. We will explore the potential of psychoanalysis to further our understanding of the realities of education, both now and in the future. Insights from psychoanalysis include the importance of paying attention to unconscious anxieties, fantasies, and psychological defenses. Applying these insights to learning spaces, and their concomitant stresses and anxieties, provides critical scholars and educators with concepts useful for understanding the psychosocial (collective) defenses that arise in response to anxiety-inducing social, cultural, and institutional pressures. The unconscious permeates a range of phenomena across educational systems: individual (student, teacher), interpersonal (teaching dyad), group (classroom), organization (institutional), and social (discourses of pedagogy, politics). Psychosocial defenses often serve to create undiscussable and collusive resistance to the work of learning, essentially erecting a form of willful ignorance to avoid the anxieties of not knowing. We contend that psychoanalytic thinking can make such dynamics knowable and discussable. Further, that psychoanalytic thinking provides both teachers and students with useful strategies for managing the anxieties associated with (un)learning what we think we know about providing, or obtaining, management education. This PDW may benefit researchers and scholars who, regardless of career stage, wish to explore and engage with the potential of psychoanalytic thinking for deepening their understanding of the complexities of teaching and learning, and in doing so deepen their potential to innovate for the future.

Organizer: **Ellen Shaffner**, *Mount Saint Vincent U.*

One of the most enduring features in business education is the case method of teaching, which originated at Harvard Business School a century ago. The HBS case method reflects a conviction that business education is first and foremost a training in decision making on practical business problems. However, it is seen by critics as contributing to a narrow, instrumental, managerial perspective on business, which fails to respond to calls for a more responsible management education. In response to these criticisms, a genre of 'critical cases' has emerged and flourished. Critical case writing and teaching promotes a reflexive practice which assists students in challenging taken for granted logics of business and management. This workshop is an opportunity for those interested in writing, teaching, and publishing critical cases to reflect on and develop their professional practice.

Artificial intelligence is expected to transform businesses and societies in ways that we have never seen before. This paper development workshop is intended to examine how this enabling technology will reshape some of the fundamental issues in research, such as creation, discovery, exploitation, and funding of entrepreneurial opportunities, as well as strategic decision making, innovation, value creation and capture, management and organization, and social entrepreneurship. The session will also provide a platform to explore novel research opportunities that emerge from cross-fertilization of multiple fields.

Research Grant Development: An Overview of Process and Funding Agencies

Facilitator: **Daniel M. Walker**, *Ohio State U.*

Facilitator: **Leeann Comfort**, *Agency for Healthcare Research and Quality*

Facilitator: **Joanna Veazey Brooks**, *U. of Kansas Medical Center*

Facilitator: **Joshua Ryan Vest**, *Indiana U., Indianapolis*

Facilitator: **Gary J Young**, *Northeastern U.*

Panelist: **Ann Scheck McAlearney**, *Ohio State U.*

Panelist: **Justin Kane Benzer**, *U. of Texas at Austin, Dell Medical School*

Universities are placing greater emphasis on extramural research funding at the same time that securing funding is becoming increasingly competitive. Funding agencies are traditionally often more focused on basic (T0), pre-clinical (T1), or translational (T2-T4) research as opposed to management research. These challenges require health care management researchers to develop rigorous research proposals that are targeted to specific funding agencies and funding calls. The goal of this Professional Development Workshop (PDW) will be to provide information about how to develop and write a grant to a federal (i.e., National Institutes of Health [NIH], Agency for Healthcare Research and Quality [AHRQ]) or foundation (i.e., Robert Wood Johnson Foundation [RWJF]) funding agency. Using successful grant writers as well as insiders from funding agencies as facilitators, we will first provide an overview of strategies for success in obtaining external funding for organizational research. Among the topics to be discussed are writing research proposals that get funded, uncovering the mystique of the grant funding process, and finding the appropriate funding venue for your research. Next, we will breakout in a 'hot topics' style session with discussion of different aspects of securing funding covered at different tables within the session. Scholars of all career stages are welcome to attend this interactive PDW, which is designed as an in-person session.

Interdisciplinary Insights: Shaping the Future of Interprofessional Team Research in Healthcare

Organizer: **Tera Webb**, *U. of Alabama, Birmingham*
Facilitator: **Anthony C. Hood**, *First Horizon Bank*
Presenter: **Monique Alexandria Alvarez Domingo**, *Louisiana State U.*
Presenter: **Michelle Brown**, -
Facilitator: **Nancy Borkowski**, *U. of Alabama, Birmingham*

This PDW is specially designed for students and faculty poised to explore interprofessional team research in healthcare. Focused on the critical area of interprofessional teams, this workshop is pivotal for enhancing patient care quality and healthcare system efficiency. It offers an engaging introduction to the multifaceted dynamics of diverse healthcare professionals working collaboratively for comprehensive patient care. Participants will immerse in foundational knowledge and innovative thinking, unlocking new perspectives in the study of these teams. Participants will be introduced to the multidisciplinary nature of team research, drawing from fields such as organizational behavior, psychology, and health services research. Interactive elements throughout the session ensure an engaging, hands-on approach to learning. So, whether you are a student taking your first steps in academic research or a faculty member looking to expand your research repertoire, "Interdisciplinary Insights" offers a supportive and informative environment to begin your exploration.

Innovating for the Future: Igniting Sustainable Innovation & Ethical Entrepreneurship in Iberoamerica

Organizer: **Maritza Espina**, *Sustainability, Ethics, & Entrepreneurship Society*
Organizer: **Maribel Guerrero**, *Global Center for Technology Transfer, Arizona State U.*
Organizer: **Erica Helena Salvaj**, *U. del Desarrollo*
Organizer: **Luis Antonio Perez-Batres**, *Missouri State U.*

In the vibrant tapestry of Iberoamerican cultures, where diverse traditions blend with modern innovations, this session is dedicated to unveiling cutting-edge research and transformative ideas at the intersection of Sustainability, Ethics, and Entrepreneurship, with a focus on the unique challenges and opportunities within the Iberoamerican context. As the world strides towards a sustainable future, this session aims to foster a dynamic exchange of radical, controversial, and groundbreaking projects that question established dogmas and offer novel insights into the sustainable development of businesses in the region. We will discuss opportunities for collaboration and future research initiatives. Join us to contribute to a vibrant community eager to drive sustainable and ethical business transformations in Iberoamerica and beyond.

Developing Meaningful Research Partnerships

Organizer: **Tanvi H. Kothari**, *San Jose State U.*

Organizer: **Aarti Ramaswami**, *ESSEC Business School*

Organizer: **Nagaraj Sivasubramaniam**, *Duquesne U.*

This PDW seeks to fulfill the mission of the Indian Academy of Management to build a supportive community of scholars focused on India-centric research. In line with this year's Academy theme of innovating for the future, we endeavor to expand research opportunities to connect and explore new ideas salient in the Indian context. In addition, this PDW is designed to serve the specific goal of building research capabilities within India. The PDW is targeted at researchers and scholars who are beginning to develop a research stream, and scholars elsewhere seeking to conduct research in India. The partnerships formed during this PDW will hopefully translate to more impactful and higher quality research engagement and scholarly output.

Consulting for Lightning-Speed Innovation: How to Release Improvisational Skills

Organizer: **Raphael DE VITTORIS**, *Clermont Auvergne U.*
Organizer: **Pierre El Haddad**, *INSEEC Grande Ecole*

Crises are so frequent they are becoming the new normal. Crises have deleterious effects, but they also provide room for innovation thus aligning with this year's AOM conference theme. When under duress, innovation needs to happen at lightning speed, thus shortening the time lapse between planning and executing to nil. Specific improvisational skills, knowledge, tools, and structures are needed. The present PDW looks at this aspect from the lens of the scholar and the practitioner.

Seeing Anew: Studying Organization During Social Transformation

Organizer: **Gerald F. Davis**, *U. of Michigan*
Organizer: **Daniel Wadhvani**, *U. of Southern California*
Presenter: **Christina Lubinski**, *Copenhagen Business School*
Presenter: **Stephen Cummings**, *Victoria U. of Wellington*
Participant: **Andrew Hargadon**, *U. of California, Davis*
Participant: **Lena Olaison**, *Copenhagen Business School*

Current transformations in capitalism, such as digitization and climate change, pose fundamental challenges to the categories of observation that have been used in studying management and business: firm, employee, industry, market, performance (Davis and DeWitt, 2022; Bansal and Desjarine, 2014). How might management scholars study business in a moment when such basic building blocks of managerial research are contested? This PDW draws on history to help participants develop creative ways to observe and study transformations in business today. During the first part of the PDW, the panelists present a series of commentaries on history as both an approach for thinking about transformations and a set of methods for studying them. We highlight that transformation involves not just change or evolution but the need to see the world in a fresh light (Lubinski et al, 2024) and we point to specific historical examples of socioeconomic transformation and how they unfolded. We also discuss the value of specific methods (Wadhvani and Sorensen, 2023; Hargadon and Wadhvani, 2023) for studying transformations over time and consider their application to transformations in business today. During the second part, participants will have the opportunity to creatively apply these ideas in breakout groups devoted to five specific categories under contestation and transformation today: work, firm, industry, market, and performance.

So What? Overcoming the Feedback Report Obstruction: Tips, Tricks, and Tools

Organizer: **Jeremy D. Meuser**, *Purdue U. Northwest*
Organizer: **Jarvis Smallfield**, *Central Michigan U.*
Panelist: **Joel B. Carnevale**, *Syracuse U.*
Facilitator: **Amy Bartels**, *U. of Nebraska, Lincoln*

Organized as a collaboration between the Making Connections Committee (MCC) on behalf of the OB Division and the Network of Leadership Scholars, this PDW helps participants learn about the communication of the practical implications of research as relevant to feedback reports. In this PDW, we provide advice on how to create high quality, relevant feedback reports efficiently. The practical implications of our work are important for many reasons, yet there is little to no training in PhD programs on how to communicate science to non- scientists. The focus is, understandably, teaching non-scientists to be, think, write, talk, act, and present like scientists. In doing so, we often forget how to talk and write like a “normal person.” These two domains of our experience are separated by a five-year intense and stressful chasm of life. Simply, many OB scholars have not practiced the crucial skill of communicating the value of our work outside of the echo chamber of academia. In this PDW, our purpose is to help participants learn how to:

- 1) Communicate the value of research agendas and the skills that the research team brings to organizations in an effort to “pitch” research partnerships.
- 2) Present research results (including the statistics and analyses helpful to various audiences) and practical implications to multiple stakeholders.
- 3) Create a feedback report/presentation rapidly using a variety of tools that we will overview during the session and the value of doing so.

The Art of Writing and Publishing for Non-Native English Scholars

Organizer: **Jeewon Cho**, *Oregon State U.*
Organizer: **C. Ashley Fulmer**, *Georgia State U.*
Organizer: **Bard Kuvaas**, *BI Norwegian Business School*
Organizer: **I-Heng Wu**, *U. of South Alabama*
Panelist: **Ivona Hideg**, *Saïd Business School U. of Oxford*
Panelist: **Chak Fu Lam**, *City U. of Hong Kong*
Panelist: **Chad Benjamin Murphy**, *Oregon State U.*
Panelist: **Chidiebere Ogbonnaya**, *King's College London*
Panelist: **Jing Zhu**, *Nanyang Business School, Nanyang Technological U., Singapore*

Academic performance is judged in part on one's level of linguistic competence in English. As a consequence, scholars who wish to succeed on the academic field must be able to write in English not only fluently but also eloquently. This places non-native English scholars in a disadvantageous position. The goals of this professional development workshop (PDW) are therefore to have a discussion regarding the various challenges that non-native English scholars face when writing and publishing in English and to share concrete tips on improving academic writing in English. We bring together a panel of experienced and well-published management scholars who approach the theme from diverse perspectives. In the first segment of the PDW, our six panelists will share their experiences and insights into the art of writing, publishing, and collaborating as non-native English scholars and with them. In the second part of the PDW, we will continue with a practice-oriented roundtable discussion, delving into the issues presented in the first segment of the workshop. We will conclude the PDW with a session-wide Q&A and a summary of lessons learned.

Algo, AI and I: Exploring Identities in Algorithms and How AI Reshapes Who We Are at Work

Participant: **Corentin Curchod**, *U. of Edinburgh*

Participant: **Samer Faraj**, *McGill U.*

Participant: **Sarah Lebovitz**, *U. of Virginia*

Participant: **Michael G. Pratt**, *Boston College*

This workshop discusses the implications of algorithmic work on occupational identity. It argues that algorithms and AI are changing the nature of work interactions and that this is disrupting the traditional way in which workers build their sense of self at work. It explores the impact of (intelligent) algorithms on occupational identities, particularly in the context of digital work where algorithms increasingly structure, command, and define what workers do. It argues that occupational identities are not simply defined by interactions with humans, but also by interactions with algorithms. This is because algorithms are becoming increasingly embedded in work processes, and workers are doing their work through algorithms as well as interacting with them directly. The PDW invites to explore new perspectives on occupational identity 'in' algorithmic work, where algorithms are seen as a new work structure that changes workers' relationship with their work and how they build their occupational self. The workshop suggests that researchers need to develop a new approach to studying identities in algorithms, one that takes into account the intra-active nature of the relationship between algorithms and workers. It gathers a panel of four scholars who are working on different aspects of algorithmic work and identity: Corentin Curchod, Samer Faraj, Sarah Lebovitz and Michael Pratt.

Governing for a Sustainable Future: Exploring the Interactions Between the Public and Private Sector

Organizer: **Sylvia Grewatsch**, *Brock U.*
Organizer: **Miriam Feuls**, *Copenhagen Business School*
Organizer: **Sunny Mosangzi Xu**, *Copenhagen Business School*
Organizer: **Natalia Mityushina**, *Brock U.*
Panelist: **Domenico Dentoni**, *Montpellier Business School*
Panelist: **Raghu Garud**, *Pennsylvania State U.*
Panelist: **Aoife Marie Brophy**, *U. of Oxford*
Panelist: **Johanna Mair**, *Hertie School of Governance*
Panelist: **Madeleine Stefanie Rauch**, *Cambridge Judge Business School*

Today, the world confronts numerous grand challenges that pose a threat to a sustainable future for both people and the planet. Addressing these challenges necessitates collective actions and collaborative solutions forged through public-private interactions. The literature on organizational research and innovation has delved into diverse forms of public-private interactions, exploring their collaborations and outcomes. Nevertheless, numerous questions concerning the governance of these interactions for sustainable futures remain open and warrant academic attention. Through organizing this Paper Development Workshop (PDW), our aim is to delve deeper into the intricate dynamics of public-private collaboration in tackling grand challenges and advancing sustainable futures. As an outcome, we seek to identify key areas for future research, create research recommendations for scholars, and develop a call for action to motivate more studies in this critical domain.

Participant: **Jaclyn Piatak**, *U. of North Carolina, Charlotte*
Participant: **Elizabeth Searing**, *U. of Texas at Dallas*
Participant: **John M. Bryson**, *U. of Minnesota Twin Cities*

The Public and Nonprofit Division's Editor Panel offers an opportunity for members and other conference attendees to learn about potential outlets for their work. The Editor Panel offers journal editors the opportunity to provide an overview of their journals to the audience which is followed by a discussion. This year we will discuss the future trends in public and nonprofit research. We will consider these trends and hear from the editors about their vision of their respective journals. This panel provides conference attendees with the opportunity to learn about public and nonprofit management journals and ask questions about the peer review and publication process. Participation in this PDW is open to all conference attendees.

AMD Shark Tank PDW

Presenter: **C. Chet Miller**, *U. of Houston*

While in Chicago for the AOM Annual Meeting, participate in the highly regarded “AMD Shark Tank.” Like the reality TV show, participants will “pitch” their paper ideas to a panel of leading management scholars who will then, along with the audience, be asked to vote for the most promising papers. If you are interested in being “on the show,” submit an extended abstract of your proposed paper (up to four double-spaced pages for the abstract). From the pool of submissions, the AMD editor team will select finalists to serve as contestants. Each contestant will be given 5 to 6 minutes (no more than 4 power point slides) to summarize the study during the live session (i.e., make the pitch). Esteemed panelists will then be given a few minutes to give quick, constructive, and perhaps humorous feedback for each paper. Submit your extended abstracts by 8 July 2024 via <https://form.jotform.com/AOMForms/amd-paper-workshop-at-aom>.

Facilitator: **Scott Sonenshein**, *Rice U.*
Facilitator: **Lee Watkiss**, *Ivey Business School*

AOM 2024 will be the eleventh year this PDW has been offered. Over the years, this PDW has been guided by the recognition that the dissertation stage in one's doctoral program is a critical time in the development of a qualitative scholar's research capabilities and scholarly identity. This is especially true because qualitative research has no "boilerplate" (Pratt, 2009). Doctoral students who have chosen to use or incorporate qualitative methods into their dissertations require tailored developmental attention. In this PDW, students at all phases of the dissertation process—proposal, data collection, analysis, and defense—will receive general advice and personalized feedback while developing relationships with more senior scholars. Our objective is to connect students with faculty facilitators to receive support on their research, as well as career advice, as they approach the final step in their doctoral studies. Faculty facilitators are drawn from the vibrant community of qualitative management scholars. Facilitators have published qualitative research in top-tier journals and have experience managing careers as qualitative researchers. Students will be matched with facilitators based on qualitative methodology, research topic, and/or level of analysis. In addition to practical guidance on research methods, students will also have the opportunity to meet with qualitative scholars to expand their networks.

Speed Networking with the SIM Division

Organizer: **Sarah Stephen**, *U. of Liverpool Management School*
Organizer: **Susana Esper**, *IESEG School of Management*

Networking can be daunting. It may feel tempting to avoid a room filled with strangers in favour of seeking out more comfortable conversations with those you know. But wait! – What if that room is filled with established and future SIM thought-leaders, who are passionate about the same kinds of scholarly topics, research methods, teaching innovations, and impact? How about a space dedicated to warm introductions, energetic idea-sharing, and the spirit of community? What if you could plan on lively facilitated opportunities to meet extraordinary global colleagues, discuss existing research, and consider developing new projects? Spoiler alert: you can!! SIM Speed Networking is exactly that space with exactly those people and exactly these opportunities! This annual event, in collaboration with the SIM Division's Research Committee, aims to facilitate connections among scholars interested in topical issues linking business and society, professional development, and impactful research incubation. All are welcome.

Minds at Work: The Past, Present and Future of Cognitive Representations in Management and Strategy

Organizer: **Hui Sun**, *Frankfurt School of Finance & Management*

Organizer: **Douglas Hannah**, *Boston U.*

Panelist: **Felipe Csaszar**, *U. of Michigan*

Panelist: **Chris B. Bingham**, *U. of North Carolina, Chapel Hill*

Discussant: **Timothy Ott**, *U. of North Carolina, Chapel Hill*

Panelist: **Violina Rindova**, *U. of California-Irvine*

Panelist: **Teppo Felin**, *Utah State U.*

Discussant: **Yuliya Snihur**, *IESE Business School*

Panelist: **Jeffrey Loewenstein**, *U. of Illinois at Urbana-Champaign*

Discussant: **Chiara Spina**, *INSEAD*

Cognitive representations are central to management and strategy, and over the past five decades the field has curated an extensive list of constructs that describe cognitive representations at the individual, group, organization, and industry level. Yet, the relationships between these constructs, and the differences in their formulations, definitions, and impact, is often obscure. This “proliferation without consolidation” limits our collective understanding of a critical phenomenon. The aim of this professional development workshop is to convene scholars working at the intersection of cognition and organizational management, strategy, and entrepreneurship. In the first part of the workshop, a panel of senior scholars will discuss the state of the field, including key constructs, differences between them, impacts, and inconsistencies in their definitions and underlying assumptions. Their aim overall will be to consolidate existing theory on cognitive representations, as well as identify promising areas for future research. In the second half of the program, the panelists will be joined by additional five roundtable discussion leaders, who will lead individual participatory discussions with PDW participants on ongoing work and proposed projects. Overall, the objective of this workshop is to acknowledge and consolidate existing progress made through a cognitive perspective, as well as to prepare the ground and seed community for future research in this area.

The PDW consists of two parts: Part 1 Panel presentation and panel discussion (no registration required) and Part 2 Roundtable discussion (register with the link below). If you are interested in participating in the Part 2 roundtable discussion and receiving feedback on a research project related to managerial cognition, please submit a one-page summary of your research project using the link below. All applicants will be notified of the decision by late July. If you have any questions, please contact mindsatworkPDW@gmail.com. Submission Deadline: July 1, 2024, Anywhere on Earth. Link: <https://forms.gle/NxTBvVDVwT8azThq6>

Scaling and Scalability: Building an Integrated Research Agenda

Panelist: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*
Panelist: **Tobias Kretschmer**, *LMU Munich*
Panelist: **Benjamin L. Hallen**, *U. of Washington, Seattle*
Panelist: **Esther Tippmann**, *U. of Galway*
Discussant: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Discussant: **Erkko Autio**, *Imperial College Business School*
Organizer: **Gianluigi Giustiziero**, *IE Business School*
Organizer: **Tobias Kretschmer**, *LMU Munich*
Organizer: **Jingya You**, *U. of Illinois at Urbana-Champaign*

Recent years have witnessed rapidly growing interest in the topic of scaling within management scholarship. Existing research has explored the phenomenon of scaling from different perspectives, such as high growth rates, organizational scaling, digital scaling, and global scaling. Along with the emergence of various streams of scaling research, different definitions of the concepts of ‘scaling’, ‘scalable’, and ‘scalability’ have been advanced and operationalized. This PDW aims to integrate these emerging conversations and provide an overview of this field that is especially valuable to junior scholars. The PDW will be structured with four panelists drawing on their research to present important perspectives on scaling, followed by a commentary discussion by two experts in the field. In addition, we will engage with audience members through various activities, including polls, a Q&A session, and breakout discussions. By assembling a group of scholars undertaking cutting-edge scaling research, we hope to advance our understanding of the scaling phenomenon, provide junior scholars with an overview of the topic, and facilitate discussions to generate new ideas for future research.

Panelist: **Amir Goldberg**, *Stanford U.*
Panelist: **Navid Asgari**, *Fordham U.*
Panelist: **Mario Daniele Amore**, *HEC Paris*
Discussant: **Ehsan Valavi**, *Massachusetts Institute of Technology*
Discussant: **Ralph A. Heidl**, *U. of Oregon*
Discussant: **Harshvardhan Ketkar**, *Bocconi U.*
Discussant: **Deepak Nayak**, *The Ohio State U. Fisher College of Business*
Discussant: **Mario Daniele Amore**, *HEC Paris*
Discussant: **Balazs Kovacs**, *Yale School of Management*
Discussant: **Amir Goldberg**, *Stanford U.*
Discussant: **Shinjinee Chattopadhyay**, *U. of Illinois*

LLMs have captured widespread attention. Despite the hype about their disruptive impact across industries, it is undeniable that these models possess an extraordinary capability to grasp the intricacies of human language and cognition. Consequently, recent explorations tried to elucidate LLM's interactions with human subjects. However, our PDW's perspective extends beyond this—we contend that LLMs can serve not only as subjects of examination but also as powerful research tools, substantially benefiting management scholars in two fundamental ways: Amplifying Research Productivity: LLMs can significantly enhance researchers' productivity in their existing, familiar research endeavors. Unlocking New Insights: LLMs have the potential to unearth novel insights from vast troves of textual data, broadening the horizons of research possibilities. The proposed PDW comprises three segments: 1st Segment: Five speakers will discuss how they harness LLMs for their research pursuits, offering valuable insights into their practical applications. Each speaker will have 16 minutes to discuss 1) why they turned to LLMs—rather than other tools—and how they help them in their research; 2) what the risks and challenges of using LLMs for research are. 2nd Segment: Next, eight scholars who actively use LLMs will lead discussion groups. Each participant will join a group to discuss their manuscript or ideas with other members and the assigned scholar. 3rd Segment: The PDW will conclude with volunteers from each table highlighting the discussed ideas and research opportunities to the audience. The PDW aspires to motivate and help management scholars benefit from LLMs' opportunities while highlighting their pitfalls.

The Empirical Research on Organizational Search: Current Approaches and the Path Forward

Organizer: **Sukhun Kang**, *UC Santa Barbara*
Organizer: **Cha Li**, *U. of Texas at Austin*
Panelist: **Stefano Brusoni**, *ETH Zürich*
Panelist: **Abhishek Nagaraj**, *UC Berkeley & NBER*
Panelist: **Melissa Schilling**, *New York U.*
Panelist: **Hart E. Posen**, *Dartmouth College, Tuck School of Business*
Presenter: **Helge JD Klapper**, *Purdue U.*
Presenter: **Madeline King Kneeland**, *Babson College*
Presenter: **Matteo Tranchero**, *Haas School of Business, UC Berkeley*

The topic of organizational search has received extensive attention from strategy and management scholars, evolving into a prominent field of research over recent decades. While significant progress has been made, there remain important areas where our understanding of organizational search can be enhanced. These underexplored areas hold considerable promise for future research, especially given the emergence of new data sources and empirical methodologies. In this PDW, we aim to reflect on the empirical opportunities enabled by new data sources and empirical methodologies, bringing together a group of leading scholars on organizational search. Overall, the goal of this PDW is to provide a platform where scholars can share recent advancements in empirical opportunities and provide useful insights into how next-generation scholars may employ these opportunities to make theoretical advancement in organizational search. This two-and-a-half-hour PDW will follow a four-part format. In the first part, four leading scholars (Stefano Brusoni, Abhishek Nagaraj, Melissa Schilling, and Hart Posen) will share high-level insights and editorial perspectives on the empirical research of organizational search. The second part will showcase some working papers from emerging junior faculty (Helge Klapper, Madeline Kneeland, and Matteo Tranchero) who study organizational search. The third part will consist of a semi-structured panel discussion among the presenters. The last part will contain roundtable discussions that enable further interactions between the participants and the presenters. Prospective participants will apply to the PDW by submitting a brief description of a research idea to be explored with the discussants and other participants.

Participation is open to all for the panelist presentations, but pre-registration is required for the round table discussion. To participate in the round table discussion, please fill in this form by Monday, July 1, 2024: <https://forms.gle/84FVgpUW6WPmCIT98>. Acceptance notifications will be sent by mid-July. If you have any questions, please contact Sukhun Kang (sukhunkang@ucsb.edu) or Cha Li (cha.li@mcombs.utexas.edu).

Private Equity and Alternative Ownership/Governance: Research Opportunities for Strategy Scholars

Organizer: **Paul Nary**, *The Wharton School, U. of Pennsylvania*
Organizer: **Vikas A. Aggarwal**, *INSEAD*
Panelist: **Gautam Ahuja**, *Cornell U.*
Panelist: **Francesco Castellaneta**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*
Panelist: **Claudine Madras Gartenberg**, *The Wharton School, U. of Pennsylvania*
Panelist: **Rosa Kim**, *Oklahoma State U.*
Panelist: **Harbir Singh**, *U. of Pennsylvania*
Panelist: **Margarethe F Wiersema**, *U. of California, Irvine*
Panelist: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

Building off the success of the inaugural PDW on this topic during the AOM 2023 in Boston, this PDW will bring together a community of scholars interested in issues of strategy and organizations to better understand forms of ownership and governance under the umbrella of private equity and private capital. These forms represent either alternatives or challenges to public corporate ownership. While many of the prominent scholars studying this topic have been from the finance discipline, we feel that: (1) a strategy and organizations lens would be of unique value in understanding alternative ownership and governance forms as phenomena; (2) the emergence and continuing evolution of various ownership and governance forms such as PE, VC, SPACs, etc., bear important implications for firm strategies and outcomes; and (3) using these contexts for research can help us more deeply understand key questions related to corporate scope, firm capabilities, corporate governance, alliances, ecosystems, and so on. In our view, there can and should be significantly more work on these topics in the mainstream strategy, organizations, and management journals. This PDW will serve as a “primer” for scholars interested in using this industry as a context for strategy research. We will have a panel of both senior and junior scholars who can speak to potential research directions and current work in this area, and will include a set of roundtable discussions for scholars interested in doing research in this domain. The ultimate goal is to continue to develop a vibrant research community oriented around these issues following the highly successful inaugural session of this PDW at AOM 2023 in Boston.

Pre-registration is not required, but strongly suggested, especially if you intend to participate in the roundtable discussions of your relevant research in process. To pre-register, please email us at aompepdw@gmail.com and include your affiliation and research topic of interest.

Facilitator: **Antonina A. Bauman**, *Baker School of Business, The Citadel*

This session offers participants an opportunity to enhance their repertoire of experiential learning (EL) methods that may be appropriate for all types of management courses, and is designed for management educators at all career stages. Beginning with introductions and brief overviews of each of the methods provided for roundtable discussion, we introduce considerations of assessment in experiential learning so that each roundtable may integrate these elements into their discussion. We then break out into groups facilitated by method experts who engage participants in a discussion of their experiential learning method in terms of its considerations for use, relevant elements of implementation, and other issues as raised by participants. We conclude with a discussion of insights and next steps. The PDW offers a comprehensive exploration of 8 experiential learning methods, addressing the theme of "Innovating for the Future." Participants can expect to leave with an expanded view of experiential learning methods, tips and takeaways from discussions with peers, and an enriched network of experts representing multiple experiential learning approaches.

Creating Business School Education for Sustainability in One Year “for Free”

Participant: **Linda Irwin**, *SeeComm Group*

Participant: **John Lindholm**, -

Participant: **Kenneth Sagendorf**, *Regis U.*

Participant: **James A F Stoner**, *MSR*

Participant: **James Weichert**, -

Participant: **Anindo Bhattacharjee**, *Woxsen U., Hyderabad, India*

This workshop brings together colleagues who are using bold, innovative, inexpensive, and speedy approaches to transform business education to meet the sustainability challenges of the 21st Century. The PDW will create shared learning on current projects and partnerships for future initiatives by building on recent accomplishments and commitments of all participants. In small breakout groups, audience members and speakers will share their experiences changing research, curricula, and positive activism on campuses around the world. Those campuses are pivoting away from teaching and supporting business-as-usual mindsets and practices toward investing their resources into creating a sustainable/flourishing/regenerating world. Contributors to the workshop include colleagues working in many schools and particularly with Woxsen University in Hyderabad, Telangana, India. Woxsen is collaborating with other business schools in transforming its entire business school to be fully aligned with the need for a sustainable, poverty-alleviating, world. It is doing so publicly and transparently in one year (from July 2023 to July 2024) with essentially no extra financial resources. It is demonstrating that any business school can do the same in just one year -- or faster -- “for free.” Come to the session to be inspired by bold new transformations in business education.

Over the past several decades, practitioners and scholars alike have paid substantial attention towards the work/life interface. In particular, navigating parenthood and academia presents unique challenges for organizational researchers, such as navigating children's schooling choices amid job market options, making major family decisions during the tenure clock, and balancing parenting demands amid non-traditional work hours and high role demands. The goal of the proposed professional development workshop (PDW) is to expose challenges associated with being a parent-academic, provide a forum for parents (or hope to be parents) within academia to connect, and generate fruitful suggestions for navigating these challenges over different phases of scholars' parenthood and academia journeys. This proposed PDW invites prominent scholars in the field to share their experiences of parenthood within academia, as well as draw upon relevant literature in this space. Following the discussants' comments, participants will be invited to participate in breakout table sessions with the discussants and other invited facilitators. The purpose of the breakout sessions will be for participants to share and generate collective guidance for navigating the challenges of parenthood and academia. This PDW aims to bring light towards the challenges associated with navigating parenthood in academia, as well as the development of collective guidance for addressing them.

The purpose of this professional development workshop is to provide a forum where careers scholars can participate in research discussions with other scholars who study similar topics, facilitating potential research collaborations amongst researchers. Attendees will have the opportunity to participate in two 40-minute roundtable discussions moderated by 2-3 accomplished Careers scholars. We encourage attendees to come with research ideas that they can discuss. We have chosen eight themes that reflect contemporary topics in careers research: (1) Future of Careers, (2) Career Success and Well-being, (3) Career Interventions & Mentoring, (4) Career Transitions, (5) Career Choice, (6) Entrepreneurial Careers, (7) Diversity Issues in Careers, and (8) Culture and International Careers. This PDW serves as a platform for careers scholars to build connections with each other, which may also lead to future research collaborations.

Preserving the Dignity of the Identity of Others

Coordinator: **Eric Gautier Laurent**, *IRG, U. Gustave Eiffel, U. Paris-Est Créteil, F-77454 Marne-la-Vallée*

Speaker: **Patrick Mathieu**, *Patrick Mathieu Singularity*

Speaker: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*

Session Chair: **Catherine Voynnet Fourboul**, *U. Paris Pantheon Assas*

Participant: **Hayoung Park**, *U. Paris-Panthéon-Assas*

Unethical behavior in business, resulting in loss of dignity for employees and teams, increasingly calls for higher levels of consciousness, reflection and action. Furthermore, to satisfy the search for lasting solutions to our society's current problems, we see growing interest in alternative philosophies and ethical systems (Marques, 2012). From this standpoint, this workshop, developing since 2020, seeks to discover and explore a model of singular consciousness (Gautier, Voynnet-Fourboul, 2019) that provides the means to decrypt one's singularity scenario (Mathieu & Monneyron, 2015). After modeling the leadership of a world-renowned entrepreneur in the 2021 PDW, examine the element of consciousness from a Buddhist perspective in the 2022 PDW, this 2024 edition seeks to deepen the spiritual component of individuals' singularity process dealing with discrimination and the refusal of otherness, by using Mandela's model (2008). This workshop can be useful for students, teachers, researchers and practitioners who are considering a transdisciplinary approach to human well-being in personal and professional environments.

Leveraging Dr. King's Christian Love Spirituality for Peaceful Conflict Resolution: Prospects

Session Chair: **R Ray Gehani**, *Kent State U.*

Participant: **Scott Myers**, *Good Place Myers Industries*

Participant: **Nishant Gehani**, *Rodan Energy*

Participant: **Harley Tipton**, *Kent State U.*

Just like his mentor Mahatma Gandhi, Nobel Peace Prize winner Dr. Martin Luther King Jr., as he underscored to all of us in his renowned "I Have a Dream" speech in front of President Lincoln in Washington D.C., that he believed deeply in using peaceful persuasion for a better future for his small children (Carson, 1998). Till his last rushed breath, Dr. King remained steadfast to his two convictions: (A) Christian love spirituality, and (B) Mahatma Gandhi's Satyagraha practices. He discovered that the Christian doctrine of love, presented in conjunction with Gandhi's nonviolent way, offers millions of African Americans their most spiritually potent force to gain their freedom. This was not easy (we agree). Soon after the bombing of his home, Dr. King delivered a sermon at his Dexter church: "It's Hard to be Christian" (Jackson, 2008: 115). He cautioned his supporters that Christian faith was costly by definition - demanding dangerous and costly altruism. Though, towards the end of his shortened under 40 life, seeing the sky-rocketing popularity of his rival African American leader Malcolm X, Dr. King may have started developing some doubts regarding the pace of his peaceful outcomes. The diverse presenters of our timely and innovative PDW will help explore collectively with our more diverse AOM participants, these ideas along with some potential prospects and pitfalls of Dr. King's dual innovative peace-based strategy for our children's and grand-children's better future.

Emerging Quantitative and Qualitative Research Approaches for Empirical OSCM Research

Organizer: **Tingting Yan**, *Texas Tech U.*

Organizer: **Andreas Wieland**, *Copenhagen Business School*

Organizer: **Wendy Tate**, *U. of Tennessee*

Panelist: **Vikram Bhakoo**, *U. of Melbourne*

Panelist: **Sangho Chae**, *Warwick Business School*

Panelist: **Elena Giovannoni**, *Birmingham Business School, U. of Birmingham, UK*

Panelist: **Alexandra Brintrup**, *x*

This symposium focuses on expanding the quantitative and qualitative research landscape in supply chain management (SCM). Echoing the call for methodological diversity, it will discuss the potential of emerging research methods, both quantitative (e.g., agent-based modeling, secondary data analysis, experiments, machine learning) and qualitative approaches (e.g., interpretive research, narrative research, and ethnography) for empirical OSCM research. Based on underutilized or improperly executed approaches in OSCM research, a panel and round-table discussion of these approaches offer fresh insights into complex phenomena and foster innovative development of forward-looking theories. The key goal of this workshop is to help OSCM scholars master innovative research methods for making theoretical contributions.

Discussant: **Llewellyn D W Thomas**, *IESE Business School*
Discussant: **Jens Schmidt**, *Aalto U., Department of Industrial Engineering and Management*

Running for the third consecutive year, this PDW aims to foster an interdisciplinary exchange of knowledge and ideas on platforms and ecosystems. This year, the workshop focuses on topics related to adaptation within platforms and ecosystems by considering adaptation from the perspectives of both more and less powerful actors. Specifically, we encourage exploration of the reasons, methods, timing, and implications of structural, procedural, resource, capability, and leadership changes by both powerful actors (e.g., platform owners and sponsors, keystone ecosystem actors) as well as less powerful ones (e.g., complementors, consumers). These conversations aim to contribute to a richer and more comprehensive understanding of the antecedents, processes, and outcomes of platform and ecosystem adaptation; inspire new ideas; and encourage collaboration among scholars from different disciplines and theoretical traditions.

Management studies is rapidly gaining historical consciousness. Leading management journals—including the Academy of Management Review, Strategic Management Journal, Journal of International Business Studies, Journal of Management Studies, Organization Studies, Strategic Entrepreneurship Journal, Family Business Review and Academy of Management Perspectives—have recently devoted special issues to encourage researcher to explain the historical situatedness of management and organizations. Despite the significant advances, the insights, potential and contributions of historical research remain scattered across diverse research streams. To further shed light on this growing area of scholarship, we bring together a combination of panel presentations by distinguished scholars with significant work on this topic and interactive round table discussions with workshop participants to explore the breadth and depth of historical research conducted in management and organizations studies. The proposed workshop is built on the success of last two years' PDWs and will likely continue this series. It is of interest to researchers working in the areas of organization and management theory, strategic management, entrepreneurship, international management, and management history.

Now in its 13th year, the STR Junior Faculty Paper Development Workshop aims to provide junior scholars with the opportunity to receive developmental feedback on their current research projects from a panel of distinguished scholars. With expertise in a diverse range of topics and methods, the panelists will discuss junior scholars' papers and give advice on how to improve. The workshop is particularly suitable for junior faculty who are struggling with their papers, e.g., a paper that has been rejected or received contradictory reviews. In the process of paper discussions, senior scholars will also have an opportunity to share their best practices in research.

To apply, please complete the registration form (<https://forms.gle/NFV6PAizbJD4i9>). Our deadline is June 1st, 2024; however, we encourage you to apply early. Note that accepted participants will be informed before the end of June. Only accepted participants can attend the session.

Panelist: **Olena Mazurenko**, *Indiana U.*

Securing external funding is becoming an increasingly important aspect of academic appointments, even as funding opportunities are becoming more competitive. Understanding how to navigate the application process can provide a critical advantage to grant applicants in this challenging landscape. Federal agencies including the National Institutes of Health (NIH) and the Agency for Healthcare Research and Quality (AHRQ) are among the major funding bodies for many U.S. based Health Care Management (HCM) researchers. Understanding how grant applications are reviewed in these agencies can help researchers better prepare for the peer review process and craft applications that are more competitive. This session will provide participants with an insider view of the peer review process through a mock study section, complementing the expert insights from the Research Grant Development: An Overview of Process and Funding Agencies PDW. Peer reviewers with experience serving on Federal study sections will demystify the review process by demonstrating how grant applications are read, discussed, and scored. These reviewers will also provide their insights and guidance during discussions with participants. Keywords: health care management, funding, grants, NIH, AHRQ, peer review

This interactive PDW provides participants with a practical framework for developing theory from empirical research in extreme contexts, which are organizational settings where potential adverse events and harm arise from risks, emergencies, and disruptions. The PDW is designed for scholars whose primary interest is extreme contexts as well those considering doing research in this area for the first time or as a one-off project. Participants will be introduced to a comprehensive and dynamic framework for theorizing in and from extreme contexts research, which comprises four distinctive modes of engagement: (1) Adventuresome Inquiry; (2) Instrumental Scholarship; (3) Ideological Improvement; and (4) Reflexive Labor. To give participants a taste of each mode of engagement and how different modes can be combined, a group of early career scholars, mid-career researchers, and senior academics will share examples from their own research in extreme contexts, including mixed martial arts, emergency departments, storm chasers, war-torn areas, bushfires, women entrepreneurs in Afghanistan, and the pandemic. Scholars will also offer Indigenous and African perspectives on extreme contexts. In roundtable discussions with facilitators, participants will gain practical insights for adapting the four modes of engagement in their own empirical research for more generative theorizing.

Ethical Data Governance in Design, Practice, and Education

Participant: **Elizabeth Davidson**, *Shidler College of Business, the U. of Hawaii at Manoa*

Participant: **Jeffrey V. Nickerson**, *Stevens Institute of Technology*

Participant: **Jennifer Chandler**, *Cal. State Fullerton*

Participant: **Ina Sebastian**, *MIT Sloan School of Management*

Participant: **Lauri Kristian Wessel**, *European Uni Viadrina, Frankfurt (Oder)*

Growing stockpiles of digital data, arising from ubiquitous digitalization and consumerization of IT, present untold opportunities for innovation and societal benefit. However, these data also pose substantial risks to privacy, autonomy, equity, and social inclusion. Balancing these issues calls for ethical approaches to data governance within and across organizations to maximize societal benefits while mitigating negative outcomes. Yet achieving such balance presents formidable organizational and technical challenges. Responding to the conference theme, *Innovating for the Future: Policy, Purpose, and Organizations*, in the context of digital data management and governance, this PDW addresses the relationships between policy, purpose, innovation and value in the creation and uses of digital data resources and examines approaches to embed effective ethical governance approaches into data management technologies, sociotechnical platforms, and organizational practices. The PDW also explores policy, processes and practices to respond to societal regulation of digital data resources intended to ensure privacy, autonomy and equity while also facilitating the innovative potential and value of data resources. The objective of the PDW is to highlight practical actions that management scholars and practitioners can take to “bake” ethical data management and governance into organizational (and interorganizational) technologies, practices and strategies. The workshop format will engage participants actively with issues and techniques to address challenges.

Calls for advancing a Responsible Management Learning agenda (Laasch et al., 2020) and frameworks of curriculum development that promote responsibility, sustainability and ethics are mobilizing interesting responses in redesigning and not merely rethinking executive education and leadership development (Guttel, 2021; Moldoveanu & Narayanda, 2022). Leadership development reflects a healthy balance of diachronic and synchronic elements in terms of learning practices ranging from innovations in experimental approaches (Birkenshaw & Gudka, 2022); art-based (Antonacopoulou and Taylor 2019a; 2019b); coaching and mindfulness (Badham & King, 2019); responsibility and conscience (Miska & Mendenhall, 2018) alongside established methods like action learning (Revens, 1982); collaborative and appreciative inquiry (Shani and Coghlan, 2021) to name but a few. This PDW builds on the success of last year's launch of the series of AOM PDWs and other international fora intended to mobilize the momentum and respond to the creative systems changes called for this 'decade of action' (UN, 2021) and the priority of responsible leadership to take centre stage (WEF, 2021) in addressing United Nation Sustainable Development Goals (UNSDGs). We recognise that the achievement of the SDGs through innovations in management education requires creative and pluralistic approaches that embrace both a Global North and Global South perspectives, taking into consideration differences in the challenges of sustainability and the on-going geopolitical inequalities in resources and power. This PDW creates space to contribute to the ongoing problematisations and provocations whilst also showcasing emerging promising practices in management education and leadership development for radical change in the SDGs at different levels – through the way we (1) design and deliver management education, (2) co-create and use technology for transformation, (3) listen and engage students themselves in leadership and transformation, (4) challenge business school structures and cultures, (5) train and prepare those who teach in business schools to deal with the SDGs, and (6) organise and transform shared societal structures to accelerate the achievement of the SDGs. We promote therefore, a grander ambition for the innovations called for and the scope this provides for Business Schools to realize their impact in shaping a better world. We frame this as advancing a human flourishing agenda, which is anticipated to mark the makings of the 5th Industrial Revolution (Antonacopoulou, 2024) which has already catalysed a significant momentum in academic, practitioner and policy fora (Las Heras et al., 2023; VanderWeele, 2017). Business Schools need to develop a learning leadership capacity building orientation that works for the individual learners, that supports directly the leadership across levels (individual, team, organization) and propels impact that is marked by choices based on practical judgements that elevate decisions made as a direct response to grand challenges of our time.

Discussant: **Songqi Liu**, *National Science Foundation*
Discussant: **Ajay Mehra**, *U. of Kentucky*
Discussant: **Francesca Pallotti**, *U. of Exeter Business School*
Discussant: **Le Zhou**, *TexasA&MU*.

This workshop aims to provide participants (in particular junior faculty and PhD students) with an understanding of how to publish organizational network studies in management journals. The study of networks within and between organizations is a growing field of research with its own unique opportunities and challenges. It is unusual in that it has theoretical relevance at the individual, team, organizational, and industry level; and can be integrated with a broad range of management theories. Therefore, it has broad applicability across the members of many of the academies divisions and interest groups. The opportunity to apply an organizational network framework across a broad range of topics also provides challenges. For example, understanding what research questions are relevant for a broad management audience is not always obvious. Network analysis has seen new statistical methods that provide opportunities and challenges, such as how to convey these new models to a wider management audience. This workshop, originally designed by the LINKS Center for Social Network Analysis of the University of Kentucky and the University of Exeter Centre for Social Networks, sees the unique opportunity to bring together 15 leading academics who have published in a wide range of top management journals. The format of the workshop includes a panel session and small roundtable discussions where individual papers from participants (submitted prior to the workshop) will be discussed.

Introduction to Social Network Analysis

Organizer: **Prasad Balkundi**, *U. at Buffalo, The State U. of New York*
Organizer: **Daniel S. Halgin**, *U. of Kentucky*
Presenter: **Raina A. Brands**, *UCL School of Management*
Presenter: **Richard DeJordy**, *Rochester Institute of Technology*
Presenter: **Yong Kim**, *Texas A&M U.*
Presenter: **Evelyn Ying Zhang**, *Nanyang Business School, NTU Singapore*

Social network analysis is a field of study that focuses on social relations among a set of actors—people, teams, and organizations. Network researchers have developed a set of distinctive theoretical perspectives and methodological techniques for data collection, statistical analysis, and visual representation. This PDW's goals are to: • Introduce members of the Academy of Management to social network theory and analysis • Discuss micro, meso, and macro management research based in social network theory • Introduce participants to UCINET and other social network analysis tools • Guide participants on how to learn more about social network analysis and how to apply in their research

Temporality and Technology: Temporal Dynamics of Technology Emergence and Development

Organizer: **Nina Granqvist**, *Aalto U.*
Organizer: **Mia Chang-Zunino**, *ESCP Business School*
Discussant: **Henri Schildt**, *Aalto U. School of Business*
Panelist: **Shahzad Ansari**, *U. of Cambridge*
Panelist: **Raghu Garud**, *Pennsylvania State U.*
Panelist: **Stine Grodal**, *Northeastern U.*
Panelist: **Violina Rindova**, *U. of California-Irvine*

This PDW brings together prominent scholars and ongoing empirical research projects in the emerging literature on the role of temporality in technology emergence and development. Traditionally, the literature on technology emergence and development has treated time as a continuous and unidimensional construct, as a backdrop on the X-axis. Lately, scholars have begun to challenge these assumptions and explore the multiple ways in which temporality—defined as socially construed understandings of time—shape technologies. The objective of this PDW is to foster conversations and support research in this emerging area. The PDW begins by featuring four keynote presentations from panelists who have been trailblazing this topic to gain insight into this emerging trend in the literature. Led by the panelists, the workshop takes an inventory of what has been accomplished so far and maps out unanswered questions and future research directions. The latter part of the workshop is designed to help researchers refine their emerging empirical projects on this topic, and fine-tune their research designs. Our 20 pre-selected participants will then break into five roundtables, each lead by one of the PDW experts. Within these interactive roundtables, participants will pitch their research designs to the roundtable chair and collect expert feedback.

The PDW is structured to two parts: Part 1 is dedicated for the panelists' presentations followed by audience Q&A, and is open to all conference attendants. Part 2 is a paper development workshop. Participation here is limited to 20 pre-selected participants who present their research design or idea to the experts. If you wish to join the developmental session, please submit a 1-2 page summary of your project to Mia Chang-Zunino (mchang@escp.eu) by Jun 21, 2024. We will select the participants based on the quality of their research ideas and their potential to contribute to the emerging literature.

CAR Meet the Editors' Panel Discussion

Organizer: **Janine Bosak**, *Dublin City U.*
Organizer: **Annabelle Hofer**, *U. of Cologne*
Organizer: **Sherry E. Sullivan**, *Bowling Green State U.*
Organizer: **Eric J. Michel**, *Northern Illinois U.*
Organizer: **Christina Li**, *U. of Oklahoma*
Panelist: **Jonas W. B. Lang**, *U. of Exeter*
Panelist: **Daniel Spurk**, *U. of Bern*
Panelist: **Beatrice Van Der Heijden**, *Radboud U. Nijmegen*
Panelist: **Alexander Newman**, *Melbourne Business School, U. of Melbourne*
Panelist: **Jennifer A. Harrison**, *EM Normandie Business School, Métis Lab, France*

Publishing in leading internationally renowned careers and psychology journals is a primary means by which our research work in the field of careers is disseminated as new knowledge to scholarly 'conversations'. Publishing in these leading internationally renowned journals is also critically important to career success in academia. Yet careers scholars may still find it challenging to decide whether to target a classic 'careers' journal such as for example the Journal of Vocational Behavior or to target psychology journals such as for example the Journal of Applied Psychology to best place their career-focused papers. Awareness of how these journals vary in their positioning, review processes and appetite for careers research are important subjects for careers scholars making tough choices about where to submit their work. The goal of this PDW is therefore (a) for the panellists to share information regarding the publishing of careers research in leading internationally renowned journals from the careers and psychology field (here, Journal of Applied Psychology, Journal of Vocational Behavior, European Journal of Work and Organizational Psychology, Applied Psychology: An International Review, Career Development International); and (b) for participants to have their burning questions answered. The panel will consist of two editors-in-chief, and three associate editors. Each editor will provide a short overview of their journal (e.g., vision, scope, characteristics of an 'ideal' paper, review process), followed by Q&A to engage the audience. This format will allow participants to ask the editors more targeted questions, while in a comfortable and psychological safe environment.

The New Landscape of Teaching Diversity, Equity, and Inclusion in 2024

Participant: **Joy E. Beatty**, *Eastern Michigan U.*
Participant: **Susan S. Case**, *Case Western Reserve U.*
Participant: **Lindsay Dhanani**, *Rutgers U., School of Management and Labor Relations*
Participant: **Rebecca M. Paluch**, *Sauder School of Business, U. of British Columbia*
Participant: **Dana McDaniel Sumpter**, *Pepperdine Graziadio Business School*
Presenter: **Alison M. Dachner**, *John Carroll U.*

The diversity, equity, and inclusion (DEI) space remains lively in 2024, with an expanding set of stakeholders focused on competing agendas on diversity education at the college level. Political attention has heightened, with state proposals regulating permissible DEI topics and cutting DEI campus funding. Amid this, our university context necessitates faculty to develop inclusive strategies to discuss DEI with students that is aligned with the state's political reality. Business students must acquire competency in working with and leading diverse teams as a vital business skill. Building off of last year's well-attended and successful professional development workshop (PDW), this workshop aims to share best practices for DEI classroom discussions, addressing both central challenges and opportunities that exist in today's climate. Participants will hear from a panel of experts on teaching DEI and participate in small group discussions to help them craft their narrative rationale and personal approach for teaching DEI-related topics. Experienced and new faculty are welcome.

SAP IG - Breakfast

Organizer: **Christian Bruck**, *WU Vienna U. of Economics and Business*

Organizer: **Omid Omidvar**, *Warwick Business School*

Organizer: **Madalina Pop**, *Aarhus BSS, Aarhus U.*

Get ready for a morning of networking and knowledge-sharing at this year's Interest Group Breakfast! Since our SAP community keeps growing, you are specially invited to join your peers for this exclusive event that promises a perfect start into another conference day, with insightful conversations, and, of course, a free cup of coffee for all attendees! This year, we again cordially invite valued members of the Global Citizen Program to join us during our special social networking event.

Event Details:

- Day & Time: Sunday, 11th August 2024, 7:30 AM - 9:00 AM
- Location: Corner Bakery, London House Chicago (1st Floor, Curio Collection by Hilton), ENTRANCE ON WACKER DRIVE, 360 N Michigan Ave, Chicago, IL 60601

Event Highlights:

- Networking with senior scholars: Engage in meaningful conversations and build connections with esteemed senior scholars in your field of interest.
- Welcoming newcomers and reconnecting with old-timers: Extend a warm welcome to newcomers while reconnecting with colleagues you've known for years. It's a great chance to foster new relationships and strengthen existing ones.
- Enjoying a free coffee: Have breakfast together enjoying a free cup of coffee in the company of your fellow academics.

2024 Gathering of POS Scholars at AOM Presented by the Center for Positive Organizations

Organizer: **Kelsey Walz**, *Center for Positive Organizations*

This breakfast experience organized by the Center for Positive Organizations gathers together the community of scholars applying the concepts and theories in the field of Positive Organizational Scholarship (POS) in their research. Please, join us for the POS gathering to build community, connect with research collaborators, learn about new developments in the field, and generate energy about the possibilities created by using the POS lens.

Speaker: **Karen Schnatterly**, *Virginia Tech*
Speaker: **Till Talaulicar**, *U. of Erfurt*

Fitting with the “Innovating for the Future” theme of the conference, the goal of this caucus is to share, develop, and discuss emergent ideas examining the effects of board structure, composition, and dynamics on corporate innovation strategies and outcomes. By bringing together experts from corporate governance and innovation, it is our intention to create cross-fertilization between both research fields and develop a future research agenda.

The board of directors is at the apex of making strategic decisions, setting long-term objectives, and advising and monitoring management during strategy implementation (Fama & Jensen, 1983; Forbes & Milliken, 1999; Hillman & Dalziel, 2003). Building upon that premise, a large body of research has demonstrated how the structure, dynamics, and functions of boards affect corporate development activities, such as marketing strategies and financial restructuring (e.g., Baysinger & Hoskisson, 1990; Bowman & Singh, 1993; Finkelstein, Hambrick & Cannella, 2009; Pugliese et al., 2009). Yet, there has been surprisingly limited research on how boards of directors affect firm innovation strategies. This is remarkable given the recent studies that have shown how CEOs and top management teams have strong influences on firm innovation outcomes (Boone et al., 2019; Kiss et al., 2020; Kurzhals, Graf-Vlachy & König, 2020; Singh et al., 2021). Extending research in this area is also timely given the increasing diversity in innovation strategies that firms can adopt, including open innovation policies, platform strategies, and corporate venturing (Kretschmer et al., 2022; Masucci, Brusoni & Cennamo, 2020; Waldkirch, Kammerlander & Wiedeler, 2021). Given this lack of cross-fertilization between these two research fields in strategic management, we believe there are plenty of opportunities for future research. On the one hand, boards are increasingly involved in steering and controlling firm innovation strategies. For example, the appointment of chief technology and/or chief digital officers as well as the formation of board technology committees indicate the importance of innovation for directors (Clark et al., 2020; Firk et al., 2021; Kunisch, Menz & Langan, 2022). On the other hand, firm innovation strategies have become progressively integrated with overall corporate and business strategies. For instance, firms can intentionally use acquisitions as a matter of obtaining breakthrough technologies or commercialize the outcomes of their R&D activities (Ahuja & Katila, 2001; Bhussar et al., 2022; Vinokurova & Kapoor, 2020). Firms can also pursue innovation through joint product development or out-licensing through various forms of partnerships (Klueter, Moreira & Ofoedu, 2023; Oxley, 1997; Oxley & Sampson, 2014). Interestingly, both acquisitions as well as partnerships have their own unique governance challenges that corporate boards, technological committees or chief technology officers need to deal with. This caucus intends to bring together academic experts in corporate governance as well as key scholars in R&D and innovation. Corporate governance scholars have long specialized in the role of board structure, composition, functions and board dynamics. Research in innovation has long focused on different aspects of firm innovation. By bringing together scholars from both fields we intend to establish a future research agenda. Each of the speakers will build upon their prior work and insights on the topic and give their perspective on the intersection of boards and innovation. By providing the audience with the opportunity to question these specialists, the caucus aims to create fertile ground for interaction and collaboration on this theme of research among all attendants.

Hybrid Work Arrangements

Organizer: **Karin Sanders**, *UNSW Business School, Australia*

Organizer: **Andrew Dhaenens**, *UNSW Sydney*

Organizer: **Huadong Yang**, *U. of Liverpool*

The impacts of the COVID-19 pandemic continue to challenge traditional work arrangements. Researchers worldwide are studying hybrid work arrangements concerning the various needs and preferences of working in organizations. This caucus aims to openly discuss research relating to hybrid and flexible work arrangements and explore future ways of collaboration.

Reimagining Creative and Knowledge Work in the Age of Generative AI

Organizer: **Shiyan Zhang**, *Lancaster U. Management School*
Organizer: **Deborah Mateja**, *U. of Mannheim, Business School*
Organizer: **George Kuk**, *Nottingham Trent U.*
Presenter: **Jeffrey V. Nickerson**, *Stevens Institute of Technology*
Presenter: **Youngjin Yoo**, *Case Western Reserve U.*
Presenter: **Marleen Huysman**, *KIN Center for Digital Innovation, Vrije U. Amsterdam*
Presenter: **Ingrid Erickson**, *Syracuse U. School of Information*
Presenter: **Moran Lazar**, *Tel Aviv U.*

In an era shaped by the transformative influence of generative AI, this interdisciplinary workshop aims to explore the coevolution of human ingenuity and technological advancement. Designed for scholars across diverse fields such as information systems, organizational behavior, strategy, and technology and innovation management, this workshop seeks to unpack the impacts of generative AI on the creative processes and practices of knowledge work. The objectives encompass fostering creativity by transcending traditional knowledge boundaries, synthesizing a deeper understanding of generative AI's potential in sculpting present and future knowledge work landscapes. Hereby, we seek to cultivate critical discourse around advanced toolsets for designing and navigating AI-integrated work environments and building a network of multidisciplinary thought leaders for rich dialogue and potential research collaborations focused on the multi-layered implications of generative AI in creative and knowledge work. Through an innovative blend of panel presentations and roundtable discussions, complemented by interactive activities, case studies, and demonstrations, the workshop offers a dynamic exploration of the interconnected components of the creative and knowledge work ecosystem including task and workflow design, where human ingenuity converges with generative AI capabilities, serving as a catalyst to reimagine the future of creative and knowledge work.

Gender and Social Roles

Session Moderator: **Anna Gorska**, *Kozminski U.*

DEI: **Gender Dynamics in Hackathons: Uncovering Gender Differences in Motivation, Anxiety and Confidence**

Author: **Anna Gorska**, *Kozminski U.*
Author: **Maciej Rys**, *U. of Information Technology and Management*
Author: **Pawel Korzynski**, *Kozminski U. / Harvard U. / INSEAD*

This study investigates gender differences in motivation, anxiety, and confidence in hackathon environments. We explore whether intrinsic and extrinsic motivations mediate the relationship between gender and these psychological states. Data collected from participants at HackYeah 2023 reveal that female participants do not experience higher anxiety levels but have slightly lower confidence compared to males. Contrary to our hypotheses, neither intrinsic nor extrinsic motivation significantly mediates the relationship between gender and anxiety. However, extrinsic motivation partially mediates the relationship between gender and confidence. These findings challenge existing assumptions about gender dynamics in competitive tech settings and suggest the need for nuanced strategies to enhance female participation and confidence. The study's limitations and implications for future research and hackathon organization are discussed, emphasizing the importance of motivational factors in addressing gender disparities in hackathons.

DEI: **A Gender-Sensitive Framework for Understanding and Addressing Work-Related Intimate Partner Violence**

Author: **Laura Anne Kauzlarich**, *Northwest Missouri State U.*
Author: **Michelle Greenwood**, *Monash U.*

Intimate partner violence (IPV) is a long-standing and serious social issue that inherently impacts and is impacted by work and workplaces. Work-related intimate partner violence (WIPV) is a pattern of IPV that both directly and indirectly undermines its victim/survivors' employment, work and careers, yet scant attention has been paid in management studies to workplace responses and responsibilities regarding this form of violence. Hence, we conduct a systematic review and conceptual analysis of 111 WIPV-focused papers utilizing three well-established feminist lenses to ascertain and conceptualize what we know and do not know about the WIPV domain and, more importantly, to outline an agenda for what we should know from a gendered perspective about WIPV. We develop a gender-sensitive, multilevel framework by which we investigate and challenge the WIPV research agenda from individual, interactionist, and structural viewpoints including the interaction between those perspectives. A key purpose of this paper is to expand the notion of WIPV beyond the current focus on micro-level employment issues to include meso-level organizational issues and macro-level societal issues. A second and connected purpose is to draw attention to the need to ask big questions related to workplaces and to highlight the pivotal role of human resource management (HRM) in fostering ethical and socially sustainable workplaces. Thus, we advance the much-needed debate about WIPV, provide a template for how gender can be conceptualized in HRM and workplace research, and challenge the ethical boundaries for organizational involvement in areas traditionally deemed as private or societal.

DEI: **Money as Achievement on Person-Job Fit**

Author: **Sharmeen Merchant**, *U. of Cincinnati*
Author: **Sodiq Babatunde**, *U. of Cincinnati*
Author: **Laurens Bujold Steed**, *U. of Cincinnati*
Author: **Joseph Charles Rode**, *Miami U. Ohio*

Traditional gender-driven social roles continue to prevail despite the growing number of dual-income earning couples. While there is a vast and growing body of work considering the effects of such evolving social dynamics on females, understanding of male perceptions is nascent. Along those lines, drawing from interdependence theory, we investigate the joint effects of dual-income earning partners' considerations of money as a form of achievement on the male partner's person-job fit. Our findings support three hypotheses: Male's person-job fit increases as the focal male's and partner female's perceptions of money as achievement becomes more congruent; male's person-job fit increases as congruence is obtained at higher levels (opposed to lower levels); and male's person-job fit is lowest when congruence is obtained at moderate levels. Notably, as expected, these congruence/incongruence effects are not present when evaluating a female's person-job fit. Theoretical and practical implications specific to dual-income earners' interdependence, gender roles, and dyadic perspectives on money-related attitudes are discussed.

DEI: **Behavioral Patterns of Family-Supportive Supervision: A Latent Profile Analysis**

Author: **Amanda C. Sargent**, *Bentley U.*
Author: **Victoria Daniel**, *York U., Toronto*

Family-supportive supervision ("FSS") is viewed by scholars as a best practice in organizations and has been linked to several important individual and organizational outcomes. However, this past research has been fraught with issues that have challenged the utility of these findings. As such, Daniel, Sargent, and Shanock (2023) introduced a new conceptual framework of FSS that suggests supervisors' enactment of specific helping and hindering behaviors are the critical component of FSS, and they further assert that these behavioral patterns are more important to employees' evaluations of FSS than any one behavior in isolation. Building on this work, the current investigation explored whether distinct profiles of family-relevant supervisor behavior are experienced by employees, and if so, how these profiles might differentially predict FSS evaluations. Taking a person-centered approach, we used latent profile analysis with data collected in two waves from 257 U.S. workers representing various occupations and industries. Our findings reveal four distinct profiles of supervisor family-relevant behavior patterns (bolstering, obliging, erratic, and impairing) that indeed predict different levels of FSS evaluations. We discuss implications for theory and practice.

Disability Inclusion Practices

Session Moderator: **Anica Zeyen**, *Royal Holloway, U. of London*

DEI: Changing the Script: A Documentary-Based Masterclass in Activism  

Author: **Anica Zeyen**, *Royal Holloway, U. of London*

This documentary-based intervention empowers business school students to confront and change the scripts that systematically disadvantage people living, working, and innovating at different intersectionalities with disability. Based on a 24-month rapid research project, and complemented by published findings and podcasts featuring first-person public advocates, this intervention has already been implemented in business schools on four continents. We share our motivation, step-by-step approach, and impact.

DEI: Journey to Disability Inclusion: Past, Present, and Future- Johari Window Framework as a Solution 

Author: **Neha Kumari**, *Department of Management Studies, Indian Institute of Technology Roorkee*

Author: **Usha Lenka**, *Professor, Management Studies, Indian Institute of Technology Roorkee*

The study's objective is to find out the phases of disability inclusion in the workplace and how to apply Johari Window as a solution for disability inclusion in the workplace. The authors conducted a comprehensive review to investigate how, from the 1960s to the present, views of disability have changed along with theoretical frameworks. After completing an initial search, a thorough screening method was used to identify papers that matched the study's aims and then subject to detailed analysis. This study explores the fascinating history of disability inclusion in the workplace. In five transformational phases, this study reveals significant changes in theory and perception. Explore the cultural dynamics, human and organizational factors, and legal environment that affect accessibility, how interventions may promote an inclusive culture, from cutting-edge training programs to custom accommodations and the disability, diversity, equality and inclusion. The study also delves into the Johari Window, which provides a useful tool for recognizing and eliminating prejudices and preconceived beliefs about the inclusion of people with disabilities. Individuals may cooperate to foster an environment of acceptance and understanding by adopting this information. This study offers a novel viewpoint on disability inclusion in the workplace by outlining its development across four stages and providing insightful information on how society's perspectives are shifting. The use of the Johari window framework further enhances this study's novelty and distinctiveness.

DEI: Untangling Espoused Theories and Theories-in-Use on Employers' Attitudes to Disability Inclusion  

Author: **Fahad Alammari**, *Alfaisal U.*

Author: **Nourah Alfayez**, *Alfaisal U.*

This qualitative research aims to explore the general attitudes of managers toward the inclusion of disabled people. We interviewed 14 employers who dealt with employees with disabilities to gain insight into attitudes toward including people with disabilities in the workplace. Using Grounded Theory as a study approach, the findings revealed a paradox between the views managers state they adhere to (espoused theories) and the views inferred from their actual explanations (theories-in-use) toward the inclusion of people with disabilities. Suggesting alignment with Argyris and Schön's (1974) theory of action framework, the study proposes a need for an organizational shift from single-loop learning to double-loop organizational learning. This study serves as a reflective and evaluative model to understand this dynamic, raise awareness about this dissonance, and contribute to developing more inclusive workplace policies and practices.

DEI: Task Conflict and Inclusion of Employees Without Disabilities in Disability-Inclusive Workplace

Author: **Yu Yang**, *Central U. of Finance and Economics, Beijing, China*

Author: **Xiji Zhu**, *School of Business Administration, Hitotsubashi U.*

Author: **Yang Bai**, *Guanghua School of Management, Peking U.*

This study explores the dynamics of workplace social inclusion for employees without disabilities in disability-inclusive environments. Recognizing the critical role these employees play in fostering an inclusive workplace, the research seeks to uncover the factors that influence their level of social inclusion. Applying the affective events theory, the study examines the emotional responses of employees without disabilities to work events, particularly task conflict, and how these responses affect their levels of social inclusion. We hypothesize that contempt—a negative emotion specifically arising from task conflict—may mediate the relationship between task conflict and social inclusion difficulties among employees without disabilities. Additionally, the research investigates the moderating role of perceived social support, theorizing that it may buffer the negative impacts of task conflict. Our hypotheses are tested and supported by an empirical study of 290 employees without disabilities working in disability-inclusive workplaces. The study aims to contribute to the literature on disability-inclusive workplaces by providing insights into the experiences of employees without disabilities, the emotional underpinnings of their workplace interactions, and the significance of organizational social support in mitigating adverse affective responses.

Disability and Workplace Flexibility

Session Moderator: **Qiongjing Hu**, *Zhejiang U.*

DEI: Perfectly Accommodated or Trapped? Exploring Loneliness of People with Disabilities Working Remotely   

Author: **Qiongjing Hu**, *Zhejiang U.*

Author: **Yuting Chen**, *School of management, Zhejiang U.*

Author: **Xiji Zhu**, *School of Business Administration, Hitotsubashi U.*

Author: **David Baldrige**, *Oregon State U.*

Author: **Qianyuan Xiao**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Xiaoyun Xie**, *Zhejiang U.*

This study aims to explore the dynamics of workplace loneliness among people with disabilities (PWD) who work remotely, examine its impact on their work and life, and identify leadership behaviors that can mitigate loneliness. Through qualitative interviews with 84 individuals—75 employees with disabilities working remotely and 9 leaders who supervise PWD in remote work—we examine the experience of workplace loneliness and its implications. Utilizing repeated coding and literature retrospectives, we develop a theoretical model of the emergence, consequences and solutions of workplace loneliness for PWD working remotely. Our findings indicate that three factors in remote work context (external contact, communication quality and work independence) and two disability attributes (disability onset and severity) interact to impact the extent of loneliness. We also identify four types of leadership behaviors which can help lessen workplace loneliness (supportive communication, cooperative work design, inclusive treatment, and team intimacy development) and compare gender and age differences with regard to leader behaviors' effectiveness. Our research contributes to the disability literature by underscoring the inclusion of PWD in remote work contexts and emphasizing the often-overlooked role of leadership.

DEI: Navigating Careers as a Person with Disability  

Author: **Christoph Breier**, *U. of St. Gallen (HSG)*

Persons with disabilities (PWD) often face considerable barriers regarding their workplace inclusion on the one hand but may also receive support fostering their inclusion. This becomes especially crucial when regarding the career ambitions. Interviews with 21 employees with disabilities across three Swiss companies revealed a multitudes of career paths. Each comes with its own distinct role of disability type, onset, and agency. Three distinct career patterns emerge from the analysis: Stepping back, reinvention, and a 'model' career. They all come with internal differentiations based on the context in which they are embedded. A key finding is that disability can have both a transformative and or disruptive impact on people's careers.

DEI: Unlocking Opportunities in Closing Disability Employment Gaps 

Author: **Guanyi Song**, *Rotterdam School of Management, Erasmus U.*

Recognizing the disadvantages that the disabled population face within the labor market and the dynamic interaction between individual efforts and the web of institutional arrangements, this paper directs its focus toward understanding how a combination of measures and interventions contribute to the inclusion of differently abled individuals into workforce. Through a two-stage mixed-methods approach, we first employ an experimental audit study to examine the opportunity gap between disclosed and non-disclosed disabilities and assess the influence of enhanced individual competencies on hiring evaluations. Subsequently, utilizing fsQCA, we explore how regulatory interventions, including Reasonable Accommodation Provision, EEO Survey, and EEO Statement, combined with individual competences, work to narrow this gap. Our findings unveil that while enhanced competencies, particularly in vocational skills, do contribute positively to evaluations, their impact is not overly pronounced. This paper provides a configurative perspective on how the integration of individual, organizational, and institutional interventions collectively shapes employment opportunities for differently-abled individuals, highlighting avenues for future research in disability inclusion.

DEI: Investigating the Effects of Workplace Flexibility on Justice for People with Disabilities

Author: **Nicola Glumann**, *U. of St. Gallen*

Author: **Magdalena Schertler**, *U. of St. Gallen*

Recent years were characterized by meaningful changes in the working conditions for many employees. Specifically, access to flexibility reached a new high during the COVID-19 pandemic, spurring research endeavors on the consequences of these changes. This study contributes to these efforts by exploring the effects of reactive and proactive workplace flexibility on perceived overall justice in employees with and without disabilities. Building on the Conservation of Resources (COR) theory, we hypothesized that access to flexibility increased employees' perceived justice over time and expected a more pronounced positive effect for employees with disabilities. We tested these hypotheses in a representative sample of N = 3695 employees in Germany, including N = 488 employees with disabilities and N = 3207 employees without disabilities. We could investigate the within-person effect over time by utilizing longitudinal data collected at three measurements over one year and employing random-intercept cross-lagged panel models (RI-CLPM). According to our results, no significant effect of reactive workplace flexibility on perceived justice was found in either group. While employees without disabilities also showed no effect of proactive workplace flexibility on perceived overall justice, a positive effect of proactive workplace flexibility in employees with disabilities emerged. Our findings show a nuanced picture of the effects of different types of workplace flexibility, providing important theoretical and practical implications.

Presenter: **Patricia Guerrero**, *U. of Texas At Arlington*
Presenter: **Jimena Ramirez Marin**, *IESEG School of Management (LEM-CNRS 9221)*
Presenter: **Patricia G. Martinez**, *Loyola Marymount U.*

There are now more than 60.9 million Latinx-identified individuals in the U.S., making up more than 18.5% of the population, and trending to be approximately 30% by 2050. Yet this demographic trend is not necessarily top of mind in scholarship on management, organizations, and work. Latinx people in the U.S. are already making important contributions to American society; whether in agriculture—laboring in fields picking fruits and vegetables, as essential workers in healthcare, as entrepreneurs, as educators, as STEM or business professionals, and in the boardroom. This reality calls for greater urgency in generating research and scholarship to meet the moment and contribute to understanding this important demographic and cultural group; and as importantly to influence forward-thinking initiatives, shaping workplaces that not only attract Latinx talent but also cater to their unique needs and priorities, ultimately fostering a more innovative and diverse work environment for the future. Our aim in this symposium is to continue to generate scholarship that will assist organizations to develop strategies for attracting, engaging, and retaining Latinx people, in ways that contribute to equality, diversity, and inclusion. It will also provide evidence and perspectives to help Latinx individuals with strategies for navigating structural barriers in organizations, attaining career success, and thriving in the process. This area of inquiry focuses on issues such as the intersectionality of multiple Latinx identities to help identify barriers Latinx people face in employment and to locate ways to mitigate, remove, or overcome these barriers. It addresses areas of vitality, resilience, and possibility, even in the face of obstacles; as well as ways in which Latinx people are sustaining and developing cultural expression and identity at work and supporting collective ways of fostering more inclusion and equity in organizations and society.

Race Matters: Unpacking the Influence of Racial Identity on Negotiation Outcomes

Organizer: **Kathy Vo**, Kellogg School of Management, Northwestern U.
Organizer: **Gabrielle Rose Lopiano**, Vanderbilt U.
Presenter: **David P. Daniels**, NUS Business School
Presenter: **Edward Chang**, Harvard Business School
Presenter: **Jackson Lu**, MIT Sloan School of Management
Participant: **Tosen Nwadei**, U. of Toronto, Rotman School of Management

This symposium features four papers that explore the role of race in negotiations. The studies utilize diverse methodologies and data sets to demonstrate gaps in negotiation propensity and outcomes, both between and within racial groups; the nuanced underlying mechanisms through which these gaps manifest, such as through differential employer assessment across racial groups; and initial evidence for strategies that may mitigate racial disparities in negotiation experiences. The goals of this symposium are to highlight ongoing research in the under-studied area of race and negotiations, and advance diversity and negotiations scholarship by illuminating the ways in which racial identity influences multiple stages of the negotiation process.

Discussant: **Pamela Hinds**, *Stanford U.*
Organizer: **Lindred L. Greer**, *U. of Michigan, Ross School of Business*

Distributed work arrangements - including hybrid and remote work - offer workers around the world choice in their work location, which should ostensibly promote equity and inclusion. However, numerous challenges may arise for equity and inclusion as organizations and their employees navigate the narratives, structures, and implications of distributed work choices. In this symposium, we seek to separate narrative from fact around the current trends in distributed work and to understand exactly how hybrid and remote work can be navigated to maintain (and ideally foster) equity and inclusion in organizations. The five papers in this symposium collectively explore the emergence of prevailing narratives around remote and hybrid work, challenge existing narratives that remote and hybrid work are a “double-edged sword” for women and minorities, and seek to understand how, when, and why hybrid work can be the “best of both worlds” for diverse teams. Our discussant, Dr. Pamela Hinds, a leading scholar in the study of distributed work, will close our symposium by synthesizing the presented papers and facilitating a discussion with the audience regarding the future directions for this important topic. Through this symposium, we aim to generate new insights about how scholars can continue to study and improve the research on equity and inclusion within distributed work arrangements.

Mentoring and Coaching

Session Moderator: **Seth Butler**, *U. of north carolina wilmington*

ENT: **Entrepreneurial Mentoring: How Do Mentors and New Ventures Choose Each Other?** 

Author: **Ayna Yusubova**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

While the mentor-new venture relationship involves a range of beneficial exchanges between a dyadic pair and is highly dependent on the quality of the relationship, very little is known about the nuances of mentor-mentee relationships and the specific characteristics crucial for initiating a productive mentoring relationship. Drawing on Social Exchange Theory, this study explores the mutual perspectives of both mentors and new ventures to investigate how the evaluation of particular characteristics may influence the initiation of mentoring relationships. Conducting an in-depth analysis of 18 mentors and 20 new ventures from ten Business Incubators and Accelerators, the results show that mentors' criteria for initiating mentoring relationships include two subcategories of individual characteristics: "Experiential" and deep-level "Personality," along with one characteristic related to "Venture Business Aspects". Similarly, the study identifies two subcategories of individual characteristics highlighted by new ventures to initiate mentoring relationships with mentors: "Experiential" and deep-level "Personal Values". This article offers insights for BIA managers, mentors, and new ventures to improve mentoring relationships.

ENT: **A Good Mentor is Hard to Find: A Systematic Literature Review of Entrepreneurial Mentorship**  

Author: **Seth Butler**, *U. of north carolina wilmington*

Twenty eight percent of entrepreneurs have mentors. Mentorship is a key component of entrepreneurship education, entrepreneurial support organizations like accelerators and incubators, investment relationships, and more. Despite the practice's importance and widespread nature, the literature on entrepreneurial mentorship is disparate and siloed. In order to better equip researchers to conduct more impactful research in entrepreneurship and empower entrepreneurship program managers to innovate their programs for the future, I conducted a systematic literature review of entrepreneurial mentorship research. After a comprehensive search that returned 4140 articles, an exclusion process resulted in a final set of 160 articles on the phenomenon. I provide a thorough discussion of the existing literature; describe key research streams and theoretical approaches; and problematize existing research and suggest avenues for future inquiry. Key practical and academic questions for the future include motivations for entrepreneurs and mentors, fit in mentorship relationships, and the dark side of entrepreneurial mentorship.

ENT: **How to Make Entrepreneurship More Inclusive? Allyship as the Missing Perspective**  

Author: **Vera Eger**, *Center for Digital Technology and Management (CDTM)*
Author: **Hana Milanov**, *TUM School of Management, Technical U. of Munich*
Author: **Rachida Justo**, *IE Business School*

With the growing scholarly interest in diversity and inclusion in entrepreneurship, we have learned a lot about biases and obstacles surrounding disadvantaged entrepreneurs. In doing so, however, we appear to have overlooked the potential of allyship as a promising mechanism to foster diversity in entrepreneurship. Allyship – defined as behaviors with which advantaged social group members uplift disadvantaged peers – has proven beneficial in a number of ways across a range of contexts, from academia to large organizations. To set the research agenda for allyship in entrepreneurship, we first review extant work within the management literature and outline core findings about why allies act, how they act, and how these actions are perceived. Then, we extract key insights from the management literature to conceptualize research suggestions for allyship in the entrepreneurship context. Our work contributes by introducing allyship as an overlooked but promising perspective to foster diversity and inclusion in entrepreneurship.

ENT: **Coaching Entrepreneurial Success the Dynamic Impact of Self-Efficacy, Coachability and Venture Phase**  

Author: **Cintya Gajardo-Vejar**, *PhD Candidate at U. of Massachusetts Lowell*

Entrepreneurial coaching has become an essential resource for entrepreneurs looking to improve the success of their businesses. An experienced coach has been shown to be helpful for entrepreneurs however, we know little about how the entrepreneurs' personal characteristics influence entrepreneurial coaching or whether the impact of those characteristics varies across the organization's life cycle. Moreover, questions remain regarding how the interpersonal dynamics between the coach and entrepreneur impact relational outcomes. Therefore, this study examines the impact of an entrepreneur's self-efficacy on relationship outcomes and whether that impact is conditional on the entrepreneur's coachability as well as the life cycle of the venture. This study finds that the achievement of relational outcomes are more positive for entrepreneurs that have been leading their businesses for more than three years. For early entrepreneurs, a high level of self-efficacy may be useful for obtaining the entrepreneurial outcomes of the relationship even when their level of coachability is low. On the other hand, when early entrepreneurs have a low level of self-efficacy, their level of coachability has no influence in the achievement of the entrepreneurial outcomes. This study provides theoretical and practical implications and proposes directions for future research.

Institutions, Industries, and Networks

Session Moderator: **Shu Deng**, *U. of Texas at Dallas*

ENT: **Market Intermediary and Entrepreneurial Opportunities in Creative Industries**

Author: **Shu Deng**, *U. of Texas at Dallas*
Author: **Haemin Dennis Park**, *U. of Texas at Dallas*
Author: **Anmol Madan**, *U. of Texas at Dallas*

Market intermediaries mitigate frictions, facilitating market participation and thickening the market. However, a thicker market may lead to greater information proliferation and causes evaluation difficulties for the buyers, particularly in markets rife with uncertainties in valuing ideas with a high degree of heterogeneity. Using the launch of IMDbPro as a natural experiment, we examine how the intermediary platform in the film industry affects the transaction of film distribution rights. We find that the launch of a market intermediary leads to a higher likelihood of transactions between independent filmmakers and distributors. Furthermore, films produced by more experienced production teams and more conventional films benefit more from the new opportunities. Our findings highlight the boundary effects of intermediaries in markets featuring high uncertainties.

ENT: **Are Desirable Futures Possible Without Bureaucratic Work? On the Tedious of Everyday Entrepreneurship**

Author: **Claire Champenois**, *Audencia Nantes School of Management*
Author: **Michel Devigne**, *Institut Mines Telecom Atlantique*
Author: **Stratos E. Ramoglou**, *U. of Southampton*

What does it take for entrepreneurs to succeed in the entrepreneurial arena – particularly when their entrepreneurial deeds are driven by growth aspirations? We revisit Max Weber’s insights into the determining role of bureaucratic work to recalibrate entrepreneurship theory towards more holistic understandings of the entrepreneurial phenomenon, that place front and center the often tedious – yet entirely necessary – processes necessary for the realization of entrepreneurial dreams. Key theoretical kernels of Weberian thought drive our theorization of the existence of two phases of bureaucratization – the Weberian moment and the Weberian momentum – that we concomitantly scrutinize and refine via a qualitative study. This paper has implications for 1) the construct of “entrepreneurial work” at the core of the actualization perspective of entrepreneurship, 2) the “after the startup” turn in recent literature, 3) the problematization of the concept of creativity in entrepreneurial processes, as well as 4) the boundaries of entrepreneurial agency as conditioned by employees in processes of co-actualizing desirable futures.

ENT: **Exploring The Emergence of Platform Firms**

Author: **Kenan Guler**, *Rochester Institute of Technology*
Author: **David McIntyre**, *Providence College*
Author: **John S. Chen**, *Baylor U.*
Author: **Richard DeMartino**, *Rochester Institute of Technology*

Many new organizations adopt a platform business model that facilitates transactions among various parties. While the impacts of these platform firms on traditional business environments are visible in many industries, relatively little attention has been paid to their entrepreneurial origins. Analyzing 70 interviews with platform entrepreneurs, managers, and venture capitalists, we develop a grounded theoretical framework that extends existing perspectives in entrepreneurship and digital platforms and applies them to the context of entrepreneurial platforms. Our research suggests that platform firms emerge over three phases, with an initial emphasis on a marketplace or a core technology, while some may iterate between these two. Implications for entrepreneurial decision-making and the emergence of platform firms are discussed.

ENT: **Network Dynamics and Coopetition: Unraveling the Varied Impact of Indirect Ties**

Author: **Lei Zhang**, *U. of South Florida*

Previous research shows inconsistent findings about the effect of indirect ties and common third parties. This paper conducts a more fine-grained analysis of indirect ties using venture capital investment data. Adopting a coopetition framework, this paper argues that the impact of indirect ties differs depending on whether common third parties are themselves included in the same partnerships and both internal network dynamics and external environment may moderate the effect of indirect ties. We found general support to our argument. This paper makes important contribution to the network formation literature and venture capital syndication research by revealing the varied effect of indirect ties.

Session Moderator: **Md Imtiaz Mostafiz**, *U. of Leicester, Leicester, UK*

ENT: **Cognitive Flexibility, Entrepreneurial Imaginativeness and Opportunity Recognition** 

Author: **Md Imtiaz Mostafiz**, *U. of Leicester, Leicester, UK*
Author: **SAMUEL ADOMAKO**, *Birmingham Business School*
Author: **Mujtaba Ahsan**, *San Diego State U.*
Author: **Mark Mallon**, *Florida Atlantic U.*
Author: **Birton Cowden**, *Kennesaw State U.*

Although previous research in entrepreneurship highlights the cognitive hurdles associated with opportunity recognition, there is a dearth of empirical investigations into the cognitive attributes that may distinguish entrepreneurs in entrepreneurial ventures. This study contributes to the evolving body of research by pinpointing cognitive flexibility as a significant trait in addressing the challenges of opportunity recognition. Using data collected from entrepreneurs in Bangladesh (n=189) and India (n=242), we propose that cognitive flexibility operates through entrepreneurial imaginativeness. Our findings indicate that entrepreneurs with higher cognitive flexibility are associated with greater imaginativeness. Consequently, entrepreneurial imaginativeness correlates with higher levels of opportunity recognition. Our findings also suggest that entrepreneurs' emotional regulation is a critical moderating factor affecting the indirect effect of cognitive flexibility on opportunity recognition. This research advances the cognitive foundations of opportunity recognition.

ENT: **A Meta-Analysis About the Correlation Between Entrepreneurial Passion and Entrepreneurs' Behavior** 

Author: **Lorena Stelzer**, *PhD at Paderborn U.*

Academic research on entrepreneurial passion is much more complex than the extant literature or popular press portray. Although research on entrepreneurial passion has progressed, much remains unexplored about entrepreneurs' behavior. Why do entrepreneurs behave differently, even though they all pursue the same objectives? This study examines the relationship between entrepreneurial passion and the individual entrepreneurs' behavior. Based on academic research and theory of planned behavior, the social cognitive theory and self-regulation theory, it is assumed that entrepreneurial passion is positively related to entrepreneurs' behavior. I employ three-level meta-analytic techniques using random effects modelling summarizing 37 studies, 78 effect sizes and a total sample size of 12,525. The measurement for entrepreneurial passion must follow Cardon et al. (2013). The results show a significant positive link between entrepreneurial passion and entrepreneurial behavior and for all specific types (creative activity, entrepreneurial alertness, entrepreneurial persistence, innovative action, and entrepreneurial self-efficacy). Consequently, the findings not only contribute to the advancement of theory and provide a roadmap for future inquiry on entrepreneurial passion but also offer novel managerial and organizational purpose driven solutions which are necessary due to the social change across the globe like political unrest, economic volatility, inequality or rapid technological change.

ENT: **Founder's Affective Commitment and New Venture Performance: The Role of Innovative Ambidexterity** 

Author: **Galina Shirokova**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Tatiana Anisimova**, *School of Business and Economics, Linnaeus U.*
Author: **Jan Weiss**, *Montpellier Business School*
Author: **Joshua Victor White**, *U. of Dayton*

Prior studies have found that the affective commitment of firm leaders may yield superior firm performance, but existing research has yet to uncover the paths through which this relationship materializes. Using a sample of 7,319 new ventures from 23 countries, we demonstrate that founder's affective commitment relates to new venture performance through innovative ambidexterity. Contrary to expectations, our moderation analysis reveals that performance-based culture weakens the relationship between innovative ambidexterity and venture performance. Implications for theory and practice are provided.

ENT: **Emotional Culture of Hope as a Driver of Entrepreneurial Social Action in Warzones**

Author: **Tatiana Egorova**, *Stockholm School of Economics*

Very little is known about entrepreneurship amid ongoing military conflicts, although, entrepreneurial firms and small businesses are the most common form of business activity in the conflict-affected regions. Entrepreneurship can support hope, which is very important in aiding those affected by humanitarian crises, however, extant research on the role of hope in warzone entrepreneurship is scarce. Building on diary data collected from entrepreneurs living and working in Ukraine during the Russo-Ukrainian war, this research demonstrates how emotional cultures built on hope can motivate socially oriented entrepreneurial action and support entrepreneurial agency in challenging contexts. These findings contribute to the literature on entrepreneurship in war zones and research on emotional cultures.

Gender and Entrepreneurship IV

Session Moderator: **Shu Yang**, *Hofstra U.*

ENT: **Breaking Gender Stereotypes in Startup Funding**

Author: **Shu Yang**, *Hofstra U.*
Author: **Daphna Motro**, *Hofstra U.*
Author: **Dan K. Hsu**, *North Dakota State U.*

Gender research in management has surged in the last decades. Although most studies have taken a traditional status-based view in which men have universal advantages over women in terms of leadership and entrepreneurial activity, we argue that such advantages may reverse under certain contexts. Leveraging role congruity theory, we designed a $2 \times 2 \times 2$ between-subjects experiment to examine the conditional effects of early-stage startup investors' gender stereotypes on their funding decisions. After testing 226 early-stage investors' responses, we find that investors can exhibit bias toward men as well as women entrepreneurs when making funding decisions. Specifically, investors are more likely to favor sex-trait congruent entrepreneurs (i.e., agentic men and communal women) than incongruent ones, and such effects are stronger when the entrepreneur targets the male market than the female market.

ENT: **Beyond the Limits: The Strength of Afro-Brazilian Women Entrepreneurs Undertaking in America**

Author: **Vania Jorge Nassif**, *U. Nove de Julho - UNINOVE - São Paulo*
Author: **Marcos Hashimoto**, *Bradley U.*
Author: **Eloisa Elena Shinohara**, *U. Nove de Julho - UNINOVE - São Paulo*
Author: **Flávia Maria Da Silva**, *U. Nove de Julho - UNINOVE - São Paulo*

Entrepreneurship attracts a diverse array of individuals, forming varied groups in terms of gender, ethnic and social backgrounds, as well as being geographically distributed across various regions and countries (Subramani, 2020). This multiplicity of audiences and profiles identifies a large entrepreneurial population, but one that is socially underrepresented, characterizing them as Minoritized Groups. The theory of intersectionality (Crenshaw, 1989), in turn, seeks to understand how different forms of oppression and discrimination intersect in the lives of Afro descendent female entrepreneurs. Against this backdrop, opportunities arise to investigate: How do Afro-Brazilian female entrepreneurs residing in a foreign country face challenges and obstacles due to being both women and black, and what are their overcoming behaviors in dealing with adversity? The research leads to an investigation into systemic discrimination factors and explores behaviors of overcoming obstacles, including self-care strategies. The research is qualitative and exploratory, with data acquired through interviews with ten Afro-Brazilian entrepreneurs operating in Chicago/IL. The data was recorded, transcribed, and organized with the support of Atlas TI software, generating three categories: intersectionality, challenges/obstacles and overcoming behaviors analyzed through content analysis technique (Bardin, 2011; Flores, 1994). These categories were grounded in intersectionality theory. The results indicate both similarities and differences in the challenges faced by the entrepreneurs, highlighting the resilience of these women in coping with social and emotional impacts and corresponding overcoming behaviors. The intersectionality theory drove us to add ethnicity to gender, race and social status and led us to conclude that being an immigrant imposes more challenges than the fact of being black and woman, demonstrating the strength these entrepreneurs exhibit in navigating these intersecting identities.

ENT: **Female Entrepreneurship in the Caribbean: Transformative Prospects Through Digital Technologies**

Author: **Beverly Jacqueline Best**, *U. of Strathclyde, Strathclyde Business School*
Author: **Paul Lassalle**, *U. of Strathclyde, Scotland, UK*
Author: **Katerina Nicolopoulou**, *U. of Strathclyde*

This study examines how digital technologies influence the transformation of female entrepreneurship in the Caribbean and contribute to more inclusive and resilient societies. By acknowledging the "dark side" of digital technologies, the study develops a conceptual framework that draws on contextual gendered lens to broaden the scholarship on female digital entrepreneurship in developing countries. Adopting an interpretative approach and using qualitative methods, the study is informed by semi-structured interviews of 30 Caribbean female digital entrepreneurs. Using a context-focussed approach for the converging interplay between digital technologies and female entrepreneurship, the study builds on the Technology Affordances and Constraints Theory (TACT) and post-modernist feminist theory. The study revealed that the way in which digital technologies impact gender imbalance in female entrepreneurship within the paradoxical gendered boundaries of Caribbean patriarchal ideology, lends itself to cultivating openings for highlighting critical sensitivities and assumptions of a digital economy that is interlinked to the broader entrepreneurial ecosystem. The research contributes to the literature on the impact of digital technologies on female entrepreneurship and the entrepreneurial "othering" debate by theoretically elaborating and empirically validating how women entrepreneurs develop resilience capacity in their embedded contexts. The novel insights gleaned can revolutionise "gate keeping" in entrepreneurial education.

ENT: **Women Support Women? How Investors Respond to High-Profile Female Fraud Case Exposure**

Author: **Jiongni Mao**, *PhD Candidate at Bocconi U.*

Previous research has revealed that both male and female investors are more likely to extend offers to entrepreneurs of the same gender, but female-backed women entrepreneurs may struggle to raise additional funds from new investors. However, same-gender support may face challenges from the shadows of high-profile scandals of firm misconduct, particularly those involving prominent female figures. Using the Google search index of the high-profile female figure Elizabeth Holmes, I identify the impact of public attention by (1) dividing US states into treatment and control groups based on the median of the aggregate index of "Elizabeth Holmes" from 2015 to 2023; (2) using Google Trends API as a proxy of attention to female-centric scandal to explore investor response in the aftermath. The primary findings show that female investors are more active in the funding rounds in more attentive states, while this increased involvement appears driven by male-led startups after the scandal. Importantly, the engagement of female investors with female-founded startups did not waver, with support from female partners rising post-scandal in all states regardless of the level of public attention.

Social Interactions

Session Moderator: **Cristiano Bellavitis**, *Syracuse U. Whitman School of Management*

ENT: **Unrequited Preference: The Job Market Interaction Between Tech Ventures and Former Founders**

Author: **Uisung David Park**, *Syracuse U.*
Author: **Cristiano Bellavitis**, *Syracuse U. Whitman School of Management*

Emerging research examining former founders as potential wage workers predominantly underscores a “founding penalty,” where candidates with entrepreneurial backgrounds face disadvantages in the job market. This research, however, illuminates a notable exception within the context of technology ventures. Contrary to the general trend, we contend that technology ventures value the founding experience, recognizing the human capital that former founders bring to the table. This research further explores how the former founders perceive and evaluate job opportunities within technology ventures. Adopting the human capital perspective, we propose that technology ventures regard former founders favorably, initiating proactive outreach towards them, yet, the level of reciprocated interest from these former founders may be limited. We also delve deeper into the moderating effects of environmental munificence and uncertainty. Leveraging a unique and proprietary dataset of 275,962 email interactions across 1,879 technology ventures and 28,979 job candidates, we find support for our hypotheses. Our study extends the literatures on human capital theory, entrepreneurial resource mobilization, and the career decisions of former founders.

ENT: **Unravelling the Potential of Social Media: Exploring Resource Acquisition**

Author: **Hina Fatima**, *School of Business and Law, Edith Cowan U.*
Author: **Uma Jogulu**, *Edith Cowan U.*
Author: **Jalleh Sharafizad**, *Edith Cowan U.*
Author: **Tom Barratt**, *School of Business and Law, Edith Cowan U.*

This study addresses the limited empirical evidence on Australian women's entrepreneurship, including migrant women entrepreneurs who face additional disadvantages. The research examines how social media usage as a source of bridging social capital (online) influences resource acquisition processes of women entrepreneurs' small businesses during the initial stages of business development. To fill the gaps in current knowledge, the study conducted qualitative research, consisting of 35 in-depth, semi-structured interviews with women entrepreneurs in Perth, Western Australia. The findings reveal that social media serves as a valuable source of bridging social capital, enabling women entrepreneurs to overcome resource constraints by facilitating access to various resources. By shedding light on the influence of social media usage on women entrepreneurs' small businesses, this research provides robust evidence of the support and resources social media platforms offer, particularly during the start-up stages of business development.

ENT: **Unpacking Organizational Support for Employee Ideation and Experimentation in Early-Stage Innovation**

Author: **Erik Monsen**, *U. of Vermont*
Author: **Sreevas Sahasranamam**, *U. of Glasgow*
Author: **Marina Biniari**, *U. of Sussex Business School*
Author: **Jonathan Levie**, *U. of Galway*

Perceived organizational support could be critical for translating employees' creativity into organizational-level innovation outcomes. Existing studies exhibit a one-size-fits-all approach toward organizational support, overlooking contextual differences regarding the resources employees require at individual phases of the process, particularly ideation and experimentation. Drawing on Social Exchange Theory, we argue that different forms of organizational support are needed to resource individual phases of the innovation process. Our findings from a global survey of 1001 managers demonstrate that organizational support for ideation and experimentation have differential effects on employee engagement in organizational innovation and its outputs (process versus products). We further find that time availability - a critical but often overlooked resource - moderates the relationship between support for experimentation and engagement in product and process innovation, but in subtly different ways.

ENT: **Unveiling Entrepreneurship in Chinese State-Owned Enterprises: A Computational Linguistic Analysis**

Author: **Ting Gong**, *Tsinghua U.*
Author: **Bin Dou**, -
Author: **Yong Wang**, *Tsinghua U.*

Entrepreneurship constitutes a pivotal facet in business practice and research, and state-owned enterprises (SOEs) stand as integral components within the Chinese economy. Diverging from private enterprises, Chinese SOEs, instead of being spearheaded by their entrepreneurs, find their origin in the state apparatus and fall under governmental purview. The board of directors, in turn, is typically led and appointed by the Communist Party of China as well. Given this backdrop, delving into the behavioral dynamics of entrepreneurship and its consequential impact on firm performance emerges as a compelling and yet unresolved inquiry. However, the scarcity of overt personal attributes impedes a direct assessment of the personalities and entrepreneurial traits inherent in these leaders. Therefore, we draw upon 80 public speeches delivered by leaders of central CEOs, employing computational linguistic methods to formulate two distinct text analysis models: the LDA topic model and the Word2Vec language model. Through these models, a quantitative analysis framework for entrepreneurship is established, elucidating the nuanced dimensions of entrepreneurship in Chinese SOEs. The research delineates 5 general and 13 detailed perspectives on entrepreneurship, measured through corresponding indicators. Utilizing regression analysis on the presented entrepreneurship traits and collated enterprise indicators, our measure of entrepreneurship traits establishes a robust foundation for future theoretical advancements concerning the impact of entrepreneurial personality traits. The specific findings contribute to an enhanced comprehension of how entrepreneurship influences the profitability and accountability of enterprises.

Decision Making in Adversity

Session Moderator: **Kris Gericke**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

ENT: Too Late to Pivot? How Grit Influence the Effectual and Causal Decision-Making of Entrepreneurs

Author: **Kris Gericke**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*
Author: **Andrea Greven**, *WHU Otto Beisheim School of Management*
Author: **Malte Brettel**, *RWTH Aachen U.*

Grit was positioned as one of the best predictors for success in entrepreneurship (Mueller et al., 2017). To understand the mechanism behind this observation, this study investigates the relationship from Grit towards Causal and Effectual Decision-Making. The underlying mechanisms are derived from self-regulation theory (Bandura, 1991) and Grit is presented as an adaptive entrepreneurial competency (Martínez-Martínez & Ventura, 2020). For a more in-depth analysis, Grit (Perseverance, Consistency, Passion Attainment) and Effectual Decision-Making (Experimentation, Affordable Loss, Flexibility) are analyzed on their reflective sub-dimensions, not on their formative second-order construct. In total 451 responses by entrepreneurs from ventures in Germany, Switzerland, Austria (GSA) are analyzed using multivariate regression and hierarchical regression analyses. Consistent with our hypotheses, first, we find evidence that Perseverance and Passion are positively related to Causal Decision-Making and Flexibility. Second, we show that Consistency is negatively associated with Experimentation, supporting a potential 'stubbornness' of high Grit entrepreneurs. Thus, our study makes three contributions to the literature: on negative outcomes of Grit, on psychological antecedents of decision-making, and on entrepreneurial competencies. Further implications for theory, practice, and future research are discussed.

ENT: Turning Adversity into a Bottle of Wine: Black Women Wine Industry Entrepreneurs and Capital

Author: **Allan Fernando Discua Cruz**, *Lancaster U. Management School*
Author: **Olufunmilola Ojediran**, *U. of Central Lancashire*

This study explores how and why black women entrepreneurs convert their available and accessible economic, cultural, social, and symbolic capital in the South African wine industry. Drawing on Bourdieu's theory of practice as a theoretical framework, particularly the concept of capital, this study frames such conversion as a process of transforming one capital form to another. Relying on a qualitative approach, and using in-depth semi-structured interviews, this study delved into the lived experiences of nine black women wine industry entrepreneurs in South Africa. Data were supplemented with observations and associated secondary materials and were inductively analysed using the constant comparative technique. The study uncovers that the capital conversion process is habitual, that is a natural undertaking, and accentuates the overlapping and convertibility essences of various capital forms. Moreover, it reveals that black women wine industry entrepreneurs may not give utmost preponderance to economic capital, and that economic capital conversion forms a part of a broader capital conversion process. This study shows that black women entrepreneurs should not be discouraged from starting viable enterprises simply because of insufficient funds (economic capital). Rather, they should leverage on other different non-economic capital forms to counteract the lack of money. The value of this study bears on the emphasis that both the value and conversion rates of each species of capital may differ, and for black women entrepreneurs particularly in the wine industry, economic capital may not be accorded utmost preponderance.

ENT: Stay or Leave? The Role of Psychological Contract Violation of Entrepreneurial Founder Team Members

Author: **JiaoNAN WANG**, *Tongji U., School of Economics and Management*

As a critical part of entrepreneurial process, entrepreneurial exit has great influence on the fate of new ventures. The reasons why entrepreneurial founder team (EFT) members choose to exit the new ventures they help to found have long intrigued researchers and practitioners. Based on psychological contract violation literature, our study investigates the psychological antecedents of EFT members' entrepreneurial exit. We offer a cross-level contingent decision-making model to explain how and when psychological contract violations affect entrepreneurial exit. Using a metric conjoint experiment, we study 3968 exit decision-making judgements made by 124 participants. Our findings indicate that EFT members' psychological contract violations motivate entrepreneurial exit intentions, and beneficial financial consequence of exit positively moderate the positive impact of psychological contract violations on entrepreneurial exit. Moreover, when perceiving psychological contract violations, EFT members with lower risk propensity are more likely to make entrepreneurial exit decisions.

ENT: How Start-ups Navigate Environmental Jolts: A Dynamic Capabilities Perspective

Author: **Charu Rastogi**, *Indian Institute of Management, Bangalore*
Author: **Srivardhini K. Jha**, *Indian Institute of Management, Bangalore*

This paper examines how young ventures navigate drastic changes in the environment that shift the gears of their industry. We explore this through an in-depth qualitative study of a young biotechnology venture – Mylab Discovery Solutions Pvt. Ltd. – that responded to an environmental jolt that accelerated the molecular diagnostics industry in India. Drawing from dynamic capabilities literature, we develop a grounded process model to explain how a venture can reconfigure its resource base to obtain a better environmental fit. We find three enduring meta capabilities – innovation, relational and context-shaping capabilities. The sub-capabilities under these meta-capabilities undergo a temporal and spatial reorientation, allowing the venture to rapidly respond to the jolt. Further, we find that organization cohesiveness and culture play an overarching role in driving a venture's adaptation to the environmental jolt. Finally, we suggest that the odds of successful outcomes increase if young ventures consciously invest in developing specific capabilities in advance, even though the benefits may not be apparent immediately.

Entrepreneur Migration 1

Session Moderator: **Felipe Ignacio Symmes**, *EGADE Business School, Tecnologico de Monterrey*

ENT: **Agonistic Entrepreneurship: Collaborations Between Indigenous and Non-Indigenous Entrepreneurs**

Author: **Felipe Ignacio Symmes**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Urs Peter Jäger**, *INCAE Business School*
Author: **Rajiv Maher**, *EGADE Business School, Tecnologico de Monterrey*
Author: **Stephanie Rügger**, -
Author: **Jose Pablo Valverde**, -

Using a longitudinal case study, we explored a collaborative venture by Indigenous Coya and Western entrepreneurs to further social progress in the Puna, Argentina's most impoverished region. Our results deduce 'agonistic entrepreneurship' as an ongoing struggle to explore and exploit potential opportunities by respecting the other party and engaging in constant deliberations despite differing perceptions of value. Our study furthers the literature on Indigenous entrepreneurship by illustrating an entrepreneurial process in Latin America in which Indigenous entrepreneurs adapt to a global economy dominated by Western market perspectives without necessarily engaging in colonization dynamics and Western perceptions of value. We also contribute to the literature on partnerships between Indigenous and Western actors by showing how each negotiates value creation by continually navigating conflict around common frames of reference, and extend theories on agonistic pluralism by applying it to entrepreneurship phenomena in that political frameworks can illustrate the tensions inherent to collaborative ventures with marginalized populations.

ENT: **Disrupt, Decouple, Rebuild: Identity De- and Re-Construction of Refugee Entrepreneurs**

Author: **Sanita Rugina**, *Sodertorn U.*
Author: **Aki Harima**, *Tallinn U. of Technology*

Since the mid-2010s, there has been a burgeoning scholarly interest towards the realm of refugee entrepreneurship. However, despite the insights contributed by scholars in the past, this dynamic domain faces numerous challenges. Earlier studies tended to delineate static facets, categorizing external factors and individual competences, contemporary research acknowledges the imperative to understand refugee entrepreneurship as a dynamic journey for forcibly displaced individuals. In gap response to this gap, our study delves into the intricate reconstruction process of entrepreneurial identity after the disruptive event. Employing an explorative qualitative approach, we conducted 30 semi-structured interviews with Ukrainian female refugees who fled Ukraine following the Russian invasion and subsequently initiated businesses in their host countries. Through our analysis, we identified drivers and impediments in the loss and reconstruction of refugee entrepreneurs' identities, unveiling two distinct mechanisms: the decoupling and recombination of identity components. Grounded in these findings, we present a comprehensive framework detailing the mechanisms governing the identity reconstruction of refugee entrepreneurship.

ENT: **The Effect of Returnees' Culturally Imprinted International Experience on Internationalization Speed**

Author: **Xinrui Liu**, *U. of Greenwich*

Despite the importance of returnee entrepreneurs' prior international experience (RIE), its conceptualization and effect on firm outcomes is not comprehensively understood. Drawing on social and cognitive learning theories, we propose that RIE host country is a critical learning context wherein their prior international experience was culturally imprinted. We examine the impact of culturally imprinted RIE on firms' entrepreneurial orientation (EO), and post-entry speed of internationalization (PSI). Data from 216 Chinese exporting small-and-medium-sized enterprises show that RIE positively influences PSI both directly and indirectly through EO. Cultural distances between RIE host-home and RIE host-firm exporting country pairs moderate these relationships. Our findings align with the revisited Uppsala model concerning the importance of pre-history knowledge prior to the founding of firms. Our research makes novel contributions to the theoretical conceptualization of international experience and managerial implications for returnee entrepreneurship.

ENT: **Refugee Entrepreneurs Network Disruption & Opportunity Recognition: Evidence from a RCT in Uganda**

Author: **Seyedeh Zahra Hejrati**, *Stanford U.*
Author: **Medhanie Gaim**, *Umea U.*
Author: **Charles Eric Easley**, *Stanford MS&E*

Entrepreneurship is deeply intertwined with an entrepreneurs' network and social capital, which facilitate resource acquisition, opportunity identification, and legitimacy. While existing literature delves into the formation and benefits of such networks, there is a gap in understanding the network dynamics post-network disruption. This study addresses this by exploring the impact of network loss severity on entrepreneurs' opportunity recognition, specifically focusing on the role of trust and legitimacy in new tie formation post-disruption. We chose refugee entrepreneurs as our subject, given their unique experience of abrupt and involuntary network loss due to forced relocation. Drawing from the liability of foreignness (LOF) framework, we posit that refugees face heightened challenges in accessing resources and opportunities in host countries. Through a randomized field experiment, our findings indicate that refugees better integrated into their host communities produce higher-quality entrepreneurial ideas. Additionally, collaboration with local partners enhances the growth potential of the ideas, while decreasing the idea novelty.

Session Moderator: **Katsufumi Matsui**, *U. of Tokyo*

ENT: **From Entrepreneur to Intrapreneur: Entrepreneurial Experience and Intrapreneurial Growth Aspirations** 

Author: **Lan Zhou**, *Business School of Nankai U.*
Author: **Wangbin Hu**, *Business School of Nankai U.*
Author: **Yahui Zhang**, *Shandong U. of Technology*
Author: **Zhu Yu**, *Business School of Nankai U.*

Ambitious entrepreneurs are acknowledged for fostering business growth, yet ambitious intrapreneurs have received limited attention. Guided by insights from role identity research, we propose a theoretical model to investigate the impact of intrapreneurs' entrepreneurial experience on their intrapreneurial growth aspirations (IGAs) and the contingent effects of intrapreneurial contextual traits (including intrapreneurial project innovativeness and intrapreneurial role-model exposure). Hypotheses were tested using data from 2,646 intrapreneurs spanning 23 countries. Intrapreneurs with entrepreneurial experience exhibit lower levels of IGAs compared to their no-entrepreneurial counterparts, and this negative relationship is weakened when the intrapreneurial project is of higher innovativeness and when the intrapreneurial role model holds higher scale. This research extends the consequences of entrepreneurial experience to IGAs by drawing on the identity-based perspectives, which helps to develop more inclusive entrepreneurial growth aspirations theories and advances our understanding of how intrapreneurs' characteristics interact with their immediate context in determining intrapreneurial outcomes.

ENT: **From Intent to Action: The Mediating Role of Implementation Intention in Entrepreneurship Education**   

Author: **Katsufumi Matsui**, *U. of Tokyo*
Author: **Kana Tomita**, *U. of Tokyo*
Author: **Enkhzaya Nergui**, *Kyushu U.*

This study investigates how entrepreneurship education influences students' entrepreneurial intention, implementation intention, and entrepreneurial behavior. While numerous studies have examined the effectiveness of entrepreneurship education, most have focused on short-term outcomes such as students' intentions and attitudes. In contrast, the effects of entrepreneurship education on long-term outcomes such as entrepreneurial behavior is scarcely known. Intentions have been considered the best predictor of planned behavior, according to prior research on the Theory of Planned Behavior. However, intentions do not always lead to action in entrepreneurship. This study analyzed a synchronous online entrepreneurship education program focusing on practicing entrepreneurial behavior to fill this gap. Approximately 800 undergraduate and graduate students participated. Pre and post-tests were conducted, with a six-month follow-up. A quasi-experimental design was used to assess the performance of a treatment group that received online entrepreneurship education and a control group that did not. Additionally, to elaborate on the process through which entrepreneurship education influences entrepreneurial behavior, the study considered implementation intention as a mediating variable between intention and action. The findings showed that at the end of the eight-week program, the treatment had a positive effect on implementation intention, mediated by entrepreneurial intention. Furthermore, a long-term outcome was observed whereby entrepreneurship education positively affected students' entrepreneurial behavior through the mediation of implementation intention after six-months. The results suggest that entrepreneurship education should emphasize increasing entrepreneurial and implementation intentions to stimulate entrepreneurial behavior.

ENT: **Global Scaling of Disruptive Business Models** 

Author: **William Chongyang Zhou**, *Sacred Heart U.*
Author: **Li Sun**, *UMass Lowell*
Author: **Scott L. Newbert**, *City U. of New York, Baruch College*
Author: **Weilei Shi**, *Cheung Kong Graduate School of Business*

How do new venture's disruptive business models expand globally? Drawing upon the recent global scaling literature, we theorize that business model scalability is a key enabler of foreign market entries. We find that it is easier for newly public firms with more scalable business models to replicate and reconfigure across national borders, since core activities of highly scalable business models do not need to be adapted; only peripheral activities need adjustment. In comparison, both core and peripheral activities of less scalable business models need to be adapted. We find that the disruptive business model has high scalability and the positive relationship between the disruptive business model and scalability is strengthened by VC support. We further examine the positive association between business model scalability and foreign market entries and find that this relationship is magnified by the economic distance but weakened by the institutional distance between the host and home countries.

ENT: **Grow or Well-Being? A Configurational Approach on Returnee Entrepreneurship**

Author: **Daomi Lin**, *Sun Yat-Sen U.*
Author: **Wenwen An**, *Guangdong U. of Technology*
Author: **Qian Gu**, *Georgia State U.*

Returnee entrepreneurs have long been considered an important conduit of international knowledge transfer which brings venture growth impact for industry and region development. However, from an entrepreneurial well-being perspective, as international knowledge transfer usually entails greater challenges and stress in entrepreneurship, we have relatively little knowledge about how returnee entrepreneurs can configure their roles as knowledge transferers or other alternatives to achieve personal well-being. Building on knowledge-based view, we take a holistic, configurational approach to understand the match among push and pull factors in knowledge transfer, network embeddedness and institutional support. Employing a sample of 217 returnee entrepreneurship cases and through mvQCA methodology, we found that configurations with cutting-edge knowledge transfer pushed by host country embeddedness lead to high venture growth, while configurations with mature knowledge transfer pulled by home country recontextualization as well as information brokers and value carriers pushed by host countries embeddedness lead to high satisfaction. We also demonstrate a dominant focus instead of a dual focus on either home country or host country side in successful returnee entrepreneurship, facilitating the understanding of the causal complexity of returnee entrepreneurship.

Political Considerations

Session Moderator: **Roberto Ragozzino**, *NOVA School of Business and Economics*

ENT: **A Study of Early-Stage Environmental Entrepreneurship in the Politically Divided USA**

Author: **Roberto Ragozzino**, *NOVA School of Business and Economics*

Author: **Aaron Hill**, *U. of Florida*

Author: **Franziska Hittmair**, *NOVA School of Business and Economics*

In this study, we investigate the link between the political ideology of states in the United States and the likelihood of launch and success of environmental products in crowdfunding. While it is widely understood that the idiosyncratic aspects of different locations play a role in the economic development of said locations, the direction and mechanisms that explain the specific relationships above are unknown. To the extent that addressing environmental concerns is crucial, given the importance of potentially disruptive early-stage entrepreneurship in this domain, and in the light of the divisive political ideology characterizing the United States in the recent past both in general and specifically about the environment, this investigation aims at offering a momentous study for researchers and policy makers alike. Our results show a strong relationship between ideology and environmentally conscious entrepreneurship and the battery of supplementary tests we run provide a nuanced picture of this relationship, offering insights for scholars and practitioners alike.

ENT: **Straddling Diverse Audiences: Venture Emergence as Legitimacy Seeking**

Author: **Anna Saies Jenkins**, *U. of Queensland*

Author: **A. Paul Spee**, *U. of Queensland*

Establishing legitimacy with multiple audiences across legitimacy thresholds is critical for the emergence of a new venture. Yet, how entrepreneurs navigate the challenges of building legitimacy with multiple audiences as they navigate venture emergence remains underexplored and under studied. Building on a comparative case study of four entrepreneurs over 34 months, and drawing on the Lean Startup as a context we develop an empirically grounded theorization of venture emergence as a process of legitimacy seeking. We characterize the process of startup emergence into distinct phases: socializing and actualizing each characterized by distinct audiences, resources and activities. Our conceptualization advances new venture legitimacy through an articulation of venture emergence as a legitimacy seeking process while also addressing repeated calls to advance an activity-based understanding of how entrepreneurs create new ventures.

ENT: **Political Composition and Startup Success: How Founders' Political Heterogeneity Shapes Startups**

Author: **Balazs Kovacs**, *Yale School of Management*

Author: **Tim Sels**, *Yale U.*

How does the political heterogeneity of startup founders affect startup success? Using data from Crunchbase on startup founder teams and L2 data on the political affiliation of US voters, we identified the political affiliations of the founding members of 2,835 US-based startups. In examining startup team composition, we observed a strong preference for political homophily: teams with similar political views are far more common than those with diverse political views, even after controlling for gender, age, geographic, and industry distribution of founders' political views. Exploring the impact of political heterogeneity, we found that startups with politically heterogeneous founders have fewer employees and a higher likelihood of shutting down or to get acquired. We found no significant effect on the amount of money raised. We conclude with a discussion of the implications and potential limitations.

ENT: **Political Participation, Managerial Attentional Allocation, and New Venture Decentralization (WITHDRAWN)**

Author: **Xuan Huang**, *U. Nottingham Ningbo China*

Author: **Di Song**, *U. of electronic science*

How entrepreneurs design their ventures' organizational structure plays a profound role in determining new ventures' growth potentials and avenues. Yet, prior studies have provided merely partial guidance on how the variation in decentralization is born. In this paper, we explore the emergence of decentralization among new ventures. Drawing on the attention-based view of firms and the political participation literature, we postulate that political participation encourages entrepreneurs to allocate managerial attention to external activities and thus induce their ventures to implement a more decentralized organizational structure. Furthermore, government intervention and entrepreneur ownership moderate the relationship between political participation and entrepreneurs' managerial attention allocation. Using a sample of 6,940 new ventures in China, we find empirical evidence for our theoretical framework. Theoretical and practical implications are discussed.

ENT: **Back to Reality: How Ventures Maintain Legitimacy Through Pragmatic Decoupling**

Author: **Mohammed Bendaanane**, *TUM School of Management, Technical U. of Munich*

Author: **Frank-Martin Belz**, *Technical U. of Munich*

Research highlighted the importance of stories for entrepreneurial ventures to gain pragmatic legitimacy and overcome the liability of newness. Yet, scholars have devoted scant attention to maintaining legitimacy and overcoming threats that emanate from ventures' inability to meet the expectations set by initial entrepreneurial stories. Based on a longitudinal single case study (2011-2023) of a venture that builds infrastructure for generating and delivering electricity in remote rural communities in Kenya, we propose a process model of maintaining legitimacy. By analyzing the accounts, the venture uses over time, we identify a process of "pragmatic decoupling" by which ventures decouple their underperformance from their entrepreneurial capabilities via three distinct categories of pragmatic accounts: contextualizing struggles, capitalizing on experience, and enacting entrepreneurial flexibility. Our proposed model reveals that entrepreneurial ventures deploy pragmatic accounts rather than stories to maintain legitimacy and convert underperformance to an acquired entrepreneurial capability that directs investors' attention to future potential instead of past losses.

Presenter: **Mattias Nordqvist**, *Stockholm School of Economics*
Facilitator: **Patricia Josephine Guinan**, -
Facilitator: **Keith Rollag**, *Babson College*

There has been much research on entrepreneurial entry, trying to uncover why certain people pursue entrepreneurship while others do not. Two major categories of driving forces are the context in which entrepreneurs have been embedded and their identities. However, most research overlooks the stakeholders that often define both factors for future entrepreneurs—parents. While family dynamics have been known to be critical to preserving family businesses, recent research has started to examine the effects of parents, parental styles, and inherited parental identities on entrepreneurs more broadly. As any parent knows, however, parenting is a complex and multidimensional process, which makes understanding parents' role in their children's entrepreneurial pursuits challenging. This PDW, therefore, aims to (1) establish a research agenda to understand the interrelationship of entrepreneurship and parenting better and (2) bring together an interdisciplinary community of scholars to discuss, plan, and pursue aspects of the agenda. The invited speakers at this PDW have made inroads into this research area from very different perspectives and varied theoretical lenses. Their work provides starting points for mapping this new research frontier.

Facilitator: **Giuseppe Argiolas**, *Sophia U. Institute*

Facilitator: **Cristina Leone**, *U. of Palermo*

While extant research recognizes the role of human resources in shaping entrepreneurial and resilient organizations, women, black men, gays, lesbians, and transgender people are frequently relegated to the fringes within their organizations. Today, acknowledging the contributions of all forms of diversity is not only a matter of “social justice” but also a necessity to foster entrepreneurship and resilience in organizations. In Part 1 of this PDW, distinguished scholars discuss barriers hindering diversity and inclusion (D&I) in the business world and the role of D&I in building entrepreneurial and resilient organizations. Part 2 of the PDW will feature four dynamic and participative parallel roundtables to engage all participants in co-creating value in a specific area. In the first roundtable, participants will actively participate in a “theater activity” to experiment with a tool designed to promote D&I within organizations. In a second roundtable, participants discuss real cases of implementing D&I practices and connecting D&I in constructing entrepreneurial and resilient organizations. The last two roundtables are dedicated to paper development on the PDW theme.

Panelist: **Lloyd P Steier**, *U. of Alberta*
Panelist: **Alex Stewart**, *Memorial U. of Newfoundland*
Participant: **Shannon Leigh Sciarappa**, *Boston College*

This symposium brings together scholars to explore the potential of ethnography to understand entrepreneurship, and particularly family businesses. Though ethnography has long been recognized as a promising methodology for uncovering the complex interplay of interactions, relationships, and processes in entrepreneurial firms, ethnographic research in entrepreneurship, and in family business scholarship in particular, remains scant. A panel of experts will reflect on their current and prior projects to explore challenges and opportunities associated with conducting ethnographic work in an array of entrepreneurial settings. They will also share best practices and their “tricks of the trade.”

Panelist: **Renee Maria Rottner**, *U. of California, Santa Barbara*

Panelist: **Anu Wadhwa**, *Imperial College Business School*

Panelist: **Ken Davidian**, *Virginia Tech*

Once dominated by state-run entities, the space industry is experiencing a significant transformation and the emergence of the “space economy.” Entailing the exploration, development, and utilization of outer space, the space economy encompasses a wide range of commercial, scientific, as well as private and government activities that take place beyond Earth’s atmosphere. The space economy includes various sectors and industries, such as satellite manufacturing, launch, and communications, space tourism, research and development, and the potential for resource extraction from celestial bodies (e.g., asteroid mining). The primary objective of this proposed panel symposium is to accelerate research engagement on the intricacies of the space economy. To achieve this, we bring a diverse group of experts from several management sub-fields, including entrepreneurship, corporate strategy, ecosystem management, business policy, innovation, and corporate venture capital. We seek to (1) expose AOM attendees to insights gleaned from these experts regarding research challenges and opportunities in the space economy; and (2) provide multifaceted perspectives on the development of innovative theories and methods for shaping future research in this area. Aligned with the overarching theme of AOM 2024 Chicago, “Innovating for the Future,” this symposium will contribute to our understanding of the “untamed problems” inherent in exploring an emerging domain, called the space economy.

The Role of Human Resources in Healthcare Management

Session Moderator: **Candice Vander Weerdt**, *Cleveland State U.*

HCM: **Coping with Insufficient Resources: A Qualitative Study of a Behavioral Health Department**

Author: **Candice Vander Weerdt**, *Cleveland State U.*

Author: **Tracy Hopkins Porter**, *Cleveland State U.*

Author: **Jessica Peck**, *Cleveland State U.*

Healthcare workers face stressful conditions when treating patients without sufficient resources. According to the Transactional Model of Stress and Coping (Lazarus & Folkman, 1984), workers cope with stress through problem-based and emotion-based cognitive and behavioral efforts. In a qualitative study of a behavioral health department in an urban community hospital, we identify specific behaviors and cognitive beliefs to cope with insufficient resources. We found healthcare workers identify threats in terms of a dangerous environment, financial security, and unexpected conditions without sources of assistance from external resources, internal resources, and effective management. Healthcare workers coped with this stress through problem-based coping strategies including deviant workplace behavior and justification of the system. Workers engaged in emotion-based strategies of meaningful work, behavioral justification, and disengagement. Based on our findings, we developed the Framework of Workplace Coping Efforts identifying both the method and focus of coping in response to workplace stress.

HCM: **The Impact of Well-Being-Oriented HRM on Nurse Burnout and Proactivity: A Multilevel Study in Health**

Author: **Amir Mehralian**, *U. of Exeter School of Business*

Author: **Jongwook Pak**, *U. of Auckland Business School*

Author: **Mohammad Moradi**, *MSc in Business Administration, Tarbiat Modares U.*

In the field of strategic human resource management (SHRM), scholars have recently delved into well-being-oriented HRM (WBHRM). Recognizing that psychological, physical, and social well-being is widely acknowledged as a fundamental driver of positive employee attitudes within the workplace, it is reasonable to posit that it should similarly enhance the efficacy of organizational functioning. Yet, in the healthcare context, such mutual gains proposition has seldom been the subject of inquiry. To fill the void, the current study establishes and tests a multilevel dual paths model to corroborate the mutual gains effects of WBHRM. Specifically, we propose that WBHRM benefits nurses by lowering their burnout level, and the link is manifested via their role breadth self-efficacy. In parallel, WBHRM enhances felt responsibility for change, which is conducive to nurses' proactive behaviour. In aggregate, these dual paths improve unit-level patient care quality. Also, we hypothesize that nurses' proactive personality systematically changes these suggested relationships. Particularly, extra care was paid to gathering a large dataset with actual patient reports to ensure the rigorosity of our research. Our two-wave and multilevel data from 128 non-acute wards in 28 public hospitals in Tehran generally confirm the hypotheses. We discuss the theoretical and practical implications of our findings.

HCM: **Revealing the Uniqueness of the Human Resource Business Partner Model in a Health Care Setting**

Author: **Paula Marie O'Kane**, *U. of Otago*

Author: **Travor C. Brown**, *Memorial U. of Newfoundland*

Author: **Martin McCracken**, *U. of Ulster*

Author: **Shadi Mahdavi**, *PhD Candidate, Memorial U., NL, Canada*

Author: **Hadyn Robert Bennett**, *U. of Ulster*

While there are growing arguments and evidence concerning the benefits of strategic HRM within healthcare, we find very limited examination of the human resource business partner (HRBP) model within a healthcare context. To date, this strategic HR practice has been largely examined in larger, industrial, financial/insurance, and for-profit organizations. In the study, we examine a newly introduced HRBP model within a complex, unionized healthcare setting. We analysed qualitative data resulting from 52 interviews (27 from HR and 25 from line managers partners) using an interpretive reflexive approach which enabled us to be aware of our previous experience while still looking for meaning and interpreting the data. Overall consistent with contingency theory, we find that the model needed to be adapted to meet the unique circumstances of a healthcare setting. Our findings underscore the need for HR models to fit the culture of the organization in question and for organizations to carefully address issues related to competencies, roles, and responsibilities.

HCM: **Affective Commitment in Public Hospitals: Exploring Employee-Supervisor Dynamics and HR Perceptions**

Author: **Aneeqa Suhail**, *Human Resource Studies, Tilburg U.*

Author: **Steven Kilroy**, *Trinity Business School, Trinity College Dublin*

Author: **Trui Steen**, *KU Leuven Faculty of Social Sciences*

The employee perspective on HR practices is considered an essential element in the linkage between HRM and performance. Drawing on social information process theory, the aim of this paper is to explore what factors influence employee perceptions of motivation-enhancing HR practices thereby improving the level of attachment they have towards their organization. In this regard, this study examines the influence of supervisor perceptions of motivation-enhancing HR practices as well as the perceived employee-supervisor relationship on affective commitment via employee perceptions of motivation-enhancing HR practices. Additionally, we explore the employee-supervisor relationship as a moderator in the relationship between supervisor perceptions of motivation-enhancing HR practices and employee perceptions of HR practices. The study draws on survey data from 542 employees and 38 supervisors in two large public hospitals in Pakistan. The results, generated through multilevel analysis in Mplus, suggest that both supervisors' perceptions of motivation-enhancing HR-practices and the employee-supervisor relationship are positively associated with employee perceptions of motivation-enhancing HR practices. Moreover, employees' perceptions of motivation-enhancing HR practices mediate 1) the relationship between supervisor perceptions of motivation-enhancing HR practices and affective commitment, and 2) the relationship between the employee-supervisor relationship and affective commitment. Finally, the employee-supervisor relationship did not moderate the relationship between supervisor perceptions of motivation enhancing-practices and employee perceptions of motivation-enhancing HR practices. This study contributes to a better understanding of the antecedents (and their boundary conditions) of employee perceptions of HR practices.

Shaping the Future of Work: Strategies for Effective HR Systems and Employee Attitudes

Session Moderator: **Faiza Manzoor**, *Zhejiang U.*

HR: **Corporate Social Responsibility, Organizational Culture, and Happy Management: Consumer Happiness as a Result of Happy Management**

Author: **Faiza Manzoor**, *Zhejiang U.*

Author: **Longbao Wei**, -

This study scrutinizes the mediating role of corporate social responsibilities (CSR) on organizational cultures and happy management. Illustrating stakeholder theory, this article investigates the nexus between organizational culture and happy management. The second is to examine the mediation of CSR between organizational cultures and happy management and further identify the relationship between happy management and consumer happiness. 488 employees from Pakistan rated their organizational cultures, CSR, happy management, and consumer happiness. The results found that CSR partially mediates the relationship between organizational cultures and happy management, and happy management has a positive and significant influence on consumer happiness.

HR: **Beyond the Individual: Trickle Effects in Line Managers' HR Implementation**   

Author: **Joonyoung Kim**, *U. of Missouri*

Author: **Brittany Bond**, *Cornell U.*

In recent years, the field of strategic human resource management (SHRM) has increasingly recognized the pivotal role of line managers in delivering human resource (HR) management practices. However, existing research predominantly centers on individual characteristics of line managers, such as abilities and motivation, as predictors of their HR implementation behaviors, often overlooking the wider organizational context in which they operate. This study leverages social learning and social information processing theories to explore how the HR implementation behaviors of line managers' supervisors permeate down the organizational hierarchy, creating "trickle-down effects." Additionally, it investigates the "trickle-around effects," where the HR implementation behaviors of line managers' peers influence others within the same hierarchical level. Finally, this study uncovers the distinct factors that drive trickle-down effects, influenced by social learning from higher hierarchical levels, and trickle-around effects, stemming from the influence of peers in similar positions. The purpose is to theorize and demonstrate how trickle-down and trickle-around effects interact and collectively shape the HR implementation behaviors of focal line managers. Our aim is to provide a more holistic understanding of the intricate dynamics in line managers' HR practice implementation, moving beyond the existing literature's emphasis on their individual characteristics.

HR: **This I Promise You: An Examination of Psychological Contract Breach Recovery in a Relational Context**  

Author: **Zhiyuan Cai**, *U. of Edinburgh business school*

Author: **Susan E. Murphy**, *U. of Edinburgh*

Given the inevitability of psychological contract breaches, it is crucial for managers, the primary agents in these processes, to effectively repair damaged relationships. Extant literature often simplifies organizational repair efforts as generalized responsiveness, overlooking the nuanced daily interactions between managers and employees and failing to distinguish the varied strategies managers may employ. This study aims to address these gaps. Employing an experimental vignette methodology, two empirical investigations assessed the effectiveness of apologies, amends, and promise-making in mitigating feelings of violation following a breach. Study 1 (N=795) focused on transactional breaches, while Study 2 (N=495) examined relational breaches. Both studies consistently found that while all tactics were beneficial, offering amends was most effective. Additionally, this research explores the moderating roles of pre-violation trust and response velocity. These findings contribute to a more nuanced understanding of breach recovery and offer theoretical insights and practical implications for effective psychological contract breach recovery. This study not only fills a critical gap in the literature but also guides managers in strategically navigating and mending breached contracts.

HR: **The Paradox of Algorithmic Human Resource Management: Based on Technology Affordance Theory**  

Author: **Yunqing Zou**, *School of Business, Renmin U. of China*

Author: **Yu Zhou**, *School of Business, Renmin U. of China*

The widespread adoption of algorithmic technologies in human resource management (HRM) practices raises questions about the potential influences of algorithmic HRM. Drawing on the technology affordance theory, we systematically analyzed the effects of algorithmic HRM based on its technology affordances (i.e., comprehensive, instantaneous, interactive and opaque) and argue that algorithmic HRM is a double-edged sword with both benefits and risks. Specifically, we propose that algorithmic HRM exert control in the workplace through two mechanism, which we re-constructed as enabling mechanism by augmenting employees to improve their work ability and enclosing mechanism by providing restrains and social structures to limit people's work in the organizations. We also conclude this paper with the providing avenues for future research.

Adapting to the Changing Nature of Work: Trends in Contingent Workforce and Job Design

Session Moderator: **Wrenford Thaffe**, *Telfer School of Management, U. of Ottawa*

HR: **Classifying Work in the New Economy: A Spatiotemporal Approach**

Author: **Wrenford Thaffe**, *Telfer School of Management, U. of Ottawa*

Current work classification systems are fragmented and do not sufficiently capture various work arrangements prevalent in the new economy. Such shortcomings hinder researchers and practitioners from differentiating work arrangements and from understanding how and why work characteristics influence workers' attitudes and outcomes. We address this gap by developing a new inclusive taxonomy based on conceptualizing economic work along time and space dimensions. We leverage previous classification systems and draw conceptual inspiration from the physical sciences, particularly mechanical wave theory and structural graph theory. The resulting taxonomy consists of 16 categories of work arrangements based on unique combinations of 2 time sub-dimensions and 2 space sub-dimensions of economic work. Human resource professionals will find this classification system useful for distinguishing between standard and nonstandard workers and among various types of employees, contract workers, and freelancers. Scholars may also build on the taxonomy's underlying theoretical framework to explore how the time and space components of work jointly influence workers' outcomes. We discuss several practical and theoretical contributions of our classification system, highlight potential limitations, and suggest areas for future research.

HR: **Gig Work and Retirement: A Precarious Transition?**

Author: **Alexander Peever**, *DeGroot School of Business, McMaster U.*

Gig workers, unlike employees, are not entitled to benefits such as employee pensions. Although gig work can be characterized as a more flexible and autonomous work style, uncertainty abounds around the amount of work they will have, potentially resulting in an unpredictable income stream and economic insecurity. How, then, do gig workers plan for retirement? What prevents them from preparing for retirement? This study explores how gig workers plan for retirement using an open-ended survey study design. Gig workers who thought about and planned for retirement drew on a mix of resources, forming a retirement bricolage. Self-imposed rules dictated how resources were combined to maximize their value and minimize losses. The minority of gig workers reported having no plans for retirement due to insufficient funds, competing priorities, or a poor understanding of the retirement preparation process.

HR: **Beyond Algorithms: Understanding Applicant Cognition and Motivation in AI-Enabled Recruitment**

Author: **Joomin Kim**, *aSSIST U.*

Author: **Stefano Battaglia**, *Franklin U. Switzerland*

Author: **Hyunjee Hannah Kim**, *Korea Aerospace U.*

This study explores how cognitive activities of applicants in AI Video Interviews (AIV) impact their performance. The objective is to analyze the mediating and moderating effects of Cognitive Persistence (CP), Cognitive Flexibility (CF), and Self-Efficacy (SE) on the relationship between the Opportunity to Perform (OP), which possesses characteristics of Fairness, and the performance in AI video interviews. To test these relationships, we collected survey data and the actual performance data of 223 AIV participants during the recruiting process from one of global manufacturing company in South Korea. The results indicate that CP and CF play a positive mediating role between OP and the applicant's AIV Performance, and self-efficacy partially moderates this relationship. Higher self-efficacy enhances the cognitive persistence of applicants, motivating them to achieve better performance. This research provides important insights into how cognitive traits and self-efficacy should be considered in designing and improving the hiring processes utilizing AI tools like AIV. This study will assist companies in creating more effective and fair recruitment processes and offer applicants the opportunity to maximize their potential.

HR: **Exploring Gig Work Dynamics and Service Provider Shortages in Ride-Hailing Platforms**

Author: **Eugene Son**, *SUNY, Albany*

This paper delves into the utilization of gig workers within the ride-hailing industry through multiple human resource management perspectives. Ride-hailing platforms have typically categorized their gig workers, who provide driving services to clients, as independent contractors rather than employees. Accordingly, the platforms have deviated from traditional employee management practices, focusing primarily on basic job training and payment structuring. The classification of gig workers as independent contractors as independent contractors is elucidated and justified using four theoretical perspectives: the resource-based view of a firm, human resource architecture, transaction cost theory, and human capital theory. Nevertheless, in the aftermath of the COVID-19 pandemic, the ride-hailing platforms experienced severe driver shortages, posing a potential threat to their sustainability. Built on resource dependence theory, this paper contends that the labor pool, rather than the individual human capital of gig workers, should be considered a crucial resource for these platforms and managed with careful consideration. This paper identifies three potential concerns that gig workers may have about working for ride-hailing companies and urges platforms to address these concerns proactively to secure their crucial resource: the stable labor pool of driving service providers.

Workplace Adaptability: Responding to Changes and Challenges in Modern Work Environments

Session Moderator: **Aaron Cohen**, *U. of Haifa*

HR: **The Dark Triad and Cyberloafing: Unveiling the Shadowy Nexus**

Author: **Aaron Cohen**, *U. of Haifa*
Author: **Emrah Özsoy**, *Sakarya U.*

This paper examines the intricate relationship between the Dark Triad personality traits - psychopathy, Machiavellianism, and narcissism - and the phenomenon of cyberloafing. Cyberloafing, engaging in non-work-related online activities during work hours, has garnered increasing attention due to its potential to disrupt productivity and organizational functioning. Drawing upon contemporary research, we delve into the underlying mechanisms and potential implications of how these malevolent personality traits may foster or mitigate cyberloafing. We also examined four other personal psychological and two demographic variables as potential correlates of cyberloafing. The sample included 155 working adults from the USA who participated via Amazon's Mechanical Turk (MTurk). The findings showed that dark triad personalities, particularly Machiavellianism and psychopathy, were related to the two forms of cyberloafing: browsing activities and Emailing activities. Narcissism was not related to any of the forms of cyberloafing. Pay satisfaction and social media addiction (both positively) and age (negatively) were also related to the two forms of cyberloafing. The paper also discusses avenues for future research and practical implications for organizations seeking to mitigate the adverse effects of cyberloafing. The paper concluded with suggestions for future research and presented the limitations of this study.

HR: **The Paradox of Meaningful Work: Uncertainty in the Context of Corporate and Daily Purpose**

Author: **Luisa Liedtke**, *PHD Student at Bielefeld U.; Faculty for Business Administration*
Author: **Kai Christian Bormann**, *Bielefeld U.*

Meaningful work and uncertainty are two major trends in today's workplace. Drawing on conservation of resources theory our aim is to disentangle the complex relationship between meaningful work and uncertainty focusing on their effect on unethical pro-organizational behavior (UPB). We differentiate between corporate purpose, an overarching ethical goal guiding company actions, and daily purpose, the individual's daily valuation of their work. Recognizing that meaningfulness fluctuates, we introduce variability in daily purpose (VDP) as a new variable to capture fluctuations within a person over time. We argue that a corporate purpose in times of uncertainty leads to UPB. Furthermore, we analyze whether daily purpose itself can be a source of uncertainty. We argue that VDP leads to uncertainty. Additionally, to understand the impact of uncertainty in the context of meaningful work on UPB, we explore whether uncertainty leads to UPB. A diary study with 252 participants, yielding 2170 observations, was conducted to validate our propositions. As hypothesized, uncertainty moderates the relationship between corporate purpose and UPB. When uncertainty is high, corporate purpose leads to more UPB; when uncertainty is low, it leads to less UPB. Uncertainty is also the result of varying daily purpose over time and direct predictor of UPB.

HR: **Examining Job Redesign, Reskilling Initiatives, and Their Effects on Employee Engagement**

Author: **Aditya Moses**, *Indian Institute of Management, Ahmedabad*
Author: **Debjit Ghatak**, *Indian institute of management Ahmedabad*

The world of work has undergone significant changes due to technology. This has also resulted in jobs being redesigned. In this study, we first focus on the impact of job redesign on employee engagement. As a response to changing technology, organizations undertake reskilling initiatives. We explore the impact of training on employee engagement when jobs are redesigned. Using survey data from 493 professionals in India, we find that job redesign has a negative impact on employee engagement. Further, technical trainings do not influence this relationship. Behavioral trainings have a negative impact on the relationship between job redesign and employee engagement. Trainings perceived as effective have a positive influence on the relationship between job redesign and employee engagement. Finally, we find that perceived organizational support has a positive impact on the relationship between job redesign and employee engagement.

HR: **How to Align Strategic and Algorithmic HRM? An Integration Based on Ontological Status**

Author: **Astrid Reichel**, *U. of Salzburg*
Author: **Isabella Scheibmayr**, *U. of Salzburg*

The future of HRM has often been described as one of algorithmic HRM, i.e., automating or augmenting HRM decisions by using computational algorithms. For meaningfully integrating an emerging field (algorithmic HRM), into an existing field of knowledge (strategic HRM), it is necessary to identify ontological assumptions made in each field to uncover discrepancies and overlaps. We find substantial differences and intersections in ontological status given to central entities in algorithmic and strategic HRM. Strategic HRM focuses on aligning employee behavior to organizations' strategies by deploying a variety of practices to incentivize the behavior desirable for the organization. Algorithmic HRM, in contrast, conceptualizes worker behavior as object to be predicted by a computational software assuming that algorithms do not influence the behavior they are designed to predict. To overcome this antagonism and meaningfully integrate algorithmic into strategic HRM, we propose a conceptual model for aligning the ontological assumptions between the two.

New Insights into HR Practices from Advanced Methodologies

Session Moderator: **Pingshu Li**, *U. of Texas Rio Grande Valley*

HR: The Effect of Employee-Oriented HRM on Employee Downsizing Following Mergers & Acquisitions

Author: **Pingshu Li**, *U. of Texas Rio Grande Valley*

Author: **Mengwei Li**, *Tilburg U.*

Author: **Hyesook Chung**, *U. of Texas at Dallas*

Author: **Clint Chadwick**, *U. of Kansas*

Firms have increasingly engaged in Mergers and Acquisitions (M&A) activities in recent years. A common strategy following M&A is employee downsizing that aims at achieving strategic goals and enhancing performance. This approach, however, raises concerns from a strategic human resource management (HRM) perspective. Research suggests that downsizing may breach employees' psychological contracts and hinder the development of firm-specific human capital. While this viewpoint has an intuitive appeal, we reconsider it by suggesting that, in the M&A context wherein employees expect significant organizational changes, downsizing does not necessarily lead employees to negative reactions. Instead, if acquiring firms have strong employee-oriented HRM policies and continue to adopt similar policies after the acquisition, employees may interpret downsizing as a strategic managerial action to facilitate organizational changes. Using a representative sample of 5,338 firm-year observations from 1,174 U.S. publicly traded firms between 2002 and 2018, we found that both pre-acquisition investment in employee-oriented HRM policies and the post-acquisition adoption of such policies by acquiring firms positively moderate the negative relationship between employee downsizing following M&A and labor productivity. We discuss the implications of these findings for both research and practice.

HR: Collective Turnover and Unit Performance: The Role of Network Contagion and Knowledge Diversity

Author: **Xin Wei**, *College of Management and Economics, Tianjin U.*

Author: **Xi Zhang**, *Tianjin U.*

Author: **Carol Xiaojuan Ou**, *Tilburg U.*

Author: **Kexin Sun**, *Tianjin U.*

Author: **Emiel Caron**, *Tilburg School of Economics and Management (TISEM), Tilburg U.*

As the digital transformation process deepens, turnover rates have continued to soar to new heights and renews attention to collective turnover from both academia and practitioners, increasingly studies explored the impact of collective turnover on unit performance but without a consistent conclusion. Considering the dynamic process of collective turnover and its contagion effect in the enterprise social network, based on context-emergent turnover theoretical framework and social contagion theory, we investigate the impact of human capital (i.e., knowledge diversity) and collective turnover on unit performance and the role of network contagion effect. Three years of turnover records and enterprise social network data are used to conduct empirical analysis. The results indicate that collective turnover has a significantly U-shaped impact on unit performance, while knowledge diversity and network contagion effect positively affect unit performance. Interestingly, the network contagion effect flattens the inverted U-shaped relationship between collective turnover and unit performance. In addition, peak unit performance shifts to the left-hand side of the inverted U shape when network contagion effect is added. This paper extends the context-emergent turnover theoretical framework by integrating network contagion effect and suggests managers should pay more attention to the phenomenon of turnover contagion within organizational units.

HR: Do Online Employee Reviews Predict Firm Performance (or Vice Versa)?

Author: **Yoshio Yanadori**, *Waseda U.*

Author: **Yue Zhong**, *Graduate School of Commerce, Waseda U.*

When examining the relationship between employee attitudes and performance, it's crucial to consider the direction of causality; while positive employee attitudes contribute to enhanced performance, enhanced performance also stimulates positive employee attitudes. This study addresses this interplay at the firm level, examining how collective employee attitudes and firm performance are interconnected. Building on existing theory and research, we argue that these two variables have a positive reciprocal relationship; firm performance has a positive, time-lagged effect on collective employee attitudes, and conversely, collective employee attitudes have a positive, time-lagged effect on firm performance. Drawing on the employee review data from an employee review website in Japan, we empirically test this time-lagged reciprocal relationship using cross-lagged panel model. The results of the analyses support our argument; there is a positive reciprocal relationship between collective employee reviews on organizational management (pay satisfaction, motivation, and justice) and firm performance (ROA, Tobin's Q, and total shareholders' return).

Author: **Yezi Kang**, Faculty of Economics and Business, U. of Groningen

Author: **Ngoc Han Nguyen**, Groningen U. (RuG)

Author: **Thomas Arend De Vries**, U. of Groningen, Faculty of Economics and Business

Author: **Gerben S. Van Der Vegt**, U. of Groningen

Internal movers within organizations undergo a re-adaptation process after transitioning to new teams. We theorize that the growth in a mover's centrality in the new team after entry is a process involving both adapting and gaining informal status. Prior research on newcomer socialization has primarily focused on post-entry factors that facilitate adaptation in a static manner, limiting our understanding of a more effective way that can predict post-entry adaptation dynamics: team newcomers' pre-entry characteristics. To address this issue, we integrate insights from expectation states theory with the literature on newcomer socialization, exploring why some team newcomers have centrality advantages initially and why others demonstrate a faster increase in their centrality within the new team. Our expectations are supported by a rich dataset, including personnel records, email communications, and performance data from a healthcare organization in the Netherlands. Our results provide evidence that internal movers' within-team centrality is positively linked to their performance. Further, by tracking them for nine months following their exact entry into a new team, we found that explicit social characteristics of newcomers (i.e., higher education, coordinated function, and formal leadership position), which are visible to team members, affect only the initial level of centrality. Implicit competence characteristics (i.e., prior transition experience, and centrality in old teams), which take time to become noticeable through interactions, are predictive of a more rapid increase in centrality in the new team. Our findings evidenced that explicit and implicit characteristics function differently over time. We also contribute to the newcomer literature by highlighting the importance of newcomers' prior experiences in shaping their future developments.

Elevating the Employee Experience: Strategies for Effective Socialization and Training

Session Moderator: **Daniel M Cable**, *London Business School*

HR: **First Impressions: Newcomers' Initial Organizational Images and Psychological Contract Orientations**

Author: **Daniel M Cable**, *London Business School*

Author: **Jerel Slaughter**, *U. of Arizona*

Author: **Zixu Zhang**, *U. of Arizona*

Organizational images help newcomers interpret their employment situations, aiding their socialization into organizations. Using Schwartz and Bilsky's (1987) circumplex of basic human values, we developed a model to explain how newcomers' initial images about their employers affect their psychological contract orientation as the employment relationship unfolds. In Study 1, we tested the model's predictions using a single organization's socialization of 798 newcomers at locations across the United States during one recruiting season. Results suggested that the images newcomers form by their second day of employment related to their psychological contract orientations after one month, which in turn predicted burnout and turnover intentions after three months. In Study 2, results from a policy-capturing study largely confirmed the linkages between initial organizational images and psychological contract orientations.

HR: **Gender in IHRM Scholarship: Implications for Management Education and Women's Academic Careers**

Author: **Fang Lee Cooke**, *Monash U., Australia*

Author: **Karin Sanders**, *UNSW Business School, Australia*

Author: **Komal Balkrishna Bhoir**, *U. of New South Wales*

Like many professional occupations, the participation of female scholars has steadily increased since the mid-20th century in the field of international human resource management (IHRM). While it is widely acknowledged that workforce diversity brings different perspectives, we lack insight into the impact of such changes in the field of IHRM. In this paper, we examine IHRM articles published over the last two decades and explore the implications of gender in the first authorship of scholarly articles for the knowledge base of this field. The analysis of 891 articles published in four journals shows that the IHRM field is becoming more feminized in terms of female (first) authorship of scholarly articles. We found some interesting differences in the types of research topics that are addressed by male and female first authors. Further, articles first authored by women are more likely to examine gender-related research topics. No differences linked to authors' gender were found in the theoretical frameworks and countries studied. We discuss the implications of these findings, particularly with regard to management education and the career development of emerging and future IHRM scholars.

HR: **Sink or Swim? Empowering Trainees for Informal Learning to Improve Transfer and Distal Outcomes**

Author: **Blake Runnalls**, *U. of Nebraska-Lincoln*

Author: **Brian D. Blume**, *U. of Michigan, Flint*

Author: **Jason Huang**, *Michigan State U.*

Author: **Zhonghao Wang**, *U. of Houston - Downtown*

Author: **J Kevin Ford**, *Michigan State U.*

When employees begin a new job in a competitive sales environment, they have a lot to learn in a short period of time. Most organizations incorporate an orientation and formal training, but newcomers also learn informally while on the job. We examine the impact of informal field-based learning (IFBL) on individual outcomes of 244 newcomer sales employees. We investigate how supervisor empowerment interacts with employees' goal orientation to impact IFBL, which serves as a conduit to further influence training transfer and employee outcomes (i.e., supervisor-rated performance, promotion, and turnover). Results demonstrate that IFBL promotes formal training transfer, which influences newcomers subsequent job performance, promotion, and turnover. We also found that supervisor empowerment has an indirect effect on employee promotion and turnover sequentially through IFBL, training transfer, and performance, and this indirect effect is moderated by employee goal orientation. Practical implications are discussed.

Workplace Evolution: Adapting HR Systems to the Dynamics of Modern Work

Session Moderator: **Promila Agarwal**, *Indian Institute of Management, Ahmedabad*

HR: **How is HR Communicating with Employees? The Balancing Act of HR Communication**

Author: **Komal Balkrishna Bhoir**, *U. of New South Wales*
Author: **Karin Sanders**, *UNSW Business School, Australia*
Author: **Helen De Cieri**, *Monash U.*
Author: **Andrew Dhaenens**, *UNSW Sydney*

Communication about people-related matters is a critically important function of human resources (HR), being one of the most effective ways to foster employee engagement and well-being. However, HR communication is currently not well understood. As the custodians of the employee-employer relationship, HR professionals and similar leaders walk a tightrope between the diverse needs and aspirations of the workforce and the strategic goals of the organization. In this qualitative study, we delve into the complex dynamics of this balancing act, by conducting 32 in-depth interviews to better examine the challenges, approaches, and implications of HR communication. Drawing on signaling theory, this paper also aims to explore the unique role and perspectives of HR professionals in crafting communication. By crossing goal orientation (organization or employee-focused) with the signal strength dimension (strong or weak), we develop a typology that organizes HR communication as sent out to employees. This paper contributes to HR scholarship and practice by providing a framework for academics and practitioners to better understand and guide effective HR communication with employees.

HR: **Silencing the Quiet Quitting: Crafting a Symphony of HRM and Psychological Conditions**

Author: **Promila Agarwal**, *Indian Institute of Management, Ahmedabad*
Author: **Prabhjot Kaur**, *Chandigarh School of Business*
Author: **Pawan S. Budhwar**, *Aston U.*

To fill the research gap and expand the body of knowledge on quiet quitting (QQ), the current study, utilising the conservation of resources theory (COR), investigates the effect of high-performance work systems (HPWS), psychological meaningfulness, and psychological availability on quiet quitting. A survey of 431 participants confirmed that HPWS, psychological meaningfulness, and psychological availability are negatively related to QQ. We also found that psychological meaningfulness and psychological availability are mediating mechanisms through which HPWS can result in reduced QQ. The findings make theoretical contributions, have practical implications and we also offer directions for future research.

HR: **Digital Human Resource Management: Scale Development and Validity**

Author: **Qian Sun**, *School of Management, Shandong U.*
Author: **Wenjing Pei**, *School of Management, Shandong U.*
Author: **Wei Liu**, *Shandong U., China*

Even though digital human resource management have attracted scholarly attention due to its widespread use, the lack of an established measure has hindered progress in this research field. Across three studies (n =685), we created and validated a reliable 19-item scale that includes four dimensions: digital strategy support, digital operational support, employee development support, and talent identification support. In particular, study 1 assessed the factor analytic structure; the study 2 confirmed the multidimensional construct of study 1 and determined that DHRM is a second-order factor construct; the study 3 involved assessments of internal consistency, convergent validity, discriminant validity and predictive validity. The results provided a theoretical advancement to the literature on digital human resource management and offered an applied measuring instrument for empirical research in this emerging field.

HR: **CEOs' Displayed Value, High Investment Human Resources Systems and Industrial Environment Moderation**

Author: **Xin Wen**, *The Ohio State U. Fisher College of Business*

We draw upon strategic-choice and organizational adaptation theories to investigate how CEOs' display of communal and agentic values impacts the usage of high-investment human resource systems (HIHRS). Additionally, we explore the moderating impact of industrial munificence and dynamism on the relationship between CEOs' display of communal and agentic values and HIHRS adoption. Our findings indicate that CEOs displaying communal values are likely to enhance HIHRS utilization. Moreover, we observe a negative moderating effect of industrial dynamism on the relationship between CEOs displaying communal values and increased HIHRS usage. Support for our hypotheses was found based on a sample of 4,937 firm-year observations from 1,035 companies listed on the U.S. stock market. This study contributed to strategic HRM research by highlighting the role of CEOs displaying communal values in influencing the usage of HIHRS and by examining the moderating effect of industrial dynamism on the relationship between top leaders' displayed values and the HRM systems.

HR Systems and Workplace Challenges: Navigating the Path to a Better Future

Session Moderator: **Junting Li**, *School of Business and Management, Shanghai International Studies U.*

HR: **Female Leadership in the HR Function and the Adoption of High-Involvement HR Practices**

Author: **Junting Li**, *School of Business and Management, Shanghai International Studies U.*

Author: **Joo Hun Han**, *KAIST College of Business*

Author: **Yan Pan**, *Rutgers U., School of Management and Labor Relations*

Drawing on the upper echelons theory and research on gender leadership, this study proposes that the gender of chief HR officers (CHRO) can impact the adoption of high-involvement HR practices. I specifically expect that female CHROs are more committed to the adoption of high-involvement HR practices because of the characteristics of their leadership styles, cognitive styles, and values compared with male CHROs. While I propose that the direct effects of CHRO gender on the adoption of high-involvement HR practices are positive, the total effects of CHRO gender may also be conditioned by three organizational factors—the proportion of female top executives, the proportion of female middle managers and the level of financial slack. I test the research model using eight-wave panel data in South Korea from 2005 to 2019.

HR: **Social Exchange Breakdown: Income Inequality and High-Commitment Work Practices Effectiveness**

Author: **Jeffrey Arthur**, *Virginia Tech*

Author: **Daniel Judson Beal**, *Virginia Tech*

Societal income inequality is a cause of numerous harmful consequences for individuals and the communities in which they live. In the current research, we argue that such disparities can also change the context of the employee-organization relationship. In a balanced employee-organization relationship based on principles of social exchange, organizations invest in high commitment work practices (HCWPs), providing employees a shared belief that their commitment to the organization will be reciprocated with fair treatment. When the larger environment in which the organization operates is characterized by high levels of income inequality, however, employees have little faith in the fairness of this exchange. As a result, HCWPs are less likely to generate an effective social exchange relationship. Using data from 192 hotel franchises nested within 40 U.S. states, we find that HCWPs affect collective affective commitment by helping to create a strong justice climate; however, this process was moderated by state-level income inequality. Although franchises in states with low income inequality enjoyed a strong effect of HCWPs on justice climate, franchises in states with high levels of inequality had essentially no relation between HCWPs and justice climate, suggesting a breakdown of the implicit social exchange contract. The interactive effect of state income inequality remained robust to several alternative explanations examined in supplementary analyses. Results are discussed in terms of the impact of societal income inequality on organizational functioning, HCWP effectiveness, and methods organizations can adopt to help offset the damaging effects of societal income inequality.

HR: **Flexibility-Oriented Human Resource Management and Employee Innovative Behavior**

Author: **QiHui Sun**, *Shandong U.*

Author: **MengLi Liu**, *Shandong U.*

Author: **Bing Liu**, *Shandong U.*

Author: **Pengxin Yu**, *Shandong U.*

As an emerging management practice, flexibility-oriented human resource management has attracted significant attention from both theoretical and practical circles for its rapid response to dynamic environments. Although existing studies have focused on the impact of flexibility-oriented human resource management on organization, knowledge of how it affects employee is limited. Drawing on person-environment fit theory, we explored the impact of flexibility-oriented human resource management on employee innovative behavior through person-job fit, and proposed the moderating effect of work unit structure. We conducted a two-wave questionnaire survey involving 409 employees from Chinese companies and their direct leaders. We found that flexibility-oriented human resource management, including resource-flexibility-oriented human resource management and coordination-flexibility-oriented human resource management, has a positive impact on person-job fit and further positively affects employee innovative behavior. Interestingly, in comparison to mechanistic work unit structure, flexibility-oriented human resource management has a stronger positive impact on person-job fit in the organic work unit structure. These findings hold significant theoretical and practical implications.

HR: **Do High-Performance Work Systems Always Inhibit Knowledge Hiding? A Moderated Mediation Model**

Author: **Chenghao Men**, *Shandong U.*

Based on social exchange theory, the current study tested a model that links high-performance work systems to three dimensions of knowledge hiding (i.e., evasive hiding, playing dumb, and rationalized hiding). This empirical study of 266 employees revealed that the negative correlations between high-performance work systems and evasive hiding and playing dumb were mediated by felt obligation. However, the indirect effect of high-performance work systems on rationalized hiding through felt obligation was not significant. Moreover, the results found that mastery climate moderated the indirect effects of high-performance work systems on evasive hiding and playing dumb through felt obligation. Our research contributes to the theoretical and practical implications for the literature on high-performance work systems and knowledge hiding, and we also discuss the limitations and future research directions.

As research on AI – much like AI itself – is in its infancy, it is imperative that scholars take up intentional research investigating the impact, presence, and attitudes toward AI at work. This presenter symposium meets this goal head-on and delves into the AOM 2024 theme: Innovating for the Future by investigating factors that managers and leaders should consider in the adoption of AI.

Participant: **Yusliza Mohd-Yusoff**, *U. Sains Malaysia*

Electronic Human Resource Management (e-HRM) stands at the intersection of Information Technology (IT) and Human Resource Management (HRM), shaping the way organizations manage their human capital. The evolution of e-HRM has been profoundly influenced by advancements in technology, defining a new era in how HR practices are carried out within the organizations. Over the past few decades, e-HRM has become an essential component in effectively supporting organizational processes through various HR practices such as recruitment, selection, training, and more (Bissola & Imperatori, 2013; Shah et al., 2020). The concept of e-HRM encompasses the strategic use of web-based technologies to implement HRM policies and practices, thereby improving HRM effectiveness and efficiency (Bondarouk, et. al., 2017). It comprises operational, relational, and transformational practices, each serving a distinct purpose in the HRM landscape (Bondarouk, et. al., 2017). Digital tools and platforms for supporting human resources include HR information systems (HRIS), employee self-service portals, data analytics, and various online communication channels. These tools contribute to the automation and integration of human resource management processes to make them more easily accessible and responsive (Sharma & Aggarwal, 2018). Because e-HRM is evolving rapidly, traditional practices are replaced with a more employee-centric approach. The purpose of this symposium is to explore the current discourse on the role of e-HRM in organizations. Fitting with the conference theme of “Innovating for the Future – Policy, Purpose, and Organizations” this collection of papers explores different ways to leverage technology for improving recruitment, well-being and retention of employees. By looking at the different aspects of human resource management, this symposium offers an integrative perspective on the applications of technology for improving organizational performance and employee experience.

Talent Attraction and Retention: Strategies for Effective Selection and Hiring

Session Moderator: **Miranda Welbourne Eleazar**, *U. of Iowa*

HR: **Unmasking the Shadows: Exploring Antecedents and Moderators of Applicant Ghosting Behavior**

Author: **Brian D. Lyons**, *Elon U.*
Author: **Robert Moorman**, *Elon U.*
Author: **John W. Michel**, *Loyola U. Maryland*

Popular press articles suggest that both applicants and organizations withdraw from the recruitment and selection process without notice. This behavior, referred to as “ghosting,” is prevalent yet empirical research on this topic is unfortunately scarce. To gain greater clarity, the current study examines the antecedents of applicant ghosting behavior, which we place within the nomological network of maladaptive workplace behavior. Drawing on an interactionist framework, we examine the role of aberrant dispositional characteristics—the Dark Triad, self-control, and fear of missing out (FoMO)—in predicting applicant ghosting behavior. We also draw on trait activation and conservation of resources theories to examine how the experience of being ghosted before moderates these relationships between aberrant dispositional characteristics and ghosting behavior. Results from a two-wave design suggest that psychopathy and FoMO positively predicted ghosting behavior and being ghosted before moderated relationships between both (a) self-control and ghosting behavior and (b) FoMO and ghosting behavior. We discuss the theoretical and practical implications of these results and offer future research directions in this nascent field.

HR: **The Impact of Exploding Offers in Hiring**

Author: **Miranda Welbourne Eleazar**, *U. of Iowa*
Author: **Sujin Jeong**, *U. of Iowa*

Hiring is a vital part of organizations and their potential success. Thus, it is crucial that firms understand what makes applicants accept job offers and how the applicants feel about the hiring process. One aspect that can potentially influence applicants’ decisions and perception of employers is employers’ provision of offers with a short period to respond, which are often called “exploding offers” and occur in a variety of industries. Such offers require applicants to make decisions with limited time to cognitively process the offers and their potential ramifications. We hypothesize that applicants are likely to accept jobs when they are given an exploding offer; that effect will be greater in women due to increased risk aversion; and applicants that receive exploding offers will have a more negative perception of the application process, and by extension, their decision to accept the offer. Through multiple studies and methods, we begin to uncover how exploding offers affect job applicants’ decision-making and perception of employers, contributing to the literature on hiring and decision-making.

HR: **Perceived Exploitability: The Effect of Immigrant Applicants’ Hierarchy**

Author: **Joy Obioma Ibedionu**, *The U. of Texas at Arlington*
Author: **Jason R. Lambert**, *Texas Woman’s U.*
Author: **Ekundayo Akinlade**, *Saint Xavier U.*

Studies have suggested that immigrants are exploited and face discrimination in the United States labor market. However, little is known about the sense-making process of immigrant job seekers as they pursue employment. Although prior research has reviewed the experiences of immigrant employees, the management literature scantily examines their attitudes, beliefs, and behaviors as they search for employment. This article aims to fill that void by introducing a conceptual framework explaining why and how immigrant job seekers are exploited by highlighting the acculturation strategies, as moderators, they utilize. Individual differences in recruiters’ attitudes, other-group orientation, and human values are also discussed as potential moderators that could influence employers’ motivation to exploit. The article concludes with practical implications for the framework and suggestions for future research.

HR: **Advancing Stigma Measurement: Comprehensive Validation of the Workplace Stigma Characteristics Scale**

Author: **Jiuyang Chen**, *Louisiana State U.*
Author: **Michael Addison Johnson**, *Louisiana State U.*
Author: **Bailey A. Bigelow**, *U. of Utah*

The interest in diversity, equity, and inclusion in professional practice outpaces scholarly understanding. Some contemporary research explores individual perceptions and reactions to marginalized identities by examining five stigma characteristics—concealability, controllability, centrality, disruptiveness, and malleability. Yet, there is a gap in understanding the mechanisms of how these attributes are perceived and judged in the workplace. This gap is partly due to the lack of a reliable measure for stigma characteristics. Therefore, this paper aims to develop and validate a characteristics of stigma scale in two stages, involving four studies. In Stage I, we follow Hinkin’s scale development process (1995, 1998) to create items based on the literature-defined stigma characteristics. We first invite subject matter experts to help us establish content validity. We then employ an Exploratory Factor Analysis (EFA) with a sample of 278 employed individuals, confirming five distinct dimensions (Study 2). Further validation is conducted with responses from 351 employed individuals through Confirmatory Factor Analysis (CFA) and tests for convergent and discriminant validity (Study 3). The Stage II involves further testing the scale’s criterion and construct validity by examining its relationships with related constructs and assessing the nomological network with a sample of 322 individuals (Study 4). These steps collectively support the utility of the 15-item Stigma Characteristics Scale as a validated instrument.

Participant: **Kristen Price Jones**, *U. of Memphis*
Participant: **Abbie Griffith Oliver**, *U. of Virginia*

Although work-family researchers have made meaningful progress in understanding how parental and pregnancy experiences affect work, little has been done to understand the affects that reproductive health issues, including infertility, IVF, and miscarriage, have on employees at work. This symposium brings together four insightful empirical studies that examine the complex interplay between employees' reproductive challenges and their professional lives. In doing so, this symposium begins an important and much-needed dialogue on the challenges that these hardships present to employees and the ways that they spillover into the work domain. By highlighting the need for innovative organizational policies and practices that are more inclusive of and supportive towards employees confronted with these challenges, this symposium strongly aligns itself with the Academy of Management's 2024 conference theme of "Innovating for the Future: Policy, Purpose, and Organizations.

Detrimental Effects of Remote/Hybrid Work: A Social Interactional Perspective

Organizer: **Michael Paik**, *Florida State U.*
Organizer: **Young Eun Lee**, *Florida State U.*
Participant: **Gang Wang**, *Florida State U.*
Discussant: **Ravi Shanker Gajendran**, *Florida International U.*
Presenter: **Da Yeon Her**, *Florida International U.*
Presenter: **Archana Manapragada Tedone**, *Fairfield U.*
Participant: **Jessica R. Mesmer-Magnus**, *U. of North Carolina, Wilmington*
Participant: **Chockalingam Viswesvaran**, *Florida International U.*
Presenter: **David Joseph Keating**, *U. of Mississippi*
Participant: **Cynthia Kay Maupin**, *U. of Mississippi*
Participant: **Fatima Koko**, *U. of Mississippi*

Since the COVID-19 pandemic, more and more employees have switched to working remotely, and consequently, interest in remote/hybrid work has been rapidly raised and studied by numerous scholars (for reference, see; Gajendran & Harrison, 2007). Despite the heightened interest in remote work, the effect of remote/hybrid work on work outcomes relies heavily on increased autonomy and efficiency (e.g., Bailey & Kurland, 2002; Shamir & Salomon, 1985), with less interest in the effect it has on workplace relationships. Yet, fostering and maintaining good relationships is crucial at work, making us question why this area or research had been neglected previously. Thus, the purpose of this symposium is to explore the nature of remote/hybrid work with a relational perspective, such as social interaction and communication, and identify detrimental effects of remote/hybrid work. First, Gajendran and Her examine how the lack of social interaction of remote workers have less opportunity to build shared cognition with their supervisor and the negative impact can be mitigated by a proactive followership behavior (Manage Your Boss). Second, Tedone, Mesmer- Magnus, and Viswesvaran also point out the lack of in-person engagement as an antecedent of loneliness for remote workers and emphasize the importance of interaction among coworkers. Third, Paik, Wang, and Lee discuss how interpersonal interaction and communication discrepancy influence the OCB of remote/hybrid workers. Lastly, Keating, Maupin, and Koko suggest a new theoretical perspective on the ambiguity of computer-mediated communication by introducing three elements: formatting, punctuation, emoticons. The papers in this symposium demonstrate how remote/hybrid work may affect relationships of remote workers and how this ultimately influences the work outcomes of remote/hybrid workers.

Revitalizing Interactions: Unraveling the Social Dynamics of Newcomer Socialization in the Workplace

Discussant: **Jing Zhu**, *Nanyang Business School, Nanyang Technological U., Singapore*
Organizer: **Ying Wu**, *U. of Illinois Chicago*
Organizer: **Songqi Liu**, *National Science Foundation*

The interactions between newcomers and insiders are crucial for socialization and organizational functioning. These interactions contribute to knowledge sharing, relationship building, identity formation, anxiety reduction, and competence development. Despite previous research delving into various facets of social interactions in newcomer socialization, challenges persist in understanding how the process unfolds and effectively harnessing their organizational benefits. Taken together, the presentations in this symposium offer critical insights to researchers and practitioners on how to effectively evaluate social interactions during socialization and carefully evaluate the pros and cons of a variety of social interactions among newcomers, leaders, and peers. This symposium presents a compelling exploration of the dynamics of social interactions during the socialization process within organizations. It is a platform where academic scholars and practitioners converge to dissect and understand the complexities of how newcomers integrate into new work environments. This integration process is critical not only for the newcomer's success but also for the overall health and effectiveness of the organization.

Panelist: **Simon Pek**, *U. of Victoria*
Panelist: **Trevor Daniel Young-Hyman**, *U. of Pittsburgh*

Self-managing organizations (SMOs) are radically decentralized and flat firms that provide high freedom and flexibility to employees. The investigation of self-organizing and decentralizing with SMOs, although not new, has recently gained prominence. Scholarship on this topic is hampered by an overly narrow set of questions and cases. While most research has investigated the (ir)relevance of SMOs and selected outcomes, less research has focused on how self-organizing and decentralizing function and what impacts effectiveness. This panel symposium aims to go beyond the current dialog by focusing on enabling factors, boundary conditions and opportunities. We include six short presentations that cover distinct areas of emerging, rigorous research. Presentations will be followed by discussions involving the audience. Ultimately, we will take stock of key factors and research findings addressing what enables and limits self-organizing and decentralizing the workplace and where opportunities can be found.

The International Management Division Doctoral Student Consortium is designed for PhD students with an interest in international management as either the primary or a secondary field of inquiry. We welcome participants from all areas related to international management and all stages of their PhD program to attend. The consortium provides a unique opportunity for doctoral students to engage in a conversation around the critical issues of research, careers, and ethics. Participating panelists have diverse and international backgrounds with various academic, leadership, and editorial experiences. The consortium includes a combination of structured panels on different themes, round table discussions on pressing issues, and informal interactions. A substantial amount of time will be dedicated to dissertation development, featuring feedback from faculty in small groups. This event is both an excellent opportunity for doctoral students to receive feedback on their work, and to network with fellow doctoral students and leading scholars in the International Management field.

The International Management Division Junior Faculty Consortium is designed for junior and early career scholars who have defended their dissertations in the last 1-5 years and are building their academic careers in the IM fields. The consortium provides a unique opportunity for the junior faculty to engage in a conversation around the critical issues of careers, research, publishing, teaching and service with leading IM scholars from around the world. These IM scholars have diverse and international backgrounds with various academic, leadership and editorial experiences. The consortium will include a combination of structured panels on many themes, round table discussions on pressing issues, and informal interactions. We will debate the challenges and opportunities of an academic career in IM, getting tenure, building a scholarly reputation, developing a research/publishing strategy for a more significant impact on the field, and maintaining a healthy balance between research, teaching, and service.

Climate Action Research: What's Holding Us Back?

Organizer: **Bradley J. Hastings**, *U. of New South Wales*
Organizer: **David Grant**, *UNSW Business School, Australia*
Panelist: **P Devereaux Jennings**, *Alberta School of Business*
Panelist: **Hilary M. Bradbury**, *Action Research Plus AR+ Foundation*
Panelist: **Daniel Nyberg**, *The U. of Queensland*

Climate change is the grand challenge of our time (Sevil, Muñoz, & Godoy-Faúndez, 2022) yet, it has been observed that there is a dearth of management research on this issue (Nyberg & Wright, 2022). In this panel symposium, we go further than providing a simple 'call to arms' in respect of climate action research. We acknowledge that such calls are important in that they highlight the imperative to conduct research on this important theme, however they do not provide us with an explanation of why management researchers are not applying their research experience and expertise to it. Our symposium centers on a panel discussion where leading management researchers drawn from Europe, North America, and the Asia-Pacific, all of whom have engaged in climate action research, will debate why it is that management researchers are generally failing to engage with this critically important challenge. In doing so, they will address two fundamental questions: (i) 'What's holding us back from climate action research?' (ii) 'What key choices do management researchers have to make when deciding whether to undertake research on climate action?' The outcomes of this discussion will, we believe, lower perceived barriers to research on climate risk among management scholars, guide future debate on the issue, and lead to research that positively contributes to climate action.

The Material and Symbolic Aspects of Management Concepts

Organizer: **Jinah Ryu**, *U. of Illinois at Urbana-Champaign*
Session Chair: **William Ocasio**, *U. of Illinois at Urbana-Champaign*
Organizer: **E. Geoffrey Love**, *U. of Illinois at Urbana-Champaign*
Panelist: **Paul S. Adler**, *U. of Southern California*
Panelist: **Markus A. Höllerer**, *UNSW Sydney & WU Vienna*
Panelist: **Deepika Chhillar**, *U. of Illinois at Urbana-Champaign*

New management concepts serve as new guidelines for managers tackling challenges in technology, society, and the economy. Their longstanding popularity is reflected in the historical ebb and flow of various concepts, ranging from quality and business models, to agility and purpose, over the past century (Abrahamson, 1997; Barley & Kunda, 1992; Bodrožić & Adler, 2018). However, despite its significance, scholarly attention to management concepts in general remains notably limited. The complexity around understanding management concepts lies in how actors employ these concepts and the way these concepts diffuse, though little acknowledged. Specifically, management concepts can be conceived by what practices and techniques are developed and adopted; but the conception can be shifted as actors interpret and communicate them differently, expanding the scope of the conception or even leading to the emergence of new ideas (e.g., Höllerer, Jancsary, Barberio, & Meyer, 2020; Zbaracki, 1998). This symposium aims to bring cutting-edge ideas about management concepts to wider audiences, renewing attention to management concepts and their roles in the changing environments of modern organizations. We particularly discuss both material and symbolic facets of their development, change, and influence. As a new research program, this symposium explores theoretical perspectives and showcases methodological ideas to connect management concepts to the current scholarship in management.

Occupations, Professional Identities and Expertise

Session Moderator: **Carlos Inoue**, *U. of Illinois at Urbana-Champaign*

OMT: The Routinization of Expertise: The Entry of Less-Credentialed Workers into Organizations

Author: **Carlos Inoue**, *U. of Illinois at Urbana-Champaign*
Author: **Jillian Chown**, *Northwestern Kellogg School of Management*

Organizations are increasingly relying on less-credentialed workers to carry out work that has traditionally been performed by experts, such as lawyers, accountants, or physicians. This causes a restructuring of work within the organization, which has implications for experts' behavior and performance. In this study, we propose that the use of less-credentialed workers prompts experts to focus on performing tasks that differentiate themselves from the other workers. The experts' increased specialization stimulates the repeated use and provision of these differentiated tasks, even for clients who may benefit from simpler tasks and services. We suggest that this indicates the routinization of their expertise. Furthermore, we expect that the mismatch between experts' specialization and clients' needs will reduce worker performance and service quality. Using a difference-in-differences framework, we examine these propositions by exploring the introduction of obstetric nurses in hospitals in Brazil and its impact on the behavior and performance of obstetricians-gynecologists. We find that obstetricians-gynecologists are more likely to perform a caesarian section following the introduction of obstetric nurses in a hospital, resulting in worse care for low-risk births. This study highlights how the use of less-credentialed workers can increase experts' specialization while reducing experts' performance.

OMT: Speaking to Those Who Know: How Experts Manage Knowledge Overlaps with Clients

Author: **Abhishek Gupte**, *NYU Stern School of Business*
Author: **Callen Anthony**, *New York U.*
Author: **Beth Bechky**, *UC Davis*

Much of economic and social life depends on experts who draw on their unique knowledge and specialized practices, many of which are invisible and obscure to clients, to make decisions and solve problems. However, experts increasingly find themselves in situations where their clients may possess similar knowledge, experiences and familiarity with expert work practices, raising questions about expert authority. Yet we know little about how experts contend with and manage overlaps in knowledge with their clients, and with what consequences. In this paper, we inductively study the work of two equity research analyst teams who serve large institutional investors. By tracing their work over a decade through approximately 680 reports covering the same 5 publicly-traded firms, we found that these groups varied in what we call their "relational stances" toward clients, which held important consequences for how they articulated and framed their valuation practices. While one group sought to differentiate its expertise from clients and framed its practices as conceptually superior, the other accommodated and mirrored client preferences while framing practices as pragmatic solutions to specific market contexts and challenges. These differences led the two groups to adopt different trajectories of practice change which varied in how they introduced, adopted and used valuation methods across the same set of companies.

OMT: Voluntary Change in Professional Work: Ambition, Need for Efficiency and Role Perceptions

Author: **Clarissa E. Weber**, *Queen Mary U. of London*
Author: **Marilena Diel**, *U. of Goettingen*
Author: **Christian P. Kortkamp**, *U. of Goettingen*

Change in professionals' work contexts is an important and increasingly frequent phenomenon, yet change initiatives often fail due to professionals' resistance. While this holds especially true for change that is externally mandated, our study shows how professionals' change resistance can even arise in the context of their own, voluntary, change initiatives. Based on qualitative data on German GPs' adoption and use of video consultations, we explore how and why professionals counter their own change initiatives. Our findings show how GPs engaged in various interdependent yet counter-effective efforts, which both enabled but also considerably limited the use of the newly adopted practice. Outlining the underlying sources—professionals' ambition, need for efficiency and role perceptions—and the intricate relationship of efforts, our study provides several contributions to the literature on professionals' behavior in the context of change.

OMT: Winter is Coming: Meaningful Work Through the Cold Collective of Elite Identities

Author: **Emma Perriton**, *U. of Southern Denmark*
Author: **Marianne Storgaard**, *U. of Southern Denmark*

This paper demonstrates the significance of others in experiencing meaningful work for elite professionals, in this case that is, professionals who work for societal challenges through technical solutions. An ethnographic field study shows how an elite professional identity is maintained by working with others in what we term a 'cold collective'. The cold collective is a different than usual form of achieving meaningfulness with others at work; not by engaging in friendly and social work relations, but rather by engaging in relations based on competences, knowledge, and expertise. We show how the boundaries of the cold collective to which elite professionals relate are temporally and spatially fluctuating and dispersed by nature, which implies that relations among elite professional identities as processes must continuously be renegotiated with others. These findings build on the emerging bridge between the literatures on meaningful work and professional identity work and add more detailed accounts to the meaning of unity with others in the quest for meaningful work. By doing so, we widen the current understandings of what peers as significant others mean for experiencing work as meaningful among elite professionals.

Entrepreneurial Imagination and Innovation

Session Moderator: **Hassan Mahmood**, *Institute of Business Administration, Karachi*

OMT: **Institutional Work and the Creation of New Organizational Forms in Contested Fields**

Author: **Hassan Mahmood**, *Institute of Business Administration, Karachi*

I draw on a detailed case study of a popular political party in Pakistan, the Pakistan Tehreek-e-Insaf (PTI), to first highlight how its amateur politician founders skillfully employed distributed institutional entrepreneurship and emotive and performative work; and drew upon norms, values and affiliations both internal and external to the contested field of Pakistani politics to legitimize a new form of party organization in Pakistan. Second, I highlight how the field incumbents, the political notables, in the second half of the PTI's history, deployed their own suite of institutional persuasion work to infiltrate the PTI organization, and undermined the legitimacy of the new organizational form by acting from both inside and outside the party. In doing so this paper highlights how the creation of new organizational forms in a contested field differs from the creation of new organizational forms in both established and emerging fields; the factors which determine which of the two parties – the challengers or the incumbents – are successful in such new organizational form creation battles; and the usefulness of undertaking 'unconventional' organizational research for not only pushing the frontiers of organization theory, but also for making it more relevant to theorists, policymakers, and the general public alike.

OMT: **"We're not the Crypto-Bros": The Role of Utopian-Dystopian Imaginaries in Collective Identities**

Author: **Kiia Strømmer**, *Maastricht U.*

Author: **Jarrod Ormiston**, *U. of Technology, Sydney*

Images of possible, probable and preferred futures shape organisational action in the present. This paper explores how utopian and dystopian imaginaries shape collective identities in nascent entrepreneurial fields. We focus on the emerging entrepreneurial field of 'blockchain for good' as a site to explore how utopian and dystopian imaginaries shape collective identity. We adopt a methodology from futures studies, Textor's ethnographic futures, to elicit utopian and dystopian imaginaries through interviews with 40 blockchain entrepreneurs developing alternative approaches to decentralised finance. Our findings reveal how their utopian and dystopian imaginaries exist in a dialectical relationship, shaping and being shaped by each other to create utopian dystopias and dystopian utopias. We show how this utopia-dystopia dialectic triggers mechanisms of 'othering', 'claiming and reclaiming utopias', and 'sensing co-opted utopias' which influences collective identities as entrepreneurs establish coalitions of 'good actors' and distance themselves from those perceived as leading towards dystopian futures. Our study contributes to the literature on future imaginaries and collective identity in nascent entrepreneurial fields by showing how the dialectical relationship between utopian and dystopian imaginaries shapes collective identity formation. Further, we extend our understanding of the role of othering in creating shared utopias and shaping collective identities in emerging fields by creating coalitions of 'good' actors and spaces for critique of those leading a path towards another dystopia.

OMT: **The Anatomy of a Eureka Moment: Microinteraction Patterns, Emotional Scaffolding & Ideas Development**

Author: **Maria Cecilia Flores**, *Alma Mater Studiorum U. di Bologna*

Author: **Santi Furnari**, *City, U. of London*

Research on creative projects has long highlighted the key role of micro-interactions for collective creativity. However, it has neither unpacked what goes on in micro-interactions nor connected their emotional dynamics with the generation and integration of new ideas. In this paper, we ask how micro-interactions among participants of a creative project shape the ideas generated and integrated into it. We draw upon a longitudinal qualitative case study of a creative project team tasked with finding innovative applications for a new technology. Our multi-method case study triangulates between participant observation, interview data and video recordings of all team meetings. We focused our data analysis on the video recording of a key meeting when the task was creatively re-framed, and an innovative solution was generated. Combining video-ethnography, conversation analysis and micro-sociology, we trace the second-by-second micro-interactions unfolding in the meeting, systematically coding the types of interaction patterns, the verbal, vocal and physical cues of emotional dynamics, and the generation and selection of new ideas. Our findings highlight a micro-interactional process of creative re-framing that we label 'emotional scaffolding' by which team members build a positive emotional mood while connecting existing and new ideas into a new solution. We contribute a comprehensive theoretical understanding -and a new methodology- that shows how emotional and cognitive aspects of social interaction intertwine and shape the generation and integration of new ideas in creative projects.

Participant: **Federica Bianchi**, *U. della Svizzera Italiana*
Participant: **Alexandra Gerbasi**, *U. of Exeter Business School*

In any group or organization, conflicts of interest can arise between what serves the collective's interests and what benefits each individual member (e.g., Evans, Hendron, & Oldroyd, 2015). This tension between the individual and the collective may emerge in the realm of social capital returns (Ibarra, Kilduff & Tsai, 2005). For example, individuals might erode the social capital of the whole community as they strive to maximize their own network benefits. Similarly, the community might prosper at the expense of individuals' social capital. Although prior research in social networks has suggested the potential dilemmas arising from the juxtaposition of individual and communal social capital, empirical evidence concerning these dilemmas has been limited. Most social network studies concentrate on individual ego networks and their impact on the focal individual, overlooking their influence on the surrounding network community. This symposium presents four lines of research, each highlighting promising frontiers of social network research at the intersection of the individual and the collective. The first paper examines the tensions that arise in bowtie structures as brokers between cohesive groups seek advantage. The paper poses the question as to the relative outcomes for individuals and groups with respect to social capital and creativity. In the second paper, the focus shifts to cross-team social interactions, revealing an unexpected tradeoff. Whereas these interactions are commonly perceived as beneficial for work teams, the paper reveals how they can cause burnout to boundary spanners due to emotional contagion. The third paper investigates how brokers within a competition network are likely to be disadvantaged if their competitors join forces with each other rather than engage in competition with each other. The fourth paper examines the challenges faced by racial and ethnic minorities within social networks. It uncovers a dilemma between individual networking efforts and the collective network structures and dynamics that hinder or facilitate individual success.

Entrepreneurship, Innovation and Change

Session Moderator: **Sunasir Dutta**, *U. of Minnesota*

OMT: **Entrepreneurial in Text: The Communicative Constitution of Corporate Venture Units**

Author: **Eve-Michelle Basu**, *Stockholm School of Economics*
Author: **Gundula Lücke**, *Uppsala U.*

While individual or collective actor's role in entrepreneurial is widely established and studied, less is known about how texts, specifically multimodal texts that combine words and images, contribute to organization creation. In this study, we draw on the communicative constitution of organizations perspective to explore textual agency in the emergent process of organization creation. Incorporating insights from multimodality and organizational bullshit literature, we conceptualize multimodal texts as construction sites that organize the emergent new order of corporate venture units. We analyze the communicative practices employed in a corpus of multimodal texts containing 230 images and about 20 000 words, which address the corporate venture units of ten Fortune 500 firms headquartered in north-western Europe. In our multimodal analyses, we find that several communicative practices in the texts work together to organize those parts of the organizational reality of CVUs that are settled, as well as those that are still under construction into a loosely coupled system. We identify concretization, embedding, and ambiguity as central communicative practices in and through which texts communicatively constitute the organizational reality of CVUs.

OMT: **How Early Crises Shape Startups' Propensity For Future Change**

Author: **Sunasir Dutta**, *U. of Minnesota*
Author: **Pyung Nahm**, *U. of Minnesota*
Author: **Luis Rios**, *The Wharton School, U. of Pennsylvania*

Organizations in their infancy are more likely to adopt features driven by the social and technical needs of the environment around them, which then can become persistent imprints. While most work in this vein has looked at how these imprints are hard to change later, we argue that organizations that encounter exogenous crises and adaptation needs at the time of founding are imprinted with greater capabilities for future change of other kinds. We test this in the context of US startups in the period 1985-2014, and find that organizations that encountered a local natural disaster in the year post founding are associated with greater chances of technological and organizational pivots later in their lifetime. Yet such enhanced capability for change is a double-edged sword, also enhancing the organization's failure chances long after the crisis itself has subsided. We discuss implications for literatures in organizational adaptation, imprinting, entrepreneurial geography, and exogenous crises and organizations, while offering insights for startups and investors that find themselves in such conditions.

OMT: **The Transformative Potential of the Craft Imaginary - A Study on Craft Brewing**

Author: **Stephan Moritz Schaefer**, *Lund U.*
Author: **Anselm Schneider**, *Stockholm U.*

Craft has been a steady adversary to the proliferation of industrialization. As an imaginary of embodied work, mainly driven by intrinsic motivation and by a strive for excellence, craft is increasingly re-emerging in discussions on improving current forms of work. A common theme across research on craft is its potential to address alienation as one of the main pathologies of modern work. We study the potential of craft for de-alienating work through a case study of the Swedish craft beer community. We build our analysis on Hartmut Rosa's socio-phenomenological concept of resonance, which provides a fine-grained framework for understanding how alienation can be countered through a re-appropriation of the self and the world. We explore how workers in the craft beer industry establish resonance along the axes of process, product, and community. However, we also find that resonant experiences along these axes are inherently precarious, and seemingly evading efforts for institutionalization. On the basis of these findings, we theorize the potential and pitfalls of organizational and social imaginaries to serve as a compass for transforming organizations and society.

OMT: **The Luck of Being "Unlucky": The Initial Small-Fish-in-a-Big-Pond Experience and Future Wins**

Author: **Yue Zhong**, *Graduate School of Commerce, Waseda U.*

Previous literature on prize effects has largely considered winning vs. losing as the only factor that differentiates a prize's impact on its nominees. It is believed that initial winners of a prestigious prize are endorsed with legitimacy and status, and therefore proceed to develop far more successful careers than initial nonwinners, even when the initial difference between the two is just luck. However, empirical findings are mixed: some research finds support for the winners' accumulated advantages, others find the opposite. In this paper, I introduce another important factor: average quality of the nominee pool. Exploiting a unique context of the Akutagawa and the Naoki Prize for Japanese literature, 1935-2018, I compare the subsequent creative outcomes between nonwinners in highly creative cohorts ("small fish in big ponds") and winners in less creative cohorts ("big fish in small ponds"). Corroborating that membership of each cohort is quasi-random in this context, the two groups can be regarded as having essentially equivalent quality, with the second group luckier than the first. I argue and find that, counter to the extant theory's prediction, initially "unlucky" small fish in big ponds produce more novels and collaborate with larger numbers of new publishers subsequently, than initially "luckier" big fish in small ponds. With higher productivity and exploration in publishers leading to more future wins, I show two indirect pathways through which initial small-fish-in-a-big-pond experience can help an individual to attain sustained creativity. I contribute to prize effects literature by demonstrating how initial advantages can be reversed.

Presenter: **Jean-Pierre Imbrogiano**, *U. of Helsinki*

Literature on decolonizing management and organization (MOS) studies has become a hot topic in our discipline (i.e., Allen & Girei, 2023; Pal et al., 2022; Yousfi, 2021). As scholars have recognized a Western-centric bias, fostering one-sided knowledge outputs incommensurate with other cultural contexts (Banerjee, 2021; Filatotchev et al., 2021), there has been an increased call to enhance indigenous theorizing (Bothello et al., 2019; Bruton et al., 2021; Salmon et al., 2023). However, decolonizing our discipline is more than overcoming a so-called WEIRD bias – the narrow research focus on and with actors from countries with a Western, educated, industrialized, rich, and democratic background (Henrich et al., 2010). Instead, decolonizing MOS requires serious “emancipatory” steps to overcome institutional hurdles that hamper the heterogenization of knowledge creation (Banerjee, 2021). Further reflections and new solutions on the setup of journals (Barros & Alcadipani, 2022; Zoogah et al., forthcoming), international conferences (Kondayya et al., forthcoming), or business schools (Woods et al., 2022) are needed to include previously unheard voices in the mainstream literature. What decolonizing means in academia and what it is not is thus a topic that concerns all management scholars (Abdelnour, 2022). Particularly if we take our call seriously to create knowledge for addressing current and future grand challenges (George et al., 2016; Kunisch et al., 2023). Spaces for voices and theories on sustainable solutions beyond Western Enlightenment ideals are thus needed (Banerjee & Arjaliès, 2021). Hence, decolonizing MOS requires profound and deepened reflections from different viewpoints: i) taking stock of existing literature on the topic to identify unaddressed gaps, ii) establishing a common understanding of why to decolonize our discipline, iii) creating ideas of how to do this as an individual scholar in the broader system of knowledge creation, iv) reflect on what institutions in which areas of academia need to be reimagined, v) and finally launch initiatives and start actions (beyond writing about the topic) that can seriously impact and change our academic world. The presenter symposium wants to shed light on these issues through the presentation and subsequent discussion of five articles.

Panelist: **Jan Vom Brocke**, *U. of Münster*

The management field is experiencing a proliferation of groups, networks, and communities across divisions (e.g., OMT, ENT, OB, ONE) dedicated to creating impact (e.g., RRBM network, Desirable Futures scholars, Design Science scholars, GRONEN, OS4Future, PRME). Despite their shared commitment to impactful scholarship, there is currently limited exchange among these communities. The aim of this PDW is to bring these communities together. The idea is to learn about their different perspectives and approaches; to build connections among them; and to inspire novel impactful (research) projects. To accomplish this goal, we have designed an interactive and engaging PDW with two parts. Part 1 will feature an interactive discussion panel with distinguished speakers representing the different communities. Each scholar will offer insights into their communities' perspective and approach towards creating impact. Building on the valuable insights gained from Part 1, Part 2 will adopt an engaging 'Market-of-Makers' format. This energizing format aims to stimulate the creation of novel impactful (research) projects, to uncover shared interests, and to build connections among like-minded scholars. In summary, this groundbreaking PDW seeks to inspire, innovate, and unite to innovate for the future.

No registration required.

Panelist: **Krista Pettit**, *Ivey Business School*
Panelist: **Andre Spicer**, *City U. London*

Dealing with failure is one of the most common challenges scholars face in their academic careers. In fact, scholars encounter more failures than successes, whether it concerns the publication process, one's career path, or the ability to disseminate knowledge to students and the broader society. Yet, in public we mainly talk about successes and often form narratives of negativity around failure. In this Professional Development Workshop (PDW), we invite participants to rethink the conventional way of seeing failure as the opposite of success. We encourage them to look at failure with curiosity, as an opportunity for personal growth, and by accepting the feeling of vulnerability. This PDW provides an opportunity to hear vivid, real-life stories from a diverse and distinguished panel of scholars about their failures, ranging from dry spells in publishing, to not getting tenure, the acceptance of the 'wrong' job, and much more. Through these open and honest stories, we aim to (a) normalize failure and humanize academia, (b) illustrate how to ask for help if one needs it, and (c) offer practices, skills, and mindsets to overcome failure or even fail successfully. Interactive roundtable discussions and dialogues follow the panel presentations. Panelists and panel organizers lead each roundtable. The roundtable sessions allow participants to suggest strategies to build resilience, share ideas and embrace the possibility to fail.

To register for one of the roundtables, please provide your preferences here by July 31st: https://ieseg.az1.qualtrics.com/jfe/form/SV_cuat2Yfijh2mY6

Research on identity and identification has exploded in the organizational sciences in recent years, evolving to the point where it is now considered a root construct. Explorations of identity in organizational scholarship span across a myriad of levels—from the personal, to the occupational/professional, to the organizational, and on up to market/industry levels. The use of qualitative methods has been particularly generative for the development and expansion of identity-related theories. In these efforts, a diversity of qualitative methods have been employed to elicit identity and identification. Such methods include the use of archival records, interviews, historical narratives, artifacts, and/or ethnographic observation. In this professional development workshop, we profess two principal purposes: 1) to survey a variety of qualitative methods for eliciting identity and identification, and 2) to suggest additional and/or supplemental methods of qualitative inquiry that may contribute to the advancement of identity and identification research in the organizational sciences. To do so, we engage a panel of scholars who have employed a wide variety of methods across multiple levels of analysis. Through the lens of their experience, we aim not only to educate our attendees on contemporary approaches to identity and identification research, but also to inspire the next wave of qualitative scholarship.

Interest in experimenting is fueled by an emphasis on establishing causality, which is desirable for publishing academic research in top journals. A recent methodological revolution in the social and behavioral sciences is not only changing the way in which scholars approach experimental design and data analysis, from pre-registering studies to making data and materials available on public repositories, but also raised new critical issues concerning methodological practices to achieve the rigor required in top journals. The purpose of this PDW is to elucidate best-practice recommendations and future directions for designing and conducting different types of experiments (i.e., online, laboratory, field, and quasi-experiments), with the overall goal of discussing current and future approaches for using experiments to advance theory across management fields including organizational behavior, leadership, human resources, entrepreneurship, organizational theory, and strategy. To this end, the PDW is designed to cover both methodological and statistical issues germane to conducting and publishing rigorous experiments that meet top journals' requirements as well as address emerging research trends for directing future scholarship that bridges micro-, meso-, and macro-fields of management. This PDW will also include a Q&A session to encourage questions and reflections from all participants, and an interactive session with roundtable discussions to offer pre-registered participants opportunities to discuss specific questions with the panelists.

If you are interested in participating in the second part of the session (roundtables) to discuss questions specific to your experimental research, please register here by July 26, 2024, 11 pm EDT time: https://gwu.qualtrics.com/jfe/form/SV_clu9hlsyZeM28R0 You will be asked to answer a short questionnaire about your research interests and indicate some issues/questions related to experimental research methods that you have encountered in a project and that you want to discuss with the panelists.

Corporate Philanthropy Strategies

Session Moderator: **Vontrese Deeds Pamphile**, *George Washington U.*

STR: **Pursuing Gains or Avoiding Losses? The Effect of CEO Regulatory Focus on Corporate Philanthropy**

Author: **YuRu Zhou**, *School of Business and Management, Shanghai International Studies U.*

By combining upper echelons theory and regulatory focus theory, this study examines how CEO promotion and prevention focus affect corporate philanthropy and theorizes how these relationships are moderated by board independence and firm's ownership type. Using a sample of 4382 observations of Chinese A-share listed firms from 2006 to 2017, our results show that CEO promotion focus is positively related to corporate philanthropy, and this relationship is attenuated by board independence but accentuated by state-owned firm type; CEO prevention focus is negatively related to corporate philanthropy, and this relationship is attenuated by both board independence and state-owned firm type. Our study makes important theoretical contributions to strategic leadership research, upper echelons theory, and the literature of corporate philanthropy.

STR: **The Dual Labor Effects of Corporate Philanthropy**

Author: **Luis Ballesteros**, *Boston U. Questrom School of Business*
Author: **Vontrese Deeds Pamphile**, *George Washington U.*

This study explores the proposition that the specific social causes targeted by corporate philanthropy influence its effects on labor performance. We introduce a categorization based on social psychology, distinguishing between welfare-shocks philanthropy, aimed at providing welfare restitution for victims of disruptions, and chronic-conditions philanthropy, focused on welfare improvement for those facing longstanding problems. Our experimental evidence demonstrates that exposure to welfare-shocks philanthropy significantly enhances workers' production, accuracy, and efficiency. In contrast, labor performance tends to decrease under chronic-conditions philanthropy and remains unchanged in the absence of philanthropy. These results broadly generalize in matched difference-in-difference estimates spanning 12 years of philanthropic activity by U.S. corporations. Our findings suggest that not all philanthropic efforts are equally motivating for employees and underscore the strategic importance of the philanthropic focus in influencing labor performance, both positively and negatively. Consequently, this study helps reconcile previous varying results regarding the strategic value of corporate philanthropy, offering a nuanced understanding of how this non-financial incentive can shape workforce dynamics and guide the design of more effective philanthropic strategies.

STR: **How the Uncertainty Associated with Social Issues Influences the Returns of Corporate Philanthropy**

Author: **Luis Ballesteros**, *Boston U. Questrom School of Business*
Author: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*

This study examines whether the varying financial returns to philanthropy can be explained by the uncertainty associated with the issues to which a firm donates. We start with the premise that stakeholders react favorably to donations they view as effective and appropriate for specific social needs, which can lead to financial advantages for the donor firm. However, the reliance on various cues for such assessments may differ based on the uncertainty surrounding social issues. For stable issues, where the social need and redress strategies are relatively clear and direct, we expect that proximate cues such as the donation amount and a firm's donation experience are likely indicators of philanthropic effectiveness, thereby predicting its financial returns. Conversely, when donations target uncertain issues where the social need is unclear or evolving, these cues become less informative, prompting stakeholders to consider broader cues, such as firm reputation. Our analysis introduces a method for measuring the country- and time-specific uncertainty of issues and applies it to evaluate donations from the world's largest 2,000 firms from 2007 to 2018. The significance of our study is underscored by the increasing engagement of firms in social issues fraught with high uncertainty.

STR: **Participation of Party Organizations in Corporate Governance and Targeted Poverty Alleviation**

Author: **MENGLI LYU**, *Shanghai U. of Finance and Economics*

A prominent feature of corporate governance in China is the participation of Party organizations, which is considered to play a crucial role in promoting social responsibility and sustainable development. Based on Chinese A-share listed companies from 2016 to 2020, we examine the impact of participation of Party organizations in corporate governance on enterprise targeted poverty alleviation. Our results show that participation of Party organizations plays a significant role in promoting enterprises to fulfill social responsibility for poverty alleviation; compared with blood transfusion poverty alleviation, the higher the degree of participation of Party organizations in corporate governance, the greater the positive impact on hematopoietic poverty alleviation; furthermore, external supervision enhances the positive relationship between Party organizations' participation in corporate governance and targeted poverty alleviation. In addition, we find that the participation of Party organizations in corporate governance has an impact on poverty alleviation by influencing the distribution of corporate attention.

Corporate Political Spending and Lobbying

Session Moderator: **Bo Yang**, *The U. of Hong Kong*

STR: **Sleeping with the Enemy? Politicians' Stakeholders and the Lobbying Strategies of Foreign Firms**

Author: **Miguel Espinosa**, *Bocconi U.*

Author: **Giorgio Zanarone**, *U. Pompeu Fabra*

Author: **Akhil Ilango**, *Indian Institute of Management Bangalore*

How does home country reputation affect foreign firms' non-market strategies? We address this question using unique longitudinal data on foreign lobbying in the U.S. We find that when external events tarnish a country's reputation, firms in that country increase their lobbying of U.S. politicians who have prior connections to the country, and thus are most exposed to stakeholders' backlash. Further corroborating the effect of domestic stakeholders on international non-market strategies, we find that the increase in lobbying is concentrated among politicians from states with strong political competition and where citizens have weak social ties to and negative views of the shocked country. Our results suggest that firms adapt their international lobbying strategies not only to political distance between countries, as found by prior research, but also to the varying features of political stakeholders within a country.

STR: **Political Turnover and Corporate Covert Donations**

Author: **HAOJING SONG**, *Northwestern Polytechnical U.*

Author: **SiJia ZHANG**, *Northwestern Polytechnical U.*

Author: **Jia Ming**, *Northwestern Polytechnical U.*

Covert donation refers to the practice of focal firms failing to honestly disclose the actual amount of their donations, a phenomenon that has been largely ignored in the previous literature. This study examines the influence of political turnover on corporate covert donations. From a political legitimacy perspective, we propose that firms increase the disclosed amount of donations (resulting in few covert donations) in the year of political turnover to gain political legitimacy. However, they hide further information about their donations in the following year of political turnover. Moreover, the above effect would be stronger among state-owned enterprises than private-owned enterprises. Our hypotheses are tested using 5,329 firm-year observations of listed firms in China from 2011 to 2020, and we find empirical support for our hypotheses. Our study contributes to the literature on strategic disclosure and legitimacy management.

STR: **Corporate Lobbying in the EU: Winners and Losers** →

Author: **Nilanjana Dutt**, *Bocconi U.*

Author: **Elie J. Sung**, *HEC Paris*

Author: **Ruyue Li**, *Boston U. Questrom School of Business*

Author: **Johan Rath**, *Bocconi U.*

Do firms gain benefits from lobbying? While firms often engage in markets in various countries, this fundamental question has been examined only in the context of national governments and mostly in the US context. To answer this question for corporate lobbying of institutions that span across countries, we focus on the EU, which is the largest single market, and present a novel dataset of firm-EU policymaker meetings spanning 2016-2022. These meetings, involving firms and EU policymakers like European Commissioners, Members of Parliament, and their staff, serve as a measure for lobbying activities. Next, to gauge the impact of lobbying on firm performance, we examine the likelihood of firms securing EU public procurement contracts. Our analysis shows that meetings are associated with a higher likelihood and value of winning European public procurement contracts. Consequently, lobbying is associated with a higher likelihood of material benefits for firms. Overall, lobbying is both active and expanding in the EU, with firms utilizing meetings as an effective strategy to secure contracts successfully.

STR: **Corporate Political Connections and Value Appropriation in Buyer-Supplier Relationships** 🖨️

Author: **Hanzhong Shi**, *Huazhong U. of Science & Technology*

Author: **Angie Wang**, *The Chinese U. of Hong Kong*

Author: **Bo Yang**, *The U. of Hong Kong*

This paper investigates the understudied role of political connections in shaping buyer-supplier relationships, utilizing the value-based framework. We hypothesize that a firm's connections with the government enhance its outside options, hence its ability to capture value in transactions. We leverage the empirical opportunity to quantify the value acquired by the supplier by examining the trade credit it extends to buyers. We manually extracted buyer-supplier-pair level trade credit data for publicly listed U.S. firms. We find that an increase in a firm's political connections decreases the trade credit it extends to buyers, particularly the financially risky ones and those with a shorter duration of transactional relationships. The study sheds light on the benefits of political connections in enhancing firms' value appropriation in their supply chains.

Navigating Uncertainty: Strategic Adaptation and Innovation in Response to Market Shock

Session Moderator: **Minjae Lee**, *Southern Connecticut State U.*

STR: Innovating or Retrenchment?: Revisiting Strategic Responses to Crisis from an Event Systems Theory 

Author: **Sohvi Heaton**, *Baylor U.*

Author: **Jungwon Min**, *Inha U.*

Shocks that cause economic losses and disrupt normal operations often require rationing of various resources. Considering the critical nature of allocating limited resources during periods of excess demand, extensive research has been dedicated to understanding how firms respond to crises. Unfortunately, these studies often overlook various types of shocks and yield mixed findings based on the context, making it challenging to derive meaningful conclusions. Applying event system theory (EST), we explore the impact of various attributes of a shock on a firm's human capital (HC) allocation decisions. Analyzing longitudinal data spanning from 2013 to 2021 for 1,115 Japanese firms, our findings reveal a positive correlation between the strength dimension of shock events and retrenchment-focused allocation. Simultaneously, the space dimension of shock events is linked to innovation-oriented resource allocation.

STR: Flying Through Turbulent Environments: Physical Resource Reconfiguration and Redeployment 

Author: **John Eklund**, *U. of Southern California*

Author: **Hyo Kang**, *U. of Southern California*

We examine how firms respond to an unexpected industry shock that shifts demand patterns. We highlight the importance of reconfiguring and reallocating non-scale free physical resources to new applications to create new sources of value and being able to access new markets to capture value from these reconfigured resources. The COVID-19 pandemic's impact on the airline industry provides a unique opportunity to examine such a demand shock as there was a substantial decline in passenger demand coupled with a surge in cargo demand. Our findings from the US domestic airline industry reveal that firms possessing highly fungible narrow-bodied aircraft and operating in more dispersed markets were better able to take advantage of the shift from passenger to freight demand. A supplementary case study and interviews with industry experts both support the benefits of fungible physical resources and access to dispersed markets in shaping effective responses to turbulent environments. These findings offer important managerial implications, suggesting that firms whose resources are closely tailored to prevailing industry environments may be less able to adapt effectively to demand shifts caused by industry shocks.

STR: Maladaptation or Strategic Tradeoff? The Effect of a Firm's Preexisting Capability 

Author: **Minjae Lee**, *Southern Connecticut State U.*

This paper investigates the effect of a firm's preexisting capability in project management on the direction of its responses and performance to a demand surge. Our empirical context is the liquefied natural gas industry, which experienced a sudden demand surge in 2000. We find that, under a demand surge, a firm's project management capability has a negative effect on its project efficiency, a positive effect on its project volume, and a positive effect on its total profits. Our further analysis indicates that the negative effect of project management capability on project efficiency may result from a firm's strategic decision to trade project efficiency for project volume rather than from maladaptation after the surge. This study contributes to understanding the dynamics of a firm's preexisting capabilities in the face of market demand changes.

STR: Weathering the Storm: Shaping and Adapting in Response to an Extreme Weather Shock in Florida 

Author: **Emanuel Ubert**, *Rotterdam School of Management*

Author: **Giuseppe Criaco**, *Erasmus U. Rotterdam*

When do firms try to shape their mature and regulated market environment rather than adapt to it in response to a market shock? Strategic management scholars typically think of such shocks as triggering varied adaptive responses that are based on firms' comparative adjustment, transaction, and opportunity costs (CATO). We suggest that such shocks can instead motivate firms to shape their market environment. In this paper, we theorize when firms might pursue such shaping rather than adaptive strategies in response to a specific type of market shock— an extreme weather event. We argue that firms engage in shaping when such a shock introduces uncertainty about the payoffs of firms' existing market opportunities and political opposition to firms shaping those payoffs is weak. We substantiate our theory in the empirical context of homeowner insurer underwriting responses to a record hurricane season in Florida in 2004. A qualitative process analysis traces the coevolution of insurers' shaping and adaptive efforts and that of their legislative and regulatory environment. A difference-in-difference analysis then identifies how political opposition in the form of legislative restrictions blocked market-shaping efforts and triggered systematically different cost-based adaptive responses by specialist and generalist insurers. The paper discusses the consequences of these findings for the CATO framework and for theories of industry co-evolution.

Technology, Innovation, and Organizational Change

Session Moderator: **Piyush Gulati**, *INSEAD*

STR: **Media Intervention and Cessation of Quarterly Earnings Guidance**

Author: **Yachang Zeng**, *Nanyang Business School, Nanyang Technological U., Singapore*

Author: **Jihun Bae**, *Erasmus School of Economics, Rotterdam*

Author: **Jingoo Kang**, *New York U. Abu Dhabi*

When covering firm-provided information for investors, the financial media often expresses views that deviate from managers' intended messages. This media-created information can pose a threat to managers by revealing inaccuracies or inconsistencies in the firm-provided information. Using a comprehensive dataset of news articles covering quarterly earnings guidance (QEG), we find that media sentiment deviation from a manager's intended QEG message reduces the manager's tendency to provide QEG subsequently. This relationship is stronger when media-created information is perceived more credible and when the external demands for QEG are lower. As QEG plays a crucial role in reducing information asymmetry, our findings imply that media-created information can unintentionally increase information asymmetry in the subsequent period by dampening a manager's future tendency to provide information.

STR: **Digital Collaboration Technologies and Managerial Intensity In U.S. Corporations: An Examination**

Author: **Piyush Gulati**, *INSEAD*

Author: **Arianna Marchetti**, *London Business School*

Author: **Phanish Puranam**, *INSEAD*

Observers of novel, technology-enabled forms of organizing have argued that digital technologies enable effective decentralization and can, therefore, reduce reliance on managers in organizations. However, systematic evidence has been scarce, and countervailing narratives exist that portray digital technologies as increasing the degree of coercion and control of subordinates by managers (i.e., "Digital Taylorism"). We develop a theoretical explanation for why digital collaboration technologies (DCTs) should lower managerial intensity and increase decentralization in organizations. To test this argument, we apply a differences-in-differences design on a novel dataset built from over 26 million job listings (Lightcast) and over 20 million social profiles (Revelio) matched to 3,017 US public firms in Compustat, which we track in the period 2010-2019. We find that over the observation window, DCT adopters show a 3% reduction in managerial intensity and a 5-7% increase in non-managerial skills linked to decentralization in their job postings in the years following adoption. The pattern of results is robust to a battery of alternative measures and specifications and strongly supports the idea that DCTs make organizations less hierarchical along the dimensions we studied.

STR: **Red or Blue Survival of Covid-19: Organizational Political Ideology, Exploration, and Resilience**

Author: **Wenjia Su**, *Friedrich-Alexander-U. Erlangen-Nürnberg*

Author: **Verena Hossnofska**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Author: **Sebastian Junge**, *Friedrich-Alexander-U. Erlangen-Nürnberg*

The global impact of the Covid-19 pandemic has increased the importance for organizations to understand and foster resilience. In this study, we explore how an organization's liberalism influences its organizational resilience. Specifically, we argue that liberal-leaning firms achieve greater resilience in two ways—namely, higher stability and faster recovery. Furthermore, we delve into the mediating role of exploration as a proxy for a firm's adaptive and absorptive capabilities. Using a sample of S&P 500 listed firms, our empirical findings indicate that liberal-leaning organizations experienced a smaller setback during the initial Covid-19 shock and achieved quicker recovery to pre-shock levels. Furthermore, we find that exploration mediates the relationship between organizational liberalism and performance setback, such that liberal-leaning organizations achieve a higher level of exploration, which in turn, mitigates the performance setback during adversity.

STR: **How Scientific Organizations Adapt to Advances in Artificial Intelligence: The Impact of AlphaFold1**

Author: **Gabriel Cavalli**, *U. of Toronto, Rotman School of Management*

This paper investigates how leaders of technology-developing organizations adapt to unexpected technological advances in their field. The study proposes that leaders' expertise, determined by their knowledge domain, shapes their beliefs regarding organizational goals and outcomes. Distinct types of expertise are thus hypothesized to drive leaders towards distinct adaptive expertise-sourcing strategies when confronted with unexpected technological advances. Interdisciplinary leaders, proficient in both application and engineering, are argued to adapt through organizational downsizing, aiming to reduce organizational complexity and explore new fields more effectively. Application-oriented leaders are argued to adapt through organizational upsizing and expertise broadening, facilitating knowledge recombination and widespread testing of technological applicability. Engineering-oriented leaders are argued to adapt through organizational expertise deepening, to optimize technological development for enhanced competitiveness. To test these hypotheses, the study examines the success of AlphaFold1 in 2018, an unexpected advance in artificial intelligence that prompted principal investigators in established academic labs to reconsider organization size and expertise composition based on their academic backgrounds. The findings highlight the nuanced interplay between leaders' expertise, beliefs, and adaptive expertise-sourcing strategies in response to unexpected technological advancements.

Role of Media and Stakeholder Evaluations

Session Moderator: **Wei Guo**, *China Europe International Business School (CEIBS)*

STR: The Mediating Effect of Media Approval Between Corporate Social and Financial Performance

Author: **Liang Wen**, *Xi'an Jiaotong-Liverpool U.*

Author: **Jingyu Yang**, *U. Of Sydney*

Author: **Wen Helena Li**, *UTS Business School, U. of Technology Sydney*

Given the intricate corporate social-financial performance linkages, this study focuses on the underexplored secondary stakeholder, media, and develops a framework to unveil how media approval plays a complex role in enabling firms' transformation of corporate social performance (CSP) to improved corporate financial performance (CFP). Specifically, we posit that CSP increases media approval at a decreasing rate and such media approval positively mediates the CSP-CFP relationship. Additionally, given the importance of obtaining political legitimacy in emerging economies, we also suggest that both CSP-media approval relationship and the mediation effect of media approval on the CSP-CFP relationship are weakened when a firm holds a high level of political legitimacy. Our analysis of a panel dataset of 2,008 Chinese publicly listed firms between 2010 and 2019 lends support to our arguments. Our findings shed new light on the role of social approval, in the form of media, in enabling firms' transformation of CSP to CFP.

STR: Nothing but the Truth? Private Information and Reporting on Corporate Social Responsibility

Author: **Jean-Etienne De Bettignies**, *U. of Toronto, Rotman School of Management*

Author: **Huafang Liu**, *Zicklin School of Business, Baruch College, City U. of New York*

Author: **David Robinson**, *Duke U.*

We develop and test a model in which firms can make \textit{non-verifiable} statements about their CSR engagement, and hence may have incentives to mislead markets with exaggerated CSR claims. Firms may privately receive a signal correlated with their CSR engagement - e.g. a measure of greenhouse gas emissions - and have discretion over whether to publicly disclose it. Based on whether a signal is disclosed to them, and on what the signal is, markets form beliefs about the firm's CSR activities and the truthfulness of its claims. The model illustrates the disciplining effect of \textit{ex post} private signal availability on firms' \textit{ex ante} reporting on their CSR engagement. We test the model using a difference-in-differences approach that exploits special features of the introduction of the UK Companies Act of 2013, and find evidence supporting the model's predictions.

STR: Valuing The Revolving Door: Media Attention and Departures of Corporate Executives to the Government

Author: **Conor Callahan**, *U. of Illinois Chicago*

Author: **Eni Gambeta**, *U. of Cincinnati*

Author: **Douglas A. Schuler**, *Rice U.*

The movement of individuals between roles in private-sector firms and the government is a common phenomenon known as the revolving door. While revolving door movements are widely assumed to benefit firms, their establishment also generates varying levels of media attention. This attention has been theorized in other contexts to limit the discretion of government officials and firms to engage in mutually beneficial political exchanges. We argue that media attention poses a boundary condition on the ability of firms to attain benefits from these connections. Focusing on revolving door connections established when corporate executives move to senior positions in the government since the year 2000, we reexamine the performance impact of these ties. Using synthetic control methodology, we analyze the post-appointment Tobin's Q of firms following the movement of their senior executives to the U.S. federal government. Our analyses suggest that when media attention to these moves is greater, the firms of those departed executives experience decreased market expectations. Furthermore, we find little evidence that these firms benefit from these moves, regardless of media attention. Our findings highlight the importance of the social context surrounding revolving door movements and have critical implications for research on corporate political connections.

STR: The Risk of Information Richness: CSR Reporting and Diverse Stakeholders' Evaluation

Author: **Bingkun Zhang**, *The U. of Hong Kong*

Author: **Wei Guo**, *China Europe International Business School (CEIBS)*

Prior studies less explored when diverse stakeholders react similarly and differently to the same CSR reporting. This paper examines how and when rich information disclosed in CSR reports will elicit similar and different reactions from investors, as reflected in stock market reaction, and the general public, as reflected in the favorability of media coverage. We find that, in general, disclosing rich information in CSR reports is positively associated with stock market reaction and media coverage tone. Furthermore, we find that performance decline weakens the positive relationship between rich CSR reports and stock market reaction but strengthens the positive relationship between rich CSR reports and media coverage tone. In contrast, congruence of CSR and core business operations strengthens the positive relationship between rich CSR reports and stock market reaction but weakens the positive relationship between rich CSR reports and media coverage tone. We used computerized content analysis to quantify the extent of information richness in CSR reports and empirically test our hypotheses through data from Chinese listed firms between 2008 to 2017.

Top Manager-Inventor Dynamics

Session Moderator: **Sebastian Cortes-Mejia**, *Pontificia U. Javeriana Bogotá*

STR: **Legal Mind at the Helm: General Counsel in Top Management and Firm Innovation**

Author: **Seung-Hwan Jeong**, *U. of Georgia*
Author: **Xingyuan Fei**, *Texas A&M U., San Antonio*
Author: **Sean Cao**, *U. of Maryland R.H. Smith School of Business*
Author: **Lynn Li**, *Boston U. Questrom School of Business*

General Counsels (GCs), who traditionally were seen as legal gatekeepers playing a supporting role, are increasingly ascending to more powerful roles in strategic leadership. Considering their expanding role, we examine how general counsels in top management teams (TMTs) influence firm strategy in the critical realm of innovation. Our main argument is that the presence of GCs in TMTs can ensure that legal expertise is leveraged in the early stages of the innovation process, allowing for inventions to be developed with a clear understanding of legal implications. In support of this idea, we find that firms with GCs in TMTs have better innovation performance (in terms of both quantity and quality), and this result is stronger when firms' innovation efforts entail high legal risk and uncertainty. Furthermore, the results are weaker when GCs' attention is diverted due to ongoing patent litigation and stronger when GCs have higher levels of power within the TMT.

STR: **Executive's Free-Riding and Firm Innovation: Exploring the Microfoundation Mechanism**

Author: **Guoli Chen**, *INSEAD*
Author: **Wenlong He**, *School of Business, Renmin U. of China*
Author: **Zitai Hu**, *School of Business, Renmin U. of China*
Author: **Weiwu Li**, *Sun Yat-Sen U.*

Although there is evidence that executive inventors with hands-on innovation experience promote firm innovation, existing research has not yet investigated the effects of executive free-riders, who do not put real effort into the R&D process but only share the results, on firm innovation. To address this gap, we leverage the free-riding theory and propose that executive free-riding behavior misappropriates the intellectual property of employee inventors and discourages their motivation to innovate, thus undermining firm innovation. By establishing a unique inventor-level panel data for Chinese listed firms and leveraging the difference-in-differences (DD) research design, our analyses show that executive's free-riding behavior reduces the innovation productivity of (a) inventors who are directly free-ridden by executives (i.e., direct effect) and (b) the rest inventors who are not subjected to but witness such executive free-riding behavior within the same company (i.e., spillover effect). Besides, our results further show that inventors who are directly free-ridden by the executive tend to get promoted in a faster pace. By identifying specific free-riding behavior of the executive and exploring the underlying mechanisms at the individual inventor level, this study contributes to the literature on executive inventors and more broadly corporate governance and firm innovation.

STR: **The Top Management Team's Influence on Innovation Outcomes**

Author: **Soojung Han**, *U. of St. Thomas*
Author: **Andres Felipe Cortes**, *Sacred Heart U.*
Author: **Sebastian Cortes-Mejia**, *Pontificia U. Javeriana Bogotá*
Author: **Youngeun Lee**, *California State U., Los Angeles*
Author: **James Summers**, *Iowa State U.*
Author: **Pol Herrmann**, *Iowa State U.*

A substantial body of strategic leadership research has studied the influence of the top management team (TMT) on firm innovation, i.e., the organization's ability to generate and implement new strategic initiatives. However, the plethora of studied TMT characteristics, along with some inconsistent findings, have impeded a structured synthesis of the literature that provides practical insights and concrete avenues for future research and theoretical development. Using a sample of 131 studies, we address this issue by conducting a meta-analysis that consolidates findings on the relationship between TMT characteristics and innovation outcomes. We organize our analysis following three major groups of theoretical focus (human capital, compensation and ownership, and diversity) and explore if the effects vary depending on innovation inputs and outputs. Our findings indicate a positive effect of TMT size, TMT education, TMT experience, TMT compensation, TMT functional diversity, and TMT cultural diversity; a negative effect of TMT gender diversity; and no significant effects of TMT tenure, TMT stock ownership, TMT founder ratio, TMT age diversity, TMT tenure diversity, and TMT education diversity. We discuss important theoretical implications of these findings.

STR: **Top Managers' Involvement in Inventive Activities and Firms' Performance**

Author: **Jinhuan Tian**, *Southwest U. of Finance and Economics*
Author: **Gianluca Vagnani**, *Sapienza U. Di Roma Rome, Italy*
Author: **Yan Dong**, *Southwestern U. of Finance and Economics*

Positioned at the intersections between the orchestrating resources theory and managers' human capital perspective, our study investigates the relationship between top managers' involvement in inventive activities, technological knowledge breadth, and firms' performance as measured by Tobin's q and Default probability. Using longitudinal data drawn from 2,363 China A-share market firms from 2009 to 2018, we find that top managers' involvement in inventive activities has a positive effect on Tobin's q, while reducing a firm's Default probability. Such an effect is moderated by top managers' technological knowledge breadth. Mechanism tests indicate that managers' involvement in inventive activities promotes Tobin's q through enhancing innovations' quality. Our results explicitly address managers' actions related to the firm innovative resources stock and their contribution to the firm's performance. Implications for firms and policymakers are also proposed.

In two- or multi-sided platform ecosystems, the platform owner governs value generation between and for multiple groups of participants, such as users and complementors, and influences whether and how these ecosystems grow. Most prior research examined the impact of formal mechanisms (like application programming interfaces or software development kits) of these platform strategies, paying little attention to relational and informal factors like collaborative governance with the involvement of complementors, differences between platform ownership structures, and the context of industry or country-level differences. Our symposium is devoted to shed light on this new frontier in platform research. By drawing upon multiple methodologies and studying platform markets across countries, we aim to advance our understanding of the relational and informal side of platform strategy.

Reflection Room

This space is designated as a non-denominational room for attendees to use for prayer or quiet reflection amidst the busy backdrop of the meeting. Use of this space requires tolerance for all faiths, spiritual beliefs and practices. In order to make this space available to attendees, the following rules apply: Only registered Academy of Management attendees are permitted. No candles, incense burning or other smoke, fragrance or flame is allowed. The space is open to registrants at all scheduled times. Conversation and music are prohibited and noise is to be kept to the strictest minimum. Use is restricted to purposes of personal reflection, meditation or prayer. No sleeping is permitted.

Revitalizing Absorptive Capacity

Session Moderator: **Bruno Alencar Pereira**, *Flinders U.*

TIM: From Absorptive Capacity to Innovation: Breakthroughs in New Technology-Based Firms and Startups

Author: **Bruno Alencar Pereira**, *Flinders U.*

Author: **Adela Jana McMurray**, *Flinders U.*

Author: **Josivania Farias**, *U. of Brasilia*

This novel study advances the absorptive capacity and innovation in new technology-based firms (NTBFs) and startup discussion. Expanding the seminal absorptive capacity (ACAP) literature, this qualitative study undertakes a review of the theory by analyzing 167 existing publications until June 2023. The significant findings identify new theoretical insights related to the occurrence and focus of absorptive capacity in NTBFs and startups. The findings identify the search for complementary knowledge and assets, resource-based capacities, and especially dynamic capabilities, as being essential sources for innovation processes. The study establishes that alliances and collaborations for innovation through ACAP present a strong and common approach in the literature and business practice that enhances new knowledge acquisition and technological diversification. Finally, the study provides a rich research agenda comprising 55 topics and directions that academics, managers, and policymakers can observe to leverage the innovation absorption and capabilities in organizational policies, processes, and practices, helping organizations cope with intractable problems while staying true to their purpose for the future. Four significant research gaps are identified related to absorptive capacity and innovation strategies; absorptive capacity, internal-external factors, and resources; antecedents, potential, and realized absorptive capacity; and absorptive capacity and networks.

TIM: Rethinking Absorptive Capacity in the Age of Artificial Intelligence

Author: **Mattia Pedota**, *Politecnico di Milano School of Management*

The concept of absorptive capacity has been widely applied to explain how firms acquire, assimilate, transform, and exploit knowledge to attain competitive advantage. We posit that the rapid emergence of artificial intelligence (AI), which bypasses the gap between data and knowledge, challenges the conception of absorptive capacity as we know it. Through a multimethod qualitative approach that analytically combines an integrative literature review with case studies of eight AI providers, this study unravels the intricate relationship between AI and knowledge absorption. Specifically, it unveils novel dimensions of absorptive capacity pertaining to AI-driven processes and analyzes the interactions between these new dimensions and the traditional facets of absorptive capacity. In extending the absorptive capacity construct, this work seeks to reassert its relevance in the age of AI and develop a nuanced understanding of AI's role in enhancing innovation performance and competitive advantage.

TIM: Resistance to Change and Process of Strategic Planning in the Context of Innovative Capabilities

Author: **Radek Nowak**, *New York Institute of Technology*

The literature on firm innovative capabilities has already identified many organizational resources that can either enable or hinder their development. This study contributes to such research by investigating the effects of two factors, employee resistance to change (RTC) and process of strategic planning (PSP), in the context of absorptive capacity (ACAP). Specifically, the study theorizes and empirically tests the main and moderating effects of these factors on the strength of two dimensions of absorptive capacity – potential absorptive capacity (PACAP) and realized absorptive capacity (RACAP). Statistical tests are conducted using original survey data collected in the healthcare industry in the United States. Future research and implications for practice are discussed.

TIM: The Effect of Exploration on Unutilized Knowledge Spill-Ins

Author: **Sara Ryoo**, *City U. of New York, Baruch College*

Author: **Seungho Choi**, *Ewha Womans U.*

Author: **Wen Zheng**, *ShanghaiTech U.*

This study investigates conditions under which the knowledge-originating firm is more likely to revitalize its unutilized knowledge. We examine 1,688 U.S. pharmaceutical firms from 1996 to 2016 concerning how their propensity to explore influences the re-absorption of their own unutilized knowledge. We find that firms engaging in exploration search facilitate spill-ins of their unutilized knowledge to reinvent themselves in a new technological trajectory. Further, the knowledge distance between the knowledge-originating firm and the recipient firms positively moderates the relationship between exploration and unutilized knowledge spill-ins, while the technological salience of recipients negatively moderates the relationship. This study suggests vicarious learning through knowledge spill-ins as a mechanism through which firms revitalize their own unutilized knowledge.

Understanding Markets: User and Institutional Enablers

Session Moderator: **Kaushik Bagchi**, *U. Ramon Llull, ESADE Business School*

TIM: Environmental Uncertainty and Imitative Adaptation  

Author: **Atif Acikgoz**, *Concordia U., Montreal*
Author: **Fulya Acikgoz**, *U. of Sussex Business School*
Author: **Ayşe Günsel**, *Kocaeli U.*

This research investigates the relationship between environmental uncertainty and imitative performance within marketing teams. We questioned the influence of mental models, which could be adversely affected by informational imperfections rooted in uncertainties in the environment, on imitative adaptation. To do so, we considered the interplay between market complexity and market dynamism as two characteristics of environmental uncertainty, as well as teamwork and taskwork as two components of mental models. Among numerous possibilities, we argue that marketing teams suffer from mental models due to imperfect information. That is, environmental uncertainty likely impedes team members' comprehension of market parameters, resulting in informational imperfections. These imperfections have the potential to constrain the effects of mental models on imitative performance. To validate these hypotheses, we collected data from 81 marketing teams. Our analyses supported the hypothesis that exposure of mental models to informational imperfections negatively mediates the relationship between environmental uncertainty and imitative adaptation.

TIM: Serendipity or Cautious Systematic Exaptation? Uncovering Applications on the Route to Market 

Author: **Kaushik Bagchi**, *U. Ramon Llull, ESADE Business School*

Finding uses for an invention beyond its initial imagined function is a pathway to innovation that has a long and storied history. Of particular interest to innovation scholars is the extent to which finding new applications for inventions is a process of serendipitous discovery as opposed to careful and systematic theory driven search. We distinguish between the propensity of an individual project to lead to a new market application with the aggregate number of new market applications explored using the same underlying invention to delineate between pure serendipity as opposed to a more thorough systematic search process to uncover unexpected applications. We argue that when a new or complex invention is being tested for market application the propensity of an individual project testing a new application is low but that on aggregate more applications are likely to be sought. We thus suggest that, on average, exaptation is a more likely pathway than serendipity to finding unanticipated market applications. We find partial empirical support for our theory through an analysis of drug development projects over a span of three and a half decades, covering more than 100,000 projects in various stages of pre-clinical and clinical testing.

TIM: Legalization and Innovation in the Cannabis Market      

Author: **Lucy Xiaolu Wang**, *Assistant Professor at UMass Amherst*
Author: **Nathan Chan**, *U. of Massachusetts Amherst*

How would legal institutions affect the rate and direction of innovation in restricted or illicit markets? This paper studies the impact of legalization on innovation in the cannabis market. We construct novel data on cannabis-related innovation in clinical trials and patent applications. Using staggered difference-in-differences models and event studies utilizing the variation in state legalization of medical and adult-use cannabis, we find no evidence that medical cannabis laws affect innovation. Adult-use cannabis laws increase trials and patenting, especially patenting in downstream products and methods rather than upstream chemical or treatment innovation. We corroborate the findings with multiple new methods in the literature. These results suggest that legalization increases innovation in the cannabis market, but with relatively weak gains in areas pertinent to health and safe use.

TIM: The Role of Technology Readiness in Consumers' Acceptance of Autonomous Delivery Service 

Author: **Ya Liang**, *Xi'an Jiaotong-Liverpool U.*
Author: **Lixian Qian**, *Xi'an Jiaotong-Liverpool U.*
Author: **Yang Lu**, *Xi'an Jiaotong-Liverpool U.*
Author: **Tolga Bektas**, *U. of Liverpool Management School*

Recent innovations in autonomous driving have spotlighted its potential in last-mile delivery, but there is insufficient research to understand consumers' acceptance of autonomous delivery service (ADS) powered by autonomous driving technology. We fill this research gap by examining the role of technology readiness (TR) in influencing consumer acceptance of ADS in an extended Behavioral Reasoning Theory framework. We find that two TR traits, namely innovativeness and discomfort, can affect both individuals' reasons for and against accepting ADS. However, optimism and insecurity, as two other TR traits, only influence the positive and negative reasoning for accepting ADS respectively. The influences of TR traits on consumers' acceptance intention are mediated by the reasoning process, where the "reasons for" demonstrates stronger effect than "reasons against". Our study also investigates the antecedents of TR traits, with the findings that younger individuals have both stronger TR motivators and weaker TR inhibitors while better educated consumers only demonstrate stronger TR motivators. This study offers valuable insights into the innovation acceptance in last-mile delivery service, with theoretical and managerial implications.

What Do We Know About Digital Innovation?

Session Moderator: **Narges Mashhadi Nejad**, *U. of Toledo*

TIM: Refining Literature Review Strategies: Analyzing Big Data Trends Across Journal Tiers  

Author: **Narges Mashhadi Nejad**, *U. of Toledo*
Author: **Marcelo J. Alvarado-Vargas**, *U. of Toledo*
Author: **Mehrdad Jalali Sepehr**, *U. of Toledo*

This study investigates the influence of academic journal tiers on literature reviews, particularly in the context of big data research in business operations. This study analyzes 1,000 academic articles and conference proceedings across various journal tiers using topic modeling to guide researchers in selecting appropriate journal tiers while conducting a literature review. It examines whether researchers should prioritize different tiers of academic journals based on their goals of depth or breadth. LDA is used for topic modeling, analyzing themes across A*, A, B, and C level journals. The analysis reveals that higher-tier journals (A* and A) offer depth and specialized research. Lower-tier journals (B and C), however, provide a wider range of themes, contributing to the breadth of research topics. Quantitatively, the study employs the Shannon Diversity Index to assess thematic diversity across journal tiers. The results indicate a progressive increase in thematic diversity from A* to B tiers, but this expansion plateaus with the inclusion of C tier journals. Statistical tests confirm that highly cited journals exceed a threshold for thematic depth (Hypothesis 1) and that including a broader range of journal tiers enhances thematic breadth up to a point (Hypothesis 2). The study concludes that the selection of journal tiers for literature reviews must balance depth and breadth.

TIM: Retrospective Synthesis and Future Directions of Public Research Funding' Impact on Big Data Output     

Author: **Giulio Ferrigno**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Author: **Viviana D'Angelo**, *U. Cattolica del Sacro Cuore*
Author: **Francesco Cappa**, *Luiss Guido Carli U.*

The world is overwhelmed by big data and their growth rate is expected to increase consistently over the next years. Accordingly, many funding agencies have boosted big data research in the last decade by pledging financial resources. This circumstance calls for contributions that display a retrospective examination of public research funding impact over time. Using bibliometric techniques, we provide a comprehensive analysis of the big data research most prominent topics and themes, as well as its most prolific authors, institutions, and countries, and to discern the themes and concepts that prominently shaped the progress of the discipline itself. The results suggest that big data research funding impact has progressively widened its field of investigation from industry-specific software applications (2012–2017) to market-demand predictions (2018–2020) and then to firm-performance values (2021–2022). Lastly, based on most frequently cited papers from 2022 onwards, we identify an emerging set of research trajectories that we expect will shape the future impact of big data research funding and the field at large.

TIM: Exploring the Impact of AI on the Recognition of Tacit Knowledge from the Perspective of KM

Author: **Michael Juin-Yi Han**, *National Chengchi U.*
Author: **Feng-Shang Vincent Wu**, *National Chengchi U.*

The debate over whether artificial intelligence (AI) can match or even surpass human intelligence has become an important issue and its impact on businesses has sparked high interest in the communities of knowledge management and R&D innovation management. Consequently, a question arises: Can businesses utilize AI technology to better transform their receptive tacit knowledge? If it is feasible, it could not only potentially reshape the essence of knowledge management and related practices but also impact how AI product is developed. However, there is still very little research on this crucial question. The main purpose of this paper is to address this theoretical gap. This study adopts an experimental approach to collect the required data. Two radiologists were invited to participate in the experiment, using an AI medical recognition software system to experiment, interpret, and compare cases of "judging whether wrist cartilage tears are present in MRI medical images." Research results show that AI, after being trained with a large number of images and data, can reach the level of expert interpretation. Therefore, the study proposes three important propositions: (1) Businesses can utilize algorithms to establish unique AI models in order to model large amounts of data, and create models for dealing with tacit knowledge. (2) Businesses can establish AI models for performing prediction and inference by analyzing the context of data, allowing the organization's tacit knowledge to be better utilized through AI models. (3) Businesses can establish AI models to reduce the degree of knowledge tacitness within the organization, thereby enabling the effective knowledge management and innovation. The research contributes to both industrial practices and academia regarding knowledge management. For the former, this study suggests that managers can use AI technology to analyze various data within the organization, establish AI models with uniqueness, help businesses make various inferences and predictions, and effectively reduce the degree of knowledge tacitness within the organization, accelerating innovation. For the latter, this paper contribute to the theory of knowledge management by redefining the traditional simple equinox: tacit vs. explicitness knowledge, which has significant impact on the ways of managing knowledge and innovation.

TIM: Digital Innovation in Management and Business Literature: A Bibliometric and Topic Modeling Review  

Author: **Dejan Uršič**, *School of Economics and Business, U. of Ljubljana*
Author: **Tomaz Cater**, *U. of Ljubljana, School of Economics and Business*

This paper examines the field of digital innovation publications in management and business journals. By applying two bibliometric techniques – co-citation and bibliographic coupling analysis – we provide a comprehensive overview of digital innovation publications. The bibliometric analysis is further complemented and enhanced by a topic modeling analysis using the Latent Dirichlet Allocation (LDA) technique. We analyze 354 primary documents, identifying three foundational topics from which digital innovation draws, seven current topics from bibliometric analysis, and twelve from topic modeling analysis. We conclude with recommendations for future research in the field of innovation management. This paper reveals knowledge clusters, clarifies nomological networks, and identifies critical knowledge gaps in the literature. Additionally, it serves as a guide for complementing bibliometric and topic modeling analyses in reviewing the knowledge bases of various fields.

Structural Influences on Innovation

Session Moderator: **Wei Wang**, *Business School, Zhengzhou U.*

TIM: Network Stability and Breakthrough Innovations

Author: **Wei Wang**, *Business School, Zhengzhou U.*

Author: **Yanjiao Liu**, *Business School, Zhengzhou U.*

Author: **Jin Chen**, *School of Economics and Management Tsinghua U.*

Although research has investigated how the collaboration network influences the breakthrough innovations, structural explanation do not carry over into an understanding of network stability because they gloss over the nature of network dynamics and, importantly, the addition or lost of ties by the focal inventors. In this study, we move beyond the static network perspective to explore the impact of ego-network stability on breakthrough innovations. We further investigate two contingencies—structural holes and degree assortativity—that moderate the effect of ego-network stability on breakthrough innovations. We argue that ego-network stability reduces breakthrough innovations. The negative effect of ego-network stability decreases when focal inventors span structural holes, while increase when degree assortativity is high. An analysis of a large longitudinal dataset of 487,455 American pharmaceutical patents covering 396,267 inventors provides strong support for our hypotheses. We end with a discussion of the theoretical and practical implications.

TIM: Spending Moore's Dividend to Unleash the Power of Modularity: The Missing Performance Contingency

Author: **Ezekiel Masao Leo**, *Grand Valley State U.*

Modularity research in the past decade has contributed to a growing body of knowledge on various contingencies impinging on the so-called mirroring hypothesis, i.e., increased product modularity is associated with advantageous increases in organizational modularity. However, we have yet to arrive at a coherent or systematic explanation for the different extents of mirroring across industries or technologies. Based on the comparative analysis across software and automotive product development, this conceptual article seeks to address this research gap by advancing a theoretical explanation for the different extents of mirroring across technologies.

TIM: Handling Interrelated Tensions for Modularization Through Using Boundary Objects

Author: **Yang Liu**, *U. of Southampton*

Modularity has been demonstrated as a useful approach to product and organizational design. However, the literature has offered insufficient insights into interrelated tensions for product modularization and how to resolve the tensions. Through a case study of a home appliance company undergoing the cross-product-line modularization process, I found that the interrelated tensions for modularization were revealed through wiring boundary objects and resolved through rewiring boundary objects. I also discovered three loops in the modularization process showing how rewiring contributed to tension resolution when negotiations based on the initial wiring reached deadlock. By linking modularity and boundary objects studies, this research contributes to both fields by highlighting boundary objects as key assistance tools in handling the interrelated tensions for modularization. It shows how self-reinforcing wiring activities can reveal the interrelated tensions and how rewiring activities can resolve these tensions by extending spaces of negotiation.

TIM: Institutionalizing Innovation through Structure, Roles, and Innovation Career Paths

Author: **Gina O'Connor**, *Babson College*

Author: **Chris Meyer**, *Baruch College*

This study argues that organizations that want to continually develop true breakthrough innovation must institutionalize an innovation management system that is structurally differentiated from its mainstream organization. This innovation management system must foster and protect career paths for workers focused on innovation, and it must incorporate integration mechanisms both within the innovation subsystem and between it and the mainstream organization. While others have made similar arguments, few have elaborated how such an organizational subsystem should be structured or provided justification for any particular approach. We draw on the organizational routines literature, organizational design, and Stratified Systems theory to consider this issue. Based on a longitudinal study of twelve large, established companies engaged in building a competency for sustained breakthrough innovation, we develop and report insights that extend these theories into the context of breakthrough innovation management systems. Our findings suggest an alternative to the standard talent development model which expects individuals to excel at numerous differentiated tasks. We augment our empirical results with propositions and by demonstrating how our work contributes to the theories of organization on which it was grounded.

Ideas and Inventors: Igniting Grand Solutions

Session Moderator: **Paul Huenermund**, *Copenhagen Business School*

TIM: Understanding the Dynamics of (De) Regulation and Innovations in Response to Grand Challenges 

Author: **Javad Soltanzadeh**, *U. of Mazandaran*

This research investigates the interactions between innovation and (de)regulations in addressing grand challenges, focusing on ex-ante and ex-post interactions. The study draws from theoretical frameworks such as innovation economics, regulation economics, transaction cost theory, and the resource-based view to enhance our understanding of how firms can leverage their assets and capabilities to maintain competitive advantage. The research emphasizes the need for smart regulations that balance stringency and inclusiveness and calls for further theoretical development and empirical substantiation. It also highlights the importance of considering the behavioral level of firms in responding to grand challenges and the need to mitigate the effects of pressure groups opposing innovations. This research suggests eight propositions and opens avenues for future exploration in understanding the co-evolution of (de)regulations and innovation in grand challenge context.

TIM: How Can a Single Spark Kindle a Prairie Fire? Diffusion Mechanism of Disruptive Medical Innovation 

Author: **Lai Xiuping**, *Nanjing U.*

Author: **Zhang Wenhong**, *Healthcare Researcher*

Disruptive medical innovation is an essential part of the deepening reform of medicine and healthcare system. Distinct from innovations that have advantages in cost or performance, disruptive medical innovations first need to address the challenge of safety. Existing studies do not answer the question of how innovators overcome safety barriers, find early adopters, and grow to the early majority. Through a longitudinal case study of the diffusion of Enhanced Recovery After Surgery (ERAS) in China during 2011-2018, we dissected the key processes and mechanisms underlying the early diffusion of disruptive medical innovations. We find that when adoption may trigger a cognitive dissonance, actors' very early (dis)adoption is driven by both economic gain and structural position; central actors then play amplifier roles in the development from early adopters to the early majority. The key to early diffusion of ERAS is facilitating rational response through a cognition reshaping process. During this process, mobilization strategies aim at motivation, packaging strategies aim at empowerment, and resonance strategies aim at reinforcement and alignment. The proposed framework for cognition reshaping has theoretical contributions to expanding the cognitive perspective on innovation diffusion and managerial implications for the early diffusion of disruptive medical innovations.

TIM: Scientific Inquiry Evolution and Knowledge Impact 

Author: **Jiehao Zhang**, *Tsinghua U.*

Author: **Xibao Li**, *Tsinghua U.*

Driven by passion and interest, scientists seeking to tackle important research topics could occasionally migrate into research areas they are not familiar with before and thus entail an adjustment or change of research directions or fields. How such an inquiry changes affects scientists' knowledge production have a bearing not only on scientists' career development, but also on the evolution of underlying science in the field. Grounded in coalition and the theory of scientific change, we argue that such an inquiry change has a double-edged effect on scientists' knowledge production. Based on a sample of Chinese scientists in the field of Chemistry, we find that inquiry change, on one hand, decreases the visibility of the knowledge produced but, on the other hand, enhances its disruption, thereby driving scientific change. Additionally, the study reveals that scientists' position and degree of embeddedness in collaboration networks affect the impact of inquiry change on their knowledge output. This research elucidates the influence of scientists' research strategies on their creative outputs and uncovers the interactive relationship of multiple networks in which scientists are situated.

TIM: Inventor Mobility After the Fall of the Berlin Wall 

Author: **Ann Hipp**, *U. of Bremen*

Author: **Paul Huenermund**, *Copenhagen Business School*

This study investigates the patenting activities and mobility patterns of East German inventors after the fall of the Berlin Wall. We analyze a sample of 23,950 inventors from the German Democratic Republic (GDR) and trace their patenting careers in reunified Germany after 1990 based on a novel disambiguation and matching procedure. The GDR's singular historical context allows us to shed light on the relative importance of specialized versus general human capital, and the role of an inventor's social and political environment in shaping mobility decisions. Our instrumental variable regression results indicate that East German inventors active in technological fields closer to the Western technological frontier were more likely to continue patenting. Those who initially resided in communities with more robust political support for the ruling socialist party had a lower probability of continuing to patent. However, conditional on that these inventors continued to patent, they were more likely to leave their social context behind and move to former West German regions.

What Can We Be? Radical Technological Change and Competence Re-Orientation

Session Moderator: **Marius Müller**, *Heinrich-Heine U. of Dusseldorf*

TIM: Shaping Change – On the Role of Firms’ Strategic Digital Orientation in Leading Technological Change

Author: **Marius Müller**, *Heinrich-Heine U. of Dusseldorf*

In our digital era the race for "winning technologies" has led to accelerated technology cycles and an increased density of innovation-induced transformations that shape the turbulent times we are living in. Firms must constantly reconfigure core aspects of their DNA – the ability to make decisions under uncertainty becomes critical. While literature has offered rich insights about the heterogeneity of incumbent firms in reacting to discontinuous technological change with adaptation, an alternative strategic response has recently entered the stage: shaping. We build on this and link a knowledge-based view on technological evolution with aspects of strategic shaping to theorize why firms engage in the purposeful discovery of new knowledge when facing uncertainty caused by profound changes in their industry. Further, we position a firm’s strategic digital orientation as a moderator strengthening this relationship. Using longitudinal panel data for 336 S&P-500 firms from 1997 to 2012 we also test our ideas empirically. In doing so, we demonstrate that a momentum of technological change in competition leads firms to create radically new knowledge and that this is even more so the case when the firm’s digital orientation is high.

TIM: Questioning Organizational Identity During Radical Technological Change

Author: **Amber Geurts**, *The Netherlands Organisation for Applied Scientific Research*

Author: **Thijs Broekhuizen**, *U. of Groningen*

Author: **Wilfred Dolfsma**, *Wageningen U. & Research Center*

Author: **Katharina Cepa**, *Vrije U. Amsterdam*

Exogenous radical technological changes often threaten firms’ organizational identity. Many organizations, be it incumbent or new entrant, need to reinvent themselves in light of such technological changes, if they can. To contribute to research on organizational identity and firm responses to radical technological change, we adopt a multifaceted view of organizational identity and emphasize that who or what a firm is, is as important as what a firm does and why. Based on a qualitative, multi-case study on the responses of Dutch music companies to the emergence of digitalization, we explore how this identity-strategy nexus plays out during radical technological change. Based on our analysis, we identify three identity-strategy response mechanisms. In identity affirmation, firms prioritize their identity and incorporate radical technologies to fit their organizational identity. In identity hedging and identity accommodation firms prioritize strategy and suspend organizational identity in favour of strategic change, which over time reconfigures organizational identity. This provides an alternative explanation for the heterogeneity in firm responses to the same radical technological change. The differences across these three response mechanisms yield important insights for the growing study of the intersection of radical technological change and the OI literatures.

TIM: Competency Reorientation: From Photographic Films to Cosmetics at Fujifilm, 1985-2018

Author: **Yusaku Takeda**, *U. of Illinois at Urbana-Champaign*

For decades, scholars have used the notion of “competency trap” to theorize how prior organizational competencies induce rigidity and stasis and thus serve as liabilities facing radical technological changes. I explore a counter pathway in which incumbent organizations’ prior competencies, far from being liabilities, serve as core assets to address their adaptation challenges. I theorize this process through an in-depth historical case analysis of Japan-based multinational company Fujifilm, the only company from the analog photography industry to increase revenues since the triumph of the digital revolution by continuously entering non-photography markets. I relied on proprietary archival data and interviews to trace this transformation. The research uncovers antecedents and mechanisms facilitating this reorientation, emphasizing the dynamic reevaluation and flexible application of competencies in response to market changes. The study highlights the process of creating collective meanings of core competencies within firms and their consequences on subsequent social interactions, extending beyond the conventional focus on top management’s cognitive decision-making processes.

TIM: Managing the Knowledge for Organizational Performance: Through Organizational Ambidexterity

Author: **YongSun Chang**, *Chosun U.*

Author: **Kicheol Boo**, *Chosun U.*

The main aim of this study is to ascertain the impact of knowledge management on organizational ambidexterity and performance. This study sets the organizational ambidexterity as a mediator between the knowledge management and organizational performance. The main aim of this study is to recognize the leading variables affecting organizational ambidexterity and the causal relationships behind the preceding factors and organizational performance. We unfold this research on the theoretical backgrounds of knowledge management and organizational ambidexterity and collect 916 samples from 61 organizations of Korean Financial Institution. This sample based on 494 employees and 422 managers from 61 organizations. We use regression analysis and bootstrapping to test hypothesized relationship at the organizational level. This research yields the following conclusions: First, knowledge management has a positive relationship with organizational ambidexterity. Second, knowledge management is a positive antecedent variable for organizational performance. Third, organizational ambidexterity plays a mediating function between knowledge management and organizational performance. In financial institutions, knowledge management and organizational ambidexterity are found to be meaningful variables explaining organizational performance.

Ambitions, Orientations, and Green Innovation

Session Moderator: **Guannan Xu**, *Beijing U. of Posts and Telecommunications*

TIM: Impacts of Corporate Social Responsibility on Green Innovation: Moderating Role of Network Position 

Author: **Guannan Xu**, *Beijing U. of Posts and Telecommunications*
Author: **Laien Huang**, *Beijing U. of Posts and Telecommunications*
Author: **Jiaying Zhang**, *Beijing U. of Posts and Telecommunications*
Author: **Jingjing Guo**, *Institutes of Science and Development, Chinese Academy of Sciences*

The relationship between Corporate Social Responsibility (CSR) and green innovation presents a paradox in existing research. This study seeks to resolve these contradictions by employing integrative social contract theory to classify CSR into two categories: tight contractual CSR and loose contractual CSR. It then examines the divergent effects of these CSR types on green innovation, particularly under the moderating influence of a firm's network position. Our empirical analysis is based on panel data from 1,245 Chinese listed companies, covering the period from 2011 to 2020, and utilizes a Poisson regression model. The findings reveal that tight contractual CSR tends to inhibit green innovation, while loose contractual CSR promotes it. Additionally, the study uncovers that a firm's connectivity within collaboration networks intensifies the restrictive impact of tight contractual CSR and reduces the supportive effect of loose contractual CSR on green innovation. Conversely, network dominance alleviates the adverse effects of tight contractual CSR and bolsters the encouraging influence of loose contractual CSR on green innovation. These outcomes provide strategic insights for firms seeking to integrate their social responsibility initiatives with the promotion of green technological advancements.

TIM: Chief Digital Officers and Environmental Performance: The Role of the Organizational Environment    

Author: **Alexander Viets**, *U. of Muenster*
Author: **Stephan Von Delft**, *Adam Smith Business School, U. of Glasgow*

This paper studies the impact of a chief digital officer (CDO) on corporate environmental performance. Drawing on the upper echelons theory and the attention-based view, we examine whether and under what environmental contingencies the presence of a CDO affects a firm's environmental performance. To test our hypotheses, we use a dataset of 374 publicly traded U.S. firms and analyze their greenhouse gas (GHG) emissions from 2005 to 2021. Our results show that the presence of a CDO has a positive impact on corporate environmental performance. Notably, we show that this positive link is intensified in contexts with lower environmental complexity, higher dynamism, and lower munificence. Thereby, we extend the understanding of the outcomes of new functional top management team members and contribute to the literature by bringing the organizational environment into the analysis. In particular, we shift the focus to previously little recognized but highly relevant non-financial performance outcomes. The results encourage managers to consider potential environmental performance outcomes and the organizational environment when deciding on the appointment and governance of a CDO role.

TIM: Business as Usual? Exploring the Relationship Between Circular Economy Ambitions and IPR Strategies

Author: **Giovanna Capponi**, *Copernicus Institute of Sustainable Development, Utrecht U.*
Author: **Carolina Castaldi**, *Utrecht U., Department of Human Geography and Planning*
Author: **Laura Piscicelli**, *Copernicus Institute of Sustainable Development, Utrecht U.*

Intellectual property rights (IPRs) play a key role in the business strategies of innovators, hence also for companies innovating towards a circular economy (CE). IPRs can allow circular companies to economically benefit from their innovations, but can also create tensions with their CE ambitions. Unfortunately, a clear picture of such tensions and the way circular companies deal with them is missing. This paper aims to fill this gap by conducting in-depth qualitative interviews with 17 CE-frontrunner companies. Our results show that most firms experience no friction between their CE and IPR strategies. Instances where firms radically rethink usual IPR strategies to achieve a 'strong circularity' are rare. These findings inform the debate on how the business case for circularity might limit the impact and transformative promises of circular initiatives.

TIM: Strategic Orientation and Sustainable Performance: Role of Green Innovation and Technology Dynamism  

Author: **SAAD MAHMOOD BHATTI**, *U. Kebangsaan Malaysia*
Author: **Zafir Khan Makhbul**, *National U. of Malaysia*
Author: **SARA KANWAL**, *U. Kebangsaan Malaysia*

Ecological degradation of natural resources compelled businesses around the globe to embrace sustainable innovation for competitive viability and sustainable performance. Due to this reason, this study investigates how green entrepreneurial and green market orientation impact green innovation and how green innovation mediates the link between strategic orientations and sustainable performance. Data from a survey of 326 medium and large manufacturing firms in Pakistan were analyzed using the partial least squares method. Results reveal that both green entrepreneurial orientation and green market orientations positively influence green innovation, leading to favorable economic and environmental outcomes. The study underscores the mediating role of green innovation and highlights the importance of integrating green technology dynamism to strengthen the impact of green entrepreneurial orientation on green innovation and green innovation on environmental performance. The study recommends organizations to promote green strategies, offer training on eco-friendly technologies, and suggests policymakers implement programs to foster green business development, including incentivization or penalties to encourage compliance.

The Future of Diversity Research in Entrepreneurship, Innovation and Science

Organizer: **Yotam Sofer**, *Copenhagen Business School - Department of Strategy and Innovation*

Organizer: **Sofie Cairo**, *Copenhagen Business School - Department of Strategy and Innovation*

Speaker: **Rembrand Michael Koning**, *Harvard Business School*

Speaker: **Eric Zwick**, *U. of Chicago Booth School of business*

Speaker: **Isabel Fernandez-Mateo**, *London Business School*

Speaker: **Mercedes Delgado**, *Copenhagen Business School and MIT*

Speaker: **Cassidy Sugimoto**, *Georgia Institute of Technology*

In the pursuit of scientific breakthroughs, diversity is not just a virtue but an imperative. This motivates our Professional Development Workshop (PDW), taking stock of the frontier in research on diversity in entrepreneurship, science and innovation. From the underlying questions of how to improve gender and minority representation in science and innovation (speakers Cassidy Sugimoto and Mercedes Delgado), including the origins of investors and entrepreneurs (speaker Eric Zwick), as well as attraction and persistence, (speaker Isabel Fernandez-Mateo) to how scientific knowledge production is affected by diversity deficits, and may result in societal losses (speaker Rembrand Koning). The PDW consists of three parts. First, to secure a shared knowledge base, five speakers present the stock of knowledge in the field, addressing: Women in science, the science and innovation talent pipeline, biases and talent retention, societal loss and consequences from a lack of diversity in science, and the future of and frontier methods in diversity research. The second part of the PDW is devoted to a panel discussion to draw up a research agenda exploring the role of policy makers, universities and funding agencies in supporting the attraction and retention of diverse scientists and inventors, and the use of experimental methods to deliver advice for scalable interventions. The third and last part of the PDW will consist of roundtable discussions with our distinguished speakers where participants can share and discuss research ideas with the speakers, and their colleagues.

The PDW is open for all, BUT only pre-registered participants may share ideas, discuss ongoing research, and obtain insights from colleagues and PDW's speakers at the roundtable discussion (last item on the agenda). To preregister for the roundtable discussion, please sign up by August 5, 2024 using the link: <https://forms.gle/GGM5zqNjYNB1Dgfg8> You will be asked to upload a 1- page description of a research idea related to the PDW agenda that you would like feedback on. Preregistration closes when 25 people have registered.

Teaching Innovation Management with Large Language Models

Participant: **Sarah Mueller-Saegebrecht**, *TU Dresden*
Organizer: **Maria Riniker**, *Bern U. of Applied Sciences*
Participant: **Naomi Haefner**, *U. of St. Gallen*
Participant: **Sebastian Gregor Bouschery**, *RWTH Aachen U.*

Our PDW addresses the integration of Artificial Intelligence (AI) into the teaching of innovation management, a crucial skill for innovation educators. The workshop takes a blended didactic approach, combining theoretical insights with practical exercises on AI tools to enhance participants' understanding and application skills. The PDW covers three main parts. First, the use of ChatGPT-4 for idea generation and creativity in an executive master's course will be explored. This segment shows how AI helps in the development of innovative product ideas and how effective different creativity techniques are in interaction with AI. The second segment looks at the role of AI in developing business cases and model refinement in undergraduate settings. Here we focus on formulating effective prompts and comparing the performance of ChatGPT-3.5 and ChatGPT-4 in analyzing business models. The final part of the workshop deals with the responsible use of AI in teaching. It looks at the ethical integration of AI tools and discusses the reliability of AI-generated content and its impact on management education. This part provides educators with knowledge about the ethical use of AI. Hence, this PDW provides practical knowledge of AI applications in teaching innovation management. It also aims to foster a learning community focused on the competent and responsible use of AI in higher education. Participants will leave with a comprehensive understanding and guide for adapting AI practices in their educational environments.

Human AI Collaboration: Fad, Fringe, and Innovating for the Future

Organizer: **Miaomiao Zhang**, *Harvard Business School*
Organizer: **Fabrizio Dell'Acqua**, *Harvard Business School*
Organizer: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*
Participant: **Léonard Boussioux**, *U. of Washington, Michael G. Foster School of Business*
Participant: **Nan Jia**, *U. of Southern California*
Participant: **Brian Uzzi**, *Northwestern U.*
Organizer: **Jacqueline Lane**, *Harvard U.*
Participant: **Dokyun Lee**, *Boston U. Questrom School of Business*
Participant: **Natalia Levina**, *New York U.*
Participant: **Maytal Saar-Tsechansky**, *U. of Texas at Austin*
Participant: **Hyunjin Kim**, *INSEAD*

This workshop's goal is to provide opportunities to develop an interdisciplinary research agenda on the role of human-AI collaboration in decision-making contexts such as healthcare, finance, and renewable energy, as well as creativity and innovation in the arts, science, and knowledge work. The workshop is motivated by the ever-evolving relationship between human capabilities and generative artificial intelligence (AI) for organizational decision-making and creativity. Since OpenAI released its popular chatbot, ChatGPT, in November 2022, there has been burgeoning interest in the potential for humans and AI to work together – bringing both exciting opportunities and perils of replacement. We focus on pioneering, long-term questions that management, technology, and strategy scholars should explore within this cutting-edge field, distinguishing the future of human-AI collaboration from mere fads and fringe theories. What is clear is that AI is here to stay, and knowledge workers who use AI will likely replace those who do not in a range of industries, such as consulting (Dell'Acqua et al., 2023), content creation (Chen & Chan, 2023), entrepreneurship (Otis et al., 2023), and medicine (Ayers et al., 2023). To advance understanding, this PDW will engage an interdisciplinary group of scholars from strategy, management, and adjacent fields of information systems, operations management, sociology, and machine learning, to develop the foundational questions in AI and human collaboration for the next five years. Integrated into these discussions, we plan to incorporate paper presentations with live AI Demonstrations and Simulations. These interactive components will showcase the latest multimodal Large language models (LLMs) and generative AI technologies. Participants will witness AI's capabilities and limitations firsthand, offering a practical context to the theoretical insights provided by our panelists. These demonstrations aim to provide a tangible understanding of how AI can augment human skills in various professional settings. Following the panel discussions, participants will engage in Small Breakout Sessions for collaborative brainstorming. These sessions are designed to facilitate deeper conversations and brainstorming about future directions and potential workstreams in human-AI collaboration. Attendees will have the opportunity to interact closely with experts, peers, and a customized AI model that is pre-trained based on participants' submitted abstracts (upon consent), discussing how the insights and technologies demonstrated can be applied to their own fields and interests. This PDW is tailored for a wide audience, including academic scholars and industry practitioners, and aims to foster a collaborative environment where diverse perspectives can converge on cutting-edge research questions for future work. Our objective is to provide a comprehensive overview of the current landscape of human-AI collaboration using some interactive components, as well as to spark innovative ideas and partnerships that will shape the future management research on human-AI collaboration.

The MCD 2024 Doctoral Consortium will be as attractive, insightful and inclusive as possible. The Doctoral Consortium will offer doctoral students a complete experience of the Academy of Management Annual Meeting in all its aspects: Scholarly, PDW, symposia, caucuses, and social time. The Doctoral Consortium will take place on Saturday August 11, 2024, and will enable doctoral students (Ph.D., DBA, Exec-PhD, DM ...) to compare their research with the views and experience of the professors and practitioners present.

Supply Chains in a Post-Growth Era: Theoretical Developments and Empirical Examples

Organizer: **Annachiara Longoni**, *ESADE Business School*

Organizer: **Davide Luzzini**, *EADA Business School*

Organizer: **Bobby Banerjee**, *Bayes Business School (formerly Cass), City, U. of London*

Organizer: **Veronica Devenin**, *EADA Business School*

Organizer: **Joe Miemczyk**, *ESCP Business School*

Unequivocal evidence demonstrates that current business activities are contributing to surpassing planetary boundaries, threatening current and future generations (Vogel & Hinkel, 2023). Economists, environmental scholars, and social movements suggest that a core part of the problem is the widespread imperative of endless economic growth in business practice (Banerjee et al., 2021; Parrique et al., 2023). The post-growth approach challenges the desirability of economic growth as the primary objective for businesses and societies but is mostly unexplored in the OSCM literature. However, it represents a fundamental piece of the puzzle to address sustainability challenges in OSCM, including: adopting the ecological dominant logic in SCM (Montabon et al., 2016), closing the gap between Global North and Global South in global supply chains (e.g., Tate et al., 2019), leveraging the interaction between policy and SCM (e.g., Fugate et al., 2019), producing based on genuine needs (e.g., Freudenreich & Schaltegger, 2020). The purpose of this PDW is to open a collective discussion about how supply chains should be designed in a post-growth era. We will reflect on the topic with invited speaker presentations and roundtable discussions involving experts and participants. The workshop will act as a forum for those interested in the topic to learn from experts from different disciplines, share ideas and receive feedback.

STR 2024 Outstanding Educator Award in Honor of David J. Collis

Organizer: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*
Organizer: **Marie Louise Mors**, *Copenhagen Business School*

The STR Outstanding Educator Award recognizes (in even years) an established strategy scholar who has demonstrated outstanding commitment to MBA/executive education in strategic management. The award recipient's contributions typically include outstanding teaching over an extended period, demonstrated mastery of the field, training future business leaders with an impactful strategic perspective, and developing and disseminating teaching methods or materials widely adopted by others. The 2024 STR Outstanding Educator Award recognizes David J. Collis!

Envisioning Education 3.0: AI Integration and UTAUT 2 Unveiled (CANCELLED)

Presenter: **Priya Chaudhary**, *International Management Institute New Delhi*

Presenter: **Simple Arora**, *Assistant Professor (HRM/OB)*

Presenter: **Reetesh K. Singh**, -

The integration of Artificial Intelligence in education has been a topic of increasing interest and importance in recent years. Despite the rising importance of AI, many educational institutions need help to adopt AI due to its demanding and challenging nature. The symposium, "Envisioning Education 3.0: AI Integration and UTAUT 2 Unveiled," embarks on a transformative exploration of the symbiotic relationship between Artificial Intelligence (AI) and the Unified Theory of Acceptance and Use of Technology 2 (UTAUT 2) in the context of education. This dynamic experience is designed for educators, instructional designers, administrators, researchers, and industry stakeholders seeking to revolutionize the future of teaching and learning. The symposium comes alive with a showcase of real-world AI applications in education, featuring case studies, and interactive demonstrations. Participants actively engage in a hands-on workshop, crafting AI-infused lesson plans aligned with UTAUT 2 principles. An immersive escape room challenge adds an element of fun, prompting collaborative problem-solving rooted in the symposium's theoretical foundations. This interactive symposium promises a unique and engaging experience, combining theoretical insights with practical application, fostering collaboration, and providing participants with tangible takeaways for implementing AI in education.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Innovative Praxis in the Classroom – Sharing Experiences With the PRME Impactful Five (i5) Pedagogy

Organizer: **Dirk C. Moosmayer**, *Kedge Business School*
Presenter: **Meredith Conlin Storey**, *PRME Secretariat/United Nations Global Compact Office*
Presenter: **Cheyenne Maddox**, -
Presenter: **Christian Van Buskirk**, -
Presenter: **Dirk C. Moosmayer**, *Kedge Business School*
Presenter: **Marina Anna Schmitz**, *IEDC-Bled School of Management*
Presenter: **Aurora Diaz Soloaga**, *Almaty Management U.*
Presenter: **Benito Teehankee**, *De La Salle U., Manila, Philippines*

Management learning and education must develop leaders' ability to address today's pressing sustainability challenges. The need to educate for creative and impactful development of skills such as systems thinking, futures thinking, circular thinking, design thinking, sustainability science, digital skills, and change management is well documented. To drive the development of these crucial skills, the Principles for Responsible Management Education (PRME) joined forces with The LEGO Foundation and developed the Impactful Five (i5) framework. The i5 framework includes five characteristics that can be used to infuse more joy, meaning, active engagement, social inclusion, and iteration to pedagogy and praxis in business schools. The i5 project started in 2022 with the conceptual development of the framework that was launched in summer 2023 and has since then been rolled out within the PRME network. In this TLC session, we bring together i5 experts, colleagues who have used i5 methods in their teaching since its global launch one year ago, and i5 novices who are interested in innovative responsible management pedagogies. We showcase exemplary interactive and playful learning interventions that i5 experts and early adopters applied within the i5 framework. We then discuss with participants how they can adapt them for their own teaching, allowing them to go home with at least one concrete innovative impactful intervention for their own teaching.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

What About the “O” in the VRIO? Effective “O”rganization and How to Teach It

Participant: **Alex Tawse**, *Georgia State U.*

Introduced by Jay Barney in 1991, the VRIO is the central framework of strategy pedagogy. However, while we know a great deal about the underlying factors and forces that make resources and capabilities valuable, rare, and inimitable (the VRI of the framework), we know remarkably little about the necessary conditions of effective organization. Strategy textbooks generally go little further than defining the “O” as, “being organized to capture value,” or reduce the concept to a matter of organizational structure. In this session, participants will gain a deeper understanding of what effective organization is, and how to teach it. More specifically, I draw on the process of strategy implementation to introduce three essential elements of effective organization and two mechanisms through which managers can influence these elements. An experiential case and exercise will be used in the session to reinforce the concepts and the pedagogical process.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Enhancing Management Pedagogy by Integrating the HistoryMakers' Digital Archive

Organizer: **Anastasia Veronica Graham Bailey**, *Rutgers Business School*
Organizer: **Megan LePere-Schloop**, *Ohio State U.*

This proposed session focuses on pedagogical innovations involving the integration of the HistoryMakers' Digital Archive into management courses. As the country's largest African American video oral history collection, the HistoryMakers' Archive richly documents the lived experiences of leaders and trailblazers across a wide variety of organizations and sectors. Integrating the HistoryMakers archive into management courses therefore provides students the opportunity to engage with the lived experiences of highly effective practitioners and African American voices. Both session facilitators participated in the HistoryMakers' Faculty Innovations in Pedagogy and Teaching Fellowship. As part of the fellowship program, faculty members from across the country worked collaboratively with HistoryMakers staff to integrate the archive into class lectures and discussions, course activities, and assignments. The course redesigns and intensive training sessions ensured that the courses were both guided by and enhanced with African American voices. The facilitators have a wealth of lessons learned to share with other faculty members who want to design their courses in ways that center the voices and lived experiences of HistoryMakers. Participants in the proposed session will have the opportunity to reflect on the value of integrating African American and practitioner voices into their management courses, experience first-hand pedagogical approaches for doing so, and collaboratively ideate ways to enhance their management pedagogy using the HistoryMakers archive.

Entrepreneurial Business Plan Development Projects in Partnership with Start-Ups and SMEs

Presenter: **Kumaran Rajaram**, *Nanyang Technological U.*

Presenter: **Steven Austin Stovall**, *Southeast Missouri State U.*

Presenter: **Edward Andrew Crowley**, *Southeast Missouri State U.*

Project-based learning, or problem-based learning, is an important part of the pedagogical process of imparting major functional areas of business in the practitioner world, while also teaching key theoretical and academic concepts to college-level students. This workshop explores how universities in Singapore and the U.S. are working with start-ups and small to medium enterprises to provide project-based learning to students. Instructors from these universities will share how they approach potential business partners, develop the projects, describe past projects, and discuss how student efforts are evaluated. The primary goal is to develop a learning design to incorporate the hands-on projects with real firms addressing real-time issues. The process incorporates three major elements, namely identifying the priority issue of the organization to be dealt with, developing solutions using the theoretical frameworks taught, and have the assessment performed. The verbal pitch of the course assessment will have selected leaders from these firms partnering with the faculty to perform the evaluation. The idea is to make the students' learning authentic, provide an opportunity to be exposed to these potential future employers, and be involved with the entrepreneurship community to operate as part of the eco-system.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Integrating Generative AI inclusively for Constructivist-Oriented Active Learning

Panelist: **Lilian Ngozi Schofield**, *Queen Mary U. of London*
Panelist: **Xue Zhou**, *Queen Mary U. of London*
Panelist: **Joanne Jin Zhang**, *Queen Mary U. of London*
Panelist: **Olatunde Amoo Durowoju**, *Liverpool Business School, Liverpool John Moores U.*
Panelist: **Xianghan (Christine) Odea**, *Kings College London*
Panelist: **Michael Odea**, *U. of York*

The session aims to showcase how educators integrate generative AI, aligning with constructivist-oriented active learning principles. Central to the discussions are inclusion issues, particularly accessibility, AI literacy, and AI policies in teaching and learning. The panel will showcase how educators incorporate generative AI into constructivist-oriented active learning to cater to accessibility, AI literacy, and generative AI use in education. The panel session aims to provoke discussions on the potential of AI in constructivist-oriented active learning to enhance inclusion in AI usage. Educators and stakeholders interested in generative AI in learning would find the session useful.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Creating a Psychological Safety Learning Community

Presenter: **Binhua Eva Huang**, *Wilfrid Laurier U.*

Psychological safety is the foundation of feeling secure enough to take interpersonal risks, voice opinions, openly disagree, and express concerns without the fear of negative consequences. In an educational context, psychological safety is paramount for students to feel comfortable taking risks, sharing genuine feelings, and expressing themselves without the apprehension of judgment or repercussions. The sense of psychological safety empowers students to perform at their best. However, quite often in our classes, a notable majority of students remain silent, leaving only a few actively contributing to class discussions and learning. In such instances, the class may lack a sense of psychological safety, hindering open communication and discouraging students from freely expressing their thoughts, opinions, or questions. This absence of a psychological safety foundation in the learning environment may lead to hesitation among students to contribute, limiting the diversity of perspectives and impeding the richness of class discussions. Recognizing the critical role of psychological safety in successful learning, this dynamic and interactive session aims to provide practical tips and suggestions on building a psychological safety learning community. Cultivating such a community necessitates continuous efforts throughout the entire semester. Participants will gain insights into various approaches for fostering psychological safety at different stages, including before the semester begins, at the start of the semester, midway through, and as it concludes. The takeaways will enable participants to develop a tailored approach to psychological safety that aligns with the unique needs of their courses.

Utilising a Multiple Partnership Approach to Enhancing Students' Learning

Presenter: **Li Xiang**, *Adam Smith Business School, U. of Glasgow*

Presenter: **Katie Lombardo**, *U. of Glasgow Adam Smith Business School*

Presenter: **Denis Fischbacher-Smith**, *U. of Glasgow*

Business school courses have been criticized as being overly theoretical and where the delivery of learning within them is seen as problematic (Fleck, 2012; Starkey et al., 2004; Starkey & Tempest, 2005). The question of whether business schools are professionally orientated or more conventional social science departments has been a long-standing debate within the academy as has the effectiveness of their approaches to learning and teaching (Bennis & O'Toole, 2005; Pfeffer & Fong, 2002). In response to these criticisms and based on feedback from our alumni we developed a practice-based blended elective course with multiple partners. This approach was seen to fit with the University's Learning and Teaching Strategy in terms of increasing experiential learning opportunities for students, and marked a response in teaching practices around remote working caused by Covid-19. The course was offered to MBA/MSc-FinTech students and the course design aligns with the University's Learning & Teaching Strategy by focusing on student-centered active learning (Prince, 2004), curriculum and assessment transformation, and the development of students' professional skills. The course allows students to apply multidisciplinary frameworks to an assessment of active, real-world challenges. The dynamic nature of the course ensures students can learn in a high quality and novel experience whilst developing graduate attributes through a supportive learning network. This course has delivered positive learning outcomes as evidenced by student and alumni feedback. As result of the positive experience with the course, 30% of alumni returned as alumni mentors, well beyond the industry standard for alumni volunteering.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Generative AI and Meta-Learning: A New Age of Teaching and Learning in Management Classroom

Presenter: **Gokhan Oztunc**, *wesleyan College*

In this Teaching and Learning Conference session, participants will learn how to use Generative AI for high-end meta-learning in management classrooms. Using Bloom's taxonomy, this session will provide participants with a specific roadmap to utilize Generative AI for the knowledge, comprehension, application, analysis, synthesis and evaluation stages of high-end learning. Overview of Generative AI, meta-learning and Bloom's Taxonomy will be provided, and specific examples of how Generative AI can be used to achieve the levels of the taxonomy will be presented. Participants will work together to develop new ideas and innovative ways of using Generative AI in management classrooms. Through interactive discussion, they will also have the opportunity to further create a professional network of management educators and scholars for future collaboration in the application of Generative AI in classroom settings. With the new AI technologies, this session will contribute to the educational and scholarly conversation about the new age of teaching and learning in the field of management and organization.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

The Habit of Reflection – Why, How and When Should We Include Space for Reflection in our Classrooms

Presenter: **Anita Boey**, *Trent U.*

Reflection allows pause, which is important for increasing self-awareness, acknowledging challenges/successes, digestion, absorption of information, prepares for forward thinking and goal setting. That was a long list of benefits! This workshop will give participants the space to discuss the importance of using reflective teaching approaches for students and for our own self-development as teachers. Presenters will demonstrate several reflective teaching approaches and give recommendations for when reflection could/should be used during class. Participants get to leave the workshop with a good idea of why, how and when reflections should be a good habit to have in their teaching and classrooms.

Presenter: **Belinda Zakrzewska**, *U. of Sussex Business School*
Presenter: **Seray Ergene**, *U. of Rhode Island*
Presenter: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*
Presenter: **Alexandre Faria**, *EBAPE/FGV*

Following this year's conference theme 'Innovating for the Future', this PDW is oriented towards facilitating scholars to engage in critical reflections, insights, and open discussions on CMS as both a condition and consequence of innovation. This PDW focuses on CMS as both a community, such as the AOM CMS division, and an approach to knowledge/scholarship. The central position of this PDW is that if CMS is to understand the emerging needs and rising challenges of our changing society, then CMS itself should reflect upon the existing consequences of its own past innovations to consider possible directions for innovating a future for CMS. The central question that this PDW seeks to ask and answer is: 'How then should we reflect toward innovating a future for CMS?' To address this question, we bring together a panel of six CMS scholars from different regions, cultures, and career stages, all of whom have close interactions with the CMS division. Two overarching processes of reflection will occur in the PDW space. The first process reflects on existing issues and possible directions for innovating a particular future for CMS. Scholar presentations serve as a conversation starter, where they reflect on their experience with the CMS division/community/scholarship and share four envisioned directions for a CMS future, including participatory innovation, radical decolonization that prevents self-colonizing, critical connections and togetherness, and a politics of hope. The second process of reflection focuses on next-step actions and consequences, laying a foundation for future activities and events of CMS collective innovations.

Achieving Systemic Change: Developing Women Administrators and Allies in Universities

Organizer: **Gina Grandy**, *U. of Calgary*

Organizer: **Wendy Cukier**, *Ryerson U.*

Organizer: **Suzanne Marie Gagnon**, *Asper School of business, U. of Manitoba*

Panelist: **Ajnes Prasad**, *EGADE Business School*

Panelist: **Pushkala Prasad**, *Skidmore College*

Panelist: **Susan Swayze**, *George Washington U.*

In universities, women remain underrepresented among academic staff and in senior administrative leadership. These challenges regarding gender equity and representation persist even as the establishment of equity offices and diversity task forces that facilitate the development and implementation of inclusive policies within universities have become commonplace. Equity and inclusion are especially urgent issues within university settings, as the presence of staff and leadership from underrepresented groups is critical within the university context where these individuals can serve as role models and mentors, encouraging students from diverse groups to consider careers within academic organizations, and sponsors to facilitate professional opportunities and experiences. Increasingly, research demonstrates that the exclusion of women and scholars from underrepresented groups has a profound impact on the quality and relevance of research as well as the ways in which postsecondary institutions engage with communities and their social mandates. This Professional Development Workshop (PDW) sets out to advance discourse among gathered experts to promote tangible systemic change, and advance equity concerning the representation of women in this sector by sharing insights framed at individual, collective, and systemic levels with a focus on gender and intersectional perspectives. The PDW will feature short scholarly presentations based on exceptional research, followed by interactive roundtable discussions among participants and notable scholars in the field.

This PDW is designed to continue to cultivate a strong community of scholars who are interested in research related to health and well-being in the context of entrepreneurship. This PDW will (1) provide keynote presentations and round-table discussions lead by scholars who have published work related to health and well-being in entrepreneurship for the purpose of spurring new research and (2) allow for networking by inviting all participants to display their research interests using a gallery walk format (i.e., small poster presentations). In this PDW, we aim to highlight exciting new directions for research about the role of health in the entrepreneurship process. The goal is to build a larger community of scholars engaging in innovative and meaningful entrepreneurial health-related research. Our PDW is unique by including a broad set of topics, including: specific roundtables on (1) new research platforms for facilitating an international research community on health and well-being, (2) doing interdisciplinary research on entrepreneur health and well-being, (3) using ethnographic methods to study entrepreneur health and well-being, (4) suicide and disability, (5) the health vs. hustle paradox associated with entrepreneurship, (6) the role of the self and identity, (7) how to use large epidemiological datasets to study entrepreneur health, (8) disadvantaged populations and the relationships between resourcefulness and entrepreneur health, (9) well-being trade-offs and how to measure well-being across diverse research designs, and (10) understanding the nuanced interplay between entrepreneurs work-related passion and non-work pursuits (i.e., leisure) on entrepreneur's health, well-being, and venture performance.

This session provides (1) keynote presentations, (2) round-table discussion, and (3) a gallery walk of small-format poster presentations. All are welcome to bring a small poster (8.5x11 inches) of their research to this session. For questions on poster format, please contact Tim Michaelis (tmichaelis@niu.edu).

Management and Organizational History (MOH) (Clark & Rowlinson, 2004; Rowlinson, Hassard, & Decker, 2014) and Historic Organization Studies (HOS) (Maclean, Harvey, & Clegg, 2016; Maclean, Clegg, Suddaby, & Harvey, 2021) has researched efforts by organizations in the past to adopt strategies that have gone beyond the profit motive, and developed socially responsible forms of business that catered to the needs of stakeholders, society and the environment. This has, in particular, focused on the history of industrial welfare, the human relations movement, personnel and human resource management (HRM), and corporate social responsibility (CSR) (Fitzgerald, 1988; Gospel, 1992; Mandell, 2002; Kaufman, 2008; Marens, 2010, 2011; Bruce & Nyland, 2011; Hassard, 2012; Kaplan, 2015; Weatherburn, 2020; Maclean, Shaw, & Harvey, 2022). How and why this occurred, including the question of altruistic versus instrumental corporate motivation, have structured much of this research. In this PDW we examine this history through four presentations which case study socially responsible management in the past. We ask and provide guidance on the implications of this research for those studying the history of responsible leadership, management and organizations, and for researchers who are interested in the legacy of the past on socially responsive practices and strategies for management and organizations in the present and future.

Brain Imaging for Organizational Research: Hands-on Training for fMRI Studies

Organizer: **George Christopoulos**, *Nanyang Business School, NTU Singapore*
Presenter: **Rongjun Yu**, *Hong Kong Baptist U.*
Presenter: **Glenn Fox**, *U. of Southern California*
Presenter: **Shengchuang Feng**, *Nanyang Business School, NTU Singapore*

Functional Magnetic Resonance Imaging (fMRI) is one of the most widely used methods for cognitive and decision neuroscience, giving us the ability to record brain responses in vivo. Despite that the method is mature enough and has been very widely adopted by many disciplines, its usage in organizational research is limited. Aim of the course is to give the foundations for students to properly theorize, design and analyse their own experiments using functional Magnetic Resonance Imaging (fMRI). Specifically, the PDW will (i) introduce to basic principles of brain function (ii) analytically present basic experimental principles and designs for fMRI (iii) explain how to report and interpret results, avoiding common misinterpretations and (iv) offer a hands-on analysis of a typical experiment. Finally, (v) participants will be invited to discuss their own research questions, designs and experiments; organizers will offer verbal feedback and recommendations to participants. The PDW is interactive and built using andragogical (adult-learning) principles, open to any divisions that want to use fMRI in their research, developmental (as we offer customised advice), flexible (by including sufficient time for discussion), and offers obvious value as it significantly expands the methodological toolboxes of participants.

Exploring Degrowth in Organization Studies: A Multifaceted Lens

Organizer: **Niki Khorasani**, *Alberta School of Business*
Organizer: **Angelique Slade Shantz**, *U. of Alberta School of Management*
Panelist: **Charlene E. Zietsma**, *U. of Michigan*
Panelist: **P Devereaux Jennings**, *Alberta School of Business*
Panelist: **Sean Buchanan**, *U. of Manitoba*
Speaker: **Seray Ergene**, *U. of Rhode Island*

In the last decade, degrowth as an ideology and scholarly construct has emerged to critique growth as a social paradigm and to encourage more sustainable and equitable ways of organizing. Although an increasing number of scholars and activists have engaged with the degrowth idea, the field of organization studies has shown limited interest. On the other hand, over the past several decades, business and organization theorists have put forth a host of ideas around sustainability, such as the triple bottom line and green growth. However, based on empirical facts that question the possibility of decoupling economic growth from environmental degradation (Hickel and Kallis 2020; Parrique et al. 2019), relying on these ideas may not be sufficient. What does this mean for organization and management theories? In this PDW we aim to inspire dialogue on possibilities in the field of organization studies for not only studying degrowth empirically, but also integrating its ethos to defy growth in theories and possibly leveraging existing knowledge for imagining alternative futures. Our objective is to encourage scholars to engage with this concept by offering multiple perspectives, through inviting highly esteemed scholars to share their thoughts. We hope to stimulate both conceptual and empirical research that critiques the taken-for-grantedness of growth at economic, organizational, and individual levels in theory and practice. The final part of the PDW will be allocated to the discussion of participants' submissions in roundtables with the panelists.

Attendees can send a 500 word abstract to nikikhor@ualberta.ca. Submission is not mandatory for participation. Selected abstracts will be discussed in breakout groups as part of the PDW. To manage time, we will have to select a limited number of abstracts for the group discussions.

Panelist: **Lily Morse**, *U. of Denver*

Individuals, organizations, and institutions around the world are increasingly grappling with the promise and perils of Artificial Intelligence (AI). The intent of this PDW is to help scholars develop ideas to advance research on AI, organizations, and management. PDW will begin with a facilitated discussion on the current landscape of research on AI, organizations, and management with panelists from diverse disciplinary and practitioner backgrounds. The second half of this interactive PDW will provide participants the opportunity to develop their own research ideas through facilitated small breakout groups and large group discussions with the panelists.

Strategic Innovations: Navigating Corporate Purpose and Market Dynamics

Session Moderator: **Agnes Guenther**, *U. of Utah, David Eccles School of Business*

STR: Seeking Symbiosis: Navigating Tensions within Nested Innovation Ecosystems  

Author: **Ayomide Peter Alao**, *Vrije U. Amsterdam, School of Business and Economics*

Innovation ecosystems have become a central phenomenon in creating new complex value propositions that require the collaboration of multiple actors. Current research has focused on macro-level insights, leaving room to explore the intra-organizational micro-level dynamics driving their existence. Such intra-organizational dynamics are particularly prominent when organisations engage in multiple interconnected ecosystems. Within our empirical study, we examined the tensions that firms engaging in multiple ecosystems encounter, thereby contributing to micro-level insights around ecosystem dynamics. Our analysis revealed four tension resolution mechanisms: temporal resource partitioning, spatial resource partitioning, framing and complementor (de)privileging. The top management team and managers used these mechanisms to mitigate these tensions and cultivate synergies across the ecosystems. Drawing on our findings, we proposed a process model that illustrates how firms create synergies within multiple interconnected ecosystems.

STR: How Salary Comparisons Among Spouses and Social Norms Affect the Salary Negotiations of R&D Workers  

Author: **Andreas Distel**, *Rotterdam School of Management*

Author: **Agnes Guenther**, *U. of Utah, David Eccles School of Business*

Author: **Wolfgang Sofka**, *Copenhagen Business School*

R&D workers are of strategic importance for firms because they accumulate tacit knowledge about their employers' technologies. They have substantial bargaining power about their salaries because this knowledge would be attractive for competitors but hard to replace by their existing employers. While these conditions are well understood, we know comparatively little about when R&D workers are motivated to negotiate aggressively for higher salaries. We draw on theoretical mechanisms from social comparisons within marriages in social psychology and reason that R&D workers who earn less than their spouses will negotiate higher salary increases. Further, we propose that social norms make this effect stronger for male R&D workers who are traditionally considered as the breadwinners in households as well as for R&D workers who have a relatively higher-ranked job than their spouses which makes them sensitive to seeing their status threatened. We test and support these hypotheses for 70,312 married R&D workers in 3,710 unique firms in Denmark between 2008 and 2016.

STR: Corporate Purpose and Business Model Innovation: Evidence from a Multi-Case Study 

Author: **Andrea Buratti**, *U. degli Studi di Bergamo*

Author: **Giovanna Campopiano**, *U. degli Studi di Bergamo*

This paper explores how corporate purpose is framed by firms and how this relates to business model innovation. Based on a qualitative, multiple case study research on 10 Italian firms, this article shows that firms can differ in their purpose definition, either identification-oriented or inspiration-oriented, and in the perception of a mission shift occurrence. The results show that the interaction of these two concepts relates to the attitude of firms towards business model innovation (BMI), both in terms of BMI elements breadth and BMI themes combination. The paper contributes to the literature on corporate purpose by continuing the discussion on its definition and its strategic implications, and to the BMI literature discussing purpose definition as a driver of business model design. The article proposes also implications for managers, called to be aware of what characteristic of purpose they stress and if there is a mission drift occurring in their firm when they are performing BMI.

STR: Maybe More Than Just Innovation? Exploration of CVC Investments as Impression Management Mechanism   

Author: **Yoon Jung Kwon**, *U. of Utah, David Eccles School of Business*

I suggest that when faced with industry-wide legitimacy challenges, incumbents may use corporate venture capital (CVC) investments in certain entrepreneurial ventures as a means to manage institutional pressures and expectations. In the context of the global oil and gas (O&G) industry which is under increasing scrutiny for its adverse impact on climate change, I propose that the environmental performance of the country in which an O&G company is headquartered has a positive relationship with the likelihood that the company invests in a renewable energy venture, especially if it has recently made a greater commitment to its O&G business. Moreover, I propose that this effect would be particularly stronger if the venture operates in a renewable energy segment that has high business compatibility with O&G. Using a sample of O&G CVC investments in renewable energy ventures in 2001–2019, I find evidence to support these predictions. By providing and testing a novel perspective—namely, the impression management perspective—to explain CVC investors' choices of their investees, this study departs from the traditional CVC literature's focus on the innovation value of CVC investments and suggests an underexplored strategic benefit associated with CVC investments.

STR Mid-Career Consortium: Managing Your Evolving Career

Session Chair: **Heli Wang**, *Singapore Management U.*

Session Chair: **Govert Vroom**, *IESE Business School*

Panelist: **Richard Whittington**, *U. of Oxford*

Panelist: **Cynthia E. Devers**, *Virginia Tech*

Panelist: **Brian T. McCann**, *Vanderbilt U.*

Panelist: **Vibha Gaba**, *INSEAD*

The Consortium is designed for STR faculty members who attained tenure on or before August 2023 and possess a minimum of five years of academic experience. It will include panel discussions featuring senior faculty members, as well as break-out and/or Q&A sessions, providing mid-career faculty members with the opportunity to interact with the panel of senior faculty.

Participant: **Minyoung Kim**, *The Ohio State U.*

Participant: **Vijayaraghavan Venkataraman**, *Indian Institute of Management, Bangalore*

In an era of significant societal challenges like climate change and biodiversity loss, how do we best tackle these complex issues? This symposium presents a reevaluation of traditional methods, spotlighting nuanced strategies in the realm of grand challenges (GCs). Addressing gaps in current GC literature, our symposium uniquely balances centralized, public coordination with decentralized, market-driven competition. Our set of five papers explore the microfoundations of societal problem-solving, traditionally depicted as a monolithic goal yet demanding systematic unpacking. Our inquiry of organizational modes spans from the roles of mission-oriented R&D programs, public-private partnerships to innovation tournaments, in the face of environmental and regulatory uncertainties. Our papers also employ diverse cutting-edge methods, including abductive reasoning, machine learning, and content analysis. This approach encourages the exploration of novel solutions to complex problems, particularly valuable in uncertain scenarios where not all variables are observable, and creative, interdisciplinary thinking is required. We examine a variety of high-risk, high-tech industries such as radar, autonomous vehicles, space exploration, carbon capture, and Covid testing. Challenging the prevailing emphasis on macro-level coordination, we unveil the transformative impact of competition and laissez-faire approaches. These studies collectively investigate how nuanced communication, regulatory dynamics, and collaborative efforts can reshape our understanding of GCs, offering innovative solutions and strategic insights. Join us to delve into the multifaceted world of GCs, where innovative approaches redefine societal problem-solving. This symposium is an invitation to rethink, rediscover, and respond to the most pressing challenges of our time with fresh perspectives and groundbreaking research methods.

Green Innovation and Brown Organization: How to Bridge the Transition Gap?

Panelist: **Nilanjana Dutt**, *Bocconi U.*

Panelist: **David A. Kirsch**, *U. of Maryland*

Panelist: **Xia Li**, *London Business School*

Panelist: **Thomas Peyton Lyon**, *U. of Michigan*

Panelist: **Lamar Pierce**, *Washington U. in St. Louis*

Panelist: **Donald Siegel**, *Arizona State U.*

Moderator: **Xiaoli Tang**, *Bocconi U.*

This panel symposium focuses on the critical issues arising from the United Nations Climate Change Conference (COP28) in Dubai, particularly the global shift from fossil fuels to renewable energy. Acknowledging the complexities and non-linear nature of energy system transitions, the symposium aims to address the need for deeper structural changes within organizations for a just and equitable transition. Key topics include the role of green innovation in balancing growth and sustainability, the evolving responsibilities of firms in social outcomes, the socio-economic impacts on communities dependent on traditional energy sources, and the influence of digital technology on this transition. The symposium seeks to bring together experts for an interactive discussion, providing insights into the challenges and strategies for navigating this pivotal shift.

Presenter: **Svenja Damberg**, *U. of Twente*

Presenter: **Rajnish Tiwari**, *Hochschule Fresenius*

Organizer: **Constantin Lackinger**, *WirtschaftsU. Wien*

Making technology and innovation more inclusive is essential in the face of the current global challenges in the context of sustainable development. Responsible Innovation addresses ethics, emerging technologies research and innovation governance. Both, inclusive and responsible innovation paradigms, respond to overarching societal challenges, involve multiple stakeholders in innovation processes, and are therefore a promising way for organizations to contribute to the betterment of society. As an outcome of the substantial discourse in several scientific communities, a broad diversity of perspectives on, and tools for inclusive and responsible innovation exist, without a clear overarching framework or toolbox. This PDW will aim at systematizing these approaches and tools by presenting the principles and benefits of inclusive and responsible innovation, by providing an overview of approaches and tools as well as by allowing insights into challenges and benefits of their usage. In particular, it will cover open innovation, co-creation, design thinking, life-hacks, frugal innovation, and specific tools for inclusive innovation. Seven presenters will share practical experiences with specific tools related to inclusive and responsible innovation. The second half of the PDW will be dedicated to roundtable discussions with the presenters and organizers and will allow the participants to discuss and experience selected tools themselves.

With the rising challenge of climate change and the impact of organizations on the natural environment, future managers must be prepared to lead their organizations in finding innovative and sustainable solutions to problems and alternatives to current approaches. Management educators focused on sustainability have an important role to play in terms of drawing attention to the need for organizations to be sustainable and in preparing students to support sustainability through driving and implementing innovation. This professional development workshop includes a series of presentations by experienced and diverse management educators focused on teaching techniques and tools that can be used in management and leadership classes related to sustainability and organizations and the natural environment. Presentations will include innovative approaches to teaching but also teaching students to drive innovation that supports sustainable organizations. The emphasis of the session will specifically be on teaching practice and each presenter will explain and demonstrate tools or techniques in a way that allows the audience to expand their skills and knowledge through immediate application. This session is proposed and moderated by the Organizations and the Natural Environment Division's teaching team to encourage effective teaching on sustainability.

AMR: Writing Theoretical Papers - A Workshop With the Editors

Presenter: **Kris Byron**, *Georgia State U.*

This interactive workshop will help participants write clear theoretical articles that make a contribution to the literature. The session consists of two parts. First, we offer participants insights on how to structure a manuscript to showcase its theoretical contribution, we also discuss some of the major challenges in writing theoretical articles and potential avenues for address these challenges. Second, participants will have the opportunity to engage in small group discussions on these topics with current and past AMR Editors, Associate Editors, and Editorial Review Board members. All are welcome to attend on a first come, first served basis. (No Pre-Registration is required.) Contact AMR@aom.org for details.

Facilitator: **Ithai Stern**, *INSEAD*
Panelist: **David H. Zhu**, *Arizona State U.*

This Professional Development Workshop is a session for scholars interested in integrating Virtual Reality (VR) into their research. The goal of this PDW is to help bring VR to a broader audience in order to advance management research and produce novel insights. The workshop comprises three main sessions: introductory presentations on VR as an additional research tool, a panel discussion addressing publication opportunities for VR research in management, and an interactive development workshop. The format emphasizes dynamic interaction, progressively increasing participant engagement through presentations, discussions, and hands-on project development. This workshop is open to everyone, no prior experience with VR is needed.

Different Perspectives on Gig Work Careers Around the World

Session Moderator: **Richa Saxena**, *Institute of Management Technology Ghaziabad, India*

CAR: **Deciphering Career Anchors in Relation to Well-Being, Precarity, and Inclusivity in Gig Employment**

Author: **Shipra Shaiwalini**, *Institute of Management Technology Ghaziabad, India*
Author: **Richa Saxena**, *Institute of Management Technology Ghaziabad, India*

The dynamic and evolving landscape of the gig economy presents unique challenges and opportunities for gig workers. An interesting issue is to understand how these gig workers navigate through their long-term career trajectory in the context of their well-being and the precarity associated with the gig work. The focal point was the career anchors proposed by Schein. In this study, we adopted qualitative methodology to understand this dynamic. We interviewed 52 gig workers and after the analysis of the data our key findings were that the gig work on one hand presents some resources in terms of flexibility and independence. On the other hand, there are certain demands like financial and economic insecurity that are being present by the non-traditional gig work. In this study, we see that the gig work both aligns with and expands upon Schein's career anchors. The non-traditional nature of gig work introduces new considerations into the career decision-making process, emphasizing the need for adaptability, proactive management, and personal responsibility. These additions to the career anchors model reflect the evolving nature of work and the growing significance of gig employment in the modern labour market necessitating a multifaceted approach from organizations to support them effectively. This study also enriches the understanding of the psychological contract in gig work by highlighting the expectations and perceived obligations of gig workers, which have been largely under-examined in the extant literature.

CAR: **Does a Sustainable Career Exist in the Gig Sector? A Qualitative Study of Gig workers in China (WITHDRAWN)**

Author: **Christian Yao**, *Victoria U. of Wellington*

Having a sustainable career is increasingly crucial as the job market continues to change. However, existing sustainable career literature overly focuses on individual agency and lacks empirical grounding, particularly in diverse cultural contexts. This study uses the Person-Environment (P-E) fit theory to explore Chinese gig workers' perceptions of sustainable careers. Semi-structured interviews with 42 workers across ride-hailing, online retail, and food delivery sectors reveal distinct perceived working experiences, including transition, turbulence, dissonance, and harmony. Analysing these experiences through the P-E fit theory unveils the complex determinants of gig work sustainability. This study introduces the 'Gig Worker Perceptions Quadrants,' providing a dynamic framework emphasising the interaction between individual attributes and the gig environment. The paper concludes by highlighting avenues for exploring cultural and contextual influences on sustainable careers, bridging theoretical and practical gaps.

CAR: **The Gig Economy Through a Gender Lens: A Review of Women's Experiences of Gig Work**

Author: **Camille Desjardins**, *Renmin U. of China*

The gig economy has followed a sharp rise over the past years as workers have been increasingly looking for flexibility in their jobs. There is evidence that this trend is set to continue across the world. While much research on the topic of gig work has been conducted among men (e.g., in the ride-hailing and delivery industries) or has not adopted a gender lens, there is evidence that women are increasingly turning to this new form of work (MBO Partners, 2022). However, our knowledge of women's experiences in gig work is limited and the literature on the topic has developed haphazardly, resulting in a lack of clarity regarding what is known and what requires further exploration. In this paper, we take stock of the literature on women's work and career experiences in the gig work economy by conducting a systematic review of 90 articles on the topic. This interdisciplinary research reviews the multi-level antecedents (societal, organizational, and individual) that can shape women's gig work experiences (formal, interpersonal, personal) and their resulting outcomes (work and non-work). Bridging the interdisciplinary divides, the papers in this review are organized into an integrative framework of women's gig work experience, which reviews past research to provide insights into the topic and outlines a way forward to shed light on a phenomenon for which many aspects remain to be explored.

CAR: **Striving or Surviving? A Qualitative Investigation of How Gig Workers Craft Their Career Success**

Author: **Surendra Babu Talluri**, *Indian Institute of Management Bangalore*

With a fundamental shift in the way people build their careers, a growing number of working individuals are moving to gig work to build their careers. Such changes in the nature of the career landscape pose significant implications for career research to develop new knowledge. Career success is one of the essential topics in careers research to assess and understand the primary objectives of one's career actions. However, the measures of career success also depend on the context and type of chosen career pattern. In the current study, we adopt a qualitative approach to conduct 19 semi-structured interviews of gig workers to unfold the indicators of gig career success. Further, we highlight several individual proactive behaviors that gig workers engage in to achieve gig career success. We further discuss the implications of these findings to the careers literature and practice.

Participant: **Dorothea Roumpi**, *Pennsylvania State U.*
Presenter: **Alison M. Dachner**, *John Carroll U.*
Participant: **Erin E. Makarius**, *U. of Akron*

The recent increase in role transitions both within and beyond organizational boundaries necessitates a nuanced understanding and effective management of these movements for individual and organizational success. This symposium is anchored in research on role transitions and explores diverse perspectives on employee transitions, featuring four papers that investigate the complexity and strategy needed to manage these transitions. The first two papers delve into employees' active role in shaping their mobility, emphasizing the job-seeking strategies within organizations and likelihood of boomeranging back to an organization. The second two papers shift the focus to organizational management of employee transitions, exploring restraints and support for mobility through one paper on post-employment restrictive covenants and another paper on a structured offboarding programs. J.R. Keller, an esteemed discussant, will integrate themes and takeaways, offering valuable insights for research on employee transitions within and beyond organizational boundaries. This symposium aims to inform both researchers and practitioners, fostering a deeper understanding of the intricacies of managing individual role transitions and providing practical implications for talent management in dynamic organizational environments.

Participant: **Amando Cope**, *George Washington U.*
Participant: **Adelle Bish**, *North Carolina A&T State U.*

This caucus follows previous caucuses in 2019-2021 that brought together military veteran researchers and established the Military Research and Networking Community (MRANC). The focus is to connect researchers and expand research on a broader spectrum of those acculturated by military service (i.e., spouses), explore data sources, and propose special issues.

At AOM 2019 in Boston, Sean Rogers and Kenneth Sweet brought a group of military veteran-focused researchers together to discuss this unique demographic in organizational research. This caucus will continue their foundational work, take advantage of recent surges in interest and veteran-related special journal issues, and draw on recent insights to widen the lens to include all military-connected individuals. The focus will be to examine the broader spectrum of individuals acculturated by the military, including active-duty service members, reservists, spouses, and dependents. Key topics will be data sources (including moving beyond the predominantly Western military focus to a variety of global military structures); addressing the transition of skills from and managing cultural differences between military and civilian workplaces; and how military experience shapes new ventures (e.g., “vetrepreneurs”). The caucus aims to provide AOM members with a forum to connect and discuss the latest research and teaching strategies to enhance the integration and support of military-connected individuals in the workforce and classroom.

Analogous Inspiration: Making Unexpected Connections to Innovate and Thrive

Organizer: **Jesse E. Olsen**, *U. of Melbourne*
Organizer: **Momotaro Takamori**, *Kwansei Gakuin U.*

Research suggests that connecting seemingly unrelated activities (“analogous inspiration”) can promote innovation. What does this mean for us as management academics and practitioners? This caucus features (1) discussions about analogous inspiration experiences and ideas toward practice, research, and teaching; and (2) networking opportunities to continue analogous inspiration together going forward.

After an introduction to and examples of analogous inspiration, participants will discuss their experiences and ideas in small groups, focusing on practice, research, and/or teaching. Groups will then summarize their key insights for others in the session, and we will close with an opportunity to network around common interests.

Facilitator: **Robert G. Lord**, *Durham U.*
Facilitator: **Ronald E. Riggio**, *Claremont McKenna College*

Our Caucus brings together scholars globally and across career stages to discuss evidence-based strategies for leadership development with a focus on identity and measurement perspectives. We host three distinguished speakers and four roundtable discussions. We aim to facilitate research idea development and expand the reach of our network.

The Caucus consists of three parts: First, following a brief introduction by the two Caucus organizers, three distinguished speakers will share their views of the current conceptual, empirical, and implementation challenges in the leadership identity, measurement, and development space: David V. Day (Claremont McKenna College, US), Michelle Hammond (Oakland University, US), and David Sluss (ESSEC, France). This will be followed by 30-minute roundtable discussions on four key issues: (1) Dynamic leader follower identity perspectives (e.g., “Who am I? Leader? Follower? Or both?”); (2) Measurement and feedback (e.g., “How am I doing as a leader? How to get feedback?”); (3) Bright and dark sides (e.g., “What if my leader identity is threatened? What if I feel like an impostor?”); (4) Development (e.g., “How to navigate career transitions? How to let go of leadership?”). A 30-minute plenary discussion will follow during which participants from the roundtables will first briefly share main discussion points and key insights. Caucus participants will then discuss opportunities and strategies for collaborative research.

Presenter: **Isaac Raymundo**, *Columbia Business School*
Presenter: **Modupe Akinola**, *Columbia U.*

Existing organizational research addresses various paths to gaining status for individuals, groups and organizations. In light of existing work, the purpose of this symposium is three-fold. First we highlight the importance of acknowledging the differences in status associated with different social or demographic categories, and how this shapes status attainment particularly for those in lower status demographic categories. Second, we consider the interplay between individual and group-level status and the intragroup dynamics that arise when high achieving individuals are members of low status groups. Third we consider how status may be attained outside of the well-established prestige versus dominance dichotomy. Overall, the projects in this symposium seek to enrich our insight into how to gain status or overcome perceptions of holding low status.

Actually, I Am One of Them: Self-categorization of High-Status African Americans

Navigating Stigma Dynamics

Session Moderator: **Shayan Nematgorgani**, *Louisiana State U.*

DEI: Navigating Stigma Dynamics: A Longitudinal Study on Subjective Body Fatness, and Self-Devaluation 

Author: **Shayan Nematgorgani**, *Louisiana State U.*

Author: **Michael Addison Johnson**, *Louisiana State U.*

This paper challenges the static view of marginalized identities by adopting a dynamic perspective, focusing on the subjective nature of obesity. Specifically, we utilize the context of subjective body fatness to explore within-individual fluctuations in stigmatized views by employees over time. We examine if how someone feels 'right now' may exhibit unique and stronger effects on one's job than how big they feel in general. Drawing from stigma theory, we utilize an experience sampling design to consider how weekly variations in subjective body fatness influence self-devaluation and, subsequently, task performance among customer service workers over a period of five weeks. The results reveal that weekly subjective body fatness uniquely relates to subsequent self-devaluation, supporting a dynamic, within-person nature of stigmatization. Furthermore, self-devaluation mediates the relationship between subjective body fatness and subsequent task performance. Thus, marginalized identities are not just a category that one is in, but they are a dynamic identity that can change across time. Overall, this study sheds light on the nuanced interplay between self-perception and the ever-changing dynamics of marginalized identities, particularly in the context of obesity.

DEI: Queens of Drag, Organizations, and Organizing: Stigma, Spectacle, and Inclusion   

Author: **Maria Rita Micheli**, *IESEG*

Author: **Mario Campana**, *U. of Bath*

Author: **Katherine Duffy**, *Adam Smith Business School, U. of Glasgow*

Prior research highlighted that organizations can thrive by showcasing stigma, instead of concealing it. However, we do not know much about how the showcasing can help to normalize stigma and help stigmatized audiences of organizations to feel more accepted within society. In this paper, we explore this new domain of research, explaining how both organizations and stigmatized audiences can benefit from showcasing stigma. In addition, we explain how stigmatized audiences can contribute to normalization, by engaging allies. In this preliminary version of the paper, we collected semi-structured interviews from the audiences of RuPaul's Drag Race, exploring how the showcasing of stigma influenced the perception of audiences regarding the acceptance and well-being within the society. We will extend our findings by including different organizations that showcase LGBTQ+ stigma and their audiences.

DEI: AI-Enabled Respect: How Framing of AI Affects Occupational Stigma Toward Dirty Work  

Author: **Yuqing Gan**, *School of Business, Sun Yat-sen U.*

Author: **Xiang Zhou**, *Sun Yat-Sen U.*

Author: **Rongrong Zhang**, *The Chinese U. of Hong Kong, Shenzhen*

Author: **Luyuan Jiang**, *China U. of Mining and Technology*

Author: **Shuying Mao**, *School of Business, Sun Yat-sen U.*

Although past research has explored various strategies for coping with occupational stigma, there has been a relative neglect in examining the role of technology development, particularly the transformative impact of artificial intelligence (AI). Integrating signaling theory and meaningful work literature, we develop a model that specifies when and why framing of AI used by the organization involved in dirty work changes people's perception of dirty work. Using a multi-wave survey and two experiments, we find that framing AI as an augmentation (as opposed to automation) is positively associated with people's perceived meaningfulness of dirty work, which is further negatively associated with occupational stigma toward dirty work. In addition, we find that people's fixed mindset weakens the indirect effect of framing of AI on occupational stigma through perceived meaningfulness of dirty work. We discuss our theoretical and practical contributions and propose future directions.

DEI: Not in My Work Group: Evaluators of Stigma and the Role of Social Distance in the Workplace

Author: **Elizabeth Eley**, *John Molson School of Business, Concordia U.*

Whereas extant stigma literature has focused on the lived experience of 'marked' individuals, this paper generates novel insights about stigma by examining the perspective of evaluators of stigmatized individuals. Drawing on the concept of desired social distance from the sociology, we develop theory of stigma rooted in an evaluators' perspective in which judgments vary depending on the proximity to the 'target' of the stigma. Specifically, we argue that social distance, the desired social closeness to a stigmatized identity influences how evaluators think, feel and behave towards stigmatized organizational members. As a whole, we enrich stigma literature by incorporating an evaluator perspective and, in so doing, we help to explain an observed disconnect between organizational rhetoric regarding diversity and inclusion and their actual practices.

In response to this year's theme, 'Innovating for the Future: Policy, Purpose, and Organizations,' we aim to explore the transformative influence of Blockchain, Artificial Intelligence, Underrepresented Entrepreneurs, DEI policies, and Sustainable practices on organizations doing business in a woke world. This symposium highlights the diversity of research examining the intersection of doing business in a woke world and the profound impact of stakeholder capitalism. In particular, the authors consider areas where there are opportunities to advance the field by building upon the depth and breadth of research to resolve three pressing needs in the literature: contextuality, scalability, and stakeholder management. These papers provide specific paths forward to advance the field by addressing these challenges. The papers in the symposium broaden our understanding of factors that have shaped the practice of inclusivity, sustainable entrepreneurship, and opportunities for new venture creation to generate social impact.

Pitching

Session Moderator: **Henrik Wesemann**, *IE Business School*

ENT: **Suit Up? Impression Management in Venture Pitches**

Author: **Henrik Wesemann**, *IE Business School*
Author: **Torben Antretter**, *U. of St. Gallen*
Author: **Vangelis Souitaris**, *Bayes business school and U. of St. Gallen*
Author: **Joakim Wincent**, *Luleå U. of Technology*

This article explores how entrepreneurs' clothes can influence investor assessments. We theorize that, although clothes are very unreliable indicators of underlying venture quality, they are predictive of fundraising performance such that informally dressed entrepreneurs tend to outperform formally dressed entrepreneurs. Moreover, we propose that clothes can create sufficiently strong first impressions to make investors neglect later, more important signals like prior entrepreneurial experience. Two field studies, an experiment, and a series of interviews support our hypotheses. Our article contributes to research on impression management in entrepreneurship by outlining the benefits of casual clothes, as well as showing that they can have lasting effects. Moreover, it contributes to signaling theory by illustrating how initial contextual factors can diminish the relevance of later strong signals.

ENT: **Charismatic Signaling in Entrepreneurial Pitching: An Experimental Approach**

Author: **Anely Bekbergenova**, *TUM School of Management, Technical U. of Munich*
Author: **John Antonakis**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Marianne Schmid Mast**, *U. of Lausanne, HEC Lausanne*
Author: **Benjamin Tur**, *U. of Lausanne, HEC Lausanne*

Entrepreneurial pitching is a key moment for entrepreneurs, which enables them to showcase their business ideas, secure venture funding, and expand their network. We investigate whether charismatic signaling helps entrepreneurs pass into the next round of a pitching competition (Study 1) and whether entrepreneur charisma increases financing to the project and willingness to meet the entrepreneurial team (Study 2). In Study 1 we used field data from a startup competition "Thinking Digital" held in 2015. The sample consisted of 70 entrepreneurial pitches in the semi-final and final stages of the competition. In Study 2, 233 participants were randomly assigned to watch a 3-minute video of an entrepreneur pitching a business using charismatic signaling or not. The results of Study 1 show that verbal charismatic signaling had a positive effect on startups being chosen in the semi-final round of the competition. Nonverbal charismatic signaling (i.e., gestures, open body posture, animated facial expressions, eye contact, and vocal variations) did not increase the likelihood of entrepreneurs being selected in the final round of the competition. The results of Study 2 show that charismatic signaling increases the belief of participants that the entrepreneur will attract financing for the venture and that more strength is attributed to the entrepreneurial team, the force in sales, and entrepreneur leadership. The findings of Study 1 suggest that using charisma can help entrepreneurs attract meetings with potential investors. Findings of Study 2 reveal participants' beliefs that charismatic entrepreneurs will attract more financing for the venture, and that the key strengths of the venture are the entrepreneur leadership, the entrepreneurial team, and the sales force.

ENT: **Pitching to Learn: How an Evolving Pitch Scaffolds Learning in New Ventures**

Author: **Susan L. Cohen**, *U. of Georgia*

Recent research has uncovered multiple learning processes available to entrepreneurial ventures as they craft strategies for creating and capturing value. A completely separate stream of research has examined how characteristics of business pitches and pitchers influences a venture's likelihood of attracting interest from external resource providers. However, since these literatures have developed independently, neither literature has considered how ventures may use the pitch to learn, nor how they learn to pitch. Through an inductive study of 75 venture founders, mentors and staff at 9 U.S. accelerator programs, I discovered that learning and pitching are closely intertwined. Specifically, an evolving (vs. static) pitch scaffolds learning, triggering various forms of learning by thinking, borrowing and doing and also stores what is learned over time. I elaborate these findings in a novel theoretical framework wherein creating a pitch prompts early-stage ventures to (1) draft a pitch, (2) cast for feedback, (3) anticipate objections, (4) catalyze action, and (5) revise recursively. In doing so, I contribute to the organizational learning and entrepreneurship literatures by unearthing an expanded role of pitching. Not only can a pitch be used as a way to solicit external financial capital, but it also can be used to prompt and store learning. Overall, I shift the emphasis from "the pitch event" to a process of pitch development, in turn establishing how creating and refining a pitch scaffolds learning.

ENT: **Dynamics in Entrepreneurial Pitch Q&A: Examining Gender, Communication, and Trust in Investment**

Author: **Laura Gasiorowski**, *U. of Delaware*
Author: **Ahreum Lee**, *State U. of New York at Oswego*

We examine how communication styles of directness and succinctness in the question-and-answer of entrepreneurial pitches impacts funding decisions. Overall, the more direct an entrepreneur answers questions, the greater likelihood they'll get a deal. The more succinct an entrepreneur answers questions, the lower the likelihood of a deal. We also provide evidence that communication style influences investment through trust. Further, and contrary to existing communication theories, we find very little gender differences in communication.

Entrepreneurial Orientation

Session Moderator: **Shankar Naskar**, *U. of Virginia*

ENT: **How Entrepreneurial Orientation Enables Digitalization in Startups – A Multidimensional Perspective**

Author: **Thomas Hipp**, *U. of Mannheim*

Digitalization has become a hard challenge for most organizations. As startups are agile and flexible in their very nature, they have a distinct advantage in their ability to successfully adopt digitalization into their business models. However, some startups are natural digital entrepreneurs from the outset while others struggle and have to develop first. Not much is yet known about the connection between a startup's entrepreneurial orientation (EO) and its degree of digitalization in startups. We are approaching this gap from a unidimensional as well as a new multidimensional perspective on EO as there has been growing discussion on only unidimensional perspectives. We analyze possible relationships by utilizing data on over 1,100 German companies from the IAB/ZEW Startup Panel through formulation and testing of hypotheses via a series of regression analyses. Our results yield a relationship between entrepreneurial orientation (EO) and the degree of digitalization in startups and provide granular insights from a multidimensional perspective. Our results contribute to the digital entrepreneurship literature as well as digitalization literature by providing possible drivers for digitalization and researching the impact of entrepreneurship on the degree of digitalization.

ENT: **The Effects of EO Soft and Hard Signals on Valuation of Listed Pharmaceutical Firms in China**

Author: **Gang Cao**, *School of Management, Shanghai U.*

Author: **Xiaoyu Yu**, *Shanghai U.*

Entrepreneurial orientation (EO) signals and firm valuation have been studied inconclusively. We used signaling theory and hard and soft information theory to categorize EO signals into hard and soft signals to solve the theoretical puzzle and empirical ambiguity on this focal relationship. Our 1,350 observations from 269 pharmaceutical firms from 2012 to 2020 showed that EO hard signals positively affected firm valuation, while EO soft signals negatively affected firm valuation. Further, EO soft signals strengthened the positive effect of EO hard signals on firm valuation. In addition, corporate philanthropy enhanced both the positive and negative effects of EO hard signals and EO soft signals. Our research contributes to the EO literature by providing fresh insights into the relationship between EO signals and firm valuation.

ENT: **Entrepreneurial Orientation in Nonprofits: A Strategic Management Perspective**

Author: **Johan Bruneel**, *IIESEG School of Management - KU Leuven*

Author: **Matthias Staessens**, *Montpellier Business School*

Author: **Jurgen Willems**, *Vienna U. of Economics and Business*

Building on the resource-based view of the firm, this study presents a novel mediation model to dissect the interplay between human capital, organizational capabilities, and Entrepreneurial Orientation (EO) in the context of nonprofit organizations (NPO). We delve into how different levels of human capital within these NPO contribute to EO through stakeholder engagement capability. Using multi-respondent survey (1,071 upper echelon respondents) and secondary data of 184 Belgian NPO, our findings reveal a notable dynamic. While staff human capital significantly fosters EO through enhanced stakeholder engagement, the human capital of the board and top management team (TMT) surprisingly plays a less pronounced role in influencing EO within the nonprofit context. These findings challenge the prevailing assumptions about the influence of upper-echelon human capital on stakeholder engagement and organizational entrepreneurship.

ENT: **A Little in a Lot: A Real Options Perspective on Entrepreneurial Orientation and Government Ties**

Author: **Jeffrey Thomas Cavanaugh**, *U. of Nebraska*

Author: **Izuchukwu Evans Mbaraonye**, *U. of Missouri, Kansas City*

Author: **Varkey Titus**, *U. of Nebraska, Lincoln*

Firms' strategic orientation toward entrepreneurship exposes them to regulatory uncertainties. Prior research suggests that addressing these uncertainties through corporate political activities (CPA) may require costly trade-offs, such as the loss of strategic flexibility. We argue that some of these trade-offs can be mitigated by the way firms structure their investments in CPA. We extend insights from real options reasoning (ROR) to offer a framework for how firms may circumvent some of these trade-offs through greater CPA breadth, which allows firms to retain their strategic flexibility while reaping some of the benefits of CPA. Our theoretical model and empirical tests help us contribute to the literature on firms' use of CPA as well as the literature on ROR.

Gender and Entrepreneurship I

Session Moderator: **Golshan Javadian**, *Morgan State U.*

ENT: **Supervisor Gender, Employee Creativity and the Mediating Role of Interaction Frequency**

Author: **Holly Chadwick**, *Bryant U.*
Author: **R. Isil Yavuz**, *Bryant U.*
Author: **Crystal Xiangwen Jiang**, *Bryant U.*

While it is well established that leader characteristics influence employee outcomes, little is known about whether and how leader gender influences employee creativity. Traditionally, female leaders are considered a mismatch for prototypical leadership roles, resulting in less optimal employee outcomes compared to male leaders. In this paper, by drawing on social role and leader-member exchange (LMX) theories, we argue that female supervisors may have advantages over male supervisors and may serve as a catalyst to encourage employee creativity. In the empirical analyses, we test our hypotheses using data from German, Japanese, and South Korean foreign subsidiaries located in China. Results confirm our hypotheses and show that female supervisors have a positive influence on employee creativity, and the frequency of supervisor-employee interaction mediates this relationship. The contributions of the study to creativity and leadership literature are discussed.

ENT: **Female Top Managerial Representation Effects on Organizational Entrepreneurial Posturing**

Author: **Pide Lun**, *Adelaide Business School*
Author: **Anish Purkayastha**, *U. of Sydney Business School*
Author: **Ralf Zurbrugg**, *U. of Adelaide*
Author: **William John Wales**, *U. at Albany, State U. of New York*
Author: **Jeff Covin**, *U. of Wyoming*

How do organizations better position themselves for entrepreneurial growth and avoid 'resting on their laurels' within their competitive landscapes? Drawing on double standards for competence theory and evidence from medical science, this research considers female representation within the top management team (TMT) as one potentially significant explanatory factor that may influence how an organization's strategic posture is manifest. Specifically, we observe that TMTs with greater female representation manifest more forward-looking entrepreneurially oriented strategic postures. Our results indicate that inclusion of a single female executive makes a substantial difference in firms' forward-looking posturing, and that the effect is stronger with a greater number and proportion of female executives. Moreover, we demonstrate how CEO power diminishes the female representation effect. Implications for future research examining the critical role of 'female voice' within the TMT are discussed, along with how future research exploring entrepreneurial posture may proceed.

ENT: **Are All Entrepreneurial Exit Routes the Same? Effects of Gender-Role Orientation and Misfits**

Author: **Haiyuan Zhao**, *Xihua U.*

This study explores how gender-role orientation (GRO) and person-entrepreneurship misfit affect the women entrepreneurs' intended entrepreneurial exit routes. Two-wave data of 329 women entrepreneurs have been analyzed. The results revealed that person-entrepreneurship misfit positively related to intended entrepreneurial exit routes. Two types of misfit (i.e., needs-supplies misfit and demands-abilities misfit) displayed distinctive connections with three exit routes. Meanwhile, women entrepreneurs identifying with the masculine GRO and androgynous GRO are more likely to be involved in the intended harvest entrepreneurial exit route and stewardship entrepreneurial exit route, while women entrepreneurs identifying with the feminine GRO are more likely to be involved in the intended voluntary cessation. Furthermore, the positive association between needs-supplies misfit and the intended harvest entrepreneurial exit route is stronger for women entrepreneurs identifying with the masculine GRO. This study sheds new insight into incorporating misfit perceptions and GRO in future entrepreneurial exit research.

ENT: **A Meta-Analysis of Gender, Entrepreneurial Self-Efficacy, and Success**

Author: **Alexander Glosenber**, *Loyola Marymount U.*
Author: **Duygu Phillips**, *U. of Delaware*
Author: **Joseph Richard Schaefer**, *SUNY New Paltz*
Author: **Ernest O'Boyle**, *Indiana U.*
Author: **Jenna McChesney**, *Meredith College*
Author: **Sean Noble**, *North Carolina State U.*
Author: **Mary Kathrine Ward**, *Curtin U.*
Author: **Lori Lea Foster**, *North Carolina State U.*

In this paper we demonstrate how studies linking entrepreneurial self-efficacy (ESE) with success might provide inaccurate results if scholars don't examine the role of gender and success-type. To facilitate advancement of scholarship in this area of inquiry, we (a) meta-analyze samples of varying proportions of men and women from the United States ($k = 32$, $N = 4,732$); (b) present key results, namely that the relationship between ESE and financial measures of success is weaker among samples with greater proportions of women – but not for non-financial measures; and (c) reveal four methodological recommendations and relevant procedures that scholars and practitioners should consider to more accurately understand the relation between socio-cognitive factors, such as self-efficacy, and entrepreneurial success. Put succinctly, our four methodological recommendations are to better capture and report the gender and sex of participants, take into account success type, establish – rather than assume – measurement equivalence, and consider, if appropriate, gender-tailored interventions.

Opportunity

Session Moderator: **Brent Clark**, *U. of Nebraska, Omaha*

ENT: **Opportunity Attitude: Moving Beyond Cognitive-Centric Evaluation of Entrepreneurial Opportunities** 

Author: **Binyam Zewde Alemayehu**, *U. of Adelaide*

Author: **Paul Steffens**, *U. of Adelaide*

Author: **Scott Gordon**, *U. of Adelaide*

Opportunity evaluation is an important concept in entrepreneurship, central to our understanding of how individuals evaluate specific opportunities, develop entrepreneurial intentions and (possibly) engage in entrepreneurial behavior. Existing understandings of opportunity evaluation tend to adopt a cognitive-centric approach. We build on the trilogy of the mind theory and the attitude literature from psychology to develop a new construct, opportunity attitude, which integrates cognition, affect and conation as a tri-component construct. This model regards opportunity evaluation as a dynamic process tending towards congruence of the cognitive, affective and conative components of mind. Importantly, it does not assume primacy of cognition, but allows for circumstances where affect or conation may dominate attitude formation or change. This conceptualization provides a more complete account of the way in which entrepreneurs evaluate entrepreneurial opportunities. Moreover, the interaction between the three attitude components provides a foundation for better understanding both the formation of an individual's attitude toward an entrepreneurial opportunity and changes over time. Mechanisms underlying these attitude formation and change processes are identified and discussed.

ENT: **A New Opportunity for Opportunity Recognition?** 

Author: **Alex Schöneiseiffen**, *Saarland U.*

Author: **Marcel Aksoy**, *Saarland U.*

Author: **Rene Bohnsack**, *Catolica Lisbon School of Business and Economics*

Author: **Benedikt Schnellbacher**, *Saarland U.*

Every entrepreneurial journey starts with the identification of a business opportunity. While artificial intelligence enables entrepreneurs to discover and create more fruitful opportunities, its recent advancements also undermine the human self-conception of driving innovation and in particular radical innovation. Entering an AI-augmented world, this study examines the impact of the cohabitation of artificial and human intelligence on entrepreneurship and opportunity recognition. The future entrepreneurial playing field is determined by the interaction of human and artificial intelligence and what an entrepreneur can derive from it. Success depends on the entrepreneur's capability to leverage the correct level of each intelligence at the right point of time. This study provides guidance for this new entrepreneurial approach by interviewing founders of startups, who already integrated or attempted to integrate artificial intelligence in their entrepreneurial processes. This study contributes to the literature threefold. First off, the impact of the new phenomenon artificial intelligence on opportunity recognition theory and its processes is examined. Furthermore, the study highlights how human and artificial intelligence can be combined during these processes to optimize the probability of generating radical innovations. Lastly, based on the empirical findings a framework is developed how the technology can be leveraged for different kind of opportunities.

ENT: **Opportunity Generativity: How Future Opportunities Emerge from Present Pursuits** 

Author: **Sunny Li Sun**, *UMass Lowell*

Author: **Xin Zheng**, *Business School, Sun Yat-Sen U.*

Author: **KANAN ASIF**, *U. of Massachusetts Lowell*

Building on experiential learning theory, this paper develops an opportunity generativity concept to explain how new ventures keep capturing opportunities over time. Our analysis of representative panel data of U.S. new ventures revealed that entrepreneurial opportunity generation is a dynamic process consisting of continual transitions and iteration. Each incremental transition of current opportunity leads to larger leaps in transitioning to subsequent opportunities—a phenomenon which we term as opportunity generativity. We also find that customer interaction positively affects a new venture's opportunity generativity process. Moreover, opportunity generativity positively affects the likelihood of survival of new ventures. Our study contributes to the entrepreneurial opportunity literature by providing a novel perspective and complementing the opportunity discovery versus creation perspective.

ENT: **Ecosystems of Opportunity: Experiences of Black Tech Entrepreneurs in Silicon Valley and Atlanta**  

Author: **Alicia Sheares**, *Stanford MS&E*

Scholarship on race highlights how racism constrains the economic activity of racially marginalized actors, but seldom considers how place matters in these experiences. Alternatively, entrepreneurship scholars are particularly attuned to the role of place in structuring entrepreneurial norms, constraints, and actions, but have been slower to assess how entrepreneurship is inherently a racialized process. I link these literatures together to understand how racially marginalized economic actors navigate through unequal systems to make headway in their professional pursuits. Relying on nearly 100 interviews and a hundred hours of participant observation with Black tech entrepreneurs in Silicon Valley and Atlanta, I find that both groups held similar perceptions as to how racism constrained their entrepreneurial trajectory, but they also took into consideration the available opportunities and constraints within their respective ecosystems. Taking both racial and ecosystem realities into consideration, Black tech entrepreneurs deployed what I call racialized legitimation strategies or specialized tactics aimed at navigating racism and ecosystem norms, to make headway. Yet how they did so varied. Those in Silicon Valley oriented their actions towards making themselves more appealing to a predominantly White class of venture capitalists by gaining elite credentials. Alternatively, those in Atlanta connected with elite Black networks and that provided them with alternative opportunities. Ultimately, by examining Black entrepreneurs in two locations, we gauge to what extent the racialization of entrepreneurship is bounded by place, while also showing us the strategies Black people must adopt to navigate this unequal reality to make their mark.

Entrepreneur Migration 2

Session Moderator: **Meena Chavan**, *Macquarie U.*

ENT: **A Grounded Model of How Refugee Family Businesses Build Entrepreneurial Ecosystems**

Author: **Meena Chavan**, *Macquarie U.*

Author: **Francesco Chirico**, *Jonkoping International Business School*

Author: **Muhammad Aftab Alam**, *School of Business and Law, Edith Cowan U.*

Author: **Christina Theodoraki**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

Entrepreneurship literature recognizes the role of refugee family businesses in driving entrepreneurial ventures in the host country, yet there is not much of an understanding of how they shape entrepreneurial ecosystems. Using a grounded model, this paper illustrates how refugee family businesses use their social capital to build a refugee entrepreneurial ecosystem by engaging multiple stakeholders in the home and host countries. Drawing on in-depth interviews with twenty refugee entrepreneurs and ten members of supporting organizations in Australia, this study disentangles three building blocks of refugee entrepreneurial ecosystems: 'bonding close relationships,' 'bridging the structural holes,' and 'spanning the network.' The integrative model contributes to entrepreneurship literature by showing how refugee family entrepreneurs use social capital to obtain incubation services and government support to leverage their business in the host country. The study highlights the initial difficulties of refugee family businesses in the host country and explains how social capital helped them at various stages in their entrepreneurial journey. The findings suggest that individual competence, survival traits, and national origin of refugee family businesses play an important role in building entrepreneurial ecosystems.

ENT: **Entrepreneurs' Well-Being in Extreme Contexts: Evidence from Refugee Camps**

Author: **Sadek Showkat**, *Loyola U. Chicago*

Author: **Daniel L. Bennett**, *U. of Louisville*

Author: **Oana Branzei**, *Ivey Business School*

This dual-method dissertation-based paper combines a diary study with a multi-sited reflexive ethnography to explain how entrepreneurs displaced in the second phase of the genocide against the Rohingya people by the military regime in Myanmar maintain well-being by balancing resourcefulness and religiousness in the extreme context of the Kutupalang refugee camp. A 12-point, 6-week diary study of 70 refugee entrepreneurs lends support to both direct and dignity-mediated effects of resourcefulness on well-being. A multi-sited reflexive ethnography reveals limits to the well-being benefits of resourcefulness in extreme contexts by showing the negative moderating effects of religiousness. In a context where religious values and practices are both strong and visible, and religiousness offers a common modality of both individual and communal coping with enduring hardship, even small deviations from rituals can attenuate the direct and the dignity-mediated benefits of resourcefulness. The theorized trade-offs between resourcefulness and religiousness are empirically robust: they replicate for refugee entrepreneurs of different ages and genders; across types and locations of ventures; and at multiple levels of experienced distress and social obligations. This paper highlights two important boundary conditions for the literature on well-being. First, it reveals the previously under-theorized role of dignity in the maintenance of well-being by those who entrepreneur while displaced, explaining why refugee entrepreneurs who vest their ventures with the provision of peace, respect and/or stability derive supplementary benefits from the same acts of resourcefulness. Second, it suggests that acts of resourcefulness compete with acts of religiousness, especially for dignity-mediated paths to well-being maintenance.

ENT: **Community Logics Enactment and Refugee Entrepreneurship**

Author: **Todd W. Moss**, *U. of Oklahoma*

Author: **Trenton A. Williams**, *BYU Marriott School of Business*

Author: **Kurian George**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

Author: **Maria Minniti**, *Syracuse U.*

A growing stream of research examines how individuals and organizations re-order their post-disruption reality moving into future endeavors. A central challenge in dealing with disruptions involves navigating the paradoxical processes of escaping and integrating aspects of one's disrupted past into the future. One research context that particularly highlights this paradox of escaping and integrating across multiple levels is the ongoing global refugee crisis. We shed light on this paradox by exploring the phenomenon of refugee entrepreneurship. We conduct a qualitative study of venturing efforts of refugee immigrants following their disruptive (and often traumatizing) forced migration from one institutional context to another. We find that they make sense of and identify with community in different ways, creating dynamics that influence organizing processes and outcomes, and develop a model of community logics enactment. In exploring these dynamics, we explain how community-based logics emerge, whereas those logics are typically taken as given. Our findings contribute to the literature on adapting to disruption by demonstrating how refugees' efforts to escape and integrate their past anchors and orients venturing activities within (and between) communities. By doing so, our findings provide novel insights on how forced human mobility across borders translates into the emergence and workings of organizations.

ENT: **Refugee Remittances and Transnational Entrepreneurship in Less Developed Countries**

Author: **William Laramy**, *U. of Minnesota Carlson School of Management*

Author: **Paul M. Vaaler**, *U. of Minnesota*

Refugees living abroad due to discrimination or physical danger represent a growing share of the world's migrants, yet we know little about their potential to assist households and communities back home as transnational entrepreneurs. We respond with the first broad-sample statistical study of migrant remittance effects on new business and community investment in less-developed countries with significant refugee populations. Panel data and related analyses show that remittances from migrant diasporas with higher refugee shares diminish positive new business but magnify positive community investment indicators suggesting that refugee money and ideas matter more for social rather than commercial entrepreneurship back home.

ENT: **How Do Founders' Value Creation Goals Combine with Strategic Entrepreneurship to Achieve Success?**

Author: **Emmanuelle Fauchart**, *U. of Fribourg, Switzerland*
Author: **Christine Scheef**, *U. of St. Gallen, Switzerland*
Author: **Philipp Sieger**, *U. of Bern*

Drawing on the literature on strategic entrepreneurship and founder social identities, we use a configurational approach to study how new ventures' entrepreneurial and strategic behaviors combine with founder social identities to explain new venture performance. Our analysis of 60 founders shows that founders can take different pathways to success and that founders who do not primarily pursue economic value creation can still achieve high new venture performance through distinct combinations of entrepreneurial and strategic behaviors. Our empirical findings and corresponding propositions advance the literature on strategic entrepreneurship and founder social identities in important ways.

ENT: **Growth Leadership: Personalized and Depersonalized Leadership as Driver of Start-Up Scaling**

Author: **Maya Klingelheller**, *BSP Business and Law School Campus Hamburg*

Scale-ups are crucial for economic growth, yet many start-ups falter before evolving. A key reason is the absence of defined managerial skills within their leadership. Current literature does not specify the leadership qualities essential for successful scaling. Addressing this gap, my paper employs qualitative analysis of expert interviews to identify leadership characteristics that support the start-up to scale-up transition. Building on these findings, I propose the 'CEO framework,' comprising Connection, Empowerment, and Orientation, articulating a navigating leadership style that is crucial for growth leadership and contributes to leadership development research.

ENT: **How Does Daily Time Pressure Fatigue Entrepreneurs? The Paradoxical Effects of Growth Mindset**

Author: **Rai Siddhant Sinha**, *NEOMA Business School*
Author: **Nandakumar Mankavil Kovil Veettil**, *Indian Institute of Management, Kozhikode*

Entrepreneurs go through intense time pressures in their daily lives, yet entrepreneurship research lacks an understanding of how daily time pressures impact entrepreneurs. In this paper, we employ experience sampling methodology and analyze multilevel data from daily surveys spread across 16 days from 87 entrepreneurs, leading to 1090 observations to examine how daily time pressures fatigue entrepreneurs by focusing on within-person dynamics. Further, we also examine the between-person dynamics and introduce a notion of willpower growth mindsets to entrepreneurship research. We depict the duality of this growth mindset by highlighting how it allows entrepreneurs to reduce the emotional consequences of time pressure yet exacerbate their physiological reactions to the emotional consequences they experience. Thus, this work makes important contributions to entrepreneurship theory and practice.

ENT: **How Do Pre-Incubation Programs Foster New Venture Creation? Evidence from a Regression Discontinuity**

Author: **Greta Serpente**, *Department of management, Bologna U.*
Author: **Riccardo Fini**, *U. of Bologna*

Given the public investment in pre-incubation programs to support new venture creation, it is key to assess their effectiveness. Literature acknowledges their impact, yet the extent of their effect still needs to be quantified. To fill this gap, using a regression discontinuity design, we estimate the effect of receiving an entrepreneurship training treatment on subsequent firm creation. Our sample consists of 318 applications (accepted and rejected) to a pre-incubation program between 2017-2020 in Italy. Evidence suggests that the effect of the Pre-Incubation Program is positive and marginally significant for all entrepreneurial projects. It gets stronger and more pronounced for digital projects (software and hardware) and non-significant for non-digital ones (e.g., manufacturing, food). We offer implications for entrepreneurship research and public policy.

Family Firms II

Session Moderator: **Yanhong Ding**, *Department of Management and Technology, Bocconi U.*

ENT: **Stand by or Come Inside: Family Resources, Family Involvement and Entrepreneurial Innovation**

Author: **Yanhong Ding**, *Department of Management and Technology, Bocconi U.*
Author: **HONGXIN XIE**, *Ferryman Education Co. Ltd*

Exploring the determining factors of innovation investment has been a central issue in the behavioral studies of the firm. Yet, what has been left out in these discussions is the fact that the owner is not an isolated person but a member of his or her family. In this paper, we trace back to how entrepreneurs' access to family resources affects innovation investment in start-ups. Since only children perform differently from their non-only-child counterparts due to access to family resources, we use the only-child "trick" to uncover the effect of access to family resources on innovation investment. China's one-child policy is used as an exogenous shock to reveal the effect of being only children. We also investigate whether there are changes in innovation investment when family members actually involve in the start-ups by providing initial financing or monitoring strategic choices as major shareholders. Using data on approximately 2,150 Chinese start-ups, we find that only-child entrepreneurs invest in less innovation, and their lower risk preference serves as an explanatory mechanism. However, when their family members significantly involve in the start-ups, the effect of lower risk preferences of only-child entrepreneurs on innovation investment disappears. Our analyses highlight the difference between the availability of family resources and actual involvement of family resources when evaluating innovation investment in start-ups.

ENT: **Not for Me: Parents' Entrepreneurial Struggles and Children's Family Business Succession**

Author: **Afsaneh Bagheri**, *Lecturer in Entrepreneurship, Lincoln International Business School*
Author: **Golshan Javadian**, *Morgan State U.*
Author: **Arezoo Bagheri**, *National institute for population research*

Family-owned enterprises grapple with a significant hurdle as the younger generations display a reluctance to assume the responsibility of overseeing and managing the business. While existing research extensively supports the notion of a positive parental role modeling effect in shaping children's entrepreneurial intentions, scant attention has been given to contradictory evidence. This study, grounded in the principles of social learning theory, investigates how the challenges faced by parents in business ownership can negatively influence their children's decisions regarding succession in family businesses. Specifically, we posit that parental work-home interference and entrepreneurial exhaustion have an adverse impact on children's willingness to inherit the family business. Furthermore, we argue that the link between work-home interference and children's intentions to take over the family business is mediated by entrepreneurial exhaustion. Our study, based on a sample of Iranian parent entrepreneurs and their children, provides empirical support for these hypotheses. We discuss the implications of our findings for both research and practical applications.

ENT: **The Legacy of Intangibles: The Transfer of Social Capital in Intra-Family and Non-Family Succession**

Author: **Eva Dötschel**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Sebastian Junge**, *Friedrich-Alexander-U. Erlangen-Nürnberg*

Social Capital (SC) is a valuable intangible resource and can help generating a competitive advantage. Yet, it remains unclear how SC is transferred in family firms during succession events, especially to non-family successors. This study addresses this void and investigates the handover of SC in German family firms from the predecessor to intra-family and non-family successors. Applying an inductive qualitative approach, we analyze data from 19 semi-structured interviews, and develop a framework on the handover of SC along five phases from before the entrance of the successor until the management of SC. We assign the different phases of the handover of SC to the stages before, during, and after succession, and highlight differences and similarities in the handover between intra-family and non-family successions. Our findings extend understanding the handover of SC beyond intra-family successors, and provide first insights into the mechanisms of the transfer of SC in non-family successions.

ENT: **The Balancing Act: Ownership Structure and Market Dynamism in Entrepreneurial Family Firms**

Author: **Seyed Hooman Seyed Abootorabi**, *U. of Louisville*
Author: **Mohamed Ashraf Genedy**, *Jönköping International Business School*

Family firms are significant drivers of economic and social prosperity. These firms are typically characterized by being controlled by the family members, having high decision-making concentration, and pursuing non-financial goals, commonly known as socioemotional wealth (SEW). The emotional bond of the family to the establishment and their desire to maintain the heritage of the business makes it difficult for them to relinquish control or decision-making authority to new stakeholders. In this line, the involvement of external investors in family firms may generate concerns regarding the future control and decision-making authority. Further, how family firms navigate market dynamics and respond to competition determines their sustainable growth. Notwithstanding, there is lack of research on how enrolling external stakeholders and strategic flexibility affect the future growth of family firms. In this line, by combining and integrating data from NRG and Compustat Global, we compare the outcome of public entrepreneurial firms that are family-owned versus those that are not. We then investigate how institutional and environmental flexibility affect their future performance. Our findings have important implications for theorizing the SEW framework and contribute to the literatures on competitive dynamisms, corporate governance, ownership, and strategic adaptation. We also offer practical implications to family firms in addressing the control versus ownership dilemma.

Actions and Behaviors

Session Moderator: **Kai Christian Bormann**, *Bielefeld U.*

ENT: Executive Function and the Pursuit of Entrepreneurial Opportunities: A Multidimensional Approach

Author: **Ipek Koparan**, *Bentley U.*
Author: **Gorkem Aksaray**, *Trinity Business School, Trinity College Dublin*
Author: **Tatiana S. Manolova**, *Bentley U.*
Author: **Linda F. Edelman**, *Bentley U.*

This study investigates the relationship between executive function (EF) and entrepreneurial opportunity exploitation while considering the role of uncertainty in the entrepreneurial context. EF encompasses cognitive skills like working memory, inhibitory control, attention, and cognitive flexibility. The research explores whether EF dimensions collectively impact entrepreneurial engagement and how varying levels of uncertainty influence this relationship. A vignette experiment with 200 participants was conducted, revealing valuable insights into the complex interplay of cognitive processes in entrepreneurial behavior. The findings support most hypotheses but also raise intriguing questions about the role of attention and the impact of uncertainty, opening avenues for future research in this field.

ENT: Entrepreneurs' Variability in Decision-Making and Downstream Consequences for Behavioral Proactivity

Author: **Kai Christian Bormann**, *Bielefeld U.*

Entrepreneurs engage in analytic and intuitive decision-making to navigate their demanding daily work. Complementing and extending the literature in this area, I focus on the process of shifting between these decision-making modes and introduce variability in decision-making (VDM) as a unique construct that covers the extent to which entrepreneurs switch between analytic and intuitive decision-making over time. Drawing from theories of self-regulation, I position decreased behavioral proactivity (i.e., taking charge behavior) as an outcome of entrepreneurs' VDM. Furthermore, regulatory focus strategies are posited as antecedents. Finally, these associations are theorized to emerge only for entrepreneurs and not for non-entrepreneurs (i.e., employees). Results from a large experience-sampling field study covering 438 daily observations from 53 entrepreneurs and matched data from non-entrepreneurs confirmed most of these assumptions. For entrepreneurs, VDM decreased their taking charge behavior. Further, as expected, entrepreneurs with high (low) prevention focus engaged in less (more) VDM, whereas, contrary to assumptions, promotion focus was unrelated to VDM. Last, as hypothesized, these relationships were found only for entrepreneurs but not for non-entrepreneurs.

ENT: Entrepreneurial Actions and Symbolic Interactions in the Emergence of a Market Category

Author: **Eduardo Meléndez**, *U. of Oklahoma*

Market categories emerge as a result of ongoing actions and interactions of different market actors. Research on the emergence of market categories is extensive. However, it primarily studies how emergent categories constraints or enables action or how market actors perform in these new structures. As a result, substantially less research exists about the role of entrepreneurial actors. Scarce evidence about entrepreneurial action in market category emergence is a significant omission because it leaves us with an incomplete view of this process. Most importantly, because the emergence of new structures often happens in opposition to established structures, these processes often proceed amid considerable contestation. In this study I investigate how new market categories emerge in the face of oppositional fields and what the role of entrepreneurial action is. I conduct a historical case analysis of the electronic dance music (EDM) genre in the United States between 1980 and 2000. I find three succeeding processes that resulted in EDM emerging as mainstream genre: 1) the emergence of an underground category; 2) the structuration of an underground field and the opposition from actors in a mainstream field; and 3) the emergence of a mainstream market category. I also identify entrepreneurial strategies and interaction mechanisms to show that the emergence of a market category is a collective effort that first requires entrepreneurial actions to create category elements and then collective interactions to construct meanings about such elements.

ENT: What Actions are Helpful for Marginalized Entrepreneurs? Developing Questions Inductively

Author: **Alexander Glosenberg**, *Loyola Marymount U.*
Author: **Paul Steffens**, *U. of Adelaide*
Author: **Michael Frese**, *Asia School of Business*
Author: **Manjula Dissanayake**, *U. of Adelaide*
Author: **Shona Passfield**, *None*

It has been proposed that entrepreneurs with few socioeconomic resources engage in different entrepreneurial processes than more privileged entrepreneurs. However, it remains unclear what actions socioeconomically marginalized entrepreneurs might need to adopt to obtain successful outcomes. Increasingly, it is believed that individual entrepreneurs should be proactive, innovative, and take risks – in line with a firm-level view of entrepreneurial orientation (EO). However, whether or not this is the case for marginalized entrepreneurs remains unclear – a glaring omission in the literature given that such persons make up a large share of entrepreneurs internationally. To consider a more pluralistic understanding of entrepreneurial processes, we content analyze a particularly effective, and perhaps the best-studied, approach to entrepreneurship education and training (EET) for marginalized entrepreneurs: personal initiative training for entrepreneurs (PIE; Frese et al., 2016). Unlike other approaches, PIE training focuses on promoting specific actions among entrepreneurs via short-hand heuristics, known as action principles. Within PIE training, we identify 101 action principles and derive 21 first-order and seven second-order themes. These seven second-order themes share three underlying dimensions: proactivity, innovation, and risk-mitigation – partially diverging from the traditional understanding of EO. Our results raise important theoretical questions to be tested in future research to better understand, and support, marginalized entrepreneurs.

Decoding Disparities: Examining Intersectional Gender and Race Gaps in Entrepreneurship

Coordinator: **Kanwal Bokhari**, *Ent*

Panelist: **Joanna Tochman Campbell**, *U. of Cincinnati*

Panelist: **Peer Fiss**, *U. of Southern California*

Panelist: **Rachida Justo**, *IE Business School*

Because entrepreneurship is an important driver of economic growth and wealth creation, it also carries significant implications for social inequality (Braunstein, 2008; Joshi, Son, & Roh, 2015; Kanze, Huang, Conley, & Higgins, 2018). Consequently, the investigation into gender and racial disparities in entrepreneurship has become increasingly salient, reflecting not only entrepreneurship's prominent role in modern society but also its ongoing underrepresentation of groups such as women and racial minorities (Fairlie, Robb, & Robinson, 2022; Kanze et al., 2018; Orser & Elliott, 2015). The current symposium invites scholars studying such disparities and inclusion pathways to address inequalities by utilizing innovative approaches, theoretically and methodologically. Gender and racial inequalities and associated disparities are complex phenomena characterized by multifaceted interdependencies (Furnari, Crilly, Misangyi, Greckhamer, Fiss, & Aguilera, 2021; Ragin & Fiss, 2017). Understanding this complexity demands attention to the interconnected nature of independent factors that can jointly shape outcomes (Furnari et al., 2021; Ragin & Fiss, 2017). Bringing such innovative approaches to bear on entrepreneurship—theoretically and methodologically—we aim to probe the multifaceted and intersectional nature of gender and racial inequalities within entrepreneurship. Our goal is to foster a dialogue that illuminates the exclusionary mechanisms that uphold the status quo and the inclusionary pathways forward that allow us to effectuate meaningful change, with the broader aim of informing research, pedagogy, and policy.

Healthcare Quality Improvement

Session Moderator: **Pejmon Noghrehchi**, *The Ohio State U. College of Public Health*

HCM: Leadership Matters: Nursing Home Administrator Turnover Imperils Quality

Author: **Rohit Pradhan**, *Texas State U. San Marcos*

Author: **Akbar Ghiasi**, *U. of the Incarnate Word*

Author: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*

Background and Objectives: Nursing homes are an integral component of the US healthcare system acting as a safety net for older adults and people with disabilities. Nursing home administrators (NHAs) are responsible for supervising the day-to-day operations of their facilities and determining its strategic direction. However, nursing homes have experienced persistent challenges with high NHA turnover rates, and research has established a strong association between turnover rates and poor organizational performance. The purpose of this study was two-fold: first, to examine the relationship between NHA turnover and quality; second, to understand if the association between NHA turnover and quality is mediated by registered nurse (RN) turnover. Research Design and Methods: Our conceptual framework is an integrated perspective based on tenets from the structure-process-outcome model and the knowledge-based view of the firm. The study uses multiple secondary data sources including the Care Compare: Skilled Nursing Facility Quality Reporting Program (SNF QRP) and Long-Term Care Focus (LTCFocus) Results: Our final analytic data file comprised of 19,645 nursing homes for the study years 2020-2022) Our results support our hypotheses: NHA turnover associated with lower quality of care. Significantly, this effect is fully mediated by RN turnover. Discussion and Implications: Quality improvement initiatives in nursing homes have privileged nurse staffing with administrators an afterthought. Our results highlight the synergistic relationship between administrators and caregivers. While nursing homes must improve compensation and non-monetary benefits to encourage NHA retention, government intervention may still be necessary especially considering the resource-constrained environment the industry operates in.

HCM: The Interplay Between Healthcare Quality Improvement, Temporality, and Materiality

Author: **Sara Melo**, *Queen's U. Belfast*

It is widely acknowledged that healthcare quality and patient safety (Q&PS) improvement is significantly impacted by the multiple, and often conflicting, day-to-day practice demands on staff's time and/or opposing short-term and long-term priorities. Research has also identified that materiality strongly influences these dynamics. Yet, the role of the interplay between Q&PS improvement, temporality, and materiality has received scant research attention. This article fills this gap by building on Hernes and Schultz's (2020) theoretical framework of situated temporality. The research utilised a qualitative case study conducted at a Portuguese University hospital. Data was collected through 46 in-depth semi-structured interviews involving 49 clinical and non-clinical staff. The findings illustrate that the interplay between Q&PS improvement, temporality, and materiality can contribute to both the emergence and the successful management of temporal tensions associated with Q&PS improvement. Namely, objects can contribute to lessen temporal tensions by acting as temporal bridges (foster hospital staff to remember past or imagine future events) or as temporal anchors (help staff to focus on the present moment) – two new concepts introduced in this article. The article also highlights healthcare staff's agency in shaping the impact of temporality on Q&PS improvement as well as the importance of adopting a situated rather than deterministic conceptualization of time.

HCM: Unpacking the Black Box of Improvement: Performance Feedback Orientation Among Physicians

Author: **Laura Desveaux**, *Institute for Better Health, Trillium Health Partners*

Author: **Braeden Terpou**, *Institute for Better Health, Trillium Health Partners*

Author: **Simona Minotti**, *Institute for Better Health, Trillium Health Partners*

Author: **Ruoxi Wang**, *Institute for Better Health, Trillium Health Partners*

Audit and Feedback (A&F) is a widely utilized and promising solution to reduce unwarranted physician-level variation in care, yet its impact is variable in practice and uptake is often suboptimal. While recipient characteristics are acknowledged as an important driver of interaction with A&F reports, surprisingly little attention has been paid to understanding these characteristics and their mechanisms of action. From a control-value perspective, we developed and tested an integrated theoretical model delineating the modifiable antecedents to engaging with A&F by measuring recipient attitudes, beliefs, and regulatory focus in the healthcare context. By using a partial least squares path modeling technique, we found that 1) recipients' commitment to act on feedback is influenced by both their perceived value of and perceived confidence in acting on feedback; 2) both pathways of influence are mediated by perceived usefulness of feedback; 3) recipients' perceived need for change influences their perceived value of acting on feedback; and 4) prevention focus has a negative but insignificant association with perceived usefulness of feedback. Our findings contribute to a more in-depth understanding of the upstream cognitive appraisal process of A&F, which determines recipients' intention to interact with A&F.

HCM: Advanced Practice Provider Utilization and Merit-Based Incentive Payment System Group Performance

Author: **Gregory N. Stock**, *Northern Arizona U.*

Author: **Christopher McDermott**, *Rensselaer Polytechnic Institute*

Author: **Margaret McDermott**, *Rensselaer Polytechnic Institute*

In this study, we investigate the relationship between the utilization of advanced practice providers (APPs) and the quality performance of medical practice groups as measured by the Merit-based Incentive Payment System score assessed by the United States Centers for Medicare and Medicaid Services. APPs, who are primarily physician assistants and nurse practitioners, are non-physician healthcare providers who can perform many of the same tasks as physicians. Their increased use has been suggested as a means of improving cost and access of healthcare in the United States, but there is a question of whether quality of care would be affected. In contrast to most results from prior research, we find that the utilization of APPs is negatively related to quality performance. We discuss the implications of these findings for research and practice.

Innovating for the Future: Organizational Challenges of Healthcare's Digital Transformation

Organizer: **Simcha Jong**, *UCL Global Business School for Health*

Organizer: **Paola Zappa**, *U. College London*

Panelist: **Daniele Mascia**, *Luiss Guido Carli U.*

Panelist: **Etienne Minvielle**, *Ecole Polytechnique de Paris*

Panelist: **Eivor Oborn**, *U. of Warwick*

New technologies are an occasion for organizational restructuring (Barley, 1986). Accordingly, there arguably is no domain that is open for more restructuring than the healthcare domain. Healthcare is currently undergoing a period of rapid and profound technological change, spurred by advances in and the convergence of fields such as precision medicine, robotics, and artificial intelligence. These changes herald steep improvements in how we manage health. Telemedicine allows us to provide previously cut-off patients access to healthcare in remote and under-resourced healthcare settings, artificial intelligence has the potential of taking over critical tasks from highly skilled professionals such as radiologists, and is changing clinical decision making, precision medicine offers the opportunity to personalize prevention, diagnosis and treatment of diseases, and advances in genomic medicine have opened up new avenues for treating patients in revolutionary new ways based on the variability of diseases. Yet, the potential of these new technologies mostly remains untapped in our current health systems as the organizational complexities of implementing these technologies often prove too difficult to resolve. These complexities were for example on full display as part of the systemic failures of even the richest health systems to effectively manage COVID-19 outbreaks during the pandemic, and by the many high-profile failures to integrate new electronic health record systems in clinical care such as the US\$ 16 billion electronic health records update that the US Veteran's Affairs health system abandoned in 2023. This panel brings together an interdisciplinary group of organizational scholars to shed their light on the challenges posed by the raft of new technologies – all of which digital – engulfing the healthcare domain. Specifically, this panel will examine how the successful implementation of these new technologies is generally interlinked with a need to refashion existing (1) organizational structures, (2) patterns of interaction, and (3) institutional roles that define the healthcare domain. While this panel engages with broader debates in the organizational literature on digital transformations as organizational transformations (e.g. Anthony, Bechky & Fayard, 2023; Lebovitz, Lifshitz-Assaf & Levina, 2022; Waardenburg, Huysman & Sergeeva, 2021), the clear focus is on the unique organizational complexities that characterize healthcare settings.

Emerging Trends in HR: Qualitative Research Insights and Strategic Implications

Session Moderator: **Martina Caic**, *Aalto U.*

HR: **Am I Even Needed? Navigating Through Role Changes in the Age of Artificially Intelligent Agents**

Author: **Martina Caic**, *Aalto U.*

Author: **Robert Ciuchita**, *Hanken School of Economics, Finland*

Author: **Katja Einola**, *Stockholm School of Economics*

Author: **Violetta Khoreva**, *Hanken School of Economics*

We explore through the eyes of organizational members how job roles are transformed by the introduction of a chatbot we refer to as an AI-powered agent. Our inductive study employing methods of constructivist grounded theory, draws from research material collected at a well-established multinational firm in the retail financial services industry located in Northern Europe. Our research shows how pervasive the introduction of an early-stage AI technology can be when it cuts across many functions in the organization, generating new roles, transforming existing ones and creating tension in how different employee groups perceive the changes. In our case company, these tensions are reflected in metaphorical roles, AI as a villain, hero and a fool, bestowed on the AI-powered agent by employees as they cope with the changes and the uncertainty related to the future. Our study captures the complex and far-reaching nature of job role changes triggered by the integration of what at first appears to be a simple, early-stage AI-powered agent serving customers and performing what were formerly repetitive human tasks.

HR: **Innovators or Conformists? A Context-Based Exploration of Employer Agents' I-Deals Responses**

Author: **Dotun Ayeni**, *U. of Edinburgh business school*

Author: **Maryam Aldossari**, *Royal Holloway School of Business and Management*

Author: **Sara Chaudhry**, *Birkbeck*

This study explores the contextual forces shaping employer agents' (i.e., line managers, supervisors, and HR Managers) decisions to authorise or decline individualised, non-standard work arrangements, known as I-deals. Prior research has underexplored how contexts may influence employer agents' I-deals processing and consequent outcomes. Drawing on Gooderham, Mayrhofer and Brewster's comparative contextual framework, which emphasises institutional awareness and the layered levels of contexts, as well as a process-based comparative case study approach, this study provides empirical evidence of the role of context(s) in how employer agents response to I-deals requests and the linkages to I-deals contents and forms. The two firms considered in our study are distinctly different. One is a multinational in Nigeria's telecommunications industry, operating in various cities, and the other, a large-sized, locally-owned Nigerian law firm with branches in different states. Findings from the study reveal that the outcomes of I-deals negotiations are profoundly influenced by contextual factors linked to the I-deals requested, the I-dealer(s), timing, outcomes, and employer agents' prior I-deals experiences. Overall, this study demonstrates that a more nuanced understanding of the intersecting, multilevel and time-sensitive factors shaping I-deals negotiation outcomes is pivotal for grasping the broader contextual complexities that firms face.

HR: **Beyond Compassion: Unveiling New Talent Logic in Nonprofit Organizations During Professionalization**

Author: **Ksenia Usanova**, *U. of Luxembourg*

Author: **Alexandra Telitsyna**, *National Research U. Higher School of Economics*

Author: **Hugh Scullion**, *Nui Galway, Ireland*

Nonprofit organizations (NPOs) play a crucial role in contributing to societal betterment. Despite the extensive literature on human resource management (HRM) within NPOs, there remains a noticeable gap in research, particularly regarding paid employees in small voluntary organizations within the evolving landscape of the third sector's professionalization. This study draws on institutional logics theory to investigate the evolving concept of "talent" during the professionalization of small NPOs and the operationalization of talent identification. Through a multiple-case study, we have delineated and conceptualized three talent logics that currently guide the practices of small NPOs. We elucidate how these organizations introduce, blend, or discard different logics and examine how employees respond to these transformative changes.

HR: **The 'What, When, and How' of Line Managers' Involvement in HRM Implementation: A Systematic Review**

Author: **Aneeqa Suhail**, *Human Resource Studies, Tilburg U.*

Author: **Jeske Van Beurden**, *Tilburg U.*

Author: **Anna C. Bos-Nehles**, *U. of Twente*

The significance of the line manager's role in HRM implementation in Strategic HRM literature is well-established. However, uncertainties persist about what, when, and how, specifically line managers are involved in this process. This systematic review, drawing from the analysis of 89 articles, delineates "what" entails line managers' involvement in executing HR-related tasks, showcasing less pronounced participation in decision-making, financial authority, and knowledge transfer. "When" line managers are involved hinges on various factors—external, contextual, organizational, and notably individual considerations. Finally, "how" depends on partnership with HR professionals, employing adaptive strategies, and the agency of line managers. Based on our comprehensive analysis, the study developed an integrative framework identifying significant gaps in understanding what, when, and how line managers are involved in HRM implementation. Additionally, the paper proposes potential research inquiries within each domain to assist HR scholars in advancing this evolving research field.

Job Design and the Changing Nature of Work

Session Moderator: **Sujinda Popaitoon**, *Maharakham Business School*

HR: **Job Crafting, Entrepreneurial Intention and Work Engagement: New-Generation Employees**

Author: **Sujinda Popaitoon**, *Maharakham Business School*

Author: **Atthaphon Mumi**, *Maharakham U.*

Author: **Patchara Popaitoon**, *Chulalongkorn U.*

Responding to the need to broaden job crafting research to encompass diverse work settings through a multidisciplinary perspective, this research investigates the roles of job crafting and person-job fit in the relationships between entrepreneurial intention and work engagement, particularly among new-generation employees. Based on survey data collected from 555 respondents, particularly new-generation employees working in relevant digital jobs, this research reveals that entrepreneurial intention has a positive indirect impact on work engagement facilitated through the practice of job crafting, while person-job fit significantly strengthens the negative aspect of this relationship. This research contributes to the job crafting literature by conducting a multidisciplinary study that encompasses entrepreneurship, HRM (comprising job crafting, person-job fit, and work engagement), and the new generation. Additionally, it contributes to the HRM literature, providing insights for practitioners and policymakers on effectively engaging new-generation employees with entrepreneurial intentions. The implications drawn from these findings will be subject to further academic analysis and discussion.

HR: **Crafting Meaning out of Inconsistency: How Illegitimate Tasks Ignite Job Crafting & Meaningful Work**

Author: **Annika Schaefer**, *PHD Student at Bielefeld U.; Faculty for Business Administration*

Author: **Kai Christian Bormann**, *Bielefeld U.*

Illegitimate tasks are a common phenomenon in everyday work, yet individuals increasingly seek consistency and meaning to navigate a changing environment. This study examines the paradoxical relationship between illegitimate tasks and the need for meaningful work. Adopting a need-oriented perspective, we introduce two types of illegitimate tasks: variability in illegitimate tasks – capturing fluctuation over time – and previous illegitimate tasks – capturing the experiences of the prior workday –, both hypothesized to influence individuals to change the nature of their work. We propose, that variability in illegitimate tasks positively predicts strategies to craft meaning and that the relationship between crafting meaning and experiencing meaningful work will be stronger with high levels of previous illegitimate tasks. A 10-day diary study with 250 employees, yielding 1803 daily observations, was conducted and multilevel analysis showed a positive relationship between job crafting and meaningful work, at the between and within level. We confirmed the hypothesized effect of variability on job crafting at the between level and the interaction at the within level. The findings emphasize the activating role of the introduced types of illegitimate tasks. This highlights importance to broadening the understanding of illegitimate tasks, as seemingly positive work outcomes might stem from undesirable working conditions.

HR: **Interests of the Future: An Integrative Review and Research Agenda for an Automated World of Work**

Author: **Alexis Hanna**, *U. of Nevada, Reno*

Author: **Christopher D. Nye**, *Michigan State U.*

Author: **Andrew Samo**, *Bowling Green State U.*

Author: **Chu Chu**, *U. of Illinois at Urbana-Champaign*

Author: **Kevin Hoff**, *U. of Illinois at Urbana-Champaign*

Author: **James Rounds**, *U. of Illinois at Urbana-Champaign*

Author: **Frederick L. Oswald**, *Rice U.*

The future of work has been a focus for both academics and practitioners as many are interested in what the work landscape will be like following increased automation. However, despite projections about the types of tasks and jobs that are likely to be automated, there has been no attention devoted to how automation may affect work that people are interested in and the degree to which different types of interests are exposed to automation. In the present study, we used theoretical perspectives from work design to guide integration of vocational interest frameworks and automation projections to better understand the scope of potential automation effects within and across jobs. We found that within Holland's RIASEC interest framework, Investigative and Conventional tasks and jobs, especially within the STEM fields, are the most exposed to automation. On the other hand, Social tasks and jobs appear to be least exposed, and most hands-on, physical Realistic tasks and jobs have low exposure as well. For Artistic and Enterprising tasks, there is a moderate proportion of exposure, indicating that some creative work, decision-making, and leadership tasks may be affected by automation across a range of jobs. Building on these results, we also provide a research agenda for future work on interests, work design, and technology, such as identifying areas for future research on career decisions, the role of interests in project-based work and a "jobless" future, downstream changes in people's interests following technological changes, and impacts of automation to sociodemographic groups based on interests.

HR: **An Augmented Consultant? The Impact of AI on Job Design and Work Outcomes**

Author: **Ghassan Yacoub**, *IESEG School of Management*

This study investigates the impact of AI, particularly Large Language Models (LLM) like ChatGPT, on job design and work outcomes in Professional Service Firms (PSFs). While the debate has predominantly centred on AI's potential for task automation, this research shifts focus on a comprehensive understanding of AI's determinants and their effects on job design and individual work outcomes. Through a qualitative exploratory study of consultants, we propose a conceptual framework and identify two key mechanisms: one altering job design through transformative or enabling effects and the other directly influencing work. Our findings contribute to the literature by providing a nuanced view of AI's role in job design and outcomes, also underscoring the transformative role of AI in New Ways of Working (NWW) and highlighting its implications in knowledge-intensive settings like PSFs.

Advancing HR Analytics: Leveraging AI and Machine Learning for Strategic Insights

Session Moderator: **Zhipeng Zhang**, *China U. of Labor Relations*

HR: **A Daily Diary Study of Perceived Algorithmic Control and Delivery Riders' Multitasking Performance**

Author: **Zhipeng Zhang**, *China U. of Labor Relations*
Author: **Shuxia Zhang**, *Wayne State U.*
Author: **Guangjian Liu**, *School of Management, Shandong U.*
Author: **Jialiang Pei**, *South China U. of Technology*

Navigating the nuanced realm of app-work, the current research draws from the Job Demands-Resources (JD-R) model, emphasizing not just job demands but also the untapped job resources embedded in algorithmic control. Our investigation then delves into how perceived algorithmic control (PAC) influences the multitasking performance of delivery riders in the gig economy. First, we developed and validated the PAC scale following rigorous methodological approaches. Second, through a 7-day diary survey of 102 Chinese delivery riders, we elucidated the mediating role of job crafting in the positive relationship between PAC and delivery riders' multitasking performance. Moreover, we found that personal-level resources (i.e., proactive personality) and technological-level resources (i.e., algorithmic transparency) serve as vital catalysts that amplify the constructive pathway from PAC to job crafting. Our research reveals the deep-seated implications of algorithmic control on app-workers' work outcomes and illuminates the conditional and multifaceted impacts of individual and algorithmic attributes. Implications, limitations, and future research trajectories are further discussed.

HR: **Leader Emergence via Experiences: A Lifespan Leader Development Framework Built on Machine Learning**

Author: **Guihang Qin**, *Hong Kong Baptist U.*
Author: **Cheng Wang**, *Zhejiang U.*
Author: **Zhenkun Liang**, *Zhejiang U.*
Author: **Mengyin Li**, *Zhejiang U.*
Author: **Zhengguang Liu**, *Zhejiang U.*

Despite leader development having drawn significant scholarly attention, we still only have a scattered understanding of how individuals' complex prior experience records across the lifespan could influence their leader development and ultimate leader emergence in the workplace. The absence of such integrative understanding has been noticed yet remained unsolved, mainly due to the traditional modeling methodologies that limited the ability to deal with dozens of mixed past experiences. Accordingly, we utilize machine learning modeling to build an integrative framework for lifespan leader development, investigating the relationship between individuals' past developmental experiences and their later leader emergence from a lifespan perspective. Through deduction, induction, and abduction processes, we posit and investigate several research questions. By synthesizing the patterns discovered in machine learning modeling (conditional random forest, CRF) in the quantitative study and the findings in the qualitative research, we propose an integrative framework to explain leader development through the lens of lifespan developmental experiences.

HR: **Predicting Turnover Intention of Korean Employees Across Career Stages: Based on Random Forest Model**

Author: **Sangsuk Oh**, *National Cancer Center Korea*
Author: **Justin Ji**, *Towson U.*
Author: **Owwon Park**, *The Catholic U. of Korea*

Turnover intention has been one of the key variables predicting actual turnover behavior, which is critical for managing workforce retention. Literature finds that the set of predictors varies and is not generalizable to different situations. Thus, this study aims to fill the research gap by creating a random forest (RF) model, one of the machine learning methods, to predict the turnover intention of Korean employees at different career stages based on the Human Capital Corporate Panel (HCCP) data. The RF model identified four critical predictors of turnover intention out of 24 items: organizational commitment, job satisfaction, pay, and stress/exhaustion. The partial dependence plot (PDP) shows different variables predicting turnover intention and illustrates the range of their impact on turnover intention across career stages. The results show that all variables predict the turnover intention of the advancement employees (whose tenure is between two and ten years). On the other hand, two variables, such as job satisfaction and stress/exhaustion, are significant for the establishment employees (whose tenure is two years or less), and none is significant for the maintenance employees (whose tenure is between ten and twenty years). Overall, this study provides insights into the importance of understanding the different impacts of organizational intervention on employees' turnover intention in different career stages.

HR: **Evaluators' Consideration of Task- and Relationship-Oriented Behaviors in Performance Assessments (WITHDRAWN)**

Author: **Jana Kim Gutt**, *Paderborn U.*

When providing performance appraisals, evaluators find themselves in the dual role of observers and judges of performance. While the judgment side of performance appraisals has received considerable research attention over the years, little is known about the relationship between observed interaction elements and evaluation outcomes. To close this gap, this study investigates how the interaction during a two-person task is reflected in different evaluation formats. Evaluators provide conventional performance ratings and evaluation comments (written and spoken). Through the use of a machine learning algorithm, the evaluation comments are quantified and compared to the conventional performance ratings. Drawing on previous studies, the interaction is coded in terms of task- and relationship-oriented behaviors. By exploring how the coded behaviors translate into conventional and algorithmic performance ratings, the study finds preliminary evidence that the consideration of interaction elements depends on the evaluation format, the performance level, and the gender of individuals. The results also show that the considerations vary strongly in comments and ratings originating from the same evaluator. This study contributes valuable insights into the complex relationship between interaction elements and evaluation outcomes by exploring the nuanced dynamics of verbal and numerical performance assessments.

Employee Attitudes and Performance: Aligning HR Strategies for Organizational Success

Session Moderator: **Jake Messersmith**, *U. of Nebraska, Lincoln*

HR: **Toward an Eudaimonic Perspective on HRM Systems and Employee Well-Being**

Author: **Jake Messersmith**, *U. of Nebraska, Lincoln*

There is a growing focus on the importance of understanding the antecedents to employee well-being, particularly within the macro-HRM literature. This need is underscored by growing levels of disengagement and mental health concerns in the workplace. This paper offers a different perspective on the relationship between HR systems and employee well-being, by assessing well-being from an eudaimonic perspective. The paper outlines the ways in which social exchange-based models may have missed the mark in helping us to understand deeper forms of well-being in the workplace. The paper then conceptualizes different ways in which HR systems may be employed to encourage more eudaimonic forms of well-being.

HR: **Ethics-Centered HRM System and Knowledge Hiding: A Moderated Mediation Model**

Author: **Zahid Hameed**, *Prince Mohammad Bin Fahd U.*

This study contributes to knowledge management literature by investigating psychological contract fulfillment (PCF) as an underlying mediating mechanism between an ethics-centered HRM system and knowledge hiding (KH). In addition, we explored the moderating role of mindfulness between the ethics-centered HRM system and PCF. We employed a time-lagged multi-source research design to obtain 118 employee-coworker dyads (236 employees total). The hypothesized relationships were tested in structural equation modeling. The study findings indicate that an ethics-centered HRM system is negatively related to KH; this effect was mediated by PCF and moderated by mindfulness. Taking into account the negative consequences of KH for individuals, teams, and organizations, we suggest that PCF and mindfulness are important mechanisms and boundary conditions that explain the association between the HRM system and KH. Our research adds to the field of knowledge management by disentangling how the ethics-based HRM system influences KH via PCF. This may help the organization to get insights about what type of HRM practices are useful to reduce the employees' KH behavior.

HR: **Impact of High-Performance Work Practices on Employee Outcomes in Employee-Owned Companies**

Author: **Edward Carberry**, *U. of Massachusetts, Boston*

Author: **Jung Ook Kim**, *Chatham U.*

Author: **Joo Hun Han**, *KAIST College of Business*

Author: **Dan Weltmann**, *Professor, Western Connecticut State U.*

Author: **Joseph Blasi**, *Institute for the Study of Employee Ownership and Profit Sharing at Rutgers SMLR*

Author: **Douglas Kruse**, *Rutgers U.*

A central claim of scholarship on employee ownership (EO) is that it has the strongest impacts on employee outcomes when implemented in combination with other HR practices that are typically associated with high-performance work systems. However, our explanations for why these complementary practices are important remain underdeveloped. In this paper, we draw on theories about the psychology of ownership and the abilities-motivation-opportunities (AMO) framework from the industrial relations and HR literatures to theorize the effects of three types of what we call "ownership HRM" (OHRM) practices on employee attitudes and behaviors in a dataset of 881 employees in nine companies with employee stock ownership plans (ESOPs). We find that the extent to which employees perceive that they have influence, are engaged as owners through information sharing and business literacy training, and receive high quality communications about the ESOP have direct effects on organizational commitment, turnover intention, voice behavior, and helping behavior, and that these effects vary across these four outcomes. In addition, we find that psychological ownership moderates the impact of OHRM practices on employee attitudes and behaviors. Our findings reveal that there are multiple, complex pathways through which OHRM practices impact employee outcomes in EO companies, and a broader range of theoretical explanations for these impacts than has been captured in the literature.

HR: **What Matters Most in Pay Satisfaction? Pay Information, Pay Transparency, and Organizational Justice**

Author: **Carolyn Henn**, *West Virginia U.*

Author: **Jeffery D. Houghton**, *West Virginia U.*

Author: **Christopher B. Neck**, *West Virginia U.*

Research has explored the effects of pay information disclosure and pay transparency practices on employee attitudes and behaviors. However, relatively little is known about the potentially differential effects of internal and external sources of pay information on employee perceptions of pay fairness and pay satisfaction. The current research builds on existing theoretical frameworks to explore which sources of information matter most in determining employee pay satisfaction. Specifically, this paper develops and tests a conceptual model of the relationships between three sources of pay information (i.e., outcome pay transparency, process pay transparency, and archival pay information) and pay satisfaction as mediated by organizational justice perceptions (e.g., perceived distributive justice and perceived procedural justice). Results reveal that process pay transparency is positively related to pay satisfaction as mediated by organizational justice perceptions. In contrast, outcome pay transparency is unrelated to pay satisfaction while publicly available archival pay information (e.g., Salary.com and Payscale.com) is negatively related to pay satisfaction. These findings have important implications for pay information scholars and for managers interested in providing pay information that is effective in enhancing employee perceptions of fairness and pay satisfaction. The implications are discussed along with study limitations and directions for future research.

Workforce and HR Ecosystems: A Generative Discussion on Synergies, Tensions and Future Directions

Organizer: **David Cross**, *Southampton Business School, U. of Southampton*
Organizer: **Anastasia Kulichyova**, *Queens U. Belfast*
Panelist: **Elizabeth J. Altman**, *U. of Massachusetts Lowell*
Panelist: **Thomas Garavan**, *U. College Cork*
Panelist: **Ashish Malik**, *Ashish Malik, Professor, Queen's U. of Belfast, UK*
Panelist: **Jelena Petrovic**, *Southampton Business School, U. of Southampton*
Panelist: **Scott A. Snell**, *U. of Virginia*

Amid a host of changes to the world of management and work, the concepts of 'workforce ecosystems' and 'HR ecosystems' have concurrently emerged. These frameworks help make sense of the increasingly diverse ways that organizations deliver strategic value using not only their internal resources but also an extended workforce including contingent workers, partner organisations, and technological actors. This has significant implications for the practice and direction of HR professionals and managers, the boundaries of organisations within the ecosystems, and the strategic management of them not to mention questions of leadership, governance, and function. In this panel symposium, we aim to consider the similarities, tensions, and synergies between these concepts, consider the changing role of managers and HR professionals, and consider the future of these ecosystems. We do this through a generative discussion featuring experts from the field of workforce and HR ecosystems.

Participant: **Morela Hernandez**, *U. of Michigan, Ann Arbor*

In the ever-evolving business landscape, an organization's ability to effectively manage its human resources plays an essential role in creating sustained advantage at the individual and workgroup levels. Integrating traditional and innovative approaches, the presentations in this symposium delve into the modern employee experience, examining the nuanced links between daily experiences, organizational politics, employee demands, and such outcomes as employee well-being, attitudes, behaviors, cognition, and identity. The presentations contribute to the development of new and recently introduced constructs using recent advancements in momentary and longitudinal research designs. In doing so, the authors contribute to the burgeoning and existing literature on the influence of bottom-line mentality on individual outcomes, how leader-wielded social comparisons result in performance pressure, and how contextual leadership and environmental factors influence such outcomes as leader identity and turnover.

Fun in the Workplace: A Discussion of the Extant Literature and Exploration of Future Research

Moderator: **John W. Michel**, *Loyola U. Maryland*
Panelist: **Michael J. Tews**, *Pennsylvania State U.*
Panelist: **Barbara Anne Plester**, *U. of Auckland*
Panelist: **Katherine A Karl**, *U. of Tennessee, Chattanooga*
Panelist: **Joy VanEck Peluchette**, *Lindenwood U.*
Panelist: **Erin Rae Fluegge**, *Southeast Missouri State U.*
Panelist: **Tiffany J. McDowell**, *Ernst and Young LLP*

In recent years, there has been a growing focus on promoting fun at work. The modern workplace fun movement traces its origins to the ideas of Peters and Waterman (1982) and Deal and Kennedy (1982), who advocated for organizational cultures promoting play, humor, and fun. Since the beginning of the 21st century, a growing body of research has focused on fun at work. On the whole, quantitative research has focused on validating the impact of fun. After nearly 35 studies, this research has demonstrated that fun yields favorable benefits for individuals and organizations. Despite promising findings, several questions remain to be addressed about fun at work in the management literature. The objective of this panel symposium is to convene a panel of experts for an interactive dialogue to address the current state of the literature on fun in the workplace and discuss the aforementioned avenues for future inquiry.

Presenter: **Andrew Speer**, *Indiana U. - Kelley School of Business*
Participant: **James Perrotta**, *Wayne State U.*

A recent slew of scholarship in organizational psychology and management journals on the use of artificial intelligence (AI) in human resource management (HRM) is evidence of its growing importance in theory and practice (e.g., Campion & Campion, 2023; Campion et al., 2023; Fan et al., 2023; Hernandez et al., 2023; Hickman et al., 2022; Koenig et al., 2023; Landers et al., 2023; Speer et al., 2023; Zhang et al., 2023). Advancements such as large language models (LLMs; FALCON, GPT, LLaMa, Bard, Claude, etc.) have made the use of AI more accessible to non-data scientists and enabled widespread exploration of how to leverage these tools at work. While this is an exciting development, as researchers in the selection space, it is our responsibility to be able to understand and explain how we arrive at employment-related decisions powered by AI tools. As such, in the proposed symposium, we assess a variety of uses of natural language processing (NLP) applications. We present research on the more rudimentary methods of word dictionaries that are cost-effective, easy to understand, and relatively easy to develop; and we also present research on LLMs and how we can use these to improve resource intensive HRM processes.

Progress toward workplace diversity and inclusion has been slow and there is a pressing need to identify innovative organizational practices that can support attraction and engagement of diverse employees. In this symposium, we investigate how exceptional organizations might 'think outside the box' to find innovative ways to support employee diversity. We focus on organizations in emerging sectors like space startups, space simulation missions. With less pressure to conform to industry norms, these organizations have the latitude to push boundaries and incubate creative ways to attract and engage a diverse workforce. We also highlight organizations in more mature sectors that recruit atypical employees and adopt innovative benefits. By focusing on the exceptions who break the usual rules, our symposium offers inspiring examples of organizations finding innovative ways to address diversity and inclusion at work. But our symposium also delivers cautionary lessons, by highlighting some unanticipated consequences of organizational diversity and inclusion practices. Two presentations (Maslikowska et al. and Perera et al.) examine diversity and inclusion practices in the emerging space sector. Two presentations investigate how high-tech organizations are attracting and engaging women (Srinivasan et al.) and racial minority employees (Fugere & Lempialä) in a sector traditionally dominated by White men. The final two presentations (Bertola et al. and Gruda et al.) examine the complex consequences of diversity and inclusion activities across sectors (e.g., fertility treatment services, biotech, retail, healthcare, IT, finance, business services).

Entrepreneurship in Management Education

Session Moderator: **Michele Pinelli**, *U. Ca' Foscari of Venice - Dept. of Management*

MED: **Learning to Navigate Paradoxes Through Accelerators' Entrepreneurial Education**      

Author: **Michele Pinelli**, *U. Ca' Foscari of Venice - Dept. of Management*

Author: **Luca Pistilli**, *U. College Dublin*

Author: **Alessio Cozzolino**, *U. College Dublin*

Accelerated ventures consistently exhibit superior growth metrics by securing more capital, expanding their workforce, and attaining higher valuations. Despite that, there is a limited understanding about how the education and learning programs of accelerators contribute to venture success, and in particular whether they can facilitate startups in navigating inherent paradoxes. In this study, we present new theoretical insights derived from an inductive case study of Y Combinator (YC), the pioneer and largest modern accelerator. Leveraging a comprehensive analysis of archival materials, we identify that entrepreneurial education programs provided by accelerators teach founders to practically navigate conflicting priorities concurrently, an aspect that we termed 'paradoxical execution.' Based on our findings, the educational program of an accelerator can reveal specific paradoxes inherent in new venture development and nurture a paradoxical mindset within startups. Our study expands the application of paradox theory beyond large firms to encompass early-stage ventures. This research also contributes to a nuanced understanding of how education can be used to foster a cognitive orientation towards embracing paradoxes, specifically among the founders of a new venture.

MED: **Developing Conceptual Foundations for Contextualized Entrepreneurship Education**

Author: **Sam Horner**, *U. of Liverpool*

Pedagogical research concerned with EE has grown dramatically in recent years, yet the field of EE is currently at a crossroads. The conceptual foundations of EE remain underdeveloped, precipitating a condition in which the contours of EE, in terms of its aims, pedagogies, and outcomes are contingent on the assumptions about the nature of entrepreneurship that are held by educators. This is problematic for two reasons, first, the conceptual ambiguity functions to undermine the legitimacy of EE as a field of educational practice and a domain of academic research, second it has led to a skewed emphasis on some approaches (e.g silicon-valley style venture creation programmes) over others. This is particularly concerning because recent developments in the field of entrepreneurship have problematized the acontextual nature of this dominant model of entrepreneurship. To address the conceptual ambiguity that characterizes EE, and the associated problems of the silicon-valley model of EE, this paper develops a novel epistemological basis for entrepreneurship education. We draw on Gregory Bateson's theory of deuterio-learning, which places context at the heart of learning, to develop an explanation of why dominant models of EE have thus far failed to address the pressing issues of our time, including income inequality and ecological breakdown. We also build on the underlying epistemological premises of deuterio-learning to develop a model of 'ecological entrepreneurship education' that aims at stimulating deep learning in students through the means of provocation and self-awareness. In so doing, we contribute to the EE literature by advancing a novel conceptualization of learning and education. We also contribute to the broader entrepreneurship literature by developing a theory of context that foregrounds the mutual-causal coordination that characterizes entrepreneurs' interactions with their environments.

MED: **Joy is Strength: Understanding Curiosity, Entrepreneurial Self-Efficacy, and Entrepreneurship**   

Author: **Yu-Yu Chang**, *National Cheng Kung U., Taiwan*

Author: **Kamonluck Sathornsam**, *National Cheng Kung U., Taiwan*

Author: **Yeshwant Raj. S.**, *National Cheng Kung U., Taiwan*

Author: **Huei-Ying Chen**, *National Cheng Kung U., Taiwan*

Drawing upon the social cognitive career theory, we aim to disentangle the personality-belief nexus to explain individuals' engagement in entrepreneurial education and the formation of their entrepreneurship. This study scrutinizes how entrepreneurial education shapes individuals' intrinsic/extrinsic outcome expectations and thus moderates joyous exploration's indirect effect on entrepreneurship through the mediating role of entrepreneurial self-efficacy. To test our hypotheses, we collected longitudinal data with an eighteen-week interval (n=198), including undergraduate and postgraduate students from various academic backgrounds taking a practice-based entrepreneurship training program. This paper sheds new light on the role of curiosity and outcome expectations in entrepreneurship education.

MED: **Templatization Without Homogenization: Entrepreneurship Frameworks in Undergraduate Classrooms**     

Author: **Douglas Hannah**, *Boston U.*

Author: **Hilary Mahar**, *Boston U. Questrom School of Business*

Author: **Siobhan O'Mahony**, *Boston U.*

Theories of management fashion predict that mass diffusion of a single framework can foster isomorphism or settlement on a common approach. Thus, frameworks codified and distilled into templates should produce cohesive replication over time. Yet, little work has examined how management fashions, and in particular, fashions embedded in templates, shape what scholars teach. We address this gap by focusing on the growing field of undergraduate entrepreneurship, where common templates are increasingly available and influential. We ask: What is taught in undergraduate entrepreneurship classrooms? With a survey of 86 syllabi at 84 US colleges and universities, we observe templatization without homogenization: a) widespread adoption of common templates, but b) little evidence of the standardization that might be expected. With interviews of 23 educators, we unpack this juxtaposition. Our analysis suggests this pattern arises from educators' individual efforts to grapple with field level tensions concerning intended learning outcomes, topic scope, and effective pedagogical strategy. Overall, our research contributes an underappreciated lens as to how educators leverage templates and frameworks to manage an expanding mandate for entrepreneurship while stubbornly resisting standardization.

Innovating Pedagogy for Responsible Leadership – Learning With the PRME Impactful Five (i5) Project

Participant: **Dirk C. Moosmayer**, *Kedge Business School*
Participant: **Meredith Conlin Storey**, *PRME Secretariat / United Nations Global Compact Office*
Participant: **Cheyenne Maddox**, -
Participant: **Samantha Thompson**, *PRME Secretariat / United Nations Global Compact Office*
Participant: **Christian Van Buskirk**, -
Participant: **Aurora Diaz Soloaga**, *Almaty Management U.*
Participant: **Marina Anna Schmitz**, *IEDC-Bled School of Management*
Participant: **Benito Teehankee**, *De La Salle U., Manila, Philippines*
Participant: **Zein Tarek Ibrahim**, *PRME Secretariat / United Nations Global Compact Office*

The Impactful Five (i5) (<https://linktr.ee/i5project>) is the largest project under the roof of the United Nations Principles of Responsible Management Education (PRME). It builds on research by the LEGO Foundation that finds learning most effective when applying the five principles of personal meaningfulness, active engagement, multiple iterations, social engagement and joyfulness. Sharing and applications of the i5 pedagogy framework started in summer last year. To further broaden and strengthen the i5 innovative pedagogy community of practice, we share learning experiences from this past year of application and discuss avenues for innovating the future for larger impact. In this workshop, you will be first learn about the i5 project, some institutional roll-out activities, and how i5 has been applied in the classroom. You will then engage in roundtables that explore different factettes and opportunities that evolved in this past year around the i5 pedagogy: -a- The new PRME principles and their relevance to i5, -b- Global partnering and exchange opportunities evolving around i5, -c- Effective i5 narratives, -d- i5 pedagogy's role in faculty training and induction, -e- i5 as a means of incentivization and recognition, -f- i5 and research opportunities. You will come out of this PDW with a clear understanding of the opportunities to benefit from and get involved with the innovative i5 pedagogy.

Developing Historical Foundations of Management Thought

Session Moderator: **Stephen Cummings**, *Victoria U. of Wellington*

This session develops the historical underpinnings of management thought, examining pivotal moments and key contributors that have shaped the discipline.

MH: **A Scientometric History of the Journal of Management History (1995-2022)**

Author: **Jeffrey Muldoon**, *Emporia State U.*
Author: **Luis Antonio Orozco**, *U. Externado de Colombia*
Author: **Erik Taylor**, *East Carolina U.*

The Journal of Management History (JMH) is the leading source for management and business history research and has played a central role in facilitating the discussions and investigations that advance management history thought and research. This article investigates the socio-cognitive nature of the journal's "invisible college"—the group of scholars developing knowledge and methods pertaining to a specific field through communicating research results and scientific advancements in the journal. Specifically, this work analyzed patterns of co-citation, co-word, co-authorship, and sources that cited papers published in JMH between 2006 and 2022 using VOSviewer software to produce an interpretative description of the linkages and associations between different intellectual roots, topic trends, and schools of thought represented by research in JMH. Findings reveal that the journal is a big tent, with several types of schools of thought and topics represented, including traditional, critical, post, and modern perspectives in management history scholarship. In addition, the range of topics covered was extensive in the contribution to administrative management and organizational theory. The invisible college seems to function as a fragmented adhocracy moving toward a polycentric oligarchy. Additionally, findings reveal that the structure of the invisible college around JMH shares key similarities with the Management and Organizational Sciences invisible college and provide useful information for authors and editors to guide the research agendas to strengthen or introduce research topics.

MH: **Not a Handful of "Nothin"—The Contribution of the Human Relations to Management Thought**

Author: **Jeffrey Muldoon**, *Emporia State U.*

The human relations movement has been one of the most influential and controversial programs in management thought. Indeed, there is considerable disagreement over the exact nature of the contribution. Some scholars have pointed out that human relations scholars noted the importance of social factors in motivation. Yet, a wide range of scholars have challenged this finding—noting correctly that social factors had been discovered prior to the human relations movement and that other studies (such as the Rowntree studies) stressed financial, rather than social factors. However, our contention is that what made human relations so notable was that the rejection of homo economicus, becoming the true contribution of human relations. This made it possible to study human behavior as financial incentives that are bounded by social factors—which allowed for a richer and deeper understanding of organizational behavior.

MH: **Undermining Efficiency: A Conceptual History of How Management's 'Axiom Number One' Limits Innovation**

Author: **Stephen Cummings**, *Victoria U. of Wellington*
Author: **Christina Lubinski**, *Copenhagen Business School*

Management studies inertia and lack of substantive innovation is claimed to stem from a combination of individual decisions and institutional pressures. Yet the role of the field's foundational concepts in explaining its stagnation has yet to be explored. This paper engages in a "conceptual history" of the concept of efficiency, from its pre-modern form to its transformation and adoption as management studies' foundational and fundamental good. This history enables us to see how efficiency's transformation from a particular political device to an unquestionable fundamental axiom has obscured alternative paths of development, and exacerbated the stagnation currently observed within the field at a time of existential crises.

MH: **Retracing Expectancy Theory: An Evolution of Management Studies' Second Best Known Motivation Theory**

Author: **Nicholous Mark Deal**, *Mount Saint Vincent U.*
Author: **Robert Lloyd**, *Fort Hays State U.*

Victor Vroom has long been credited as originating expectancy theory, the idea that people are motivated to behave in certain ways so long as their efforts lead to successful performance that is then exchanged for valuable or attractive rewards. Expectancy theory has become widely accepted in practice as an applied framework for managers to understand how employees engage in their work while being motivated to perform their best. It is now an orthodoxy in management studies, featuring prominently in scholarship over the past half century and in management textbooks still to this day. However, a close excavation of the origins of expectancy theory and its development over time reveals a much different version than the one Vroom is said to have founded. We explore the antecedents of Vroom's ideas and leverage our analysis to illustrate a reassessment of expectancy theory in management studies, especially how it has evolved in and around Vroom's influence for several decades. We invite a rethink of who and what has been included in the annals of management theory and encourage those writing textbooks to employ a more thoughtful, inclusive approach in storying histories of management thought.

Mechanisms for Navigating the Future of Manufacturing Jobs

Organizer: **HUI ZHANG**, *U. of Sheffield*
Discussant: **Colin Lindsay**, *Strathclyde Business School, U. of Strathclyde, UK*
Presenter: **Ahmet Onur Agca**, *Loughborough Business School*
Presenter: **CAROLINA MARIN-CADAVID**, *U. of Strathclyde*
Presenter: **HUI ZHANG**, *U. of Sheffield*
Presenter: **Mariachiara Barzotto**, *U. of Bath*
Presenter: **Philip Tomlinson**, *U. of Bath*

This symposium serves as a showcase for existing research, with a specific focus on mechanisms for navigating the social aspects of future manufacturing. Specifically, these mechanisms can help organizations and industries to coordinate and leverage diverse resources, and develop initiatives aimed at realigning the demand and supply of skills and roles for the future. The first two papers explore diverse potential visions of future work in manufacturing, investigating how digital manufacturing may reshape the job dynamics in the sector. The third paper systematically reviews the use of socio-technical scenario tools as a mechanism to engage stakeholders in envisioning future scenarios for work processes and roles, along with developing action plans for transformative change. In the fourth paper, the exploration shifts to coworking spaces as a mechanism for promoting cross-skills fertilization. Recognizing the imperative for diverse skill sets in upcoming manufacturing roles, this paper investigates how coworking spaces can facilitate the exchange of knowledge and collaboration within and across organizations in the manufacturing sector.

Envisioning a Socially Sustainable Future in Digitally-Enabled Manufacturing

Exploring Ed Schein's Legacy and Enduring Influence to Inform the Future

Organizer: **David Coghlan**, *U. of Dublin, Trinity College*
Participant: **Jean M. Bartunek**, *Boston College*
Participant: **Jill Waymire Paine**, *IE Business School*
Participant: **A.B. Rami Shani**, *California Polytechnic State U.*
Participant: **Baruch Shimoni**, *Bar-Ilan U.*
Participant: **Ilene Wasserman**, *ICW Consulting Group/Wharton Sr Leadership Fellow*

The contribution of Edgar H. Schein (1928-2023), to the field of management, organization studies, and applied behavioral science is both extensive and deep. For over seventy years he creatively and systematically shaped theory and practice in areas such as: organization development and change, career dynamics, the cultural dynamics of complex systems, leadership, process consultation, and the clinical inquiry/research paradigm. Following his passing on 23rd January 2023, the proposed symposium was intended to examine and explore the way Ed's Schein's seminal work informs the future of the field. We proffer that "Exploring Ed Schein's legacy and enduring future" is congruent with the 2024 meeting's theme of Innovating for the Future.

Expertise and Careers in Flux

Session Moderator: **Raphael H. Heiberger**, -

OMT: **Creative Workers on the Move: How Cultural Fit to a New Organization Enhances Individual Performance**

Author: **Raphael H. Heiberger**, -
Author: **Lukas Erhard**, *U. of Stuttgart*
Author: **Steffen Triebel**, *U. of Exeter Business School*
Author: **Alexander Brem**, *U. of Stuttgart*

How does the arrival at a new work environment affect the performance of creative workers? Even though it is a shared experience in many careers, we know surprisingly little about the impact of transferring to an unfamiliar workplace. To test the direct and indirect effects of how creative workers fit new colleagues at scale, we need to have (i) information on career trajectories and (ii) assess the cultural fit (CF) to a work environment computationally. We address these challenges by collecting a unique dataset on early career researchers (ECR) and their transition to another university after graduating in physics and psychology between 2006 and 2015 in the US. Then, we measure the CF by utilizing unsupervised machine learning and comparing each ECR's research to the work of their new colleagues. In a close approximation of both fields (> 2.5 million documents), our results not only show a strong impact of CF on creative performance but also that fitting-in moderates the trade-off between specialization and generalization strategies. Moreover, we reveal how high-status organizations impose social pressures that further augment the effects of CF.

OMT: **Of Professions and Technologies: The Case of Algorithmic Cooptation in Dentistry**

Author: **Anne-Sophie Mayer**, *Vrije U. Amsterdam*
Author: **Anastasia Sergeeva**, *Vrije U. Amsterdam*

Whereas traditionally professionals used their expertise to claim control over an area of work, emerging technologies are associated with the promise of outperforming professional expertise and thus, are increasingly used to challenge professionals' market turf. Yet, we know little about how the process of jurisdictional contest unfolds when emerging technologies are used to disrupt an established profession. Building on qualitative field data—including semi-structured interviews and extensive archival material—we show how over time, despite intensive efforts, the elite profession of orthodontists lost their established exclusive control over their market turf of teeth-straightening to teleorthodontics companies and dentists. Our process analysis shows how the jurisdictional contest initially centered around the outperformance claims of algorithmic technologies, but then eventually degraded into algorithms entering a “parasitic” relationship, in which technological capabilities derived a source of “living” and growth in a co-opted existing professional sub-group of dentistry. Our study makes contributions to the literature on professions and algorithmic technologies.

OMT: **Identities in Flex: How Management Consultants Construct Their Identity Roles**

Author: **Sophie Marie Cappelen**, *Copenhagen Business School*
Author: **Eva Boxenbaum**, *Copenhagen Business School*

This paper studies how management consultants construct themselves in and as part of processes of translation, and how their professional identity constructions shape the translation output. Informed by a Scandinavian institutionalist approach, we conducted a qualitative case study of Danish management consultants. We find that management consultants mobilize four strategies to mediate between two opposing, yet essential, consultant roles when engaging in processes of translation. Consultants mobilize these strategies at different junctions to mediate between these two roles. By flexibly playing both roles, consultants alternate between ‘flexing’ deep academic knowledge (the expert role) and offering simplified, actionable advice (the implementer role). Our findings therefore show how the mediation between different roles allows consultants to simplify academic knowledge while retaining their professional integrity as knowledge experts. We add to prior research on the role of management consultants in the translation of management theory by showing that translation serves as a form of role mediation. We propose that translation actors use translation strategies dynamically to communicate and consolidate their own professional identity. Finally, we point to the need for articulating how translation actors, processes, and outcomes interact with one another and collectively affect how management theory is implemented and perceived in practice.

OMT: **Client Conflict as Barriers to Interfirm Mobilities in Professional Services Industry**

Author: **Tae-Seok Kim**, *Waseda U.*

This study examines whether and to what extent conflict among clients can serve as barriers to the labor market mobilities among employees in the professional services industry. I propose that firms strategically refrain from hiring professionals from source firms in the presence of client conflict due to an increase in the anticipated costs of post-hiring integration and concerns about violating industry norms surrounding client loyalty. I further delineate that the reluctance to hire during client conflict becomes more pronounced if the hiring and source firms share a higher degree of resource overlap (i.e., common clients and knowledge similarity) and occupy higher status positions. I test and confirm my ideas through a joint analysis of 1,253 mobility events of federal lobbyists across 683 lobbying firms and the events of policy conflicts among their clients in the United States between 2007 and 2018.

Risk It All: Integrating Diverse Traditions of Risk and Shaping Futures

Panelist: **Steve Maguire**, *U. of Sydney Business School*

Panelist: **Sim B. Sitkin**, *Duke U.*

Panelist: **Michael Useem**, *U. of Pennsylvania*

Panelist: **Klaus Weber**, *Northwestern U.*

Organizer: **Ming Wang**, *Kellogg School of Management, Northwestern U.*

“Risk” and its “management” are rapidly gaining importance in managerial and organizational contexts. This phenomenon presents an opportunity to advance our research and theories. However, the potential of management scholars is often limited by the complexities of analyzing risk, which arise from diverse theoretical approaches, heterogeneous empirical contexts, and differences in scholarly values. This symposium aims to facilitate an exchange, comparison, and integration of ideas on risk and related research by bringing together four established panelists (Steven Maguire, Sim Sitkin, Michael Useem, & Klaus Weber) for a constructive, interactive discussion. The theme aligns well with the AoM theme, and we anticipate attracting a large audience, particularly from the OMT, SAP, & MOC divisions.

Corporate Strategies and Policy Responses in Climate Change Mitigation

Session Moderator: **Yifan Wei**, *Beedie School of Business Simon Fraser U.*

ONE: **Climate Policy, Corporate Climate Action, and Firms' Policy Positions: A Matter of Time Horizons**

Author: **Julia Loder**, *U. of St. Gallen (HSG)*

Author: **Frederik Maibaum**, *Leibniz U. Hannover*

While firms operate in a defined regulatory environment, they can also influence policies. This relationship is especially relevant in the context of climate policy. Therefore, we set out to investigate how institutional regimes influence firms' corporate climate action (CCA) and how firms position themselves regarding major climate policies. Based on a multiple case study of German automotive incumbents, we develop a conceptual model to outline the interrelationships between climate policies, CCA, and firms' positions regarding climate policies leading to four main findings. First, past CCA does not allow to predict future CCA. Second, firms tend to set CCA targets late and with long target time horizons when they perceive great uncertainty about the future. Third, the more established an institution, the more likely CCA adheres to the institutional regime. Finally, firms' political response to climate policy is determined by characteristics of the policy and its compatibility with the focal firm's CCA. Our study contributes to research on decarbonization of firms by providing a more integrated understanding of firms' climate action and its links to climate policy. Furthermore, we emphasize the role of different time horizons for the interplay between CCA and corporate political activity.

ONE: **Mobilizing Firms for Climate Action: Paris Climate Agreement and Corporate Green Bond Issuance**

Author: **Yifan Wei**, *Beedie School of Business Simon Fraser U.*

Author: **Kenneth Guang-Lih Huang**, *National U. of Singapore*

Author: **Ya Gao**, *Asper School of business, U. of Manitoba*

This study examines the effect of the Paris Climate Agreement, as a plausibly exogenous shock, on the issuance of corporate green bonds (CGBs), a new financial instrument to address climate change in line with the goals of the Agreement. We argue that firms in industries that contribute most to climate change are potentially more affected by the Agreement because they perceive themselves as the target of the upcoming national environmental regulations derived from the Agreement. So firms in the affected industries are more likely to issue CGBs after the Agreement than firms in the minimally affected (or unaffected) industries. This differential effect becomes stronger among firms in countries with more media attention on environmental issues, but weaker in countries with more stringent legal enforcement. Using a proprietary cross-national dataset of CGBs and difference-in-differences estimation, we find strong support for our hypotheses. This study advances our understanding of the intersection between firms' green financing as a form of self-regulation and the broader institutional context, and responds to the recent call for more research on integrating multiple pressures that jointly shape firms' environmental behaviors.

ONE: **Carbon Pricing and Multinationals' Climate Change Mitigation Strategy**

Author: **Xia Li**, *London Business School*

Reducing greenhouse gas (GHG) emissions has become a key societal expectation, and governments have incentivized this by introducing carbon pricing, i.e., carbon taxes and emission trading schemes, but their impact on multinationals' actions is unclear. Building on institutional economics, we propose that the implementation of carbon pricing policies in the home country of multinationals results in a reduction of corporate-level GHG emissions because of the constraining effect of the regulations. We add depth to this idea by proposing spillover effect of these regulatory constraints by arguing that the same policies also reduce GHG emissions in companies that are not targeted by the policies and in the multinationals' overseas operations that are outside the reach of the policies because of the creation of awareness over the regulatory constraints in other firms and locations. We test these ideas on public companies headquartered in 112 countries and find that corporate GHG emission intensities decrease after their headquarter countries adopt carbon pricing, this effect is only significant on targeted sectors, and it results in carbon leakage on GHG emissions of these multinationals' foreign operations.

ONE: **Business Responsibility in Low-Carbon Transition: A Conceptual Model to Address Structural Injustice**

Author: **Christian Linder**, *SKEMA Business School - U. Côte d'Azur*

Author: **Samantha Goethals**, *SKEMA Business School - U. Côte d'Azur*

This paper explores the intersection of responsibility, structural injustices, and business behavior in the context of low-carbon transition and climate change mitigation. Focused on the determinants of business strategic responses to structural injustices, our conceptual model emphasizes the intricate interplay between stakeholder power and evolving normative frames of efficiency and legitimacy in the sustainability discourse. We highlight that businesses' perception of stakeholder power significantly influences their response to responsibility in the absence of direct causality for harm. The model elucidates the mechanisms shaping corporate decision-making, revealing variations in business responses based on the anticipated influence of different stakeholders. Importantly, our research addresses the empowerment of traditionally marginalized stakeholders in the changing landscape of sustainability, particularly in the context of a just transition. By bridging the gap between theoretical constructs and practical business conduct, our conceptual model provides a critical link for advancing responsible climate mitigation innovations and encouraging tangible changes in business behavior towards a more sustainable future.

Sustainable Business Practices and Ethical Challenges in Corporate Strategy

Session Moderator: **Bob Bastian**, *U. of Trento*

ONE: The Downside of Growth: Examining the Relationship Between Firm Growth and Social Responsibility

Author: **Mark R. DesJardine**, *Tuck School of Business at Dartmouth*

Author: **Jimi Kim**, *U. of New South Wales*

Author: **Pratima Bansal**, *Ivey Business School*

In this paper, we explore the relationship between firm growth and corporate social responsibility (CSR). Researchers often argue that firm growth offers greater opportunities and resources for firms to invest in CSR. Yet, we argue the opposite: firm growth consumes scarce financial and attentional resources, which are also needed for CSR. Firm growth, therefore, is negatively related to CSR. We probe the mechanisms for this relationship by exploring how the level of financial and attentional resources moderate the relationship between firm growth and CSR. We test this relationship by analyzing data from 4,305 firms over 2002 to 2020 across 46 countries, providing support for these ideas. This study offers important implications to research in business strategy, managerial attention, and CSR.

ONE: Sustainability for Business Models: A Problematization Review

Author: **Bob Bastian**, *U. of Trento*

Author: **Andrea Caputo**, *U. of Trento & U. of Lincoln*

Author: **Maria Della Lucia**, *U. of Trento*

In this literature review, we show that a decade of research on sustainability as business models has led to the production of no less than 26 literature reviews on the topic, and how these reviews, through a dominant gap filling approach, propose unclear conceptual boundaries with sustainable assumptions that are largely unchallenged. We then follow the recently proposed problematization review by Alvesson and Sandberg as an alternative methodology to systemize the literature through a deliberate, systematic and ambitious effort and, confront the existing business model literature on sustainability with alternative points of interpretation. We pinpoint a deliberate narrow selection of sustainable business model articles within the management literature to map out problematic issues about their underlying theoretical assumptions. Then, we locate articles within the wider realms of the business model and sustainability literature to problematize these identified dominant assumptions. Our findings demonstrate taken for granted suppositions and categorize these between in-house assumptions, paradigmatic assumptions, and ideology assumptions. Finally, we further critique these findings and set out a future research agenda with the aim to guide management scholarly conversations on rethinking sustainable business model research.

ONE: Overcoming Socialized Moral Hazard: Toward a Theory of Moralized Value Creation

Author: **Wilson Odhiambo Odek**, *PhD Student in Business Studies and management, U. of Southampton*

Author: **Rashedur Chowdhury**, *U. of Essex*

The dark side of moral hazard shows itself when agents hamper the interests of principal. This is a well-established phenomenon in management literature. However, the element of morality is often ignored in moral hazard problems. Such omission of morality may explain the inadequacy of the assumptions underpinning agency theory. The assumptions of agency theory justify, but do not explain, why agents act go rogue by acting against the interests of principals, society and the natural environment. Remedies attempting to correct actions of rogue agents have subsequently lacked a morality element in their recommendations. We conceptualize the absence of morality in moral hazard as socialized moral hazard and show its significance in hampering the pursuit for organizational consciousness for morality and sustainability. Furthermore, we propose a model of moralized value creation that operationalizes morality through incorporating a morality perspective in the day to day running of organizations. Moralized value creation results in tri-dimensional outcomes along social, environmental, and organizational lines that offset socialized moral hazard consequences.

ONE: MME Crowdsourcing Sustainability Innovations

Author: **Haitao Yu**, *U. of Macau*

Author: **Simone Carmine**, *IESEG School of Management*

Sustainability challenges such as food security are global in scale yet experienced and responded to locally. To address sustainability challenges requires businesses to develop locally relevant and globally scalable innovations. MNEs are uniquely positioned to innovate for sustainability. MNEs recognize the contribution of locally relevant innovations, but they often struggle to recognize where the most promising solutions lie. One way to enable MNEs to recognize locally relevant innovations is crowdsourcing. However, it is difficult for MNEs to crowdsource sustainability innovations due to limited attentional resources and the tradeoff between local relevance and global scalability. To investigate this topic, we conducted a qualitative study of Thought for Food (TFF) – a crowdsourcing innovation platform for sustainable food and agriculture. We found that, through crowdsourcing, MNEs find a way to generate multiple new and breakthrough ideas. However, they struggle to successfully integrate these ideas into their innovation path. This research contributes to the literature by 1) explaining the contradictory role of crowdsourcing platforms for MNEs to identify locally relevant sustainability innovations and 2) articulating the cross-scale linkages between the local and the global for sustainable development.

Author: **Angela Greco**, *TU Delft*

The literature on business model innovation for sustainability is contradictory about the mechanisms unfolding in the context of organizational hybridity. Existing hybrid organizations are put under pressure to transform their business model to meet new social and environmental goals while ensuring financial sustainability. However, organizations with a strong social mission might be reluctant to change, having structured their business model to meet a particular social goal. Through an ethnographic study at a Dutch social housing association introducing an energy-neutral house as a new product, we investigate the key stages and enabling mechanisms for a sustainable business model change in which the social and environmental logics are conflicting. We analyze the underlying causal mechanisms in the process of business model innovation for sustainability. We show that the mechanisms responsible for organizational inertia in its conventional (negative) connotation, may in fact enable the intended positive and enduring social and environmental goals over time.

Digital Work

Session Moderator: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*

SAP: **Digital Puppet-Mastery: Power Practices of Strategists in Digital Strategy Workshops** 

Author: **Lydia Schuster**, *Hamburg U. of Technology*
Author: **Stephanie Schrage**, *U. of Kiel, Germany*
Author: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*
Author: **Thomas Wrona**, *Hamburg U. of Technology*

Digital communication technologies (DCT) have important implications for power relations in strategy work. Despite the pervasiveness of these technologies, the power effects of strategic practices performed in digital settings remain underexplored. Drawing on data from a nine-month ethnographic single-case study of digital strategy meetings and workshops, including interviews with strategists during and after the observation period, we investigate how strategists used DCT. Our findings reveal how strategists enacted the DCT for three purposes: (i) to construct the reality of the digital workshop setting, (ii) to exploit and (iii) to bypass this setting, ultimately resulting in staging effects of rationalization of workshop interactions and the reinforcement of existing power structures. Our process model of strategy and power in digital workshops contributes an understanding of power effects of DCT in strategy work to the strategy-as-practice (SAP) literature.

SAP: **Mandatory Work from Home During COVID-19 Pandemic: A Spatial Perspective**

Author: **Tarun Kumar Vashisth**, *Indian Institute of Management Bodh Gaya*
Author: **Rajesh Chandwani**, *Indian Institute of Management, Ahmedabad*
Author: **Sushil Nifadkar**, *U. of Nebraska, Lincoln*

Amidst COVID-19 pandemic, organizations worldwide had mandated for their employees to work from home (WFH). The COVID-19 induced mandatory work from home (MWFH) however, was different from our extant understanding of WFH, primarily because in the MWFH scenario, homespace was mandatorily and continuously collocated with workspace. Drawing from qualitative data on information technology employees in India, we studied the MWFH phenomenon anchored on Lefebvre's Theory of Production of Space (Lefebvre, 1991) and developed a spatial model to advance a processual understanding of MWFH. Our study charted employees' experiences of how employees, family members, and organizations dialectically engaged in facilitating MWFH, which resulted in the continual emergence of the homespace. Specifically, moving away from the traditional notion of colonization of homespace by organizations and the intrusive role of family members during WFH, our study highlighted how organizational actors and family members helped employees to construe and manage significant superimposition of workspace over homespace. Further, as we situated our study in a non-Western—specifically, Indian—context, our study highlighted how culture-specific factors such as family norms played an important role in shaping employees' MWFH experiences. Keywords: Mandatory work from home; spatialization; Lefebvre's Theory of the Production of Space; COVID-19 pandemic

SAP: **Organization Studies in the Metaverse: Facing Ontological Reversal**  

Author: **Anja Danner-Schröder**, *U. of Kaiserslautern, Germany*
Author: **Thomas Grisold**, *HSG U. of St. Gallen*
Author: **Christian Alexander Mahringer**, *U. of Stuttgart*

While it is taken for granted that organizing happens primarily in physical space, we argue that the rise of the Metaverse leads to an ontological reversal, in which digital spaces become the driving force for organizing. Building on this ontological reversal, we discuss how key assumptions in organization studies are challenged in the Metaverse. First, we argue that the absence of physical bodies in the Metaverse loosens the entanglement of mind and body in organizing. Second, we suggest that the impact of physical appearance on actors' identities is weakened because actors can flexibly select their avatars. Third, actors may not be able to differentiate between humans and bots in the Metaverse, which is possible in the physical world. Fourth, the Metaverse levers out the laws of physics, enabling new forms of generativity. Fifth, we argue that the Metaverse relaxes the pervasiveness of organizational structures for human agency. Taken together, these arguments have substantial implications for how we think about and how we study organizing in the Metaverse.

SAP: **Interactions Between Play and Work in the Virtual World: Qualitative Evidence from Second Life** 

Author: **Feichin Ted Tschang**, *Singapore Management U.*
Author: **Hye Young Kang**, *Ewha Womans U.*

As workplaces seek to improve work outcomes like creativity through play-like mechanisms, interactions between play and work become important to study. To study how work-play dynamics may work - an underexplored topic in extant research - we conduct a qualitative study of a space agency that entered a play-like virtual world. The agency engaged volunteers in a community of play, to explore the concept of participatory space exploration. We find that as the setting evolved, various forms of play emerged, including, creative forms of play initially synergistically-linked with the agency's work. The synergistic work-play actions was eventually subsumed to more mission-oriented objectives; the more creative aspects of volunteers' creative play shifted to volunteer-led locations; and the forms of work-play that remained in the central location were heavily dictated. We explore certain related concepts' influence on the work-play complex, including how different types of governance can shape these interactions between play and work.

Sensemaking, Framing, and Meaning-Making

Session Moderator: **Lisa Day**, *U. of Liverpool*

SAP: **Managerial Sensegiving in Times of Crisis: Facilitating Strategic Change Under High Distress**  

Author: **Stephan Ryf**, *U. of St.Gallen*

While prior research has provided rich insights into how strategic change unfolds through sensemaking and sensegiving, the existing literature has predominantly focused on contextual conditions characterized by relatively low levels of urgency and threat. My study contributes to addressing this gap by examining how the effort of leaders to effectively construct and disseminate meaning around strategic change is influenced by the context of an organizational crisis. Drawing on the drastic turnaround of multinational corporation ABB in the early 2000s, I find that the CEO effectively mobilized the company's strategic change program to shift institutionalized cognitive schemes through sense breaking, sense specification, sense enactment, and sense reinforcement. In a supportive process, the CEO constructed meaning around the uncertainty surrounding the crisis to ensure continued commitment, establish clear expectations, create cognitive capacity, and invoke the company's core identity. My analysis contributes to the body of work on managerial sensegiving by elucidating mechanisms and dynamics that allow for a particularly quick and abrupt shift in established interpretive schemes, all the while facilitating a continued, positive enactment of change.

 SAP: **Bridging Expectations: Bidirectional Framing for Navigating Legitimacy Tension** 

Author: **Anna Plotnikova**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Krsto Pandza**, *U. of Leeds*

Large organizations increasingly attempt to encourage employees to participate in their strategy making processes and availability of technology-mediated forms of collaboration creates more opportunities for realizing this objective. In this study we investigate how organizers of an internal online community navigate the legitimacy tensions emerging from the different evaluation criteria of the two stakeholder groups: senior managers and community members. From our analysis, we derive a theoretical framework centered on bridging mechanisms that secure support by community stakeholders. This framework posits that the divergent interests and expectations of the two stakeholder groups can be harmonized through a combination of bidirectional framing and hidden structuring mechanisms.

SAP: **Being Your Own Worst Enemy: Framing-Induced Idea Erosion in the Elaboration of Radical Innovation**   

Author: **Renate Kratochvil**, *BI Norwegian Business School*

This study investigates how strategic leaders who anticipate a technological, radical innovation in their industry shape the evolution of this idea through their use of frames to guide their decisions. My research design is an in-depth, longitudinal case study of a Norwegian construction company whose strategic leaders intended to realize the idea of a "fully digital construction process," harnessing the potential of big data. I develop a process model that reveals how strategic leaders' framing-induced idea erosion unfolds over time. I explain the activities understanding data-driven technologies, organizing idea elaboration processes, and building of technological knowledge, all contributing to their framing of lack of progress in their endeavor. As strategic leaders frame these activities as failures to act, elaborate on ideas, and foster collaboration, the idea erodes. This erosion leads to a pivot from aiming to implement to prepare for an anticipatory radical innovation. Drawing from existing literature, I elucidate that failure framing can be attributed to their limited experience in leveraging setbacks as learning opportunities and working iteratively during the idea journey. This research offers a process perspective on strategic leader social cognition during the trajectory of an idea about a radical innovation.

SAP: **The Dynamic Process of Constructing Digital Technology-Based Interpretation System**

Author: **YI LIU**, *Fudan U.*

Author: **Lingfang Li**, *Fudan School of Management, Fudan U.*

Author: **Shenghui Ma**, *Fudan U.*

We conducted a longitudinal qualitative study to investigate the process involved in constructing a digital technology-based interpretation system in a leading fresh grocery e-commerce company in China. Our findings indicate that the digital technology based-interpretation system formed via 4 period—local experiment, overall engagement, managerial intervention and compulsory implementation period. The findings show that, during the 4 periods, the constructing activity triggered different stakeholders to change their legitimacy judgment of digital technology. In return, stakeholders' legitimacy judgment adjusted the constructing activity such as increasing digital technology affordance, which reinforced some of the stakeholders to support for the digital technology. This mutual reinforcement between constructing activity and forming legitimacy judgment became a mechanism for the construction of the digital technology-based interpretation system. We discuss the theoretical implications of these findings for the process of constructing digital technology-based interpretation systems in organization

STR 2024 Distinguished Scholar Award in Honor of David J. Teece

Organizer: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*
Organizer: **Marie Louise Mors**, *Copenhagen Business School*

The STR Distinguished Scholar Award recognizes an individual who has developed a set of ideas that fundamentally advanced research and understanding in the field of strategic management. While these ideas may involve specific theoretical or empirical discoveries, priority is given to the discovery's importance to the field rather than the accumulation of disparate facts or findings. The intent is to recognize contributions that altered the development of the field. The 2024 STR Distinguished Scholar Award recognizes David J. Teece!

Dynamic Digital Transformation

Session Moderator: **Shusheng WANG**, *School of Business, Renmin U. of China*

TIM: Whom You Know Matters: Network Embeddedness, Industrial Environment and Digital Orientation  

Author: **Shusheng WANG**, *School of Business, Renmin U. of China*

Author: **Yan Yan**, *Renmin U. of China*

Author: **Baolin Wang**, *School of Business, Renmin U. of China*

Author: **Haitong Li**, *Economics and Management School, Wuhan U.*

Researchers in digital orientation (defined as a focal firm's commitment to implement digital technologies) have demonstrated that highly digital orientated firms are able to dynamically evolve competitive advantage and exhibit better performance in the digitalization era. However, it is important to understand the antecedents that enable firms to develop digital orientation. In this study, we explore how firms develop digital orientation from the network embeddedness perspective. We argue that while different types of network embeddedness facilitate firms' proactiveness and efficiency in adopting digital technologies, the extent to which embedded firms are actually supported depends on the environmental munificence of the industry they operate. By empirically examining the model using secondary data of 2,131 U.S. manufacturing firms from 2000 to 2020, our results suggest that positional and structural embeddedness positively support firms' digital orientation, but the impacts differ when firms operate in a highly munificent industry. Collectively, the findings provide insights to how network embeddedness and industry environment interactively support firms' strategic decisions to become digitally orientated.

TIM: Employees' Entrepreneurial Orientation and Digital Competence: Managers Technical Competence Effect

Author: **Kiththi Perera**, *Asian Institute of Technology*

Author: **Yuosre F. Badir**, *Asian Institute of Technology*

In today's rapidly evolving digital landscape, organizations are increasingly embracing digital transformation initiatives to remain competitive. Recognizing the crucial role of human resources in the transformation process, there has been a shift toward fostering an entrepreneurial mindset among employees. Accordingly, this article has two objectives. Firstly, to investigate the relationship between the three dimensions of individual-level entrepreneurial orientation (namely, proactiveness, risk-taking, and innovativeness) and the digital competence of employees. Secondly, to examine the moderating effect of middle managers' technical competence on these three relationships. The empirical study was conducted at Sri Lanka Telecom PLC, involving 87 middle managers and 353 subordinate employees. The findings reveal that proactiveness, risk-taking, and innovativeness each has a significant and positive impact on employees' digital competence. Notably, the middle manager's moderating effect is stronger at lower levels of technical competence in the relationship between innovativeness orientation and digital competence. In contrast, this moderating effect is stronger at higher levels of middle managers technical competence in the relationships involving proactiveness and risk-taking orientations. These findings have important implications for research and practice as they highlight the role of the individual employee entrepreneurial orientation and middle managers' technical competence in facilitating firms' digital transformation.

TIM: Implementing AI-driven Sales in B2B Environments: Challenges and Solutions 

Author: **Roland Z. Szabó**, *Széchenyi István U.*

Author: **Lilla Hortoványi**, *Senior researcher*

The consequence of COVID is that previously reluctant companies have begun to realize the value of big data, AI, and machine learning. Although B2B companies were initially hesitant due to their focus on customer relationships, they are reportedly embracing the technology and implementing AI-driven operations. This study explores innovative AI technologies within a global B2B enterprise. Through interviews with top and middle management, and analysis of meeting notes and hard data, the research uncovers psychological and social barriers, as well as two damaging cycles that impede the benefits of AI. The study highlights the importance of change management strategies to overcome challenges, foster technological and organizational learning by addressing siloed thinking and managing competing interests. It also extends technology management and organizational learning theories by relating them to each identified barrier and suggesting potential solutions.

TIM: A Dynamic Model of Digital Industrial Innovation - Process, Product and Business Model Innovation 

Author: **Lars G. Bengtsson**, *Lund U.*

Author: **Mirella Muhic**, *Umeå U.*

The seminal studies conducted by Utterback and Abernathy (1975), as well as Abernathy and Utterback (1978), stand as cornerstones in the examination of innovation processes within industrial firms, offering a foundational perspective in the realm of management research. The underlying assumptions of the industrial innovation model posit that new products are characterized by high change costs, exclusivity, rivalry, and a non-generative nature. Digital innovations, in contrast, present a challenge to these assumptions, as they tend to exhibit modularity, reprogrammability, non-rivalrous characteristics, and generativity. Despite the transformative nature of digital innovations, contemporary management research and textbooks appear to lack a comprehensive acknowledgment of their implications for our understanding of the innovation process within the industrial firm context. Specifically, there is a notable absence in recognizing the need to formulate a new dynamic model of the industrial innovation process in the era of digitalization. This study contributes significantly to the existing research in three primary ways. Firstly, it furnishes a holistic model delineating the stages of the digital industrial innovation process. Secondly, in contrast to the conventional industrial innovation sequence of "product innovation followed by process innovation," the digital industrial innovation process unfolds in a reversed manner, progressing from "digital process innovation followed by digital product innovation and then digital business model innovation." Thirdly, while industrial firms traditionally leverage scale effects and a system of products and complementary offerings to gain a competitive edge through innovation, the dynamic capability inherent in digital innovation emerges as a pivotal competitive advantage in the realm of products and business models grounded in digital technologies. Consequently, there is a pressing need to orchestrate and govern the digital industrial innovation process, transitioning from digital process innovation to digital product innovation and ultimately to digital business model innovation.

Modes and Degrees of Centralization: Implications for Adaptability and Performance

Session Moderator: **Marko Kohtamäki**, *U. of Vaasa*

TIM: **Managing the Emergence of AI-Enabled Product-Service Systems in Autonomous Solutions**

Author: **Marko Kohtamäki**, *U. of Vaasa*

Author: **Thomas Brekke**, *U. of Southeastern Norway*

Author: **Rimsha Naeem**, *U. of Vaasa*

Author: **David Sjödin**, *Luleå U. of Technology*

Author: **Vinit Parida**, *Luleå U. of Technology*

The study explores the management of the emergence of Artificial Intelligence (AI)-enabled Product-Service Systems (PSS) in facilitating a manufacturer's transition toward autonomous solutions. We use a case study involving a leading manufacturer actively developing autonomous and integrated solutions while incorporating AI into Product-Service Systems (PSS) from 2015 to 2022. The study contributes to the literature on digital servitization in two main ways. First, the study integrates AI into product-service systems and uses socio-technical viewpoints for analysis. It proposes a path model involving AI-enabled PSS, relevant technologies, and collaborations within the business ecosystem, all of which interact to foster innovation in PSS. Second, it identifies managerial practices for visioning, evangelizing, and routinizing AI-enabled PSS, providing guidance for managers planning to integrate AI into their product-service systems. The study also outlines a research agenda for future AI-enabled PSS, Digital Servitization (DS), and Product-Service Innovation (PSI), serving as a guide for managers and directing further research in this field.

TIM: **Decoding DAOs: Governance Dynamics and Their Performance Implications in Decentralized Organizations**

Author: **Lukas Beckenbauer**, *TUM School of Management, Technical U. of Munich*

Author: **Marvin Hanisch**, *U. of Groningen*

Decentralized Autonomous Organizations (DAOs) have introduced a notable shift in organizational governance. Characterized by decentralized control and transparency, they challenge traditional governance models based on centralized mechanisms of control and authority. This study investigates how changes in governance activity, coupled with governance interest and network activity, impact the overall performance of DAOs. To this end, we leverage a unique longitudinal sample comprising 36 DAOs, encompassing detailed data on governance activities, including governance proposals and votes, alongside financial performance metrics. Our analysis reveals a nuanced picture: While high rates of governance activity are associated with lower market capitalization, the relationship changes as a function of governance interest and network activity. Specifically, as governance interest, as reflected in proposal votes, increases, governance activity has a positive impact on DAO performance, suggesting that community engagement in DAO governance is necessary to improve performance. At the same time, as network activity increases, the relationship between governance activity and DAO performance becomes increasingly negative, suggesting possible inertia in overcoming governance challenges in highly active environments. This research contributes to the understanding of DAO governance by providing insights into the equilibrium dynamics that constitute effective decentralized governance, while highlighting areas for future research in the context of market volatility and trading activity.

TIM: **Who Takes the Lead? Changes in Organizational Actors' Roles and Importance in Cluster Emergence**

Author: **Kristina Vaarst Andersen**, *Technical U. of Denmark (DTU)*

Author: **Tage Koed Madsen**, *U. of Southern Denmark*

Author: **Erik Stavnsager Rasmussen**, *U. of Southern Denmark*

Clusters can emerge from random and accidental events, but to develop into successful clusters a combination of luck, favorable framework conditions, and the agency of central organizational actors is necessary. To understand cluster development and improve the likelihood that new clusters will emerge and grow it is therefore necessary to understand the roles of organizational actors in the process. This paper analyzes how the roles and importance of central organizational actors change throughout the emergence and growth of an innovative cluster. Based on an in-depth case study of an internationally successful robotics cluster, we develop a theoretical framework for understanding how organizational actors' importance and impact influence cluster development throughout the cluster life cycle phases of emergence and growth.

TIM: **Unraveling of Ecosystems**

Author: **Mehdi Montakhabi**, *Vrije U. Brussel*

Author: **Christopher L. Tucci**, *Imperial College Business School*

Contemporary theories regarding ecosystem firms often overlook the potential for emerging practices in which users or complementors disrupt the benefits of an ecosystem orchestrator. We discuss ecosystems' "virtuous cycles," driven by network effects, learning, and economies of scale. Simultaneously, we put forth the concept of ecosystems' "vicious cycles," arising from individual opportunism and collective action. We delve into how this vicious cycle can impede the virtuous one, emphasizing that factors such as product perishability, flexibility of use, and demand elasticity have varying impacts on this disruptive effect, especially when comparing vertical ecosystems to platform ecosystems.

Innovation and Firm Performance

Session Moderator: **Chih-Hsing (Sam) Liu**, *National Kaohsiung U. of Science and Technology*

TIM: Identifying the Differences in Innovation Attributes in Creating Organizational Performance 

Author: **Chih-Hsing (Sam) Liu**, *National Kaohsiung U. of Science and Technology*

Author: **Ian Wang**, *Tunghai U.*

Author: **Jun-You Lin**, *National Open U.*

Innovation is recognized as the pivotal factor influencing a firm's survival and growth. This study contributes to the existing body of knowledge in business and management by discerning critical attributes and offering a fresh perspective on the antecedents and consequences of innovation performance. Utilizing a sample of 13,841 entries from the Taiwanese Technological Innovation Survey (TTIS) database, this study employs a resource-based view (RBV) to underpin the formulated hypotheses. These findings reveal the direct effects of innovation breadth and protection on innovation capability, subsequently impacting innovation performance, which confirms the mediating role of innovation capability. Additionally, this study explores the moderating role of innovation barriers in influencing the relationship between innovation breadth, protection, and innovation capability. The theoretical and managerial implications are elucidated in the concluding section, illustrating the significance of these insights for both academia and industry.

TIM: Innovation Outputs and Superior Performance: Evidence from Spanish Companies  

Author: **Jude Edeh**, *INSEEC Business School*

Author: **Encarnación Ramos-Hidalgo**, *U. de Sevilla*

Author: **Ángeles M. Rodríguez-Serrano**, *U. de Sevilla*

Author: **Maria A. Agusti**, *U. de Sevilla*

Evidence on the relationship between innovation and companies' performance remains inconclusive. This study contributes to the innovation literature by examining how innovation outputs lead a company to achieve economic returns above its industry's average performance – superior performance. The study uses a comprehensive panel database from the Spanish Technological Innovation Panel Survey (PITEC) for 2004–2016. The empirical analysis of 1,780 manufacturing companies shows that it is not a mere introduction of product innovation that leads to superior performance; instead, the commercialisation of new products. Moreover, the results reveal that process innovation positively moderates the relationship between the commercialisation of new products and superior performance.

TIM: Innovative and Swift: New Product Introductions as Responses to Performance Feedback   

Author: **Charlotte Ren**, *U. of Pennsylvania*

Author: **C. Jennifer Tae**, *Temple U.*

Author: **Anna Pak**, *Kean U.*

We examine the impact of discrepancies between firm performance and aspirations on the extent of exploration and speed in subsequent new product introductions (NPIs). We argue that both NPI exploration and speed are conditional on i) whether firms perceive the need to explore and/or expedite NPIs (motivation) and ii) their ability to do so (capacity). We further propose that these two conditions are not only determined by the direction of performance feedback (i.e. shortfall or surplus), but also by its degree (i.e., moderate vs. extreme). Using data of movie producers from the U.S. movie industry between 1980 and 2015, we find nonlinear relationships between a firm's performance feedback and its NPI exploration (i.e. propensity to release movies in new-to-the-firm market niches) and speed. Specifically, following performance surpluses, firms either explore or speed up, but do not pursue both simultaneously. Following performance shortfalls, however, the degree of shortfall affects whether firms pursue both exploration and speed or only one. Our findings elucidate why and how an antecedent can jointly impact decisions on NPI exploration and speed as well as identify the boundary conditions on when exploration and speed are pursued together or separately.

TIM: A Meta-Analysis of Adaptability in Innovation Management   

Author: **Felix Hoch**, *U. of Münster*

Author: **Tobias Roeth**, *U. of Bremen*

Author: **Alexander Kock**, *Technische U., Darmstadt*

Adaptability, flexibility, and agility have become crucial concepts in innovation management as firms have to adapt to the ever-changing organizational environments, in which they operate. While extant research largely supports a positive effect of adaptability on innovation, there is notable heterogeneity in firms' ability to leverage this potential. Grounded in a dynamic capabilities lens, we propose conceptual differences and overlapping constructs within different sub-domains of adaptability (i.e., strategy, technology, workforce, supply chain, and customer), as well as contextual contingencies on the firm (i.e., firm size) and country level (i.e., institutional quality and stability) as potential drivers of this heterogeneity. A meta-analysis of 392 effect sizes from 188 independent samples, reveals an overall positive relationship between adaptability and innovation across all sub-domains, with the customer sub-domain being particularly pronounced. Further, we demonstrate that the positive effect is stronger for larger firms and weaker for firms in strong and stable institutional environments. Moreover, our findings indicate that managers should emphasize technology and customer adaptability to drive innovation. Meanwhile, firms operating in environments with institutional instability should prioritize adaptability, ensuring they can swiftly navigate the changing landscape. By synthesizing the fragmented literature on adaptability and the related concepts of flexibility and agility, we provide a holistic conceptualization of adaptability and evidence as well as explanations for its generally positive but highly heterogeneous effect on innovation.

The Many Shades of Ideation

Session Moderator: **Maren Alana Mickeler**, *ESSEC Business School*

TIM: **Identity Provision & Indirect Contributions in Idea Contests: A Field Experiment**

Author: **Maren Alana Mickeler**, *ESSEC Business School*
Author: **Diego Zunino**, *SKEMA Business School - U. Côte d'Azur*
Author: **Marine Hadengue**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

Organizations increasingly rely on idea contests to solve challenges by asking for potential solutions from their members. Individuals' contributions to the contest can be either direct, by posting original ideas, or indirect, by commenting on extant ideas of other contest participants. So far, research knows little about the drivers of members' indirect contributions. We propose a theoretical framework that explains individuals' indirect contributing behavior as a function of two motivators: Efficacy considerations and reputational gains. Muting the latter by granting individuals' anonymity, we propose that contest holders can influence the number and types of indirect contributions provided by organizational members. We test our hypotheses by running a field experiment whereby individuals participate in an idea contest on a digital platform. We find that anonymity increases the number of comments posted. At the same time anonymous comments are shorter, less constructive, and less likely to be incorporated by original posters in their revised ideas.

TIM: **Playing the Part: How Roleplay Shapes Creativity in Ideation**

Author: **Arabella Pollack**, *Rotterdam School of Management, Erasmus U.*
Author: **Daan Alexander Stam**, *Rotterdam School of Management, Erasmus U.*

There is no innovation without innovative ideas. Organizations chasing innovation often want to maximize the quantity and quality of ideas entering their innovation pipeline and existing research provides many insights into how best to do this. Existing research, however, does not address that diverse professional backgrounds may influence not only group outcomes, but also the creative ideas of the individuals themselves. We test this idea using role play, a tool related to design thinking's foundation in empathizing with the customer. Our experiment shows that role play seems to be an ineffective tool for improving novelty and creativity and can negatively affect the quantity and diversity of ideas generated. In an online experiment, participants role playing a creator unexpectedly generated fewer ideas than a control group, while those who role played a business manager generated fewer ideas and less diverse ideas. Thinking about oneself as a customer had no effect on ideation outcomes, suggesting this common intervention is insufficient to improve idea generation. These findings complement recent findings about role play affecting the evaluation and selection phase of innovation and progress our understanding of roles in the innovation process.

TIM: **The Process and Critical Developments in Building Design Capabilities in Organizations: A Comparative Case Study Analysis**

Author: **Jan Auernhammer**, *Engineering Dept., Stanford U.*
Author: **Steffen Hamann**, *Magenta*

This article outlines the investigation of the process of building design capabilities in large organizations. While various studies have investigated the dynamics between management and design, a sparsity of empirical research examines the process of building design capabilities. This comparative case study research examined three successful, four unsuccessful, and two ongoing cases to identify the essential activities of building organization design capabilities. This research contributes by providing imperative activities and efforts represented in fourteen themes, such as prototyping organizations, strategic storytelling, and building communities. The study identified that the absence of these activities in establishing design teams for strategic projects impacts the success of scaling and establishing organization design capabilities. This research advances current design and innovation management literature by providing a process for building design capabilities and informs managerial practitioners in developing the necessary capabilities for driving design innovation.

TIM: **When More is More and More is Less: Investigating Success Factors of Creativity Workshops**

Author: **Benjamin Möhrle**, *Friedrich-Alexander U. of Erlangen-Nürnberg*
Author: **Peter M. Bican**, *U. of Bremen, Germany*
Author: **Jens Hammer**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

In this study of 152 creativity workshops, we explore the critical role of creativity in driving innovation within organizations. Our research examines 38 distinct creativity techniques and identifies key success factors essential for maximizing the impact of these workshops on innovation. We found that factors such as the duration, location, and participant gender do not significantly affect the creative output in terms of idea quantity or quality. Notably, we observed an inverse U-shaped relationship between workshop size and idea generation, suggesting an optimal group size for maximizing creativity. Crucially, employing multiple creativity techniques simultaneously has a marked positive effect on the creative process, driving innovative thinking and solutions. This indicates a link between the strategic application of creativity techniques and the generation of innovative ideas. Our findings illuminate the intricate interplay between creativity, ideas, and innovation, offering insights for effectively weaving these elements into organizational strategies to catalyze innovation.

Managing Knowledge for Open Innovation

Session Moderator: **Susanne Beck**, *Warwick Business School*

TIM: Crowdsourcing Novel Problem Statements

Author: **Egor Burda**, *LBG OIS Center & Copenhagen Business School*

Author: **Susanne Beck**, *Warwick Business School*

Author: **Marion Kristin Poetz**, *Copenhagen Business School*

Author: **Henry Sauermann**, *ESMT European School of Management and Technology*

Recently, organizations started exploring the use of crowdsourcing not only to solve pre-defined problems, but also to identify novel problems worth solving – not least in the hopes of more effectively aligning research and innovation agendas with issues of societal relevance. Yet, a key challenge is that many crowd-identified problem statements are not novel and simply re-state well-known problems, resulting in an ineffective way to organize problem identification. In this study, we theorize that the extent of “user knowledge” among crowd members, which can be acquired both through one’s own experience as someone affected by a particular situation (e.g., as a patient) and through engagement with the experiences of others (e.g., as a caretaker or medical professional), increases the novelty of problem statements. In addition, we explore whether the novelty of crowd-identified problem statements might be improved by providing crowd members with two types of complementary knowledge related to the problem space: declarative and procedural. Our preliminary results from a large-scale online experiment show a significant positive relationship between “user knowledge” of crowd members and the novelty of the problem statements they submit. Providing crowd members with complementary knowledge related to the problem space does not lead to significant novelty improvements, according to our preliminary analysis. Nevertheless, these initial findings indicate that the impact of experiential knowledge in problem-solving also applies to problem finding. This has significant implications for organizations aiming to effectively utilize crowdsourcing for establishing their research and innovation agendas.

TIM: What the Structure of Crowdsourced Solution Landscapes Reveals About Their Ideas’ Value

Author: **Julian Just**, *U. of Innsbruck*

Author: **Thomas Ströhle**, *U. of Applied Sciences Kufstein Tirol*

Author: **Johann Fueller**, *U. of Innsbruck*

Author: **Katja Hutter**, *U. of Innsbruck School of Management*

In crowdsourcing contests, participants span rich solution landscapes where ideas take different locations depending on their semantic similarity. The characteristics of an idea derived from its location in the solution landscape, e.g., its semantic distinctiveness or network centrality, can affect its likelihood of success. Despite increasing research efforts using different measurement approaches and contextual variations, we lack a thorough understanding of the potentially complex relationship between idea similarity and value. This study comprehensively examines how the similarity structures of ideas embedded in solution landscapes influence the likelihood of success. Using a dataset of 11,615 ideas from 39 crowdsourcing challenges, the research combines natural language processing (NLP) to retrieve multiple semantic-similarity-based idea features and machine learning algorithms to inductively derive patterns and validate them in a hold-out sample. The results show that while distinctive ideas are generally more likely to be successful, associations are non-linear and context-dependent. The study highlights the importance of the density of the spanned landscape. In denser landscapes, distinctiveness in terms of word atypicality is negatively related to success. While highly interconnected ideas are more appreciated, ideas closely connected to others are less successful in dense contexts. By providing a more nuanced view of the role of similarity structures in idea success, the research advances the theoretical understanding of search across crowdsourced solution landscapes. As such, it contributes to a more strategic approach to idea generation and evaluation in crowdsourcing environments.

TIM: Solve Knowledge Seeker’s Problem: The Role of Bounty Amount and Temporal Scarcity

Author: **Min Yu**, *School of Business and Management, Shanghai International Studies U.*

Author: **Mingyue Zhang**, *Shanghai international*

Author: **Baojun Ma**, *shanghai inter*

By investigating user-generated platforms, this study delves into the relatively unexplored domain of competitive contests and peer awards, with a specific focus on assessing the impact of bounty awards on content contribution. Leveraging insights from the optimistic bias and opportunistic behavior of contributors, we posit that competition for bounty awards enhances user engagement, resembling a Rank-Order tournament without explicit rankings. Specifically, we focus on two features of bounty awards which are distinct from traditional incentivizing elements, that is, personalized bounty amount and expiration time. By utilizing Stack Overflow data and employing logistic and negative binomial regression models, we identify an inverted U-shaped relationship between the bounty amount and content contribution, while temporal scarcity exhibits a U-shaped pattern on contributors’ effort allocation. Our research expands the scope of peer award literature and enhances the applicability of the stuck-in-the-middle (STIM) effect, as well as contributing to a nuanced understanding of incentivizing content contribution within knowledge-sharing platforms.

This study examines the combinations of internal and external knowledge flows between R&D incumbents and start-ups in the context of open innovation. While there is a growing body of knowledge which has examined how, in a knowledge economy, a firm's knowledge and innovation activities are closely linked, there is no systematic review available of the key antecedents, moderators, mediators, and outcomes of knowledge spillovers. We have conducted a multi-stage research to identify, through a systematic review of literature (61 research articles), the antecedents, outcomes, moderators, mediators and control variables. In the second stage, we performed content analysis of the selected articles to capture the major themes, theory perspectives, geographical contexts, and keyword occurrences. Finally, the findings of the previous two stages helped us to advance a nomological network that addresses the strength of relationship between the observable constructs that emerged from the review of literature. Our findings demonstrate how knowledge spillovers can help incumbent organizations and start-ups to achieve improved innovation capabilities, R&D capacity, competitive advantage, and creation of knowledge ecosystems leading to improved firm performance. Our study has important implications for practitioners and managers - it provides managers with important antecedents of knowledge spillover (knowledge capacities and knowledge types) which directly impacts the R&D intensity and digitalization driving open innovation. It also suggests that a mix of different types of external knowledge partners, in combination with internal R&D capabilities, may be crucial for understanding the role of open innovation models in emerging economies

Smart, Fast, Frugal: Innovation That Drives Firm Performance

Session Moderator: **Yue HE**, *Renmin U. of China*

TIM: Leveraging Internal Resources for Smart Products: The Role of Intraorganizational Power

Author: **Yue HE**, *Renmin U. of China*

Author: **Zhang Wenhong**, *Healthcare Researcher*

Author: **Zhongxing Su**, *Renmin U. of China*

Although smart products are not new, their development remains challenging. How can one develop a smarter product? Research indicates that organizational resources are necessary to resolve conflicts related to departmental coordination and cycle coordination during smart product development. This suggests that the availability of organizational resources for a development project can impact the performance of smart products. However, these studies do not examine the positioning of smart products within the organization, nor do they consider the differences in organizational resources that can be allocated to different product projects within a firm. Therefore, this study addresses three main questions: (i) Would the intraorganizational power of the product owner influence smart capability level in the development of a smart product? (ii) Would this influence vary across different types of smart products? (iii) Would external resources have an impact on the product development process within the firm? We collected 71 product reports from the U.S. Food and Drug Administration and the State Drug Administration of China for smart products that have obtained medical device registration certificates. Extensive data collection was conducted on these products, including matching them with the Crunchbase database and the LinkedIn database, as well as soliciting expert ratings. The results of data analyses showed that the power of the product owner positively influenced the product smart capability level. Additionally, the impact of product owner power on product smart capability was moderated by role of digital technologies in product, financial resources, and the CEO's composite professional education background.

TIM: Frugal as the Future of Innovation     

Author: **Mir Dost**, *U. of Winchester*

Frugal innovation (FI) is a concept that has resulted in many affordable and environmentally friendly inventions. It is suggested that FIs create value through lower costs, making such products and services more affordable, accessible, and sustainable. Drawing on the resource-based view and the stakeholder theories, the author investigates the impact of FI on the firm's environmental and financial performance and the moderating role of managerial proactiveness. To test the hypothesised relationship, the author collected data from CEOs of firms (n=580) operating in emerging markets and analysed that data using descriptive statistics and regression analysis techniques. The findings suggest that firms that excel in FI achieve better environmental and financial performance. The managerial proactiveness positively moderated the link between FI and environmental performance. However, it inversely moderated the link between FI and financial performance. The article concludes by suggesting how frugality is the future of innovation for firms to achieve superior environmental and financial performance.

TIM: Fast-Paced Innovation: Its Role and Impact on Diversified Patenting Portfolios   

Author: **Cristina Oana Vlas**, *U. of Massachusetts, Amherst*

Drawing from the signaling and organizational learning theories, I propose that in innovation-intensive industries, the content of firms' patenting matters for investors more than the quantity or the quality of firms' innovations. Content is captured by orthogonalizing exploratory (distant) and exploitative (local) innovation trajectories. Along these trajectories, I differentiate diversification and pace of growth as practices with a crucial signaling role for firms' investors. Findings from a panel of U.S. public firms from telecommunications and software industries indicate that patenting at a fast pace increases firms' appreciation by investors when firms engage an exploratory but not an exploitative trajectory. Overall, this study encourages scholars to acknowledge the signaling role of exploratory and exploitative diversification and the role of pacing innovation along these trajectories.

TIM: Heterogenous Patent Portfolios, Market Uncertainty, and Firm Value 

Author: **Lanhua Li**, *zhejiang U. of technology*

Author: **Xiaodan Yu**, *U. of Nottingham, China*

Author: **Can Huang**, *Zhejiang U.*

Author: **Liyang Wang**, *China Insitute for Small and Medium Enterprises, Zhejiang U. of Technology*

High-technology firms have increasingly adopted heterogeneous patent-portfolio strategies to establish competitive advantage in the marketplace. The signaling role of patent-portfolio size and its impact on a firm's market value has been well established in the literature. The structural characteristics of patent portfolios and the effects of a signaling environment under uncertainty have, however, received little attention. Bridging the patent-portfolio literature with signaling theory, we find that heterogeneity in patented technologies and patent quality negatively moderates the impact of patent-portfolio size on a firm's market value, based on data from publicly listed firms operating in China's high-technology industries. The proposed effects depend on market dynamics, as market uncertainty weakens the moderating effects of technology heterogeneity but enhances those of quality heterogeneity. This study generates both theoretical and managerial implications for improving signaling outcomes with heterogeneous patent portfolios.

User-Inspired Innovation

Session Moderator: **Ryan Allen**, *U. of Washington*

TIM: Listen to Your Users? Self-Selection in User Community Feedback and Commercial Success   

Author: **Ryan Allen**, *U. of Washington*
Author: **Robert Bremner**, *Stanford U.*
Author: **Rory Morgan McDonald**, *Harvard U.*

Prior research has demonstrated that firms collaborating with user communities benefit from the extreme-value solutions that can emerge from communities' broad exploration. This theoretical logic has coalesced around user communities that produce their own innovations. But this same logic may be less applicable to collaboration with communities that offer market feedback on innovations developed by firms. In these cases, we argue, firms derive value from the degree to which the feedback is representative of the broader market's preferences. Accordingly, we highlight an overlooked negative consequence of a widely recognized characteristic of user communities: self-selection. Due to the voluntary nature of participation, user communities attract members with atypical preferences, which may not mirror the broader consumer base. Feedback from such communities may thus produce biased signals of market demand that, when incorporated into a product, diminish its commercial appeal. Our analysis of quantitative and qualitative data from experimental PC-game development indicates that developer firms that are highly responsive to feedback from (unrepresentative) users tend to release less commercially successful games. We also investigate why developers heed feedback from unrepresentative communities, underscoring the challenges of effectively utilizing communities to develop commercially viable products.

TIM: Dominant Design Selected by Users: Dynamic User Interaction and Convergence  

Author: **Fan Zou**, *School of management, Zhejiang U.*

Dominant design is ultimately shaped by market forces, and users serve as the wellspring of market selection. While existing research has primarily examined dominant design from the vantage point of technology, institutions, or other market factors, there remains a dearth of studies that delve into the user-driven perspective on dominant design. In this article, we present a dynamic interaction model of users, aiming to elucidate the influence of social interaction on the emergence of dominant design. Leveraging simulations, we modeled a spectrum of evolution and convergence pathways for user preferences. It sheds light on how users' technology adoption hinges on the dynamic interplay of sequence and frequency within the context of undifferentiated competition grounded on opinion dynamics theory. The results indicate that dynamic interactions affect user adoption, promoting different potential dominant designs. The findings reveal that not only do dynamic entry and exit—characterized as discontinuous social interactions—contribute to the emergence of a dominant design within undifferentiated competition, but the appropriate sequence and frequency of interactions hold paramount importance. This study aims to uncover the proactive role of users in affecting the dominant design and the subsequent creation of new user value stemming from it.

TIM: How can Artificial Intelligence in Customer Knowledge Development Help Push Innovation Performance?

Author: **Holger Ernst**, *WHU Otto Beisheim School of Management*
Author: **Priscilla Sarai Kraft**, *WHU Otto Beisheim School of Management*
Author: **Kevin Wohlhauser**, *WHU*

Artificial Intelligence (AI) is transforming classical business functions and facilitating new forms of customer interaction. Recent research and industry examples suggest that AI is reshaping how firms develop their customer knowledge—a crucial lever of innovation performance. However, little is known about whether and how AI-based technologies can help increase innovation performance. We rely on stakeholder theory to examine how using AI in customer knowledge development can help better integrate this important stakeholder group (i.e., customers) to increase innovation performance. We use unique data from 143 participants and 113 business units to empirically examine our mediation model. The results largely support our predictions and shed light on two crucial mediating mechanisms that help explain how using AI in customer knowledge development increases innovation performance: through a better understanding of customer pain points and an increased acquisition of new customers. Our findings thus contribute to the growing literature on AI and innovation by increasing our understanding of how AI-based customer knowledge helps innovate more effectively.

TIM: U-Shape Relationship of Design Innovation and User Experience  

Author: **Egbert Amoncio**, *Goethe U. Frankfurt, Germany*
Author: **Gaëtan De Rassenfosse**, *Ecole Polytechnique Fédérale de Lausanne*

This study investigates the crucial yet underexplored relationship between design innovation and user experience, a key component in today's "experience economy." Our research focuses on understanding how design innovation relates to user satisfaction, specifically through the lenses of design newness and design thinking. We analyzed a dataset of 1,222 Amazon products, each linked to its respective design patents through the IPRoduct database, and assessed user experience based on product star ratings. Our results uncover a nuanced U-shaped relationship between design innovation and user experience. In addition, we find that this relationship is moderated by factors such as innovation gestation and design team expertise. In particular, we observed that products with longer gestation periods exhibit a flatter U-shaped curve. At the same time, those developed by teams with greater expertise show a rightward shift in the curve's turning point. Based on these findings, we outline managerial and policy implications, highlighting the complex dynamics between design innovation and user experience.

Revolutionizing Education with AI: Building Customized GPTs to Enhance Student Learning

Facilitator: **Ted Ladd**, *Hult International Business School*

Participant: **Hendrick Krack**, *Hult International Business School - San Francisco*

Participant: **Luis Guillen**, *Hult International Business School - San Francisco*

Participant: **Federico Quintana**, *Hult International Business School - San Francisco*

In the swiftly evolving landscape of educational technology, the integration of Artificial Intelligence (AI), particularly Generative Pre-trained Transformers (GPTs), stands out as a transformative approach to learning. This proposal explores the potential of custom GPT models to generate structured, interactive, and tailored lesson plans from diverse informational sources such as articles, books, and online content. These AI-driven tools facilitate 24/7 access to tailored learning resources, enabling students to engage with educational content anytime, anywhere, thus supporting asynchronous learning models. This workshop teaches educators to guide students (and themselves) in the development of custom GPTs that can fulfill specific roles in a company (e.g. a marketer agent, a finance agent, an operations agent) based on selected material that the agent's creator specifies. This same tool can also be used to construct agents to help students with their own studies (e.g. micro-economics tutor). These tools revolutionize student-teacher interactions and learning methodologies, fostering a more adaptable and personalized educational experience.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Films, Simulations and Theoretical Frameworks in Action for Developing Cultural Intelligence

Presenter: **Marco Aponte**, *U. of Southern California-Marshall School of Business*

Presenter: **Kumaran Rajaram**, *Nanyang Technological U.*

Presenter: **Rebecca Heino**, *U. of Southern California-Marshall School of Business*

The purpose of this session is to provide educators and coaches with an innovative, practical and tested approach for developing students' cultural intelligence. It is based on three different methodologies which can be easily implemented in undergraduate, graduate, and executive education programs. The session starts with an introduction to original practice-oriented conceptual frameworks for teaching cultural intelligence. These frameworks, validated through academic research and practical application, provide educators with robust tools for integrating cultural intelligence into diverse educational settings. Then, the session explores how short films from other cultures can be used to develop leaders' cultural intelligence. Drawing from Hofstede's framework and the GLOBE project framework on cultural differences, we propose a film-based three-step approach to develop cultural intelligence: watching the film, analyzing the culture in the film according to the frameworks, and reflecting on the cultural differences noted in the film. Finally, we transition to the realm of experiential learning with the Bafa Bafa simulation. This segment highlights the transformative impact of immersive learning experiences in cultivating cultural understanding and adaptability, essential components of cultural intelligence. Together, these approaches—cinematic exploration, experiential learning, and theoretical framework application—form a comprehensive strategy for developing cultural intelligence, equipping students and leaders with the necessary skills to thrive in global environments.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

EDUCRACY: Democratizing Student Debates to Develop Non Violent Communication in Gen Z

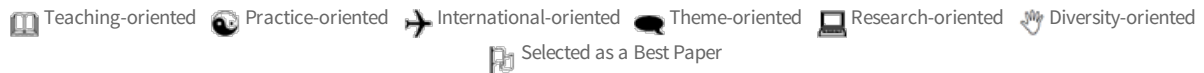

Distinguished Speaker: **Saloni Sinha**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*
Speaker: **Maya Vimal Pandey**, *Birla Institute of Management Technology, Greater Noida, Uttar Pradesh India*

‘Suicide’ is a severe health issue taboo to be spoken about, in a culturally diverse and sensitive society like India. ‘Suicidal behavior’ is inexplicable despite many explorations (Bryan and Rudd, 2016). Discussing sensitive and difficult topics by the educators is in a way empowerment for students (Sedlovskaya, 2022). The presenters intend to share the impact of a debate organized by a debating club of a leading AACSB accredited premier Higher Education Institutes (HEI) in India. The intervention was to make students discuss and debate a difficult issue such as “death by suicide”. The intention was to ingrain understanding of psychological safety and non-violent communication through a “learning by doing” pedagogy which is strengthening the grand challenge of mental well-being of youth i.e., SDG 3 targets. HEIs need to nurture future ready authentic leaders within their campuses (SDG#4), who upon joining their world of work, play a vital role in establishing a psychological safe organisation and normalize conversations around mental health (SDG#3), thus contributing in mainstreaming and supporting colleagues who are dealing with mental health issues. Deloitte’s Mental Health Survey 2022 has reported that around 80 percent of the Indian workforce has reported mental health issues in 2022. But is anyone talking? So debate it to eliminate it!

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Building Key Skills for Gen Z Through Stimulating Reflexivity and Learning by Discovery

Participant: **Amanda Jones**, *King's College London*

The aim of this session is to demonstrate both the need for and methods of developing desirable skills, including reflexive and critical thinking, information literacy, and collaborative skills, among Gen Z students. It will showcase methods of teaching core topics while effectively developing key skills through drawing on students' own cultural differences and leveraging publicly available data sources with which Gen Z are already familiar and engaged. Two applied methods of class design, a reflexivity exercise, and a flipped, interactive 'learning by discovery' approach, both well-grounded in pedagogic research, are demonstrated. Specific information about class preparation and class follow-up is also provided. The session should be of particular interest to those responsible for engaging and educating 'Gen Z' students at postgraduate and undergraduate levels, towards successful future learning and employment. Participants will leave the session with knowledge of a step-by-step process which they can use to produce innovative education delivery which develops key, identified skills to support the future of work.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

The U.S. Opioid Crisis & Ethical Business Failure: A Hands-On Exercise for a Business Ethics Course

Session Chair: **Benjamin Nathan Baki Alexander**, *California Polytechnic State U.*

Session Chair: **Anne D. Smith**, *U. of Tennessee, Knoxville*

Session Chair: **Alice C. Stewart**, *U. of Tennessee*

In this session, attendees will learn about what led to the U.S. opioid crisis through a hands-on card sort exercise and facilitated discussion. The emergence and growth of the crisis will be framed using complexity theory, specifically the components of complex adaptive systems analysis. In ethics courses and in the popular press, crises such as the opioid epidemic are depicted by failures of individual decision making, organizational culture, and/or weak institutions. In the case of the opioid epidemic, complexity theory and the components of complex adaptive systems analysis offer a more robust understanding of the evolution of this crisis and is a novel perspective for business ethics courses. Complex adaptive systems analysis highlights the importance of initiating conditions, movement to a “far from equilibrium” state, factors that amplify deviance, and use of repeating patterns (fractals) across time. The relevant components of complex adaptive systems analysis will be used to describe the development of the U.S. opioid crisis from 1995 to present day. The objectives of this exercise are threefold: 1) to expose business students to the role of businesses in the creation of the U.S. opioid crisis; 2) to introduce a framework – complex adaptive systems analysis – that provides a robust and comprehensive explanation of this crisis; and 3) to consider how this crisis could have been resisted or moderated.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

AI as the New Ethical Compass? Transforming Business Education for Tomorrow

Presenter: **Tawnya Means**, *U. of Illinois at Urbana-Champaign*
Presenter: **Michelle Darnell**, *Pennsylvania State U.*

In the rapidly evolving landscape of business education and technology, generative AI stands at the forefront. While many worry about the ethics of leveraging generative AI in the classroom (including challenges of ensuring academic integrity), this session proposes that generative AI can serve as a tool and a compass to guide ethical understanding and application. This session delves into the innovative use of generative AI to create and facilitate meaningful application learning activities in business ethics courses. The process begins with the strategic integration of generative AI, particularly ChatGPT, into the development of the curriculum. This involves crafting scenarios, activities, and ethical dilemmas where AI assists in generating diverse, complex, and real-world business situations. These AI-created scenarios are the foundation for student-led discussions, analyses, and decision-making exercises, fostering an interactive and dynamic learning environment. Particularly because of the sense of urgency surrounding AI in business, integrating AI-enhanced activities have demonstrated a profound impact in the classroom, positively influencing affective and cognitive development of students. AI's introduction of multifaceted and evolving scenarios mirrors the real business world's complexity, preparing students for the ethical challenges they will face in their professional lives. This session charts the journey of pioneering this new territory in business ethics education. It shares insights and tangible results from the classroom where AI has not only aided in teaching ethics but has also acted as a catalyst for innovative thinking and ethical decision-making among students. Participants will leave with a blueprint for integrating generative AI into their teaching.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

How to Get Your Students to Write a Business Case as a Class Project

Organizer: **Brent D. Beal**, *U. of Texas at Tyler*
Presenter: **Karen MacMillan**, *U. of Western Ontario*
Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*

In this session, we will examine how to use case writing as a pedagogical tool to increase student engagement and learning. Case writing as a student assignment asks students to move from a mostly passive analyst role to take on a variety of roles – researcher, interviewer, writer, and, ultimately, teacher. We will address each component of the student case-writing process including preparing students for case writing, customizing the assignment to fit class learning objectives, requiring incremental work, addressing unique challenges associated with case writing as a student project, facilitating peer critique, providing feedback on incremental assignments, grading finished cases, managing student teams, and assessing publication options.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

AI in the Classroom for an Internationally Diverse Audience

Presenter: **Katarzyna Bachnik**, *Hult International Business School*
Presenter: **Pamela Campagna**, *Hult International Business School*
Presenter: **Robert Neer**, *Hult International Business School*

We believe that when designing and launching courses, we must always consider the nature of our audience particularly when, as in our case, 85% of our student body is from outside the United States. International and cultural diversity plays a central role in course design and delivery and is becoming increasingly challenging with the advent of new technologies such as generative AI. In effect, the practices that we want to identify and discuss in our session capture the unique opportunities presented by AI from both a cultural and geographic perspective.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Social Entrepreneurship Increases Risk-Taking and Entrepreneurial Mindset in Disadvantaged Student

Participant: **Ian Norris**, *Berea College*

Recent research demonstrates the impact of entrepreneurship education on entrepreneurial mindset. However, despite ardent calls for the significant benefits of entrepreneurship training for disadvantaged populations, few research studies have actually examined the benefits of such education in low-income or otherwise disadvantaged populations. And yet these populations face significant social-psychological and cognitive barriers that make it all the more important to understand the antecedents and outcomes of their entrepreneurial behavior. The purpose of this presentation is three-fold: First, to engage the audience in a rich discussion of the specific challenges and opportunities of entrepreneurship education in low-income and disadvantaged student populations; second, to present a case study in a specific entrepreneurship program that is designed to serve low-income students working in specifically disadvantaged communities; and third, to share some recent data demonstrating direct, causal effects of immersive, social entrepreneurship training on critical outcomes such as mindset and risk propensity. Specifically, utilizing a pre-test/post-test design across two successive summer cohorts, our 7-week social entrepreneurship program demonstrated significant direct, causal effects on these and other variables. To our knowledge these data are among the first to reliably demonstrate a strong impact of entrepreneurship education on meaningful entrepreneurship-related outcomes in disadvantaged populations.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

The Effective Classroom Voice – A Practical Workshop

Presenter: **Anita Boey**, *Trent U.*

We use our voice daily to communicate, to express ourselves, to talk, to teach. Yet, we take it for granted and rarely give it any thought, as to how we can make our teaching more effective by learning about our own voice and how to use it to the best of our ability. This workshop aims to start this conversation by providing practical tips on how to be mindful of our voice, and how to be comfortable in silence in our classrooms to help carry our voice for a better teaching experience. In this workshop, participants will increase their self-awareness of their own teaching voice, practice the use of varying volume, power pause and silence to emphasize key points in their speech and to increase attention and comprehension of speech. Participants get to leave the workshop with a good idea of how to make small changes that have big impact on their daily communication.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Re-imagining Entrepreneurship to Shape Desirable Futures

Session Chair: **Kathleen Randerson**, *Audencia Business School*
Session Chair: **Cyrine Ben-Hafaiedh**, *IESEG School of Management*
Session Chair: **Claire Champenois**, *Audencia Nantes School of Management*
Panelist: **Siri Ann Terjesen**, *Florida Atlantic U.*
Panelist: **Tanusree Jain**, *Copenhagen Business School*
Panelist: **Colin Patrick Higgins**, *Deakin U.*
Panelist: **Adam Vigdor Gordon**, *AU*
Panelist: **Jeffery S. McMullen**, *Indiana*

Panelist: **Julius Gatune**, *Dedan Kimathi U. of Technology*
Panelist: **Antje Bierwisch**, *MCI The Entrepreneurial School*
Panelist: **Clay Dibrell**, *U. of Mississippi*

Our goal in this PDW is to provide a forum for a fresh dialogue between the research and practice of Entrepreneurship and that of Futures. Indeed, although entrepreneurship has long been considered the armed wing for creating the future, there is less and less consensus on the future thus created, or how it was created. Climate change can no longer be denied, income inequality is exploding, and social and political unrest are pervasive: extant entrepreneurship research and practice could be more the problem than the solution, as the covid crisis has shown us. This PDW sets the stage for a turning point. Mobilizing concepts, activities and tools from Futures studies and practice, participants will be positioned to use these to re-imagine entrepreneurship. To do this, our PDW will have two parts. In the first the chairs, panelists, and attendees will do a projection into 2040, imagining its social, economic, technological, ecological characteristics. A discussion will support the emergence of possible, plausible, desirable futures. In the second, the attendees will have the opportunity to work with panelists, at themed tables, in an activity of reverse causality. This session will provide first a renewed connection between the fields of entrepreneurship and futures rejuvenating or augmenting cross-fertilization; it provides a stage where established meets emerging as each table is designed with experts holding diverse viewpoints on the topic at hand; and finally, our hope is that the discussions thus created will trigger policy, purpose, and /or organizational innovations for a better future.

Panelist: **Gerry M. McNamara**, *Michigan State U.*
Panelist: **Michelle K. Duffy**, *U. of Minnesota*

As in organizational life, there are numerous barriers that detriment female scholars in academia generally and in the field of organizational sciences, specifically. Indeed, akin to the 'glass ceiling' phenomenon within organizations, women in academia suffer from similar gender inequities (e.g., field-level structural barriers, lack of organizational support, social support concerns, and limited allyship). As such, the aim of the proposed professional development workshop (PDW) is to shed light on the challenges that female scholars face in our field and generate ideas and solutions for changes that can help women overcome some of these barriers. To do so, this session invites leading scholars to apply insights from their own, and others', research and knowledge on gender and organizational bias to the field of management. Through panelist presentations and roundtable sessions, participants are able to have open conversations with the panelists and discuss possible solutions to the barriers facing women scholars. Combined, this PDW seeks to broaden our understanding of women's experiences in the Academy and find solutions to better meet the needs of female scholars and facilitate their success in the field. This PDW is slated to be one of the flagship PDWs of the OB Division.

How to Manage Academic Collaborations: Tips and Strategies from OB Scholars (5th Annual)

Organizer: **Stefan Berger**, *U. of Groningen*
Organizer: **Hendrik Johan Van De Brake**, *Hendrik van de Brake*
Organizer: **Ulrich Leicht-Deobald**, *Trinity College Dublin*
Organizer: **Sophie Pychlau**, *Iowa State U.*
Distinguished Speaker: **John Mathieu**, *U. of Connecticut*
Panelist: **Rachel McCullagh Balven**, *Arizona State U.*
Panelist: **Hooria Jazaieri**, *Santa Clara U.*
Panelist: **Michael Yanche Lee**, *INSEAD*
Panelist: **Michele Williams**, *U. of Iowa*
Host: **Ashley Elizabeth Hardin**, *Washington U. in St. Louis*
Host: **Kristie Joy Neff Moergen**, *Iowa State U.*

In this PDW, we draw from a variety of perspectives in organizational behavior to learn how we can successfully manage academic collaborations for co-authoring research publications. The primary goals of this PDW are to (1) enhance attendees' awareness of common issues and themes in research teams, and (2) derive practical strategies they can use after the PDW to increase their success and well-being in academic collaborations. The PDW will commence with a keynote from Dr. John Mathieu, highlighting how team science informs our understanding of research collaborations. This will be followed by a panel discussion on a range of pertinent topics, including navigating hierarchical differences, tackling ethical dilemmas, engaging in difficult conversations, and forging productive and meaningful relationships. The panel will feature Drs. Rachel Balven, Hooria Jazaieri, Michael Lee, John Mathieu, and Michele Williams who will bring in their research expertise and personal experience into the panel discussion. Roundtable discussions will follow the panel, providing participants an opportunity to share their experiences in academic collaborations and potentially workshop strategies for attendees' individualized situations. The PDW will conclude with a summative discussion of key learnings.

Workaholics Anonymous: A Guided & Interactive Workshop for Attaining Your Desired Work-Life Balance

Organizer: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*
Organizer: **Jayci Robison Pickering**, *Oklahoma State U.*
Speaker: **Matt Call**, *Texas A&M U., College Station*

Experts in our field note that workaholism is harmful to individuals' personal, familial, and work well-being. These detrimental effects have resulted in a scholarly emphasis on the importance of managing workaholism; yet many academics still struggle to find both meaning in work and a life outside of work. It is thus critical that we seek to mitigate our workaholic tendencies and rebalance the nine primary components of our lives, including self-care (i.e., sleep/recharge/alone time, exercise/yoga/mediation/religion, creativity/hobbies), work life (i.e., research, teaching, service), and home life (i.e., partner/romantic, family/kids/pets, social life/friends). This guided and interactive workshop provides attendees with personalized resources in an effort to inspire a more sustainable and healthy balance, transforming our perspective from "living for work" to "loving our work." Specifically, this PDW aims to equip attendees with personalized knowledge regarding their workaholism and balance scores, along with customized and crowdsourced strategies for attaining their personal balance goals. Additionally, this workshop boasts a diverse panel from three renowned experts in our field and attendees will be provided a custom-tailored Self-Work-Home Balance Tool free of charge. Given the interactive nature of the workshop, there will be opportunities for individual reflection, group discussions and activities, and broader debriefs and presentations. We welcome all academics wary of falling victim to workaholic tendencies to join us in this attempt to rebalance our lives and shed this label and its associated pressures.

Publishing Inductive Qualitative Research in Prominent Academic Journals

Panelist: **Quy Nguyen Huy**, *INSEAD*

Panelist: **Melissa Graebner**, *U. of Illinois at Urbana-Champaign*

Panelist: **Winnie Jiang**, *INSEAD*

This PDW workshop is aimed at fostering information exchange among practitioner scholars interested in publishing inductive qualitative research in prominent academic journals. Practitioner scholars are individuals who pursue rigor in their research process and output as well as produce knowledge that is useful for improved managerial practice. This PDW has been offered for several years now and continues to attract hundreds of scholars each time. The content offered is not predetermined and varies every year depending on the audience's questions and evolving norms in the field. The workshop will feature scholars with a track record of publishing qualitative research in premier journals. The goal will be to help practitioner scholars to disseminate their ideas through prominent journals, while still encouraging these scholars' focus on managerial relevance. The conference presenters will lead exchanges around topics such as understanding the expectations of premier journals; conducting a literature review; designing data collection and analysis processes; selecting and working with co-authors; writing a first research draft; refining a manuscript before journal submission; and dealing with the editor and reviewers during the review process.

Checking the Numbers: A Professional Development Workshop to Build Methods-Focused Reviewing Skills

Organizer: **Lindsey Greco**, *Oklahoma State U.*
Panelist: **Nikos Dimotakis**, *Oklahoma State U.*
Panelist: **Janaki Gooty**, *U. of North Carolina, Charlotte*
Panelist: **Scott G. Johnson**, *Iowa State U.*
Panelist: **Jeremy Lee Schoen**, *U. of Auckland*
Panelist: **Chad Van Iddekinge**, *U. of Iowa*

Peer review plays a pivotal role in maintaining the integrity of scholarly research and reviewing is often seen as a “professional responsibility” (Trevino, 2008). A significant priority for all scholars should be ensuring high quality and objective evaluations of manuscripts, yet there are frequent observations that many reviewers lack the necessary expertise needed to perform reviews. While other sessions have provided guidance on the holistic review process, the focus of this session is specifically on the methods and results sections of manuscripts. The methods and results sections of a research article provide information used to judge the study’s validity and while evaluating the theoretical development and contribution may be similar across a wide range of studies, the wide variety and application of research methods presents unique challenges for reviewers. The purpose of this session is to provide potential reviewers with tools to better assess the methodology in substantive articles. The session will consist of two parts: the first half of the session will be devoted to a panel discussion where panelists answer questions from the organizer and audience members about general methods issues encountered in the review process and the second half of the session will be devoted to methods-specific topics (e.g., multilevel, meta-analysis, endogeneity) with recommendations for evaluation and suggestions as a reviewer.

STR Division Junior Faculty Teaching Consortium

Session Chair: **Marlo Raveendran**, *U. of California, Riverside*
Session Chair: **Michael J. Mol**, *Copenhagen Business School*
Distinguished Speaker: **Nilanjana Dutt**, *Bocconi U.*
Distinguished Speaker: **Julien Clement**, *Stanford U.*
Distinguished Speaker: **Chengwei Liu**, *Imperial College London*
Distinguished Speaker: **Pursey Heugens**, *Rotterdam School of Management, Erasmus U.*
Distinguished Speaker: **Daphne W. Yiu**, *Singapore Management U.*
Distinguished Speaker: **Manuela Hoehn-Weiss**, *Oregon State U.*

The STR Junior Faculty Teaching Consortium is intended for both teaching- and research-oriented faculty who are 0-5 years out of their PhD programs. The objective of the consortium is to engage participants so they become more effective in the classroom and more efficient with their teaching-related activities. Participants will have opportunities to learn from award-winning teachers, to discuss with distinguished faculty and peers in small groups particular teaching issues they may be having, to learn about available resources, to meet and interact with future colleagues, and to enhance their teaching and overall development.

Interested participants should apply here: https://ucrbusiness.co1.qualtrics.com/jfe/form/SV_0JTFIVUYIPTO5QW Sign up today as we have limited seating!
Application Deadline: July 1, 2024. If you have questions about the STR Junior Faculty Teaching Consortium, please contact consortium co-chairs Marlo Raveendran (marlor@ucr.edu) or Michael Mol (mmo.si@cbs.dk).

Knowledge and Innovation Across Firm Boundaries

Session Moderator: **Vladislav Maksimov**, *U. of North Carolina, Greensboro*

STR: **Digital Innovation Ecosystem Evolution in Intelligent Automotive Industry: A Patent-Based Analysis**

Author: **Bicong Wu**, *U. Paris 1 Panthéon Sorbonne*

Author: **Syoum Negassi**, *U. Paris 1 Panthéon Sorbonne*

Intelligent automotives, as a burgeoning product within the automotive industry in the digital era, are progressively reshaping human production and lifestyle. The intelligent automotive sector has engendered a multifaceted digital innovation ecosystem. Utilizing the intelligent automobile industry as a case study, we have constructed a social network relationship diagram to investigate collaborative innovation dynamics within the industry. Our analysis is based on patent data spanning from 2002 to 2023, categorized into three distinct stages: the initial stage, the pre-pandemic boom stage, and the pandemic-affected boom stage. Employing UCIENT, we have computed the network characteristics of each stage from both temporal and spatial perspectives. Additionally, a social network analysis has been conducted to scrutinize the evolutionary trajectory of the digital innovation network within the intelligent vehicle sector. Our findings elucidate a consistent expansion in the scale of the digital innovation ecosystem within the intelligent automotive industry. Collaborative relationships have been forged among participating entities, resulting in a relatively cohesive network. Distinct roles are assumed by different entities at various stages of development. Moreover, spatial patterns exhibit an increasing interconnectivity over time, primarily characterized by divergent collaborations centered around the United States.

STR: **Overcoming the Liability of Gender? Inventor Networks and Disruptive Innovation**

Author: **Xiangting Wu**, *U. of Minnesota*

Author: **Aks Zaheer**, *U. of Minnesota*

Author: **Russell James Funk**, *U. of Minnesota*

Much research has established that women inventors are systematically disadvantaged in the research process – they produce both lower patent numbers compared to male inventors and lower citation counts arising from poorer co-patenting network positions, negative stereotypes, and a “return deficit” from similar network positions as men. However, we argue that women can “overcome” these barriers by producing patents that are both disruptive and produce higher market value for firms. To study this phenomenon, we create intra-firm inventor co-patenting networks for 629 U.S. public firms in the bio-pharmaceutical industry from 1995 to 2013. Our data include 39,614 inventors, of which 9,276 are female and 30,338 are male. We use multi-way fixed effects models to control for unobserved heterogeneity and a battery of robustness tests to demonstrate the consistency of our results. Our results show that, despite their network disadvantages, women do create more disruptive patents of higher market value by employing mechanisms including superior use of network reachability and knowledge diversity.

STR: **Leveraging a Target Firm’s Knowledge and Capabilities Post-Acquisition**

Author: **Charlotte Jacobs**, *Louisiana State U.*

Author: **Vivek Tandon**, *Fox School of Business, Temple U.*

Author: **Kannan Srikanth**, *The Ohio State U. Fisher College of Business*

Author: **Ilya Cuypers**, *Singapore Management U.*

In this paper, we empirically investigate how the centralization and network density of the target inventor network structure influences post-acquisition knowledge and capability leverage by the acquirer. Such an inquiry has the potential to shed light on the importance of considering target characteristics when examining post-acquisition innovation outcomes as knowledge and capability leverage. A lack of understanding of how pre-acquisition characteristics of a target affect this leveraging may result in us inadvertently attributing these effects to acquirer characteristics or the acquirer’s post-acquisition integration approach. In a sample of 146 acquisitions of small firms by established firms in the US, we find that on the one hand, the centralization of the target inventor network positively influences capability leverage but doesn’t directly influence knowledge leverage. On the other hand, target inventor network density has no direct effect on capability leverage and a negative effect on knowledge leverage. We further investigate moderation effects to probe the mechanism underlying these results.

STR: **To the Moon - Launching a Platform with First-Party Complements**

Author: **Alexey Rusakov**, *LMU Munich*

This study investigates the optimal use of vertical forward integration strategies by platforms in the launch phase. To this end, I formally solve a dynamic optimization problem of a platform in determining the number of first-party complements (FPCs) to release during its life cycle. The key finding is that the level of indirect network effects (INEs) exerted by consumers on third-party complements (TPCs) is the main factor that influences the optimal number of FPCs. Interestingly, higher INEs lead to an increase in the optimal number of FPCs during the launch phase. However, excessively strong INEs do not necessitate more FPCs, resulting in an inverted U-shaped relationship between FPCs and INEs. The main argument is that platforms face a trade-off between the reinforcement dynamics they can utilize to facilitate the launch and a substitution effect between FPCs and TPCs. Additionally, with heterogeneous product categories, I explore how potential market size and different types of network externalities influence FPCs strategies, providing new reasons for platforms to use FPCs in smaller product categories. My research contributes to the understanding of FPCs as a platform launching strategy and provides managerial implications for platform owners regarding the dynamic use of FPCs and product category selection.

Grand Challenges and Solutions

Session Moderator: **Farzam Boroomand**, *U. of Minnesota*

STR: **Blue Economy Risk Factors and Resilience Strategies: Evidence from the Great Barrier Reef**     

Author: **Eijaz Khan**, *James Cook U.*

Author: **Carmen Reaiche**, *College of Business, Law and Governance, James Cook U., Australia*

Author: **Stephen Boyle**, *College of Business, Law and Governance, James Cook U., Australia*

This paper develops a decision model to determine the best combination of resilience strategies for managing blue economy (BE) risk factors and improving the performance of the BE. It applies the natural resource-based view (NRBV) and a multimethodology approach. Through a systematic literature review, stage 1 identifies BE risk factors and resilience strategies. Stage 2 determines the most important resilience strategies by applying quantitative case studies and the quality function deployment technique. Fuzzy set qualitative comparative analysis is used in stage 3 to determine the most appropriate resilience strategies to tackle the highly significant BE risk factors and thus improve BE performance. Study results suggest that no single risk factor can negatively affect BE performance, and a resilience strategy alone cannot enhance BE performance. By combining the NRBV with a multimethodology approach, resilience strategies in BE can be reconfigured, which have received limited empirical attention to date.

STR: **Children Left Behind: Charter Schools and the Privatization of Public Education in the US**    

Author: **Farzam Boroomand**, *U. of Minnesota*

The growing interest in private solutions like CSR initiatives, non-profits, and public-private partnerships for addressing social issues such as poverty alleviation, disease eradication, or education provision poses a critical question: Are these solutions Pareto improving, or do they benefit recipients while disadvantaging non-recipients? This concern is particularly pertinent when private providers compete with public actors, potentially reducing the latter's effectiveness. In this paper, I examine how private solutions to social issues might negatively impact existing public providers. First, the entry of private providers could diminish support for public providers, leading to fewer resources. Second, private providers, often profit-motivated, might serve more economically viable segments, leaving less viable ones to public providers, thereby increasing the latter's production costs. I explore these mechanisms in the context of US public education, where charter schools (private providers) coexist with traditional public schools (public providers). I find that the entry of charter schools reduces local support for traditional public schools (TPS), evident in decreased per pupil local revenues and fewer successful school referenda for additional funding. Furthermore, using a quasi-natural experiment, I demonstrate that traditional public school grades exposed to charter schools see an increase in the proportion of economically disadvantaged and disabled students. Additionally, I find these effects are more pronounced following the entry of for-profit private providers than non-profits, providing evidence on the comparative efficiency of the non-profit organizational form in addressing social issues where a service must be provided indiscriminately.

STR: **Chipping Away at a Grand Challenge: Aligning Goal and Governance to Ease off Homelessness**

Author: **Nuno Gil**, *U. of Manchester*

Author: **Sara L. Beckman**, *U. of California, Berkeley*

Author: **Maria Cristina Sousa**, *188322*

As with other intractable grand challenges, little is known how public, private, and nonprofit actors can ease off homelessness. By juxtaposing intersectoral collaborations to aid homeless communities across São Paulo (Brazil), San Rafael and San Diego in California (USA), and Manchester (UK), we explore alternative approaches to aligning shared goals with governance arrangements. We delineate two basic arrangements to pursue targeted goals, characterized by either centralized (Partnerships) or distributed (Coalitions) decision-making authority. To pursue broader goals, organizations can choose to evolve into Missions by adapting their managerial hierarchies to engage in mutually reinforcing local partnerships and coalitions. Or evolve into Movements by not only engaging in partnerships and coalitions, but also by adopting a third governance arrangement – a participation architecture – to encourage collaboration at scale from third parties outside their hierarchical control. We conclude with a framework to shed light on how each goal-governance alignment chips away at today's grand challenges.

STR: **Leviathan as Client: Public vs Private Promotion of Desalination Technology to Address Water Crises**   

Author: **Ilze Kivleniece**, *INSEAD*

Author: **Leandro S. Pongeluppe**, *The Wharton School, U. of Pennsylvania*

Author: **Sergio Giovanetti Lazzarini**, *Western U.*

We examine the comparative role of public versus private actors in addressing grand challenges through adoption of desalination technologies that vary in sustainability dimensions. While prior research has explored how governments promote new technologies via supply-side (e.g., via subsidies), we explore public (versus private) actors' role on demand-side (as clients). Using data on historical droughts and all desalination investments worldwide (1950s-2015), we find that, while private clients respond with more plants launched, public clients are associated with more energy-efficient technology choices. Crucially, this effect is contingent upon the institutional development of the countries. We further demonstrate how both sector investments are associated with negative externalities through environmental pollution. By highlighting sustainability trade-offs, we foster a better understanding of economic organizing for pressing societal issues.

Discussant: **Michael Park**, *INSEAD*

This workshop aims to explore research frontiers in the increasingly active area of nonmarket strategy. Through a combination of panel presentations by distinguished scholars and interactive roundtable discussions with workshop participants, we seek to identify how to advance research and how to address some shortcomings in existing approaches – both empirical and theoretical – in nonmarket strategy research. Roundtables will provide a venue for participants to receive feedback on work in progress from leading scholars in the field. The proposed workshop is likely to be of interest to researchers working on topics such as corporate social responsibility, political strategy, (social) innovation, stakeholder governance, and sustainability, providing an informed perspective on cutting-edge research on these topics. This is a continuation of the AOM 2016, 2017, 2019, 2021, 2022, and 2023 PDWs under the same name, sponsored by STR, IM, ONE, PNP, and SIM divisions.

How is AI Transforming Firms' Strategic & Operational Environment? From Practice to Theory and Back

Organizer: **Michael G Jacobides**, *London Business School*
Participant: **Ron Adner**, *Dartmouth College*
Participant: **Carliss Baldwin**, *Harvard Business School*
Participant: **Michael Chui**, *McKinsey & Co., Inc*
Participant: **Fabrizio Dell'Acqua**, *Harvard Business School*
Participant: **Elisa Farri**, *Capgemini Invent*
Participant: **Lisa Kraymer**, *BCG / BHI*
Participant: **Karim R. Lakhani**, *Harvard U.*
Participant: **Yuri Romanenkov**, *Evolution Ltd & London Business School*
Participant: **Mari Sako**, *U. of Oxford*
Participant: **Kristina Steffenson McElheran**, *U. of Toronto*

This PDW will showcase empirical evidence from high-profile initiatives that bridge the world of practice and business academe, involving thought leaders to help make sense of AI's implications for management research. The first part will consist of findings from the world of practice. We will review the well-publicized study on consulting productivity from BCG / BHI by participants from Wharton, HBS and MIT, and the ongoing project funded by the UK's Regional Innovation Fund undertaken by LBS in collaboration with CVC, the UK's Institute of Directors, and Evolution Ltd, and from McKinsey & Co/MGI research. We then consider ManagementGPT (prototypes of AI Co-thinkers engaging managers in human-machine conversations on complex managerial issues), a project developed by Capgemini Invent's Management Lab in collaboration with selected academics, and their survey of business school students on their use of Generative AI. Large-scale survey evidence from the US on the technological and organizational context of AI use in production will be presented; ditto for insights from "verticals" such as legal services and consulting. The second part of the PDW will take us from practice to theory, but also to the purpose of business schools in this context. It will involve a discussion of the implication these changes have both for management research and for the value of business schools (in terms of research and professional qualifications) with respected scholars who engage with practice. The final part of the PDW will consist of participants sharing their AI-related research with the senior practitioners and academic participants.

Strategic Alignment: Aligning HR Strategy with the Changing Nature of Work

Session Moderator: **Huaiqian Zhu**, *School of Business, Renmin U. of China*

HR: **How National Factors Matter in Effects of Pay Transparency on Employee Outcomes?**

Author: **Huaiqian Zhu**, *School of Business, Renmin U. of China*
Author: **Yu Zhou**, *School of Business, Renmin U. of China*
Author: **XINYU HU**, *Renmin Business School Renmin U. of China*

Pay transparency has become a global trend, but extant studies have not reached consensus on how employees react to this practice. Through a met-analysis across 50 samples and 14 countries, this study synthesizes mixed findings concerning the effects of pay transparency on employee outcomes (cognitive, attitudinal, and behavioral reactions) and explores the moderating effects of global contingencies (country-level economic, cultural, technological, regulatory, demographic, and societal factors) drawing on relative deprivation theory and relative gratification theory. The results reveal generally positive effects on cognitive and attitudinal responses, and positive but not significant effects on behavioral reactions. Besides, generally consistent with our predictions, unfavorable external environment (high income inequality and high gender wage gap, etc.) would amplify positive effects owing to relative gratification, while favorable macro environment (high law gender equality, participatory democracy, etc.) would suppress the positive effects. Theoretical and practical implications of these results are discussed.

HR: **All by Ourselves? Review and Research Agenda for Team Self-Leadership**

Author: **Jennifer Hilmer**, *Gottfried Wilhelm Leibniz U.*
Author: **Eduard Esau**, *Gottfried Wilhelm Leibniz U.*

The rapidly changing world of work, which is characterized by dynamic and open organizational systems, represents a challenge for the traditional form of leadership. In response to this change, the concept of self-leadership has gained importance as an alternative to traditional hierarchical leadership. The concept, which was developed over 40 years ago, has been developed in re-search in recent years both at the individual and, above all, at the team level. Teams with a higher degree of decision-making autonomy, known as self-managed teams, are playing an increasingly important role in modern companies and reflect the ongoing change in organizational structures. This literature review examines the antecedents, characteristics, processes and outcomes of self-leadership in teams. Antecedents classified as internal and external forces include organizational structures, cultures, information technology, team composition, and external leadership. The re-search looks at the effects of self-leadership on team characteristics and processes, examining task characteristics, interaction processes and team identity. It also examines the outcomes of team self-leadership, providing a nuanced picture with context-dependent effects on performance, creativity, commitment, job satisfaction and team learning. The paper outlines a research agenda and identifies three avenues for future research: Conflict management in relation to self-leadership, the impact of individuals on team self-leadership, and external factors influencing self-leadership.

HR: **Innovating for the Future: AI and HRM Capabilities for Sustainability in Higher Education**

Author: **Tricia C. Cleland Silva**, *Metropolia U. of Applied Sciences*
Author: **Mika Hämäläinen**, *Metropolia U. of Applied Sciences*

This paper investigates the intersection of sustainability strategies and artificial intelligence (AI) in Human Resource Management (HRM) with a Finnish University of Applied Sciences as its case study. Drawing from a multi-level framework, the paper explores and discusses the interplay of barriers and drivers shaping sustainability practices in teaching and the potential of leveraging AI for consistent messaging and accountability to the organizational goals. The historical evolution of AI in HRM is presented with an emphasis on the need for strategic frameworks. The research design uses a cross-disciplinary approach, focusing on case study analyses within the educational context. Preliminary findings reveal a gap in translating institutional and strategic sustainability capabilities into operational practices, prompting the introduction of AI plugins for enhanced accountability and transparency in the digital learning platform. The study concludes with recommendations for future research, emphasizing the potential of AI in HRM system and practices to drive sustainability in higher education.

HR: **Generative AI as a Strategic Intelligent User Interface for Human-AI Collaboration**

Author: **Chien-Chi Tseng**, *Virginia Tech*

How can firm workers establish the collaboration between humans and artificial intelligence (AI) using generative AI through the intelligent user interface? This paper delves into the emerging role of generative AI for key users in firms, addressing the gap in understanding its potential for fostering unique human-AI collaboration. Introducing the concept of the Intelligent user interface, the study emphasizes its critical role in enhancing human-AI synergies. It outlines the machine learning paradigms necessary for developing effective intelligent user interfaces and examines the strategic paradigm planning under which these learning paradigms can amplify generative AI capabilities. The paper offers insights into the benefits of integrating generative AI in strategic environments, providing a comprehensive framework that links generative AI user similarity and diversity initiatives with effective human-AI collaboration.

Discussant: **Marlon DeMarcie Twyman**, *U. of Southern California, Annenberg School for Communication and Journalism*
Discussant: **Aaron Schecter**, *U. of Georgia*
Discussant: **Thomas Grisold**, *HSG U. of St. Gallen*

This PDW is designed for interactive discussion and community building on Computational Social Science (CSS) in management studies. In this first edition at AOM, expert leaders in this interdisciplinary field will discuss 1) how they have conducted their research ideas incorporating computational methods, 2) the achievements and gaps of CSS in management research, and 3) the potential future and directions that CSS can bring. The session will consist of three parts. At the beginning of the workshop, the presenters will share their experiences and prompt the participants with issues and challenges to explore for research at the intersection of CSS and management research. Participants will then engage in roundtable discussions to address topics suggested by the presenters. The session will conclude with a plenary discussion, and presenters will act as panelists. The workshop aims to identify research opportunities and challenges at the intersection of CSS and management, and to foster a community of interdisciplinary researchers centered on employing CSS approaches and techniques to advance management theories and methodologies.

A Matter of Inclusion: Mental Health in Academia

Facilitator: **Richard Longman**, *The Open U., United Kingdom*

Facilitator: **Paulina Segarra**, *U. Anáhuac México*

Facilitator: **Florence Villeseche**, *Copenhagen Business School*

Facilitator: **Kristin Samantha Williams**, *Acadia U.*

Mental health in academia has been a topic which has been touched upon by different scholars; however, we believe that we need to create spaces that allow those with similar struggles and concerns to connect in order to feel included and heard. The aim of this workshop is to open a safe space for participants to share their own experiences and concerns regarding mental health and how the PhD experience has had an impact on it. We believe that opening this kind of space can allow for more open conversations which will help to somewhat destigmatize these issues which most scholars have faced in different ways and levels. We are hoping that this will allow for a sense of community and for scholars to feel not only heard but seen. The idea of this workshop is for attendees to share their own experiences and coping mechanisms – although facilitators can and are willing to share their own experiences. – We believe that this kind of talk needs to be normalized and encouraged for us as scholars to be part of a community which sometimes struggles but can thrive together.

Mindful Innovation: Impacting Individual and Collective Flourishing

Organizer: **Joan F. Marques**, *Woodbury U.*

Panelist: **Sandra A. Waddock**, *Boston College*

Panelist: **Ian Mitroff**, *U. of California, Berkeley*

Panelist: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*

The overarching premise of this symposium is to underscore the importance of mindfulness practices amongst stakeholders, especially people attempting creative innovations, both social and of other sorts, in the context of today's polycrisis, the intersecting set of civilization threatening crises now facing businesses and other institutions. Mindfulness has the ability to ignite positive changes its practitioners through increased self-transcendence and an orientation towards the good of the whole, whether organizational or socio-ecological, which means, that mindfulness is beneficial to its practitioners in multiple settings. Mindful awareness of what is happening now, in this context, we argue is essential to understanding when, where, and how innovations are needed and can take place. Such innovations need not always be technological. Sometimes they are social, requiring new ways of interacting and engaging in and outside of the workplace to cope with the myriad of issues now facing businesses and all other institutions.

Shareholder Activism and Societal Challenges

Organizer: **Torben Trapp**, *U. of Edinburgh*
Organizer: **John Matthew Amis**, *U. of Edinburgh*
Discussant: **Gerald F. Davis**, *U. of Michigan*
Presenter: **Maria Goranova**, *U. of Wisconsin, Milwaukee*
Presenter: **Rieneke Slager**, *U. of Groningen*
Presenter: **Margarethe F Wiersema**, *U. of California, Irvine*

This presenter symposium engages with the overarching question of how shareholder activism affects societal challenges. While shareholder activism research has gained popularity in recent years, too little is still known about its effects on broader societal problems such as climate change or economic inequalities. Particularly, when accounting for a substantial increase in ownership concentration of assets over recent years, that are managed by fewer and ever more powerful, and oftentimes institutional, investors. These investors have been successful in using shareholder activism to bring about organizational change, reshape priorities of target firms, and affect their agenda on climate change and other societal outcomes in various ways. In this symposium, we will unpack the inherent complexity within this powerful industry, understand more about specific types of institutional investors, learn how intermediaries play a role in shaping their agenda, and discuss how it affects the agenda of firms when some of their largest investors are simultaneously invested in their market competitors.

Field Experiments in OSCM: Sharing Experiences and Incubation

Organizer: **Henrik Franke**, *U. of Cologne*
Organizer: **Katie S. Wowak**, *U. of Notre Dame*
Organizer: **Daniel Kwasnitschka**, *Swiss Federal Institute of Technology Zurich, ETH*
Organizer: **Fabian J. Sting**, *U. of Cologne*
Organizer: **Rogelio Oliva**, *Texas A&M U.*
Organizer: **Aravind Chandrasekaran**, *Ohio State U.*

Field experiments are among the most interesting and powerful methodologies since they involve gathering evidence that can support causal claims immediately in practice. Still, field experiments are an emerging methodology in the empirically oriented journals that are most present in the Academy of Management Operations and Supply Chain Management (OSCM) division. This PDW is hosted by a group of authors and journal editors that have recently conducted or edited field experiments to share their experiences and to incubate new field experimental research. The workshop is designed for participants of all experience levels, be it an initial interest in field experiments, already set up plans for field experiments, or hands-on experience that can be added to the discussion for collective learning. The first half of this PDW will focus on disseminating these learnings from conducting and editing field experiments in OSCM in the division and to re-discover field experiments as an interesting and impactful methodology. The second half of the PDW will break the participant group out into roundtable discussions to develop ideas and define action plans for field experiments, ideally based on materials and elevator pitches that participants can provide at the tables. Each roundtable will be facilitated by at least one scholar that has hands-on field experiment experience. This PDW does not provide a comprehensive methodological guide but shares personal experiences and learnings. The workshop is open to all divisions and kindly asks participants to register before attending (franke@wiso.uni-koeln.de). Spontaneous attendants are welcome as well.

Green Innovation in China

Session Moderator: **Mengge Wang**, *Tongji U., Shanghai, PR. China*

STR: **Number of Green Patent Applications and Stock Market Reactions: A Signaling Perspective from China**

Author: **Xikai Yu**, *School of Management, Shanghai U.*

Integrating signaling theory and organizational reputation theory, we examine how stock market investors interpret firms engaged in green invention patent applications or green utility model applications. We theorize that the effect of a firm's number of green invention patent applications and green utility model applications (which signals its tendency to engage in environmental practices) on the stock market reactions of investors is contingent on the firm's environmental performance (which signals its actual environmental practice capability). Based on 2,754 observations for 548 Chinese manufacturing firms from 2011 to 2019, we find that when the environmental performance is low (high), the effect of the number of green invention patent applications on stock market reactions is negative and significant (positive and significant). In contrast, when the environmental performance is low (high), the effect of the number of green utility model applications on stock market reactions is positive and significant (non-significant). These findings are robust to a series of additional tests. Our study contributes to research on signaling theory, organizational reputation theory, and green patent.

STR: **Systemic Risk Management Perspective: Common Institutional Ownership and Corporate Green Innovation**

Author: **Hao Huang**, *Huazhong U. of Science and Technology*

This study takes Chinese listed companies as the research object to investigate the impact of joint institutional ownership on corporate green innovation. The study found that common institutional ownership significantly promoted corporate green innovation. For the motivation of systematic risk management, common institutional owners will promote corporate green innovation by reducing agency costs and improving corporate information transparency. When common institutional ownership is a green investor and the industry in which the enterprise is located is a highly polluting industry, the role of common institutional ownership in promoting green innovation is more obvious. This study further distinguishes the types of green innovation and finds that common institutional ownership promotes collaborative green innovation among firms. This paper has enriched the research on the synergistic effect of common institutional ownership, and also provided useful enlightenment for regulatory authorities to standardize and guide common institutional ownership to promote green innovation of enterprises.

STR: **Digital Transformation and Green Innovation: A Resource Orchestration Perspective**

Author: **Yapu Zhao**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Miao Feng**, *Nanjing U. of Aeronautics and Astronautics*
Author: **Yusi Jiang**, *Donghua U., Glorious Sun School of Business and Management*

While there is industry consensus on digital transformation as an effective means to address the resource dilemma in green innovation, scant research has delved into the relationship between digital transformation and green innovation at the firm level. Building upon prior studies elucidating digitalization through the resource-based view, this paper employs resource orchestration theory to investigate the causal link between digital transformation and firm-level green innovation, along with its boundary conditions in terms of "who, where, and when". Using a longitudinal dataset of Chinese publicly manufacturing firms for the period 2007–2018, we find that digital transformation can facilitate firm green innovation. Additionally, this relationship is weakened when the firm displays a greater de?ciency gap (when) and a higher level of managerial myopia (who), as well as when the firm spans few structural holes in board interlocks (where). This study contributes to research at the intersection of digital transformation, green innovation, and resource orchestration.

STR: **Can Green Subsidies Really Promote Firms' and Peers' Substantive Green Innovation?**

Author: **Xuemei Xie**, *Tongji U.*
Author: **Mengge Wang**, *Tongji U., Shanghai, PR. China*

Previous research has indicated that green subsidies promote green innovation in recipient firms, yet whether green subsidies really promote substantive green innovation of recipient firms and whether green subsidies have a similar impact on the green innovation strategies of non-recipient firms have rarely been discussed. Using data from 2,189 listed Chinese manufacturing firms, we conduct two studies to examine the impact of green subsidies on both substantive green innovation and strategic green innovation of recipient and non-recipient manufacturing firms between 2011 and 2020. In Study 1, we find that after receiving green subsidies, recipient firms are more likely to conduct strategic green innovation than they are to conduct substantive green innovation. Likewise, in Study 2, we find that recipient firms' green innovation activities are more likely to promote strategic green innovation than substantive green innovation in non-recipient firms. However, both studies show that firms with high digitalization capabilities tend to engage in substantive green innovation rather than strategic green innovation. Together, the two studies offer compelling evidence in support of our model based on the awareness-motivation-capability (AMC) framework, suggesting that firms translate the awareness of various signals into a motivation to pursue innovation to develop different green innovation strategies.

Boards of Directors

Session Moderator: **Thomas Markus Zellweger**, *U. of St. Gallen*

STR: Anticipatory Impression Management in Earnings Conference: Motivation, Casting, and Market Reactions 

Author: **Lu Ye**, *U. of Melbourne*
Author: **Helen Wei Hu**, *U. of Melbourne*
Author: **Daejeong Choi**, *U. of Melbourne*

This study sheds light on how publicly listed firms in China might use earnings conferences for the purpose of anticipatory impression management (AIM) to proactively build a positive image before the disclosure of negative events. Study the specific event timeline—after committing financial misconduct but prior to regulators' misconduct announcement—we predict that firms aim to use earnings conferences as an AIM tactic. Besides, the number of earnings conferences will increase with the severity of the misconduct. Moreover, considering the significant impact of qualitative information delivered through earnings conference on investor perceptions, we highlight the casting (i.e., the attendance of independent directors) of such AIM conference, which hinges on the independent directors' AIM value for the focal firm and their monitoring capabilities in detecting financial misconduct. Lastly, we also posit that AIM conferences will positively influence investors' perceptions, thus buffering market reactions to misconduct announcements. Based on data from all Chinese-listed firms that committed financial misconduct from 2016 to 2020, we identified 122 AIM conferences, providing strong evidence to support our hypotheses.

STR: Capitalizing on the CFO: Interfirm Linkages and Foreign Debt Capital in Emerging Markets 

Author: **Anish Purkayastha**, *U. of Sydney Business School*
Author: **Christine Shropshire**, *Arizona State U.*

Access to foreign capital can be crucial to emerging market firm (EMF) growth, yet we know little about how emerging market CFOs gain access to foreign debt capital (FDC) or its implications for subsequent strategic and economic outcomes. We draw from extensive research on board interlocks and the diffusion of strategies in our study of the top 500 Indian firms over the previous decade. We conceptualize mediated legitimacy as the means by which FDC may be legitimized for an emerging market CFO, while EMFs themselves gain legitimacy in the eyes of foreign lenders through their CFOs' connections to other firms with FDC experience. Further, we consider moderating governance effects of ownership and board structure, as well as the second-stage impact of FDC on firm strategies and performance. We find support for our hypothesized relationships, offering new insights into research on interlocks, legitimacy and corporate governance alongside the role of the CFO and FDC in emerging markets.

STR: When the Main Owner is the Board Chair: Too Much of a Good Thing for Stakeholders and Firm Growth

Author: **Sebastian Sigg**, *U. of St. Gallen*
Author: **Thomas Markus Zellweger**, *U. of St. Gallen*

We study 'owner duality', hence when an individual is the largest owner of a firm and simultaneously serves as the firm's board chair. To explore the firm growth implications of owner duality, we analyze a sample of publicly listed U.S. firms under control of individual owners. Upon dissecting owner duality into its two constituent elements, namely ownership concentration and board chair position, we find that ownership concentration in the hands of individuals by itself promotes firm growth. However, when ownership concentration is combined with the board chair position, firm growth suffers. Examining the causal mechanism underlying this negative effect, we find that owner duality engenders controversies with non-shareholding stakeholders, which harms their commitment to the firm and undermines growth. We find that executive ownership is effective while board independence is ineffective in curbing the growth penalty tied to owner duality. Our study introduces the concept of owner duality to the literature and adds to the new stakeholder theory of the firm.

STR: Regaining Legitimacy Post Product Recalls and Role of Board Characteristics

Author: **Mohammad S K Shazzad Hossain Sikdar**, *Colorado Mesa U.*
Author: **Gurdeep Singh Raina**, *The U. of Texas, Permian Basin*

In the contemporary business landscape, product recalls have become an increasingly prevalent phenomenon, often stemming from safety concerns or manufacturing defects. These crises can inflict significant damage on a firm's reputation and erode stakeholder trust. Extant research suggests that to regain legitimacy and restore stakeholder confidence, firms strategize actions and communications. However, it remains unclear how different board characteristics shape the series of actions that we refer to as "legitimacy regaining actions" or LRA. This study explores the dynamic interplay between board characteristics and firm's LRA following severe product recalls. Drawing on Expectation Violation Theory and Upper Echelons Theory, we posit that board independence and national diversity positively moderate the relationship between recall severity and LRA while board size does the opposite. The study also presents a nuanced view of how the interplay between board characteristics and recall severity affects firm's legitimacy regaining actions. Based on a sample of 708 drug recall events and 8496 firm-year observations from 2002–2016, we find support for our theorization. This study offers valuable insights for scholars and practitioners in navigating the complex landscape of organizational legitimacy in the aftermath of severe product recalls.

Intermediary Strategy and Structure

Session Moderator: **Bowen Zhou**, *Singapore Management U.*

STR: **Growth Challenge, Platform, and Optimal Growth Rate** 

Author: **David M. Gomulya**, *Singapore Management U.*

Author: **Bowen Zhou**, *Singapore Management U.*

Author: **Xuesong Geng**, *Singapore Management U.*

Although growth is essential for the ultimate success of firms, existing strategy studies remain relatively silent on the effect of firm growth on firm success. This study advances our understanding by examining the relationship between firm growth rate and survival in digitalized era, focusing especially on how it is influenced by platform vs. non-platform business model. Examining this question in listed information-driven firms in the early 2000s, this study offers new insights on the growth strategy of firms. Confirming limited prior empirical findings, we found that even in a largely information-driven industry and in a traditional business model (i.e., non-platform), a faster growth rate can improve firm survival although, beyond a certain point, the relationship will reverse. However, in the case of platform business model, we show that the earlier U-shaped relationship between growth rate and failure will reverse to be more inverse-U-shaped although with a flatter curvature. We also show how firms adopting platform business model face a significantly increased failure risk on average. We detailed our various theoretical contributions in this emerging literature.

STR: **How Complementors Respond to First-Party Complement Provision: The Moderating Role of Multihoming**  

Author: **Xiaowei Zhang**, *Tilburg U.*

Author: **Xavier Martin**, *Tilburg U.*

Author: **Niels G. Noorderhaven**, *Tilburg U.*

We study how complementors respond to the competitive dynamics between platform owners and complementors, specifically in relation to the decision of the platform owner to enter a game genre with a first-party complement (FPCP). We hypothesize that first-party complement provision has a negative effect on the number of subsequent newly released third-party complements, because of the increased within-genre competition. However, this negative effect will be mitigated if the genre has recently experienced a loss of common pool resources, as indicated by an increase in multihoming-to-other-platforms complements. This is because first-party complements help re-establish the platform's distinctiveness and thus its attractiveness for complement providers. Our analysis of the US video game industry from 1995 to 2005 offers general support for these hypotheses. Additionally, we provide an extensive set of robustness and supplemental mechanism analyses and explore complementors' long-term reactions to FPCP, revealing that their responses depend on the extent of common pool resource depletion and the frequency of FPCP.

STR: **Embracing Short Video Era: The Impact of Bilibili's Launch of Story Mode on Content Creators**

Author: **YIN WU**, *School of Economics & Management, Tongji U.*

Platform companies often govern their complementors through design changes. Despite the popularity of platform governance and complementors' responses, previous research has typically overlooked the impacts of complementors' status and products on shaping their responses. In this study, we explore how content creators respond to Bilibili's introduction of Story Mode, a new module focusing on short videos. Our findings reveal that, in response to this introduction, long-video creators tended to reduce video duration and increase update frequency more significantly than short-video creators. However, these effects were less pronounced among high-status creators. Our research sheds light on complementors' response strategies to platforms by emphasizing the impact complementors' status and their products' features.

STR: **Targeting incentives in intermediary markets**  

Author: **Oliver Gürtler**, *U. of Cologne*

Author: **Matthias Heinz**, *U. of Cologne*

Author: **Kai Schäfer**, *U. of Cologne*

Author: **Dirk Sliwka**, *U. of Cologne*

Author: **Max Thon**, *U. of Cologne*

We investigate how to motivate resellers in intermediary markets. We collaborate with a large travel company and run an RCT with more than 1,000 independently owned resellers, which sell the firm's own but also its competitors' products to end customers employing sales agents. We compare the impact of different monetary incentives schemes with improved services provided to sales agents to facilitate their selling efforts. We find that (i) providing sales agents with better services increased sales and profits, (ii) higher commission payments to the agencies' owners had no discernable effects, but (iii) directly incentivizing sales agents through vouchers raised sales for agencies with low prior commission rates but not overall profits. We analyze potential underlying mechanisms using survey data and further administrative data.

Divestitures

Session Moderator: **Cheng-Wei Wu**, *National Taiwan U.*

STR: **Structural Fragmentation and Acquisition Performance: The Role of the Target's Corporate Strategy**

Author: **Louis Mulotte**, *Tilburg U.*

Author: **Marco Testoni**, *Miami Herbert Business School*

In this study, we investigate how the performance of an acquisition is influenced by the acquisitions and divestitures previously conducted by the target firm. By combining insights from the corporate strategy literature and organizational structure research, we propose that the efficiency of an acquisition's post-merger integration phase is negatively affected by the target's levels of structural fragmentation, which, in turn, are increased by acquisitions and reduced by divestitures. Based on this perspective, we hypothesize that the performance of an acquisition worsens as the size of assets acquired by the target prior to the acquisition increases, particularly if those assets are unrelated to the target's core business. Conversely, we suggest that the performance of an acquisition improves when the target has divested assets, especially if they are unrelated to its core business. To support our viewpoint, we analyzed data from a sample of acquisitions announced between 1985 and 2019 among U.S. public firms. The results strongly support our claims, making a significant contribution to the corporate strategy literature, expanding research on organizational structure, and providing valuable managerial insights about how to maximize acquisition performance.

STR: **Parent Firm Network Dynamics and Foreign Subsidiary Divestment**

Author: **Jianhua Ge**, *Renmin U. of China*

Author: **Jane Lu**, *City U. of Hong Kong*

Author: **Xiangting Wu**, *U. of Minnesota*

Why divest foreign operations and which subsidiary to close? This study seeks to advance our understanding of foreign divestment by offering a novel explanation from a dynamic network perspective. We posit that subsidiary exit can bring potential network changes to parent firms, the parent firms thus need to weigh the possible network losses in determining whether and which subsidiary to close. This argument gains robust support from our analysis of Japanese firms' foreign investment data between 1994 and 2019. We find that the greater the expected losses in a parent firm's network position (i.e., centrality, status, and brokerage opportunities) resulting from the exit of a foreign subsidiary, the less likely the subsidiary will be closed. Moreover, while the parent firms have strong motives to close the poor-performing subsidiaries, we find that they do adjudicate between performance and network such that those subsidiaries are poor in performance but important in the network may not be closed. We further reveal that such network impacts in a parent firm's foreign divestment decisions are contingent on its international orientation and geographic proximity with its neighboring firms. These findings shed new light on foreign divestment and contribute to the literature on network changes and corporate behaviors.

STR: **Two Sides of the Same Coin: Divestitures and Alliances as Joint Forces in Innovation**

Author: **Lok Ting Chan**, *National Taiwan U.*

Author: **YUTAO BIAN**, *National Taiwan U.*

Author: **Cheng-Wei Wu**, *National Taiwan U.*

This study aims to bridge a gap in divestitures literature by examining the interplay between divestitures and the formation of alliances. Our mechanism is divided into two dimensions following divestitures: 'where to search', signifying the pursuit of distant opportunities, and 'how to search', indicating the adoption of alliances to leverage this pursuit. The finding shows that firms undertaking divestitures achieve more innovation outputs in the exploratory domain, as opposed to the exploitative domain, relative to their non-divesting counterparts. To amplify exploratory innovation, firms can form alliances that focus on specialized technology after divestitures, thereby improving the learning effect, as suggested by organizational learning theory. Such alliances not only help firms recover lost resources but also enable them to refocus more on innovative activities in highly competitive industries. Overall, our study highlights the importance of the combined impact of divestitures and alliances in adapting to the rapidly evolving technological landscape.

Zooming in on Employees

Session Moderator: **Fernando Deodato Domingos**, *FGV-EAESP*

STR: The Effects of Corporate Staff: A Missing Element in the Research on Strategic Decision Making

Author: **Katsuhiko Shimizu**, *Keio U. Japan*

In this study, we pay attention to corporate staff members who help top management and influence strategic decisions in various ways, a topic that has not received much academic attention. Echoing the repeated call for more research on the microfoundations of strategy and organizations, we develop a preliminary behavioral model that captures the realities of corporate staff in an organization. Contrary to the prevalent emphasis in practitioner-oriented literature, which underscores the importance of corporate staff due to the potential overconfidence and biases of top managers, our study argues and demonstrates two key points: (1) corporate staff may not be as effective as conventionally anticipated for analogous reasons, and (2) consequently, the cultivation of political savviness emerges as a crucial factor for corporate staff in helping strategic-decision makings of top management. These hypotheses are examined through the analysis of survey data gathered from 54 major Japanese firms.

STR: Bearing the Burden: The Effects of Corporate Social Irresponsibility on Employees

Author: **Ligia Azevedo-Rezende**, *USC Marshall School of Business*
Author: **Fernando Deodato Domingos**, *FGV-EAESP*

This paper examines how Corporate Social Irresponsibility (CSI) affects the employees of irresponsible companies. Using an employer-employee matched dataset from Brazil, we investigate whether two major CSI events involving large Brazilian companies led to spillovers to their employees. First, employing a synthetic control method, we find that CSI sharply increases the turnover rates of the offending companies at the time of the event. Second, by expanding the investigation to the individual level, we find that employees who leave the irresponsible firms spend more time out of the formal labor market and make less money over time compared to people leaving companies not involved in CSI scandals. This paper goes beyond the traditional firm-level research on CSI and provides large-scale empirical evidence of the impact of CSI effects on workers, suggesting a reputational spillover effect from irresponsible firms to their employees.

STR: Triggered: How Stakeholder-Specific Activation Counters Employee and Shareholder Apathy toward CSR

Author: **Michael J. Mannor**, *U. of Notre Dame*
Author: **Henrique Ribeiro De Alencar Goncalves**, *U. of Notre Dame*

Do stakeholders notice or care when top executives focus on corporate social responsibility (CSR)? Although stakeholders overwhelmingly express personal interest in socially responsible policies, they are inundated on a daily basis with a wide array of information and have been shown to focus little attention on a firm's guiding logics. We draw from activation theories to argue that situationally-relevant, visible, and accessible activation triggers are needed to induce stakeholder responses. We develop frameworks for understanding both trigger emergence and different types of triggers. Analyzing thousands of earnings call transcripts, market-to-book ratios, social media posts, charitable donations, political contexts, and millions of Glassdoor.com employee ratings for S&P1500 firms over 13 years, we also find that neither shareholders nor employees significantly react to a firm's attention toward a CSR logic. However, we do identify a range of triggers that activate employee and/or shareholder responses. Triggers emerge from individual, firm, industry, and institutional levels of analysis, from internal and external sources, involve both dispassionate and emotionally-charged information, and from both critical events and continuous information flows. In doing so, we provide a framework for both managers and scholars to better understand when stakeholders will react to a firm's embrace of new institutional logics.

STR: Thankless Task: Female CEOs, Workplace Safety, and Employee External Whistleblowing

Author: **Junfeng Wu**, *U. of Texas at Dallas*
Author: **Yilin Liu**, *U. of Texas at Dallas - Jindal School of Management*
Author: **Cuili Qian**, *UT Dallas*
Author: **Zhiang Lin**, *U. of Texas at Dallas*

Taking a more holistic view that incorporates both the benefits of female chief executive officers (CEOs) and the stereotype biases faced by them, this study integrates upper echelons theory with theories of social role and role congruity to uncover a unique dilemma faced by female CEOs in the context of workplace safety. On the one hand, drawing upon the behavioral differences perspective of female leadership derived from social role theory, we argue that female CEOs are more attentive to the health and safety of their employees, resulting in fewer workplace injuries. On the other hand, based on role congruity theory, we argue that female CEOs suffer from the bias in leader evaluations when there are organizational health and safety related issues, leading to more employee external whistleblowing. Further, we argue that the effect of female CEOs on the reduction in workplace injuries is accentuated, but on employee external whistleblowing is attenuated, when the CEO has a longer tenure. Analyzing a sample of 33,913 establishment-year observations from 694 unique firms, we found support for the predictions. Our research contributes to the strategic leadership literature by integrating two prevailing accounts of female leadership in the context of workplace safety and revealing significant challenges facing female CEOs.

Program Session: **703** | Submission: **14760** | Sponsor(s): **(STR)**

Scheduled: **Sunday, Aug 11 2024 10:45AM - 12:15PM CT (UTC-5)** at **Sheraton Grand Chicago in Superior B**

Risk or Opportunity? Firm Strategies in the Face of Policy Uncertainty and Disruptions

Organizer: **Gianni De Bruyn**, *Darla Moore School of Business, U. of South Carolina*

Organizer: **Angela Soomin Ryu**, *Columbia Business School*

Panelist: **Luis Ballesteros**, *Boston U. Questrom School of Business*

Panelist: **Shon R. Hiatt**, *U. of Southern California*

Panelist: **Yongwook Paik**, *KAIST College of Business*

Panelist: **Stephanie L. Wang**, *Indiana U., Bloomington*

Businesses increasingly deal with a complex (geo)political environment, resulting in high uncertainty and ambiguity. Policy uncertainty is generally seen as a barrier to clear decision-making, investment, and production, yet it also presents opportunities for businesses to navigate and potentially exploit this uncertain environment. This raises the question of whether policy uncertainty is a risk, an opportunity, or both. We delve into the key question of what type of firms are more vulnerable to, protected from, or capable of leveraging these uncertainties. In doing so, we first focus on clarifying the concept of uncertainty at different levels (e.g., global, national, industry, firm) and the different types and sources of uncertainty (e.g. financial, regulatory, geopolitical, corporate wrongdoing). In this symposium, the panel will provide insights into different types of uncertainty and their nuances, encompassing domestic and international perspectives. Further, we will discuss methodologies, data, and innovative research designs, setting the stage for addressing the critical questions that will shape the next decade of research on policy uncertainty and firm strategies.

Navigating Multiple Goals in a World of Polarized Stakeholders

Organizer: **Saeedeh Ahmadi**, *Amsterdam Business School, U. of Amsterdam*

Panelist: **Dongil Daniel Keum**, *Columbia Business School*

Panelist: **Flore Bridoux**, *Erasmus U.*

Panelist: **Henrich Greve**, *INSEAD*

Panelist: **Claus Rerup**, *Frankfurt School of Finance & Management*

Discussant: **Aseem Kaul**, *U. of Minnesota*

This symposium builds upon the showcase symposium on multiple goals held at the 2023 Boston Academy of Management. Building on the theme of organizational challenges to managing multiple goals (Cyert and March 1963, Simon, 1972), this session extends previous work and zeroes in on multi-stakeholder management as a key context under which managers are compelled to prioritize specific goals and navigate the repercussions of deprioritized goals. While the symposium offers a brief review of the related body of work from different perspectives, it will focus on providing a perspective on promising future research directions.

Panelist: **Theodor Lucian Vladasel**, *U. Pompeu Fabra and Barcelona School of Economics*
Panelist: **Tiantian Yang**, *U. of Pennsylvania*

Research on social class as a source of inequality in established organizations has enjoyed increased attention in scholarly outlets and academic communities. However, explicit discussion of social class in entrepreneurship studies remains notably scarce. This is particularly surprising given the popular narrative of entrepreneurs moving from rags to riches. Nevertheless, a foundation for examining social class in entrepreneurship has already been laid. It is grounded in extensive scholarly discussion on topics such as necessity, poverty, and underdog entrepreneurship, as well as the impactful work on intersectionality and social inequality in entrepreneurship. This Professional Development Workshop (PDW) aims to integrate these diverse perspectives to foster dialogue and formulate a comprehensive research agenda on social class and entrepreneurship. To this end, the PDW will begin with a panel of distinguished experts from across disciplines, sharing insights on the foundational elements and questions pertaining to social class and entrepreneurship. Following the panel, thematic roundtables will facilitate discussion on related topics and prospective research directions. As part of the roundtable discussions, participants at each career stage will receive constructive feedback on their pre-submitted abstracts. A second panel discussion will feature emerging scholars sharing their perspectives on future research at this intersection, informed by their current research as well as themes emanating from roundtable dialogues. Ultimately, the PDW aspires to unite and support scholars already conducting research at this intersection and provide resources for those interested in joining the emerging conversation.

Participation in the entire PDW is open to all conference attendees and does not require an application. There is a call for abstracts for those interested in individual feedback on their research. Abstracts will be selected depending on the potential contribution to the PDW. Scholars across all career stages (including PhD students) are encouraged to submit. Please submit by July 9 (via <https://forms.gle/4mMGxBr2AP1v8kRr8>) an abstract of your (planned) research on social class and entrepreneurship with max. four double-spaced pages (all inclusive).

AOM Scholars On... How to Win at Work: Using Technology for Productivity and Innovation

Organizer: **Steve Whalen**, *Academy of Management*

Moderator: **Margaret E. Heffernan**, *RMIT U. + MED PDW Chair-elect*

Panelist: **Hila Lifshitz-Assaf**, *Warwick Business School*

Panelist: **Leon Prieto**, *Clayton State U.*

Panelist: **Matt Beane**, *U. of California, Santa Barbara*

In line with the 2024 Annual Meeting theme –Innovating for the Future– this AOM Subject Matter Expert panel will address the dramatic technological shifts as well as the ever-changing workplace complexities at the intersection of innovation, policy, and purpose. Helping to answer the questions on how organizations and managers can create policies (at macro, meta, and micro levels) that strike a balance between regulating the use of emerging technologies, such as artificial intelligence (AI) and chat bots, and incentivizing innovation that aligns with responsible, purpose-oriented growth? This panel offers research-driven insights into solutions and next steps.

Panelist: **Alona Revko**, *Oxford U., Saïd Business School*

Over the past two decades, research and practice in social entrepreneurship, innovation, and impact have transitioned from the margins to the mainstream. Not only have these topics become central to organization and management theory, but they are also now on the agenda in corporate boardrooms and global policy arenas, including the UN, OECD, World Economic Forum, and World Intellectual Property Organization. From addressing climate change to promoting gender and racial equity, social entrepreneurship and innovation are seen as promising approaches for tackling ‘grand challenges’ and ‘wicked problems’. However, are research and practice up for the task? What can the existing scholarship tell us about the future? What questions remain unanswered? This panel symposium will reflect on lessons learned from the past two decades of research on social entrepreneurship, innovation, and impact and highlight opportunities and challenges for the future of the field. The discussion will be based, in part, on a Global Innovation Index Special Topic Report evaluating the state of social entrepreneurship globally. We will bring together a unique group of voices, including researchers who have contributed to building the field and those at the field’s frontier. By bringing together these scholars, this symposium will provide an opportunity to learn about the state of social entrepreneurship, innovation, and impact in 2024, hear concerns from researchers and practitioners, and inspire future scholarship in both unexplored and high-interest subfields.

Testing Causal Mechanisms of the Decision-Making Process in Corporate Governance

Organizer: **Ilaria Orlandi**, *Copenhagen Business School*
Organizer: **Radina R. Blagoeva**, *U. of Georgia*
Panelist: **Sam Garg**, *HKUST Business School*
Panelist: **Vilmos F. Misangyi**, *Pennsylvania State U.*
Panelist: **Tessa Recendes**, *Penn State Smeal College of Business*
Panelist: **Joanna Tochman Campbell**, *U. of Cincinnati*
Panelist: **Timothy J. Quigley**, *U. of Georgia*
Panelist: **Michael C. Withers**, *Texas A&M U.*

In pursuit of strong theoretical contributions and theoretical advancements in the management field, scholars have emphasized the need for methodological rigor and the importance of robustly testing the claimed theoretical mechanisms. While experiments remain the “golden standard” of establishing causality and testing theorized mechanisms, they might not be feasible or easily implementable in many macro fields, including the field of corporate governance and strategic leadership, where access to corporate leaders to conduct experiments is limited. Scholars in corporate governance who rely heavily on archival data need different tools to overcome the challenges associated with rigorously testing their theories. The purpose of this PDW is to equip participants with some vanguard tools to enhance their methodological rigor in testing the theoretical mechanisms in corporate governance by engaging a group of expert panelists in a moderated and interactive discussion. During this PDW, six panelists will share their thoughts on (1) how to navigate matching the methodology with the mechanisms they theorize about, (2) which steps to follow when designing a study (having in mind the review process), and (3) what are the major opportunity and challenge of using a specific method in the corporate governance and strategic leadership field. The topics covered include the use of videometrics in corporate governance, publishing with novel archival data, dealing with endogeneity, the use of robustness tests and supplemental analysis to substantiate the testing of theoretical mechanisms, gathering and analyzing primary data in corporate governance, and the use of qualitative comparative analysis (QCA).

Using Abductive Methods in Management Research

Panelist: **Rajshree Agarwal**, *U. of Maryland*
Panelist: **David A. Kirsch**, *U. of Maryland*
Panelist: **Saku Mantere**, *McGill U.*
Panelist: **Lamar Pierce**, *Washington U. in St. Louis*
Panelist: **Grazia D. Santangelo**, *Copenhagen Business School*
Panelist: **Zhiyan Wu**, *Erasmus U. Rotterdam*
Organizer: **Seojin Kim**, *Drexel U.*
Organizer: **Sandeep Pillai**, *Department of Management and Technology, Bocconi U.*
Organizer: **Liyue Yan**, *BI Norwegian Business School*

This PDW brings together scholars with extensive experience in abductive methods to provide exemplary practices and guidance in effectively using abduction to publish research in top management journals, and share experiences in navigating the challenges of abductive research. During the panel session, speakers will engage in conversations about epistemological questions on abduction, share experiences in abductive research, and provide editorial perspectives. In the roundtables, speakers will join the audience in interactive discussions to further their understanding of the method and research development.

A World Where You Own Nothing? Demystifying Property Rights Theory

Organizer: **Kun Liu**, *Kent State U.*

Organizer: **Gideon D. Markman**, *Colorado State U.*

Distinguished Speaker: **Peter G. Klein**, *Baylor U.*

Distinguished Speaker: **Sharon Alvarez**, *U. of Pittsburgh*

Distinguished Speaker: **William S Hesterly**, *U. of Utah*

Distinguished Speaker: **Heli Wang**, *Singapore Management U.*

A world without property rights would not only mean no legal ownership or an inability to exclude others from using or accessing assets, resources, or property, it would also mean the absence of legal framework to establish and protect ownership. A lack of legal infrastructure would increase interfirm friction, reduce resource conservation, and economic development would decline due to a lack of incentives for investment and entrepreneurship. If having property rights is so central and valuable, why is it that management scholars appear to take property rights theory (PRT) for granted? What are the conceptual and empirical costs that management scholars pay when diverse fields—e.g., strategy, entrepreneurship, international business, innovation, and especially social and environmental issues and OB/HR—pay very little attention to PRT? The goal of this PDW is to address these questions and motivating more and deeper research on the role of PRT in resource preservation.

This PDW is about property rights theory (PRT). FORMAT 0:00-0:02 — Welcome: Gideon Markman (Colorado State University) 0:02-0:09 — Speaker 1: Peter Klein (Baylor University) -- What is PRT? 0:09-0:16 — Speaker 2: Gideon Markman -- Applied illustrations of PRT in real life 0:16-0:23 — Speaker 3: Bill Hesterly (University of Utah) -- Research questions that urgently need redressing 0:23-0:30 — Speaker 4: Kun Liu (Kent State University) -- PRT in the context of adjacent theories (TCE, RBV, etc.) 0:30-0:40 — Break 0:40-1:40 — 1st Breakout sessions (roundtable discussions of manuscripts). 1:40-1:50 — Break 1:50-2:50 — 2nd Breakout sessions (roundtable discussions of manuscripts; reshuffling attendees and organizers). 2:50-3:00 — Concluding remarks. PDW attendees will be divided into small groups, and each group will be headed by one of the organizers. Participants will describe their working projects and research questions by following this five-point prompt: 1. From prior research we know that... 2. Yet a complication comes about because... 3. This complication is of concern because... 4. To address this concern, we did... 5. Therefore, our paper makes the following 2 contributions... We'll conclude with an interactive discussion about avenues for future research and efforts to advance the theoretical development and application of PRT (~10 minutes).

Ventures and Corporations for a Sustainable Future

Organizer: **Riitta Katila**, *Stanford U.*

Organizer: **Anna Lukkarinen**, *Stanford U.*

Panelist: **Rodolphe Durand**, *HEC Paris*

Panelist: **Ioannis Ioannou**, *London Business School*

Panelist: **Dean Shepherd**, *mendoza*

Panelist: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*

Panelist: **Witold Jerzy Henisz**, *U. of Pennsylvania*

The purpose of this PDW is to advance rigor and coherence in sustainability research. As sustainability considerations are transitioning from peripheral to central among many ventures and corporations, this PDW addresses the imperative of advancing high-quality sustainability research. First, we will focus on crystallizing the sustainability construct and its boundaries. Second, we will discuss the need for research designs and measures that align with the multi-objective nature of sustainability-oriented businesses. Third, the workshop will capitalize on the diverse sustainability-related research streams across management fields to encourage cross-disciplinary dialogue and insights. We aim to seize these three opportunities with an interactive format. The session will engage participants through panelist speeches that include Q&A, a moderated panel discussion with audience participation, and revolving roundtables for personalized expert feedback on participants' work. We trust participants will leave the workshop inspired and equipped with tools and connections for making high-quality theoretical and empirical contributions to the emerging spectrum of sustainability research in management. Aligning aptly with the AOM 2024 theme "Innovating for the Future", the PDW provides essential insights into sustainable innovation in the complex contemporary economic, environmental, and social context.

Military Veterans in Business Education: Enhancing Integration and Inclusion

Participant: **Daniel M. Peat**, *U. of Cincinnati*

Participant: **Jaelyn Perrmann**, *Northern Kentucky U.*

Participant: **Victoria Buckley**, *U. of Cincinnati*

Military veterans individuals represent a distinct group of non-traditional students that enroll in business schools at higher rates than other academic programs. Their diverse experiences, teamwork, and leadership skills enrich business classrooms, yet their integration is often challenged by misconceptions, stigmas, and an overall lack of support. This interactive workshop addresses these issues by enhancing understanding of student veteran experiences, leveraging military experience in business courses, and fostering veteran and military-centric best practices for inclusion. The session highlights the critical role of management educators in supporting student veterans and creating more inclusive learning environments that enable military veterans to succeed in business education and their future careers.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Writing a Great Case That Students Will Love

Session Chair: **Karen MacMillan**, *U. of Western Ontario*
Presenter: **Brent D. Beal**, *U. of Texas at Tyler*
Presenter: **Meredith J. Woodwark**, *Wilfrid Laurier U.*

Educators who can write effective cases have the power to: fill in worrisome voids in a teaching plan; engage students with relevant, current material; gain a competitive edge by tailoring executive education programs; develop research ideas with practitioners; and, increasingly, receive publishing credit applicable to tenure decisions. Royalty payments can also make writing best-selling cases lucrative. This dynamic, interactive session will offer practical advice on how to tackle each step of the case writing process, including: determining what kind of case to write; finding leads in the field; collecting data; writing a well-liked case and teaching note; getting the case released and tested; and publishing the case.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Growing a Scholarship of Teaching and Learning Culture as a Pathway to Professional Development

Presenter: **Brendan Wehby-Malicki**, *Humber College Institute of Technology and Advanced Learning*

Presenter: **Emma Smith**, *Humber College*

Presenter: **Siobhan Williams**, *Humber College Institute of Technology and Advanced Learning*

Developing a research culture in the Canadian college/polytechnic context can be challenging due to structural factors such as high teaching loads and lack of time for research activities (Rosenkrantz, 2013). We will present our strategies and lessons learned from developing an inclusive Scholarship of Teaching and Learning (SoTL) research program at our institution. We have tackled these challenges by focusing on gradual development of both our programs and our faculty's skills and by providing flexible support in order to meet our community members' unique needs. Through a diverse series of offerings including internal grant funding, workshops, a research boot camp and a newly developed SEDA research certificate, our program aims to foster a sustainable and collaborative research culture. Participants will leave the session with insights and actionable strategies to develop and enhance SoTL research within their own institutional contexts.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Inviting Practitioners in the Classroom - Who, Why, How? From Passive to Engaged Active Learning

Participant: **Vincent Lefebvre**, *Audencia Business School*
Participant: **Franck Bares**, *HEC Montreal*

Inviting practitioners in the classroom represents a great opportunity for student learning as they enable to discuss careers, industries and businesses. To take the most of this opportunity, we should ask: (1) Who is the best practitioner for my group? (2) How to organize the visit? (3) What are the expected takeaways and how to measure them? In Entrepreneurship Education (EE), teaching what entrepreneurs do is a core component of entrepreneurial curricula. Each indirect testimonial or illustration of “what entrepreneurs do”, such as case studies, podcasts, videos, or books must be prepared with the same care than direct testimonials. Moreover, as educators, we play a crucial role in the social representation of what “being or becoming an entrepreneur” means. In each of our courses we mobilize several such direct and indirect illustrations, and each story participates to what students think about being or becoming an entrepreneur. The expected student outcomes might be challenging the theories we teach them by confronting them to the real-life experience of entrepreneurs, developing students’ self-efficacy by introducing role models with similar backgrounds, or creating a connection with the entrepreneurial ecosystem. Usual practitioner testimonials are rather indirect and passive. We introduce in this teaching & learning contribution a framework to better organize these testimonials and show how to transform them into an active learning experience using podcasts as a medium to build a relation between students and entrepreneurs.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM](#).

Creating a Growth Mind-Set in Classrooms

Presenter: **Mahbubul Alam**, *Algoma U.*
Presenter: **Jody Rebek**, *Algoma U.*

Individual students usually hold a belief about their own intelligence and ability. A teacher also develops individual student level beliefs about their intelligence and ability. These beliefs have significant implications for students' learning and achievement. Researchers have distinguished two categories of assumptions or beliefs concerning students' intelligence. They might have a fixed mindset that regards intelligence as a fixed characteristic: some pupils are intelligent, and that's that. A growth mindset, on the other hand, holds that intelligence may be developed through a variety of methods, such as effort and proper instructions. Studies demonstrate that having a growth mind-set is especially important for students who are laboring under a negative stereotype about their intelligence and abilities. Adopting a growth mind-set helps those students remain engaged and achieve well, even in the face of stereotypes. The proposed session will provide practical suggestions on how to create a growth mind-set in a class. Through various activities of short lecture, individual and group exercises, and class discussion, the participants will learn how to: 1) identify personal mind-set, 2) deal with personal believe about students of diverse backgrounds, 3) provide growth mind-set feedback on students' work, and 4) create a culture of growth mind-set in the classrooms. These takeaways will help participants to change their perspective on students' intelligence and provide tools and techniques to develop growth-mind-set classrooms.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Using Generative AI in Client-Based Experiential Learning Projects

Organizer: **Aimee Barbeau**, *U. of Illinois Urbana-Champaign*
Organizer: **Heejin Kim**, *U. of Illinois at Urbana-Champaign*

Business schools, and even higher education more generally, are adapting to a new, powerful tool in generative AI. Instructors struggle to help students practice ethical uses of generative AI that do not involve banning it altogether. While it may be easier to simply admonish learners to avoid using AI, that is neither a realistic expectation for college students, nor a beneficial approach given the use of AI in the workplace, the context business educators aim to prepare their students for. Moreover, it is challenging for students to learn appropriate use of AI on their own; rather, it must be actively taught, scaffolded, and modeled for them. The presenters incorporated generative AI into an existing 8-week long client-based experiential learning project undertaken by 800+ first-term business students at a public university in the United States. In the session, participants will be walked through how students were guided in their use of AI, both in terms of how to utilize it to improve client projects and how to use the tool ethically. Furthermore, participants will see findings from a survey and qualitative feedback from students on how students used AI in the project and what they learned about the appropriate use of AI. The session will help attendees envision how AI might be incorporated into existing assignments and courses while discussing some potential benefits and pitfalls of that integration.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

How to Create a Sense of Belonging in a Large Online Undergraduate Course

Presenter: **Elina Ibrayeva**, *Associate professor of practice management*

This presentation discusses three innovative assignments that can make your large online undergraduate management course more engaging for students. These three innovative assignments make student learning more personalized and meaningful (journaling), create faculty presence as well as a sense of belonging to the others in the class (small group zoom meetings) and to the school alumni (video interviews with alums). Participants will be asked to brainstorm the potential adaptation of these assignments in their own teaching practice as any of the assignments can be modified for multiple course formats (online, hybrid, or on-campus) and at any level (graduate and undergraduate). The goal of the presentation is to help participants become more skillful, confident, and pedagogically savvy teachers of their disciplines.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Transforming Education for Future-Proof Graduates with the Newly Developed Cognitive AI Framework

Participant: **Colin Fu**, *Surrey Business School*

Education is constantly evolving. To prepare students for future challenges, we propose a comprehensive approach, integrating advanced technology, precise educational assessment, and a commitment to equity, inclusivity, and community engagement. Central to this is the 5-level Cognitive AI Framework, evolved from 8-level structure that garnered considerable attention at various international conferences. The further streamlined framework harnesses technology for educational innovation and experiential learning, equipping students with future-ready skills in the AI era. This framework includes stages of exploration, enhancing inquiry-driven learning with AI; engagement, providing equitable technology access; examination, critically analysing AI outputs and biases; formulation, applying AI to practical, community-focused problem-solving; and reflection, focusing on AI's ethical aspects. This innovative approach blends practical, real-life learning with Generative AI technology, making education globally relevant and engaging. It promotes active problem-solving, bridging theory with real-world application.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

No Student Left Behind: Creating and Maintaining Inclusivity in the Classroom

Presenter: **Belgin Okay-Somerville**, *U. of Glasgow*

Session Chair: **Paul Hunter**, -

Presenter: **Adina Dudau**, *Adam Smith Business School, U. of Glasgow*

Presenter: **Alvise Favotto**, *U. of Glasgow*

Today's classrooms are more diverse than ever before. As educators, are we equipped to lead diverse teaching cohorts? In this interactive session we will work with the audience to develop tools for creating more inclusive and supportive learning environments. We will draw on our experience working with international students, mature students, and students with learning disabilities to explore what inclusive teaching means; discuss barriers to inclusivity in the classroom and share teaching methods for fostering a sense of belonging. Our aim is to equip ourselves and the audience with the tools to foster learning environments where – as our title suggests – no student is left behind.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

How to Create Assignments in a Chat GPT World: Adapted Activities and the Poster Project

Presenter: **Anita Boey**, *Trent U.*

The world has seen the steady development of AI in all industries, and AI has also made great waves in academia and education. With the introduction of every new technology, you get mixed reactions from it. Some instructors jump on the opportunity to use it in their classrooms, while others are more hesitant. This workshop will give participants the space to discuss the timely topic of how to create assignments in a ChatGPT world. We hold the assumption that learning is not about output; rather, it is about the process of doing and learning the content. Also, we cannot stop students from using ChatGPT, rather, we should adapt to this new tool. Presenters will share assignment ideas, in particular, poster projects; how to guide students on such projects and how to evaluate them. Participants leave the workshop with poster project instructions, guidebook, and grading rubric, plus the confidence to know that they can successfully facilitate such a project!

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Compensation Strategies: Insights into Pay Structures and Employee Motivation

Session Moderator: **Le Xu**, *Hofstra U.*

HR: **CEO-TMT Vertical Pay Gap and Firm Productivity: A Tournament Theory Perspective**

Author: **Le Xu**, *Hofstra U.*

Author: **Ajay Rama Ponnappalli**, *Wayne State U.*

Author: **Chen Wang**, *Western Michigan U.*

Prior research that focuses on the impact of the CEO-TMT vertical pay gap on firm performance has largely yielded equivocal findings. We address the equivocal findings by examining firm productivity, a more immediate reflection of TMT members' effort motivated by the CEO-TMT vertical pay gap. Drawing on tournament theory, we theorize that the increased CEO-TMT vertical pay gap will lead to higher firm productivity. We also contend that the positive relationship will be stronger when firms are headquartered in states with high noncompete enforceability and weaker when CEOs are outsiders. Using data from US public firms from 1993 to 2012, we find broad support for our hypotheses. Our study advances the scholarly understanding of tournament incentives in the form of the CEO-TMT vertical pay gap and provides practical implications on how boards of directors can incorporate tournament incentives into the design of executive compensation.

HR: **An Integrative Model of Performance Feedback Transparency**

Author: **Felix Bölingen**, *LMU Munich*

Author: **Peter Bamberger**, *Tel Aviv U.*

Author: **Ingo Weller**, *LMU Munich*

Integrating the performance feedback and organizational transparency literatures we develop and test a model that explains how and under what conditions performance feedback transparency influences employees' task and contextual performance. We conceptualize performance feedback transparency as the extent to which employees have a line of sight into their own and potentially their peers' performance metrics. The model predicts that performance feedback transparency can elicit both status concerns, with negative effects on task and contextual performance, and a learning focus, with positive effects on task but negative effects on contextual performance. We further theorize that narrative feedback and relative performance position function as boundary conditions, in that they both attenuate the effects of performance feedback transparency on status concerns and enhance the effects on learning focus. A laboratory experiment provides empirical support for the mediating mechanisms with respect to task performance, but not contextual performance. Furthermore, neither narrative feedback nor relative performance position were found to moderate the indirect effects of performance feedback transparency on performance outcomes. We discuss the implications of the theoretical and empirical findings for the feedback literature and the organizational transparency literature.

HR: **Horizontal Pay Dispersion and Organizational Performance: A Meta-Analysis**

Author: **Zhijie Xing**, *Zhongnan U. of Economics and Law*

Author: **Zhengtang Zhang**, *Nanjing U.*

Author: **Jinzhao Qu**, *Xi'an Jiaotong Liverpool U.*

Pay dispersion, one such pay structure property, has received increasing attention in management literature. However, there is currently no consistent evidence on the relationship between pay dispersion, especially horizontal pay dispersion, and organizational performance. In view of this, a meta-analysis was conducted to determine the magnitude of the relationship between horizontal pay dispersion and organizational performance, and test the moderating effect of five measurement characteristics (i.e., horizontal pay dispersion types, organizational performance types, horizontal pay dispersion measures, data source of pay and organizational performance, and data structure) and three sample characteristics (i.e., Location, industry, and job level) on the relationship. Through literature search, screening and coding, 37 studies (including 44 independent samples, 86 effect sizes, $N = 82632$) were identified. Results show that there is no statistically significant correlation between horizontal pay dispersion and organizational performance, and the strength of this relationship significantly varies across different types of horizontal pay dispersion and organizational performance.

HR: **Getting Educated on Pay Education**

Author: **Ormonde Cragun**, *U. of Minnesota, Duluth*

Author: **Lin Xiu**, *U. of Minnesota, Duluth*

Author: **Jason Kautz**, *U. of Texas at Dallas*

We introduce the concept of pay education as a structured and intentional organizational process for teaching and learning about pay systems, policies, and their implications. Distinct from pay learning, which is an individual's acquisition of pay-related knowledge, pay education is a formalized, guided approach emphasizing the organizational role in fostering pay knowledge. Rooted in adult learning and constructivist education principles, pay education is presented as a dynamic, interactive process, encompassing both the technicalities of pay components and the psychological and sociological factors influencing pay perceptions. We propose a model illustrating how this approach leads to improved understanding of pay, thereby enhancing decision-making, pay satisfaction, and equity perceptions among employees. The model highlights key phases such as program design and individual learning processes, emphasizing the transformation from a singular focus on individual learning to an organization-wide strategy in pay understanding. This approach significantly enriches the literature by challenging and expanding the inherent assumptions about learning in pay information disclosure and pay communications, offering a more comprehensive understanding of how organizations can effectively educate and engage employees in the complexities of pay systems and policies.

Participant: **Gilad Hirschberger**, *Reichman U.*

What really is a rivalry and can it truly come to an end? If a rivalry can end, who is the determiner and what consequences may arise from the termination? How rivalry is defined and measured, as well as who is asked, will determine the answers. This symposium considers the temporal nature of rivalries (i.e. potential termination) to explore whether Micro and Macro Management perspectives can be integrated and thus provide a platform for new predictions and research directions. Taken together, these talks collectively provide evidence that stakeholders may resist terminating existing rivalries, and engage in behaviors to maintain the rivalry into the future, unless there is another target or source that can serve in that rival's place.

While successful career transitions are vital for overall career quality, those transitions are complex and can be challenging. Occurring at different career and life stages, workers need to repeatedly maneuver transitions throughout their career journeys, ranging from school to work until retirement. Amidst the evolving modern career landscape, also our understanding of careers is shifting, and workers progressively seek to, e.g., experience meaningfulness and realize work flexibility. While research provides valuable insights into how people successfully manage diverse career transitions, we lack knowledge on what influences workers' career choices and their experiences when transitioning across key career stages. This symposium integrates research on key career stages, ranging from school-to-work transitions, to people moving in between their work and leaving traditional paths of employment to seek fulfillment in alternative careers, to the late career stage and retirement. By this, we explore how workers experience and thus choose to develop their careers, how they make career choices to better align their careers with their identities and with what is important to them, and how they navigate new, alternative, and difficult career transitions. We advance knowledge on career transitions and offer a comprehensive view of how workers maneuver and experience their career journeys.

Employee Helping: Connecting a Community of Researchers and Developing a Future Research Agenda

Session Chair: **Andrea L. Hetrick**, *U. of New Mexico*
Session Chair: **Dana Harari**, *Technion - Israel Institute of Technology*

This caucus will provide a forum for researchers to discuss emerging topics in the area of employee helping. This will include discourse surrounding novel research themes, construct clarity and operationalization, and theoretical frameworks. It will also provide a setting for researchers create connections for potential collaboration in future research projects.

Employee helping is an important aspect of organizational citizenship behavior (Ehrhart, 2018). As the organizational citizenship behavior literature has grown (Podsakoff et al., 2018), the literature examining employee helping behavior has also flourished in tandem (Ehrhart, 2018). This caucus has three main areas of discussion that we see as valuable and worthy in promoting the conversation about helping in organizations: (1) The relationship between helping and overlapping constructs, including organizational citizenship behavior (OCB), (2) When and why is helping more beneficial or detrimental for helpers, help recipients, and organizations? And (3) promising avenues for future research.

Inclusive Leadership and Voice for Organizational Innovation

Participant: **Rea Prouska**, *Hult International Business School*

Participant: **Alexandros Psychogios**, *Loughborough Business School*

This Caucus addresses this year's Academy of Management "Innovating for the Future" conference theme as it brings the emerging topic of inclusive leadership and voice as a lens for rethinking conventional ways of leading and managing people and organizations towards innovation. The aim of this Caucus is to encourage the development of a community that creates new ideas about inclusive leadership and voice for driving organizational innovation across international boundaries. In this Caucus, we will: Firstly, discuss the challenges of the conventional ways of leading and managing people in organizations from a leadership and voice perspective. Secondly, introduce the concepts of inclusive leadership and inclusive voice. Thirdly, debate the role of organizational leaders and of HR in creating inclusive cultures directed at innovation through leadership and voice for all employees and workers. Fourthly, discuss research avenues that can progress this field by capturing data from an international comparative perspective.

Exploration at the Intersection of Craft & Organizations

Organizer: **Jose Antonio Cerecedo-Lopez**, *U. of Texas At San Antonio*

Organizer: **Marta Gasparin**, *Copenhagen Business School*

Contemporary academic exploration in organizational studies highlights a significant revival of craft, emphasizing its role in fostering a more sustainable economy and society. It integrates aesthetics, ecology, and ethical care into new organizational models, underscoring craft's potential to innovate and create meaningful work, thereby challenging the disenchantment of industrialized environments. This resurgence reflects a shift towards local, community-based economies, where craft culture is pivotal. The proposed caucus offers a platform for dynamic, collaborative discussions on these emergent trends, aligning perfectly with the ethos of craft and its impact on organizational innovation.

In preparation for the caucus, calls for 1-page abstracts will be sent out, inviting research on craft and organizations from individuals currently engaged or interested in this field. Participants submitting abstracts will be grouped at rotating tables, with all abstracts shared in advance to facilitate informed discussions. Each participant will have the opportunity to elaborate on their abstract, discussing common issues and exploring potential research collaborations.

Uncomfortable Truths about Industrial-Organizational Psychology

Organizer: **Ivan Hernandez**, *Virginia Tech*
Organizer: **Christopher Huynh**, *Virginia Tech*
Speaker: **Kayden Stockdale**, *Virginia Tech*
Participant: **Michael Zickar**, *Bowling Green State U.*
Speaker: **Keaton Allen Fletcher**, *Colorado State U.*
Discussant: **Arturia T. Melson-Silimon**, -

This symposium addresses significant paradoxes in Industrial-Organizational (I-O) Psychology, focusing on the gap between the field's stated humanitarian values and its practices regarding employee well-being and worker treatment. The session features presentations that challenge the current state of I-O Psychology and propose a reorientation towards more authentic and equitable approaches. The first presentation critiques the prevailing utilitarian perspective in I-O Psychology, which often conflicts with fundamental human rights. This critique is especially pertinent in areas such as personnel selection and occupational health psychology. The speakers advocate for a shift in philosophical framework and policy towards rights-based standards, emphasizing the need to prioritize ethical considerations over cost-benefit analysis. The second presentation addresses the lack of focus on child labor issues within I-O Psychology research. It reviews the global state of child labor and legislative changes in the U.S., calling for expanded research to include populations affected by child labor and to assess the impact of recent legislative changes. Last, the symposium includes a discussion on the ethical considerations regarding non-human animal workers. This presentation argues for the recognition of the rights and ethical treatment of these workers, advocating for I-O psychologists to support the abolition of non-consensual, non-compensated labor of vulnerable populations. The symposium concludes with an integration of these themes, highlighting the importance of addressing oppression and striving for equity in I-O Psychology.

Inclusive Change and Voice in Organizations

Organizer: **Danielle Tucker**, *U. of Essex*
Panelist: **Huong Le**, *Central Queensland U.*
Panelist: **John Richmond**, *U. of Sheffield*
Panelist: **Martyna Sliwa**, *Durham U. Business School*
Panelist: **Angelina Zubac**, *AIM Business School, Australian Institute of Management*
Discussant: **Jane Hendy**, *Brunel Business School*

When is it resistance and when is it employee voice? Interpreting behavior that does not unquestioningly conform to a new organizational reality as 'resistance' positions resisting employees as 'troublemakers'. This is potentially problematic for organizational change as it may result in diminished employee voice and leader-centric bias about what is fair and ethical business practice. Leader-centric approaches fail to encourage an inclusive approach to change, diminishing the voices of minorities within organizations. Yet, as change scholars and practitioners we tend to focus on how effective the change was, not how inclusive the process is. Therefore, the purpose of this panel symposium is to engage a group of panelists in a formal, moderated, interactive discussion of the following questions: (1) Who has a voice in the change process and who does not? Who stays silent and why? (2) What is the impact of silencing certain voices in the organizational change process? (3) How effective are traditional methods of consultation and participation in the change process at achieving representative feedback, particularly from minority groups? (4) How might the actions of change agents help or hinder this process?

Stereotype Threats and Concerns

Session Moderator: **Janine Black**, *Kean U.*

DEI: 'Wade in the Water': An Exploration of Black Entrepreneurs Utilizing Navigational Capital  

Author: **Janine Black**, *Kean U.*
Author: **Saran Anika Nurse**, *Kean U.*
Author: **Kisha Dasent**, *Kean U.*
Author: **Alex Rivera**, *Kean U.*

This research sheds light on the pervasive impacts of racism on Black entrepreneurs and highlights their resilience. Utilizing a Group Model Building approach, triangulated with semi-structured interviews of 49 Black entrepreneurs, and guided by Critical Race Theory, we unveil the multifaceted manifestations of racism including stereotyping, low perceptions of legitimacy, restricted access to capital resources and internalized racism. Despite these barriers, Black entrepreneurs exhibit remarkable resilience, leveraging "navigational capital" – a set of skills and strategies for maneuvering through systems not designed with their needs in mind. Navigational capital includes concealment of racial identity, simultaneously creating co-ethnic and diverse networks, seeking creative sources of funding, and pursuing representation and influence in political decision-making processes. This study challenges prevailing race-neutral entrepreneurship narratives, promoting a more inclusive and pluralistic perspective that lays the foundation for the development of policies tailored to the unique needs of Black entrepreneurs, thereby fostering an environment conducive to their financial and mental well-being.

DEI: More Ecstasy Than Agony?: An Exploration of Pathways to Manage Stigmatized Identity Through Gig Work   

Author: **Anjali Bansal**, *Indian Institute of Management, Lucknow*

Stigma has long been a focus of organizational scholars. Yet, stigma theory has not yet deeply considered how new paradigms of organizing might change stigmatized employees' work experiences. Extant research shows that gig work presents challenges to employees' work-related identities. This research builds on these ideas but examines how stigmatized personal identities are managed outside of traditional organizational structures. In a cross-cultural, inductive study of 71 LGBT gig workers, this research reveals that counter to extant theory, the unique features of gig work may provide avenues for stigmatized workers to transcend stigma and manage their identities in ways that support their identity development and well-being. Specifically, the findings conclude that the research participants engaged in one of three distinct processes to manage their LGBT identities: authentic exploration, confident reorientation, or vigilant curation. These processes reflected the unique features of gig work that drew participants to gig work, the techniques that the workers leveraged to manage their identities on the job, and the identity-related and well-being outcomes associated with these techniques. This scholarship adds meaningful nuance to the gig work and workplace stigma literature by demonstrating the potential power of new ways of working to improve stigmatized employees' work experiences and outcomes.

The aim of this study was to assess the impact of stereotype threat related to leadership on women's negative affect and state self-esteem, and to explore whether this impact is moderated by the woman identity centrality. In our experimental study (N = 110), we manipulated exposure to information regarding the gender gap in top leadership positions, and biographical information about successful male leaders. Results revealed that women exposed to stereotype threat showed increased negative affect compared to those in the control condition. The findings also provide evidence that the detrimental effects of stereotype threat on state self-esteem were mitigated among women with high women identity centrality, thus demonstrating that high women identity centrality serves as a buffering factor against stereotype threat. These findings highlight the importance of understanding the underlying mechanisms that enable woman identity centrality to counteract the negative influence of stereotype threat on state self-esteem, despite the fact that it does not alter the direct effect of such threats on negative affect.

DEI: A Contingent Model of Stereotype Threat Responses and Leader Outcomes

Author: **Stacy Boyer**, *Moravian U.*

Stereotype threat describes a concern for being judged or treated in accordance with a negative, self-relevant stereotype, or of confirming that stereotype, in a valued domain. Stereotype threat has been linked with a multitude of negative cognitive and emotional effects that can impair one's performance in a valued domain (i.e., a vulnerability response). Chronic threat has further been linked with domain disidentification, decreasing diversity in important roles such as leadership. However, there is growing evidence that threat can also have performance-enhancing effects under specific circumstances, such as following an explicit stereotype activation. The drivers of this stereotype reactance response are not yet well understood, leading to inconsistent findings and interpretations in the stereotype threat, queen bee, and self-group distancing literatures. The purpose of this paper is to integrate stereotype threat theory (Steele, 1997; Steele & Aronson, 1995) with psychological reactance theory (Brehm, 1966; Brehm & Brehm, 1981) to clarify conceptual understandings and to develop a contingent model of stereotype threat responses with implications for leader outcomes. Although the short-term effect of reactance on performance appears positive, I explain how both vulnerability and reactance responses to threat can reduce one's motivation to lead and their leadership career aspirations. This paper advances research on stereotype threat in the leadership domain by identifying the factors that contribute to vulnerability and reactance and discussing how these responses manifest in organizational settings.

Neurodiverse Workforce Careers

Session Moderator: **Maria Victoria Novaro**, -

DEI: Navigating Neurodiversity: Career Paths and Workplace Inclusion

Author: **Maria Victoria Novaro**, -

Author: **Maria Jose Murcia**, *IAE Business School & CESIS, Austral U.*

Neurodiversity is an umbrella term encompassing intellectual and learning disabilities such as Autism Spectrum Disorder (ASD), Attention Deficit/Hyperactivity Disorder (ADHD), Dyslexia, Dyscalculia, Developmental Coordination Disorder (DCD), and Tourette's syndrome. Conditions comprised under neurodiversity are not only pervasive (estimated as present in one in seven individuals population-wide), but also often entail invisible or 'hidden' disabilities that subject individuals to workforce exclusion and, and affect their employment, career progression, and overall quality of life. This study distills a model outlining discriminatory, employment, and alternative career outcomes that characterize the experiences of neurodiverse individuals as well as institutional and organizational strategies that moderate the relationship between neurodiversity and each of those outcomes. The study offers a process model as well as practical guidance to tackle neurodiversity management and inclusion in organizations, harnessing individuals' abilities and minimizing their vulnerabilities, potentially fostering organizational competitiveness.

DEI: Neurodivergent Jobseeker Responses to the Strengths-Based Neurodiversity Narrative

Author: **Benjamin Stephen Poag**, *NYU Stern School of Business*

Author: **Olivier D. Boncoeur**, *U. of Notre Dame*

Numerous organizations strive to capitalize on the strengths of neurodivergent employees, embracing a "competitive advantage" narrative in recruiting from this population. However, significant theoretical tension remains over the implications of this narrative for including neurodivergent individuals in the workplace, specifically over whether it empowers this subpopulation of employees or reinforces existing stereotypes. In this paper, we advance a theoretical model that draws from uncertainty management theory (UMT) and self-verification theory (SVT) to build initial understanding of how neurodivergent individuals respond to organizational signaling that frames neurodiversity as a competitive advantage. We argue that this competitive advantage rhetoric may reduce uncertainty about an organization among neurodivergent applicants, but ultimately that this effect is qualified by how positively applicants view their own neurodivergent identity. An experimental study partially substantiates these claims, as an organizational diversity statement with a strengths-based neurodiversity clause induced significantly less uncertainty among jobseekers who expressed more pride in their neurodivergent identity, and such individuals in turn perceived the signaling organization more positively. This research advances the nascent literature on neurodiversity, draws novel theoretical connections that bolster research on diversity initiative effectiveness, and provides guidance for companies seeking to tap into the neurodivergent talent pool.

DEI: Neurodiverse Perceptions of Inclusivity in the Workplace

Author: **Shannon Lively**, *U. of Missouri-St. Louis*

Author: **Ekin K. Pellegrini**, *U. of Missouri, St. Louis*

The increase in neurodivergent professionals has led to a significant need for research to examine neurodiversity inclusion in the workplace. Research has portrayed workplace inclusion as the perception that the individual is a valued member of a workgroup through satisfactory experiences of belongingness and uniqueness. We draw on the person-environment fit and the neurodiversity approach literatures to examine how neurodivergent professionals view inclusion, exclusion, and cope with exclusion in the workplace. Results of semi-structured interviews with 20 neurodivergent professionals suggest six inclusion and six exclusion themes at work. Results were largely consistent with previous inclusion research, however, one novel category, flexible accommodations, suggests the importance of considerate accommodations that are easy to implement, low cost, and significantly matter to neurodivergent employees. Participants also identified six coping strategies that provide insight into how they cope with exclusion, which vary from masking to educating others on their strengths and needs. Results extend theory development on inclusion and person-environment fit, and underscore the importance of neurodiversity awareness, as well as intentional and informed neurodiversity inclusive practices. Business organizations can utilize these findings to improve inclusion of neurodivergent employees and provide neurodivergent individuals a pathway to success in their careers.

DEI: How Do I Disclose My Neurodiversity? Avoiding Authenticity Penalties Through Proactive Disclosures

Author: **Carlina Conrad**, *IE Business School*

Author: **Kriti Jain**, *IE Business School*

Author: **Yupeng He**, *IE Business School*

Amidst the growing awareness on the high levels of neurodiversity within the workforce, a paucity of research exists within the academic literature concerning how this workforce can become more integrated. This research addresses this gap by focusing on how disclosures of neurodiversity are perceived at the workplace. By investigating how disclosure methods, namely proactive vs reactive disclosures, and work impairments interact to influence how the discloser is perceived by the recipient, we offer insights into how neurodiverse individuals can garner more support within organizational settings. Results from a micro-narrative study and from a scenario-based experiment support our proposition that individuals who use reactive disclosures are perceived as less authentic when their work performance is already impaired. This ultimately leads the receiver of the disclosure to want to avoid this individual more, shown by decreased helping and collaboration intentions. These findings provide a nuanced understanding on disclosure methods crucial for fostering inclusive environments for neurodiverse individuals in the workplace.

Participant: **Alexandra Feldberg**, *Harvard Business School*
Participant: **Kathleen L. McGinn**, *Harvard U.*

This symposium aims to introduce novel psychological states and emphasize the importance of social contexts for gender inequality, suggesting that management scholars must adopt a broader lens beyond the traditional focus on gender disparities in human capital and occupations when considering gender inequality issues in organizations. Specifically, while introducing novel psychological states and individual characteristics for gender inequality, we emphasize the significance of scrutinizing social contexts (i.e., occupation, corporate, and familial environments) where gender inequality is more likely to manifest. By providing specific contexts that are more likely for gender disparities to occur, this symposium intends to not only identify psychological factors that yield different rewards or gendered psychological states contributing to gender inequality but also attempts to examine 'when' those gender gaps in psychological factors are more pronounced, providing policymakers and organizational authorities insights into where they need to pay attention to in order to mitigate gender inequality.

Venture Capital: Investment Decision

Session Moderator: **Victor Martin-Sanchez**, *U. of Southern Denmark*

ENT: **Time Tells: Unraveling the Temporal and Risk Dynamics of Venture Capitalists**

Author: **Mario Daniele Amore**, *HEC Paris*
Author: **Orsola Garofalo**, *Copenhagen Business School*
Author: **Cedric Gutierrez**, *Bocconi U.*
Author: **Victor Martin-Sanchez**, *U. of Southern Denmark*
Author: **Valerio Pelucco**, *Department of Management and Technology, Bocconi U.*

Access to funds is critical for new ventures, yet many struggle to secure financing. Why are some investors more likely than others to finance new ventures? We address this question by studying the influence of time and risk preferences on venture capital's investment decisions. Using data from a large-scale incentivized survey of venture capitalists in Europe, our findings reveal that patient venture capitalists favor early-stage firms, whereas risk-averse venture capitalists invest in more mature ones. Moreover, we show that risk and time preferences provide different pathways to success: risk-averse investors are more likely to exit through a trade sale, whereas patient investors exit more often through an initial public offering (IPO). The most favorable path to an IPO occurs when investors demonstrate both patience and a willingness to take risks, highlighting an interplay between risk and time preferences.

ENT: **The Performance Puzzle in Venture Capital and Private Equity Style Drifts**

Author: **Douglas Cumming**, *Florida Atlantic U.*
Author: **Armin Schwienbacher**, *SKEMA Business School*
Author: **Yelin Zhang**, *Gonzaga U.*

Prior research shows directly conflicting evidence on the performance implications of style drift in venture capital and private equity, which represents an unresolved puzzle. In this paper, we identify one compelling source for this conflicting evidence. We differentiate between initial style drift, occurring when a venture capital (VC) fund invests in a company for the first time, and follow-on style drift, which occurs when a VC makes subsequent investments in the same company. We hypothesize that follow-on style drift investments involve an exacerbated escalation of commitment, leading to a negative impact on performance. Consistent with this hypothesis, we provide large sample evidence that initial style drift investments have superior, positive exit performance, while follow-on style drift investments have substantially worse exit performance. We discuss implications and future research suggestions.

ENT: **Inside the Black Box: Understanding Organizational Decision-Making Processes in VC Funds**

Author: **Anna Khoroshylova**, *Technische U. Darmstadt*
Author: **Norbert Linn**, *Technische U. Darmstadt*
Author: **Carolin Bock**, *Technische U., Darmstadt*

Venture capital (VC) firms are known for their opaque decision-making processes, making it difficult to understand the group dynamics in early-stage investment decisions. This study uses a multidisciplinary approach to examine the distinct stages, individuals, roles, interpersonal dynamics, and factors that influence interactions within the decision-making process in venture capital firms. This research draws on previous studies in psychology, sociology, human resources management, and strategic planning to deepen the understanding of related concepts and their applicability in the context of early-stage VC investments. The findings of this study suggest that the decision-making process in VC firms is influenced by a range of factors, including the stage of the decision-making process, the individuals involved, the roles they play, and interpersonal dynamics within the decision-making group. This study highlights the importance of understanding these factors to improve the efficiency and effectiveness of VC funds and support the development of innovative new ventures.

ENT: **Principal Problem in Venture Governance by Venture Capitals: A Meta-Analysis**

Author: **Jin-Su Kang**, *NYCU*
Author: **Pei-Yi Lin**, *National Yang Ming Chiao Tung U.*
Author: **Sanjay Goel**, *U. of North Dakota*

Despite predominant views of venture capitals (VCs)' positive effects on the success of funded firms (i.e., ventures), empirical studies in aggregate reflect inconsistent findings in terms of the direction and magnitude of the relationship. Drawing on the principal problem perspective, our study investigates relationships between VCs' (i.e., principals) governance tools, ownership and board involvement, and various venture outcomes. Based on a sample of 61,891 for VC ownership and 5,485 for VC board, respectively, in the US from 1980 to 2019, the results of our meta-analysis support VCs' short-term orientation as both VC ownership and board involvement enhances IPO performance, but not financial performance. However, entrepreneur ownership positively moderates on the VC ownership-IPO performance and VC ownership-financial performance, respectively, suggesting that it mitigates any effect of VCs' short-term orientation.

Entrepreneurial Intentions

Session Moderator: **Paul L. Drnevich**, *U. of Alabama*

ENT: **Local Contexts and Entrepreneurial Agency within a Fragile State**

Author: **Esther Salvi**, *IMD Business School*
Author: **Frank-Martin Belz**, *Technical U. of Munich*
Author: **Julia Katharina Binder**, *IMD*
Author: **Ali Aslan Gümüşay**, *LMU Munich*

Fragile states are generally associated with the concept of institutional voids. Yet, in this study, we move beyond state fragility to explore how distinct local contexts within a fragile state are shaped by multiple institutional logics. Through an explorative multiple case study design, we shed light on two constellation types – relation-centered and market-centered constellations – that constitute the local contexts, with which entrepreneurs interact, within a fragile state. Depending on their entrepreneurial (mis)alignment, we find that the entrepreneurs agentically engage and interact with their local contexts, hereby – consolidating relational centrality, molding relational centrality, reinforcing market centrality, and navigating market centrality.

ENT: **Conceptualizing an Anthropological Approach to Entrepreneurial Action**

Author: **Monique Boddington**, *Cambridge Judge Business School*

This paper examines an anthropological approach to entrepreneurial action. While the scientific approach, which involves the development and testing of hypotheses through experimentation, has been widely adopted in the literature, it has limitations in terms of developing holistic mental models and avoiding blind spots in uncertain environments. In addition, in the literature, there is support for broader methods of theorizing by entrepreneurs. Presenting an anthropological perspective offers a lens to examine alternative patterns of the reasoning behind entrepreneurial action. An anthropological perspective considers the social mechanisms and cognitive processes of entrepreneurial action. It employs participant observation and ethnographic methods to gain a more nuanced and empathetic understanding of customer needs. This approach also accounts for the relationship between the observer and the observed, and cultural dynamics within the entrepreneurial process are increasingly recognised in the literature, something not explicitly addressed in the scientific approach. By utilising anthropological methodologies and theories, entrepreneurs can identify and create value under conditions of uncertainty while accounting for social and cognitive processes. This paper contributes to the literature on the micro-foundations of entrepreneurship by providing an alternative explanation of how entrepreneurs generate information to produce value under conditions of uncertainty within a co-creative approach

ENT: **Capitals and Self-Efficacy: Catalysts for Entrepreneurial Intention of Potential Entrepreneur**

Author: **Soyeon Kim**, *Gakushuin U.*
Author: **Kyounghee Chu**, *Chosun U.*

This research explores the significance of capitals and their relative importance in shaping entrepreneurial self-efficacy and intention. Specifically, the study intends to clarify the differing effects of bonding and bridging social capital on entrepreneurial intention. Grounded in resource-based theory and social capital theory, this study sheds light on the roles of human, bonding social, bridging social, and psychological capitals, and their mediation through entrepreneurial self-efficacy. Survey data from young adults in their 20s with an interest in management and entrepreneurship (n=511) were analyzed using structural equation modeling and dominance analysis. The findings reveal that these four types of capital significantly influence entrepreneurial self-efficacy, with varying effects. Human, bridging social, and psychological capitals positively impact entrepreneurial self-efficacy, while bonding social capital has a negative effect. Notably, human and bridging social capitals exert greater effects on entrepreneurial self-efficacy than bonding social and psychological capitals. Furthermore, the relationship between these capitals and entrepreneurial intention is mediated by entrepreneurial self-efficacy. This research offers a deeper understanding for potential young entrepreneurs, providing valuable insights into the current discussions of entrepreneurship studies.

ENT: **Job Attitudes and Intrapreneurial Intention: The Moderating Role of Core Self-Evaluations**

Author: **Gentrit Berisha**, *U. of Prishtina*
Author: **Besnik Krasniqi**, *U. of Prishtina*
Author: **Drin Govori**, *Independent Researcher*

Job attitudes have been given merit in predicting employee behavior and outcomes, but their fame has not made it in intrapreneurship research. We contemplate shedding light on the relationship between job attitudes, namely work engagement and workplace belongingness, and the intrapreneurial intention of managers. Furthermore, we rely on self-efficacy and self-esteem as moderators to better understand the hypothesized relationships. Our hypotheses are tested using a sample of 233 managers employed in various sectors and company sizes in Kosovo. The results indicate that work engagement is positively related to INI, while workplace belongingness is not. The moderation analyses show that self-efficacy moderates the relationship between workplace belongingness and INI, whereas OBSE moderates the relationship between work engagement and INI. Our findings inform research and practitioners of the relevance of job attitudes in intrapreneurship research and managerial interventions to increase intrapreneurial activity through job attitudes.

ENT: **The Expectations Game: The Contingent Role of Hype in Resource Mobilization Processes Among AI Firms**

Author: **Judy Rady**, *Virginia Tech*

Author: **David Matthew Townsend**, *Virginia Tech*

Author: **Richard Hunt**, *Virginia Tech*

In the early stages of resource mobilization processes, startups must strike a delicate balance between establishing legitimacy with stakeholders and crafting a unique identity that appeals to potential investors. This process can be seen as an 'expectations game,' where startups must convince investors on an ongoing basis that they possess exceptional qualities that will yield substantial returns in the future. By doing so, they will continue to secure the necessary resources to deliver on their future promises. Startups employ various rhetorical strategies to shape investors' expectations and motivate their interest which collectively, sometimes involve developing firm-level hype in order to generate an enticing vision of the future. Our study builds on these emerging perspectives to theorize that the effectiveness of hype is contingent on several factors, including both categorical and firm-level factors that influence how investors perceive the comprehensibility, desirability, credibility, and feasibility of a startup's hyperbolic claims. By shedding light on the contingencies shaping the role of hype in attracting resources for AI startups, we contribute to a better understanding of the challenges startups face in leveraging hype to navigate the challenges of early-stage resource mobilization processes.

ENT: **What's the Buzz? Capturing the Role of Localized Innovative Atmosphere**

Author: **Carlo Corradini**, *Henley Business School, U. of Reading, United Kingdom*

Author: **Emma Catharina Folmer**, *Groningen U. (RuG)*

Author: **Anna Rebmann**, *King's College London*

What makes some places more conducive to individuals becoming entrepreneurs than others? Ample research shows that entrepreneurial culture and other informal institutions are important factors in explaining differences in entrepreneurship across regions. Yet, for the most part, what constitutes these informal institutions still remains a black box. In this paper, we introduce the concept of buzz from Economic Geography as an important part of the informal institutional context of a place, shaping both social interaction and the transmission of information and norms. In particular, we introduce the concept of innovative buzz is or the extent to which people talk about topics related to innovation in a particular region. We hypothesize that regions with higher levels of innovative buzz are more likely to support the emergence of individuals who intend to become entrepreneurs, who start new ventures and furthermore, that these ventures are more likely to be higher quality start-ups i.e. opportunity-based or high-growth aspiration ventures. We provide evidence for our hypotheses by merging individual entrepreneurship indicators from GEM with novel indicators of innovative buzz produced by applying natural language processing (NLP) methods to a corpus of almost two billion words across 180 million tweets, representing the population of geolocated tweets in the UK for 2014. Our contribution offers a novel conceptualization of buzz for entrepreneurship research, as well as new evidence on the opportunities in big data and language analysis for entrepreneurship research.

ENT: **Understanding Entrepreneurial Buzz Elements Over Time: Toward a Theory of Buzz Momentum**

Author: **Emily Neubert**, *Neeley School of Business - Texas Christian U.*

Author: **Clau Sganzerla**, *Texas Tech U.*

Author: **Nathan Hayes**, *U. of North Carolina, Charlotte*

Author: **Jared Shaw Allen**, *Texas Tech U.*

Author: **Pavas Pandey**, *Texas Tech U.*

Creating excitement, or 'buzz,' around a venture's products, future plans, or trajectory provides a viable means by which entrepreneurs can attract the resources and stakeholder support necessary to grow and scale their ventures. Within this paper, we introduce a buzz framework that unpacks the core elements of entrepreneurial buzz (agent, audience, and anticipated future) and how they interact to generate entrepreneurial buzz. We then leverage our buzz framework to theorize a model of buzz momentum across the stages of a venture's development to highlight how entrepreneurs can realize buzz at each stage, the effects of realizing buzz, and how buzz can help safeguard against potential legitimacy losses from entrepreneurial hype.

ENT: **My Signaler is Better than Yours: How Online Influencers Establish Legitimacy of New Ventures**

Author: **Kevin D. Heupel**, *Oklahoma State U.*

Author: **Matthew W. Rutherford**, *Oklahoma State U.*

From prior research, we know that new ventures often face challenges in establishing legitimacy, with signals playing a pivotal role in persuading stakeholders of their potential and viability. Yet a complication arises as traditional signals might not resonate with modern consumers who yearn for genuine, human connections, especially in the age of digital media. This complication is of concern because new ventures, devoid of tangible proofs (e.g., product successes), struggle to convey their authenticity, thereby risking their chances of early-stage customer acquisition. The course of action to address this concern entails a rigorous examination of how new ventures can leverage signaler from various spokesperson categories—founders, employees, celebrities, and online influencers—and how signaler reliability impacts the effectiveness in establishing new venture legitimacy.

Social Entrepreneurship

Session Moderator: **Vrinda Khattar**, *Indian Institute of Management Mumbai*

ENT: **Defining Scaling and Disentangling Founder Leadership Styles in Scaling Technology Social Ventures**

Author: **Vrinda Khattar**, *Indian Institute of Management Mumbai*
Author: **Upasnaa Agarwal**, *Professor at IIM Mumbai*

Technology social ventures (TSVs), a form of hybrid ventures, are among the most important and impactful forms of entrepreneurship. Like new social and commercial ventures, scaling is important for new TSVs to become established firms. Yet, what constitutes scaling is significantly different for TSVs as compared to other forms of ventures, namely, not-for-profit social organizations and profit-driven commercial ventures. However, scholarship is fragmented over defining scaling in TSVs. Therefore, the first objective is to contribute to the definition of scaling TSVs. To meet the first objective, we conduct an adapted Delphi study, where we formulate a literature-driven and expert-ratified definition of scaling TSVs. Our second objective is to identify founders' leadership styles to aid scaling in TSVs. In the second study, based on our scaling definition, we identify three scaling TSVs, and then, using a multiple case study approach, we explore their founders' leadership styles that aid scaling. It emerges that the founders do not use a single leadership style but use a combination of transformational and transactional leadership styles. Interestingly, it emerged that founders used humble leadership styles. Using these leadership styles, founders encouraged high performance and created an environment that aided scaling.

ENT: **Disclosing Everyday Practices of Social Entrepreneurs: Resource Based Perspective**

Author: **Meriam Razgallah**, *PSB Paris School of Business*
Author: **S everine Le Loarne Lemaire**, *Grenoble  cole de management*
Author: **Adnan Maalaoui**, *Mbsc Prince Mohammad Bin Salman College*

This study explores how social entrepreneurs get access to resource, in an everyday basis, depending on the development phase of their organisation. The literature considers that the social entrepreneur mainly acquire resources through bricolage. To better understand this topic, we conducted a qualitative analysis of two contrasting social entrepreneurship contexts – a European context, where resources are relatively easy to access, and a North African context, where resources are relatively scarce. For each of these contexts, individual interviews on the history of the social enterprise, with a focus on the modes of resource acquisition, are conducted. The interviews show that the resource acquisition process is not only based on bricolage, but it is also based on practices of causation and effectuation. In addition, we find that the modes of resource acquisition mainly differ according to the stage of development of the social enterprise. During the emergence phase, the social entrepreneurs are more effectuation-oriented. During the growth and sustainability phases, they are more bricolage oriented. They also use causation practices, but a very low degree. Our study contributes to the literature of social entrepreneurship by providing insights in setting strategies for resource mobilisation depending on the development phase of the social enterprise.

ENT: **The Role of Institutions in the Pursuit of Social Motives in Entrepreneurial Ventures**

Author: **Leonie G rtner**, *U. of Bayreuth*
Author: **Yasmine Yahyaoui**, *U. of Bayreuth*
Author: **Rodrigo Isidor**, *U. of Bayreuth*

While the role of institutions is studied extensively in entrepreneurship, little attention is paid to social entrepreneurship, which is central to addressing global challenges. Thus, we analyze the influence of political institutions, including economic freedom, democracy, and political ideology, on the pursuit of social motives in entrepreneurship. In addition to these formal institutions, we further consider informal institutions by investigating the moderating effect of cultural tightness. Therefore, we use a multinational sample consisting of 23 countries and 10,545 new ventures. The results of our multilevel analysis show that democracy and a socialist/communist ideology relate to the pursuit of social motives in entrepreneurship. Furthermore, we demonstrate that cultural tightness moderates this relationship. Our study makes an essential contribution to social entrepreneurship research by providing an understanding of the influential role of formal and informal institutions. In addition, we add to the debate on institutional void and institutional support theory in the context of entrepreneurship by providing evidence supporting the institutional void theory as a contextual factor determining entrepreneurial action.

ENT: **The Dynamic Effects of Cultural Leadership Ideals on Nascent and Operating Social Entrepreneurship (WITHDRAWN)**

Author: **Byungku Lee**, *U. of La Verne*
Author: **Yeri Cho**, *U. of La Verne*

This study examines the relationships between cultural leadership ideals and social entrepreneurship, using a large sample of 241,558 social and commercial entrepreneurs across 41 countries in the Global Entrepreneurship Monitor survey. This study hypothesizes that the relationships vary in shape due to the dynamic characteristics of cultural leadership ideals (i.e., humane-oriented, self-protective, and charismatic leadership ideals) and the distinctive phases of social entrepreneurship (i.e., nascent and operating social entrepreneurship). This study discusses the implications of the findings to the previous literature on the culture-entrepreneurship fit.

Fostering Creative Success: Power, Intersectionality, AI Feedback, and Social Influence

Organizer: **Carl Blaine Horton**, *Columbia Business School*
Organizer: **Analexis Glaude**, *Haas School of Business, UC Berkeley*
Presenter: **F Katelynn Boland**, *Columbia Business School*
Presenter: **Sahoon Kim**, *U. of Illinois at Urbana-Champaign*
Discussant: **Justin M. Berg**, *U. of Michigan, Ross School of Business*
Presenter: **Carl Blaine Horton**, *Columbia Business School*
Presenter: **Analexis Glaude**, *Haas School of Business, UC Berkeley*

“Almost always, the creative dedicated minority has made the world better.” — Martin Luther King Jr. Scholars and practitioners have long recognized the importance of creativity and innovation in shaping management practices (Amabile, 1996; Birkinshaw et al., 2008), fostering organizational longevity (Heunks, 1998), and influencing decision-making (Chen et al., 2009; Damanpour, 2018; Staw, 1995). Success in many organizational contexts, from hiring to entrepreneurship, is driven by our ability to generate novel ideas, evaluate unconventional solutions, and implement innovative practices. To better understand these processes, this symposium presents four articles that collectively deepen our understanding of these phenomena. Each presentation contributes unique insights exploring related topics. These include how brainstorming sessions might be better structured to account for the differential effects of power, the intersectional effects of race and gender when evaluating a target’s creative abilities, whether rapid-feedback from AI has the potential to help entrepreneurs by fostering revision and higher quality ideas, and the ways social influence impacts our ability to “objectively” evaluate entrepreneurial ideas and predict creative success. In sum, this session lays the groundwork for important discussions and transformational advancements at the crossroads of creativity, organizational behavior, and management science. Presentations

The first paper, “Low Power Warm-up Effect: Understanding the Effect of Power on Creativity over Time” by Sahoon Kim, Brian J. Lucas, and Jack A. Goncalo investigates the relationship between power dynamics and creativity. Building upon past research that shows how feeling less powerful can hinder creative expression due to a greater likelihood of conformity, they introduce the concept of a “low power warm-up effect.” Specifically, they suggest that individuals with lower power can overcome initial creative disadvantages by engaging in creative tasks multiple times, eventually achieving creative parity with those in high-power positions. Three studies support this claim, revealing that while high-power individuals initially demonstrate greater creativity, low-power individuals catch up over time, with their creativity increasing more steeply across multiple rounds of a creative task. This work contributes to organizational literature on power, creativity, and brainstorming by demonstrating the dynamic effect of individual power on task performance over time, and by highlighting the rewarding nature of persistence for individuals in low-power states. The second paper, “The Intersection of Race and Gender on Creativity and Innovation” by Analexis A. Glaude, Merrick R. Osborne, and Sa-kiera T.J. Hudson, discusses the intersectionality of race and gender in the context of creativity and innovation. Specifically, they examine how perceptions of a target’s abilities differ by race, gender, and domain across three studies. Their results suggest that while perceptions of creativity and innovation play an important role in who gets hired or promoted, this role continues to depend upon race and gender. For example, all else equal, White men are perceived to be significantly more innovative than their peers. These findings illustrate the importance of taking an intersectional lens when seeking to develop better business practices. The third paper, “Feedback and Revision in Entrepreneurship: Comparing AI and Human Influence on the Willingness of Entrepreneurs to Revise” by Katie Boland, Rachel Jensen, and Sheena Iyengar delves into the challenges faced by entrepreneurs, highlighting the high failure rates of new businesses. They focus on how the psychological ownership entrepreneurs feel toward their ideas contributes to the persistence of suboptimal strategies, such as escalation of commitment and premature commitment to solutions. Broadly, their study aims to shed light on how the source of feedback, whether AI or human, influences entrepreneurs’ willingness to revise and their emotional responses to feedback. Specifically, they explore the potential of Artificial Intelligence (AI) as a source of accessible, high-quality, rapid feedback for entrepreneurs—testing whether entrepreneurs revise their ideas at all based upon feedback from AI, and whether AI feedback may be less likely to threaten one’s sense of psychological ownership over an entrepreneurial idea. Indeed, preliminary results from their ongoing exploratory study suggest that entrepreneurs are more likely to revise their startup ideas when receiving feedback from AI compared to human sources. In the fourth paper, “Predicting Evaluations of Creative Ideas: Quantifying Social Influence” by C. Blaine Horton Jr. and Sheena S. Iyengar, the authors investigate how social influence affects perceptions of entrepreneurial ideas. Their study employs a “small world” design to illustrate the conditions under which social influence shapes evaluations of entrepreneurial creativity among quasi-experts (i.e., MBA students). Their studies confirm several key findings. For example, social influence increases agreement among evaluators, but blurs meaningful distinctions between creativity dimensions, and weakens correlations with expert judgment made by angel investors. Validating theory put forth in past research (Salganik et al., 2006), these effects appear to depend upon idea quality. While highly creative and non-creative ideas consistently succeed or fail across conditions, the success of ideas that would otherwise be considered average is largely explained by anchor effects. And yet, despite average ideas faring unpredictably well or poorly under social conditions, their outcomes are also more predictable with less data. For example, various regression models suggest that while an idea’s “inherent creativity” explains roughly 27% of variance when considering group-level outcomes across conditions, anchor effects explain roughly 26% of additional variance. Collectively, these papers offer a multifaceted exploration of creativity and innovation, probing the social, temporal, and intersectional dimensions of these constructs. The symposium promises to spark insightful discourse on the importance of creativity and creative processes in management science and beyond.

Insight and Outlook

Session Moderator: **Shelby Meek**, *Kennesaw State U.*

ENT: **Who You Ask Matters: Combining Perspective Taking and Positioning for Novel and Useful Opportunities**

Author: **Shelby Meek**, *Kennesaw State U.*

Author: **Matthias Alfred Tietz**, *U. of St.Gallen - Singapore/Switzerland*

In recent years, perspective taking has been found to predict innovative organizational outcomes. However, hidden in this direct perspective taking-innovation relationship is that individuals approach the situation from different angles and thus may differ in the type of value they bring to innovation efforts. This research considers an individual's positioning and perspective taking ability together as joint components of social embeddedness and contributes a deeper understanding of how perspective taking influences innovative organizational outcomes. Based on a series of opportunity identification experiments, this paper presents evidence that among organizational insiders, perspective taking enhances the usefulness of opportunities identified, whereas among organizational outsiders, perspective taking enhances the novelty of opportunities identified.

ENT: **What Will They Do? The Role of CVC Investors' Market Orientation for Ventures' Financial Performance**

Author: **Alexander Ewertz**, *Chair for Technology & Management, TU Dortmund U.*

Author: **Tessa Christina Flatten**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Although research in the Corporate Venture Capital (CVC) domain significantly expanded during the last decade, only a few studies examine the role of CVC investments for the ventures' financial performance. Since these studies even yield ambiguous results, research calls for examining the underlying drivers of venture's financial performance in the CVC context. Based on the resource-based view, our study investigates the role of the CVC parent's market orientation (MO) for the venture's financial performance. Particularly, we examine the role of CVC parent's long-term orientation and profitability orientation for the provision of resources to ventures. Further, we assess how this relationship is moderated by the autonomy of the CVC unit from the CVC's corporate parent. We analyze a unique data set of 765 firm-year observations from 2001 to 2022. While we find a positive relationship between CVC parent's long-term orientation and venture's financial performance, we find an adverse effect for CVC parent's profitability orientation. Further, we find that these observations do not hold for high levels of CVC autonomy from the corporate parent. In doing so, we contribute to literature on entrepreneurial finance by providing a more differentiated perspective on the drivers of venture's financial performance and advancing market orientation literature in the CVC domain.

ENT: **When Life Gives You Lemons: From Trauma to Entrepreneurship**

Author: **Nishant Garg**, *Indian Institute of Management, Lucknow*

Author: **Neha Garg**, *SVYASA Yoga U.*

Author: **Guninder Pal Singh**, *Jindal Global Business School, OP Jindal Global U., Sonapat, India*

In the evolving entrepreneurship landscape, where the emphasis often leans towards external influences, this study addresses a critical gap by delving into the transformative impact of traumatic experiences on entrepreneurial motives. Utilizing a qualitative longitudinal approach, we explore the sensemaking processes of military veterans transitioning to entrepreneurship. Unveiling three distinct sensemaking paths and two pivotal stages—meaning emergence and motive development—this research enriches entrepreneurial literature by introducing a nuanced perspective that recognizes the intricate interplay between personal experiences, sensemaking, and the emergence of entrepreneurial motives. Beyond theoretical contributions, the study offers practical insights for tailored support systems and interventions, acknowledging the potential of trauma to catalyse innovative thinking and purposeful action in the entrepreneurial journey.

ENT: **What Are They Looking at? The Role of Cognitive Process in Entrepreneurial Attention Allocation**

Author: **Daria Kautto**, *Aalto U. School of Business*

Author: **Perttu Kahari**, *Aalto U. School of Business*

Author: **Anna-Riikka Maria Smolander**, *Aalto U. School of Business*

Building on the premises of attention-based view, cognitive-experiential self-theory, and cognitive motivation, we examine how entrepreneur's cognitive process of information gathering and processing affect attention allocation across attributes contributing to start-up location choice. We derive four theoretically defined groups of factors influencing entrepreneurial location choice: functional economic, experiential economic, personal social ties, and personal quality of life attributes. We run the best-worst scaling conjoint experiment on 121 founders of start-up ventures located in the metropolitan area of Helsinki, Finland. Our findings suggest that founders with higher rational decision-making style pay significantly more attention to economic rather than to personal location attributes. Experiential decision-making style does not significantly affect attention distribution. The founders with higher need for cognitive closure pay more attention to experiential economic location attributes, which helps to minimize the need for additional information search and ambiguity. The use of effectual decision-making heuristic did not moderate the relationship between rational decision-making style and importance of economic vs personal location attributes. The paper clarifies the relationship between the lower (motivational) levels of entrepreneur's cognitive processing and attention allocation in decision-making and provides empirical evidence of the remarkable role of individual information processing differences in start-up location choice.

Family Firms I

Session Moderator: **Ludovica Del Barone**, *U. of Salento*

ENT: **Family Firms Innovativeness Across Generations**

Author: **Ludovica Del Barone**, *U. of Salento*
Author: **Maria Carmela Annosi**, *Wageningen U.*
Author: **Evelyn Rita Micelotta**, *Telfer School of Management, U. of Ottawa*
Author: **Filomena Buonocore**, *Parthenope U. of Naples*

After succession takes place, family businesses either diverge from predecessors or maintain continuity. We know very little, however, about the processes and mechanisms that underpin these differences. Through a multiple case study of seven Dutch family firms in the food sector, we delve into the dynamics of incumbent-successor interactions and identify the tensions that shape differences in innovation paths. Our study uncovers four distinct innovativeness trajectories, explained by three forces: incumbent imprinting, successor self-determination in innovation, and the impact of the successor's past experiences on the innovativeness trajectory. The paper contributes to the literature on family business innovation post succession.

ENT: **Generational Involvement in Family Firms: From Family to Societal Generations**

Author: **Sofia Brunelli**, *LIUC U. Cattaneo, Castellanza (VA), Italy*
Author: **Emmadonata Carbone**, *U. of Naples Federico II*
Author: **Alessandro Cirillo**, *U. of Naples Federico II*
Author: **Torsten Michael Pieper**, *U. of North Carolina, Charlotte*
Author: **Salvatore Sciascia**, *LIUC U. Cattaneo, Castellanza (VA), Italy*

The proposed research will offer a structured literature review on generational involvement in family firms. Then, we integrate family business and non-family business literature through generational theory which proposes that experiences and historical events that people have lived through shape individuals' behaviour. The core assumption of this theory that will be used in the proposed study is that each generation differs in terms of leadership style, wealth management as well as attitudes toward balancing work and life. Hence, the integration of family generational issues with societal generational characteristics provides the opportunity to enhance our theoretical understanding of the drivers of decision-making and distinct family business behaviour, and ultimately the causes of family business heterogeneity. Additionally, we also offer a brief overview of the contributions of each paper, and drawing on this review we identify some important research gaps and suggest future research directions.

ENT: **Exploring Key Drivers of CEO Trust in Family and Non-Family Firms**

Author: **Solvej Lorenzen**, *Witten/Herdecke U.*
Author: **Maïke Gerken**, *U. of Witten/Herdecke*

This study examines the influence of trustworthiness on manager trust in CEOs from family and non-family firms and its subsequent effects on job performance. Drawing from a sample of 482 managers working in family firms and non-family firms, our results show that managers, unlike in non-family firms, build trust in family CEOs based on their perceived integrity and benevolence, while the perceived abilities of family-firm CEOs do not play a role. Further, trust in family-firm CEOs has a positive mediating effect on managers' job performance, leading to higher job satisfaction and reduced turnover intentions. However, this effect does not significantly differ between family firms and non-family firms, suggesting that trust in CEOs does not give family firms a distinct advantage over non-family firms. Our study contributes to the understanding of trust dynamics in organizational leadership and provides insights for future studies on trust and trustworthiness in family and non-family business contexts.

ENT: **Fortitude Amidst Turmoil: Assessing Family Firms' Resilience to Adverse Shocks**

Author: **Nupur Pavan Bang**, *Indian School of Business*
Author: **Taj Uddin Malik**, *Indian School of Business*
Author: **Sougata Ray**, *Indian School of Business*
Author: **Ramachandran Kavil**, *Indian School of Business*

In an era of "global disorder," scholars have been captivated by the question of why some organizational forms are more resilient to systemic shocks than others and what factors contribute to this heterogeneity. Drawing from organizational resilience theory and the resource-based view, Utilizing insights from organizational resilience theory and the resource-based view, we aim to add new insights to this inquiry by leveraging a unique proprietary database of listed family firms in India. We argue that family ownership and management will positively influence the stability dimension of resilience while family business group affiliated firms will find their agility curtailed and therefore may not be as resilient as the standalone family firms. Using the GLS model, we test our hypothesis against the backdrop of the Covid-19 pandemic. We assess the stability of firms by gauging the severity of various factors, including productivity loss, liquidity, financial stress, social responsibility, profitability, and employee welfare. Our results show that family-owned firms exhibit a greater level of stability in managing liquidity and coping with financial stress compared to non-family firms. Additionally, our research reveals that family-managed enterprises also experience a reduced severity in terms of expenditure on employee welfare. On the other hand, business group affiliated firms face adverse effects on their stability. Our findings enrich the understanding of resilience in diverse organizational forms and variability in responses to a crisis within family firms.

Social Dynamics

Session Moderator: **Parul Manocha**, *U. of Alabama at Birmingham*

ENT: **How Enabling is the Entrepreneurship Industry? EI Intermediaries and Spectrum of Actions & Outcomes**

Author: **Parul Manocha**, *U. of Alabama at Birmingham*
Author: **Kip Kiefer**, *Rollins College*

Entrepreneurship Industry (EI) intermediaries are pivotal in initiating entrepreneurial action, guiding decision-making, and shaping outcomes. Despite their evident influence, EI intermediaries remain under researched, leaving a critical gap in the nuanced conceptualization of the roles played by EI intermediaries in the entrepreneurial landscape. Our study adopts a structured framework, by focusing on EI intermediaries' transition mechanism. Guided by seminal work by McMullen & Shepherd (2006), we assert that EI intermediaries facilitate transition from the third-person to first-person stage of opportunity recognition and exploitation. We delve into the homogenization of business models resulting from the use of EI intermediaries and scrutinize non-uniform access to EI intermediaries: highlighting barriers that exacerbate inequalities within the entrepreneurial ecosystem. By using the research context of name, image, and likeness rule change that resulted in half a million potential entrepreneurs, findings offer scholarly contributions and actionable policy recommendations. The study calls for a more inclusive, equitable, and innovative entrepreneurial environment.

ENT: **I Go Where You Go: Imitation Behavior and Social Proof in Early-Stage Investments**

Author: **Henrik Wesemann**, *IE Business School*
Author: **Torben Antretter**, *U. of St. Gallen*
Author: **Dean Shepherd**, *mendoza*
Author: **Joakim Wincent**, *Luleå U. of Technology*

This study explores the dynamics of imitation behavior in angel investments. Drawing from signaling theory and the social proof principle, we investigate the impact of external and internal social proof on investment decisions. Our findings, based on an analysis of 77,312 decisions by 469 angel investors and an experiment involving 1,092 investor assessments, show that inexperienced investors largely depend on easily accessible but less useful external social proof, whereas experienced investors largely rely on more difficult-to-obtain but also more valuable internal social proof. Moreover, we show that reliance on internal social proof correlates with superior investment returns, but external social proof only produces irrational herding behaviors. These results contribute to the understanding of early-stage investment networks, the dynamics of social information in uncertainty, and signaling theory in the context of angel investing.

ENT: **Identity Construction in Conditions of Poverty: How Necessity Entrepreneurs Shape Who They Are**

Author: **Pierre-Yann Dolbec**, *John Molson School of Business, Concordia U.*
Author: **Robert Nason**, *McGill U. - Desautels Faculty of Management*
Author: **Jack Sadek**, *McGill U. - Desautels Faculty of Management*

While the myth of the entrepreneur equates financial wealth with success, the reality for many entrepreneurs is that they operate in contexts of poverty with limited opportunities for significant financial gain. How, then, can entrepreneurs in contexts of poverty create a successful entrepreneurial identity? To answer this question, we use an inductive qualitative approach based on single and repeat interviews with 45 small coffee farmers in rural southwestern Colombia and field data from a three-day workshop with an additional 37 farmers. We find that the farmers in our sample were socialized into an alternative system of worth that leveraged culturally available resources despite materially poor conditions. They shield their alternative system of worth from global market imposition and are able to craft a fulfilling entrepreneurial identity that is distinct from Western ideals and that, in some cases, has emancipatory effects. As a whole, our study identifies a territorialized approach to identity construction and points to a model for entrepreneurial organizing that eschews market hegemony while embracing pluralistic institutional influences.

ENT: **How Do Female Entrepreneurs Acquire Entrepreneurial Skills? The Inadvertent Role of Patriarchy**

Author: **Augustine Awuah Peprah**, *Southampton Business School, U. of Southampton*
Author: **Bede Akorige Atarah**, *U. of Professional Studies, Accra*
Author: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*

ABSTRACT The question of how female entrepreneurs develop entrepreneurial skills in patriarchal societies remains critical for researchers and policymakers. We use interviews in Ghana to explore how female entrepreneurs' navigation of patriarchy affects where and how they acquire entrepreneurial dexterity and managerial capabilities. Our findings reveal three socialization contexts (i.e., nuclear family, extended family, and community) from which three gendered skills are acquired (i.e., domestic submissiveness, domestic judgement, and domestic bricolage). The findings also show how the utilization of these three skills are mapped to three entrepreneurship phases (i.e., opportunity recognition, opportunity evaluation, and opportunity exploitation) and how their leverage in the entrepreneurship process is contingent on four feminine statuses (i.e., marriage, motherhood, divorcehood, and widowhood). These findings have important theoretical and practice implications.

Signaling and Communication

Session Moderator: **Lewin Von Saldern**, *Heinrich-Heine U. of Dusseldorf*

ENT: **Signaling of Social Startups: How Intellectual Property Rights can Translate into Funding Success**

Author: **Lewin Von Saldern**, *Heinrich-Heine U. of Dusseldorf*

We follow the call for more quantitative research in Social Entrepreneurship (SE) and examine whether technological and marketing capabilities are positively associated with the funding success of for-profit social startups. Using a unique panel data set with 254 social startups from the US, we operationalize patents as proxies for technological capabilities and trademarks as proxies for marketing capabilities and examine whether these forms of Intellectual Property are positively associated with funding success. While our survival analysis reveals no such effect for technological capabilities, we find a positive and significant effect between marketing capabilities and time to first funding. Further, we find that communicating about the social mission boosts the effect between marketing capabilities and funding success. Our research has three key contributions: First, we provide statistical insights in SE, a research field that is still predominantly conceptual and case study based. Second, we add to Signaling Theory by showing how social startups can employ trademarks as signals for marketing capabilities. Lastly, we complement the entrepreneurial finance and marketing literature by showing how social startups can position themselves to increase funding chances. For practitioners, our findings suggest that commercialization activities should be prioritized over invention activities until the first funding round.

ENT: **Evoking and Creating Meaning: The Role of AI in Social Entrepreneurial Rhetoric Creation and Framing**

Author: **Liang Shang**, *The Education U. of Hong Kong*

Author: **Yanto Chandra**, *City U. of Hong Kong*

Author: **Stratos E. Ramoglou**, *U. of Southampton*

Author: **Jeffery S. McMullen**, *Indiana*

Artificial Intelligence (AI), and specifically large language model AI, presents a wealth of opportunities to advance entrepreneurship scholarship. One of which is exploring ChatGPT as a new type of methodology to advance research on social entrepreneurial rhetoric creation, framing, and refinement. Utilizing prompt engineering as experiments, we engaged ChatGPT to produce a corpus of social enterprise ideas (n=311) aimed at alleviating poverty in Africa. We then tasked ChatGPT to refine these ideas (baseline corpus) into persuasive pitches in a 'pitch to win' scenario (pitch corpus). By comparing the baseline and refined pitch corpus using a mixed-method that combines natural language processing analysis and qualitative interviews, our analysis unveiled that ChatGPT strategically employed a variety of entrepreneurial framings in the language refinement process. At the word level, it leveraged call-to-action, impact, visionary, and collective framings. At the phrase, sentence, and paragraph levels, it employed solution, reinforcement, and plotline framings. In addition, by viewing entrepreneurial framing as an external, meaning-evoking strategy, we theorized a process model that demonstrates how entrepreneurial framing leads to desired communication outcomes by engaging audiences in a meaning-making process. Methodologically, our research reports one of the first empirical evidence of the potential of AI in refining social entrepreneurial rhetoric through a 'prompting as experimenting' approach. This work paves the way for future research to explore the limitless possibilities of AI for social entrepreneurship research, practice and policy with a particular attention on rhetoric.

ENT: **A Promising Future or a Pie in the Sky? Distinct Follower Responses to Vision Communication**

Author: **Fu Yang**, *Southwestern U. of Finance and Economics*

Author: **Mengqian Lu**, *Southwestern U. of Finance and Economics*

Vision communication, as one of the most pivotal and enigmatic aspects of leadership, has gathered substantial attention from both practitioners and scholars. However, a more comprehensive understanding of entrepreneurial vision communication necessitates the recognition that entrepreneurs cater to diverse audiences and there may be both intended positive and unintended negative consequences across these audiences. We integrate the concepts of construal fit and misfit from construal level theory, building up a dual-path model that sheds light on the divergent reactions to daily entrepreneurial vision communication based on followers' different types of psychological contract orientations. We conducted an experience sampling methodology (ESM) study and collected overall 865 daily observations from 113 participants who responded to multiple surveys for 10 consecutive working days. Results from multilevel path analyses indicate that after entrepreneurial vision communication, followers with relational contract orientation tend to focus on opportunities and in turn, exhibit a reduced intention to resist future change, whereas followers with transactional psychological contract orientation tend to focus on limitations, and become more likely to resist future change. This research challenges the consensus that vision communication generally has positive impact on followers, and contributes to research on dynamic motivation processes.

ENT: **Co-Creating a New Venture's Organizational Culture: A Study on Stakeholder Influence Strategies**

Author: **David Nawrath**, *Technical U. of Munich*

Author: **Anne Tryba**, *Technical U. of Munich*

New ventures rely on stakeholders to compensate for resource constraints. Although we know that stakeholders can profoundly shape a new venture's initial strategy and behavior, we lack a more nuanced understanding of their role in creating a venture's organizational culture – the DNA of a venture that is, once established, difficult to change. Drawing on a resource dependence perspective and a longitudinal multiple case study of eight new ventures, we build a conceptual model that illustrates how stakeholders employ different culture intervention strategies and related sets of influence tactics contingent upon their level of social identification with the new venture. Based on the respective responses of the venture's founding teams, stakeholders adapt their tactics, ranging from sharing well-meant advice to employing rational persuasion and coercive maneuvers. These ultimately determine the extent to which stakeholders' values and norms imprint the venture's culture and leave a mark on the collaboration with the venture's founding team. Our findings contribute to research on emergent venture organizing, organizational culture creation, and stakeholder engagement.

Balancing Acts: HR Practices and Labor Relations in the Modern Era

Session Moderator: **Bora Kwon**, *Sacred Heart U.*

HR: **Employer-Sponsored Voice Practices: When is it Worth Speaking Up?**

Author: **Bora Kwon**, *Sacred Heart U.*

Author: **Elaine Farndale**, *Penn State U.*

Author: **Jong Gyu Park**, *Chazanoff School of Business, CUNY College of Staten Island*

Organizations implement employer-sponsored voice practices (ESVPs) to encourage employees to speak up about issues related to their work. However, the mere presence of ESVPs tells us little about how employees experience them. Building from signaling theory, we develop a multilevel employee voice process model to investigate how an organization's ESVPs affect employees' perceived ESVPs and, in turn, employee perceptions of voice efficacy and voice safety. We suggest that this process is further moderated by the organizational climate for employee participation. A cross-level investigation of employee voice perceptions involving 476 employees across 22 organizations was conducted. The results show that organizational ESVPs are indirectly positively related to employee perceptions of voice efficacy via perceived ESVPs, while the same pattern was not found for employee perceptions of voice safety. The results further demonstrate a moderation effect of participative climate on the relationship between perceived ESVPs and employee perceptions of both voice efficacy and safety. The findings have important implications for both employee voice theory and practice.

HR: **Investment in Employee Development & Job Engagement: Demographic and Job Characteristics Moderators**

Author: **Rola Chami Malaeb**, *American U. of Beirut*

Author: **Thomas Garavan**, *U. College Cork*

Author: **Hussain Alhejji**, *Gulf U. for Science & Technology*

Author: **Irfan Ullah**, *School of Management and Economics, Beijing Institute of Technology, Beijing*

This paper offers a theoretical model explaining whether and when investment in employee development by hospitality organizations in Lebanon, Kuwait, and Saudi Arabia enhances job engagement. Drawing from Social Exchange Theory (SET) we first investigate direct relationships between perceived investment in employee development (PIED) and overall job engagement, then the relationship with its dimensions- cognitive, emotional, and physical engagement. We specifically interrogate whether these relationships hold up for gender, age, job experience, and job level. Second, we investigate the moderating effects of work intensity and irregular working hours on these direct relationships and whether these contingencies result in organizations losing the value of employee development investments. We utilize data from hotels in Lebanon, Kuwait, and Saudi Arabia involving 729 front-line employees and managers. Our results show that PIED is positively associated with overall job engagement and its three dimensions. We found that these relationships are stronger for male and older employees, those with less job experience, and managerial employees. Work intensity negatively moderates the relationships between PIED, job engagement, and its dimensions whereas irregular work hours positively moderate the PIED - job engagement relationship and both cognitive and physical engagement. We discuss implications for theory and practice.

HR: **Sharing is Caring: Employee Stock Ownership Plans and Employee Satisfaction in U.S. Manufacturing**

Author: **Adrianto Adrianto**, *U. of Minnesota*

Author: **Jason Sockin**, *U. of Pennsylvania*

Author: **Avner Ben-Ner**, *U. of Minnesota*

Author: **Ainhoa Urtasun**, *U. pública de navarra*

Do employees fare better in firms they partly own? By examining workers' reviews of their employers on the website Glassdoor, we offer the first expansive comparison of employee satisfaction between firms in which workers own company shares through an employee stock ownership plan (ESOP) and conventional firms in which they do not. Focusing on production workers and managers in an industry-labor market matched sample within U.S. manufacturing, we find that employees report greater satisfaction in employee-owned firms overall and within specific aspects of jobs such as their firms' culture. Such differences in job quality cannot be rationalized by differences in skill demand and are greater when the ESOP is the product of collective bargaining. This work highlights how match quality can differ by ownership arrangement.

HR: **What Did Unions do for Working Parents During the COVID-19 Pandemic?**

Author: **Yonjin Suh**, *U. of Illinois at Urbana-Champaign*

The Covid-19 pandemic dramatically affected workers' lives and their ability to manage dual demands stemming from both the work and family domain, especially in the case of working parents. In this study, the authors focus on the positive role that unions played in increasing access to workplace benefits during the pandemic and examine how such efforts may have contributed to the wellbeing of working parents. Using nationally representative survey data collected from South Korea across two time points, this study finds that unions had a positive influence on the availability and awareness of family-friendly practices, which in turn contributed to lowering working parents' Covid-related parenting stress. The results also show that social class, union instrumentality, and government Covid-19 crisis management moderated the mediated relationship. Overall, the study seeks to enrich scholarly understanding of what unions did for working parents during the pandemic by shedding light on how they may contribute to workers' wellbeing by having a positive influence on family-friendly workplace benefits. The paper further provides novel insights into the effects unions have on the family domain by bringing family-related factors into the spotlight.

Innovation Through HR: Leveraging Research Insights for Organizational Growth

Session Moderator: **Yan Wang**, *East China Normal U.*

HR: **The Paradoxical Influence of Algorithmic Control on Platform Workers' Customer-Directed Deviance**

Author: **Yan Wang**, *East China Normal U.*

Author: **Zhenyuan Wang**, *East China Normal U.*

Algorithmic control has been widely adopted by online labor platforms to ensure that workers consistently deliver quality services. However, extensive evidence suggests that platform workers under the tight control of algorithms still regularly engage in customer-directed deviant behavior, thus raising questions about the effectiveness of algorithmic control. To address this critical tension, the authors draw on ego depletion theory to examine why and when algorithmic control fails in constraining worker customer-directed deviant behavior. The present study conducted an online questionnaire survey at three time points with 377 ride-hailing drivers in China. Data were analyzed with structural equation models. The results show that algorithmic control does help reduce worker customer-directed deviance, but it also results in worker ego depletion, which in turn creates conditions for more undesirable behavior toward customers. Algorithmic transparency alleviates the influence of algorithmic control on ego depletion and financial dependence on platform work mitigates the impact of ego depletion on customer-directed deviance. The indirect effect via ego depletion is more pronounced when algorithmic transparency and financial dependence are both low. The study provides feasible directions to optimize algorithmic control system design and reduce customer-directed deviant behavior.

HR: **Leveraging Artificial Intelligence: The Machine/Human Agentic Impact on Evolving Practices in L&D**

Author: **Debolina Dutta**, *Indian Institute of Management, Bangalore*

Author: **Anasha Kannan Poyil**, *Indian Institute of Management, Bangalore*

The practices and processes enabling learning within organizations have emanated from human agencies and have led to structures and protocols for building a learning culture. Besides, rapid technological advancement has increased the adoption of artificial intelligence (AI) in various domains of Human Resource Management (HRM) (e.g., use of bots, natural language processing, and machine learning, among others). Ironically, though, their adoption in Learning and Development (L&D) remains abysmally low. In this paper, using the lens of technology in practice, we examine the machine agency and its impact on structures and practices within L&D. In the process, we adopt a qualitative approach and interview 24 HR leaders within the L&D function of global organizations. Further, deploying Gioia's methodology for qualitative analysis, we eventually theorize about the socialization of human-to-human and machine-mediated human interactions to develop the four emerging structures of how human-machine-conjoined agencies support L&D. Keywords Learning & Development (L&D), Artificial Intelligence (AI), Human-Machine Agency, Technology in Practice, AI adoption, AI-driven learning

HR: **How Does Quantum Leadership Stimulate Employees' Innovation in the VUCA Era?**

Author: **Yufei Ma**, *Nanjing U.*

Author: **Qing Ni**, *Anhui U.*

Author: **Shuming Zhao**, *Nanjing U.*

In the VUCA era, using quantum thinking mode to improve leadership effectiveness is one of the frontier issues in organizational management. Based on the social cognitive mechanism and social learning mechanism of social cognitive theory, we constructed a moderated dual mediation model to explore the mediation mechanism and boundary conditions of quantum leadership on employees' innovative work performance. This study revealed that quantum leadership positively influenced employees' innovative work performance. Creative process engagement and critical thinking played a partial mediating effect on the positive impact of quantum leadership on innovative work performance. Moreover, the findings of this study revealed that high levels of employees' perception of HRMS strengthened the positive relationship between quantum leadership and innovative work performance. The findings of this study both enriched the research on the mechanisms of quantum leadership and provided managerial insights for improving employees' creative work performance.

HR: **The (Lingering) Curse of the Bell Curve? Performance Management in MNC IT Service Firms in India**

Author: **Uday Bhaskar**, *Institute of Management Technology Ghaziabad, India*

Research on performance management systems (PMSs) in general and the bell curve system specifically has accentuated the subjectivity of the system, which has led to widespread dissatisfaction with the bell curve system and an increasing number of firms abandoning it. However, little is known about whether the new PMSs are more effective than the seemingly discarded bell curve system and the broader human relations management (HRM) implications the new PMSs may have. Equally, the institutional context in which PMSs are implemented in multinational companies (MNCs) in emerging markets has not been sufficiently examined. In particular, little is known of the main institutional forces that shape performance rewards behind the scenes. Drawing on case study data from two Indian-owned and three foreign-funded MNCs in the IT industry in India, we found that the PMSs adopted after abandoning the bell curve system have led to reduced rewards that do not differentiate and acknowledge top talents sufficiently, and there is reduced transparency of ratings and hidden application of the bell curve even though it has been officially abolished. Our study also shows that there are strong similarities and convergence of the PMSs and practices across the five firms and that western MNCs operating in India have been strategically adopting a cost-centered approach to HRM to take advantage of the labor market and labor institutions, although this is not entirely successful, due to the booming IT sector and a high level of attrition.

Talent Management Excellence: Strategies for Developing High-Potential Employees

Session Moderator: **Anna Sender**, *Lucerne U. of Applied Sciences and Arts*

HR: **How Who I Am Affects If I Want to Stay: Talent Status, Identification, and the Role of Embeddedness**

Author: **Anna Sender**, *Lucerne U. of Applied Sciences and Arts*
Author: **Marion B. Eberly**, *U. of Washington, Tacoma*

Even though organizations implement talent management (TM) programs with the explicit goal to increase retention, results are mixed whether these programs do indeed reduce turnover among talents. We examine the relationship between talent status and turnover intentions through a social identity theory lens. We propose that talents, compared to their non-talent peers, report greater organizational identification but reduced workgroup identification, which in turn should lead to opposing effects on turnover intentions. We also examine whether job embeddedness moderates the mediated effect via workgroup identification. Our three-wave survey study over the course of two years included 352 employees at a multinational machinery manufacturing company in China, of which 45 had recently been nominated as a talent in the company's newly established TM program. Our results showed that talents did not report greater organizational identification compared to non-talents. However, we found support for the moderated mediation hypothesis such that talents with low job embeddedness reduced their workgroup identification and, as a result, reported higher turnover intentions compared to non-talents. This study highlights the critical role of boundary conditions such as job embeddedness in talent and non-talents' attitudes over time and emphasizes the potential identity strain talents experience, which may trigger thoughts of leaving.

HR: **The Role of Previous Experience in Human Capital Redeployment: The Value of Solo Experience**

Author: **Hyoungwon Thomas Yoon**, *Bocconi U.*

Research on strategic human capital and resource redeployment emphasizes how firms benefit from human capital redeployment in facilitating effective knowledge transfer and recombination. However, we argue that the very purpose of redeployment for knowledge transfer may burden geographically redeployed individuals and reduce their performance. Empirical analysis of individual-level patent data on inventors and their productivity at 545 U.S. technology firms confirms the negative individual-level productivity implications of geographic redeployment. We then examine how redeployed individuals have differential performance implications from accumulating different types of knowledge. The findings of our study suggest the necessity of careful redeployment of human capital across locations.

HR: **Stars Out of Alignment: The Dynamic of Leader-Member Star Symmetry/Asymmetry on Unethical Behavior**

Author: **Michelle C. Hong**, *North Dakota State U.*
Author: **Hsing-Er Lin**, *National Sun Yat-Sen U.*

While existing star literature has extensively probed into strategies for recruiting and retaining star performers, a notable gap remains in understanding the potential dark side of having stars within an organization. Stars, akin to any individuals, are susceptible to ethical misconduct. Using a leader-member dyadic sample, this study explores the dynamic interplay of leader-member star status in influencing their behaviors. Our findings reveal that when both the leader and member share high star status (leader-member star symmetry), leaders demonstrate a diminished likelihood of engaging in unethical behavior. However, leaders are prone to compromising their ethical standards when their star status falls behind that of their followers. Similarly, followers are more predisposed to ethical misconduct when their star status surpasses that of their leaders. This study concludes by discussing the practical implications for optimizing the team composition of stars between leaders and followers.

HR: **Chasing Stars: Firm and Environmental Factors Influencing the External Hiring of Star Employees**

Author: **Ryan Terry**, *Wichita State U.*
Author: **Jeffrey E McGee**, *U. of Texas At Arlington*
Author: **Jodi Pelkowski**, *Wichita State U.*

The understanding that not all employees contribute equally to a company's strategic value has intensified the competition among firms to attract and retain star employees. Organizations have considered stars as vital assets and pivotal drivers of organizational performance, yet little research has examined the antecedents for acquiring these key individuals. This study set out to shed some light on this topic by examining internal and external characteristics that shape firm behavior for pursuing stars. We find that firm aggressiveness and competitive rivalry positively influence a firm's decision to hire stars externally, while a negative relationship exists for a firm's competitive position. Results also indicate that firm aggressiveness further influences the competitive rivalry and competitive position relationships with a firm's propensity to externally hire stars. These findings suggest that firms carefully consider both internal and external factors in the decision to retain or chase stars.

Change Leadership: Strategies for Navigating Organizational Transformations

Session Moderator: **Rana Muhammad Naeem**, *The Islamia U. of Bahawalpur, Pakistan*

HR: **Empowering Leadership and Employee Well-being in Extreme Context: The Moderated Mediation Model** 

Author: **Rana Muhammad Naeem**, *The Islamia U. of Bahawalpur, Pakistan*
Author: **WENG Qingxiang**, *U. of Science and Technology of China*
Author: **Zahid Hameed**, *Prince Mohammad Bin Fahd U.*

Emergency service organizations are currently grappling with challenges related to the poor well-being of their staff and higher turnover intention. Limited research investigates the factors that may increase work engagement and decrease turnover intention among those working in extreme contexts. Drawing from the Job Demands-Resources model, this study examines the relationship between empowering leadership (EL), work engagement and turnover intention, with psychological resilience as the mediator and social support as the moderator. We tested our hypothesized model using three-wave data (with a two-month time lag between each wave) collected from 396 emergency service employees. Results from multi-wave data reveal that EL positively influences psychological resilience, leading to increased work engagement and decreased turnover intention. The study results suggest that psychological resilience significantly mediates between EL and outcome variables. Furthermore, the EL and psychological resilience relationship is strengthened at high levels of social support, indicating a beneficial effect for emergency service employees working in extreme work contexts. These findings carry significant theoretical and practical implications.

HR: **Feeling the “Heat” in Energy-squeezed Europe: Green HRM as a Resilience Strategy, Revisited**

Author: **Laura Khachan**, *U. Paul Valery, Montpellier*
Author: **Ibrahim Tanko Tanko GAMPINE**, *U. Paul Valery, Montpellier*

STUDENT FIRST AUTHOR - The urgency of addressing climate change and the necessity of bolstering organizational resilience have become critical. As part of the organization's approach to Corporate Social Responsibility, the HR function must also adjust internally to external developments and to social and environmental needs. While SMEs and VSEs are free from legal duties, large and mid-cap corporations in France are bound by ecological rules and regulations. Could Green HRM serve as a strategy to foster resilience? And how does HR management fit into CSR at the scale of VSEs and SMEs and translate into real-world applications? In this study, we gather and analyze qualitative data using the grounded theory method. We investigate the effect of green HRM on organizational resilience by looking at best Green HRM practices in environmentally mature organizations in France and relate these practices to the strengthened dimension of resilience. The application of environmental practices, the effective management of transition and change, the management of sustainable performance, and the anticipation of the wave of environmental legislation at the level of VSEs and SMEs can all strengthen Green HRM's position as a strategic pillar of Organizational Resilience. In this study, we aim to equip VSEs with appropriate instruments and suggestions to expedite their ecological shift and cultivate their adaptability.

HR: **Does a New Broom Sweep Clean?: When and Why New Managers Can Excel** 

Author: **Hyesook Chung**, *U. of Texas at Dallas*
Author: **Sangyun Kim**, *U. of Zurich*

While managerial changes are common in contemporary organizations, the existing body of literature tends to disproportionately focus on the detrimental effects of such changes. It often focuses on the disruptive effects caused by the departure of incumbent line managers, with less attention given to the potential advantages brought by new managers' arrival. Utilizing a unique longitudinal data set that includes episodes of managerial change, this study identifies conditions that can lead to successful managerial transitions. In particular, We propose that a stable structure and workforce composition – modular work groups and full-time employees – can facilitate the learning processes for new managers, thereby helping them to quickly overcome the initial managerial change and potentially achieve better performance outcomes. Therefore, this research underscores that the key to successful managerial change lies not only in minimizing the disruption caused by the transition but also in effectively capitalizing on the opportunities it presents.

HR: **Employee Reactions Toward Change in the Context of Digital Transformation**

Author: **Jiayi Chen**, *Nanjing U. School of business*
Author: **Yixuan Zhao**, *Nanjing U.*
Author: **Man Cao**, *Nanjing U. of Science and Technology*
Author: **Ru Li**, *Nanjing U. of Finance and Economics*
Author: **Chenhong Hu**, -

Digital transformation is imperative for organizations to adapt to the digital era and gain new competitive advantages. Given the pivotal role of employees, it is particularly crucial to internalize organizational strategic intentions into employees' cognition and behavior. Recognizing the influential role of human resource management (HRM) in shaping employee cognition and behavior, we deployed HR attribution theory and conducted a two-stage survey involving 110 senior managers and 682 employees from 110 enterprises undergoing digital transformation to examine the impact mechanism and boundary conditions of digital HRM on employee reactions to change. The study reveals that digital HRM influences employee reactions to change through HR attributions. Paradoxical leadership not only moderates the relationship between digital HRM and employees' HR attributions, but also moderates the indirect effects of digital HRM on employee reactions to change through HR attributions. This study not only broadens the understanding of the mechanisms and boundary conditions related to the influence of digital HRM on employees' cognition and behavioral responses, but also provides new insights for managers to seek inspiring employees' bottom-up supportive behaviors toward organizational digital transformation.

Discussant: **John Mathieu**, *U. of Connecticut*

As organizations tackle increasingly complex challenges, multiteam systems (MTSs) have become critical for coordinating specialized teams. Despite growing recognition of the importance of MTSs, empirical research remains limited, stemming from difficulties concerning adequate data collection. This symposium demonstrates high-powered experimental and computational modeling MTS studies enabled through an innovative approach of establishing a national infrastructure facilitating large-scale collaboration. The case for the advantage of establishing such an infrastructure is best made by showcasing previously unexamined topics that are made possible to study through this collaborative capability. Each of the four papers in this symposium empirically examines important yet understudied questions in the MTS literature. Collectively, the papers exhibit multifaceted questions approachable through pooled access to participants, with insights spanning levels and methods. This symposium, therefore, illustrates the potential that architecting dedicated infrastructures can play in advancing empirical frontiers. The discussant, John Mathieu – a prominent scholar in this topic area – will highlight the key theoretical and practical implications of this innovation in MTS research.

This symposium aims to advance our understanding of the relatively novel phenomenon of technology-mediated HRM by examining the key complexities that it represents for HRM and employment relations scholarship. With the lack of human managers in certain employment settings (e.g. platform-based gig work), HRM activities are primarily outsourced to algorithmic systems and, in some cases, customers, who engage in performance management processes by submitting anonymous ratings of workers. Thus, the uniqueness of this symposium lies in its multi-stakeholder perspective, which contributes to academic research by shedding light on and addressing the implications of this technology mediated form of people management for HRM theory and practice. In doing so, the papers featured in this symposium examine various perspectives of the working relationship, including worker, organizational, customer, and legal perspectives.

Prosocial behaviors are a ubiquitous part of daily organizational life for most employees. Whether it is helping an overwhelmed colleague with their work tasks, asking for advice from a team member about a work or personal problem, or observing a coworker offering assistance to another organizational member, prosocial behaviors are highly prevalent and visible in the workplace. Research has suggested that prosocial behaviors may offer benefits for both the giver and the receiver as well as improve organizational performance. However, more recent research has cautioned that prosocial behaviors may also have some costs for actors. Given the complex implications of prosocial behavior for actors, it is important to understand factors that influence the extent to which employees choose to engage in prosocial actions toward their coworkers. This symposium seeks to offer new insights into the complexity of behaving prosocially toward coworkers by considering the social context in which prosocial behaviors in organizations occur. Due to the inherently interpersonal nature of prosocial behaviors, social judgments about coworkers may affect employees' willingness to give help, advice, or other assistance to their coworkers. Indeed, prosocial behaviors at work do not occur in a vacuum but rather are embedded in the context of ongoing coworker relationships and social pressures in an organization. Thus, our work seeks to contribute to our understanding of when employees behave prosocially toward their coworkers by considering various types of social perceptions at work as predictors of prosocial behaviors. Specifically, utilizing a diverse set of methods (e.g., experience sampling study, experiment, multi-wave dyadic study), the papers presented here collectively study relational judgements, social comparisons, and social pressures as antecedents of different types of prosocial behaviors at work (e.g., personal help giving, advice giving, OCB). Together, the papers suggest that how employees construe themselves in relation to their coworkers is a significant driving force of decisions to help (or not to help) coworkers.

MED: How Collaborative Accountability in Workplace Coaching Impacts Employee Sustained Change  

Author: **Roman Terekhin**, *George Washington U.*
Author: **Scott N. Taylor**, *Babson College*
Author: **Ellen B. Van Oosten**, *Case Western Reserve U.*

Workplace coaching often implies some form of accountability in the coach–employee relationship, but there is minimal treatment of accountability in the extant coaching literature. Much of the research on accountability in general treats it as a tool needed for evaluation and ensuring certain activities occur. We draw upon three theories (self-expansion theory, intentional change theory, and self-determination theory) to propose an essential construct for workplace coaching called collaborative accountability. We present this construct as part of a framework of vision-based workplace coaching that describes how a coach enables employee psychological safety, vision clarity, and intrinsic motivation, such that the coach and employee in turn experience relational mutuality and self-expansion. These two elements enable collaborative accountability, which is essential to and enables employee sustained change. We present propositions that serve to invite further coaching research, and we discuss the implications our framework has for the practice of workplace coaching.

MED: Executive Education and Elite Formation Dynamics 

Author: **Virpi Sorsa**, *Jyväskylä U. School of Business and Economics, Jyväskylä, Finland*
Author: **Pasi Nevalainen**, *U. of Jyväskylä*
Author: **Juha Kansikas**, *U. of Jyväskylä School of Business*
Author: **Aleksi Korhonen**, *Aalto U. School of Business*

Executive education influences business leaders, corporate practices, and society. Yet, the role of these educational programs in shaping local business elites has not been explored. Our study advances the research on executive education’s impact on the development of business elites by examining the Finnish LIFIM executive education program from the 1950s through the 2000s. We propose a model that offers a comprehensive understanding of the multifaceted role of educational programs. This model extends beyond the scope of educational content to include the formation of social networks. It provides a framework for understanding how an educational program can evolve into a prestigious tradition among local business elites and the factors contributing to the loss of this status.

MED: Shifting Paradigms in Leadership: The Rising Influence of Intuition in Executive Development  

Author: **Anderson De Souza Sant’Anna**, *FGV-EAESP*
Author: **Fatima Bayma De oliveira**, *Fundação Getúlio Vargas/EBAPE*
Author: **Luiz Salgado Vogel**, *FGV-EAESP*

This article examines the application of the Myers-Briggs Type Indicator (MBTI) in leadership development within the context of executive education programs. Utilizing a comprehensive empirical study of 7,924 executives enrolled in executive education programs at a leading Brazilian business school from 2010 to 2016, this research aims to explore shifts in psychological profiles, particularly the prevalence of the Intuition function. The study utilizes a quantitative and descriptive approach, analyzing data through MBTI assessments to categorize executives into 16 personality types. The findings reveal a dominant presence of “Thinking” and “Sensing” functions, with a notable increase in the “Intuition” function over time. This indicates a shift towards more visionary and adaptable leadership styles in response to global business changes, such as globalization and technological advancements. The study contributes to the literature on leadership development by highlighting the evolving nature of leadership competencies and the increasing importance of diverse psychological profiles in leadership roles. This research is significant for practitioners and organizations aiming to develop leaders equipped to navigate 21st-century business challenges. The study, however, recognizes the limitations of its regional focus and reliance on self-reported data, suggesting the need for further research incorporating broader samples and additional psychological assessments.

Making ChatGPT Work for Non-Technical Faculty

Organizer: **Sunyoung Park**, *Louisiana State U.*

Organizer: **Seungwon Yang**, *Louisiana State U.*

Advancements in artificial intelligence (AI) and large language models (LLMs) have opened exciting new possibilities for enhancing higher education. Since the release of ChatGPT in November 2022 (DeVon, 2023), academia has expressed divergent opinions about the use of this technology. This AI-based chatbot has a lot of potential to improve academic work efficiency by interacting with users in a conversational way, using human-like language to answer questions and generate content (Meyer et al., 2023). Specifically, ChatGPT has been used to support faculty work, including research and teaching (Kiryakova, & Angelova, 2023; Meyer et al., 2023; Rahman & Watanobe, 2023). However, there have been limited opportunities to support faculty members learning and applying ChatGPT efficiently and effectively in their academic work practices, addressing ethical and privacy concerns involved with ChatGPT. Therefore, the purpose of this workshop is to guide participants on how to apply ChatGPT to enhance faculty work (research, teaching, and service) and everyday tasks, through specific examples and hands-on activities by using prompt patterns and useful tips. This workshop can help to promote the transfer of knowledge on ChatGPT into faculty work and bridge the divide between knowing ChatGPT theoretically and using it practically. The expected outcomes of this workshop are: (a) to increase knowledge and understanding about using ChatGPT in personalized ways and (b) to improve individual capability of applying specific prompt patterns to ChatGPT by expanding application cases and examples. Additionally, this workshop also provides opportunities for participants to practice ChatGPT in their work contexts and share their experiences and ideas to improve its applications

Please bring your laptop.

A Toolbox for Humor in Management Education – From Award Winning Instructors and Top Comedy Schools

Organizer: **Svetlana Ivanova**, *Vienna U. of Economics and Business*
Presenter: **Andre Martinuzzi**, *WU Vienna U. of Economics and Business, Institute for Managing Sustainability*
Presenter: **G. James Lemoine**, *U. at Buffalo, The State U. of New York*
Presenter: **Lisa T. Stickney**, *The U. of Baltimore*
Presenter: **Angelo Spörk**, *WU Vienna U. of Economics and Business*

This highly successful PDW, than won the last years's best PDW award from the MED division, will be offered in Chicago again, as humor in the classroom provides a broad diversity of positive effects. It helps to motivate students and supports a positive relationship between them and educators. When integrated into course design, humor increases students' understanding of the topic, improves learning outcomes, and positively impacts their creativity, critical thinking and ability to deal with ambiguity. In this PDW we will present a well-founded, modular toolbox with established effectiveness that can be used in different teaching contexts and does not require extensive training and initiate a dialogue about its usage based on first-hand experiences. It supports you in in utilizing humor in your teaching strategies, courses, and exercises by introducing the basic functions of humor, by illustrating how it can be successfully applied, and by providing effective tools. If accepted, this PDW will feature a distinguished guest from one of the top comedy schools – the 'The Upright Citizens Brigade' or 'The Second City'. Their insights will be enriched by practical cases of using humor as a teaching and learning tool successfully implemented at business schools in the U.S. and Europe. In an interactive exercise, session participants will gain insights into how to effectively utilize humor in their teaching strategies while avoiding possible negative effects.

We Cannot Escape History: On the Co-evolution of History in Organizations

Coordinator: **Matteo Cristofaro**, *U. of Rome Tor Vergata*
Moderator: **Jeffrey Muldoon**, *Emporia State U.*
Panelist: **Bradley Gerald Bowden**, *Journal of Management History*
Panelist: **Marcelo Bucheli**, *U. of Illinois at Urbana-Champaign*
Panelist: **Geoffrey Jones**, *Harvard Business School*
Panelist: **Arie Y. Lewin**, *Duke U.*

Our plenary delves into the pivotal theme of the contextual significance of history to organizations. Current organizations' identity, processes, strategies, and behavior are a product of multi-level co-evolution, where organizational actions intertwine with environmental responses. As such, there is a path dependence that speakers in our plenary seek to illuminate. Their focus will be to examine the intricate dynamics that shape organizational paths, seeking to deepen our understanding of nuanced relationships between actions and reactions. Attendees can anticipate a thought-provoking exploration of how organizational narratives unfold within the context, offering valuable insights into the holistic understanding of management history.

Organizer: **Tobias Fredberg**, *Chalmers U. of Technology*

Unprecedented challenges of disruptive technologies, climate change and social crises, as well as stakeholder disorientation, call for a re-evaluation of organizational capabilities, growth priorities, and the way organizations change and innovate for the future. Established companies face a sharp increase of exploration and exploitation tensions and the need for renewal of business practice, models, and governance is existential. In these conditions, examples of high-growth companies place the corporate purpose central to their strategy and innovation, leveraging it to restructure playing fields and value propositions (Knowles & Hunsacker, 2022; Malnight et al., 2019), to catalyze systematic change (Henderson, 2021), to serve multiple stakeholders' interests (Battilana et al., 2022), and to radically reinvent themselves (Binns, O'Reilly & Tushman, 2022). In continuation of the AOM2023 symposium "Purpose-driven Innovation and Transformation" and building on existing and emerging empirical research, the aim of this symposium is to deepen the discussion and explore the under-researched role of corporate purpose in the specific fields of strategic renewal, generative change as well as groundbreaking and collaborative innovation. For a insightful and lively debate on these topics, we invited leading experts in organizational transformation and evolution, strategic renewal, disruptive and open innovation, visionary leadership, and ambidexterity. The members of the panel have academic as well as practitioner backgrounds and experiences.

Examining AI Adoption and Productivity Improvement: From Resistance to Acceptance

Organizer: **Jeremy Wei**, *Harvard U.*

Organizer: **Sida Peng**, *Microsoft Corporation*

Panelist: **Mert Demirer**, *MIT*

Panelist: **Peter Cihon**, *GitHub*

Panelist: **Jin Paik**, -

Panelist: **Michael Schwarz**, *Microsoft Corporation*

In an era driven by technological advancements, AI-human collaboration has sparked profound discussions regarding its adoption and impact on productivity, particularly in domains such as chess, medical diagnostics, and individual resilience against adversities. The symposium aims to unveil a novel framework anchoring on established technology acceptance and innovation diffusion theories, encompassing recent AI adoption and productivity improvement studies in the real world. Notable professionals representing esteemed institutions like Microsoft, GitHub, Harvard, and MIT will actively participate in panel discussions to bridge the divide between real-world observations and academic discussions, igniting innovative ideas and crafting analytical frameworks. This symposium includes three parts. At the beginning of this symposium, Jeremy Wei and Sida Peng will revisit the technology acceptance model, the diffusion of innovations model, and institutional theories from a critical perspective, summarizing new studies on software engineers about the impacts of functional and psychological barriers on the resistance to AI adoption and how the transition from resistance to acceptance emerges. At the second part of this symposium, Sida Peng and Mert Demirer will lead a discussion on productivity improvement by introducing their recent experiments about software developers' productivity using GitHub Co-pilot in the real world. In conclusion, this symposium gathers diverse perspectives from the panel speakers and participants to contribute to understanding the acceptance and resistance to AI adoption, thereby yielding practical implications for theory and management.

Theorizing Change: Turn, Turn, Turn

Session Moderator: **Vanessa Pouthier**, *U. of Melbourne*

OMT: **“New” to Whom? How French New Wave Gendered Change**

Author: **Xiaoran MA**, *U. of Melbourne*
Author: **Vanessa Pouthier**, *U. of Melbourne*

Despite institutional work studies' growing concern with gender, few attempts have been made to examine how gender-work binding has been made throughout institutional change. Addressing this literature lacuna helps explain the stubborn transmission of gender inequality from one form of organizational novelty to another (Ridgeway, 2011). By conceiving gendering as a specific form of institutional work, we examine how gendering work is performed such that male superiority and labor division are perpetuated underneath the progressive, revolutionary appearance of an institutional change. After investigating the historical case of French New Wave, we identify four types of institutional work – namely, deconstructing, constructing, defending, and silencing, baking gender hierarchy into new roles that the art movement proposed. Our study makes two contributions. First, by dissecting the gendered change of New Wave, we contribute to unraveling the puzzling persistence of gender inequality despite continuous waves of social change and organizational novelty (Tilly, 1998). In so doing, we also explain why our collective imagery about artistic creativity and craftsmanship has been colonized by masculinity. Second, we contribute to gendering literature by illustrating diachronic (i.e., deconstructing, constructing, and defending) and synchronic (i.e., silencing) axes underpinning gendering work dictating what women are willing and capable of doing. On the one hand, we demonstrate “history as strategy” to expose and break the body-work associations (Ashcraft & Ashcraft, 2015). On the other hand, we foreground the discursive disentanglement of cruel optimism (Berlant, 2011) – that is, cruel (i.e., the unsaid darkness) x optimism (i.e., the said fantasy) – as crucial to making visible the delicate but potent gendering work in contemporary organizing. Keywords: institutional work, gendering, institutional change, cinema

OMT: **From Institutionalization to the Simulacra: The Repetition of Signs in the Micro-Macro Processes**

Author: **Yuan Li**, *Saint Mary's College of California*

This paper seeks to reconceptualize the micro-macro institutionalization process as repetition of signs. A sign is a triadic structure, known as the semiotic triangle, that consists of signifier, signified, and referent. The semiotic triangle allows for a more balanced consideration of the symbolic (i.e., signifier and signified) and the material (i.e., referent) aspects of social actions and social structure as we theorize the micro-macro relation. It can be extended to present meaning processes that involve potentially infinite chains of semiosis regression toward the signifier, signified, or referent as the sign spreads, generating three types of sign repetition. Repetition is a Deleuzian concept understood as intensive encounters. I argue that early management and organization practices are semiosis regression towards the referent, followed by regression towards the signified and, more recently, we are observing semiosis regression towards the signifier, which is akin to what Baudrillard would call the simulacra or copies without originals. This reconceptualization brings heterogeneity and more dimensionality to the micro-macro dynamic. It enhances the theoretical rigor of loosely coupled institutional change and enables organization theorists to engage the broader ideological context which is often missing in micro-macro research.

OMT: **Becoming While Changing**

Author: **Emamdeen Fohim**, *U. of Bern*
Author: **Claus Jacobs**, *U. of Bern*

Institutional entrepreneurship has been identified as one (not exclusive) condition that can foster institutional change. Scholars have studied how external changes in the institutional environment trigger institutional entrepreneurship as well as institutional entrepreneurs' characteristics and actions influential on the amendment of institutions. However, few empirical studies have investigated how the motivation for institutional entrepreneurship during changes in the institutional environment is formed (or, in some cases, not). By a multiple-case study approach combined with phenomenological interviews, we investigated the experiences of Swiss cantonal planners (CP) – high-level civil servants responsible for sustainable urban planning – when being exposed to the same change in the institutional environment (a new federal law in Spatial Planning) that affected the institution they were responsible for (the cantonal plan). We found out that those CPs motivated to engage in institutional entrepreneurship did so to align an imagined identity of themselves and an imagined alternative institution with their evoked core values that emerged when experiencing an institution as socially reconstructable. The resulting theoretical model sheds light on the becoming of institutional entrepreneurs and the role of imagination in this process. It contributes to organizational literature on addressing the process of how people turn into actors and the role of values in imagining alternative futures.

OMT: **All Change: How Peripheral Actors Theorize Change in Mature Fields**

Author: **Ibrat Djabbarov**, *Imperial College London*
Author: **Andrey Pavlov**, *Cranfield School of Management*
Author: **David Denyer**, *Cranfield U.*

This study explores how challengers theorize change in mature fields and how their theorization evolves in view of contestation from the incumbents. As peripheral actors, challengers often lack the legitimacy and resources to enact major change, and their attempts to change the field's arrangements do not go uncontested by the incumbents. We studied how a social enterprise configured solutions to improve access to vaccination services in resource-poor countries and, in doing so, changed the institutional arrangements in the mature field of global health. Based on a longitudinal qualitative study, we extend the concept of theorization in institutional theory. In particular, we show how incumbents' contestations lead the challengers to complexify their theorization by elaborating solutions to secure endorsement and introduce change in the global health field. We highlight how, in pluralistic mature fields, challengers may develop multiple streams of change aimed at diverse categories of incumbents in response to different issues, interests, and institutional arrangements, yet simultaneously form a master theorization by assembling the diverse solutions together.

Presenter: **Joanna Reddick**, *U. of Georgia*
Presenter: **Michael Pfarrer**, *U. of Georgia*
Presenter: **Katherine Chen**, *The Wharton School, U. of Pennsylvania*

From research spanning decades, scholars have shown that society shapes organizations and that organizations shape society. Social activists can force organizations to take stances on social issues, and in turn, those social stances alter the public's understanding of those issues. LGBT marriage benefits are a de facto case. Pro-LGBT social activists created a cycle of targeting firms for benefits, and then firms reflected their claims' legitimacy back through society via satisficing and the media (Briscoe & Safford, 2008). Firms' products hold similar power, where a given product can impact society's perception of an entire category (Negro, Hannan & Rao, 2011). Building on a rapidly growing body of recent research, this symposium extends research on how social activists change firms and invoke social change. Each of the papers presented in this symposium goes deeper into the mechanisms, frameworks, and consequences of social activism. Our goal is to provide fresh, practical insights for academics and practitioners who are navigating the evolving space of socially-conscious management. Using our symposium's empirical papers, we explore firm-linked social change in several contexts, including community-led economic development, climate change, race, and gender. Our symposium ends with a framework to aid in identifying future topics.

Climate Action and Organizational Adaptation: Behavioral and Strategic Responses

Session Moderator: **Toby Li**, *Texas A&MU*.

ONE: Dynamics of Lifestyle Change: The Effect of Pro-Environmental Behaviours on Australians  

Author: **Subhadarsini Parida**, *lecturer, U. of South Australia*
Author: **Deepak Sardana**, *College of Business and Law, RMIT U.*
Author: **Narain Gupta**, *Management Development Institute Gurgaon*
Author: **Sameer Deshpande**, *Griffith U., Australia*
Author: **Graham Bradley**, *Griffith U., Australia*

This research delves into the complex landscape of Australian perceptions and attitudes toward climate actions, emphasizing the varying perspectives among the population. The study encompassing an extension of the Theory of Planned Behaviour (TPB) to examine the influence of climate change risk perception, climate change concern, knowledge about climate change, willingness to engage in pro-environmental behaviour, on lifestyle changes. This quantitative study collected data from 3605 individuals in Australia. The theoretical contributions are twofold, to the domain of climate change lifestyle, a groundbreaking application of the TPB to explore psychological determinants of sustainable lifestyle choices. The study also introduces the willingness to engage in pro-environmental behaviour as a mediator, forging novel connections between cognitive factors such as risk perception, concern, and knowledge, and their translation into tangible lifestyle changes in response to climate change. Practically, the study underscores the significance of fostering willingness as a catalyst for broader climate change lifestyle changes, and thus, offers valuable insights for interventions and campaigns aimed at promoting sustainable living. On a policy level, the survey's findings have the potential to inform and shape policy interventions in Australia, encouraging and supporting pro-environmental behaviour.

ONE: Firm Speed and Environmental Accidents 

Author: **Toby Li**, *Texas A&MU*.
Author: **Ashton Lewis Hawk**, *U. of Colorado, Boulder*

Firms can achieve competitive advantage by performing activities faster than rivals, but less understood is how firm speed may have environmental consequences. This study empirically examines the role of firm speed in organizations' subsequent environmental performance. Our basic premise is that faster operations are more likely to lead to worse environmental performance in the form of more environmental accidents. We then examine how firms can mitigate this speed versus environment tradeoff. Specifically, we expect that this relationship is mitigated by more automation, more project diversity, and greater labor market thickness. We find support for these ideas using data from oil and gas drilling projects in Pennsylvania.

ONE: Climate Change and Corporate Vulnerability: Impact of Natural Disasters on JVs and WOSs  

Author: **Huan Zou**, *SOAS U. of London*
Author: **Laixiang Sun**, *U. of Maryland at College Park*
Author: **Zhao Zeng**, *College of Management and Economics, Tianjin U.*

Increasing natural disasters pose significant challenges to multinational enterprises, given the complex, disruptive and long-lasting impact induced by climate change. This study adopts a multidisciplinary approach, amalgamating climatological insights, engineering design perspectives, and industrial economics theories to evaluate corporate vulnerability of MNEs based on two operating modes – joint ventures and wholly foreign-owned subsidiaries in Shanghai, China. Modelling Typhoon Winnie as the future climate conditions, we unfold the exacerbated economic loss in 2050 scenarios in comparison to that in 2013 scenarios for wholly owned subsidiaries. Nevertheless, with a microgeographical approach, our study demonstrates that in each district within the mega metropolitan city, the 'location advantage' position needs to be revisited in the way that clusters have double-impact role in MNEs' performance in the wake of a natural disaster. This research carries important implications for business operations and policy making in highlighting the importance of developing dependencies across value chain activities and supportive institutional support.

ONE: Where Do We Go from Here? Muddling Through Business Adaptation to Climate Change  

Author: **Kerrigan Marie Machado Unter**, *U. of St. Gallen*
Author: **Jorge Rivera**, *George Washington U.*

We study the interrelations among climate change (CC)-related extreme events, adaptation strategies, and product price performance within the California wine industry. Drawing upon the resource-based view of the firm, we formulate a hypothesis suggesting that the influence of CC-related extreme events on product performance is mediated by the adaptation strategies employed by firms. Adaptation to CC can be a source of differentiation advantage to firms. In this context, firms strategically adapt to the physical environment to secure access to vital natural resources amidst extreme CC disturbances. Subsequently, these adaptive measures translate into enhanced firm value. To assess our hypotheses, we employ a sample comprising 50,156 wine-winery-year observations for 535 wineries, spanning the years 1981 to 2019, matched with wildfire events. Our results indicate that the adoption of CC adaptation strategies can be a source of value for firms, enabling them to produce products that can be sold at a price premium. We also suggest that firm CC adaptation strategies mediate the relationship between CC-related extreme events and product price.

Leadership and Strategy in Green Innovation and Corporate Sustainability

Session Moderator: **Kamal Badar**, *Nottingham U. Business School (Malaysia)*

ONE: Green Innovation: The Roles of Green Inclusive Leadership, Green Knowledge and CSR Communication   

Author: **Kamal Badar**, *Nottingham U. Business School (Malaysia)*

Author: **Ahmad Nabeel Siddiquei**, *Bond Business School, Bond U., Australia*

Drawing upon the natural resource-based view (NRBV), organizational learning (OL), and contingency theories, we develop and test a theoretical framework that examines the impact of green inclusive leadership on green innovation. Our framework further examines the simple and serial mediation of green knowledge acquisition and sharing and the moderation of internal CSR communication. Using survey questionnaires, we collected multiwave data from 215 middle managers from different manufacturing and production organizations operating in Pakistan. The hypotheses were inspected using the PROCESS macro. According to the findings, green inclusive leadership and green innovation are positively associated, and green knowledge acquisition and green knowledge sharing are efficient serial mediators of this relationship. Further, the results suggest that internal CSR communication moderates the serial mediation such that the indirect relationship between green inclusive leadership and green innovation was stronger at high levels of internal CSR communication rather than at lower levels. Our research offers implications for manufacturing industry leaders and policymakers. By merging NRBV, OL, and contingency theories and drawing links across different genres of literature, our study provides unique insight into leadership, knowledge management, corporate communication, sustainability and CSR, and innovation.

ONE: Performance Effects of Corporate Sustainability Strategies Using a Semiotic Square Approach 

Author: **Marco S. Giarratana**, *IE Business School*

Author: **Martina Pasquini**, *IE Business School*

This theoretical study utilizes the semiotic square to comprehensively categorize corporate sustainability approaches and their impact on company performance. First, it introduces four main strategies: no sustainability orientation, business-oriented sustainability, foundation-oriented sustainability, and ambidextrous sustainability, connecting them to the classical institutional response framework. We then formulate hypotheses derived from this structure. Our theory suggests that the ambidextrous approach, which combines both business and foundation-oriented strategies, may lead to conflicts and resource allocation challenges that hinder its viability. Conversely, business-oriented sustainability and foundation-oriented sustainability are expected to yield the highest performance outcomes. Additionally, we investigate the role of sustainability certifications and the pursuit of diverse social goals as significant moderators that influence the relationship between these strategies and performance. Furthermore, this study delves into the importance of social identity and lobby capabilities as key mechanisms that impact the effectiveness of sustainability approaches.

ONE: Green Innovation Roots: Exploring CEO Psychological Traits as Precursors  

Author: **Ajith Venugopal**, *Texas A&M International U.*

Author: **SAHA IQBAL HOSSAIN**, *Texas A&M International U.*

Author: **Abdul Rasheed**, *U. of Texas At Arlington*

Author: **Glory George**, *Indian School of Business*

Chief Executive officers (CEOs) wield significant influence on their companies' green innovation efforts. Despite considerable prior research on the traits of CEOs and their firms' green innovation, our comprehension of how the psychological attributes of CEOs impact the course of green innovation remains somewhat constrained. We explore the relationship between three facets of CEO psychological characteristics and their firms' green innovation. Using upper echelon theory, we posit and show how CEO openness to experience and openness to change affect firms' green innovation. Besides, we also examine the moderating role of CEO cognitive complexity in these relationships. We formulated measures for CEO psychological attributes through machine-learning algorithms and computer-assisted textual analysis tools, drawing on the language patterns found within the question-and-answer segments of quarterly conference calls with CEOs, and conducted our tests on a sample of 371 CEOs of 277 publicly listed firms. We found that CEO openness to experience CEO openness to change positively influences their firms' green innovation efforts. Additionally, we found that CEO cognitive complexity enhances the positive influence. Our results maintain consistency after various robustness checks. The findings of our study broaden the scope of research on strategic leadership and its impact on corporate innovation.

ONE: Proactive vs. Reactive Green: How Political Connections Shape Corporate Environmental Practices 

Author: **Nan Zhang**, *School of Management, Northwestern Polytechnical U., Xi'an, Shaanxi, Chi*

Author: **Huiying Li**, *School of management, Northwestern Polytechnical U.*

Author: **Yu Chang**, *Northwestern Polytechnical U.*

Existing research on the relationship between political connections and corporate environmental practices yields mixed and contradictory findings. We argue this ambiguity stems from overlooking the heterogeneity of environmental practices. In this study, we address this gap by classifying corporate environmental practices into governance-oriented (reactive) and prevention-oriented (proactive) categories based on their characteristics. We then explore how political connections influence each type. Using data from Chinese listed firms from 2013 to 2020, we reveal that political connections have distinct effects on different types of environmental practices. Specifically, political connections positively impact governance-oriented environmental practices but negatively affect prevention-oriented ones. We further demonstrate that these effects are moderated by both CEO green experience and regional government environmental regulation, highlighting how these strategic choices interact with the internal and external factors. These findings provide new insights into the dialogue on political connections and corporate environmental practices.

Panelist: **Maoliang Bu**, *Nanjing U.*

Across disciplines, most publications in top journals are authored by scholars in Western high-income countries. Increasing geographic diversity seems particularly important for sustainability research, not least because regions around the world have different perspectives on sustainable development and tensions related to business sustainability often include a spatial element. While many journals have started paying attention to the question of how to increase diversity of authors and research contexts, guiding the publication process for researchers from and on underrepresented regions also holds challenges. With an esteemed group of editors from business sustainability and management journals, we will discuss these challenges and what journals, editors, reviewers, and authors can do to foster publications from and on underrepresented regions of the world.

Reviewing as Craft in and for AMLE (co-hosted with MED)

Presenter: **Bill Harley**, *U. of Melbourne*

Presenter: **Mairead Brady**, *Trinity Business School, Trinity College Dublin*

Join us for an essential Professional Development Workshop (PDW) designed specifically for both current and aspiring reviewers of AMLE. This session aims to foster a deeper understanding of the reviewing process and its significance in an academic career. Through interactive discussions, we will address three key questions:

1. **Why Review?** Understand the critical role of peer review.
2. **How to Craft a Review?** Gain practical strategies and insights into the art of crafting constructive reviews.
3. **What Benefits Do You Gain from Reviewing?** Explore how engaging in the review process enhances your own research skills, builds your academic reputation, and contributes to your professional growth.

Reviewing is more than a duty—it's a cornerstone of academic development. Particularly for early-career scholars, mastering the art of crafting a review can be transformative, enriching both your own work and the broader academic community. This workshop will delve into what makes AMLE distinctive and the specifics of reviewing for this renowned journal. Participants will leave equipped with the skills to effectively contribute to the development of impactful journal research. This session is an invaluable opportunity to enhance your reviewing capabilities, understand the unique aspects of AMLE, and ultimately, advance your academic career.

Qualitative Methods and AI: Friends or Foes?

Organizer: **Susan Hilbolling**, Aarhus U., BSS

Organizer: **Renate Kratochvil**, BI Norwegian Business School

Panelist: **Kevin G. Corley**, Imperial College London

Panelist: **Vern Glaser**, U. of Alberta

Panelist: **Karen Golden-Biddle**, Boston U. Questrom School of Business

Panelist: **Hila Lifshitz-Assaf**, Warwick Business School

Panelist: **Anne D. Smith**, U. of Tennessee, Knoxville

With the rapid development in artificial intelligence (AI), specifically the capabilities of large language models (LLMs), the question may not be if but rather how AI will or can enhance the research process. In this panel, we focus specifically on the work of a qualitative researcher. Qualitative methods research is particularly suited for leveraging the power of LLMs, given its focus on words (as opposed to numbers). While these new technologies available may create new opportunities for innovating research methods, it may also challenge the fundamentals of qualitative methods. Therefore, before we can have an opinion on whether AI and qualitative methods are "friends or foes," in this panel we want to discuss the core skills and strengths of a qualitative research scholar. Reflecting on these foundations can help us assess which and how new technologies can help us learn and conduct qualitative research and when their use poses a risk of lowering the quality (in the short or long term). This session aims to seek informed answers to questions such as: What are the foundations of qualitative methods? What makes qualitative research and the researchers conducting it unique? How can AI complement, threaten, or augment qualitative data collection, data analysis (including coding), theorizing, and composing qualitative research? Is there a risk of AI/LLMs eroding the unique skills of qualitative researchers? How can we develop and maintain unique qualitative research skills, such as the creative leap, to produce absolute novelty? How do we consider using AI/LLMs in light of the multiplicity of ontologies, epistemologies, and methodologies in qualitative research? How should we (re-)consider the quality criteria used to assess qualitative research (e.g., credibility, transparency) when evaluating research that includes using LLMs?

Reimagining the Future of Higher Education in Business and Innovation

Organizer: **Pablo Cortes**, *NEOM*

In this interactive session, we will discuss higher education learning environments of the future. After a brief introduction on the opportunity space in higher education innovation and an overview of how that is playing out in the mega-project NEOM, we will have table discussions and brainstorming on topics related to the future of higher education. The topics are not only relevant to the development of the NEOM ecosystem (blending individualized and lifelong learning with future focused innovation) but are also highly relevant to business schools globally as they evolve / struggle to remain relevant in the next several decades. Some topics to be discussed are: physical and virtual learning environments / spaces, skills development, individualized learning, and how to maintain research productivity in the face of all of these changes. After a short debrief, all participants are invited for a buffet lunch.

Acquisitions Strategies

Session Moderator: **Xin Deng**, *Alliance Manchester Business School, U. of Manchester*

STR: **The Value of Quickly Closing an Acquisition** 

Author: **Andrew Garofolo**, *Georgia Southern U.*
Author: **Ashton Lewis Hawk**, *U. of Colorado, Boulder*

Accelerating an acquisition can help acquirers realize revenues and synergies sooner, preempt a rival bidder, and can give the firm a competitive advantage in their industry. Moving faster while desirable however, does come at a cost due to the phenomenon of time compression diseconomies (TCD). TCD suggests that as firms attempt to accelerate a project, this comes with additional resource requirements and with diminishing returns. Building off competitive strategy literature on intrinsic speed capabilities, this paper explores acquisition speed capabilities, referring to an acquirer's ability to complete an acquisition more quickly than a competitor. We predict that high acquisition speed capabilities will be positively related to firm value, and that firm innovativeness and prior M&A experience will enhance this effect. We find support for our hypotheses using data in the biopharmaceutical industry.

STR: **Predicting Market Reactions to Acquisition Announcements and Its Role in Acquisition Decision Making** 

Author: **Xinying Qu**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **Shyam Kumar**, *Lally School of Management, Rensselaer Polytechnic Institute*
Author: **Tony Tong**, *U. of Colorado, Boulder*

Prior theory suggests that predicting market reactions to acquisition announcements using historical transactions may not only enable capturing the wisdom of the crowds, but that these predictions can also constitute an important basis for a forward-looking, expectations-based model of learning by managers. Building on these perspectives, we develop machine learning models to predict market reactions to acquisition announcements and demonstrate that these predictions can confer value by informing decision making in areas such as deal selection. Next, we show that when the actual market reaction to an announcement deviates from the predicted reaction, there is learning, as evidenced in a longer deal completion time. Our results highlight that predictions of market reactions have an important role to play in acquisitions, and that they can be a distinct source of learning.

STR: **Exploitation or Exploration? The Impact of Peers' M&A**    

Author: **Xin Deng**, *Alliance Manchester Business School, U. of Manchester*
Author: **Huma Javaid**, *Loughborough Business School*

This paper investigates the impact of peers' Mergers and Acquisitions (M&A) activities on the innovation strategy of firms that are not directly involved in these transactions. We find that while peers' M&A activities positively affect a firm's exploratory innovation, they adversely influence its exploitative innovation. This dynamic is predominantly driven by peer firms acting as acquirers. We further explore two mechanisms: the learning effect and the competition effect. With regard to the learning effect, the relationship between peer acquirers and exploratory innovation is more pronounced when these peer acquirers merge with their own competitor firms (horizontal M&A) and when they possess a strong absorptive capacity, enabling them to leverage value from acquisitions more effectively. In terms of the competition effect, the link between peer acquirers and exploratory innovation is stronger amid high competition intensity and technological peer pressure. Moreover, we find that the negative relationship between acquirers and outsider firms' exploitative innovation becomes more pronounced particularly under high technological peer pressure.

STR: **Paving Evolutionary Path with Experience Transition in Dynamic Capabilities** 

Author: **Julia Lee**, *U. of Nevada, Las Vegas*

The dynamic capabilities approach underscores the role of experience accumulation as a firm-specific resource in sustaining a competitive advantage through evolutionary paths. However, little is known about experience transition and its effect on firm performance. This topic is important because it touches upon a long-standing debate about strategy commitment and flexibility. To explain and predict experience transition, this study draws insights from sequence analysis to examine the effects of sequence stability. Drawing from the acquisition sequences of 234 publicly traded firms within the biotechnology industry from 2012 to 2019, this study corroborates with the dynamic capabilities approach and finds that the significantly negative effect of sequence stability is contingent upon complementary assets. While a negative relationship exists between sequence stability and advertising investment, the causal direction reverses when the interaction term shifts to physical capital investment. This study contributes to the resource-based view by highlighting that successful experience transition depends on resource alignment with corporate strategy.

Institutional Theory and Non-Market Strategy

Session Moderator: **Jiang Bian**, *HKU Business School, The U. of Hong Kong*

STR: Keeping it Real in the Death Zone: (In) Authenticity and Mt. Everest Climbing Expeditions, 1921-2019 

Author: **Cameron Verhaal**, *Tulane U.*

Author: **Carmen Weigelt**, *Tulane U.*

This study investigates how the emergence of new and inauthentic organizational forms impact incumbent actors in environments where authenticity is fundamental to the prevailing collective identity. While prior research has investigated how new organizational forms leverage an authentic identity against mainstream incumbents, we know less about how the introduction of new and inauthentic organizations challenge individuals' adherence to existing collective norms. Specifically, we theorize about the degree to which individuals engage in behavior that may violate a prevailing collective identity because they see individuals associated with the new organizational form succeed at higher rates. To test our theory, we turn to the alpine climbing community on Mount Everest from 1921 to 2019. Historically, only the most experienced mountaineers climbed Everest. However, beginning in the late 1980s, commercial climbing expeditions emerged and successfully ferried many relatively inexperienced climbers up Mount Everest by violating established authentic norms, namely employing increasing amounts of supplemental oxygen (even while sleeping on the mountain). Ultimately, our study sheds light on a burgeoning dynamic in contemporary market environments – the proliferation of commercially-oriented organizations in identity-driven markets thereby generating ideological conflict, contested practices, and increased competition in environments typically built on intrinsic rather than extrinsic motivation.

STR: The Sum of All Fears: The Role of Collective Emotions on the Temporary Rise of the War Logic 

Author: **STEFÂNIA CAMPANHA DE SOUZA**, *Instituto U. de Lisboa (ISCTE-IUL) Unidade de Investigação Empresarial (BRU-IUL)*

Author: **Maria Major**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*

The study of emotions within organizations has been often associated with institutional logics. Emotions can, in their energetic form, supplying actors with elements to accept, reject, model and conform to constellations of logics, and the dynamics of competitiveness within hybrid organizations. This paper explores, in a longitudinal case study, the impact of organizational emotions when faced with a situation of extreme uncertainty, such as the Covid-19 pandemic. The sum of several fears, including the lack of knowledge about the disease, triggered a collective reaction among managers and healthcare professionals that collapsed the predominant logics, care and business. Without its usual logic, the organization as a whole appropriated, through a warlike discourse, of values, beliefs and norms compatible with a state of war, composing what we call the war logic. This logic remained as the sole dominant during the peaks of the disease, being discarded after the reduction in cases. We discuss the mechanisms by which fear became first an energetic emotion, and then a collective emotion, shaking the foundations of existing logics and serving as structure for the new logic. But we also examine the relationship between the reduction of fear as responsible for the rejection of this same logic of war.

STR: The Company They Keep: Young Medical Device Ventures and Legitimacy of Physician-Relationship 

Author: **Jiang Bian**, *HKU Business School, The U. of Hong Kong*

Author: **Riitta Katila**, *Stanford U.*

Using an institutional lens, we trace physician-venture relationships post sunshine regulation – when a previously highly-valued involvement of physicians as outside experts in medical device firms is delegitimized by regulatory institutions. Exploiting a quasi-natural experiment provided by the staggered enactment of state-level “sunshine laws” that promoted transparency regarding potentially-conflicted relations between physicians and firms in particular U.S. states, we observe changes in (1) physician involvement, and (2) innovation in ventures. Consistent with perceived incompatibility with physician’s professional logic, we observe decreases in R&D involvement by junior and academic physicians (but not by senior or clinical ones), and in patent and product applications filed by non-physician (but not physician) founded firms. Our findings indicate that the new value of transparency promoted by regulatory institutions is perceived differently across the profession and has an unintended effect on young firms’ R&D and innovation. This study contributes to research in the intersection of institutional theory and contemporary research on entrepreneurship, and on how professionals perceive and creatively respond to institutional delegitimation pressures. In so doing, we unpack bases for resistance to delegitimation among professional actors—contributing to novel insights about the microfoundations underlying delegitimation.

STR: Breaking the “One-hit Wonder” Curse: Balanced Logics and Enterprises’ Sustained High Growth in China

Author: **Peipei Yang**, *The Fraunhofer Institute for Systems and Innovation Research ISI*

Author: **Yimei Hu**, *AAUBS, Aalborg U.*

High-growth enterprises are widely perceived as pivotal actors in regional and national development, but most of them cannot realize sustained high growth, especially for those of small and medium sizes, resulting in the so-called “One-hit Wonder” curse. However, few studies have explored the mechanism to break this curse. Drawing upon the perspective of institutional logics and employing an analysis of a panel dataset of Chinese gazelle enterprises—a kind of high-growth small and medium-sized enterprises—we find that both the state logic and market logic are indispensable in ensuring their sustained high growth within the Chinese context. Notably, the modes of the logic balance matter. We propose two balancing modes, namely the external balance and internal balance, and find that the external balanced logics can promote these small and medium-sized enterprises’ sustained high growth significantly, whereas the internal balanced logics fall short in achieving this outcome. The positive effect of external balanced logics is moderated by demonstration zones and shareholders’ equity: operating in demonstration zones weakens it, while high shareholders’ equity strengthens it.

CEO Characteristics and Experience

Session Moderator: **Philip J. Steinberg**, *U. of Groningen, Faculty of Economics and Business*

STR: When Innovator Casts A Shadow: CEO Inventor Experience and Corporate Social Irresponsibility 

Author: **Yungu Kang**, *UNIST*

Author: **Seok-Hyun (Stephen) Hwang**, *Hong Kong Baptist U.*

Author: **Taejin Jung**, *IE Business School*

This study explores the impact of chief executive officer (CEO) inventor experience on firms' engagement in corporate social irresponsibility (CSI). While recognizing the growing interest in CEO inventor experience and its positive association with firm innovation and performance outcomes, this research takes a divergent approach by proposing an adverse effect of CEO inventor experience on firms' social performance. Drawing on strategic leadership literature and insights from studies on inventors and unethical behavior, we propose that CEO inventor experience will be associated with a heightened sense of entitlement and a greater tendency for self-serving justifications for unethical decisions, thereby being associated with greater CSI engagement. To further examine the underlying mechanisms, we investigate the moderating effects of CEO career variety, CEO founder experience, and the prevalence of inventor CEOs within an industry. These factors are expected to shape and interact with the relationship between CEO inventor experience and CSI engagement. Using a longitudinal dataset encompassing S&P 1500 firms, our empirical analysis supports our hypotheses. By showing that CEOs with more inventor experience are associated with greater CSI activities, this study unveils the adverse social implications of CEO inventor experience, adding to the growing interest in this unique CEO attribute.

STR: Entrepreneurial Imprinting: Does CEO Entrepreneurial Experience Catalyze or Hinder Risk Taking?

Author: **Ting Cao**, *Xiamen U.*

The purpose of this study is to examine the effect of CEO entrepreneurial experience on a firm's strategic risk taking. Drawing from the entrepreneurial imprinting literature, we theorize that the imprint of CEO entrepreneurial experience may inhibit their perception of risk, thereby increasing the firm's propensity for strategic risk-taking. Utilizing a longitudinal sample of SMEs listed on NASDAQ in the Bio-pharmaceutical industry from 1996 to 2020, we hypothesize, and find strong evidence supporting the assertion that CEO entrepreneurial experience is positively associated with a firm's strategic risk taking. We also aimed to examine the boundary conditions of the effect of CEO entrepreneurial experience imprint. Specifically, we separately investigate the moderating effects of the inhibiting condition (i.e., CEO educational experience) associated with the formation of CEO entrepreneurial imprint and facilitating condition (i.e., CEO founder status) related to the expression of CEO entrepreneurial imprint on the relationship between CEO entrepreneurial experience and a firm's strategic risk taking. Our results align with our hypotheses and contribute to understanding the joint role of individual and organizational imprinting on a firm's strategic risk taking.

STR: Famine Imprint: CEOs' Childhood Famine Experiences and R&D Investment 

Author: **Lu Shang**, *School of Economics and Management Tsinghua U.*

Author: **Siqi Han**, *U. of International Business and Economics*

Author: **Xinyu Yang**, *School of Economics and Management Tsinghua U.*

The 1959–1961 Great Famine had a profound impact on China. An intriguing research question is whether the experiences of the great famine during CEOs' childhood still affect R&D investments today. Based on upper echelons theory and imprinting theory, we use 4,131 observations from 827 enterprises listed on China's A-share stock market from 2010 to 2022 to empirically explore the impact of CEOs' childhood famine experiences on enterprises' R&D investment. Our empirical results show that CEOs' childhood famine experiences negatively affect R&D investment. Furthermore, we explore the boundary conditions of the CEOs' work experience. To address endogeneity issues, we employ instrumental variable methods and test robustness through alternative measurements and subsample regressions. In additional analyses, we delve into the intensity of the childhood famine imprint and the cohort effects related to CEOs' age. We find that the longer the overlap between CEOs' childhoods and the Great Famine, the more significant the negative impact on R&D investment. Notably, only CEOs who experienced famine during their childhood exhibit a significant negative impact on R&D investment. Our study makes contributions to the literature on innovation, upper echelons theory, and imprinting theory and provides valuable practical insights.

STR: The Role of CEO Creativity in CEO Successor Selection After Corporate Misconduct 

Author: **HE Li**, *Xi'an Jiaotong Liverpool U.*

Author: **Philip J. Steinberg**, *U. of Groningen, Faculty of Economics and Business*

Author: **Jordi Surroca**, *U. of Liverpool Management School*

Author: **Hille C. Bruns**, *Groningen U. (RuG)*

Although research has discussed various characteristics associated with CEO successors in firms with corporate misconduct, few studies have explored the CEOs' less visible cognitive abilities. This study investigates the role of CEO creativity, as a prominent cognitive ability, in CEO successor selection following corporate misconduct. Based on prior research on the "dark side" of creativity, we propose that companies with disclosures of misconduct tend to select less creative CEOs as successors because less creative CEOs are more likely to be well-received by stakeholders after corporate misconduct. Additionally, the role of creativity in selecting a CEO successor is influenced by industry conditions. Results from analyses of S&P 1500 firms generally support our hypotheses.

Author: **Lars Kimmig**, RWTH Aachen U.

Considering the significant implications of top management teams (TMTs) on organizations, it is highly relevant to understand the criteria that impact TMT composition. However, prior research has not explored (1) which TMT criteria have the highest relevance for CEOs when forming the TMT, and (2) how the CEOs' decision-making is influenced by the organizational context. By conducting a choice-based conjoint experiment with CEOs, our research explores the relative importance of TMT criteria while considering the moderating impact of organizational factors. Our findings reveal that interpersonal relations (i.e., trustworthiness) and the executives' mindset (i.e., leadership qualities and entrepreneurial thinking) are most relevant for CEOs, followed by the executives' competencies (i.e., industry/functional knowledge and network strength) and cultural/diversity perspectives (i.e., cultural fit and team diversity). We further find that organizational factors (i.e., ownership type, organizational size, and international orientation) significantly impact the preferences of CEOs when forming the TMT. We contribute to TMT literature by deepening our knowledge on how CEOs make TMT appointment decisions and add empirical insights on the relevance and relative importance of these criteria. Implications and contributions for theory, practice and future research are discussed.

Creating an Inclusive Future: Connecting Diversity to Creativity and Creative Work

Organizer: **Martina Pizzinato**, *UCL School of Management*
Organizer: **Chesta Ahuja**, *UCL School of Management*
Discussant: **Devon Proudfoot**, *Cornell U.*
Participant: **Khwan Kim**, *INSEAD*
Participant: **Frederic Clement Godart**, *INSEAD*
Participant: **William Maddux**, *U. of North Carolina, Chapel Hill*
Participant: **Wyatt Lee**, *Cornell U.*
Participant: **Clarissa Cortland**, *UCL School of Management*

Over the past decades, scholars in management studies have continuously engaged in vibrant discussions around the topic of creativity - the production of novel and useful ideas at work (Amabile, 1983). In particular, researchers have tried to understand and delve deep into an important factor that influences creativity and creative workers: diversity. However, although diversity can positively impact creativity and creative work (i.e., Chua, 2018; Godart, Maddux, Shipilov, & Galinsky, 2015; Hoever, Van Knippenberg, van Ginkel, Barkema, 2012; Tadmor, Galinsky, & Maddux, 2012), organizational scholars have also found that these constructs can negatively influence each other (i.e., Hora, Baudra, Lemoine, & Grijalva, 2022; Lu, 2023; Proudfoot, Kay, & Koval, 2015; Proudfoot, Berry, Chang, & Kay, 2023). The purpose of this presenter symposium is to contribute to our ambiguous understanding of the link between diversity, creativity, and creative work and provide novel insights on how some important kinds of diversity (i.e., cultural, and gender) might shape creativity and the experiences of creative workers.

Empowering Tomorrow: Unleashing the Power of Digital Transformation and Innovative Management in Asia

Organizer: **YIRUI JIANG**, *Cranfield U.*

In the dynamic realm of digital transformation, Asia emerges as a leader in innovation, steering economic growth and technological advancements. Amid the swift evolution of digital technologies, there is a growing imperative for managers and business leaders to delve into effective strategies that can effectively channel these advancements for organizational innovation and success. This workshop delves into the impact of international political dynamics, economic disparities, and the ever-evolving digital technologies on the formulation of new business models and management approaches in Asia. Participants will glean insights into how Asian enterprises leverage cutting-edge technologies, such as artificial intelligence and big data, to reshape their business landscapes and maintain competitiveness in the ever-changing digital landscape. Additionally, the workshop emphasizes the pivotal role of sustainable management in the digital age. By fostering cross-disciplinary collaboration, the workshop seeks to facilitate the exchange of knowledge among early career researchers, research professionals, industry professionals, and public sector representatives.

Welcome, attendees! If you are interested in the "Empowering Tomorrow:Unleashing the Power of Digital Transformation and Innovative Management in Asia". Please email your CV or contact the organizer to [Email Address: yirui.jiang@cranfield.ac.uk] with [Email Title: AOM-AAM-Your Name-Your Affiliation] no later than [1st August, 2024]. This will facilitate our preparations and enhance networking opportunities during the event. Should you have any questions or require assistance before or during the event, please feel free to contact our event coordinator, DR YIRUI JIANG, at [Email Address: yirui.jiang@cranfield.ac.uk]. We look forward to welcoming you and ensuring an enjoyable experience for all attendees. Thank you for your participation!

Breaking the Managerialist Ice? Critical Management Education Through Conversational Card Games

Facilitator: **Karryna Madison**, *Australian National U.*

Facilitator: **Jonathan Roberts**, *Monash U.*

Facilitator: **Michelle Greenwood**, *Monash U.*

Facilitator: **Julie Wolfram Cox**, *Monash U.*

Facilitator: **Laura Visser**, *Monash U., Australia*

Teaching critical thinking skills is proven to be difficult. Learners often get overwhelmed by the complexity of critical concepts and are at risk of pre-emptively opting out. In this interactive workshop, we will introduce and illustrate the application of conversational card games in management learning and education. This approach to introducing participants to the teaching content translates theories into reflective, engaging questions and offers an accessible and provocative means to introduce concepts relevant to critical management studies. It also bridges the potential gap between complex critical management studies and practical application, making critical ideas accessible to a broader audience including students, industry professionals, and fellow researchers. In demonstrating and encouraging discussion of this approach, the workshop aims to foster an environment of active engagement, where participants are encouraged to consider how conversational card games can be a tool for introspection and challenging established practices in educational and industry settings.

The State of DEI in Business Schools

Session Chair: **Monica C. Gavino**, *San Jose State U.*
Facilitator: **Jennifer Robin Bishop**, *Impact of Gender Diversity on work Performance at Work place*
Organizer: **Marla White**, *Virginia Tech*
Organizer: **Darryl Rice**, *Farmer School of Business, Miami U.*
Organizer: **Patricia G. Martinez**, *Loyola Marymount U.*
Organizer: **Danielle Beu Ammeter**, *U. of Mississippi*
Organizer: **Barbara Lofton**, *U. of Arkansas*

To some extent, diversity, equity, and inclusion (DEI) has been present in business schools and higher education institutions for some time, given AACSB standards as well as the PhD Project. However, in the wake of the killing of George Floyd in the summer of 2020, the demand for DEI expertise grew drastically across organizations in the United States and worldwide. More recently, many states have attacked, defunded, or banned DEI efforts. In collaboration with the Business School DEI Collaborative (BUSDEIC), the Academy of Management's (AOM) DEI Division embarked on a study to collect data and conduct interviews on DEI efforts in business schools. This PDW aims to 1) provide an overview of the state of DEI in business schools; 2) share innovative practices to inspire our DEI efforts; 3) foster connections and networks for those who are interested in DEI efforts in business schools; and 4) create a forum for DEI scholars, practitioners and those in DEI roles, and administrators to discuss best practices and challenges to DEI efforts in higher education.

Ethical Attribution in the Era of Generative AI

Organizer: **Rachel McCullagh Balven**, *Arizona State U.*
Organizer: **Rebecca Wendy Frankel**, *Sage Publications*
Organizer: **John Pescatore**, *Academy of Management*

As artificial intelligence platforms such as Chat GPT continue to be useful tools for both professors and students, questions arise as to the accuracy and reliability of AI responses as well as appropriate ways in which we can credit the help of AI in our work. In this forum, the Ethics Education Committee aims to offer guidance on citation and attribution when using AI. Our conversation will include when and why the use of AI may be important, issues regarding the accuracy of AI responses, and attribution-related best practices when using AI. Further, our forum will include small group discussions to draw on the experiences of participants regarding their experiences with the nuances of AI platforms.

Organizer: **Erik M. Van Raaij**, *Erasmus U. Rotterdam*

In line with the Academy of Management 2024 theme “Innovating for the Future,” this professional development workshop (PDW) will bring together scholars, practitioners, and students from various divisions of the Academy to learn from sustainability experts about health system initiatives to address challenges around climate change.

This immersive workshop, hosted at a leading academic medical center, includes a virtual tour showcasing multiple sustainability initiatives, an interactive management simulation focusing on reducing health systems’ carbon footprint, and breakout roundtable discussions that will discuss the role of theory and research in promoting sustainable healthcare. This PDW seeks to develop a comprehensive research agenda, leveraging management theories for advancing healthcare sustainability. By emphasizing hands-on learning and collaborative dialogue, the organizers intend to develop a repository of theories and research methods to guide future research in this vital area. With healthcare sustainability as the central context, the ultimate goal of this PDW is to drive progress towards a more sustainable healthcare sector, addressing environmental concerns while ensuring healthcare’s essential functions.

The bus departs for Rush University Medical Center from the AOM HCM Hotel lobby at 12:00 PM and will return at 4:00 PM. Light refreshments will be provided.

Pre-registration is required to ensure adequate transportation.

Please contact Matt DePuccio at Matthew_J_DePuccio@rush.edu by June 30th to register for this event.

Participants should bring their own laptop and/or tablet for the simulation portion of the session. Please share any dietary restrictions or special accommodations when you fill out the registration form. Please use this link: https://www.surveymonkey.com/r/AOM_Session_21686

We live in a world of environmental degradation, geopolitical polarities, weakening social and moral fiber, and incessant wars bordering on self-annihilation. We work ourselves to sickness, only to find that we have been priced out of healthcare. And, in our furious struggle for success in a business world red in tooth and claw, we discover we no longer have a community, but only narrow self-centered clans united by aversion. And yet, these developments have also stirred us into thinking about novel approaches to live and lead organizations and societies. As management scholars and practitioners, we must continue to harness our inner resources and discover innovative ways to confront current reality and to embrace effective work and change principles to not only survive but also to thrive during these turbulent times. This PDW seeks to explore the pathways to developing values-based, resilient organizations effectively following the time-tested moral and spiritual insights and practices enshrined in the Indian wisdom text called the Bhagavad Gita. It is designed as an offering to counter the present parallel spiritual pandemic and as a dedication to creating a better, kinder world through living and leading from a higher moral stance based on the teachings of the Gita. We believe that operationalizing the Bhagavad Gita's key principles and practices of equanimity, workplace excellence, selfless action, and seeking the welfare of all have a universal relevance for a world plagued by war, conflict, and uncertainty

Panelist: **Trish Reay**, *U. of Alberta*
Panelist: **Michael Smets**, *U. of Oxford*

This PDW is aimed at facilitating conversations, knowledge sharing, and connections among scholars who are interested in investigating social phenomena in organizational settings using immersive techniques. Our personal experiences and scholarly text produced on immersive techniques inform us that immersive methods, including organizational ethnographies can be daunting and illusive. Therefore, through our 'Behind the Scenes' PDW we aim to highlight processes and practices that lead to successful completion of ethnographic and immersive research endeavors that result in interesting publications. This year, we bring a novel twist to this ongoing and overarching theme: supervision in the context of organizational ethnographies. While the give and take between mentors and mentees in their ethnographic journeys is highly significant, it is less spoken and written about. Thus, through this PDW we address the broad question: what goes into supporting and supervising emerging organizational ethnographers? Structured into three interactive segments, the PDW provides participants with the opportunity to hear from and engage in conversations with our panelists and fellow participants. These segments include individual presentations where panelists briefly reflect on their experiences in developing and supervising impactful work, a moderated panel discussion addressing questions posed by workshop participants, and themed roundtable discussions allowing small groups of participants to discuss their own work with an expert panelist. The PDW covers both traditional and new methods (such as team and digital ethnography) and addresses issues related to training and supporting young scholars in applying various ethnographic methods in their research. Given the increasing interest in qualitative and mixed-method approaches, the PDW will be of great interest to PhD students, junior scholars, and senior members of the field interested in immersive research methods or whose team members or supervisees require support for their ethnographic research.

Following a surge of new Indigenous-related research over the past decade (Salmon et al., 2022) and widespread efforts within the academe to decolonize, Indigenize, and rematriate research (Newcomb, 1995; Smith, 1999; Banerjee & Linstead, 2004; Colbourne et al., 2020; Gray, 2022; Price & Hartt, 2023), teaching (Tuck, 2011; Hrenyk & Salmon, Forthcoming) and the institution of business education more generally (Bastien et al., 2022; Woods et al., 2022; Price et al., 2022), this PDW aims to bring together Indigenous and non-Indigenous scholars to discuss pathways to decolonization. The workshop will also provide opportunities for Indigenous and Indigenous engaged scholars to share and build on their knowledge, experience and professional networks. Indigenous-related efforts within the management academe frequently impose Western knowledge systems and structures on Indigenous peoples and contexts (Bastien et al., 2022; Doucette et al., 2021; Bell et al., 2017). As a result, when business schools seek to decolonize and indigenize the academy, they frequently employ performative and tokenistic approaches that fail to create supportive and safe spaces for Indigenous students and scholars to thrive in ways that are inclusive of Indigenous knowledge and practices (Bastien et al., 2022; Scobie et al., 2021; Staniland et al., 2021). Emphasizing Indigenous agency, knowledge, relational practices and strengths, this workshop, guided by Indigenous scholars, will build upon the momentum and interest expressed within the first Indigenous Research PDW held in Boston in 2023. Specifically, we will focus on decolonization efforts and engage in collaborative conversations with participants to discuss opportunities to pursue decolonial institutional change in teaching, research, and practice.

No registration is necessary, and we welcome all individuals interested in Indigenization/decolonization to attend and actively participate in the workshop. To facilitate meaningful discussion, we kindly request that attendees come prepared by reading a minimum of two (2) articles from the following list (listed alphabetically): Bastien, F., Foster, W. M., & Coraiola, D. M. 2023. Indigenous Peoples and Organization Studies. *Organization Studies*, 44(4): 659–675 Gaudry, A., & Lorenz, D. 2018. Indigenization as inclusion, reconciliation, and decolonization: navigating the different visions for indigenizing the Canadian Academy. *AlterNative: An International Journal of Indigenous Peoples*, 14(3): 218-227. Gray, R. R. (2022). Rematriation: Ts' msyen law, rights of relationality, and protocols of return. *Native American and Indigenous Studies*, 9(1), 1-27. Tuck, E., & Yang, K. W. 2012. Decolonization is not a metaphor. *Decolonization: Indigeneity, Education & Society*, 1(1): 1-40.

Discussant: **Mia Chang-Zunino**, *ESCP Business School*
Discussant: **Steven Randazzo**, *Warwick Business School*

New generative artificial intelligence tools based on large language models can summarize, evaluate, and even create text. As this technology is being rapidly adopted to automating and augmenting diverse professional work tasks in companies, it is pertinent to ask whether and how qualitative researchers can benefit from such tools. While scholars have long used computational tools to quantify and categorize textual data, the next generation of computational text analysis tools holds a promise to facilitating new and innovative forms of interpretive qualitative analyses. Yet, the new powerful technology is not without its limitations and perils for both research ethics and practice. The ability of tools to conduct increasingly sophisticated analyses may be deceptive, pushing researchers to conduct analysis that excels in replicability but lacks in creativity and originality. We propose that rather than outsourcing analytical steps to ChatGPT and its ilk, qualitative researchers may benefit the most from computational tools by approaching them as partners in abductive scientific exploration. The purpose of this PDW is to share emerging insights on the new research approaches and to form a community of qualitative scholars interested in developing new research methods around artificial intelligence to augment qualitative analysis.

Changing Course: Reimagining and Innovating in Business in a Human- and Eco-Centric Future

Organizer: **Sandra A. Waddock**, *Boston College*

Organizer: **James P. Walsh**, *U. of Michigan*

Panelist: **Sandra A. Waddock**, *Boston College*

Panelist: **James P. Walsh**, *U. of Michigan*

Panelist: **Philip H. Mirvis**, *Babson Social Innovation Lab*

Panelist: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*

Panelist: **A. Wren Montgomery**, *Ivey Business School*

This proposed panel symposium raises the question of how the purposes and social-ecological behaviors of firms - and indeed whole economies - may need to change (or, in the words of the call for papers, innovate) if humanity is to build a future that decenters business and economics and re-centers humans in the natural world. The time is now. After all, we appear to be heading toward a polycrisis, an intersecting, entangled set of existential crises that pose global systemic risks (Henig and Knight, 2023; Homer-Dixon et al., 2021). This polycrisis is the legacy of a past that, in both conscious and unconscious ways, leaves us on the precipice of unimaginable loss (Ord, 2020). While the future is not ours to wholly design, we do have an opportunity to shape its evolutionary contours. We need to have a conversation about how we as business scholars might change the path of history, one that leaves us so vulnerable to crisis and even the possibility of human extinction. Do we need to reconsider the purpose, responsibility and accountability of business to society and to nature at this moment of crisis? We think the answer to that question is "Yes." And so, we hope to convene a symposium in Chicago that both considers the need for paradigmatic change and the nature of that change itself. The following scholars have agreed to participate in this symposium, if accepted: Sandra Waddock will describe the symposium, define the context of polycrisis, explore the implications of three cultural myths in fostering that crisis, and issue a call for catalyzing transformative and innovative action. James P. Walsh will examine accountability in a world of responsibility management, exploring the motivation for the symposium and a need for innovation in business paradigms. Phil Mirvis will address the evolution of purpose over the past 20 years, along with the issues that have arisen for companies in designing purposes. Chris Laszlo will present the science of prospecting, in which the acts of reimagining and innovating in business can be seen as calling forth solutions to polycrisis, rather than as exercises in extending knowledge about the past or present. Wren Montgomery will examine whether corporate sustainability promises that do not align with and impact science-based targets and planetary boundaries are "not credible" or "future washing", and are simply new forms of greenwash.

TIM Distinguished Scholar Luncheon

Organizer: **Elena Novelli**, *Bayes Business School*
Award Recipient: **Daniel Levinthal**, *U. of Pennsylvania*

Since 1996, the Technology & Innovation Management Division has been presenting the Distinguished Scholar Award to scholars whose contributions have been central to the intellectual development of the field. As individuals, each recipient embodies a career of scholarly achievement and has had a significant impact on TIM scholarship. Join the TIM Division to hear from our 2024 Distinguished Scholar, Dan Levinthal, the Reginald H. Jones Professor of Corporate Strategy at the Wharton School, University of Pennsylvania.

Panelist: **Russell James Funk**, *U. of Minnesota*

Organizer: **Waverly W. Ding**, *U. of Maryland*

What are the costs and benefits of pursuing research projects on the organization of science? A focus on science and the production of knowledge has spurred the development of managerial and innovation topics ranging from status differentials to regional spillovers to the core capabilities of firms in the knowledge economy. And yet, in an age when Science is increasingly important, it is our belief that a significant amount of research on the Organization of Science, the examination of science as conducted by individuals embedded in organizations, has fallen dormant. Why is this so? And what can be done about it? In this Professional Development Workshop (PDW), we take a fresh look at a long-standing topic from a developmental perspective. This proposed PDW unfolds in two acts. In a first segment, we present short presentations by top management scholars that focus on an array of topics including a) gender status, and organizational age in Science, b) atypical organizational forms, and c) science spillovers and general purpose technologies. Second, and more importantly, we provide an interactive venue for audience participants to receive direct feedback on their working papers and projects. The goal of this PDW is to promote a better understanding of the of the rewards and pitfalls of research in the Organization of Science, as well as to foster a burgeoning community on this important topic.

Navigating the Hybrid Work Paradigm: Strategies for Work-Life Harmony and Employee Engagement

Session Moderator: **Shiva Taghavi**, *NEOMA Business School*

HR: **Temporal Boundary Control in Work-From-Home**

Author: **Shiva Taghavi**, *NEOMA Business School*
Author: **Moumita Das**, *Ohio U.*
Author: **Dhruv Pratap SINGH**, *NEOMA Business School*

Working from home is the new normal. As the world adapts to this new boundaryless work environment, the issue of managing boundaries comes to the forefront. Who benefits more from working from home, and how? To answer these questions, we build on past research on boundary control theory to examine the effect of perceived Temporal Boundary Control (TBC) on work-family balance satisfaction and job engagement, and the moderating impact of work-home identity integration (HWI) for employees who work from home. We tested our hypotheses via a field study (N=218) and a lab experiment (N=402) in which we recruited employees working a substantial amount of time from home. Results confirmed that perceived TBC positively impacts work engagement through increasing work-family balance satisfaction. Perceiving more control over the temporal boundaries of work and home activities resulted in more satisfaction with work-family balance, and this effect is significantly stronger for individuals who have less integrated work and home identities. Our research contributes to the literature of boundary control for work-from-home employees, as well as the literature of job demands and resources perspective by introducing new dimensions of job crafting.

HR: **Finding Your Totem: A Digital Intervention to Promote Strengths-Oriented Feedback Within Work Teams**

Author: **Marc-Antoine Gradito Dubord**, *U. of Montreal*
Author: **Marylene Gagne**, *Curtin Uni*
Author: **Philippe Dubreuil**, *Business School, U. du Quebec a Trois-Rivieres, Canada*
Author: **Jacques Forest**, *École des sciences de la gestion (ESG UQAM)*

Workplace strengths interventions have been linked to improved worker well-being and performance, but their accessibility and sustainability are often questioned. This research examined the impact of an online strengths-based activity, the Totem activity, on need satisfaction, autonomous motivation, psychological well-being, and perceived team effectiveness. Using a mixed-methods approach combining quasi-experimental and longitudinal design features, we studied the outcomes of this activity on a sample of full-time workers (n = 395) and contrasted them to those of a control group (n = 61). Data was gathered pre- and post-intervention for both groups, with the experimental group providing additional feedback three weeks post-intervention. The findings revealed that the experimental group displayed notable increases in all of the outcome variables post-intervention compared to the control group, with effect sizes varying from low to medium. Longitudinal analyses via a latent change score model (LCSM) indicated that changes in need satisfaction post-intervention were predictive of shifts in work motivation, psychological well-being, and team effectiveness over three weeks. Additionally, autonomous motivation appears to partially mediate the link between changes in need satisfaction pre- and post-activity and the shifts in perceived team effectiveness over three weeks. However, variations in need satisfaction consistently emerged as the sole significant predictor of well-being during the same period.

HR: **Understanding the User Experience of Work-at-Home During a Pandemic: A Configuration Analysis**

Author: **Kip Kiefer**, *Rollins College*
Author: **Jawadul Islam**, *Islamic U. of Technology*
Author: **Justin Paul**, *U. of Puerto Rico*
Author: **Paolo Saona**, *Saint Louis U.*
Author: **Md. Abul Kalam Azad**, *Islamic U. of Technology*

Abstract Purpose: The Covid-19 pandemic had huge implications for all employees. Many employees were forced to remain at home while in-person workspaces were replaced by virtual work environments. This study investigates the virtual user experience of work-at-home (WAH) employees for various levels of employment (top-level, mid-level, and entry-level). **Methodology:** This paper utilizes an online fuzzy-set qualitative comparative analysis (fsQCA) survey strategy by distributing questionnaires on several social media platforms. We contacted corporate individuals world-wide to gather information from workers who worked at home during the coronavirus crisis. The study obtained and analyzed 323 effective replies. **Results:** The fsQCA analysis reveals four key elements shaping the work-at-home (WAH) experience: Job demands (emotional load and workload), Job resources (task variety and autonomy), Work-Home Interface, and Learning Opportunities. The study introduces two employee topologies for WAH: 1. Work-Home Interface and 2. Learning Opportunities, both influencing the user experience of WAH. Surprisingly, despite previous research indicating adverse effects, the results show a very positive emotional outlook among WAH users, emphasizing the complexity and varied outcomes in the WAH landscape. **Originality:** Our novel dataset, directly obtained from WAH employees during the pandemic, provides a unique portal into the true nature of employee's user experiences in WAH environments. The application of the fsQCA technique allows for a unique perspective of reshaping WAH for people and is varied according to companies' work-home interface and learning opportunity orientation and is specifically employed to analyze the WAH environment. **Implications:** This study shares new methods for managers leading firms during crises (i.e., a global pandemic) and in WAH environments. The study also highlights dimensions and indicators such as flexibility and work-life balance, remote work infrastructure, adaption challenges, performance measurement and accountability, mental health and well-being that have the greatest influence on workers. Findings suggest ways managers can predict and eliminate the negative impacts on work-life balance and domestic-life situations while working in WAH environments.

Using a sample of Standard and Poor's 500 firms, we examine determinants and consequences of U.S. firms' return-to-office (RTO) mandates. Results of our determinant analyses are consistent with managers using RTO mandates to reassert control over employees and blame employees as a scapegoat for bad firm performance. Also, our findings do not support the argument that managers impose mandates because they believe RTO increases firm values. Further, our difference in differences tests report significant declines in employees' job satisfactions mandates but no significant changes in financial performance or firm values after RTO mandates. In summary, our research contributes to the ongoing debate over RTO versus working from home and has important implications for practitioners.

The Latest Research on Meaning: Examining Novel Theories and Factors That Promote Meaning at Work

Organizer: **M. Catalina Enestrom**, *IESE Business School*
Discussant: **Ryan M. Vogel**, *Fox School of Business, Temple U.*

In light of the wide-ranging benefits of meaning-making in the workplace, and employees' desire to experience meaningful work, it is important that researchers understand the different ways that people experience meaning in their work and the factors that can promote meaning in work. While prior research has provided initial insights, a large percentage of employees still do not find their work to be meaningful. This symposium assembles some of the latest research that investigates work meaningfulness, providing possible solutions for how to overcome the current lack of meaning in work. In doing so, the contributions of this symposium include: (1) Proposing work meaning as being empirically distinct from work meaningfulness and testing a model of work meaning relevant for the modern workplace; (2) Reconceptualizing the work orientations literature to suggest job, career, and calling as three separate dimensions of how employees experience their work; (3) Suggesting moderators that can allow employees to experience an often negative work situation (i.e., work absurdity) as meaningful; and (4) Providing self-oriented and other-oriented mechanisms that explain how beneficiary contact promotes work meaningfulness.

OMT: **The After-Crunch Syndrome: Creators' Iterative Idea Journeys with Adaptive Project Leaders**

Author: **Ya Jiao**, *Waseda U.*
Author: **Hitoshi Mitsuhashi**, *Waseda U.*

Creators in project teams, led by adaptive or planning leaders, iteratively engage in idea search and selection processes for innovation (i.e., idea journey). Adaptive leaders, using emergent strategies, demand creators' mandatory overtime and extensive work efforts, a practice called "crunch." We explore how creators' experiences of crunch with adaptive leaders affect subsequent career and innovation. We hypothesize that crunch experiences with adaptive leaders make creators discontinue working as creators. If they persist, enhanced innovativeness occurs due to knowledge transfer. Analyzing the data of creators in the video game industry, we find that creators tend to become inactive after experiencing crunch with adaptive leaders (i.e., the after-crunch syndrome), but effects on survivors' subsequent innovativeness are inconclusive. The analysis also suggests reverse-buffering effects of teams' social cohesion because it causes potential feelings of indebtedness. These results challenge the idea that an adaptive approach in managing project teams, considered essential for innovation, is unquestionably beneficial, and that social support during crunch might not be an effective solution for the after-crunch syndrome.

OMT: **Industry Cycles versus Attention Cycles: The Effects of Shifting Entrepreneurial Attention**

Author: **Aleksios Gotsopoulos**, *SKK Graduate School of Business*
Author: **Jose Lejarraga**, *IE U.*
Author: **Maud Pindard-Lejarraga**, *IE U. - IE Business School Madrid, Spain*

In the majority of industries, organizational density follows a common pattern: A slow start is followed by a rapid ascend to a peak, which then gives its place to an often equally abrupt, precipitous decline. Analyzing this dominant pattern, extant literature has focused predominantly on economic explanations: abnormal economic returns attract entrepreneurs and increase entry until a new industry's carrying capacity is saturated. Subsequently, intensifying competition leads to concentration, exit, and lower levels of density. Nevertheless, similar patterns can be created by attention-based dynamics of diffusion and abandonment that have little to do with the availability of economic resources. Using data on Greek stock brokerage firms, we explore alternative, economic and social, explanations. Results suggest that social dynamics such as fads can be more important than the availability of economic resources in driving entrepreneurial action. Bringing such dynamics into the analysis of industry life cycles and entrepreneurship can thus contribute significantly to a richer and more nuanced understanding of industry evolution.

OMT: **Why Organizations Have Routines: A Critical Synthesis of the Routinization Process**

Author: **Guillermo Ruiz Pava**, *Pontificia U. Javeriana*

The question that originated this article (why organizations have routines) has several answers. Our current understanding of routines doubts the precise meaning of this parsimonious theory. This study performed a critical synthesis concentrated on a single answer: Organizations have routines because they solve recurrent problems. The synthesis selects sufficient conditions or limits to conclude that the routinization process solves recurrent problems. Recent advances in routine theories facilitated the formalization of a routinization concept associated with collective and conflictive problem-solving processes. In particular, this article demonstrates that if actors share an extension of bounded rationality, a routine as a procedure can emerge, implementing a valuable solution for a specific type of recurrent and ill-structured problem. Likewise, the routinization process could become a persistent iteration in problem-solving if the implemented solutions are not valuable for the organization at each moment.
