A well-established literature argues that individuals form validity beliefs regarding the legitimacy of certain practices, norms, organizations, etc. based on validity cues received from the environment. This literature typically does not consider how individuals cope with incoherent validity cues - although exposure to incoherent validity cues is becoming more frequent in contemporary society, marked by increased dissensus between multiple groups. To begin to address this limitation, we focus on individual organizational members and distinguish four types of validity cues to which they can be exposed. We then develop a model of how organizational members, in response to incoherences in between-cue types, may prioritize some cues over others to infer what is or is not valid within their environment. Specifically, we argue that organizational members’ prioritization of validity cues is sequential - from the internal level of the organization to the external level of the broader environment and culminating with cross-level comparison of validity cues - and influenced by two main drivers: the fear of formal and informal sanctions and the need for organizational members to claim membership into a distinct group. We then discuss the model’s implications for the legitimacy literature.

OMT: **“Be Authentic and Always Keep Hustling”: Authenticity and Entrepreneurialism in Platform-Based Work**

Author: **Farnaz Ghaedipour**, *Stanford U.*

Author: **Arvind Karunakaran**, *Stanford U.*

Emerging occupations involved in platform-based work face competing demands: they are not only expected to be authentic but also need to embrace entrepreneurialism to survive. The need to be simultaneously authentic and entrepreneurial has some inherent tensions, but prior research is unclear about how and when occupational members navigate such tensions. Through a qualitative study of an emerging occupation (content creators) involved in platform-based work, we examined this question. We identified three types of authenticity work—expressive, deflective, and protective—that content creators enacted, and found that as compared to expressive and deflective authenticity work, protective authenticity work enabled them to navigate the tension between authenticity and entrepreneurialism. Through protective authenticity work, content creators (a) layered the self into a “sacred” core, a marketable exterior, and a desacralized middle that involves vulnerable experiences that are emotionally or temporally distant; (b) blurred the boundaries of market and non-market spheres by bundling commercial exchanges with social exchanges through exposing the desacralized middle layer to the audiences. Together, these mechanisms of layering and bundling facilitated content creators to obfuscate their economic intention while passing as authentic in the eyes of the audiences, thus enabling them to navigate the authenticity-entrepreneurialism tensions in platform-based work.

Sustainability Dynamics: From Tourism to Ecosystems and Global Value Chains

Session Moderator: **Nhung T. Hendy**, *Towson U.*

ONE: **Intellectual Humility in Sustainable Tourism Development: A Stakeholder Analysis**

Author: **Nhung T. Hendy**, *Towson U.*

Author: **Nathalie Montargot**, *La Rochelle Business School*

Intellectual humility as an antecedent of tourism development and tourism support was examined in an online survey of 233 adults in the United States. After controlling for common method variance using bifactor confirmatory factor analysis, factor scores were computed and used to run a logistic regression predicting tourism support, operationalized as travel intent post pandemic. Results showed that participants who reported responding from the viewpoints of resident stakeholder group were found to exhibit less pro-social behavioral tendency. The extent of perceived tourism's negative ecological impact was found to predict travel destination such that the stronger the negative impact, the more likely non-U.S. travel destinations were selected. In addition, older and female adults were more likely to report travel plan outside the U.S. while reporting more pro-social behavior. Neither pro-social tendency operationalized as HEXACO Honesty-Humility nor intellectual humility were significant predictors of sustainable tourism support. Practical and policy implications of the findings are discussed.

ONE: **What Constitutes the Blue Economy? Disentangling Placelessness, Development, and Sustainability**

Author: **Carolin Decker-Lange**, *Brunel Business School, Brunel U. London*

Author: **Paul Caussat**, *School of Business and Management, Royal Holloway, U. of London, UK*

Author: **Katharina Bothe**, *German Maritime Museum - Leibniz Institute for Maritime History*

Author: **Knut Lange**, *Department of Management, Royal Holloway*

The Blue Economy concept combines the views of oceans and seas as areas of economic growth, industrialization, and development, on the one hand, and as vulnerable spaces and unique environmental ecosystems that need to be protected and safeguarded, on the other hand. In this exploratory study, narrations are extracted from data collected during four interdisciplinary online workshops, linked to discourses of placelessness, development, and sustainability, and set in contrast. Tensions within and between the SDGs, stakeholders' antagonistic perspectives, and power imbalances are discernible. The findings can be linked to ongoing debates, such as sustainable management practices, inter-organizational collaboration, governance, and business ethics, and inspire future studies integrating ocean-related industries, organizations, and professions into management research.

ONE: **Game of Green Thrones: Interorganizational Tensions and Disempowerment Dynamics in GVC**

Author: **Simone Carmine**, *IESEG School of Management*

Author: **Valentina De Marchi**, *ESADE Business School*

To be addressed effectively social and environmental grand challenges require the coordinated effort of multiple and diverse actors. To understand how it is possible to successfully tackle these challenges in interorganizational systems, we investigate how the leather global value chain navigates the tension - arising among actors - deriving from the need to reduce its ecological impact. We found that the management and the outcome of interorganizational sustainability tensions is affected by power dynamics and by opposite ways to frame the challenge, with the consequence that - despite the best intentions and efforts of all actors engaged in the value chain - overall systemic improvements remain elusive. In particular, we show how the disempowerment of few actors in the chain results in a loss of collective capability to navigate sustainability tensions, thus identifying three mechanisms that explain the failure in improving the environmental sustainability of the leather GVC: misalignment of frames, (forced) alignment of action, and misalignment of outcomes. We contribute to paradox theory by explaining the role of power dynamics in the management of interorganizational tensions, and to the sustainability literature and practice, by showing the unintended effects of collective action in a context of power imbalance.

ONE: **Narratives of Nature: The Work of Social Ecological System Intervention**

Author: **David R. Hannah**, *Beedie School of Business Simon Fraser U.*

Author: **Kirsten Marie-Paule Robertson**, *U. of the Fraser Valley*

Author: **Brett Van Poorten**, *Simon Fraser U.*

There are many workers whose responsibilities include overseeing "social ecological systems" (SES): circumstances where human activity and the natural world are interconnected and reciprocally influential. We aimed to learn about how workers decide to intervene in these systems, decisions that can shape the fate of ecological systems and the species within them, as well as the livelihoods and experiences of the people who interact with them. Based on data gathered from interviews with recreational freshwater fisheries managers in the Canadian province of British Columbia and from archival sources, we analyzed descriptions of 26 SES interventions. We uncovered a narrative structure to those descriptions, comprised of four processes wherein workers considered (1) which aspects of the system were valuable and important (which we termed valorization); (2) whether a problem existed (problematization); (3) what was causing the problem (untangling); and (4) which action to take in response (implementation). The overall narrative provided both a series of steps to guide interventions, and a rhetorical structure to justify them. However, other actors in the social systems sometimes had differing accounts of what was happening, leading to what we termed "narrative disjunctions." We explicate the implications of our findings for the critical work of SES management.

Sustainability Orientation and Organizational Practices

Session Moderator: **Emilia Filippi**, *U. of Brescia*

ONE: Unraveling the Complex Interplay of Women Directors, Eco-Innovation, and Situational Contingencies

Author: **Emilia Filippi**, *U. of Brescia*
Author: **Letizia Lo Preiato**, *U. of Brescia*
Author: **Mariasole Bannò**, *U. of Brescia*

This study investigates the effect of women directors on eco-innovation and each type of eco-innovation (i.e., environmental products, noise reduction, product impact minimization, and renewable/clean energy products) considering the moderating role of three situational contingencies: the presence of a CSR committee, the industry's environmental insensitivity, and the level of country's gender inequality in which firms are located. The study adopts social role theory and the contingency theory. We adopted a panel data (with random-effect) approach on an unbalanced panel database of 37,346 firm-year observations regarding 6,677 firms operating in OECD countries and referring to the 2012-2020 period. Our results show that women directors have a positive effect on eco-innovation. The presence of a CSR committee amplifies the positive effect of women directors on eco-innovation, while operating in an environmentally insensitive industry and in a country with high gender inequality reduces the positive effect of women directors on eco-innovation. Some differences emerge when analysing the impact on each type of eco-innovation. This study makes important contributions to previous literature and provides useful managerial and policy implications.

ONE: Organizational Sustainability Orientation and its Outcomes: A Meta-Analysis

Author: **Matheus Tardin**, *FGVEAESP*
Author: **Marcelo Gattermann Perin**, *EAESP - FGV*
Author: **Luiza Braga**, *FGVEAESP*

Amidst growing stakeholder pressure, companies are increasingly integrating ecological and societal goals into their core business strategies, reflecting a deeper commitment to sustainability. This study aims to synthesize the empirical literature on the relationship between Organization Sustainability Orientation (OSO) and firm performance, to merge literature streams and reconcile inconsistencies in previous research. A meta-analysis was conducted, aggregating findings from 117 articles and 326 effect sizes, focusing on the relationship between OSO and various performance metrics. The meta-analysis revealed a consistently positive relationship between OSO and both operational and performance outcomes across firms. This relationship was moderated by firm size, industry type, country-level governance, and cultural dimensions. The study contributes to academic knowledge by providing an integrated view of the impact of OSO on firm performance, highlighting the role of various moderators. Practically, it offers insights for business leaders and policymakers on implementing sustainability practices effectively across different firm sizes and industry sectors. This research bridges theory and practice, underscoring the importance of OSO in contemporary business strategy and operations.

ONE: Sustainability Transformation or Utopia? The Role of Organizational Practices for Resolving Tensions

Author: **Timo Busch**, *U. of Hamburg*
Author: **Carolin Weber**, *U. of Hamburg*
Author: **Theresa Sophie Rötzel**, *U. of Hamburg*

Drawing on a 10-year ethnographic study in a multinational firm, we generate novel insights into how organizational actors address tensions that emerge on the journey towards embedding sustainability at the core of the business. Our findings show how an interplay of top-down and bottom-up practices can explain the resolving and evolving of tensions over time. A distinct feature of the sustainability strategy implementation process is a shift in relevance from top-down to bottom-up practices. The paper thus makes two major contributions to current discussions on tension management and strategy-as-practice literature. First, we further the understanding of the role of tensions within the unfolding processes of sustainability strategy implementation. Second, we propose a process model that demonstrates how new tensions become salient when existing salient tensions are resolved. Moreover, it extends the knowledge of how sustainable business practices experience, over time, a shift in relevance from top-down to bottom-up practices. Our results offer new perspectives for practitioners on how to navigate through the journey of evolving and resolving tensions when successfully implementing a sustainability strategy.

ONE: Towards a Theory of Planned Organizational Behavior

Author: **Waqas Nawaz**, *Smith School of Business, Queen's U.*

The dominant viewpoint in current organizational literature tends to utilize an external perspective in addressing sustainability challenges, ascribing the driving force for sustainability actions to external pressures emanating from stakeholders and regulatory bodies. While this perspective holds value, it tends to leave unnoticed some significant variations in how organizations respond to these external pressures. Specifically, it remains unclear why certain organizations demonstrate more impactful sustainability actions than others, even when equipped with similar resources and knowledge bases. This research asserts that while resources and knowledge serve as necessary prerequisites for action, they are insufficient for explaining the divergent behaviors of organizations. It is essentially the variation in motivation of the executives which creates differences in organizational sustainability behavior. To theoretically explore the impact of executives' motivation on organizational sustainability behavior, this study extends Ajzen's well-established Theory of Planned Behavior (TPB). Recognizing the limitations of TPB within the organizational context, a novel theoretical framework is introduced: the Theory of Planned Organizational Behavior (TPOB). This framework is employed to formulate four key propositions that expound on the interplay between executives' sustainability worldviews, intentions, and attention, and their influence on organizational sustainability behavior. Together, these variables determine the nature of sustainability actions, categorized in this work as substantive, integrative, instrumental, or symbolic.

Sustainable Business Innovations and Public-Private Dynamics

Session Moderator: **Wendy Stubbs**, *Monash U.*

ONE: Innovating Systemic Solutions for the UN Sustainable Development Goals

Author: **Amanda Nicole Williams**, *IMD Business School*

Author: **Kathleen Klaniecki**, *Chemonics International*

Author: **Christian Dorninger**, *U. of Natural Resources and Life Sciences*

We conducted a qualitative study of an innovation lab organized to develop solutions for grand challenges. To guide participants, the facilitators enforced a linear process inspired by design thinking. We found that teams that complied with the innovation process proposed an incremental solution whereas teams that minimally complied suggested a systemic solution. We advance the grand challenges literature that focuses on orchestrating novel solutions by demonstrating that team-level processes may influence the systemic nature of the solutions. We make a novel contribution to the innovation process constraints literature, which finds that constraints benefit social interactions for innovating within the firm. In our study, constraints adversely influence the outcome in ad hoc settings since teams struggle to find fluidity with the enforced process and experience time pressure.

ONE: The Role of SMEs' Sustainable Business Model Experimentation in Sustainability Transitions

Author: **Wendy Stubbs**, *Monash U.*

Author: **Megan Farrelly**, *Monash U.*

Author: **Kyra Fabianke**, *Monash U., Australia*

Author: **Minh Nguyen**, *Monash U.*

In the search for more sustainable ways of doing business to address global environmental and social issues, there is growing scholarly and practitioner interest in the role of sustainable business model (SBM) innovation. Experimenting with new SBMs allows organisations to fundamentally change the way they do business to address persistent social and environmental issues and contribute to sustainability transitions. Yet there is limited understanding of how small to medium enterprises (SMEs) experiment with sustainable business models and practices that contribute towards sustainability transitions. This paper examines the inputs, processes, outputs and outcomes of 29 Australian SMEs' sustainability experimentation activities. We found that SMEs' sustainability experiments, and transitions, are multi-dimensional and multi-actor, embracing network-building and/or collaboration processes. This fosters not only the individual firm's experience, but collectively advances sectoral knowledge regarding what is feasible. This suggests collaboration is not only a core competency within the experimentation process, but also a critical outcome of SMEs' activities.

ONE: Public-Private Dynamics in Launching the Direct Air Capture Industry

Author: **Ho-Wei Hsu**, *HEC Paris*

Author: **Wenru Shi**, *HEC Paris*

The interplay between public and private entities in shaping new industries tackling major global challenges, such as climate change, remains largely unexplored. This study delves into the dynamic formation of the Direct Air Capture (DAC) industry, a pivotal player in addressing climate change, through an in-depth, longitudinal case study spanning from 2007 to 2022. Our investigation reveals that while for-profit companies are adept at navigating technological innovations and refining business models, government bodies and non-profit organizations play a crucial role in managing both the benefits and drawbacks that emerge from these developments. These insights not only shed light on the evolving nature of the DAC industry but also offer valuable contributions to understanding public-private partnerships and the evolution of industries. Furthermore, our findings have significant implications for designing business models for commercial organizations aimed at addressing critical global challenges.

ONE: Value Proposition Strategies and Investment Decisions for Green Offerings

Author: **Marcel Aksoy**, *Saarland U.*

Author: **Benedikt Schnellbacher**, *Saarland U.*

Author: **Alex Schöneiseffen**, *Saarland U.*

The environmental transformation of economies and the increasing demand for green technologies should offer opportunities for suppliers of green offerings. Yet, suppliers face challenges in convincing business-to-business customers to invest in environmentally-beneficial technology offerings as decision-makers are often not aware of the environmental and financial benefits of these solutions. To overcome these challenges, technology vendors can use sustainability-oriented value propositions. However, little is known so far on the effects of different value proposition strategies on investment decisions, as most studies use qualitative approaches and investigate value propositions through the lens of the vendors. We therefore conducted a scenario-based experiment, through which we investigated whether the three different value proposition strategies monetization, certification and risk assessment influence investment preferences of buyer firms' decision-makers. Our results provide empirical support for the effectiveness of sustainability-oriented value propositions on buyers' decision-making. Finally, moderation analysis indicates that the certification strategy is more effective for buyers in markets with low uncertainty, while risk assessment is for buyers in high uncertainty markets.

The Promise and the Peril: Emergent Governance of Artificial Intelligence

Moderator: **Megan LePere-Schloop**, *Ohio State U.*

Moderator: **Rebecca Tekula**, *Pace U.*

Program Chair: **Erynn Beaton**, *Ohio State U.*

As the 2024 AOM All-Conference Theme highlights, Artificial Intelligence (AI) is rapidly transforming organizational operations and management practice, while public policy and AI governance are still emergent. This plenary brings together a panel of scholars whose research aims to understand and critically examine the use and impact of AI and to inform policy and practice in this rapidly evolving space. This plenary seeks to engage PNP members and the broader AOM membership in informed and critical dialogue about the deployment and governance of AI.

Text as Data: Advancing Research through Topic Modeling and Textual Analytics

Session Moderator: **Mark Learmonth**, *Nottingham Trent U.*

RM: How Corpus-Assisted Discourse Studies can Enrich Qualitative Explorations of Large Textual Datasets

Author: **Mathew Gillings**, *Vienna U. of Economics and Business*
Author: **Gerlinde Mautner**, *WU Vienna U. of Economics and Business*
Author: **Mark Learmonth**, *Nottingham Trent U.*

How might qualitative researchers tackle large data sets consisting of millions or even billions of words? Corpus-assisted discourse studies (CADS) is the approach we explore here. Designed for the analysis of voluminous textual data, it offers a recognised empirical approach for making sense of such data, but it does so within an epistemology that understands language to be central in shaping our understanding of the world around us. In other words, CADS can assist researchers in revealing the social dynamics of the text. Bringing the training of applied linguists and a management scholar, we discuss the background to CADS and its differences from text mining approaches such as topic modelling, which have been more widely used in management studies to date. Focused on the needs of people who are new to the approach, we then offer a worked example to show CADS' potential in exploring a management-related corpus. Our paper concludes with a discussion of the strengths and weaknesses of the approach and its potential for future discursively-orientated management research – especially in the context of the rise of 'big data'.

RM: Developing an Integrated Topic Modeling Approach for Text-Based Knowledge Accumulation

Author: **Maximilian Weinhold**, *WHU Otto Beisheim School of Management*
Author: **Dries Faems**, *WHU Otto Beisheim School of Management*

This paper introduces an integrative topic modeling approach, leveraging recent advancements in natural language processing (NLP) for knowledge accumulation. It addresses the limitations of traditional topic modeling methods (i.e., Latent Dirichlet Allocation), employing novel algorithms such as BERTopic, CorEx, and leveraging large language models like GPT. Using 2567 journal paper abstracts in the research domain of innovation ecosystems, the paper identifies and analyzes 27 distinct topics, enabling a comprehensive bibliographic review. This innovative approach showcases the potential of a combination of various topic modeling techniques for scalable, contextual text analysis in management research.

RM: A Novel Method for Theorising with Big Textual Data: Topic Modeling with Grounded Theory   

Author: **Eyyub Can Odacioglu**, *U. of Manchester*
Author: **Lihong Zhang**, *U. of Manchester, UK*
Author: **Richard Allmendinger**, *Alliance Manchester Business School, U. of Manchester*
Author: **Azar Shahgholian**, *Liverpool John Moores U.*

Recent advancements in artificial intelligence globally changed the perception on machine learning and big data applications. While the era of big data brings opportunities for practice and research, it opens a window to the possibilities to build new theories. This paper demonstrates a new method that embeds a machine learning technique into a traditional qualitative method. This method combines topic modelling with constructivist grounded theory which provides potential for contributing to theory and the knowledge reconstruction process. The study illustrates this method by analysing a corpus generated from the esteemed project management journals of the International Journal of Project Management and the Project Management Journal, identifying studies bearing on complex innovation projects. Employing topic modelling alongside the constructivist grounded theory approach, this study proceeded to analyse real-life case studies from the literature and engaged directly with Project Managers (PMs) within the aerospace industry in Turkey. This demonstration of the integrated approach guided to the establishment of a preliminary framework of Relational Accountability skill set for PMs.

RM: Topic Modeling in Literature Reviews 

Author: **Ivan Zupic**, *Goldsmiths, U. of London*
Author: **Sukrit Vinayavekhin**, *Thammasat Business School*
Author: **Andrea Caputo**, *U. of Trento & U. of Lincoln*

Topic modeling is a family of machine learning methods that can automatically extract thematic information from text. Recently, researchers have started using these methods as a quantitative tool for literature reviews. We have identified and analysed 79 papers in management and organisational research that used topic modeling for literature review. Our analysis covers all aspects of analysis and reporting: from data search & selection, preprocessing, analysis, interpretation, validation and visualization. Based on our analysis we developed the guidelines for implementing the process and reporting of topic modeling literature reviews.

Entrepreneurial Identity and Strategy Work

Session Moderator: **Ronit Yitshaki**, *Department of Economics and Business Administration, Ariel U.*

SAP: **Making Strategies for the First Time**

Author: **Qian Li**, *Warwick Business School*

Author: **Paula Jarzabkowski**, *U. of Queensland*

Research on the work of strategy-making has largely focused on established organizations with existing strategies to which new strategies must relate. Little is known about the becoming of strategy in new ventures during their founding. Our study explores this question using a unique dataset of internal message exchanges in the very first two years of a venture's journey. We find that strategy emerges as early members attempt to resolve strategic issues core to their survival and growth. Our findings illustrate various actions, interactions, and patterns of strategy-making and identify three types of entangled strategy work of deploying-resources-in-actions, garnering-respect-for-expertise, and anticipating-progress-towards-concrete-outcomes through which strategies are recognized. Our study explains how strategy emerges in the absence of existing strategies, highlights actor's knowledgeable and purposive work in strategy-making, and contributes to a relational understanding of new venture creation within people's actions and interactions.

SAP: **The Dynamics of Strategy-Making in New Ventures: Beyond Dualist Accounts**

Author: **Heiko Marc Schmidt**, *U. EAFIT*

Author: **Sandra Milena Santamaria-Alvarez**, *U. EAFIT*

Entrepreneurial strategy-making has often been described in terms of different reified modes, such as effectuation or causation. Despite widespread agreement that these modes are not exclusively used and change over time, limited research considers them in conjunction and focuses on their interrelation over time. In this article, we employ a constructivist grounded theory approach based on three years of observations, diaries, interviews, and documents to study how causal and effectual strategy-making practices unfold in a new venture. We found strategy-making to be composed of two complementary nexuses of practices that iteratively shape each other over time, one more causal and teleological, the second more effectual. This contributes to theory by recasting the hitherto mostly dualistic accounts of entrepreneurial strategy-making as iterative dualities, complementary and sequenced nexuses of practices that feed into each other.

SAP: **Responding to Opportunity Threats: The Impact of Founders' Identity Work on Opportunity Development**

Author: **Yalan Yang**, *School of Management, Fudan U.*

Author: **Shenghui Ma**, *Fudan U.*

How founders cope with threats to their entrepreneurial opportunity is an important topic in entrepreneurship research. Existing studies suggest that when facing threats, founders often treat the opportunity as part of their self-meanings and try to persist with it. However, scholars also noticed that some founders may actively integrate external feedback and adjust the opportunity. These behavioral differences seem to result from the variations in their identities. As existing research generally treats founder identity as static, we have a rather limited understanding of how founders may engage in identity work when facing threats to their opportunity and how their different identity work approaches affect opportunity persistence or modification. To fill this gap, we conducted a qualitative study drawing on 74 in-depth interviews with 40 founders. We identified two types of founders whose self-meanings were initially attached or unattached to the current opportunity. When facing threats, this difference affected whether and how they maintain, suspend, or enrich their self-meanings, which in turn influenced their persistence or adjustments of the current opportunity, and/or development of new opportunities. Our study contributes to the literature on founder identity work and opportunity development by enhancing the understanding of how founder identity is constructed and evolved in coping with threats to entrepreneurial opportunity, and how identity work influences the development of both current and new opportunities.

SAP: **Performative Narratives in Entrepreneurship: Unveiling Identity Through Ricoeur's Lens**

Author: **Henrika Franck**,

Author: **Paul Savage**, *Aalto U. School of Business*

This study explores the performative approach to entrepreneurial identity and its impact on entrepreneurs' narratives. Traditionally, entrepreneurship studies lean towards positivism, yet there's growing interest in interpretive and performative methods. These approaches, especially in narrative identity studies, challenge the factual interpretation of entrepreneurs' statements, as they often perform speech acts that construct identity rather than describe reality. This paper intertwines empirical data with Paul Ricoeur's philosophy, analyzing interviews from 50 Silicon Valley startup entrepreneurs and 263 newspaper articles. This approach reveals how entrepreneurs construct their narrative identity, a response to life's em-plotment per Ricoeur's mimetic cycle. Four identity narratives emerge: Uniqueness, Resemblance, Continuity, and Permanence, highlighting the balance between identity-as-sameness and identity-as-change. Key findings indicate that performative narrative identity reveals unchanging virtues and a balance between static and dynamic aspects of identity. This suggests that narrative identity is not just a reflection but an active response to the entrepreneurial journey. The study redefines understanding entrepreneurial identity through a performative lens, offering fresh insights into its narrative construction.

Predict or Create: Discussing the Different Understandings of the Future in the Context of AI

Organizer: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*

Organizer: **Sarah Stanske**, *Leuphana U. Lüneburg*

Organizer: **Thomas Wrona**, *Hamburg U. of Technology*

Moderator: **Jennifer Whyte**, *U. Of Sydney*

Panelist: **Shahzad Ansari**, *U. of Cambridge*

Panelist: **Alice Comi**, *Tongji U.*

Panelist: **Vern Glaser**, *U. of Alberta*

This symposium explores how different conceptions of the future influence the development and application of artificial intelligence (AI). Based on the theoretical foundation of understanding the future as either predictable or unpredictable, the symposium aims to discuss the impact of AI in creating and/or predicting the future. While AI tools that use machine learning and neural networks to draw inferences from data sets are seen as having great potential to predict futures, there are also conflicting views on the accuracy of algorithmic predictions, with some emphasizing the limitations of past data in predicting the unknown. The symposium aims to move beyond binary perspectives and advocate for a nuanced understanding of the sociomaterial interactions between humans and AI in constructing futures. Examples such as Amazon's predictive shipping, where AI combines predicting and creating future purchases, will be presented as examples of this middle ground. The symposium invites scholars to contribute to a research agenda that explores further examples of human-AI collaboration in creating and predicting the future and promotes a more comprehensive understanding of the role of AI in future shaping processes.

SIM: Offenders by Conviction: How a Dual Mission Shapes Power Dynamics in Investor-Investee Relationships

Author: **Niko Gerlach**, *Heinrich Heine U. Düsseldorf*
Author: **Lena Schätzlein**, *Heinrich-Heine U. of Düsseldorf*

Power—endemic for interorganizational collaboration and mostly negatively connotated—can be exerted with different intentions. Impact investors (IIs) and social enterprises (SEs) share the higher goal of creating a societal impact while having a market-based foundation and thus seem to be a perfect match. Research on power exertion in investment relationships with a joint mission ‘for the greater good’ is largely missing. Thus, we conducted 54 interviews with social entrepreneurs and IIs to explore the reasons for power exertion in this mission-driven dyad and its consequences for the relationship. Our findings reveal that (1) preconceived notions about one another affect power utilization practices during the entire relationship. (2) IIs mainly exert power to professionalize SEs, while social entrepreneurs exert power to limit and mitigate the power of IIs. (3) While IIs are the more powerful actors in the dyad and exert considerably more power than social entrepreneurs, their primary focus is on supporting the investee. (4) IIs use power to pressure social entrepreneurs to perform well but do not push for mission drift.

SIM: A Configurational Approach to Financial/Social Trade-Offs in Dual-Purpose Companies

Author: **Changwei Guo**, *School of Business, Renmin U. of China*
Author: **Fengbin Wang**, *School of Business, Renmin U. of China*
Author: **Jianxun Chen**, *U. of International Business and Economics*

Dual-purpose companies (DPCs) encounter numerous financial and social trade-offs in their operations. However, existing research has not fully explored the heterogeneity and antecedents of these trade-offs. To bridge this gap, we first make a distinction between scenarios in which trade-offs are mitigated or intensified, and then categorize the intensification into two directions: social dominance and financial dominance. We hypothesize that unique combinations of governance arrangements and organizational capabilities result in different trade-off scenarios. To test our hypothesis, we conducted a fsQCA of 46 subsidiaries within a Chinese state-owned enterprise group. We identify three patterns that mitigate trade-offs and three patterns that intensify them. The findings highlight the complex interplay between governance mechanisms and organizational capabilities related to different trade-off situations, the diverse pathways toward trade-off mitigation, and the causal asymmetry between patterns of different trade-off scenarios. This study advances our understanding of the heterogeneity of financial/social trade-offs in DPCs.

SIM: Resilience and Adaptation of Third-Sector Organisations (TSOs): Insights from a Developing Economy

Author: **Temitope Fagbemi**, *Robert Gordon U.*
Author: **Oluwatoyin Dosumu**, *Alliance Manchester Business School, U. of Manchester*
Author: **Rasheed Adigun**, *J.P. Morgan Chase & Co*
Author: **Franklin Nakpodia**, *Durham U. Business School*
Author: **Rilwan Sakariyahu**, *U. of Dundee*

Across the globe, third sector organisations (TSOs) have played substantial roles in providing essential community support and facilitating sustainable development. However, their susceptibility and fragility in the face of socio-economic challenges, exemplified by the Covid-19 pandemic, have raised critical questions. This study employs a semi-structured interview-based approach to investigate the resilience and adaptation strategies of TSOs operating in a challenging landscape. Through in-depth interviews, the research explores how TSOs in a Sub-Saharan African economy (i.e., Nigeria) navigate uncertainties within their local contexts. The study uncovers an intricate web of traditional and innovative strategies that TSOs employ to survive as well as thrive during adversity. These findings reveal that TSOs employ strategic capabilities, digital citizenship, cultural dynamics, and community participation to overcome the challenges triggered by the Covid-19 pandemic. By shedding light on the less-explored dimensions of resilience, this study contributes valuable insights to inform TSOs, policymakers, and scholars striving to understand the resilience of non-profit organisations operating in challenging economic and social environments.

SIM: A Configurational Analysis of Civil Society Organizations in Extractive Conflicts

Author: **Lukshmee Saravanapavan**, *U. of Victoria (PhD Student)*
Author: **Matthew Murphy**, *U. of Victoria*
Author: **Juan Francisco Chávez R.**, *Smith School of Business, Queen's U.*
Author: **Ilir Haxhi**, *U. of Amsterdam*
Author: **Miguel Rivera-Santos**, *Babson College*

Civil Society Organization's (CSOs) knowledge and material assets can help communities elevate their environmental justice mobilizations against extractive companies. The strategic value of this assistance is, however, shadowed by the reality of increasing violence against mobilizing activists. These conflicts also threaten the firms involved with costly disruption to operations and a loss of reputation. This paper attempts to develop a deeper understanding of this contentious circumstance by addressing the question: How do the configurations of different types of CSOs present in community mobilizations affect the intensity of community conflicts against extractive firms? We perform a fuzzy-set QCA based configurational analysis of the key stakeholder groups present in 550 environmental justice conflicts against extractive firms, occurring worldwide between the years 1996-2017. Our variables of interest include CSOs (international and/or local), type of firm (foreign firm or not), type of community (rural or not, and variety of mobilizing groups) and Government (assessed in terms of its regulatory quality and level of economic dependence on extractives). Our results contribute to the literature on stakeholder influence strategies (Frooman, 1999) by portraying 10 unique configurations of stakeholders, which lead to high intensity of conflict and 5, which lead to low.

Author: **Yuhao Zhuang**, *EMLYON Business School*

Author: **Marieke Huysentruyt**, *HEC Paris*

Author: **Bertrand V. Quelin**, *HEC Paris*

Substantial development aid is channeled to recipient countries with varying levels of political development and implemented by organizations from both civil society and the private sector. The nonprofit and for-profit intermediaries may differentially respond to an aid delivery opportunity in a country with few political constraints—that is, the nations where the policymakers in political institutions disproportionately accommodate the interest of the privileged few instead of undergoing the pressure to serve the majority. We develop a conceptual framework of the selection of nonprofits and firms into a country with a low level of political constraints, and test our theory using a proprietary dataset of 1,166 bids for international development aid contract initiated by the United Kingdom’s bilateral agency. We show that, holding constant the nature of the project and the economic development of the target country, nonprofits as champions of marginalized populations are more willing to compete for contracts in countries distinguished by few political constraints, compared to for-profit firms. Our findings also suggest that the purely socially-oriented nonprofits, not the hybrid ones, with a neutral agenda distanced from value-driven statements are most willing to address the lack of political constraints and most likely to win these contracts. Further, presence of peer organizations facilitates the engagement of other types of nonprofits with the absence of political constraints: Hybrid nonprofits more likely compete for and secure the contracts targeting countries with low political constraints, when there is already a strong presence of transnational social organizations. Our results underline the critical role of nonprofits with an under-the-radar approach in advancing the most needed public welfare in politically challenging contexts, without incurring unwanted political interventions.

Discussion: Strategy, Stakeholder Engagement, Social Activism, and Governance for Sustainability

Session Moderator: **Michael L. Barnett**, *Rutgers U.*

This discussion-intensive session showcases diverse theoretical perspectives, empirical approaches, and levels of analysis for exploring and advancing social and environmental facets of sustainability globally.

SIM: The Practices of Chief Sustainability Officers in Orchestrating Strategy Formation

Author: **Toke Bjerregaard**, *Nottingham Business School, NTU*
Author: **Mai S. Linneberg**, *AarhusU.*

This paper qualitatively examines how chief sustainability officers (CSOs) engage and combine practices in orchestrating the sustainability strategy formation of large, complex organizations (in this case MNCs). Previous research has demonstrated how distributed emergence tends to occur in such organizations, raising the question of how top HQ managers, then, shapes strategy formation. This study advances insights into the knowledge practices of CSOs in orchestrating sustainability strategy formation in which they are faced with distributed emergence. Findings show and explain how CSOs in a continuous effort iteratively engage knowledge integration practices such as: locating and sourcing knowledge from a diverse set of internal and external stakeholders, contextualising sustainability content (e.g. based on market requirements, socio-cultural peculiarities, and product/process specifications, etc.), while establishing documentation, coordinating with and achieving approval from other top managers and CEO through legitimizing practices. Rather than merely constituting a top-down, linear process, this strategizing work comprises knowledge interactions that are both vertically and laterally versatile, with high demands on the CSO to continually coordinate knowledge dynamics in strategizing.

SIM: The Role of R&D in Enhancing the Impact of Environmental Responsibility on Financial Performance

Author: **Martin Osei**, *Stevens Institute of Technology*
Author: **Josep A. Tribo**, *Stevens Institute of Technology*

This paper examines the impact of corporate environmental responsibility (CER) on corporate financial performance (CFP) and the potential positive moderating role of R&D investment. Drawing on the natural resource-based view theory, we argue that R&D investment positively moderates the CER-CFP relationship, even in periods of financial distress. Using international panel data for firms operating in 77 countries from 2012 to 2021, we find that the joint effect of CER and R&D investment positively impacts CFP. This effect holds in both non-distressed and distressed situations. Remarkably, in situations of financial distress, the effect on performance is even larger when sectors are of low technology intensity. However, this effect only appears in Liberal Market Economies (LMEs) like the US. Our findings highlight the importance of combining CER practices with R&D investments for improving financial performance independently of a firm's financial situation, particularly in institutional/national settings where there is high pressure to generate short-term results (LMEs).

SIM: Why Do Firms Engage in Corporate Sociopolitical Activity? An Empirical Test

Author: **Michael Greiner**, *Oakland U.*
Author: **Jaemin Kim**, *Oakland U.*
Author: **Jennifer Cordon Thor**, *Oakland U.*

Corporate sociopolitical activity (CSA) has been generating much attention both in the popular media and in the scholarly literature. One question that remains open is why firms engage in CSA in the first place. In this article, we rely upon signaling theory to argue that firms tend to engage in CSA for two reasons related to its employees. First, when a firm's employees are progressive, well-educated and lower paid, the firm may engage in CSA to signal to its employees its shared values. However, when employees are conservative, less educated and well paid, we argue that firms may engage in CSA as part of the CEOs' efforts to signal to their peers and even themselves. We further argue that the CEOs' authenticity will positively moderate these relationships. We tested our theory on a unique database constructed from archival sources and found support for our predictions.

SIM: Stakeholder and Institutional Perspectives in Social Activism Research: Systematic Literature Review

Author: **Md Kamrul Hasan**, *Louisiana State U.*

In this paper, I systematically review the burgeoning yet dispersed literature on organizations facing the consequences of social activism stances and subsequent organizational strategies to alienate the effects. I synthesize research findings on social activism within the management literature to understand why social activism stances are increasing, motives of the social activists to target organizations, organizational costs of facing social activism stances, and the strategies taken by organizations to combat the effects. Based on the review, I identify significant research gaps, highlight the major theoretical lenses used to describe the phenomenon, and develop a future research agenda. With this systematic review and future research agenda, I hope to stimulate research questions that would encourage scholarly inquiries by shedding light to solve current puzzles and further the conversation on this phenomenon.

SIM: **Barriers and Enablers Toward Stakeholder Engagement for Net-Zero Neighbourhood Projects**    

Author: **Emily Nichols**, Cardiff Business School, Cardiff U.

Author: **Qian Li**, Cardiff Business School, Cardiff U.

Author: **Alberto Gallotta**, WSP

Author: **Peter Wells**, Cardiff Business School, Cardiff U.

Net-zero neighbourhoods offer a promising avenue for decarbonisation in the construction sector, yet challenges in stakeholder engagement hinder their broader adoption. This paper investigates the current barriers, enabling factors, the significance of barriers between stakeholder groups, in order to provide suggestions for accelerating the transition could be made. We employ a mixed-method design for this study, incorporating both a systematic literature review using the Systematic Review Reporting Standards (ROSES) methodology and primary data analysis derived from semi-structured interviews. Guided by the conceptual framework of social-technical systems theory, this paper offers a distinct perspective on existing barriers and provides insights into effective strategies for overcoming them. We suggest that net-zero neighbourhoods are niche innovations within the broader socio-technical system, currently in the first phase of socio-technical transition. We uncover that while stakeholders have unique challenges to address, ultimately, interconnection of all system-actors is required to overcome them. The findings of this paper will inform the implementation of net-zero neighbourhoods in the South Wales region and beyond, providing a unique insight into the current stakeholder engagement challenges and how they can be overcome to accelerate socio-technical transition.

SIM: **Digital Technologies and Governance: Unpacking Differences by Regime Type for International Business**  

Author: **Anna-Lena Maier**, U. of Hamburg

Author: **John E. Katsos**, Queen's U. Belfast

Author: **Jason Miklian**, U. of Oslo

Digital communication technologies can both promote and constrain public spaces for deliberation and private spaces for individual autonomy. We explore the varied types of digital control to extrapolate the differing impacts on organized immaturity in different political regimes. We do this by applying the insights from existing research on restrictions of the digital sphere with three case studies from each political regime. In autocracies, the form of public and private digital spaces is the focus of restrictions, as citizens ought to remain immature with respect to organizing. In democracies, content within those spaces is the focus of restrictions, rather than the digital space itself. Hybrid democratic regimes restrict both content and form leading to a “worst of both worlds”-problem. Based on our analysis, we derive ethical and practical implications for business organizations seeking to operate in these contexts, particularly in hybrid regimes that are often seen by firms as “almost as good” as democracies but in practice have more in common with their authoritarian counterparts as concerns protection of civilians, digital users, and other stakeholders.

SIM: **What is the Quality for Carbon Disclosure? The Role of Managerial Discretion and Governance**

Author: **Joel Alejandro Cumpean**, Autonomous U. of Tamaulipas

Author: **Arturo Briseno**, Autonomous U. of Tamaulipas

Author: **Bryan W. Husted**, Tecnológico de Monterrey

This research examines the effects of managerial discretion and corporate governance elements on the quality of carbon disclosure in companies participating in the Carbon Disclosure Project and listed on the Mexican stock market (Mexican Stock Exchange and Institutional Stock Exchange). The study is grounded in agency and institutional theories, considering both internal and external dynamics of organizations. We construct a data set containing 71 companies for 2016 – 2022, employing ordinal logistic panel regression using STATA 17 to assess the relationship between managerial discretion and corporate governance on carbon disclosure. Our main findings suggest that board independence and the presence of an environmental committee prove effective for monitoring and improving sustainable reporting. Unexpectedly, network centrality and family ownership negatively impact disclosure quality. These results provide a deeper understanding of the determinants influencing the quality of carbon disclosure in companies, with implications for strategic managerial decision-making and public policy related to sustainability.

SIM: Does CSR Attract the Righteous? Experimental Evidence from an Online Labor Market

Author: **Dana Horvath**, *WHU Otto Beisheim School of Management*
Author: **Rainer Michael Rilke**, *WHU Otto Beisheim School of Management*
Author: **Christina Guenther**, *WHU Otto Beisheim School of Management*

We investigate whether employers who engage in corporate social responsibility (CSR) activities attract more honest workers. Our novel pre-registered field experiment in an online labor market consists of two parts. In the first part, we ask workers to make a decision that requires lying for either selfish or prosocial reasons to elicit their lying behavior. In the second part, we offer them a job providing or withholding information about the employer's CSR activities and observe whether they accept the job. We provide evidence for the self-selection effect among workers in response to an employer's promotion of CSR activities in job advertisements. Our study's second part reveals no significant impact of CSR promotion on the lying intensity among workers choosing jobs with CSR-promoting employers. This holds for selfish black and prosocial white lies.

SIM: (De-) Constructing Gender Power Asymmetry at the Base of the Pyramid - A Relational Approach

Author: **Carina Keller**, *EBS U. für Wirtschaft und Recht*

In attempts to address social inequality and gender-specific barriers, scholars and practitioners have praised female entrepreneurship as a potential solution for fostering female empowerment. In turn, entrepreneurial support organizations rolled out a myriad of female entrepreneurship programs at the base of the pyramid, which, however, oftentimes remain ineffective for women. Therefore, we ask How can entrepreneurial support organizations foster female empowerment over time, and what are the consequences in terms of power asymmetries? To answer these questions, we conducted a 20-month multi-case study of two entrepreneurial support organizations in Uganda, which both offer female entrepreneurship programs following a market- or community-based approach. Our findings reveal how entrepreneurial support organizations may tackle and (de-) construct gender inequalities, including gender power asymmetries, by means of three different relational processes (i.e., fostering contiguous relationality, creating bounded relationality, and co-constructing deep relationality) over time. By departing from the widely held assumption that female entrepreneurship is a panacea for female empowerment, independent from women's social embeddedness, our findings generate some interesting new insights for entrepreneurship and organizational research as we offer a relational view on the empowerment processes of low-power groups.

SIM: Beyond the Hype: Organizational Challenges and Implications of the Purpose Approach

Author: **Nicole Steller**, *Witten/Herdecke U.*
Author: **Guido Moellering**, *Witten/Herdecke U.*

The Purpose concept has rapidly gained prominence in management literature. Purpose is currently considered one of the most influential concepts in the business world, promising to enable the transformative power of businesses. This systematic literature review evaluates 152 studies from 2005 to 2023, identifying a research gap regarding the challenges and potential downsides of the Purpose approach in for-profit businesses. We introduce a framework delineating the complex relationship between applying a Purpose concept and the effects at individual, organizational, and societal levels. Our framework highlights three key challenges influencing the outcome: Purpose Clarity, Purpose Operationalization, and Purpose Credibility. Hence, the study augments the current understanding of Purpose-driven organizing by relating organizational challenges to the ambivalent implications of the Purpose approach. Further, we enrich the academic discourse by postulating the inherent ambiguity in managing the key challenges. Thus, we assist practitioners in navigating potential pitfalls and preventing an unreflected Purpose hype.

SIM: How Compliance Affects Firm Green Innovation? Evidence from Targeted Poverty Alleviation Initiative

Author: **Yuqing Tang**, *School of Business, Renmin U. of China*
Author: **Wenlong He**, *School of Business, Renmin U. of China*
Author: **Zhiyuan Chen**, *School of Business, Renmin U. of China*

Although prior studies have investigated the impacts of external pressures and intra-organizational attributes on firm's green innovation, the question of how and why firm's compliance activities affect its green innovation remains underexplored. The current research aims to fill this important gap by examining firm's ambidexterity in the resource-competing tension between compliance activities and competence-enhancing activities. We propose that compliance can promote firms' green innovation. We take the Targeted Poverty Alleviation (hereinafter abbreviated as TPA) initiative in China as a natural experiment and use the difference-in-differences (DD) research design. We find that participation in the TPA initiative enhances the firm's political legitimacy, thus enabling firms to access more financing from government-backed financial institutes to fund their R&D activities and promote their green innovation. This positive effect is moderated by environmental issue salience at the regional level and also by the focal firm's independence on the institutional pressuring constituents. Our study extends the compliance research into the domain of firm innovation and our findings shed new light on the tension between compliance and competitiveness.

Critical Views and Agenda Setting for Business and Human Rights (BHR) Scholarship and Practice

Session Moderator: **Jennifer Leigh**, *Nazareth U.*

SIM: The Promise of Business and Human Rights for Conceptualizing Business Responsibility

Author: **Judith Schrempf-Stirling**, *GSEM - U. of Geneva*
Author: **Harry J. Van Buren**, *U. of Tennessee, Chattanooga*

Even though business and human rights (BHR) has become one of the major concepts for discussing businesses' responsibilities for their societal impacts, its interdisciplinary character and the dominance of previously developed concepts related to business responsibility have made BHR a blurry academic concept, with unclear boundaries, meanings, and implications. The purpose of the paper is to provide conceptual clarity to differentiate it from existing conceptualizations of business responsibility, show that BHR is able to explain better the prominent phenomena that we observe today in terms of business responsibility – such as the division of responsibility for human rights between states and businesses – and argue how it offers a promising conceptual perspective to capture business responsibility in the 21st century. In so doing, we define BHR as a concept for redefining the roles and responsibilities of business and state for human rights, clarify the fundamental assumptions that BHR is based upon as well as outline what BHR explains and what its implications are for a theory of the firm, business purpose, and capitalism. BHR also provides an analysis of governance gaps as well as the roles and responsibilities of state and business; consequently, it provides robust and stringent normative claims about what the purpose of business should be. We conclude with implications for future research.

SIM: Means-End Decoupling in the Adoption Global Norms: The Case of Prior Consultation in Colombia

Author: **Stephanie Villadiego De La Hoz**, *Neuchâtel U.*
Author: **Emmanuelle Reuter**, *U. of Neuchâtel*

The nascent literature on business and human rights has advocated for a right-centric perspective of indigenous peoples and their relations with firms. Global legal norms play a pivotal role in prompting indigenous rights, acting as institutions defining social practices. However, the adoption of these norms in domestic policy, in particular, the conditions in which and how institutional adoption fails to achieve developers' goals remain poorly understood. We conduct an in-depth case study of the adoption of the global norm of prior consultation in Colombia between 1992 and 2022. Our findings uncover a process of means-ends decoupling in which the implementation of the duty to consult rightsholders in policymaking failed to achieve its intended goal of ensuring indigenous rights and instead resulted in the consolidation of the state-led extractivist paradigm.

SIM: Unmasking Exclusion: A Normative Critique of Human Rights Due Diligence and Its Implications in BHR

Author: **Rim Bitar**, *U. of Geneva*

This paper critically examines Human Rights Due Diligence (HRDD) as a mechanism employed by businesses to fulfill their human rights responsibilities, emphasizing its normative standing within the broader discourse of Business and Human Rights (BHR). Building on existing critiques of HRDD, the paper proposes a normative evaluation grounded in the assertion that HRDD should be perceived as a decision-making process similar to a political process rather than a pure managerial endeavor. Drawing on the insights of Iris Marion Young, the analysis centers on the notion of exclusion and argues that HRDD, in its current form and as currently implemented, entails exclusion and is exclusionary in its implementation which – by force of logical inference based on Young's argumentation – increases the possibility of leading to negative outcomes for rightsholders, also called affected individuals. The paper contends that exclusion within HRDD undermines the normative foundations of BHR. By examining the shortcomings of HRDD through the lens of exclusion, the paper explores the moral deficits associated with an exclusionary approach and emphasizes the consequential negative outcomes for rightsholders. Ultimately, by offering a normative criticism of HRDD through the normative lens of exclusion, the paper advocates for a reevaluation of HRDD to align with the moral foundations and objectives of BHR which begs a further examination regarding the adoption of principles of inclusion.

SIM: When is it Time to Heal? Addressing the Temporal Dimension of Corporate Accountability in TJ Setting

Author: **Jordi Vives Gabriel**, *IESE Business School*
Author: **Hugo Van Der Merwe**, *Center for the Study of Violence and Reconciliation*

Business actors operating in conflict arenas or under repressive regimes may commit or be complicit in human rights violations. Over the last decades, transitional justice initiatives have become the blueprint for states, societies, and groups to achieve accountability and serve justice in the aftermath of periods of violent conflict or repressive rule. While practical guidance and scholarship on this topic have sought to address corporate actions within transitional justice, holding corporate actors accountable for their connections to human rights abuses through transitional justice settings remains a quest fraught with difficulties and frustrations. One reason for this challenge is that business and human rights scholarship has hitherto uncritically relied on temporal assumptions of accountability grounded in a narrow conventional transitional justice theory. We challenge these premises and offer a temporal conceptual framework that better aligns corporate accountability with transitional justice settings. This serves to narrow the gulf between transitional justice and the BHR debates and helps close the corporate impunity gap.

Dear Corporate Social Irresponsibility (CSI), Meet Shareholder Activism

Session Moderator: **Tim Hargrave**, *Central Washington U.*

SIM: Corporate Social Irresponsibility: A Literature Review and Research Agenda

Author: **Ligia Azevedo-Rezende**, *USC Marshall School of Business*
Author: **Thomaz Novais Rocha**, *FGVEAESP Sao Paulo School of Business Administration*
Author: **Jorge M. T. Carneiro**, *FGVEAESP Sao Paulo School of Business Administration*

In this paper, we conduct a major literature review on the topic of Corporate Social Irresponsibility (CSI). By analyzing papers published in the Financial Times journals list (FT50), we synthesize and integrate a body of knowledge that has been developed quite independently in fields such as management, accounting, marketing, and finance. Specifically, we organize the literature into a framework based on the drivers, inhibitors, and outcomes of CSI, as well as firms' mitigation and remediation strategies. Also, we offer five conceptual dimensions of CSI to better understand the different facets of the phenomena. Based on our findings, we provide a research agenda that can serve as a guide for future studies on the topic.

SIM: It's (Not) My Game: Green Realignment's Divergent Impact on Stakeholders in CSiR Firms

Author: **Jia Shen**, *U. of Texas at Dallas - Jindal School of Management*
Author: **Yuxi Cheng**, *U. of Liverpool Management School*

This study examines the complex interplay between corporate social irresponsibility (CSiR) and stakeholder reactions, focusing on the divergent impacts of sustainability transformations. Specifically, we investigate how efforts to mitigate CSiR's adverse effects on shareholder activism through corporate sustainable strategies—green talent and technology realignment initiatives—can yield contrasting responses among shareholders and employees. Applying a multi-stakeholder attribution framework, our primary argument posits that while CSiR is a direct catalyst for shareholder activism, it does not significantly affect employee complaints because they may be attributed to external causes rather than the organization. However, when firms initiate internal green talent and technology realignment initiatives, including green job searching and green innovation activities, this internalization of response strategies might lead employees to reattribute firm misconduct internally. This shift in attribution is expected to heighten employee sensitivity and complaints regarding CSiR. The study seeks to contribute to the fields of corporate social responsibility and organizational behavior by highlighting the critical role of attribution processes in shaping employee responses to internal sustainability efforts. The findings highlight the need for a balanced and holistic approach in addressing the varying expectations and perceptions of diverse stakeholder groups within the corporate sustainability framework.

SIM: Shareholder Activism, Corporate Social Irresponsibility, and Obfuscation

Author: **Ligia Azevedo-Rezende**, *USC Marshall School of Business*

In this paper I investigate the impact of Corporate Social Irresponsibility (CSI) in shareholder activism. Specifically, I posit that companies with higher levels of CSI will be more targeted by activist shareholders. However, linguistic obfuscation in sustainability reports will weaken this relationship. Using data from the S&P 500 firms, I find that as the severity of the CSI events increases, measured by the dollar amount of fines, so do the number of ESG-related shareholder proposals. Notwithstanding, this relationship is attenuated by the level of obfuscation in sustainability reports. The opposite happens for firms that have small but frequent violations, suggesting that shareholders react differently to firms that misbehave “badly” vs. firms that misbehave often (when those violations are small). This paper contributes to the literature on shareholder activism, information disclosure and corporate social irresponsibility.

Towards an Integrated Perspective: Synergies and Trade-Offs in the Repertoire of Nonmarket Strategy

Organizer: **Zhao Li**, *New York U.*

Organizer: **Haram Seo**, *Texas A&M U., Mays Business School*

Panelist: **Thomas Peyton Lyon**, *U. of Michigan*

Panelist: **Douglas A. Schuler**, *Rice U.*

Panelist: **Timothy Werner**, *U. of Texas at Austin*

Firms in the contemporary business environment employ diverse nonmarket strategies, including Corporate Political Activities (CPA) and Corporate Social Responsibility (CSR). While extensive research has demonstrated the individual benefits of these strategies, their nuanced interplay remains underexplored. This gap is crucial for firms as they contend with mounting stakeholder scrutiny and demands for improved alignment in these initiatives. However, the existing nonmarket scholarship provides limited insights into firms' strategic responses to achieving this alignment or alternative approaches that firms can employ to mitigate risks stemming from stakeholders' perceptions of misalignment between these activities. The escalating expectations of stakeholders regarding firms' involvement in activism further complicate these dynamics, as they prompt firms to engage in socio-political issues that have been the target of neither CPA nor traditional CSR efforts. These complexities underscore the pressing need for research that adopts an integrated perspective, delving into the relationships between these engagement methods and the considerations firms must weigh to craft an "optimal" portfolio of socio-political engagement. In this symposium, our distinguished panel of scholars will address these questions and offer insights into potential directions for future research in this domain, drawing from their expertise in strategic management, organizational theory, and political economy.

How Intra-Organizational Interdependence Affects Strategy and Innovation

Discussant: **Daniel Levinthal**, *U. of Pennsylvania*

Organizer: **Cha Li**, *U. of Texas at Austin*

Organizer: **Xirong Shen**, *McCombs School of Business, U. of Texas at Austin*

Strategy and organizational theory scholars have long recognized the pivotal role that intra-organizational interdependence plays in guiding organizational design and search. Intra-organizational interdependence manifests as tradeoffs and complementarities between subsystems within complex organizations, thereby both producing challenges for coordination and presenting opportunities for synergy. These processes have deep and broad implications for corporate strategy, technology innovation, and entrepreneurial strategy. While being a central topic in strategy and organizations literature, empirical research on intra-organizational interdependence remains limited, partially due to methodological challenges in collecting data on intra-organizational interdependence and identifying its impact. However, in recent years, new tools, methods, and datasets have become available, providing promising opportunities to advance both the empirical investigation and theoretical insights into intra-organizational interdependence. Therefore, this symposium aims to promote conversations between scholars conducting theoretical and empirical research on intra-organizational interdependence. In particular, we bring together a group of leading scholars who will exchange their insights on key theoretical questions in intra-organizational interdependence that may be informed by empirical research and what novel data/methods can be exploited to make inroads into answering these questions.

Advancing Strategic Management Research: Applications of Generative AI

Organizer: **Albert Choi Roh**, *U. of Southern California -Marshall School of Business*

Organizer: **Nan Jia**, *U. of Southern California*

Presenter: **Natalie Carlson**, *The Wharton School, U. of Pennsylvania*

Presenter: **Bart Vanneste**, *UCL School of Management*

Presenter: **Hyo Kang**, *U. of Southern California*

The recent advances in Large Language Models (LLMs) have dramatically transformed the landscape since the launch of OpenAI's ChatGPT in November 2022. These models, known for their deep understanding of language and reasoning, have rapidly become integral in various domains, mirroring human cognition with remarkable fidelity. Major tech firms like Microsoft, Google, and Meta have embraced this innovation, launching products like Bing AI, Bard, and Llama. Concurrently, these firms have also reduced hiring and conducted layoffs in roles that are increasingly automated by this technology. These dual facets of LLMs - their capabilities and organizational impact - are pivotal for management scholars. Firstly, in their role as tools, LLMs demonstrate exceptional ability in processing nuanced interpretations and managing extensive textual datasets. This versatility makes them invaluable across various research stages, from ideation to copy editing, as noted by Korinek (2023). Their applications include complex tasks such as data annotation (Gilardi et al., 2023; Rathje et al., 2023; Tornberg, 2023) and simulating participant responses in experimental studies (Boussioux et al., 2023). Second, as research subjects, LLMs are reshaping methodologies in firm-level strategic decision-making, underscoring their transformative potential in both strategy formation and refinement. Furthermore, at the market level, a growing body of research is exploring their impact on employment dynamics (Brynjolfsson et al., 2023; Dell'Acqua et al., 2023; Eloundou et al., 2023; Noy and Zhang, 2023) and organizational decision-making processes. Despite the increasing number of studies addressing these aspects, our comprehension of LLMs, both as tools and subjects, remains notably limited. Recognizing the substantial impact of LLMs and the need for more in-depth understanding, this symposium has been organized to explore LLMs both as a tool (Paper 1-3) and a subject (Paper 4). It brings together preeminent researchers to present their latest findings on how LLMs are shaping the future of strategic management. Each paper contributes to a deeper understanding of the role of LLMs in strategic management, showcasing their unique applications and implications. The first and second papers introduce innovative ways for management scholars to utilize LLMs. The first paper examines the use of LLMs in data annotation and text classification within strategic management research, focusing on identifying product sustainability in crowdfunding projects. This study reveals that ChatGPT can match or exceed the efficiency of traditional methods with careful prompt refinement. However, the authors also found that minor prompt variations can significantly alter annotation outcomes. These variations have serious implications for the accuracy and robustness of subsequent data analysis. To combat this, the study introduces Prompt Variance Estimation (PVE), a method ensuring analytical robustness for LLM-generated labels, complete with detailed instructions and coding guidelines. The second paper explores the application of LLMs in managing and analyzing unstructured data, such as congressional hearing transcripts. It outlines three key research tasks that LLMs can perform: text summarization, topic extraction, and extraction of related concepts. Applying these tasks to data from the U.S. House Space, Science, and Technology Committee, the paper studies the interaction between government policies and firm technology strategies. It showcases the capability of LLMs to process extensive textual data, overcoming issues like context window limitations. This paper emphasizes the efficiency of LLMs and their complementarity to conventional NLP methods, with insights shared via an interactive dashboard and digital platform. The third paper focuses on the application of LLMs as a decision-making tool for firms. It investigates how generative AI, particularly LLMs, can aid in assessing the value of strategic alternatives, a vital task for irreversible business decisions. The study compares traditional machine learning methods with the generative capabilities of AI, assessing 60 AI-created business models across various industries. It aims to determine the extent to which AI aligns with human judgment in strategic decision-making, employing correlational and Bayesian analyses. This research highlights the potential of generative AI in scenarios with limited or unique data, offering fresh perspectives on AI's role in strategic business decisions. Finally, the fourth paper delves into the role of generative AI, as a subject of study. It examines how LLMs transform research outputs, focusing on the varied impacts on researchers of different language skills and experience levels. The paper suggests that non-native English speakers and less experienced researchers might benefit more from AI tools, thereby potentially reducing the communication gap in academia. Utilizing AI detectors like GPTZero, it evaluates AI usage in submissions to the Academy of Management Annual Meeting, analyzing their linguistic quality. The results demonstrate diverse adoption and benefits of LLMs across varying researcher demographics. This research offers a nuanced perspective on generative AI's impact within the strategic management community, highlighting its potential to address or accentuate disparities in academic communication and representation.

Humans and Algorithms in Organizations: Navigating the Intersection of Blockchain and AI

Organizer: **Magnus Van Haaren**, *Rotterdam School of Management, Erasmus U.*

Organizer: **Xule Lin**, *Imperial College Business School*

Organizer: **Carlos Santana**, *Norwegian U. of Science and Technology (NTNU)*

Speaker: **Oliver Baumann**, *U. of Southern Denmark*

Speaker: **Robert Wayne Gregory**, *U. of Miami*

Speaker: **Hanna Halaburda**, *New York U.*

Speaker: **Fang He**, *U. of St. Gallen*

Speaker: **Alex Michael Murray**, *U. of Oregon*

Participant: **Matthias Troebinger**, *ESSEC Business School*

This symposium delves into the integration of blockchain and artificial intelligence (AI) within organizational design and theory, focusing on their impact on decentralized decision-making and governance. It navigates a series of theoretical lenses to dissect this integration. First, it employs bounded rationality to understand the delegation of complex tasks to AI, in the context of human cognitive limitations. Next, transaction costs are used to evaluate the governance implications of blockchain-enabled smart contracts. The role of AI in reshaping organizational structures is also a focal point, particularly through the lens of Decentralized Autonomous Organizations (DAOs). Additionally, the symposium probes into the effects of AI on network effects within digital platforms. Concluding the theoretical exploration, it considers the interplay between machine learning and human judgment for theorizing in organizational research. This comprehensive inquiry aims to advance our understanding of how emerging technologies like blockchain and AI are reshaping the landscape of organizational design and decision-making processes.

AI and Talent

Session Moderator: **Daokang Luo**, *The U. of Hong Kong*

TIM: Artificial Intelligence, Employee Productivity and Human Capital Loss 

Author: **Daokang Luo**, *The U. of Hong Kong*

Author: **Kevin Zheng Zhou**, *U. of Hong Kong*

As companies increasingly embrace artificial intelligence (AI) to enhance employee work, the potential for AI to unintentionally disempower employees remains a question. We develop a nuanced (dis)empowerment perspective to examine AI's dual effects on employee performance. Analyzing panel data from the United States, we find that AI, by enhancing task automation and capability augmentation, increases employee productivity. However, task automation may create perceptions of control, and capability augmentation may lead to skill mismatches, both contributing to the unwanted loss of human capital. Moreover, human resource management (HRM) practices, such as employee involvement, could weaken AI's positive effect on both employee productivity and human capital loss. Employee development practices may also attenuate AI's positive impact on human capital loss. Overall, our research sheds new light on the dual facets of AI in the workplace and highlights the governance roles of HRM practices in AI-employee interaction.

TIM: Me, Myself and AI: How Interacting with LLMs Affects Employees' Expectations of AI at Work   

Author: **Meena Andiappan**, *DeGroot School of Business, McMaster U.*

Author: **Ruo Mo**, *Montpellier Business School*

Author: **Senthujan Senkaiahliyan**, *U. of Toronto*

Author: **Emir Efendic**, *Masstricht U.*

Author: **Gillian Hadfield**, *U. of Toronto*

Author: **Philippe Van Calseyde**, *Eindhoven U. of Technology*

In two online studies (N = 484), we examine how one-on-one interactions with a Large Language Model (Open AI's GPT-3) affect employees' perceptions of AI's abilities, attitudes toward AI, and willingness to work with AI in the future. To investigate this, we assigned employees four different work tasks: developing interview questions, fact checking, creating online content, and writing a recommendation letter, with instructions to rely on GPT-3 for each task. In Study 1, we find that while positive attitudes about AI increase and negative attitudes decrease post-interaction, the latter effect is more pronounced. Interestingly, we also show that people miscalibrate the impact of interacting with AI on their attitude changes. Our second study largely replicates Study 1 findings, and we additionally find that changes to task-specific perceptions (e.g., acceptability, performance, suitability, and willingness to use AI for a certain task) are highly dependent upon task types. Overall, we find that despite some initial qualms, people are more, rather than less, willing to work with a Large Language Model AI after having interacted with it in a work context. We discuss how these findings fit with current theorizing regarding the algorithm aversion-appreciation paradigm, as well as the applied implications.

TIM: The Short-Term Effects of Generative Artificial Intelligence on Employment   

Author: **Oren Reshef**, *Washington U. in St. Louis, Olin Business School*

Author: **Xiang Hui**, *Washington U. in St. Louis, Olin Business School*

Author: **Luofeng Zhou**, *New York U.*

Generative Artificial Intelligence (AI) holds the potential to either complement workers by enhancing their productivity or substitute them entirely. We examine the short-term effects of the recent release of the large language models (LLM), namely ChatGPT and other image-based models, on the employment outcomes of freelancers on a large online platform. We find that freelancers in highly affected occupations suffer from the introduction of generative AI, experiencing reductions in both employment and earnings. We find similar effects studying the release of other image-based, generative AI models. Exploring the heterogeneity by freelancers' employment history, we do not find evidence that high-quality service, measured by their past performance and employment, moderates the adverse effects on employment. In fact, we find suggestive evidence that top freelancers are disproportionately affected by AI. These results suggest that generative AI may transform the role of human capital in the organization by narrowing gaps across workers and reduce overall demand for workers.

TIM: Impact of Artificial Intelligence on Team Creativity: A Dual Stage Perspective 

Author: **Yujia Hu**, *Beihang U.*

Author: **Linna Xu**, *Beihang U.*

As the application of artificial intelligence (AI) in the workplace evolves into a team collaborator, the impact of AI usage on team creativity requires in-depth exploration. This research explored the impact of AI usage on team creativity based on the dual process (i.e., idea generation and idea evaluation) in creativity. We conducted an experiment involving 91 MBA students by manipulating the use of generative AI. We found that teams that used AI in the idea generation stage outperformed teams that used AI in the idea evaluation stage and teams that did not use AI in terms of the technical goodness and usefulness of their ideas. However, regarding to idea novelty, teams that used AI in the idea generation stage performed relatively polarized; teams that used AI in the idea evaluation stage performed better; teams that did not use AI performed moderate and stable. Moreover, we explored the underlying mechanisms. Compared with the other two types of teams, teams that used AI in the idea generation stage have a stronger dependence on AI and show lower team learning behavior, creative self-efficacy, and autonomy. Our study enriches the research on team creativity and AI in organizational behavior and provides implications for organizations to enhance team creativity using AI.

Scoping and Scaling Innovative Business Models

Session Moderator: **Laavanya Ramaul**, *LUT Business School*

TIM: Generative AI as an Enabler of Business Model Innovation: A Multiple-Case Study 

Author: **Laavanya Ramaul**, *LUT Business School*
Author: **Mika Ruokonen**, *LUT Business School*
Author: **Paavo Ritala**, *LUT Business School*
Author: **Thomas Clauss**, *U. of Witten/Herdecke*

Generative AI is transforming industries and business functions at a rapid pace. This paper contributes to the understanding of the transformative role that Generative AI plays in driving business model innovation (BMI). Through a comprehensive multiple-case study approach, this study delves into the drivers, barriers, and opportunities that Generative AI provides in context to the three dimensions of business model innovation – value creation, value proposition, and value capture. Additionally, we investigate the scope and novelty of Generative AI in business model innovation. Via a multiple-case study of eight companies across different industries and various sizes, we demonstrate how firms find it relatively easier to innovate on value creation than with value proposition, and find it hardest to innovate on value capture. We also demonstrate the challenges for incumbent firms in developing truly “architectural business model innovations” in the context of Generative AI that would change both the internal and external activities and structures of existing companies. In addition to providing empirical evidence on the use of Generative AI, this study also aims to bridge the gap between research and practice.

TIM: Business Model Dynamics During the Growth Stages of Technology-Based Start-Ups

Author: **Ghassan Kharbeet**, *ghassan*
Author: **Hanieh Khodaei**, *Delft U. of Technology*
Author: **Victor Egbert Scholten**, *Delft U. of Technology*
Author: **Roland Ortt**, *Delft U. of Technology*

To survive in a constantly changing environment, technology-based start-ups must adapt their business models over time. Both external and internal forces require changes in business models, yet the evolution of business models and the interactions between business model elements over time are poorly understood. This paper explores changes in business models of technology-based start-ups during their growth stages. Drawing from literature on sustainable business model dynamics and company growth stages, we propose a comprehensive framework to visualize and analyse business model dynamics during the growth stages. The framework is applied to Dutch technology-based start-ups, revealing the various changes in their business models and the key factors influencing these changes during the growth stages. The framework helps to navigate technology-based start-ups during their growth stages. The results of our research have significant implications for entrepreneurship, both in theory and practice.

TIM: Gen-AI's Effects on New Value Proposition in Business Model Innovation: Evidence from IT Industry    

Author: **Dequn Teng**, *U. of Cambridge*
Author: **Chen Ye**, *U. of Cambridge*
Author: **Veronica Martinez**, *U. of Cambridge*
Author: **Paula Melfe**, *U. of Cambridge*

Generative AI (Gen-AI) has made substantial achievements, showcasing its evolving natural language understanding and interaction capabilities. While existing research has discussed Gen-AI's impact on computer science and engineering, its adoption significantly influences business models across various industries. This paper focuses on how Gen-AI affects new value proposition within Business Model Innovation (BMI). The qualitative research method is adopted in this research. The data is collected and analyzed through 32 semi-structured interviews and archival sources. The study identifies five approaches—knowledge querying-based cloud solutions, content creation, AI agents, foundation models, and upstream industry chain infrastructure—that Gen-AI affects new value propositions in BMI. This research introduces empirical evidence from the information technology (IT) industry, broadening the contextual boundaries of Gen-AI's new value propositions in BMI. The study advances beyond isolated mechanisms, providing a quadrant view and process map to illustrate the interrelated dynamic effects of Gen-AI's new value propositions in both disruptive and incremental BMI.

TIM: From Novelty to Architectural Innovation: The Evolution and Scalability of Business Models 

Author: **Qinli LU**, *INSEAD*
Author: **Johann Peter Murmann**, *U. of St. Gallen*

Business model innovation is generally thought of as a challenging exercise for organizations. While prior research has highlighted novelty per se as a key driver for high-performing business models, some recent studies further suggest that novelty does not always lead to an effective business model due to complexity. How can business models be developed and scaled based on novelty? We explore this question by investigating the case Freshippo—a novelty-centric business model in online fresh food industry, from its inception to successful scale. Drawing on an activity system lens, our theoretical framework shows how activities are developed based on novelty and the relationship between novelty and business model architecture. Our results highlight a dynamic perspective of interdependency between activities for the effectiveness of the business model and the flexibility of quick trial-and-error. We suggest a systemic view to help achieve an “architectural innovation” in which co-evolutionary activities in a business model can form positive feedback loops of value.

Governing Collaboration for Innovation

Session Moderator: **Anna Moretti**, *Venice School of Management - U. Ca' Foscari of Venice*

TIM: Unboxing Relational Capabilities for Innovation 

Author: **Anna Moretti**, *Venice School of Management - U. Ca' Foscari of Venice*
Author: **Stefano Li Pira**, *Warwick Business School*
Author: **Francesco Zirpoli**, *Venice School of Management - U. Ca' Foscari of Venice*

Research has shown that firms' relational capabilities, a byproduct of experience in managing interorganizational relationships (IORs), positively impact the propensity to innovate. The literature shows that firms benefit from the selective use of governance mechanisms (formal or informal) in the management of their IORs. Hence, there is a tension between replicating, i.e., the leveraging and exploiting of experience and varying the governance to match the idiosyncrasies of specific IORs. As the literature does not provide systematic evidence on such a tension, our understanding of the relational capabilities needed for innovation remains black-boxed. Thus, using a unique survey of Italian automotive suppliers, we create a dataset to test the relationship between the replication of governance mechanisms across IORs – a proxy for relational capabilities – and firms' propensity to innovate. We find that this relationship is contingent on the use (or nonuse) of formal and informal governance such that a broader replication of formal governance mechanisms across a firm's portfolio of IORs reduces its propensity to innovate, and such a replication of informality increases the firm's likelihood of innovating. One noteworthy implication of this result is a more nuanced conception of relational capabilities that goes beyond the mere replication of proven effective governance practices and encompasses the capacity to mix and match them.

TIM: Sustainability Alliances: Cooperative and Coordinative Concerns and Mission-Driven Governance 

Author: **Elizaveta Johansson**, *Luleå U. of Technology*
Author: **Anna Brattstrom**, *Lund U.*
Author: **Johan Frishammar**, *Luleå U. of Technology*

Sustainability alliances are gaining momentum, enabling firms to simultaneously pursue economic profit while also generating value for society. Extant alliance literature fails to sufficiently inform this emerging phenomenon as it primarily comes from a perspective of alliances pursuing unidimensional economic goals. To build theory on governance in sustainability alliances, we conducted an explorative case study of eight sustainability alliances in Sweden. We demonstrate how the joint pursuit of sustainability introduces unique and difficult cooperation and coordination concerns in such alliances. Yet, we also showcase that it enables mission-driven alliance governance – a previously underappreciated governance mechanism, beyond relational and contractual approaches. Based on our findings, we discuss the nature of mission-driven alliance governance and how it helps to improve cooperation and coordination outcomes.

TIM: The Influence of Product Approvals and Recalls on Inter- and Intra-Firm Collaborations 

Author: **Jieun Lee**, *Rochester Institute of Technology*

Drawing upon the behavioral theory of the firm, this study examines the effects of loss-focused and gain-focused aspirations on the formation of new collaborative relationships. While new collaborations could be considered a risk-taking action due to increased search costs and risks, this study suggests that the nature of such risk-taking decisions hinges on the types of aspirations. Utilizing product approval and recall data from the FDA in the U.S. medical device industry, the analysis reveals that falling below loss-focused aspirations, by reporting more product recalls, prompts managers to focus on inventor-level internal knowledge development collaborations while reducing variations. This managerial focus results in a decrease in new collaborations among inventors. Furthermore, this effect of managerial emphasis on risk avoidance is reinforced when the firm faces financial difficulties. In contrast, exceeding gain-focused aspirations, indicated by receiving more product approvals, influences managers to emphasize maximizing gains. They prioritize firm-level external knowledge development collaborations and increase variations in the pursuit of new opportunities. This managerial focus leads to the establishment of new partnerships in firm alliances. Overall, findings show that loss-focused aspirations foster internal, risk-averse choices, while gain-focused aspirations encourage external, risk-taking changes in collaboration contexts. This study provides an important theoretical insight into the significance of distinguishing between two aspiration types in shaping managerial attention to risk avoidance or risk-taking.

TIM: Digitalization and Joint Venture Survival: An Information Processing View and Evidence

Author: **Qing Dai**, *Guizhou Normal U.*
Author: **Liang Wang**, *U. of New Brunswick, Canada*

Digitalization is swiftly and profoundly altering business terrain, raising numerous novel research questions. This study aims to explore digitalization in the alliance context. Developing an information processing view, this study posits that digitalization of a partner can decrease the risk of JV termination by fostering effective and efficient communication and coordination within the partnership. And this termination-preventing effect of partner digitalization is more pronounced when there are richer inputs from prior alliance experience and in JVs that involve complex and ambiguous information. Empirical findings from 256 JVs generally support the hypothesized direct effect of digitalization on JV termination and the contingencies. Our findings position digitalization as a new stabilizer of partnerships and expand the beneficial effects of digitalization.

Dynamics of Value Creation and Capture in Ecosystems

Session Moderator: **Esko Hakanen**, *Aalto U.*

TIM: **Technology and Innovation Management: Overcoming Ecosystem Bottlenecks by Innovation Policy**

Author: **Esko Hakanen**, *Aalto U.*

Author: **Adam Uhrdin**, *KTH, Royal Institute of Technology*

Author: **Thomas Draschbacher**, *Graz U. of Technology*

Author: **Juho Carpén**, *Aalto U.*

Two highly contrasting discourses emphasize collective benefits, high market efficiency, and socio-economic growth related to technology development. On the one hand, research on “ecosystems” highlights the value and role of technological interdependencies and technology-specific investments while, on the other hand, the literature on “innovation policy” advocates for technology-neutral or agnostic approaches. Drawing from qualitative, embedded case studies and several illustrative examples, this paper integrates the largely disconnected discourses on ecosystems and innovation policy. We provide nuanced implications for policymakers looking to balance societal relevance and economic viability. We argue that an effective innovation policy is vital for overcoming different ecosystem bottlenecks. Our study offers implications for policymakers who struggle to balance market-driven dynamics with societal interests in a landscape characterized by rapid technological development and constantly evolving ecosystems.

TIM: **A Learning Perspective on Ecosystem Roles- How Roles and Governance Shape Learning Within Ecosystems**

Author: **Jan-Marco Nepute**, *RWTH Aachen U.*

Author: **Christina Dienhart**, *Institute for Technology and Innovation Management at RWTH Aachen*

Author: **Torsten-Oliver Salge**, *Institute for Technology and Innovation Management at RWTH Aachen*

This paper explores an under-explored area, enhancing the inter-organizational learning literature by introducing an ecosystem perspective. We integrate the ecosystem context into existing learning frameworks through robust quantitative analysis of survey data and strategic documents. The study investigates the influence of a new set of two pivotal factors: the member’s role within the ecosystem, their role clarity on member learning from the ecosystem/ecosystem member learning, and the moderating effect of the ecosystem governance mode. The central finding of this study reveals that, alongside the established factors of (relational and structural) embeddedness and strategic adaptability, these variables significantly impact member learning from the ecosystem. By incorporating an actor’s role and role clarity, this study enhances the learning literature and offers actionable guidance for practitioners in designing. Contrary to popular belief, member-driven governance does not increase actor learning. We suspect this occurs because of the extensive resources directed towards governance and management could be better spent on interaction and learning within the ecosystem. This research has implications beyond academia, providing invaluable insights for ecosystem members in operational and strategic decision-making. Thus, this paper helps to bridge academia and practice, contributing to our understanding of inter-organizational learning mechanisms and the development of sustainable ecosystems.

TIM: **Loss and Gain: Impact of Ecosystem Strategy on Value Capture and Value Expectation**

Author: **Ke Rong**, *Tsinghua U.*

Author: **Tianxi Yang**, *Tsinghua U.*

Author: **Tao Zhang**, *Institute of Economics, Tsinghua U.*

Does a firm benefit from orchestrating an ecosystem? What kind of firm is capable of being the orchestrator? Using data from listed firms in China's stock market during 2006–2019, this paper reveals the loss and gain of ecosystem strategy: a decrease in immediate value capture but an increase in value expectation (future value creation). We find that a firm’s ecosystem strategy can generate high-value expectations by fostering innovation and partner diversity and that this impact varies among firms. Only those with a larger scale reap the advantages of orchestrating an ecosystem. By revealing the pace of value capture and value creation for focal firms, this paper contributes to ecosystem theories and guides firms in adopting ecosystem strategy.

TIM: **From Matchmakers to Innovation Machines: A Study of Market Generativity in the Bubble.io Ecosystem**

Author: **Mahdieh Sarbazvatan**, *PhD student at Haskayne School of Business*

Author: **Mohammad Keyhani**, *U. of Calgary*

Many of the world’s most valuable companies (e.g. Google, Amazon, Apple, Alibaba), earn much of their income through marketplaces. Yet our understanding of marketplaces as intentionally designed products is hindered by the dominance of the matchmaking analogy, which implies that the main function of markets is allocation. We contend that marketplaces are often better viewed as distributed innovation machines, which is in line with definitions of generativity (Zittrain, 2006). In this abductive case study on the Bubble.io marketplace and its ecosystem, we investigate the process of intentionally leveraging generativity as a market design strategy and a source of advantage. We challenge the commonplace conceptions of generativity as an unintentional characteristic of technology, and markets as purely resource allocation systems. Our study introduces a novel framework for intentionally crafting a marketplace that is generative. Importantly our framework emphasizes that in order to succeed in generativity and benefit from it, the marketplace must also have good allocation and appropriation mechanisms.

Who Engages in Green Innovation?

Session Moderator: **Ho-Wei Hsu**, *HEC Paris*

TIM: Innovating Against the Tide: How Polluters Drive the Evolution of the Carbon Capture Technologies

Author: **Ho-Wei Hsu**, *HEC Paris*

This paper investigates the role of polluters as innovators in the Carbon Capture and Storage (CCS) industry. Employing an abductive, phenomenon-driven approach, I explore how firms, especially polluters, contribute to innovation in this nascent industry and shape the associated value chains. Utilizing a dataset of over 290 CCS projects from 1972 to 2018, I find that firms with limited prior experience in gas separation technologies, which have been repurposed for carbon capture, are more inclined to engage in innovative activities. Furthermore, experienced polluters are more likely to follow established commercial value chains, whereas their inexperienced counterparts are more likely to pursue environmental ones. Additionally, the findings suggest a reluctance to pursue further innovation in carbon capture technologies beyond a certain performance level among polluters, especially those with prior experience. The actor-centric view adopted in this paper provides new insights into the dynamics of green innovation, emphasizing how various actor-specific characteristics influence their approaches to solving common challenges.

TIM: Evaluating Pro-Environmental Activity Premium at Different Levels of Innovation Propensity

Author: **Fankun Meng**, *Cardiff Business School, Cardiff U.*
Author: **Qian Li**, *Cardiff Business School, Cardiff U.*

In the contemporary business landscape, successful innovation is increasingly defined not just by the development and synthesis of novel knowledge, but also by a steadfast commitment to environmental stewardship. This study aims to bridge the gap between environmental responsibility and corporate innovation by quantifying the returns of pro-environmental activities on new product sales and internal R&D investments. Utilising matched firm-level data from the Community Innovation Survey (CIS) and the Business Survey Database (BSD) spanning 2002 to 2020 in the United Kingdom, our research offers an empirical evaluation of the impact of environmental orientation on corporate innovation. Our findings reveal a significant positive correlation between eco-conscious practices and the sales of environmentally friendly products, corroborated across both large and small businesses. Additionally, a notable increase in internal R&D investment is observed in innovators prioritising reduced environmental impact. These findings extend the discourse in innovation theories, suggesting a synergistic relationship between environmental responsibility and innovation performance. The study not only advances theoretical models in this realm but also offers pragmatic insights for businesses striving to harmonise innovation with environmental sustainability.

TIM: Breaking the Ceiling: Unraveling the Tension between CEO Gender and Green Innovation Strategies

Author: **Marika Platz**, *Leibniz U. Hannover*
Author: **Marie Gabel**, *WWU Münster*
Author: **J. Nils Foegel**, *Leibniz U. Hannover*

As the global climate crisis intensifies, firms face mounting pressure to make their strategies and processes more sustainable. One way to tackle this challenge lies in pursuing a strategy that strengthens green innovation. Upper echelon theory suggests that the characteristics of the Chief Executive Officer (CEO) are critical factors that shape firm strategy and ultimately its performance. As for innovation strategy and outcomes, existing literature suggests that the gender of the CEO is a crucial factor, with male CEOs often displaying a stronger inclination toward pursuing innovation. While we acknowledge these insights, we also argue that this relationship is much more complex when it comes to green innovation, i.e., innovations that reduce firms' impact on the environment and its use of natural resources. In fact, we identify a tension: male CEOs tend to be more involved in innovation activities, while female CEOs demonstrate a distinctive environmental awareness. The relationship between CEO gender and green innovation is therefore less clear. Our analysis of 13,784 firm-year observations of US-listed firms over 23 years aligns with previous research, showing that having a male CEO is associated with increased innovation. However, we also uncover empirical evidence indicating that female CEOs are more actively involved in green innovation. Significantly, we discover that the association between female CEOs and green innovation is context-sensitive, with slack resources attenuating the positive link. This study contributes to the literature about green innovation by uncovering the role of CEO gender for sustainability.

TIM: The Emergence of Data-Driven Business Models in the European Energy Industry

Author: **Claudia Marante**, *Catolica Lisbon School of Business and Economics*

Sustainability, liberalization, and digital technologies are changing the energy industry. Consequently, data-driven business models are expected to proliferate. However, that is not the case. This study examines the role of the technological capabilities of firms, regulations, and market design in the adoption of data-driven business models. Based on secondary data and complemented by four interviews with energy experts, this qualitative research aims to explore how firms in the European energy industry are capitalizing on data in their business models, in the context of their technological capabilities, shift regulations, and diverse market designs. Our findings reveal that regulations (GDPR) play a relevant role in instilling trust in consumer privacy. Yet, compliance with these regulations poses challenges to firms in monetizing data. Moreover, differences among markets influence the compatibility and transferability of data-driven business models. By shedding light on the interplay between technological capabilities, data protection regulations, and market design, this research provides insights for scholars, policymakers, regulators, and energy firms seeking to navigate the evolving landscape of data-driven business models in the European energy industry.

Navigating Digitalization from Diverse Starting Points

Session Moderator: **Celina(Xinyue) ZHANG**, Zhejiang U.

TIM: Navigating Distinctiveness in Digital Landscapes: Born-Digital Firms Versus Non-Born-Digital Firms

Author: **Celina(Xinyue) ZHANG**, Zhejiang U.

Author: **Huajie Shen**, Zhejiang U.

Author: **Xiaobo Wu**, Zhejiang U.

The optimal distinctiveness literature emphasizes that firms are supposed to navigate the opposing pressures of competition and legitimacy to enhance their performance. Recent research have highlighted the importance of audience predispositions and their implications on the distinctiveness-performance relationship. Our study enriches this literature by exploring how investors' risk-averse predispositions vary across two types of digital firms (born-digital firms versus non-born-digital firms), thereby different criteria of legitimacy assessments and variances on the distinctiveness-performance relationship. Specifically, born-digital firms (versus non-born-digital firms) face lower (versus higher) uncertainty in digital practices, thus appealing to strongly (versus weakly) risk-averse investors. When adopting distinctive digital practices, born-digital firms encounter substantial legitimacy penalties from strongly risk-averse investors, yielding a U-shaped distinctiveness-firm performance relationship. In contrast, non-born-digital firms can sustain legitimacy from weakly risk-averse investors when pursuing differentiating digital practices, leading to an inverse U-shaped distinctiveness-firm performance relationship. A sample of Chinese listed firms from 2007 to 2022 supported our arguments. These findings provide important theoretical and practical implications.

TIM: Big Data Analytics Capabilities: Antecedents and Implications for SMEs' International Performance

Author: **Amin Bernadine N Dri**, U. Laval

Author: **Zhan SU**, U. Laval

For exporting small and medium-sized enterprises (SMEs) to survive in the face of competition and cope with the fierce pressures of fast-changing environments, they need to develop new capabilities known as Big data analytics capabilities (BDAC). This study draws on the theories of resource-based view (RBV) and dynamic capabilities to investigate the antecedents of BDAC and their impacts on the international performance of exporting SMEs. Partial least squares structural equation model was used to empirically validate this model, using survey data from a sample of 178 exporting SMEs in the manufacturing industry. The results show that entrepreneurial orientation and market orientation are important contributors to the development of BDAC. However, as the market becomes increasingly volatile, entrepreneurial orientation has a stronger effect on BDAC, while market orientation has a weaker effect on same. The results also show that digital marketing capabilities as well as network capabilities partially mediate the positive effect of BDAC on SMEs' international performance.

TIM: An Inclusive Future: Role of Digital Business Ecosystems in Sustainable Socio-Economic Growth

Author: **Samrat BAGCHI**, Indian Institute of Management, Indore

Author: **Kamal Sharma**, Indian Institute of Management, Indore

Calls for exploring the holistic impact of digital technologies towards an inclusive future have never been stronger. Our study investigates whether digital business ecosystems can better address some of the sustainable developmental goals, that of economic growth and innovation, industry, and infrastructure in the context of emerging and developing economies in Asia. This multiple case study explores ecosystems as a unit of analysis and illustrates the dual value creation process in terms of economic and social value creation. The study uses the institutional context to investigate the phenomenon of ecosystem emergence and contributes to the nascent literature on DBE orchestration in the context of emerging markets. It also responds to earlier calls by scholars to explore how interconnectedness provided by novel digital technologies can address sustainable developmental goals by for-profit organizations. The study finds evidence of DBE's potential to address better the need for economic growth and innovation in industry. It posits that orchestrating an organization's top management team's orientation to a higher-order goal influences the relationship. The study has implications for scholars and management thinkers and guides policymakers to facilitate novel organizational forms and digital technologies to build an inclusive future.

TIM: Internal Strategic Resource Market and Diversification in the Digital Age

Author: **Ga-Young Jang**, SusFin Research

Author: **Hyung Goo Kang**, Hanyang U.

Extant studies demonstrate that failures and imperfections in external capital markets compel firms to establish internal capital markets and business groups. Following a similar rationale, we posit that the inadequacies and incompleteness of the external data market drive platform companies to create internal data markets and pursue apparently unrelated diversification. This theoretical paper illustrates that the internal data market will eventually evolve into an internal artificial intelligence market and an internal strategic resource market, becoming more sophisticated in nature. The discussion extends to Internal Data Markets and Internal Artificial Intelligence Markets, strategically addressing imperfections in external data and AI markets. The Internal Strategic Resource Market framework extends the Resource-Based View to internal markets, providing a structured platform for critical resource allocation within corporate groups. This paper offers insights into designing strategic resources for data-driven and AI-enabled firms. It also delves into regulatory discourse, proposing interventions to foster innovation, ensure market competition, and safeguard consumer interests.

Safe Transfer: Knowledge Diffusion by Teams, Scientists, Technicians

Session Moderator: **Christian Schröder**, *U. of Siegen*

TIM: Same Same but Different: An Analysis of Knowledge Transfer Activities in Biotech and Health Sciences 

Author: **Christian Schröder**, *U. of Siegen*

Author: **Ann-Christin Groezinger**, *U. of Siegen*

Author: **Petra M. Moog**, *ZHAW School of Management and Law*

Author: **Arndt Werner**, *U. of Siegen*

Knowledge transfer to the private sector as well as to society and the ways researchers contribute to the public good are a growing concern for researchers and university policymakers alike. In this regard, two disciplines offer great potential to learn about patterns and mechanisms, namely the biotechnology and health sciences. Both research disciplines play a critical role in helping to advance research, develop new treatments and therapies, and improve public health. To date, little is known about how health scientists leverage their expertise and resources to address the needs of the wider community, and how they foster collaboration and partnerships that can help drive social and economic change, compared to biotechnology scientists being in the spotlight of research for a longer time. To gain more insights about the different knowledge transfer processes in both fields, we analyze 30 qualitative interviews with university and science institute researchers, as well as knowledge transfer intermediaries. We apply an ecosystem perspective and systematically analyze the interaction of framework conditions as well as systemic conditions in both fields. While biotechnology knowledge transfer is primarily hindered by intra-layer conflicts within the framework conditions, we find that health scientists face significant inter-layer encounters between framework and systemic conditions. This results in different knowledge transfer forms as an outcome of each ecosystem. Biotechnology researchers engage more in a market-oriented approach whilst health scientists seem to prefer an integrated knowledge transfer model. Our findings can both help researchers to boost their knowledge transfer efforts and university policymakers to develop more effective policy measures. With this, our results show how to foster knowledge transfer in different fields.

TIM: Sharing Solutions Without Spilling Secrets: How Technicians Diffuse Knowledge Among Innovators  

Author: **Danielle Elaine Bovenberg**, *Yale School of Management*

The diffusion of knowledge among innovators is vital to progress at technologically complex innovation frontiers. Yet competitive incentives between innovators may prevent them from sharing useful advancements with each other. In this multi-year ethnographic study of three shared R&D facilities in the field of semiconductor research, I examine how concrete solutions to shared technical problems can nonetheless be safely diffused among innovators through the “safe diffusion strategies” of the technicians that oversee the tools that innovators have in common. These technicians were unaffiliated with any one innovator but instead with the shared equipment that all innovators had to use. I detail how technicians used their role in the division of labor to elicit greater disclosure of effective solutions from innovators, assess the risks of sharing these solutions, and recognize unique avenues for safely sharing solutions across innovation projects. In particular, technicians leveraged their command over tools, materials and techniques to contain the technical scope of the solutions they diffused and to distill generalized guidance from the solutions they withheld. By extending our understanding of selective knowledge diffusion in competitive settings to other members of innovation ecosystems that are often overlooked but nonetheless essential to conducting technologically complex work, this paper documents a previously unrecognized avenue by which valuable knowledge can diffuse at competitive innovation frontiers. In so doing, it extends the role theoretically accorded to supporting, technical occupations in the advancement of these frontiers.

TIM: The Effect of Inventor Collaboration on Mobility: The Role of Technology Complexity and Obsolescence

Author: **LI Liu**, *U. Carlos III de Madrid (UC3M)*

Author: **Neus Palomeras**, *U. Carlos III de Madrid*

Author: **Eduardo Melero**, *U. Carlos III de Madrid*

This study aims to examine how team collaboration affects the inter-firm mobility of inventors. Since knowledge accumulated through team collaboration can be complementary or substitute to the teammates, teamwork can affect the relative value of the inventor’s knowledge inside the firm versus the outside value in opposing ways. In this paper, we explore to what extent and in which circumstances teamwork leads to more or less inter-firm mobility. Leveraging on the premature death of collaborators as an exogenous shock to teamwork, we find that inventors who lose a collaborator are more likely to leave their current firm (than otherwise similar inventors). This average negative effect between collaboration and mobility, however, is driven by a particularly intense relationship in technological areas of high complexity and quick obsolescence rate, suggesting that it is in these areas where collaboration complementarities play a key role in the generation of knowledge.

TIM: Network Variance of Scientific Team and Knowledge Creation: A Network Embeddedness Perspective 

Author: **Shanwu Tian**, *School of Business, Qingdao U.*

Author: **Xiurui Xu**, *School of Politics and Public Administration, Qingdao U.*

Previous network research has focused on studying scientists’ network embeddedness and knowledge creation at the individual level, but ignored the impact of network embeddedness variance among scientists within a team. In this study, we examine how network variance of scientific team contributes to knowledge creation from a network embeddedness perspective. Specifically, we explore how team relational embeddedness variance and team structural embeddedness variance influence team knowledge creation. Furthermore, team average relational embeddedness and team average structural embeddedness serve as moderators. We conduct empirical tests, using a negative binomial regression model and several robustness tests, on bibliographic data from scientific articles in the field of new energy vehicles. The data was provided by Web of Science Core Collection and covered the period from 2008 to 2020. We find that both team relational embeddedness variance and team structural embeddedness variance have inverted U-shaped impacts on team knowledge creation. The results also provide original evidence on an overlooked phenomenon: team average relational embeddedness and team average structural embeddedness moderate the effect of team relational embeddedness variance and team structural embeddedness variance on knowledge creation, respectively. Overall, these findings suggest important implications for understanding the relationship between network variance of scientific team and knowledge creation.

Presenter: **Jino Lu**, *Washington U. in St. Louis, Olin Business School*
Presenter: **Sukhun Kang**, *UC Santa Barbara*
Presenter: **Roger Masclans Armengol**, *Fuqua School of Business, Duke U.*

The symposium on the diffusion and commercialization of science delves into the critical role of scientific knowledge in driving innovation and economic growth. It addresses the challenges and strategies involved in using publicly available scientific knowledge for commercial applications. The symposium brings together researchers studying the commercialization and diffusion processes, focusing on how firms access and utilize scientific knowledge, the role of universities and scientists in the diffusion of scientific knowledge, and the impact of successful commercialization on science itself. These papers range from the development of novel measures to examine the commercial potential of scientific research to exploring the impact of media and social media in disseminating scientific knowledge and investigating the interplay between corporate and academic research in the development of enabling technologies like quantum computing. Given the decline in corporate science over the last few decades, the challenge for firms is effectively leveraging scientific discoveries from universities and research institutions. The papers in the symposium offer important implications for businesses and research institutions striving to bridge the gap between scientific research and commercial application.

Participant: **Marshall Van Alstyne**, *Boston U.*

Multi-sided platform marketplaces connect at least two groups of customers together, enabling complex value creation and capture systems. They have dominated entire industries over the last decade, attracting billions of users and dollars of capital. The largest of these platforms have plowed their data, labor, and capital investments into artificial intelligence (AI) engines. As yet, these platforms have yet to merge these two ideas together to create new products or marketplaces. When they do, will this reinforce the existing theories on multi-sided platform strategy, or will it require new theories at the intersection of platforms and AI? This Symposium assembles the world's experts on platforms to describe their predictions for how AI will impact the practice and theory of multi-sided platforms. The session will conclude with a discussion among the panelists and audience for a research agenda to guide future efforts in this evolving field.

Publishing Impactful Research in AMJ

Presenter: **Marc Gruber**, *Ecole Polytechnique Fédérale de Lausanne*

All scholars set out to publish high-quality and important research. The attributes of high quality research have been discussed at length in past commentaries (e.g., the “Publishing in AMJ” series of FTEs). What does it mean, though, for research to be important? One factor in evaluating importance is making a significant theoretical contribution—enriching, extending, and elaborating upon previous theoretical understandings of a phenomenon. A significant theoretical contribution is necessary for a high-quality paper. Indeed, we note psychologist Lewin’s (1952) adage that “there is nothing so practical as a good theory.” However, the consensus may be shifting away from a sole focus on theoretical contributions such that research is also viewed as important when it yields insights that have the potential to significantly change management practice in ways that better organizations and society (Tihanyi, 2020). Attend this session to meet with the award winners from the papers that have received AMJ’s Impact Award.

How Person-Environment Dynamics Shape Careers

Session Moderator: **Qi Wei**, *Kingston U.*

CAR: **Person-Career Fit: An Exploration of Self-Employed Freelancers**

Author: **Qi Wei**, *Kingston U.*
Author: **Lilith Whiley**, *Sussex U.*
Author: **Caroline Boyd**, *Self-employed*

Research exploring how self-employed freelance workers self-manage their careers is an important emerging field. In this study, we applied the theoretical lens of career self-management (CSM) to explore how self-employed freelance workers navigate the complexities of self-managing their careers and negotiating person-career fit. We conducted 30 semi-structured interviews with self-employed freelance coaches. Specifically, we paid close attention to freelancers' enactment strategies, thus offering richer insights into the processes and mechanisms associated with their person-career fit. Our findings suggest that freelancers re(negotiate) person-career fit at three critical junctions: upon entering the ecosystem, while negotiating gig work, and sustaining career success. To harmonise (evolving) person-career fit, tensions between precarity and autonomy, competition and marketability, and paid and unpaid work, needed to be reconciled as matters of usual practice. Person-career fit was a constant negotiation. Our findings thus contribute to the emerging literature on freelance workers in the gig economy by extending our understanding of how freelance workers self-manage their careers and (re)negotiate person-career fit.

CAR: **Personality-Occupation Relationships in Careers**

Author: **Claudia Rossetti**, *U. of Mannheim*
Author: **Torsten Biemann**, *U. of Mannheim*
Author: **Katja Dlouhy**, *U. of Mannheim*

Complementing existing research that has investigated the reciprocal effects between individuals' personality traits and occupational choices, we move from a variable-centered to a person-centered approach and examine the interplay between combinations of personality traits and individuals' occupations. Leveraging German panel data tracing individuals' career trajectories from 2005 to 2017, we utilize a distance-based methodological approach from the spatial sciences to measure and relate similarities in individuals' overall personality traits and similarities in their occupations. We find that individuals with similar Big Five personality traits enter similar occupations and that individuals with occupation-specific personalities are more likely to stay in the occupation. Moreover, we show that working in similar occupations contributes to the convergence of personalities over time. This research enhances our understanding of the intricate interplay between personality and occupations, providing a comprehensive and innovative test of attraction and selection, attrition, as well as socialization effects between more similar individuals and occupations.

CAR: **Can Obsession for an Occupation Continue to Shadow Further Career Outcomes?**

Author: **Sweta Sinha**, *IIM Rohtak*
Author: **Koustab Ghosh**, *Associate Professor Indian Institute of Management Rohtak*
Author: **Dheeraj Sharma**, *Indian Institute of Management, Rohtak*

In the last few decades, we have witnessed careers evolve from being linear within a single occupation to non-linear involving multiple occupations, which may not be related. Extant research has conceptualized work passion along two streams- harmonious and obsessive, which can have positive or negative impact on career outcomes. We postulate that while the employees develop a passion for their first occupation, it continues to impact their engagement with further occupations after transition. Hence, it is important to examine the impact of sustained work passion on the work outcomes of present employment. This paper attempts to fill the gap in the literature by explicitly examining the impact of harmonious work passion for current occupation (HWP_Occ2) on the two outcome variables viz subjective career success and career distress. Additionally, we examine the moderating role of obsessive work passion towards a previous occupation (OWP_Occ1). The study's results showed a significant moderating impact of OWP_Occ1 towards having a career distress, while it was not significant towards subjective career success. The study offers several theoretical insights and managerial implications.

CAR: **Why Me? Protege Role Behavior and Mentor-Protege Exchange in Mentor and Protege Outcomes**

Author: **Stacy Lyn Astrove**, *U. of Delaware*
Author: **Maria Kraimer**, *U. at Buffalo*

Integrating the relational mentoring perspective (Ragins, 2012) with leader-member exchange theory (Graen & Uhl-Bien, 1995; Liden & Maslyn, 1998) we constructed a model investigating why some protégés experience more effective mentoring than others. We hypothesized that mentor-protégé exchange quality mediated the relations between protégé role behaviors and career and psychosocial mentoring support provided to protégés. Using an academic sample consisting of professor mentors and their PhD student protégés, we found that protégé positive role behavior correlated with mentor-protégé exchange quality regardless of whether quality of mentor-protégé exchange is rated by the mentor or the protégé. Conversely, we found a negative relationship between protégé negative role behavior and mentor-protégé exchange quality, but only when evaluated by the mentor. Notably, mentor-rated mentor-protégé exchange was positively related to psychosocial support provided to protégés, whereas protégé-rated mentor-protégé exchange quality related to both career and psychosocial support provided. In terms of indirect effects, we found that mentor-protégé exchange quality mediated the relationships between protégé positive and negative role behaviors and psychosocial support provided to protégés when mentor-protégé exchange was rated by the mentor. Finally, we found that mentor-protégé exchange quality mediated the relationship between protégé positive role behavior and both career and psychosocial support provided to protégés when mentor-protégé exchange was rated by the protégé. These findings contribute to theoretical insights into the mentoring process and offer practical implications for mentoring practices.

Participant: **Mark Whiting**, *U. of Pennsylvania*
Participant: **Duncan J. Watts**, *U. of Pennsylvania*

The goal of this symposium is to connect theorists, methodologists, and technologists at the interdisciplinary frontier of team collaboration and conflict management studies. Specifically, this symposium weaves together technology's dual implications on both teams and the science of teamwork. Across four original research papers, we will demonstrate that studying teams in a digital setting is more than simply a recreation of in-person interactions, but rather a rich setting for methodological innovation. These innovations, in turn, push the boundaries of our knowledge about teamwork, particularly in a world in which collaboration increasingly occurs via technology. We call this bidirectional interplay between methods and theory a "computational science of collaboration." Paper 1 introduces a model designed to capture the dynamics of naturalistic turn-taking, showing how fine-grained data can help to bridge the gap between micro-level turn dynamics and broader macro-level outcomes. Paper 2 further expands on micro-level dynamics to explore how conflict dynamics differ across communication media, with implications for facilitating constructive disagreements in a digitized yet polarized world. Paper 3 presents the results of an online experiment that systematically varies five facets of teamwork (Team Composition, Team Size, Task Attributes, Task Complexity, and Communication Process). Its findings show that, all else equal, team outcomes are highly dependent on the task at hand. Lastly, Paper 4 demonstrates how researchers can take advantage of the latest advances in Large Language Models to build interactive agents for behavioral experiments. Following the four presentations, discussants Laurie Weingart and Randall Peterson will lead a conversation integrating the papers' theoretical and methodological contributions. In what ways do these novel tools extend prior theories of teamwork, perhaps with greater precision or resolution, and in what ways do they highlight novel forms of collaboration — whether across different modalities, different tasks, or different types of "teammates" (AI-powered versus human)? How might this "computational science" influence our field's research agenda in the years to come?

Conflict Management, Decision-Making, Engagement, & Innovation in Sustainability and Field Contexts

Session Moderator: **Hardo Firmana Given Grace Manik**, *U. of Queensland Business School*

CM: **A Theoretical Model of Indigenous Conflict Management Strategies in the Sustainability Context**

Author: **Hardo Firmana Given Grace Manik**, *U. of Queensland Business School*

Author: **Ali Intezari**, *U. of Queensland*

Author: **Justin Peter Brienza**, *U. of Queensland Business School*

Managing sustainability-related conflicts among stakeholders is critical to ensure the achievement of sustainable development goals in response to global environmental exigencies. As Indigenous peoples consistently demonstrate strong pro-environmental behaviors by stewarding lands, forests, and oceans, their perspectives matter in these conflicts. While there are several systematic literature reviews mapping the causes of such conflicts and their mitigation strategies, these studies do not address the role of Indigenous Peoples in managing such conflicts. This study conducts a systematic literature review to develop a theoretical model that explains the antecedents and consequences of conflict management strategies in the Indigenous context. This paper proposes that wise reasoning can strengthen cooperative conflict management strategies (i.e., integrating and compromising). We also postulate the mediating role of trust in stakeholders, inclusivity in decision-making, environmental justice, and community support on the relationship between cooperative management strategies and pro-environmental behaviors of Indigenous Peoples. Drawing upon wisdom approaches and Indigenous aspirations, we contribute theoretically by providing sociocultural nuances to conflict management theory in the sustainability context.

CM: **Fostering Sustainable Innovation and Hybrid Performance in Family Firms**

Author: **Mahdi Vesal**, *U. of Technology Sydney Business School*

Family firms are known for emphasizing profitability, growth, and market share. However, the rising environmental concerns pose a unique challenge as prioritizing environmental sustainability may impact profitability. This study, based on the resource-based view, explores data from Australian family firms' CEOs and senior managers through separate surveys. Our analysis shows that participative decision-making in family firms positively influences the adoption of sustainable innovation practices, leading to high levels of both financial and environmental performance, termed hybrid financial-environmental performance. Notably, this relationship depends on TMT heterogeneity and family member involvement in the TMT. These findings contribute to the literature on sustainability in family firms and offer valuable insights to those seeking to balance financial success and environmental responsibility.

CM: **Can Experience Extinguish Worker Decision Biases? A Natural Field Experiment at a Major Organization**

Author: **Polly Kang**, *INSEAD*

Author: **David P. Daniels**, *NUS Business School*

A vast literature has documented systematic decision-making biases in both field and laboratory settings, often with profound implications for conflict management in organizational contexts. However, it remains controversial whether experience is likely to extinguish decision-making biases in natural field settings such as real-world organizations. Prior findings seem contradictory. Some prior studies suggest that experience will reliably extinguish biases, but other prior studies suggest the opposite – that biases can persist even among highly experienced individuals. We resolve this apparent contradiction by using a large-scale five-year natural field experiment at a major nonprofit organization to test whether and how quickly experience extinguishes biases in volunteer workers' labor supply decisions. We show that although workers' decision-making biases can eventually be extinguished by experience, this learning process is extremely slow. Each hour of experience shrinks workers' biases by just ~0.07%. As a result, it takes over 1,200 hours of experience to completely extinguish workers' biases – but unfortunately, less than 1% of workers ever attain that much experience. Therefore, while experience can gradually shrink and eventually extinguish workers' decision-making biases, this learning process happens so slowly that over 99% of workers never acquire the immense amount of experience that would be necessary to extinguish their biases.

CM: **Firm's Online Controversial Events: How User-Generated Content Affects Consumer Engagement**

Author: **Tingting Fan**, *Chongqing U.*

Social media have increased the frequency and intensity of firm's online controversial events, which differs conceptually from negative events. Despite this, there exists a dearth of research on the attributes of these events and how firms can effectively manage them. We present a theoretical framework that identifies two characteristics – namely, the information redundancy and asymmetry problem and the community norm problem within consumer groups- and introduce two expected user-generated content (UGC) strategies - the informativeness strategy and the norm contradiction strategy- that firms can employ. This paper presents an analysis of user-generated posts from online brand communities (OBCs) on two distinct Chinese social media platforms. It aims to provide the first empirical evidence to understand how and whether UGC strategies can help firms broaden favorable voice and its corresponding impact on consumer engagement. The analysis is based on a sample of 10,480 data points collected from Weibo and Zhihu. These findings indicate that firm-expected UGC strategies have a significant impact on consumer engagement. We also examine the moderating effect of platform context and time-related factors. Our work advances the knowledge on firms' online controversial events and UGC and provides practical implications for firms to effectively manage online controversial events.

Identity, Identification, and Loyalty in Trust, Conflict, and (Un)Ethical Behavior

Session Moderator: **Christopher Williams**, *ESSCA School of Management*

CM: **Understanding Organizational-Professional Conflict From a Control Perspective**

Author: **Christopher Williams**, *ESSCA School of Management*
Author: **Sander Van Triest**, *Amsterdam Business School, U. of Amsterdam*
Author: **Helena Kloosterman**, *Amsterdam Business School, U. of Amsterdam*

Organizational-professional conflict (OPC) occurs when professionals such as doctors, accountants and lawyers are asked to behave in ways that are not consistent with their professional norms. This may lead to unethical behavior, while it also has negative consequences such as reduced job satisfaction, job stress, and turnover intentions. We take a novel approach for understanding OPC by examining the role played by formal and informal controls within the organization in which the professional is working, as well as the strength of the broader professional field of which the professional is a member. Using a sample of 449 qualified professional employees from a wide range of organizations and industries we find that (1) formal behavior control does not influence OPC, (2) formal output control is positively linked to OPC, (3) informal social control reduces OPC, and (4) professional field strength provides boundary conditions to the effects of output and social controls. The results extend recent insights into OPC while guiding professional organizations in terms of how their control systems may reduce the negative consequences of OPC amongst key employees.

CM: **Mitigating Interpersonal Deviance Through Authentic Leadership: Do Social Identification and Trust**

Author: **Kiho Jun**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Author: **Joonghak Lee**, *Gachon U.*
Author: **Kwangtae Kim**, *Yonsei U.*

Although authentic leadership might reduce followers' bad behaviors, scholars have rarely included followers' workplace deviance as an outcome in their research models. Drawing from authentic leadership and social identity theory, we investigate how authentic leadership decreases followers' interpersonal deviance. First, we test the mediating role of followers' social identification in the relationship between authentic leadership and followers' interpersonal deviance. Second, we consider followers' perceptions of trust toward their coworkers as one situational factor that influences the relationship between social identification and followers' interpersonal deviance. Using data from 242 respondents in several business organizations located in Korea, we found that followers' social identification mediates the relationship between authentic leadership and followers' interpersonal deviance. Furthermore, followers' trust toward coworkers (i.e., trust in group) moderates the relationship between social identification and followers' interpersonal deviance. The theoretical implications, managerial implications and future research directions are discussed.

CM: **Devaluation by Omission: Limited Identity Options Elicit Anger and Increase Identification**

Author: **Sean Barrett Fath**, *ILR at Cornell*
Author: **Devon Proudfoot**, *Cornell U.*

From completing the census to filling out an employee engagement survey, people are often asked to provide demographic information about themselves, such as their gender, by selecting their identity from a list of options. However, the options provided in such situations are seldom unlimited—they typically reflect only a subset of possible identities. In the present research, we explored social identity threat caused by subtle acts of omission, specifically, situations in which social identity information is requested but one's identity is not among the options provided. We predicted that being unable to identify with one's group—e.g., in the demographics section of a job application form—may signal social identity devaluation, eliciting negative affect (e.g., anger), reducing anticipated organizational belonging, and increasing the importance of the omitted identity to group members' sense of self. Six pre-registered experiments (N = 2,964 adults) sampling members of two minority identity groups (i.e., gender minorities and members of a minority political party) support these predictions. Our findings document the existence of a subtle but likely pervasive form of social identity threat. We discuss implications for organizations concerned with reducing social identity threat for employees.

CM: **Loyalty Increases Perceptions of Harm**

Author: **Simone Tang**, *Cornell U.*
Author: **Ji Sok Choi**, *Cornell SC Johnson College of Business*

People who are loyal (vs. not loyal) to their ingroup perceive negative actions by an outgroup against their group as more harmful. Four studies provided support for this hypothesis. Students loyal to their university's basketball team perceived greater harm from its rival basketball team than those who were not (Studies 1-2). The effect held controlling for related group constructs, such as group identification (Studies 1-2), and related moral constructs, such as disgust and belief in a just world (Study 1). Rather than differences in memory recall or general negative perceptions of the outgroup, this effect appeared to be due to loyalists exaggerating the perceived harm inflicted (Study 2). Loyalty can backfire, however. Not only are people more willing to lie for their object of loyalty, like a close friend, but they are also more likely to withhold information from the friend because they believe it will hurt the friend (Studies 3a-3b).

Organizer: **Kristin Samantha Williams**, *Acadia U.*
Organizer: **Fabio Prado Saldanha**, *U. de l'Ontario français*
Organizer: **Alison Pullen**, *Macquarie Business School, Macquarie U.*

This session introduces Critical Management Studies (CMS) to those new to its concepts. We aim to demystify CMS, highlighting its focus on power, equity, and social justice in organizations. We will explore how CMS differs from traditional approaches to management, promoting inclusive, diverse, and equitable practices. Through structured discussions with experienced academics, we'll explore CMS's role in challenging the status quo and nourishing alternatives. This session serves as a gateway for beginners, inspiring them to incorporate CMS perspectives into their thinking, fostering transformative organizational change.

Is AI Helping or Hurting Creators?

Session Moderator: **Shagun Tripathi**, ASSISTANT PROFESSOR IE

CTO: **Demystifying GenAI for Creative Workers: A Mixed-Method Investigation of Firsthand Experience**   

Author: **Yukun Liu**, Zhejiang U., China
Author: **Siyu Chen**, Zhejiang U., China
Author: **Xiaoyun Xie**, Zhejiang U.

The emergence of text-to-image generative artificial intelligence (GenAI) is revolutionizing the creative industry by providing the capability to produce visually appealing artwork using natural language prompts. This study examines the impact of GenAI on creative professionals, using firsthand data to scrutinize their responses and strategies for mitigating perceived threats that obstruct the integration of GenAI into their professional practices. Our extensive investigation, which includes an exploratory interview study (n=79), an experimental study (n=197), and a two-wave longitudinal survey (n=119), reveals that firsthand experience with GenAI significantly enhances creative workers' understanding of its technical features, including aesthetic appeal and functionality. This enhanced understanding, in turn, motivates them to adaptively incorporate GenAI into their creative workflows, thereby reducing the perception of GenAI as a threat. By adopting a mixed-methods approach, the study not only highlights the challenges posed by perceived threats to the effective utilization of GenAI but also emphasizes the effectiveness of firsthand experience as a strategy to overcome these barriers.

CTO: **How Do Human Creators Compete with Artificial Intelligence? An Empirical Analysis**  

Author: **Ohchan Kwon**, Hong Kong U. of Science and Technology
Author: **Yue Zhang**, Hong Kong U. of Science and Technology

Recent artificial intelligence (AI) technologies can perform highly cognitive and creative tasks once exclusively performed by humans. This development not only lowers barriers to entry in creative fields but also intensifies competition, raising questions about how humans respond to this new AI-driven competitive landscape. In this study, we examine how human creators in an online art community respond to heightened competition from the advent of generative AI tools. We analyze human responses in terms of both the quantity and creative direction of artistic output and employ a difference-in-differences approach that leverages AI's differential impact across genres. Our results show significant heterogeneity in responses based on creators' skill levels and motivations. While AI leads to a reduction in overall human output quantity, creators with high skill levels and commercial orientation exhibit only marginal declines. Affected creators also change their creative direction by increasingly focusing on niche and original content, especially those with high skill levels and commercial orientation. These findings are consistent with the theory that competition affects individuals differently based their abilities and motivations. Our study contributes to the growing literature on how AI can substitute or complement individuals across a spectrum of skills and motivations and provides valuable insights for organizations aiming to leverage AI for enhanced value creation.

CTO: **Collaboration with Artificial Intelligence Negatively Impacts Creator Reputation**    

Author: **Jack McGuire**, Northeastern U., D'Amore-McKim School of Business
Author: **Ke Michael Mai**, China Europe Int'l Business School (CEIBS)
Author: **David De Cremer**, Northeastern U., D'Amore-McKim School of Business

As creators increasingly make use of AI systems to aid with the production of creative work, it is important to understand whether such works and the creators involved are judged differently for doing so. Across three experimental studies, we found that while no reliable differences were revealed for evaluations of creative work produced by human-AI dyads (vs. human-human dyads), the creators involved were consistently judged more negatively. Creators that collaborate with AI (vs. another human creator) were perceived to invest less effort in their work but only when producing highly creative (vs. uncreative) work (Study 1). In turn, due to lower perceptions of invested effort, these creators were viewed to be less competent and warm and this pattern of findings was replicated when obtaining evaluations from investors (Study 2) and laypeople (Study 3) across a diverse range of creative contexts. Data collection is presently underway to further test our findings in a sample of professional AI developers (Study 4). Finally, as important behavioral consequences of being viewed less competent and warm, we found that creators who collaborate with AI were trusted less and viewed as possessing less leadership potential.

CTO: **Assessing Public Sentiment on AI-Generated Art Across the United States Using Deep Learning**  

Author: **Lan Sang**, U. of Colorado - Boulder
Author: **David Dobolyi**, U. of Colorado, Boulder
Author: **Kai R. Larsen**, U. of Colorado, Boulder

Art is crucial in conveying the rich tapestry of human feelings and societal values. However, the recent development of high-quality AI-generated art has created controversy in terms of how this new form of art should be perceived and valued. Understanding the public's attitudes towards AI-generated art can help AI companies improve products and guide the government's policy regarding the generative AI industry. This study uses social media data (i.e., Twitter/X) to analyze sentiment toward AI-generated artwork across the United States. Analyses of these data show a generally negative attitude towards AI art in most states. The findings also indicate that AI and art market maturity and urbanization rate positively impact public sentiment on AI-generated art, whereas median household income is negatively correlated with attitudes toward AI-generated artwork. Collectively, these findings highlight the importance of building mature AI and art markets.

Organizations and AI: Data Collection, Preparation, and Value

Session Moderator: **Elizabeth Davidson**, *Shidler College of Business, the U. of Hawaii at Manoa*

CTO: **Time to Reassess Data Value: The Many Faces of Data in Organizations**

Author: **Daisy Xu**, *The U. of Queensland*
Author: **Marta Indulska**, *U. of Queensland*
Author: **Ida Someh**, *The U. of Queensland*
Author: **Graeme Shanks**, *The U. of Queensland*

Despite the substantial body of evidence detailing the multifaceted applications of data within organizations, the conceptualization of data and their value propositions remain disjoint and require updating. Scholars have come to realize that the traditional ways of conceiving data now appear inadequate in framing this ever-evolving data-driven phenomenon. In this context, we argue for a reassessment of the fundamental assumptions about data in the Information Systems field. This paper offers a comprehensive literature review, through which we conceptualize the role of data into four distinguishable types: data as a tool, as a commodity, as a practice, and as algorithmic intelligence. Each type possesses a set of identifiable characteristics, usage, and value propositions. Together these elements form a typology, which provides an explanation for the unique nature of data use in organizations and the diverse sources of their value. By extensively drawing evidence from various domains, this research endeavors to introduce a fresh perspective on how we define and perceive data value in organizational contexts.

CTO: **Beyond Data Collection: Examining Artificial Intelligence Data Creation in Organizations**

Author: **Jodie Koh**, *Northwestern Kellogg School of Management*

Current management literature conceptualizes “data collection” — or the organizational process of gathering inputs to train and validate transformational technologies — as a bounded process involving technical work, limited interaction between stakeholders, and finite time. In our 16-month ethnographic study of a healthcare organization developing artificial intelligence (AI) systems, the project team initially approached data collection for AI as literature predicts. We found, however, the project team engaging in a process of data creation involving expansive interactions across different occupations, spanning many organizational practices, and involving diverse stakeholders. Our findings uncovered four consequential, but overlooked, components of the expansive data creation process: what is the phenomenon for which an AI model should be built, what is considered data about the phenomenon, which data can be collected, and which data are ultimately recorded. As a result, this paper’s central insight is that rather than conceptualizing data for AI in organizations as a raw, independent, objective resource which is collected through a bounded process, our study highlights how data is contextual, subjective, and dependent, and is actively created through an expansive, iterative approach within organizations. We discuss the theoretical and empirical implications of our results for organizations pursuit of transformational technologies.

CTO: **The Materiality of Data: Practices of Coping with Imperfect Data for Machine Learning Development**

Author: **Tomislav Karacic**, *KIN Center for Digital Innovation, Vrije U. Amsterdam*
Author: **Wendy Günther**, *Vrije U. Amsterdam*
Author: **Anastasia Sergeeva**, *Vrije U. Amsterdam*

We study how the materiality of data shapes the practices of data work. Empirically, we look at the development of machine learning models for predicting complex agricultural phenomena. We find that representing phenomena by data involves an iterative process of data workers redefining phenomena to make them representable by data, and reconstructing data modulated by the material aspects of data’s recording. In particular, we find four practices data workers enact as they cope with these challenges of representing complex phenomena: transforming data, resourcing new data, redefining phenomena, and proxy making. The paper contributes to the literature on data work by showing the consequential role of materiality in data work which enables us to develop a taxonomy for systematic analysis of data work practices and introduce a novel practice of data work - proxy making.

Risk, Fairness, and Trust in AI Management and Sharing Platforms

Session Moderator: **Steven Lawrence Johnson**, *U. of Virginia*

CTO: **From Counterfactual Fairness to Algorithmic Fairness: Building Principle of Equity in AI Management**    

Author: **Maggie Minghui Cheng**, *JMSB, Concordia U.*

The issue of fairness associated with the use of algorithms in human resource management has only recently gained significant scholarly attention. This paper contributes to this field in several ways. First, potential sources of unfairness are identified, with emphasis on legal considerations. Second, the concept of counterfactual fairness, commonly used as a criterion for fairness in computer science, is critically compared with alternative principles rooted in equity theory and justice theory from management and psychology. Third, this paper presents a case for using causal modeling to fully evaluate the fairness of HR algorithms. Fourth, and relatedly, it illustrates how causal modeling can usefully be applied to evaluate several aspects of legal compliance. Fifth, in line with the call for HR practitioners to build a deeper insight concerning the construct, this paper contends that fairness is a multifaceted, dynamic concept, entailing the consideration of moral issues, beyond legal compliance per se. Potential ways to enhance perceptions of justice concerning the application of algorithms for human resource decision-making by employers are suggested. Finally, in concert with offering a broadened definition of algorithmic fairness, a five-step model is proposed to help ensure its integration into the use of HR algorithms.

CTO: **What's the Damage? Meta-Analysis of Risk and Trust Dynamics in the Sharing Economy** 

Author: **Daria Soloveva**, *U. of Jyväskylä*

Author: **Reza Yamini**, *U. of Jyvaskyla*

This meta-analysis uses 210 studies to understand the relations between risk perceptions, trust, and consumer behavior in the sharing economy. First, we examine how market safety and platform characteristics, represented by consumer involvement and the necessity of in-person interactions with strangers, influence the relations between risk, trust, and behavioral intention using meta-analytical regression analysis (MARA). Second, we test the mediating role of trust in risk perceptions and consumer behavioral outcomes in a conceptual model by applying meta-analytical structural equation modeling (MASEM). MARA analysis shows that safety and consumer involvement moderate the relations between risk-intention and risk-trust while having no effect on the trust-intention relation. In-person interaction moderates the risk-intention and trust-intention relations. MASEM results indicate that the negative relation between risk perception and behavioral intention is partially due to damaged trust in platform and provider, while the negative effect of risk on satisfaction and loyalty occurs only through trust damage.

CTO: **No Simple Fix: How AI Harms Reflect Power and Jurisdiction in the Workplace (WITHDRAWN)** 

Author: **Nataliya Nedzhvetskaya**, *Dept. of Sociology U. of California Berkeley, Ca. 94720 U.S.A*

Author: **JS Tan**, *Massachusetts Institute of Technology*

The introduction of AI into working processes has resulted in workers increasingly being subject to AI-related harms. By analyzing incidents of worker-related AI harms between 2008 and 2023 in the AI Incident Database, we find that harms get addressed under considerably restricted scenarios. Results from a Qualitative Comparative Analysis (QCA) show that workers with more power resources, either in the form of expertise or labor market power, have a greater likelihood of seeing harms fixed, all else equal. By contrast, workers lacking expertise or labor market power, have lower success rates and must resort to legal or regulatory mechanisms to get fixes through. These findings suggest that the workplace is another arena in which AI has the potential to reproduce existing inequalities among workers and that stronger legal frameworks and regulations can empower more vulnerable worker populations.

Online Communities: Rhetoric, Dialog, and Generative AI

Session Moderator: **Thomas Grisold**, *HSG U. of St. Gallen*

CTO: **Managing Platform Legitimacy During Change: Material-Rhetorical Practices in Digital Spaces** 

Author: **Yaomin Zhang**, *Queen's Management School, Queen's U. Belfast*

Author: **Jonatan Pinkse**, *King's College London*

Author: **Andrew McMeekin**, *U. of Manchester*

How can digital platforms sustain and evolve their legitimacy in the eyes of users when they modify exchange rules and algorithms that form the foundation of their activities and relationships with users? This study investigates a peer-to-peer exchange platform which implemented a virtual currency for scaling and the practices it performed to maintain legitimacy throughout this change process. The empirical analysis shows how the change contradicted existing legitimacy standards, aroused controversy among old users, and attracted new users unfamiliar with existing norms, and led to diverging user evaluations and behaviours which threatened the platform's legitimacy. In response, the platform performed three practices to (re)configure the meanings and system designs which govern the relationships with and between users: experimenting with rhetoric and system designs, representing community experiences and norms, and silencing uncompromising user evaluations. We propose the concept of material-rhetorical practices to capture platform doings that enhance a perceived alignment between their evolved digital systems and community legitimacy standards. We explain how configuring and evolving rhetoric and digital materiality constitute a platform's legitimation process when undergoing change and are consequential to how it governs relationships.

CTO: **Talking Through Turf Wars: How Co-Producers Use Dialogue to Rebuild Consensus and Resolve Disputes**

Author: **Leo Pick Allen**, *HEC Paris*

Author: **Sri Kudaravalli**, *HEC Paris*

This study investigates how online communities manage resource tension and create knowledge by exploring how participants on Wikipedia use dialogue to self-resolve content disputes. It posits that disputing interlocutors primarily rely on two types of dialogue to resolve disputes, knowledge staking and knowledge integration, and finds that both influence the likelihood of dispute self-resolution. Knowledge staking, dialogue that articulates and justifies an interlocutor's personal perspective, is conducive to dispute self-resolution when shared information is well-substantiated, relevant, and does not attempt to restrict the discussion. However, disputes are more likely to self-resolve when they consist of a relatively higher proportion of knowledge integration, dialogue that interlocutors use to develop perspectives that are ostensibly intersubjectively acceptable. The study also reveals that disputes are less likely to escalate when participants stake out their personal perspectives before attempting to integrate shared knowledge into a workable consensus, and suggests that self-resolution is characterized by implicit rather than explicit alignment around common ground. The findings contribute to our understanding of how online co-production communities autonomously resolve disputes, and offer empirical insights that refine our understanding of dialogical knowledge creation.

CTO: **Not All Doom and Gloom: ChatGPT, Knowledge Diversity, and Style Similarity in Online Communities**   

Author: **Chan Gyu Lee**, *Seoul National U.*

Author: **Jeongsik Lee**, *Drexel U.*

Author: **Hyunwoo Park**, *Seoul National U.*

Understanding the dynamics of user behavior in online collaborative communities (OCCs) is essential to leverage and maximize the potential of these communities. While OCCs heavily depend on users' voluntary involvement, concerns have been raised regarding potential declines in user engagement following the introduction of ChatGPT, an advanced large language model. This study examines the disruptive impact of ChatGPT on user behavior within Stack Overflow—an OCC that is highly prominent and arguably most severely impacted by the technology shock—focusing on knowledge coverage and community cohesion. For the investigation, we use the entropy measure and linguistic-style match (LSM) methods to measure content diversity and linguistic style similarity, respectively, within the community. We then apply a difference-in-differences analysis to assess the causal effect of ChatGPT on these measures. Despite an overall decrease in the volume of user-generated posts following the introduction of ChatGPT, our empirical findings reveal a positive impact on knowledge coverage, indicating that ChatGPT helps enhance content diversity within the community. Additionally, the results indicate a trend of linguistic style homogenization, suggesting a more cohesive community environment potentially enabled by ChatGPT. Our study provides some early empirical evidence that, contrary to initial concerns about the introduction of ChatGPT threatening the role of OCCs, ChatGPT may have instead enriched and diversified community knowledge, fostering a more cohesive and collaborative environment for these communities.

Gender Dynamics and Ideology

Session Moderator: **Shen-Yang Lin**, *Aston Business School*

DEI: Mothers' WFC and Fathers' Gender Role Ideology Shape Offspring's Job Satisfaction Across 19 Years

Author: **Shen-Yang Lin**, *Aston Business School*

Author: **Lynda Song**, *Leeds U. Business School*

Taking a COR and signaling perspective, this study examines how fathers' expectations that mothers will stay at home (fathers' good-stay-at-home- mother ideology; the ideology about 'being a good stay-at-home mother') intensify the negative influence of resource loss from mothers' work interference with family (WIF), signal to their offspring that the workplace is a distressful and hopeless place, and, in turn, ultimately decrease the global job satisfaction of their offspring. Multiwave data from 366 mother-father-offspring triad data drawn from the Household, Income and Labor Dynamics in Australia (HILDA) survey conducted in Australia over a 19-year period support our full model.

DEI: When Women Ask, Do We Tell? Gendered Responses to Questions

Author: **Asher Lawson**, *INSEAD*

Author: **Natalia Karelaia**, *INSEAD*

Asking questions is a primary way by which people gather information that serves as an input to decision making. As a result, the ability to effectively ask questions and receive informative answers plays a key role in decision making processes. This is a key element of leadership, and so people's responses to one's questions may affect the question asker's ability to effectively lead. Yet it could be the case that the benefits of asking questions are not open to all. In the present research, we test how people's responses to questions – both in their content and tone – vary as a function of the gender of the question asker. Using a large archival dataset of containing 367,749 questions asked in the U.K.'s House of Commons between 1988 and 2015 (1,560 unique speakers, 17.5% women), we analyse whether men and women give equally lengthy, relevant, and polite responses to women as they do to men. To quantify the relevance of responses to questions, we use word embeddings. We also investigate how linguistic characteristics of questions affect responses women and men receive to their questions. Specifically, we test whether women and men receive equally lengthy, relevant, and polite responses to their questions when these contain a higher proportion of words associated with threat and dominance. We find that women might face less favorable outcomes when engaging in behaviors that are not only necessary for fulfilling their professional roles, but also, on the surface, might appear coherent with gender role stereotypes.

DEI: Shifting Grounds: Unveiling Female Employees' Response to Gender Regime Dynamics in Organizations

Author: **Pia Carstensen**, *Bielefeld U.*

Author: **Jana Boevers**, *Bielefeld U.*

Anchored in the theoretical foundation of gender as an institution, this paper is concerned with the complexity and embedded nature of gender inequality within organizations within the dimensions of gender order, gender regime, and gender practices. We draw upon the concept of institutional work to focus on female employees reacting to changes in gender regimes (i.e., initiatives to reduce inequality). Building on a single case study based on interviews and qualitative diary data, we explore how these female employees experience a new gender regime in their daily gender practices through cognitive and emotional processes and how this affects their investment or disinvestment into the new regime. We provide a framework that explains how the investment in the new gender regime and the engagement in maintaining or disrupting the gender regime depends on whether or not individuals on a gender practice level hold on to their fantastic frame and justify the changed regime by adopting the emotional and cognitive habitus. We contribute by demonstrating the complex dynamics of changing gender regimes and the central role of female employees in navigating through and potentially transforming gender regime and practices.

DEI: Are Women's Labor Market Outcomes Affected by Their Spouse's Gender Ideology

Author: **Pooja Mishra**, *Indian School of Business*

Author: **Hirakjyoti Basak**, *Indian School of Business*

Author: **Subhasree Basak**, *Indian School of Business*

Based on four studies with married men across developed and developing countries of the world, we found that married men's gender role attitudes have important implications for the labor market outcomes of their wives. Specifically, women married to men with higher sexist beliefs have a lower probability of working full-time, having ever worked a year long compared to women married to men with lesser sexist beliefs. Moreover, this negative effect is found not only during the entry into the labor market but also on other economic outcomes such as income and occupational prestige. Across four studies (Studies 1: N=11,308; Study 2: N=30,378; Study 3: 23,048; Study 4: N=29,102), we show with cross-sectional, cross-national, and longitudinal data that women married to men with higher sexist beliefs tend to have lower prospects of entering the labor market in general and working full-time in particular. Moreover, using two-stage least squares instrumental variable regression we find that this result is robust to self-selection whereby women married to men with higher sexist beliefs are in general more compromising towards their career. In Studies 1, 2, and 4 we find that even if women are working, those who are married to men with higher sexist beliefs tend to earn less and are in lower occupational prestige jobs compared to women married to men with less sexist beliefs. The results hold true for the US, as well as various European, Asian, African, and Oceanian countries. Our findings present evidence of an important non-organizational factor that affects the organizational outcomes of married men.

Workforce Diversity and Productivity

Session Moderator: **Xiaoxiao Shi**, *School of Economics and Management, Beihang U.*

DEI: **Expertise Diversity in Online Crowdsourcing Contests: Impacts of Creative Stars on Team Performance**  

Author: **Xiaoxiao Shi**, *School of Economics and Management, Beihang U.*

Author: **Richard Evans**, *Dalhousie U.*

Author: **Wei Shan**, *Beihang U.*

Author: **Tailai Xu**, *Beihang U.*

Author: **Huakang Liang**, *Beijing Jiaotong U.*

Online contests, organized by idea-seeking firms through crowdsourcing platforms, harness the collective intelligence of self-organizing teams. Drawing upon research on status hierarchies and motivated information processing in group theory, this study examines the impact of expertise diversity within crowdsourcing teams on team performance, addressing a critical gap in existing literature. After analysis of 5,323 crowdsourcing teams, involving 10,660 contestants on Kaggle.com, the study argues that the effect of expertise variety on crowdsourcing team performance depends on expertise disparity and the relational capital of the 'creative star', characterized by centrality and external connectivity. Specifically, it is suggested that the influence of expertise variety on crowdsourcing team performance is positive when expertise disparity is high but negative when expertise disparity is low. Furthermore, this positive (negative) effect under high (low) expertise disparity weakens when the creative star holds a more central position within the crowdsourcing team. Conversely, the positive (negative) effect under high (low) expertise disparity strengthens when the creative star has more external connections during the crowdsourcing contest. This research extends the current understanding of the dynamics of online crowdsourcing contests and the pivotal role of team diversity in achieving team success.

DEI: **Political Ideology Diversity and its Effects on Team Performance**  

Author: **Jake Telkamp**, *Augusta U.*

Author: **Phoebe Haemin Pahng**, *California State U. Sacramento*

Author: **Sung Mo Kang**, *Cornell College*

Author: **Sang Jib Kwon**, *Hansung U.*

Political ideologies and their implications have been receiving increased attention in organizational scholarship, and findings suggest these political preferences affect a host of employee and top manager outcomes. Despite this research, it remains unclear how these political ideologies affect team dynamics when political liberals and conservatives work together in teams. Compared with other forms of diversity, research indicates that people with differing political ideologies often dislike each other quite strongly, perhaps indicating that political ideology diversity's effect on team functioning may be even more pronounced. Drawing from the political affiliation model and categorization-elaboration model, we argue that political diversity on teams will lead to more relationship conflict and thus hinder team effectiveness. Importantly, we propose that having a diversity climate is a boundary condition for these negative effects. In a field study of 70 teams in South Korea, we find general support for our hypotheses, and conclude with theoretical implications and future directions of our work.

DEI: **Diversity Climate, Workplace Discrimination, and Voice Behavior: The Moderating role of SDO**

Author: **Christian Vandenberghe**, *HEC Montreal*

The present study aims at expanding research on the antecedents, consequences, and boundary conditions associated with perceived racial/ethnic discrimination in workplaces. We suggest that psychological climate for diversity relates to reduced perceptions of racial/ethnic discrimination, which in turn would relate to increased employee prosocial voice behavior. However, we theorize that these relationships would be moderated by employee social dominance orientation (SDO), an individual difference variable reflecting the degree to which individuals accept unequal distribution of power among social groups. Drawing upon two-wave survey data collected among 826 employees in Canada, psychological climate for diversity was found to negatively relate to the perception of racial/ethnic workplace discrimination. This relation was stronger among low-SDO employees. Moreover, the relation between perceived racial/ethnic workplace discrimination and prosocial voice behavior was moderated by employee SDO such that this relation was significantly positive among low-SDO employees but significantly negative among high-SDO employees. Further, the indirect effect of climate for diversity on prosocial voice was positive for high-SDO employees but negative for low-SDO employees. We discuss these findings in the context of a contingent view of the effects of diversity and discrimination perceptions in organizations, where employee SDO is a crucial boundary condition.

Workforce diversity provides a firm with access to a wider pool of talent and resources, which can enhance innovation, improve problem solving and increase elaboration. Specifically, the study examined the relationship between workforce diversity attributes of gender, age, ethnicity, and education and how boundary conditions influence the diversity-productivity relationship. This study follows the meta-analysis technique proposed by Grewal, Puccinelli and Monroe, (2018) to analyse a sample of 50 primary studies published between 2003 and 2023 across multiple countries. The procedure used in this study followed two steps. First, the study assessed the main effect of workforce diversity attributes on firm productivity and tested the heterogeneity of the effect sizes across the primary studies used in this research. The second step explored the boundary conditions that explain the source of the heterogeneity in the workforce diversity-productivity relationship. The findings show that workforce diversity attributes - age, gender, education, and ethnicity significantly influence firm productivity, with education diversity having the highest impact. The results also revealed statistically significant moderating effects whereby the relationships between age, education, ethnic diversity, and productivity were contingent on differences in country, industry, and other moderators. However, the impact of gender diversity on organizational productivity did not significantly differ across the various boundary conditions. The results for interaction terms pointed towards a direct, non-contingent relationship between gender diversity and productivity, irrespective of boundary conditions such as country, sector, economic factors, or period. This paper examines the causal patterns of workplace diversity attributes influencing firm productivity and systematically assesses the contextual factors that moderate the relationship and thus, explain the heterogeneity in the diversity-productivity relationship. The findings show that gender gaps are less dependent on external comparative influences than other diversity dynamics relating to age, ethnicity, and other functional attributes. The finding that education diversity has the strongest positive relationship with productivity aligns with CEM tenets regarding cognitive resource diversity and the development of task-relevant perspectives.

Participant: **Asma Ghani**, *Harvard U.*

This symposium tackles timely research questions on the subject of gender intersectionality, shedding light on the unexpected instances in which gender does (and does not) matter in intersectional contexts. Specifically, the current set of papers explores (1) the primacy of gender in social cognition among LGBTQ individuals; (2) whether gender normative stereotypes are equally attributed to men and women of different identities, including race and sexual orientation; (3) whether the “motherhood penalty” afflicts different racial groups equally; and (4) how age moderates gender attitudes, and vice-versa. We believe that this collection of papers helps push the gender research envelope into more robust, theoretical territory. In so doing, we hope to inspire a new era of gender research and theory, as well as intersectionality research more broadly.

The growing interdependence between nations and cultures in the modern world has resulted in a notable increase in immigration. The United Nations has reported that the number of international migrants – “people residing in a country other than their birth country” - has gone up from 173 million in the year 2000 to 281 million in 2020. As the number of immigrants worldwide increases, the social and political conversations around immigrants’ place in society become more and more polarized. Although policy and law can sometimes make it difficult for immigrants to integrate into the workforce, corporations have been noted to be largely supportive of immigration because they see the unique values and perspectives that immigrants bring to the workplace. Despite the recognition from corporate executives, immigrant employees have received little attention from management scholars. The scant management literature on immigrant workers has focused on the organizational challenges they face, such as work attainment, discrimination, and language and cultural barriers. Very little research has looked at the distinctive contributions of immigrants to the workplace. This symposium aims to motivate future research by providing a glimpse into the unique skills and perspectives that immigrants offer in shaping the future of organizations and work at large, against the backdrop of relentless challenges faced by immigrant employees.

Bringing Institutions and Inclusion Together: A Multi-Level Theoretical Integration

Moderator: **Chloe R. Cameron**, *Ivey Business School*

Panelist: **Frank D. Golom**, *Loyola U. Maryland*

Panelist: **Wesley Helms**, *Brock U.*

Panelist: **Linda Jakob Sadeh**, *Ruppin Academic Center*

Panelist: **Christopher W. J. Steele**, *U. of Alberta*

Academic siloes are inhibiting progress on both diversity, equity, and inclusion (DEI) and institutional literatures. DEI theorizing has progressed at certain levels, particularly at the individual level, but lacks depth as it relates to societal inputs, indicating opportunities for institutional frameworks. Likewise, institutional theories have progressed to identify various types of institutional work, conditions that enable institutional change, and actor perceptions of institutions that are clearly affected by diverse actors, but have notably avoided contemporary diversity-related empirical contexts that could address paradoxical gaps in theorizing. The purpose of this panel symposium is to formally begin a conversation to explore how the two literatures can be meaningfully integrated so that each may benefit from the knowledge that has been established in the other and future research agendas can draw on integrated theoretical frameworks. We bring together panelists with different perspectives to discuss the most promising opportunities for theoretical integration at different levels of analysis in both the institutions-to-DEI and the DEI-to-institutions directions.

Entrepreneurship and Teams 2

Session Moderator: **Joelle Hofer**, *U. of Bern*

ENT: **Don't Judge a Book by Its Cover: The Effects of Personality Faultlines in New Venture Teams**

Author: **Joelle Hofer**, *U. of Bern*

Author: **Artur Baldauf**, *U. of Bern*

While it is generally known that the personality of an entrepreneur affects the performance and development of a new venture, there has been very few research on personalities and personality diversity within a new venture team. This is surprising since teams, not individuals, are commonly assumed to be critical for new ventures' success. Additionally, it is known that identity- and knowledge-based diversity (e.g., age, gender, education, tenure) can affect new venture teams and their outcomes. Therefore, we hypothesize that personality diversity, specifically personality faultlines, in new venture teams also affect the performance of a new venture. The faultline concept is applied to consider various personality traits simultaneously, as it has been called for by previous researchers. Based on a sample of new ventures in Switzerland we test our hypotheses and find that, personality faultlines negatively affect the performance of a new venture. This effect is mediated by conflict. Additionally, we compare our results on personality faultlines to the more often studied identity- and knowledge-based faultlines. Based on our findings, implications for theory and practice are discussed.

ENT: **New Venture Team Initiation of Lead Founders: An Exchange Theory Perspective**

Author: **Yannick Nicolai Amend**, *Justus-Liebig U. Giessen*

Author: **Petrit Ademi**, *U. of St. Gallen (HSG)*

Author: **Monika Schuhmacher**, *Justus-Liebig U. Giessen*

We combine exchange theory with rule-based reasoning to theorize upon new venture team initiation decisions. Methodologically, we employ a conjoint analysis that captures 4,848 decisions by 202 entrepreneurs assessing potential co-founders. Our results demonstrate that entrepreneurs not only follow resource-seeking and interpersonal attraction strategies, but also consider their interaction. Additionally, our findings show that entrepreneurs' dark triad impacts mental simulations of prospective exchanges with co-founder candidates, which ultimately influences selection decisions. We extend exchange theory through a rule-based judgment view and show that mental simulations regarding prospective (i.e., affective, and instrumental) exchanges serve as important rule contents in relationship formation decisions.

ENT: **I am a Newcomer: Exploring the Micro-Process of Nascent Entrepreneurs Forming Entrepreneurial Teams**

Author: **Mohammad Moustafa Hawily**, *U. of Bologna*

Author: **Paola Giuri**, *Bologna U.*

Author: **Leonardo Corbo**, *U. of Bologna*

Author: **Marco Corsino**, *U. of Milan - Bicocca*

This research paper delves into inexperienced entrepreneurs' nuanced process of forming entrepreneurial teams (ETs), mainly focusing on nascent entrepreneurs taking the early steps in translating their ideas into a bigger picture. Despite the increasing population of nascent entrepreneurs, limited attention has been devoted to understanding the intricacies of those entrepreneurs initiating their first entrepreneurial teams, as most studies have focused on examining ET in established ventures. To address this research gap, we adopt an inductive approach by relying on the social network perspective to examine nascent entrepreneurs' actions in forming nine ETs. We discovered significant findings regarding nascent entrepreneurs' team formation. First, we identify distinct stages in their actions, with the phases varying based on the network context. Second, we show that skills and interpersonal relations are interlinked, and their consideration is influenced by the phase of ET formation and the network setting. Third, we unveil that nascent entrepreneurs employ either a systematic approach or a spontaneous, unplanned method when forming their entrepreneurial teams.

ENT: **Unveiling Team Dynamics: The Effect of the Four Horsemen in Co-Founder Conflicts on Team Satisfaction**

Author: **Jennifer Ettner**, *TUM School of Management, Technical U. of Munich*

Author: **Theresa Treffers**, *TUM School of Management, Technical U. of Munich*

Author: **Isabell Melanie Welp**, *Technical U. of Munich*

Understanding conflict behavior in new venture teams (NVTs) is crucial for identifying promising teams before objective measures of success become available. Despite its relevance, we lack empirical knowledge about conflict behavior in new venture teams and its effects on team satisfaction, a crucial antecedent of NVT exit. To address this research gap, we draw on insights from marriage research and examine the role of the "Four Horsemen" (criticism, contempt, defensiveness, and stonewalling) in NVT satisfaction. We tested our hypotheses in a quasi-experimental lab study involving 45 startups, measuring conflict behavior between co-founders in a lab setting and predicting team satisfaction through questionnaires. Our results reveal that criticism and contempt have a small negative impact on team satisfaction. The present study introduces a new perspective on conflict behavior in NVTs and helps identify promising teams based on their conflict behavior early in the entrepreneurial life cycle.

Session Moderator: **Shijian Wei**, *U. of Alabama*

ENT: **Innovative Education Methods to Enhance Entrepreneurial Self-Efficacy: A Phenomenological Analysis**      

Author: **Leng U Tseng**, *Curtin U.*
Author: **Paul Christopher Weber**, -
Author: **Louis Geneste**, *Curtin U.*
Author: **Pi-Shen Seet**, *Edith Cowan U.*

Extant literature establishes that entrepreneurship education develops entrepreneurial self-efficacy (ESE), the necessary and persistent self-belief that initiates new venture creation. However, current and innovative teaching methods in entrepreneurship courses that can develop ESE have not been fully explored and it is unclear which specific learning actions and pedagogy best develop ESE. This original research explores contemporary ESE-enhancing teaching methods based on in-depth, semi-structured interviews from 26 countries. A framework of research foci was used to create an interpretative (thematic) description of entrepreneurship education designs that develop ESE. The findings of this research improve our knowledge of how ESE is developed in tertiary students, illuminating which entrepreneurship education methods are more innovative and effective in enhancing ESE and therefore more likely to help develop graduate entrepreneurs. Practice-based implications of these findings include opening more opportunities for enhancing entrepreneurship education design. Whilst offering guidance on entrepreneurship training designed to increase ESE, the study also outlines future research directions to further understand and validate these discoveries in other settings and contexts.

ENT: **Design-Oriented Research in Entrepreneurship: A Methodological Review**   

Author: **Konstantin Remke**, *ESCP Business School*
Author: **Christoph Seckler**, *ESCP Business School*
Author: **Florian Lüdeke-Freund**, *ESCP Business School*

Entrepreneurship scholars increasingly leverage design-oriented research to combine real-world relevance with academic rigor in their work. Design-oriented research aims at developing scientifically sound solutions to how-to problems (i.e., design problems). Although design-oriented research has traction in the entrepreneurship domain, conducting and reviewing design-oriented work remains challenging as there are few established best practices. The present article provides a review of design-oriented research from published design-oriented entrepreneurship articles. The paper contributes by mapping the entrepreneurship field regarding design-oriented research, by showcasing best practices, and by outlining future research directions.

ENT: **Artificial Intelligence-based Business Model Innovation and the Creation and Capture of Firm Value** 

Author: **Shayan Rashidi**, *Lancaster U. Management School*
Author: **Olufunmilola Dada**, *Lancaster U. Management School*

In recent years, innovation based on artificial intelligence has attracted significant attention. One of the areas that can be innovated by artificial intelligence is the businesses model, which is a construct that indicates how firms create and capture value. In this regard, business model innovation based on artificial intelligence seems promising, as any innovation in this construct can directly affect value creation and value capture mechanisms. Different empirical studies have employed a variety of theoretical lenses to study how artificial intelligence-based businesses model innovation can help firms create and capture value. However, there has been no comprehensive efforts to synthesise the findings from extant literature. This study aims to conduct a systematic review of the empirical findings to understand how artificial intelligence-based businesses model innovation can help create and capture value in firms. Evidence from the review was utilised to develop a conceptual model which provides insights into different mechanisms of value creation and value capture enabled by artificial intelligence-based businesses model innovation and the strong connections between these mechanisms.

ENT: **Measuring Lean Startup: Instrument Development and Validation** 

Author: **Vanesa Barrales-Molina**, *Department of Management, School of Business, U. of Granada*
Author: **Marta Riquelme-Medina**, *School of Economics and Business, U. of Granada*
Author: **Sa'ad Sahili**, *Sa'ad Sahili*

Despite the widespread adoption of the Lean Startup Method among practitioners, the scientific literature lacks empirical validation of this methodology, primarily due to the absence of suitable measurement instruments for assessing its implementation. This study aims to fill this gap by developing and validating a measurement scale specifically designed for the lean startup method. Data collected from 114 European startups provide preliminary insights into the validation of this instrument. The results indicate that the 11-item instrument exhibits excellent psychometric properties, proving to be a reliable and valid measure for the lean startup method. The development of this instrument contributes to the existing literature, providing a robust foundation for further exploration of the methodology's dimensions and impact. Moreover, it facilitates the integration of practical applications into academic discourse. The study's findings also demonstrate that the application of the lean startup method in startups indeed leads to better outcomes, particularly in terms of new product implementation. Ultimately, the validated instrument serves as a valuable tool for future research, allowing for more in-depth investigations and providing an essential means for conducting quantitative empirical studies to systematically evaluate the overall effectiveness of the lean startup method.

International Entrepreneurship I

Session Moderator: **Lolita Emanuelle Walker**, -

ENT: **The Effects of Digital Transformation on Family SMEs Internationalization**

Author: **Christian Keen**, *U. Laval*
Author: **Mikel Alayo**, *U. of the Basque Country UPV/EHU*
Author: **Valeriano Sanchez-Famoso**, *U. of the Basque Country UPV/EHU*
Author: **Giovanna Campopiano**, *U. degli Studi di Bergamo*

Internationalization drives the growth of small and medium-sized (SMME) family firms and contributes to their long-term goals. However, these businesses face several liabilities in their internationalization efforts, and we claim that digital transformation can address those liabilities. Following transaction cost theory, this study aims to elucidate how digital transformation affects the internationalization process undertaken by small and medium-sized family firms. Digital transformation not only offers these firms increased opportunities in terms of information gathering, connectivity, and diminishing costs in foreign markets but also mitigates their risks. Our analysis centers on a sample of Spanish family SMEs and tests the hypothesized relationships using structural equation modeling. Our results suggest that digital transformation exerts a positive effect on family SMEs' internationalization, and that this relationship is positively moderated by multigenerational involvement and negatively by family involvement in managerial positions. This research offers several contributions to family firm theory and practice.

ENT: **Born Global or International New Ventures: Bridging the Gap Between Developed and Emerging Economies**

Author: **Marleth Judith Morales Marengo**, *U. of Alabama, Tuscaloosa*

Born Global [BG] phenomenon refers to firms that internationalize rapidly from inception, often prioritizing global markets over domestic ones. Critical indicators of BGs encompass the speed of international engagement, significance of global initiatives, and breadth of operations across geographies. Despite the rising influence of emerging economies in the global arena, BG research predominantly centers on developed economies, leaving a research void. We offer an in-depth review of this scholarship, with a comprehensive analysis of 149 BG studies over three decades, revealing an underrepresentation in premier journals, geographical biases, and a need for thematic unity. The European context dominates the research, primarily anchored in the International New Venture Framework, followed by Internationalization Theory, with a conspicuous absence of insights from emerging economies. This paper addresses this breach, emphasizing the unique challenges BGs encounter in developing nations, such as limited information, expertise, regulatory barriers, and financial constraints. The study illuminates the pressing need for a more inclusive and multidisciplinary approach to BG research, particularly in the context of emerging markets. By cataloging and critically evaluating extant literature, we aim to refine the BG research narrative, offering a foundation for future scholarly endeavors in entrepreneurship, international business, and related disciplines.

ENT: **Trust Formation in New Ventures' Cross-Border Stakeholder Relationships - Evidence from South Africa**

Author: **Sönke Mestwerdt**, *ESCP Business School*
Author: **Nathalie Burkert**, *ESCP Business School*
Author: **Alisa Sydow**, *ESCP Business School*
Author: **Matthias Mrozewski**, *ESCP Business School*

Entrepreneurship scholars have recently recognized that stakeholder and entrepreneurship theory have developed in complete isolation from each other, which has led to the field of entrepreneurship research being too inward-looking. Therefore, our study aims to contribute to the integration of both domains by investigating one of the most important but least researched concepts in stakeholder and entrepreneurship theory – trust. By choosing a dual-sided approach – through the inclusion of the entrepreneur's and stakeholders perspective – our qualitative study analyzes the role of trust in initiating new cross-border stakeholder relationships. Our findings show that new ventures and their potential new stakeholders face unique challenges compared to established companies. Interestingly, contrary to previous assumptions, the key challenges identified are rather context-related than interpersonal. More specifically, we find that interpersonal trust is needed to substitute for institutional trust. In addition, we were able to isolate three practices that can be applied to overcome these challenges in forming trusting relationships. Finally, our study highlights the significant weight of intentionality in trust formation in stakeholder relationships of new ventures.

ENT: **International Entrepreneurship: A Bibliometric Review and Research Agenda**

Author: **Lantao Cao**, *Stevens Institute of Technology*
Author: **Sibel Ozgen**, *Stevens Institute of Technology*

This study uses bibliometric analyses to review and integrate the literature on international entrepreneurship (IE) over the past three decades. Drawing on 536 publications from 1989 to 2023 and incorporating bibliometric data from three distinct databases, findings outline the temporal changes in research hotspots within the IE field. Findings illustrate the developmental trajectory of the field by analyzing the annual number of publications and providing growth dynamics over time. And also showcases the collaborative relationships among different countries constructing a network of countries. Additionally, the study illustrates the social structure of the IE field through detailed analyses of co-authorship, offering insights into the collaborative trends of different scholars. The most important part of this research delves into the thematic analysis of keywords. Combined with the firm life cycle theory, we have identified strategy and performance evaluation as two key themes in IE, and conducted a systematic summary of the entire development process. Additionally, the potential crisis stages were briefly discussed based on existing criticisms of IE. Overall, this study offers valuable perspectives on the historical development of the field of IE and provides meaningful implications for domain evolution, setting a foundation for future scholarly endeavors in this dynamic field.

Corporate Venture Capital

Session Moderator: **Michael Klitzka**, *Technische U., Darmstadt*

ENT: **Do CVCs Add Value to IPO Ventures? Evidence from the High-Tech Manufacturing Industry**

Author: **Michael Klitzka**, *Technische U., Darmstadt*
Author: **Dirk Schiereck**, *Technische U. Darmstadt*

In this study, we show that corporate venture capital (CVC) investors add value to their portfolio ventures despite potential adverse selection concerns during the Initial Public Offering (IPO). We examine value creation by analyzing the effect of CVC-backing on IPO valuation and underpricing. Based on our data sample of 2,391 IPOs of ventures from the high-tech manufacturing industry between 2010 and 2020, we find empirical evidence that CVC-backed ventures receive higher valuations than traditional VC (TV) -backed or non-VC-backed ventures. However, we find no evidence for differences in underpricing. Further, post-hoc analyses reveal that CVC-backed ventures hire more prestigious underwriters at more favorable conditions during IPOs.

ENT: **Corporate Venture Capital Programs: A Strategic Response to Industry Tournaments**

Author: **Othman Alolah**, *Al Imam Mohammad Ibn Saud Islamic U. (IMSU)*
Author: **Fatima Shuwaikh**, *Leonard de Vinci Business School*

This paper examines the complex interaction between competitive dynamics among industry executives and firms' strategic choices to develop Corporate Venture Capital (CVC) programs. Specifically, we examine the impact of industry tournament incentives (ITIs) on firms' decisions to participate in CVC projects, taking into account the wider context of innovation and growth. The findings suggest a positive correlation between ITIs and the likelihood of firms making investments through CVC programs. The relationship is particularly pronounced for young CEOs and firms in industries that prioritize innovation. We corroborate our findings using an instrumental variable approach and by examining the impact of the staggered rejection of the Inevitable Disclosure Doctrine (IDD) on CVC investments. Our work provides insight into how CEO motivations and corporate innovation strategies interact.

ENT: **Ventures' Technological Redeployability and Corporate Venture Capital Syndication Decisions**

Author: **Petrit Ademi**, *U. of St. Gallen (HSG)*
Author: **Monika Schuhmacher**, *Justus-Liebig U. Giessen*
Author: **Andrew Zacharakis**, *Babson College*

We propose a conceptual model of technological redeployability as a source of inter-firm partnering, which we test in the context of corporate venture capital (CVC) manager evaluations of ventures for syndication decisions. Drawing upon a decision-making experiment, we find that CVC managers are more willing to syndicate with other CVC investors when ventures possess technology that is readily redeployable, and that this effect is mediated by venture investment attractiveness. Additionally, we examine differences in syndication decisions based on the position and prior job experiences of CVC managers. We advance theory on resource redeployment and inter-firm partnering, while providing unique insights into information processing and CVC syndication behavior through real-time experimental data.

ENT: **Boundary Work in CVC: How Boundary Work Enables the Strategic Use of CVC to Create and Unlock Value**

Author: **Ezra Carlson**, *U. of Hertfordshire*
Author: **Mehdi Safavi**, *Cranfield School of Management*

In this article, we build on and contribute to the literature on Corporate Venture Capital (CVC) through the lens of Boundary Work Theory. Analyzing interview data from several successful CVCs, we uncover boundary works (micro-strategies) taking place at and through organizational boundaries that enable collaboration amongst CVC stakeholders and balance competitive and collaborative forces within and across the organizational boundaries. CVCs are more complex than traditional institutional venture capitals (VCs) as they seek to maximize both strategic and financial returns. While extant research has shown that the strategic use of CVC creates value for the parent firm, none have explored how successful CVCs do this at and through the boundaries amongst different parties involved. We identify two overarching mechanisms, one at the boundaries that enable collaboration and the other through the boundaries that simultaneously bring certain CVC activities together whilst keeping others apart to enable collective action. Our findings portray a process model comprised of eleven micro-strategies that successful CVCs use to create and unlock value.

ENT: **Building Resilient Entrepreneurs! An Action-Driven Experimental Insight into IEO Training**  

Author: **Ahmad Raza Bilal**, *U. of Sargodha Pakistan*

Author: **Tehreem Fatima**, *Lahore Business School The U. of Lahore Sargodha Campus Pakistan*

Author: **Muhammad Kashif Imran**, *The Islamia U. of Bahawalpur, Pakistan*

Author: **Ambreen Sarwar**, *Virtual U. of Pakistan*

Author: **Sobia Shabeer**, *U. of Gujrat, Pakistan*

Author: **Sobia Nasir**, *Superior U. Lahore, Pakistan*

The focus of entrepreneurial psychology is on the intricate interplay between actions and processes. Concerning psychological training for entrepreneurs, there is always a keen interest in knowing how these training programs yield outcomes. This study sheds light on the individual entrepreneurial orientation (IEO) training program and how it improves the career resilience of small business owners. The tenet of Action Regulation Theory (ART) was used to explain the sequential mediating role of IEO behaviour and career adaptability. A randomized controlled experiment was carried out in four waves (training group=265, control group=281) in which 546 small business owners were recruited from Punjab, Pakistan. The data analysis was done via ANCOVAs and serial mediation was tested through PROCESS Model 6. The findings unraveled that IEO training enhances entrepreneurial career resilience enhancing behavior and career adaptability. Thus, we highlighted the career-related outcomes of IEO training based on action action-driven perspective.

ENT: **Better Shot?: Impact of Gender Quota on Female Entrepreneurship, Evidence From Germany**  

Author: **Kyung Eun Park**, *U. of Mannheim*

Author: **Baris Istipliler**, *U. of Mannheim, Business School*

In response to increasing discussions about gender inequality in corporate boardrooms, often cited as a potential root cause for disparities at other levels, many countries are now actively considering or implementing mandatory gender quotas in boardrooms. This has sparked research into the effects of such policies, primarily focusing on their impact within organizations. Our paper, however, explores the broader societal implications, specifically examining how gender quotas influence women's career choices, particularly their decision to pursue entrepreneurship. Incorporating the mobility perspective of entrepreneurship, we hypothesize that gender quotas may shift women's perceptions of career advancement opportunities within organizations, particularly for highly qualified women, and this could potentially discourage them from venturing into entrepreneurship. By analyzing data from Germany, our findings indicate that women with higher education, especially those with STEM backgrounds, are less likely to start their own businesses following the implementation of gender quotas.

ENT: **Building MVPs in a Highly Regulated Environment: Choices and Trade-offs** 

Author: **Suho Han**, *Syracuse U.*

The Lean Startup method advises new ventures to prioritize early customers as they build their first products. However, it remains less clear how this approach works in highly regulated environments, where multiple actors, beyond early customers, have significant influence determining acceptable product attributes and business models. To explore how new ventures build their first products in a highly regulated environment, we use a comparative case study of two fintech ventures entering the Australian banking industry. We find that instead of closely following the Lean Startup, the ventures chose paths that exhibited variation in overlap with only its "lean" resource ethos. One venture started close to a "lean" ethos by renting their assets, yet surprisingly, this led to limited learning and constraints that foreclosed strategic options. In contrast, a second venture began more distant to a "lean" ethos by building their assets. Despite high costs and early constraints, this path provided growth opportunities and greater strategic flexibility. Our study contributes to research on Lean Startup by demonstrating the alternative ways that a "lean" approach emerges in multi-actor environments, and to research on entrepreneurship in regulated environments, by highlighting the role of regulators in influencing new ventures' early product decisions.

ENT: **Beyond Naming Patterns of Entrepreneurs in the US Biotechnology: The Effect of Industry Life Cycle** 

Author: **Irina Stoyneva**, *Thomas Jefferson U.*

In this paper, I explore patterns of name choices of entrepreneurial firms in the field of biotechnology over a period of 20 years. Drawing on the population ecology and rational selection perspectives I propose a model that explores the impact of industry life cycle on the name choice of entrepreneurial firms. I test the model on 4205 start-ups in the field of biotechnology from 1999 till 2018.

Session Moderator: **Rebecca Arwine**, *U. of Tennessee*

ENT: **Phoenix Rising: The Owner's Journey of Family Business Sale and Revival Through Ownership Competence**

Author: **Domenico Appio**, *Politecnico di Milano*
Author: **Josip Kotlar**, *Politecnico di Milano School of Management*
Author: **Luca Manelli**, *Politecnico di Milano*
Author: **Francesco Paolo Appio**, *Paris School of Business*

This study delves into the nuanced interplay between the ownership competencies of family business owners and the multifaceted dynamics surrounding the sale of their business. It challenges the existing literature by focusing on the less-explored post-sale phase, a period critical for former owners, their families, and stakeholders. The research utilizes a multiple-case study design, examining seven multi-generational business families in Italy and Denmark, to understand how family businesses navigate the complexities of sale events. The study builds upon the ownership competence theory, examining how these competencies—matching, governance, and timing—are applied during and after the sale of a family business. It investigates the evolution of family business owners' roles, from operational to strategic, through the lenses of psychological disengagement and strategic decision-making during critical transitions. The findings reveal a nuanced characterization of ownership competencies in family businesses and demonstrate how these competencies are strategically employed during significant events like the sale of the business. This research contributes to the understanding of family business dynamics, particularly in managing transition events, and offers insights into the strategic application of ownership competencies in navigating these complex scenarios.

ENT: **Place and Pace: Civic Wealth Creation and Degradation in Tourism Towns**

Author: **Rebecca Arwine**, *U. of Tennessee*
Author: **G. T. Lumpkin**, *U. of Tennessee, Knoxville*

Drawing on a comparative case focused on two communities stationed at entrances to the Great Smoky Mountains National Park, the most visited national park in the US, we empirically test and extend theory on civic wealth creation (CWC), which involves the collaboration of multiple independent stakeholder groups to generate not only economic but also social and communal benefits for communities. Specifically, we trace the historical development of Gatlinburg, perhaps the most famous gateway community in the US, as compared to its unsung neighbor to better understand how interactions between the three independent stakeholder groups considered in CWC (enterprises, regimes of support, and community members), produce such stark differences in development over time, and with what effect on the types and amount of wealth created. We find that the alignment of stakeholder goals and the distribution of power across stakeholders accounts for differences in how civic wealth is created, sustained, or diminished over time. As such, this study offers an empirical advancement of civic wealth creation by identifying important mechanisms that drive the creation of different types of wealth for communities. In doing so, we examine how diverse stakeholders leverage purpose, policy, and entrepreneurship to create and distribute value for communities.

ENT: **Problematising Research on Social Entrepreneurial Crowdfunding: Toward a Processual Perspective**

Author: **Maria Riniker**, *Bern U. of Applied Sciences*

This review problematizes current research on social entrepreneurial crowdfunding based on its underlying assumptions and potential blind spots. By introducing the Communicative Constitution of Organizations (CCO) theory as an alternative approach, directions for prospective research are suggested. Specifically, based on a critical analysis of the research literature on social entrepreneurial crowdfunding, four areas of concern are discussed: 1) an exaggerated belief in the potential of crowdfunding for social entrepreneurs, 2) blind spots created by the use of publicly available data, 3) an individualistic focus, and 4) a variable-centric perspective that neglects the relational nature of the phenomenon. Drawing upon CCO theory, this problematization offers an alternative perspective to bring into view what is typically cast in the shadow in prior research, notably the processual nature of crowdfunding campaigns, the constitutive role of communicative events, the role of non-human agency, and the becoming nature of social enterprises and social entrepreneurs as processual entities. The review contributes to extant research by stimulating a holistic reevaluation of social entrepreneurial crowdfunding scholarship, urging scholars to apply theoretical perspectives and methodologies capable of capturing the underlying dynamics of the phenomenon.

ENT: **Pivoting vs Perseverance: A Conceptual Study Explaining the Cognitive and Emotional Foundations**

Author: **Sukanya Roy**, *Indian Institute of Management, Bangalore*

In this research, we construct a conceptual framework that integrates the influence of dispositional affect and entrepreneurial cognition, with a particular emphasis on entrepreneurial alertness, in the context of entrepreneurial pivoting. Furthermore, our investigation delves into the effects of entrepreneurial overconfidence, self-serving bias, entrepreneurial grit, and impulsiveness on the process of pivoting. We present an empirically testable model that contributes to the understanding of emotions and cognition within the emerging concept of pivoting in entrepreneurship.

Promoting Patient Engagement: Management & Input

Session Moderator: **Mengzhen Guo**, *Nankai U., China*

HCM: Will Patient Gratitude Expression Promote Voice Behavior of Healthcare Workers?

Author: **Mengzhen Guo**, *Nankai U., China*

Author: **Mingxuan Xin**, *Nankai U., China*

Author: **Yu Tang**, *Nankai U., China*

Author: **Changyi Yi**, *Nankai U., China*

Author: **Quan Li**, *Nankai U., China*

Based on the emotions as social information (EASI) theory and self-determination theory, we examined the impact of patient gratitude expression on healthcare workers' voice behavior and tried to explore the mechanisms and boundary conditions underlying it. The results from a multi-wave and multi-source questionnaire survey showed that, patient gratitude expression had a positive impact on healthcare workers' voice behavior, and psychological need fulfillment mediated such a relationship. Moreover, gender moderated the relationship between patient gratitude expression and healthcare workers' psychological need fulfillment, such that a stronger effect was observed among female healthcare workers. We expanded the current literature by revealing how patient gratitude expression, as an external organizational factor, influences healthcare workers' voice behavior. Meanwhile, we also provide practical insights for healthcare system managers by emphasizing the importance of patient gratitude expression and enhancing healthcare workers' voice behavior.

HCM: Mo-dalities, Mo Problems: Impacts of Provider Modality Switching in Hybrid Outpatient Clinics

Author: **Mitchell Tang**, *Harvard Business School*

Author: **A Jay Holmgren**, *U. of California, San Francisco*

Author: **Robert S. Huckman**, *Harvard Business School*

Author: **Maximilian Julius Pany**, *Harvard Business School*

Author: **J. Michael McWilliams**, *Harvard Medical School*

Hybrid outpatient clinics offering both in-person and telemedicine visits were rare prior to the COVID-19 pandemic. Today, they are the norm. Yet, despite their ubiquity, there is still uncertainty regarding the right way of organizing care under this new paradigm. The need for providers to juggle two distinct care modalities in the same clinic day produces frictions unique to hybrid practices. In particular, transitions from one visit type immediately into another can hamper provider and patient experience. In addition to provider task switching costs, there may be additional operational incompatibilities between the two care modes. Notably, in-person visits often run long, while telemedicine visits are expected to start on time; thus, switches from in-person to telemedicine visits in particular may result in delayed starts and mismatched patient expectations. We investigate the impacts of modality switching for primary care practices at a large US academic health system where nearly 10% of visits from 2021-2023 were modality switches. We observe large impacts specifically for in-person to telemedicine switches. Telemedicine visits occurring immediately after in-person visits have 2.7-5.3 percentage point higher patient no-show rates (25-44% increase) and lower patient-reported provider ratings, consistent with our hypotheses of delayed visit starts and mismatched patient expectations.

HCM: How Patients and their Relatives Coordinate (Inter-) Professional Work in Home Care

Author: **Marilena Diel**, *U. of Goettingen*

Author: **Indre Maurer**, *U. of Goettingen*

Author: **Clarissa E. Weber**, *Queen Mary U. of London*

Home care is typically characterized by a high need for coordinating the interdependent work of various healthcare professionals. However, there are often significant barriers for coordination among professionals, for instance, due to limited communication as a consequence of time constraints, spatially separated actors, and non-integrated information- and communication systems. Our study draws on the literature on patient involvement and coordination in healthcare to explore how patients and their relatives actively coordinate professional work in home care. We examine this question inductively based on multiple best-practice cases in the context of home care in Germany. Our findings reveal two distinct, yet equifinal, approaches that patients and their relatives apply when successfully coordinating home care: management by initial configuration and management by continuous synchronization. Both approaches comprise efforts to (1) supervise professionals' work, (2) manage information and professionals' information exchange, and (3) claim and exercise decision-making rights—yet these efforts differ considerably across the two approaches. We contribute to the understanding of patient involvement and coordination of healthcare in home care by unpacking the nature and dynamics of patients' active self-involvement in the coordination of professional work.

Author: **Larry R. Hearld**, *U. of Alabama, Birmingham*

Author: **Kristine Ria Hearld**, *U. of Alabama at Birmingham*

Author: **J'Aime Jennings**, *U. of Alabama at Birmingham*

Author: **Seung-Yup Joshua Lee**, *U. of Alabama, Birmingham*

The purpose of this study was to examine whether and under what conditions the presence of patient and family advisory boards (PFAB) among acute care community hospitals are associated with screening for and programs to address patient social needs. The study used a secondary data set derived from the American Hospital Association's 2020 and 2021 Annual Surveys. Our primary analysis used one multinomial regression model and two negative binomial regression models to assess the relationship between the presence/absence of a PFAB and the likelihood of offering and the number of areas addressed by social needs screening programs (e.g., housing, transportation). Secondary analysis included interaction terms between PFAB and community characteristics indicative of greater health (county-level health status) and social need (county-level social vulnerability). More than half (55.9%) of all responding hospitals reported having a PFAB in 2020 (55.9%) and 2021 (52.7%). Nearly 90% of the study hospitals reported doing some type of social needs screening (46.1% for all patients, 40.4% for some patients). The presence of a PFAB among hospitals was not significantly associated with patient social needs screening; however, hospitals with a PFAB were associated with more programs to address social needs (IRR = 1.05, 95% CI = 1.01, 1.10) and more types of partners to address these needs (IRR = 1.06, 95% CI = 1.03, 1.09). Hospitals with a PFAB that were located in geographic areas with higher social vulnerability also reported more programs to address social needs (IRR = 1.23, 95% CI = 1.04, 1.46). Community hospitals with a PFAB have more robust programs and partnerships to address patient social needs, particularly in high social need areas; however, additional approaches may be needed to identify patients who may benefit from these programs and partnerships.

Stress, Burnout, and Coping: Addressing Modern Work Challenges

Session Moderator: **Chidiebere Ogbonnaya**, *King's College London*

HR: **Engagement and Burnout as Psychological Determinants of Perceived HRM Practices**

Author: **Chidiebere Ogbonnaya**, *King's College London*
Author: **Jake Messersmith**, *U. of Nebraska, Lincoln*

The field of strategic human resource management (HRM) is shifting away from relying solely on managerial perspectives and towards taking employee perceptions of HRM practices into account. In this approach, employees are not passive recipients of HRM policies, but rather active interpreters whose perceptions are critical for creating high-performing workplaces. However, there are still unresolved issues regarding the psychological factors that influence how employees assess the effectiveness of HRM practices. Building on the affect infusion model, we examine the impact of employee engagement and burnout on perceived HRM practices. In two separate studies based on a vignette experiment and three-wave data, we show that engagement increases attentional focusing (i.e., the cognitive ability to focus one's attention on desired tasks and outcomes, while ignoring other distractions), leading to positive perceptions of HRM effectiveness. However, burnout has the opposite effect. Furthermore, we show that employee intention to stay serves as a buffer against the negative effects of burnout. We discuss the theoretical and practical implications of these findings.

HR: **What Can Recipients Do? Learning and Mindfulness as Feedback-Receiving Strategies**

Author: **Meng Zhong**, *Xi'an Jiaotong U.*
Author: **Avraham N. Kluger**, *Hebrew U. of Jerusalem*

While existing feedback research mainly focuses on how to give feedback effectively, there are limited implications for feedback recipients regarding what they can do to benefit from others' feedback, especially negative feedback. Drawing upon the literature of personal resources and feedback intervention theory, we identified learning something new and acquiring mindfulness states as two actionable strategies that can generate different types of resources, thus having divergent roles in facilitating recipients to work harder and work smarter. Two event-contingent studies were conducted. Study 1 of 201 academics' review feedback-receiving events found that mindfulness negatively affects academics' post-feedback procrastination, and negative review feedback amplifies the positive impact of mindfulness on creativity. Interestingly, negative feedback weakens the negative impact of learning activities on procrastination. Study 2 of 557 performance review events found that learning activities can activate both task and meta processes of employees, whereas mindfulness only activates task processes while inhibiting meta processes. Thus, learning and mindfulness have different impacts on procrastination and creativity. Negative feedback amplifies the indirect effects of learning activities on two outcomes via both task and meta processes. This research contributes to the feedback literature by identifying the actionable feedback-receiving strategies and revealing the divergent mechanisms underlying different strategies.

HR: **A Continuous Performance Management Approach: Effects of Daily Performance Management Behaviors**

Author: **Xiyang Zhang**, *College of Management and Economics, Tianjin U.*
Author: **Jing Qian**, *Beijing Normal U.*
Author: **Hui Liu**, *Macau University of Science and Technology*
Author: **Xin Wang**, *College of Management and Economics, Tianjin U.*

Building on the trend of performance management (PM) moving towards more frequent and the research gap for the effectiveness of the modern form of PM, we adopt an experience sampling method to study daily PM behaviors continuously for two weeks. Our theoretical model was tested using 906 observations from 97 full-time employees, providing initial evidence for daily PM's effectiveness in increasing employee next-day job attitudes and job performance. Moreover, we also revealed the relationship-based mechanism underlying the effects of daily PM. Specifically, our findings suggest that daily PM behaviors increase employee next-day job satisfaction, job engagement, and job performance because PM behaviors make employees perceive a higher leader-member exchange relationship. Importantly, we found the boundary conditions for PM behaviors in increasing this exchange relationship quality. The relationship was weaker when work stressors (i.e., workload and cognitive stressors) were high rather than low. It supports our view of daily PM as a social interaction process that would increase strain for employees rather than provide resources for relieving the stress. We discuss theoretical and practical implications, limitations, and future research directions.

HR: **Shame and Hostility as Mediators Between Financial Insecurity and Work Outcomes**

Author: **Imke Dirkx**, *Vrije U. Brussel (VUB)*
Author: **Serge P. Da Motta Veiga**, *NEOMA Business School*
Author: **Bert Schreurs**, *Vrije U. Brussel*

Financial insecurity forms a big part of employees' life. Even though its origin can often be found in the private environment, employees take their financial insecurity with them to work, where it affects the organizational outcomes. Financial insecurity instigates strong emotional responses, which in turn lead to specific behavioral reactions. Drawing on Lazarus' appraisal theory of emotion, the current study attempts to investigate the emotional mechanisms that underlie the consequences of financial insecurity at the moment it occurs. Shame and hostility were included as mediators, due to their clear theoretical distinctions, with shame internalizing blame and hostility externalizing it. We adopted a within-person design to examine how shame and hostility mediated the effects of financial insecurity on work effort and counterproductive work behavior. Bi-weekly diary data was collected over three time points from 427 employees ($N_{within} = 1111$). We analyzed the data using multilevel path analysis and multilevel mediation analysis in Mplus 8.7. As predicted, we found that shame would mediate the effects on work effort, and we found limited evidence that hostility mediated the effects of financial insecurity on counterproductive work behavior. We discuss implications for theory, research, and practice.

Author: **Yongjia Duan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Hui-hua Liu**, *Shanghai Jiao Tong U.*

Organizations benefit much from elder worker's knowledge transfer to the younger generations. However, elder workers hesitantly share their knowledge to younger coworkers in practice. Drawing on Conservative of Resource theory and a stereotype threat framework, this research investigated the detrimental effects of age-based stereotype threat in organizational knowledge management. We built a moderated mediation model in which age-based stereotype threat may generate elder employee's knowledge hiding behavior through increased job insecurity, while leader-member exchange could mitigate these effects. Results of a time-lagged study conducted in China with 219 elder workers supported our hypotheses. We highlighted the negative impact of age-based stereotype threat on organizational knowledge transfer and suggested organizations take actions to create an age-inclusive environment for elder worker's intergenerational knowledge transfer.

Ethics and Effectiveness: Navigating HR's Role in Modern Corporations

Session Moderator: **Sitong Liu**, *Shandong U.*

HR: **When Ethics Matters: Impact of Socially Responsible Human Resource Management on Unethical Behavior**

Author: **Sitong Liu**, *Shandong U.*

Author: **Li Cheng**, *Shandong U.*

Author: **Mingyu Yan**, *School of Management, Shandong U.*

Author: **Sidi Sui**, *School of Management, Shandong U.*

Drawing on moral self-regulation theory, we argue that socially responsible human resource management negatively impacts employees' unethical behavior through the decrease of moral disengagement. We additionally contend that the impact becomes stronger as leaders exhibit a higher level of ethical leadership because both ethical leaders and socially responsible human resource management could create an organizational context that emphasizes being accountable for immoral conduct. A survey consisted of 231 employees supports the proposed model and hypotheses. Our research contributes to the theoretical and practical implications for socially responsible human resource management and unethical behavior literature, and we also discuss the limitations and future research directions.

HR: **Sustainable Human Resource Management Practices: Scale Development and Validation**

Author: **Shuo Yuan**, *U. of Shandong*

Author: **Junyun Jia**, *Shandong U.*

Author: **Guiyao Tang**, *Shandong U.*

Although calls for sustainable human resource management (HRM) are growing, it remains unclear which factors comprise the practices of sustainable HRM and how sustainable HRM advances individual sustainable career success. This study aims to propose and validate an instrument to measure sustainable HRM. In Study 1, we create and validate a sustainable HRM scale that captures three dimensions: environmental rationality, social rationality, and economic rationality, as well as offer a theoretical advancement to the sustainable HRM literature. Using data across four phases ($n = 618$), we establish factorial, convergent, and predictive validities of the sustainable HRM measurement. In Study 2 ($n = 162$), we test a theoretical model of how sustainable HRM influences individual career sustainability. Specifically, sustainable HRM correlates positively with perceived career success. Job crafting mediates the relationship between sustainable HRM and individual career success, and individual career adaptability moderates the mediating role of job crafting. Implications and future research are discussed.

HR: **A Longitudinal and Quasi-Experimental Investigation of Green Human Resource Effects**

Author: **Carlos Gabriel Colin Flores**, *EGADE Business School, Tecnológico de Monterrey*

Author: **Juan I. Sanchez**, *FIU-EGADE Tec Monterrey*

A preponderance of prior studies documenting the empirical association between Green Human Resource Management (GHRM) and Employee Green Behavior (EGB) suffers from limitations on their research design, which question the internal validity of this presumed cause-and-effect linkage. First, virtually all studies rely on perceptual measures of EGB, which are potentially biased particularly when self-reported by the employees themselves. Second, although it is often argued that GHRM effects are transmitted through changes in employees' internal motivation, cross-sectional designs fail to assess the direction and the evolution of this process. We hypothesized that, in emerging markets with high rates of unemployment and precarious employment, GHRM effects stem at least partly from the external motivation to comply with new job obligations and not only from the internal motivation triggered by new values. A total of 160 workers of a logistics company in an emerging market participated in a four-wave quasi-experiment. Half of them located in the south distribution center were assigned to the control group, whereas the half in the north center was assigned to the treatment group. We gathered perceptual and non-perceptual measures of EGB (e.g., CO2 emissions) over a period of 12 months with a separation of four months between waves. A mixed (i.e., measurement waves nested in participants) linear model demonstrated statistically significant GHRM effects on EGB measures. However, GHRM effects were not fully mediated by employee perceptions, but had direct effects on EGB, particularly among older workers who possibly perceived few employment alternatives.

HR: **The Bright Side of Having Pregnant Women in the Workplace**

Author: **Puchu Zhao**, *School of Business, Sun Yat-sen U.*

Author: **Xin Qin**, *Sun Yat-sen Business School, Sun Yat-sen U.*

In the modern workplace, pregnant women are often discriminated against by their employers due to their lower performance compared to non-pregnant employees. While the prevailing notion assumes that pregnant women make less performance contribution to organizations, this research challenges this notion by suggesting that pregnant women can make unique contributions to enhance organization ethics. Specifically, drawing upon social cognition theory, we posit that pregnant women serve as "moral beacons" in the workplace, such that their presence constitutes a guiding and illuminating force, resulting in employees who work with them exhibiting higher moral awareness and in turn engage in less unethical behavior. Four studies conducted across the U.S. and China supported our hypotheses. In sum, this research supports an inspiring notion that retaining pregnant women in the workplace goes beyond merely achieving gender equality goal and offers substantial benefits for enhancing organizational ethics as well.

Migration and International Entrepreneurship

Session Moderator: **Veselina Petrova Stoyanova**, *U. of Birmingham*

IM: Tech-Driven Inclusivity: AI Strategies for Migrant Entrepreneurs' Embeddedness in the Host Country

Author: **Veselina Petrova Stoyanova**, *U. of Birmingham*

Author: **Stoyan Stoyanov**, *Heriot Watt U.*

This research explores how Generative Pretrained Transformer (GPT) Artificial Intelligence (AI) technology is leveraged by migrant entrepreneurs to establish virtual embeddedness, consequently reducing liabilities of foreignness in the host country. Drawing upon a qualitative interpretivist approach, semi-structured interviews were conducted with 20 migrant entrepreneurs actively using GPT AI in the United Kingdom. Thematic analysis of the collected data revealed that GPT AI technology serves as a critical tool for overcoming language and cultural barriers, understanding business norms, and engaging with local networks. The use of this technology significantly enhanced the participants' abilities to connect and collaborate with diverse business stakeholders, thereby reducing their liabilities of foreignness. This study makes a significant contribution to the theoretical understanding of the role of AI in migrant entrepreneurship and offers practical implications for policymakers and practitioners in developing supportive programs and strategies for migrant entrepreneurs. It underscores the potential of AI as a tool of empowerment for marginalized business communities and illuminates new avenues for organizational inclusivity and diversity.

IM: How and When do Forced Migrant Business Owners Perform Well in Their Host Countries in the Long Run?

Author: **Eren Akkan**, *Kedge Business School*

Author: **Burcin Hatipoglu**, *U. of New South Wales*

Author: **Kerem Gurses**, *La Salle, U. Ramon Llull*

While forced migrants' (FM) businesses can have a substantial impact on their host countries, we know little about how FMs surmount their precarious states and succeed in their businesses in the long run. Adopting a self-anchoring perspective, we suggest that two prominent experiential factors, the experience of discrimination and local language mastery, influence FMs' venture performance via host country identity. Conceptualizing promptness of formal protection as an immediate holding environment, we suggest that having acquired formal protection at the time of entry into a host country (as opposed to later in time) alleviates the adverse impacts of such experiential factors on venture performance. Using quantitative data from Syrian FMs in Turkey, we find evidence towards most of our hypotheses. Our study contributes to migrant entrepreneurship and international management literatures by providing a more comprehensive perspective of how FM businesses perform well in a host country.

IM: Overcoming Barriers of SME Internationalization – The Role of Migrant Employees Informal Networks

Author: **Fadi Alsarhan**, *ISC Paris Business School*

Author: **Sabine Bacouel-Jentjens**, *ISC Paris Business School*

Author: **Sven Horak**, *St. John's U.*

Author: **Lena Zander**, *Uppsala U.*

The role migrant employees can play for internationalization of Small and Medium-sized Enterprises (SMEs) remains largely unrecognized due to a lack of understanding of emerging market institutions and related competencies required. Drawing on a series of interviews with Middle East and North African (MENA) region migrant employees working for French SMEs, we explore the distinct characteristics of informal networks, and the pivotal role they play for French SMEs venturing into the MENA region. Utilizing a conceptual frame connecting insights from informal network theory and the liability of foreignness discourse we find that migrant employee's tacit knowledge on informal network management in their country of origin can serve as an accelerator, facilitator, and sustainer of SME internationalization activities. Migrant employees can in contrast to expatriate managers integrate into local informal networks and act as boundary spanners, due to their understanding of informal institutions, informal practices, knowledge on relationship management and language skills. This research advances knowledge on SME internationalization and informal networking and suggests propositions, instrumental and directional for generating deeper knowledge. From a practical viewpoint, it creates awareness on how to utilize the largely neglected but distinct skillset and competencies migrant employees can contribute to SME internationalization.

IM: Immigrant CEOs' Cultural Distances and Firms' Corporate Social (Ir) Responsibility

Author: **Xuefei Yu**, *U. of Hong Kong*

Author: **Yi Tang**, *U. of Hong Kong*

Anchored by social identity theory, we investigate the impact of immigrant CEOs' cultural distance on firms' corporate social responsibility (CSR) and corporate social irresponsibility (CSI). We postulate that an immigrant CEO will perceive the liabilities of outsidership resulting from the cultural distance between his or her country of origin and the country he or she currently resides. To strengthen this social identity, the immigrant CEO from a culturally remote country will show more CSR while avoid CSI than another immigrant CEO from a culturally proximate country. We furthermore examine two contingencies that may alter this effect, including CEO racial minority status and firm reputation. Results based on a sample of U.S. firms led by immigrant CEOs support our hypotheses.

IM Division Best Paper in International Corporate Governance Award

Session Moderator: **Jaeyong Song**, *Seoul National U.*

Award Winners will be announced at the IM Division Awards and Recognition session.

IM: **Board Gender Diversity Reform and Corporate Carbon Emissions**

Author: **Raul Barroso**, *IESEG School of Management*
Author: **Tinghua Duan**, *IESEG School of Management (LEM-CNRS 9221)*
Author: **Siyue Guo**, *IESEG School of Management*
Author: **Oskar Kowalewski**, *IESEG School of Management (LEM-CNRS 9221)*

We examine the impact of board gender diversity on corporate carbon emissions using data from 50 countries. Employing a difference-in-differences-in-differences (DiDiD) methodology based on national reforms related to board gender diversity, we find that firms with more female directors reduce their corporate carbon emissions following gender diversity reforms. This reduction is more pronounced when the reform is legislative. Culture also plays a role as emissions are further reduced when legislative reforms are implemented in countries with a collectivistic culture. Finally, we illustrate the combined benefits of aligning climate legislation with enhanced board representation, which leads to a greater reduction in carbon emissions following the Paris Agreement.

IM: **Boosting Domestic and International Joint Ventures' Growth Through Ultimate Owners' Goal Congruence (WITHDRAWN)**

Author: **Maria Cristina Sestu**, *U. of Groningen, Faculty of Economics and Business*

Joint ventures (JV) perform poorly or fail for a number of reasons, an important one being the lack of goal congruence between JV partners. We explore this from the perspective of the ultimate owners of joint ventures by integrating two well-established streams of literature: the role of goal congruence and the influence of ultimate owners type. We hypothesize that partners' ultimate owners of the same type will have similar goals and visions and that goal congruence stimulates JV growth. We further hypothesize that positive relationship is stronger if the ultimate owners come from the countries in the same cultural cluster. We test these hypotheses using a sample of 496 JVs (domestic and international) and 819 ultimate owners, and find that JVs formed between partners controlled by the same type of ultimate owner (i.e. family-family, state-state, institutional-institutional) do grow faster than JVs between partners controlled by ultimate owners not of the same type, and that the effect is stronger if same-type ultimate owners come from countries in the same cultural cluster.

IM: **The Role of Corporate Governance in Empowering MNE Subsidiaries in Weak Institutional Environments**

Author: **Franklin Nakpodia**, *Durham U. Business School*
Author: **Folajimi Yesir Ashiru**, *Coventry Business School*
Author: **Emmanuel Afolabi Adegbite**, *U. of Nottingham*
Author: **Nikolina Koporcic**, *Laurea U. of Applied Sciences*

The international business (IB) literature offers valuable insights into the significance of institutional environments for multinational enterprises (MNEs) operating in different markets. However, less is known about the practical institutional challenges confronting mature MNE subsidiaries in weak institutional contexts, such as those in Africa, and how corporate governance mechanisms are deployed to address these challenges. Relying on institutional theorising and qualitative evidence from 34 interviews with executives of mature MNE subsidiaries in Nigeria, this paper documents three less-researched institutional challenges encountered by MNEs, i.e., the organisational identity conundrum ('us vs them'), limited attention to social capital, and 'word vs action' contradictions. The study also frames three corporate governance-related themes that MNEs can use to manage institutional difficulties in Nigeria: enhanced local stakeholder engagement, accountability drivers, and use of innovation and technology. The study advances the IB literature as it sheds theoretical as well as practical insights into how mature MNE subsidiaries operating in a weak institutional context can overcome institutional challenges.

IM: **Multisectoral Governance for Sustainability in Global Supply Chains**

Author: **Cristina Leone**, *U. of Palermo*
Author: **Pasquale Massimo Picone**, *U. of Palermo*
Author: **Arabella Mocciano Li Destri**, *U. of Palermo*

Sustainability poses a challenging goal for multinational enterprises that encompasses their activities within global supply chains. By exerting their bargaining power, multinational enterprises may require their suppliers to conform to their private codes of conduct. Additionally, multinational enterprises and their suppliers may be engaged in standard-setting partnerships with social actors. At the same time, their supply operations are scattered across institutional contexts strongly influenced by public policy and cultural factors. In describing the multifaceted sources of power and authority along the global supply chains, extant studies usually focus on a single sector of governance – i.e., public, social, or private – or, at most, the combination of two sectors of governance (for example, private and social). Sometimes, such studies separately analyze specific governance mechanisms, formal or informal. In this paper, we summarize previous literature and develop a framework that: (a) simultaneously considers public, social, and private governance sectors; (b) unveils the interplay between formal and informal governance mechanisms for each governance sector, and; (c) illustrates the multiple interactions among the public, social, and private governance sectors. After discussing the implications for theory and future research stemming from our framework, we identify practical insights for managers and policymakers.

How do the US-China Political Tensions Affect Global Strategies?

Session Moderator: **Michael A. Witt**, *King's Business School*

IM: How MNEs Reconfigure Their Resources Amid the US-China Rivalry  

Author: **Injae Jeon**, *Korea U. Business School*

Author: **Min Jung Kim**, *U. of Illinois at Urbana-Champaign*

This study investigates the impact of the evolving international order, influenced by US-China rivalry, on the geographical resource reconfiguration of MNEs. Addressing a gap in the existing literature, which predominantly relies on anecdotal evidence, this research integrates theoretical concepts with robust empirical evidence. Employing a difference-in-differences approach, we examine how US MNEs adapt their resources through FDI in response to shifts in the rule-based international system, especially amid escalating US-China geopolitical tensions since 2018. A particular emphasis is placed on the high-tech sectors to evaluate industry-specific responses to national security concerns. The findings demonstrate a strategic adjustment in the resource commitments of US MNEs, by decreasing investments in China and augmenting them in G7 and EU member states. These shifts are more pronounced in high-tech industries, especially in terms of reduced engagements in China. The results indicate that MNEs are realigning their corporate value chains towards nations that are strategically aligned with their home country, with an increased focus on domestic operations for firms critical to national security. Our findings anticipate major transformations in international business practices and emphasize the role of dynamic capabilities in navigating a highly uncertain environment during the reshaping of the international order.

IM: Strategic Flexibility and Dual Ecosystem: How High-Tech MNEs Face Techno-Geopolitical Uncertainty  

Author: **Jinyun Sun**, *Fudan U.*

Author: **Qing Shu**, *Fudan U., School of Management*

This conceptual work employs real options theory to delineate the dual-ecosystem strategy adopted by emerging market high-tech firms in navigating techno-geopolitical uncertainty. The high-tech industries have long operated within ecosystem dynamics, fostering innovation interdependencies. However, techno-geopolitical uncertainty introduces risks and vulnerabilities to these interdependencies. Emerging market high-tech firms, historically reliant on international and advanced ecosystems for growth and operations, are now pivoting to establish alternative, secure technology ecosystems. These new ecosystems often involve collaborations with domestic suppliers and complementors, offering a hedge against international risks. Concurrently, these firms refrain from exclusive commitment, effectively treating their strategy as a real option. This deliberate non-commitment imbues their approach with flexibility—a key tenet of real options theory. This study delves into the impact of diverse ecosystem specifications on the value of this option and explores strategies for optimizing the conditions to cultivate this option for maximal benefits. Propositions are also developed to guide future empirical testing.

IM: “Cross-Cultural Strategies”: Unveiling China-Australia Decision-Making Nexus in Iron Ore Industry

Author: **Dr Renée Ralph**, *Curtin U.*

Author: **Prateek Kumar Dirghangi**, *IIM Ranchi*

Australia and China have committed to leverage their comparative advantages by increasing bilateral trade and investment. This has manifested in increased investment in Australia's natural resources sector, like iron ore and coal, by Chinese corporations in the form of joint ventures. In this paper, we present a "Culture-Bound Decision Quality Model" framework for improving collaborative and joint decision-making between Australian and Chinese iron ore corporations. Using a qualitative research methodology, we conducted 31 semi-structured interviews at the senior executive and management level working in 11 Western Australia iron ore companies. Our study highlights the need to integrate aspects of cultural intelligence and cross-cultural communication with traditional decision-making processes. The findings from this study showcase a model focusing on ideology, governance, economic policies, and organizational structures to facilitate mutually beneficial quality decision outcomes. Keywords- Decision-making framework, Cross-Culture Communication, Cultural Intelligence

IM: Exploring Diversification Among US-China Ally Countries and MNE Performance in a Bifurcated World 

Author: **Jongmin Lee**, *Yonsei U. School of Business*

Author: **Jiahui Xiao**, *Yonsei U. School of Business*

The US-China dispute has multifaceted effects on international business, necessitating scholarly exploration through the lens of geopolitical tension. We introduce the concept of “inter-US-China-ally diversification” to characterize the extent of international activities of multinational enterprises (MNE) spread across US-ally and China-ally countries. Leveraging insights from corporate diplomacy and real options theory, this study investigates the impact of inter-US-China-ally diversification on the performance of Chinese MNEs. Our findings reveal a positive relationship between inter-US-China-ally diversification and Chinese MNEs' performance amid escalating tensions between the US and China. Additionally, we discover that the foreign experience of the top management team negatively moderates this positive relationship, highlighting the nuanced dynamics in the context of a divided global economy. These findings carry significant implications for both theoretical understanding and practical applications in a bifurcated world.

Managing Alliances Between Businesses, and Between Scholars

Session Moderator: **Nikolaos Papageorgiadis**, *U. of Liverpool*

IM: **Making IB Research Impactful: An Analysis of UK Research Excellence Framework Impact Case Studies**

Author: **Nikolaos Papageorgiadis**, *U. of Liverpool*
Author: **Frank McDonald**, *Professor of International Business, U. of Leeds Business School*
Author: **Malika Ben Kahla**, *U. of Liverpool Management School*
Author: **Yingqi Wei**, *U. of Leeds*

The International Business (IB) discipline has the potential to make societal impact and help tackle grand challenges by providing and applying pertinent knowledge. This has sparked ongoing debates concerning the future research agenda in IB and the calls for closer coupling between IB research and practice. This paper aims to improve our understanding of the extent to which IB research has made a high-quality impact on IB practice. We present a comprehensive evaluation of Impact Case Studies (ICS) with an IB focus submitted to the UK Research Excellence Framework (REF) in 2014 (REF2014) and 2021 (REF2021), offering a unique avenue to evaluate the key characteristics and evolution of how submitting UK universities have presented their 'best' cases of high-quality impact connected to IB research. This evaluation enables the development of novel insights into key characteristics of high-quality impact from IB research that have policy implications for universities leaders aiming to understand and boost impact related work in their institutions, policymakers related to University-industry collaboration and future ICS authors.

IM: **Research Globalization: The Shifting Origins of Organizational Research Findings**

Author: **Chris Alwine**, *Virginia Commonwealth U.*
Author: **Imran Kadolkar**, *Virginia Commonwealth U.*
Author: **Frank A. Bosco**, *Virginia Commonwealth U.*

We use a large research database of 14,038 articles from 69 countries published in 28 prominent organizational journals from 1980-2017 to find that the proportion of findings from the U.S. has declined over the years and, as of 2010, less than half of findings were collected in the U.S. We change the conversation regarding the generalizability crisis; due to insufficient samples from individual countries, the cumulative research findings may not generalize to any one country. Chris Alwine and Imran Kadolkar contributed equally and are listed alphabetically.

IM: **Deadlock and Joint Ventures**

Author: **Andres Velez-Calle**, *U. EAFIT*
Author: **Peter Jack Gallo**, *Creighton U.*
Author: **Hermilson Velasquez**, *U. EAFIT*
Author: **Santiago Sosa**, *U. EAFIT*

Deadlock can be fatal to business relations, as it leads to a halt in operations and even termination of ventures. Therefore, the anticipation of deadlock situations is a crucial element of contract negotiation. Despite this, current scholarship focuses on how parties deal with deadlock rather than how they prepare for the possibility. We explore the inclusion of deadlock clauses in joint venture contracts. Using insights from transaction costs economics, information asymmetry and international relations, we argue that symmetry between the partners, as well as other exit provisions, are positively related to the likelihood of deadlock clause inclusion in joint venture contracts. Moreover, we also study the impact of contextual factors, such as cultural differences and corruption, in contract design. We analyze a sample of joint venture contracts obtained from the US Securities and Exchange Commission using logistic regressions. This study contributes to the strategy and alliance literatures by further exploring how JV partners design ex-ante governance mechanisms for their future relationship. Deadlock clauses, in particular, have not previously been studied to this extent in the strategy literature, appearing mostly in legal scholarship to this date.

IM: **Managing University-IJV Partnership for Low-Carbon Innovation: The Role of Networking Capabilities**

Author: **Linlan Huang**, *Birmingham City U.*
Author: **Huan Zou**, *SOAS U. of London*

As global emphasis on sustainable development intensifies, the synergy between academic research and industry expertise becomes vital for advancing low-carbon technologies. Nevertheless, the prior literature mainly focuses on the multinational enterprises (MNEs) capabilities in collaborating with local universities to promote sustainable development goals, underestimating the critical role of International Joint Ventures (IJVs) in leveraging university-industry partnerships. This paper investigates the IJV's networking capabilities in managing university-industry partnerships to facilitate low-carbon innovation over time. The study delves into how IJVs, as unique collaborative entities between MNEs and local firms, leverage their networking capabilities to link universities' theoretical knowledge and parents' practical, market-driven focus to promote low-carbon innovation. Adopting a longitudinal multiple case study, we conducted data collection in three rounds from 2017 to 2023, featuring 60 semi-structured interviews with 22 informants, six on-site observations and a document review of 1218 pages. Our findings highlight the networking capabilities of IJVs comprising different functionalities for relationship initiation, development and establishment/termination over time. IJVs with reactive networking capabilities participate in joint research and development (R&D) projects with parents and universities in parent networks to share research outputs addressing common technical problems. In contrast, proactive networking capabilities enable IJVs to actively search, select, extend and deepen IJV-university partnerships from parent networks and independent channels, becoming a crucial source of competitive advantages in the existing and prospective low-carbon technology sector.

What Enables Expatriates to Succeed?

Session Moderator: **Riki Takeuchi**, *U. of Texas at Dallas*

IM: Expatriates' Contextualized Domain Learning

Author: **Xiao Jun Xu**, *Fudan U.*

This paper conceptualized contextualized domain learning to play a key mediating role in explaining the curvilinear effects of cultural knowledge and distance on expatriates' task performance and job creativity. Data from 366 expatriate-supervisor dyads working in 51 Chinese multinational companies provided strong support for such mediation effects. Moreover, we found U-shape relationship between cultural knowledge and contextualized domain learning and inverted U-shape relationship between cultural distance and contextualized domain learning in particular, cultural metacognition enhanced the negative effect of half-cultural knowledge on contextualized domain learning. The negative half-knowledge effect and the positive moderate cultural distance effect influence expatriate performance and job creativity via contextualized domain learning. These findings significantly enrich the organizational learning, CQ theory and cultural distance literatures and provide new insights on expatriate management.

IM: Cultural Orientations and Expatriate Performance: A Dyadic Perspective

Author: **Alexei Koveshnikov**, *Aalto U.*

Author: **Mark Van Der Giessen**, *Aalto U. School of Business*

In this paper, we build on social categorization theory and introduce a novel dyadic perspective to examine how corporate expatriates' and their host country supervisors' cultural orientations, measured as cosmopolitanism and ethnocentrism, respectively, determine the mutual perceptions of the counterparty in the dyadic relationship and, through that, influence the assessment of expatriates' performance as rated by supervisors. Empirically, we analyze 250 expatriate-supervisor dyads from organizations in Russia. We find supervisors' ethnocentrism to inflate perceived national differences between them and their expatriate subordinates. At the same time, we also find expatriates' cosmopolitanism to act as a counterforce to this effect decreasing perceived national differences as viewed by supervisors and influencing positively expatriates' performance evaluations as rated by supervisors.

IM: Optimizing Expatriate Adjustment Through Linear/Nonlinear Thinking Style Balance and Versatility

Author: **Francisco De Borja Martín-Garrido**, *U. Loyola Andalucía*

Author: **Emilio Morales-Fernandez**, *U. Loyola Andalucía*

Author: **Charles M Vance**, *Loyola Marymount U.*

Author: **Marian Van Bakel**, *U. of Southern Denmark*

Author: **Kevin S. Groves**, *Pepperdine U.*

The adaptation to diverse cultural contexts is one of the most essential elements of the international management of expatriates given the substantial impact on their professional and personal lives. One critical aspect of expatriate adjustment that has received scant research attention is the relationship between thinking styles and their professional and personal adjustment to the country of destination. We address this research gap with an empirical study of international expatriates that examines a range of thinking styles and their impact on multiple forms of adjustment to diverse cultural contexts. On the basis of thinking style theory and research, which examines multiple information-processing and decision-making processes, we hypothesize that some thinking styles are associated with higher levels of expatriate adjustment while other styles are more likely to attenuate adjustment. Thinking styles are shaped by numerous factors, including education, culture, social groups, experiences, and other sociological and psychological factors, which collectively influence the adaptive capacity of expatriates. Utilizing a multivariate statistical methodology to classify international expatriates according to their thinking style, this survey study of 188 expatriates assessed the relationships between eight thinking styles (one linear and seven nonlinear) from the Thinking Styles Profile (Groves & Vance, 2014) and multiple elements of expatriate adjustment to the professional and personal contexts associated with their international experiences (psychological adjustment, sociocultural adaptation, and expatriate adjustment). Our analyses also examined the degree of thinking style balance and versatility across linear and nonlinear thinking by classifying expatriates as nonlinear thinkers, linear thinkers, or balanced and versatile thinkers. The results illustrate that the balanced and versatile thinking style profile, which consists of high linear and high nonlinear thinking, was strongly associated with all three types of optimal international adjustment. Our results highlight the existence of significant differences across thinking style profiles regarding their impact on fostering professional and personal adjustment of international expatriates. We conclude by discussing suggestions for future research and the primary practical implications for optimizing expatriate international adjustment.

IM: Venturing into the Unknown: How do Expatriates Perceive Uncertainty

Author: **Anoop Adhur Kutty**, *Aalto U. School of Business*

Plenty of studies have emerged, in the last three decades, around the different contextual and individual factors affecting expatriate adjustment. Most of these theories seem to assume that uncertainties associated with expatriation play a critical role in their adjustment and that expatriates adjust better with less uncertainty. This assumption has made it into the literature on expatriation as the earlier studies and theory building have been on the backdrop of predominantly US-based, white, top management executives relocating from headquarters to subsidiaries. Through this qualitative research, which draws upon uncertainty regulation theories, I find that even when expatriates perceive uncertainty, they do not necessarily find it as aversive. These findings are based on interviews with 31 expatriates including assigned expatriated and self-initiated expatriates. I find three co-existing psychological states that expatriates might find themselves in while facing uncertainty. These are expatriate circumspection - when they find uncertainty as highly aversive; expatriate courage - when they are comfortable with the unknown, and expatriate myopia - when they don't even perceive uncertainty.

How do MNEs Engage With Host Country Institutions?

Session Moderator: **Vikas Kumar**, *U. of Sydney Business School*

IM: **Global Cities, Cosmopolitanism, and Organizational Culture**

Author: **Torben Pedersen**, *Copenhagen Business School*

Author: **Christian Geisler Asmussen**, *Copenhagen Business School*

Author: **Anthony Goerzen**, *Queen's U.*

A common implicit assumption in research on global acculturation towards cosmopolitanism is that it occurs uniformly across geographic space. Our contention, in contrast, is that it occurs in primarily within and among global cities, and that this has implications for the interaction between location and organizational culture in MNEs. Examining 11,176 MNE employees across nine countries, we enhance our understanding of the nature of global cities and the ways in which cosmopolitanism is a sub- and supra-national phenomenon. Our findings suggest that global cities are pulled towards a cosmopolitan global culture that is different from their national compatriots and similar across global cities.

IM: **To Enter or Not to Enter? Navigating MNCs' Internal Sourcing in Foreign Investment Locations**

Author: **Der-Ting Huang**, *U. of Illinois at Urbana-Champaign*

This study investigates the role of multinationality in shaping multinational corporations' (MNCs) investment decisions regarding whether to enter industry agglomerations upon entry into a host country. Existing research highlights the benefits of entering local agglomerations for specialized knowledge and resources, but often overlooks the role of firms' internal sourcing as an alternative approach to access these resources. This study introduces multinationality as a form of internal sourcing networks, theorizing that it potentially substitutes the need to join industry agglomerations by leveraging resources across countries available within MNC subsidiary networks. That said, the cross-border transferability of resources determines the extent to which MNCs can internally leverage the resources provided by their own multinationality. Hence, this study also assesses how the ease of transferring different in-network resources (i.e., knowledge/technology, intermediate inputs, and service skills) across countries influences the potential for multinationality to substitute for local agglomerations. Accordingly, I hypothesize that the degree of an MNC's overall multinationality reduces the likelihood of the MNC to choose agglomerations when operating in a host country. Moreover, due to varying degrees of geographic fungibility among in-network resources, I maintain that an MNC's R&D multinationality exhibits the strongest substitutability, followed by its service multinationality, and finally its manufacturing multinationality. Using data on MNCs' foreign investments in the United States from 2004 to 2020, the findings corroborate the hypotheses.

IM: **Policy-Sensitive Location Advantages and Their Impact on MNEs' Subsequent Investment Decisions**

Author: **Shiqi Xu**, *Ivey Business School*

Subsequent investment (SI) is the additional capital injected by MNEs already established in a host country. Drawing on the MNE growth and the location (L) advantages literatures, we explore two research questions: 1) which L-factors yield greater influence on experienced investors, and 2) how the identified L-factors lead to SI, thereby fostering to MNEs' growth in host countries? To address these questions, we conducted a qualitative content analysis of 669 news announcements, of which 528 on SI and 141 on initial investments). Our study identified three institution-related L-factors – investment promotion agencies (IPAs), investment incentives, and public procurement contracts (PPCs). Because these three L-factors are closely related to government policies that can be adjusted in the short run, we refer to these as policy-sensitive L-factors. Our findings reveal a stronger association of policy-sensitive L-factors with SI, depending on the design of these institutions. Particularly, SI is more effectively driven by 1) fiscal incentives, 2) IPAs with government funding, and 3) PPCs with incentive packages and supported by the strong political credibility of host government.

IM: **Why Stop Now? The Institutional Deterrence Effect and FDI into Tax Havens**

Author: **Chris Michael Jones**, *Aston U.*

Author: **Stephen Brammer**, *U. of Bath*

Author: **Giulio Nardella**, *ESCP Business School*

Author: **Yama Temouri**, *Khalifa U., Abu Dhabi, UAE*

Author: **Johan Rewilak**, *Aston U.*

It is expected that firms will be deterred from engaging with tax havens by formal and informal institutions. However, our understanding of how tax haven investment decisions are influenced by shifting institutional deterrents and varying organizational contexts remains limited. Combining the institutional complexity perspective with behavioral theory, this study explores the extent to which formal and informal institutions deter firm investment into tax havens. We theorize and explain how variance in the organizational context, such as the firm's degree of managerial discretion and influence, act to sensitize or de-sensitize organizational decision makers to institutional deterrents. Drawing on a comprehensive and granular dataset of tax haven subsidiaries by 2,857 firms between 2009 and 2017, this study contributes to the advancement of theory, policy, and practice on the global strategic management of tax havens.

Engaging with Critical Stakeholders Locally

Session Moderator: **Ronny Manos**, *College of Management, Israel*

IM: **Reducing Poverty via Cultural Linguistics: The Microfinance Case**

Author: **Ronny Manos**, *College of Management, Israel*
Author: **Amir Shoham**, *Fox School of Business, Temple U.*
Author: **Riikka Sarala**, *UNC Greensboro*
Author: **Shlomo Yedidia Tarba**, *U. of Birmingham, UK*
Author: **Agnieszka Chidlow**, -

In this paper we present a theoretical and empirical examination of cultural linguistics as a way of reducing poverty via microfinance. In doing so, we utilize a large sample of Microfinance Organizations (MFOs) from thirty-three countries over nineteen years to empirically examine if and how linguistic structures impact the prevalence of poverty reduction action using depth of outreach measured as the percentage of female, rural borrowers as well as by loan size. We find that MFOs located in societies where the dominant language allows pronoun dropping or which includes grammatical politeness have a higher prevalence of poverty-reducing actions. The results also indicate that the interaction between pronoun dropping, and grammatical politeness increases MFOs depth of outreach. The study grounds its theoretical development in the grand challenges, microfinance, culture, and linguistic literature. To mitigate endogeneity concerns, we subjected our results to a battery of empirical robustness tests, including casualty analysis.

IM: **Foreignness Under Fire: Market Evaluation to Foreign-Sounding Restaurants in Buycott and Boycott**

Author: **Fangwen Lin**, *National U. of Singapore*

This study examines the influence of foreign-sounding brand names on audience evaluations within an environment advocating for civil liberties and democracy. Firms in emerging market increasingly adopt foreign brand names, aiming to project higher quality and social status to attract audiences. However, the perceived foreignness also engenders heightened expectations regarding a firm's commitment to defending civil liberties and democracy. When foreign-branded firms position themselves against a pro-democratic movement, they failed to meet these expectations and thus faced more negative evaluations compared to their nonforeign-branded counterparts. Conversely, when supporting a pro-democratic movement, foreign-branded firms received fewer positive evaluations because the presumption was that these firms should align with their foreign identities. Drawing on empirical setting of the 2019 pro-democratic protests in Hong Kong, we find evidence of foreign branding in changing restaurant ratings. This research aims to contribute to the intersection of international business and social movement literature within emerging markets.

IM: **The Impact of Foreign Direct Investment on Organized and Petty Crime**

Author: **Yannick Wiessner**, *Erasmus U. Rotterdam*

Attracting foreign direct investment (FDI) has long been considered a path to prosperity and societal progress, especially for developing countries. However, the fact that FDI can substantially alter local governance and incentive structures for various types of activities, such as crime, deserves more attention. We theorize (1) abatement, (2) aggravation, and (3) displacement effects of FDI on crime. More specifically, we argue that FDI affects the incentive structures to commit more or less organized types of crime—petty crimes against persons or property versus organized forms of drug trafficking—in different ways. Moreover, we expect the societal trickle-down effects of FDI to differ between the recipient region of FDI and non-recipient regions that are close to the recipient region. Testing these conjectures with bilateral state-level FDI data in Mexico, we find support for the hypothesized effects. While Mexico might seem to be an extreme case, it in fact shares its properties of being an emerging economy with weak institutions with many other FDI-recipient nations. This study thus contributes to our understanding of a so far rarely considered externality of FDI by unraveling its complex relationship with crime types and especially the geography of crime in recipient nations.

IM: **When in Rome, Do as the Romans Do**

Author: **Ali Ahmad Bodla**, *Nijmegen School of Management, Radboud U. Nijmegen*
Author: **Muhammad Sarwar**, *U. of the Punjab*
Author: **Rana Umair Ashraf**, *U. of Warsaw*
Author: **Tahir Islam**, *Leeds Trinity U. Business School, Leeds Trinity U., Leeds, UK*

Social network structures significantly impact business opportunity recognition, but existing evidence reveals that not all social network structures work in favor. This study examines the effects of international entrepreneurs' network centrality and constraints on opportunity recognition in a host country. Also, it analyzes the contextual mechanism of the home country's cultural tightness and looseness on the relationships between network structures and opportunity recognition. This study employs a quantitative research approach and used survey data of 220 international entrepreneurs from China. The data was analyzed using multiple regression analysis. This research finds that international entrepreneurs' network centrality (not the network constraints) in the host country positively contributes to opportunity recognition. Furthermore, we suggest that international entrepreneurs' home country cultural tightness negatively moderates the relationship between network centrality and opportunity recognition. This study illuminates the literature on international entrepreneurship and social networks by offering a novel understanding of international entrepreneurs' social networks and opportunity recognition in China. It has research and practice implications for international entrepreneurship.

How to Align Purpose in Practice? Implications for Corporate Social Responsibility Within MNEs

Organizer: **Marloes Korendijk**, *Macquarie Business School, Macquarie U.*

Organizer: **Bjoern C. Mitzinneck**, *Groningen U. (RuG)*

Panelist: **Jonathan P. Doh**, *Villanova U.*

Panelist: **Matthew Kraatz**, *U. of Illinois*

Panelist: **Marya Besharov**, *Oxford U., Saïd Business School*

Panelist: **Rui Torres de Oliveira**, *Queensland U. of Technology*

In this symposium, panelists (and the audience) will discuss how corporate purpose may be thoroughly embedded within MNEs and what the implications of a turn to purpose in MNEs may be for their CSR efforts. In particular, we seek to elucidate whether corporate purpose can indeed aid with implementation of other practices, especially CSR, or whether purpose is subject to the same cross-country tensions and challenges that CSR is facing. To this end the symposium will engage a group of panelists in a formal, moderated and interactive discussion on the role of corporate purpose in CSR implementation within organizations. The panel will synthesize the current status of the field and discuss opportunities to push research forward. Specifically, panelists will share their interpretation of (1) implementation of CSR strategy within MNEs, (2) the role of purpose within organizations (3) the role of purpose in CSR strategy formulation and implementation, and (4) CSR and purpose measurement opportunities.

Empowering Innovation: Collaborating with Employee Empowerment

Session Moderator: **Vanessa Susan Hills**, *Western Michigan U.*

This session highlights the importance of empowering employees in driving innovation. Topics include research avenues on employee engagement, talent development in remote work settings, and strategies for involving employees at all levels in innovation processes.

MC: **Leave Me Alone Unless I Need You: An IPA of Remote Employees' Relationships with Their Supervisors**     

Author: **Vanessa Susan Hills**, *Western Michigan U.*

Using interpretative phenomenological analysis, this study examines employee perceptions of leader-member exchange quality in remote and hybrid work environments, focusing on the unique challenges and dynamics that emerge when employees and supervisors interact virtually. Data collected through semi-structured interviews with remote employees were analyzed, providing insights into effective relationship practices for remote teams, the implications for employees, and the transferability of previous research on Leader-Member Exchange (LMX) Theory. Findings highlight the role of autonomy, information, and personal connection on employee perceptions of leader-member relationship quality. Additionally, they uncover a dialectical tension between the remote employees' desired autonomy and their need for information, which can lessen anxiety about their role and the impacts of organizational change.

MC: **Talent Development in Remote Work**

Author: **Amandine Savall**, *ISEOR*

Author: **María Angeles Rastrollo-Horrillo**, *U. of Málaga*

This paper explores the effects of remote working on talent development in a context where companies are promoting "virtual proximity" through the use of information and communication technologies. Drawing on 12 years of intervention-research, the authors identify challenges and present best practices in talent development, highlighting six specific needs and the importance of a balance between physical and virtual proximity. In conclusion, the longitudinal analysis of the three case studies demonstrates that this hybrid proximity optimizes talent development and organizational performance, underlining the usefulness of intervention research in the study of remote working and talent development.

MC: **Why So Silent? Proposing Research Avenues on Employee Silence in Professional Service Firms** 

Author: **Henrik Maria Bienstein**, *WFI - Ingolstadt School of Management*

Author: **Björn Schäfer**, *Free U. of Bozen-Bolzano*

Author: **Vinzenz Ulrich Krause**, *Catholic U. Eichstätt-Ingolstadt*

The phenomenon of employee silence is gaining increasing attention in organizational research. While recent silence studies addressed the importance of context, employee silence has never really reached the field of professional service firms (PSFs) like management consultancies or law firms. This gap is surprising, as various organizational characteristics of PSFs seem to be unique drivers for withholding information, problems, or concerns. We identify a framework containing seven distinctive features of PSFs conducive to employee silence: elitism & career model, autonomy & informality, organizational structure, reputation, mission drift, leadership style, and client & project demands. We explain how these PSF characteristics foster employee silence by deducing ten theory-based research propositions. Our paper builds a starting point for further studying employee silence in the specific context of PSFs. We encourage scholars to build on our propositions by empirically investigating the phenomenon of silence.

MC: **Innovate by Involving Low Skilled Employees, Case of a Care Service Company**   

Author: **Melissa Sanchez**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Author: **Maite Rateau**, *ISEOR*

The crisis, the need for economic results and heightened competition affect all sectors, including the care services sector. Professionals in this sector offer services to help maintain the autonomy and social ties of dependent persons. While it is true that the care services sector is no stranger to the economic challenges of our time, research has highlighted the lack of commercial involvement of the players, even though this is a lever for economic performance. Several obstacles explain this delay in commercial development, such as the physical and psychological hardship of this profession, the precariousness of low-skilled jobs, high staff turnover and chronic absenteeism. We believe that managers play a key role in mobilizing teams to develop socio-economic performance. We also believe that employees, including low-skilled ones, have a business potential that only needs to be stimulated by participative methods. This paper presents the results of a intervention-research within a small private company providing personal services in France. The transformative phase focused on the formalization and implementation of a business strategy co-constructed and implemented by the employees. This research shows the role of the researcher in training a manager to reveal the human potential of his team.

Leading Innovation: Developing Leadership Skills for Effective Management

Session Moderator: **Oluseyi Ajayi**, *Weatherhead School of Management, Case Western Reserve U.*

Focusing on leadership development, this session covers topics such as the impact of authentic leadership on organizational reporting, the role of shared leadership in project success, and the importance of dynamic leadership in influencing project outcomes.

MC: **Hybrid Professionals: A Systematic Literature Review and Proposal for Future Research**      

Author: **Urszula Pajdzik**, *Trinity Business School, Trinity College Dublin*
Author: **Na Fu**, *Trinity Business School, Trinity College Dublin*

Over the last three decades, the traditional professional logic valuing autonomy and commitment to public good has gradually come under the pressure from the managerial logic that focuses on efficiency and profits. In response, traditional professional practice of accounting, engineering, healthcare, and law became dominated by large, knowledge-intensive organizations. These developments led to the emergence of hybrid professional roles, including audit managers, nurse managers, or clinical directors whose goal is to balance and reconcile the competing logics of professionalism and managerialism. To provide a coherent overview of the current knowledge about professional hybrids and their work, we conducted the systematic review of 61 papers published across 33 academic journals, between 1998 and 2022. Based on thematic analysis of these papers, the review identified a broad spectrum of behaviours displayed by professionals in response to the challenges of hybrid work and reasons underpinning these behaviours. The findings reveal a complex web of multiple factors impacting professional hybridization, including institutional environment, organizational structures, and individual characteristics. An agenda is also offered for the future research.

 MC: **The Direct Effects of Authentic and Ethical Leadership Approaches on Perceptions of ESG Reporting**  

Author: **Oluseyi Ajayi**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Timothy Fogarty**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Philip A. Cola**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Yunmei Wang**, *Case Western Reserve U.*

In response to mounting pressure on organizations to integrate environmental, social, and governance (ESG) considerations into their operations, this study explores the direct effects of Authentic and Ethical Leadership approaches on the perceptions of ESG among 302 managers and executives. While existing research suggests a link between leadership and sustainable performance, the specific mechanisms shaping perceptions of ESG among internal stakeholders are underexplored. This study addresses this gap by examining the impact of ethical and authentic leadership approaches on the three components of ESG. Results indicate that authentic leadership is associated with the perception on Environmental elements of ESG, whereas, both ethical and authentic leadership have significant direct effects on the perception on Social elements of ESG. Lastly, the study found that authentic leadership has significant direct effects on the perception on Governance elements of ESG. These findings have crucial implications for leadership development and their role in fostering organizational sustainability and responsible practices. It provides valuable insights for the consulting community while deepening the understanding of their clients as they operationalize the lessons learned from implementing ESG principles in their organizations. Keywords: Ethical leadership, authentic leadership, perceptions of environmental, social, and governance (ESG).

MC: **Revealing the Impact of Shared Leadership on Project Performance: A Serial Mediation Model**

Author: **Qiwei Zhou**, *Ocean U. of china*
Author: **Yuyuan Sun**, *Management College of China Ocean U.*

Shared leadership as a valuable mechanism has received increasing empirical and theoretical attention in the field of project management. However, there is a dearth of studies revealing how shared leadership promotes project performance. On this premise, the purpose of the current research is to examine a serial mediation model investigating the relationship between shared leadership and project performance through team failure learning and team resilience. We conducted a field study that surveyed 79 project teams across various industries (comprising 380 project team members and 79 project managers) with a multi-source, time-lagged survey design. The results show that shared leadership has a positive impact on project performance. More importantly, we found that team failure learning and team resilience play mediating roles sequentially in the process of shared leadership influencing project performance. Our findings offer new ways for project managers to be equipped with practical techniques to manage project performance effectively. Specifically, we suggest that project managers should recognize the benefits of shared leadership. To utilize shared leadership approach, project professionals should facilitate team failure learning and improve team resilience which serves to boost the performance of projects. Drawing on the conservation of resources theory, this study provides a novel perspective regarding how shared leadership influences project performance. To the best of our knowledge, we are among the first to explore the serial mediating effect of team failure learning and team resilience on the shared leadership - project performance relationship.

MC: **The Importance of Dynamic Project Leadership in Influencing Project Success** 

Author: **Robert Calder Cooney**, *UNC Charlotte*

Research on project success factors has shown that one key success factor is the presence of a strong project leader (Fortune and White, 2006). But what constitutes a strong project leader? Traditionally, the focus was on technical competence. Recent research, however, has shown that leadership capability and other “soft skills” are as important or more important than technical skills. Building on this research, this paper theorizes the concept of dynamic project leadership and suggests that dynamic project leadership on the part of the project champion positively impacts project success and that this influence will be more impactful in organizations with a higher level of intrapreneurial orientation.

Author: **Mukhtar Abubakar Yusuf**, *John Carroll U.*

This study examines the impact of exchange rate fluctuations on Foreign Direct Investment (FDI) inflows to Nigeria, employing Linear Regression and Random Forest models to analyze historical data and predict future trends. Key findings reveal that exchange rate variability significantly influences FDI, with Linear Regression showing a direct relationship and Random Forest uncovering more complex patterns. Despite historical fluctuations, with a notable peak in 2010, projections suggest a stabilization of FDI inflows beyond 2020. These insights offer valuable guidance for investors and policymakers in Nigeria, indicating a move towards consistent FDI trends. The research highlights the importance of considering exchange rate trends in strategic economic planning, providing a foundation for informed decision-making in Nigeria's dynamic financial landscape.

Creativity and Innovation in Management Education I

Session Moderator: **Lorin Busaan**, *U. of Victoria*

MED: **The Potential of Deliberative Pedagogy in Cultivating Phronesis in Management Education**

Author: **Lorin Busaan**, *U. of Victoria*

Author: **Simon Pek**, *U. of Victoria*

Aristotle's notion of phronesis has garnered increased attention in recent years because of its potential to improve the quality of managers' judgement, reasoning, and decision-making. These skills are even more relevant considering heightened expectations of managers and businesses to tackle pressing social and environmental issues. However, efforts to cultivate phronesis in business schools are relatively rare and face a host of theoretical and practical challenges. In this paper, we draw on the growing body of research on deliberative pedagogy, which has yet to be explored by scholars of management learning and education, to develop theory about how it could help cultivate phronesis. We argue that deliberative pedagogy has absorbed three important elements from its two main intellectual foundations—deliberative democracy and engaged pedagogy—that are especially relevant for the cultivation of phronesis: recognition of the transformative benefits of group deliberation; an emphasis on choice and action; and careful attention to power dynamics in social relations. Our arguments offer novel insights into research on individual and collective phronesis, civic skill and capacity development, and boundary spanning in the context of business schools.

MED: **Heartbeats and Deep Breaths: The Rhythms of Organizing Responsible Management Education**

Author: **Valtteri Aaltonen**, *U. of Helsinki*

Author: **Marjo Elisa Silttaoja**, *U. of Jyväskylä*

We argue that rhythm is central to understanding the organization of responsible management education (RME) and its possible outcomes. Drawing on qualitative case study materials, including interviews with faculty members, and analyzing curricula materials, we investigate how rhythms shape the organizing of RME and the emergence of (alternative) outcomes. Our findings from Finnish business schools reveal that linear rhythms driven by accreditation and publication pressures and hierarchical academic notions often conflict with the RME agenda. However, linear rhythms coexist with cyclical rhythms that foster alternative outcomes aligned with RME. This study emphasizes the importance of understanding and leveraging rhythms in organizing for responsible management education, highlighting the agency embedded in the tempo of organizing and the significance of direction and sequences for organizing alternatives. Moreover, it has practical implications for business schools and organizations seeking resilient and dynamic solutions to sustainability challenges.

MED: **"Synergistic Mindsets Wanted" Are Business Schools Meeting the Demand in Times of VUCA?**

Author: **Dina Abdelzaher**, *U. of Houston, Clear Lake*

Author: **Muna Onumonu**, *U. of Houston Clear Lake*

Abstract The COVID-19 pandemic was an eye-opening experience that put to the test our crisis management competencies across many institutions, including those offered by institutions of higher education. In this article, we review the literature on international business (IB) risks and international business education (IBE) to question whether business graduates are equipped to make decisions in today's volatile, uncertain, complex, and ambiguous (VUCA) marketplace. While the IB literature has discussed the importance of various sources of risks on global business operations, IBE did not effectively adopt an integrative approach to building the needed risk management competencies related to those risks into our pedagogy. We argue that this integrative approach to teaching IB is critically needed to prepare future global managers for addressing crises, like that of the pandemic and others. Specifically, we propose that this integrated risk management competency can be developed through the building of "synergistic mindsets". We present a conceptual framework for the components of the synergistic mindset, with intelligence that directly links to present IB risks. These components are cultural intelligence (CQ), emotional intelligence (EQ), public policy intelligence (PPQ), digital intelligence (DQ), and orchestration intelligence (OQ). Insights related to IBE to ensure its effectiveness in addressing today's VUCA market demands are discussed.

MED: **Business Decision-Making Game Facilitates Training Effectiveness: A Three-Level Meta-Analysis**

Author: **Yingni Cai**, *The Chinese U. of Hong Kong, Shenzhen*

Author: **Zheng Liu**, *The Chinese U. of Hongkong (Shenzhen)*

Author: **Mengzhen Hu**, *Nanjing Normal U.*

Author: **Wenjing LUO**, -

Author: **Juanxi Cheng**, *Chinese U. of Hong Kong, Shenzhen*

Author: **Yutong WEI**, *The Chinese U. of Hongkong, Shenzhen*

Business decision-making games are designed to replicate real-world business scenarios, challenging trainees to make strategic decisions in management, finance, marketing, and strategic planning. Despite their widespread use, a comprehensive evaluation of the training effectiveness of these games in business educational settings is lacking. To address this gap, we conducted a three-level meta-analysis to estimate the effectiveness of business decision-making games and identified the conditions under which these games are most effective. We focused on four dimensions of training effectiveness: reactions, learning process, learning performance, and motivation. We identified a total of 41 primary studies utilizing a between-subjects experimental design (N = 8376), yielding 94 effect sizes. The results demonstrated that business decision-making games effectively enhance management training effectiveness ($g = .53$, 95% CI [.35, .71]), resulting in improvements across reactions ($g = .44$), learning process ($g = .66$), learning performance ($g = .45$), and motivations ($g = .85$). This positive effect remained consistent and robust across a wide variety of conditions, including participant characteristics, game features, implementation methods, and research designs. Practical and theoretical implications for business education are discussed.

Author: **Anjali Bansal**, *Indian Institute of Management, Lucknow*

Using ambidexterity and learned industriousness theories, this research employs two opposing but complementary supervisory styles, i.e., directive, and supportive styles to gauge teachers' ambidexterity towards learning students' creativity. While the directive supervisory style of teachers is associated with their authoritative pursuit in directing the steps to solve problems in the class, the supportive supervisory style enables them to hand-hold students, motivate them, and provide feedback for further improvement. The current research thus investigates how this ambidextrous supervisory style of teachers adds to the students' exploration behavior which when combined with the assessment of the climate of rewards for creativity enhances students' creative performance. By using dyads of teachers and students (teachers=181; students=487) from 16 elite business schools in India, the present study established a positive moderated mediated relationship between teacher ambidexterity and student creative performance. The current study has important implications for education researchers and education institutions in carefully investing their efforts in building and nurturing creativity across sectors.

Panelist: **Poonam Arora**, *Quinnipiac U. School of Business*

Panelist: **Margaret Goralski**, *Quinnipiac U.*

Panelist: **Robert F. Scherer**, *Trinity U.*

Public scrutiny of business has grown over the past decades in the wake of financial, environmental, ethical, and social crises, placing increasing responsibility on business schools to increase focus on societal concerns. Accrediting bodies have also responded with calls to action, such as AACSB Standard 9, requiring business schools to document how their actions align with the social impact and engagement standard. Many business schools have struggled with implementing social impact into their research and curriculum, and AACSB has suggested the United Nations Sustainable Development Goals (SDGs) as a framework (2023). The panelists will discuss how they have incorporated the SDGs in their courses or schools, followed by a moderated discussion and question and answer session with the audience. This session will discuss best practices, obstacles, and tips for increasing social impact and engagement and documenting these efforts. In addition to aligning with AACSB Standard 9, these initiatives will also help prepare students for the business environment of their future careers.

Political Ideologies and Management Amidst Historical Turmoil

Session Moderator: **Andrew D A Smith**, *Birmingham Business School, U. of Birmingham, UK*

This thought-provoking session explores the intersection of political ideologies and management amidst significant historical upheavals. Delve into the complexities of management thought during times of turmoil, where societal, political, and economic forces shape organizational practices and political ideologies.

MH: Responding to Serfdom and Slavery: Management Thought in Russia and the USA, 1861-1917 

Author: **Vadim Ivanovich Marshev**, *Head of the Laboratory of Historical and Management Studies, Faculty of Economic*

Author: **Ivan Dvoluchanskii**, *Lomonosov Moscow State U., Faculty of Economics*

Author: **Bradley Gerald Bowden**, *Journal of Management History*

The purpose of this paper is that of studying the ways in which the legacies of unfree labor shaped the development of management thought in the United States of America (USA) and Imperial Russia between 1861 and 1917. In doing so, it brings together the hitherto separate streams of management history scholarship that have stemmed from the USA and the Management History Division (MHD) on the one side and, on the other, the conferences on the History of Management Thought and Business (HMT&B) held at Lomonosov Moscow State University (MSU) since 1996.

MH: Freedom's Frictions: Entrepreneurial Imaginaries as Political Theory 

Author: **Hannah Knox Tucker**, *Copenhagen Business School - Denmark*

Author: **Daniel Wadhvani**, *U. of Southern California*

While shifts in entrepreneurial venturing have often been seen as the work of visionaries or uncontrollable market forces, we propose that these changes stem in part from an evolving political theory of legitimate venturing. Building on the political philosophy of Isaiah Berlin and Charles Taylor, we introduce the construct of "entrepreneurial imaginaries" as collective moral judgments of forms of entrepreneurial organization that are considered threats or aids to mutual freedom. We theorize that forms of entrepreneurial organization that were once understood as expressions of freedom are reinterpreted as threats to freedom as they grow dominant. The result is a dialectical political theory of entrepreneurial capitalism. Using evidence from the past 250 years, we identify three periods of American entrepreneurial organizing around conflictual business models that produced frictions in the exercise of freedom. We then show how these freedoms' frictions produced contestation that a new entrepreneurial form resolved for a time before frictions emerged anew. Finally, we draw out the implications for interpretations of entrepreneurial capitalism today.

MH: Endogamy Leading to Schism and Reunification: The 1842-1857 Indiana Anti-Slavery Yearly Meeting

Author: **Jay J. Janney**, *U. of Dayton*

Author: **Della Stanley-Green**, *U. of Dayton*

Author: **Terry Lee Amburgey**, *U. of Toronto*

Pre civil war there existed sharp division within the anti-slavery movement on how best to proceed. We contend this conflict shifted from organizational to personal, due to extensive familial connections via marriage, which we label as an endogamous organization. We contend when organizations with high levels of endogamy face conflict, the conflict can turn more deeply personal. We examine the Indiana Yearly Meeting schism (1842-1857), and how endogamy helped exacerbate the conflict, as well as lead to its eventual resolution via reunification. We note that while the group which left laid down its organization, the remaining yearly meeting shifted closer to their views.

MH: Japanese Postwar Success: The Impact of Moral Re-Armament and the Quality Movement  

Author: **Eric B. Dent**, *Florida Gulf Coast U.*

Author: **Stephanie L. Torrico**, *Florida Gulf Coast U.*

Author: **Craig Randall**, *Florida Gulf Coast U.*

Japan's morale and economy were devastated by World War II and postwar they had to start nearly from scratch to rebuild them. Two of the more impactful factors that helped them to grow from GDP \$102 billion in 1945 to \$420 billion by 1961 were the work of Moral Re-Armament (MRA) and the manufacturing quality movement led by the Japanese Union of Scientists and Engineers (JUSE) with the assistance of W. Edwards Deming, Joseph Juran, and Kaoru Ishikawa. The latter roles are well known and memorialized in several ways such as the Deming Award, one of the most prestigious honors in Japan. MRA's influence was arguably more significant, but its abundant activities have largely been lost to history. MRA developed support at all levels from Prime Ministers to union employees through international meetings, person-to-person conversations, and staging plays. JUSE extensively promoted major training efforts by Deming and Juran, in particular, to rally Japan's manufacturing to unprecedented levels. This article looks at both these efforts as they emerged and their substantial impact on Japan's recovery as an international economic power.

MH: **How Social Context Influences CPA Tactics: Insights from the Business History of the British Empire**

Author: **Andrew D A Smith**, *Birmingham Business School, U. of Birmingham, UK*

Author: **Ruomei Yang**, *U. of Liverpool Management School*

Author: **Mehdi Boussebaa**, *U. of Glasgow*

Author: **Maki Umemura**, *Cardiff U.*

Author: **Aparajith Ramnath**, *Ahmedabad U.*

While Corporate Political Activity (CPA) is an increasingly important area of management research, there is growing awareness of the limitations of the theoretical tools used to understand CPA and firms decisions about which CPA tactics to use. This history-to-theory paper discusses the range of CPA tactics used by British MNEs during the British Empire, documenting that the tactics selected varied along the directness and formality dimensions. We document that as Britain's domestic political system democratized, those British MNEs who participated the imperial project adopted increasingly indirect CPA tactics. We also find that changing moral economy of the political marketplace changes which CPA tactics are used by MNEs. Our findings also suggest that MNEs may have more political power than is generally assumed in the management literature on CPA, particularly in non-democratic countries. Our paper contributes to the wider project of developing a Political Marketplace 2.0 theoretical lens by illustrating the relevance of the historian Thompson's concept of moral economy. We discuss the implications of our research for teleological or Whig views of history and for thinking about how future institutional change could change the CPA tactics used by MNEs headquartered in emerging markets.

Participant: **Hooria Jazaieri**, *Santa Clara U.*

Emotions have enchanted scholars for decades, yet scholarship has not always reflected emotions' social functions at work despite their frequent occurrence within interpersonal contexts. Organizational scholars have only scratched the surface in understanding the social effects of emotions, leaving significant gaps in identifying the different mechanisms and boundary conditions in which emotion expression impacts others' reactions and behaviors. To address the social complexity of emotions at work, we utilize the emotions as social information (EASI) model to frame this symposium. We present a diverse body of scholarship that explores the interpersonal consequences of emotions and offer novel methodological and theoretical directions that serve as a catalyst for new areas of inquiry. Together, the papers in this symposium employ a multitude of theoretical perspectives (e.g., temporal dynamics, discrete emotions, emotion regulation, emotional intelligence, and creativity) and methodological approaches (e.g., physiological stress measurements, qualitative interviews, and group experiments) to advance our understanding of the social effects of emotions at work.

Our symposium is aligned with the 2024 Academy of Management theme, "Innovating for the Future: Policy, Purpose, and Organizations." We emphasize the pivotal role of research and practice in crafting fresh strategies to combat inequality and cultivate responsible, purpose-driven business practices. Management scholars and practitioners have a unique opportunity to collaborate on solutions to pressing issues, capable of catalyzing enduring, positive change within organizations and society. This symposium responds to this clarion call by centering its focus on vulnerable populations, including (im)migrants, survivors of human trafficking and violence, LGBTQ+ individuals, and trauma survivors. Through theory-driven research, our overarching goal is to offer both scholarly and practical insights that reshape our perspective on the future of organizations while actively addressing the reduction of work and employment inequalities experienced by vulnerable individuals. We showcase five scholarly papers that shed light on the challenges confronted by vulnerable workers. These papers yield substantial contributions by using diverse theoretical perspectives to advocate for an inclusive approach, encompassing understudied communities within the vulnerable workforce. Employing a spectrum of methodological approaches, including qualitative and quantitative methods, our symposium serves as an academic platform fostering rigorous examination, meaningful discourse, and innovative exploration to catalyze the development of effective strategies for a more equitable future.

Panelist: **Kathryn Pavlovich**, *U. of Waikato Management School*

Panelist: **Richard Peregoy**, *Emeritus Associate Professor*

Panelist: **Lee Robbins**, *Golden Gate U.*

The purpose of the MSR Flamekeepers is to serve as a spiritual support group for MSR, keep alive the vision of MSR, to support a space for discernment, and to provide opportunities for deep relational connection among MSR members. The granting of division status of MSR within AOM provides a great opportunity for its members to reflect on why we became involved in MSR and where we would like to go in the coming years. In this panel symposium members of the Flamekeepers will share how and why their spiritual and religious experiences, practices and/or beliefs led them to become involved with MSR, and how each of them sees their role as a Flamekeeper in furthering the vision of MSR. The session will provide an opportunity for MSR members, after hearing the experiences and aspirations of the Flamekeepers, to reflect on how their spiritual experiences, beliefs and practices have influenced their teaching and research, how they can do so even more in the future, and how this could influence their participation in MSR in the future.

Exploring Authentic, Spiritual, and Humble Leadership Approaches

Session Moderator: **Kiho Jun**, *Beijing Normal U.-Hong Kong Baptist U. United International College*

This session delves into various leadership approaches and their effects on employee outcomes, focusing on authentic, spiritual, and humble leadership styles. It provides insights into effective leadership approaches' mechanisms and boundary conditions, ultimately contributing to a deeper understanding of how leaders can foster positive employee outcomes and create more supportive and engaging work environments.

MSR: **Supreme Leadership Under Crises: Effects of Deity-Like Leadership**   

Author: **Jingyang Gu**, Hong Kong Chu Hai College

Author: **Ye Li**, Nanjing U. School of business

Author: **Zhan Wang**, St Cloud State U.

Author: **Ning Hou**, St. Cloud State U.

Author: **James Tan**, St. Cloud State U.

Implicit leadership theories are the basis for this examination of effects of supreme deity-like leader characteristics under unprecedented and uncertain organizational crises. Both qualitative and quantitative studies are used to identify predictiveness and ethicality as leader characteristics that are embodied in ecumenical perceptions of divine characteristics. The hypotheses predict that when leaders show characteristics that are congruent with the characteristics of iconic ecumenical perceptions of supreme beings, employees show increased trust, diminished perceived crisis threat, and subsequently reduced stress, enhanced affective commitment, and better performance in times of crisis. A multi-wave survey confirms the hypotheses. Theoretical and practical implications are addressed, along with suggestions for future crisis management research.

MSR: **Authentic Leadership and Its Ripple Effects on Employee Outcomes at Work: Support and Trust as Key**   

Author: **Kiho Jun**, Beijing Normal U.-Hong Kong Baptist U. United International College

Author: **Joonghak Lee**, Gachon U.

Author: **Yan Qiuling**, U. of Manchester

Author: **Yi Sun**, BNU-HKBU United International College

Drawing on organizational support theory, we examine the effects of authentic leadership behavior on employee outcomes at work. This study mainly focuses on the mediating roles of perceived supervisor support (PSS) and perceived organizational support (POS) and the moderating role of trust in leader. Using data from 384 respondents in several business organizations in Korea, this study tests a mediation mechanism in the relationship between authentic leadership and followers' turnover intention and organizational citizenship behavior (OCB). First, the analysis shows that authentic leadership has a positive relationship with employees' OCB and a negative relationship with their turnover intention. Secondly, this study finds that PSS and POS mediate the relationship between authentic leadership and employee work outcomes. Specifically, supervisors' authentic leadership influences employee performance by increasing their PSS and POS. Lastly, the analysis finds that followers' trust in leader moderates the relationship between authentic leadership and PSS. Managerial implications and future research directions are discussed.

MSR: **Spiritual Leadership and its Positive Outcomes: A Moderating and Mediation Model**  

Author: **Tasneem Fatima**, International Islamic U., Islamabad, Pakistan

Author: **Imran Yousaf**, International Islamic U. Islamabad Pakistan

The study highlights the importance of spiritual leadership in the work context and tries to fill important gaps in the extant literature in this domain by proposing a few underlying mechanisms between spiritual leadership and positive work outcomes. The study aims to examine serial mediating mechanisms in terms of moral attentiveness and moral potency between spiritual leadership and employees' positive work outcomes, particularly self-contentment and helping behavior. It also proposes a moderating role of the moral self between spiritual leadership and moral attentiveness. The social learning theory has been used as an overarching theory to explain all the links suggested in the proposed model. It is argued that subordinates learn from their spiritual leaders' behaviors, which are based on altruistic love, faith, vision, calling, and membership. Through a cognitive and internalizing process, they try to replicate learned behaviors in the form of self-contentment and helping behavior. Following quantitative research, the study is based on a time-lagged design to undertake the survey. Data has been collected using a time-lagged design from employees of public and private sector universities. Relying on the convenient sampling technique, 303 responses were taken using self-administered questionnaires. Results provided good support for the proposed model. Future research directions have also been provided, mentioning a few limitations of the study.

MSR: **When and How Does Leader Humility Lead to Followers' Passive and Proactive Behavior?** 

Author: **Somayehsadat Bahmannia**, U. of Canberra

Author: **Darren K. B.**, U. of Northern British Columbia

Author: **Steven Grover**, Macquarie U.

Author: **Kevin B. Lowe**, U. Of Sydney

Author: **Robin Mengxi Yang**, School of Economics and Management, U. of Chinese Academy of Sciences

Leader humility increasingly appears in the literature as a positive leadership style that fosters positive outcomes in followers, yet recent studies suggest that there are potential negative outcomes on the behavior of followers. This study advances this stream of research by exploring how leader humility shapes individual prosocial behavior (i.e., cooperative silence and pro-group unethical behavior) using two-wave, time-lagged data. Drawing on the social identity theory of leadership, we theorize and find that leader humility relates to both the cooperative silence and pro-group unethical behavior of followers. Consistent with the social identity perspective, these effects were mediated by pride in group membership. Furthermore, in line with impression management theories, we find that the concern of individuals regarding reputation maintenance moderated the overall relationship, such that followers with a greater concern for their reputation were more likely to engage in pro-group unethical behavior or cooperative silence because of their pride in group membership. Keywords: Leader humility, pride in group membership, cooperative silence, pro-group unethical behavior, reputation maintenance concern.

NEU: **Behavioral and Neural Evidence on Consumer Responses to Trust Repair Strategies for Service Failures**

Author: **Ping Han**, *Xi'an Jiaotong U. School of Management*
Author: **Qiushi Wang**, *School of Management, Xi'an Jiaotong U.*
Author: **Shuwei Hao**, *School of Management, Xi'an Jiaotong U.*
Author: **Zixuan Liu**, *School of Management, Xi'an Jiaotong U.*

This study adopts two experiments to investigate whether consumers' responses to trust repair strategies for e-commerce service failures differ at the subconscious and conscious levels. Consumers' subconscious responses were measured using Event-related potentials (ERPs), combined with conscious measures of self-report preferences using a questionnaire. Stark differences were observed between the results of the subconscious and conscious trust measures. The results of subconscious evaluation revealed that there was an optimal trust repair strategy for each type of e-commerce service failure. By contrast, the results of conscious evaluation demonstrated that financial compensation was most effective in repairing trust violations regardless of service failure types. Based on our behavioral and neural evidence, this study advances a nuanced understanding of the complex nature of consumer decision-making and preferences and highlights the value of using EEG to extend the research on consumer trust repair.

NEU: **Sexual Dimorphism and Women's Resilience to Circadian Disruptions: A Daily Diary Study**

Author: **Stacey Robin Kessler**, *Kennesaw State U.*
Author: **Shani Pindek**, *U. of Haifa*
Author: **Zhiqing Zhou**, *Johns Hopkins Bloomberg School of Public Health*
Author: **Graham Hughes Lowman**, *Kennesaw State U.*
Author: **Patricia Lanier**, *U. of Louisiana at Lafayette*

Even though nightly sleep patterns are fundamentally a biological process, many organizational studies researchers have examined sleep using a social approach. Following recent NEU scholars, we argue that the incorporation of a biological approach into the study of sleep within the organizational studies literature represents an exciting opportunity to understand important workplace phenomena. Doing so is particularly useful when examining biologically based differences between men and women's circadian rhythms (i.e., an example of sexual dimorphism) as prior research indicates that women are more resilient to nocturnal circadian disruptions than men. Grounded in the chronobiological literature, we hypothesize that this sex difference will manifest in the workplace in the form of workplace engagement. Results of a 10-day daily diary study, consisting of a sample of 111 employees, indicated support for this proposition; women maintained high levels of work engagement even after experiencing nocturnal disruptions. In turn, morning workplace engagement was related to two afternoon measures of workplace performance (i.e., task performance and creativity) and a measure of job-based well-being (i.e., job satisfaction). These findings indicate that our focus on contextual effects has inhibited our understanding of individuals' work experiences. This seems particularly true given women's resilience to circadian disruptions, a competitive workplace advantage that has not yet been fully understood.

NEU: **Entrepreneurial Alertness and Opportunities: State-of-the-Art and Future Challenges**

Author: **Giuseppe Bongiorno**, *Ph.D Student*
Author: **Mariacarmela Passarelli**, *Management Department*

In recent years Entrepreneurial Alertness (EA) has become a key construct of interest for entrepreneurship research. EA defined as "the ability to notice without search opportunities that have hitherto been overlooked" (Kirzner, 1979, 48), has been shown as a relevant antecedent for opportunity recognition. Amid this interest, there is still a lack of consensus on what entrepreneurial alertness is, how it can be best measured and what effect it has on entrepreneurship behaviour and activities. In order to contribute to the conversation within this research area, we propose a systematic literature review (SLR) with bibliometric tools to systematize and synthesize the current state-of-the-art knowledge related to the EA. Specifically, we attempt to show the timely opportunity for Organizational Neuroscience (ON) research, to provide substantial inroads to advance the field. As is shown by our findings, knowledge integrating Organizational Neuroscience can offer a more cohesive understanding of this important construct and, as such, develop new empirical testing and theorizing for the benefit of the ON and entrepreneurial scholarly and practical communities alike.

NEU: **Neurological Insights into the Gender Gap in Entrepreneurial Fundraising**

Author: **Sohvi Heaton**, *Baylor U.*
Author: **Peter G. Klein**, *Baylor U.*
Author: **Jin Yun**, *The Wharton School, U. of Pennsylvania*
Author: **Michael Platt**, *Perelman School of Medicine at the U. of Pennsylvania*

The well-acknowledged gender gap in startup funding has prompted previous studies to propose gender diversity in the investment community as a potential solution. However, these studies often lack a comprehensive analysis of the underlying reasons influencing investor decision-making. Drawing on existing empirical evidence regarding the neurological foundations of investor behavior, we theorize that neuro-chemistry among investors plays a crucial role in predicting investor interest in entrepreneurial projects. By exploring these dynamics, our study aims to provide neurological insights that might reconcile the varied empirical results found in previous studies emphasizing gender diversity. Additionally, we provide detailed methodological considerations for future research, including the neuroforecasting approach, which has proven valuable in predicting organizational outcomes, such as consumer choices.

Advances in Leader Effectiveness Research

Session Moderator: **Stefan Razinskas**, *Freie U. Berlin*

OB: Integrating Research on Leadership and Psychological Resilience: A Literature Review

Author: **Stefan Razinskas**, *Freie U. Berlin*

Author: **Silja Hartmann**, *TU Berlin*

Leaders are particularly challenged in times of crisis and adversity, as they are expected to support the ones they lead while also having to cope themselves. Thus, the concept of psychological resilience has become of crucial importance to leadership research. We synthesize 164 empirical studies on leadership and psychological resilience and offer an integrative literature review. Despite increasing interest in the resilience of leaders and followers, theory is still about to switch from relatively well-established intrapersonal perspectives that consider either the leaders or their followers to the required interpersonal leader-follower perspective. To acknowledge this current state of research and point to directions for future research, we build a multi-perspective leader-follower framework. We discuss how leadership as a social process is not only shaped by, but also influences, the resilience of leaders and their followers. Our synthesis of this field of literature is supposed to guide future research toward the contagion of resilience through social interactions and the role that leader-follower (in)congruence in resilience plays in this transmission. Such an elaborate understanding is important to inform organizational practices about the value of psychological resilience, offer insights into how to spread resilience across an organization, and address leaders' responsibilities in this regard.

OB: When Vision Communication Goes Wrong: an Ideological Contract Perspective of Work Meaningfulness

Author: **Courteney Buchanan**, *Wayne State U.*

Author: **Shuxia Zhang**, *Wayne State U.*

Author: **Amanuel G. Tekleab**, *Wayne State U.*

The present paper utilizes the ideological perspective of psychological contracts to describe how and why team leader vision communication can ultimately lead to lower team meaningfulness of work. We explain how leaders who fail to commit to the proposed vision breach the ideological contract by threatening a valued purpose and its coinciding ideological rewards. This relationship is dependent on the trait of leader behavioral integrity, as ascribed by followers, such that it is weakened when leaders are perceived as having high behavioral integrity, and strengthened when leaders are perceived as having low behavioral integrity. Once breach occurs, we suggest teams perceive lower significance in their tasks and form shared perceptions of lower meaningfulness of work. We propose this relationship is also dependent upon contextual factors, namely, team outcome assessments related to the magnitude and the implications associated with the breach. In this case, the relationship will be strengthened when teams perceive high breach magnitude and/or implications and weakened when teams perceive low breach magnitude and/or implications. Together, we describe the conditions that lead to team leader communication resulting in detrimental team effects, contradicting its original purpose.

OB: A Dynamic Framework for Understanding Leader-Follower Dyadic Relationships

Author: **Huanxin Liu**, *Binghamton U.-State U. of New York*

This conceptual paper addresses the gaps in the literature on leader-follower dyadic relationships by proposing a comprehensive framework that integrates followership theory and considers the dynamic nature of these relationships. Despite significant advancements in understanding the complexities of leader-follower interactions, current literature remains predominantly leader-centric, oversimplifies the nature of relationships, and often treats them as static entities. To overcome these limitations, we first review existing theories and models in the field, highlighting their contributions and shortcomings. Next, we introduce followership theory and emphasize its importance in the context of leader-follower dyadic relationships. We further explore the interplay between social and economic exchanges across different stages of dyadic relationships. Finally, we present a holistic framework that captures the dynamic, interactive process of leader-follower dyadic relationships, incorporating followership theory and the intricate balance between social and economic exchanges. This paper aims to offer a more comprehensive understanding of leader-follower relationships and their implications for organizational success, paving the way for future research and practical applications

OB: Do Leaders Age Like a Fine Wine? A Meta-Analysis of Leader Age and Leadership Effectiveness

Author: **Yingge Li**, *Florida State U.*

Author: **Joshua C. Palmer**, *Kennesaw State U.*

Author: **Gang Wang**, *Florida State U.*

Author: **Justin Marcus**, *Koç U.*

Author: **Xin Zheng**, *Florida State U.*

Does first-line and mid-level (FLML) leaders' age matter to their leadership effectiveness? Different and even competing theoretical perspectives were proposed to understand the role of leaders' age. Empirically, disparate findings were reported, and equivocal implications were provided. Surprisingly, with the workforce getting older and increased attention to age in the workplace, we have no synthesized knowledge on whether older FLML leaders are more or less effective than their younger counterparts, let alone why or when older FLML leaders are more or less effective. To fill this critical void, we drew from the leadership literature and meta-analyzed relations of FLML leaders' age with widely studied leader and follower work outcomes given that FLML leaders not only perform their own tasks but also shape followers' work outcomes. Meta-analytic results based on 217 studies reveal that FLML leaders' age had a negative and weak relationship with their own task performance and positive and weak relationships with key follower (e.g., follower task performance) outcomes. Our moderation analysis results suggest these relationships were largely generalizable across various conditions. Moreover, FLML leaders' age consistently showed indirect effects on leader and follower work outcomes via leader traits (e.g., task competence) and behaviors (e.g., contingent reward).

Empowering and Designing Creative Work

Session Moderator: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*

OB: Cognitive DA Fit and Employee Creativity: The Moderating Effect of Task Idiosyncratic Deals 

Author: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*

Author: **Xue Zheng**, *China Europe International Business School (CEIBS)*

Author: **Zhiqiang Liu**, *Huazhong U. of Science and Technology*

Author: **Jingran (Mia) Zhou**, *Purdue U., West Lafayette*

By integrating the job demands–resources model with the demands-ability fit literature, we proposed that (in)congruence of cognitive demands and abilities and the congruence levels are indirectly related to employee creativity via creative self-efficacy, and task idiosyncratic deals serve as a crucial boundary condition for the relationships. A three-wave multi-source survey conducted among 1026 employees working in high-tech firms revealed that congruence on cognitive demands and abilities and the levels of congruence were positively related to creative self-efficacy, and indirectly related to employee creativity via creative self-efficacy. We also found that task I-deals complemented the effect of (in)congruence such that when task I-deals are higher than lower, employees with lower cognitive abilities than cognitive demands were more likely to enhance creative self-efficacy. Meanwhile, task I-deals supplemented the effect of the levels of congruence on creative self-efficacy and the indirect effect of the levels of congruence on employee creativity via creative self-efficacy, such that these effects were stronger when task I-deals were lower than higher. Our findings provide a holistic perspective to explain how job demands (i.e., cognitive demands), employee abilities (i.e., cognitive abilities), and job resources (i.e., task I-deals) interact to affect employee creativity via creative self-efficacy.

OB: How Does Organizational Design Matter for Creativity? A Study from Attention Allocation Perspective 

Author: **Yunhan Qin**, *Chongqing U.*

Author: **Yong Zhang**, *Chongqing U.*

Author: **Jiahui Feng**, *Chongqing U.*

Employee creativity is crucial for organizational innovation and survival. Although previous studies have examined the impacts of organizational design on enterprise innovation, few studies to date have investigated how organizational design influence employee creativity, which is a core driver of innovation. Based on the theory of attention allocation, this study examined the relationship between organizational design and radical creativity and incremental creativity, dedicating to the possible mediating role of knowledge scanning in the relationship. We conducted a longitudinal research with one month time lagged at three time points. Data were collected from 429 dyads of employees and their immediate supervisors in 36 units. Analysis of the time-lagged data revealed that centralization has a negative indirect effect on radical creativity via external scanning, and a negative indirect effect on incremental creativity via internal scanning. In contrast, connectedness has a positive indirect effect on radical creativity via external scanning, and a positive indirect effect on incremental creativity via internal scanning. Unexpectedly, the indirect effect of formalization on creativity was not contingent. These results extend previous studies by examining the mediating effect of knowledge scanning of employees, and clarify the mechanism through which organizational design influences different types of creativity.

OB: Humble Leadership and Team Creativity: Exploring the Role of Team Voice Quality and Team Demographic

Author: **Mingyan Chen**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Extending the existing dynamic perspective between leaders and team members, we argue how and why leader humility impacts team creativity through interactional processes (team voice quality). The purpose of this study is to examine the mediating effect of team voice quality on the relationship between humble leadership and team creativity. The study also investigates the moderating effect of team demographic diversity on the relationship between humble leadership and team voice quality. Using multisource data collected from 267 subordinates and 55 teams in China, we adopted the path model approach and the bootstrap method to test a moderating mediation model regarding leader humility and team creativity. We found that leader humility is positively related to team voice quality, and team voice quality mediates the relation between humble leadership and team creativity. Moreover, the results showed that team demographic diversity moderates the indirect effect. This study answers the call for paying greater attention to voice quality and empirically examining its development process. Moreover, this study provides a theoretical framework that accounts for constructive social interactions in the relationship between leader humility and team creativity.

OB: Can Self-Sacrificial Leadership Fuel Employee Innovative Behavior?  

Author: **Yanting Zhu**, *North China U. of Technology*

Drawing upon social information processing theory, this study explores the working mechanism of self-sacrificial leadership on employee innovative behavior, and the mediating effect of leader secure-base support as well as the moderating effect of employees' creating cognitive style. By proposing a moderated mediation model, this study answers questions that why and how self-sacrificial leadership can influence employee innovative behavior through leader secure-base support, and when the main effect as well as the mediating effect were stronger in the Chinese context. By adopting multi-source and multi-wave research design and conducting the multilevel modeling analysis of 547 leader-subordinate dyad data, this study has investigated that self-sacrificial leadership can positively predict employee innovative behavior, in which the leader secure-base support exerts a mediating role between this main relationship. Moreover, employees' creating cognitive style is an important boundary condition which can moderate the relationship between leader-secure base support and employee innovative behavior, as well as the mediating effect of leader secure-base support. This study sheds new insights on the effectiveness of self-sacrificial leadership.

Jumping In With Both Feet: Adoption of New Technologies at Work

Session Moderator: **Ruowen Shen**, *Renmin U. of China*

OB: From Comfort to Creative Sparks: Nexus of Well-Being-Oriented Technologies and Personal Resources  

Author: **Ruowen Shen**, *Renmin U. of China*
Author: **Zhuyi Li**, *Renmin U. of China*
Author: **Kai Zhang**, *Renmin U. of China*
Author: **Maw-Der Foo**, *Nanyang Technological U.*

This study explores the relationship between well-being-oriented technologies (WBOT) and creativity in the workplace. Recognizing creativity as a pivotal competency, we investigate how WBOT, technologies designed to enhance human well-being, influence employees' creativity. We conducted a quasi-field natural experiment and a field survey to understand the impact of WBOT on creativity through energy-based personal resources. Our research extends beyond traditional task-oriented technologies, examining how tools aimed at improving well-being contribute to creative outcomes. We found that WBOT enhances creativity by bolstering employees' energy-based personal resource and creative self-efficacy, essential for creative tasks. Furthermore, our study reveals the role of mindfulness in maximizing the benefits of WBOT, suggesting that employees with high mindfulness experience greater personal resource enhancements. This research not only bridges the gap in understanding the role of well-being technologies in fostering workplace creativity but also contributes to the broader discourse on the influence of emerging technologies on work-related outcomes.

OB: Promethean Anxiety from AI Adoption: Employees' Need for Self-Actualization and Turnover Intention 

Author: **Liping Chen**, *Guanghua School of Management, Peking U.*
Author: **Minya Xu**, *Guanghua School of Management, Peking U.*
Author: **Xiaoxuan Li**, *School of Economics and Management, Tsinghua U.*

This study examines the impact of artificial intelligence (AI) adoption on eliciting employees' proactive pursuit of occupational self-actualization and subsequent turnover intention. Drawing on protection motivation theory, we developed a research model to elucidate that AI adoption in the workplace would stimulate employees' need for occupational self-actualization, which, in turn, triggers their turnover intention. A three-wave field survey supported our model. The findings revealed the invigorating, yet previously overlooked role of AI adoption in inspiring employees' enthusiasm for the pursuit of occupational self-worth, although accompanied by potential costs to organizations in the form of increased employee turnover intention. Moreover, our findings suggested that perceived career prospects can mitigate the positive impact of AI-induced need for occupational self-actualization on turnover intention, providing opportunities for organizations to retain talents. In general, this study expands our understanding of the impact of AI on employees' workplace experiences and offers practical insights for workplace management in the digital era.

OB: Institutional Logics of Digitization: The Case of the Motion Picture Industry 

Author: **Ganna Pogrebna**, *AI and Cyber Futures Institute, CSU and U. of Sydney Business School*
Author: **Amon Chizema**, *Loughborough U.*
Author: **Yevgen Bogodistov**, *MCI Management Center Innsbruck*

Drawing upon the lens of institutional logics and leveraging advanced data science and econometric methodologies, this study delves into the issue of digitization within the motion picture industry. By amassing data from 350 prominent motion picture companies that have released 4,482 films from 1925 through 2019, we discerned two predominant institutional logics: a "logic of the profession" that views film as an artistic endeavor, and a "logic of the market" that approaches film from an operational standpoint. Econometric models exploring the financial trajectories of these companies reveal that top-grossing companies harmoniously integrate both logics in their allocation decisions between human and digital processes and teams. Moreover, the high revenue-generating firms in the industry evince accelerated shift towards the "hybrid" logic with the higher reliance on "logic of the market" than on "logic of the profession" components. Financially successful companies are also the ones who increase digitization reliance in their filmmaking operations compared to their less lucrative counterparts.

OB: The Impostor Phenomenon of Workplace Artificial Intelligence Augmentation 

Author: **Puchu Zhao**, *School of Business, Sun Yat-sen U.*
Author: **Guohua He**, *Shenzhen U., College of Management*

Organizations are increasingly augmenting employee tasks with artificial intelligence (AI). Whereas the existing literature predominantly describes AI augmentation as a positive practice that enhances employee capabilities and task performance, we attempt to challenge this consensus by exploring its dark side. Drawing upon the theory of impostor phenomenon, we posit that workplace AI augmentation can evoke workplace impostor thoughts in employees and in turn decrease their knowledge sharing and interpersonal citizenship behavior. Moreover, we suggest that these effects can be more pronounced when employees have a higher level of intrinsic motivation. We tested our hypothetical model with three experiments and a longitudinal survey. This research challenges the consensus in the literature by revealing the dark side of both AI augmentation and intrinsic motivation, and offers important contributions to research on impostor phenomenon.

Proactivity Matters

Session Moderator: **Sen Zhang**, *Graduate School of Commerce, Waseda U.*

OB: **Endorsement of High Performers' Voice: The Role of Voice Tactic and Supervisor's Power Motivation** 

Author: **Sen Zhang**, *Graduate School of Commerce, Waseda U.*

High performers' voice offers numerous advantages to organizations and previous research has demonstrated that supervisors tend to endorse it. However, following social dominance theory, such a voice may be perceived as a threat to the established hierarchy, leading to diminished voice endorsement. Drawing on associative evaluation theory, I argue that the degree to which supervisors endorse a high performer's voice is fundamentally determined by the supervisor's organizational-focused associations that the voice elicits. I contend that there is a three-way interaction effect, involving high performers, coalition voice, and the supervisor's power motivation, on managerial voice endorsement. More specifically, a high performer's coalition voice is less likely to receive managerial endorsement via organizational-focused associations compared to a non-coalition voice, especially from supervisors with high power motivation. Results from a scenario-based experimental study sampling 226 supervisors (Study 1) and an event-contingent survey-based study sampling 181 supervisors (Study 2), both conducted in the United States, supported my hypotheses. I discuss the implications of my findings both theoretically and practically and offer directions for future research.

OB: **The Motivational Mechanisms of Employee Proactive Work Behavior: Evidences from Meta-Analysis**

Author: **Mei Yang**, *School of Labor and Human Resources, Renmin U. of China*

Author: **Hong Li**, *U. of Chinese Academy of Sciences*

Author: **Jianmin Sun**, *School of Labor and Human Resources, Renmin U. of China*

Scholars have conducted numerous studies on the influence of both proxy and distal antecedents and the mechanisms of employees' proactive work behavior. There is still controversy regarding the varying degrees of impact different motivational states have on employee proactivity. This paper tested the motivational mechanisms within Parker's (2010) model of proactive work behavior by meta-analyzing 107 papers in both English and Chinese language. The relative strengths of three motivational states: "can do," "reason to," and "energized to" in influencing employees' proactive work behavior were analyzed with a combined sample size of 34,017. The results indicate that all three motivational states positively contribute to proactive work behavior. Specifically, "reason to" has a stronger impact compared to other motivators, and "can do" exhibits a stronger influence than "energized to," highlighting the significance of having a reason to engage in proactive work behavior. Limitations of the study and future directions are discussed.

OB: **When Do Larks and Owls go the Extra Mile? The Impact of Chronotype on OCB via Time Extension Self-Efficacy** 

Author: **Ji Woon Ryu**, *Portland State U.*

Author: **Cristiano L O Guarana**, *Indiana U. - Kelley School of Business*

Author: **Miguel Caldas**, *U. of Texas at Tyler*

Author: **Jaewook Lee**, *Indiana U. - Kelley School of Business*

In this research, we investigate the effects of chronotype on individuals' perceived ability to extend their available time of day and their engagement in OCB. Drawing upon the self-efficacy theory and the circadian process theory, we theorize that individuals' wake time and bedtime experiences associated with their chronotypes shape different beliefs in their capability to extend their morning and evening by changing their sleep timing (which we call time extension self-efficacy). We suggest that these efficacy beliefs influence individuals' OCB engagement in the morning and evening since perceived time availability plays an important role in individuals' decisions to engage in discretionary extra-role behaviors. We tested these predictions across two studies. In Study 1, we found that individuals with earlier chronotypes (i.e., morning people) showed stronger confidence in extending their morning by advancing their wake time, which led to higher OCB engagement in the morning. In contrast, individuals with later chronotypes (i.e., evening people) showed stronger confidence in extending their evening by delaying their bedtime, leading to higher OCB engagement in the evening. In Study 2, we replicated these findings and found similar patterns for OCB. We conclude by examining the theoretical and practical implications of these discoveries and suggesting potential avenues for

OB: **Configurations for High Employee Engagement: Using the FsQCA Approach**

Author: **Jie Huang**, *Henan U.*

Author: **Yali Li**, *Nanjing U.*

Invoking the "job characteristics – individual differences" framework and job demands-resources model, this study provides a configurational perspective and exposes asymmetric relationships among developmental human resource practices, relational coordination (i.e., communication ties and relationship ties), employability, and career commitment that lead to high or low employee engagement. 2-month time-lagged data are gathered from 735 employees of 26 Chinese enterprises, and the fuzzy set qualitative comparative analysis (fsQCA) is used to examine the configurational paths. Our main findings reveal six equifinal configurations for high employee engagement: either developmental human resource practices or career commitment – or both – are necessary for high employee engagement; Furthermore, the results highlight the importance of communication ties / relationship ties and employability for high employee engagement. Further, the results show two different configurations for low employee engagement. We demonstrate how configurational theory and methods can be employed to analyze the causal complexity of employee engagement, this offers a more complete picture of how enterprises improve employee engagement.

I've Got a Bad Feeling About This: Emotions and Negative Outcomes

Session Moderator: **Hamid Roodbari**, *Surrey Business School*

OB: **Exposure to Extreme Contexts and Employees' Safety Performance** 

Author: **Hamid Roodbari**, *Surrey Business School*
Author: **Chidiebere Ogbonnaya**, *U. of Kent*
Author: **Hossein Olya**, *Sheffield U.*
Author: **Sanaz Vatankhah**, *U. of Bedfordshire*

Recent years have seen considerable growth in extreme contexts research, with a focus on understanding the nature of management practices in unusual or atypical work environments. While significant attention has been paid to organisational responses in these contexts, the responses of individuals have often been overlooked. Using affective events theory, our research investigates the impact of exposure to extreme events on safety performance in extreme contexts of firefighting and shipping. In Study 1, based on time-lagged data from 302 firefighters, we find that exposure to high extreme events indirectly reduces safety performance through a micro-foundational process. Specifically, exposure to high extreme events heightens negative emotions, which, in turn, diminishes work engagement and, consequently, leads to a decline in safety performance. These findings are replicated in Study 2, using time-lagged data from 316 ship officers. Study 2 also reports the important role of self-emotion appraisal as a boundary condition for hypothesised relationships. We conclude by discussing the theoretical and practical implications of our findings.

OB: **The Bright and Dark Sides of Employee Creativity: The Role of Authentic and Hubristic Pride**

Author: **Mo Chen**, *School of Management, Harbin Institute of Technology*
Author: **Chao Chen**, *Rutgers U.*
Author: **Linnea Van Dyne**, *Broad College of Business, Michigan State*

Although employee creativity can contribute to organizational innovation and effectiveness, research also acknowledges the dark side of employee creativity because creativity also can predict destructive work behaviors. Integrating attribution theory and the cognitive appraisal theory of emotions, we investigate conditions and mechanisms that shed light on when and why employee creativity triggers positive versus negative behaviors directed at coworkers. Specifically, we hypothesize that when creativity is attributed to effort, employees experience authentic pride, and when it is attributed to ability, they experience hubristic pride. Moreover, we hypothesize that the average level of coworker creativity weakens the effect of employee creativity on hubristic pride to a greater extent than on authentic pride. Finally, we hypothesize that authentic pride, in turn, motivates coworker helping and inhibits coworker incivility, whereas hubristic pride motivates coworker incivility and inhibits coworker helping. The results of a multisource and time-lagged field study generally support our hypotheses. We conclude by discussing theoretical and practical implications.

OB: **Work Deadlines: Role of Family Incivility, Emotional Exhaustion and Emotional Intelligence** 

Author: **Asma Shakeel**, *Aix Marseille U.*
Author: **Imran Sharif**, *U. of Lahore*
Author: **Ambreen Jabeen Shah**, *Lahore Business School, The U. of Lahore*
Author: **Muhammad Ali**, *Aix Marseille U.*

This study extends the limited existing research on family incivility and investigates the negative spillover effects of family incivility on employees' ability to meet work deadlines. In addition, we detail that an important reason why employees' exposure to rude family behavior hinders their ability to complete work tasks on time is that they feel emotionally exhausted. However, this harmful process can be curtailed to the extent that employees can draw from their emotional intelligence and regulate their own emotions and those of their family members. To test these predictions, we collect data from 161 employee-supervisor dyads working in various hospitality sector organizations in Pakistan. The findings support our predictions that family incivility negatively affects employees' ability to meet work-related deadlines. Moreover, this relationship is mediated by emotional exhaustion and moderated by emotional intelligence. This study provides pertinent insights to organizations and managers to help their employees in dealing with their family issues.

OB: **The Mixed Blessing of Person-Team Time Urgency Discrepancy: Roles of Team PPGO, Anxiety, and Pride**  

Author: **Jiang Xu**, *Beijing Sport U.*

Drawing upon social comparison theory and social information processing theory (SIP), this study investigates how person-team time urgency discrepancy influence the focal employee's job performance. Specifically, the study proposes that when the focal employee exhibits lower time urgency than their team members, the positive effect of the discrepancy on the employee's anxiety is strengthened by team performance-prove goal orientation (PPGO), which ultimately leads to reduced performance. On the other hand, when the focal employee displays a higher level of time urgency than their team members, team PPGO strengthens the positive effect of the discrepancy on the employee's pride, thereby enhancing their performance. Results from a multi-wave and multi-source field survey provide support for the proposed effects. Implications for theory and practice are discussed.

Come Together Now: Multilevel Teams Research

Session Moderator: **Maolin Wang**, *Yunnan U. of Finance and Economics*

OB: Leaders' Culturally Shaped Mindsets: Explaining the Persistence of Authoritarian Leadership

Author: **Maolin Wang**, *Yunnan U. of Finance and Economics*
Author: **Xinhui Jiang**, *Yunnan U. of Finance and Economics*
Author: **Chao Ma**, *Australian National U.*
Author: **Nannan Chen**, *Yunnan U. of Finance and Economics*

An intriguing paradox in organizational management is that authoritarian leadership continues to prevail, particularly in high power distance contexts, despite recurring adverse research outcomes. To better clarify this puzzle, this study integrated cultural and active leader-choice perspectives and proposed a comprehensive framework to illustrate how power distance shapes leaders' social cognition and motivation toward authoritarian leadership, causing variations in its distribution within and between cultures. Drawing from two distinct studies conducted in China and the USA, the data showcases that leaders' power distance boosts their belief in the effectiveness of discipline-focused authoritarian leadership and need for power, resulting in the manifestation of discipline- or dominance-focused authoritarian leadership, respectively. In addition, as anticipated, Chinese leaders exhibited higher power distance scores and stronger beliefs in the effectiveness of authoritarian leadership than US leaders. Theoretical and practical implications are discussed.

OB: The Dual Effects of AI-Enhanced Task Automation on Team Members' Psychological Ownership

Author: **Kaidi Wang**, *U. of Florida*
Author: **Zhefan Huang**, *U. of Florida*
Author: **Yifan Song**, *Texas A&MU.*
Author: **Junqi Shi**, *Zhejiang U.*

As artificial intelligence (AI) is being increasingly used in the workplace to automate employees' job tasks, organizational scholars have started to investigate how employees react to such AI-enhanced task automation but have generally found contrasting findings. To better understand this issue, we draw upon technology affordances and constraints theory (TACT) and research on psychological ownership to investigate the effect of such task automation on employees' psychological reactions and in-role performance in the team context. Through testing multi-source and multi-wave data collected from 377 work teams, we found that AI-enhanced task automation can have dual effects on team members' job-based psychological ownership feelings and in-role performance through automation adaptation (i.e., the affordance actualization process) and automation intrusion (i.e., the constraining aspect of affordances). We also found that team task reflexivity can strengthen the desirable effect of AI-enhanced task automation. Our contributions to research on employee reactions to AI use, TACT, and psychological ownership are discussed at the end.

OB: Boundaries and Learning Processes Linking Star Employees' Proactive Helping to Peers' Performance 

Author: **Ying-Chun Chou**, *National Sun-Yat Sen U.*
Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*

To maximize the benefits of star employees on non-star peers' performance, star employees must proactively help their peers. Based on social learning theory, we conducted three studies to investigate whether supervisors' servant leadership promotes star employees' proactive helping and whether non-stars' can benefit from stars' proactive helping. Additionally, we also explore the moderating effect of the group star proportion (GSP) on these potential social learning processes. We tested our hypotheses by collecting data regarding stars and non-star peers from three distinct samples: 97 insurance sales teams, 46 R&D engineer teams, and 65 automobile sales teams. The findings of multilevel path analysis from the three studies revealed that: (1) supervisors' servant leadership positively correlated with star employees' proactive helping; (2) star employees' proactive helping exhibited a positive indirect effect on their peers' performance via peers' job-related self-efficacy and challenge-seeking behavior; and (3) a higher group star proportion intensified these indirect relationships. Findings offer both theoretical and practical insights into how star employees benefit their peers and provide guidance on managing and leveraging the contributions of star employees.

OB: Taking a Fair Share of Availability! The Neglected Role of Justice in Hybrid Teams

Author: **Martina Hartner-Tiefenthaler**, *TU Wien*
Author: **Tarek Benedict Carls**, *U. of St. Gallen*
Author: **Stephan Alexander Boehm**, *U. of St. Gallen*

In hybrid work environments, availability is a major challenge as time-spatial flexibility allows employees to individualize their work time and place based on their personal needs and preferences. While this gives employees more autonomy, it may not be equally applicable to all hybrid team members, as their perceptions of the boundaries for their actions may vary. Some team members may exceed their boundaries while others do not fully utilize them, intensifying their work and constantly being available for work issues at the cost of their own well-being. This study investigates how justice can address the trade-off between performance and well-being. We propose using team charters to clarify availability expectations within teams. Our study based on 1,440 employees across 109 teams in an automotive company (57 teams in the intervention group) employed a randomized controlled trial to assess the impact of team charters on mental health and work performance. We tested our hypotheses using fixed effects differences-in-differences models and a multilevel structural equation model. Our results show that co-created team charters fostered shared mental models. This resulted in higher perceived justice, which in turn reduced employees' emotional exhaustion. Additionally, shared mental models led to less differentiation in justice perceptions within the team, thereby promoting team performance. Thus, the co-creation of a team charter using team reflexivity can serve both employee health and team performance; two goals that are often seen as conflicting in organizations.

OB: The Perfectionism Cycle: Dynamics Between Perfectionism, Psychological Capital, and Goal Attainment  

Author: **Emily Kleszewski**, *Philipps-U. of Marburg*

Author: **Kathleen Otto**, *Philipps-U. Marburg*

Author: **Monique Mohr**, *Chemnitz U. of Technology*

Perfectionism is a common phenomenon among employees that can have its costs and benefits. Despite recent research pointing to the importance of dynamics in perfectionism for employees' work, little is known about how employee perfectionism and experiences at work may interplay. In the present study, we therefore aimed to shed light on the dynamic association between employee perfectionism and goal attainment at work over a four-month period. Using the high performance cycle as a theoretical framework, we propose a self-perpetuating cycle of employee perfectionism. In this cycle, we expect perfectionistic strivings at T1 to relate to goal attainment at work two months later (i.e., T2), which, in turn, relates to increases in perfectionistic strivings four months later (i.e., T3). Perfectionistic concerns at T1, by contrast, should relate to a lack of goal attainment at T2, which should relate to increases in perfectionistic concerns at T3. Furthermore, we assume that psychological capital as a personal resource facilitates perfectionistic employees' goal attainment, and thus acts as a moderator in this perfectionism cycle. We tested our model using a sample of 260 employees who participated in a three-wave survey study. Latent structural equation modeling results were largely consistent with our hypotheses. Perfectionistic concerns at T1 were indirectly positively related to perfectionistic concerns at T3 via a lack of goal attainment at T2, supporting the expected low performance cycle. Moderation analyses revealed that the indirect effects of perfectionistic strivings at T1 on perfectionistic strivings at T3 via goal attainment at T2 were significant only for high levels of hope and low levels of self-efficacy. We discuss the role of goal attainment in the manifestation of employee perfectionism over time and the finite adaptive nature of perfectionistic strivings.

OB: Scale Development and Validation of Self-Moral Actualization

Author: **Mansura Nusrat**, *The U. of Texas at El Paso*

Author: **Richard Posthuma**, *UTEP*

Author: **Prajya Rakshit Vidyarthi**, *U. of Texas at El Paso*

This research introduces the Self-Moral Actualization (SMA) scale, a novel tool designed to measure the integration of personal moral values, ethical decision-making, and self-awareness. The study employs qualitative and quantitative methodologies, including literature reviews and expert interviews, to identify SMA's core aspects: value congruence, moral reflection, and adaptive morality. The scale's construct validity is affirmed through exploratory and confirmatory factor analyses using diverse professional samples. Structural equation modeling reveals a strong correlation between emotional intelligence and SMA and SMA's significant predictive power for ethical decision-making and leadership behaviors. The SMA scale is reliable and valid, providing valuable insights for academic research and practical applications in ethical behavior and leadership development. Implications for academic research and practical organizational and leadership development applications are discussed, highlighting the scale's potential for enhancing ethical behavior and leadership effectiveness.

OB: Employee Playfulness and OCB: The Roles of Friendship with Leader and Team Formalization Climate 

Author: **Yangxin Wang**, *business school of Central South U.*

Playfulness captures individuals' dispositional differences in (re)framing a situation in an amusing, humorous, and entertaining manner. This study examines how and when highly playful employees may exhibit organizational citizenship behaviors directed to organizations (OCBO) and individuals (OCBI) by drawing on the socioanalytic theory of personality and person-situation interaction models. We suggest that playfulness drives employees to pursue both goals of gaining status (labeled as "getting ahead") and gaining social acceptance (labeled as "getting along"), which further prompt them to engage in both OCBO and OCBI that align with these goals. We also propose that the positive effects on OCBO and OCBI are realized through highly playful employees' friendship with their leaders and mitigated by team formalization climate. Multi-source, multi-wave data from 368 employees from 84 teams supported most of our hypotheses. Theoretical and practical implications are discussed.

OB: Whose Voice Will Be Solicited: Relationship of Subordinate Narcissism and Leader Voice Solicitation

Author: **Pang Xingyu**, *School of Economics & Management, Tongji U.*

Author: **Mingyue Liu**, -

Author: **Limei Zhang**, *School of Management, Xi'an Jiaotong U.*

While leader voice solicitation has been found to be a crucial way to encourage subordinates to voice, there is limited research to explore who will become the target for leaders to solicit voice. To help answer this question, drawing on signaling theory, our research investigates the effect of subordinate narcissism on leader's voice solicitation behavior and its potential spillover effects on subordinates' work-related outcomes. We conducted a field study by using a sample of 453 subordinates with their 109 leaders to test our theoretical model. Results indicated a positive relationship between subordinate narcissism and leader's voice solicitation towards them, which was strengthened as the quality of leader-member exchange increased. Leader's voice solicitation was positively related to the subordinate's work engagement, and organizational citizenship behavior and negatively related to intention to leave. We also found support for the mediation and moderated mediation models. Our research provides theoretical and practical implications for the voice solicitation literature.

This All Stresses Me Out!

Session Moderator: **Hsuan-Che Huang**, *Sauder School of Business, U. of British Columbia*

OB: **Biting off More Than You can Chew at Work: The Cultural Hard and Excessive Work (CHEW) Scale**   

Author: **Hsuan-Che Huang**, *Sauder School of Business, U. of British Columbia*

Author: **Friedrich Goetz**, *U. of Cambridge*

Existing research suggests that differences in working styles (e.g., working diligently, working excessive hours) are primarily due to individual traits, such as workaholism and work ethic. However, cultural-level values and beliefs about work also shape work patterns. This research advances a cultural perspective, arguing that variations in how hard and excessively individuals work can also be explained by the pressure of societal values of work. To capture the work ideals that individuals might feel are imposed on them by their culture, we introduce culturally imposed work ideals, and differentiate between the extent to which individuals perceive that their culture values (a) hard work (i.e., efficiency, quality, and wise use of time) and (b) excessive work (i.e., duration, quantity, and prioritizing work at all times). We develop and validate the Cultural Hard and Excessive Work (CHEW) Scale across six diverse Canadian and American samples (N = 1,902) of full-time employees, business undergraduates, and MBA students as well as alumni. Psychometric results support the reliability and validity of the two dimensions of CHEW. As expected, the cultural ideal of hard work predicts beneficial employee outcomes, such as lower cynicism and higher work engagement, above and beyond existing cultural-, organizational-, and individual-level predictors. Meanwhile, the cultural ideal of excessive work is consistently associated with detrimental consequences, including higher emotional exhaustion, lower job satisfaction and well-being, and impaired physical health. We discuss theoretical and practical implications, emphasizing the fundamental distinction between hard and excessive work ideals that individuals might hold based on their cultural milieu.

OB: **Understanding Why and When Supervisor Bottom-Line Mentality Inhibit Workplace Safety Behavior** 

Author: **Varun Sharma**, *Indian Institute of Management Indore*

Author: **Mayowa Babalola**, *U. of Western Australia*

Author: **Jatin Pandey**, *Indian Institute of Management, Indore*

Workplace safety behavior along with remaining profitable are two essential considerations for business leaders in the competitive world. However, the literature is yet to understand whether leaders focusing solely on achieving financial bottom-line (i.e., those who adopt a bottom-line mentality; supervisor bottom-line mentality; BLM) are effective in enhancing employees' workplace safety behaviors. Therefore, this research draws from social information processing theory to examine the link between supervisor BLM and workplace safety behaviors. We theorize that supervisor BLM reduces employees' perceptions of supervisor support for safety, which then eventuates in reduced employee workplace safety behaviors. We also explore how employee job insecurity exacerbates this mediating process. Using data from a multi-wave study involving employees working in the United States (N=222), we found empirical support for our hypothesized moderated mediation model. Implications of our findings and future research directions are discussed.

 OB: **How and When Work Intensification Leads to Unethical Pro-Organizational Behavior?** 

Author: **Dan Wang**, *Xihua U.*

Author: **Ataullah Kiani**, *Wenzhou-Kean U.*

This study examines why and when employees might respond to work intensification by engaging in unethical pro-organizational behavior (UPB), actions that benefit organizations in the short term but are ethically unsustainable. Drawing on the conservation of resources theory, we propose that work intensification can trigger UPB through the mechanism of job insecurity, and explore how the personal traits (i.e., proactive personality and adaptability) interact with work intensification to predict job insecurity and, consequently, UPB. Our findings reveal that adaptability acts as a protective buffer, mitigating the relationship between work intensification and job insecurity, as well as the indirect effect of work intensification on UPB via job insecurity. In contrast, proactive personality amplifies the relationship between work intensification and job insecurity, as well as its indirect effect on UPB via job insecurity. Interestingly, we found that employees with high proactive personality but low adaptability are more likely to experience job insecurity and engage in UPB when facing work intensification. Conversely, employees with low proactive personalities but high adaptability are less prone to job insecurity and UPB.

OB: **Financial Precarity: An Integrative Review and Future Research Agenda**

Author: **Dayoung Kim**, *Auburn U., Harbert College of Business*

Financial precarity is a significant and widespread issue among the workforce, drawing considerable attention from scholars. In this integrative review paper, I convey the conceptualization of financial precarity and its interdisciplinary findings. In doing so, this paper provides greater understanding of the commonalities, as well as the inconsistencies in terminologies and measurements, found in financial precarity research across different disciplines. The current paper also reviews the antecedents and consequences of financial precarity in an organizational context, highlighting the need for further research in management literature. This paper concludes by proposing future research agendas for advancing our understanding of financial precarity.

Empowering Leadership Research

Session Moderator: **Xinyi Liu**, *Macau U. of Science and Technology*

OB: **Job-Oriented Constructive Deviance: A Cross-Level Moderated Mediation Analysis**  

Author: **Xinyi Liu**, *Macau U. of Science and Technology*
Author: **Li-Yun Sun**, *Macau U. of Science and Technology*

Among tremendous amount of research on workplace deviance, empirical work on constructive deviance, the beneficial and inspiring aspects of employee deviation, is unfortunately insufficient. Drawing on self-determination theory (SDT), we examined the environmental, work, and individual impact on job-oriented constructive deviance (JCD), and the mechanism through which the contextual and individual antecedents influence JCD. Data were collected from 506 employees and their 95 supervisors across 95 groups at three different time points in China. The multilevel path analytical results reveal that (i) environmental dynamism, problem solving demand and creative cognitive style positively relate to employees' change participation, (ii) the effect of change participation on JCD is moderated by empowering leadership, and (iii) the indirect effects of environmental dynamism, problem solving demand, and creative cognitive style on JCD through change participation are moderated by empowering leadership. Specifically, the moderating and moderated indirect effects are stronger when the level of empowering leadership is high rather than low. The study contributes to the literature of employee constructive deviance in the multi-level context.

OB: **Introverted Leaders and Their Teams** 

Author: **Agnes Bäker**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Wim Coreynen**, *School of management, Zhejiang U.*
Author: **Joeri Van Hugten**, *Vrije U. Amsterdam*
Author: **Johanna Vanderstraeten**, *U. of Antwerp*
Author: **Arjen Van Witteloostuijn**, *Vrije U. Amsterdam*

Introverted leaders are seen as less effective and linked to lower team performance. Framing the characteristics of the immediate leadership team as resources buffering job demands arising from leadership tasks, we propose that introverted leaders can be effective leaders after all when embedded in a highly connected leadership team and/or in one with high psychological safety. In a sample of 213 leaders, referring to 192 small and medium-sized enterprises, we show that leader introversion relates positively to firm growth between 2018 and 2022, but negatively to their engagement in empowering leadership. Moreover, team tie connectedness positively moderates the relationship of leader introversion with firm growth and empowering leadership. In contrast, team psychological safety does not provide introverts with additional resources beyond team tie connectedness, but might reduce the perceived need to engage in empowering leadership. We discuss theoretical and practical implications for introverted leaders, emphasizing how leaders' social environment shapes their effectiveness.

OB: **Empowering Leadership and Employee Creativity: A Stress Perspective** 

Author: **Haeseen Park**, *Bowling Green State U.*
Author: **Seohyun Kwon**, *U. of Minnesota*

Recent studies on empowering leadership have challenged the conventional understanding that empowering leadership facilitates positive workplace outcomes and cautioned about the possibility of its negative effects and boundary conditions of its positive effects, suggesting that it can, at times, be burdensome to employees. This study aimed to examine when and how empowering leadership might be perceived as burdensome by employees. We developed our model based on the transactional model of stress (Lazarus & Folkman, 1984) which provides a foundation to understanding how individuals appraise and cope with stress. Specifically, we suggested that the effect of empowering leadership on employee creativity is mediated by two types of stress—challenge and hindrance, and employees' neuroticism moderates the mediating relationships. Two field studies using time-lagged multisource survey data from leader-follower dyads showed that empowering leadership positively influences employee creativity by increasing challenge stress and decreasing hindrance stress particularly for employees with lower neuroticism. However, for those with higher neuroticism, the mediating effects were found to be nonsignificant. These findings help understand when and how empowering leadership can be taxing for employees and suggest a new distinct mechanism through which empowering leadership fosters employee creativity from a stress perspective.

OB: **Effects of Organizational Support and Close Monitoring on Empowering Leadership and Follower Outcomes**

Author: **Yeunkyung Cho**, *Binghamton U.*
Author: **MINJU OH**, *Seoul National U.*
Author: **Seokhwa Yun**, *Seoul National U.*

Empowering leadership is characterized by a decision-making process that entails investing in human capital within the workplace through power-sharing and embracing uncertainty. To better understand the decision-making process of leaders who take risks and foster empowerment among their followers, we draw upon prospect theory and propose that leader perceived organizational support (POS) acts as an antecedent to empowering leadership, subsequently influencing follower outcomes (task performance, Organizational citizenship behavior, and voice). Furthermore, we introduce leaders' supervisor close monitoring as a boundary condition in this proposed mediation model, as it determines leaders' autonomy in their leadership decisions. Our results from a time-lagged investigation on 202 leader-follower dyads indicate that when supervisor close monitoring is low, the relationship between leader POS and empowering leadership and the indirect effects of POS on follower outcomes remain negative. This negativity arises from leaders adopting a risk-taking perspective on decision-making when pursuing empowering leadership. Conversely, when supervisor close monitoring is high, the relationship between leader POS and empowering leadership and its indirect effects on follower outcomes becomes positive. This is because high supervisor close monitoring reinforcing the resource utilization when leaders possess high POS, thereby fostering empowering leadership and follower outcomes.

When Emotions Run High: Emotion Regulation at Work

Session Moderator: **Hannah Kunst**, *U. of Sydney Business School*

OB: Why Do We Try? Goal-Focused Extrinsic Emotion Regulation Influences Co-Worker's Relational Outcomes

Author: **Hannah Kunst**, *U. of Sydney Business School*
Author: **Helena Nguyen**, *U. Of Sydney*
Author: **Anya Madeleine Johnson**, *U. Of Sydney*
Author: **Carolyn MacCann**, *U. Of Sydney*

At work and in everyday life, people regulate each other's emotions (i.e., extrinsic emotion regulation: EER). To date, research in this area has focused on how people try to regulate others' emotions, but less is known about the choice of regulation strategies, and the goals they are trying to achieve. In this paper, we investigate the influence EER goals have on EER strategies that co-workers use to regulate each other's emotions, and how this influences coworker relationship quality (conflict and team member exchange/TMX). Using a co-worker dyadic design (N = 553) we find that employees with pro-hedonic goals are more likely to use the EER strategy of allowing co-workers to talk about their problems (i.e. receptive listening) and this reduces relationship conflict. Employees with the instrumental goal to keep up appearances at work are more likely to ask their co-worker to suppress their emotions which reduces TMX and increases relationship conflict. These results extend theoretical insights into EER and have important practical implications for promoting high quality interactions between colleagues as well as interventions for building positive workplace cultures and emotion regulation norms within organizations.

OB: Highlighting the Power of Sleep: Employees' Daily Sleep Quality and Emotion Regulation at Work 

Author: **Lynn Schmodde**, *Heinrich Heine U. Düsseldorf*

Previous research has primarily focused on sleep quality as an outcome of emotion regulation strategies in the workplace. However, the role of sleep quality as a precursor to these strategies is not well understood. This study investigates the relationship between employees' daily sleep quality and their emotion regulation at work, and examines how sleep quality influences surface acting and deep acting as two distinct emotion regulation strategies. Data were collected with a one-week diary study, encompassing employees' daily sleep quality, emotion regulation ability and strategies, and their perceptions of display rules in their organizations. The findings reveal that better daily sleep quality enhances employees' daily emotion regulation ability at the within-person level. This improvement is associated with reduced daily surface acting, a form of emotion regulation involving the display of inauthentic emotions, known to negatively affect employee well-being and work behaviors. Conversely, sleep quality showed no significant within-person level effects on deep acting, a more authentic form of emotion regulation. Additionally, the study found that perceived display rules moderate the impact of sleep quality on surface acting. This suggests that the influence of sleep quality on emotion regulation varies based on individuals' beliefs about appropriate emotional displays in the workplace.

OB: Exploring the Nonlinear Impact of Emotional Work Demands and Work Passion on Job Satisfaction 

Author: **Antonia Lampaki**, *American College of Greece*
Author: **Ilias Kapoutsis**, *Athens U. of Economics and Business*
Author: **Patricia Kenney**, *Tallahassee Memorial Hospital*
Author: **Marsha Hartline**, *Florida State U.*
Author: **Yufan Deng**, *Southwestern U. of Finance and Economics*

In numerous professions, emotional work demands (EWDs) are a central stressor, and their impact on job satisfaction is key for effectively addressing workforce management challenges. Grounded in activation theory, we hypothesize and empirically establish that the EWDs-job satisfaction relationship is nonlinear across work passion levels. Analyzing data from 267 practicing nurses, collected over three time points using polynomial analysis, we reveal a unique pattern: high-passion workers exhibited the highest job satisfaction when EWDs are moderate-to-high, whereas less passionate workers achieved peak satisfaction with low-to-moderate EWDs. Our results challenge the often-assumed assumption that increased work demands are uniformly detrimental and questions the traditional linear models often used to represent employee behavior, especially when examined in unison with contextual factors. We discuss the study's theoretical implications, practical manifestations, strengths and limitations, and suggest areas for further investigation.

OB: You Have Found a Job! Envy You! How Peers' Progress Influence Envy and Intention 

Author: **Xinglin Liu**, *school of management, USTC*
Author: **Qingxiong Weng**, *U. of Science and Technology of China*
Author: **Xiujuan Wang**, *school of management, USTC*
Author: **Jinke Qu**, *U. of Science and Technology of China*

Although previous research indicated that job seekers might experience job search envy, it has overlooked the differences dual envy (benign envy and malicious envy) for job seekers. Based on social comparison theory and the deservingness theory, we propose that peer's job search progress invokes dual envy which affect job search effort intention and negative gossip intention. We further propose that perceived deservingness moderate the relationship between peer's job search progress and dual envy. The results of a field study (N=352) and an online experiment (N=240) support our hypotheses. Peer's job search progress is associated with dual envy, and benign envy mediates the positive relationship between peer's job search progress and job search effort intention. In contrast, malicious envy mediates the positive relationship between peer's job search progress and negative gossip intention. We have also found that the positive indirect effect of peer's job search progress on job search effort intention via benign envy is stronger when the progress is deserved. In contrast, the indirect effect of peer's job search progress on negative gossip intention via malicious envy is stronger when the progress is perceived as undeserved.

Participant: **Daniel Newton**, *U. of Iowa*

Self-disclosure is sharing personal information with another party, which is recognized in psychology as a behavior that acts as a vehicle promoting well-being. Recently, self-disclosure studies in the organizational context have gained increasing prominence. Yet, a classification of the variety of possible self-disclosure in this setting and the effects of self-disclosure on organizational outcomes at the different levels of analysis (i.e., individual, interpersonal, and group levels) have received relatively little empirical and theoretical attention from management scholars. This symposium explores various types of self-disclosure, including disclosure of multi-racial identity, disclosure of personal weaknesses, disclosure of a miscarriage, and disclosure of holding multiple jobs. The exploration takes place across very different contexts. The symposium presents five papers – one conceptual review/model, one experimental study, one qualitative study, and two survey studies – examining different types of self-disclosure and its effects as well as its role in organizations across levels. Specifically, the first paper discusses new theoretical insights into the role of self-disclosure in fostering fluidity for multiracial individuals. Also, based on the idea of disclosing information perceived as a weakness, the second paper explores the influence of congruence between the level of self-disclosure wanted and received by followers on trust felt by followers. The third paper investigates the role of virtual disclosure of private medical information related to remote work conditions during the pandemic to a group of colleagues. The fourth paper delves into female employee's position to self-disclosure. It identifies the different miscarriage disclosure decision-making paths women experience. The final paper examines the role of multiple jobholder disclosure on employees' psychological well-being (i.e., life satisfaction and job stress) through a sense of authenticity and attention residue or the attention multiple job workers give to these jobs. These papers feature myriad types of self-disclosures in organizations to clarify the conceptualization and measurement of self-disclosure. We believe this symposium is an important step towards encouraging scholars to consider "opening up" conceptualizations and measurement of self-disclosure in organizations, which are representative and inclusive of individual experiences – ultimately important for fostering conditions of individual potential for innovation in the workplace.

Advances in Leadership and Teams Research

Session Moderator: **XiuFeng Li**, *Business School of Shandong Normal U.*

OB: Unpacking the Multilevel Motivating Effects of Shared Leadership on Team and Individual Performance

Author: **XiuFeng Li**, *Business School of Shandong Normal U.*

Author: **Congcong Lin**, *Shandong U.*

Author: **Meiting Liu**, *Shandong Normal U.*

The prevalence of virtual teams in modern organizations poses additional barriers to applications of vertical leadership due to the lack of face-to-face contact. Shared leadership as an emerging distributed leadership from team members shows promise in tackling such barriers when managing virtual teams. However, prior evidence for the relation between shared leadership and virtual team performance remains equivocal and inconsistent. Drawing on input-process-output model and self-determination theory, we propose a multilevel mediation and moderation model to investigate how and when shared leadership conduces to good performance outcomes in virtual work settings. We conducted a field study comprised of 73 virtual teams with 353 members. Results showed that shared leadership had a positive effect on team performance through team cohesion at the team level, and such effect was only significant in smaller virtual teams, rather than in larger ones. Also, shared leadership had a positive effect on individual performance via proactive behavior across levels, furthermore, such effect was only significant under the condition of high communication effectiveness; otherwise, it was nonsignificant. These findings expand the multilevel impact of shared leadership in virtual teams and contribute to resolving the controversy about the relation between shared leadership and performance outcomes.

OB: The Detrimental Effect of Differentiated Transformational Leadership on Employee Turnover

Author: **Sabine Daniel**, *Mainz U. of Applied Sciences*

Author: **Klaus Moser**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Author: **Susanne Rank**, *Mainz U. of Applied Sciences*

Transformational leadership includes leadership behaviors that are directed towards both the team as a whole and towards individual team members. An important part of transformational leadership is therefore differentiated individual-focused leadership, which is defined as leadership behavior that treats team members in a differentiated way. Previous research has found that this behavior has a detrimental effect on the teams. However, so far little is known about the underlying processes. We hypothesized that differentiated individual-focused transformational leadership is detrimental due to varying levels of commitment to the supervisor within the team, which in turn negatively impacts team commitment. We tested this assumption in a longitudinal study with three measurement points, complemented by objective employee turnover data. The sample consisted of 1,114 employees nested in 168 teams. Structural equation analysis revealed significant but opposite outcomes of team-focused and differentiated individual-focused leadership on turnover, mediated by corresponding commitment foci. Team-focused leadership positively related to team commitment, which in turn negatively related to turnover intention and turnover. More importantly, differentiated individual-focused leadership positively related to a divergence in team members' commitment to the supervisor, which in turn negatively related to team commitment and ultimately turnover, thus impairing positive outcomes of the team-focused component of transformational leadership.

OB: The End in Sight: The Impact of Contract End-Type on Leader Perceptions of Contract Workers

Author: **Kaylee Somerville**, *Smith School of Business, Queen's U.*

Author: **Shani Pupco**, *Smith School of Business, Queen's U.*

This study examines the influence of fixed-term contracts on leaders' perceptions and behaviors towards contract employees. We posit that the end-date inherent in fixed contracts negatively impacts leaders' views of temporary workers' competence and commitment. We conducted two vignette experiments to explore how contract end-types and durations affect leaders' attitudes and behaviors. Results indicate a distinct bias against contract workers, with leaders perceiving them as less committed and less competent compared to their permanent counterparts. This perception affects leaders' willingness to provide resources, support, and high-quality leadership. By introducing a new perspective on the differential treatment of permanent and temporary workers based on the psychology of anticipated endings, this research contributes to the broader discourse on employment practices and leadership. The insights gained underscore the importance of addressing these biases in organizational settings to promote a more equitable and supportive work environment for all employees.

OB: Is Visionary Leadership a Valid Leadership? A Meta-Analysis

Author: **Yuting Mu**, *Sun Yat-Sen U.*

Author: **Xin Li**, *Jinan U. Management School*

Visionary leadership receives widely attention in recent years. However, its effects on employees at the individual level is scatted and difficult to form consistent conclusions. Moreover, despite the calling for treating visionary leadership as a concept distinct of charismatic-transformational leadership, there is a lack of quantitative evidence. In order to ascertain the validity of visionary leadership, a comprehensive meta-analysis was conducted to investigate its effects on employees' behavioral, attitudinal, and relational perception outcomes. Additionally, incremental variance analyses were performed to determine the incremental efficacy of visionary leadership as compared to charismatic-transformational leadership. Further, relative weights analyses were conducted to further assess the respective contributions of visionary leadership and charismatic-transformational leadership. The findings suggest that employees' vision-oriented proactive activity, positive attitude towards vision, and change for self-concept are unique outcome variables associated with visionary leadership. However, in most outcome variables, visionary leadership demonstrates relatively small incremental variance and relative weight. This paper further explores the reasons for non-significant results and provides suggestions for future research directions. It also offers practical guidance for organizations on how to cultivate visionary leaders.

Antecedents and Outcomes of Leader Behaviors

Session Moderator: **Mahbubul Alam**, *Algoma U.*

OB: **Does Managers' Emotion Regulation in Leading Employees Help or Hurt?**

Author: **Mahbubul Alam**, *Algoma U.*

Author: **Parbudyal Singh**, *York U.*

Author: **Marie-Helene Elizabeth Budworth**, *York U.*

Author: **Mark Podolsky**, *York U.*

The more than two decades of scholarly research on emotional labor has been skewed towards service workers with the dominant view that engagement in emotional regulation impairs service workers' well-being outcomes. Despite the potential knowledge gain of examining the role managerial emotion regulation plays in leadership of employees, the call for further study of its effect in managerial and leadership contexts has largely been unattended. Based on the findings of two studies, this research reports the interpersonal benefits of leader deep acting on employee outcomes without adversely affecting leaders' within-person well-being. Using self-reported survey data ($n = 175$) collected from the employees of a mid-sized, reputable financial company, the findings from study 1 suggest that employee perception of leader deep acting was favorably related to employee job satisfaction and perceived leadership effectiveness; these relationships were mediated by employee perception of leader authenticity. In study 2, using managers of the same financial company as a sample ($n = 81$), diary data (experience sampling from 5 consecutive days) showed a significant positive relationship between leader surface acting and emotional exhaustion, with the relationship being mediated by daily emotional dissonance. However, as predicted, daily leader deep acting was not found to be related to leader's daily well-being outcomes of emotional dissonance and emotional exhaustion. Combined, our two studies demonstrate that managers' use of deep acting has the potential to favorably impact employee outcomes without impairing their (managers') well-being.

OB: **Why Leader Leniency Benefits or Costs Employees? An Examination Based on the Cognitive Perspective**

Author: **Xin Liu**, *Renmin U. of China*

Author: **Bo Lv**, *Renmin U. of China*

Author: **Liyuan Li**, *College of Business Administration, Capital U. of Economics and Business*

Author: **Xiaoming Zheng**, *Tsinghua U.*

Author: **Jiawei Zheng**, *Harrisburg U. of Science and Technology*

As the core element of the organization, leaders are often faced with a dilemma as to how to respond to employee misconduct. Previous research has primarily focused on leader punishment as a vital mean in dealing with employee misconduct. However, leader leniency, as an alternative response to misconduct commonly adopted in practice, has been largely overlooked. To complement this aspect and clarify whether leader leniency is effective, we draw on the cognitive perspective to investigate the potential two-sided influence of leader leniency on employee task performance. Specifically, we propose that leader leniency inhibits employee task performance through the mediating role of psychological entitlement, while it also benefits employee task performance through the mediating role of servant leadership perception. Moreover, trait moral disengagement serves as a vital boundary condition, which amplifies the negative influence of leader leniency through psychological entitlement and simultaneously mitigates the positive effect through servant leadership perception. The results of 463 daily data using experience-sampling approach collected from 86 individuals supported the hypotheses. Our work highlights the mixed blessing of leader leniency and clarifies when and how leader leniency rehabilitates wrongdoers or instead propels them to lower performance.

OB: **The Antecedents of Supervisor Bottom-Line Mentality**

Author: **Zhining Wang**, *China U. of Mining and Technology*

Author: **Shuang Ren**, *Queen's U. Belfast*

Author: **Yuanmei Qu**, *Rowan U.*

Author: **Xin Guo**, *China U. of Mining and Technology*

Author: **Shaohan Cai**, *Sprott School of Business, Carleton U.*

While prior research has extensively investigated the outcomes of supervisor bottom-line mentality (BLM), there has been relatively limited exploration of its antecedents and the underlying pathways. To address this gap, our study draws on threat rigidity theory to propose that negative performance feedback from top managers triggers supervisors' perception of job insecurity, subsequently leading them to adopt a BLM approach in their work. Additionally, we hypothesize that a competitive work climate intensifies this mediating process. To test our hypotheses, we collected data from a sample of 161 supervisors and 590 coworkers, and our findings provided support for the proposed hypothesized model. Theoretical and practical implications stemming from our research findings are thoroughly discussed.

OB: **Family Paths Towards Abusive or Benevolent Supervision: Parental Influence to Leader Behaviors**

Author: **Xue Zheng**, *China Europe International Business School (CEIBS)*

Author: **Jiing-Lih Farh**, *China Europe International Business School (CEIBS)*

Author: **Sebastian C. Schuh**, *China Europe International Business School (CEIBS)*

Author: **Katherine Xin**, *China Europe International Business School (CEIBS)*

It is widely recognized that leaders differ in their styles. For example, some leaders treat their subordinates with benevolence whereas others show a cold or even abusive style. However, the origin of these differences in leadership style is still not fully understood. To address this limitation, our research takes the social cognitive perspective as a novel theoretical framework and examines a dual paths model by linking leaders' early life experience of parenting styles with leaders' abusive and benevolent behaviors via the mediating role of goal orientations. Across two multi-wave, multi-source studies conducted among leaders and their subordinates, we found that leaders raised by authoritarian parents were likely to exhibit abusive supervision and that this link was mediated by leaders' performance prove-goal orientation. In contrast, leaders raised by authoritative parents were likely to exhibit benevolent behaviors. This link was mediated by leaders' learning goal orientation. Our research thus critically extends leadership literature by tracing the root causes of leaders' abusive and benevolent behaviors. Importantly, our research provides goal orientation as a novel cognitive mechanism that illuminates the parental influence on leader behaviors.

Using of Agent-Based Modeling Across Management Research

Organizer: **Sophia Rose Thomas**, *Texas Tech U.*
Presenter: **Mai P. Trinh**, *UTRGV*
Presenter: **Bill Rand**, *North Carolina State U.*
Presenter: **Gabriela Cuconato**, *Case Western Reserve U.*
Presenter: **Bryan Acton**, *Binghamton U.-State U. of New York*
Presenter: **Gretchen Renee Vogelgesang**, *San Jose State U.*
Participant: **Jon Atwell**, *Stanford Graduate School of Business*

In this symposium, participants will be introduced to a variety of important management questions and will experience how current agent-based modeling experts are using these methods to explore those questions. In bringing agent-based modeling techniques into the spotlight, we hope to spark greater interest in the research methods community in learning more about this method and bringing more acceptance for these types of exploration to the field. The presenters in this symposium each used agent-based modeling to explore important micro- and macro-management topics in dynamic, systems-focused ways. The general topics covered in this session range from inequality in career advancement, organization accountability, honest and dishonest behaviors, identity and interpersonal teamwork behaviors, employee-focused investments, and decision-making systems in organizations. Each of these topics explores how decision-making has complex outcomes over time, which can affect others in many ways depending on the specific decisions made.

Conversations addressing conflicts, disagreements, and sensitive topics are instrumental for both individual and team decision-making in organizational settings. Nevertheless, discussions of difficult or sensitive topics are often avoided due to a common misconception that such dialogues diminish decision-making efficiency, exacerbate conflicts, and strain relationships. In this symposium, we present novel research on organizational and interpersonal contexts where people fail to talk about and effectively manage sensitive topics. These topics are often controversial, including the request to initiate a negotiation, changing one's political views, and engaging with large-scale societal problems through reporting or helping. In particular, the papers presented will show that people (1) overestimate how likely negotiation counterparts are to withdraw a deal if one attempts to negotiate, and as a result, avoid negotiating; (2) overestimate how likely ingroup members are to penalize one for changing one's mind about controversial political topics, which leads to self-censorship; (3) have conflicting perceptions of victims' motivations in reporting about similar events, which affects trust and perceptions of accuracy; (4) underestimate the sensitivity and impact of big problems, leading to lower helping; (5) may overestimate the mere effect of apologies on reducing medical lawsuits. Moreover, this set of papers shows the detrimental consequences of such misperceptions, particularly for missed opportunities for disclosure and for economic and relational benefits. Taken together, this symposium highlights the fraught nature of sensitive topics, and points to avenues for improving the effective flow of information within organizations.

The new era of industry 4.0 has empowered organizations to revolutionize the workplace through artificial intelligence (AI). As AI becomes more ubiquitous and ingrained in both organizational and daily life, new questions arise about the dynamics of human-AI interactions and its implications for management and society. The current symposium seeks to shed light on critical aspects of these AI-driven changes, taking a focused perspective on research at the intersection of technology and organizational behavior. The five papers featured in this symposium delve into the multifaceted and complex nature of human-AI interactions, collectively exploring how people navigate and develop relationships with AI systems. The papers investigate influential topics such as ethical beliefs and considerations toward AI, the impact of AI on individual attitudes and behaviors, and the evolution of human-AI partnerships within organizations. Together, the papers contribute to the growing body of knowledge on AI and human behavior, offering new insights into the challenges and opportunities that arise as people work in an increasingly artificial workplace.

Embracing the Complexity of Terminations: Theoretical and Empirical Advances in Involuntary Turnover

Organizer: **Lyonel Laulié**, *U. of Chile*
Discussant: **Connie Wanberg**, *U. of Minnesota*
Moderator: **Selinay Civit**, *U. of North Texas*

In comparison to voluntary turnover research, which has flourished over the last 100 years (Hom et al., 2018; Rubenstein et al., 2018), involuntary turnover research has received much less attention, despite its significance to individuals, organizations, and the broader economy. In this symposium we draw together and integrate several papers at the forefront of the effort to increase involuntary turnover scholarship.

Panelist: **Charlie Trevor**, *U. of Wisconsin-Madison*

Despite its rich history over the last century, our understanding of employee turnover phenomena continues to evolve as work environments and organizational norms change. As new phenomena relating to employee turnover emerged during and after the COVID-19 pandemic, it is imperative that scholars continue to assess the employee turnover in a post-pandemic workforce. To encourage scholarly conversations about how we can move forward employee turnover research, this panel symposium brings together prominent turnover researchers. The topics in the panel discussion include but are not limited to 1) influence of technology on turnover, 2) the extensions of unfolding model and job embeddedness on turnover, 3) events-based episodic turnover models, and 4) macro turnover through the lenses of quit rates and layoffs.

Discussant: **Emily Dunham Heaphy**, *U. of Massachusetts, Amherst*

Workplace relationships promote productivity, growth, and well-being in organizations. However, as the work context changes, the nature of workplace relationships, the processes by which they are formed and maintained, and their functions may change as well. This symposium includes four studies that examine the ways in which workplace and societal shifts impact relational processes and outcomes. All four studies emphasize the increasingly porous boundary between work and life, considering the effects of alternative work arrangements and macrosocietal events such as the COVID-19 pandemic and global wars on workplace relationships and examining how nonwork relationships may fulfill work-related needs. The presentations and planned discussion will shed light on the ways in which relationships may be impacted by changes to work and worker concerns and the ways in which relationships may help employees navigate the changing world of work.

Participant: **Nick Epley**, *U. of Chicago Booth School of business*

In our daily lives, we are constantly presented with opportunities to interact with others, both in professional and personal contexts. Yet, the perceptions and interpretations we hold in these interactions are often clouded by biases and misunderstandings, leading to significant social (mis)perceptions. This symposium brings together five compelling papers that explore different aspects of social (mis)perception in various contexts. The first presentation delves into the misperceptions between majority and minority group members regarding reactions to societal inequity, highlighting the tendency of individuals to misinterpret the emotions and attitudes of outgroups. The second presentation examines how people often overestimate the level of awkwardness in anticipated social situations; this miscalibration can lead to altered behaviors and missed opportunities. The third presentation draws from NYT's "Questions to Fall In Love" in a work setting to investigate the outcomes of such deep, personal conversations among coworkers. The fourth presentation addresses the consequences of backhanded compliments, a common yet poorly understood occurrence in social interactions. The final presentation explores how individuals revise their beliefs about conversations after they occur, particularly correcting their underestimation of positive aspects and overestimation of negative aspects. Together, these papers not only expand our understanding of social (mis)perceptions but also provide critical theoretical and practical insight. The findings and discussions underscore the importance of recognizing and addressing these perceptual disparities, therefore improving communication and enhancing interpersonal and intergroup relations.

This symposium explores the increasingly integral role of Artificial Intelligence (AI) in modern society and its profound influence on the workplace. While businesses are swiftly adopting AI for a variety of functions, this adoption has been met with mixed reactions, ranging from anticipation to apprehension. By developing theory about this emerging technology and empirically investigating human reactions to the use of AI in both individual and team contexts, the five papers in this symposium examine how individuals regard AI's role in their work-related tasks. Our goal is to illuminate the circumstances under which AI is deemed beneficial or harmful, thereby better equipping employees, managers, and organizations to navigate the introduction and integration of AI technologies in the workplace. Our symposium will conclude with a discussion by Dr. Ella Glikson, who will share her insights and expertise on human reactions to AI.

Digitizing the Future: Exploring the Impact of Technology on Organizational Change

Session Moderator: **Jingyu Yang**, *School of Business, Renmin U. of China*

ODC: **How Does Digital and Real Economy Convergence Promote the Development of Advanced Manufacturing?**  

Author: **Jingyu Yang**, *School of Business, Renmin U. of China*

In the era of the digital economy, the convergence of digital industries and manufacturing represents the path for the intelligent transformation and upgrade of traditional manufacturing enterprises. As a novel trend in contemporary industrial development, the convergence of digital and real economy gradually emerges as a new driving force for economic growth. However, the current academic discourse lacks a comprehensive exploration of the connotations and effects of this digital-real economy convergence. This research posits that the principal drivers of digital-real economy convergence include the development of digital technologies, the construction of new infrastructure, a user value-oriented approach, and substitutive competitive dynamics. Data fusion is identified as the most prominent characteristic of digital-real economy convergence, while the mechanisms of transformation, sharing, and acceleration constitute the three major operational facets. The ultimate outcome of digital-real economy convergence is deemed to be an open-ended industrial ecosystem. This study undertakes an in-depth analysis of the essence of digital-real economy convergence across four dimensions: drivers, trends, mechanisms, and outcomes. To assess the efficacy of digital-real economy convergence, the research employs input-output analysis and panel data regression to empirically analyze the enhancing impact of the industrial convergence of digital and advanced manufacturing sectors on industrial performance. Against the backdrop of the digital economy, this study provides policy recommendations for the development of digital and real economy convergence, aspiring to offer guidance for industrial transformation and development.

ODC: **Boon or Bane: The Dual Effects of Digital Leadership on Employee Creativity** 

Author: **Jing Jiang**, *Beijing U. of Posts and Telecommunications*
Author: **Yan Rong**, *College of Business, Shanghai U. of Finance and Economics*
Author: **Lyu Yina**, *Beijing International Studies U.*

Based on social information processing theory, this study explores the dual effects of digital leadership on employee creativity and the boundary conditions of different response strategies. Through a survey analysis with multiple sources and time points, the results show that digital leadership enhances employee digital self-efficacy, thereby positively impacting employee creativity. However, digital leadership also induces digital anxiety, which negatively affects employee creativity. Additionally, employee approach-oriented avoidance-oriented job crafting can moderate the effects of digital leadership on digital self-efficacy (digital anxiety), thereby strengthening (weakening) employee creativity. These findings advance our understanding of the mechanisms by which digital leadership impacts employee creativity, and provide important implications for organizational management practices.

ODC: **Exploring new Startups' Formation and Stakeholders' Involvement: The Case of Digital Technologies** 

Author: **Matthew Ayamga**, *Wageningen U. & Research Center*
Author: **Ayalew Kassahun**, *Wageningen U. & Research Center*
Author: **Wilfred Dolfsma**, *Wageningen U. & Research Center*
Author: **Bedir Tekinerdogan**, *Wageningen U. & Research Center*

The entrepreneurial potential of digital technologies for new business startups and the engagement of stakeholders in the implementation of these technologies have garnered increasing interest from scholars and practitioners alike. However, there remains a notable gap in understanding the effects of digital technologies on the inception of new business startups and the dynamic conditions that unfold during their interactions with stakeholders in the business domain. To address this gap, we draw from the realms of digital technologies, entrepreneurship, and ecosystem literature to conceptualize a digital entrepreneurial ecosystem. This framework aims to (1) unravel the 'what' and 'how' factors contributing to the establishment of new business startups, specifically in the context of Agritech firms leveraging digital technologies within the agri-food sector in Ghana, and (2) identify the stakeholders involved in the implementation process of digital technologies. Employing an explorative research approach, our study analyzes 22 interviews from 15 Agritech firms in Ghana, complemented by observational and secondary data. Our findings reveal two key aspects: firstly, four distinct business formation processes guide the establishment of Agritech firms, encompassing (a) spin-off activities, (b) engagement in research projects, (c) capitalizing on agricultural business opportunities through digital technologies, and (d) responding to agritech challenges originating from innovation hubs. Secondly, three sets of stakeholders intricately contribute to the implementation process of digital technologies by Agritech firms, operating at the micro, meso, and macro levels. At the micro-level, stakeholders, comprising farmers and their off-takers, indirectly support Agritech firms through feedback and active involvement in the digital solution development process. Meso-level stakeholders, represented by a network of agritech firms, foster mutual support by sharing experiences and knowledge, thus fostering inter-firm synergies. At the macro level, stakeholders, including innovation hubs, government agencies, universities, and international development agencies, provide direct support through grants, business development training, office space, and linkages to investors. Through these findings, our study seeks to offer a nuanced understanding of the intricate interplay between new business startups and various stakeholders within the dynamic landscape of implementing digital technologies in the agri-food sector.

ODC: **The Impact of AI vs. Human Driven Task Allocation on Employees' Transparency and Security**   

Author: **Ilia Protopapa**, *King's College London*
Author: **Antonis Kazouris**, *Birkbeck, U. of London*

Companies started to adopt artificial intelligence (AI) technology to automate processes of task allocation in the services industry. However, the increasing level of job automation and AI implementation has increased neuroticism in the workplace. Despite the increasing attempts of companies to adopt AI to increase employees' productivity and services' quality through the automation task allocation, there is no evidence on employees' perceptions of security and fairness. In addressing this gap, this paper collects data from 124 consultants, following an experimental survey design, to examine the impact of AI versus human task allocation on employees' perceptions of transparency, fairness, security and satisfaction. Results suggest that human driven task allocation elicit more favourable evaluations with regards to transparency, security and satisfaction. However, scores in the fairness variable are higher for AI rather than human driven task allocation in consultancy firms.

Network Drivers of Organizational Advantage: Its Not What You Know....

Session Moderator: **Manuel David Gomez-Solorzano**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

OMT: **Network Strategies Within Organizations**

Author: **Manuel David Gomez-Solorzano**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

Author: **Alessandro Iorio**, *Bocconi U.*

Author: **Giuseppe Soda**, *Bocconi U.*

Assortativity in intraorganizational networks—the level of homophily prevalent in the network—is an important but often overlooked occurrence with implications for organizational outcomes. An egonet composed by contacts with similar knowledge can ease knowledge integration and coordination but it can also create an echo chamber limiting flexibility and innovativeness. We argue that individuals engage in strategic decision-making when considering assortative or disassortative strategies for potential ties to achieve an optimal level of knowledge similarity in their egonet. Furthermore, we posit that a formal status-based mechanism plays a role in determining with whom individuals pursue either strategy. Leveraging a novel research design that allows us to identify wanted ties—ties that actors deem effective for their performance but that do not exist yet—we study the drivers of these network ties in a population of professional staff in a large multinational corporation. This study contributes to our understanding of how individuals actively intend to shape their social networks and has implications for organizations seeking to promote effective network formation and knowledge exchange among employees.

OMT: **Bottleneck or Not? The Ceiling Effect of Network Closure on Individual Innovative Performance**

Author: **Stefan Breet**, *Radboud U. Nijmegen*

Author: **Lotte Glaser**, *Erasmus U. Rotterdam*

Author: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*

Author: **Jan Dul**, *Rotterdam School of Management, Erasmus U.*

This study examines the extent to which employees in closed networks can compensate for the lack of structural access to heterogeneous knowledge and information. We introduce the “performance ceiling” concept to describe the maximum level of innovative performance that individuals can potentially achieve with a given level of network closure. Leveraging insights from the literature on necessary conditions and constraint causal mechanisms, we argue that network closure not only reduces the average individual innovative performance of employees, but also puts a cap on the maximum level of innovative performance they can potentially achieve. Our empirical analysis of a professional service firm indeed shows that closed networks serve as social straitjackets, preventing them from achieving high levels of innovative performance. An important implication of our study is that employees in closed networks cannot fully compensate for the lack of structural access to heterogeneous knowledge and information. We discuss the implications of our findings for the literature on social networks and innovation.

OMT: **Exploring the Relationship Between Deglobalization and Corporate Network Structure**

Author: **Paula Margaretic**, *U. Adolfo Ibañez*

Author: **Erica Helena Salvaj**, *U. del Desarrollo*

Author: **Julian Andres Diaz Tautiva**, *U. del Desarrollo*

This study examines the relationship between deglobalization and the structure of interlocking directorates, considering the historical perspective. Corporate networks are vital for coordination, information flow, and cost reduction. However, existing research on corporate networks and (de)globalization remains fragmented, focusing on specific countries or time periods. By analyzing 15 countries over the twentieth and early twenty-first centuries, we document that deglobalization is a key condition generating dense corporate networks. However, institutional factors from the Capital, Labor, and State domains also play crucial complementary roles (particularly legal systems) in generating dense corporate networks during periods of deglobalization. This challenges the prevailing notion that globalization alone caused the decline in corporate network cohesion since the 1980s. Our study emphasizes the significance of institutions in shaping the impact of deglobalization on corporate networks, highlighting the institutional complementarity, equifinality, and asymmetry as core mechanisms driving the institutional configurations. Overall, this research contributes to comparative management by stressing the importance of considering institutional factors and their interactions when understanding network dynamics during periods of deglobalization. It enhances our understanding of the consequences of deglobalization for corporate networks.

OMT: **Closing a Triad: A Tug of War Between Brokers and Alters**

Author: **Wei Xia**, *U. of Washington*

Author: **Xiaoou Bai**, *Georgia State U., J. Mack Robinson College of Business*

Author: **Eric WK Tsang**, *U. of Texas at Dallas*

Integrating the broker's and the alters' motivations, this paper proposes a novel framework that sheds light on the dynamics of triadic closure. We integrate broker-centric and alter-centric approaches by bringing the insights of social exchange theory into network analysis. We show how status can be a critical factor generating opposite effects on brokers' versus alters' motivations. In a directional network, high-status brokers are less likely to close the triad than low status brokers, but alters are more likely to collapse the structural hole when the brokers are high-status; high-status alters are less likely than low-status alters to be invited by the broker to close the triad, but are more likely than low-status alters to be invited by co-alter to close the triad. Furthermore, we argue that when conflicting motivations arise between brokers and alters, the latter's motivations are more likely to dominate.

Author: **Amit Kumar**, *Warwick Business School*

Author: **Elisa Operti**, *ESSEC Business School*

This paper takes a contextual approach to network dynamics and investigates how regional innovation networks evolve through exogenous crises. We studied how the 2007-08 Financial Crisis influenced the logic driving the formation of collaboration ties between inventors, and thus the regional network structure. Existing research on social capital has identified two perspectives on network formation: an instrumental approach and a community-oriented approach. Based on behavioral research, we propose that while facing a crisis, individuals shift their emphasis from advancing self-interests to pursuing the collective good of their community. Accordingly, we hypothesize that regional innovation networks become more connected and less hierarchical during downturns while less connected and more centralized during economic growth. We tested these hypotheses using data describing the evolution of the co-inventing networks of US Metropolitan Statistical Areas (MSA) between 2002 and 2014, before and after the 2007-8 Financial Crisis.

Organizational Identity: Unleashing the Patronus

Session Moderator: **Asma Zafar**, *Brock U.*

OMT: **What Doesn't Kill Us Makes Us Stronger: How Place Matters for Organizational Identity?**

Author: **Asma Zafar**, *Brock U.*
Author: **Trish Reay**, *U. of Alberta*

Despite surging interest in the role of place in organizational studies, the concept has been largely missing from the study of organizational identity dynamics. We address this gap through a 19-month-long ethnographic study of a social service organization – Better World (a pseudonym), located in the downtown core of a Western Canadian city. We uncover how experiencing a place disruption that changed Better World's neighbourhood and threatened its existence in its building shaped the evolution of organizational identity at Better World. We show that upon experiencing place disruption, members further grounded the organization in its building and location, revealing a strongly emplaced organizational identity. We contribute by theorizing a strong, previously overlooked relationship between place and organizational identity, and showcasing the evolution of organizational identity as a political process with place disruption at the core of the process.

OMT: **Showtime: How Organizational Identity Companies the State in the Media—A Dramaturgy View**

Author: **Mac Nguyen**, *Gustavson School of Business, U. of Victoria*
Author: **Takahiro Endo**, *Hitotsubashi U.*

This study investigates the construction of organizational identity under social pressure—the normative, not coercive, association with the state to achieve performance, focusing on VinaX, a pseudonym for a prominent Vietnamese conglomerate. Through a detailed analysis of various ceremonial events and media representations spanning three decades, we illustrate the alignment of VinaX's identity with that of the Vietnamese government. Drawing on Goffman's dramaturgical metaphor and Burke's dramaturgic pentad, we dissect the symbolic elements and dramaturgic components shaping the organization's identity. Our findings reveal a dynamic interplay of acts, agents, agencies, scenes, and purposes, collectively forging a 'patriotic identity' within VinaX, thereby embedding an institutional value system. This research contributes significantly to the theoretical understanding of organizational identity, offering new insights into how it is perceived and constructed within the socio-political context of a state-influenced corporate environment.

OMT: **Organizational Identity Work in Times of Identity Ambiguity**

Author: **Stéphanie Havet-laurent**, *INSEEC Business School*
Author: **Ruth Rentschler**, *U. of South Australia*
Author: **Caroline Julie Demeyere**, *Copenhagen Business School*

What happens when the identity of an organization is unclear? This study examines organizational identity work in small cultural organizations facing difficulty in making sense of their identity beliefs causing identity ambiguity. In this context, identity beliefs are in doubt, the relevance of practices is questioned and the relations to others are unclear. Using a dynamic approach to organizational identity, we compare two cases experiencing a strong level of identity ambiguity, tracing how identity beliefs and their associated meanings evolve over time, taken from a total of 13 cases, 470 hours of observations and 27 interviews. We then provide an empirical account of organizational identity work process, focusing on interactions and experiences, which is under-theorized. Our research identifies two different outcomes to the identity work process: identity being reinvented or reasserted, stressing the need for new ideas to be experienced before they are adopted (or not) and become (or not) part of organizational identity. We extend theory on organizational identity work, which has been largely overlooked, developing a framework of how small organizations confront identity work in times of identity ambiguity.

OMT: **I Think; Therefore, I am. Crafting the Strategic Identity of a Boundary Organisation**

Author: **Michael Fiifi Nkrumah**, *U. of Leeds*
Author: **Alex Kevill**, *Leeds U. Business School*

The research explores how a university-established boundary organisation operating as a fulcrum in an emerging innovation ecosystem craft its strategic identity from transitioning from one organisational form to the other. It draws on configurational boundary work to outline its distinct practice for orchestrating collaborations between institutions. To achieve the goal, the research conducts an in-depth qualitative case-study of a university boundary organisation created to deepen innovation within an emerging regional innovation ecosystem. In so doing, it seeks to present a novel empirical account of distinct kinds of boundary work that drives regional innovation policy.

Institutional Memory and Maintenance: Being a Goldfish?!

Session Moderator: **Colette Russell**, *Monash Business School*

OMT: **When Institutional Maintenance Fails: Situational Logics in the UK Fire Service**

Author: **Colette Russell**, *Monash Business School*
Author: **Mike Zundel**, *U. of Liverpool Management School*
Author: **Christian Garmann Johnsen**, *Copenhagen Business School*

Although much is known about the types of actions that can create, sustain, and undermine institutions, less is known about the contextual conditions under which different acts of institutional maintenance succeed or fail. We theorize these conditions as 'situational logics'. Situational logics alter in relation to shifting levels of interdependence of institutional actors and changes in the favorability of prevailing contexts for actors' vested interests. As outcomes, situational logics are influenced by multi-level events, including previous actions of institutional actors, and as antecedents they provide contexts for subsequent action. Using the case of the UK Fire Service, we identify four situational logics—protection, compromise, elimination, and opportunism—as well as corresponding acts of institutional maintenance—defensive, concessionary, competitive, and expedient. We find that acts of institutional maintenance are more effective when they correspond with prevailing situational logics. This allows us to show how acts of institutional maintenance that can be effective at one point in time can be ineffective or even detrimental at another. Our research contributes to understanding the multi-level influences on institutional maintenance and change, emphasizing the timing and context of institutional action within a processual framework.

OMT: **History, Memory and Hype: Provenance Work in the Non-Fungible Token (NFT) Market**

Author: **Nkosana Mafico**, *U. of Edinburgh*

Although hype traditionally centers on future projections, our research introduces an alternative viewpoint emphasizing the importance of history and memory. Utilizing grounded theory methods, we delve into the experiences of 20 entrepreneurs and investors within the NFT market who consciously harness historical perspectives. By analyzing in-depth interviews alongside an examination of observational data and archival records, we demonstrate how actors can strategically use the past to classify assets, generate different types of hype, and differentiate themselves in a future oriented market. In contributing to the literature on hype, we formulate an empirically grounded model that captures the focus of managing the past and its interplay with the present and future in hype management theory. In particular, we introduce a novel concept termed provenance work. In this performative strategy, actors enhance or maintain the historical authenticity of assets serving both prosocial and commercial interests in a future-focused market. Our focus on the NFT market also generates a unique perspective on the role of technology in managing hype. Specifically, we highlight how blockchain technology, pivotal in the NFT landscape, can serve as a tamper-proof historical record that mitigates potential negative consequences of hype by preventing the selective recall of past events.

OMT: **A Relational Perspective on Mnemonic Devices and Their Shaping of Mnemonic Communities**

Author: **Jeanette Ostertag**, *EBS U. für Wirtschaft und Recht*

Material objects and artefacts play an important role in the transmission and constitution of organizational and collective memories. Existing organizational memory studies primarily emphasize mnemonic devices' representational and semiotic aspects, overlooking their inherent materiality and relational dimensions within broader ecological contexts (within and between organizations). To shed light on this issue, I ask how the materiality of mnemonic devices shape and impact organizational mnemonic communities. Grounded in a qualitative inductive study of the heritage craft of gun making in Germany and Austria, this work uncovers the layered relational capacities of mnemonic devices—multimodal aesthetic richness, transferability, and cross-generational durability. Ultimately, this study contributes to advancing knowledge on mnemonic practices in a broader web of an organizational field by elucidating the intricate interplay between mnemonic devices and the communities they engender – across time and space.

Mergers, Acquisitions, and Inter-Organizational Collaboration: With A Little Help From My Friends

Session Moderator: **Paul Skilton**, *Washington State U.*

OMT: **Blind Spots in Collaborative Inter-Organizational Networks: An Information Processing Norm View**

Author: **Paul Skilton**, *Washington State U.*

Author: **Tingting Yan**, *Texas Tech U.*

Author: **Zhaohui Wu**, *Oregon State U.*

Author: **Kevin Dooley**, *Arizona State U.*

Author: **Yusoon Kim**, -

Collaborative inter-organizational networks such as supply networks, multi-stakeholder initiatives, and complex development projects address problems that single organizations cannot. The structure and behavior of these networks are shaped by the distribution of power among network members and member diversity. Similar configurations of power and diversity give rise to similar combinations of information processing norms that are manifested as the network curates, governs, and makes sense of potentially relevant information drawn from its embedding field. These norms help maintain network social structure, and in some cases, make problem solving more efficient. Our paper suggests these norms also lead to collective blind spots that can hamper complex problem-solving success. Four archetypal collective blind spots are identified - partial vision, tunnel vision, kaleidoscopic vision, and blurred vision, and examples are provided. Our theory suggests that any collaborative inter-organizational network, regardless of its power distribution or participant diversity, can experience collective blind spots. Blind spots are a type of unintended consequence of what makes information processing norms worthwhile.

OMT: **Temporal Focus Fit in Mergers and Acquisitions**

Author: **Dongge Zhou**, *Lally School of Management, Rensselaer Polytechnic Institute*

Author: **Shyam Kumar**, *Lally School of Management, Rensselaer Polytechnic Institute*

Strategy scholars have long explored why certain M&As are more effective than others. Moving beyond the traditional resource-fit perspective, this study suggests that cognition fit is a more fundamental factor. While it may not be as directly involved in economy of scale or scope as other factors, cognition fit acts as a critical threshold. A certain level of cognition alignment needs to be met to ensure smooth combination and coordination, thereby allowing the positive impacts of other factors on M&A performance to materialize. Drawing from the Time, Interaction and Performance (TIP) Theory, we focus on temporal focus similarity in particular. Using US public M&A cases as the sample and adopting choice model and Necessary Condition Analysis, our study finds: (1) Firms with different temporal focuses are less likely to merge; (2) Acquirers and targets with different temporal focuses require more time to complete their transactions; (3) Having a similar temporal focus between the acquirer and the target is necessary (although not sufficient) for achieving high M&A performance. By introducing a necessity-based perspective to the cognitive fit literature in M&As, our research offers new insights into the intricate interplay between resource fit, cognition fit, and M&A efficiency.

OMT: **The Impact of Speed Variations on Individuals' Emotional Journey During Post-Merger Integration**

Author: **Mark Thomas**, *ICN Business School - CEREFIGE*

Author: **Muriel Durand**, *EM Normandie Business School, Métis Lab, France*

Author: **Sniazhana Ana Sniazhko**, *U. of Vaasa*

Author: **David Kroon**, *Vrije U. Amsterdam*

To investigate the link between speed of integration and organization members' emotional experiences during post-merger integration, we undertook a 30-month, qualitative research project of two merging organizations. Using multiple sources of data, including 53 semi-structured interviews, we were able to identify the periods in which managers chose to accelerate and decelerate speed of integration. Hereby we offer a novel empirical demonstration of the variations in the speed during the integration process. We then describe and analyze the emotional consequences and outcomes of such changes in speed. This analysis resulted in the development of a comprehensive process model elucidating how variations in the speed of PMI affect emotional reactions through sensemaking ('rationalizing' and 'senseseeking') and sensegiving practices ('sensehiding,' 'sense reversal,' and 'sense symbolization').

OMT: **"Strings of Tensions Waiting to be Struck"—Towards a Paradox Perspective on Post-Merger Integration**

Author: **David Kroon**, *Vrije U. Amsterdam*

Author: **Niels G. Noorderhaven**, *Tilburg U.*

Author: **Victor Gilsing**, *Vrije U. Amsterdam*

We introduce a paradox-theoretical framework to parsimoniously categorize and explain inherent tensions during post-merger integration (PMI), their interrelations, and how they can be managed. Specifically, combining the notion of paradoxes as contradictory, self-referential, and persistent tensions with established categorizations of management paradoxes, we develop a typology of four generic paradoxes in PMI: PMI organizing paradox (autonomy versus control); PMI belonging paradox (shared versus separate identities); PMI performing paradox (collaboration versus competition); and PMI learning paradox (capturing short-term versus creating long-term benefits). Moreover, by invoking three established categories of organizational responses to paradoxes—i.e., "Either-Or," "Both-And," and "More-Than"—we outline possible approaches to address the PMI-paradoxes. Finally, we introduce a configurational perspective to managing PMI-paradoxes, including propositions as to how (the approaches to) PMI-paradoxes are related to the level of strategic interdependence of the acquiring and acquired firm, as well as how the different PMI-paradoxes are interrelated. Our key idea is that PMI can be understood as the management of intertwined paradoxes—a notion that enhances the PMI literature, and has implications for research on, and management of, PMI.

Categorization, Paradox and Tensions: Same Same... But Different

Session Moderator: **Jie Yang**, *U. of Manitoba*

OMT: **Distinctiveness and Conformity: Not Two Poles of the Same Dimension**

Author: **Huajie Shen**, *Zhejiang U.*
Author: **Jie Yang**, *U. of Manitoba*
Author: **Stan X. Li**, *City U. of Hong Kong*

The strategy and optimal distinctiveness literature argues that firms confront a fundamental tension between “sameness” and “differentness” in market positioning. Although an eclectic approach to this tension—that firms maintain an intermediate level of distinctiveness—has gained wide support, researchers urge further exploration of the distinctiveness-performance relationship due to contextual contingencies and the conceptual ambiguity of distinctiveness. We propose a renewed, multidimensional framework that incorporates both distinctiveness and conformity as predictors of performance. Distinctiveness measures the absolute difference between a firm and an industry’s central tendencies, while conformity captures directional differences (underconforming, mimicking, or overconforming). We outline the major assumptions in our theorizations, specify scope conditions, and empirically test our propositions in the Canadian property and casualty insurance industry. Monte Carlo simulations also validate our framework.

OMT: **A Theoretical Model for Testing Paradox Theory**

Author: **Arjun Odedra**, *U. of Manitoba*
Author: **Parshotam Dass**, *U. of Manitoba*

In this paper, we propose a theoretical model for testing paradox theory. We propose two paradoxical tensions—cognitive ambivalence and emotional ambivalence and develop hypotheses regarding their relationships with their antecedents and consequences. The antecedents include identity, business model, tight-loose coupling, and environmental characteristics such as munificence and dynamism. We propose that multiple identities, dual business models, tight coupling, environmental scarcity, and environmental dynamism may lead to higher levels of paradoxical tensions, which in turn, are likely to result in negative consequences in terms of performance at various organizational levels. However, employees and managers can use their paradoxical mindsets and paradoxical leadership, respectively, to intervene and moderate the negative effect of paradoxical tensions. Further, these moderation effects may be mediated by other factors such as strategic agility and ambidexterity to improve performance at various levels. We suggest methods to test the model and discuss implications for future research in paradox theory. Our paper responds to a call to innovate and strengthens a recent theory by drawing on ideas across disciplines and fields in an effort to solve modern challenges. Hence, this paper is relevant for the 2024 Annual Meetings of the Academy of Management theme: Innovating for the future.

OMT: **Exploring the Micro-Foundations of Paradox Ontology and Organizational Measurement Apparatuses**

Author: **Marco Berti**, *Nova School of Business and Economics, U. Nova de Lisboa*
Author: **Eric Knight**, *Macquarie Business School, Macquarie U.*

competing demands. We focus on the micro level, that is, on individual decision makers’ experience of organizational paradoxes, to explain why universal tensions that underlie organizing sometimes manifest as decidable choices, and other times as undecidable but generative paradoxes. We contribute to paradox theory by (1) articulating the concept of organizational measurement apparatuses, describing how latent tensions are enacted into salient paradoxes, i.e. undecidable trade-off choices; (2) identifying the factors that determine the undecidability; (3) explaining the persistence of these conditions of undecidability, showing the mechanisms that hinder the detection and correction of organizational conditions producing undecidability.

OMT: **Firms Divided: Corporate Activism, Ideological Homogenization, and Political Polarization**

Author: **Sean Buchanan**, *U. of Manitoba*
Author: **Trish Ruebottom**, *DeGroote School of Business, McMaster U.*

In this article, we offer a theory of firm-driven political polarization that explains how firms intensify societal political polarization through ideological homogenization processes inside firms. Drawing from research on corporate sociopolitical activism and ideologies in and around organizations, we develop a conceptual framework that describes how firms taking public stances on contentious social issues triggers divergent processes in stakeholders connected to the firm: ideology threat and ideology affirmation. These processes engender distinct organizational and individual outcomes in ideologically aligned and misaligned stakeholders that promote ideological homogeneity inside firms. We then theorize how ideological homogeneity works to intensify societal polarization through group polarization and echo chamber effects. We describe the implications of our theorizing for research on corporate sociopolitical activism, ideologies in organizations, and political polarization.

Growth and Degrowth in Nonprofits and Entrepreneurships

Session Moderator: **Christopher Bruno**, *Management Department - The Wharton School, U. of Pennsylvania*

OMT: **Growth to Support Need: Corporations and the Size of the Local Welfare Nonprofit Sector** 

Author: **Christopher Bruno**, *Management Department - The Wharton School, U. of Pennsylvania*

Current research suggests that growth in the number of corporate headquarters (HQs) in a city leads to a growth in local welfare nonprofits, as HQs provide resources to these organizations. This relationship appears positive, however, whether HQ resources are distributed to nonprofits in cities that need them is unexplored. In this paper, I develop an integrated theory of nonprofit growth that considers the relative amount of resources that corporations provide a city (the supply side) matched to the relative need for welfare nonprofit resources in that city (the demand side). I argue that growth in HQs increases resource supply while decreasing the demand for welfare nonprofits, calling into question whether corporate resources are allocated to welfare nonprofits serving those most in need. The results of a series of city-year panel models from 2001 to 2018, including an instrumental variable approach and a quasi-exogenous shock to HQ growth, support these arguments. Forms of community social capital and political ideology are explored as moderators that may reduce the misallocation of resources to nonprofits. Additional city-year panel models, as well as abductive analysis of interviews and corporate foundation giving data help unveil mechanisms underlying the main relationship.

OMT: **Unraveling Institutional Myths: Entrepreneurship Towards Degrowth**

Author: **Niki Khorasani**, *Alberta School of Business*

Author: **Madeline Toubiana**, *Telfer School of Management, U. of Ottawa*

Institutional myths are taken-for-granted ideals that are widely held and collectively rationalized. In this paper we explore how entrepreneurs challenge one of the most prevalent institutional myths of our time – growth. To do so we conducted a qualitative study of entrepreneurs seeking to implement and design degrowth into their ventures. Drawing on social-symbolic work, institutional work and the effectuation literature, we theorize the multi-level forms of work required to challenge growth as an institutional myth. Our findings reveal that entrepreneurs generated cognitive and embodied reflexivity through awareness work, and then engaged in disruptive self-work to disentangle growth from their sense of self. We also discovered the importance of effectuating work, which we define as the design of opportunities to disengage from an institutional myth and create an alternative imaginary. We unpack these findings and contribute to the literature on institutional work, entrepreneurship, and degrowth.

OMT: **Towards a Racialized Nonprofit Industrial Complex**  

Author: **Gregory Wilson**, *Ohio State U.: John Glenn College of Public Affairs*

Scholars across disciplinary boundaries have examined the intersection of race and racialization. In doing so, they have stopped short of providing a robust theoretical framework within which to understand how, why, and in what ways the nonprofit sector, itself, is racialized. To address the need for such a theory, I propose what I call the racialized nonprofit industrial complex (RNIC) - a racialized social system that places organizations into separate categories on the basis of race. I argue these categories are largely defined by competing schemas that converge around organizational success metrics - areas thought to be race-neutral and central to any organization's success - which produces a racialized outcome that negatively impacts the behaviors, practices, and outcomes of Black-led organizations. I conclude with a discussion of how the RNIC might vary by place and implications for further research.

Institutions and Individuals: Connecting the Micro and Macro

Session Moderator: **David Johnson**, *Durham U. Business School*

OMT: **Institutional Work in Freemasonry: Secrecy and Masonic Ritual**

Author: **David Johnson**, *Durham U. Business School*

Secrecy shapes both behavior and interactions within organizations, emphasizing that secrecy is much more than a static tactic of information concealment but is instead a social process that is at the heart of the microfoundations of organizations. While often associated with negative connotations, secrecy can indeed be a force of good and necessary for effective organizational functioning. The significance of secrecy is amplified through the rituals surrounding it. Unfortunately, our understanding of secrecy, and its relationship with ritual, at the institutional level remains limited. Accordingly, I investigate the characteristics of secrecy and ritual within institutions, exploring their interactions and influence on institutional maintenance. I engaged in a 48-month ethnographic study of The Grand Lodge of Ancient, Free and Accepted Masons of Scotland (GLoS). Data collection consisted of field observations, 8,255 surveys responses, 15 supplementary interviews, and access to GLoS strategic documents. Findings shed light on the role of secretive performances, secretive enhancement, secretive continuity, secretive implications, and boundary spanning secrecy, in maintaining institutions. By revealing how secrecy and ritual interact to maintenance (secretive) institutions, this study contributes to both institutional maintenance and hidden organization scholarship.

OMT: **Institutions and the Self**

Author: **Tobias Bruegger**, *U. of Illinois at Urbana-Champaign*

Author: **William Ocasio**, *U. of Illinois at Urbana-Champaign*

How can corporate managers act in accordance with their sense of who they are? We draw upon research on institutions and the self to conceptualize the core self as an experienced reference point and internal moral compass to perform organizational and institutional roles. Based on a study of the daily conduct of corporate managers, we identify the dynamics at play when the core self becomes a reference point for managers to enact their managerial role. We identify the three dynamics of distancing, anchoring, and engaging which characterize the process of drawing upon the core self for role enactment. We introduce an understanding of anchored role enactment in which people orchestrate the dialectical dynamics of engagement with organizational and institutional roles and distancing from them by anchoring, that is a performative reference to the core self to ground their role enactment in their sense of who they are.

OMT: **Endorsement or Detachment? Examining Individual Responses to Institutional Decoupling**

Author: **Yunsung Lee**, *KAIST College of Business*

Author: **Sangchan Park**, *Korea Advanced Institute of Science and Technology (KAIST)*

Scholars within institutional theory have consistently directed their focus toward the institutional and organizational determinants that explain why certain organizations engage in institutional decoupling. While these studies offer valuable insights, there remains a significant gap in understanding how individual employees respond to institutional decoupling. This study addresses this theoretical gap by examining South Korean organizations ostensibly adopting the 40-hour work policy while discreetly maintaining overtime work to sustain productivity. Through a multi-level analysis involving 6,576 individual employees across 209 organizations, our findings reveal a negative relationship between institutional decoupling, organizational identification, and proactive performance, attributed to the cognitive dissonance arising from the incongruence between external expressions and internal values. We argue that cognitive dissonance can be mitigated through normative attitudes and behaviors associated with social identities, along with individual motivations for self-enhancement. As organizations gain greater appeal in the labor market, employees rationalize institutional decoupling as a means to enhance their identity and status. Additionally, when organizations make efforts to achieve a desirable future image, they interpret institutional decoupling as a transitional phase aimed at reinforcing their social identity. These findings highlight the role of social identity in shaping how individual employees address cognitive dissonance arising from institutional decoupling.

Author: **Habofanoe Jeremiah Polaki**, *IESEG School of Management (LEM-CNRS 9221)*

Author: **Wim Van Lent**, *IESEG School of Management (LEM-CNRS 9221)*

Author: **Farah Kodeih**, *IESEG School of Management*

Although existing theory conceptualizes institutional translation as a distributed process involving various actors, scholars mainly focus on the contestation or novelty of an idea or practice, the disparity between origin and receiving context, and the adaptive work of actors. Whilst many ideas and practices are contested and subsequently manipulated to fit a receiving context, the focus on idea or practice adjustment obfuscates the dynamic and complex interactions between actors and contextual factors in the process of institutional translation. We seek to understand how the roles and agency of translating actors evolve within an institutional infrastructure and throughout the translation process when the translated ideas and practices are not contested in principle. To do so, we conducted a case study of the localization of foreign aid amongst local and Indigenous NGOs combating HIV/AIDS in Lesotho. Our study identifies and explains how institutional factors shape and complicate the transfer of practices and agency through a chain of translating actors. Overall, our findings advance knowledge by highlighting contextual factors, such as legacy funding mechanisms, administrative complexity and an established field hierarchy as key determinants of the institutional translation process.

Political Activism in Firms

Session Moderator: **Kwonhee Han**, *U. of Illinois at Urbana-Champaign*

OMT: PAC Contributions, Performance, and Downsizing: Constraining Effect of Corporate Political Activity

Author: **Kwonhee Han**, *U. of Illinois at Urbana-Champaign*

The influence of corporate in politics is growing in the United States after the Citizens United Supreme Court decision. Previous literature on corporate political activities (CPA) has focused on its strategic aspect – how it could shape economic and social conditions in which firms can thrive. However, this paper adopts alternative views on CPA and studies its constraining effect. This study argues that past CPA will shape the generalized understanding of the firms (“organizational character”) and audience’s expectations on their behavior, thereby constraining the firm’s future decisions in politicized domain. More specifically, this paper investigates the effect of the firm’s past CPA on their decision in shareholder-value oriented downsizing. Workforce downsizing as a strategy to remedy market performance decline is a politically contested issue, as it directly harms labor interest while boosting shareholder value. This paper hypothesizes that the negative relationship between market performance and downsizing announcement will be less significant among Democratic-leaning firms, as they will avoid deviating from their established political identity to evade penalization from the audience (e.g., being perceived as opportunistic and untrustworthy). Based on the data of Fortune 500 firms and their downsizing announcements between 2011 and 2017, the empirical analysis of this study supports the hypothesis. This study aims to contribute to the literature on CPA by illustrating how it gets firm embedded in the interdependent network of social evaluation. I expect that the findings of this study will inform how firms navigate through complex political environments.

OMT: Leaving Russia: Evidence from MNEs’ Divestment in the Aftermath of Russia’s Invasion of Ukraine

Author: **Yong Kim**, *Texas A&M U.*

Author: **Kyunghwan Lee**, *Texas A&M U., Mays Business School*

Author: **Steven Boivie**, *Texas A&M U.*

Large firms are known to be hesitant to divest from foreign markets even in challenging circumstances, due to the significant costs and consequences associated with exit. This study examines the response of large firms to Russia’s invasion of Ukraine in 2022, which led many large firms to divest from Russia in response to public pressure to penalize the country. Our analysis of Fortune 500 companies reveals that the Russia divestment was primarily influenced by CEOs who possess a strong internal regard (from their employees) and high external visibility (from the media). Furthermore, we argue and find that an increased presence of institutional investors shapes CEOs to be more attuned to scrutiny and external expectations, enabling them to manage for the long-term prospects of the firm. Conversely, when there is lower presence of institutional investors, both internal regard and external visibility only have a negligible effect, potentially limiting other stakeholders’ ability to influence CEOs’ decision-making processes. Our study highlights the significance of CEOs and the influences of other stakeholders, including investors, that may lead firms to take actions contributing to ending wars and promoting justice.

OMT: From Visions of a Better Future to Practice: How Ideology Evolves when Fields Move Towards Action

Author: **Eleonora Grassi**, *Alma Mater Studiorum U. di Bologna*

Author: **Andrea Carlo Lo Verso**, *U. Ca’ Foscari of Venice - Dept. of Management*

Author: **Grace Augustine**, *School of Management, U. of Bath*

Ideologies have been considered central elements of social movement fields, helping to hold diverse actors together and guide action. What we know less about, however, is how ideologies shift over time in emerging fields. Especially, it is unclear how this may be intertwined with stages of change as social movement fields move from ideas to action and look to concretize their idealized visions. In order to investigate these questions further, we observe how the emerging field ideology evolves in the Platform Cooperativism movement, a movement aimed at challenging the inequalities and power dynamics of traditional platform businesses and envisioning a future of platforms built around the cooperative model and its associated ideals. Through a Structural Topic Modeling analysis of the discursive exchanges in four conferences held by the Platform Cooperativism movement between 2015 and 2021, we have identified three kinds of discourses: ideological, practical, and integrating, the final one aimed at embedding the field’s ideology into new structures and practices. By observing how these discourses unfold over time, we reveal how social movement field ideology evolves in relation to field development and change.

Healthcare Operations & Supply Chain Management

Session Moderator: **Subhajt Chakraborty**, *Coastal Carolina U.*

OSCM: **How do Patient Care Quality Facets Differ Across North America?**

Author: **Subhajt Chakraborty**, *Coastal Carolina U.*
Author: **Jorge A. Gonzalez**, *U. of Texas Rio Grande Valley*
Author: **Miguel Sahagun**, *High Point U.*
Author: **Cara-Lynn Scheuer**, *Coastal Carolina U.*

It is unclear whether patient care quality (PCQ), which comprises four facets—interpersonal, technical, environmental, and administrative quality—differs across hospitals in the three contiguous countries of North America—the US, Canada and Mexico. To offer a more nuanced understanding of the comprehensive nature of PCQ and the roles of their antecedents, we disaggregated the four PCQ facets. Using a mix of primary and secondary data drawn from hospital quality experts in the three nations we empirically tested a model whereby two country-level factors—national culture and a country's level of infrastructure development—moderate the roles of hospital quality leadership and technology integration on each of the four PCQ facets. The results support a negative moderation by infrastructure on the positive role of a hospital's quality leadership on environmental quality. This study contributes to healthcare operations literature by highlighting the important role of a country's institutional attributes on PCQ delivery, as well as the role of quality leadership in this process. We contribute to medical practice in hospitals as well. Given the increase in globalization, travel and migration among healthcare workers and the general population across North America, our results imply that physician and nursing staff should be sensitized to cultural and institutional differences in healthcare stakeholder definitions of quality care. It would improve hospitals' ability to provide care for all patients thereby globalizing healthcare.

OSCM: **The Impact of Increasing Entry Fee on Emergency Department Demand: A Territory-Wide Study**

Author: **Hyun Seok Lee**, *Korea U. Business School*
Author: **Eric Park**, *Wake Forest U.*
Author: **Timothy Rainer**, *U. of Hong Kong*

Emergency department (ED) overcrowding is a global health problem. In hopes of reducing patient traffic to mitigate ED overcrowding, several countries have heightened the financial burden for access to ED care by increasing ED entry fees. We perform a territory-wide study of the universal public health system of Hong Kong SAR and empirically investigate the impact of the June 2017 ED entry fee increase from HK\$100 (US\$13) to HK\$180 (US\$23) on ED patient visit behavior and the underlying mechanisms. The study data covers all patient visits from 2014 to 2019 at 18 public EDs. Using a difference-in-differences approach, we find that the fee increase persistently reduced overall patient traffic for at least 2.5 years after the intervention. The estimated effect of the 6.3% reduction is larger than the government-reported 4.4%. This is mainly driven by a significant reduction in less-urgent visits, while urgent visits did not decrease. The intervention has been more effective in reducing revisits than initial visits. At the individual patient level, we find a significant reduction in patient ED visit frequency, and this effect is stronger for frequent visitors. We also find that the fee increase has reduced patients who abandoned and did not revisit in the near future. Overall, we provide empirical validation of the financial access hurdle as an effective policy instrument for alleviating healthcare congestion. We also show the policy's effectiveness in limiting inappropriate use of ED services. We highlight the effectiveness and importance of managing external demand in addition to improving internal processes.

OSCM: **Racial/Ethnic Concordance and Participant Engagement in Home Visiting Programs**

Author: **Minjeong Kang**, *U. of Minnesota Carlson School of Management*
Author: **Rachna Shah**, *U. of Minnesota Twin Cities*

This study examines whether racial and ethnic concordance between home care providers and care receivers increases participant length of stay in a state-run Early Childhood Home Visiting Program. Racial and ethnic concordance refers to when the care provider and care recipient belong to the same race and ethnicity. The program offers regular home visits by trained care providers to families with multiple economic and social risk factors, starting from pregnancy up to the first five years of a child's life. We obtain participant-level data from 32,989 home visits conducted between March 2020 and March 2023 and involved 2,956 participants, from the program agency. We measure home care providers and participant race and ethnicity following US Census classification, and participant length of stay in the program as the number of days between the first and last provider visit dates. Using a two-stage residual inclusion (2SRI) with Cox proportional hazards model, we find that racial/ethnic concordance between home care providers and participants is associated with a lower likelihood of Black and Asian participants exiting the program, but not for non-Hispanic White and Hispanic participants. The results indicate that racial/ethnic concordance is critically essential to retain families at higher socio-economic risk. For agencies managing such programs, the results also highlight the need to align provider recruitment with the race/ethnicity of the participants they are targeting to serve if longer retention in the program is the objective.

Panelist: **Christian Kober**, *Helmut Schmidt U.*
Panelist: **Neo C. K. Yiu**, *U. of Cambridge*
Panelist: **Fatema El-Wakeel**, *U. of Cambridge*
Panelist: **Stephen Green**, -

Research suggests that numerous industrial organizations and supply chains have been exploring new ways to differentiate themselves by implementing digital technologies such as, AI, digital twins, blockchain among others, and compete on the basis of value delivered rather than on the basis of cost. Other organizations have been implementing some of these digital technologies to follow and level up with the competition. Whatever is the rationale for adoption research shows that discussions are mainly emphasised on the implementation of the digital technologies and less emphasised on role of the digital data generated by these technologies and their implications for future (plans, management and value creation). The objective of this panel symposium is to open up the discussion discuss how successful organisations are currently managing and using their data generated by digital technologies in OSC– data as a strategy or as an asset. The industrial and academic panellists paired by technology expertise will discuss the data phenomenon on three different digital technologies contexts.

Money & Morality: Exploring the Motivational Contours of Public Sector Employment

Session Moderator: **Meghna Sabharwal**, *U. of Texas at Dallas*

This presentation will examine the varied dimensions of motivation in the public sector, from the interplay of public service motivation on creative outcomes, to cultural nuances in India, innovative work behaviors for organizational enhancement, and the influence of monetary attraction on ethical conduct.

PNP: Fostering Innovative Work Behavior to Improve Organizational Performance   

Author: **Seongdeok Oh**, *U. of Texas at Dallas - PhD Public Affairs program*
Author: **Meghna Sabharwal**, *U. of Texas at Dallas*

In the face of rapid changes and heightened public service demands, fostering Innovative Work Behavior (IWB) has emerged as pivotal for public organizations to enhance performance. This study examines the link between IWB and Organizational Performance (OP) in South Korea's public sector. It focuses on how Public Service Motivation (PSM) mediates this link and how Innovative Organizational Culture (IOC) moderates it. Analysis of data from 4,133 public employees in 47 central and 17 local government agencies confirms positive direct IWB-OP correlation. It also highlights PSM's partially mediating role and IOC's moderating effect. This research provides valuable insights for improving both innovative behaviors and organizational performance among public employees.

PNP: Unveiling the Effect of Love of Money on Unethical Behavior: A Moderated Mediation Model

Author: **Muhammad Ali Hussain**, *NingboTech U.*
Author: **Qing Miao**, *Zhejiang U.*

Despite the tremendous increase and significance of frontline employees in the public sector, little is known about civil servants' motivation to analyze whether their self-motives may influence their unethical behaviors. The present study aims to explore when and why a person's attitude toward the love of money causes them to violate their own moral foundations and subsequently engage in unethical behaviors. According to three-wave data from 903 civil servants, love of money was positively related to moral disengagement, and moral disengagement was positively linked with unethical behaviors. Further, moral disengagement mediate the relationship between the love of money and unethical behavior. Besides, the study finds that professional stigma intensifies the indirect relationship between the love of money and unethical behaviors.

PNP: Balancing Act: Synergistic Influence of Public Service Motivation and Centralization on Creativity

Author: **Nishtha Arora**, *Indian Institute of Management, Lucknow*
Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*
Author: **Manish Saini**, *Indian Institute of Management Lucknow*
Author: **Aashima Gaba**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Muskaan Virdi**, *Doctoral Student at Indian Institute of Management Lucknow*

Building on a person-in-situation perspective, we theorize and test conditions under which public service motivation increases creativity. Based on multi-source, multi-organization data from 280 employees, we tested and found that although public service motivation was positively related to creativity, the relationship was moderated by dimensions of centralization, i.e., hierarchy of authority and participation in decision-making. We further found a significant three-way interaction between public service motivation, hierarchy of authority and participation in decision-making in predicting creativity, such that creativity was highest when both participation in decision-making and the hierarchy of authority was high. By examining how contexts in combination can have a synergistic positive impact on creativity, we offer novel theoretical insights regarding the effects of organizational context and public service motivation on creativity.

PNP: Public Service Motivation in India: Assessing, Refining, and Validating a Revised Conceptualization   

Author: **Samvet Kuril**, *Ahmedabad U.*
Author: **Vishal Gupta**, *Indian Institute of Management, Ahmedabad*
Author: **Shiva Kakkar**, *XLRI - Xavier School of Management, Jamshedpur*
Author: **Rajneesh Gupta**, *BIMTECH - Birla Institute of Management Technology*

Globally, the examination of Public Service Motivation (PSM) has been instrumental in understanding how the attitudes and values of public servants shape the outcomes and efficacy of social welfare through public institutions. The construct of PSM offers a lens to assess and enhance the alignment between public servants' motivations and the objectives of public institutions. Yet research on PSM in the Indian context is conspicuously deficient as existing PSM frameworks and instruments, derived from Western-centric studies, do not adequately capture the cultural, economic, and administrative nuances that characterize the Indian public service. Consequently, there is a pressing need to investigate and measure the concept of PSM in India. In four studies, we re-examine the construct of PSM in the local context and develop a valid measure for it, identifying three unique dimensions - job security and growth, power to create change and social respect. The study contributes to the scholarly discourse on Public Service Motivation (PSM), laying groundwork for researchers in the Indian subcontinent to develop and empirically validate more refined theories of public administration.

Paradox & Capacity: Persistent Tensions in Public & Nonprofit Organizations

Session Moderator: **Danbi Seo**, *Arizona State U.*

This presentation will explore the dynamics of organizational tension and paradox, examining how entities manage collaborative strain, the role of absorptive capacity in advocacy, the complex creation of paradoxes during legitimacy crises, and the unique contradictions inherent in public sector leadership.

PNP: **Caught in a Trap: The Co-Creation of Paradoxes in Processes of Legitimacy Repair**

Author: **Iris Seidemann**, *U. of Hamburg*

Author: **Daniel Geiger**, *U. of Hamburg*

The article examines how the co-creation of paradoxes impedes a public agency's attempt to repair its legitimacy. Using press articles, it builds on analyzing the media discourse around the Berlin State Office for Health and Social Affairs (LAGeSo) during the so-called 'refugee crisis'. Our findings show how the media call the agency's legitimacy into question and, when the agency addresses the call to repair its legitimacy, becomes even more vulnerable and fails in the repair attempt. We explain this observation with the emergence of co-created paradoxes the agency finds itself trapped in. The study contributes to the legitimacy discourse in public management by highlighting the role of the media not as passive spectators but as powerful actors in legitimacy processes. Second, we contribute to paradox theory by arguing that paradoxes can be co-created by multiple actors and that addressing them exceeds the capability of a single organization.

PNP: **Leadership Paradoxes in Public Administration: A Qualitative Study**

Author: **Lokesh Malviya**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Author: **Vishal Gupta**, *Indian Institute of Management, Ahmedabad*

Public sector organizations face paradoxes on a regular basis. However, the extant literature has not paid adequate attention to formally analyze and draw out nuances of the said paradoxes which occur on an almost day-to-day basis and as research suggests, may have the potential to significantly impact various performance-related measures. Based on thematic analysis of semi-structured interviews of mid-level public administrators in India, the study found evidence of six paradoxes: creativity paradox, political paradox, decision-making paradox, implementation paradox, consideration paradox and identity paradox. The study aims to contribute to theory development on paradoxes and paradoxical leadership by providing a more nuanced view of the same. The study has the potential to inform officers, trainers, and human resource managers of public administration about the paradoxes that are inherent in this job and the leadership capabilities required to manage them at work.

PNP: **Hang in There: Experiencing and Addressing Capacity Tension in Collaboration**

Author: **Danbi Seo**, *Arizona State U.*

Actors join collaboration to complement and strengthen their existing capacity, broadly defined. However, they must first invest their capacity to build collaboration until it is fully developed and produces intended outcomes. This creates a challenge of ongoing work versus deferred gains, which is identified as "capacity tension" in this study. To advance theory and practice on the processes of managing capacity tension and sustaining collaboration, this study examines a nonprofit collaboration that struggled with constant capacity tensions yet persisted for several years with some meaningful achievements. Drawing on a unique longitudinal data from 165 interviews with 27 collaboration participants over 11 rounds of interviews, participant-observations, and archival documents between 2016 and 2020, this study reveals the presence of ongoing capacity tension in collaboration and offers various coping strategies. Based on the analysis, a process model on navigating capacity tension in collaboration is proposed.

PNP: **How Organizational Absorptive Capacity Shapes Advocacy Outcomes**

Author: **Qiaozhen Liu**, *Florida Atlantic U.*

The past several decades have seen a surge of research on nonprofit advocacy and lobbying. Previous studies have predominately focused on direct-service nonprofits, with little attention being paid to nonprofit infrastructure organizations (NIOs) that conduct advocacy on their behalf. Since advocacy and lobbying have become highly "specialized and institutionalized," there is a pressing need to better understand the role of professional advocacy services carried out by NIOs. The present study examines NIOs' advocacy effectiveness through the lens of absorptive capacity that highlights the importance of an organization's capability to acquire, assimilate, transform, and exploit information toward accomplishing organizational missions. Taking advantage of an original online survey of U.S.-based NIOs, this study confirms that an organization's absorptive capacity, including its connectedness, knowledge, and learning mechanism, influences different aspects of advocacy effectiveness.

Catalyzing Change: Scaling & Innovation for Public & Nonprofit Impact

Session Moderator: **Sungdae Lim**, *Sam Houston State U.*

This presentation will explore the landscape of transformational innovation across the public and nonprofit sectors, from the driving force of public values and feedback, through the integration of artificial intelligence, to the narrative strategies behind government reinvention, and the systemic scaling efforts addressing homelessness.

PNP: Public Values as Catalysts for Innovation: How Feedback Sources Shape Nonprofit Innovation

Author: **Byung Min**, *Wayne State U.*

Author: **Sungdae Lim**, *Sam Houston State U.*

Author: **Daniel Fay**, *Florida State U.*

Nonprofit organizations providing social services must innovate to meet the evolving needs and expectations of their beneficiaries, leadership, and society writ large. To accomplish this, organizations must first understand the nature of the needs and expectations of these stakeholders. Using feedback-seeking behavior, internal management, and stakeholder theories this study examines the relationships between diverse feedback sources and organizational innovation, mediated by public and nonprofit value orientations. Our structural equation modeling analysis shows that creating diverse feedback channels that originated from different public values promotes nonprofit innovation. The findings highlight that communication and interaction between diverse stakeholders not only directly impact innovation but also indirectly shape the organization's public value orientation. This underscores the intricate and multifaceted nature of nonprofit innovation, along with the dynamics of internal and external stakeholders of nonprofit organizations.

PNP: Entrepreneurial Storytelling in Political Context: The Logics of "Reinventing Government" in the US

Author: **Chelsea Lei**, *Boston College*

Existing research on how entrepreneurial storytelling is used to legitimate innovation and change has focused primarily on commercial settings. This paper extends analysis of entrepreneurial storytelling to a public institution, the U.S. federal government, and demonstrates how political context affects the stories told by institutional entrepreneurs seeking to legitimate radical change. Using qualitative historical archival methods, I content analyzed the use of and relationship between two co-existing institutional logics – the state logic and the market logic – embedded in 154 official stories in five annual reports (1993-1997) of the Clinton administration's National Performance Review, popularly known as "Reinventing Government." I found that the use of the state logic and the market logic in the administration's stories changed over time and relative to each other. The stories initially emphasized an oppositional relationship between the two logics to justify the replacement of the state logic by the market logic as the dominant framework for guiding federal management. However, changes in the political context (i.e., Republican takeover of Congress in 1994) motivated the administration to construct stories that portrayed a collaborative relationship between the two logics, thus modifying its initial rhetoric of logic replacement by a subsequent rhetoric of logic hybridization. The study demonstrates that entrepreneurial storytelling by government actors constitutes an important rhetorical strategy through which the relationship between the central logics of two societal institutions, the state and the market, is politicized to create the enabling conditions for profound institutional transformation in the public sector.

PNP: Scaling as Organized System Change: The Case of Homelessness (WITHDRAWN)

Author: **Christian Seelos**, *Stanford U.*

Author: **Charlotte Traeger**, *U. of Bern*

Author: **Fenja Nolting**, *Hertie School*

We apply the lens of organized system change (Mair & Seelos, 2021) to understand the scaling of efforts to address the complex societal challenge of homelessness. This lens considers how organized efforts problematize and alter aspects of systems understood as complex social realities. To examine historical data on scaling solutions to homelessness in the United States between 1960 and 2021, we deploy an analytical scaffolding that distinguishes between the causal, situation, and problem realms of social systems. By examining the historical evolution of decisions and actions taken across various sectors and system realms, we develop a set of propositions that shed light on the efficacy, legitimacy, and desirability of scaling efforts. These propositions expand current understandings of scaling social innovation anchored in managerial or transactional perspectives. We contribute to the literature on scaling social innovation by integrating historical and system perspectives to comprehend the intended and unintended consequences of organized efforts to address societal challenges and make progress on social problems. Lastly, we evaluate the usefulness of our analytical scaffolding for empirical research on organized efforts to change social systems.

PNP: Welcome, Innovation! A Meta-Synthesis of Artificial Intelligence Adoption in the Public Sector

Author: **Simona Mormile**, *U. of Salerno*

Author: **Roberta Romano**, *U. of Salerno*

Author: **Gabriella Piscopo**, *U. of Salerno*

Author: **Paola Adinolfi**, *U. of Salerno*

Purpose. The purpose of this paper is to explore the impact of artificial intelligence (AI) adoption in the public sector organizations. The investigation seeks to delve into the multiple facets involved in the adoption of AI technologies by public organizations, discerning the complexities and implications of this transformative journey. Design/methodology/approach. We conducted a meta-synthesis of the qualitative literature on the topic of artificial intelligence in the public sector. Drawing from 15 systematically selected qualitative studies, we explored the various aspects related to how public organizations adopt AI technologies, with reference to the factors and challenges influencing its adoption. Findings. The results identify the main factors influencing the adoption of AI in the public sector, highlighting the involvement of organizational, technological, social, and environmental factors. Despite the presence of multiple barriers, there are just as many challenges and opportunities to effectively adopt AI in the public sector. Originality/value. This study seeks to analyze a significant number of qualitative studies regarding AI adoption within the public sector, highlighting the need for further investigation into this crucial topic.

Person-Centered Approaches to Diversity And Inclusion Research

Organizer: **Niamh Dawson**, *U. of Queensland*
Presenter: **Arian Kunzelmann**, *Future of Work Institute, Curtin U.*
Presenter: **Jane Chong**, *U. of Western Australia*
Organizer: **Belen Alvarez**, *U. of Queensland*

Despite increasing recognition of the value in using person-centered methods for vocational research, they are underutilized when it comes to modeling diversity and inclusion dynamics at work. This is surprising given the increasing complexity faced by scholars in accurately capturing the expanding conception of workforce diversity, as well as lack of insight into promoting employee inclusivity. In this symposium, we showcase the utility of person-centred approaches for advancing diversity and inclusion scholarship. The four included papers exhibit a range of person-centred techniques as applied to diverse populations, contexts, and theoretical frameworks. We hope that collectively, this research stimulates thought-provoking discussion on the methodological utility of person-centred methods, and inspires their use for future diversity and inclusion research.

New Insights on Causal Inferences: Assessing Mediation and Control Variables

Session Moderator: **Michael Sturman**, *Rutgers U.*

RM: **Mediation Research: Drawing Valid and Complete Inferences**

Author: **Jie Feng**, *Rutgers U.*

Author: **Rakoon Piyanontalee**, *Penn State U.*

Author: **Mevan M. Jayasinghe**, *Michigan State U.*

Author: **Barry Gerhart**, *U. of Wisconsin, Madison*

Mediation research, when combined with strong methods, is uniquely valuable in understanding theoretical pathways and thus in providing a sound basis for policy decisions pertaining to people management. However, our comprehensive review shows that current mediation research in human resources, organizational behavior, and other areas of management has serious deficiencies that frequently result in incomplete, or worse, invalid conclusions and policy recommendations. The most fundamental problem in mediation research is the prevalent exclusive focus on the indirect effect while ignoring the direct and/or total effect (97.8% in our sample of studies). This problem is most serious when mediation is inconsistent (i.e., the sign of the direct effect is opposite to that of the indirect effect), which we find is common (occurring in 26.4% of sampled mediation studies), but almost always ignored. Focusing only on the indirect effect is especially problematic in inconsistent mediation when the direct effect is larger than the indirect effect, resulting in the total effect and indirect effect having opposite signs. Even when mediation is consistent, a sole focus on the indirect effect fails to satisfy a fundamental effect size requirement unique to mediation research: the need to quantify the size of the indirect effect relative to the size of the total effect. We provide a set of recommendations to address these concerns and to improve mediation research going forward. One key recommendation is to report and interpret not only the indirect effect, but also the direct effect and total effect. A second key recommendation is to report PM, as well as a form of PM, Absolute PM, that has been largely overlooked, but which our analyses demonstrate has crucial advantages (smaller sampling variability, robustness to inconsistent mediation) over PM alone.

RM: **From Theory to Practice: An Accessible Guide on Addressing Endogeneity Using Control Functions**

Author: **Jonathan Hoke**, *U. of Münster*

Author: **David Bendig**, *Otto von Guericke U. Magdeburg*

This study addresses the challenge of endogeneity in empirical information systems (IS) research, emphasizing the importance of the control function (CF) approach in analyzing secondary data. As IS research explores complex dynamics, it is crucial to rigorously handle endogeneity to maintain the validity of empirical findings. The paper demonstrates how the CF approach can address biases resulting from omitted variables, simultaneity, and measurement errors. Additionally, we compare its effectiveness with the Heckman two-stage and instrumental variable estimations. This paper aims to make the CF approach more accessible to IS researchers and our contribution is threefold: (1) providing an accessible, step-by-step guide to the CF approach, making it easily understandable, (2) outlining the theoretical underpinnings and relevant applications, and (3) presenting a hypothetical research model, complemented by software tutorials in Stata and R to effectively bridge the gap between complex econometric theories and their application in empirical research.

RM: **The Construct Uncertainty Principle: A Paradox of Control Variables the makes Research Design More Complex**

Author: **Michael Sturman**, *Rutgers U.*

Author: **James A Breagh**, *U. of Missouri, St. Louis*

Although there has been growing recognition of concerns associated with endogeneity and omitted variable bias, the way in which the inclusion of control variables influences the interpretation of statistical findings has not received sufficient attention. In this paper, we discuss what we refer to as the Construct Uncertainty Principle. This principle represents a paradox, where researchers can either know the construct being examined but not fully know the unbiased effect of that construct, or where researchers can have high confidence in the parameter estimate provided in an analysis (e.g., the regression coefficient) but not fully know the construct validity of the residual predictor used in that analysis. Using a simulation based on actual correlation matrices, we show that semi-partialled constructs have an equivalent reliability less than 0.70 roughly 50% of the time, and actually falls below an equivalent reliability of 0.50 roughly 25% of the time. The problem is larger when more control variables are used. Overall, this paper demonstrates that construct validity issues need to be much more carefully considered when using multivariate analysis and the interpretation of analyses merits equivalent attention to that given to endogeneity concerns. Recommendations for helping to address the concerns revealed in this paper are provided.

RM: **Improving Theory Testing with Nonlinear Control Variables**

Author: **Andreas Salmen**, *Brandenburg U. of Technology Cottbus-Senftenberg*

Author: **Diemo Urbig**, *Brandenburg U. of Technology Cottbus-Senftenberg*

Strategic management theories including dynamic capabilities, optimal distinctiveness, agency theories, and knowledge-based views, suggest nonlinear relationships and require nonlinear control variables (NLCs) for accurate theory testing. However, NLCs are rarely used and poorly understood, and, as we illustrate using previous research, neglecting them leads to inaccurate conclusions. We provide analytic proof and a Monte Carlo simulation to illustrate how NLCs result in more accurate theory testing in strategic management research. These analyses improve our understanding of when and why NLCs have positive (i.e., decreased bias and increased efficiency) or negative (i.e., reduced efficiency) effects on theory testing. Also, we offer best practice recommendations for identifying and using NLCs for balancing bias and efficiency.

Keeping Qualitative Weird: Resisting the Objectification of Qualitative Research

Session Chair: **Hans Hansen**, *Texas Tech U.*
Session Chair: **Anne D. Smith**, *U. of Tennessee, Knoxville*
Panelist: **Benjamin Nathan Baki Alexander**, *California Polytechnic State U.*
Panelist: **Marcos Pereira Fernandes De Barros**, *Grenoble Ecole de Management*
Panelist: **Sara R. S. T. A. Elias**, *U. of Victoria*
Panelist: **Jean M. Bartunek**, *Boston College*
Panelist: **Karen Golden-Biddle**, *Boston U. Questrom School of Business*
Panelist: **Robert P. Gephart**, *U. of Alberta*
Panelist: **Dirk Lindebaum**, *Grenoble Ecole de Management*
Panelist: **Anna Stevenson**, *Lund U., School of Economics and Management*

This panel symposium hopes to offer an insightful discussion about how we can avoid the objectification of qualitative research by “keeping it weird.” After outlining current problems in published qualitative research, we will open a space for dialogue where panelists in editorial roles, as well as the audience, will interactively discuss and explore practical suggestions for resisting objectification in qualitative research in journal publications. We hope to discuss ways we might regain qualitative research’s distinct method of embracing subjectivity and leveraging its differences, which we believe contribute to impactful and interesting research.

Entrepreneuring and Entrepreneurship as Practice

Session Moderator: **Alex Christian**, *TUM School of Management, Technical U. of Munich*

SAP: **Caring and Valorising: How Stuck Entrepreneurial Evaluations are Accomplished in Practice**

Author: **Alex Christian**, *TUM School of Management, Technical U. of Munich*

Author: **Neil Pollock**, *U. of Edinburgh business school*

Author: **Marian Konstantin Gatzweiler**, *U. of Edinburgh*

Author: **Luciana D'Adderio**, *U. of Edinburgh*

Our two-year ethnographic study examines a UK government-initiated innovation competition for digital health and social care to explore how entrepreneurial organisations are evaluated in practice. Evaluations of entrepreneurial organisations are crucial for their economic survival, yet highly complex to conduct in practice since evaluators often have to base their evaluations on future promises and inappropriate levels of information. We draw on observations, interviews, and documentary material to analyse the interactions between evaluators, as well as their interactions with contesting technology ventures within multiple evaluation meetings. By theorising entrepreneurial evaluating as a social practice, we show how complex evaluation processes can get stuck and how such situations of stuckness can be overcome in practice. In particular, we focus on the role of caring and valorising in accomplishing stuck evaluations. Our study contributes to the literature on entrepreneurship, organisation, and valuation.

SAP: **Place and Placing in the Emergence of Start-ups and Start-up Culture: A Dialectical Approach**

Author: **Boukje Cnossen**, *Leuphana U. Lüneburg*

Author: **Sarah Stanske**, *Leuphana U. Lüneburg*

Drawing on the burgeoning literature of place in organizational research, we examine the emergence of a local entrepreneurial region in northern Germany and investigate how actors linguistically construct the new start-up scene. In this sense, we extend existing literature, which has foremost highlighted how actors draw on already established meanings of local places, such as Silicon Valley, by showcasing how places become infused with meaning in the first place. Surprised by the observation that actors described the region as both a suitable place to start ventures, and as an area that is seriously lagging behind in its capacities to support start-ups, we draw on a dialectical approach, and mobilize Bakhtin's notion of the chronotope to better understand this seemingly paradox. Drawing on interviews, observations and documents, we discern four types of 'placing', which are geared towards constructing the emerging entrepreneurial region both symbolically and materially. Common to these types of placing is that they work with scale and distance, shaped by what we believe are two chronotopes; one being that of the international start-up world, and the other that of a rural region. Relying on the chronotope allows us to develop a spatialised or 'sited' way to account for the role of local and translocal discourses in shaping processes of symbolic and material construction. Furthermore, by proposing the notion of 'placing' as tension-ridden process, we extend current literature on place and entrepreneurship and highlight the role of language in the construction of a local start-up ecosystems.

SAP: **Corporate Ventures for Strategic Renewal? Start-Up Identity and Strategizing Under Ambiguity**

Author: **Kathrin Borner**, *Erasmus U. Rotterdam*

Author: **Fleur Deken**, *Vrije U. Amsterdam*

Author: **Frans Feldberg**, *KIN Research, VU Amsterdam*

Many incumbents set up corporate ventures for their strategic renewal. These corporate ventures must enact the incumbent's goals while doing things differently to renew the incumbent's strategy. Often these corporate ventures are confronted with ambiguity caused by multiple goals imposed by the incumbent they are embedded in. To better understand how corporate ventures strategize under ambiguity, we investigate how a corporate venture's identity relates to strategizing under ambiguity arising from multiple goals. We address this question in a longitudinal study of a corporate venture which had to contribute to the incumbent's transformation into a more data-driven, circular and B2C (business-to-consumer) oriented firm. Using a longitudinal, micro-level ethnographic approach allowed us to gain in-depth insights into how corporate ventures strategize under ambiguity. We show how a corporate venture solved ambiguity and engaged in their own strategizing activities instead of following the imposed goals from the incumbent. Driven by their start-up identity which developed over time the corporate venture shifted further and further away from the imposed goals of the incumbent. The corporate venture followed its own strategizing activities and ultimately ended in a strategy drift.

SAP: **Iterative Problem Development Process in Startup Innovation Contests**

Author: **Juliane Moellmann**, *Aarhus BSS, Aarhus U.*

Author: **Michael Zaggl**, *NEOMA Business School*

Corporations use open innovation approaches to solve internal problems by utilizing external knowledge, for example, in the form of crowdsourced innovation contests. However, the issue of formulating an innovation problem for broadcasting is under-researched. We address this issue in the context of startup innovation contests, a new form of crowdsourcing in which corporations crowdsource problems to startups and which is managed by a program. Specifically, this study examines how problem statements are formulated and how they are constructed collaboratively by the participating actors in this setting. Using a case study analysis with a processual microlens, we analyze five companies in the German Housing industry, each crowdsourcing a problem and later collaborating with a startup. Our analysis examined the changes in the problem statement throughout the process. We find that an unequal balance between knowledge seekers and startups during problem formulation results in cancellations or delays during the pilot project implementation. The research highlights the relevance of the problem formulation process in corporate-startup collaboration and provides a fine-grained perspective in the broader understanding of problem construction.

Responsible Corporate Behavior or Greenwashing? Governance, Decoupling, and Stakeholder Views

Session Moderator: **Stelios C. Zyglidopoulos**, *Sprott School of Business, Carleton U.*

SIM: **Corporate Governance and Greenwashing**

Author: **Erifili Chatzopoulou**, *AUEB*

Author: **Maria Fotaki**, *Athens U. of Economics and Business*

Author: **Giorgos Papagiannakis**, *U. of Peloponnese*

Author: **Stelios C. Zyglidopoulos**, *Sprott School of Business, Carleton U.*

Companies worldwide are increasingly adopting environmental sustainability (ES) initiatives to meet stakeholder demands and gain environmental, reputational, and financial benefits. However, concerns are rising about the authenticity of these efforts, given the surge in irresponsible corporate behavior. Researchers are exploring drivers of CSR greenwashing, with past studies focusing only on organizational aspects or external pressures. This paper investigates how corporate governance influences a firm's likelihood to engage in greenwashing. The significance of this inquiry lies in the direct connection between governance mechanisms and how firms decide, manage, oversee, and communicate their ES engagements. Using Asset4 Thomson Reuters ESG data for US manufacturing firms between 2010 -2017, we found that firms that have independent members and a CSR committee on the board of directors are more likely to engage in greenwashing, or environmental championing rather than in greenwashing.

SIM: **Type I and II Greenwashing: Extending the Critique of CSR Communication via Means-Ends Decoupling**

Author: **Aurélien Feix**, *HEC Paris*

Author: **Moritz Gruban**, *Royal Holloway, U. of London*

Author: **Ariel De Fauconberg**, *Cambridge Judge Business School*

Widespread criticism of “greenwashing” practices has prompted business organizations to report on their corporate social responsibility (CSR) activities under more stringent transparency standards. However, in order to steer economic activity towards the meaningful integration of social and environmental sustainability goals, it is not enough for companies to simply report on the degree of “responsibility” with which they conduct their business: what counts as “responsible” corporate behavior must also be conducive to such a state. We argue that the fulfillment of the latter condition is hampered by an under-conceptualized form of greenwashing. “Type II greenwashing,” as we call it, refers to discursive practices by which the means advocated in the name of CSR (i.e., the corporate practices qualified as “responsible”) are decoupled from their stated ends (i.e., the declared broader goal of a corporate “responsibility”, ensuring an economically prosperous society that is also socially and ecologically sustainable). We show how Type II greenwashing differs from the practices that are conventionally subsumed under the term “greenwashing” (i.e., “Type I greenwashing”), and describe three discursive mechanisms through which Type II greenwashing functions: conflation, blurring, and distension of the means-ends link. Finally, we outline an agenda for researching and countering Type II greenwashing and offer useful implications for managerial practice.

SIM: **A Post Pandemic Perspective on Greenwashing Discourse & Manager's Perceptions**

Author: **Ouiam Kaddouri**, *Leonard de Vinci Business School*

Amidst the unprecedented economic backdrops of a global pandemic, the intricate web of greenwashing discourse in times of fake news has woven its threads into the fabric of corporate sustainability, reshaping managers perceptions and challenging their attitudes toward sustainable decision making. Through a two-phases qualitative study, this research explores the impact of greenwashing discourse on manager's perceptions and attitudes toward sustainability post pandemic. The results reveal a disconnection between external greenwashing discourse and the managerial mindset, as claims of greenwashing are often linked to 'fake news.' Furthermore, the study shows that the pandemic has shifted the spotlight to financial concerns, overshadowing sustainability in strategic decision-making, thereby altering the landscape of corporate responsibility. Going beyond the conventional focus on consumers and clients, this study aims to fill a critical gap in greenwashing research by examining the impact on a different category of stakeholders. Through this investigation, we aim to contribute to the research regarding greenwashing discourse by offering a more comprehensive understanding of the complexities and nuances involved in managerial perceptions of greenwashing discourse and sustainability initiatives in an era marked by unprecedent contextual challenges.

Global Insights for Empowered Gender Representation: Roles and Experiences of Women in Governance

Session Moderator: **Johanna Kujala**, *Tampere U.*

SIM: From Their Own Voices: The Lived Experiences of Women on Corporate Boards in Nigeria  

Author: **Aruoriwo Marian Chijoke-Mgbame**, *De Montfort U.*

Author: **Emmanuel Afolabi Adegbite**, *U. of Nottingham*

Author: **Simisola Akintoye**, *De Montfort U.*

Author: **Elewechi Okike**, *International Centre for Training, Research and Audit of Governance, Washington*

Relying on social categorisation and institutional theories, this paper contributes to the corporate governance literature and board gender diversity in weak institutional settings. Through a qualitative methodology, we present insights into the lived experiences of women on corporate boards in Nigeria. In particular, we highlight the barriers that impede women, their challenges while accessing and serving on corporate boards, and how they make sense of these challenges. We offer some solutions in dealing with these challenges as well as firm and policy levels recommendations for increasing the opportunities for female board members to contribute to good corporate governance.

SIM: Women Representation in Top Management Team and Corporate Green Innovation

Author: **Congshan Li**, *Xiamen U.*

Author: **Wei Jiang**, *Xiamen U.*

This study investigates the relationship between women's representation in top management teams (TMTs) and corporate green innovation. While existing literature suggests the potential benefits of diverse leadership for sustainability, the specific impact on green innovation remains under-explored. We analyze the influence of women leaders' psychological traits, considering both their ethical orientation and risk aversion, on their approach to green innovation. Employing a panel dataset of listed Chinese private firms and a two-stage least squares regression model with an instrumental variable, the findings reveal a statistically significant negative impact of women's TMT representation on green innovation. Further examination of contextual moderators identifies specific factors that mitigate or exacerbate this relationship. Notably, severe air pollution, political connections, and higher R&D intensity attenuate the negative effect, while intense industry competition intensifies it. This study advances understanding of women leadership in corporate upper echelons and the antecedents of green innovation, as well as offers insights for companies seeking to promote sustainable practices through diverse leadership.

SIM: Fit or Push? Understanding the Double-edged Sword of Pay-for-Performance for Female Leadership   

Author: **YuTing Guo**, *Northwestern Polytechnical U.*

Author: **Ying Zhang**, *Northwestern Polytechnical U.*

Does pay-for-performance vary with gender-based leadership differences? If so, how, and when? Our study integrates person-environment fit theory with agency theory, we propose a set of competing predictions on the relationship between female CEO presence and pay-for-performance. Based on person-environment fit theory, female CEOs will be associated with low pay-for-performance. But agency theory predicts that female CEOs will result in high pay-for-performance to counterbalance female CEOs' risk aversion tendencies. We further explore the joint effect of female CEO presence and pay-for-performance on a firm's financial outcomes. Our findings indicate that firms will mirror female CEOs' preferences with low pay-for-performance and, indeed, pay-for-performance may backfire if firms are led by female CEOs. Our empirical analyses provide substantive support for our predictions.

SIM: Gender Premium in Social Ventures for Women Founders: Philanthropic Grants   

Author: **Aindrita Chatterjee**, *Institute of Management Technology Hyderabad*

Author: **Seung Hoon Lee**, *Indian School of Business*

Social ventures have been seen as a field with less gender inequality, commonly involving more women founders. However, previous research suggests gender penalty exists for women founders accessing equity and debt capital. This paper attempts to resolve this apparent puzzle by examining an alternative source of financing of social ventures: philanthropic grants. By taking philanthropic grants as an important component of financing of social ventures, this paper addresses the following research question: Is there less of a gender penalty or even a gender premium for women founders of social ventures receiving philanthropic grants? If so, under what conditions can such a gender premium be amplified or attenuated? Based on existing theory and evidence, we first hypothesize that the presence of more women founders in social ventures decreases the probability of receiving equity or debt financing and the absolute amount. Building on social role theory and gender role congruity theory, we then hypothesize that presence of more women founders in social ventures increases the probability of receiving philanthropic grant and its amount. We further predict that this gender premium for women in receiving philanthropic grants is higher for non-profit than for-profit social ventures, and that this premium for non-profit social ventures can be even higher when the venture is in a revenue generation status and when that revenue is higher. These hypotheses are initially tested through a sample of 11872 social ventures using data from the Global Accelerator Learning Initiative (GALI) database. In a second study, we perform an experimental analysis to validate our hypothesis about the gender premium received by ventures having a higher proportion of women founders in the case of philanthropic grants. Our findings generally support our theory and further show that the gender of the donor can moderate this premium.

The unorganized sector holds extreme importance for developing and underdeveloped economies as it is a major source of livelihood for the larger populace. According to the International Labour Organization (ILO, 2002), 50–75 percent of all non-agricultural employment in the developing world exists in the informal sector. Studies suggest that unorganized enterprises are generally low on productivity and constrained to finance due to which they have limited growth opportunities (Rothenberg et al., 2016). Women in developing countries are mostly found engaged in unorganized setups as it helps them to fulfill family obligations due to time use flexibility. Deterrence to entrepreneurial activities exist for both men and women; however, female entrepreneurs are affected mainly due to gender biases arising out of socio-economic conditions or certain legal biases such as unfavorable inheritance laws (Daynard, 2015). Women empowerment in the context of knowledge society advocates building capabilities at individual levels so that women are well informed about their choices, acquire required skills, and exercise control over their decisions. This work identifies significant determinants of credit access for women-owned unorganized enterprises and their dynamics using NSS datasets and IHDS-II. The preliminary emphasis of this paper lies on the demand side factors, particularly empowerment levels of the women entrepreneurs and other owners' characteristics and firm characteristics. A multidimensional Empowerment index has been developed to measure the empowerment levels of women entrepreneurs. Policy implications based on the findings have been suggested.

SIM Best Business Ethics Paper Finalists present their work in this field advancing session. The SIM Best Business Ethics Paper Award recognizes exemplary business ethics scholarship.

SIM: Business and the Common Good: A Moral View of Corporate Purpose

Author: **Gerard George**, *Georgetown U., McDonough School of Business*

Author: **Thomas John Fewer**, *Rutgers U., Camden*

Author: **Quentin Dupont**, *Georgetown U., McDonough School of Business*

There is a growing expectation that businesses take more active roles in addressing societal problems. Recent scholarship further endorses the idea of corporate purpose, which implicitly assumes a form of moral responsibility towards society. By drawing from the philosophical doctrines of the common good, we offer a moral view of corporate purpose. We conceptualize the common good as a multidimensional construct that draws from three moral perspectives, substantive, procedural, and consequential, where all three are jointly necessary but individually insufficient to explain the moral view of corporate purpose. We explain how the dimensions underlying each of these perspectives of common good could serve as a rubric for decision-making through the process of framing, formalizing, and realizing corporate purpose. We develop a research and practice agenda that provide tests of the common good as applied to a firm's governance, actions, and outcomes.

SIM: An Integrated Systems Model of Ethical Messaging in Organizations

Author: **Maribeth Kuenzi**, *Southern Methodist U.*

Author: **McKenzie Rees**, *Brigham Young U.*

Author: **Marshall J. Schminke**, *U. of Central Florida*

The goal of this paper is to expand understanding of the complex terrain that lies between an ethical message and resulting (un)ethical behavior in organizations. To do this, we integrate research in the ethics literature (i.e., ethical leadership, ethical climate, and moral judgment) with dual processing theory of ethical decision making and systems theory of communication to develop an integrated systems model of ethical messaging in organizations. We identify three components – resonance, activation, and cultivation – which represent how leaders, followers, and the work environment are interconnected. Further, we delineate the processes through which these components can lead to effective messaging about ethics by understanding how followers perceive, understand, and prioritize complex ethical messaging in the workplace. In doing so, we expand on the roles of leaders, the ethical environment, and followers in how to communicate effectively about ethics. Lastly, we provide practical prescriptions for organizations to create more effective messaging and how to create a shared meaning of ethical messaging in organizations to promote consistent, committed ethical behavior in employees.

SIM: Nobody's Perfect: How Recognition of Moral Fallibility Prevents and Promotes Workplace Deviance

Author: **Chase Thiel**, *U. of Wyoming*

Author: **John Bush**, *U. of Central Florida*

Author: **David Welsh**, *Arizona State U.*

Author: **Julena Bonner**, *Utah State U.*

Decades of behavioral ethics research demonstrates that well-intentioned people deviate from their moral standards on a regular basis for a variety of reasons, and that ignoring this reality only increases the chances of misconduct. Indeed, no one is perfect and ignoring this reality can be problematic. However, does believing that oneself is susceptible to deviant behavior lead to more or less actual deviance? By operationalizing the construct of moral fallibility and developing a measure, we unravel the nuanced relationship between moral fallibility and deviant behavior. Drawing upon social cognitive theory, we argue that moral fallibility has countervailing effects on deviant behavior through moral anxiety. On the positive side, moral anxiety caused by moral fallibility promotes proactive moral problem-solving (a “fight” response), which reduces deviant behavior. Conversely, moral anxiety caused by moral fallibility also has the potential to induce moral disengagement (a “flight” response), which leads to an increase in deviant behavior. Further, whereas one's level of motivation to behave ethically is critical to moral self-regulation in social cognitive theory, we also predict that those high in moral identity are less likely to disengage their moral standards in response to moral anxiety. Across three studies, we find converging support for our theoretical model. The theoretical and practical implications are discussed.

Toward Flourishing: The Role of Care, Love, Meaning, Values, and Moral Foundations

Session Moderator: **Christopher Michaelson**, *U. of St. Thomas*

SIM: Exploring the Role of Social Mechanisms in Determining the Reconciliation of Paid Work and Eldercare

Author: **Hedva Vinarski Peretz**, *The Max Stern Yezreel Valley College, Israel*
Author: **Galy Binyamin**, *Ariel U. Department of Economics and Business Administration, Israel*

This study examines a broader social mechanism affecting working informal caregiver's ability to reconcile paid work and eldercare. Drawing on Informal Care Model (ICM), we conducted a qualitative inquiry to examine how three pillars of the social context, family, workplace and community, support or impede primary caregivers' ability to reconcile paid work with eldercare. Semi-structured interviews with employed primary caregivers aged 43-60 form the basis of the study. Thematic analysis indicates that the provision of informal eldercare by working caregivers is positively affected by the workplace social network (colleagues), work arrangement/model (autonomy and flexible work), the availability of public resources in the community and of complementary resources from the primary family circle. Unlike, the provision of informal eldercare is restricted due to lack of a comprehensive support service system for caregivers, where they experience unmet multiplied responsibilities of work and care and unending spillover on the work-family-care axis. Our major theoretical contribution lies in an expansion of the ICM model. Although the ICM provides a behavioral perspective, laying the foundations for investigation of the external conditions that facilitate or restrict the provision of care and frame three major pillars, to date the model does not include exactly which key supportive or restricting factors operate within each pillar. This article therefore responds to this gap by suggesting more insight into the key conditions in the care context that can be integrated into the ICM.

SIM: What's Love Got to Do with It: Love and Organizational Studies

Author: **Michael Andreas Pirson**, *Fordham U.*
Author: **Diego Arias Padilla**, *U. of Detroit Mercy, CBA*
Author: **Abiola Olukemi Ogunyemi**, *Lagos Business School Pan Atlantic U. Nigeria*
Author: **Georgia Diletta Nigri**, *Sophia U. Institute*

Love, with its various forms, is depicted as a dynamic force propelling creativity, care, innovation, progress, and overall well-being. Our analysis delves into the significance of love in business management. The challenge lies in bridging the gap between personal and professional selves, fostering the translation of love from personal to workplace settings, and transforming self-interest into a moral emotion that extends beyond oneself. Based on these premises, we aim to operationalize the concept of love, framing its importance in the organizational context and trying to understand the factors that enhance or detract from its complete application. We highlight various definitions that have been offered in the literature, with a focus on ethics. We then seek to provide an overview of love in the context of organizing, highlighting varying conceptions of love. Finally, we assess the impacts of these conceptions of love on the study and practice of leadership and management. Developing an organizational culture of inclusiveness may enhance the ethic of love. A culture can outlast the individuals who reify it, thus leading to a virtuous cycle capable of self-perpetuation, encouraging close identification with that created value system. We seek to demonstrate that a relational collective environment can foster love at an organizational level and that its various forms can drive human flourishing.

SIM: Going Back to My Roots: Stability Despite Liminality in the Search for Meaningful Work

Author: **Annette Yunus Pendrey**, *Cranfield School of Management*

Meaningful work has typically been explored in stable workspaces. However, modern workplaces have become increasingly changeful, with a blurring of organizational boundaries. We situate our paper at the intersection of meaningful work and liminality and use a Bourdieusian lens to understand how liminal spaces facilitate change in people's meaningful work sensemaking. A 21-month, qualitative analysis at four business schools, as exemplary liminal spaces, first found three distinct meaningful work habitus that had been imparted by people's childhood caregivers. Second, despite the liminal space, we found remarkable stability in most meaningful work accounts. A minority experienced change. The different scenarios resulted from habitus-workplace conditions (mis)fit, which contributed to meaningful work (dis)enactment. We offer a process model that elucidates how meaningful work is (dis)enacted in liminal spaces. Our work contributes to scholarship, first by uncovering an underexplored causal mechanism for meaningful work which we introduce as the meaningful work habitus. Differences in meaningful work habitus that are socially reproduced during childhood explain why people have divergent understandings of meaningful work in adulthood. Second, we identify a core boundary condition in which liminal spaces facilitate change, with implications for career choice, wellbeing, and organizational uses of these spaces.

SIM: Humanity, Impartiality, and Data Preferences: How Values Shape the Quantification of Human Need

Author: **Alex Odium**, *U. of Lausanne, Faculty of Business and Economics (HEC Lausanne)*
Author: **Joerg Dietz**, *U. of Lausanne, Faculty of Business and Economics (HEC Lausanne)*
Author: **Julian N. Marewski**, *U. of Lausanne, Faculty of Business and Economics (HEC Lausanne)*

The business of collecting data is an old one, but propelled by digital technology, ever more aspects of human existence are being quantified. This trend calls for understanding the values and ethical implications of quantification processes, particularly in domains where the resultant numbers impact human well-being. In an experiment, we examined how values influence preferences to immediately use readily available data, instead of spending time to improve data quality. Participants were assigned to one of three between-subject conditions, featuring a humanitarian organisation valuing (i) humanity over impartiality, (ii) impartiality over humanity, or (iii) both equally. Our findings suggest that organisational values emphasising impartiality drive analysts to spend time improving data in terms of its accuracy, security, freedom from bias, or evidence-base, while values emphasising humanity encourage analysts to expedite the use of available data. Thus, our research reveals that although the use of data gives decisions an aura of objectivity, these data themselves can reflect value preferences.

Author: **Jake Telkamp**, *Augusta U.*

Author: **Marc H. Anderson**, *Iowa State U.*

Like all people, researchers have values and morals that serve as guiding principles and are important drivers of their attitudes and behavior. Yet, we know little about what values and morals management researchers hold, and whether they align with the stakeholders they intend to inform—managers in industry. In this empirical study, we take stock of the values and morals of management researchers and compare them with a sample of practicing managers, establishing the phenomenon of a value divergence. We find that managers, compared with management researchers, placed more emphasis on four of the six moral foundations: equality, loyalty, authority, and purity, and on five of the 19 values: hedonism, power (dominance), security (societal), tradition, and humility. Management researchers, on the other hand, placed more emphasis on the six values of achievement, self-direction (thought), self-direction (action), benevolence (dependability), universalism (concern), and universalism (tolerance). We found that managers were slightly less liberal on average than the management researchers, but only for social issues and not economic issues. Managers also placed a higher emphasis on both idealism and relativism than did researchers, and there was no difference between how religious the groups were. We discuss several theoretical and practical implications of these findings and offer suggestions for how future work can address scholarly value “blind spots.”

New Horizons in Stakeholder Activism Research

Session Moderator: **Olga Hawn**, *U. of North Carolina, Chapel Hill*

SIM: How Stakeholders Infiltrate Open Climate Strategies

Author: **Susana Esper**, *IESEG School of Management*
Author: **Gustavo Birollo**, *FSA ULaval (Laval U.)*
Author: **Maria Castillo**, *IESEG School of Management*
Author: **Frank G.A. De Bakker**, *IESEG School of Management*

While the literature on stakeholder engagement and that of open strategy evolved independently from each other, they both inquire over a similar empirical phenomenon: how organizational managers include stakeholders in certain organizational activities. Despite this growing interest in the phenomenon, we still know very little about how stakeholders actually make their way into strategy-making when they are not invited. To fill this research gap, our paper asks: How do stakeholders infiltrate a strategy-making process? Adopting an action-research methodology, this article explores the stakeholder engagement process of a business school that led to the co-construction of the climate strategy. We found that due to the infiltration of diverse group of stakeholders, an initially classic strategy-making process evolved into an OS process, reaching more ambitious climate goals than those initially foreseen. We contribute to the literature on stakeholder engagement, by conceptualizing the role of stakeholders in fostering organizations' engagement activities and shaping the definition of organizational issues, and to the literature on open strategy by showing how stakeholders exercising pressures over the organization for openness in areas not originally planned, lead to more ambitious climate strategies, rather than finishing up as ephemeral events.

SIM: Towards a Theory of Organizational Repression of Stakeholder Collective Action

Author: **Natalie Holzaepfel**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Olga Hawn**, *U. of North Carolina, Chapel Hill*
Author: **Timothy Werner**, *U. of Texas at Austin*

Prior research on organizational responses to normative pressures has cataloged a spectrum of strategies, ranging from accommodation to resistance, but more assertive responses have largely been overlooked. We expand the existing repertoire to include the more aggressive, targeted, and intertemporal response of organizational repression. We define repression as a unique strategy designed to prevent, control, or constrain stakeholder collective action (SCA) that aims to induce organizational change. Repression can target both internal and external stakeholders and can operate both proactively and reactively. Our theorizing focuses first on repression's antecedents and second on how organizations select among myriad repressive tactics. We propose that organizations are more likely to repress SCA when they perceive stakeholders as i) having potential, but less actual power relative to the focal organization, ii) less legitimate, and iii) threatening core business activities. Further, we argue that the selection of repressive tactics will vary across i) internal and external stakeholders and ii) temporal stages of SCA. Our theory builds from and contributes to the neo-institutional, nonmarket strategy, and stakeholder theory literatures. Ultimately, we seek to draw scholarly and practitioner attention to repression, as its use has sweeping consequences for organizations, stakeholders, and society more broadly.

SIM: Activism Beyond Ownership: Advisory Role as a Means of Shareholder Influence

Author: **Prami Sengupta**, *U. of California, Irvine*

The shareholder activism literature has made a strong case supporting private dialogues and the ensuing advisory roles of shareholder activists as ways for the shareholder activists to wield influence. However, the process through which shareholder activists get to positions where corporate managers use them as advisors remains unknown. This study uses ethnographic methodologies to examine how shareholder activists, operating with limited ownership and without elite alliances, emerged as advisors to managers of large multinational corporations. The study identifies three interacting practices- projecting expertise, soliciting expertise, and supplying expertise- that work in tandem to enable and legitimize the advisory status of shareholder activists. It also describes four orientating practices through which the shareholder activists orchestrated different aspects of their meetings with corporate managers, subtly moving the managers into requesting the specific type of input and suggestions that shareholder activists wished to provide. The study contributes to the scholarships of shareholder activism, shareholder engagement, and expertise recognition.

SIM: Corporate Governance Evaluation and Shareholder Activism: An Institutional Gatekeeping Perspective

Author: **You-Xiang Song**, *U. of Texas at Dallas*
Author: **Jun Xia**, *U. of Texas at Dallas*

Integrating research on corporate governance (CG) into institutional theory on gatekeeping, we conceptualize public rating agencies as gatekeepers as having a twofold implication. From the activist-centric perspective, a firm's unfavorable CG rating may attract the attention of shareholder-proposal activists to target the firm. From the firm-centric perspective, an unfavorable CG rating generates institutional pressure on corporate receptivity to activism. However, support from external auditors and interlocked boards may dilute activists' attention to the unfavorable CG rating, thereby reducing its effect on shareholder activism. Moreover, such support may become a pressure-resistant force for firms, weakening the effect of unfavorable CG ratings on their receptivity to shareholder activism. Using a sample of S&P 1500 firms, we find evidence that largely supports our arguments. This study provides insights into the CG literature on the extent to which institutional gatekeepers affect shareholder activism and its receptivity.

Does Gender Make a Difference?

Session Moderator: **Aten Zaandam**, *Duke U.*

STR: **The Impact of CHROs on Corporate Social Performance: Does Gender Make a Difference?** 

Author: **Toru Yoshikawa**, *Waseda U.*

Author: **Ignacio Requejo**, *U. of Salamanca*

Author: **Richard R. Smith**, *Johns Hopkins Carey Business School*

Author: **Daisuke Uchida**, *Keio U.*

This study examines the effects of female Chief Human Resource Officer (CHRO) on corporate social performance, or the “Social” dimensions in ESG. Previous research emphasizes gender differences in values and moral orientation and argues that female leaders are positively associated with corporate social performance. We apply this logic to female non-CEO executives, especially female CHROs, and investigate whether they are indeed effective in enhancing corporate social performance. We further examine the moderating effect of female CHRO’s influence measured by her role tenure, the presence of a female CEO, and the level of board gender diversity. We predict that these factors should enhance female CHROs’ influence, thereby improving corporate social performance. Our empirical analyses support our prediction on the role tenure, but we find the opposite results on the moderating effects of female CEO and female board members. Our empirical evidence, which contradicts our expectations, suggests the presence of substitution effects between female CEOs and female directors, and female CHROs. With these findings, this study contributes to research on TMT diversity and corporate social responsibility.

STR: **Going Along Versus Going Alone? Why do Female CEOs Conform with Rather Than Deviate?**  

Author: **Livia Markoczy**, *U. of Illinois at Chicago*

Author: **Aten Zaandam**, *Duke U.*

Author: **Steve Sauerwald**, *U. of Houston*

We draw on Upper Echelons Theory (UET) to argue that CEOs face gender-specific playing fields in two key CEO role domains—corporate strategy and corporate social responsibility (CSR)—that affect CEOs’ discretion to act on their values and cognition. We attribute differences in these playing fields to incongruity between CEO role domain-based expectations and female gender-based stereotypes in the corporate strategy domain and to congruity in the CSR domain. We theorize that such situational differences pressure female CEOs to conform to industry norms in the corporate strategy domain while the CSR domain frees them to act on their values and cognition. We further test for contingencies, including gender-diverse boards and poor firm performance, that we predict will moderate the relationship between female CEOs and firm-level (non-)conformity actions in corporate versus CSR domains. We tested our predictions using a sample of S&P 1500 firms from 2007 to 2018 and found that they supported our hypotheses.

STR: **Make No Mistake – Performance of Extreme Precision Tasks under Pressure and the Role of Gender**  

Author: **Leo Schmallenbach**, *U. of Mannheim*

This study investigates the relationship between pressure and performance in extreme precision tasks, which are cognitively demanding tasks performed under high levels of physical activation. Contrary to the dominant view that individuals “choke” under pressure, it is suggested that pressure can be beneficial for the performance of these tasks. This is because pressure can potentially help individuals to shift attention towards cognitive processes and consciously adapt their behavior. The study also considers gender as a contingency factor, examining whether performance of extreme precision tasks under pressure differs between men and women. The empirical context of this study is professional biathlon, an Olympic Winter sport that combines cross-country skiing with rifle shooting. Results from a longitudinal study of 391 professional biathlon athletes and over 50,000 shooting rounds support the hypothesis that women perform better under pressure in extreme precision tasks, as they miss fewer shots at the Olympics compared to non-Olympic races, while men do not show this difference.

STR: **Gender, Rejection, and Perseverance in Grant Applications**  

Author: **Jiang Bian**, *HKU Business School, The U. of Hong Kong*

Author: **Toby E Stuart**, *U. of California, Berkeley*

Author: **Yanbo Wang**, *HKU*

Author: **Zhongyu Zhao**, *The U. of Hong Kong*

We examine differences in perseverance between male- and female-led entrepreneurial ventures during resource seeking through grant applications. Exploiting a gender-neutral evaluation setting provided by a premier innovation grant program in China where funding allocation is merit-based and measured by the ranking of firm’s evaluation scores, we find that male-led ventures are significantly more likely to reapply following an initial grant rejection, relative to female-led ventures with comparable attributes. We further examine how female-led ventures respond differently than male-led ventures to noisy evaluative feedback. Notably, male-led ventures tend to be more motivated to reapply by divergent evaluations compared to female-led ventures. Specifically, male-led ventures are influenced more by positive signals while female-led ventures by the aggregate evaluation. We propose a signal interpretation mechanism to explain the observed gender differences in perseverance.

Strategies and Signals in Market Entry: Shaping Success Amid Competition

Session Moderator: **Roberto Vassolo**, *IAE Business School - Austral U., Argentina*

STR: **Competitive Dynamism in Nascent Markets: Trademarks and Superstar Firm Entry in the Metaverse**   

Author: **Wendy Bradley**, *Southern Methodist U.*

Author: **Julian Kolev**, *United States Patent and Trademark Office*

Does entry by a superstar firm change the competitive dynamics of nascent industries? Using USPTO trademark data and a quasi-experimental design, we explore this question by analysing the development of new products and services in the metaverse. We develop a theoretical framework of heterogeneous strategies for market entry under uncertainty, contrasting competition in digital vs. physical industries. Empirically, we show that firm size has a strong positive correlation with metaverse participation among U.S.-based trademarking firms, and that this effect is amplified for born-digital and global, physical-goods firms. However, following Facebook's entry in 2014, we document a 10% decline in metaverse engagement; decomposing this average effect, larger and born-digital firms were minimally impacted, while globalized physical-goods firms experienced the largest declines. These results suggest that physical-goods firms are much more sensitive to superstar entry than digital-goods firms in nascent markets. Our analysis contributes to the understanding of intangible assets as key drivers of firms' competitive advantage in the global, digital economy.

STR: **Competing with Theories: How Entrants use Awareness to Capture Rents from Disrupting an Industry**  

Author: **Timo Ehrig**, *Solvay Brussels School of Economics and Management*

Leveraging unique and valuable resources is often cast as the primary source of economic rents, but current market outcomes cast doubt on this assumption. Three of the six companies with the highest global market capitalization in 2022 (Apple, Tesla, Microsoft) were upstarts in their industries with few resources at their origins and, surprisingly, incumbents (media publishers, Daimler, IBM) actively collaborated with entrants to help assemble the resources they required. We show how entrants compete with their theories to induce incumbents to help them generate resources critical to their own disruption. We combine work in the theory-based view and value capture theory and highlight two distinct sources of economic rents: awareness rents and resource rents. Our central result is that partial revelation of superior awareness of the entrant to the incumbent can lure the latter into a partnership while the entrant can effectively capture most of the economic rents arising from controlling the disruption. Thus, we qualify Barney's idea on economic rents and demonstrate that controlling the awareness of superior theories among stakeholders is a mechanism that may explain the disruption of entire industries by companies like Apple, Tesla, or Microsoft.

STR: **Burn the Boats! Market Entry and Firm Boundary Decisions as Signals of Corporate Purpose Credibility** 

Author: **Adam Clark**, *Chapman U.*

Author: **Steve Kofford**, *Mississippi State U.*

This paper examines how the credibility of a claimed corporate purpose affects stakeholder decision making. We argue that strategic decisions that reduce a firm's flexibility to adapt to future market conditions can credibly signal a commitment to a claimed purpose and, as a result, lead stakeholders to be more willing to transact with that firm. We test our theory by examining the effect of market entry and firm boundary decisions on the preferences of a particular stakeholder group: consumers. Using a series of discrete choice experiments, we test the effect that market entry timing, mode of entry (de alio vs de novo), degree of unrelated diversification, and vertical integration of purpose-related activities have on consumer preferences. We find that decisions that reduce flexibility, and thereby increase strategic commitment to a claimed corporate purpose, significantly increase stakeholder willingness to transact with a firm.

STR: **The Impact of Recessions on Two-Sided Platforms**

Author: **Angel Sevil**, *U. del Desarrollo*

Author: **M. Florencia Gabrielli**, -

Author: **Manuel Willington**, -

Author: **Roberto Vassolo**, *IAE Business School - Austral U., Argentina*

This paper explores how recessions affect industry evolution and competitive dynamics in two-sided markets, breaking through the high entry barriers in place, allowing competitors with a superior price-performance proposition to improve their market performance, and even leapfrog the market leader. It extends traditional perspectives on platform competition that emphasize challenges associated with complementors, ecosystem governance, technology performance, and innovation, including an often forgotten but omnipresent and relevant factor: the macroeconomic context surrounding firms and industries. Our study informs platform literature and management practice in turbulent environments and is supported by empirical evidence on the smartphone operating system industry.

Adaptation and Interorganizational Collaboration

Session Moderator: **Donghong Li**, *School of Economics and Management Tsinghua U.*

STR: **Inter-Organizational Governance and Resilience: Moderating Roles of ICT-Enabled Knowledge Sharing** 

Author: **Tingyu Lu**, *School of management, Northwestern Polytechnical U.*
Author: **Xubing Zhang**, *Faculty of Business, The Hong Kong Polytechnic U.*
Author: **Guijun Zhuang**, *Xi'an Jiaotong U.*

Inter-organizational governance (IOG) is widely used to maintain and enhance supply chain resilience in practice. However, working with exchange partners entails significant challenges because of firms' diverse technical knowledge. Drawing on task-technology fit theory and the knowledge-based view, we examine the associations between IOG and supply chain resilience. Moreover, we investigate the moderating effects of inter-firm knowledge sharing (IKS) enabled by information and communication technology (ICT). We adopt a multi-method approach to test the research model using field survey data on 520 industrial manufacturing firms and secondary data. The results confirm our hypotheses that IKS enabled by inter-organizational information systems and societal ICT improves the effectiveness of contractual governance. Furthermore, social media-enabled IKS enhances the positive effect of relational governance on supply chain resilience. This research adds a vital perspective of ICT and IOG and offers practical suggestions to deploy ICT in supply chain management.

STR: **Orchestrator Bypass: The Emergence of Informal Collaboration in the Danish News Ecosystem** 

Author: **Emil Bakkensen Johansen**, *U. of Southern Denmark*
Author: **Oliver Baumann**, *U. of Southern Denmark*

Collaboration among ecosystem complementors is often formally orchestrated by a central firm. While the role of such orchestrators is well-documented, however, our understanding of how complementors adapt when the central firm may fail to maintain the collaborative structure is limited. This paper proposes that an orchestrator in crisis may lead to "orchestrator bypass": the move towards direct, informal collaboration among complementors that circumvents the central firm. Utilizing a dataset of 5.2 million news articles, the paper provides empirical evidence for orchestrator bypass by tracking citation patterns – the collaborative use of content via referral to other organization's articles – in the Danish news ecosystem from 2005-2021. The crisis endured by the central Danish news agency from 2008-2015 allows documenting how formal collaboration via the news agency was in part replaced by informal collaboration, i.e., a higher reliance on direct citations between complementors, leading to a more decentralized ecosystem structure. The temporary shift toward informal collaboration illuminates complementors' adaptive capacities despite the imminent failure of the ecosystem orchestrator.

STR: **Over Drinks at the Ballroom: Dual Effects of Attracting Collaborators and Diluting Influence** 

Author: **Yuxuan Zhao**, *School of Economics and Management Tsinghua U.*
Author: **Donghong Li**, *School of Economics and Management Tsinghua U.*
Author: **Zhenzhen Xie**, *School of Economics and Management Tsinghua U.*

In emerging innovation ecosystems without a clear leader, field-configuring events (FCEs) jointly participated by multiple stakeholders could serve as a collective ecosystem orchestrator. Although existing research has demonstrated both the collective and private benefits of participating in FCEs such as conferences, few scholars have considered the trade-offs associated with these decisions. Examining the impact of firms' participation in the China EV100 annual conferences held in the emerging new energy automobile sector in China, our empirical findings suggest that it promotes firms' collaboration in innovation while simultaneously decreases their relative domain influence of innovation. These findings aim to make contributions to extant literature on FCEs, ecosystem orchestration and the open-close paradox in open innovation.

STR: **Alliance Network, Knowledge Network, and Exploratory Innovation** 

Author: **He Liu**, *Central U. of Finance and Economics*
Author: **Xiaozhou Jing**, *Central U. of Finance and Economics*
Author: **Chao Zhang**, *Institutes of Science and Development, Chinese Academy of Sciences*

Although recent literature has explored the relationship between strategic alliances and firms' exploratory innovation, the mechanisms of this relationship have rarely been studied empirically. Therefore, in addition to studying the effects of strategic alliances on exploratory innovation, we address the following two questions: how, i.e., through which mediating channels do strategic alliances impact firms' exploratory innovation? And when, i.e., in which situation do strategic alliances have more significant effects on exploratory innovation? Based on the zero inflation poisson (ZIP) model and structural equation model (SEM), we use unbalanced panel data from 36,393 firms in Zhongguancun Science Park (ZSP) during the period 2005-2015 to test our moderated mediation model. Based on the resource-based view, the transaction cost theory and the knowledge-based view, our findings demonstrate both the direct and indirect effects of strategic alliances on exploratory innovation. Specifically, strategic alliance networks promotes exploratory innovation through the mediating effect of knowledge networks. We also analyze the moderating influence of structural embeddedness. We find that structural embeddedness positively moderates the indirect effect of the strategic alliance network on exploratory innovation performance. The study offers a new theoretical perspective for alliance network literature and knowledge network research, and offers evidence-based implications for managers on how to exert the influences of strategic alliances effectively.

STR: Structure, Personality and Employee Turnover: How Hierarchies Repel and Retain Different Individuals   

Author: **Kathrin Heiss**, *U. of Vienna*
Author: **Steffen Keck**, *U. of Vienna*
Author: **Markus Reitzig**, *U. of Vienna*

In this paper we explore the effect of organizational structures on firms' ability to attract and retain strategic human capital, and how employees' personalities might moderate this relationship. We created a dataset based on the LinkedIn profiles of 8500 American professionals in the video game industry, spanning over 350 companies and 34 years. This involved coding each individual's employment history across different firms to form a multilevel firm-person dataset. Moreover, adapting methods from prior research, we inferred individuals' personalities by analyzing characteristics of their LinkedIn profiles, and use information on the different job titles of employees within the same firm to estimate the steepness of its corporate hierarchy. Our results show that employees' personalities cannot explain their choice for working in either flatly or steeply organized firm. However, we discovered that post joining a firm, more extroverted individuals and those lower in openness are more likely to leave their firms early, and that all personality types have a higher risk of turnover the steeper the hierarchies of the firms. Most interestingly, the positive effect of a more hierarchical organizational structure on turnover is particularly pronounced for highly conscientious people, but less so for individuals who score low on this trait.

STR: Government Influence and Tie Formation in the Chinese Interlock Network

Author: **Tianyu Ricardo Xiang**, *The U. of Queensland*

Despite the critical implications of board interlocks, little is known about the role of institutions in the mechanism of their formation in emerging economies. Drawing upon the interlock literature as well as institutional and social network theories, this paper goes beyond considerations of market logic to investigate how government influence (including state ownership, political connections, and a network structure characterised by government intervention) affects the potential for tie formation in a network of 843 directors and 175 publicly listed firms in China. Using two-mode exponential random graph models (ERGMs), this research demonstrates that the influence of institutions on the formation of multiple board directorships vis-à-vis board interlocks is nested at the director, firm, and network structural levels. Specifically, this paper finds that politically connected directors tend to establish more board affiliations, thus creating interlocking directorates. Cross-ownership interlocks between state-owned enterprises (SOEs) and non-SOEs are more often observed through overlapping directors. Well-connected directors embedded in the interlock network structure are, however, less likely to form additional ties. These findings advance the theoretical understanding of the antecedents of interlock networks in an under-researched institutional context.

STR: Managing the Intraorganizational Resource to Create Digital Businesses

Author: **Yumeng Wang**, *Beijing U. of Posts and Telecommunications*
Author: **Bin Zhang**, *Beijing U. of Posts and Telecommunications*

The current digital environment forces organizations to creating new businesses by digital technologies so as to consolidate their competitive advantages. Literature on resource management provides a valuable lens for understanding the process of digital transformation. However, extant literature has long assumed the focus firm as a whole, neglecting the extremely complicated coordination and cooperation inside a massive corporate conglomerate. Based on a longitudinal study of China Unicom from 2008 to 2023, we developed a dynamic process model of intraorganizational resource management. Our findings show that there are three interactive relationships among headquarter, subsidiaries, and branches, which are defined as structuring the resource portfolio from bottom to up, bundling resources from top to down, and circularly leveraging capabilities. We conclude these findings together into a resource management dynamic model of intraorganizational relationships for creating digital business. Our study thus contributes to the literature on resource management by considering the interactive process among headquarter, subsidiaries, and branches.

STR: Corporate Proximity, Risk Preferences and Timing of New Product Introductions  

Author: **Punit Sharma**, *U. of California, Irvine*

This study examines the effects of organizational structure and firm risk on the entry timing of new technologies. Using quarterly product-level data on the world's major mobile handset manufacturers for the period 1994–2008, we analyze how a business unit's proximity to the corporate office and firm risk influence technology commercialization decisions regarding entry timing following a pioneering firm. We develop a theory where corporate proximity influences entry timing through information processing and modifies the influence of firm risk preferences on entry decisions. We find that greater firm risk speeds timing decisions, and corporate proximity amplifies these effects. Our results indicate that the interaction between structure and risk is critical for understanding entry timing, and contributes to theories of risk, technology commercialization and organizational design.

Discussant: **David Hsu**, *The Wharton School, U. of Pennsylvania*

The pharmaceutical industry is one of the most significant sectors in the economy -- both in terms of economic impact and welfare implications due to health outcomes. Further, unique attributes of the industry and available data allow for robust empirical studies of strategy and innovation questions that are difficult to observe in many settings. This symposium showcases papers that study the implications of pharmaceutical M&A and IPOs on drug pricing and innovation as well as the link between competition and strategic patenting of pharmaceutical firms.

Identity and Inclusion in Digital Platforms

Session Moderator: **Oren Reshef**, *Washington U. in St. Louis, Olin Business School*

STR: **The Benefits of Revealing Race: Evidence from Minority-owned Local Businesses**

Author: **Oren Reshef**, *Washington U. in St. Louis, Olin Business School*

Author: **Abhay Aneja**, *U. of California, Berkeley*

Author: **Mike Luca**, -

Is there latent demand to support Black-owned businesses? To explore, we analyze a new feature that made it easier to identify Black-owned restaurants on a large online platform. We find that labeling restaurants as “Black-owned” increased customer engagement and firm performance, as measured by online traffic, calls, orders, and in person visits. These effects are most pronounced in left-leaning areas characterized by lower bias against racial minorities, as measured by regional variation in voting patterns and IAT scores. Restaurants that receive the label also see an increase in the fraction of reviews that are left by White customers.

STR: **Personal Identifiable Information and User Engagement on Digital Platforms: A Field Experiment**

Author: **Huiyi Litan**, *Tsinghua U.*

Author: **Di Zhou**, *School of Economics & Management, Tongji U.*

Digital platforms have increasingly leveraged personal information as a strategic asset. Recent privacy regulations globally, such as General Data Protection Regulation (GDPR), have initiated discussions about the privacy concerns associated with how these platforms use personal information, especially personally identifiable information. Despite burgeoning interest, there is a notable gap in research specifically addressing the regulation of personally identifiable information. This study investigates the impact of disclosing identifiable versus non-identifiable information on user engagement in digital platforms. We conducted a large-scale randomized field experiment on a major Chinese e-commerce platform. Our findings reveal that non-identifiable personal information significantly enhances user engagement, evidenced through increased clicks, product views, and seller views, while mitigating privacy concerns. Interestingly, this effect is more pronounced among users who serve dual roles (as both buyers and sellers) and those with shorter tenure on the platform, indicating heightened sensitivity to privacy risks in these segments. This study not only offers insights into effective management of personal information on digital platforms but also underscores the need for tailored approaches considering diverse user segments and privacy concerns.

STR: **Innovation Strategies for the Inclusion of Disabled Individuals**

Author: **Cyrille Grumbach**, *ETH Zürich, D-MTEC*

Author: **Chan Hyung Park**, *Scientist, ETH ZURICH*

This paper examines strategies to innovate to meet a grand challenge—inclusion of individuals with disabilities. Drawing on innovation and inclusion research, we propose that a synthetic strategy to innovation, reliant on individuals with disabilities sharing their needs and experiences during the innovation process, would lead to greater innovation. We posit that the typical, market-oriented, analytic strategy to innovation that exploits existing knowledge sets, such as medical knowledge on disabilities, would likely lead to incremental improvements rather than significant innovation. We conducted a global field experiment through an online platform, Hackster.io, involving more than 300 problem-solvers to test the benefit of the synthetic strategy in advancing innovation in rehabilitation and assistive technology. We find that the synthetic strategy encourages greater participation from individuals with disabilities and problem-solvers but, surprisingly, that the analytic strategy led to more innovative solutions. Our ongoing post hoc interviews aim to understand this surprising finding.

STR: **How Gender and Expectancy Violations Affect Host Performance on the Airbnb Hospitality Platform**

Author: **Kristin Bain**, *Rochester Institute of Technology*

Author: **Kenan Guler**, *Rochester Institute of Technology*

Author: **Clyde Eirikur Hull**, *Rochester Institute of Technology*

This paper explores the nuanced dynamics of complementor gender and its impact on consumer preferences within the Airbnb hospitality platform. Even though platforms may afford more anonymity than conventional commerce, platform ecosystems such as Airbnb remain susceptible to societal biases. Drawing from role congruity and expectancy violations theories, our research highlights the complex relationship between gender and performance, emphasizing the role of expectation violations in shaping consumer preferences of complementors. Across two studies, an experiment with over 1,400 people and using longitudinal data from almost 3 million Airbnb listings by 218,532 Airbnb hosts over 55 months, we find evidence that gender affects hosts' outcomes. Consistent with role congruity theory, we find that people prefer women hosts over men hosts. However, results suggest that when hosts violate gender-based expectations, consumer preferences can reverse, providing men an economic advantage on Airbnb. This research thus sheds light on the nuanced ways in which gender influences outcomes in platform ecosystems, contributing to our understanding of gender disparities in this context.

Expanding the Behavioral Assumptions and Empirical Approaches in Transaction Cost Economics

Presenter: **Jack A. Nickerson**, *Wash U. and MBS*
Presenter: **Beverly Rich**, *U. of Utah*
Presenter: **Zhe Xing**, *Santa Clara U.*
Organizer: **Jessica Jeesoo Kim**, *U. of California, Irvine*
Presenter: **Akhil Bhardwaj**, *School of Management, U. of Bath, UK*

This symposium embarks on a critical examination of Transaction Cost Economics (TCE) amidst the backdrop of rapid technological changes such as AI advancements. It reconsiders the applicability of TCE in today's digital landscape, acknowledging its significance in the context of increased asset specificity in transactions. The symposium seeks to extend TCE's traditional boundaries, exploring how the inclusion of cognitive and motivational aspects can revitalize its theoretical constructs. Key discussions will revolve around redefining TCE's perspectives on bounded rationality, opportunism, asset specificity, and uncertainty, aiming to align them more closely with the realities of modern organizational dynamics. This symposium also highlights the necessity for methodological innovation in TCE research, advocating for a shift towards empirical methods that capture a wider array of transactional influences. By bridging the gap between theory and contemporary practice, the symposium aspires to contribute to a richer, more adaptable understanding of TCE, enhancing its relevance in the ever-evolving field of organizational studies.

Top Managers and Acquisitions

Session Moderator: **Hakki Dogan Dalay**, *U. of Zurich*

STR: A New Perspective on the Relationship between Female CEOs and Acquisition Intensity  

Author: **Guoguang Wan**, *The Southwestern U. of Finance and Economics (SWUFE)*

Author: **Shili Chen**, *Xi'an Jiaotong-Liverpool U.*

Author: **Mingyun Huai**, *Tongji U.*

Author: **Qian Lu**, *Nanjing U. of Science and Technology*

Author: **Lida Lingling Zhang**, *U. of Macau*

Previous research has shown that female leaders are less likely to engage in acquisitions than male leaders due to their communal characteristics. Yet, many female leaders do pursue acquisitions aggressively. We rely on research about gender stereotypes and counter-stereotypical behaviors to address this puzzle. We propose that female CEOs may feel compelled to participate in the “boy’s game” (e.g., pursue acquisitions aggressively) to demonstrate agentic qualities and competence, thereby fitting into the top leader role. This is especially true when men predominantly occupy the top management teams (TMTs) of their firms or industries. We find support for these arguments in an analysis of data from all private Chinese listed firms between 2000 and 2019. Our results show that the relationship between female CEOs and acquisition intensity is positive in firms or industries with more male-dominated TMTs, while it is negative in those with more gender-balanced TMTs. Our theory and findings highlight the tendency of female CEOs to conform to the agentic norms in the top leader role when making strategic decisions, as well as how increased female representation in TMTs can attenuate this tendency.

STR: Founder Games: A Power Maintenance Perspective On Target CEO Retention In Acquisitions

Author: **Hakki Dogan Dalay**, *U. of Zurich*

Author: **Thomas Keil**, *U. of Zurich*

Author: **Stevó Pavicevic**, *Frankfurt School of Finance & Management gGMBH*

Leveraging insights from social-psychological research on power, we develop a two-sided power-maintenance perspective to explain how founder-CEOs of both the acquirer and the target shape target CEO retention in acquisitions. Our perspective also underscores the significance of target firm performance, initial acquisition premium, and alternative bidders – three critical power levers in acquisition negotiations – as boundary conditions influencing the impact of acquirer and target founder-CEOs on target CEO retention. Through an analysis of 651 acquisitions involving publicly listed firms in the United States, our findings highlight a substantial influence of acquirer and target founder-CEOs on target CEO retention and suggest asymmetric effects of acquisition negotiation factors on the degree to which founder-CEOs impact target CEO retention.

STR: Management of Technology Intensive Acquisitions: The Role of the Chief Innovation Officer 

Author: **Stefan Wuorinen**, *Xavier U.*

Author: **Gerry M. McNamara**, *Michigan State U.*

In this study, we contribute to the innovation and acquisition literatures by investigating the impact of Chief Innovation Officers (CINO) on post-acquisition innovation efforts. We propose that CINOs have distinct benefits for innovation focused organizations, especially those pursuing technology intensive acquisitions. We further investigate the conditions surrounding technology intensive acquisitions, suggesting that the presence of CINOs in the targeted firm and investments into innovation following acquisitions moderate the impact of the acquiring firm having a CINO. Collectively, we find evidence supporting our predictions. Our findings offer theoretical contributions by demonstrating the value of CINOs in the management of technology focused acquisitions. Further, this study offers practical contributions for organizations pursuing acquisitions with the intent of augmenting their existing innovation capabilities by demonstrating the importance of structural or management related fit between merging organizations and post-acquisition management of strategic resources.

STR: Time To Step Down? Strategic Acquisitions and CEO Retirement  

Author: **Guoli Chen**, *INSEAD*

Author: **Danyang Zhu**, *Fudan U. School of Management*

Author: **XuHong Li**, *Fudan U.*

We examine the CEO’s discretionary role in the succession process by considering a critical yet overlooked phenomenon—CEO retirement. We challenge the “quiet life assumption” in career horizon literature and posit that late-career-stage CEOs who are resistant to retirement may take strategic acquisitions to prolong their incumbency. We test our predictions in the setting of Chinese state-owned enterprises (SOEs), where executives must follow the National Statutory Retirement Age rules. An event history analysis on a sample of all Chinese state-controlled publicly listed companies from 2003 to 2019 confirms that acquisitions a focal firm initiated are negatively associated with the subsequent likelihood of the incumbent CEO’s retirement. Furthermore, the negative relationship is strengthened when the acquisitions have greater complexities, such as cross-border acquisitions over domestic acquisitions, or public-listed over private-held targets. By addressing the question of whether and when the normal CEO retirement events do not occur, our study captures the heterogeneity of psychological states of late-career-stage executives, sheds light on the CEO succession, and career horizon literature, and provides a new lens of firm acquisitions.

The Stakeholder Value Creation and Appropriation Model: A New Tool for Addressing Grand Challenges?

Panelist: **Marvin B Lieberman**, *UCLA Anderson School of Management*
Panelist: **Sophie Catherine Bacq**, *International Institute for Management Development - IMD*
Panelist: **Marco Testoni**, *Miami Herbert Business School*
Panelist: **Philipp Kern**, *Loughborough U.*
Organizer: **Philipp Kern**, *Loughborough U.*
Moderator: **Gerhard Schnyder**, *Loughborough U.*

The stakeholder value creation and appropriation (VCA) model enables analysis of how the economic value created by a firm's activities is shared among its immediate stakeholders—employees, customers, suppliers, government, and capital owners. A series of articles in the Strategic Management Journal has conceptualized and developed the approach as well as demonstrated its application in comparative case study analysis (Garcia-Castro and Aguilera, 2015; Lieberman, Garcia-Castro and Balasubramanian, 2017; Lieberman, Balasubramanian and Garcia-Castro, 2018; Kern and Gospel, 2020). The approach holds potential beyond the Strategy field by offering a way of investigating how firm-level decisions and practices create winners and losers. It enables Management scholars to link micro-level patterns of distribution to macro-level pressures and outcomes, which is of particular importance in a time of heightened inequality and distributional conflict. Inequality in and around organizations is one of the defining societal issues of our time and has been particularly laid bare during the Covid crisis and ensuing period of inflation (Suddaby, Bruton and Walsh, 2018; Amis, Mair and Munir, 2020; Bapuji, Ertug and Shaw, 2020; Munir, 2020). The suggestion of 'greedflation' – corporations driving inflation through excess profits – has brought distributional questions to the fore: are firms prioritizing returns to shareholders while resisting wage increases, thus leaving workers struggling to cope with the rising cost of living (Weber and Wasner, 2023; Inman, 2023)? The stakeholder VCA model is a new tool that helps Management scholars address questions such as this and contribute to solving societal grand challenges. Building on the success of the stakeholder VCA symposium at AOM 2021, this symposium will again bring together scholars who are experts in the approach with those who have an interest in it, take stock of developments in the area of work, and explore new applications and extensions of the model. The debate will place particular emphasis on how it can be used to help us unpack the complex relationship between organizations and wider distributional outcomes, and thus help to address grand challenges.

Strategies for Sustained Growth: Insights from Organizational Focus and Managerial Actions

Session Moderator: **Yassine Lamrani**, *Erasmus U. Rotterdam*

STR: Managerial Actions of Persistent High Growth: A Machine Learning Configurational Perspective  

Author: **Yassine Lamrani**, *Erasmus U. Rotterdam*

Author: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*

Persistent high growth firms have been suggested to be essential for advancing economies and resolving societal challenges. Yet only a small minority of high growth firms persist over time and scholars have debated about whether persistent high growth is just a random process or may emerge from deliberate and skillful management. Our study uses a configurational perspective and combines advanced machine learning with high-end capability computing to explore how growth, restructuring and market actions interact to predict persistent high growth. Our findings suggest that persistent high growth can be predicted very accurately, and as such, our study implies that persistent high growth is not a random walk, but rather emerges from a concerted and interrelated configuration of managerial actions. With that, our study applies algorithmic inductive theorizing that provides important implications for understanding persistent high growth, the role of specific and effective configurations of managerial actions, as well as shows the potential machine learning approaches may provide management scholars to research forward and to predict complex outcomes in general.

STR: Who Performs Better? The Roles of Acquisition and Scaling on Performance of High Growth IPO Firms

Author: **Mahdi Shahriari**, *Erasmus U. Rotterdam*

Author: **Yu Liu**, *Erasmus U. Rotterdam*

Using theoretical logic from expectancy violation theory, we develop a framework to explain how the reputation of IPO firms shapes their long-term performance. We find that a high growth reputation at IPO negatively impacts the long-term performance of newly public firms. Moreover, we show that the aggressiveness of post-IPO strategies in terms of acquisition intensity and scaling mitigates such negative performance effects. In doing so, our study provides important implications for understanding how and why the reputation of IPO firms may have long-lasting effects on their performance, and how such performance effects are contingent upon aggressive strategies to fulfill and potentially exceed expectations among shareholders.

STR: A Growing Concern: Comparing the Influence of Organizational Growth Focus on SMEs

Author: **Hanako Frawley**, *U. of Western Australia*

Author: **Christine Soo**, *U. of Western Australia*

Author: **Mark Edwards**, *Jonkoping International Business School*

Author: **Richard Gruner**, *U. of Western Australia*

Organizational growth has been defined in a variety of ways without careful attention to how different types of growth (what growth means to the firm) might lead to varied organizational outcomes. To address this shortcoming, we examine the learning climate, dynamic capabilities, innovation performance, and financial performance effects of externally-focused growth (i.e., external environment driven) and internally-focused growth (i.e., internal environment driven). A two-wave time-lagged survey on Australian SMEs (n = 236) revealed organizations with internally-focused growth are more positively associated with, and directly influence a firm's learning climate and dynamic capabilities, and indirectly influence a firm's innovation performance and financial performance. These findings indicate that different types of growth can have distinct implications for organizational climates, processes, and outcomes, and shows how what growth means to the firm can have a greater impact on organizations than previously thought.

Optimizing Human Capital: Strategies for Growth, Integration, and Mobility

Session Moderator: **Ulya Tsolmon**, *Washington U. in St. Louis*

STR: The Effects of Human Resources Integration Capacity on Human Resources Slack (Re) Configurations  

Author: **Alexandru Roman**, *CSULA*

In this paper I explore the effects of HR integration capacity on HR slack (re)configurations. I theorize that increased HR integration capacity will be associated with: (1) increases in levels of HR slack, (2) the diversification of human capital in the HR slack and (3) the frequency of HR slack integration. I further theorize that increased HR integration capacity leads to (re)configurations in work contribution such that the integration of HR slack into routine operations comes at the expense of HR outside of the organization's HR strategic core (i.e., optimum HR bundle). To test these expectations, I take advantage of a quasi-natural experiment within the English Premier League, which due to COVID-19, increased the number of allowable substitutes per team per game from three to five. I find robust evidence supporting the hypothesized relationships. These results provide insights into the manner in which the capacity to integrate HR impacts decisions regarding HR slack (re)configurations – which is an unexplored topic in the literature.

STR: Waiting for Opportunities: Variation in Task Opportunity and the Future Productivity of Employees

Author: **Luchi He**, *London Business School*

Author: **Yue Maggie Zhou**, *U. of Michigan*

Author: **Sendil Ethiraj**, *London Business School*

This paper identifies an underexplored managerial practice – the differential allocation of opportunities in task assignment – as a source of productivity heterogeneity among employees. We define opportunities for productivity (simplified as opportunities in this paper) as a set of favorable conditions that can potentially increase the maximum productivity achievable by employees in certain tasks. Despite the widespread existence of opportunity differences across similar tasks, their effect on employee productivity have not been theorised about or empirically studied. Therefore, this paper aims to examine the impact of assigning employees to perform tasks in high-opportunity conditions (vs. low-opportunity conditions) affect their future productivity, as well as the underlying mechanisms. By utilizing server-level transaction data from a restaurant chain, we develop a novel empirical strategy to examine how employees' productivity changes pre- and post- their temporary assignment to work in a high-opportunity condition – specifically, serving tables in a popular section with potential for higher sales and tips. Our findings indicate that even temporarily assigning servers to serve tables in a high-opportunity section leads to an increase in their hourly sales in subsequent periods when they are assigned back to low-opportunity sections. Further empirical analysis and interviews with managers suggest that the productivity boost appears to stem from both skill acquisition and motivation enhancement.

STR: Mobility Restrictions and Entrepreneurial Detours: When Knowledge Access Drives Spinouts   

Author: **Benjamin King**, *Tulane U.*

Author: **Evan Penniman Starr**, *U. of Maryland, College Park*

Author: **Jacob David Valentine**, *U. of Maryland*

A growing body of scholarship in strategic human capital examines the role of mobility frictions in protecting intellectual property (IP) and preventing knowledge expropriation by departing employees. We develop a theoretical framework arguing that mobility frictions may incentivize the employer to provide employees with increased access to valuable knowledge and resources. Such access may facilitate entry into entrepreneurship despite the frictions imposing costs on entrepreneurship. We explore this tension using a unique survey and focus on postemployment restrictive covenants (Mobility restrictions) such as noncompete, nondisclosure and nonsolicitation agreements. We find that employees who are subject to mobility restrictions have access to more valuable knowledge, have more business ideas (particularly unrelated to the parent firm) and are more likely to pivot their ideas when starting a business. This implies that mobility frictions imposed by the employer may facilitate knowledge transfer and entrepreneurial entry into contexts that are less likely to compete with the former employer.

STR: Organizational Barriers to Career Advancements of Women Managers: Role of Internal Structure 

Author: **Tingyu Du**, *UCLA Anderson School of Management*

Author: **Ulya Tsolmon**, *Washington U. in St. Louis*

This study examines how internal organizational structure can influence the promotion rates of women executives to CEO positions. We leverage an organizational design framework that categorizes organizational structure into centralized and decentralized types, each requiring distinct managerial skills and abilities. We hypothesize that women executives in centralized structures are less likely to be promoted than their counterparts in decentralized structures, driven by differences in performance visibility and transferable skills required, such as social relationships and networks. We contend that decentralized structures provide less opportunity for gender bias owing to greater transferrable skills and visibility. We find empirical support for these predictions using the data on over 240,000 managers in 8,686 firms. The results suggest that organizational structures can shape the career trajectories of women managers.

CEO Personality

Session Moderator: **Jooyoung Kim**, *Deakin U.*

STR: **Unravelling CEO Paranoia Process: From Socio-Cognitive Mechanisms to Organizational Outcomes**  

Author: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*
Author: **Shavin Malhotra**, *U. of Waterloo*

Our paper explores the paradoxical effects of CEO paranoia on organizational decision-making and stakeholder relations by mapping out a three-phase process that illustrates the progression from a CEO's paranoid tendencies to organizational effects. Initially, we identify heightened vigilance and biased interpretation as primary socio-cognitive outcomes of paranoia at both individual and interpersonal levels. These outcomes precipitate a paradoxical approach to decision-making that is marked by both cautious and proactive behaviors. We further suggest that paranoia influences the manner in which CEOs engage with stakeholders, prompting a drive for unity against challenges while maintaining a strategic distance to preserve autonomy. We further theorize that while moderate levels of CEO paranoia can enhance strategic adaptability and stakeholder value appropriation through early threat detection and balanced stakeholder engagement, excessive paranoia may impede strategic change and deteriorate stakeholder trust. We also discuss personal, situational, and organizational factors that moderate the effect of CEO paranoia on socio-cognitive outcomes. This study highlights the need for theoretical frameworks that accommodate both the constructive and destructive potentials of leader psychology. It also aims to inform organizational leaders and policymakers on the optimal calibration of paranoia within leadership to leverage its potential while avoiding its detrimental excesses.

STR: **Understanding the Role of Perceived CEO Narcissism Through the Agency-Communion Model** 

Author: **Jooyoung Kim**, *Deakin U.*
Author: **He Gao**, *U. of Delaware*
Author: **Russell Eric Johnson**, *Broad College of Business, Michigan State*

Employees' active involvement with the strategy formation process has been thought to be crucial for organizational recovery from the crisis. However, little is known about what shapes employees' perceptions about the crisis and organization, fostering trust in employees and motivating such behaviors. Drawing from the recent stakeholder view of upper echelons, we propose that a characteristic that people readily detect from CEOs—CEO narcissism—can be a key determinant of employees' decision to involve with strategy formation process. Specifically, we examine two different presentation styles of narcissism—communal and agentic narcissism—and reveal their nuanced effects. We predict that employees' perception of communal (agentic) narcissism in their CEOs has positive (negative) relationships with involvement in strategy formation via organizational trust. We also posit that, when employees attribute crisis internally to an organization to a greater degree, these relationships are further amplified. We tested our hypotheses across two studies, involving 258 employees (Study 1; online survey) from US, Canada, and the UK and 77 employees (Study 2; field survey) enrolled in an advanced degree program in a major U.S. university. Results generally supported our hypotheses.

STR: **CEO Regulatory Focus and Corporate Social (Ir) Responsibility Strategy: Broad or Narrow?**

Author: **Rong Ma**, *Rutgers U., Camden*
Author: **Hyun Gon Kim**, *Rutgers U.*

A key debate in corporate social responsibility strategy revolves around the narrow versus the broad approach. Drawing from the regulatory focus, we propose that how firms choose to adopt a broader or narrower strategy regarding both doing good and avoiding harm activities is shaped by CEO regulatory focus orientations. We further explore how uncertainty in stakeholder demands and attributes, stakeholder dynamism and conflicting stakeholder demands, leads CEOs to alter CSR/CSIR diversification strategy to serve their self-regulatory goals of a promotion or prevention focus. The empirical analysis on a sample of S&P 500 firms between 1995 and 2015 showed partial support for our hypotheses. Theoretical and practical implications of our study are also discussed.

STR: **Managing Digital Innovation for the Future: The Role of CEO Narcissism and Management Innovation**  

Author: **Till Marius Gantert**, *U. of Bayreuth*

Digital innovation differs from traditional radical innovation in several ways: it has unclear boundaries, tends to continue after its launch, requires a smooth transition, the contribution of heterogeneous individuals, distributed processes and overcoming silo thinking. Following the upper echelon theory, which states that CEOs shape innovation, our study shows that higher levels of education inhibit digital innovation, while greater digital expertise increases digital innovation. We also reveal that CEO narcissism has a negative moderating effect and management innovation has a positive moderating effect. In summary, our results suggest that digital innovation requires CEOs with more digital expertise, low narcissism and high management innovation.

Firms as Influencers of Policy Discourse: Strategic and Societal Implications

Organizer: **Angela Soomin Ryu**, *Columbia Business School*
Organizer: **Jinkyong Choi**, *Columbia Business School*
Panelist: **Hillary Greene**, *U. of Connecticut, School of Law*
Panelist: **Bruce Kogut**, *Columbia Business School*
Panelist: **Jiao Luo**, *U. of Minnesota*
Panelist: **Luigi Zingales**, *U. Of Chicago*

Over the past decade, firms, alongside policymakers and politicians, have competed to influence the language and narratives of various policies. Although the various strategies firms use to engage in this process have been examined across fields, when such strategies are most beneficial for firms and what implications these strategies have for broader societal outcomes remain a topic of debate. Moreover, advances in machine learning methodologies have also ignited new opportunities for research to trace the impact of businesses' strategic communication of ideas and narratives on improving their competitive positioning. In this panel symposium, we've gathered a panel of respected scholars from diverse disciplines who study and represent diverse actors in policy discourse. Our goal is to bridge these views for a comprehensive examination of how effective these strategies are and what they mean for society, helping to shape more effective and prudent ways for companies to engage in policy discussions.

Discussant: **Roberto Gutiérrez**, *U. de los Andes*

Communities as groups of people and organizations with shared resources and common goals present a microcosm of highly interactive behavioral mechanisms. While communities share intrinsic motivation towards common goals, how different community actors prioritize and pursue those goals varies greatly. For example, individualism and global developments may trump trust and reciprocity, which creates tensions that are rich to study. In this symposium, we present recent works that examine phenomena related to decision-making for collective organizing in different community contexts, whereby we focus on community members and organizations located in geographically bounded territories. Taking a behavioral perspective, we address several questions related to how different community actors, both on individual and organizational levels, make decisions that have an impact on the social and economic life of the communities. For example, how do information infrastructures affect the individual decision-making regarding the usage of resource commons under resource scarcity? How do interventions lead to the emergence of new organizations within communities that spur economic development? How do community actors define and pursue multiple, potentially conflicting, goals? Last, we critically discuss, how the strength of community's worldviews affect the performance of local organizations and the development of the communities.

To Shape or Adapt? Strategy Making Under Uncertainty in Industry Emergence and Evolution

Organizer: **Mana Heshmati**, *U. of Washington, Seattle*

Organizer: **Hee Yeul (Tom) Kwon**, *U. of Southern California*

Panelist: **J.P. Eggers**, *New York U.*

Panelist: **Kathleen Eisenhardt**, *Stanford U.*

Panelist: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*

Panelist: **Suresh B Kotha**, *U. of Washington, Seattle*

Panelist: **Violina Rindova**, *U. of California-Irvine*

Organizational success during industry emergence and evolution is critically reliant on how firms shift strategies in response to uncertainty (Teece, Pisano, & Shuen, 1997; Brown & Eisenhardt, 1997; Rindova & Kotha, 2001). However, firms' strategic actions vary depending on how they perceive uncertainty. On one hand, prevailing strategy research suggests that firms viewing uncertainty as an issue of partial knowledge tend to develop adapting strategies, modifying their internal knowledge to align with the rapidly changing environment (Brown & Eisenhardt, 1997; Furr & Kapoor, 2017; Eggers, 2012). On the other hand, recent studies increasingly highlight that firms may also perceive uncertainty as a source of opportunity, leading them to adopt shaping strategies (Gavetti, Helfat, & Marengo, 2017.; Furr & Eisenhardt, 2021; Rindova & Courtney, 2020; Helfat, 2021). These shaping strategies aim to create new industries or fundamentally transform existing industries by reconfiguring competitive interactions and changing the rules of the game to their advantage. This symposium brings together a group of scholars from diverse theoretical and methodological perspectives for a systematic discussion on how firms formulate adapting and shaping strategies when navigating different dimensions of uncertainty in industry evolution. Specifically, we explore three main themes: (i) the conceptualization of adapting and shaping strategies in relation to different dimensions of uncertainty, (ii) the theoretical and methodological differences in studying the shaping of nascent versus established industries, and (iii) the identification of future research opportunities in this field.

Collaborative Networks for Innovation

Session Moderator: **Shanwu Tian**, *School of Business, Qingdao U.*

TIM: Bidirectional Relationship Between Acknowledgement and Collaboration Networks 

Author: **Shanwu Tian**, *School of Business, Qingdao U.*

Author: **Xiurui Xu**, *School of Politics and Public Administration, Qingdao U.*

Innovative scholars not only find themselves deeply connected within social networks of collaborations, but also within acknowledgment networks that rely on the relationship between authors and acknowledgees. This paper studies the bidirectional relationship between acknowledgement and collaboration networks. Based on the bibliographic data collected from the new energy vehicles industry over the period of 2008 to 2020, it tests the reciprocal causation between them. The empirical results confirm that a scholar's position in the acknowledgement network will affect his / her position in the future collaboration network, and vice versa. To sum up, it addresses the research void by investigating the reciprocal correlation between acknowledgement and collaboration networks. In particular, this paper proposes a novel approach for constructing the acknowledgement network using data mining techniques, which is more efficient than existing methods.

TIM: Innovation Collaboration with Start-ups for Organizational Change in Family Firms 

Author: **Laura Doriane Baumgaertner**, *WHU Otto Beisheim School of Management*

Author: **Jonas Soluk**, *Stockholm School of Economics*

Author: **Nadine Kammerlander**, *WHU Otto Beisheim School of Management*

Organizational change is crucial for family firms to survive and prosper in today's complex business environment. However, organizational change is often impeded by the difficult trade-off between change and continuity. By providing insights into new ways of working during innovation collaborations, start-ups can help introduce change in family firms. Despite increasing scholarly attention, previous research has failed to explain the role of start-ups in organizational change in family firms and their interaction with internal actors. Based on data from six cases of family firms collaborating with start-ups (including 40 qualitative interviews), we distill the mechanisms that start-ups developed to interact with internal change agents and owning families to uncover opportunities for change, initiate new practices, and facilitate their implementation and dissemination within the family firm.

TIM: Knowledge Coupling, Collaborative Innovation Network and AI Technological Generality 

Author: **Lingling Qin**, *Guangdong U. of Technology*

Author: **Xiafei Chen**, *U. of Science and Technology of China*

Artificial intelligence (AI) is a crucial part of the intelligent economy and a significant productive force in the digital era. As a general-purpose technology, AI's value lies in its ability to be applied in diverse technologies and scenarios. From a recombinant search perspective, this study explores the effect of knowledge coupling on AI technological generality, and further considers the moderating effects of AI collaborative innovation network centralities on the relationship between coupling and AI technological generality. Based on a total of 10575 AI patents from 1978 to 2016, the results show that there is an inverted U-shaped relationship between knowledge coupling and AI technological generality. While network betweenness centrality strengthens the non-linear relationship, network closeness centrality attenuates it. This research has important theoretical and practical significance for AI technological innovation and innovation collaboration.

TIM: Collaborating by Hiring: The Roles of Local Talent Mobility and Boundary-Spanning Linkages   

Author: **Tianjiao Xia**, *U. of East Anglia*

Author: **Xiaohui Liu**, *Loughborough U.*

This paper examines how and under what conditions increasing presence of highly skilled local employees (HSLEs) within a developed country multinational enterprise (DCMNE)'s subsidiary influences incumbent local inventors' inbound and outbound collaborative innovation activities. We argue that incumbent local inventors' power in the social exchange relationships with DCMNEs influences the patterns of their collaborative innovation. Adopting a power dependent perspective, we propose that incumbent local inventors are more likely to engage in collaborative innovation with external inventors than their colleagues internally in response to the increasing presence of HSLEs. Successful outbound collaborative innovation increases their bargaining power though the control of the external network critical to DCMNEs' innovation with alternative employment opportunities elsewhere. We further contend that the positive relationship between increasing presence of HSLEs and incumbent inventors' collaborative innovation is reinforced by the boundary-spanning characteristics of the management hierarchies such as cross-cultural CEOs and interlocking directors. Our findings from an analysis of DCMNEs operating in China provide support for these predictions. This research offers novel and important insights into the innovation benefits of employing local talents in a collaborative context and the strategic importance of external exploitation of their knowledge and expertise.

Crowdfunding

Session Moderator: **Yu-Shan Su**, *National Taiwan Normal U.*

TIM: Factors Influencing the Success of Crowdfunding Campaigns for Early-Stage Startups in Asia      

Author: **Yu-Shan Su**, *National Taiwan Normal U.*

Author: **Wai Yin Ho**, *National Taiwan Normal U.*

In the ever-evolving landscape of entrepreneurial finance, crowdfunding has emerged as a transformative force, particularly for early-stage startups. This research embarks on a comprehensive exploration of the intricate dynamics that underpin crowdfunding success, with a specific focus on the unique context of Asia. Drawing on the Behavioral Theory of the Firm, Marketing Theories in Crowdfunding, and the Innovation Adoption Theory, our study delves into pivotal factors shaping the outcomes of crowdfunding campaigns. Our research dissects the impact of critical variables, such as funding goals, the experience of campaign creators, and campaign duration. Venturing beyond conventional metrics, we scrutinize the influence of distinctive marketing indicators, notably the coveted 'Staff Pick' and the illuminating 'Spotlight,' on the overall success of campaigns. The study aspires not only to unravel the complex interplay of these factors but also to furnish actionable insights. By aligning our findings with theoretical frameworks and empirical evidence, we aim to offer strategic recommendations for startups, investors, and crowdfunding platforms navigating the distinctive contours of the Asian entrepreneurial ecosystem. This research transcends the confines of academic inquiry, seeking to empower stakeholders with practical guidance for optimizing their crowdfunding strategies in the vibrant and dynamic landscape of Asian entrepreneurship.

TIM: Evaluating Innovation with AI: The Emotional Dimensions of Crowdfunding

Author: **Jonathan Rupp**, *U. of Innsbruck*

Author: **Johann Fueller**, *U. of Innsbruck*

This study explores the role of emotions and crowdfunding innovation on the predictive power of AI-measured spontaneous affect on idea evaluation. Using an affective computing approach, we examine the spontaneous affective reactions of potential customers to Kickstarter pitches and evaluate the impact on cognitive evaluations of ideas. Our research shows a significant relationship between affect (measured as the interaction of valence and arousal) and idea evaluation, particularly in the context of hedonic products. Furthermore, we investigate the influence of emotional expressivity on these dynamics. In a two-phase study with 505 US participants recruited via Prolific, we used facial emotion recognition technology to measure real-time emotional reactions. Our findings show that the emotional expressivity of participants improves the predictive power of idea evaluation and emphasize the nuanced role of emotions in crowdfunding depending on product type. Our research contributes to the understanding of affective reactions in digital crowdfunding innovation. It demonstrates the potential of affective computing for capturing consumer sentiment, offering practical insights for more emotionally intelligent product development.

TIM: The Role of Intellectual Property Protection and Sustainability for Reward-Based Crowdfunding      

Author: **Hanna Jäschke**, *Leibniz U. Hannover*

In reward-based crowdfunding, the sending of signals is essential for campaign owners to overcome information asymmetries and collect sufficient funding to pursue their projects. In this study, we examine the role of intellectual property rights and sustainability as signals in project descriptions for the success of the respective campaign. As an increasingly relevant funding practice for startups, reward-based crowdfunding is gaining importance. Drawing on the experience of campaign owners, we analyze textual data from twenty-six interviews with startups that have launched an IndieGoGo campaign. Our findings indicate that signaling intellectual property protection is associated with campaign success, as it enables campaign owners to persuade backers to participate. Beyond that, our findings suggest that sustainability sends a strong positive signal that is rewarded by backers, while the interplay between intellectual property protection and sustainability is also considered and appears to be critical to the success of campaigns. Furthermore, the study introduces a decision-making framework for campaign owners, providing a comprehensive guide for intellectual property protection in reward-based crowdfunding.

TIM: Green Orientation & Crowdfunding Success of Green Projects: Role of Project Characteristics   

Author: **Rakesh Kumar Pati**, *Deakin U.*

Author: **Niharika Garud**, *U. of Melbourne*

The study investigates the impact of green orientation on crowdfunding success and the moderating role of project characteristics, i.e., project duration, project stage, and project innovativeness, on the green orientation-crowdfunding success relationship. We test our hypothesis using two studies. Our first study uses 151 energy and green technology crowdfunding ventures from the Indigogo platform. For our second study, we designed three experiments with four hypothetical green crowdfunding projects each and collected data from 119 crowdfunders about their likelihood of funding the projects. The results of both studies highlighted the significant positive impact of green orientation on crowdfunding success. Moreover, in line with our expectation, projects with longer duration and high innovativeness leverage the benefit of green orientation significantly higher than projects with shorter duration and low innovativeness, respectively. However, in contrast to our hypothesis, the impact of green orientation on crowdfunding success was much stronger among projects in advanced stages than in early stages. We also discuss the implication of our findings on research and practice.

Technology Enablers of Green Innovation

Session Moderator: **Rocco Pavesi**, *U. of Milan*

TIM: Charting the Green Path: A Bibliometric Exploration of Sustainable Technologies in Business Strategy

Author: **Rocco Pavesi**, *U. of Milan*
Author: **Luigi Orsi**, *U. degli Studi di Milano*

: In an era of urgent climate concerns, this study investigates the critical nexus between green technologies and business strategies. Utilizing a bibliometric analysis on a sample of 824 scholarly articles, this research employs bibliographic coupling, co-citation analysis, and keyword occurrence analysis as methodological tools. The objective is twofold: to map the academic landscape and to discover the practical implications of integrating sustainable technologies into business practices. The data demonstrates that adopting these green technologies is not merely an ethical choice but also a strategic one, offering distinct competitive advantages. This paper aims to contribute significantly to the existing body of academic literature, offering both theoretical and pragmatic insights into the sustainable transformation of business models. It concludes by suggesting directions for future studies, notably in tackling the real-world challenges of management and in shaping valuable policy environments.

TIM: Blockchain's Role in Advancing Environmental and Social Sustainability: A Comprehensive Review

Author: **Matilde Messina**, *Jönköping International Business School*
Author: **Mohammad H. Eslami**, *Jönköping International Business School*
Author: **Joaquin Cestino**, *Jonkoping International Business School*

Despite the recent proliferation of research on blockchain, the existing literature is widely dispersed and lacks a comprehensive understanding of the integration of blockchain in impacting environmental and social sustainability. The purpose of our review is to synthesize previous research on the intersection of blockchain and sustainability. In our systematic review, we integrate and reconcile existing research on blockchain and sustainability by presenting antecedents and outcomes of blockchain integration and how blockchain is leveraged to achieve environmental and social impacts. We also propose a future research agenda to advance our knowledge of blockchain's role in enhancing organizations' sustainability efforts.

TIM: Driving Twin Transition in Green SMEs: The Role of Platform Leadership in Sustainable Practices

Author: **Khalid Mehmood**, *School of Economics and Management Hubei Engineering U.*
Author: **Yaser Iftikhar**, *Armed Forces Post Graduate Medical Institute, National U. of Medical Sciences*
Author: **Aamir Suhail**, *Tecnologico de Monterrey*
Author: **Fauzia Jabeen**, *Abu Dhabi U.*
Author: **Rana Umair Ashraf**, *U. of Warsaw*
Author: **Haseena Bader Alkathheeri**, *Abu Dhabi U.*

The concept of the "twin transition," which integrates eco-friendly practices with digitalization for a sustainable future, is gaining momentum under the guidance of the United Nations Sustainable Development Goals (SDGs). This research delves into the twin transition within high-tech small and medium enterprises (SMEs), aligning with the SDGs' vision. The study's primary aim is to address current gaps in knowledge by examining the indirect impact of information effects and how the flexibility of artificial intelligence (AI) infrastructure modifies the relationship between platform leadership and green sustainable practices. Anchored in the diffusion of innovation paradigm, this investigation draws on data from a three-wave time-lagged field survey involving 437 high-tech SMEs in China. The findings reveal a positive correlation between platform leadership and green sustainable practices, where factors like responsiveness and usability (under information effects) serve as mediating variables. Notably, the research demonstrates the moderating influence of AI infrastructure flexibility on the connection between platform leadership and information effects. This moderation affects how platform leadership indirectly influences green sustainable practices through these information effects. This research makes a substantial contribution to our understanding of the twin transition in high-tech SMEs, highlighting the pivotal roles of platform leadership, information effects, and the adaptability of AI infrastructure in promoting green sustainable practices. The implications of these findings are far-reaching, offering valuable insights for managers, policymakers, and academics focused on sustainability and innovation within the high-tech industry.

TIM: Enhancing Decision-Making with Interconnected Digital Twins: A Car Manufacturer Case Study

Author: **Alexander Schink**, *European Business School, Wiesbaden*
Author: **Tobias Gutmann**, *EBS Business School*
Author: **Sebastian Brenk**, *Nijmegen School of Management, Radboud U. Nijmegen*

This study investigates the use of interconnected digital twins (IDTs) in enhancing sustainable decision-making along a product life cycle, with a focus on a case study of CarCo, a major car manufacturer. The research addresses the complex challenges of information overload and increasing sustainability regulations in product development. By integrating IDTs, CarCo aims to improve transparency and efficiency throughout the product lifecycle. Utilizing a longitudinal case study methodology, the research comprises ethnographic observations, interviews with CarCo's management, and analysis of documentary evidence. Findings indicate that CarCo's use of IDTs aligns with the situation awareness model, effectively addressing perception, comprehension, and projection in sustainable product development. The study suggests modifications to Endsley's Situation Awareness theory, advocating an additional decision-making layer due to the influence of IDTs. This research highlights the strategic role of IDTs in sustainable product development and offers insights into enhancing organizational decision-making processes.

Big Data Analytics for Innovation

Session Moderator: **Minh-Tay Huynh**, *Free U. of Bozen-Bolzano*

TIM: Individual Analytics Mindset and Decision Quality: The Mediating Role of Effort and Persistence

Author: **Minh-Tay Huynh**, *Free U. of Bozen-Bolzano*

Organizations increasingly rely on big data and analytics for strategic decision-making where individuals' analytics mindset (AM) is critical for shaping a data-driven culture and obtaining favorable outcomes. Notwithstanding its importance, there is a lack of empirical evidence on AM constituents and outcomes. Hence, this study employs the mindset theory of action phases and the expectancy-value theory to develop an AM instrument, considering expectancy-related beliefs, values, and perceived costs as AM constituents. Individual effort and persistence are also proposed as mediators for the link between the AM elements and decision quality. Structural equation modeling analysis on a sample of 251 respondents reveals that expectancy-related beliefs positively impact effort, and show insignificant effects on persistence whereas values significantly impact both effort and persistence. Perceived costs negatively affect individuals' persistence and exhibit no effects on effort. Effort and persistence mediate the links between AM factors and decision quality, showing positive impacts on the outcome variable. This study contributes to the mindset domain, offering insights into the cognitive nature of AM and its link to individual outcomes through the mediating role of effort and persistence. Through the AM model, organizations and institutions can track and manipulate such factors to nurture an AM among employees and students to foster analytics and data-driven decision-making practice.

TIM: Finding Diamonds in the Rough: Data-Driven Opportunities and Pharmaceutical Innovation

Author: **Matteo Tranchero**, *Haas School of Business, UC Berkeley*

Big data are increasingly used to make predictions about uncertain investments, thereby helping firms identify innovation opportunities without the need for domain knowledge. This trend has led to questions about which firms will primarily benefit from the availability of these data-driven predictions. Contrary to existing research suggesting that data-driven predictions level the playing field for firms lacking domain knowledge, I argue—using a simple theoretical framework—that these predictions actually reinforce the competitive advantage of firms with domain knowledge. In innovation contexts, where returns are skewed and not all leads can be pursued, domain knowledge helps evaluate predictions and avoid false positives. I test this idea in the context of pharmaceutical innovation, exploiting the features of genome-wide association studies (GWASs) that provide data-driven predictions about new drug targets. The results show that GWASs stimulate corporate investments, but around one-third of these resources are misallocated toward false positive predictions. Companies lacking domain knowledge react more strongly but are disproportionately likely to fall into the trap of false positives. Instead, domain knowledge helps firms make fewer investments that target only the best opportunities. Together, the results show that even if data-driven predictions hold value when searching for innovations, domain knowledge remains the crucial source of competitive advantage in the age of big data.

TIM: Data-Driven Innovation Communities – Community Dynamics and the Role of Data Benchmarks

Author: **Yan Bai**, *ESADE Business School*

Author: **Laia Pujol Pujol Priego**, *ESADE Business School*

Author: **Esteve Almirall**, *ESADE Business School*

As a result of advancements in data processing and storage, organizations are significantly investing in "data assets" to drive innovation. Yet, when technologies necessitate complementary insights, companies can't innovate in isolation. They need to leverage community ecosystems to navigate the challenges associated with creating datasets and benchmarks. This paper uncovers different types of data-driven innovation in communities and investigates how data impacts the balance between competition and collaboration, the creation and dissemination of benchmarks, and ultimately, the innovation outcome. Through a multi-method study of 27 data-driven innovation communities in synthetic biology, we provide a framework for innovation communities that display different levels of resolution in the tension between collaboration and competition when utilizing a range of benchmarks. We demonstrate that the openness not only motivates the development and standardization of data benchmarks, but also accentuates the pivotal role of data benchmarks in influencing the collaboration and competition dynamics. Furthermore, we compare a spectrum of data-driven innovation communities to illustrate which collaboration types are most suitable for specific kinds of data and to offer diverse strategies for incentive management.

TIM: Big Data Effects on Creative Projects-Exploring Instrumental Logics and Control-Creativity Tensions

Author: **Paul Conort**, *CRG Ecole Polytechnique*

Author: **David Massé**, *Telecom ParisTech*

Author: **Nicola Mirc**, *Toulouse School of Management*

The increasing availability and use of big data analytics (BDA) in creative industries engender powerful new opportunities for enhancing consumer-driven innovation. But it also raises significant organizational challenges as it requires the redesigning of creative processes in which analytics-based logics need to be reconciled with legacy creativity-based ones. This paper aims to explore the ways in which BDA lead to redesigning creative processes, as well as organizational tensions they may induce. Building on a case study of video game development projects, our findings show that while big data analytics can contribute to the exploration of new ideas, be a tool to support decisions, and provide negotiation power, it also induces several organizational tensions. We uncover eight of these tensions, which we group into three themes: coordination, decision making, and control. The paper contributes to research on organizational transformation through big data and on creative industries and offers practical implications for the management of creative projects in the age of big data.

Temporal Dynamics of Innovation Success

Session Moderator: **Yanting Guo**, *School of Management, Xiamen U.*

TIM: Spatiotemporal Dynamics of Innovative Search in Response to Complexity of Environmental Change

Author: **Yanting Guo**, *School of Management, Xiamen U.*
Author: **Xiang Zhou**, *School of Management, Xiamen U.*

Academics and managers are increasingly interested in understanding the temporal patterns of strategic activities to maintain a competitive advantage in a constantly evolving business environment. This study aims to investigate how the dynamic interdependencies among search behaviors influence the innovativeness of firms engaged in integration efforts. To address this question, we employ the NK model approach to simulate the component search and architectural search of system integrators. We introduce two hybrid search strategies as alternating mode and parallel mode, which correspond to the diachronic and synchronic dimensions of innovative search in systems integration research. Our findings indicate that the parallel mode leads to a faster improvement rate of innovation performance in the short run, while the alternating mode is associated with a higher level of innovation performance in the long run. When encountering exogenous shocks, the parallel mode rebounds more quickly to the original performance level with stronger effect of resilience; the effect of alternating modes on performance improvement is weakened to a greater extent in dynamic environment. This research contributes to the literature by demonstrating the spatiotemporal dynamics of hybrid search modes, suggesting promising avenues for exploring the impact of search and adaptation in complex environmental changes.

TIM: Leader-Team Multilevel Dynamics: Unveiling Top Leaders' Polychronicity Impact on Team Innovation

Author: **Anjali Singh**, *Indian Institute of Management (IIM) Mumbai*
Author: **Sumi Jha**, *Indian Institute of Management Mumbai*

Research has shown that strategic leaders play a significant role in influencing team innovation at the functional level, especially in the context of rising geopolitical uncertainties. This study examines the impact of strategic leaders' polychronicity on team innovation. We also examine the mediating impact of team decision-making on leader polychronicity and team innovation cross-level relationships. Drawing from the multilevel data from 58 leaders and 174 teams, we found that polychronicity positively impacts team innovation. Moreover, we also found the positive mediating effect of team decision-making effectiveness on leader polychronicity and team innovation relationships. This study develops our understanding of strategic leadership characteristics and team innovation interface. It highlights the need for leaders to be aware of the polychronic tendency to facilitate the development of novel ideas among teams to solve complex organizational problems. We also advance the team innovation literature by explaining team-level decision-making among teams, which develops and influences team innovation through the collective efforts of multiple teams. We conclude with a discussion of the policy implications of our findings.

TIM: Timing Matters! Experimentation and Product Performance in Entrepreneurial Firms

Author: **Qiuqiu Qiu**, *Stockholm School of Economics*
Author: **Holmer Kok**, *Stockholm School of Economics*
Author: **Roxana Turturea**, *Stockholm School of Economics*

While experimentation benefits firms' product development processes, there is considerable heterogeneity in their ability to capture these benefits. In this study, we explore such heterogeneity by focusing on a novel dimension of experimentation – the timing of product changes. Using data on Early Access (EA) games in the video game industry, our research shows that incorporating experimentation into the product development process enhances product performance. Moreover, our findings underscore the benefits of a more extended experimentation phase, as well as strategic management of three critical timing aspects of product changes in that phase: frequency, temporal clustering, and desynchronization with major competitors. This study contributes to a richer understanding of learning from experimentation, emphasizing how variations in the timing of product changes during experimentation enhance product performance. Additionally, we add to literature on product development by unveiling product change strategies to proactively cope with market uncertainties in the digital economy.

TIM: Right Product, Wrong Time? Temporal Legitimacy of New Product Development in Projects

Author: **Linzhuo Wang**, *BI Norwegian Business School*
Author: **Jan Terje Karlsen**, *BI Norwegian Business School*
Author: **Tor Geir Kvinnen**, *U. of Agder*
Author: **Xuemei Liu**, *U. du Québec à Montréal*

In project-based industries, new products cannot finalize their development process until it is operationally adopted and socially accepted by main project participants. In line with the social judgment view of legitimacy, we argue that New Product Development (NPD) in projects is assessed by a temporal legitimacy judgment to reconcile different legitimacy assumptions from different project participants and tensions between temporary and permanent institutions. By conducting a multi-case study on Norwegian Road Construction projects, we have identified the temporal legitimacy and its constituting sub-dimensions, formative timing, inceptive timing, and disruptive timing. A framework of temporary legitimacy judgment is developed to show how heterogeneous legitimacy is resolved and how sense-making of past and future is achieved. Theoretical and practical implications were discussed.

Policy and Innovation in Emerging Economies

Session Moderator: **Weijia Ding**, *U. College London*

TIM: Shaping the Future of Innovation: Entrepreneurial Universities and Policy Interplay    

Author: **Weijia Ding**, *U. College London*

In a knowledge-based economy, universities are taking on more third-mission activities, e.g. entrepreneurship and innovation, to transfer knowledge and technology to industries and society. This study focuses on China's emerging national innovation system and the development of entrepreneurial universities. Using the Triple and Quadruple Helix framework, the study examines the entrepreneurship environment in Shenzhen, known as the Chinese "Silicon Valley." Theoretically, the paper contributes to adding theories that inform how we innovate in a more complex world. The research combines literature reviews with structured surveys and semi-structured interviews. The study aims to explore the mechanisms of innovation partnerships in Shenzhen, demonstrating how such collaborations can drive resource mobilization and influence innovation policy. The research also examines how universities transition to entrepreneurial roles under innovation policies during socio-economic transformations. Unpacking practices for orchestrating innovation partnerships, this study offers insights into science, technology, and innovation (STI) policies and inter-organizational collaborations. It identifies factors influencing collaborations in the innovation system and informs on innovation policymaking and evaluation, highlighting the engagement with diverse stakeholders amidst policy challenges.

TIM: Antecedents and Configurations of Firms' Innovation Responses to Technology-Forcing Policy Changes  

Author: **Qi He**, *Central South U.*

Author: **Chang Wang**, *Central South U.*

It is crucial for high-tech firms to select an appropriate technological trajectory for innovation response when technology-forcing policy changes (TFPC) occur. However, the antecedents and configurations that drive the heterogeneous innovation response strategies is far from being conclusively discussed in the literature. This study aims to fill this gap by utilizing a mixed research method of grounded theory and fuzzy-set qualitative comparative analysis. The findings suggest that high-tech enterprises typically respond to TFPC through on-trajectory innovation and off-trajectory innovation. These innovation strategies are influenced by the attention of the top management team (attention to TFPC incentives and attention to TFPC pressures), technical capability (research and development capability and manufacturing capability), and relational capability (supplier relationship capability and customer relationship capability). Furthermore, this study identifies the specific combinations of antecedents that ultimately lead to variations in high-tech firms' responses and uncovers the complementary and substitution relationships between these antecedents. Overall, this research provides valuable insights into understanding technology-forcing policy and the heterogeneous organizational response.

TIM: The Economics of Data Privacy and Big Tech Regulation  

Author: **Ke Rong**, *Tsinghua U.*

Author: **Fei Hao**, *Institute of Economics, Tsinghua U.*

Author: **Feng Zhu**, *Harvard U.*

The implementation of privacy legislation in various countries is designed to protect data and privacy. However, empirical evidence substantiating the positive impacts of data privacy regulation remains scarce. This study examines the Chinese "Double Lists" policy, treated as a quasi-natural experiment, and utilizes a Difference-in-Differences (DID) methodology to assess the policy's effects on application (app) performance. The findings reveal a notable increase in app installations attributable to privacy regulation. The results suggest that privacy regulation can enhance app installations by improving user perception and fostering innovation. In conclusion, privacy regulation, exemplified by the "Double Lists" policy, offers significant advantages to firms. From a market competition perspective, privacy regulation may enhance the appeal of big tech companies to new users.

TIM: Navigating Informal Rivalry: Strategic Innovation Time Allocation Amidst Labor Flexibility and SEZs    

Author: **BIBEK BHATTACHARYA**, *Assistant Professor Indian Institute of Management Ahmedabad*

Author: **Sudhanshu Maheshwari**, *S P Jain Institute of Management and Research*

Author: **Ashneet Kaur**, *S P Jain Institute of Management and Research*

This study examines the strategic response of formal emerging economy firms (FEEFs), particularly small-to-medium sized enterprises, to competition from the informal sector, focusing on the adoption of 'innovation time off' for employees. Despite their significant contribution to GDP in emerging economies, informal sector firms pose a unique competitive challenge due to their cost and flexibility advantages. Grounded in the Attention-Based View (ABV) of the firm, we hypothesize that the challenge of informal competition directs managerial attention towards fostering innovation, leading FEEFs to allocate time for employee innovation. Our analysis, utilizing a comprehensive dataset from India, reveals that informal competition positively influences FEEFs' inclination towards 'innovation time off'. Additionally, we explore contextual factors like numerical labor flexibility and SEZ location, finding that these negatively moderate the relationship between informal competition and innovation time off. This research contributes to the understanding of firm innovation in the face of informal competition in emerging economies, highlighting 'innovation time off' as a vital, yet overlooked, innovation practice in resource-constrained environments. It also advances the discourse on the temporal dimensions of innovation and the influence of state policy-induced firm characteristics on business strategies.

Panelist: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*
Panelist: **Sonali Shah**, *U. of Illinois at Urbana-Champaign*
Panelist: **Shaker A. Zahra**, *U. of Minnesota*

This panel symposium aims to answer the question of “What is the role of knowledge in shaping new venture innovation?” We invite four scholars who have advanced the field to answer this question from various angles. Topics include 1) How does knowledge drive the creation of new ventures and innovative activities? 2) How is knowledge gained, transferred, and aggregated in new ventures? 3) How do new ventures utilize and recreate knowledge? 4) What roles do established firms and entrepreneurial ventures play in knowledge transfer and creation? and, most importantly, 5) How should we study new ventures and innovation? The goal of this symposium is to identify the assumptions in the current literature about the role of knowledge in established innovative firms and propose how these assumptions shift when applied to entrepreneurial ventures.

Presenter: **Annamaria Conti**, *IE U.*
Presenter: **Ivanka Visnjic**, *ESADE Business School*

In the second edition of our symposium devoted to exploring the dynamics of moving from research to development, we examine how demand side factors influence this trajectory. This focus resonates perfectly with this year's theme of "Innovating for the Future - Policy, Purpose, and Organizations". We present four empirical studies that explore how policy incentives, mandatory disclosure requirements, platform market dynamics, and distinct organizational business models each impact project outcomes. These four studies underscore both the opportunities as well as the challenges in designing levers to incentivize and organize innovation. Through this symposium we hope to spark future research that views innovation as a dynamic process shaped by social and business needs.

OSCM: **Coordinating Supplier-Induced Disruptions Through Governance Mechanisms**

Author: **Juliette Engelhart**, *Sauder School of Business, U. of British Columbia*

Author: **Jens Roehrich**, *U. of Bath*

Author: **Brian Squire**, *U. of Bath*

Contractual and relational governance are important mechanisms for controlling and coordinating inter-organisational relationships (IORs). While prior studies have explored control in detail, the role of coordination has received limited attention. Coordination is a necessity to organise tasks and activities between firms effectively, but its use in IORs, especially when those relationships are disrupted, has received limited attention. Thus, this study explores how buyers use contractual and relational governance mechanisms to coordinate supplier-induced disruptions. This study builds on 35 in-depth, face-to-face interviews in the context of the European energy sector. The study demonstrated that supply managers have a portfolio of complementary governance mechanisms for coordination available during supplier-induced disruptions. However, supply managers use specific contractual and/or relational coordination activities to match specific coordination requirements. Prior literature on governance mechanisms has started to draw out the importance of their coordination function but has largely overlooked the simultaneous application of contractual and relational coordination. Further, the impact of situational factors, such as disruptions in IORs, on coordination requirements has been sparsely explored. This study adds to the governance mechanisms literature by highlighting the importance and dynamic nature of coordinating IORs.

OSCM: **Influence Power of Partners and the Focal Firm and Digital Knowledge Diffusion in Supply Chain**

Author: **Tianyu Gong**, *School of Economics & Management, Tongji U.*

Author: **Jingyu Li**, *0723*

Author: **Yi Hao**, *School of Economics & Management, Tongji U.*

Author: **Yuan Li**, *Shanghai Jiao Tong U.*

This study extends the dissemination of knowledge about digital technology exploitation (DTE) from an intra-industry context to the supply chain. By integrating industry status and supply chain connectivity, this study introduces three novel constructs: supply chain influencing power (SCIP) of partners, SCIP of the focal firm, and relative supply chain influence power (RSCIP) between partners and the focal firm. It explores how and why these constructs impact DTE diffusion between supply chain partners (knowledge givers) and the focal firm (knowledge receiver). The findings reveal that the SCIP of partner firms and SCIP of the focal firm can enhance the positive relationship between digital technology exploitation by supply chain partners, while RSCIP weakens such a positive relationship. These findings contribute to a deeper understanding of knowledge diffusion within firms' efforts towards digitalization.

OSCM: **Second-Order Learning by Supplying**

Author: **Lisha Liu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Xianwei Shi**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

While there have been ample empirical evidence showing that suppliers in emerging economies may develop technological capabilities by learning directly from their customers and competitors alike, we consider these suppliers' technological capability development through a second-order learning by supplying – to learn indirectly from their foreign counterparts via shared customers at home when first-order learning is unfeasible. Combining qualitative interviews with literature on organizational learning along supply chains, we hypothesize that supplying to local customers who also import from the suppliers' foreign competitors may significantly improve their technological capabilities. We also speculate that such a process is moderated by R&D investments of the suppliers and tie strength with their customers, as well as the institutional environment. The empirical analysis based on Chinese import data of the manufacturing industry from 2005 to 2015 confirms our conjectures. We contribute to both literatures on supply chain management and organizational learning by theorizing and empirically testing the second-order learning by supplying. Our findings also convey important practical implications vis-à-vis capability development of local suppliers and policy instruments on cross-border supply chain management.

OSCM: **Social Sustainability and Shareholder Value: The Role of Complex Supply Networks**

Author: **Christian Wagner**, *ETH Zürich*

Author: **Christoph Schmidt**, *ETH Zürich*

Author: **Stephan M. Wagner**, *ETH Zürich*

Social sustainability incidents often happen within complex supply networks beyond the visibility scope of focal firms. When such incidents become public, investors commonly hold focal firms accountable for the incident. Using an event study, we find significant negative performance implications of 142 social sustainability incidents within supply chains, leading to a mean abnormal return of -0.34% for focal firms' shareholder value. By analyzing the complex supply networks up to tier 3 of the respective firms, we contribute to an understanding of how network characteristics influence investor decisions. Specifically, we find that higher horizontal complexity and focal firm's accessibility within the network mitigate the negative performance implications, whereas higher influence over the network strengthens the latter.

Software procurement is a complex and challenging process for organizations. The dynamic nature of the software industry, rapidly evolving technologies, and the critical role software solutions take in business operations all contribute to these difficulties. The study aims to explore the challenges that arise in a buyer-supplier relationship when procuring software and how they can be mitigated. Methodologically, the study is grounded in an analysis of 18 comprehensive interviews with industry professionals, employing the Gioia methodological framework. The findings reveal the importance of effective Supplier Relationship Management (SRM) practices in mitigating challenges caused by the characteristics of the software itself as well as the interplay between the buying firm and the supplier. Procurement organizations can use SRM strategies like streamlining vendor selection and segmentation, negotiating favorable contracts, implementing insightful supplier evaluations, and enhanced communication to build robust, innovative, and collaborative relationships with software suppliers. By strategically navigating software-specific procurement challenges through SRM, organizations can improve the efficiency and effectiveness of their software procurement processes and drive value from their software investments.

Career Sensemaking and Identity Management

Session Moderator: **Surendra Babu Talluri**, *Indian Institute of Management Bangalore*

CAR: **Future Work Self Salience: Taking Stock and Moving Forward**

Author: **Surendra Babu Talluri**, *Indian Institute of Management Bangalore*
Author: **Karoline Strauss**, *ESSEC Business School*
Author: **Alexander Newman**, *Melbourne Business School, U. of Melbourne*
Author: **Falk Julian Voigt**, *TUM School of Management, Technical U. of Munich*

Individuals have become the primary actors in managing their careers because of the fundamental shift in the ownership of careers. This shift has made it necessary for individuals to take a vital role in various career-building activities. Future work self salience (FWSS) was introduced in the literature to understand the motivation for these proactive behaviors a decade ago. FWSS measures how readily and vividly individuals can imagine themselves in their future work self. Since then, researchers have looked into various antecedents and outcomes, further enhancing our knowledge. However, we have yet to see a synthesis of this body of knowledge that highlights significant advancements and challenges. Thus, to understand the theoretical perspectives taken in earlier work and the nomological network of variables connected to FWSS and pinpoint how this construct has been conceptualized and measured, we systematically review the empirical research on FWSS in the current study. Based on the findings of this review, we develop a future research agenda that supports further theoretical and empirical advancement.

Contemporary careers (CCs), characterized as being person-centered rather than organization-centered, have garnered significant theoretical attention in recent decades. However, research on CCs often lacks an exploration of the mechanisms that underlie the dynamic process of career development over time. Drawing from sensemaking theory, we integrate the literature to examine how individuals with a CC orientation make sense of their evolving careers. We suggest attitudinal and behavioral mediators as the core elements of the career sensemaking process and outline a process model that captures these dynamic career processes. Our findings offer insights for individual career actors as well as organizations seeking to accommodate their employees' CC orientations throughout their tenure. We also guide future scholarly work surrounding CCs by outlining research questions that can advance our understanding of CCs within organizational contexts.

CAR: **Professional Legitimacy Claims Through Meaning-Making with Memories: Narratives of CSR Professionals**

Author: **Hyemi Shin**, *School of Management, Royal Holloway, U. of London, UK*
Author: **Mai Chi Vu**, *Newcastle Business School, Northumbria U.*

This study examines the narratives of Corporate Social Responsibility (CSR) professionals to explore how they claim their professional legitimacy within the expanding professional CSR field in South Korea (hereafter Korea). The study reveals the important role of memory as a key source for CSR professionals to claim their legitimacy through meaning-making processes. We found two meaning-making mechanisms—professional legitimacy claims through self-identification-based meaning-making and professional legitimacy claims through socialization-based meaning-making—where experienced CSR professionals in Korea engaged in three types of memory when they claimed their professional legitimacy. The study contributes to the literature on occupations and professions in organizations by showing how individuals' career memory provides discursive sources to claim their professional legitimacy. The findings also contribute to the limited studies that connect meaningful work and memory by focusing on individuals' subjective engagement with memory to analyze individual-level meaning-making through professional legitimacy claims-making.

CAR: **When You Can't Be Where You Want to Be: Inter-Identity Work of Globally Mobile Professionals**

Author: **Anoop Adhur Kutty**, *Aalto U. School of Business*
Author: **Alexei Koveshnikov**, *Aalto U.*

In this paper, we explore the inter-identity work of globally mobile professionals who relocate to a semi-peripheral region of their professional field. To explore and study this phenomenon, we chose the setting of business school academics relocating to the Nordic region. We elucidate how these academics perceive their relocation to a semi-peripheral region and further engage in professional identity construction, with or without associating themselves with the Nordic region. We try to understand how they deal with the "center vs periphery" identity conflict as they (re)construct their professional identity. To do so, we conduct this interview-based study to allow our interviewees to narrate their experiences and self-perceptions of being an expatriate academic in Nordic region. We further use identity theory and a narrative perspective on inter-identity work to theorize how these expatriate academics engage in inter-identity work. Our findings show the various discursive strategies our participants adopt to (re)construct their professional identity. These are a) (re)construct the superior nature of the periphery, b) resist the status quo by problematizing the superiority of the center, and/or c) divert the focus to the individual agency to reconcile the center-periphery hierarchy. We further discuss the implication of this strategy towards the formation of a regional identity as well as tighter integration to the regional academia.

Barriers to Job Mobility in a Turbulent and Uncertain Labor Market

Organizer: **Xinhui Jing**, *KU Leuven, Faculty of Economics and Business*
Organizer: **Marijke Verbruggen**, *KU Leuven*
Discussant: **Wolfgang Mayrhofer**, *WU Vienna*
Presenter: **Ricardo Rodrigues**, *King's College London*
Presenter: **Paulien D'Huyvetter**, *KU Leuven*
Presenter: **Xinhui Jing**, *KU Leuven, Faculty of Economics and Business*
Presenter: **Vedika Lal**, *Vrije U. Amsterdam, School of Business and Economics*

Governments in many countries strive to increase job mobility to respond to the major economic and technological changes affecting our labor markets. However, realizing this increase in job mobility is highly challenging because many labor markets are strongly rigid. Indeed, in many countries, the youth unemployment rate is fairly high – which points to challenging school-to-work transitions - while job-to-job transitions remain limited (e.g., ELF, 2022). The latter is particularly surprising because many workers feel trapped in their organization and express a desire to change jobs (TempoTeam, 2022). These observations point to important barriers to job mobility. Yet, to date, research on these barriers remains limited and scattered across various disciplines. In this symposium, we bring together four studies that examine important individual and organizational barriers to successful job mobility.

Moderator: **Scott Seibert**, *U. at Buffalo School of Management*
Discussant: **Hao Zhao**, *China Europe International Business School (CEIBS)*

Although objective (e.g., earnings; Arthur et al., 2005) and subjective (e.g., career satisfaction; Seibert et al., 2013) career success has been extensively investigated in management and applied psychology (e.g., Ng & Feldman, 2014; Spurk et al., 2019), there is little understanding of this phenomenon in the context of individuals pursuing entrepreneurial careers (Seibert et al., 2024). This interdisciplinary symposium aims to address the following question: how can different groups of entrepreneurs achieve career success across the lifespan? To answer this question, we bring together four contributions by international research teams from various disciplines: careers, entrepreneurship, human resource management, and organizational behavior. In these contributions, authors focus on diverse groups of entrepreneurs, such as full-time, hybrid, and former entrepreneurs, and aim to advance the understanding of various objective and subjective dimensions of entrepreneurial career success. Examples of objective dimensions are becoming full-time entrepreneurs for hybrid entrepreneurs or securing a job for former entrepreneurs, while the subjective dimension may be described by multiple dimensions of satisfaction with entrepreneurial careers. Moreover, the authors also explore important contextual factors, such as political context, work design, and hiring discrimination, that might shape the career success outcomes of different groups of entrepreneurs. By bringing in contributions from different disciplines and different parts of the world, this symposium offers unique new insights into the career success of different groups of entrepreneurs and contributes to creating an interdisciplinary network of scholars that will move the research on entrepreneurial careers across the lifespan forward.

The platform economy introduces novel challenges and opportunities at the intersection of organizational structure, stakeholder relationships, and societal impact (Ashford et al., 2018; Caza et al., 2022; Cropanzano et al., 2023; Fieseler et al., 2019; Kuhn & Maleki, 2017). Following the call for rigorous methodological research on platform workers (Cropanzano et al., 2023), this symposium sheds light on the career development of platform workers by taking central stakeholders (e.g., workers, requesters, platform) into account. The five contributions cover diverse methodological approaches (e.g., longitudinal qualitative interviews, longitudinal quantitative surveys, diary studies), investigating online and offline platform workers from different online labor platforms (OLPs) in Asia, Europe, and the US. We bring together researchers from different fields (e.g., economics, management, psychology). They investigate how platform workers experience working on OLPs and how such experiences shape their careers. The symposium's contributions collectively deepen our understanding of the platform economy by addressing platform design (cf. presentation [P] #P1, #P2), psychological aspects, such as well-being, linked to the interaction of workers with the requesters (cf. #P3), the decision-making of workers within the platform economy and its link to the gender pay gap (cf. #P4), and by proposing a novel framework of Transactional Careers to better understand the complex career development of platform workers (cf. #P5). This symposium will provide a platform for exchange among scholars from different fields interested in the platform economy to contribute substantial scientific implications for platform workers, policymakers, and OLPs for their important endeavor to develop a sustainable digitalized labor market, considering the role of different stakeholders.

Conflict Avoidance & Resolution: New Approaches through Conversations and Decision-Making Processes

Session Chair: **Katherine Qianwen Sun**, *UCLA Anderson School of Management*
Session Chair: **Federica Pinelli**, *Columbia Business School*
Presenter: **Yuhan Mei**, *Fuqua School of Business, Duke U.*
Presenter: **Hanne Collins**, *Harvard U.*
Discussant: **Julian Jake Zlatev**, *Harvard Business School*
Presenter: **Federica Pinelli**, *Columbia Business School*
Presenter: **Katherine Qianwen Sun**, *UCLA Anderson School of Management*

Our symposium delves into the multifaceted nature of conflict within teams, questioning how conflict hinders or enhances performance. It moves past previous research to examine conflict management through categorizations, and include socio-ecological factors, communication styles, and collaborative strategies. We explore people's preferences for conflict avoidance and strategies to foster cooperations. Integrating conversation research, we aim to understand how conversational behaviors affect conflict dynamics, offering new perspectives on team performance and innovation.

Social Perception in Context: Trust, Networks, Culture, Humor, and Stigma

Session Moderator: **Pri Pradhan Shah**, *U. of Minnesota*

CM: **Network Perceptions and Trust: How the Ties in Our Mind Influence Perceived Trustworthiness**

Author: **Pri Pradhan Shah**, *U. of Minnesota*
Author: **Stephen L. Jones**, *U. of Washington, Bothell*
Author: **Dongil Jang**, *U. of Minnesota*

To date, researchers investigating the influence of social networks on trust perceptions have focused on the actual network. Yet, individuals vary in their perception of surrounding ties and these differences may influence their judgments of trust. This study uses a cognitive social structure (CSS) approach to conceptually and empirically investigate whether perceived or actual network perceptions influence perceptions of trustworthiness when we account for both. Focusing upon the advice network, this study investigates whether a trustor's perceptions of dyadic advice-seeking, mutual shared advisees (i.e., third parties that go to both the trustor and trustee for advice) and trustee advice-giving centrality influence perceptions of a trustee's trustworthiness when controlling for the actual advice ties and configurations. The results indicate that trustors' perceptions of dyadic advice seeking ties, and trustee advice-giving centrality predict their perceptions of a trustee's trustworthiness above and beyond their actual network counterpart. Moreover, when exploring how the actual and perceived advice networks interact, we find a supplementary relationship which results in trust rising when individuals perceive too many ties when actual ties don't exist, but not dropping when they perceive too few ties, when actual ties do exist.

CM: **Cultural Variation in Perceptions of Similar Others at Work**

Author: **Gaoyuan Zhu**, *Cornell U.*
Author: **John Angus Hildreth**, *Cornell SC Johnson College of Business*

The similarity attraction effect, where people generally like and are attracted to similar others, is a well-established social phenomenon. In this research, we provide one of the first direct cross-cultural comparisons of this effect in work settings. Utilizing diverse workplace contexts including hiring, workplace conflict and dispute, and workplace helping, we demonstrate that compared to Americans, East Asians exhibit higher levels of perceived threat from and aversion toward institutionally and functionally similar others at work. We find that East Asians' higher levels of aversion toward similar others at work is driven by higher levels of perceived interpersonal competition compared to Americans. Further, we find that the ingroup membership status of similar others is a critical moderating factor for East Asians' similarity aversion such that East Asians exhibit significantly less aversion toward ingroup similar others compared to non-ingroup similar others, whereas Americans exhibit similar judgments toward similar others regardless of the ingroup membership status of similar others. Theoretical implications on culture, similarity-attraction, ingroup formation and conflict management, as well as practical implications are discussed.

CM: **The Joke's on Us: How Humor Can Increase Perceived Warmth and Trust in China, but Not in the USA**

Author: **Ren Li**, *Hong Kong Polytechnic U.*
Author: **Thomas Bradford Bitterly**, *HKUST Business School*

This study examines the role of humor in leadership communication and its varying impacts across Eastern and Western cultural contexts. The historic representation of humor is predominantly Western-centric; Humor is portrayed as a valued asset in Western leadership, contributing to perceived warmth, likability, and team performance, and an undesirable behavior in Eastern cultures, where the lack of seriousness of humor is believed to be associated with social impropriety. This paper explores how humor in leadership is perceived when delivering negative feedback to subordinates in different cultural contexts. Utilizing the benign violation theory and the concept of low- to high-context communication, the research highlights the complex dynamics of humor in leadership across different cultural landscapes and reveals that humor can be rewarded more in Eastern culture than Western culture. The findings emphasize the need for a culturally sensitive approach in leadership communication, recognizing that humor's effectiveness and appropriateness depend significantly on cultural context. This study contributes to a deeper understanding of humor's multifaceted role in leadership and interpersonal dynamics globally.

CM: **Tackling Stigma through Trust: How Lack of Perceived Integrity Harms Trust of Individuals with BD**

Author: **Thomas Bradford Bitterly**, *HKUST Business School*

Bipolar disorder (BD) is a pervasive condition. Although there have been recent pushes towards greater neurodiversity within organizations, individuals with the disorder still face many social and professional challenges (e.g., unemployment, underemployment) due in part to negative perceptions of individuals with the condition. The causes of these negative evaluations are not understood; stigma is elusive in definition and measurement and the existing trust research has ignored the relationship between BD and trust. Across three experiments using diverse samples, including an established longitudinal cohort study of BD, we identify trust as a core element that governs societal perceptions of individuals with BD. Trust, in turn, is closely tied to perceptions of individual predictability and integrity; active clinical features of BD drive high or low energy states and unpredictable interactions that damage the perceived integrity and thereby trust of the individual with BD. We also examine the effects of both disclosure of a BD diagnosis and the presentation of the symptoms of BD. Disclosure of BD has a significant negative effect on perceived integrity and trust, but the manifestation of manic symptoms undermines the perceived integrity and overall trust towards the person far more than any of the features and perceptions in response to disclosure. Together, these results advance our theoretical and practical understanding of trust by demonstrating how anticipated and observed unpredictability influence trust and by building a foundation for investigating trust of individuals with a common mental illness.

Participant: **Sydney Green**, *Denison U.*
Participant: **Alexander Lyle Effinger**, *U. of Illinois Chicago*
Discussant: **Brian Gunia**, *Johns Hopkins U.*

Unresolved issues within the negotiation literature and organizations necessitate a more nuanced understanding of how identity and individual differences influence negotiation outcomes. This symposium brings together three papers that examine the effects of various individual differences and identity-relevant factors on negotiation strategies and outcomes. Collectively, these papers offer implications for negotiation science and practice across various contexts and for specific outcomes. The discussant will provide recommendations for the role of organizational scholars in addressing current issues.

Decolonization 

Session Moderator: **Hellen Cordeiro Alves Marquezini**, *Fundação Getúlio Vargas - EAESP*

CMS: A Decolonial Analysis of the Representation of Race and Ethnicity in Management Textbooks

Author: **Hellen Cordeiro Alves Marquezini**, *Fundação Getúlio Vargas - EAESP*
Author: **Todd Bridgman**, *Victoria U. of Wellington*

This paper contributes to a burgeoning literature on the politics of knowledge in the production of management textbooks. We explore the representation of race and ethnicity in the world's best-selling organizational behaviour textbook, with a particular focus on editions produced for Brazilian business students. Through a decolonial lens, we explore how these textbooks reproduce the structural silencing of difference and reinforce inequalities. We consider the implications for Brazilian students, and possibilities for representing diversity in fairer ways, that better acknowledge the Brazilian context and the contribution of Brazilian scholars and affirm the potential of management education to foster critical and creative thinking and emancipatory values.

CMS: Negotiating Rigour And Quality In Decolonising Management Research 

Author: **Nimruji Jammulamadaka**, *Indian Institute of Management, Calcutta*

This is a conceptual paper that approaches the issue of assessing rigour and quality in decolonising research. It examines this issue based on my lived experiences as an teacher, author, reviewer and editor doing decolonising management research. I identify four problems with treating decolonising management research as a paradigm. I suggest that incommensurabilities at the level of cosmologies and not at the level of paradigms in the political project of decolonising management. Drawing upon the works of de Sousa Santos on Epistemologies of the South and Gayatri Spivak's catachrestic reading, I propose four points that authors and readers/reviewers need to take into consideration in approaching the idea of rigour and quality in decolonising management research.

CMS: Ethics of Quantification and RCTs in International Development: A Decolonial Analysis (WITHDRAWN) 

Author: **Emily Cook-Lundgren**, *No Affiliation*
Author: **Emanuela Girei**, *Liverpool Business School, Liverpool John Moores U.*

In this article, we examine the ethical implications of randomised control trials (RCTs) as a practice of quantification in international development. Often referred to as the "gold standard" for the evaluation of development interventions, RCTs are lauded for their ability to generate supposedly objective, unbiased, and rigorous evidence to inform policy decisions for poverty alleviation. At the same time, critiques of quantification within and beyond development challenge claims of objectivity and neutrality, raising epistemological and ethical questions regarding the role of quantitative research, the numbers they produce, and the processes triggered by practices of quantification. Building on these critiques, this study develops a decolonial analysis of the RCTs methodology. We argue that RCTs, by enacting the coloniality of being, knowledge, and power, serve to perpetuate global coloniality, and its core organising principle, namely the colonial difference. The study contributes to ongoing conversations addressing the ethical stakes of knowledge production and (de)coloniality.

CMS: A Postcolonial Critique of Occupational Identity Research 

Author: **Victoria Barboza De Castro Cunha**, *UTFPR*
Author: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*

Despite a general call for the critical rethinking of management and organizations knowledge using postcolonial lenses, the literature on work identities has been evolving with poor connection with critical approaches that counter the "Western-centric" character of our field of inquiry and allow for the peculiarities of the Global South to be brought to the fore. Hence, this paper aims to answer how to offer a postcolonial critique of management and organizational knowledge on work identity by scrutinizing the obscure theoretical interplay between subjectivity and identity. To do so, it articulates the postcolonial constructs of hybridity, mimicry and liminality so as to fill four ontological gaps identified in the way work identity has been framed in the extant scholarship: as (1) a duality between subjectivity and social identity; (2) an external entity one must comply with; (3) an interchangeable phenomenon; (4) a juxtaposing phenomenon. Its contribution lies in proposing the study of identities and subjectivities as hybrid encounters. This is to be fulfilled in three ways. First, by exploring mimicry between the two constructs in the form of agency and control, sameness and alterity, and stability and change. Second, by acknowledging how to differently operationalize discursive practices so as they reflect either subjectivities or identities in field data collection. Third, using researchers' own subjectivities and identities to create a 'liminal space' with which to engage with participants' hybrid encounters.

CMS: Decolonizing Diversity-Driven Responsibility Education with Praxis 

Author: **Alexandre Faria**, *EBAPE/FGV*

In a complex era of decolonization and empire the rising diversity-driven literature on responsibility learning with a focus on the hidden curriculum (HC) from the North embodies the project of a self-correcting modernity and hence ignores the colonizing face of diversity and responsibility theories against the irresponsible 'too diverse' which has been partially unveiled and reinforced by Southern decolonial theorizing. In this paper I write through my (not) too diverse Afro-Mestizo body from the nuanced shadows of the stratified South to unfold (un)knowns of the everydayness of doing decolonizing in education from the perspective of the too diverse with recovery of the HC from below and share a praxistical decolonizing framework with you the reader which otherwise would remain unknown as a way, among others, to move beyond the praxis-theory hierarchical binarism against the too diverse reproduced by Northern and decolonial theories. I remember how I (un)learned to mobilize my identities of diverse and too diverse through engagement with (un)known HC from below in my 1990s bodily experiences as (not) 'too diverse' within the UK counter-revolutionary neoliberal academia. By recovering diversity and rehumanizing ways of knowing/living/being/(un)learning in both South and North from the 1960s I share the sense that the decolonizing of diversity-driven responsibility in education from the perspective of the 'too diverse' who resurges in conditions of (im)possibility from within the dual pandemic of COVID and white supremacy requires us all to re-member and renew the praxis of diversity/responsibility otherwise championed by the 'too diverse' within and around us.

Dark Cases      

Session Moderator: **Fallon Bourgeois**, *Mount Saint Vincent U.*

CMS: **Dark Side Case: Breaking the Silence on the #BellLetsTalk Campaign**    

Author: **Fallon Bourgeois**, *Mount Saint Vincent U.*

Author: **Michelle Presse**, *Mount Saint Vincent U.*

Author: **Kristy Read**, *Mount Saint Vincent U.*

Author: **Karen Whittle**, *Mount Saint Vincent U.*

Author: **Nicholous Mark Deal**, *Mount Saint Vincent U.*

This dark side case delves into Bell Canada's cause-related marketing campaign #BellLetsTalk – a critically acclaimed initiative that helped raise awareness and funding for mental health programs in Canada. This case is written from the perspective of a former employee who recounts her growing disillusionment with the campaign's authenticity. The narrative reveals internal contradictions and growing corporate interests, especially Bell's decisions that appeared to prioritize profits over employee well-being. It is intended for an undergraduate student audience, and critically examines the disparity between an organization's espoused values and its actions. It highlights issues related to corporate social responsibility (CSR) practices and corporate reputation, ethical and moral responsibilities of organizations, and how managerialism exploits social causes – like mental health and wellbeing – for profit-generating opportunities. The case is accompanied by an extensive teaching note designed to support a deep exploration of the issues within the classroom setting.

CMS: **Dark Side Case: Copping Out: Failing to Transform the Royal Canadian Mounted Police's Toxic Culture**  

Author: **Ellen Shaffner**, *Mount Saint Vincent U.*

Author: **Todd Bridgman**, *Victoria U. of Wellington*

This dark side case entry focuses on the Royal Canadian Mounted Police (RCMP) and its ongoing issues of sexual harassment and discrimination. The case draws from a class action lawsuit settlement report which details the systemic nature of the sexual harassment and discrimination against female officers by their male colleagues. The case provides background and context on the RCMP as a symbolically significant institution in Canada and raises issues related to organizational culture, change, and leadership. It is intended for undergraduate and graduate student audiences, with the aim to foster learning and discussion that encourages students to move beyond mainstream managerial perspectives and consider the complexity and challenges of systemic organizational misconduct. The case includes a detailed teaching note to facilitate exploration of these topics through a critical management approach.

CMS: **Dark Side Case: Moving Mental Health Care Beyond Western Walls for Indigenous Veterans**   

Author: **Saheli Nath**, *U. of Central Oklahoma*

This case examines the complex challenges in establishing an Integrative Wellness Center providing specialized mental health treatment catering to indigenous veterans in the fictional state of Valoria. It analyzes the need for culturally-centered care given the high rates of PTSD, suicidal ideation and suicides among indigenous veterans in Valoria due to trauma from war, compounded by intergenerational economic hardship and loss of cultural identity. The case follows the journey of Dr. Wilma Cloud as she aims to bridge gaps in standard Western therapeutic approaches by incorporating traditional healing practices alongside clinical medicine to better serve this underserved demographic in Valoria. Envisioning such an unconventional program catalyzed initial skepticism and opposition from diverse stakeholders including municipalities, government health agencies and mainstream veteran groups over funding, eligibility criteria and use of alternative therapies. This case involves evaluating multi-faceted barriers around trust-building, navigating structural biases, and reconciling competing conceptualizations of health and evidence-based treatment. The case ultimately highlights the transformative potential that transpires from cooperative efforts of leaders leveraging community advocacy to embrace inclusive systems honoring indigeneity.

This systematic literature review examines the implications of Artificial Intelligence (AI) on employee privacy in organizational settings. The study assesses the compromise or safeguarding of privacy by AI technologies, explores the costs and benefits of AI adoption regarding employee privacy, and discusses the impact of advancing AI algorithms on employee privacy. Using the privacy calculus framework, the paper highlights the trade-offs organizations face in managing employee privacy amid AI integration. By navigating the evolving landscape of AI technologies, the research identifies challenges and opportunities, offering valuable insights for academics and practitioners. The review serves as a roadmap for future research, contributing to the understanding of AI's impact on employee privacy.

CTO: **AI Has More Moral Insight: The Potential of Using Large Language Models to Resolve Moral Dilemmas** 

Author: **Puchu Zhao**, *School of Business, Sun Yat-sen U.*

Moral dilemmas are the most difficult and prevalent type of ethical challenges in organizations. Whereas prior research indicates that moral insight is key to resolving moral dilemmas, there is little knowledge about how to acquire and foster moral insight. This research investigates the potential of using large language models (LLM) to pave the way for moral insight in resolving moral dilemmas. Specifically, we theorized how LLM can emerge with moral insight by combining their creativity and moral alignment, and benefit human users in decision-making for moral dilemmas. Through two real decision-making experiments conducted across different countries and involving LLM products, we found that: (1) LLM such as ChatGPT generate more moral insight solutions than humans in moral dilemmas; (2) individuals who use LLM to resolve moral dilemmas generate more moral insight solutions than those who do not in moral dilemmas; and (3) individuals who have previously used LLM to resolve moral dilemmas generate more moral insight solutions than those who have not, even when they do not use LLM. Overall, our research showed that by using LLM, individuals can increase the likelihood of discovering moral insight solutions by 44.21% to 80.21%. This research provides significant theoretical contributions to the understanding of the relationship between morality and creativity, and it offers a novel and useful approach for resolving moral dilemmas.

CTO: **What if AI-related Values go at Odds with Each Other? An Experimental Study**    

Author: **Yevgen Bogodistov**, *MCI Management Center Innsbruck*
Author: **Markus Frischhut**, *MCI Management Center Innsbruck*
Author: **Petar Despotovic**, *IUM Monaco*
Author: **Ganna Pogrebna**, *AI and Cyber Futures Institute, CSU and U. of Sydney Business School*

In an era where Artificial Intelligence (AI) permeates various facets of life, understanding and evaluating what is the ethical application of it becomes crucial. This study adopts a contrarian approach to examine the intricate web of AI ethics, focusing on how different societal values and ethical principles intersect and often conflict in the context of AI. Based on the theory of Schwartz (1992), we make predictions regarding different (often contrarian) interpretations of ethical AI. Employing a Discrete Choice Experiment, our research captures societal preferences for specific ethical manifestations in AI, highlighting the nuances in AI-savvy peoples' opinions. Key findings reveal a complex landscape where certain ethical AI principles are preferred over others, shedding light on societal priorities and potential directions for policymaking. Moreover, we show that cultural differences have an impact on opposing views regarding the same manifestation of ethical AI in different European countries. This study not only contributes to the academic discourse on AI ethics but also provides insights for policymakers, technologists, and society at large, emphasizing the importance of a balanced and inclusive approach to ethical AI development and implementation.

CTO: **Quantum Ethics: Navigating the Dynamics of AI Through Superposition, Measurement, and Entanglement** 

Author: **Yulia Litvinova**, *Max Planck Institute for Intelligent Systems*
Author: **Jingyao Li**, *Bentley U.*

Addressing the ethical challenges posed by Artificial Intelligence (AI), our innovative approach integrates quantum theory principles – superposition, measurement, and entanglement – to perceive AI use as a dynamic phenomenon intricately interwoven with collective discourse. Drawing inspiration from the application of quantum theory in management academic domain, we extend its relevance to the information systems (IS) field, specifically focusing on scrutinizing the ethical dimensions introduced by AI. In doing so, we unveil unique insights into the multifaceted nature of AI ethics. Furthermore, we finalize the exploration of the intersection between quantum theory and AI ethics with several propositions. These propositions, derived from our quantum approach, suggest a unique perspective on examining, understanding, and navigating the intricate landscape of ethical considerations in the realm of AI. By bridging the theoretical foundations of quantum mechanics with the practical complexities of AI ethics, our proposal contributes to a nuanced and comprehensive comprehension of the ethical issues inherent in the deployment and use of AI systems.

Opening the Digital Transformation Blackbox: The Metaverse, Strategy, and Organizational Change

Session Moderator: **Julian Lehmann**, *Arizona State U.*

CTO: **Envisioning the Metaverse Beyond the Hype: A Socio-Technical Imaginaries Perspective**

Author: **Madaleine Hunt**, *Durham U. Business School*

Author: **Spyros Angelopoulos**, *Durham U. Business School*

We draw upon the concept of federated network architectures and incorporate a socio-technical imaginaries perspective to envision the future of the Metaverse by understanding the past and taking stock of the present. We adopt a bifold methodological approach incorporating semi-structured interviews with experts involved in the development of the Metaverse, supplemented with data reduction analysis on archival data relating to the development of existing federated network architectures. The combined data analysis enabled us to examine the fundamental characteristics of the future of the Metaverse, and revealed four characteristics, which often operate in relation to one another: Interoperability, Standardisation, Usability, and Scalability. Taking note of the relationship among these fundamental characteristics, enabled us to further unpack two key insights for the future of the Metaverse. The first, is that the underpinning characteristic of federated network architectures is dynamism, while the second is that by understanding such dynamism we may more readily understand that the future of the Metaverse will not follow linear progression. The evolution in each of the core characteristics may drastically impact the advancement of another, driving development forward. We discuss the implications of our study for theory and practice and delineate an agenda for future research.

CTO: **Which Path to Take? A Configurational Perspective on Digital Transformation Strategy**

Author: **Nicolai Etienne Fabian**, *U. of Groningen*

Author: **Michelle Weck**, *Johannes Gutenberg U. Mainz*

Author: **Andre Hanelt**, *U. of Kassel*

Author: **Sebastian Firk**, *U. of Groningen*

Author: **Jana Oehmichen**, *Johannes Gutenberg U. Mainz*

Author: **Abhi Bhattacharya**, *U. of Alabama, Tuscaloosa*

The IS field has shown strong interest in digital transformation, the deep integration of digital technologies into the organization's fabric. Organizations can employ a digital transformation strategy (DTS) as a blueprint (i.e., the combination of organizational digital competence, leadership digital competence, and contextual complexity) to progress on their digital transformation journey. However, research so far was limited to the impact of single elements, e.g., appointing a CDO, engaging in digital M&A, or opening a digital innovation unit, yet disregarded that those elements might be interwoven and conflated. To overcome this reductionist perspective, we use a configurational perspective and argue that there are different DTS paths towards making digital transformation progress. Our analyses are based on a sample of firms listed in the S&P 500 between 2017 and 2020. For example, our inquiry shows a wide range of configurations of elements that explain high/low digital transformation progress. Moreover, no single factor is enough to explain success or failure; a combination of elements is needed to reach either high or low progress. In our study, we challenge the reductionist perspective on digital transformation in favor of a configurational perspective that integrates the complexity of digital phenomena. We integrate the role of different DTS dimensions and elements and shed light on how no single element is enough. We advance the literature on a more realistic understanding of digital transformation, which requires changes to the organization's fabric instead of isolated initiatives.

CTO: **Industrial Firm Becomes Digital and Then Cognitive Enterprise: How AI Transforms the Organization**

Author: **Eleunthia Wong Ellinger**, *Stockholm School of Economics*

Author: **Robert Wayne Gregory**, *U. of Miami*

Author: **Ida Someh**, *The U. of Queensland*

Discourse about the disruptive potential of artificial intelligence for individuals, professions, and markets is proliferating. The fundamental changes underway at the societal level are also expected to profoundly impact and alter organizations, yet we are only just beginning to understand how artificial intelligence impacts the nature of the organization itself. Based on the premise that widespread organizational adoption of artificial intelligence fundamentally transforms the organization, we present the findings of an in-depth case study of a multinational industrial firm embarking on fundamental organizational change driven by the vision offered by artificial intelligence to become a more rationally intelligent 'cognitive enterprise' that seeks superior competitiveness through expanded rationality and the augmented ability to think logically, make sound decisions, and solve problems effectively. Drawing on the perspective of Benson's (1977) dialectical view of organizations, we develop a model of AI-enabled organizational transformation explaining AI's role in disrupting in an industrial firm, leading to its transformation and organizational reconstruction in the process of becoming a cognitive enterprise. We offer our model as a contribution to the burgeoning literature on AI in management as well as an invitation to management scholars to re-examine the behavioral theory of the firm.

The Digital Transformation of Industries: Music, Viticulture, and Healthcare

Session Moderator: **JoAnn M. Brooks**, *Bentley U.*

CTO: **Get Rich or Die Tryin': Concerts and the Digitization of Recorded Music**

Author: **Franziska Kaiser**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*
Author: **Christian Peukert**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Digitization has changed the music industry remarkably. New digital technologies have altered remuneration models of recorded music, moving from one-time sales of physical media to usage-based payments from streaming services. Changes in artists' income from recorded music were accompanied by shifts in complementary income from live performances. Artists notably increased the number of annual concerts during the time of digital piracy, until usage-based income from streaming allowed them to gradually reduce the number of yearly live performances. We quantify the relationship between artist income and concerts by studying the impact of live performances on the demand for recorded music. Data from the digital music service last.fm allows us to track individual-level listening and concert-going behavior. Canceled concerts provide a quasi-experimental setting to study the causal impact of exposure to live performances on attendees' digital music listening behavior. We show that attending a concert increases the probability of listening to the artist by 30% per week and leads to 50% more plays. Additionally, we show that live concerts are positively associated with streaming activity and higher chances of reaching the Spotify charts for artists. We estimate that the additional income from recorded music was equivalent to 37% of the total annual concert revenue before the advent of streaming, which dropped to 1% during streaming. Our heterogeneity analysis reveals that total concert revenue is the major driver for differences in absolute income between famous and less famous artists. Famous artists perform more concerts, attract larger audiences, and command higher ticket prices.

CTO: **A Multi-year Study of Resilient Digital Transformation in Viticulture**

Author: **João Barata**, *U. of Coimbra*
Author: **Paulo Rupino Da Cunha**, *U. of Coimbra*

Resilient agriculture is a requirement for sustainable development in an era of drastic changes in climate, demography, and the adoption of digital technologies. In Viticulture 5.0, digital transformation has the potential to address the multiple vulnerabilities affecting the sector, but more longitudinal studies and detailed analyses of the business ecosystem are needed. This paper presents the results of an action research project in a Top 100 world wine producer working with academic partners and technology providers to revolutionize their vineyards. Strong structuration theory is selected to evaluate (1) system design, (2) data-driven resilient viticulture, and (3) the sociotechnical networks of position practices generated by a Viticulture 5.0 strategy. This work contributes to the research strand of information systems resilience, expanding our knowledge about the duality of structure in viticulture transformations that involve increasingly complex (human and technological) actors' interdependencies in their business ecosystem.

CTO: **What Does it Take to Achieve Transformational Results in Healthcare Organizations?**

Author: **Salman Aljazzaf**, *Kuwait U.*
Author: **Julie Quick**, *U. of South Florida*
Author: **Sunil Mithas**, *U. of South Florida*

Which organizational capabilities serve as the most critical levers for achieving transformational results in healthcare? This study answers this question by using a rare archival dataset on organizational capabilities and results for US healthcare organizations who participated in multiple assessments using the Baldrige Criteria for the period 1999-2019. We use fuzzy-set qualitative comparative analysis (fsQCA) to identify configurations of capability transformations for achieving transformational results. Our findings indicate that achieving successful transformational performance involves making simultaneous transformational changes in three to five key capabilities in specific ways. Notably, we find that transformation change in a triad of information and analytics, process management, and HR focus capabilities create customer-centric transformational results. Interestingly, transformational changes in leadership and strategic planning capabilities appear less frequently in configurations of successful transformations in our data. These results provide new insights for understanding the key capabilities for transformational changes to achieve transformational results.

Digital Collaboration: Advancing Open Source Software and Crowd Sourcing Collectives

Session Moderator: **Junyi Li**, *National U. of Singapore*

CTO: **Does Temporal Structuring of Activities in Open Source Software Development Matter?**

Author: **Veeresh Thummadi**, *National U. of Ireland Galway*

Author: **Kalle Lyytinen**, *Case Western Reserve U.*

Author: **Kieran Conboy**, *National U. of Ireland Galway*

Since the formulation of first development methods such as waterfall and later method innovations such as iterative and agile, specific forms of sequences of different tasks have been viewed instrumental for effective software development given the logical and temporal dependencies between tasks and their inputs or outputs. In open-source software (OSS) no normative guidelines are available to enforce a preferred temporal structure of activities. However, even in OSS contexts some patterns are likely to be more effective than others. Alas, not much is known of the effects of time on OSS development outcomes similar to studies in vertically integrated settings. We address this gap by drawing on the notion of temporal structuring of clock-time and event time based on coding and commenting activities referred to as “spells” on software development effectiveness defined as the rate of completing opened tasks. We validate the effects of specific spells on development activities by analysing temporal structuring of development activity in a well-known, successful OSS project Apache Hadoop over a ten-year period comprising of 9865 tickets, 157721 activities and 276 releases. We identify spells of coding and commenting for each ticket and calculate their average length and estimate the effect on task completion. Overall, we find that a unit increase in event-based workflow coding structure increases the rate of ticket success by 17% and that the effect is moderated by clock-based coding and commenting structure.

CTO: **Digital Collaboration Openness and Social Innovation: Evidence From Github**

Author: **Zhenyu Qiu**, *Shanghai U. of Finance and Economics*

Author: **CHENFANG ZHAO**, *Southwestern U. of Finance and Economics*

In the global consensus on sustainable development, social innovation has become a key strategy to address complex social challenges. However, facing the unique challenges of multi-stakeholder participation, social innovation requires new solutions for cross-boundary collaboration and effective communication. In this context, the digital collaboration openness(DCO) offers unprecedented opportunities for social innovation. Drawing on resource orchestration theory, this study utilizes data from 4,599 social innovation projects on GitHub to explore the impact of DCO on social innovation. The empirical results indicate that DCO can facilitate social innovation; DCO influences social innovation by promoting multi-agent resource orchestration(MARO), and the positive relationship between DCO and MARO is strengthened by the leadership social influence. This research not only enriches the theories of social innovation, digital collaboration, and resource orchestration but also provides valuable guidance for social innovation practices in the digital era. Particularly, this study underscores the significance of DCO in addressing the complexities of multi-stakeholder engagement and social issues, offering new perspectives and insights for designing effective digital collaboration strategies.

CTO: **Beyond Algorithmic Control: Self-Coordination in Collectives Based on Decentralized Protocol**

Author: **Aljona Zorina**, *IESEG School of Management (LEM-CNRS 9221)*

Author: **Robert Wayne Gregory**, *U. of Miami*

Author: **Ola Henfridsson**, *U. of Miami*

Author: **Joana Pereira**, *Leeds U. Business School*

There is growing demand in society for self-organizing collaborative work toward a common goal while preserving a high degree of autonomy of the diverse actors involved. At the same time, existing solutions for facilitating coordination among actors at scale tend to focus on algorithmic control, exercised by a central authority (i.e., platform owner) whose interests and behaviors are not necessarily aligned with the collective. We introduce the notion of decentralized protocol as an alternative to algorithmic control and address the following research question: “How do diverse actors jointly organize themselves toward a common goal without relying on a central authority to scale coordination?” We study OpenStreetMap (OSM), the world’s largest mapping community, which has 10 mln users and produces a high-quality free and editable map of the world, while operating with no formal leadership or user superposition rights. Based on interviews, virtual ethnography, and ethnographic observations of how a variety of tensions are coordinated and resolved in four local OSM communities in Belarus, Belgium, Russia, and Portugal, we identify the key mechanisms of decentralized protocol-based coordination: maintaining collective awareness, establishing collective ownership, and negotiating collective order and contribute a Model of Decentralized Protocol that enables diverse actors to work toward a common goal without having to rely on algorithmic control to organize for coordination at scale.

DEI: Reconciliation Action Plans: Fixing The Whiteness Problem

Author: **Mark W. Jones**, *U. of Melbourne*

Author: **Mark Rose**, *Deakin U.*

Author: **Pauline Stanton**, *RMIT U.*

In Australia, the First Peoples estate is influenced by ongoing colonial contexts, government policy, organisational Reconciliation Action Plans (RAPs), Indigenous Economic Development Agencies and First Peoples Founders who lead, own, manage, and control their enterprises. This paper explores RAPs, which are White Australian organisational cultural change initiatives, and examines if and how they influence relationships, respect and opportunities with Founders of First Peoples enterprises pursuing economic self-determination. We know that First Peoples are excluded from their unceded resource rich lands, many experiencing 'fourth world' socio-economic living conditions. We apply an Indigenous Research Approach, utilising Indigenous Standpoint, elevating seven Founder voices from yarning, and ask: what do Founders of First Peoples enterprises see as the benefits and limitations of RAPs? What can be learnt from the experiences of RAPs that needs to be done by corporate Australia in progressing their reconciliation journey following a toxic referendum campaign? We identify three key findings. First, that RAPs offer some benefits by providing First Peoples procurement opportunities as well as cultural and racism awareness training for an organisation's non-Indigenous employees. Second, the limitations of RAPS include: the transactional nature of some RAPS, a lack of skills and knowledge in building reciprocal relationships with First Peoples Founders and communities and the continuing overt and covert displays of racism and racist assumptions. Our third key finding identifies Whiteness as the problem and we conclude that a focus on Whiteness is necessary in successfully navigating the reconciliation journey.

DEI: How Employees' Perceptions of Gender Equity Impact Firm Innovation

Author: **Xiaoyu Li**, *Xi'an Jiaotong U.*

Author: **Fujing Xue**, *Sun Yat-Sen U.*

Author: **Ting Zhang**, *Nanjing U. of Information Science and Technology*

Author: **Nan Hu**, *Nanjing U. of Information Science and Technology*

Author: **Wei Duan**, *Xi'an Jiaotong U.*

This study empirically investigates the influence of employees' subjective perceptions of gender equity in the workplace on firm innovation. Utilizing a dataset comprising 525,341 online reviews from Glassdoor across 436 firms, we create a novel Perceived Gender Equity Index (PGEI) through textual analysis and the Word2Vec machine learning algorithm. Our baseline results demonstrate a significant positive relationship between the gender equity perceived by employees and firm innovation, providing substantial evidence of the importance of perceived equity in the workplace. Our mediation analyses reveal that employee satisfaction and mental well-being serve as mediating factors in the relationship between employees' perceptions of gender equity and firm innovation. Moreover, we find that this positive relationship is especially prominent in firms characterized by higher levels of organizational complexity and market competition. Our research enriches the existing literature by offering a novel measurement approach and illuminating the gender equity-innovation nexus, holding significant implications for firms' strategic endeavors toward genuine gender equality.

DEI: Nature + Nurture: Familial Influences, OB, and Social Equity, from the Lens of Genetic Research

Author: **Yimo Zhu**, *National U. of Singapore*

This paper provides a scrutiny of the profound role that familial influences and genetic effects play in shaping human organizational behavior, particularly in leadership and career choices. Initially, we delve into the impacts of the family environment, encompassing socioeconomic, psychological/behavioral patterns, and genetic factors, on individual behavior, with a concentrated focus on their correlation with leadership and vocational selection. Despite these factors being instrumental in molding individual life trajectories, the paper highlights the oft-overlooked application of genetic research within the realm of social science. Subsequently, we provide an overview of the evolution of behavioral genetics and its application within social science, mapping the journey from twin and familial studies to candidate genes, and further to Genome-Wide Association Studies (GWAS) and Polygenic Risk Scores (PRS). Within this framework, we explore the concept of gene-environment interaction, taking into consideration the limitations and controversies associated with these studies. Ultimately, we discuss the future trajectory of gene-environment interaction research, specifically focusing on how to enhance our understanding and utilization of genetic information in studying social equity. By probing into the application of genetics in the study of organizational behavior and its integration with theoretical approaches, this study aims to shed new light on the understanding of human behavior and social equity.

DEI: Nationalism in Family Businesses: Privileging Domestic Employees Under Foreign Employees' Radar?

Author: **Marie Deferne**, *Bern*

Author: **Thomas Köllen**, *U. of Bern*

Author: **Andreas Hack**, *U. of Bern*

For family businesses, local and national embeddedness and loyalty are often key success factors which shape their identity, providing them with legitimacy and privileged access to local resources. However, just as with other businesses, family businesses are often dependent on an international workforce, if they wish to become (or remain) internationally competitive. Family businesses may therefore find themselves caught on the horns of a dilemma: they are expected to favor domestic employees, yet must simultaneously signal a welcome to foreign employees. Based on data drawn from 3,609 French and Swiss employees working in Switzerland, this article analyzes, for the first time, how this dilemma manifests itself in the perceived organizational climate for foreign employees. It is apparent that whilst Swiss employees perceive their French colleagues as being more excluded in family businesses (as compared to non-family businesses) solely on the job/career level, their French colleagues in turn perceive French employees as being more excluded solely on the social level. Since it is only the French employees' exclusion on the career/job level that has an impact on the trust both groups of employees have in their work environment – in different directions, respectively – the trust of Swiss employees rises when French employees receive less job/career-related support, whilst the trust held by French employees does not decrease. For family businesses in particular, this renders the potentially contradictory requirements of needing to be simultaneously nationally loyal and internationally attractive less demanding. By adding in the issue of nationalist dynamics in the workplace, this article makes an important contribution to family business research. Furthermore, by incorporating the perspective of privileged groups, this article broadens the discourse on diversity and inclusion at work.

Gender Discrimination and Inequality

Session Moderator: **Felix Hoch**, *U. of Münster*

DEI: **Gender-Discriminating Institutions as Trade Barriers for Gender-Diverse International Firms**   

Author: **Felix Hoch**, *U. of Münster*

Author: **Jonas F. Rudsinske**, *Georg-August-U. Göttingen*

This study investigates the gendered nature of internationalization processes by recognizing the role of gender-discriminating institutions. Based on an integrated theoretical framework combining Resource Dependence Theory with Institutional Theory, we theorize that gender-discriminating institutions create gender-specific trade barriers restricting the ability of female directors to provide resources in the form of information, contacts, and legitimacy. We show empirically that firm internationalization, in the form of foreign sales, is affected by the interaction between the board of directors' female share and gender-discriminating institutions in foreign countries, as firms with a high share of female directors sell relatively less to discriminatory destination countries. This firm-level relationship transfers to country-level trade flows when using countries' aggregate share of female directors and bilateral exports in a structural gravity framework. Our findings suggest that institutionalized discrimination against women is a barrier to firm internationalization, which serves as the foundation for similar macroeconomically significant effects on international trade. This might give rise to disadvantages for female directors even from non-discriminatory home countries.

DEI: **Shadows in Academia: Disparity in Academic Award Recognition For Global South Scholar**   

Author: **Poonam Singh**, *Maynooth U., Ireland*

Author: **Olga Igorevna Ryazanova**, *Maynooth U.*

Author: **Peter McNamara**, *Maynooth U.*

This study examines the underrepresentation of Global South scholars in the realm of academic society awards. It explores the extent to which these scholars are acknowledged in awards bestowed by prominent academic institutions like the Academy of Management and others. The study reveals a significant underrepresentation of Global South scholars among award recipients, highlighting the systemic biases in academic recognition. It assesses the impact of scholars' employment affiliations and the geographical location of their Ph.D. granting institution on their likelihood of receiving awards. By employing statistical methods like Relative Rate Index and Logistic Regression, the research provides empirical evidence of the disparities in award distribution. The study contributes to the ascribed status theory by demonstrating that association with high-status entities, such as Global North institutions, can mitigate the disadvantages associated with lower ascribed status. It underscores the need for policy changes to promote diversity and inclusivity within academic institutions and challenges the prevailing belief in a fair and unbiased academic milieu.

DEI: **Racial and Gender Inequality in the Brazilian Labor Market**   

Author: **José Roberto Carvalho Junior**, *U. Federal de Viçosa*

Author: **Wesley Silva Xavier**, *U. Federal de Viçosa*

Author: **Marco Aurélio Ferreira**, *Unviuersidade Federal de Viçosa*

This article examines gender and race disparities in the Brazilian Labor Market, specifically in the earnings of graduates from Brazilian Federal Universities after the adoption of the Affirmative Action Law implemented in 2012. The law reserves 50% of seats for students who completed high school in public schools, predominantly including economically disadvantaged and Black students. To achieve this, an online survey was conducted, gathering responses from 11,458 graduates across 18 Brazilian Universities. The analysis utilized chi-square tests and multinomial logistic regression to explore occupational and salary outcomes. The results highlight salary disparities in the Brazilian labor market based on gender and race, with women of Black ethnicity predominantly found in lower salary brackets, while male and White graduates attain more favorable occupational and salary outcomes.

DEI: **Evidence of Indirect Discrimination Against Black and Indigenous Men in a Simulated Hiring Scenario**    

Author: **Tanya Bilsbury**, *Saint Mary's U., Canada*

Author: **Steven Smith**, *Saint Mary's U., Canada*

Racialized and criminalized men represent intersecting groups of marginalized workers. In simulated hiring scenario with 417 subjects, participants were randomly assigned to assess the résumé of a fictitious candidate who did or did not have a criminal record. Participants were asked to make a hiring decision for a position that the candidate was fully qualified to hold. We manipulated the names of the fictitious candidates to evoke the perception that the candidate was a White, Black, or Indigenous man. We found evidence of indirect discrimination based on an interaction between race and criminal record status, such that the presence of a criminal record was a greater disadvantage for racialized candidates. Content analyses found further support for indirect discrimination. Race was never reported as a reason for rejecting racialized candidates. Rather, racialized candidates were ostensibly rejected for other reasons, which were comparatively overlooked in White candidates: having a criminal record or being perceived to lack education, experience, or professionalism. The implications of the study underscore the need for affirmative action or quota-based hiring models, because even when overt discrimination is avoided, it can still manifest through indirect means.

Minorities and Marginalization

Session Moderator: **Pardeep Singh Attri**, *U. of Bath, UK*

DEI: Epistemic Invisibilization - Dalits' Experiences of Epistemic Injustices in the Indian IT Industry      

Author: **Pardeep Singh Attri**, *U. of Bath, UK*

Author: **Vivek Soundararajan**, *U. of Bath*

Marginalized stakeholders in organizations are often rendered invisible, but there is limited research on how their knowledge and experiences are made invisible, which we refer to as epistemic invisibilization, perpetuating epistemic injustice. So, we conducted a study on the lived experiences of Dalits in the Indian IT sector. Our research reveals three practices used by dominant caste groups to invisibilize the episteme of marginalized stakeholders: ignoring their knowledge, limiting their knowledge creation, and imposing dominant knowledge. In response, Dalits engage in two practices to gain epistemic visibility: producing counter-knowledge and mobilizing knowledge communities. However, their struggle for epistemic visibility remains unresolved due to the pervasive impact of historical caste-based marginalization. Our study enriches the theoretical understanding of invisibility and epistemic injustice and contributes to the emerging field of caste research within organizations.

DEI: Increasing Racial Minority Presence Negatively Predicted Movie Sequel Ratings, but Less so After BLM      

Author: **Yu-Wei Lin**, *Leavey School of Business, Santa Clara U.*

Author: **Shiyu Yang**, *Texas A&M International U.*

Author: **Wencui Han**, -

Author: **Jackson Lu**, *MIT Sloan School of Management*

Watching movies is among the most popular entertainment and cultural activities. As Hollywood calls for eliminating racial disparity, how do viewers react when a movie sequel increases racial minority actors in starring roles ("minority increase")? On the one hand, such sequels may receive better ratings if viewers appreciate racially inclusive casting for its novel elements (the value-in-diversity perspective) and moral appeal (the fairness perspective for diversity). On the other hand, consumer discrimination research suggests that if viewers harbor bias against racial minorities, sequels with minority increase may receive worse ratings. To examine these competing possibilities, we analyze a novel panel dataset of 435 movies nested in 173 series released from 1998 to 2021 and conduct text analysis of 312,457 reviews. Consistent with discrimination research, we find that minority increase negatively predicts movie ratings, a link mediated by toxic language in movie reviews. Importantly, these effects are mitigated after the advent of the Black Lives Matter (BLM) movement. We also rule out alternative explanations for the negative link between minority increase and movie ratings (e.g., cast change aversion; performance credential differences). We conceptually replicate the bias mitigation effect of BLM in a pre-registered experiment, finding that increasing the salience of BLM grows White audience's acceptance of minority presence in a movie sequel. This research illustrates the power of social movements in fostering diversity and inclusion.

DEI: The Voice Mosaic of Ethnic Workers: A Cross-Cultural Analysis      

Author: **Patricia Tabarani**, *U. of Illinois at Urbana-Champaign*

Author: **Christine A. Riordan**, *U. of Illinois at Urbana-Champaign*

Lately, direct employee voice has been garnering attention from HRM and OB scholars owing to its numerous benefits within organizations. However, many questions remain unexplored: How did the surge in the adoption of direct voice influence the voice participation of workers with low-status identities such as ethnic minorities in the workplace? How do organizational practices, including the adoption of indirect voice channels, and different cultural contexts predict the involvement of these communities in direct voice? To address these important inquiries, we use the European Social Survey data across 17 countries, paired with GLOBE data tracking national cultural dimensions to examine the voice behaviors of ethnic minorities and test the strategic role enacted by effective indirect voice representation in driving direct voice engagement of these marginalized communities across different culture values (e.g., power distance, institutional collectivism, and ingroup collectivism). Consistent with Social Identity Theory, our findings indicate that ethnic workers were less likely to participate in direct voice compared to their nonethnic counterparts. Additionally, while indirect voice efficacy was found to motivate the participation of ethnic minorities in direct voice in cultures high on power distance, collectivist cultures were more likely to deter them from engaging in similar behaviors. Finally, our supplementary analysis corroborates the role of nonunion representation in bolstering direct voice participation among ethnic workers.

DEI: Mixed Messages: Under-Represented Minorities Receive More Conflicting Aggregated Feedback      

Author: **Ting Zhang**, *Harvard Business School*

Author: **Tuna Cem Hayirli**, *Harvard Business School*

Author: **Modupe Akinola**, *Columbia U.*

We explore whether the developmental practice of collecting and aggregating multi-source feedback generates more conflicting information for underrepresented minorities (URMs) than their White counterparts. Using an abductive approach, we examine qualitative feedback given to 242 medical school students during their clinical rotations and find that Black and Latino students are more likely than White students to receive conflicting performance feedback. Further, an examination of quantitative feedback given to 2,288 Master in Business Administration (MBA) students by their peers during their first semester reveal a similar pattern with Black students receiving more conflicting feedback relative to White students. Moreover, we find that the more conflicting the feedback, the lower the propensity for Black students to seek guidance in the form of executive coaching to debrief the feedback. Taken together, these findings have implications for theory and practice related to the development of URMs in organizations by showing that traditional processes designed to benefit all individuals, regardless of their race, may ultimately fall short of their intended purpose.

New Directions in Sexual Harassment Research: Third Party and Meta- organizational Perspectives

Session Chair: **Shannon Rawski**, *Ivey Business School*
Session Chair: **Catherine Deen**, *U. of New South Wales*
Discussant: **Anne M. O'Leary-Kelly**, *U. of Arkansas*

Decades of sexual harassment (hereafter, SH) research largely focused on the harasser and target interactions. In this symposium, we open doors for new research directions in this domain by offering an array papers (three empirical and one review) that examined SH from third- party (i.e., bystanders, observers) and meta-organizational perspectives. Specifically, our papers extend SH research by considering social roles beyond the traditional harasser-target dyad, such as the bystander and observer roles, and by considering meta- organizational contexts where SH may be perpetuated by third parties in ways that are not effectively governed by intra-organizational mechanisms. The symposium discussant, Professor Anne O'Leary-Kelly, will integrate the papers and guide audience discussion toward future research directions. We aim to capture the spirit of the AOM 2024 theme – Innovating for the Future – by pushing researchers beyond traditional or stereotypical SH incidents toward the complex gray areas and undefined roles that still plague the modern work environment with the occurrence of SH.

This symposium features research addressing cutting edge issues aimed at increased understanding and full organizational inclusion of people with disabilities. We include five research studies by 18 disability scholars, two discussants and two session co-chairs from Belgium, Canada, France, India, Poland, Switzerland, The Netherlands and the United States. Topics of focus include working with neurodiverse employees; examining the roles of managers and leaders; and the effects of remote work employes with disabilities. Our discussants will synthesize the presentations to suggest future research directions and practical implications for promoting diversity, equity and inclusion within organizations. Our collection of papers is notable for its range of topics, all of which are at the forefront of DEI research.

ENT: **Strategic Change in New Ventures: An Integrative Review of Pivoting and Business Model Innovation**

Author: **Vanessa Lind**, *Ruhr U. Bochum*

Author: **Syeda Nimra Batool**, *Royal Holloway, U. of London*

Author: **Stefanie Bröring**, *Ruhr U. Bochum*

A growing body of research looks into substantive transformation of new venture's business model through pivoting or business model innovation (BMI) to create or sustain competitive advantage. However, burgeoning literature on pivoting and BMI rooted in separate streams of research is difficult to navigate because conceptualizations and interlinkages of these seemingly interchangeable yet distinct phenomena remain fuzzy. Through an integrative literature re-view, we systematically differentiate between pivoting and BMI as distinct concepts, delineate interlinkages between them and explicate five foundational dimensions of differentiation including context, triggers, managerial choices, change in business model and outcomes. Building on our analysis, we outline a set of future research directions for examining: Pivoting and BMI in light of the venture creation process; defining, measuring, and ensuring stand-alone characteristics for pivoting and BMI; establishing the concept of pivoting within entrepreneurship literature; and the intersection of BMs and strategy.

ENT: **Strategic Geography: Exploring the Influence of Spatial Proximity on New Venture Success**

Author: **Cornelius Boy**, *Heinrich-Heine U. of Dusseldorf*

The success of new ventures is highly dependent on their ability to acquire external resources, especially during their formation. Prior research has indicated that spatial proximity to diverse potential resource providers can be beneficial in acquiring these essential resources quickly. Against the backdrop of resource dependence theory, we extend these findings by introducing granular spatial boundaries and identifying interaction effects across different resource provider types. We validate our research model empirically by applying an extended Cox proportional hazard model to a multi-source, longitudinal dataset comprising 504 US-based high-tech ventures combined with comprehensive data on venture capital investors and universities. Our findings indicate that the effects of resource proximity on initial funding success are highly localized, exhibiting sharp and heterogeneous spatial boundaries depending on the type of resource provider. Furthermore, we find that the effects of different resource provider types are complementary rather than substitutable.

ENT: **Stigmatization and Pivoting Pathways: The Role of Entrepreneurs' Collective Identity**

Author: **Abbar Ali Saiyed**, *Ozyegin U.*

Author: **Sondos Gamal Abdelgawad**, *IE Business School*

Author: **Mujtaba Ahsan**, *San Diego State U.*

This study examines how religious minority entrepreneurs respond to identity stigma at the individual, occupational, organizational, and industry levels. Specifically, we investigate the strategies entrepreneurs adopt to counter stigmatization. We argue that sudden stigmatization of industries erodes the community identity of entrepreneurs that historically enabled them to address market needs and compels them to pivot. Using meat and leather industries as a context, we conduct an inductive analysis of minority entrepreneurs who face stigmatization amidst the rise of religion-infused nationalism. Our findings reveal that founders employ various stigma management strategies, including boundary management, dilution, information management, and reconstruction, to navigate enacted and felt stigma. Additionally, we find that the type of pivots minority entrepreneurs enact is influenced by the various modes used to inflict stigma on the community identity and how the entrepreneurs individually make sense of it. This study contributes to the entrepreneurship literature by expanding the focus on religion as a central attribute of founders' identity and exploring the stigma management process within the venture context. Moreover, we provide insights into the removal and maintenance of stigma through the interactive combination of different stigma management strategies. By addressing this critical issue faced by minority entrepreneurs, this research enhances our understanding of the complexities involved in navigating stigmatized identities in venture operations.

That's Replicable: Building Cumulative Knowledge in the Face of Fads, Obsessions, and Malpractices

Organizer: **Vishal K. Gupta**, *U. of Alabama*

Host: **Christina Theodoraki**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

Panelist: **Per Davidsson**, *Jönköping International Business School*

Panelist: **Constance E. Helfat**, *Tuck School of Business at Dartmouth*

Panelist: **Jeffery McMullen**, *Indiana U. - Kelley School of Business*

Panelist: **Herman Aguinis**, *George Washington U.*

There is growing concern about the veracity and robustness of knowledge claims made by organizational researchers. The failure to confirm the findings of landmark studies, along with a drastic increase in retractions rates at many reputable journals and high-profile cases of research fraud, have raised questions about the trustworthiness of both findings and established research practices. The purpose of this plenary is to discuss the role of replication – independent confirmation of published findings – in advancing knowledge in the face of fads, obsessions, and malpractices among academics. A panel of distinguished senior scholars will share their views on why (or why not) replication can help build cumulative knowledge in management and entrepreneurship research. We will have plenty of time for audience members to ask questions and engage with the panel.

Impact Entrepreneurship: Bridging Environmental, Social, and Responsible Entrepreneurship

Organizer: **Viktoria Luise Unger**, *LMU Munich School of Management*
Organizer: **Esther Salvi**, *IMD Business School*
Moderator: **Jelena Spanjol**, *Ludwig Maximilian U. of Munich (LMU)*
Organizer: **Ali Aslan Gümüşay**, *LMU Munich*
Panelist: **Sophie Catherine Bacq**, *International Institute for Management Development - IMD*
Panelist: **Gideon D. Markman**, *Colorado State U.*
Panelist: **Pablo Munoz**, *Durham U. Business School*
Panelist: **Siddharth Vedula**, *TUM School of Management, Technische U. München*
Panelist: **Jeff York**, *U. of Colorado, Boulder*

In an era marked by critical societal and environmental challenges, impact entrepreneurship holds the potential to unite related, yet largely fragmented perspectives that focus on improving the world through new venture creation and growth. An impact entrepreneurship perspective offers an opportunity to move beyond fragmentation toward cohesion around the tripod of environmental, social, and governance (ESG) concerns in entrepreneurship, often addressed in separate literature streams. Drawing on entrepreneurship and management literatures at the intersection of impact and entrepreneurship, the symposium aims to delve into this dynamic domain, bringing together leading authors and voices from the frontlines of environmental, social, and responsible entrepreneurship. The primary goal of this symposium is to foster a critical dialogue among leading scholars in the field. We aim to delve into how impact entrepreneurship serves as a catalyst for change, integrating market and societal logics to address pressing global challenges. This dialogue will not only provide a holistic view of current academic discourse but also identify gaps and propose future research priorities. The format is designed to stimulate thought-provoking conversations among panelists and with the audience, facilitating a critical exploration of emergent themes and directions in impact entrepreneurship. This symposium represents a unique opportunity to merge diverse perspectives spanning environmental, social, and responsible entrepreneurship, paving the way for more inclusive impact entrepreneurship scholarship.

Physician Responsibilities & Outcomes

Session Moderator: **Yaru Chen**, *U. of Liverpool Management School*

HCM: **Doing Jurisdictional Work: Organizations and the Nurturing of Professionalization** → 

Author: **Yaru Chen**, *U. of Liverpool Management School*
Author: **Ian Kirkpatrick**, *U. of York Management School*
Author: **Trish Reay**, *U. of Alberta*

There has been significant attention to professionalization projects, although the focus has so far been almost exclusively on how professionals themselves engage in actions designed to claim or extend their jurisdiction. We build on recent work exploring a potentially symbiotic relationship between organizations and professionals, to explain how organizational actors can encourage and facilitate processes of professionalization. Drawing on data from China, we studied the experiences of Community Health Centers (CHCs) as they participated in the development of the General Practitioner profession. We develop a conceptual model explicating three sub-processes that organizations can enact to support the efforts of new professionals as they attempt to realize the extent of their jurisdiction within workplace settings. By highlighting the jurisdictional work of organizational actors, we contribute to the literature by developing a more nuanced understanding of the symbiotic relationship between organizations and professionals. We also contribute to the literature by showing how organizations can provide opportunities for professionals to establish relational authority and claim jurisdiction as they engage in the co-production of professionalization projects.

HCM: **Navigating Effort-Reward Imbalance and Workplace Happiness in Healthcare** → 

Author: **Kamal Badar**, *Nottingham U. Business School (Malaysia)*
Author: **Yasir Mansoor Kundi**, *Institute of Business Administration, Karachi*
Author: **Saima Ahmad**, *College of Business and Law, RMIT U.*
Author: **Nasib Dar**, *Khyber Pakhtunkhwa Education Monitoring Authority Peshawar, Pakistan*

Leveraging upon effort-reward imbalance (ERI) and conservation of resources (COR) theories, we construct and validate a model that examines the impact of ERI on happiness at work. Further, our framework delves into the mediation of bullying perpetration and the moderation of perceived voice climate. Through a multi-wave survey and two experimental studies of doctors and nurses working in diverse cities in Pakistan, our findings affirm a negative association between ERI and happiness at work. Notably, bullying perpetration emerges as a mediator in this relationship. Moreover, our results indicate that perceived voice climate acts as a moderator, weakening the indirect link between ERI and happiness at work (mediated by bullying perpetration) at higher levels of perceived voice climate. Our study addresses gaps in healthcare literature by unraveling the intricacies of how and why ERI impacts happiness at work, an area significantly underexplored in the well-being of healthcare professionals. In response to the growing emphasis on HRM-focused well-being research, our investigation provides actionable insights for targeted interventions, particularly in the healthcare sector, aiming to enhance overall workplace conditions.

HCM: **Managing Institutional Complexity in Constrained Work Practices** → 

Author: **Melike Nur Findikoglu**, *Ozyegin U.*
Author: **Zeynep Erden**, *ZHAW School of Management and Law*

Based on a qualitative study of public primary care services in Turkey, this research delves into how actors interpret and manage institutional complexity manifested in conflicts between their professional and the dominant state logics within constrained work practices. The study challenges the common assumption in the literature that actors are autonomous in making practice-related decisions and choosing which logic to enact. However, in such settings, the logic choice does not necessarily dictate the actions. We demonstrate that even two physicians choosing the same logic might act differently on the ground. Our findings reveal a two-stage response scheme, with a primary response directed immediately to the carrier of the dominant logic within the practice setting, followed by a discretionary secondary response given later to the originator of that logic outside the setting. Moreover, the nature of the carrier influences shaping the primary response. While the primary response may only temporarily reconcile the conflict, leading to a vicious circle, the secondary response may resolve the conflict permanently. Our research contributes to the literature on the micro-foundations of institutional logics by offering a nuanced understanding of how actors with limited autonomy exhibit different responses to conflicting logics, thereby causing variations in practice outcomes.

HCM: **Budgetary Performance Feedback and the Power of Doctor-Managers' Perceptions**

Author: **Manuela Paolini**, *U. of Studies Gabriele d'Annunzio Chieti - Pescara*
Author: **Domenico Raucci**, *G. d'Annunzio U. of Chieti-Pescara (Italy)*
Author: **Fausto Di Vincenzo**, *G. D'Annunzio U. of Chieti-Pescara*

The reform processes affecting Public Healthcare Organizations (PHOs) have significantly changed the tasks and responsibilities of physicians heading Operational Units (OUs), making them "doctor-managers". This hybridization makes them vulnerable to role ambiguity, with possible dysfunctional effects on their behaviors and managerial performance. The enhancement of psychological factors in budgeting practices may help to reconcile their new managerial role with the traditional clinical professional domain. Rooted in psychology-based budgeting research, this study aims to shed light on the perceptual role of Budgetary Performance Feedback (BPF) to avoid undesired psychological outcomes. It examines the influence of BPF on doctor-managers' Perceived Organizational Support (POS) and their satisfaction with the budget holder role. It also investigates the mediating effect of POS in the BPF-role satisfaction connection. The empirical analysis was conducted by administering questionnaires to a sample of doctor-managers of Italian PHOs. A linear regression model was performed to test the hypotheses. Findings show that BPF perceptions positively influence POS and satisfaction with the budget holder role; further, POS fully mediates the BPF-role satisfaction link. The study adds to the limited healthcare empirical research on the individual-level benefits of performance information, by providing evidence of how the underexplored perceptions of BPF can positively impact doctor-managers' attitudes towards the managerial role. This paper highlights how PHOs can mitigate doctor-managers' role ambiguity risks by developing budgeting practices that pay attention to psychological factors linked to their functioning and the development of POS to the managerial role.

Exploring Pay Structures and Job Evaluation Techniques in Modern Workplaces

Session Moderator: **Helen Hailin Zhao**, *U. of Hong Kong*

HR: **Lost in the Maze: An Action Research About Performance Pay Complexity**  

Author: **Helen Hailin Zhao**, *U. of Hong Kong*
Author: **Shuning Liu**, *U. of Hong Kong*

Pay for performance (PFP) systems are intended to incentivize employees to improve their performance through monetary rewards. However, our analysis of archival compensation data in a large manufacturing factory found no significant correlation between job performance and performance-based pay among their frontline workers. This disconnection prompted further investigation into the PFP system's design, revealing its complexity as a barrier for employees to observe how their job performance leads to higher performance-based pay. We suggest that performance pay complexity is not unique to this factory but rather a widespread problem in organizations due to the common needs to address multiple objectives and constraints. Drawing on systems theory, we suggest that performance pay complexity can hinder employees' ability to understand and navigate the system effectively, weakening the incentive effect of PFP systems. To address this problem, the factory developed and implemented an intervention that aimed at simplifying its PFP system. We analyzed the archival compensation data before and after the intervention to assess its effectiveness. The results showed that the intervention resulted in a stronger relationship between performance and performance-based pay and a significantly higher level of job performance among frontline workers. This action research study underscores the importance of considering performance pay complexity in designing and implementing PFP systems.

HR: **Autonomous Job Design and Shared Vision as Moderators to the Pathway from PFP to Service Quality** 

Author: **Thomas A. Birtch**, *U. of Exeter*
Author: **Flora Chiang**, *China Europe International Business School (CEIBS)*
Author: **Byron Y. Lee**, *China Europe International Business School (CEIBS)*

Understanding when and how individual pay-for-performance (PFP) can help achieve an organization's goals, objectives, and priorities is strategically important. By integrating the sensemaking and resource perspectives, this study introduces a new conceptualization to understand PFP's effects on firm-level performance. Using multi-source data collected from employees and customers of three large restaurant chains, we demonstrate that the effects of perceived PFP on firm performance (service quality at the store-level) are transmitted through employees' customer oriented behaviors (COBs) and further that such effects are moderated by two organizational levers in different ways. Specifically, when (i) autonomous job design is low and/or (ii) shared vision is high, the positive effects of PFP on COBs are strengthened. Our results reveal that in order for PFP to be effective for firm performance, its implementation must be viewed by simultaneously considering the impact of other organizational levers and their associated resource implications. Implications to theory and practice are discussed.

HR: **More Costs of Insecurity: Turnover as a Consequence of Worker Financial Insecurity** 

Author: **Gavin Joseph Williamson**, *U. of Tennessee, Knoxville*
Author: **Timothy P. Munyon**, *U. of Tennessee, Knoxville*

A growing literature suggests that workers' financial insecurity (or perception that their financial resources are insufficient) undermines job performance, hindering organizational objectives. We argue that the organizational costs of financial insecurity do not end there. Based on classic and contemporary models of turnover, we hypothesize that employee financial insecurity predicts both voluntary and (potentially unproductive) involuntary turnover above and beyond compensation. Further, we draw on attribution theory to argue that perceived negative (positive) changes in the worker's financial position also contribute to (forestall) turnover above and beyond state levels of financial insecurity, but only when the cause of the change is attributed to the employer. We test these arguments using data from a longitudinal national panel containing financial security and job transition data across more than 60,000 person-years. Our results indicate that highly financially insecure workers are nearly twice as likely to leave (voluntarily or involuntarily) than more secure workers, and changes in financial security also predicted turnover. In sum, this paper identifies multiple mechanisms through which financial insecurity impacts voluntary and involuntary turnover, offering further evidence that organizations contribute to the financial insecurity of their employees to their own detriment.

HR: **Emotional and Cognitive Consequences of Miscalibrated Bonus Expectations**  

Author: **Shuisheng Shi**, *Hunan U.*
Author: **Felix Böllingen**, *LMU Munich*
Author: **Xiang Zhou**, *Sun Yat-Sen U.*
Author: **Peter Bamberger**, *Tel Aviv U.*
Author: **Jason D. Shaw**, *Nanyang Technological U.*

We developed an emotion-driven cognitive account of how miscalibrated bonus expectations impact employee performance. Results from Study 1 suggest that both joy and hostility have adverse effects on cognitive performance immediately subsequent to bonus communication. While joy mediated the effect of over-met bonus expectation on cognitive performance, both joy and hostility mediated the effect of under-met bonus expectation on cognitive performance. Study 2 replicated the findings from Study 1 and found further that the effects of miscalibrated bonus expectations on cognitive performance persisted for 12 hours. In a field experiment of 401 freelance editors (Study 3), joy mediated the effect of miscalibrated bonus expectations on freelance editors' cognitive performance as well as task performance assessed both immediately and one week after the bonus communication. Theoretical and practical implications of these results are discussed.

Qualitative Insights: Shifting Work Attitudes and Navigating Workplace Changes

Session Moderator: **Larissa Pomrehn**, *Heinrich Heine U. Düsseldorf*

HR: **A Longitudinal Qualitative Study on HR Professionals' Perceptions of Artificial Intelligence**

Author: **Larissa Pomrehn**, *Heinrich Heine U. Düsseldorf*
Author: **Lynn Schmodde**, *Heinrich Heine U. Düsseldorf*

The integration of artificial intelligence (AI) into human resource management is rapidly increasing, while knowledge about human resource professionals' (HRPs) perceptions of AI is underdeveloped. Additionally, the COVID-19 pandemic had an impact on the way organizations operate, while it is unknown how perceptions of AI changed during this crisis. To address both research gaps, we conduct a qualitative longitudinal study by interviewing 23 HRPs in two time periods, i.e., before and after the pandemic. Our findings show that HRPs perceive the introduction of AI initially as either enabling or disabling, leading to specific short-term outcomes. However, internal and external factors can lead to a shift of AI perceptions, resulting in either positive or negative long-term outcomes. We develop a framework demonstrating how HRPs perceive AI and which short- and long-term effects can be derived. A sentiment analysis revealed that perceptions of AI did not majorly change, remaining neither more positive nor more negative between the two time periods. Thus, we provide insights for the theoretical discourse on user perceptions of AI with a focus on the COVID-19 pandemic. Practitioners can benefit from our findings as we show how organizations can shape user perceptions of AI while diminishing potential drawbacks.

HR: **Belonging in Hybrid Work – Experiences of Expert Employees**

Author: **Laura Ilona Urrila**, *U. of Vaasa*
Author: **Aija Siiriäinen**, *U. of Vaasa*
Author: **Liisa Mäkelä**, *U. of Vaasa*
Author: **Hilpi Kangas**, *Finnish Institute of Occupational Health*

Despite a wealth of research on remote or work-from-home work during the pandemic and post-pandemic era, the understanding of the social and relational implications of hybrid work is limited. Drawing from expert employees' experiences during a 1.5-year-long period of prolonged remote and hybrid working, this study explores how the sense of belonging might develop in the continuously evolving hybrid work context. Thirty-two interviews with 16 experts were conducted at two time points between 2020 and 2022. Our analysis detected opportunities and concerns stemming from the peculiarities of remote and hybrid work: flexibility (Freedom to organize work; Fading boundaries between work and spare time), virtual competence (Boost in remote working skills; Impaired access to information), and social interactions (Lost connections; Newfound ways to connect with others). We present a model that illustrates how the sense of belonging may develop in the context of hybrid work, driven by the interplay of flexibility, the acquisition of virtual competence, and engagement in social interactions, all while alternating between working alone and alongside others. We also debate potential 'early signs' of work loneliness in hybrid work, and what might constitute flourishing work relationships in this age.

HR: **The Jungle of Talent Journey: Complexity and Change in Employee Perceptions of Talent Recognition**

Author: **Marina Pletscher**, *The U. of Lucerne*
Author: **Anastasia Sapegina**, *U. of Lucerne, Center for Human Resource Management*

Talent management programs commonly aim to motivate and retain high-potential employees. However, recent research has revealed that the opposite effect can occur: After recognition, some talents feel stressed, dissatisfied, and frustrated. Based on signaling theory, the current study examines employees' immediate reactions to talent status communication and the factors that influence a potential change in their long-term perception of their talent status. Data were collected in the winter of 2022/23 and consist of 33 qualitative in-depth interviews with employees recognized as talents in an international industrial organization. The results demonstrate that while talent recognition is initially perceived as a positive signal, the absence or ambiguity of further signals related to talent management has long-term negative effects on talent attitudes and behaviors. These findings contribute to the ongoing discussion on the implications of talent recognition by demonstrating, first, that the talent journey can be perceived very differently even within an organization with the same framework for the entire talent pool; second, that not only transparency but also customization of TM-related signals is critical for beneficial program outcomes; and third, that talents continuously reevaluate their employment, with numerous contextual factors influencing this evaluation, making organizational talent management a real "jungle" and suggesting the need for a well thought-out and individualized approach to talent management.

HR: **How Does Career Trap Impact Frontline Managers' Involvement in HRM? A Qualitative Approach**

Author: **Keith Townsend**, *Griffith Business School, Griffith U.*
Author: **Hossein Heidarian Ghaleh**, *U. of East London*
Author: **Rebecca Loudoun**, *Griffith Business School, Griffith U.*
Author: **Jongwook Pak**, *U. of Auckland Business School*

The domain of people management responsibilities has expanded beyond the HR department, and frontline managers (FLMs) are expected to occupy the center stage. Acknowledging this shift, scholars have begun to study how FLMs should be prepared and motivated for their HR role; however, evidence has affirmed that FLMs are showing frail enthusiasm and readiness to be involved in HR responsibilities. Although much has been written to address this concern, little attention, if any, has centered on FLMs' career development. As such, this study attempted to resurface FLMs' career development in devolution literature. Our findings of 20 semi-structured interviews with FLMs from various industries proved very insightful. After codifying our data, we reached to six underlying themes (i.e., absence of career development planning, unstructured approach to mentoring, misaligned training and development expectations, excessive role overload, role disengagement, and turnover intention), illuminating that FLMs are forgotten and, while they are overwhelmed with a wide array of core duties, their chance for personal growth is largely disregarded. The theoretical framework we have produced here offers novel insights into the FLMs' actual experience of career development opportunities in contemporary organizations and provides potential explanations behind why FLMs are unwilling to embrace or fail to accomplish their assigned roles.

Innovating HR Practices: Shaping Firm Outcomes and Fostering Innovation

Session Moderator: **Rene Arseneault**, *Business administration faculty, Laval U. (Québec, Canada)*

HR: **Innovative and Creative Organisational Cultures: The Impact of Innovative HR Practices**

Author: **Rene Arseneault**, *Business administration faculty, Laval U. (Québec, Canada)*

Author: **Grant Wilson**, *U. of Regina*

Author: **Felix Ernesto Ballesteros Leiva**, *FSA ULaval (Laval U.)*

We examine how innovation orientation and creativity climate mediate the innovative HR practices-performance relationship. Antecedents to innovation orientation have been largely ignored, and our research explores its link to creativity climate. Employees working for publicly listed firms are surveyed on their perceptions of innovative HR practices. We use complimentary statistical methods (i.e., SEM, fsQCA) to analyze our dataset. We find that although innovation orientation and creativity climate are interlinked, they are indeed distinguishable constructs. Both innovation orientation and creativity climate mediate innovative HR practices similarly. However, our double mediated model highlights their distinguishability, and aligns with prior research suggesting the importance that creativity precedes innovation. All innovative HR practices are significant predictors of performance except for compensation practices. In terms of stimulating creative and innovative organisational cultures, our findings suggest that extrinsic motivators may be detrimental to intrinsic motivators. Our research responds to calls for more dynamic approaches in understanding the innovation-creativity link through an HR lens. Implications and future research are discussed.

Generative artificial intelligence (AI), such as ChatGPT, which can process and generate a vast amount of information, is increasingly being applied to employees' work. The impact it has on employee performance, particularly creativity, has been a subject of keen interest. Based on componential theory of creativity and attention restoration theory, our multi-source and three-wave field study data have revealed that the use of generative AI may enhance employees' creativity by promoting intellectual stimulation. However, the impact of generative AI on cognitive fatigue is contingent. Employees with high levels of perfectionism are likely to experience more cognitive fatigue when using generative AI, thereby further restricting their creativity. This paper provides an understanding of the relationship between generative AI use and creativity from the perspective of employees' cognitive thinking, revealing the dual impact of employees' engagement with AI and providing suggestions for guiding employees to effectively use AI.

HR: **A Bibliometric Analysis of Four Decades of Artificial Intelligence in Human Resources Research**

Author: **Gertrude Iranganie Hewapathirana**, *Gulf U. of Science and Technology*

Author: **Raghd Al Hajj**, *Gulf U. for Science and Technology*

Author: **Ahmed Rashad ElMelegy**, *Gulf U. for Science and Technology*

Author: **Mohamed Moustafa**, *Gulf U. for Science and Technology*

Author: **Loi Nguyen**, *Metropolitan State U.*

The rapid evolution of Artificial Intelligence applications in the field of human resources motivated researchers to examine the development and deployment of these technologies in the different human resources functional disciplines. Despite the increase in the number of publications, the bibliometric mapping and analysis of the literature is still narrow in focus and lagging in drawing an all-inclusive understanding of the research domain. To overcome several identified weaknesses in this area, this work reviews the extant literature via a comprehensive bibliometric analysis of 466 articles spanning four decades of scholarly work on Artificial Intelligence in human resources. The study investigates the current research status, identifies the main sources and most influential authors and countries, and determines the major research themes and trends. As such, the current paper provides a critical evaluation of the literature in a rapidly evolving field of study and offers several insights for practice and future research.

HR: **A Curse or a Blessing? Artificial Intelligence in Talent Attraction and Recruiting**

Author: **Julia Stefanie Roppelt**, *HHL Leipzig Graduate School of Management*

Author: **Andreas Stefan Schuster**, *HHL Leipzig Graduate School of Management*

Author: **Nina Sophie Greimel**, *HHL Leipzig Graduate School of Management*

Author: **Dominik Kurt Kanbach**, *HHL Leipzig Graduate School of Management*

Author: **Kakoli Sen**, *Woxsen U.*

The shifting demographic landscape, coupled with a shortage of qualified personnel and internal staffing constraints, has prompted global corporations to reevaluate their talent attraction and recruiting (TA&R) strategies. Artificial intelligence (AI) emerges as a promising tool to address these challenges, garnering increasing attention from both academics and practitioners. Related research suggests that adoption of AI in TA&R may lead to the emergence of harmful forms of practices (HFP) within organizations. Despite its criticality, empirical research in this area remains sparse. Addressing this gap, we investigate these HFP through a mixed method study, focusing on the underlying catalysts. First, we conducted in-depth interviews with 42 TA&R specialists, leading to the development of the 'Adoption of AI in TA&R: Framework on Negative Consequences.' This model posits that technological, individual, and organizational factors are key in precipitating HFP, including biased decision-making, data privacy breaches, efficiency reduction, and employee displacement. Second, we validated these observations, by executing a quantitative, survey-based study (n=100). Our research contributes to the discourse on AI adoption in TA&R. Further, we provide TA&R managers with a nuanced understanding of HFP resulting from the adoption of AI in TA&R and guide them to proactively implement countermeasures to successfully navigate emerging trends.

The Future of Work: Navigating Changes and Embracing Virtual Environments

Session Moderator: **Kathryn Brett**, *Australian National U.*

HR: **Flexible Work Branding: Exploring How Organizations Signal Flexible Work Information on Websites**    

Author: **Kathryn Brett**, *Australian National U.*

Author: **Sarbari Bordia**, *Australian National U.*

Author: **Karen Jansen**, *NC State U.*

This paper qualitatively investigates how organizations across the Anglo and Nordic regions signal flexible work information via their corporate websites. These countries were chosen because they offer varying levels of flexibility enabling cross-cultural and organizational-level analyses. Flexible work practices are a key factor in employees' decisions in applying for jobs. Employees search corporate websites to explore employment conditions and gain a sense of their personal fit with an organization's culture, but this information is not always available or easy to find. Our research suggests that organizations purposefully signaling flexible work information are engaging in flexible work branding. We also identify several dimensions that enable or motivate flexible work policies, most notably improvements to culture through diversity and inclusion. We conclude that flexible work branding is an innovative practice and an emerging phenomenon that is improving access to organizational information.

HR: **Tensions Between Career Orientations in a Hybrid Work Setting**  

Author: **Peter Holdt Christensen**, *Copenhagen Business School*

The COVID-19 pandemic and its associated impacts have fundamentally altered how employees interact with each other, producing widespread changes. Through 52 ethnographic interviews in a single company I identify, how and why the COVID-19 pandemic for some employees has produced new preferences for working from home days, but at the same time for other employees have maintained a traditional preference for working from the corporate office five days a week. This leads to different career orientations, and I show how these differences lead to tensions such as extreme grouping of employees, depopulated office spaces, and lack of knowledge sharing. The new normal of work – hybrid work – both makes different career orientations more salient and requires balancing employees' different preference for working from home or from the corporate office.

HR: **Working from Home, Loneliness, and Time Theft** 

Author: **Bert Schreurs**, *Vrije U. Brussel*

Author: **Surendra Babu Talluri**, *Indian Institute of Management Bangalore*

Author: **Imke Dirkx**, *Vrije U. Brussel (VUB)*

Author: **I. M. Jawahar**, *U. of New Mexico*

Remote work has surged in recent years, diminishing employees' visibility within the organization, and reducing workplace social interactions. Simultaneously, many managers express concerns about potential abuses of the freedom associated with working from home. Drawing on Robinson and Bennett's model of workplace deviance and Lawler's affect theory of social exchange, we posit that at the within-person level, remote work will be associated with time theft via workplace loneliness. This indirect relationship will be moderated by affective commitment, evidencing a cross-level mediated moderation. We collected daily diary data from 130 employees over two working weeks, resulting in 977-1058 observations at the within-person level. At this level, we found an indirect effect of remote work on time theft via loneliness. Although the cross-level interaction effect was not statistically significant, the results showed that working remotely was positively related to loneliness among employees with average and high levels of affective commitment, but not among employees with low levels of affective commitment. We discuss implications for theory, research, and practice.

HR: **Digital Onboarding: A Systematic Review and a Research Agenda**

Author: **Joëlle Simonet**, *Bern U. of Applied Sciences*

Author: **Martina Becker**, *Bern U. of Applied Sciences*

Author: **Sabrina Schell**, *Bern U. of Applied Sciences*

Author: **Nikolaus Obwegeser**, *Bern U. of Applied Sciences*

In today's fast-paced world, getting new employees up to speed through effective and efficient onboarding has become more important than ever. Further accelerated by the COVID-19 pandemic, the use of digital onboarding practices is increasingly widespread in practice. This study presents the results of an interdisciplinary systematic literature review to understand the current state of research on digital onboarding. We find that existing studies are fragmented across disciplines and lack a cumulative tradition, pointing to the need for a more systematic approach and research agenda to advance the field. To address these challenges, we synthesize extant research across disciplinary boundaries and introduce a new model that combines insights from these different fields. The proposed model emphasizes the importance of digital skills and how technologically advanced an organization is in ensuring successful onboarding. Our work provides two main contributions: first, we outline research questions that can guide future studies; second, we offer a new model that can be used for both academic research and practical applications in digital onboarding.

Managing Global Value Chains Responsibly

Session Moderator: **Grazia D. Santangelo**, *Copenhagen Business School*

IM: The Labyrinthine Path: Buyer Practices, Local Labor Regulations, and Supplier's Social Upgrading     

Author: **Shubham Singh**, *Rutgers Business School*

Author: **Ajai Singh Gaur**, *Rutgers U.*

This study examines how MNE buyers' purchasing practices and suppliers' domestic labor regulations influence emerging economy-based suppliers' social performance in global value chains. Using an instrumental variables approach, we analyze a sample of 2,236 emerging economy suppliers between 2008 and 2012 to estimate the causal association between buyers' power, suppliers' home country labor regulations, and suppliers' compliance with buyers designated social and labor standards. Results reveal supplier compliance with buyer-designated social standards is positively affected by larger buyer order volumes and more stringent local labor regulations, especially for larger factories. However, in countries with weaker labor regulations, buyers have limited power to compel compliance due to inadequate institutional support. While confirming buyer-driven governance as a driver of compliance, findings highlight how unsupportive home country institutions critically undermine compliance efforts. This study highlights the intertwined effects of global purchasing practices and local institutional dynamics on supplier social performance. Our findings offer insights into the need for more context-conscious, collaborative approaches to advance socially sustainable global value chain governance.

IM: When do MNEs Walk the Talk in GVC Relationships? Contract Termination with Irresponsible Suppliers

Author: **Grazia D. Santangelo**, *Copenhagen Business School*

Author: **Christian Schumacher**, *Assistant Professor, Copenhagen Business School*

Author: **Can Tihanyi**, *WU Vienna*

Global value chain (GVC) relationships produce economic gains for multinational enterprises (MNEs) but expose them to reputational risks. We study the role of media coverage of a lead supplier's corporate social irresponsibility (CSI) in the termination of GVC relationships. We suggest that the extensive media coverage of a lead supplier's CSI has a positive association with the likelihood of contract termination because reputational considerations prevail over economic gains. We also advance that the likelihood of termination is reduced in situations of higher dependence of the MNE on the supplier because the power asymmetries in favor of the supplier make the economic considerations more compelling. Finally, we argue that the relevance of the economic considerations associated with the supplier's power is less prominent when the supplier's CSI regards human rights violations because they increase the reputational risk for the MNE. Instead, it becomes less prominent in situations of higher GVC spatial complexity because GVC complexity gives the MNE an alibi for its failure to monitor the irresponsible supplier, thus reducing the reputational risk. We find support for our arguments on a sample of 21,631 unique buyer-supplier dyads among Forbes Global 2000 companies over the period 2014-2019. The study advances GVC research

IM: Firm Termination of Irresponsible Suppliers: The Role of Severity of Irresponsibility  

Author: **Yuxi Cheng**, *U. of Liverpool Management School*

Author: **Anupama Phene**, *George Washington U.*

Our paper explores whether and under which conditions a firm terminates its relationship with an irresponsible supplier in its global supply chain. Integrating the systems perspective in the context of sustainability with the literature on organizational aspirations, we posit that firms use nuanced decision-making to assess the cost-benefit ramifications of maintaining relationships with irresponsible suppliers while considering the expectations of their stakeholders. We hypothesize a non-monotonic relationship between supplier irresponsibility and firm termination of the relationship, with firm tolerance for intermediate severity of irresponsibility. We further propose that firm financial and sustainability underperformance relative to industry peers act as moderators, prompting firms to distance themselves from irresponsible suppliers, at both intermediate and high severity.

IM: Small Worlds Within Global Value Chains: Implications for MNEs' ESG Controversies

Author: **Sangho Chae**, *Warwick Business School*

Author: **Seongtae Kim**, *Aalto U. School of Business*

Author: **Byung-Gak Son**, *Cass Business School, City U. London*

Author: **Igor Filatotchev**, *King's College London*

With increasing public attention on corporate sustainability, environmental, social, and governance (ESG) controversies such as toxic waste spills and modern slavery are becoming more prominent in global value chains (GVCs). Having suppliers located in diverse countries has its benefits but it has limitations in terms of information access and regulating supplier behavior. This paper investigates whether multinational enterprises (MNEs) with heterogeneous GVCs are more prone to ESG controversies and proposes a structural characteristic of the GVCs as network governance that can mitigate MNEs' exposure to such controversies. Building on the literature on small-world networks, we suggest that the small-worldness of an MNE in its GVC and beyond can mitigate the impact of the GVC heterogeneity on ESG controversies. Our analysis of Fortune 500 firms from 2010 to 2019 reveals that MNEs with heterogeneous GVCs indeed suffer more from more ESG controversies, while small-worldness attenuates the negative impact of GVC heterogeneity. Our findings contribute to the international business and network studies literature by highlighting small-worldness as complementary network governance available for MNEs in managing the negative aspect of complex GVCs.

International Experience in Global Business Strategies Revisited: New Opportunities and Challenges

Organizer: **Fei Qin**, *School of Management, U. of Bath*
Panelist: **Fei Qin**, *School of Management, U. of Bath*
Panelist: **Alvaro Cuervo-Cazurra**, *Northeastern U.*
Panelist: **Anna Grosman**, *Loughborough U.*
Panelist: **Igor Filatotchev**, *King's College London*
Panelist: **Yong Li**, *U. of Nevada, Las Vegas*
Panelist: **Sabina Nielsen**, *Copenhagen Business School*

Navigating today's global markets is a complex challenge, influenced by fast changes in technology, consumer behaviors, and regulatory conditions. Understanding both local nuances and global differences is crucial for handling international business effectively. Research has looked into how international experience helps businesses expand globally, focusing on factors like geographic reach, ownership and governance, and the traits of strategic leaders and employees. We explore different types of international experience and how they interact with other major forces in the global market, particularly technological and institutional shifts, to help overcome new challenges and seize new opportunities.

IM: Strategic Argumentation for Corporate Political Strategy Success in the De-Globalization Era

Author: **Yilang Feng**, *U. of Illinois at Urbana-Champaign*

Author: **Jordan Siegel**, *U. of Michigan, Ross School of Business*

In answering a call for more work examining the portfolio of nonmarket strategy choices, we propose the concept of strategic argumentation to analyze an under-studied aspect of corporate political strategy: when a firm goes into a room with a regulator, an important aspect of the firm's strategy is what specific arguments it presents to persuade the regulator. Through strategic argumentation, firms provide an intellectual architecture for supporting the underlying logic of the regulator's policy paths that the firms prefer. Analyzing a hundred thousand applications submitted by U.S. firms to the office of the United States Trade Representative (USTR) for tariff exemptions during the U.S.-China Trade, we quantify applicant firms' various arguments based on Chinese technological threats, U.S. national interests, global supply chain constraints, and so on. We show that such strategic arguments matter to a significant degree in explaining firm-level outcomes even after controlling for various forms of resource expenditure in political influence. To further understand why some arguments work as intended, while other arguments were either ineffective or even backfired, we conducted in-person interviews in Washington, D.C., with regulators and lobbying firms that participated in the USTR tariff exemption process. We further find that, to achieve sustained political strategy success, firms' choice of strategic arguments has to be dynamically consistent with a changing and turbulent nonmarket environment.

IM: Cultural Tightness and Reliance on AI in Augmented Decision-Making

Author: **Jelena Cerar**, *WU Vienna*

Author: **Chiara Fabrizi**, *WU Vienna*

Author: **Phillip C. Nell**, *WU Vienna U. of Economics and Business*

Artificial intelligence (AI) is transforming decision-making in various organizational settings by supporting human decision-makers. However, although several AI-augmented decision-making applications occur in multi-decision settings, current literature treats AI reliance in those settings as purely influenced by single-decision level variables, fully neglecting factors specific to the multi-decision setting. Yet, understanding such factors is crucial, as reliance in single decisions might be influenced by the overall cognitive experience with the task and the AI tool. In particular, the AI-augmented decision-making literature has overlooked two cognitive factors specific to multi-decision settings – i.e., cognitive load stemming from the task-level workload and cognitive dissonance from a task-level disagreement with AI in the multi-decision session. We develop a Cognitive Multi-Decision AI-Augmentation Theory of AI reliance in multi-decision settings and theorize that a higher task-level workload increases AI reliance, whereas experiencing higher task-level disagreement with AI during the multi-decision session reduces AI reliance in single decisions. We test our theoretical framework in two multi-decision innovation selection contexts by conducting a lab experiment with 53 young business professionals, a field experiment with 88 managers in one firm, and 20 interviews to contextualize our results. We explore the findings' implications for theories of AI reliance and organizational practice.

IM: Artificial Intelligence and Climate Actions in Global Supply Chains

Author: **Wenjie Liu**, *City U. of Hong Kong*

Author: **Ying Zhao**, *City U. of Hong Kong*

Artificial intelligence (AI) has far-reaching implications on not only where and how multinational enterprises (MNEs) create and capture value but also how they impact broader society and the natural environment. This paper theorizes and examines how MNEs' AI capabilities affect the adoption of climate actions in global supply chains. Drawing on the characteristics of AI as a general purpose technology (GPT), we propose that AI capabilities can be harnessed by MNEs to provide their supply chain factories worldwide with innovative solutions tailored to accommodate the local circumstances and complex challenges faced by these suppliers, thereby enhancing their environmental capabilities to afford climate actions. We further argue that while unleashing the full potential of AI as a GPT requires investments in intangibles, large intangible investments compel MNEs to trade off economic and non-economic goals, thus hindering the allocation of AI capabilities for promoting climate actions in global supply chains. Our arguments are supported by strong evidence derived from a unique dataset of AI-related patents which we integrate with a proprietary database on the climate actions of 203 global brands across 19 countries in Chinese supply chains. Our findings offer important implications for international business and management theory.

IM: ESG and Capital Market Survival: Evidence from Foreign Firms' Delisting on U.S. Stock Exchanges

Author: **Yiyi Liao**, *U. of Sydney*

Author: **Jonathan P. Doh**, *Villanova U.*

Author: **Yi Li**, *U. of Sydney Business School*

Author: **Vikas Kumar**, *U. of Sydney Business School*

Drawing on the institutional literature as it relates to liability of foreignness and strategies to overcome those liabilities via legitimacy-enhancing strategies, we suggest that ESG performance bestows legitimacy upon foreign firms and enhances their prospects for survival. We also investigate two country-level factors that moderate the effect of ESG performance on capital market survival: the political affinity and FDI interdependence of the home and host country. High political affinity signifies aligned national interests and thus reduces perceived regulative distance and associated political risks and legitimacy concerns faced by foreign firms and therefore lessens the benefits of higher sustainability performance. Higher levels of FDI interdependence between host and home country enhances the cognitive legitimacy of a foreign firm, reducing the benefits of ESG performance as a legitimacy signal. We test our intuition on a sample of 829 foreign firms that were listed on U.S. stock exchanges between 2010 and 2021 and find support for our hypotheses.

Drivers of Internationalization

Session Moderator: **Gina Aprilitasari**, *King's Business School*

IM: **International Expansion of PSFs: Role of Reputation, Sectoral Knowledge, and Heterogeneity**

Author: **Gina Aprilitasari**, *King's Business School*
Author: **Nuruzzaman Nuruzzaman**, *Alliance Manchester Business School, U. of Manchester*

This study explores the unique challenges faced by Professional Service Firms (PSFs) during their internationalization process. These challenges stem from the distinct characteristics of PSFs, such as the intangibility and variability of services, the inseparability of production and consumption, and jurisdiction-specific demands. Traditional international business theories do not fully account for these factors. Our study suggests that these distinctive elements significantly shape the development and utilization of intangible firm-specific advantages (FSAs), such as reputation and sectoral knowledge diversity. We argue that these two intangible FSAs are closely tied to the success of internationalization for PSFs. Furthermore, our research delves into how variations in professional jurisdiction and the nature of knowledge among PSFs impact the relationship between these intangible FSAs and the firms' international expansion. To support our findings, we analyze a sample of US-based accounting and law firms spanning the years 2018 to 2022.

IM: **Arranged Friendship: A New Construct, Instrument, and National Rankings**

Author: **Vas Taras**, *U. of North Carolina, Greensboro*
Author: **Ola Taras**, *U. of North Carolina, Greensboro*

The study introduces a new construct labeled here "arranged friendship" (AF). Based on an international sample of 7,481 people from 141 countries, an instrument for measuring AF is developed and validated, and national rankings are offered for the prevalence of AF beliefs and practices. In general, AF is empirically associated with, or predicted by, the economic development of the country, such that less economically developed countries tend to display a higher preference for AF. However, the U.S. and Canada are notable outliers: while highly economically developed, the two countries score high on AF values and practices, similar to how these two countries score on religiosity. The data also indicate that AF is on the rise in the U.S., whereas such a tendency is not observed in the rest of the world.

IM: **Cross-Border Acquisition Speed of EMNEs: Towards Validation and Extension of Springboard Perspective**

Author: **Peter J. Buckley**, *U. of Manchester*
Author: **Oded Shenkar**, *Ohio State U.*
Author: **Surender Munjal**, *Aston Business School*
Author: **Somnath Lahiri**, *Illinois State U.*
Author: **Tapas Mishra**, *U. of Southampton*

According to the springboard perspective emerging market multinationals (EMNEs) engage in rapid internationalization to acquire strategic assets but implies that such rapidity can continue over an indefinite time-period. In this study, we test the suggestion drawing on organizational learning theory and examining speed of cross-border acquisitions (CBAs) undertaken by EMNEs. Our empirical modelling on a large sample of Indian EMNEs demonstrates that speed of CBA first increases and then gradually decreases as EMNEs conduct CBAs across different global clusters and increase their aggregate CBA number. The curvilinear (inverted U-shaped) relationship between CBA speed and the (a) number of global clusters and the (b) aggregate number of conducted CBAs, validates the 'aggressive internationalization' postulation of the springboard perspective, but negates its 'indefinite continuance' implication. Managers need to realize that in their quest for acquiring strategic assets in the advanced economies they will not be able to sustain CBA speed of their firms indefinitely. While advantages of learning will enable CBA speed to initially increase, various complexities associated with management of learning across the conducted CBAs will cause speed to gradually decline.

IM: **Home City Norms in Foreign Equity Size and the Isomorphic Decision of Firms in the ICT Sector**

Author: **Tariq H. Malik**, *Liaoning U.*

Most scholars of international business show one or all of these factors responsible for the equity commitment decisions in high technology sectors: Cultural distance (CD), experiential distance (ED), geographic distance (GD) or legal distance (LD). This article proposes that equity size decision in cross-country investment in response to the above factors is moderated by normative isomorphism. It proposes that focal firm gains cues from its home city's firms in equity investment abroad. The empirical evidence from the ICT (information and communication sector) on 21000 events (19000 firms) of equity investment decision from 103 home countries and 149 host countries shows a robust support for the assumption that the direct links of the four types of distances in the past literature are moderated by the isomorphic factors. Data selected from dynamics years (2007 to 2009) captures the pre-crisis and post-crisis of 2008 to further strengthen the argument that high uncertainty induces isomorphic behaviour of firms. Multilevel mixed model reveals the interaction effects between four types of distances and isomorphic contingencies. Thus, the institutional role in the firm's decision to allocate equity in a foreign firm cannot be ignored.

Coordinating Portfolios of Operations Globally

Session Moderator: **Lilac Nachum**, *City U. New York*

IM: **Is Reputation a Shared MNE Assets? The Tension Between Categorical and Institutional Logics**

Author: **Lilac Nachum**, *City U. New York*

Author: **Suparna Chakraborty**, *U. of San Francisco*

We apply reputation theories to the MNE and study the reputational consequences of a move undertaken by an MNE subunit in a given locale for the MNE as a whole. We conceptualize this outcome as the balance between categorical and institutional influences that manifest to varying degrees at different organizational and spatial levels. We employ foreign listing as the reputation-generating move and test its reputational effects based on a sample of non-US MNEs that listed in the US. We find that the listing affects the reputation of US subunits and the MNE in the US and globally. The impact varies by the strength of the categorical associations among subunits, measured by their names, and the diversity of their audiences, measured by their aggregated cultural distance from the US. These findings deepen the understanding of the way by which MNE reputation is formed and the mechanisms that drive reputational spillovers among MNE subunits. The study extends the theorization of assets' sharing among MNE subunits to reputation, an asset that received limited research attention in spite of its critical impact on MNE. It shows that reputation is an asset that creates value for MNEs across countries and can support international expansion.

IM: **(When) Do Springboard Strategies Create International Growth?**

Author: **Rishiraj Kashyap**, *Ivey Business School*

Author: **Andreas P.J. Schotter**, *Ivey Business School*

Author: **Prakash Satyavageswaran**, -

Author: **Snehal Awate**, *Indian Institute of Technology, Bombay*

Past studies have established that Emerging-Market Multinationals (EMNEs) adopt aggressive asset-seeking strategies in foreign markets (springboard strategies) to augment their technological capabilities and bolster their competitive position in their respective home countries. But we still lack concrete knowledge of whether and under what conditions they effectively orchestrate their expanding asset portfolio to drive subsequent international growth, that is, growth across their network of foreign subsidiaries. Our paper addresses this gap. We draw on the Penrosean perspective to explain that EMNE's asset orchestration relies heavily on managerial learning about the utilization of new resources, leading to the creation of resource fungibilities across foreign markets and subsequently to revenue growth in those markets. Interestingly, we find that the revenue growth effect weakens – to the point of de-growth – as the complexity of EMNEs asset portfolio increases, indicating limits to EMNEs' asset orchestration effectiveness. We attribute this reduction to constraints on the managerial capacity for learning and cross-border coordination at EMNE's headquarters. We test and find evidence for our arguments, utilizing a novel dataset of foreign subsidiaries of Indian pharma multinationals which exhibit a preference for cross-border acquisition-led international expansion. Our study extends the springboard perspective by shedding light on outcomes of global asset orchestration, which is critical for springboard strategies. The findings highlight complementarity between classical Penrosean and dynamic capability-based MNE asset orchestration perspectives.

IM: **A Firm-Level Analysis of “Indirect” FDI: The Case of the Global Network of Japanese MNEs**

Author: **Kozo Kiyota**, *Keio U. Japan*

Author: **Kiyohiko Ito**, *U. of Hawaii at Manoa*

Multinational enterprises (MNEs) control their foreign subsidiaries directly from their headquarters as well as indirectly through other foreign subsidiaries. However, the role and nature of the intermediary subsidiaries in MNEs' global network have been understudied. We use PageRank centrality to analyze the MNEs' global network. Based on data on the top 100 nonfinancial Japanese MNEs, we empirically show that simple measures of network analysis are helpful in evaluating the degree of indirect foreign direct investment and identifying special purpose entities as well as the channels of investment and dividend flows within an MNE.

IM: **EMNEs' Alliance Portfolio National Diversity and Firm Performance**

Author: **Yuying Jin**, *School of Business Administration, South China U. of Technology*

This study examines how a partner's geographical position leads to different effects on the performance of emerging market multinational enterprises (EMNEs) that pursue alliance portfolio national diversity, based on the development level of the specific economic and institutional environment. Building on the resource-based view and transaction cost economic theories, we propose that the contributions of portfolio national diversity to firm performance differ when the foreign partners of EMNEs are from developed versus emerging economies. We use a sample of Chinese MNEs from 2007 to 2017 and find that portfolio national diversity in developed economies has a positive relationship with firm financial performance, and the relationship in emerging economies is negative. We therefore demonstrate why the national environments of partners matter when investigating rationales for portfolio national diversity, although this contextual factor is often neglected.

How do Nationalism and Sanctions Influence MNE Strategies?

Session Moderator: **Ilya Cuypers**, *Singapore Management U.*

IM: Sanctions in an Interconnected World: Firms as Collateral Damage from Institutional Disruption

Author: **Olha Zadorozhna**, *Kozminski U.*
Author: **Harald Pühr**, *U. of Innsbruck*
Author: **Christopher Hartwell**, *ZHAW School of Management and Law*
Author: **Jakob Müllner**, *WU Vienna U. of Economics and Business*

Sanctions are supranational institutions that disrupt firms' cross-border business operations. They change the rules and norms that govern firms' global operations. We propose that such interruption of national, multilateral, or supranational institutions affects all multinational firms—not only those incorporated in the sanctions' target or source countries through different types of exposures (i.e., source, target, third country). Further, we show that the effect of sanctions is contingent on the context in which they unfold. We test our hypotheses on stock-market reactions to sanctions announced after Russia's invasion of Ukraine. Our results indicate that sanctions negatively affect firms with exposure to the target country, or if a broad coalition of countries announces the sanctions. Firms without a target or source exposure appear to benefit from market capture and experience positive abnormal returns.

IM: Rethinking Nationalism in International Business Research: Shift to Social Constructivism

Author: **Hailin Helen Lu**, *Shanghai U. of Finance and Economics*
Author: **Yue Tina Xu**, *Cardiff Business School*

Despite the rising interest in nationalism within International Business (IB) research, its conceptualization remains ambiguous and biased. Limited attention has been paid to disciplines like International Relations and Political Sociology that have a long history of examining nationalism. These fields have a rich tradition of scrutinizing nationalism through both rational choice and social constructivist lenses. In contrast, IB literature predominantly embraces a rationale choice paradigm, conceptualizing nationalism primarily as a political risk emanating from national interest. Through integrating insights from these fields, this paper critiques the current understanding of nationalism and its influence on multinational enterprises (MNEs) in IB studies and suggests a shift towards a social constructivist approach. In proposing this paradigmatic shift, the paper introduces a framework for future research paths characterized by multidimensionality, multilateralism, multilevel analysis, and dynamism. This proposed framework underscores the complexity and evolving nature of nationalism and its implications for IB. The paper emphasizes the need for a more judicious and nuanced approach when incorporating the concept of nationalism from other academic disciplines into IB research.

IM: Where Are You From? Home-Country Nationalism and MNEs' Identity Switching

Author: **Yong Kim**, *Texas A&M U.*
Author: **Ziyi Chen**, *U. of Melbourne*
Author: **Maxim Sytch**, *Ross School of Business, U. of Michigan*

Multinational enterprises (MNEs) often aim to convey an impression of being local when operating in a foreign market, a phenomenon referred to as identity switching. Past research suggests that MNEs' identity switching can be advantageous, enabling them to garner local support in the host country. However, it can also be detrimental as MNEs may violate the expectations of stakeholders in their home country. We propose that the rise of nationalism amplifies concerns about violating the expectations of home-country stakeholders, subsequently discouraging an MNE from engaging in identity switching. Furthermore, we argue that the impact of home-country nationalism is conditioned by the MNE's dependence on the host market as well as its external identification with the home country. We test our arguments using a sample of East Asian MNEs aiming to establish their intellectual property rights in the United States. To test our theory, we employ a difference-in-differences design and exploit a rise in home country nationalism in China prompted by the US-China Trade War. Our results broadly support our theory. Additionally, our post-hoc analysis indicates that, although avoiding identity switching might help MNEs respond to the increasing nationalism in their home country, they may forego the benefits of this strategy, as evidenced by a lower likelihood of their patent applications being granted.

IM: Nationalist Movement Against Foreign Subsidiaries' Parent Country and General Managers' Exits

Author: **Hui ZHANG**, *City U. of Hong Kong*
Author: **Wenjie Liu**, *City U. of Hong Kong*

With the global rise of nationalist movements, general managers (GMs) are of greater importance in navigating foreign subsidiaries through the turbulent environment. However, little is known about whether GMs would stay or leave during the nationalist movement against foreign subsidiaries' parent country. Building upon the social identity theory, we argue that GMs' affiliation with the foreign subsidiaries from the target country enables them to be perceived as outgroup members and suffer severe outgroup biases during the nationalist movement, forcing them to leave. Compared with local GMs, expatriate GMs are more inclined to leave because their foreign national identity complements their organizational identity, and further strengthens their perceived outgroup membership and generate greater outgroup bias. Moreover, GMs are more likely to leave in foreign subsidiaries with greater perceived outsidership but less likely to leave in cities with more intergroup contacts with the target country. Using the anti-Japan nationalist movement in 2012 out of the Diaoyu/Senkaku Islands issue in China as the research context, we analyzed the stay-or-leave decisions of 4009 GMs in Japanese subsidiaries based on the survival analysis and found support for our propositions. We contribute to the research on executive changes in foreign subsidiaries by standing on the side of GMs (supply) to study their responses to the nationalist movement. We also contribute to social identity research by showing that the nationalist movement is an important impetus for individuals' identity-deviant activities and explicating the varying interaction effect of the dual identities of local and expatriate GMs. We extend the literature on the impact of nationalism by showing its influence on managerial careers in multinational enterprises.

Managing Knowledge Sharing in the MNE

Session Moderator: **Vera M. Schweitzer**, *U. of Cologne*

IM: Work Characteristics and Power-Distance Orientation Predict Knowledge Behaviors Across Countries

Author: **Vera M. Schweitzer**, *U. of Cologne*

Author: **Ulrike Fasbender**, *U. of Hohenheim*

Author: **Fabiola Heike Gerpott**, *WHU Otto Beisheim School of Management*

Knowledge is a competitive advantage for international businesses. So far, however, research streams on micro- and macro-predictors of knowledge processes in organizations remain rather disconnected. First, we add to micro-level research by identifying interpersonal work characteristics (contact quality, task interdependence) as crucial determinants of individual knowledge behaviors (knowledge sharing and hiding). Second, bringing in a macro-level perspective, we further suggest that the proposed relationships are affected by cultural values (specifically employees' power-distance orientation). We draw from the dialectic tension model of knowledge behaviors, postulating that knowledge hiding and sharing have distinct underlying motives and can, therefore, occur simultaneously. We combine this with a social exchange perspective, arguing that the exchange of knowledge in social relationships depends on interpersonal work characteristics and culturally rooted expectations. Analyzing a sample of 10,339 employees from seven countries, we find that in terms of micro-level antecedents, employees' task interdependence serves as a double-edged sword by both increasing knowledge sharing and hiding, whereas positive contact quality with colleagues fosters sharing and hampers hiding. Power-distance orientation as a macro-level factor strengthens the effect of task interdependence on knowledge behaviors. Unexpectedly, employees with a higher power-distance orientation more strongly refrained from knowledge hiding when perceiving high contact quality.

IM: Knowledge Sharing in MNCs: Leadership, Hierarchical Similarity, and Cultural Orientation

Author: **Qaisar Iqbal**, *King Fahd U. of Petroleum and Minerals*

Author: **Katarzyna Piwowar-Sulej**, *Wroclaw U. of Economics & Business*

This study uses social exchange theory to investigate the mediating effect of psychological empowerment (PE) on the link between servant leadership (SL) and cross-border knowledge sharing (CBKS) practices. It also investigates the contingent role of collectivism and individualism (individual employee cultural orientation) on the "PE-CBKS" relationship, as well as the moderated-moderating effect of hierarchical similarity (HS). By employing a time-lagged survey study among 199 MNC representatives in Saudi Arabia, SL was found to influence CBKS indirectly through PE. In the presence of greater collectivism, the link between PE and CBKS is strengthened, however, individualism does not moderate the "PE-CBKS" relationship. The presence of HS amplifies the interaction effect (individual cultural orientation and PE) on CBKS. The empirical findings encourage the management of MNCs to apply SL, focus on the individual characteristics of their employees, and develop PE so as to foster knowledge sharing across borders.

IM: Microfoundations of Knowledge Sharing in a Multisectoral Partnership for Grand Challenges

Author: **Carla Sacchi**, *Dept of Business Studies Uppsala U.*

Knowledge sharing is key for multisectoral partnerships, where partners from different sectors (e.g., private firms, public authorities, etc.) collaborate to tackle grand challenges, such as antibiotic resistance, an interdisciplinary problem afflicting the pharmaceutical market as well as global health. This paper asks how knowledge sharing among partners is enabled or prevented in the case of a multisectoral partnership for the grand challenge of antibiotic resistance. A contextualized single-case study of a Swedish multisectoral partnership for antibiotic innovation is analysed with a microfoundations approach. The study finds that, despite some tensions arising in the individual microfoundations, the structure and process of the partnership allow for socialization and individual intrinsic motivations to drive the knowledge sharing. Moreover, the nature of knowledge meant as "domain-specific" is found to be more relevant than the traditional tacit-explicit classification. Beyond these theoretical contributions, the study offers some implications for policy and practice, to support managers of this type of partnerships and policy makers dealing with grand challenges.

IM: Navigating Frictions: Firm Capabilities to Integrate Foreign-Generated Knowledge

Author: **Roisin Donnelly**, *Tilburg U.*

Author: **Daniel Gelsing**, *Tilburg U.*

This paper explores the MNC capabilities in a foreign country that allow the firm to transfer and integrate its innovations from knowledge clusters to other firm operations. Adopting a frictions perspective, we focus on which institutional contexts create stronger needs for recombination capabilities and relational capital. We propose that cultural distance to other firm operations introduces stable and predictable frictions, making recombination capabilities and relational capital particularly salient for the integration of knowledge to other firm locations. Conversely, in host countries with high political frictions, firm capabilities are less adept at addressing the institutional context. Our findings, based on a sample of 1620 MNCs in high technology industries from 33 countries from 1994 to 2019 and their patenting behavior, generally support these hypotheses.

"Redefining Leadership, Management, and Organization: A Call for Innovation and Inclusion Across Diverse Domains" "Leadership is not merely about positions or titles; it's a perpetual commitment to innovation and inclusion, transcending traditional norms and shaping a future that celebrates diversity across all domains." - Dr. Jennifer R. Bishop In recent years, a discernible shift in the discourse surrounding leadership, management, and organizational practices has prompted a critical reevaluation of established norms. This transformative trend extends across diverse domains, from sports leadership to executive diversity in Fortune 500 companies and collaborative initiatives addressing social issues. These scholarly inquiries challenge traditional perspectives, urging a reconsideration of conventional approaches to leading, managing, and organizing. In sports leadership, the conventional emphasis on individualistic prowess attributed to franchise owners, team executives, and coaches has come under scrutiny. The paper "What constitutes a great leader in sports?" challenges this narrative, highlighting the organic emergence of effective sports leadership practices through the efforts of quality upper management. It underscores the importance of holistic, fluid, agile, mindful, strategic, and service-based leadership indicators adopted by upper management, transcending the narrow focus on wins and losses. This paper prompts reflection not only on preconceived notions of sports leadership but also on broader paradigms in leading, managing, and organizing. Turning our attention to executive diversity, the underrepresentation of African Americans in C-Suite positions within Fortune 500 companies stands as a glaring incongruity. Diversity, Equity, and inclusion programs, a disproportionate limitation persists, necessitating a critical examination of conventional paradigms. A comprehensive study, rooted in qualitative methodology, explores the factors influencing the advancement of African Americans into executive-level positions. Trust emerges as a key differentiator, challenging traditional notions of meritocracy and urging a paradigm shift in conventional approaches to leading, managing, and organizing for true diversity and inclusion. The exploration of collaborative initiatives addressing social issues further amplifies the need for rethinking conventional ways of leading, managing, and organizing. While collaboration has gained momentum, a significant gap in understanding persists, particularly in the context of the relationship between nonprofit organizations and the business sector within urban food deserts. The study delves into the multifaceted dynamics of organizational collaboration, challenging prevailing notions and urging a reconsideration of conventional paradigms in community development. Finally, the examination of white delusion within organizations reveals a critical focal point in the discourse on racial disparities. The Unmasking White Delusion: DEI model, developed within the framework of critical race theory, offers a comprehensive approach to address and dismantle white delusion. By systematically reviewing literature and aligning with the three phases of the model—denial, evaluation, and implementation—organizations are equipped to proactively confront and mitigate the adverse effects of white delusion, redefining conventional ways of leading, managing, and organizing for true diversity and inclusion. These diverse papers collectively call for a reexamination of conventional paradigms across various domains, advocating for a more inclusive, equitable, and innovative approach to leadership, management, and organization.

Uncovering the Hidden Economic Value of Social Capital

Organizer: **Raghida Abdallah Yassine**, *Adelphi U.*

Presenter: **Jim Hazy**, *Adelphi U.*

Discussant: **Gita Surie**, *Adelphi U.*

Discussant: **Charles BAKER**, *Adelphi U.*

Presenter: **Mohammad Amirhosseini**, *U. of East London*

This symposium addresses the challenge in advances in technology like generative AI and pandemic effects that have reshaped workplace dynamics and have made the future of work difficult to imagine by exploring complementary sides of these dynamics. It emphasizes the interplay of the dynamics between humans and technology, particularly focusing on the economic value of human interactions and the ethical implications of AI and technology use. Firstly, it explores ways that the economic value that is created by human interactions with other humans and with intelligent machines, can be measured and quantified. Secondly, it explores examples of how Generative AI and other technology platforms are trained by and used by humans in what arguably can be an exploitation of uninformed human participants who transfer their value to the owners of physical and financial capital. This echoes with the need to comprehend the personal development implications of AI in the workplace and how it affects employees, especially within the framework of post-COVID changes in personal values and ambitions. Thirdly, it discusses leveraging human and social capital to create financial value in the form of intellectual property, exploring the value of choice and risk diversification. It specifically highlights AI-enabled technology platforms that gather human interaction data thus providing insights and supporting individual professional development, thereby making the previously intangible “missing” information available and actionable.

Employability and Management Education

Session Moderator: **Olufolake S. Ogunsola**, *Academy for Educational Development*

MED: Nigerian Grand Challenge: College Graduates Employability (WITHDRAWN)  

Author: **Olufolake S. Ogunsola**, *Academy for Educational Development*

Author: **Hamid H. Kazeroony**, *Walden U.*

Nigerian employers face the challenge of recruiting and retaining competent workforces. Most college graduates cannot perform basic office tasks. The problem is that employers in service organizations need to adopt strategies to support Nigerian higher education institutions to enhance graduate employability. This qualitative single case study explored an employer in a service organization's strategy to support Nigerian higher education institutions in improving college graduate employability. The stakeholder theory underpinned this study. Using purposeful sampling, five managers and five graduate employees were interviewed in a service organization in Lagos, Nigeria. Data were analyzed using pattern-matching logic after triangulation of emerging themes from interviews and triangulating the themes with internal and external organizational artifacts. Research results showed that employers have yet to support higher education institutions in enhancing the employability of graduates. A potential positive social change was that its findings could help establish impactful collaboration between higher education institutions and employers in the service sector to boost graduate employability and minimize college graduates' unemployment. Keywords: Graduate employability, unemployment, employer strategy, higher educational institutions

MED: Enhancing Career Adaptability Through Service-Learning in Business Education

Author: **Dave Bouckennooghe**, *Brock U.*

Author: **Adam Michael Kanar**, *Cornell U.*

This study examines career adaptability in graduating business students, focusing on the role of person-situation interactions. Utilizing data from 215 students, it explores how perceptions of service-learning project quality and utility influence the relationship between learning goal orientation and career adaptability. Results indicate that both project quality and utility value, along with learning goal orientation, positively correlate with career adaptability. However, while project quality enhances this relationship, perceived utility value diminishes it. These findings offer insights into optimizing service-learning to foster career adaptability, highlighting the importance of aligning educational experiences with students' learning orientations.

MED: Graduate Employability in the AI-Driven Economy  

Author: **Hanady Basheer**, *Higher Colleges of Technology*

Author: **Hong Bui**, *Birmingham City U.*

Author: **Kendall Jarrett**, *U. of Chester*

The emergence of artificial intelligence (AI) has assumed a pivotal role in shaping the contours of contemporary business education. Business schools confront the challenge of innovating management education to meet the dynamic demands of an AI-driven economy. They find themselves at a critical juncture of adaptation that will have a profound impact on their graduates' future direction and success. Anchoring on stakeholder theory and social learning theory, this qualitative research explores the intricate interplay between business schools, employers and graduates with a focus on enhancing graduate employability in the context of a technologically advanced non-western nation. It formulates an empirically derived model that delineates how business schools can effectively respond to the evolving needs of stakeholders to ensure that graduates are equipped to thrive in the ever-evolving AI-centric world of work. It makes several significant contributions to the existing literature, including a graduate employability ecosystem model that sheds light on factors influencing the employability of business graduates.

MED: Global Competency of Business School Graduates: Lessons from Other Knowledge Creating Organizations   

Author: **Muralee Das**, *U. of Maine*

Author: **Fiona Devlin**, *Ivanhoe Grammar School, Australia*

Being Globally Competent is a major goal of accredited business schools' outcomes for their graduates. Business schools utilize their curriculum and teaching as important mediators to create student global competency outcomes. However, these graduates have already experienced many years of schooling prior to university that may have shaped their attitudes on global matters. What then are these antecedents? Thus, in our exploratory study, we investigate using the largest ever worldwide assessment of global competency in education- the PISA 2018 dataset of 356,000 high school students from 66 countries. We first theorize that higher levels of global mindedness in high school students can result in their increased global competency. Second, as past research shows xenophobia (fear of immigrants) exists amongst U.S undergraduate business school students, we also theorize that high school students' attitudes on immigrants is an important mediator of their global competency. Both our hypotheses were supported. The major contribution is for business schools to learn from high schools as fellow Knowledge Creating Organizations, and include a major antecedent —attitudes on immigration—as a key topic in curriculums and teaching, potentially increasing global competencies of business school graduates.

 **MED: Entrepreneurial Competencies in Vocational Training: The Road Towards Students' Employability?**

Author: **Olivier Toutain**, ESC Dijon Burgundy School of Business

Author: **Michela Loi**, U. of Cagliari

Author: **Matteo Opizzi**, department of economics and business - U. of Cagliari

This work aims to enhance our understanding of how the teaching of entrepreneurial competencies is conceived in the second level of education and how this relates to students' employability by drawing a qualitative investigation into six schools located in France. Achieving this understanding is fundamental to overcoming the lack of empirical knowledge regarding the readiness of the educational system to react to the pressure on competitiveness and employability, which is recurrent in policymakers' discourse regarding the main goals of the educational system. We identified three different perspectives that view the teaching of entrepreneurial competencies: (i) as an emancipatory tool that enables students to set their preferred jobs, (ii) as a way to complement the set of skills students should possess in the vocational and educational training system, (iii) as a not necessary means to employability, as these competencies are not critical in the job market. We highlighted a heterogeneity in the stakeholders' view, leading us to introduce the concept of ecosystem awareness as a way to share visions among stakeholders that make sense for teaching entrepreneurial competencies to all the actors directly or indirectly involved in the educational system.

Technological Innovation and Knowledge Diffusion in Historical Context

Session Moderator: **Anna Spadavecchia**, *U. of Strathclyde*

This session explores the historical context of technological innovation and knowledge diffusion, investigating the factors that drive the spread of innovation across borders and industries.

MH: The Diffusion of Technological Knowledge in the Interwar Period: The Mobility of Inventors, UK-USA

Author: **Anna Spadavecchia**, *U. of Strathclyde*

This paper examines the role of inventors in the international diffusion of technological knowledge in a context of fragmented and nationalistic intellectual property rights. It is based on a novel dataset of inventors associated with more than 8,000 patents granted in the USA to British inventions in the years between the two world wars, and on qualitative archival records. The paper highlights the elusive microfoundations of the inventors' connectivity and demonstrates that inventors were important conduits of technological knowledge through their travels and networks.

MH: How Can the Toyota Production System Continue to be a Source of Competitive Advantage?

Author: **Katsuki Aoki**, *Meiji U.*

This study examines relationships between rhetorical history and firms' competitive advantage by pursuing the following research question: How strategic resources facing a serious risk of imitation can continue to be a source of competitive advantage? It analyzes qualitative data on the Toyota Production System (TPS) collected from a total of 40 interviews with 22 of Toyota's current and former members, as well as from historical archives, such as Toyota's corporate history, articles focusing on Taiichi Ohno, and his speeches. My analysis reveals that the use of rhetorical history by outsiders plays the role of distracting public attention from the essential aspects of the firm's strategic resource (or TPS), thereby making it difficult for outsiders, including competitors, to identify imitation targets. It also reveals that the use of rhetorical history by insiders plays the role of keeping inside members focusing on the essential aspects of the strategic resource, while allowing them to evolve that resource in response to environmental changes. This study highlights that it is the mutual effects of using rhetorical history by outsiders and insiders that allow strategic resources facing a serious risk of imitation to continue to be a source of competitive advantage.

MH: Examining Network-Enabled Responses to Deglobalisation in Historical Perspective

Author: **Emily Buchnea**, *Newcastle Business School, Northumbria U.*

Author: **Nicholas Wong**, *Newcastle Business School, Northumbria U.*

Cycles of globalisation and deglobalisation can be especially impactful for business networks and network actors (firms). Given both patterns of globalisation/deglobalisation and the dynamic nature of networks, a historical perspective is essential in examining how firms experience and respond to eras of deglobalisation. This paper contributes to the understanding of experiences and responses to deglobalisation through a historical case study of a pre-modern trade network and a selection of the key firms operating within the bounds of this network. The historical case study is constructed using a variety of archival data and complemented by an exploration of network structure and composition through network visualisations. We investigate how firms respond to deglobalisation by utilising their network and, in turn, how this impacted their business in the long run. Crucially, we offer alternate perspectives of how firms manage their businesses in times of deglobalisation and suggest that these periods can provide opportunities for some firms, which can translate into positive outcomes in subsequent periods.

(Meta) Cognition and Decision-Making in Learning and Work

Session Moderator: **Julia Coff**, *NYU Stern School of Business*

MOC: Molded by the Ghost: How Physicians Use—and Cease Using—Predictive AI to Learn a Mental Model

Author: **Julia Coff**, *NYU Stern School of Business*
Author: **Elisabeth Yang**, *Yale School of Management*
Author: **Anyada Assavabhokhin**, *Carnegie Mellon U. - Tepper School of Business*
Author: **Batia Mishan Wiesenfeld**, *New York U.*

Scholarship on human-AI collaboration has demonstrated that using AI can stymie learning, induce dependence, and erode human decision making capabilities. Here, we make the case for an alternative path emerging from the use of AI for decision support. In evaluating the clinical deployment of a predictive AI tool in the early days of COVID-19, we discovered that AI use enabled physicians to incidentally learn a mental model. Our exploratory, longitudinal research featured a survey, an interview study, and a controlled experiment that revealed three discoveries. First, users derived from their use of the AI an understanding of the data that mattered, how to interpret it, and how to extrapolate from it to make decisions. They then used this mental model in the absence of the AI tool, itself. Second, owing to having learned this mental model, individuals who used the AI for decision support went on to make better decisions without it. And third, this incidental learning may have undermined decision support over time, as a result of negative feedback loops whereby learning reduced reliance. We contribute to the literature on learning from technology use and on human-AI teaming by illuminating a heretofore overlooked means by which predictive AI use can enable learning and improve autonomous human capabilities. We also shed light on the potential for incidental learning to undermine AI use, over time, with paradoxical implications for how users work with AI.

MOC: When and Why Employees Can (Cannot) Learn from Their Errors: From a Cognitive Rumination Perspective

Author: **Kaili Zhang**, *East China U. of Science and Technology*
Author: **Ellen Choi**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Pisitta Vongswasdi**, *WHU Otto Beisheim School of Management*

Treating errors as workplace goal-nonattainment, and applying the cognitive theories of rumination, we investigate how employees' daily error commission may affect their learning outcomes (i.e., next-day task efficacy) through two after-work ruminative processes: maladaptive rumination (i.e., affective rumination) and adaptive rumination (i.e., problem-solving pondering). Furthermore, we posit that the effect of daily error commission on these ruminative processes depends on the extent to which individuals consider their errors as goal-nonattainment, which we argue will be affected by error controllability and perceived error management climate. In a 10-day experience sampling investigation of 109 employees (N = 1,090), we found that daily error commission is negatively related to next-day task efficacy via affective rumination, and is positively related to next-day task efficacy via problem-solving pondering. Furthermore, we found both error controllability and perceived error management climate mitigate the negative link between error commission and next-day task efficacy via affective rumination, such that the negative indirect relationship was weaker under either higher error controllability or higher error management climate. Error controllability was also found to mitigate the positive link between error commission and next-day task efficacy via problem-solving pondering, such that the positive indirect relationship was weaker under higher error controllability. Our study contributes to theory and practice by elucidating the processes and outcomes related to individuals' learning from errors at work.

MOC: Financial Literacy is Not Enough: The Moderating Effect of Metacognition on Debt Management

Author: **JUNSU PARK**, *Dongguk U.*
Author: **Do-Yeong Kim**, *Ajou U.*
Author: **Lisa Son**, *Barnard College (Columbia U.)*

How well do college students manage multiple debts that differ in interest rates and sizes? Amar and colleagues (2011) found that when asked to play a debt management game, US college students had difficulty lowering total remaining debt due to debt-account-aversion (DAA) – a bias describing an irrational tendency to repay small debts more quickly than larger debts, while ignoring interest rates. The current study was designed to see if there are individual difference factors that contribute to these deviations. Using a sample of US and Korean college students, two experiments were conducted to examine (a) if financial literacy (FL) would relate to debt repayment performance; and (b) whether FL would interact with the accuracy of metacognitive monitoring (MM) in FL in improving performance. In Experiment 1, we demonstrated that US students' FL and its MM at the global level complemented each other to lower total debt. The same was found in Korean students in Experiment 2, further evidencing a three-way interaction between FL and two different types of MMs at the local level – MMKnowing and MMNot Knowing. Specifically, Korean students who were highly accurate in monitoring their performance on the don't know answered items (i.e., high MMNot Knowing) benefited from becoming financially literate in terms of the total debt, compared with their low MMNot Knowing counterparts. This interaction persisted when Korean students were poorly accurate in monitoring their performance on the correctly and incorrectly answered items (i.e., low in MMKnowing) but disappeared when they were high in MMKnowing.

MOC: Behavioral Decision-Making in Project Complexity: A Meta-Cognition Perspective

Author: **Pankaj Vishram Jadhav**, *Weatherhead School of Management, Case Western Reserve U.*

Since the projects operate in a dynamic environment, the interest in understanding project uncertainty and complexity has a long history in organizational behavior studies. However, even though little research has investigated behavioral decision-making in projects, the reflection of interactions of behavioral decision-making happening across multi-paradigms of projects is further ignored. Through the reflective study reported here, we elaborate on the theory concerning behavioral decision-making in multi-paradigms of project complexity. Using the onto-epistemological view, we identify the phenomenological interactions occurring among multi-paradigms in a project and define the mechanism of the phenomenological meta-cognitive regulation through which these interactions occur by forming the meta-cognitive strategies of mental contrasting used in those. My findings indicate that, through the acquisition of meta-cognitive knowledge and meta-cognitive awareness, developing the meta-cognitive strategy of mental contrasting is used to regulate each interaction between different phenomena like the plan, risk, ambiguity, and uncertainty. As a result, using these meta-cognitive strategies of mental contrasting, project managers and stakeholders can navigate through the complexity of projects by making behavioral decision-making-based interactions in projects.

Religion, Values, and CSR Religion, Values, and CSR Religion, Values, and CSR

Session Moderator: **Vu Chu Tuan**, *School of Management, U. of Ottawa*

This session investigates the role of religion and religious values in shaping corporate social responsibility (CSR) practices, entrepreneurial intentions, and business education.

MSR: Religious Involvement and Entrepreneurial Intention: The Role of Well-Being

Author: **Vu Chu Tuan**, *School of Management, U. of Ottawa*

Author: **Trang Pham**, *Telfer School of Management, U. of Ottawa*

Author: **Hien Tran**, *Telfer School of Management, U. of Ottawa*

Purpose The purpose of the present research was to examine the relationships between religiosity, hedonic well-being, eudaimonic well-being, and entrepreneurial intentions. Drawing upon insights from Self-Determination Theory, we argue that religiosity has a significant influence on entrepreneurial intention and this relationship is mediated by eudaimonic well-being. **Design/Methodology/Approach** The first study tests the mediation effect on a sample of almost 20,000 individuals from different religions across countries. The second study uses Heckman's two-stage selection model, which was run on a sample of the general population including both secular and religious individuals. This would mitigate the issue of endogeneity and account for the fact that religion and religious involvement are intentional and as a result of choice. **Findings** Results indicate that a higher degree of religiosity is associated with higher level of eudaimonic well-being that consequently facilitates the formation of entrepreneurial intent. In contrast, religious involvement has an insignificant effect on hedonic well-being, which is negatively related to entrepreneurial intention. The findings corroborate the main findings that eudaimonic well-being benefits from religious participation facilitates entrepreneurial intentions. **Implications** The present results underscore the importance of understanding the mechanisms through which faith believers form entrepreneurial intentions through the intrinsic motivations from their religions. **Originality/Value** This is the first research to provide evidence on the link between religiosity and entrepreneurial behavior through the mediation of well-being according to the lens of self-determination theory. Second, we contribute to literature on the multifaceted nature of well-being and suggest that only eudaimonic well-being has a significant role as an outcome and resource in the enterprising process. **Keywords:** Religion, Religiosity, Entrepreneurship, Hedonic well-being, Eudaimonic well-being. **JEL classification:** Z12, L26, D73, B23.

MSR: Religion as a Cultural-Cognitive Institution in Internationalization of Women-Owned Enterprises

Author: **Michelle Roberts**, *GIBS Gordon Institute of Business Science*

Author: **Anastacia Mamabolo**, *GIBS/U. of Pretoria*

Research on the influence of religion on the internationalisation decisions of women-owned entrepreneurial businesses requires refinement. These internationalisation decisions include the purpose, location choice, and entry modes. The study drew on the cultural-cognitive institution to investigate the influence of religion on the internationalisation decisions of women-owned ventures. Narrative research was conducted on women who owned international business ventures in South Africa. The findings demonstrate that religion shaped the internationalisation intentionality of women. Their religious beliefs gave them meaning for internationalisation. Such religious intention led to the unsystematic belief patterns of internationalisation where women rely on divine provision, guidance, and opportunity orchestration. We found that religious beliefs do not influence location and entry mode decisions in isolation. The co-existence of economic and religious logic influenced the location and entry mode decisions. The study contributes to the literature on women's entrepreneurship, international entrepreneurship, and hybrid entrepreneurship.

MSR: Pedagogical Tensions? Exploring the Integration of Catholic Principles and Business Education

Author: **Andres Felipe Cortes**, *Sacred Heart U.*

Author: **Kathy Dhanda**, *DePaul U.*

Author: **Chelsea King**, *Sacred Heart U.*

Catholic universities tend to share educational purposes of developing a sense of service, forming ethical leaders, fostering moral virtues and social justice, among others. However, as criticisms against capitalism and the role of business in addressing societal and environmental problems increase, business schools in Catholic universities can face the challenge of aligning their institutional mission and values with learning objectives often focused on maximizing wealth, outperforming competitors, influencing consumers, among others. Is there a pedagogical tension between the principles of Catholic higher education and business education? If so, how can it be reconciled? This qualitative and exploratory study aims to illuminate these questions by interviewing business professors at Catholic universities. The study reveals divergent perspectives on the mission of Catholic universities, intriguing viewpoints about the presence of a pedagogical tension, and valuable suggestions at multiple levels of analysis to strengthen connections between business schools and the principles of Catholic education.

MSR: CEO Religiosity and the Corporate Pay Gap: A Values-Driven Approach

Author: **Florian Fuchs**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen U.*

The widening pay gap between CEOs and employees has raised significant societal concerns, prompting research to explore its causes. Given conflicting findings on causes of pay gaps, this study addresses the issue by introducing CEO religiosity as a novel antecedent, grounded in upper echelons theory. Drawing on previous research on the impact of CEO characteristics on pay dispersion and disparity, particularly the impact of political ideology, we propose a values-driven approach to understand variations in pay gaps among firms. We argue that religiosity, as a personality characteristic strongly tied to morality and risk aversion, offers a more nuanced perspective on the causes of pay gaps than previously researched antecedents. Using data of S&P 500 firms for the years 2000-2022, we confirm the hypotheses that CEO religiosity correlates with lower pay dispersion to employees outside of the top management team (TMT), reduced vertical pay disparity from the CEO to the TMT, and diminished horizontal pay disparity within the TMT. This study contributes to understanding of the values underpinning pay setting and supports CEO religiosity as a significant personality characteristic influencing corporate decisions.

Micro, Meso, and Macro Level Findings of Religion in the Workplace

Session Chair: **Denise Daniels**, *Wheaton College*
Discussant: **Derek Lief**, *U. of Michigan*
Discussant: **Reed Priest**, *U. of Minnesota*
Presenter: **Helen Chung**, *Seattle Pacific U.*
Participant: **Annie Kato**, *Seattle Pacific U.*
Presenter: **Min-Dong Lee**, *Wheaton College*
Participant: **Hannah Stolze**, *Lipscomb U.*
Participant: **Elaine Howard Ecklund**, *Rice U.*

Religion is one of, if not the most important part of many employees' identities. Because faith-based values, practices, and assumptions inform many customer and employee behaviors within organizational settings, it is productive to consider religion's implications across multiple levels of analysis within the organization. Structured around micro, meso, and macro levels of analysis, this symposium addresses relevant research findings of religion at work. At the micro level we examine the differences in individual expressions of faith at work between managers and employees. At the meso level we examine the impact of religious employee resource groups on perceived meaning and DEI outcomes, the relationship between the religious mission of an organization and its employees' experience of meaning, as well as how organizations' religious identities may attract more diverse employees. Finally, at the macro level we examine how a religious best workplace certification connects with organizations' ratings on online evaluation sites. Attendees from both applied and academic fields will benefit from a more well-rounded understanding of religion's influence on organizational dynamics and outcomes.

Family Matters: Family as a Source of Stress and Well-Being

Session Moderator: **Nan Li**, *Peking U., School of Psychological and Cognitive Sciences*

OB: **Technostress and Information Security Behavior Beyond Compliance: A Work-life Resource Perspective**

Author: **Nan Li**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Xuejing Song**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Zhongda Wu**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Changqin Lu**, *Peking U., School of Psychological and Cognitive Sciences*

With the accelerated pace of information technology development and adoption, organizations have to secure their information systems in pursuit of sustainable growth and employees can play critical roles in promoting information security. In particular, employees are required to exhibit not only in-role compliance behavior but also extra-role participation behavior concerning information security. Three studies were conducted to investigate employees' information security compliance and participation behaviors in the context of technostress. Study 1 (N = 838) provides initial evidence for the validity of two dimensions (i.e., compliance and participation) of information security behavior across two samples. Study 2 (N = 252) next finds a negative effect of technostress on both compliance behavior and participation behavior of information security. With a resource-centric perspective, Study 3 (N = 369) further reveals the mediating role of work-life imbalance in the link between technostress and employee information security compliance and participation behaviors, and such a negative link can be buffered when employees receive life support from their supervisors. Altogether, these findings demonstrate the expanded connotations of information security behavior and provide a novel resource-centric perspective to understand the mechanism of work-family imbalance. We also highlight the practical value of supervisors' support for life as a resource supplement that can buffer the negative effect of technostress.

OB: **How Narcissistic Rivalry Shapes Crossover Effects of Work-Induced Ego Depletion**

Author: **Xiaoyu Gan**, *Durham U. Business School*
Author: **Kristin Hildenbrand**, *U. of Sheffield*
Author: **Malcolm Patterson**, *U. of Sheffield*

This research aims to explore the crossover effects of work-induced ego depletion in couples. Drawing on self-regulation theory, we investigate the effect of employees' daily work-induced ego depletion onto employees' and spouses' next-day relationship tension via spouses' end-of-day ego depletion, we also examine how narcissistic rivalry shapes these relationships. Utilizing a daily diary method and dynamic structural equation modelling, we analyzed data from 153 couples over ten consecutive workdays (resulting in a total of 1,512 observations). Our findings reveal that employees' daily work-induced ego depletion crosses over, significantly influencing their spouses' end-of-day ego depletion. However, spouses' end-of-day ego depletion did not relate to increased next-day relationship tension rated by either employees or their spouses. Instead, employees' and spouses' narcissistic rivalry acted as moderators, spouses' narcissistic rivalry strengthened the indirect impact of employees' work-induced ego depletion on the spouses' perceived next-day relationship tension via spouses' end-of-day ego depletion. Conversely, employees' narcissistic rivalry weakened the indirect impact of employees' work-induced ego depletion on the employee's perceived next-day relationship tension via the spouses' end-of-day ego depletion. Our study enhances understanding of how daily work-induced ego depletion crosses over to affect relationship tension, contingent upon the narcissistic traits of both employees and their spouses.

OB: **When and How Family Financial Pressure Promotes Versus Inhibits Proactive Career Behavior**

Author: **Jie Liu**, *School of Economics and Management, Beijing U. of Posts and Telecommunication*
Author: **Hui Chen**, *Beijing U. of Posts and Telecommunications*

Drawing on conservation of resources theory, this study aims to offer a nuanced understanding of the relationship between family financial pressure and proactive career behavior. We propose that harmonious and obsessive work passion serve as the mechanisms through which family financial pressure may influence proactive career behavior and that the focal employee's family motivation serves as a critical boundary condition that determines whether family financial pressure may promote or inhibit proactive career behavior through different types of work passion. We tested our conceptual model using data collected from 276 employees drawn from various private enterprises in China. The results showed that when family motivation was high, family financial pressure had a positive indirect effect on proactive career behavior by enhancing obsessive work passion. In contrast, when family motivation was low, family financial pressure had negative indirect effects on proactive career behavior by reducing both harmonious and obsessive work passion. Theoretical contributions and practical implications are discussed.

OB: **Navigating Work and Family Conflicts: How Embeddedness Shapes Satisfaction**

Author: **Matthew Aplin-Houtz**, *Brooklyn College*
Author: **Benjamin John Blackford**, *Northwest Missouri State U.*
Author: **Claudia Araceli Hernandez**, *Northwest Missouri State U.*
Author: **Sean Leahy**, *Loyola U. Chicago*
Author: **Stephanie Merritt**, *U. of Missouri, St. Louis*
Author: **John Patrick Meriac**, *U. of Missouri - St. Louis*

The challenge of balancing work demands with personal life is a prevalent issue in today's workforce, often resulting in conflicts that can diminish job satisfaction. Due to this practical concern, this study seeks to understand how community and work embeddedness—an individual's sense of belonging—interact with family-work conflict (FWC) and work-family conflict (WFC) to affect job satisfaction. This issue was addressed by two studies with different U.S. employee samples. The first study (n = 396) examined how FWC, WFC, and embeddedness to work and community affect general job satisfaction in our theoretical model. The second study (n = 277) examined job satisfaction factors as a dependent variable. The study shows that community and work embeddedness boost job satisfaction and that FWC and WFC complexly affect these dynamics. The studies reveal how personal life conflicts and professional embeddedness affect the nuances of job satisfaction. This paper concludes by discussing the implications of these findings for theory and practice, acknowledging the research's limitations, and offering managers targeted recommendations.

The Good, The Bad, and The Situation

Session Moderator: **Muhammad Mustafa Raziq**, *U. of Sharjah*

OB: **Exploring Situation Strength and Trait Activation for Emergent Leadership** 

Author: **Muhammad Mustafa Raziq**, *U. of Sharjah*

Author: **Marya Tabassum**, *NUST Business School, National U. of Sciences and Technology, Islamabad*

Author: **Naukhez Sarwar**, *National U. of Sciences and Technology (NUST)*

Purpose: We explore person-situation interactions, which enable the emergence of individuals to informal leader status. Drawing on the concepts of situation strength and trait activation, we present insights into an emergent leader's person-situation interactions. We explore weak and strong situations through the lens of situation strength and use trait activation theory to explore how emergent leaders' traits assist them in dealing with weaker situations. Methodology/Design: We selected 40 individuals from nine agile teams from five IT organizations using purposive sampling. Semi-structured face-to-face interviews were conducted. Each interview was undertaken with multiple agile teams' members and lasted 45-60 minutes each. Findings: Findings suggest that weaker situations provide a more suitable context for team members to emerge as informal leaders. The emergent leader relies on emotional intelligence when dealing with risks and work-related stress; extraversion in times of workplace stress and conflict; open-mindedness to handle interpersonal and task conflicts; trustworthiness in risks and conflicting situations; intellectual humility for workplace stress; and cultural intelligence for interpersonal conflicts. Originality: Emergent leaders emerge from within teams without having a formal leadership assigned role. Little is known with regard to person-situation interactions, which enable the emergence of individuals to informal leader status. We contribute to the emergent leadership literature by exploring different person-situation interactions conducive to leader emergence.

OB: **Workplace Cyberbullying, Employee Wellbeing, and Intention to Stay in Remote and Hybrid work setting** 

Author: **Nimitha Aboobaker**, *Assistant professor Cochin U. of Science and Technology*

Author: **Shanujas V**, *Assistant Professor, Digital U. Kerala, Kerala, India - 695317*

Purpose: The advent of information and communication technologies in workplace settings has broadened the range of bullying behaviours that can manifest in the digital realm. However, there is a lack of knowledge concerning the impact of situational factors on employees' perceived cyberbullying within the workplace framework. Broadly, this study aims to investigate the effects of workplace cyberbullying on employees' wellbeing at work and their intention to stay with the organization, across two groups of employees: those who work in a fully remote mode and those employed in hybrid work arrangements. Design/methodology/approach: The current descriptive and time-lagged study was conducted among a sample of 373 employees who work in the information technology (IT) sector in India, in either fully-remote or hybrid mode. The study utilized self-report questionnaires, which employed previously validated questionnaires. The hypotheses were tested using structural equation modeling and multi-group analysis using IBM SPSS, AMOS, and STATs Tools Package. Findings: The results demonstrate that cyberbullying negatively affects wellbeing at work and employees' intentions to stay with the organization. Remote-work employees experienced higher effects of workplace cyberbullying on their wellbeing at work. Also, the indirect effect of wellbeing at work was more pronounced and influential among remote work employees than hybrid work employees, suggesting the need for tailored support and resources for remote workers. Multi-group analysis across employees working in remote and hybrid work arrangements revealed that the relationship between workplace cyber-bullying and wellbeing at work is statistically stronger for remote-work employees. Originality: This study represents a novel approach to developing and evaluating a theoretical model that explores the relationship between workplace cyberbullying, wellbeing at work, and the intention to stay with the organization within the context of remote/hybrid work arrangements. The findings offer theoretical and practical implications regarding the impact of workplace cyberbullying on job outcomes and aim to bridge a gap in current research. Particularly, the study highlights the positive outcomes of hybrid work over remote work and offers recommendations to mitigate the negative experiences among employees who work remotely.

OB: **Daily Goal-Disruptive Events Increase Truck Drivers' Fuel Consumption via Anger and Happiness** 

Author: **Prisca Brosi**, *Kühne Logistics U.*

Author: **Wladislaw Rivkin**, *Trinity Business School, Trinity College Dublin*

Author: **Henrik Leopold**, *Kuehne Logistics U.*

Author: **Jason D. Shaw**, *Nanyang Technological U.*

Author: **Jan C. Fransoo**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

This research examines truck drivers' emotions to understand how organizations can reduce carbon emissions. Based on affective events theory and functional emotion theory, we examine the influence of truck drivers' emotional reactions to goal-disruptive events, i.e., anger and happiness, on fuel consumption. Furthermore, we test alternative theoretical perspectives, i.e., the buffering and undoing effect of positive emotions versus empathetic emotional congruence, to understand how the communication between drivers and dispatchers changes truck drivers' emotional reactions. Daily examining truck drivers over the course of four weeks and combining survey data with archival data on communication and driving behavior, we show that both anger and happiness in reaction to goal-disruptive events increase fuel consumption by changing driving behavior. Furthermore, our data lends support to the empathetic perspective on driver-dispatcher communication. Positive driver-dispatcher communication strengthened both the negative relationship between goal-disruptive events and happiness as well as the positive relationship between goal-disruptive events and anger. These results show that organizations can address truck drivers' emotions to reduce carbon emissions by lowering goal-disruptive events and fostering emotionally congruent communication between drivers and dispatchers.

OB: **Ethical Leadership Increases Employees' Prosocial Behavior Towards the Public**  

Author: **Shuoli Wang**, *School of Business Administration Hubei U. of Economics*

Author: **Yajun Fan**, *Economics and Management School, Wuhan U.*

Author: **Daoming Sun**, *Economics and Management School, Wuhan U.*

The relationship between ethical leadership and organizational effectiveness has been well-established. Does ethical leadership make the world a better place? This remains an open question. Drawing on social cognitive theory, the present study investigates how and when ethical leadership in the workplace shapes employees' prosocial behavior towards the public (PBP). Specifically, we examine the mediating role of employees' public service motivation and the moderating role of employees' other-interested orientation underlying the relationship between ethical leadership and employees' PBP. Using a longitudinal research design in China (Study 1) and a scenario-based experiment in the UK (Study 2), we found that ethical leadership in work increases employees' PBP, and public service motivation mediates this relationship. Furthermore, other-interested orientation positively moderates the association between ethical leadership and public service motivation. The theoretical and managerial implications of our findings are further discussed.

OB: **The (In) Congruence Effect of Subordinates' and Supervisors' Supportive Response to AI on LMX** 

Author: **MANQING XIN**, *School of Economics and Management Tsinghua U.*

Organizations hope their employees can better adapt to AI. Existing literature on human-AI interaction identifies two typical responses of humans towards AI: aversion and appreciation. While investigating the reasons behind these reactions, evidence is provided for the benefits of supportive responses to AI, such as acceptance and trust. However, previous studies have not adequately addressed the uniqueness of organizational contexts. Employees in an organization do not interact with AI in isolation; the heterogeneity in individual responses to AI means that employees and their leaders are likely to react differently to AI. Drawing on leader-member exchange theory and research on person-environment fit, this study examines the impact of the perceived congruence between an employee's supportive response to AI and that of their leader on LMX quality. The congruence leads to better LMX quality, even at low levels of fit. Our predictions were broadly supported by a survey and two experiments. We also identified nuanced differences in this impact between generative AI and discriminative AI. For LMX quality, the least ideal congruence condition depends on the role AI plays for both parties.

Leading to Creativity

Session Moderator: **Soobin Park**, *Seoul National U.*

OB: The Relationship Between Conflict Asymmetry and Creativity

Author: **Soobin Park**, *Seoul National U.*

Author: **Jin Nam Choi**, *Seoul National U.*

We examine the effects of conflict asymmetry between leaders and members on creative performance of individual members and the team. We theorize distinct contributions of leader-member asymmetry in relationship and task conflict toward individual and team creativity. We tested our theoretical propositions using a field data collected from 53 leaders and 153 members. Our analysis results of polynomial regression equations and response surface model supported that individual creativity is high when both leader and member perceive low relationship conflict. Unexpectedly, the leader-member asymmetry in relationship conflict is positively related to team creativity as compared with leader-member symmetry. For task conflict, the analysis results were consistent for individual and team creativity in that at both levels of analysis, the low leader-high member asymmetry in task conflict was related to high creativity than the high leader-low member asymmetry. The present multilevel analysis exhibited different functions of leader-member conflict asymmetry in relationship and task conflict for individual and team creativity.

OB: The Role of Organizational Support and Psychological Capital for Migrants' Entrepreneurial Behavior

Author: **Désirée Martinez-Schroeder**, *Chair for Technology & Management, TU Dortmund U.*

Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*

Migration is a global phenomenon that provides a variety of opportunities for employing organizations. Migrants possess unique capabilities which seem to facilitate an entrepreneurial mindset and entrepreneurial behavior. Characterized by innovation, proactivity, and risk-taking, entrepreneurial behavior in the workplace represents a potential source for organizations' competitive advantage. Consequently, it is important to understand how organizational and personal resources favor the entrepreneurial behavior of migrants in organizations. Drawing on conservation of resources theory, we investigate the relationship between organizational support, operationalized as perceived support from the supervisor and perceived support from senior colleagues, and the entrepreneurial behavior of migrants. We further shed light on the mediating role of psychological capital as a relevant personal resource of migrants. In a survey-based study with 123 employed migrants in Germany, we find that both perceived support from the supervisor and perceived support from senior colleagues positively relates to migrants' entrepreneurial behavior. These relationships are mediated by migrants' psychological capital. The results of our study contribute to the literature on organizational behavior by empirically showing that personal and organizational resources are key drivers of migrants' individual entrepreneurial behavior in the workplace. Adding to research on leadership, we specifically highlight the role of senior colleagues. We also discuss implications for practitioners and future research.

OB: Decoding Ambidextrous Leadership: Its Measurement, Behavioral and Trait Requirements

Author: **Meltem Ceri Booms**, *KU Leuven*

Author: **Jeroen Stouten**, *KU Leuven*

Author: **Hein Wendt**, *Independent Consultant*

Opening and closing behaviors, the interaction of which is used to measure Ambidextrous Leadership (AL), have received considerable amount of interest and empirical testing over the last years. Despite this investment, however, the field is still in need for further investigations of AL in multiple ways which we aim to address in our research with two different studies. The first study enabled us to resolve an issue that has been long-standing in the literature. Specifically, with 5 sequential sub-studies, we developed and validated a scale to measure opening and closing behaviors. Our second study including 76 leader-subordinate dyads working in innovation contexts aided us in addressing some of the propositions made on AL in the literature. We found that, contrary to the expectations, unbalanced profiles where opening behaviors were predominantly adopted by leaders more strongly predicted followers' innovative workplace behaviors (IWB). Furthermore, the same study yielded that although high levels of self-monitoring, cognitive complexity and future orientation are possessed by innovation leaders, the former two were found to be the main enablers to become ambidextrous and to balance opening and closing at high levels. Our results extend the current AL theory in several ways and have practical implications for managers and organizations, which we discuss at the end of the paper.

OB: Distant, yet Connected: Exploring Centrifugal & Centripetal Forces in Team Creative Problem-Solving

Author: **Matthias Felix Sinnemann**, *Westfälische Wilhelms-U. Münster*

Author: **Elka Thevanesan**, *Ruhr U. Bochum*

Author: **Laura Marie Edinger-Schons**, *U. of Hamburg*

Author: **Janick Edinger**, *U. of Hamburg*

Author: **Matthias Weiss**, *Zeppelin U.*

Author: **Likoebe Maruping**, *Georgia State U.*

During collective creative problem solving in organizations, centrifugal forces (CFFs) cause team members to diverge and gather different information, whereas centripetal forces (CPFs) ensure that the resulting diverse perspectives are orchestrated into common action. Herein, leadership behavior and possible changes in leader-follower interactions play a decisive role in balancing these diverging forces. Accordingly, and drawing on Sheremata's model of CFFs and CPFs during teamwork, we first theorize that an interplay of team decentralization (CFF) and team connectedness (CPF) promotes creative problem-solving. Moreover, we integrate this view with Adaptive Leadership Theory and postulate that frequently changing leader-follower interactions are beneficial to creative problem-solving in teams with pronounced decentralization. In an escape room study with 50 five-person teams, data on team decentralization and team connectedness of the individual members was collected through sociometric badges. Moreover, team adaptive leadership was examined through video observations. The associated findings confirm that an interplay of team decentralization and team connectedness potentially boosts creative problem-solving. Further, team adaptive leadership tends to be particularly beneficial when collaboration is characterized through high decentralization.

Me, Myself, and I: The Self and Work Outcomes

Session Moderator: **Sevag Kertechian**, *ESSCA School of Management*

OB: **Exploring the Interplay of Body Images and Micro-Level Management** 

Author: **Sevag Kertechian**, *ESSCA School of Management*

Author: **Hadi El-Farr**, *Rutgers U., School of Management and Labor Relations*

Our investigation delves into the nuanced connection between body image and micro-level management, with a specific focus on the impact on employee vigor in work engagement. We argue that an ongoing discourse surrounds the significance of body image in human well-being, particularly within the workplace—a domain that has been marginally explored to date. Positioning self-esteem as the linchpin that transcends disciplinary boundaries, we advocate for scholars across management disciplines to delve into the study of body image. Employing the social comparison theory as our conceptual framework, we shed light on the intricate interplay between body image and organizational dynamics. Utilizing cross-sectional data from a robust sample of 860 U.S. employees, rigorously examined through structural equation modeling, our findings present valuable insights for interventions aimed at improving employee well-being and nurturing positive body image in professional settings. Noteworthy outcomes include a direct positive correlation between positive body image and vigor in work engagement, coupled with a direct negative association between negative body image and vigor in work engagement. Moreover, our research identifies the pivotal role of self-esteem in mediating the relationship between negative body image and vigor among employees. This study pioneers an interdisciplinary exploration, casting illumination on the convergence of organizational behavior and body image—a terrain that warrants further investigation.

OB: **How Perceived Algorithmic Control Affects Workplace Well-Being: A Self-Determination Theory Approach**

Author: **Qiao Chang**, *U. of Science & Technology Beijing*

Author: **Xiao Xiao**, *U. of Chinese Academy of Social Sciences*

The original intention of introducing artificial intelligence (AI) is to enhance human well-being. However, the prevalence of AI applications driven by algorithmic control has led to conflicting emotional experiences among employees within organizations. The central paradox lies in how algorithmic control can augment employees' positive emotional experiences and simultaneously mitigate the generation of negative emotional experiences, which is crucial for widespread acceptance of AI among humans. Drawing on self-determination theory, we propose that the contradictory influence of perceived algorithmic control on workplace well-being, mediated by basic psychological needs satisfaction and frustration, this indirect effect is contingent upon employees' level of mind perception, encompassing their perception of the algorithm's experience and agency. In study 1, multisource, time-lagged two-wave survey data from 882 gig workers by a market research organization validated the antagonistic impact of perceived algorithmic control on workplace well-being via basic psychological needs satisfaction and frustration, respectively, and employees' perceived experience and perceived agency played pivotal roles in shaping this relationship, respectively. In study 2, time-lagged three-wave survey data from 118 gig workers on ride-hailing platforms revealed a mediating effect and did not reveal a moderating effect. These results offer a new theoretical perspective that helps to reconcile previous, seemingly contradictory findings on the relationship between algorithmic control and workplace well-being. Moreover, we offer practical implications for interventions aimed at promoting positive emotional experiences among employees when working with algorithms.

OB: **Giving Yourself Grace in the Workplace: Relational Mechanism Linking Self-Compassion and Performance** 

Author: **Takaki Ohya**, *Auburn U.*

Self-compassion, defined as compassion extended toward oneself, is becoming increasingly vital in modern society, where risks related to mental health are increasing due to an uncertain work environment. However, how does self-compassion affect employee performance? Although self-compassion is known to be beneficial to an individual's psychological functioning, how it affects performance in the workplace has not yet been fully examined despite its importance. Therefore, we examine how self-compassion affects various types of employees' work performance (i.e., task performance, organizational citizenship behaviors, and counterproductive work behaviors). Relying on the self-determination theory, we predict that self-compassion affects work performance through relatedness need satisfaction, which is a distinct mechanism from competence need satisfaction that previous literature has focused on. Two survey studies (n = 217 and 145) reveal that self-compassion has a positive indirect effect on organizational citizenship behaviors via relatedness need satisfaction, while the indirect effects of self-compassion on task performance and counterproductive work behaviors are only partially supported. In addition, conscientiousness moderated the relationship between relatedness need satisfaction and task performance. These results suggest that self-compassion may affect important work outcomes through a socially driven mechanism and have a boundary condition and potential negative consequences.

OB: **Loneliness Hampers Leadership Emergence** 

Author: **Nuria Tolsa-Caballero**, *U. of Michigan, Ross School of Business*

Author: **Julia Lee Cunningham**, *U. of Michigan*

Despite having the qualities needed to become leaders, many people are reluctant to assume leadership roles. We suggest that loneliness can be an important deterrent for the emergence of leaders. In Study 1, a survey of employees and their supervisors (n = 691) found that feelings of loneliness are associated with a lower willingness to lead, with lower leader identity endorsement, and with lower leadership self-efficacy. Leadership self-efficacy mediated the relationship between leader identity endorsement and the willingness to lead. In Study 2, a sample of MBA consulting teams (n = 85) revealed that students who felt lonely engaged in less informal leadership (as rated by their peers). Consistent with Study 1, loneliness also predicted lower leader identity endorsement and lower leadership self-efficacy. Study 3 (n = 604) provided evidence that beliefs about leadership as a lonely endeavor dampen the endorsement of a leadership identity, with higher perceived image risk from leading mediating this relationship. This research highlights the importance of fostering human connections in leadership to motivate people to step up and lead. Fostering a sense of connectedness in organizations can not only enhance the well-being of its members, but also boost the emergence of leaders.

Are You OK? Well-Being at Work

Session Moderator: **Shumin Zheng**, *U. of Edinburgh*

OB: **Having Fun and Thriving: The Impact of Fun HR Practices on Employee Thriving at Work**

Author: **Xue Han**, *Renmin U. of China*
Author: **Yuhui Li**, *Renmin U. of China*
Author: **Jie Li**, *Xi'an Jiaotong-Liverpool U.*

Research interest in thriving at work has burgeoned over the past decades, but we still know little about how HR practices affect employees' thriving. Drawing on self-determination theory and P-O fit theory, we developed and tested a moderated mediation model to explain how fun HR practices enhance employee thriving at work. Data collected from two studies, a scenario experiment (N = 164) and a time-lagged survey (N = 253), provided support for our hypotheses. Specifically, our results revealed that fun HR practices positively predict employee thriving at work and this relationship is mediated by autonomous motivation. Further, fun HR practices translate into higher autonomous motivation and subsequent thriving when employees have higher preference for workplace fun. This research contributes by providing a more nuanced understanding of the psychological process through which HR practices affect employee outcomes, and how HR practices benefit employees contingent upon individual characteristics. Implications for practice, limitations and future research directions are then discussed.

OB: **Alone or With Others? An Event-Based Study on Taking Eating and Drinking Work Breaks and Well-Being**

Author: **Shumin Zheng**, *U. of Edinburgh*
Author: **Kristina Potocnik**, *U. of Edinburgh*
Author: **Yumeng Yue**, *U. of Edinburgh business school*

Drawing on effort-recovery model, self-determination theory and work and non-work transition literature, this paper examines the influence of the presence of others during eating and drinking work breaks on both during-break well-being and post-break work-related well-being. We further explore the potential moderating effect of the presence of others in the pre- and post-break to examine whether taking breaks with others has the compensation or interruption effect on employee well-being. Using two nationally representative time use surveys from the US and UK, respectively, we found that compared to taking breaks alone, the presence of others during breaks was related to both higher level of during-break well-being and post-break work-related well-being in the US; however, the UK findings have shown the opposite results. The presence of others during breaks tends to compensate for the absence of others in the pre-break work episode on during-break well-being, and the presence of others in the post-break work episode tends to interrupt employee psychological flow of being alone and leading to decreased well-being in the post-break work episodes. This paper advances theory on work breaks and provides insights into how the presence of others during break can influence employee well-being.

OB: **The Double-Edged Sword Effect of Corporate Environmental Policy (CEP)**

Author: **Xinyi Hua**, *Sun Yat-Sen U.*
Author: **Lixian Qian**, *Xi'an Jiaotong-Liverpool U.*
Author: **Puwen Shang**, *School of Business, Sun Yat-sen U.*

Despite the rising interest in corporate environmental policy (CEP), our understanding of the underlying mechanisms linking CEP to employee positive or negative behavior, and the circumstances in which both relationships are magnified or attenuated is still incomplete. Adopting the conservation of resources (COR) theory and self-determination theory (SDT), we develop a multilevel model of employee green and non-green behaviors, explaining why and when CEP leads some employees to actively embrace green activities and others to resist doing so or engage in non-green behavior. Using two-wave data from a large-scale survey, we test a moderated mediation model in which CEP positively affects employee green self-efficacy and role overload, resulting in the increased green and non-green behaviors, respectively. Besides, we find that autonomous motivation strengthens the indirect effect of CEP on employee green behavior through green self-efficacy, and controlled motivation reinforces the impact of CEP on employee non-green behavior by increasing their perception of role overload. Our findings contribute to a more balanced understanding on the double-edged sword effect of CEP by revealing its benefits and detriments and shedding light on the psychological mechanisms and contextual conditions that foster or impede how CEP is indirectly translated into employee green behavior. We also discuss ethical and practical implications for promoting environmental policies and initiatives, providing preliminary evidence for CEP's potential downside that may induce employee counterproductive behavior.

OB: **Silent Treatment for Increasingly Speaking Truth to Power: Whom do Managers Ostracize Less?**

Author: **Nadia Y. Yu**, *NEOMA Business School*
Author: **Anita Starzyk**, *NEOMA Business School*
Author: **Mingjian Zhou**, *Harbin Institute of Technology at Shenzhen*

This study provides new insights into the potential negative consequences of employee voice. We investigate when voicers who speak out more frequently over time may (not) face managerial ostracism. We collected multi-wave data from employee-manager dyads in China. Managers assessed employee voice and task proficiency at three different moments over 18 months, and employee emotion management tactics at the second wave (T2). Employees assessed managerial ostracism at the third wave (T3). Random coefficient modeling and multi-level analyses revealed that on average, high levels of both promotive and prohibitive voice were associated with reduced levels of managerial ostracism. More importantly, increases in both promotive and prohibitive voice accounted for higher levels of managerial ostracism. However, employee task and interpersonal competence moderated these relationships. Employee emotion management tactics attenuated the positive relationship between positive promotive voice trajectories and managerial ostracism. Similarly, increased task proficiency attenuated the positive relationship between positive prohibitive voice trajectories and managerial ostracism. Thus, when employees who speak up can manage their emotions well and/or improve their performance, the more frequently they speak up over time, the less likely they are going to suffer from being ostracized by their managers.

Bridging Across Member Differences in Teams

Session Moderator: **Johannes Stark**, *Kühne-Logistics U.*

OB: Social Class Diversity, Team Performance, and the Critical Role of Social Class Transitioners

Author: **Johannes Stark**, *Kühne-Logistics U.*

Author: **Christian Troester**, *Kühne-Logistics U.*

Author: **Niels Van Quaquebeke**, *Kühne-Logistics U.*

Social class diversity, ubiquitous in organizations, is typically associated with intergroup biases, as social class is a highly salient characteristic, and social class differences are associated with disparities in material resources and social rank. Drawing on team diversity research, we argue that due to class-related biases, social class diversity has a negative effect on team performance. However, while management researchers have recently explored individual-level effects of social class, team-level effects of social class diversity on performance have been neglected. Contrary to other diversity dimensions, people regularly transfer between social classes and should therefore identify with different social class categories. Hence, we hypothesized that transitioners engage in stimulating information elaboration in class-diverse teams, which ultimately translates into higher team performance. In an online experimental study including 235 teams à 3 members, we found that as compared to non-diverse teams, diverse teams performed better, if they included a transitioner than if they did not include a transitioner. Moreover, transitioners' stimulation of information elaboration accounted for said effects. By investigating the critical role of social class transitioners in diversity effects on team performance, we contribute to team diversity literature that has mainly focused on stable diversity categories as well as on team-level moderators.

OB: Interorganizational Collaboration in Contexts of (Mitigating) Value Conflict

Author: **Kenneth Nygaard**, *Aalborg U. Business School*

Author: **Jacob Brix**, *Aalborg U. Business School*

Author: **Morten Graversgaard**, *Aarhus U.*

Until now, the premise for the theory of interorganizational collaboration and learning has been twofold: 1) organizations that collaborate generate better results compared to working individually on the same task, and 2) organizations that collaborate are assumed to have shared values. The novelty of our study lies in the revelation that organizations with clear, explicit value conflicts can also deliver better results when collaborating. Our case study focuses on the implementation of the EU Water Framework Directive in Denmark in 2014. In this empirical setting, water councils, consisting of protectors and users of watercourses, were created with the task of co-producing solutions to implement the directive. By employing a multi-method research strategy design, we contribute new knowledge to the literature on interorganizational co-production, offering a fresh perspective on engaging in collaborative governance with stakeholders having conflicting values. Our results challenge the assumption that interorganizational co-production is only beneficial when based on shared values. Strong indications suggest that work group climate plays a crucial role in interorganizational theories. Additionally, the presence of outsiders in the work group, such as local politicians, influences the groups toward consensus-seeking behavior. These findings are significant as we anticipate more value-conflicting collaborations to address the social and ecological challenges faced by a large part of the world.

OB: Neurodiversity in Work Teams: A Conceptual Framework and Research Agenda  

Author: **Narda Quigley**, *Villanova U.*

Author: **Alysha Meloche**, *Villanova U.*

The study of neurodivergence in the workplace has increased in recent years, with more conceptual and empirical work in management and organizational studies. The literature on work groups and teams, however, has not yet begun to incorporate neurodiversity as a dimension of workgroup composition. We develop a multilevel conceptual framework of neurodiversity in work teams that acknowledges it as an important and underexplored input that can influence team processes, emergent states, and outcomes. Further, we develop propositions that specify the ways in which contextual (organization-level intersectional inclusion and team-level inclusive leadership) and structural (team task interdependence and universal design) elements enable the positive impact of neurodivergent team members on team processes and emergent states. Importantly, these contextual and structural elements may be helpful in amplifying the positive contributions of all individuals working in teams, not just those who identify as neurodivergent.

OB: The Scope of Inter-Team Collaboration: The Impact of Within-Team, Inter-Team, and TMT Faultlines  

Author: **Qin Su**, *Xi'an Jiaotong-Liverpool U.*

Author: **Fei Liu**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Author: **Wuyang Chen**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Extant faultline research has documented the negative impact of team faultlines within teams, such as intensified conflict and lower performance. However, few studies have investigated the impact of faultlines across team boundaries. In this study, we draw on the meso paradigm to investigate the impact of multi-level faultlines, including within-team, inter-team, and top management team (TMT) faultlines, on inter-team collaborations, and then team performance. Based on the complexity bias and the out-group/homogeneity bias studies on inter-group perceptions and motivations, we propose that within-team faultlines will promote rather than inhibit inter-team collaboration. Besides, based on the meso paradigm, we propose that TMT faultlines and inter-team faultlines work as the references for team members to locate collaboration partners across borders, which means that members are more likely to collaborate with members from the same TMT subgroups or inter-team subgroups. Results from an archival dataset of 12,508 agents working in 1,983 teams from 706 shops and a survey study of 494 agents working in 97 teams from 32 shops provided support for most of the hypotheses. Theoretical and practical implications are discussed.

Author: **Jiang Xu**, *Beijing Sport U.*

Author: **Han Gao**, *Guanghua School of Management, Peking U.*

Although empirical evidence has preliminarily documented the impacts of team time urgency diversity on team performance, knowledge about how this process unfolds within organizations and the consequences for other aspects of team functioning is limited. Drawing upon Leading Diversity model (LeaD) and literature on team temporal diversity, we develop and test a model that specifies when and why team time urgency diversity promotes versus inhibits (a) team coordination effectiveness, (b) team performance, and (c) team organizational citizenship behavior (OCB). Results from a time-lagged and multi-source field survey of 87 teams suggest that the relationship between team time urgency diversity and team processes is contingent on the extent of leader planning. Specifically, when leader planning is lower (vs. higher), team time urgency diversity has a negative (vs. positive) effect on team shared temporal cognition and a negative (vs. non-significant) effect on team temporal complementarity. Furthermore, both team shared temporal cognition and team temporal complementarity exert positive effects on (a) team coordination effectiveness, (b) team performance, and (c) team organizational citizenship behavior. Implications for theory and practice are discussed.

OB: **Illuminating Dark Careers: A Meta-Analysis of the Dark Triad and Vocational Interests**  

Author: **Tyler Nicole Abayon Fezzey**, *U. of Alabama*

Author: **Peter Harms**, *U. of Alabama*

Author: **Marcus Crede**, -

Author: **Nic Lowery**, *U. of Alabama, Tuscaloosa*

Academic research and mainstream media have raised concerns about the damage individuals exhibiting narcissistic, Machiavellian, and psychopathic tendencies create in organizational settings. As such, understanding where these individuals are likely to seek employment is critical to the proper management of organizations. To clarify these relationships and inform managers on where these individuals are likely to seek employment, we extracted relationships among the D3 traits and RIASEC interests from 32 independent samples (N = 13,679) from 2001 to 2023. Our results demonstrate that all three traits are strongly drawn toward enterprising professions and that Machiavellians and psychopaths are repelled by social vocations, suggesting that individuals with these traits are drawn to roles that allow them to exert influence over others, but their attitudes toward social interactions differ. Subgroup analyses on methodological factors indicated that published journal articles, online panels, and brief unidimensional measures of the D3 traits tend to skew effect sizes. Moderator analyses also showed a gender difference in some Machiavellianism and psychopathy effects but no notable differences in narcissism effects. The results largely suggest that the RIASEC framework may be too abstract to investigate these relationships completely and that unidimensional conceptualizations of the D3 traits may obscure underlying variations in these relationships. Overall, this research contributes to the broader understanding of the intricate interplay between personality traits and career choices and serves as a foundation for more nuanced future investigations.

OB: **How Developing Economy Entrepreneurs' Conscientiousness and Neuroticism Affect Business Formality**  

Author: **Christopher G. Pryor**, *U. of Florida*

Research on entrepreneurs and business formality in developing economies has generally assumed that entrepreneurs rationally balance costs and benefits when determining the appropriate level of formality for their businesses. While this research has made significant advancements to our understanding of the conditions and antecedents that lead to business formalization, the possibility that entrepreneurs are not fully rational decision makers but are, instead, affected by their personalities, cognitions, emotions, and motivations has not been deeply explored. This paper addresses this striking oversight and adopts an upper echelons lens to understand how entrepreneurs' personality, particularly entrepreneurs' conscientiousness and neuroticism, may affect their decision to formalize their businesses. Using a sample of 175 entrepreneurs in Uzbekistan, we find that conscientiousness and neuroticism are both positively related to businesses' formal status, but that these effects are strengthened and weakened, respectively, by entrepreneurs' access to alternative income. We also test indirect effects of conscientiousness and neuroticism on performance via businesses' formal status.

OB: **Using Multi-Informant Ratings to Distinguish Generality and Context Specificity in Personality** 

Author: **Michael P. Wilmot**, *U. of Arkansas Sam M. Walton College of Business*

Author: **Brian S. Connelly**, *U. of Toronto*

Distinguishing generality and context specificity in personality is one of the grand challenges of psychology. Extant research attempts to tackle this challenge by examining the agreement (or, consensus) between informants who rate targets' personality traits in different contexts (e.g., the consensus between family and friends), but this literature is highly fragmented. Accordingly, we present a new theoretical framework that synthesizes theories of person-situation interaction into three parameters whereby contexts influence personality expression and perception: Adherence (i.e., generality), adaptation (i.e., context specificity), and acuity (i.e., perceptual accuracy). We then test this framework by examining cross-context consensus among informant ratings of Big Five personality traits in a meta-analysis (k = 43 samples, Ntargets = 6,363) spanning four contexts (i.e., family, friends, colleagues, strangers) and a primary sample (Ntargets = 6,120) spanning four workplace roles (i.e., supervisors, peers, subordinates, clients). Across traits and contexts, cross-context consensus is moderate among informant ratings of personality (mean $r = .24$). Consensus is stronger when informants rate extraversion or when they are well-acquainted with targets (i.e., family, friends, colleagues), but it is relatively homogenous across workplace roles. Surprisingly, the primary obstacle to consensus is not inconsistent behavior by targets, but informants who are error-prone in their personality ratings. After correcting for this error, we find that approximately 80% of targets' personality expressions generalize across contexts and 20% are context specific. We conclude by discussing contributions and implications of findings, as well as limitations and future research directions.

OB: **Excellence Orientation: Conceptualization and Scale Development**

Author: **Harsimar Kaur**, *LM Thapar School of Management, Thapar Institute of Engineering and Technology*

Author: **Pradeep Kumar Hota**, *Indian Institute of Management, Udaipur*

Author: **Padmakumar Nair**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*

Author: **Aarushi Mahajan**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*

The study aims to introduce excellence orientation as a dimension of culture and to develop an instrument to measure it. The scale items were generated through an iterative process involving literature review, expert validation and group discussion. Parallel items were generated for both practices and perceptions. The data obtained were checked for Cronbach's-alpha reliability, item-total correlation, and exploratory factor analysis. Data obtained as a result of factor analyses show that the scale consists of a single factor for both practices and perceptions. The scale as a result of EFA was administered to a new sample to perform CFA. The fit indices obtained as a result of the confirmatory factor analysis showed that there was a fit between the model and the data and that the proposed model was at an acceptable level. As a result of the analysis, a 10-item excellence orientation scale (five items for practices and perceptions each) was developed in 5-point Likert type. According to the results obtained, it was determined that the excellence orientation scale is a valid and reliable measurement tool.

Leaders Gone Bad: When Leaders Negatively Influence Followers

Session Moderator: **Isabeau Van Strydonck**, *Ghent U.*

OB: **Leaders' Performance Goals and Employees' Counterproductive Work Behavior**

Author: **Isabeau Van Strydonck**, *Ghent U.*

Author: **Adelien Decramer**, *Ghent U.*

Author: **Frederik Anseel**, *UNSW Sydney Business School, Australia*

Author: **Mieke Audenaert**, *Ghent U.*

In today's competitive world, organizations may value competitive leaders who strive to outperform others. Yet, past research shows that such leaders can also harm the organization through their own harmful attitudes and behaviors. In this paper, we contend that the detrimental effects highlighted in past research may reflect only part of the story, and that leaders who focus on outperforming others can also indirectly harm the organization by eliciting harmful behavior in employees. Drawing on Achievement Goal Theory, we propose that leaders with high performance-approach goals (i.e., striving to outperform others) will be more likely to provide their employees with comparative feedback, in which an employee's performance is discussed and evaluated by explicitly comparing it to the performance of other employees. Building on insights from Feedback Intervention Theory, we further argue that receiving comparative feedback from a leader will engender feelings of emotional exhaustion among employees, and eventually lead them to withdraw from their work by engaging in counterproductive work behavior. Data from a three-wave survey design using multi-source reports from 631 employees and 221 corresponding leaders supported our hypotheses. We discuss the implications of our findings for theory and future research and offer practical implications for organizations.

OB: **The Influence of Leader Perfectionism on Employee Work Rumination and Subsequent Work Behaviors**

Author: **Cuilian Zhang**, *Chongqing U.*

Author: **Yue Jing**, *Chongqing U.*

Author: **Ye Li**, *Nanjing U. School of business*

Author: **Wei Yan**, *Chongqing U.*

Although individual perfectionism has been gradually examined by scholars, existing findings on the impact of leader perfectionism are inconsistent. Based on the decision theory regarding dual information processes, this study focuses on two categories of leader perfectionism—leader perfectionistic concerns and strivings, exploring their effects on employee work rumination (affective rumination, problem-solving pondering), indirect effects on work behaviors (silence behavior, proactive skill development) via work rumination and the moderating role of employee perceived overqualification. Study 1a and 1b reveal that leader perfectionistic concerns promote employee affective rumination, and thus enhance their silence behavior. Simultaneously, leader perfectionistic strivings promote problem-solving pondering, thereby enhancing proactive skill development. Study 2a, 2b and 3 examine the moderating effect of employee perceived overqualification on the above paths. Specifically, compared with low perceived overqualification, high perceived overqualification weakens both the direct and indirect effects of leader perfectionistic concerns and strivings. Taken together, our findings provide a more integrated view to understand the effects of leader perfectionistic concerns and strivings.

OB: **How and When Leader Narcissism Helps or Hurts Team Proactivity? A Moderated Dual-Path Model**

Author: **Xin Liu**, *Renmin U. of China*

Author: **Jingni Dong**, *School of Business, Renmin U. of China*

Author: **Limei Chen**, *U. of Hong Kong*

Author: **Yu Yu**, *Southwestern U. of Finance and Economics*

Author: **Peter Harms**, *U. of Alabama*

Despite accumulating evidence supporting the importance of leader narcissism for follower outcomes, extant research has provided limited knowledge regarding the effectiveness of leader narcissism in influencing team proactivity. The present research aims to clarify this relationship by examining how and when leader narcissism helps or hurts team proactivity. Drawing on the Narcissistic Admiration and Rivalry Concept (NARC) model and social information processing theory, we propose a dual-path mediation model where leader narcissistic admiration and leader narcissistic rivalry differentially influence team proactivity by activating different collective regulatory foci. Moreover, we show that this process is moderated by team power distance value. Using a field study with multi-source and multi-wave data, we found that leader narcissistic admiration increased team proactivity through enhancing collective promotion focus, whereas leader narcissistic rivalry decreased team proactivity by triggering collective prevention focus. Furthermore, these two pathways were much stronger for teams with higher rather than lower power distance value.

OB: **Examining a Curvilinear Relationship Between CEO Narcissism and Firm Performance (WITHDRAWN)**

Author: **Sun Xiuli**, *Capital U. of Economics and Business*

Author: **Ning Guo**, *Peking U.*

Author: **Fan Yang**, *Southeast U.*

Previous research on CEO narcissism and firm performance has shown mixed findings, this may because narcissism is a multi-facet personality with both desirable and undesirable manifestations. Based on upper echelon theory and the behavioral threshold theory of narcissism, this research proposes that CEO narcissism may have a curvilinear effect on narcissism, through the mediating role of strategic decision speed. Results from a multi-source (CEO, CFO, TMT members) and multi-wave (three times) survey showed that CEO narcissism has an inverted U-shaped effect on firm performance and strategic decision speed mediates this effect due to its inverted U-shaped effect on firm performance. Furthermore, when technological turbulence is high rather than low, those two curvilinear relationships became stronger versus lower. The theoretical contributions and practical implications are discussed.

Tell Me a Story: Insights from Qualitative OB Research

Session Moderator: **Elizabeth Ogbodo**, *TSM-Research, U. of Toulouse Capitole*

OB: **When Stars Lose Their Shine: A Qualitative Study of the Role of Workplace Envy**   

Author: **Elizabeth Ogbodo**, *TSM-Research, U. of Toulouse Capitole*

Author: **Audrey Rouzies**, *U. of Toulouse*

Author: **Tochukwu Delvis Emeka**, *U. of Nigeria*

This study delves into the intriguing dynamics of star employees and their interactions with their coworkers. Star employees are individuals distinguished by exceptional and desirable qualities, a proven track record of superior performance, elevated status, and substantial potential for future success compared to their colleagues. The research aims to explore the adverse effects of coworker envy on star employees and illuminate the underlying reasons for the negative influences of stars on coworkers and organizations. While non-stars are undeniably valuable assets to their star colleagues, this study suggests that they may also exert negative influences on stars. By exploring and categorizing the consequences of envy, the study introduces an innovative framework of perceptions of workplace envy. The research is based on a qualitative interview study involving 47 professionals, all of whom were star employees in their respective organizations. The findings uncover perceptions of envy and a range of consequences, influencing areas like well-being, work engagement, job performance, and organizational detachment. By revealing the complexities of consequences caused by envy, this research advances our understanding of how non-stars can negatively influence star employees and sheds light on the circumstances under which stars may lose their shine.

OB: **Tell Me how You Learn and I Will Tell You how You Innovate: An Exploratory Study at TELT**

Author: **Matteo Opizzi**, *department of economics and business - U. of Cagliari*

Author: **Taran Patel**, *Grenoble Ecole de Management*

Author: **Chirag Patel**, *Grenoble Ecole de Management*

Although the concept of learning culture is still poorly metabolized in the current scientific debate, an empirical body of knowledge demonstrates that it can affect several dimensions of organizational performance, including innovation. However, a substantial black box persists in the comprehension of the dynamics through which learning culture affects innovation in organizations. In addressing this gap, the present paper aims to disentangle the concept of learning culture and unrevealing how it might affect innovation. We point the light on the organizational setting of TELT (Tunnel Euralpin Lyon-Turin), which is an Italian French public company in charge of building the high-speed railway between Italy and France. 23 semi-structured interviews are conducted with managers directly involved with innovation, integrated with artifacts provided by the informants and field notes. After having delineated organizational learning along five sub-constructs, our findings reveal four distinct learning cultures coexisting in the organization, each of them having different attitudes towards innovation. Finally, we expose the tensions between learning cultures and their two-way hybrid forms that cohabit in TELT. Our study has sound implications for enriching scholarly debate in learning culture and innovation. It resolves the conceptual confusion pervading extant literature and highlights vibrant dynamics for what concerns learning culture. We conclude by offering insights regarding how the propensities of members of different cultures can be harnessed for an optimal innovation outcome, and also how their resistance to innovation can be overcome.

OB: **Recasting You, Recasting Me: Audiences and Identity Change in Platform-Based Creative Work** 

Author: **Dan O'Sullivan**, *UCL School of Management*

To understand creative work – around which scholarly interest is booming – it is vital to understand how creative workers view themselves: their creative identities. Research has demonstrated the impact of creative identity upon creatives' work dynamics and interactions with audiences. But research has yet to address how, conversely, creative work dynamics and audiences shape creative identity. Through a qualitative study of 40 platform-based creative workers (those using the platform Upwork to monetize their creativity), I explored these dynamics as they apply in a growing and highly relevant digital setting which is transforming how contemporary creatives source work. I found that, with increased exposure to platform dynamics over time, creatives' perceptions of their audience changed, which spurred unique threats to their creative identities. They addressed these threats through different combinations of changing the way they presented themselves on the platform and changing the meaning of their creative identities. The resultant theoretical model sheds light on how creative identities change over time. In so doing, this study contributes to the literatures surrounding identity, image, and creative work – and answers calls within them to explore further the impacts of audiences and temporality.

OB: **Caring Motivation at Work: A Missing Link in Understanding and Encouraging Resource Seeking** 

Author: **Oleksandr Tkachenko**, *U. of New Mexico*

Author: **Abigail Ortiz**, *U. of New Mexico*

Author: **Yan Chen**, *U. of Nevada Las Vegas*

To gain a better understanding of why healthcare workers engage in feedback-seeking and advice-seeking behaviors at work, we interviewed 13 non-clinical staff and 13 employees who provided direct patient care. We find that, in addition to self-directed motives, healthcare workers' care and concern for their patients, clients, co-workers, or supervisors were key to understanding their behavior. We explain the observed phenomenon through the lens of caring motivation at work, which we regard as employees' motivation to care about others. Building on data from our interviews and relevant studies, we examine the role and potential mechanisms of caring motivation at work that prompt the employee's resource-seeking behavior. By doing so, we advance the previous conceptualization of motives for employees' feedback seeking and underscore an important area of scholarship promising to aid managers and human resource professionals to foster employees' resource seeking in the workplace.

Author: **Maggie Boyraz**, *California State U. San Bernardino*

Author: **Rosemarie Gilbert**, *None*

This study explores remote work and the evolving motivations for working from home post-COVID-19 pandemic. It examines the impact of forced remote work on subsequent motivations to continue working remotely, partially or fully. The authors focus on front-line knowledge workers and their lived experiences with remote work. Self-determination theory (SDT) provided the theoretical basis for the study (Ryan and Deci, 2000; 2017). The authors employed semi-structured individual and group interviews (with 28 participants) and explored questions related to the shift in motivation to WFH due to the shift to WFH that occurred during the pandemic. Findings reveal a shift from extrinsic to intrinsic motivation among knowledge workers who experienced remote work during the pandemic. The study contributes by developing a theoretical model based on SDT in the context of remote work. In Phase 1, workers faced transitional challenges due to the abrupt shift. Over time, in Phase 2, they adapted and adjusted. Competence, relatedness, and autonomy—all aspects of SDT—increased motivation to work from home. However, factors like career advancement and lack of voice in creating WFH-related policies acted as demotivators. Despite these challenges, the desire for remote work, at least on a hybrid basis, persisted after the forced telecommuting experience during the pandemic.

Participant: **Neha Bellamkonda**, *IIM Bangalore*
Participant: **Rahul Chandra Sheel**, *XLRI-Xavier School of Management*
Participant: **Mahesh Vaidyanathan Subramony**, *Northern Illinois U.*

Over recent years, disruptive forces including global events (e.g., pandemics, economic turmoil) and the rapid innovation in technology (i.e., service robots and AI) have introduced notable changes in the dynamics of service interactions between service workers and customers). These dynamic contextual shifts on the service frontlines necessitate comprehensive explorations congruent with the overarching theme of the upcoming 2024 Academy of Management Annual Conference, which emphasizes "innovating for the future." In response to these contextual shifts, it can be argued that there is a need for new theoretical lenses, examination of novel facets of customer mistreatment, and investigation of emerging mechanisms to unravel the complexity of customer mistreatment in evolving service settings. The aim of this proposed symposium is to foster discussion among scholars from multiple disciplines (e.g., HR, OB, Occupational Health, Marketing), with different theoretical and methodological perspectives, and conducting customer-mistreatment research in multiple national contexts (Australia, Canada, India, UK, and USA). By doing so, we aim to identify potential directions for the advancement of theoretical understanding, empirical research, and managerial policy with the context of the rapidly changing service frontlines.

Hang In There! Stress and Resilience Research

Session Moderator: **Haien Ding**, *BI Norwegian Business School*

OB: Depletion from Self-Control: The Energy-Based Effects of Illegitimate Tasks on CWB

Author: **Haien Ding**, *BI Norwegian Business School*

Illegitimate tasks refer to tasks perceived as unreasonable or unnecessary and have been conceptualized as work stress threatening employees' health and well-being. Focusing on the symbolic meaning of task illegitimacy, numerous researchers delved into illegitimate tasks' affective and cognitive implications. However, comparably less is known about the energy-related cost of carrying out these tasks. In the current research, we draw from self-determination theory to develop a theoretical model to offer an energy-based elucidation of the relationship between illegitimate tasks and counterproductive work behavior against organization (CWB-O). In an experience sampling study involving 118 employees across ten working days (Study 1), we find that daily depletion mediates the positive indirect relationship between daily illegitimate tasks and daily CWB-O. We further validate the depletion effects of illegitimate tasks in a recall-based experiment (Study 2), finding that exposure to illegitimate tasks is positively related to depletion. Our results shed light on the energy-related consequence of exposure to illegitimate tasks.

OB: Moral Injury at Work: How Job-Related Value Violations Cause Psychosocial Harm

Author: **Matthew Crayne**, *Massry School of Business, U. at Albany*

Author: **Neil Shortland**, *U. of Massachusetts Lowell*

Author: **Jennifer Griffith**, *U. of New Hampshire*

Although management research has previously noted the importance of personal values in outcomes like fit and organizational commitment, how those values can be violated is less understood. Current management theory does not consider how an individual's values may be transgressed in the context of their work and what the consequences of those violations may be. Drawing from the clinical and military psychology literatures we introduce the concept of moral injury, a significant traumatic outcome resulting from violations of closely held values. We integrate what is known about moral injury with established organizational science research and theory, specifically values theory, to propose that moral injury serves as an explanatory mechanism between salient personal values and commonly studied psychosocial traumas. In doing so, this paper makes three contributions to the management literature. First, we introduce moral injury and explain its cognitive underpinnings as well as its distinction from other phenomena. Second, we generate a model and propositions regarding risk factors for and cognitive processes leading to moral injury, and further traumas as an outcome. Third, we provide suggestions for an agenda of future research that incorporate this model and explores the impact of moral injury in the broader occupational landscape.

OB: Understanding the Difference Between Leaders' Resilience and Leadership Resilience

Author: **Charlotte Foerster**, *U. of Technology Chemnitz*

Leaders have to overcome numerous challenges, from shifting conditions in the workplace to the multiple crises that today's society face. Considering the importance of leaders' resilience for both leaders and their employees, teams, and organizations, leaders need to not only be resilient but also lead in resilient ways. Because the theoretical understanding of resilience in the context of leadership remains vague, we developed a comprehensive theoretical framework of resilience in the leadership context. With that framework, we make four major contributions. First, we distinguish the resilience of leaders and resilient leadership, a distinction not made in previous research. Second, we develop a theoretically precise conceptualization of leaders' resilience, whereby we differentiate between leaders' resilience as an outcome and leaders' resilience as a process. Third, by showing how resilience is defined in the leadership context, we additionally contribute to the differentiation of resilience from other constructs. Fourth, to provide a theoretical understanding of resilience in the leadership context, we also shed light on theories that have been used to refine that understanding.

OB: A Shield Against Ageism: Self-Affirmation Mitigates the Negative Effects of Age Discrimination

Author: **Trevor Spoelma**, *U. of New Mexico*

Author: **Lisa Marchiondo**, *U. of New Mexico*

Although an increasingly age-diverse workforce offers many potential advantages for organizations, it also presents unique challenges. Namely, bringing together people of different ages produces an environment ripe for age-based discrimination. In this study, we integrate a stress perspective of discrimination with self-affirmation theory to propose the effectiveness of a brief personal values affirmation for mitigating the effect of age discrimination on threat appraisals. In turn, we expect this intervention to reduce the indirect effects of age discrimination on somatic complaints and emotional exhaustion as mediated by threat appraisals. We find support for our predictions using two, multi-wave field experiments among full-time employees. Our findings have implications for managing experiences of ageism in organizations and complement existing techniques to reduce the adverse effects of this pernicious form of mistreatment.

OB: **A Resilient Future: Character Strengths Intervention for Pre-Service Teachers**

Author: **Gayathri Janapati**, *Department of management studies, Indian Institute of Technology Madras*

Author: **V Vijayalakshmi**, *Indian Institute of Technology, Madras*

Teachers guide learners in navigating life, and they are expected to know the what and how of it. However, what about the teachers themselves? They are individuals navigating shifts in educational practices and socio-economic adversities while endeavouring to impart knowledge for a better future. At the teacher training level, we realised an opportunity to equip future teachers with the techniques required to build their resilience. Within the positive psychological tradition, this study addresses whether an intervention enabling the development and use of pre-service teachers' positive personality traits, i.e., character strengths, can contribute to their resilience. While also improving their flexibility in employing cognitive strategies and attentional processes according to the situation (i.e., cognitive flexibility). Drawing on Polk's theory and adapting a multi-method approach, Study 1, utilising a cross-sectional design, revealed that cognitive flexibility predicts resilience. A field experiment was conducted in Study 2 within a countervailing and primary interventional framework. The results indicated a significant difference between the experimental and control groups, with a substantial improvement in resilience and cognitive flexibility in the experimental group compared to the control. The character strengths intervention underscores the process-oriented nature of resilience and proposes a comprehensive module for enhancing resilience and cognitive flexibility. It contributes to the theoretical and practical advancements in resilience. The proposed intervention module can be easily integrated into the existing curriculum to prepare the pre-service teachers to look forward to a resilient future.

Interpersonal Dynamics in Organizations

Session Moderator: **Arpana Rai**, *Indian Institute of Management, Udaipur*

OB: Underdog Expectations and Employee Outcomes: Roles of Embarrassment and Self-Monitoring

Author: **Arpana Rai**, *Indian Institute of Management, Udaipur*

Author: **Minseo Kim**, *Hankyong National U.*

Author: **Sanjay Kumar Singh**, *U. of Dundee, UK*

The present study examines 'when and why' underdog expectations relate to employee outcomes. Integrating insights from appraisal theories of emotions and self-conscious emotions theory, we propose that employees may appraise underdog expectations as a threat to their desired public image and experience embarrassment (a self-conscious emotion). In turn, embarrassment can motivate them to either withdraw from the situation to prevent further damage to their image (intentions to quit) or engage in remedial actions to repair/ restore the damaged image (high job performance and exemplification). We further examine self-monitoring as a moderator of the indirect effects of underdog expectations. We contend that because high self-monitors are very sensitive about their public image, they are more likely to consider underdog expectations as a 'worrying face-threatening event' and experience more embarrassment. However, given their effective coping skills, they are more likely to cope with embarrassment. Three-wave data collected from Indian managers supported our model. Implications are discussed.

OB: Benefits or Costs? The Nature and Consequences of Gig Employees' Social Comparison

Author: **Liyan Li**, *College of Business Administration, Capital U. of Economics and Business*

Author: **Xiaoxuan Li**, *School of Economics and Management, Tsinghua U.*

Author: **Gerui Zhao**, *School of Government, Beijing Normal U.*

Previous research has suggested that social comparison costs are prevalent within organizations, and employing labor from outside the organization can potentially mitigate the social comparison costs associated with internal incentive structures. However, with the development of the gig economy, gig employees and formal employees are interacting more frequently, leading to the emergence of social comparison costs among gig employees. To understand this new phenomenon, we drawing on social comparison theory, investigating that gig employees engage in both upward and downward social comparison with formal employees and induce emotional and motivational outcomes. Data collected from a leading Chinese internet company shows that gig employees' upward (downward) comparison with formal employees can positively (negatively) affect gig employees' organizational commitment through benign (malicious) envy. Additionally, the team's competitive psychological climate positively (negatively) moderates the relationship between gig employees' upward (downward) comparison and benign (malicious) envy. The results broaden our understanding of social comparison costs, as it now encompasses interactions not only among formal employees but also between formal and gig employees. Besides, we contribute to a deeper understanding of the emotional responses generated by social comparisons by linking social comparison literature and envy literature.

OB: Fear of Being Found Out: Motivational Working Climate and the Impostor Phenomenon

Author: **Sanne Feenstra**, *VU amsterdam*

Author: **Felenka Philips**, *VU amsterdam*

Impostor phenomenon (also known as impostor syndrome or impostorism) refers to an experience whereby individuals believe that others at work overestimate their abilities and therefore worry that they will be found out as impostors. Although a growing body of work examined this phenomenon over the last decade, our understanding of its organizational roots and underlying mechanisms is limited. Drawing on achievement goal theory, we examine employees' perceptions of their motivational work climate in shaping impostor feelings and examine the mediating role of social comparisons. Across four studies, we consistently show that a performance climate, focused on competition, is associated with increased impostor feelings, while a mastery climate, focused on cooperation, is not. We further show that frequency of upward social comparisons can explain this positive relationship between performance climate and impostor feelings. We find no support that the association between performance climate and impostor phenomenon is contingent on employees' trait competitiveness, gender, and/or tenure. We discuss the theoretical and practical contributions of our findings and offer directions for future research.

OB: The Double-Edged Sword Effects of Peer Ingratiation on Employee Vigor

Author: **Jinghong Gu**, *Business School, Nankai U.*

Author: **Longxu Gao**, -

Author: **Yujia Yang**, -

Author: **Bin Yang**, *NKU*

Author: **Quan Li**, *Nankai U.*

Ingratiation is widespread in modern work environments. However, the majority of prior research has mostly concentrated on employees' ingratiation to gain favor with their superiors, whereas only a limited number of studies have examined the phenomenon of ingratiation among peers. Furthermore, in the limited studies, researchers have mostly adopted the actor perspective, while disregarding the effects of the ingratiation on the receiver. Therefore, based on the conservation of resources theory, this study intends to explore the double-edged sword effect of peers ingratiation on employee vigor from the receiver perspective. The results of a multi-wave and multi-source survey showed that accepting peer ingratiation has both positive and negative effects. On one hand, peer ingratiation enhanced employees' perceived peer support, leading to increased employee vigor. On the other hand, it also induced employees' role overload, resulting in decreased employee vigor. Additionally, core self-evaluation can mitigate the impact of peer ingratiation on employee role overload and promote its positive effects on perceived peer support. Our findings uncover the ambivalent impacts of peer ingratiation and offer insights for organizations to manage peer ingratiation behavior at workplace.

Get a Life! The Work-Life Interface

Session Moderator: **Muhammad Kashif Imran**, *The Islamia U. of Bahawalpur, Pakistan*

OB: Tug-of-War in Work and Life: When and How Impaired Work-Life Balance Leads to Low Performance 

Author: **Muhammad Kashif Imran**, *The Islamia U. of Bahawalpur, Pakistan*
Author: **Ambreen Sarwar**, *Virtual U. of Pakistan*
Author: **Tehreem Fatima**, *Lahore Business School The U. of Lahore Sargodha Campus Pakistan*
Author: **Sobia Shabeer**, *U. of Gujrat, Pakistan*

Sustaining high performance is the aim of every organization, yet certain factors impede employee performance and impairment of work-life balance is one of such impediments. Therefore, the current study focuses on linking work-life imbalance to low performance via psychological depletion. Moreover, building on the cognitive perspective of self-regulation theory and role balance theory indirect moderating role of self-efficacy and emotional exhaustion is tested. Using a stratified sample of supervisor-subordinate dyads the data were collected in four waves. The results showed that work-life balance affects employee performance through psychological depletion. Employees having self-efficacy were able to buffer the impacts of work-life balance impairment on social depletion, nonetheless, emotional exhaustion exacerbated the psychological depletion and performance nexus. The study offers theoretical takeaways on the black box linking work-life balance and performance and has implications for maintaining an adequate workload and alleviating the negative impacts of impaired work-life balance.

OB: Too Alienated to Have Good Family Lives? The Impact of Work Alienation on Family Functioning 

Author: **Limin Guo**, *School of management, Northwestern Polytechnical U.*
Author: **Ken Cheng**, *School of Management, Zhejiang U. of Technology*

We extend the work alienation literature by moving beyond a focus on work-related consequences. Rather, we explored how and when work alienation influences employee family functioning (i.e., marital withdrawal behavior and family performance) from the work-home resources (W-HR) perspective. Using data from 265 Chinese employee-spouse dyads collected at three time points, we found that work alienation was positively related to marital withdrawal behavior and negatively related to family performance and that ego depletion mediated these relationships. Besides, we found that self-blame proneness accelerated the work alienation-ego depletion association and the indirect effect of work alienation on family functioning via ego depletion, while the ego depletion-family functioning linkage and the indirect effect of work alienation on family functioning via ego depletion were stronger when segmentation preference was low. Implications for theory, practice, and future research are also discussed.

OB: Do Flexible Work Arrangements Really Work? Individual Role Boundary Management Matters   

Author: **Kai Zhao**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Danyang Wang**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Mian Zhang**, *Tsinghua U.*
Author: **Yiyi Wei**, *School of Labor and Human Resources, Renmin U. of China*
Author: **Yuxiang Luan**, *School of Labor and Human Resources, Renmin U. of China*

By integrating the Work-Home Resources Model (W-HR Model) and boundary theory, we investigated the relationship between flexible work arrangements (abbreviated as FWAs, including flextime and flexplace policy) and family engagement. With a paired sample of 253 Chinese employees and their spouses, our analyses showed that both of the main effects of flextime and flexplace policy on family engagement were positive. However, we also found that the indirect effects of these two policies on family engagement via family boundary segmentation enactment were negative. Furthermore, family boundary segmentation preference moderated both of the main effects and the indirect effects. Specifically, on the one hand, it reinforced the positive main effect of flextime policy on family engagement; on the other hand, it also reinforced the negative indirect effect of flextime policy on family engagement. Overall, our findings enlighten us to pay more attention to the potential negative influences of FWAs on employees' family-related consequences, and suggest that individual role boundary management may be a crucial theoretical perspective to understand the mechanisms and boundary conditions for the effectiveness of FWAs. These findings also have important managerial implications for organizations and employees seeking to balance the benefits and drawbacks of FWAs in managing work and family demands.

OB: Company is in Debt to the Family: Work Contact During Family Time and Unethical Pro-Family Behavior

Author: **Ken Cheng**, *School of Management, Zhejiang U. of Technology*
Author: **Yifei Wang**, *Tongji U.*
Author: **Chenqi Cai**, *zhejiang U. of technology*

Drawing on social exchange theory, we propose that contacting employees about work-related issues during their family time (work contact during family time, WCFT) makes employees feel that the organization is in debt to the family (felt organizational indebtedness to family, FOIF), which in turn prompts employees to conduct unethical pro-family behavior (UPFB). Furthermore, we argue that employees' family centrality amplifies the hypothesized relationships. The results from one scenario-based experiment and one questionnaire survey showed that FOIF partially mediated the positive effect of WCFT on UPFB. Furthermore, we found that the effect of WCFT on FOIF and the mediation relationship were stronger for employees with high family centrality. These findings enrich the social exchange explanation of how UPFB occurs and provide insights into how to inhibit UPFB. Limitations and future research directions are discussed.

Today's work groups face unique opportunities and challenges related to new ways of organizing and performing. This symposium aims to present an integrated set of studies exploring the frontiers of dynamic interactions within work groups, paying particular attention to the roles of power, status, and emotions. It features four research papers encompassing both theoretical and empirical approaches and using diverse methodologies and study contexts. To advance knowledge and provoke new directions in group research, we have also invited a distinguished scholar as the session discussant. Together, this symposium aims to encapsulate, encourage, and elicit scholarship that addresses a compelling set of questions concerning interaction dynamics in work groups, as well as how leaders and organizations may address their social, relational, and emotional opportunities and challenges.

Presenter: **Krishna Savani**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

The theme of this year's conference, Innovating for the Future, prompts scholars to address the challenges organizations face, including the persistent issue of inequality. We respond to the call to “unlock innovative insights and evidence-based contributions for a brighter future for workers, managers, organizations, and society at large” by presenting the results of five empirical investigations into stereotyping processes that contribute to inequality within organizations. Together, these studies provide new insights into the ways in which stereotypes affect organizationally relevant outcomes, how organizational leaders attempt to gain credibility to address diversity-related issues, and what evidence-based interventions can increase organizational diversity. In this symposium we present new research on stereotypes, with each project adding insight from a different perspective. First, we show robust stereotyping along a previously unexplored dimension, namely construal level, and its impact on real-world occupational representation and role allocation decisions (Paper 1). Second, we identify a novel consequence of gender stereotypes: journalists ask women CEOs more personal questions, and men CEOs more task-oriented questions, leading to different temporal focus: women are prompted to focus more on the past, and men – on the present and future (Paper 2). We then highlight the complex dynamics of stereotypes, demonstrating that common gender stereotypes can have opposing consequences depending on target characteristics: although dominant female (but not male) leaders are evaluated as less effective at lower levels of perceived competence, these gender differences are eliminated when leaders are perceived as highly competent (Paper 3). Rising awareness of the unique challenges women face in the workplace means that CEOs and other organizational leaders must credibly address women-related issues, from maternity leave to sexual harassment, despite organizational leaders being largely male in many industries. We show that one strategy - referencing their own daughters - enhances male managers' credibility on women-related issues. Yet, the belief that fathers of daughters are more gender egalitarian does not align with the actual gender attitudes of fathers (Paper 4). Finally, we unveil a novel intervention that makes clever use of a common decision-making bias to promote diversity without mentioning gender, race, diversity, or discrimination (Paper 5).

Empowering Leadership: Current Research and The Road Ahead

Session Chair: **Tobias Dennerlein**, *Purdue U.*
Discussant: **Gretchen Marie Spreitzer**, *U. of Michigan*

This symposium sheds light on key developments in empowering leadership research as reflected in the following questions: When are leaders more vs. less likely to empower their subordinates? How does empowering leadership affect female and male employees differently? Is there a hidden dark side when it comes to over- or under-empowering employees considering the amount of empowering leadership wanted and received? Specifically, the presentations included in this symposium address how (i) leader temporal focus (Johnson, Mathieu, & Oh) and (ii) leader prosocial motivation affect leaders' likelihood of empowering their employees (Buss, Kearney, & Metzger); (iii) how employee gender moderates the effect of empowering leadership on employee outcome expectancy and career related outcomes (Dennerlein and Wu); and, (iv) how mismatches between empowering leadership wanted and received could backfire and undermine the effectiveness of empowering leadership (Li, Kirkman, Tu, & Flynn). The discussant, Dr. Gretchen Spreitzer, will summarize themes across presentations, highlight future research directions, and lead an interactive discussion between presenters and audience.

Discussant: **David Mayer**, *U. of Michigan*

The literature on organizational citizenship behavior (OCB) is a rich one that has been studied by numerous researchers. Despite the extensive body of work, scholars are still finding ways to meaningfully contribute to the OCB literature by challenging its long-held assumptions and finding new discoveries. The purpose of this symposium is to add momentum to the development of this line of research by bringing papers that address a few of the assumptions and identify novel research ideas in the area of OCB. Specifically, Chong and Wu introduce a novel predictor of OCB, external volunteering, thereby expanding the literature on OCB to include factors that are outside of the workplace. Lee, Lee, and Hu also explore a novel predictor of OCB, peer monitoring at work. They explain that how employees interpret others' monitoring of them affects their decision to engage in OCB or incivility subsequently. Poulton, Lin, Tu, and Xu introduce a novel stakeholder in an OCB event—witnesses—to explain how “ambient” OCB can affect the witness's engagement in subsequent OCB or counterproductive work behavior (CWB). Lastly, Lee, Ong, & Koval identify how OCB understood from the perspective of the recipient could result in negative responses depending on the setting and specific qualities of the OCB. The papers in this symposium demonstrate how researchers can continue to expand the OCB literature in meaningful ways.

Panelist: **Gregory Depow**, *U. of Toronto*
Moderator: **Rachel Lise Ruttan**, *U. of Toronto*
Discussant: **Monica C. Worline**, *Stanford U. Center for Compassion and Altruism Research*

Scholarship from prior decades suggests that as much as a third of the working population experiences emotional distress or suffers from poor psychological health, suggesting that this is an important topic for management scholars. Indeed, existing management scholarship on workplace distress has examined the causes and consequences of distress, as well as the characteristics of individual employees that impact their ability to cope with distressing events at work. Still, there is still much we do not know; in particular, we suggest that the direct experience of distress across workplaces, as well as the organizational and interpersonal factors that can help mitigate employee suffering warrant greater scholarly attention. Further, relatively little attention has been paid to how the distress of others influences us, and how responding with compassion influences both the one suffering and the one trying to help – topics that are key to improving the function of organizations in the future. To consider this intersection of distress and compassion, we have assembled a panel of scholars who study these topics in the context of organizations. Together, these panelists will shed light on the experience of distress in workplaces, as well as how workers manage the distress of others, and the role that compassion plays in mitigating the distress of both primary and secondary sufferers.

New Frontiers in Organizational Culture

Session Chair: **Katina Sawyer**, *U. of Arizona*
Session Chair: **Kelly Gabriel**, *U. of Arizona*
Presenter: **Olivia Amanda O'Neill**, *George Mason U.*
Participant: **Yoonjin Choi**, *College of William and Mary*
Presenter: **Patrick Sheehan**, *Stanford MS&E*
Presenter: **Christopher Law**, *Texas A&M U.*
Participant: **Chris B. Bingham**, *U. of North Carolina, Chapel Hill*
Discussant: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*

Despite the accumulated evidence of organizational culture's importance to organizational life, there are still many pressing, unanswered questions about how culture plays a role in organizations' efforts to navigate an increasingly complex world. As such, more research is needed to showcase new forms of organizational culture, new mechanisms that explain how cultures strengthen or weaken, and new outcomes that organizational cultures promote in modern markets. In particular, there is a need to broaden thinking about how culture might help organizations to survive - and thrive - in complex and unstable environments. In this vein, the papers in this proposed symposium examine new frontiers in organizational culture and examine how organizational cultures emerge, change over time, and create unique, often counterintuitive outcomes for modern organizations.

The Biophilia Effect: Innovative Management With Nature in Mind

Organizer: **Lin Jiang**, *U. of South Florida*
Organizer: **J. Jeffrey Gish**, *U. of Central Florida*
Organizer: **Elizabeth Embry**, *U. of Kansas*
Organizer: **Ian Siderits**, *North Carolina State U.*
Discussant: **Anthony Klotz**, *UCL School of Management*

While management research has traditionally focused on how companies influence the natural environments, this symposium proposes that it is equally important to explore the reverse: can natural environments also exert a significant impact on companies? This shift in perspective can encourage management scholars to rethink management with nature in mind, examining how natural environments can influence organizations and their employees. Promising evidence has emerged to suggest that contact with nature can influence employees' work efforts, novel thinking, task performance, and wellbeing. Despite the recent progress, many important questions remain unanswered. The presentations in this symposium aim to address those questions that can be of substantial interest to various divisions within the Academy of Management.

Leveraging Agility for a VUCA World

Session Chair: **Emily Elizabeth Forgo**, *U. of Maryland, College Park*
Session Chair: **Daniel Pellathy**, *Haslam College of Business, U. of Tennessee*
Presenter: **Michael Grojean**, *Haslam College of Business, U. of Tennessee*
Presenter: **Paul Hanges**, *U. of Maryland*
Presenter: **Mahka Moeen**, *U. of Wisconsin*
Presenter: **Melanie Gerschberger**, *U. of Applied Sciences Upper Austria*
Presenter: **Dritjon Gruda**, *Catolica Porto, Portugal/Maynooth U., Ireland*

Organizational agility has emerged as a critical capability that has allowed organizations to successfully innovate within VUCA (volatile, uncertain, complex, ambiguous) contexts. However, agility as a construct remains underdeveloped with regard to behavioral or “human” dimensions. This symposium focuses on papers that advance understanding of the human dimensions of agility by covering topics related to construct development, leadership and entrepreneurial antecedent, enablers and barriers, and the potential dark side of agility.

Reflecting on the Past, Anticipating the Future during Organizational Change

Session Moderator: **Annemie Van Der Schaft**, *Radboud U. Nijmegen*

ODC: Are They Loyal Rebels? Change Recipients' Role Taking Reflected in Storied Experiences

Author: **Annemie Van Der Schaft**, *Radboud U. Nijmegen*

Author: **Omar Solinger**, *Vrije U. Amsterdam*

Author: **W Van Olfen**, *TIAS/Tilburg U.*

Author: **Xander Lub**, *Hogeschool Utrecht*

Author: **Riku Ruotsalainen**, *Vrije U. Amsterdam*

Successful organizational change requires substantial efforts from both the leaders and recipients of change. After a long tradition of focusing on change leaders, academics now increasingly focus on the role of change recipients. The current literature on change recipients, however, offers mostly binary categorizations of their responses (e.g., supportive vs unsupportive) obtained from questionnaires. Such an approach cannot reveal how events can cause shifts in change recipients' role taking during a change initiative. To better capture such complexity, we adopted a narrative approach where 80 informants were asked to tell the retrospective story of their experience of, and role taking in, a top-down change initiative as if they were crafting chapters of a book. Based on analysis of this data, we induced five composite narratives (i.e., Loyal Rebel-, Redeemed Recipient-, Easy-going Optimist-, Wannabe Hero-, and Bystander-Journey), each of which represent typical dynamics of momentary role taking by change recipients during a change initiative. This study additionally highlights how experiences of top-down change initiatives are (1) diverse and (2) variable yet seem grounded in institutionalized beliefs. Moreover, from two induced dilemmas of role taking, we developed a framework that helps interpret five examples of variation and shifts in role taking processes.

ODC: Re-Discovering Path Dependence: The Case Study of UK Pension Funds' Historical Narratives

Author: **Anna Tilba**, *Durham U. Business School*

Author: **John Wilson**, *Newcastle Business School, Northumbria U.*

In the context of continuous academic and policy calls for organisations to change and be more long-term focused, this paper uses UK pension funds as an example, to explore why some organisations resist change. We utilise theorization about time through historical narratives of trustees to explore how subjective interpretations of the past are shaping strategic decision-making, representing a barrier to change. This is linked with broader debates relating to the short-term focus in organisations. Using qualitative insights from 22 in-depth, semi-structured interviews with pension fund trustees and their investment experts, we develop a theoretical model that highlights the complexity of the past at different levels of analysis: Systemic, Organizational and Individual path dependencies that are being referred to or 'validated' during strategy formulation and implementation, which also suggests that organisations have multiple path dependencies. In so doing, we provide a more nuanced theorisation of path dependence and the role it plays in shaping strategic change. Our study has significant implications for policy and practice as it highlights a lack of diversity and the need for better mapping of UK trustee landscape. We also provide suggestions on how policy makers can better instil in trustees and in the wider investment community the ability to change dominant narratives as a means of fashioning a more sustainable future.

ODC: Mindful Path Transformation: Unveiling Intersected Individual and Collective Mechanisms

Author: **Yanina Rashkova**, *U. degli Studi di Cagliari*

Author: **Francesca Cabiddu**, *U. of Cagliari*

Author: **Isabelle GALOIS-FAURIE**, *Grenoble Ecole de Management*

Organizational path dependence theory has become a pivotal basis for understanding the complexities of organizational change. For organizations seeking to enact path transformation (i.e., to shift from the existing path and form a new one) iterating self-reinforcing mechanisms, including norms, beliefs, and habits guiding organizational behavior, is essential. However, despite recognizing that self-reinforcing mechanisms are not only individually (re)produced but also collectively enacted, there has been a paucity of studies exploring this intersected process. To address this limitation, we propose introducing mindfulness into the realm of path transformation research. By doing so, we explore how mindfulness can address rigidities within both individual and collective mechanisms to facilitate organizational path transformation. We draw from the insights of a Belgian public entity (INASTI) that has been implementing mindfulness interventions for senior employees for the last 10 years while undergoing a notable path transformation. Presenting our findings through the new Mindful Path Transformation Framework, we propose that mindfulness interventions in a workplace initially facilitate progressive changes within individual and interpersonal mechanisms. This involves individuals noticing automatism at work and establishing a norm to relate with attention. These changes then trigger various path-abandoning (abandoning habitual judgment and habitual hierarchical perceptions) and path-creating (attending to alternatives and interacting with support) routines that inform the novel development of collective mechanism, mindfully questioning past collective assumptions. We suggest that mindfully questioning the collective assumptions, a group's norm to question the shared assumptions that underpin organizational development with curiosity and openness, broaden the awareness of alternatives, and represent the fundamental facilitating factor in path transformation. We contribute to path transformation and mindfulness research. Practical implications and future research directions are also discussed.

Author: **KAI ZENG**, School of Business, Renmin U. of China

Author: **Fengbin Wang**, School of Business, Renmin U. of China

Author: **Peter Ping Li**, Copenhagen Business School

Author: **Lulu Liu**, China U. of Labor Relations

Niche leaders are firms distinguished by their dominant market share and superior innovation capabilities within their specific markets. Extant literature suggests that corporate spin-offs are more likely to develop into niche leaders in submarkets of their parent companies because of the resources inherited from parents, but the specific paths to become niche leaders are still unclear. In this paper, we systematically analyze the innovation-driven pathways in which corporate spin-offs become niche leaders. These pathways are generated through investigating the conjoint effects of attributes from three dimensions: Spin-offs, Parents, and Innovation Network. Utilizing a fuzzy set qualitative comparative analysis (fsQCA) method, the study examines the development paths of 53 corporate spin-offs in China and finds five pathways for them to become niche leaders, namely, parent-supported innovation, parent-led innovation, self-driven innovation with parent halo, self-driven innovation with parent assistance, and multi-agents collaborative innovation. Additionally, it highlights four pathways that lead to failure. Our study unpacks the conjunctive and asymmetric causality underlying the corporate spin-offs' paths to niche leaders, and provides key insights in the dyadic relations between corporate spin-offs and their parent companies.

Theorizing Grand Challenges: The Arc of History

Session Moderator: **Svenja Katharina Tobies**, *U. of Hamburg*

OMT: **Paradise Lost? The Limits of Prefigurative Organizing for Desirable Futures**

Author: **Svenja Katharina Tobies**, *U. of Hamburg*
Author: **Laura Marie Edinger-Schons**, *U. of Hamburg*
Author: **Douglas A. Schuler**, *Rice U.*

Considering the multiple crises that challenge our societies, scholars have become increasingly interested in how we can organize for more desirable futures. One way to contribute to this conversation is through the study of prefigurative organizing, which is characterized by the rejection of norms, the implementation of envisioned alternatives, and a contribution to the transformation of the economy. This paper presents a qualitative study of the German Premi-um Kollektiv (Premium Collective), a purpose-driven enterprise that prefigures its desirable future by organizing itself according to a strongly held and shared value system based on the premise of 'hacking capitalism'. We trace the history of the collective from its inception to the present day, focusing on the COVID pandemic as an incisive crisis event that not only threat-ened its existence, but also entailed profound changes in its organizational order and practices. Findings show that, on the one hand, the relational resources created through prefiguration served as a buffer in times of crisis. On the other hand, our case provides evidence that exter-nal crises can shrink the spaces for prefigurative organizations to experiment and force them to take actions that are incompatible with organizational values. We show how their moves to-wards a more formalized, conventional organizational order led to extreme tensions within the collective. This case expands our understanding of what aspects afford prefigurative organiza-tions resilience in times of crisis and how this affects their ability to uphold their core organiz-ing principles.

OMT: **Emotion Reconciling to Address Attention Overload in Organizations Tackling Societal Grand Challenge**

Author: **Yidi Guo**, *School of Economics and Management Tsinghua U.*
Author: **Quy Nguyen Huy**, *INSEAD*
Author: **Saouré Kouamé**, *MTN Mobile Money Payment Service Bank Limited, Nigeria*

Organizations tackling societal grand challenges such as poverty, disease and migration encounter distinct attention load problems. Organizational members' attentional engagement with daily operations might be depleted by their frustration with the overwhelming size of the challenge and by their compassion for huge numbers of help seekers. Our study examines how members' limited attention is structured to produce continuous achievements at a charitable hospital in India that aspires to provide free high-quality medical care to all people. From it emerges an emotion reconciling process characterized by emotion projecting, whereby members evoke the emotion of hope and imagine that the present unattended demands will be taken care of by other social entities in the future. This works in parallel with emotion fortifying, whereby a small number of gatekeepers help to circumscribe other members' compassion experiences. Together these practices foster members' attentional engagement with day-to-day operations and the organization's continued effectiveness. Our study provides novel insights into the attention-based view of organizations by proposing emotion-based mechanisms that reconcile attention overload when organizations are deluged by the scale of demand as they seek to tackle the world's grand challenges.

OMT: **Theorizations of a Grand Challenge: The Danish Tech Industry's Social-Symbolic Work with Diversity**

Author: **Lærke Højgaard Christiansen**, *Technical U. of Denmark (DTU)*
Author: **Thomas Burø**, *Technical U. of Denmark*
Author: **Sille Bastrup**, *The Technical U. of Denmark*

In this paper we explore how different key actors within the Danish technology field use and theorize role models as a change tactic to work with the grand challenge of social diversity. We draw on an ethnographic field study of the Danish technology entrepreneurship field, when analyzing the collective effort of change agents and activists to change technology entrepreneurship to accommodate more social diversity, especially female entrepreneurs. Specifically, we examine change agents' social-symbolic work in relation to the grand challenge of social diversity. We find three different ideal types of role models: the conservative, the revolutionary, and the reformist. These conceptions are accompanied by three distinct change theorizations and social-symbolic work, and ultimately infuse different institutional change pathways (institutional maintenance, - accretion, and - alignment). We contribute to the literature on institutional change and grand challenges, as we elaborate on how what might appear as a shared goal, with shared means (role model) and ends (social diversity) in mobilizing for a grand challenge, actually differ tremendously, because the same tactic is theorized quite differently, fostering different pathways for change. Based on our findings, we discuss some key unanticipated consequences of the three ideal types, i.e., the attribution of responsibility-, the narrowing of scope-, and the translation of the grand challenge.

OMT: **For the Harvest of Tomorrow: Resynchronizing Across Fields in Response to Grand Challenges**

Author: **Daan Peeters**, *Rotterdam School of Management, Erasmus U.*
Author: **Corinna Frey**, *Erasmus U. Rotterdam*

Grand challenges are complex problems that increasingly demand fields to interact with each other. The limited research on field-to-field interactions predominantly focuses on formal and durable structures to interact and sustain engagement of different fields. However, the maintenance of such structures risks diverting resources and focus from the underlying grand challenge itself. We draw on the notion of interstitial spaces as offering a compelling alternative for field-to-field interactions, providing informal and transient settings where actors from diverse fields can engage each other and generate novel practices that can survive beyond the lifespan of the structure itself. Building on a four-year inductive case study of 'The Harvest', an interstitial space focused on addressing the sustainability transition of the Dutch agriculture and food system, we detail the role that catalysts and interaction rituals play at various stages of its life. Our findings unpack the actors' journey through two specific interaction rituals that conditioned their ability to more easily get back 'in sync' with different perspectives of other fields. We refer to this new practice as 'resynchronizing', enabling actors to sustain engagement around a set of perspectives rather than the static structure itself. We contribute to the literature and recent debates on field-to-field interaction and grand challenges, emphasizing the important role of interstitial spaces, and in particular the ability to resynchronize, when a shared take on the challenge remains an elusive quest.

In recent years, social network scholars have focused their attention towards the behavioral perspective of network brokerage. In this perspective, extant research theorized how and when brokering or other network-related behavior may occur (e.g., Bailey & Levin, 2023; Carnabuci & Quintane, 2023; Obstfeld, 2005; Quintane, Wood, Dunn, & Falzon, 2022), what brokerage behavior looks like (e.g., Batjargal, 2010; Quintane & Carnabuci, 2016), and what strategic tendencies people may have in enacting brokering behaviors (e.g., Grosser, Obstfeld, Labianca & Borgatti, 2019; Halevy, Halali, & Cohen, 2019; Obstfeld, Borgatti & Davis, 2014; Soda, Tortoriello & Iorio, 2018). While scholars have conceptualized brokering behaviors as being distinct to brokerage position (e.g., Stovel & Shaw, 2012), it is assumed that the antecedents and consequences of being a structural broker may apply to agentic attempts to broker. However, this assumption may be erroneous, as those who broker may not necessarily be situated in brokerage positions (e.g., Smith, 2005), and the act of brokering (e.g. tertius iungens) in some circumstances, may even cancel out the brokerage position which suggests lesser benefits received (Kwon, Rondi, Levin, De Massis, & Brass, 2020). Thus, we believe it timely for social network scholars to theorize the cause and effect of brokering behaviors in its own right. This symposium aims to showcase the current research situated in the behavioral perspective of brokerage by asking: What factors may uniquely motivate the act of brokering? Second, what are the consequences in engaging in brokering behaviors? This symposium embarks on a groundbreaking journey through five distinct yet interconnected research streams, delving into the antecedents and consequences of brokerage behavior in networks. Employing a diverse array of quantitative techniques such as experiments and experience sampling methods at multiple levels of analysis, these studies reveal the criticality of brokerage behavior but also mark a paradigm shift in our theoretical understanding of network brokerage when a behavioral perspective is used.

Culture and Cognition in Paradox Theory: Beyond the Hobgoblins

Session Moderator: **Sarah Bloomfield**, *The Open U.*

OMT: **Employing a Cultural Toolkit to Work Through Paradox**

Author: **Sarah Bloomfield**, *The Open U.*

Author: **Camille Pradies**, *EDHEC Business School*

Author: **Andrea Tunarosa**, *the U. of tampa*

Despite increasing recognition that paradoxes should be sustained and protected in organizations, little is known about how commitment to an organization with a paradoxical mission is maintained. Here, we use a cultural toolkit lens to study how organizational members work through paradoxes at the heart of their organization's mission. Using data from a two year ethnographically informed study at Forestry England, we induce a process model of sustaining members' commitment to an organization with a paradoxical mission. Our findings unpack the role of the organization's cultural frames, identity, and scripts to sustain a workable certainty. This research reorientates inquiries from specific practices employed by leaders to navigate tensions, or the individual sensemaking processes that organizational members engage in, to how organizational members work through paradox to sustain commitment to an organization with a paradoxical mission.

OMT: **Mechanisms Embedded in Culture that Shape Paradoxical Frames: A Situated Dynamics Approach**

Author: **Mirjam Langenbacher**, *U. of Liechtenstein*

Scholars have recently highlighted that research on paradoxical frames leaves out contextual features. This is surprising as prior researchers have argued based on social construction arguments that these features play a role in influencing responses to paradoxes. Particularly, we currently lack an integrative understanding on the cyclical dynamics and the interplay between paradoxical frames and context-based mechanisms embedded in culture that shape how individuals and collectives adopt paradoxical frames and respond to paradoxical tensions. Hence, this conceptual study aims to offer an integrative model introducing values as traits inherent to individuals' paradoxical frames, and schemas and norms as psychological mechanisms embedded in culture that shape individuals' and collectives' paradoxical frames once they are activated and become prevalent. Additionally, the model includes situation-specific factors which dynamically serve as activators that influence which mechanism takes prevalence. Accordingly, this conceptual study will shed light on how culturally embedded mechanisms and situation-specific factors influence the activation and prevalence of individual and collective paradoxical frames that individuals adopt when shaping responses to paradoxical tensions.

OMT: **Space-Making Practices for Navigating Paradoxes - Spacing, Juxtaposing, and Meaning-Making**

Author: **Julia Herzum**, *U. of Mannheim*

Author: **Alica Repenning**, *Greifswald U.*

Although paradox research recognizes that paradoxes are not 'a-contextual', unfolding in space and time, becoming salient through interactions, and being enacted through everyday practices, studies have almost neglected the importance of spatial concepts. With an in-depth digital ethnography on Social Digital Innovation (DSI), we address the question of how individuals use space-making practices to navigate paradoxes. The DSI is characterized as a greenfield humanitarian aid organization initiated by two designers and enacted by the formation of novel spatial constellations entangling a gas station, the digital space Instagram, and connections to Ukraine. Our paper contributes to paradox theory by developing a model of spatial paradox navigation. Firstly, our inductive analysis identifies three interrelated space-making practices we define under the terms: Spacing, spatial meaning-making, and spatial juxtaposing. We analyze how these practices enact a spatial formation navigating the paradoxes "retaining sense of self - adapting new situation change, enabling flexibility - maintaining control/ structure, and maintaining individuality - driving collectivity". Second, we show how space-making practices dynamically amplify and mitigate paradoxical tensions and impact paradox salience. Accordingly, our conceptual model shows a dynamic entanglement and evolution of paradoxes, spatial formations, and navigation practices. Therefore, we provide a more contextualized, spatial perspective on paradox navigation practices.

OMT: **How Navigating Paradox Influences Leader's Cognitive Resources**

Author: **Muhammad Mustafa Raziq**, *U. of Sharjah*

Author: **Uzma Batool**, *NUST Business School, National U. of Sciences and Technology, Islamabad*

Author: **Naukhez Sarwar**, *National U. of Sciences and Technology (NUST)*

In today's complex organizational systems, paradoxes are considered an everyday occurrence. A leader's cognitive ability holds substantial role in facing paradoxical tensions, as this can influence individual and organizational performance. Though paradox scholars have more often acknowledged that navigating paradoxes influences leader's cognitive resources, how leader's cognitive resources are influenced remains unclear. We draw on data from semi-structured interviews from 38 corporate executives (who experience paradoxes of regulation-innovation and) heading product/service departments of large size international telecom firms. Our findings suggest: (a) innovation and regulation as a paradox; (b) paradoxical leader's cognitive resources reinforced as they perceive tensions as opportunities, while navigating paradox of innovation-regulation (c) once cognitive resource generation reaches its peak, it tends to start depleting; and (c) this process of regulation to depletion is gradual. We present a cognitive resources utilization model. Our findings suggest further theorizing of the cognitive resource theory, as our results show slight deviation from the existing knowledge, which suggests that confronting paradoxes may take a toll at leader's cognitive resources. Furthermore, while our theoretical model extends long held theoretical assumptions, our study suggests that merely considering paradoxes as mentally taxing is not enough. We indicate new directions for the paradox theory.

Socio-Materiality: Space, Place and Time

Session Moderator: **Jane Bjørn Vedel**, *Copenhagen Business School*

OMT: **The Role of Spatial Scale in Institutional Processes**

Author: **Søren Lund Frandsen**, *Copenhagen Business School*

Author: **Moritz Jan Kleinaltenkamp**, *Freie U. Berlin*

Author: **Vera Cathrin Simoneit**, -

Author: **Jane Bjørn Vedel**, *Copenhagen Business School*

This paper delves into the increasingly recognized role of spatial scale in institutional processes. Drawing on insights from Human Geography, we elaborate a conjoined view on spatial scale that goes beyond the extant focus on institutional places in geographic locations, to consider them in relation to also institutional territories in geographic planes, and institutional orders and institutional interlinkages in geographic clusters. We propose that these four focal spaces of institutional processes are enacted through four (re)scaling practices discussed in Human Geography, namely territorialization, place-making, hierarchization, and reticulation. These practices offer a comprehensive framework for paying greater attention to a core characteristic of institutional processes: Their ability to reach beyond single organizations or locations. By integrating these practices into institutional analysis, our paper reveals how spatial scale not only serves as a backdrop for, but actively co-constitutes institutional processes.

OMT: **When Time is of the Essence: Examining Timing of Product Recalls in the Biopharmaceutical Industry**

Author: **David M. Gomulya**, *Singapore Management U.*

Author: **Amrita Lahiri**, *Washington State U.*

Author: **Huizhi Yu**, *Texas Woman's U.*

Considering the hazard posed by defective products, we know relatively little about how firms determine when to recall products once they are known to have defects. Drawing on two perspectives: threat rigidity and stealing the thunder, this study examines the effects of recall severity and scale on the time it takes firms to announce a product recall after becoming aware of the defect, and the contingencies surrounding them. Our study contributes insights to the literature on crisis management by clarifying the conditions when different perspectives are more likely to dominate in predicting the timing of firm response to crisis. We contribute to practice by illuminating key drivers of the timing of product recall decisions – a type of firm action with significant implications for public health and policy.

OMT: **Edinburgh's Festival(s): Configuring A New Arts Field Through Place-Based Mechanisms**

Author: **Candace Jones**, *U. of Edinburgh business school*

Fields, as sites of frequent and fateful interaction, are implicitly based in places. Studies of fields and field configuring, however, tend to focus on discourse within a field to reveal members' cognitive understandings and their subject positions. Place—the interplay of geographic location, material forms and meanings— is strikingly absent from theoretical and empirical research on fields. I engaged in a longitudinal case study of a new field created and sustained by field configuring events: the Edinburgh Festivals from 1945 to 1971. By drawing on Simmel's sociology of urban space and social relations, the study reveals that field members employed three place-based mechanisms—cultural brokers, buildings and spatial configuration. Cultural brokers connected local actors to international artists and elites that generated field heterogeneity. Buildings demarcated festivals' organizational boundaries that enabled multiple festivals to operate simultaneously but also made the landscape readable for audiences. Spatial configuration of multiple diverse festivals' events proximate to one another facilitated movement between festivals diverse events while enabling a coherent interpretive frame of the field based on place rather than organizational boundaries: Edinburgh Festival. This study demonstrates the value of incorporating place, including Simmel's sociology of urban space, to reveal how fields are mutually constituted socially, materially and discursively.

Theories of Evaluations and Review

Session Moderator: **Linqing Huang**, *Bocconi U.*

OMT: **Institutional Reviewer's Strategic Evaluations**

Author: **Linqing Huang**, *Bocconi U.*
Author: **Fabrizio Perretti**, *Bocconi U.*

This study aims to understand how organizations navigate internal similarities/differences across diverse locations. Focusing on institutional reviewers, we propose four hypotheses involving cultural and economic factors to explain disparities in evaluation outcomes across host countries. Our analysis validates two logics. Firstly, institutional reviewers encounter cultural barriers and penalize countries with dissimilar cultures. Secondly, institutional reviewers utilize their discretionary power to protect the home country from competition with other host countries in the international market. This study sheds light on the strategic preferences of institutional reviewers in shaping market perceptions and contributes to a deeper understanding of the inequalities embedded in evaluation outcomes. It also helps people understand how organizations trade off internal similarities/differences by balancing external adaptability and internal commensurability.

OMT: **Paying & Punishing it Forward: Misrecognized Evaluators Reproduce Unmeritocratic Peer Evaluations**

Author: **Mabel Abraham**, *Columbia Business School*
Author: **Tristan L. Botelho**, *Yale School of Management*
Author: **James T. Carter**, *Cornell U.*

In any evaluation system, the evaluator's purpose is to grant recognition or status to the highest quality candidates. However, these systems are imperfect; top performers may not be recognized and thus be underrecognized, and low performers may receive unwarranted recognition and be overrecognized. An important feature of many evaluation systems is that people alternate between being candidates and being evaluators. We examine how experiencing misrecognition as a candidate affects how people subsequently evaluate others within such systems. Building on theories of evaluations, role fulfillment, and equity, we argue that being underrecognized or overrecognized as candidates will affect how individuals later evaluate others. Across three studies—a natural field experiment with investment professionals, and two preregistered, multistage experiments, we find that underrecognized evaluators are less likely to grant rewards—even to the highest performing candidates—than similarly performing but correctly recognized evaluators. In contrast, overrecognized evaluators are more likely to grant recognition—even to the lowest performing candidates—than similarly performing but correctly recognized evaluators. Importantly, we provide evidence that underrecognized evaluator behavior is explained by perceptions that their experience was unfair while overrecognized evaluator behavior is shaped by role fulfillment concerns. Thus, in evaluation processes where people oscillate between the evaluated and the evaluator, we show how and why seemingly innocuous initial inefficiencies are reproduced.

OMT: **When Envy Becomes Benign and Scorn Becomes Predatory? Competitive Actions in Organization Rankings**

Author: **Chunhu Jeon**, *Morgan State U.*

Rankings locate individual actors in different ordinal positions even though there are little differences between the actors. Leveraging positional discrepancies created by rankings, I conducted regression discontinuity analyses to investigate whether and how positional discrepancies impact competitive actions in organizational dyads. The empirical analysis of market entries of Korean conglomerates suggests that upward competition is more likely than downward competition when initiating competitive actions: organizations are more likely to enter markets occupied by higher-ranked competitors. However, the results also show that this tendency can be reversed as organizations respond to previous interactions with lower-ranked competitors. Downward competition is strengthened when the lower-ranked competitor previously initiated competition. Upward competition can be weakened by previous acquisition deals in the organizational dyad. This study contributes to research on the impacts of social hierarchies on competitive actions.

OMT: **To Conform or Be Unique: Exploring the Influence of Analysts on Firms' Strategies**

Author: **Mehdi Samimi**, *City College - City U. of New York*
Author: **Ali Samei**, *U. of Sheffield Management School*
Author: **Samira Fallah**, *U. of Mary Washington*
Author: **Punit Arora**, *City U. of New York*

In this study, we examine the impact of analysts' recommendations on a critical decision faced by firms: the choice between conformity and distinctiveness. Integrating perspectives from both the strategy school of thought, advocating for uniqueness, and institutional theory, emphasizing conformity for legitimacy, we argue that, following analyst downgrades, firms may shift towards strategic distinctiveness or conformity depending on contextual factors that shape their interpretation of those recommendations. We find that, in this situation, firms tend to adopt strategic distinctiveness, when led by a powerful CEO, have strong financial performance, are categorized by investors as a growth stock, and operate in highly competitive industries. Our study contributes to the literature by providing a contextual understanding of analysts' impact on firm strategies. We also make a methodological contribution by devising a novel measure for strategic distinctiveness by employing topic modeling techniques on earnings call transcripts.

Institutional Renewal and Change: The Times They are A-Changin'

Session Moderator: **Joakim Hans Netz**, *Jönköping U.*

OMT: **From Frustration to Institutionalization: Rapid Institutional Renewal and Emergent Intermediaries**

Author: **Joakim Hans Netz**, *Jönköping U.*

Author: **Patrick Reinmoeller**, *IMD*

Author: **Rob Jansen**, *Tilburg U.*

When extreme contexts reveal voids in national preparedness systems, the actors in emergent intermediaries face a dilemma in resolving a lack of supply—they can follow existing rules and fail, or they can break rules to enable supply but risk punishment after the crisis. Multiple-case analyses of how the COVID-19 outbreak affected the supply of safety-critical goods revealed how intermediaries emerged rapidly and contravened national legislation and customs because prosocial frustration compensated for fear. Those public and private actors involved in emergent intermediaries reflected on the right thing to do and envisioned a flexible national preparedness system. Although literature points to intermediaries for new coordination of supply during crises, their emergence and social organization into rapid institutional renewal are overlooked. Based on our findings, we develop a model that shows how new intermediaries emerge when actors break, make, and prosocially integrate rules by drawing on frustration and reflection to envision system renewal, institutionalize their experience, and avoid impending punishment. While theories overlook the dilemma of voids in national preparedness systems, this study highlights how emergent intermediaries' actors renew institutions rapidly. These insights advance extreme context research on the phenomenon by integrating institutional and prosocial literature and offer policy implications.

OMT: **Kindle's Kindle: Digitization and the Novelty of Creative Content in the US Publishing Industry**

Author: **Khwan Kim**, *INSEAD*

In this study, I examine the impact of digitization on content novelty within the US book publishing industry, focusing on the transformative influence of Amazon's Kindle and its digital ecosystem on the production and consumption of creative content. I propose and demonstrate that while digitization has promoted democratization and disintermediation, enabling a wider range of creators to participate in the market and fostering a more direct interaction between creators and consumers, it has inadvertently led to a reduction in the novelty of creative content. In doing so, I theorize the diminished roles of traditional gatekeepers and intermediaries and how a market increasingly driven by algorithmic evaluations and consumer feedback encourages homogenization and reduces differentiation in creative outputs. Employing data from nearly 300,000 original books published in the U.S. between 2001 and 2014, sourced from Goodreads.com, the study utilizes fixed effects regressions and a Difference-in-Differences (DiD) analysis to examine these dynamics. The findings indicate a significant decrease in book novelty post-digitization, with variations contingent upon the size of publishing organizations, authors' status, and genre-specific traits. The results also suggest that while established creators might maintain a certain level of autonomy, emerging and independent creators are more likely to align with prevailing market trends, contributing to the overall decline in novelty. This study enriches the literature on creative industries by providing empirical evidence of the complex effects of digitization on content novelty and shedding light on the shifting landscape of creative production and consumption in the digital age.

OMT: **Shareholder Revolution and Transformation of Innovation Strategies in the U.S., 1980-2015**

Author: **Yusaku Takeda**, *U. of Illinois at Urbana-Champaign*

Author: **Larry Peng**, *U. of Illinois at Urbana-Champaign*

The shareholder revolution dominant in the U.S. since the 1980s has been theorized to hamper innovation efforts, but R&D activities have become more prominent among U.S. businesses in the past few decades. This study offers a new explanation for this paradoxical surge of innovation efforts by distinguishing between two different innovation strategies—exploitation and exploration. We examined approximately 1.3 million patents filed by 4,420 U.S.-headquartered firms and their subsidiaries, representing about 50% of all utility patent grants of U.S. origin between 1980 and 2015. We dissect a clear, decade-spanning shift in firm orientation from explorative innovation to a more exploitative approach that capitalizes on existing knowledge—a trend echoing the growing influence of institutional investors. We theorize a mechanism of market coupling linking the market logics, institutional investors, and firm innovation strategies and suggest that quasi-indexed investors, such as indexed funds and Exchange Traded Funds (ETFs), are grave suspects of this historical transformation towards exploitation and away from exploration in the US. This highlights a need to rethink a model that promotes long-term, sustainable innovation crucial to the economy and society.

Social Movement and Collective Action

Session Moderator: **Jocelyn M. Leitzinger**, *U. of Illinois at Chicago*

OMT: **From Motown to Growtown: Pluralistic Entry and the Defense of Movement Values in a Moral Market**   

Author: **Jocelyn M. Leitzinger**, *U. of Illinois at Chicago*

Author: **Robert J. David**, *McGill U.*

Moral markets are often initiated by the efforts of social movements to develop new spaces for the exchange of products and services that instantiate movement values and create a social good as a means of alleviating a social harm. A growing literature explores how social movements contribute to the emergence of these moral markets, but much less is known about their subsequent stages of development and the role that social movements continue to play in them. The current literature suggests that the initial entrants to moral markets make strategic decisions to suppress movement values in favor of market logics to attract new entrants and achieve scale. But what happens if initial entrants make the opposite strategic decision, defending their values instead of suppressing them? We address this question with a 30-year qualitative study of urban agriculture in Detroit, Michigan – a racially segregated city facing decades of economic decline. We trace how initial market members were impacted by the entrance of new organizations based on new institutional logics and how, in turn, their responses shaped the market's development. We argue that social movements can maintain their institutional logic's dominance by engaging in a process of values alignment when complementary logics enter and values defense when conflicting logics pose a threat. Our study contributes to the literature on social movements and market emergence by demonstrating that scaling moral markets does not always necessitate the lessening of movement values. Additionally, we show that race can play a foundational role in the emergence and evolution of moral markets. Finally, we enhance our understanding of institutional complexity within markets by showing how incumbent and new logics in a market interact and mutually adjust, or alternatively, how adherents to incumbent logics can “push out” new logics with which collaborative relationships fail to develop.

OMT: **When the Spark Fades: The Impact of the #MeToo Movement on Role Incongruity in Hollywood**

Author: **Carla Rua-Gomez**, *SKEMA Business School - U. Côte d'Azur*

Author: **Daniela Iubatti**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

The #MeToo social movement, generated in 2017 by the disclosure of sexual abuse allegations against Harvey Weinstein in the Hollywood film industry, brought the entire sector under global scrutiny for gender-discriminatory practices. This study investigates the impact of #MeToo on both producers' and audience's responses. Using data sourced from the IMDb and the Numbers database, we argue and show an increase in the number of female actors in leading roles within traditionally male-dominated movie genres as a visible mitigating strategy to offset potential economic and reputational repercussions arising from the #MeToo social movement. Furthermore, while the initial reaction from audiences was favorable towards such increased numerical representation of female leading actors within male-dominated genres, thanks to their heightened awareness of misconduct, this sentiment gradually shifted towards negative over time as the momentum of the #MeToo movement waned. This negative reaction can be attributed to role incongruity within those movie genres.

 OMT: **Extremist, Multivocal, or Deliberative: Unpacking the Communicative Processes of Collective Action** 

Author: **Ferran Torres**, *Rotterdam School of Management, Erasmus U.*

Author: **Bennet Schwoon**, *U. of Zurich*

Articulating responses to society's most pressing problems requires collective action. Yet, recent studies have found that collective action increasingly produces detached responses and reinforces vicious dynamics. How and when does collective action become (non)generative? To answer this question, we unpack the processes of collective action through a Habermasian lens that puts communication front and center. With this approach we can unpack how collective action unfolds over time, getting impacted and impacting the polarized context. Our argument renders three idealized paths through which collective action unfolds: the extremist, the multivocal, and the deliberative. Accordingly, for each of these paths we take our point of departure from a polarized context characterized by the starting disposition of collectives that varies along their interests, power, and identities. We then proceed to unpack the processes of collective action by explaining how the different aims of communication, the structures of communication, actions, and reflexivity lead to different systemic effects. We contribute to the literature on collective action in three ways: (1) by taking communication as a lens, we go back to the communicative roots of collective actions; (2) we unpack the underlying processes through which collective action unfolds; and (3) we highlight the deliberative path as the normatively desirable path.

OMT: **From Revolution to Revenue Stream: How Corporate Targets Co-opt Social Movement Attacks**

Author: **Anders Dahl Krabbe**, *King's Business School*

Author: **Sara Marquez**, *De Montfort U.*

Research on social movements has shown that activist attacks on corporate targets can help to create new market opportunities. Because these opportunities tend to be oppositional to incumbent industries, theory posits that incumbents are unlikely to exploit these opportunities. However, we suggest that corporate targets might be able to leverage activist attacks to their own advantage. Drawing on a longitudinal study of commercial academic publishers' responses to the Open Access Movement, we propose a theoretical model of how incumbent organizations can benefit from the market opportunities resulting from social movement attacks by manipulating powerful third-party stakeholders' perception of alignment or misalignment with the corporate targets and social movement respectively. To do so, corporate targets first co-opt social movements' frames by exploiting the distance between activists' and powerful stakeholders' concerns. Second, corporate targets redefine social movements' claims to create new market opportunities that is aligned the powerful stakeholders' concerns. Our paper moves beyond the current focus on how social movements create new, oppositional markets to how corporate targets co-opt social movement attacks to enhance their market position.

Stakeholder Dynamics and Strategic Engagement in Sustainable Development

Session Moderator: **Limin Fu**, *Monash U.*

ONE: **The Role of Community Engagement in Circular Economy Capabilities**

Author: **Limin Fu**, *Monash U.*

Prior circular economy (CE) literature predominantly focuses on technological knowledge in firms' CE capabilities. However, as CE involves multiple stakeholders, CE capabilities extend beyond firms' technological knowledge. Hence, the extant literature is yet to explore the role of engaging other stakeholders. In this study, I investigate the role of firms' community engagement in developing CE capabilities. Drawing on social capital theory and absorptive capacity, I posit that community engagement facilitates firms' development of CE capabilities by creating social capital conducive to firms' absorptive capacity. This relationship is moderated by community investment strategy and collectivistic culture. Using a global dataset from 2002 to 2020 in 64 countries, I test the hypotheses using multilevel linear modeling (MLM), propensity score matching (PSM), and a range of supplementary tests. Overall, this study's findings not only further unpack community drivers of CE capabilities, but also provide valuable insights for practitioners and policymakers seeking a more accurate understanding of the interdependent stakeholder relations in shaping sustainable practices towards Net Zero.

ONE: **How Sustainable Shareholders use Indirect Strategies to Influence Companies**

Author: **Tanja Ohlson**, *UNSW Sydney*

Author: **Emilio Marti**, *Erasmus U. Rotterdam*

Author: **Falko Paetzold**, *EBS U. of Business and Law*

While we know that secondary stakeholders use indirect strategies to influence companies, it remains underexplored how primary stakeholders may use them. By focusing on shareholders as an important primary stakeholder, this paper explores how sustainable shareholders use indirect strategies to influence companies. Using various data sources, including 35 observations of meetings with companies and 116 interviews, we find that the Federated Hermes SDG Engagement Fund used a distinct indirect strategy: making other stakeholders salient. By highlighting other stakeholders in interactions with companies, the Fund increased companies' responsiveness to sustainability issues. Our paper advances stakeholder theory by identifying an indirect strategy that is ideally suited for primary stakeholders and research on sustainable investing by illuminating the division of labor between sustainable shareholders and other stakeholders.

ONE: **Multi-Stakeholder Partnership (MSP) Dynamics for Evolving Partnership Goals**

Author: **Soumyo Das**, *EMLYON Business School*

Businesses are increasingly organizing multistakeholder partnerships (MSPs) to achieve GSC-oriented goals. Despite a surge in academic and practice interest, extant scholarship has predominantly approached the concept of goals from a static framing. Drawing on a 10-year qualitative longitudinal study of The Ebony Project in Cameroon, I explore how a partnership initially architected to address a legal crisis evolved to organizing for long-term business sustainability. I show that the evolution of partnership goals is triggered by the incidental challenges encountered by the MSP, and which informs and shapes MSP dynamics over time. I develop a grounded process model illustrating how a recursive approach to sensemaking, searching, and structuring is crucial for managing MSPs for evolving partnership goals. By shedding light on the adaptive mechanisms within MSPs, this study contributes valuable insights to the evolving landscape of MSPs and their role in addressing complex GSCs.

ONE: **Sustainability Liability? Individual Environmental Concerns and Startup Legitimacy**

Author: **Sonal Nayak**, *Doctoral Student at Indian Institute of Management Bangalore*

Legitimacy can be a major issue for startups, especially within nascent categories. While the literature has often focused on startups' internal efforts to gain legitimacy, in this paper, we complement such prior perspectives by focusing on the role of individual environmental concerns (IEC) as a source of external legitimation for startups. Our key argument is that startups suffer from sustainability liability, especially when the category is nascent, since they are often seen as prioritizing long-term good over short-term gains. Under such circumstances, individual environmental concerns influence other resource-providing stakeholders to invest in sustainability-focused startups through interactive agency. We find support for our arguments in the US food and agriculture setting. We find that sustainability-focused startups are less likely to get funded early on, but more likely to later when venture capitalists are influenced by individual environment concerns. Our findings have implications for the literatures on sustainability, entrepreneurship, and impact investing.

ONE: **How Strategic Decisions Impact the Success of Local Advocacy Interventions at Greenpeace**

Author: **Yves Plourde**, *HEC Montreal*

International advocacy non-governmental organizations (NGOs) represent key actors of global environmental governance. In this paper, we depart from the current paradigm that considers these NGOs as stakeholders to businesses and governments to investigate how they make decisions concerning their advocacy interventions. Our contribution is twofold. First, we develop a framework that explains how the national and regional organizations (NROs) at Greenpeace strategize their interventions. Second, we adopt a set-theoretic approach to investigate how the decision points associated with an intervention impact its success. Our findings show that the success of interventions largely depends on the choice of targets and tactics in relation to the particular context of an intervention. Our study calls for a greater understanding of the strategic management of international environmental advocacy NGOs.

Regional Dynamics and Global Perspectives in Environmental Sustainability

Session Moderator: **Andra Riandita**, *U. of Stavanger Business School*

ONE: **Does Location Matter for Eco-Innovation? A Comparison Between Core and Peripheral Regions**

Author: **Xiangyu Quan**, *U. of Stavanger*

Author: **Marte Solheim**, *U. of Stavanger*

Author: **Andra Riandita**, *U. of Stavanger Business School*

This paper examines the role of geographical location in the relationship between external collaboration and eco-innovation by drawing on the literature on eco-innovation and the geography of innovation. Analyzing data from 3,518 Norwegian firms in the service sector, we demonstrate that a firm's geographical location significantly influences collaboration with external partners on eco-innovation. Despite collaboration with partners at all geographical scales is positively associated with eco-innovation in both core and peripheral regions, firms situated in peripheral regions show greater benefits from collaborations with international partners compared to those in core regions. These findings highlight the need for firms to take account of their location when formulating collaboration strategies and underscores the positive correlation between partner breadth and eco-innovation, thereby emphasizing the importance of diverse partnerships for advancing eco-innovation development. This study has both theoretical and practical implications, offering strategic guidance for firms aiming to leverage external collaborations for eco-innovation in core and peripheral regions.

ONE: **How Novelty Fuels Biospheric Concerns: Insights from Visiting a Mega-Event of Dubai 2020 Expo**

Author: **Yi Zhang**, *Zayed U.*

Author: **Juan Du**, *Shanghai International Studies U.*

How to enhance biospheric concerns has posed a challenge to sustainable tourism. This study examines the impact of visiting Dubai 2020 Expo on tourists' learning from novelty experiences to promote biospheric concerns. Data was collected from 885 multi-national visitors at the mega-event. Mixed research methods were used, including quadratic curve analysis, polynomial regression analysis, and response surface analysis to validate four hypotheses. The findings indicate that novelty can be transformed into biospheric concerns with variations of repeated visiting times. Both surface and polynomial regression analyses provide evidence for the congruence and incongruence between these variables to fully comprehend visitors' learning and changes. The results also reveal that optimization-novelty level changes with the visiting times in an inverted U-shaped relationship and how the relationship impacts biospheric concerns. The findings have implications that visitors are likely to transform their learning from novelty to biospheric concerns through their repeated visits with a rising ridge shape.

ONE: **The Colors of Aliens: A Replication Study on Environmental Practices of Foreign-Owned Establishments**

Author: **Narae Lee**, *Korea Advanced Institute of Science and Technology (KAIST)*

Author: **Franziska Hittmair**, *NOVA School of Business and Economics*

This paper revisits King and Shaver's (2001) "Are Aliens Green? Assessing Foreign Establishments' Environmental Conduct in the United States". Given the development of globalization since the original time frame of the study (1992-1996), we replicate their paper and examine foreign-owned establishments' environmental practices, using recent data (2010-2018) from the Toxic Release Inventory (TRI). We extend the analysis to not only estimate the effect of foreign ownership on toxic waste releases but also examine other types of pollutants, explicitly estimating the differences between domestic- and foreign-owned facilities concerning greenhouse gas emissions and particulate matters. Our results largely align with the original study, suggesting that foreign-owned establishments still generate more toxic waste but also engage in more waste management than U.S.-owned counterparts. However, in contrast to the original research, we find that foreign-owned establishments subsequently release more emissions despite their waste management efforts. We find releases of foreign-owned facilities to be higher when it comes to both toxic waste emissions and particulate matters, but do not report differences in greenhouse gas emissions. Our study underlines the crucial role of ownership when it comes to corporate environmental practices.

ONE: **Multistakeholder Partnerships and Climate Adaptation: Insights From Switzerland's Disaster Insurance**

Author: **Eugenia Cacciatori**, *Bayes Business School, City U. of London*

Author: **Paula Jarzabkowski**, *U. of Queensland*

Author: **Rebecca Bednarek**, *Victoria Management School*

Author: **Konstantinos Chalkias**, *Birkbeck, U. of London*

Climate adaptation is a key challenge facing the world today and one of the UN's sustainable development goals. Multistakeholder partnerships, particularly in the form of cross-sector partnerships bringing together actors from the public sector, business, and civil society, are often posited as effective tools to achieve climate adaptation. Yet, the evidence of the effectiveness of these partnerships is at best mixed. In this paper, we look at an extreme case of such multistakeholder partnerships, the Swiss system of public sector disaster insurers and resilience actors. This system is widely regarded as effective in providing cheap and comprehensive disaster insurance that also contributes to resilience and adaptation – a goal that eludes many other disaster insurance systems as they face the challenge of increasingly frequent and intense weather phenomena. We use this evidence to call for future research on multistakeholder partnerships to move beyond its current focus on business and civil society actors, and pay closer attention to public sector actors and their role and capabilities.

Re-Imagining the Relationship Between Business and Justice

Presenter: **Catherine Owsik**, *U. of Michigan, Ross School of Business*

Presenter: **Rosalie Luo**, *Ivey Business School*

Discussant: **A. Wren Montgomery**, *Ivey Business School*

Presenter: **Elizabeth Embry**, *U. of Kansas*

Presenter: **Jeff York**, *U. of Colorado, Boulder*

Presenter: **Camille Roger Meyer**, *U. of Cape Town*

Organizer: **Catherine Owsik**, *U. of Michigan, Ross School of Business*

Organizer: **Rosalie Luo**, *Ivey Business School*

Scholarship and practice are both increasingly engaging with justice in the face of a wide range of social, economic, and environmental harms, with most scholars theorizing in the realms of philosophy, politics, and legal studies. However, management research on justice up to this point has primarily only focused on justice within the boundaries of organizations. In this symposium, we provide an opportunity for management scholars to expand their understanding of justice and consider a few avenues for innovation. We organize our symposium around a systematic and integrative review of justice, with the following three empirical presentations each exemplifying one of the review's emergent insights for innovative research. Our discussant will close the symposium by briefly engaging the presenters and audience in a conversation around the role of business in advancing a more just future.

Donation Dynamics: Enhancing Nonprofit Donations in the Digital Age

Session Moderator: **Justin Michael Stritch**, *Arizona State U.*

This presentation will share research on the factors driving donor contributions in nonprofits, as we examine how transparency, executive compensation, technology, and the principles of compassion organizing influence giving behaviors.

PNP: A Survey Experiment on the Impact and Mechanisms of Nonprofit Transparency on Donations to Charities  

Author: **Zhongsheng Wu**, *Zhejiang U., China*

Author: **Yiming Dai**, *School of Public Affairs, Zhejiang U.*

As a critical bridge between societal needs and civic participation, nonprofit transparency is essential to gain trust and support from potential donors. While a considerable number of existing empirical studies have explored the relation between nonprofit transparency and donations, the causal impact and mechanisms of nonprofit transparency on donations are still not answered well. This study employs a 3 (Financial Transparency: High/Medium/Low) × 3 (Performance Transparency: High/Medium/Low) survey experimental design (N=1200) to explore the causal relation and mechanisms between nonprofit transparency and donations, as well as the heterogeneous effects of financial transparency versus performance transparency on donations. Analysis of experimental data reveals that both financial and performance transparency significantly increases willingness to donate and amount of donations, while potential donors are more sensitive to signals of financial transparency than performance transparency. In addition, rationality of donors serves as a positive moderator between transparency and donations, while past donations have a mediated moderation effect through trust in charitable organizations. These novel findings can not only contribute to the literature by further expanding the signaling theory, but also provide empirical evidence and practical implications for policymakers and nonprofit managers to promote nonprofit transparency and accountability.

PNP: The Effects of NPO Executive Compensation, Performance, and Trust on Donors' Willingness to Give

Author: **Justin Michael Stritch**, *Arizona State U.*

Author: **ChiaKo Hung**, *U. of Pennsylvania*

Executive compensation is a double-edged sword for nonprofit organizations. On one hand, above market rate salaries might be required to attract and retain individuals with the talent and skills required to effectively run these complex organizations. On the other hand, high executive salaries might be at odds with normative notions and expectations that donors and the broader public have regarding the nonprofit sector. Research shows that this incongruence, and the presence of high executive compensation can undermine trust and, critically, donor engagement with the organization. In this research, we use an experimental design to disentangle the impacts of executive compensation on public trust and willingness to donate to the organization. Theoretically, we develop a model that suggests trust will play an important role in understanding this relationship while also considering the role of organizational performance as a moderator. In terms of outcomes, we add to the literature by considering the effects of these variables on both stated willingness to give as well as actual giving behavior.

PNP: From Giving to Organizing: Unveiling the Key Determinants of Compassion Organizing in Philanthropic Crowdfunding   

Author: **Qian Jin**, *Utrecht U.*

Author: **Liang Shang**, *The Education U. of Hong Kong*

Author: **Ejian Zhou**, *U. Utrecht School of Economics*

Philanthropic crowdfunding has been laden with emotions, in particular compassion. Compassion as an other-oriented emotion not only drives donation behavior, but also motivates compassion organizing from donors. We expand the outcome scope of crowdfunding from success rate to compassion organizing and interrogate what factors in philanthropic crowdfunding campaigns transform donors into secondary organizers who act upon the campaigns not only by donating but also by mobilizing others' donation behaviors. Drawing on the theory of compassion organizing, we conducted an exploratory study with BERTopic and a mixed-effect linear regression on a novel dataset (N = 69,406) from a leading philanthropic crowdfunding platform. Our study highlights the important roles of emotions in visuals and texts, the linguistic clarity and richness and the legitimacy of backing foundations in driving compassion organizing. This study makes novel contributions to crowdfunding studies and compassion organizing by introducing a new dimension into the scope of crowdfunding outcomes and identifying the key antecedents of compassion organizing.

PNP: Technology Adoption in Nonprofits and Donations 

Author: **Hanjin Mao**, *U. of Houston - Downtown*

Information technology benefits nonprofit organizations. However, the expenditures on technology infrastructure as part of the overhead cost may scare away donations. Do donors care about the information technology adoption and expenses in nonprofit organizations? This study investigates the donors' reactions to nonprofits' information technology budget, purposes, and performance. An online survey experiment is conducted on Qualtrics with 1,040 participants. Results show that information technology adoption performance has a positive impact on donations. Surprisingly, donors are more likely to donate to organizations with higher budgets for information technology. However, the detailed information disclosed about the purposes of IT projects negatively influences their willingness to donate. This study suggested a more open and innovative approach for nonprofits to present themselves as tech-equipped organizations to their donors.

Perception & Policy: The New Frontiers of Accountability in Public Service

Session Moderator: **Julia Andrea Trautendorfer**, *Johannes Kepler U. Linz*

This presentation will share research on government accountability mechanisms with an analysis of digital information behaviors, the perception of transparency policies, the interplay of formal and informal accountability, and local government reactions to performance incentives.

PNP: **Digital Platforms as Intermediaries: A Descriptive Case Study on FOI Use Behavior** 

Author: **Julia Andrea Trautendorfer**, Johannes Kepler U. Linz
Author: **Lisa Hohensinn**, WU Vienna, U. for Economy and Business¹
Author: **Dennis Hilgers**, Johannes Kepler U. Linz

Increased implementation of transparency policies and freedom of information (FOI) laws should allow citizens to gain access to government information. While some public organizations already proactively publish information on open data portals or on their web pages, citizens are also granted the right to send individual information requests to public bodies directly. Organizations bound by FOI are obliged to respond to these requests. In addition to direct communication channels (post, email, or social media), citizens can request the desired information via digital intermediaries such as FOI platforms. These digital platforms are usually hosted by non-governmental organizations (NGOs), which forward information requests to the responsible authority, thereby providing a low-threshold way for citizens to engage with public organizations. This study explores the specific role of FOI platforms in strengthening transparency and the exchange of demand and supply of government information. By drawing on intermediation theory and principal-agency theory, the study shows the potential of FOI platforms for processing information requests and reducing information asymmetries between government and citizens. In the frame of a descriptive single case study, data from a German FOI platform is analyzed. Looking at German data is especially valuable as FOI is not regulated at the federal level, but differs from state to state (Länder). Under this premise, investigating information demand and supply via online platforms can not only shed light on overall FOI use behavior and public organization's responsiveness, but also show how platforms can foster more efficient citizen-state interaction and information exchange.

PNP: **From Policy to Perception: The impact of Accountability Mechanisms on Perceived Transparency**    

Author: **Julia Andrea Trautendorfer**, Johannes Kepler U. Linz
Author: **Nina Eder**, Johannes Kepler U. Linz
Author: **Lisa Hohensinn**, WU Vienna, U. for Economy and Business¹
Author: **Dennis Hilgers**, Johannes Kepler U. Linz

Governments worldwide have introduced transparency policies and disclosure requirements, so that citizens can hold officials accountable for their actions and fulfill their role as "watchdogs" of the state. In the long term, this should improve trust in government and the efficiency of public spending and legitimize government by mitigating potential information asymmetries between citizens and the government. Therefore, if adequate mechanisms that empower citizens to increase government transparency and accountability of public officials are properly stipulated in the law, do citizens also perceive it that way? Public perceptions of decision-making processes and government activities are crucial for government policy-making because citizens are the ultimate evaluators of policy outcomes. Thus, this study examines whether institutionalized government transparency reaches citizens and positively affects citizens' perceptions of government transparency. Using individual-level data from the European Social Survey (ESS) and country-level data from the European Public Accountability Mechanisms Dataset (EuroPAM), we analyze the impact of five accountability indicators on citizens' perceptions of transparency in 28 European countries. Using the large-N sample data from the ESS, we control for socio-demographic variables and thus also shed light on covariates of citizens' perceptions of transparency.

PNP: **Efforts or Gaming: How Local Governments Respond to Performance Incentives and Bypassing Monitoring**  

Author: **Xiao Tang**, School of Public Policy and management Tsinghua U.
Author: **Zhe Deng**, School of Public Policy and management Tsinghua U.
Author: **Mengke Guo**, School of Public Policy and management Tsinghua U.

Gaming behaviors in performance measurement are prevalent in the public sector causing information distortion and impeding substantive improvement. We develop a model of how agents' gaming behaviors are elicited and relived by incentives and monitoring and identify three paths of effects that jointly determine agents' choices between efforts or gaming, namely incentive effect, monitoring effect, and parallel effect. We use China's national inspection on environmental protection as a case and measure the extent of gaming by examining the discrepancy between reported air pollution and satellite data. Empirical findings support our theoretical predictions that each of the three effects has a unique impact on the equilibrium relations between efforts and gaming. And their joint function can produce a situation where real efforts and gaming both increase, as indicated by a decrease in the actual level and a wider gap between reported and actual levels, respectively. These results implicate a fine-tuned balance between incentives and monitoring for performance management in public organizations.

PNP: **The Relationship Between Formal and Non-Formal Accountability Processes in a Public Service Context** 

Author: **Stuart Cooper**, U. of Bristol
Author: **Suzana Grubnic**, Loughborough U.

The purpose of this paper is to explore the relationship between formal and non-formal processes of accountability in a public services context. The paper presents a case study of the impact of the Health and Social Care Act (2012) on the practices of Health and Wellbeing Board (HWB) members. It draws upon multiple data sources, including in-depth interviews with the members, comprehensive archival data published by the HWB (2011-2019), and observations of HWB public meetings. The concept of dynamic duality is introduced to offer a more holistic understanding of the relationship between formal and non-formal processes of accountability within a public services context. The case illustrates the role of formal and non-formal processes of accountability at a HWB in England. Moreover, the case study reveals the relationship and interaction between the formal and non-formal accountability processes and how they change and transform each other over time. We find that whilst non-formal accountability processes were strengthened by a historical legacy of partnership working, over time the dynamics at play led to the development of formal accountability processes through more sophisticated performance systems. The paper presents a new and more holistic conceptualisation, dynamic duality, on the potential relationship between formal and non-formal accountability processes that has applicability in the public services domain.

Evolving Challenges in Public Service Leadership, Employee Conduct, and Public Sector Performance

Organizer: **Diep Nguyen**, *Northumbria U.*

Organizer: **Geoff Plimmer**, *Victoria U. of Wellington*

Discussant: **Stephen Teo**, *La Trobe U.*

The four papers in this symposium cover a spectrum of topics, addressing unethical pro-organizational behavior, workplace incivility, cynicism and withdrawal, and accountability in the performance of public service at the executive level (Hassan, 2019; Kangas et al., 2017; Kim et al., 2023; Luan et al., 2023; Valentine et al., 2018). By engaging with these multifaceted issues, the papers aspire to contribute significantly to a more profound understanding of the intricate dynamics at play within public sector organizations. Furthermore, they aim to present potential avenues for minimizing the impacts of contemporary challenges on public service leadership, employee conduct and overall public service performance. In the first paper, Nguyen and colleagues shed light on the dearth of research and empirical evidence concerning the burgeoning unethical phenomenon within public administration: micromanagement and unethical pro-organizational behavior (UPB). Employing an experiment design in Study 1 and a fieldwork survey in Study 2, this paper unveils the dark side of micromanagement, affective trust, and work engagement in fostering the engagement in UPB among public servants. The paper drawing upon social learning and conservation of resources theories contributes valuable insights to the ongoing discourse on micromanagement and UPB, prompting a call for increased attention to these critical issues in the public sector context. The findings offer significant implications for effective leadership and organizational management, emphasizing the need for proactive policies and measures to ensure ethical conduct within the context of public administration. Employing a mixed-method design comprising both qualitative and quantitative components, Paper 2 delves into the intricate dynamics of incivility influences. It sheds light on how seemingly minor acts can profoundly shape and jeopardize teams, giving rise to fear, gossip, anger, and revenge. These detrimental dynamics escalate tension, foster team divisions, promote exclusion, diminish trust, and ultimately contribute to high turnover. The study underscores the significance of line managers, revealing that the weak and inconsistent behaviors exhibited by them serve as catalysts for this toxic work environment. In light of these findings, Zhou and Plimmer recommend prioritizing line management capabilities as precursors to addressing workplace incivility, emphasizing the imperative need for leadership training and development programs in the public sector. Drawing on the Job Demands-Resources model, Paper 3 proposed and tested the moderating role of PSM on the indirect effect of illegitimate tasks on public servants' withdrawal behavior via cynicism. Results of the Process Macro model with data from two waves of public servants in Vietnam show that illegitimate tasks are positively related to cynicism and subsequently to withdrawal behavior for public servants with low PSM. For high PSM public servants, the influence is contradictory: illegitimate tasks directly reduce cynicism and indirectly alleviate withdrawal behavior via cynicism. The results indicate that the effect of illegitimate tasks varies based on public servants' PSM levels. Paper 4 leveraged data collected from senior executives within public administration in Brazil and Indonesia to explore the impact of both interfering and supportive political leadership on the strategic management of programs by executive public servants. In their contribution to the literature, Berman and Plimmer offer new insights by highlighting the pivotal role of felt accountability, coupled with supportive political behaviors instigated and exhibited by political leaders, in augmenting the strategic effectiveness of these crucial programs. This study highlights the essentiality of specific leadership behaviors at the executive level within public administration, asserting that such behaviors are instrumental in ensuring strategic effectiveness and efficiency.

Panelist: **Larry J. Williams**, *Texas Tech U.*

Previous work suggests the Academy strengthen its emphasis on reviewer training (e.g., Raelin, 2008). In response to this call, we hope to provide advice to scholars regarding 1) what makes a methodological contribution and 2) how to apply this knowledge when reviewing methods papers. Authors and reviewers alike are given little guidance regarding what makes for a methodological contribution, highlighting the need for this symposium. Relatedly, while certain reviewing standards and checklists exist across the field, we posit that reviewing methods papers requires a unique skillset. This means that, apart from very general suggestions (e.g., consistency, constructiveness), advice from standard reviewing checklists does not typically apply. As such, reviewers are often left to their own devices when sorting out the specifics, an experience we hope to mitigate. Specifically, the current panel symposium will act as a source of advice and discussion regarding reviewer 'best practices' by offering insight from current and previous members of the editorial board at Organizational Research Methods (ORM). The panel will have a distinct focus on how to review methods papers.

Bribery and Broader Organizational Misconduct: Internal and External Rationals, Drivers & Responses

Session Moderator: **Naomi A. Gardberg**, *City U. of New York, Baruch College*

SIM: Rationalizing Bribery Conduct Under Political Instability: The Impact of Ethical Blindness

Author: **Chomsorn Tangdenchai**, *Assumption U. of Thailand*

Drawing on institutional theory, this paper investigates the relationship between perceived political instability and firm's bribery through bribery rationalization. This paper also examines the moderating effect of bribery pervasiveness on the relationship between bribery rationalization and firm's bribery. Our analysis of 280 firms in an emerging market suggests that perceived political instability leads to bribery rationalization. Bribery rationalization could lead to firm's bribery and such relationship is even stronger with the presence of bribery pervasiveness. Finally, bribery rationalization is found to play a mediating role in the relationship between perceived political instability and firm's bribery in an emerging market. The limitations of this paper and the implications of its findings for researchers and practitioners are discussed.

SIM: The Sophistication Paradox: Management Practices and Bribery in Informal Firms in Anomie Contexts

Author: **Horacio Enrique Rousseau**, *Florida State U.*

Author: **Sebastian Garcia-Dastugue**, *Florida International U.*

Author: **Shashank Rao**, *Auburn U.*

What drives bribing in informal firms? Strain theory suggests that firms are more likely to commit misconduct when their performance is poor or when their capabilities are limited. However, this view ignores that, in anomic contexts, the more capable informal firms may benefit more from bribing than their less capable counterparts. This study examines paradoxical role of management practices, a critical capability, and bribery in informal firms. Specifically, we theorize that structured management practices raise performance expectations, increasing strain and prompting bribing. We also explore moderators in the link between management practices and bribing. We anticipate that features of owners that increase sensitivity to social norms will reduce the effect of management practices on bribery. In contrast, local context factors that increase expectations should enhance the positive effect of practices on bribing. We test this hypothesis using the World Bank Enterprise Surveys of the Informal Sector (ESIS) data collected in 2022 in urban India. Results from 8,047 informal firms provide robust support for our expectations. By incorporating the role of management practices in deviant strategic decisions, this study contributes to the stream of research on organizational misconduct. Our findings suggest that addressing the issue of organizational misconduct requires not only a focus on external factors but also on internal factors such as management practices. Our study also sheds light on the importance of owner characteristics and contextual factors in shaping the relationship between management practices and bribery.

SIM: The Dual Role of Security Analysts: Examining the Balance Between Pressure and Monitoring

Author: **Vaibhav Mishra**, *Fox School of Business, Temple U.*

Author: **Todd Schifeling**, *Fox School of Business, Temple U.*

Author: **Solon Moreira**, *Fox School of Business, Temple U.*

Research on the effect of financial analysts on firm misconduct behavior has shown that analysts can either put pressure on managers to meet goals at all costs, encouraging misconduct, or can have an external monitoring effect to reduce misconduct. However, the literature is relatively silent about the conditions when analysts exert a pressure role versus a monitoring one. We address this gap by theorizing that financial analysts have an inverted U-shaped effect on manager's propensity to engage in misconduct behavior. We argue that the pressure effect to cut corners exists at low levels of analyst coverage while the monitoring effect helps reduce misconduct at high levels of analyst coverage. Further, these effects are moderated by dispersion in analysts' forecasts and corporate governance effectiveness due to the differential influence of each moderator on the underlying pressure and monitoring mechanisms. Using an instrumental variable approach on a multi-industry sample, we find support for our hypotheses.

SIM: Shareholders' Reactions to Corporate Responsibility and Irresponsibility Towards Other Stakeholders

Author: **Fernando Nemec**, *Fundação Escola de Comércio Álvares Penteado*

Author: **Simone R. Barakat**, *Fundação Escola de Comércio Álvares Penteado*

Author: **Vinicius Brunassi Silva**, *Fundação Escola de Comércio Álvares Penteado*

Author: **Humberto Gallucci Netto**, *U. Federal de São Paulo*

Understanding simultaneous value creation for stakeholders requires adopting an analytical approach that goes beyond the focus on the relationship between the company and each individual stakeholder group. To contribute to the discussion on the interconnectedness of stakeholders' interests, we investigated how shareholders react to corporate responsibility or irresponsibility actions directed at other stakeholders. Employing the event study method, we examined 1,602 media articles related to actions of responsibility or irresponsibility by 81 companies listed on the Brazilian Stock Exchange. Drawing upon Stakeholder Theory and the concept of Corporate Stakeholder Responsibility, we analyzed each article to identify the covered issue and the stakeholders affected by the companies. The analysis considered the impacted stakeholder group, the sector of the company, and the portrayal of the company in the news. Overall, the findings indicate that shareholders do not exhibit a positive response towards responsible actions, with an exception seen when these actions are directed towards the consumer stakeholder group. Our results revealed that shareholders penalize responsible actions directed to the non-stakeholder group. The study also uncovered a negative shareholder response toward irresponsible actions by companies, particularly those impacting the environment, community, and employees. However, shareholders appear to reward irresponsible actions that impact competitors.

SIM: The Heterogeneity of Negative Spillovers: The Role of Corporate Social Responsibility

Author: **Yusen Dong**, Bay Area International Business School, Beijing Normal U.

Author: **Haijian Liu**, Nanjing U.

Described as industry negative spillovers, the misconduct of one firm can cause harm to other firms in the same industry. To better understand the role of corporate social responsibility (CSR) in industry negative spillovers, we draw on attribution theory and categorization literature to develop and test a model. Our model predicts that when perpetrator (bystander) firms have high CSR, investors will use causal-based categorization to attribute and punish bystander firms more (less) in the same industry by discounting their stocks more (less), thereby influencing the valence of the negative spillover. We find support for our predictions in an event study that examines the stock market valuations of bystander firms triggered by 146 regulatory actions by China Securities Regulatory Commission from 2010 to 2019 in China. Our study contributes to both inter-organizational spillover (i.e., negative spillover) literature and CSR literature.

Exploring the Governance Landscape: Implications for Sustainability, Social Value, and Stakeholders

Session Moderator: **Lori Versteegen Ryan**, *San Diego State U.*

SIM: A Model of Sustainable Corporate Governance

Author: **Etienne Develay**, *Manchester Metropolitan U. Business School*

Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*

The field of corporate governance has traditionally been divided between the shareholder and stakeholder models. However, the increasing societal demand for information on corporate sustainability is challenging these established models as it drives the dissemination of information to a wider range of stakeholders and emphasises the necessity to take ecological limits into account. In response to this challenge, this paper proposes an adaptation of the stakeholder-agency theory with a strong sustainability approach to serve as a foundation for an integrated corporate governance model aligned with sustainable development. This sustainable corporate governance model expands the definition of stakeholders to include future generations and non-living entities. It recognises the resources supplied by stakeholders as different forms of capital that must be preserved and reimbursed, and it advocates for the minimisation of their utility losses within ecological limits. Finally, the paper explores how these adaptations redefine six fundamental assumptions of traditional corporate governance models and discusses their implications for a sustainable corporate governance model.

SIM: Collaborations for Social Value: Governance Framework for Community-Social Enterprise Partnerships

Author: **Rakesh Kumar Pati**, *Deakin U.*

Author: **Christopher Sutter**, *Miami U. Ohio*

Author: **Niharika Garud**, *U. of Melbourne*

This research explores collaborative societal governance by developing a theoretical framework for resource governance in partnerships between social enterprises and beneficiary communities. While the social benefits of such partnerships are well documented and include critical social value outcomes, such as leveraging community knowledge, promoting community empowerment, and increasing the capacity of the social enterprise to scale, much less is known about the collaborative governance arrangements that might best promote creation of social value. We argue that social value creation will be greatest when the ownership and control of key resources take into consideration the communities' perceptions of social value and consensus concerning the use of these resources. Using these characteristics, we develop a framework and propose optimal resource governance structure between the social enterprise and beneficiary communities to enhance social value creation in developing countries. We explore the implications of this theoretical framework for value creation within cross-sector social partnerships.

SIM: Steering Through Uncertainty: How Corporate Governance Influence the Conception of Debtholders

Author: **Bakr Al-Gamrh**, *Rennes School of Business*

Author: **Umar Farooq**, *Xi'an Jiaotong U. School of Economics and Finance*

Author: **Tanveer Ahsan**, *Rennes School of Business*

The study examines the intricate relationships between economic policy uncertainty (EPU), corporate governance (CG), and the cost of debt (COD). It investigates how CG influences debtholders' perspectives during periods of EPU. The study utilizes a system GMM (generalized method of moments) model and analyzes data from eight European Union countries spanning from 2013 to 2021. The results reveal several significant findings. Firstly, there is a positive association between EPU and COD, indicating that increased EPU tends to raise COD for firms. Secondly, the study uncovers a noteworthy negative impact of CG on COD. This suggests that robust CG practices have the potential to reduce the COD for firms and serve as a reliable indicator for debt holders and corporate interest rates. Furthermore, the study highlights the role of CG as a moderator during EPU, mitigating the impact of economic uncertainty on COD. This moderation effect is consistent across various CG sub-indices, including board composition, audit risk and oversight, shareholder rights, and compensation. These findings underscore the significance of effective CG in mitigating the adverse effects of economic uncertainty on the COD. Robust CG practices not only lower the COD for firms but also instill confidence in stakeholders, including creditors.

SIM: Does Shared Capitalism Enhance Corporate Environmental Sustainability?

Author: **Jegoo Lee**, *U. of Rhode Island*

Author: **Douglas Kruse**, *Rutgers U.*

Author: **Joseph Blasi**, *Institute for the Study of Employee Ownership and Profit Sharing at Rutgers SMLR*

This research proposes that a shared capitalism mode of compensation, or broad-based employee share ownership (ESO), affects corporate sustainability or corporate environmental performance (CEP). We theoretically propose that employees as owners adopt more favorable attitudes toward beneficial outcomes for corporate environmental sustainability. Because of its broad-based impacts, the ESO effect overwhelms the impact of CEO ownership, as the ratio of ESO to CEO ownership is associated with positive CEP. Also, these relationships are contingent upon employee-engaged culture, as trade union settings amplify the ESO influence on CEP. We analyzed U.S. publicly traded companies to find empirical support for proposed hypotheses. This study provides scholarly and practical implications for the effects of shared capitalist modes of ownership and an employee-as-owner aspect on corporate sustainability.

SIM: **Wanted! Former Government Officials on Corporate Boards** 

Author: **Tyler Wasson**, *Assumption College*

This study presents hand-collected data on government experienced directors, who previously worked for the United States government and served on corporate boards, between 2017 to 2020, to examine their presence at S&P 500 firms and the role of political skill and political ideology on the decision to hire them. While previous studies on this group include only directors with government experience and affiliations to either the Democratic or Republican parties, this study includes “non-partisan” directors, former government officials with no publicly stated party affiliation. Government experienced directors are a common feature of S&P 500 boards. While directors with ties to both parties were hired at roughly similar levels there was significant variation by party affiliation in several areas, including at the individual level, in committee roles, at the firm level, firms with multiple government experienced directors were more likely to hire from the same party, and at the industry level, several industries hired significantly more directors affiliated with the same party. This suggests firms consider more than political skill and that political ideology can be a determining factor. These findings relate to both agency theory and resource dependency theory perspectives regarding the impact of management’s ideological beliefs on corporate governance. Furthermore, during this period, there was a slight decrease in the overall market for government experienced directors across all party affiliations, and that board party affiliations became more partisan.

SIM: Configuring the External Corporate Governance of Multinationals' Solutions to Grand Challenges

Author: **Kevin Chuah**, *Northeastern U.*
Author: **Rieneke Slager**, *U. of Groningen*
Author: **Jean-Pascal Gond**, *City U. London*
Author: **Mikael Homanen**, -

External corporate governance mechanisms—such as shareholder engagement—exert increasing pressure on MNEs to address grand challenges, including fighting corruption, enabling good working conditions, and protecting human rights. While addressing grand challenges may require narrow scale solutions to address local specificities, shareholder engagement has become a global phenomenon. We study how investors can strategically balance issue scale framing with the institutional resources at their disposal and target MNEs' capacity to address challenges. Empirically, we examine global shareholder engagement coordinated by the UN-supported Principles for Responsible Investment focused on MNEs' solutions to grand challenges. We contribute to the literature on the importance of scale in relation to grand challenges by highlighting how investors' framing of issue scale interacts with other factors for translation between local and global levels. Furthermore, we contribute to the literature on MNE capacity for addressing grand challenges by highlighting the contingencies for learning under opacity; and to the literature on comparative corporate governance by showing that investors need to strategically balance between institutional proximity with MNEs and the institutional diversity of their engagement coalitions. By doing so, we advance both theoretical and practical understandings of how complex configurations of external pressures contribute to MNEs adopting solutions to grand challenges.

SIM: Talk Left, Walk Right: How Firms Respond to The Political Risk of Sociopolitical Activism

Author: **Michael Seth Nalick**, *U. of Denver*
Author: **Scott Kuban**, *Tulane U.*
Author: **Ronei Da Silva Leonel**, *Salisbury U.*
Author: **M. K. Chin**, *Indiana U., Bloomington*
Author: **Matthew Josefy**, *Indiana U. - Kelley School of Business*

When firms engage in controversial sociopolitical issues, their activism may satisfy some stakeholders while alienating others. In this paper, borrowing from the sociopolitical reputation literature we suggest that firms recognize the risks involved in sociopolitical activism and react by developing a risk management strategy. Specifically, we argue that when firms engage in liberal-oriented activism there is an apparent sociopolitical reputation risk from conservative elected officials that are potentially aggrieved by such actions. Thus, to mitigate political loss firms will engage in a political alignment strategy, which we define as the act of increasing political support for conservative elected officials at a similar time they are engaging in liberal-oriented sociopolitical activism. We then outline three conditions under which this action would be more or less likely specifically, such as a firm's sociopolitical activism intensity, sociopolitical activism issue-specific reputation, and historic statements that coincide with activism. To test these hypotheses, we examine S&P 500 firms following expressions of support for same-sex marriage and evaluate changes to their political portfolio. Evidence from our study supports the broad notion that firms may broadcast a public position on an issue, while, perhaps less visibly, taking steps to indicate support to actors on the other side of a partisan debate.

SIM: The Messy Ethics of Business Organizations

Author: **Samuel Mortimer**, *Saïd Business School U. of Oxford*

Underlying some of the most influential normative theories of business ethics is the assumption that there is an asymmetry between the moral responsibilities of managers and those of subordinates, arising in virtue of the control managers have over organizational decision-making. Empirical research on business organizations casts doubt on this assumption. While organizational decisions are routinely attributed to managers, the decisions themselves are the product of collective action processes over which managers have little control. Managers may be able to influence the outcome of these processes, but so can subordinates. In some cases, subordinates may have more influence than managers. This suggests that the primary domain of business ethics is not managerial decision-making, but instead the various behaviors by which people exert influence on organizations. I end by discussing how a theory of business ethics that focuses on these behaviors would differ from standard theories.

SIM: Reasoning in Institutional Discourse – The Development of a Sustainable Impact Assessment Model

Author: **Sarah Jastram**, *Hamburg School of Business Administration*
Author: **Johanna Foersterling**, *Hamburg School of Business Administration*
Author: **Rupindeepa Rajagopalan**, *Berenberg*
Author: **Anna Zeller**, *Hamburg School of Business Administration*

In this paper, we contribute a differentiation of micro-institutional reasoning types to further develop discursive institutionalism within the larger field of institutional theory. Discursive institutionalism outlines the relevance of discourse in building institutions, their maintenance and change. However, the theory provides incomplete knowledge on micro-institutional foundations, especially with regard to individual discursive reasoning in economic contexts. Building on Habermasian discourse ethics, we identify pragmatic, ethical and strategic types of reasoning in an institutional discourse. Our contribution is based on an empirical, qualitative, and longitudinal case study of a bank's discursive development of a bundle of new institutions in the field of sustainable impact assessment. Our results inform theoretical debates about institution building, such as discursive institutionalism or institutional entrepreneurship, as well as related literature concerned with organizational legitimacy. Moreover, our case study provides relevant insights for practitioners as it illustrates core challenges and opportunities for practical impact measurement and impact investment.

Micro Investigations of Incivility and Unethical Workplace Behaviors

Session Moderator: **Agnieszka Paruzel**, *Bielefeld U.*

SIM: Reintroducing and Elaborating the Concept of Dispute-Related Bullying

Author: **Jason R. Pierce**, *U. of North Carolina, Greensboro*
Author: **Linda M. Dunn-Jensen**, *California State U. Stanislaus*
Author: **Cheryl Dowie**, *U. of Houston - Downtown*
Author: **Nancy Pierce**, *UNC*

Frequent reports from around the globe continue to fuel scientific and social interest in the pandemic of workplace bullying. Despite this interest, remedies for this social disease remain elusive due to a lack of a clear and consistent conceptualization for it. We propose that the first step towards establishing such a conceptualization is to recognize of the various forms of bullying and determine which kind is involved. Drawing on an often-overlooked distinction between dispute-related bullying (DRB) and predatory bullying, we outline that the majority of workplace bullying falls into the former category. We then elaborate on DRB in two ways. First, we explain how DRB constitutes a response to conflict and how it differs from other responses to conflict, namely negotiation. Second, we elaborate on the nature of DRB by proposing a process model of it adhering to Mohr's (1982) specifications for process theories. Doing so leads us to provide a clear and coherent definition of workplace bullying: a response to goal conflict in which perpetrators falsely convince targets that they are too defenseless and powerless to refuse illegitimate outcomes. We conclude with a discussion on how clarifying the concept of DRB facilitates progress towards developing theories and practical interventions for workplace bullying.

SIM: Effects of Illegitimate Tasks on Workplace Incivility and Intensifying Role of Perceived Support

Author: **Varun Sharma**, *Indian Institute of Management Indore*
Author: **Jatin Pandey**, *Indian Institute of Management, Indore*

Oftentimes employees are asked to undertake tasks that are unreasonable or unnecessary, referred to as the illegitimate task. Such illegitimate task at the workplace is quite an overlooked and a novel stressor that can violate the employees' expectation regarding what they feel can be expected from them. The current study proposes that such violation of employees expectation due to undertaking such illegitimate task can often take the form of misdirected retaliation towards the co-workers in the form of workplace incivility. Thus, per the foundations of psychological contract and moral disengagement theory, the current study proposes that such misdirection of retaliation materializes through the process of moral disengagement by which employees rationalize and justify their covert and ambiguous mistreatment of co-workers. Moreover, the current study also uncovers the counterintuitive effects of perceived support which intensifies an employees' tendency to undertake moral disengagement due to illegitimate tasks. The current study therefore proposes a moderated mediation model and finds its support using a three-wave time lagged survey from working managers from U.S (N=222). The theoretical and practical implications along with limitations and future research are also discussed in the paper.

SIM: The Interactive Effects of Status & Self-Construal on Bottom Line Mentality and Unethical Behaviors

Author: **Saima Naseer**, *Brock U., Canada*
Author: **Usman Raja**, *Brock U.*
Author: **Maryam Saleem**, *Department of Business Administration, Faculty of Management Sciences Internatio*

Drawing on moral licensing theory, this research investigates and tests a moderated mediation model unveiling the negative consequences of supervisors' workplace status. We suggest that a supervisor's bottom-line mentality is an underlying mechanism through which employees' perceptions of the supervisor's workplace status leads to unfavorable employee outcomes. We also hypothesize that the supervisor's independent self-construal will moderate the workplace status and the supervisor's bottom-line mentality relationship. Employing a three-wave time-lagged design (n=388), we collected data from employees belonging to the service sector organizations in Pakistan. Utilizing structural equation modeling (SEM) in MPlus, the results show that workplace status is significantly related to employees' intentions to sabotage, expediency, and unethical pro-supervisor behaviors directly and indirectly through the supervisor's bottom line mentality. The results of latent structural equations (LMS) in Mplus also corroborate the moderation and mod-med effects whereby workplace status creates employee's intentions to sabotage, expediency, and unethical pro-supervisor behaviors via the supervisor's bottom line mentality at high levels of independent self-construal. Based on our study's findings, we recommend theoretical and practical avenues for future researchers and managers to deal with the undesirable effects of a supervisor's workplace status.

SIM: Attenuating the Effects of Narcissism on Unethical Behavior

Author: **Jay Bates**, *Washington State U.*
Author: **Hana Johnson**, *Washington State U.*

Employees high in narcissism tend towards unethical behavior but can the goals of narcissists be influenced by contextual factors such that narcissistic employees behave no different regarding ethics from other employees? Utilizing communal versus agentic motive theory, we test the moderating role of long-term orientation and ethical work climate on the effect of narcissism to unethical behavior via moral disengagement. We test our hypotheses using a time-lagged experimental design with a sample size of 644 participants. We find that high long-term orientation and high ethical climate attenuate the positive indirect effect of narcissism on unethical behavior through moral disengagement. In other words, highly narcissistic individuals behave similar to less narcissistic individuals when they have a long-term orientation and are exposed to communal motives through an ethical work climate. This work contributes to the unethical behavior literature by identifying factors that may attenuate the negative effects of narcissism and the individual differences literature by challenging the commonly held belief that narcissists are only short-term motivated.

Author: **Meena Andiappan**, *DeGroote School of Business, McMaster U.*

Author: **Muhammad Umer Azeem**, *ESSCA School of Management*

Author: **Inamul Haq**, *Leonard de Vinci Pole U., Paris, France*

Author: **Arnaud BANOUN**, *ESC Clermont Business School, ClerMa*

We theorize that jealousy will influence the effects of informational unfairness on supervisor-directed helping behavior and spurs negative supervisor-targeted gossip. We test our hypothesis across three studies. In Studies 1 and 2, we conducted an experiment with 72 employees in Pakistan (Study 1) and 88 individuals in France (Study 2). In Study 3, the findings from a field study with 226 employee-supervisor dyads in Pakistan indicated that employees' exposure to informational unfairness invokes employee jealousy. In reaction, we find that employees stop extending a helping hand to their supervisor and spread negative gossip about them. Moreover, we find that perceived informational unfairness is more salient and perceived as hurtful for individuals who compare themselves unfavorably to their colleagues in terms of leader-member exchange quality. The findings of these studies provide practical insights to both organizations and managers about the importance of clear and fair communication, and the tangible, detrimental effects of jealousy in the workplace.

Boycotts and Beyond: Sociopolitical Activism by Firms and CEOs

Session Moderator: **Sybille Sachs**, *U. of Applied Sciences in Business Administration Zurich*

SIM: **Firm Activism - Conceptual Stocktaking and Outlook**

Author: **Tiziana Schopper**, *Ludwig-Maximilians-U. München*
Author: **Lukas Vogelgsang**, *LMU Munich School of Management*

In recent years, corporate firms have increasingly positioned themselves towards divisive, sociopolitical issues which are entirely unrelated to their core business objectives, a phenomenon we broadly term firm activism. This trend that has gained considerable academic interest across multiple disciplines, with authors conflating diverse terms and definitions of empirically close, but conceptually distinct sub-categories of firm activism. This paper aims to address the resulting conceptual confusion by clearly defining the conceptual boundaries of the five core sub-categories of firm activism: corporate social advocacy, corporate political advocacy, brand activism advertising, CEO advocacy and CEO activism. Our comprehensive literature review highlights the unique characteristics of each sub-category of firm activism. In doing so, this paper contributes to the literature by offering a structured framework to understand firm activism and highlighting how future research can benefit from considering the distinctions between the various types of firm activism.

SIM: **The Rise of Partisan CSR: Corporate Responses to the Russia-Ukraine War**

Author: **Vasiliki Bamiatzi**, *U. of Sussex*
Author: **Steven Brieger**, *U. of Sussex Business School*
Author: **Ozgu Karakulak**, *U. of Sussex Business School*
Author: **Daniel Kinderman**, *U. of Delaware*
Author: **Stephan Davys Manning**, *U. of Sussex*

The Russia-Ukraine war has challenged our understanding of corporate social responsibility (CSR). Whereas CSR is traditionally associated with business self-regulation that benefits business and society, the current conflict has revealed new forms of what we call “partisan CSR.” Based on comprehensive data from Fortune Global 500 corporations, this study discovers that in particular Western corporations have engaged in partisan CSR activities, ranging from (1) strengthening Ukraine’s economy, to (2) enhancing security and protection for Ukrainian citizens, (3) providing military support, (4) weakening Russia’s economy, and (5) supporting the Ukraine in symbolic ways. By comparison, some companies choose to be “neutral”, while exploiting economic opportunities arising from the conflict. This study also discusses major drivers of these CSR responses, including political climate, resource availability and economic dependency, isomorphism, and regulatory requirements. Our findings suggest a shift from political CSR to partisan CSR, which we expect to become more important with growing geopolitical divides and territorial conflicts.

SIM: **Dictators, Directors, and Women Warriors? The Antecedents of Firms Boycotting Governments**

Author: **Andre Havrylyshyn**, *Binghamton U.-State U. of New York*
Author: **Adam Steinbach**, *U. of South Carolina*

Scholars have explored when/why firms have their strategic actions driven primarily by moral reasons, such as how they structure their CSR programs and/or when CEOs make statements on controversial social issues. However, an important unexplored phenomenon is where firms choose to boycott doing business in a country whose government they deem to be unjust/immoral. This happens in practice increasingly, but scholars have not yet explored why some firms do and others do not engage in such boycotts. We seek to explore this issue by specifically building theory on how the demographics of the board of directors of the firm, and the array of countries in which the firm operates, are antecedents of such firm boycotts. We empirically test our model leveraging a data set which analyzes the behavior of 230 ‘western’ firms, and the degree they did or did not boycott business in Russia following that country’s attempted full-scale invasion of neighbor Ukraine in early 2022.

SIM: **Family Owner Social Political Activism**

Author: **Luciana Lucena De Lima**, *U. Ramon Llull, ESADE Business School*
Author: **Maria Jose Parada**, *U. Ramon Llull, ESADE Business School*
Author: **Christian Voegtlin**, *ZHAW School of Management and Law*

Conventional belief suggests that family owners should stay within the bounds of their family businesses, refraining from engaging in societal political discussions. However, an increasing number of family owners are challenging this notion by taking public stances on socially contentious issues. To explore this relatively uncharted yet significant trend, we introduce the Family Owner Sociopolitical Activism’s Embeddedness Model. This model aims to enhance our understanding of the complex relationship between family owners and their environment, shedding light on three key factors that drive the emergence of sociopolitical activism among family owners: the family business system, global network connections, and the economic and sociopolitical contexts. Building upon the Stakeholder Alignment Theory, we highlight the crucial roles of CEO power, celebrity status, and introduce the significance of family owners’ values and moral capacity in shaping the expression of sociopolitical activism. We focus on the Latin American context, where family businesses are deeply intertwined with their local communities and have a substantial impact on local development. Through a rigorous analysis of qualitative data derived from in-depth interviews with family business owners, our study offers valuable insights into both the potential benefits and challenges associated with family CEO sociopolitical activism. In doing so, we contribute to a nuanced understanding of how embeddedness relates to the emergence of sociopolitical activism among family owners.

Internal and External Resources and Corporate Scope

Session Moderator: **Mario Schijven**, *U. of Illinois at Urbana-Champaign*

STR: **Labor Cost and Firm Choice of Strategic Alliance**

Author: **Hyemin Kim**, *Hanyang U.*
Author: **Min Suk Lee**, *Chulalongkorn Business School*
Author: **Jingoo Kang**, *New York U. Abu Dhabi*
Author: **Angie Low**, *Nanyang Business School, Nanyang Technological U., Singapore*

We find that firms subject to labor market frictions significantly increase their strategic alliances, favoring collaborations with other firms to pursue growth over internal investments. These effects are more significant for high-growth and innovative firms. Following the law's adoption, firm growth declines, but this decline is attenuated among firms with alliances. We establish that firms adjust their boundaries to circumvent the negative growth impacts imposed by labor market friction from employment regulations.

STR: **Inter-Divisional Transfer Versus External Recruitment of Executives in Multidivisional Firms**

Author: **Sea Jin Chang**, *National U. of Singapore*
Author: **Young-Choon Kim**, *Ulsan National Institute of Science and Technology*
Author: **Sangchan Park**, *Korea Advanced Institute of Science and Technology (KAIST)*

While the multidivisional form can foster efficient organization of diverse lines of business, it requires a complementary mechanism to share resources across businesses. This study explores whether the transfer of executive managers across business divisions is driven by inter-divisional resource sharing, and how external market conditions shape the relative advantage of inter-divisional executive transfer over alternatives like within-division appointment or external recruitment. Focusing on Korean business groups, our empirical analysis reveals that the availability of corporate-level resources and given exchange relationships among business divisions influences inter-divisional executive transfer. We also find that intensified product market competition and stronger external capital market control diminish the value of inter-divisional executive transfer and instead promote external recruitment of executives.

STR: **Understanding Value Creation in Acquisitions: A Fuzzy-Set Configurational Approach**

Author: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*
Author: **Mario Schijven**, *U. of Illinois at Urbana-Champaign*
Author: **Maurizio Zollo**, *Imperial College Business School*

Extant work has predominantly investigated how acquisitions create value by focusing on isolated effects of individual determinants. We propose that this research needs to be complemented with a configurational approach that captures the multidimensional fit among these factors, thus enabling a more accurate depiction of the mechanisms through which acquisitions create—and fail to create—value. Using fuzzy-set qualitative comparative analysis (fsQCA), we draw on a fine-grained dataset of 101 acquisitions to examine the fit among three sets of factors that cover the essence of the existing acquisition literature: pre-deal characteristics of the acquisition, the acquirer's acquisition capabilities, and post-acquisition decisions. Our findings highlight different configurations leading to value creation and failure thereof, together with novel insights regarding the multidimensional fit between the underlying factors.

STR: **The Effects of Internal Agglomeration on Performance of Multiunit Firms in a Mediated Expansion**

Author: **Serghei Musaji**, *U. of New Brunswick*

While strategic management research invested significant effort in understanding the battle between the positive and the negative implications of geographical agglomerations, it has mostly been focused on the co-location of independent firms – external agglomeration. The implications of internal agglomerations remain underexplored. Even less attention has been paid to contexts, where agglomerations are mediated by independent firms. Platform markets and franchising firms are common examples. In those cases, the platform owner or the franchisor is making the agglomeration decisions, whereas private vendors/franchises are the ones who directly face their consequences. This is a problem since we do not know whether their interests are aligned. Building on the organizational ecology literature, we argue that a conflict of interest exists but mostly applies to the early expansion stages. We also discuss how spacing the entries in time and geography can mitigate it. We analyze our arguments using 5,955 market entry decisions made by an international money transfer platform organized as a franchising network while entering 426 metropolitan areas in 11 countries in 14 years (2001-2015). The implications for theory and practice are discussed.

Effects of Performance Below Aspirations

Session Moderator: **Hwee Tan**, *Simon Fraser U.*

STR: **Emotions and Performance Feedback: An Examination of Analyst Responses to Managers' Emotions** 

Author: **Hwee Tan**, *Simon Fraser U.*

Author: **JM Goh**, *Simon Fraser U.*

Author: **Daniela Blettner**, *Beedie School of Business Simon Fraser U.*

The Behavioral Theory of the Firm (BTOF, Cyert & March, 1992) suggests that managers interpret performance feedback and, if feedback is negative, an organizational response involving the organization and its stakeholders such as financial analysts is triggered. Since the interpretation of feedback is crucial for the organizational response, scholars have become interested in how managers differ in their perceptions of feedback. One aspect that has been largely unexplored are the emotions that managers attach to performance feedback. Based on a large, longitudinal sample of conference calls and subsequent analyst evaluations, we study how emotions displayed by managers during conference calls influence analysts' assessments. We find that managers' emotions affect how analysts evaluate firms and contribute to the BTOF by studying the role of managers' emotions and stakeholder's perceptions in a complex feedback interpretation process.

STR: **The Impact of Underperformance on Chief Executive Officer Turnover in Entrepreneurial Firms** 

Author: **Yu Huang**, *Fudan U.*

Author: **Yuanxu Li**, *Fudan U.*

Whether and when entrepreneurial firms engage in CEO turnover in response to underperformance? Scholars of the Behavioral Theory of the Firm suggests that restructuring human resources, such as replacing employees or managers, is a crucial strategy to address underperformance. Yet, studies have not adequately considered CEO turnover in entrepreneurial firms. Based on empirical data from China's entrepreneurial firms between 2009 and 2022, we found that high-intensity underperformance significantly increases the likelihood of CEO turnover in the focal entrepreneurial firms. However, the positive relationship was weaker when there was a CEO turnover among peer firms. Implications for theory and practice are discussed.

STR: **Performance Below Aspirations and Employee Layoffs: The Role of Regional Characteristics** 

Author: **Shinhye Gloria Ahn**, *Seoul National U.*

How do firms lay off employees when their performance falls below the level of aspirations? Although firms have been recognized to have close interrelationship with stakeholders in the regional environment, how characteristics of the regional environment influence layoff decisions of firms facing negative performance feedback has not been systematically examined. In this study, we assume that negative performance feedback triggers two motivations in firms with dissimilar time horizons—one motivation with a short-term time horizon to cut down operational costs and quickly improve financial performance, and the other motivation with a long-term horizon to take adverse responses from the regional residents into consideration prior to cutting down operational costs. Under the assumption, we theorize that when faced with negative performance feedback, firms lay off more employees in regions where ethnic diversity, litigious tendency of the residents, and size of layoffs by other firms in the regions are greater. With our data on 126 firms whose business facilities were distributed across different states in the US between 2011 and 2020, we find results that support the predictions. With these findings, we provide novel implications for scholars and practitioners on the impact of regional characteristics on firms' learning from performance feedback and the role of time horizon in restructuring organizations.

STR: **Aspiration-Performance Discrepancies and Innovation Behavior: From the Demand-Based Perspective** 

Author: **Jing Xiao**, *School of Management, Wuhan Textile U.*

Author: **Zhi Yang**, *School of Management, Huazhong U. of Science and Technology*

Previous studies in the behavioral theory of the firm have largely overlooked the insightful cues derived from consumer needs when forming organizational aspirations. This study aims to fill this void by embracing a demand-based perspective to examine how organizations form demand aspirations and respond to aspiration-performance discrepancies. Demand aspirations are determined by social peers identified by consumer demand similarity, reflecting whether focal needs have been well met. A negative aspiration-performance discrepancy signifies that the focal product fails to meet consumer needs, which triggers an abandonment effect and threat rigidity, leading managers to adopt more conservative innovations. Conversely, a positive discrepancy indicates higher consumer satisfaction, fostering inertia and motivations for revenue growth. This leads managers to maintain the status quo and reduce aggressive innovations. We also posit that market overlap amplifies the impact of aspiration-performance discrepancies on innovation behaviors, whereas the user base weakens these relationships. Empirical validation drawn from a sample of 45,476 apps and 51.18 million online consumer reviews from the Apple App Store strongly supports the arguments. These findings not only enrich the behavioral theory of the firm but also expand the explanatory power of aspiration-performance models.

Strategies in Competitive Landscapes: Balancing Aggressiveness and Market Adaptations

Session Moderator: **Lalit Manral**, *U. of Central Oklahoma*

STR: **A Claim-Based View of Competitive Dynamics** →

Author: **Theodore Waldron**, *Texas Tech U.*

Author: **Joana Pereira**, *Leeds U. Business School*

Author: **Peter T. Gianiodis**, *Duquesne U.*

Author: **Azucena Grady**, *Texas Tech U.*

Competitive dynamics scholarship has long held that inter-firm rivalry plays out through competitive actions and response. This action-based view overlooks rivalries where firms compete more on claims about their actions than the actions themselves. We introduce a claim-based view of competitive dynamics to address this explanatory shortcoming. Building on empirical insights from a qualitative study of rivalry between two Azorean dairy producers, we theorize when claim-based rivalry can occur, how firms can come out ahead during such rivalry, and why some firms are better positioned than others to do so. Our proposals provide a platform to contrast the claim- and action-based views, as well as highlight research directions for elaborating the former. Introducing the claim-based view complements and adds novel explanatory utility to the ubiquitous action-based one.

STR: **Evolutionary Strategy Dynamics (ESD): A Conceptual Framework for the Analysis of Dynamic Strategy** 🖨️

Author: **Lalit Manral**, *U. of Central Oklahoma*

The proposed framework, which derives from the search for common ontological principles underlying the evolution of competitive enterprise systems (ranging from simple to complex) within market economies, provides conceptual wherewithal for the analysis of evolutionary populations of profit-seeking firms. The framework, which conceptualizes dynamic strategy both as a determinant ('driver') and an outcome ('product') of economic evolution, integrates two conceptual issues into a comprehensive explanation of how dynamic strategy emerges through the process of 'co-creation' of the dynamic context of its elemental strategic actions. First, how the evolutionary processes that drive the changes in a firm's industrial environment in turn influence the firm's choice set. Second, how the firms' organizational evolution influences the evolution of its industry environment. The framework, which is conceptually underpinned by a quasi-Darwinian evolutionary theory of dynamic strategy, aims to serve the following analytical objectives. First, to explain both the unfolding of the strategic actions along with the patterns the strategic actions create. Second, to explain firm-level strategic outcomes – both strategic actions and performance – in terms of the dynamic interplay among the evolutionary processes that drive the changes in a firm's external industrial and internal organizational environment respectively.

STR: **Fast Forward or Pause Button? Examining the Penrose Effect in Newly Public Firms' First Acquisitions**

Author: **Peiyi Jia**, *California State U. San Bernardino*

Author: **Li Sun**, *UMass Lowell*

This study examines the Penrose effect in the context of newly public firms' first acquisitions. We investigate how product market competition, digital capability, and their interactions influence how quickly newly public firms initiate their first acquisitions. Based on the empirical analysis of the first post-IPO acquisitions of 2,245 firms that went public from 2005 to 2019, we show that product market competition reduces firms' tendency to pursue acquisitive growth. In addition, firms with stronger digital capability are more likely to transition to acquisitive growth quickly after IPOs. Furthermore, the negative impact of product market competition on the speed of the first post-IPO acquisition is less pronounced when the firm has stronger digital capability.

STR: **Group Structure of Multimarket Competition: A Simmelian Theory of Triadic Outcomes and Antecedents** 🗨️ 🖨️

Author: **Stephen Thomas Downing**, *U. of Missouri*

Author: **Jin-Su Kang**, *NYCU*

Author: **Hun Lee**, *Villanova U.*

Interfirm competitive relationships can vary in their extent of market contact with different implications for interfirm competitive aggressiveness. However, to model the totality of industry competition structures, connecting all these (dyadic) MMC ties together further complicates the story by revealing an emergent MMC network. In this approach, both social network theory and industry competition phenomena suggest the need for understanding group-level MMC for investigating interdependent behavioral outcomes and structural antecedents, which is the purpose of this study. Drawing on Simmelian triadic theory, we predict that a firm's embeddedness in groups of three competitors that are each pairwise connected by MMC (i.e., triadic MMC) constrains the firm's competitive aggressiveness. Nevertheless, these MMC triad structures are not as stable as their constraining effect on conduct would imply due to the adversarial type of relationship and conduct among the group members, leading to MMC group instability and continual recreation from firms' competitive maneuvering. We find support for our predictions in the turbulent environmental context of the converging U.S. information technology sector, 2010-2016, combining industry-agnostic samples of competitive relations and conduct dynamics.

Learning from Negative Feedback

Session Moderator: **Yiyang Zeng**, *UCLA Anderson School of Management*

STR: **Project Failure and Exploration: The Role of Operating and Project Experiences in the Context of PBF** 

Author: **Anna Pak**, *Kean U.*

Author: **Donghwi Seo**, *Pace U. - Lubin School of Bus*

Author: **Taewoo Roh**, *Hanyang U.*

Project-based firms (PBFs), due to their project-centric operational process, frequently experience routine discontinuity and organizational amnesia. These unique challenges often hinder their ability to convert experiences of failure into adaptive learning for future exploratory projects. This research, rooted in the theories of organizational learning and escalation of commitment, seeks to fill a crucial knowledge gap regarding how PBFs can effectively utilize failure experiences to facilitate learning and adaptation post-project failures. We examine the relationship between project failure and the pursuit of subsequent explorative projects by PBFs, identifying conditions that either weaken or strengthen this relationship. The study's results indicate a general reluctance among PBFs to adopt explorative approaches in subsequent projects following project failures; however, this tendency is less pronounced in firms with specialist operational experiences and a broad spectrum of project engagements. Our findings underscore the critical role of both the nature (specialization) and breadth of project experiences in empowering PBFs to overcome inherent learning obstacles and actively engage in exploratory endeavors following project failures.

STR: **Learning from Reviews: The Role of Text Reviews in the Sharing Economy**  

Author: **Yiyang Zeng**, *UCLA Anderson School of Management*

Author: **Mariko Sakakibara**, *U. of California, Los Angeles*

Online reviews help consumers evaluate products and shape their beliefs on quality. We explore how reviews determine suppliers' performance and facilitate their learning by focusing on the impact of text reviews. We examine guest reviews for Airbnb, which are critical for enhancing the credibility of hosts and free from fake reviews. We find that text reviews significantly influence host performance and complement the impact of numerical ratings. New hosts benefit more from text reviews than from numerical ratings. Furthermore, while new hosts do not benefit more from positive reviews relative to experienced competitors, reviews containing words associated with some specific negative sentiments enhance their performance, presumably due to the more actionable feedback new hosts can use to improve the attractiveness of their listings.

STR: **Exploitative and Explorative Learning from Others' Failures: Evidence from Peers' Product Recalls** 

Author: **Linyi Zhang**, *The Chinese U. of Hong Kong, Shenzhen*

Author: **Luke Rhee**, *U. of California, Irvine*

Author: **Xiaoqiao Wang**, -

Author: **Tony Tong**, *U. of Colorado, Boulder*

While studies have recognized the importance of peers' failures for a focal firm's learning, there remains limited evidence on what specifically focal firms do in their learning from peers' failures. Addressing this gap, we employ the opportunity-motivation-ability (OMA) framework to examine a focal firm's exploitative and explorative activities in the face of peers' failures. Drawing from a unique dataset of product recall events from various industries, coupled with patent data from 2005 to 2017, we discover that firms increase exploitation and decrease exploration in response to peers' product recalls. This tendency to learn by exploitation is intensified when firms' financial performance falls below aspiration levels and when they have a surplus of inventors. Moreover, our study reveals that decreases in inventor turnover, triggered by peers' product recalls, result in increased exploitation and reduced exploration, suggesting inventor turnover as a mediator. This study not only contributes to the literature on learning from others' experiences by intertwining opportunity, motivation, and ability as key factors that shape the dominant direction of a focal firm's learning and the variations in its learning rate, but also fills a gap in empirical research by providing evidence on the specific learning activities firms undertake in response to peers' failures.

STR: **Don't Throw the Baby Out With the Bathwater: Firm Response to Downstream Product Shocks**  

Author: **Phares Auda Lucas Akari**, *WHU - Otto Beisheim School of Management*

Author: **Matthew J. Higgins**, *U. of Utah, David Eccles School of Business*

Author: **Chirantan Chatterjee**, *U. of Sussex*

We explore how firms respond to downstream product shocks. We find that affected firms increase research and development and make additional safety-related upstream investments. These investments vary with firm capabilities and across shock severity. Competitors appear to vicariously learn and also engage in similar upstream investments in affected markets. We present evidence that these upstream investments have important performance implications. First, these investments show a positive correlation with the progression of uncommercialized upstream pipeline products into subsequent stages of R&D that received them. Second, these upstream investments are related with a reduced likelihood of encountering future downstream product shocks.

STR: Harnessing Unexpected Events to Tackle Grand Challenges  

Author: **Christian Busch**, *USC Marshall School of Business*

Previous research has shown that companies can be important vehicles for tackling societal challenges. This can include the development of effective cross-sector partnerships, the design of inclusive supply chains, and the creation of inclusive work environments. However, while prior work tends to assume that solutions to societal challenges can be mapped out a priori, in poverty settings, problems and solutions frequently emerge unexpectedly, and solutions are often a matter of serendipity. This creates an important paradox: how can companies harness unexpected events and prepare themselves for serendipity? Based on a (nested) comparative case study design, we studied EduCorp, a South African organization that offered low-cost quality education programs across Sub-Saharan Africa. We studied four cases of “serendipity gained” and “serendipity lost”, and identified the conditions that allow for the emergence and cultivation of serendipity in poverty contexts. We contribute new theory on how organizations operating in poverty settings can harness unexpected events to tackle societal challenges, and introduce a “pro-active” view of events—both in terms of unexpected negative events that may be anticipated and managed, as well as unexpected positive events that may be triggered.

STR: The Adaptation Effect: The Long-Term Performance of Purpose-Motivated Acquisitions   

Author: **Harrison John Munro-Clark**, *HEC Paris*

As capital markets increasingly demand socially responsible investments, the role of corporate purpose in shaping corporate strategy decisions is beginning to take on material significance. Drawing on prior work on diversified firms, this paper develops a computational model to study the long-term performance of an acquiring firm. The model illustrates that, up to a point, using a purpose to guide the search for performance improvements attenuates the post-acquisition adaptation impediment which arises from managing multiple business lines within a single firm. These benefits are particularly pronounced in more complex acquisitions and in markets with low barriers to imitation. This paper proposes that acquisitions which are motivated by the firm’s purpose are associated with superior long-term performance outcomes. Real-world examples are invoked to support the theorizing. This paper contributes to the emergent corporate purpose literature by illustrating that the pursuit of a purpose enhances the adaptability of diversified firms. Moreover, the proposed theory has important consequences for corporate strategy research as purpose begins to influence capital allocation decision in capital markets.

STR: Interorganizational Relationships and Hybrid Organizations: Understanding Antecedents and Outcomes    

Author: **Alexander Viets**, *U. of Muenster*

Author: **Christopher Albert Sabel**, *Rotterdam School of Management, Erasmus U.*

Author: **Jens Leker**, *U. of Muenster*

Prior work either examined whether hybrid organizations focus on different characteristics when choosing partners than their traditional commercial counterparts (internal view), or whether hybrid organizations’ potential partners are more likely to choose them because of their hybridity (external view). Drawing on institutional logics theory, we examine both views simultaneously to understand the propensity of partnering and relationship outcomes. Relying on a dataset of bank loans between firms certified as hybrid organizations and banks recognized as hybrid organizations, we show that loan agreements are most likely when both partners are hybrid organizations. Likewise, loan terms also become more favorable when institutional logics match. Our findings contribute to the study of hybrid organizations, showing that outcomes of their interorganizational relationships are best understood through a dyadic view.

STR: Measuring CEO Responsible Leadership: Development and Validation of a Linguistic-Based Instrument

Author: **Laura Antonia Kirsch**, *Maastricht U., School of Business & Economics*

Author: **Wim Gijssels**, *Maastricht U.*

Author: **Boris Lokshin**, *Maastricht U., School of Business & Economics*

Author: **Ann Vanstraelen**, *Maastricht U., School of Business & Economics*

We present a new, linguistic-based measure of CEO responsible leadership (RL). Its theoretical foundations rely on Upper Echelons Theory and its measure is based on a key word dictionary capturing RL from a linguistics approach. This new instrument was developed and validated, by following established procedures in a series of four studies. In Study 1, we develop our theoretically derived baseline dictionary, which we subsequently validate for convergent and discriminant validity against an established measure based on human coding (Study 2) and against other dictionaries (Study 3). In Study 4, we apply techniques from machine learning to a text corpus of a set of responsible and irresponsible leaders: First, we inductively extend our dictionary with algorithm-suggested words used by responsible leaders in our corpus. Second, we use these techniques to examine the prediction accuracy of our dictionary. We find that our dictionary can accurately distinguish between responsible and irresponsible leaders and that machine-generated words increase the prediction accuracy.

Effects of Non-Market Strategy on Corporate Strategy

Session Moderator: **Elena Vidal**, *City U. of New York, Baruch College*

STR: **Spring Cleaning? The Relationship Between Environmental Performance and Divestitures**   

Author: **Junghoon Park**, *Loyola Marymount U.*

Author: **Elena Vidal**, *City U. of New York, Baruch College*

This paper begins by positing that firms' poor environmental performance triggers them to divest existing assets, forming our baseline hypothesis based on the Behavioral Theory of the Firm. Given the limited theoretical foundations in the extant literature, we adopt a question-driven approach to further explore how both firm-level and facility-level characteristics are linked to the likelihood of specific assets being divested. One, our findings support the baseline hypothesis, showing that the poor environmental performance of firms is associated with an increased propensity for divestitures. Two, regarding firm-level characteristics, we observe distinct patterns in divestiture behaviors between utility and non-utility firms, emphasizing sectoral differences as a key firm-level characteristic. Furthermore, facilities under parent firms with poor environmental performance, particularly in the utility sector, are more likely to be divested. Three, concerning facility-level characteristics, in utility firms, facilities with higher emissions are more likely to be divested, in contrast to non-utility firms where facilities significantly contributing to their parent firm's total emissions are less likely to be divested. Additionally, for utility firms, facilities with a greater share of public firm ownership are found to be more prone to divestiture, a trend not evident in non-utility firms. This study highlights the importance of considering both firm-level and asset-level factors to fully comprehend divestiture dynamics, offering valuable managerial and policy implications for advancing sustainability.

STR: **Stakeholder Orientation and Firms' Acquisition Intensity** 

Author: **Ana Kurtanidze**, *U. of Lugano/U. Della Svizzera Italiana*

Author: **Emanuele Luca Maria Bettinazzi**, *U. della Svizzera Italiana*

This paper investigates the influence of stakeholder orientation on firms' acquisition intensity. We depart from prior literature and argue that the heterogeneity in the extent to which firms account for the interests of their stakeholders can affect their acquisition decisions. We study our research question using a difference-in-difference methodology and exploiting the staggered adoption of constituency statutes, which enabled managers to account for non-shareholding stakeholders' interests in their decisions. Our preliminary results, based on a sample of 4,241 U.S.-based, publicly listed firms from 1990 to 2015, provide evidence consistent with our predictions that increased stakeholder orientation reduces firms' acquisition intensity. We further show that this effect is stronger for related vs. unrelated acquisitions. Our additional analyses also reveal that stakeholder-oriented firms grow organically rather than via other growth mechanisms and abstain from entering unfamiliar operating locations.

STR: **Differential Market Value due to the Differential Stakeholder Management between Alliance Partners**

Author: **Baeseong Kwack**, *POSCO Research Institute*

Author: **Jay Hyuk Rhee**, *Korea U.*

Strategic alliances, by providing access to a partner's unique resources, enhance a firm's market value. However, the market value gained from alliances is not equally distributed among participants. This disparity is attributed to the differential levels of resources and capabilities each participant brings into the alliance. Stakeholder management is one of the critical resources and capabilities that positively affect a firm's market values. Thus, a participant with lower stakeholder management capabilities (SMC) in strategic alliances is often valued higher in the market due to its greater potential for appropriation and spillover benefits. Conversely, a participant with higher SMC is valued lower because it has less potential benefit compared to the partner and might face value erosion due to its partner's poor stakeholder management practices. Furthermore, since SMC is positively related to a firm's legitimacy and reputation, the differential SMC level between the participants in an alliance leads to a more sensitive market response in the salient institutional environment. This study aims to address these issues by using an event study method with global alliance data. The study concludes that as differential SMC between alliance participants increases, the differential market response increases in the opposite direction, with this relationship strengthened in the institutional environment, particularly where regulatory and cognitive pressures are high.

STR: **Does Similarity Matter? Heterogeneous Effects of CSR Dimensions on Suppliers' Specific Investments**

Author: **Zhouqi Wang**, *Nanjing U.*

Author: **Song Chang**, *Hong Kong Baptist U.*

Author: **Chunlin Liu**, *Nanjing U.*

Author: **Rui Shi**, *Guangdong U. of Finance & Economics*

Previous studies have examined the impact of corporate social responsibility (CSR) on stakeholder trust and suggested CSR benefiting secondary stakeholders, such as the community, signal a firm's altruistic tendencies more effectively than CSR benefiting primary stakeholders, like employees. However, these studies have assumed that the interpretation of CSR signals by recipients is uniform, disregarding the significance of the bilateral relationships between specific recipients and CSR beneficiaries. In this study, we aim to introduce the concept of situational similarity, which refers to the degree to which two sets of stakeholders experience similar power dynamics and functional structures in their interactions with the focal firm. Drawing on social cognition literature, we propose that situational similarity between the recipient and CSR beneficiary influences the recipient's perception and, consequently, modifies the effectiveness of CSR signals in a manner contrary to the altruistic logic proposed in previous studies. We empirically test this hypothesis in the context of suppliers' firm-specific investments (FSIs) and find that a firm's CSR initiatives related to employees exert a stronger impact on suppliers' FSIs compared to those related to communities. Moreover, we argue this disparity is more pronounced when suppliers face intense competition or the focal firm grapples with higher uncertainty.

CEO Compensation

Session Moderator: **Nandil Bhatia**, *Columbia Business School*

STR: Executive Pay Disclosure Mandates and CEOs' Qualification Signaling Through Firm Size Growth

Author: **Han Zhang**, *Graduate School of Commerce, Waseda U.*
Author: **Hitoshi Mitsuhashi**, *Waseda U.*

Pay disclosure mandates are regulatory rules that grant others access to an individual's pay information. Existing research suggests that such mandates enhance corporate transparency and benefit shareholders. However, there has been limited exploration of the subsequent responsive actions that executives would take, which can impact the overall trajectory of corporate growth. We predict that these mandates may serve as catalysts prompting CEOs to engage in qualification signaling—an effort to communicate their contribution-renumeration balance to stakeholders to avoid being recognized as overcompensated. We hypothesize that to explicitly demonstrate this balance, CEOs subsequently increase firm size after their pay is mandatorily disclosed. We tested this hypothesis using the context of the 2010 governance reform in Japan, which requires the disclosure of board members' pay if it exceeds one hundred million JPY. Our analysis supports the prediction and shows that the effects of the mandates on firm size growth are more pronounced for firms with low pre-treatment performance and less pronounced for firms in which CEOs have greater power.

STR: Do Nice Guys Finish Last? Prosociality and the CEO Labor Market during Industry Downturns 

Author: **Nandil Bhatia**, *Columbia Business School*

Prosocial CEOs increase employee motivation but are often slower to implement layoffs. We present a model of CEO-firm matching wherein negative industry shocks that require downsizing asymmetrically reduce the match quality for prosocial CEOs. We show that prosocial CEOs are more likely to be dismissed and replaced with less prosocial successors during periods of intensifying import competition. Prosocial CEOs who are retained receive greater bonus-based pay relative to less prosocial CEOs, consistent with increased financial incentives to engage in downsizing. Ironically, prosociality can explain why some CEOs receive greater pay in the midst of layoffs. Our findings highlight a novel selection channel (i.e., increased dismissal) and treatment channel (i.e., increased bonus pay) that decrease CEO prosociality during industry downturns. We show that foreign competition has had far-reaching effects, influencing not only firm economic activities but also the psychological characteristics of CEOs.

STR: Navigating Murky, Turbulent Water: Reactive Integration of ESG Goals in CEO Pay  

Author: **Xina Li**, *INSEAD*

This paper examines how firms integrate environmental, social, and governance (ESG) performance goals into CEO compensation in response to ESG controversies ("reactive ESG pay"). I argue that heightened ESG controversies increase the likelihood of firms adopting ESG pay, which typically focuses on subjective, complex, short-term, and cash-based ESG goals. The hypotheses are supported by a sample of public firms in the US from 2007 to 2019. The motivation for adopting reactive ESG pay is stronger when financial performance, regulatory pressure, and corporate culture of integrity are weaker. Additionally, reactive adoption of ESG pay is associated with positive shareholder reactions and a reduction in ESG controversies in the long run. This study contributes to the literature on corporate governance, incentive design, and ESG.

STR: When Opportunity Knocks, What's the Response? How Exogenous Change Affects CEO Compensation 

Author: **Seok-Hyun (Stephen) Hwang**, *Hong Kong Baptist U.*
Author: **Edward J. Zajac**, *Northwestern U.*

This study addresses ongoing debates on CEO labor market efficiency by analyzing how exogenously emerging opportunities affect a focal CEO's compensation. More specifically, we consider whether and how a focal firm's CEO compensation is sensitive to new demand and retention concerns, even in the face of presumed CEO labor market frictions (e.g., legal barriers and skill transferability). We also theoretically and empirically analyze potential moderators (e.g., CEO origin and education) to provide a deeper understanding of the mechanisms driving the relationship between new outside opportunities and a focal CEO's compensation. We test our hypotheses in the context of sudden deaths of CEOs among US firms between 1997 and 2020, conceptualizing them as potential outside opportunities for industry peer CEOs. We conclude with a discussion of how our theoretical perspective and supportive findings contribute to current understanding of the determinants of CEO compensation, CEO labor market dynamics, and spillover effects.

Platform-Complementer Dynamics

Session Moderator: **Yuping Li**, *U. of Colorado, Boulder*

STR: **Elite with Elite: Close Cooperation between Platform Owner and Suppliers for Market Expansion**  

Author: **Yihui Liu**, *School of management, Zhejiang U.*

Author: **Feng Zhu**, *Harvard U.*

Author: **Aiqi Wu**, *Zhejiang U.*

E-commerce platforms cooperate with their high-quality participant suppliers in the form of special marketing campaigns to expand markets. One special marketing campaign is elite marketing campaign that the e-commerce platform selects and collaborates with top suppliers in industries to make marketing promotion. This study aims to clarify how the close cooperation between the platform owner and elite suppliers in this special marketing campaign affects these suppliers' market expansion, and how the effects vary in the expansion of developed and developing markets. We combine supply-side and demand-side perspectives to explore these questions by emphasizing the leverage of the unique and rare resources and capabilities of the platform owner and a complementary signaling effect with the elite suppliers' self-credibility signals. By studying the Elite Partner Event (EPE) hosted by Alibaba.com, we find that EPE participation has a positive effect on improving the market expansion of these suppliers, and the positive impact of EPE only exists in the suppliers' expansion of developing markets rather than developed markets. We further show that these effects vary across suppliers with e-business experience and self-credibility signals, providing supportive evidence for the underlying supply-side and demand-side mechanisms. Our study demonstrates the significance of the governance mechanisms of a platform in a higher-commitment and co-specific investment way with selected suppliers in promoting cross-border value-creating activities on the platform and extends our understanding of the implications of platform governance in the global context.

STR: **Determinants of Platform Complementors' Success: A 3-D Experience**

Author: **Elisabet Garrido Martinez**, *U. of Zaragoza*

Author: **Eduardo Lope**, *U. of Zaragoza*

Author: **Juan Pablo Maicas-Lopez**, *CUNEFU*

One overlooked side in platform research is the complementor one, recently identified by several academics as a research avenue that deserves more scholarly attention. A more nuanced perspective into their attributes, strategies and competitive advantage is necessary to better understand their performance and thus, comprehend their contribution to the platform competitive advantage. In this study, we aim to deepen the knowledge around the determinants of complementors' performance within a certain platform environment by analyzing whether three dimensions of experience (length, depth and breadth) influence provider performance in a social media content-sharing environment. Hypothesis are tested through a unique database that contains monthly individual information for 20,000 channels in the Twitch platform from 2016 to 2023. Results support the beneficial effect of the three types of experience for complementors, which can also play in the interest of other parties, such as the platform owner.

 STR: **Does Platform Owners' Entry Suppress Open Source Contributions? Evidence from GitHub Developers**   

Author: **Yuping Li**, *U. of Colorado, Boulder*

While previous research has focused on the impact of platform owners' entry on complementor innovation, our study expands this inquiry into the open source context where crowd developers serve as an important source of innovation for open source complementors' technology. We investigate how platform owners' entry affects crowd developers' contributions to complementors. Using AWS's phased adoption of an open source software as a natural experiment, our stacked difference-in-differences analysis reveals divergent impacts of the platform owner's entry on crowd developers' open source contributions. On one hand, the platform owner's entry reduces contributions from existing contributors, particularly those with a strong intrinsic motivation, while it has a lesser impact on those with a strong extrinsic motivation. Conversely, the entry attracts increased contributions from new contributors, evident both in the growing number of newcomers making contributions, and the increased volume of contributions per new contributor. Aggregating contributions from all contributors, we observe that the entry of the platform owner leads to a net increase in open source contributions to the complementor. Our study offers insights into the nuanced effects of platform owners' entry on the value creation in open source complementors and underscores how such entry serves as an important factor shaping crowd developers' incentives to engage in open source contribution activities.

STR: **From Sharing to Keeping: Impact of Platform Integration on Knowledge Sharing among Complementors** 

Author: **Chengdi Fa**, *Amsterdam Business School, U. of Amsterdam*

Author: **Mohammad Taghi Ramezan Zadeh**, *Amsterdam Business School, U. of Amsterdam*

Author: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*

Platform integration, which is combining different platforms' components, is vital in driving network effects and establishing platform dominance. However, the impact of platform integration on complementor engagement within the platform ecosystem remains insufficiently understood. We propose a typology of integration in platform ecosystem and investigate how integrating two platforms influences complementor engagement. Specifically, we study how this instance of integration influences complementors' knowledge sharing by considering the trade-off between contributing to common benefits, such as expanding user base, and protecting private interests, including valuable information and market share. Using a dataset from the sellers' knowledge exchange forum on 1688 (domestic version of Alibaba), we study how sellers changed their knowledge sharing after the integration of 1688 with Taobao Deals, which allowed B2B sellers on 1688 to engage in B2C transactions through Taobao Deals directly. Our findings support the co-competition theory, revealing supply-side and demand-side effects. On the supply-side, integration intensifies competition, favoring manufacturers over non-manufacturers and reducing knowledge contributions from non-manufacturer complementors. This effect is more pronounced for bigger complementors. On the demand-side, integration requires complementors to understand diverse retail customer needs, diminishing knowledge sharing by multihoming complementors only if they are multihomed on other retail (i.e., B2C) platforms. These associations were negatively moderated by the knowledge quality of complementors. Additionally, we find that Covid-19 lockdowns, which were the initial motivation for the governance change, actually amplified these dual-edged integration effects.

Non-Market Strategy in Non-Western Contexts

Session Moderator: **Han Jiang**, *Chinese U. of Hong Kong, Shenzhen*

STR: The Implementation of Pro-Social Purpose in Organisational Business Models in Non-Western Contexts

Author: **Petya Koleva**, *Heriot-Watt Dubai*

Author: **Maureen Meadows**, *Coventry U.*

Corporations are being increasingly challenged to reflect on their purpose as the relentless pursuit of profit has had detrimental implications for our planet, society, and even shareholders. Whilst the topic of corporate purpose has been extensively examined in Western countries, and the academic community and practitioners are aware of many mechanisms, antecedents and consequences related to corporate purpose, academic literature with the same focus on non-Western countries is extremely scarce. Therefore, this article engages in an exploratory examination of corporate purpose, and more specifically pro-social purpose, from the perspective of 55 non-Western organisations. The study identifies distinct approaches to integrating pro-social purpose in the non-Western organisational context and outlines relevant antecedents and consequences. The study advances the literature on pro-social purpose by providing empirical evidence for the presence of approaches for integrating and institutionalising organisational pro-social purpose in a non-Western context, as well as relevant antecedents. The result is four distinct context-specific models for pro-social purpose that undermine organisational potential for shared value (SV) and social value creation (SVC). The study also advances the critical corporate social responsibility (CSR) literature by offering evidence of substantial divergences in the practice of CSR, compared with the business case of CSR; such divergences can erode CSR's potential to address systemic and instrumental organisational issues. In addition, the study contributes to the scarce literature on SVC in non-Western countries, both by outlining the functional and conceptual parameters around SVC, and also by enhancing understanding of the reasons behind limited SV in the same context. Based on the findings, implications for business practitioners are also highlighted.

STR: Nonmarket Strategies and Firms' Internationalization: Evidence from Sub-Saharan Africa-MENA Regions

Author: **Muhammad Saad Baloch**, *U. of Southampton*

Author: **Nouhaila Ettalibi**, *uir*

Emerging market multinational enterprises (EMNEs) belonging to regions known for the pervasiveness of institutional voids are growingly engaged in nonmarket strategies (NMS), focusing on both Corporate Political Activity (CPA) and Corporate Social Responsibility (CSR). Paying attention to this growing debate in IB literature, this study leverages the institutional theory and resource-based view to exclusively explain the role of nonmarket strategies as the determinants of the internationalization of EMNEs from MENA and Sub-Saharan African regions. This study investigates 219 multinationals for a period of 2012 to 2021 by using twostep system GMM and finds a positive effect of CSR and CPA on the degree of internationalization (DOI) when both NMS are used individually. Moreover, the complementary effect (using both strategies simultaneously) boosts this positive effect of nonmarket strategies. Likewise, the lower domestic institutional development level further strengthens (moderating positively) the positive effect of NMS on the DOI. Our study offers important theoretical and practical implications.

STR: How Firms Adjust Rhetorical Optimism in Public Communications in Response to Anticorruption Shocks

Author: **Han Jiang**, *Chinese U. of Hong Kong, Shenzhen*

Author: **Yi Peng**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

We develop a government-to-firm dependence framework that delineates two basic mechanisms through which the government may depend on firms, i.e., merit-based dependence, and rent-seeking-based dependence. We highlight that these two government-to-firm dependence mechanisms would have opposite implications for firms' rhetorical optimism in public communications: Merit-based dependence, which indicates the government's intention to collaborate with and support a firm to promote local economic development, will encourage the firm to demonstrate more rhetorical optimism. In contrast, rent-seeking-based dependence, which indicates the extent to which the government will exploit a firm for private interest, will discourage the firm from demonstrating rhetorical optimism in public communications. We draw on this framework to study an intriguing setting, anticorruption shocks. Such anticorruption shocks will increase the government's merit-based dependence on firms and decrease its rent-seeking-based dependence, thus encouraging firms to demonstrate more rhetorical optimism in their public communications. We further propose that such impacts of anticorruption shocks will be further enhanced by firms' reliance on the government. Evidence from the anticorruption campaigns in China starting from 2012 largely supports our theoretical predictions.

STR: Executive Political Ties and Innovation Performance of Emerging Market Enterprises

Author: **HUAN HUA**, *U. of Nottingham, UK*

Author: **Malay Desai**, *Nottingham U. Business School*

Author: **Chengqi Wang**, -

Drawing upon the imprinting perspective, our study seeks to expand theory on the relationship between executive political ties and innovation performance of emerging market enterprises (EMEs). Focusing on firm-level founding imprints, our analysis of a sample of Chinese high-tech manufacturing firms (2008–2018) suggest that executive political ties are more likely to benefit the innovation performance of firms that were founded (i) in the less open and market-oriented period (before 1992) than those founded in the more open and market-oriented period (after 1992) and (ii) as state-owned-enterprises than those that are not state owned. Interestingly, our results further show that the level of firm internationalization shapes the strength of firm-level founding imprints differently, and thus their impact on the relationship between executive political ties and innovation performance. Our research highlights the importance of moving beyond EMEs' current environmental and firm-level contexts to consider how their history influences the effectiveness of political ties in enhancing innovation performance, furthering understanding of the contingency explanations of the focal relationship.

How Managerial and Employee Dynamics Shape Organizational Performance

Session Moderator: **Saeedeh Ahmadi**, *Amsterdam Business School, U. of Amsterdam*

STR: Management Practices, CEO Leadership Behaviors and Firm Productivity 

Author: **Eda Aral Kilic**, *FEB, U. of Groningen*

Author: **Janka Ireen Stoker**, *U. of Groningen, Faculty of Economics and Business*

Author: **Harry Garretsen**, *U. of Groningen*

Understanding the large productivity differences across firms has been a challenge in economics and management research. Research shows that firms' management practices explain a significant part of this productivity variation. However, the possible contribution of individual managers is still ill-understood in this respect. In this paper we propose that, next to management practices, leadership behaviors of CEOs are also linked to productivity. For 156 manufacturing firms, we investigate the association of CEO instrumental leadership (IL) behaviors with firm productivity, alongside and also in interaction with firms' management practices. Our study is among the first to show that CEO leadership behaviors have not only a robust, positive association with productivity, but also that this association is independent of the association between management practices and productivity. With our findings, we contribute to the economics and management literature by providing evidence for the importance of both management practices and the individual manager for firm performance.

STR: Horizontal and Vertical Interpersonal Processes of Middle Managers and Business Unit Ambidexterity

Author: **Sebastian Fourne**, *Wilfrid Laurier U.*

Author: **Lotte Glaser**, *Vrije U. Amsterdam, School of Business and Economics*

Although scholars have developed structural and contextual perspectives in research on organizational ambidexterity, little is known about more direct ways in which middle managers (MMs) responsible for business units (BUs) address challenges associated with pursuing exploration and exploitation simultaneously within their BUs. Drawing on and extending research on MMs' work relationships, we examine how different horizontal and vertical interpersonal processes among MMs and with corporate top managers (TMs) contribute to ambidexterity at BUs. Importantly, we reveal that the relationship of horizontal knowledge exchange among MMs and BU ambidexterity depends on the specific quality of vertical interpersonal processes as integrative bargaining complements and cognitive flexibility undermines this relationship. Our results have implications for our understanding about the joint involvement of middle and top managers in executing complex strategies in multi-unit organizations. Moreover, this study provides guidance for MMs to leverage the complementarities of horizontal boundary-spanning and vertical interpersonal processes while avoiding the pitfalls of engaging in both.

STR: Multiple Goal Conflicts and Innovation at Frontline: Does Alignment Help or Hurt?

Author: **Saeedeh Ahmadi**, *Amsterdam Business School, U. of Amsterdam*

This study delves into the varied impacts of multiple goal conflicts on innovation at frontline. Although innovation is vital for an organization's survival and competitive edge and firms increasingly try to harness the creative potential of frontline workers, the pursuit of innovation at the frontline frequently clashes with other high-priority objectives. The intricate ways in which diverse goal conflicts influence innovation at frontline remain unclear, given that much of the existing research has discussed goals in general or centered on the consequences of conflicts between two goals, neglecting the subtleties of other potential goal conflicts driving the performance. We investigate how the innovation goal interplays with safety and short-term financial objectives, and subsequently influences the innovation among frontline employees. Our theory and the empirical findings, drawn from multilevel multisource data obtained from a large energy company, indicate that not all types of conflicts with the innovation goal hold equal sway over innovation. In extending prevailing theories on multiple goals, we delineate the distinctions in the effects of these varied conflicts and elucidate how multifaceted goal conflict shape individuals' innovative conduct. Furthermore, we expound on a mechanism at realm of top managers, elucidating how a context of alignment between the team and the organization can either bolster or hinder innovation in the face of diverse goal conflicts at the lower echelons.

STR: Shaping Organizational Performance via Employee Participation and Vetting in Managerial Selection    

Author: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*

Author: **Samina Karim**, *Northeastern U.*

Author: **Monica Higgins**, *Harvard U.*

This paper studies a practice that fosters a hybrid approach between decentralized decisions and centralized managerial hierarchy: employee participation in managerial selection. The main argument posits that while such participation enhances employee-level outcomes such as satisfaction and retention, it may not be sufficient to improve organizational performance due to employees' potential underemphasis on managerial competence when selecting managers. However, combining employee participation with vetting processes to screen candidates for managerial positions enables organizations to achieve both superior employee-level outcomes and organizational-level performance. This study leverages data from the Brazilian public school system to examine the different mandates for selecting school principals. The quantitative analyses use a combination of large-scale administrative unbalanced panel datasets covering over 35,149 public schools between 2007 and 2017, catering to an average of 17.7 million students annually. The results show that a combination of employee participation with vetting outperforms other forms of managerial selection, resulting in higher levels of satisfaction with managers, retention, and organizational performance. The findings underscore that employee participation and vetting strikes a balance between employee satisfaction and organizational performance.

The Past is Not Dead: Founder/Legacy Effects

Session Moderator: **Christina Walker Robichaud**, *U. of Montana*

STR: **Able, But Not Willing: A Family Legacy Perspective on Firm Strategic Change Behavior**

Author: **Christina Walker Robichaud**, *U. of Montana*

Author: **Sara Davis**, *Kennesaw State U.*

Author: **James Grabowski**, *U. of Arkansas at Little Rock*

A family firm's legacy orientation, which derives from the shared meanings of the founding family, has been long acknowledged in family business theorizing as an important reference point informing strategic decisions towards conservative choices that prevent the loss of the family's legacy. This paper contributes to the nascent research by examining the impact of family legacy orientation on firm strategic change, as well as under contexts of family control (majority ownership held by a family) and a loss context. Additionally, the paper advances research on the different forms of family legacy orientation (social, biological, material) by examining their nuanced impact on strategic change. Using a sample of US manufacturing firms, we find that family firms exhibiting a family legacy orientation are associated with a lower level of strategic change compared to their nonfamily peers, and this maintains under family control and a loss context. Even amongst a sub-sample of family firms, legacy-oriented firms exhibited a similar pattern of results—less strategic change compared to the family firms lacking the family legacy orientation. However, the different forms of family legacy orientation had mixed findings.

STR: **The Past Is Not Dead: Logic Imprints and the Adoption of a New Internal CSR Practice Within Firms**

Author: **Qin Ye**, *School of management, Northwestern Polytechnical U.*

Author: **Jianfeng Cai**, *School of management, Northwestern Polytechnical U.*

The dynamic nature of institutional environments often confronts organizations with institutional logics that diverge from previously imprinted ones, leading to potential conflicts. However, the interplay between historical and present logics in shaping organizational behaviors remains relatively unexplored. To address this gap, our study integrates institutional and imprinting theories to investigate the impact of past and present institutional logics on the adoption of employee medical insurance, an emerging internal CSR practice, among Chinese private-owned enterprises (POEs) during the nation's economic transition. Drawing on a nationwide survey of 1229 POEs, this study reveals that self-support logic imprint, derived from owners' early career experiences outside the planned system, impedes new insurance adoption, while work unit all-inclusive logic imprint, rooted in initial state ownership, fosters positive adoption outcomes. Additionally, our analysis demonstrates that POEs in highly marketized regions, characterized by prevalent current market logic, are more inclined to adopt employee medical insurance. We further observe the attenuation of imprinting effects in these regions, indicating the diminishing influence of historical logics in the face of contemporary market-oriented pressures. This research contributes to the imprinting literature and sheds light on intricate institutional dynamics.

STR: **Co-Founder Breakup Penalty: Exploring the Impact of Breakups on Investor Decision-Making**

Author: **Naja Pape**, *INSEAD*

Author: **Heejung Jung**, *Imperial College London*

Author: **Anne L.J. Ter Wal**, *Imperial College Business School*

Scholarly and anecdotal evidence show co-founder breakup – the replacement or the departure of a co-founder – is common in early entrepreneurial teams. In the absence of objective evidence on inherent venture quality, investors evaluate young start-ups using diverse quality signals derived from the limited information available about the founding team. We show co-founder breakups work as “soft” data, informing investors about the quality of the founding team and thereby affecting their evaluations. In parallel with in-depth interviews with professional investors, we conduct two pre-registered survey experiments on 1,452 individuals who have experience with start-up funding in the form of crowd-funders, business angels, and venture capitalists. We ask these investors to evaluate start-ups with versus without co-founder breakup, using real business cases that are identical across conditions. In Study 1, we find investors perceive the quality of start-ups whose team experienced co-founder breakup (compared to start-ups whose team did not) as lower in terms of viability, competence, and warmth, and, in turn, are less likely to invest. In Study 2, we find the penalty is reduced when the breakup is due to a business-related reason (e.g. inadequate skill set). In contrast, we also find co-founder breakup due to personal and emotional conflicts among co-founders significantly increases the penalty. Our research sheds light on the nuanced dynamics of co-founder breakups and their impact on investors' perceptions and decision-making, which has important implications for the startup ecosystem.

STR: **Exploring the Impact of Founder Social Identities on Sustainable Business Model Design**

Author: **David Nico Redaschi**, *U. of St. Gallen*

Author: **Karolin Frankenberger**, *U. of St. Gallen*

Author: **Christine Scheef**, *U. of St. Gallen, Switzerland*

Designing sustainable business models gains increasing importance. Particularly in young firms, the founder's social identity plays a pivotal role in shaping the creation of new ventures. Yet, founders with diverse social identities often pursue distinct goals, and there is limited understanding of how this divergence influences the design of sustainable business models. Drawing on two different founder social identities – Darwinian and Missionary founders –, we argue that founder social identities differently shape the sustainability of the business model design. In addition, we propose that entrepreneurial orientation mediates the relationship between the founder's social identities and sustainable business model design. We collected survey data from 195 solo founders in Austria, Germany, Liechtenstein, and Switzerland to test our research model. In support of our predictions, we find that Darwinian founders are negatively, and Missionary founders are positively related to sustainable business model design. We also show that entrepreneurial orientation partially mediates the link between Missionary founders and sustainable business model design, but not for Darwinian founders. Theoretical and practical insights on how founder social identities and entrepreneurial orientation can be leveraged to support sustainable business model designs are then discussed.

Challenges in Interfirm Cooperation

Session Moderator: **Carolyn Bimmermann**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen U.*

STR: The Harmful Effect of Inter-Firm Competition on Product Recalls 

Author: **Carolyn Bimmermann**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen U.*
Author: **Denise Fischer-Kreer**, *U. of Bonn*

Inter-firm cooperation, the simultaneous presence of both competition and cooperation in inter-firm relationships, has gained increasing attention in research in recent years. While selected outcomes are well-studied, perspectives on product recalls as an outcome is still scarce. Researchers have pointed out that how cooperation affects actual value creation, e.g., in terms of reduced product recalls, requires further investigation through quantitative studies. Previous research on cooperation is mainly based on conceptual work, or empirical work on isolated industries. Additionally, researchers have called for a more nuanced view on cooperation, by considering the underlying competitive and cooperative intensities. In this study, we want to bridge these research gaps and clarify the role of inter-firm cooperation as an antecedent to product recalls. We base our analysis on a cross-sectional, cross-industrial data set from 2008 to 2021, including 3,031 alliances across 1,015 U.S. firms. Firstly, we find that the cooperation occurrence is positively related to product recalls. Secondly, the intensity of cooperation in cooperation is negatively influencing product recalls. Thirdly, we find that competitive intensity in cooperation also negatively relates to product recalls. Additionally, our insights can support practitioners in cooperation decision-making, including favorable set-up conditions in case the reduction of product recalls is of importance. Furthermore, we identify avenues for future research.

STR: Dances With Wolves: How Top Management Shapes the Pursuit of Cooperation 

Author: **Sicheng Luo**, *The Hong Kong Polytechnic U.*
Author: **Devi R. Gnyawali**, *Virginia Tech*
Author: **Siqi Luo**, *Macau U. of Science and Technology*
Author: **Hao-Chieh Lin**, *National Sun Yat-Sen U.*

Empirical research on cooperation has examined multiple forces that shape the pursuit of cooperation (simultaneous competition and cooperation), but studies have largely concentrated on factors at the industry, organization, or network levels, with limited attention given to the managerial level. Focusing on the top management team (TMT), we integrate theoretical insights from the upper echelons and agency literatures and suggest that the risk-taking propensity of the TMT drives firms to engage in cooperation. We theorize that this positive relationship becomes more pronounced with an increase in long-term compensation but is attenuated by environmental dynamism. Results from the data of publicly traded firms from Taiwan during 2013-2016 provide support for our hypotheses. A supplementary analysis also shows that TMT risk-taking propensity propels firms to pursue simultaneous competition and cooperation rather than aggressive competition. Our theoretical insights and empirical results underscore the role of TMTs in the firm's pursuit of cooperation and provide a nuanced understanding of how such effect varies across different conditions.

STR: A Dark Side of Procedural Fairness Asymmetry in Channel Relationships: The Mediating Role of Negotiation Costs

Author: **Zhao Ziyu**, *School of Management, Huazhong U. of Science and Technology*
Author: **Mengyang Wang**, *Huazhong U. of Science and Technology*

Underpinned by fairness heuristic theory and transaction cost economics, this study empirically examines how buyers' procedural fairness asymmetry affects supplier performance over time via changes in negotiation costs. Drawing on two-wave survey data involving 225 buyer-supplier dyads in China, the study finds that buyers' procedural fairness asymmetry can result in an increase in negotiation costs, subsequently harms supplier performance over time. Moreover, competitive intensity weakens the positive relationship between buyers' procedural fairness asymmetry and changes in negotiation costs, whereas market uncertainty strengthens this relationship. Meanwhile, the flexibility norm positively moderates the focal relationship. By adopting a dyadic perspective to illuminate the role of buyers' procedural fairness asymmetry in buyer-supplier relationships, our study advances the existing fairness literature and enhances understanding of relationship dynamics. Additionally, it offers practical implications for practitioners seeking to improve the governance of channel partnerships.

STR: Asymmetrical Cooperation: Emergence Conditions and Characterisation Through Environmental Uncertainty

Author: **Olfa Chelbi**, *centre de recherche en gestion*
Author: **Chloe Zanardi**, *Montpellier Research in Management*

Cooperation has been largely studied in the context of symmetrical firms and only a few studies have addressed the specific case of cooperation in the context of asymmetric firms (large and small firms) given the difficulty in establishing the existence of competition between these two sets of actors. Our study aims to fill the knowledge gap in this area by establishing the existence of cooperation in settings involving asymmetrical firms (different in size, resources, market knowledge, experience...) and analyzing the conditions under which this cooperation emerges as well as its characteristics. To serve this purpose, we mobilize the theory of environmental uncertainty (state, effect and response uncertainty) as an analytical grid, since it enables us to understand the way actors perceive each other and to analyze their competitive movements. A multiple case study is carried out taking the case of two highly-regulated industries - the banking and the defense industry - as the settings for the investigation. Our results confirm the existence of a particular type of cooperation, asymmetrical cooperation. We uncover the role played by environmental uncertainty in driving this cooperation. We also show that this type of cooperation is short lived but can be extended if external parties such as regulators create the right conditions for it to last. Last, our results contribute to the ongoing discussions regarding the link between the three dimensions of uncertainty by showing that the uncertainty of effect is the starting point followed by state uncertainty, which is the second to vary, and finally response uncertainty which is the last dimension to vary.

Physical Work Environments: A Strategic Resource or Not. Implications for the Future

Organizer: **Bukky Akinsanmi Oyediji**, *London Business School*
Organizer: **Yea Hee Ko**, *Binghamton U.-State U. of New York*
Panelist: **Russell Coff**, *Wisconsin School of Business*
Panelist: **Massimo Maoret**, *IESE Business School*
Panelist: **Sunkee Lee**, *Carnegie Mellon U. - Tepper School of Business*
Panelist: **Eliana Crosina**, *Babson College*

Whether physical work environments (PWEs) are a strategic resource for firms or not has become increasingly pertinent given the pervasive shift to remote and hybrid work models. This symposium aims to critically examine this question by bringing together leading scholars who investigate PWEs varied impact on desirable outcomes in firms from different theoretical lenses. In doing so we aim to (1) discuss and consolidate current knowledge on how physical work environments contribute to productivity and profitability in firms, (2) debate these current beliefs, theoretical explanations, and empirical evidence to determine the extent to which they help attain and sustain competitive advantage, (3) identify gaps and inconsistencies in the literature regarding the nature and impact of this firm resource to stimulate future research, and (4) provide some managerial guidance on when and how they may matter to firm outcomes.

Presenter: **Sina Khoshokhan**, *U. of Colorado, Boulder*
Presenter: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*
Discussant: **David Hsu**, *The Wharton School, U. of Pennsylvania*
Discussant: **Hong Luo**, *HBS*

This symposium explores topics at the intersection of secrecy and collaboration across firm boundaries. Firms manage their intellectual assets strategically, choosing between levels of secrecy and disclosure. Prior literature suggests that firms consider secrecy enables them to appropriate costly investments, but some disclosure is required to engage in markets for technology. While literature on external sourcing of inventions, in particular in the form of markets for technology, has grown over the past decades, evidence on how firms reconcile the widely reported preference for secrecy and collaboration across firm boundaries remains scant. In this symposium, we have assembled a set of three papers at the frontier of this literature and invited two top scholars in this area as the discussants. The symposium tackles questions such as: how do firms retain secrecy even while externally sourcing patented, disclosed inventions? Also, given that employees' intra-firm patenting rates may respond to mobility constraints, how is collaborative patenting of IP affected when employees face more stringent mobility constraints? Finally, cross-firm collaboration is underpinned by information sharing and prior literature suggests firms relying on secrecy are forced to vertically integrate downstream. Then, can markets for trade secrets exist at all, and are they valuable? Presentations in this symposium will tackle these previously understudied questions, shedding light on the tensions and trade-offs in managing secrecy, disclosure, and external invention sourcing.

Collaborative Relationships for Innovation

Session Moderator: **Feng Dong**, *School of Economics & Management, Anhui Polytechnic U.*

TIM: Dose Supply Chain Partner's GPT R&D Influence Focal Firm's GPT Innovation Performance

Author: **Feng Dong**, *School of Economics & Management, Anhui Polytechnic U.*

Author: **Guiyang Zhang**, *School Economics & Management, Nanjing U. of Science and Technology*

Since the concept of general purpose technology (GPT) was first introduced by the Advanced Technology Program in 1988, the interpretation of its characteristics as well as its potential for value creation across a broad range of industries have attracted enthusiastic discussions among scholars. While most studies on GPT focus on the commercialization and diffusion, prior empirical evidence on the incentive mechanism is relatively scarce. Till now, little is known about how supply chain partners influence the focal firm's GPT innovation performance. This paper aims to elaborate on heterogeneous mechanisms of the focal firm's GPT innovation at play within the supply chain context by distinguishing upperstram suppliers and downstream customers. Drawing on resource dependence view and peer effect theory and based on the panel data of 108 top biopharmaceutical firms worldwide and the corresponding 1055 "firm-year" observations over 10 years from 2010 to 2019, this paper conducts the Negative binomial regressions. The results suggest that customers' GPT research & development (R&D) promotes the focal firm's GPT innovation performance while suppliers' does the opposite. Additionally, this paper examines the moderating effects of industry diversity for both suppliers and customers. The results show that suppliers' industry diversity plays a significant moderation role by mitigating the negative impacting strength between suppliers' GPT R&D and the focal firm's GPT innovation performance. Yet, there is no evidence that customers' industry diversity plays a moderation role between customers' GPT R&D and the focal firm's GPT innovation performance. These conclusions keep solid after series of robustness tests. Theoretical contributions, practical implications, limitations and guidance for future research are discussed.

TIM: Which is Better for Alliance Innovation Performance - Organizational Change or Stability?

Author: **Lin Deng**, *U. of Wisconsin-milwaukee*

Author: **SARTHAK SINGH**, *U. of Wisconsin, Milwaukee*

In the sustainable operation process of innovation alliances, there are two developmental trends: organizational stability and organizational change. These two mutually exclusive characteristics have a paradoxical impact on both the innovation performance and the sustainable development of alliances. To further examine this paradoxical relationship, we create a research model examining the impact of organizational change and organizational stability on alliance innovation performance, we also examine how this relationship is moderated by environmental uncertainty. We validate the theoretical assumptions through a questionnaire survey analysis of 311 Chinese enterprises. The results indicate that both the organizational change and organizational stability of innovation alliances have an inverted U-shaped impact on alliance innovation performance. Environmental uncertainty strengthens the impact of organizational change on alliance innovation performance, causing the inflection point of the curve to shift leftward and its shape to become steeper. On the other hand, environmental uncertainty weakens the impact of organizational stability on alliance innovation performance, causing the inflection point of the curve to shift rightward and its shape to become gentler. We contribute valuable insights for balancing the paradoxical relationship of alliances and strategic innovation choices under environmental uncertainty.

TIM: Coopetition Harmony and Market Value: The Impact of Coopetitor Heterogeneity and Strategic Alignment

Author: **Chiung-Yi Hwang**, *National Yang Ming Chiao Tung U.*

Coopetition alliances, where firms collaborate with their competitors, present a unique blend of cooperative and competitive pressures. Our study extends the understanding of coopetitor heterogeneity, particularly in technological and market overlaps, by shifting the focus from a firm-centric view to the perspective of capital market investors. We found that while the capital market generally perceives technological and market overlaps between firms and their partners positively, it becomes more cautious when these overlaps co-occur. Additionally, the capital market's assessment of these overlap combinations varies based on the firm's strategic orientation. Specifically, firms pursuing cost leadership strategies appear to gain more from technological overlaps and even more so when technological and market overlaps coincide. On the other hand, differentiation-focused firms are seen more favorably by the capital market in situations of market overlap. By examining the impact of coopetitor combinations from the lens of external financing and establishing boundary conditions grounded in competitive strategies, this research elucidates the varying effects of coopetitor combinations under different strategic orientations, thus making significant contributions to the understanding of coopetition dynamics and strategic alliance theories.

TIM: The Digital Capability Trap: Emerging Technology Landscape and Industry Boundaries

Author: **Henry Lopez-Vega**, *Umeå School of Business and Economics, Umeå U.*

Despite the growing relevance of emerging digital technologies and the notion of technology search, the literature lacks a more comprehensive understanding of how incumbents and new entrants collaborate in emerging technology areas (e.g., digital manufacturing, computer vision) in established industries. This paper examines the emerging digital technology areas in the manufacturing industry in Sweden and the interplay of incumbents and new industry entrants. I use a digital social research method –topic modelling– to analyse the content of 123 patents of 92 organizations. The results present 20 topics which capture the emerging digital technology landscape of manufacturing industry as well as connection of organizations to each topic and the potential collaboration opportunities. This study contributes to the burgeoning literature on the firm boundaries of digital technologies and sheds light to the study of technology search and unexplored technology collaboration.

Inclusive Data-driven Innovation

Session Moderator: **Zhuofan Li**, *U. of Arizona*

TIM: The Embeddedness of Legitimacy in a Moral Economy of Big Data Surveillance Technology 

Author: **Zhuofan Li**, *U. of Arizona*

The proliferation of technology that collects, stores, processes, and profits from large volumes of human behavioral and biometric data has sparked broad social scientific interests and regulatory concerns. Yet, big data surveillance is not only a technology but also a commodity sold and bought in the marketplace. It is often these market transactions that define the legitimate use of a new, morally ambivalent technology before regulatory intervention. Drawing on computational and historical analysis of the controversial case of facial recognition, this paper shows how technology producers construct moral legitimacy using two intersecting relational strategies: (1) embedding the technology in the institutional legitimacy of organizational buyers of the technology, and (2) disembedding the technology from its surveillance uses for it to become an autonomous moral object. These strategies allow market actors to not only justify unlimited access to, but also to shape the moral vocabularies we use to think about, consumer data.

TIM: Munging the Ghosts in the Machine: Coded Bias and the Craft of Wrangling Archival Data

Author: **Vincent Yung**, *Northwestern U.*

Author: **Jeannette Anastasia Colyvas**, *Northwestern U.*

Data wrangling is typically treated as an obligatory, codified, and ideally automated step in the machine learning pipeline. In contrast, we suggest that archival data wrangling is a theory-driven process best understood as a practical craft. Drawing on empirical examples from contemporary computational social science, we identify nine core modes of data wrangling. Although these modes can be seen as a sequence, we emphasize how they are iterative and nonlinear in practice. Moreover, we discuss how data wrangling can address issues of coded bias. Although machine learning emphasizes architectural engineering, we assert that to properly engage with machine learning is to properly engage with data wrangling.

TIM: Sustainability Orientation, Big Data and Product Innovation: Evidence from European Manufacturing

Author: **Jana Kunecova**, *U. de Girona*

Author: **Andrea Bikfalvi**, *U. de Girona*

Author: **Pilar Marques-Gou**, *U. de Girona*

Sustainability is one of the greatest challenges for industry today. The purpose of this paper is to study the influence of sustainability orientation on product innovation in the European manufacturing sector, with a particular focus on the role of big data, an issue that has been largely neglected so far. The data used for the purpose of the present study were collected from the European Manufacturing Survey (EMS) 2018 edition, consisting of 1,123 surveys carried out in Austria, Spain, Croatia, Lithuania, Slovakia, Slovenia and Serbia. Binary logistic regressions and Hayes mediation models are used to test the hypotheses. Results suggest that sustainability orientation practices and industrial big data use positively influence product innovation, and that simultaneous industrial big data use mediates the relation between sustainability orientation and product innovation. The findings have implications for both theory and practice.

TIM: How Does Corporate Social Responsibility Affect Distinctiveness of Digitalization?

Author: **Yihui Xiao**, *School of Business, Renmin U. of China*

Author: **Chunling Zhu**, *School of Business, Renmin U. of China*

Author: **Fangliang Zhang**, *Guangxi U.*

While distinctiveness of digitalization faces dilemma between gaining digital advantage and solving legitimacy concerns raised by stakeholders, we know far less about how to maximize advantages and solve legitimacy issues. Integrating stakeholder theory and upper echelons theory, we theorize that CSR performance can be an effective tool to promote firms' distinctiveness of digitalization. We further predict that CEO duality strengthens the focal relationship between CSR performance and distinctiveness of digitalization, while CEO tenure and family CEO weaken it. Based on the dataset of listed firms in China from 2011 to 2020, we find supports for our hypotheses. Our study contributes to the stakeholder theory and digitalization literature, and bridges them using upper echelons theory by showing how CSR performance shapes distinctiveness of digitalization.

Knowledge Transfer Across Organizational Boundaries

Session Moderator: **Chunpei Lin**, 13959980988

TIM: Boundary-Spanning Search, Knowledge Integration and Disruptive Innovation

Author: **Chunpei Lin**, 13959980988
Author: **Xiaoyan Zhu**, 19955368051
Author: **Xiaoxuan Li**, Huaqiao U.

This paper utilizes insights from the knowledge-based view to examine the mediating role of knowledge integration and the moderating role of environmental turbulence (market and technological turbulence) in boundary-spanning search (supply-side and demand-side search) and disruptive innovation. This paper uses two-stage survey data collected from 355 manufacturing firms in China and utilizes multiple regression and necessary condition analysis (NCA). The regression results show that boundary-spanning search (supply-side and demand-side search) facilitates disruptive innovation by increasing knowledge integration. Results also indicate that technological turbulence strengthens the effect of supply-side search on disruptive innovation, whereas market turbulence weakens such an effect; market turbulence strengthens the effect of demand-side search on disruptive innovation, whereas technological turbulence weakens such an effect. The NCA findings are that supply-side search and knowledge integration are necessary conditions for disruptive innovation.

TIM: Research on the Impact of Coopetition Relationship on Knowledge Transfer in Alliance Network

Author: **Benlu Hai**, Henan Normal U.
Author: **Ang Ma**, Henan Normal U.
Author: **Xin Ding**, Henan Normal U.
Author: **Jiahui Sun**, Henan Normal U.

Drawing upon Complexity Adaptive Systems (CAS) theory, this study, situated within the context of alliance networks, initiates its exploration by considering two dimensions: market similarity and technology relevance. It categorizes partner coopetition relationships into four distinct types: competitive, collaborative, weakly associated, and amicable. Employing computational experimental methods, this research investigates the principal roles played by partner coopetition in mediating the transfer of alliance knowledge and its consequent impact on a firm's innovative performance. The findings reveal that knowledge transfer among alliance firms positively influences the focal firm's innovative performance. The coopetition relationship emerges as a significant moderating variable in the linkage between alliance knowledge transfer and corporate innovation performance. An increase in market similarity initially constrains the growth of innovation performance, with its attenuating effect slightly diminishing beyond a certain threshold. Conversely, enhanced technology relevance promotes innovation performance growth, although the intensifying effect slightly weakens after reaching a certain level. Furthermore, the impact of alliance knowledge transfer on the focal firm's innovative performance exhibits notable differences under varying coopetition relationships.

TIM: Technology Transfer Efficiency of Publicly Funded Innovation-Driven Research Centers

Author: **Forough Zarea Fazlelahi**, Queensland U. of Technology
Author: **Evan Douglas**, Sasin School of Management, Chulalongkorn U., Bangkok
Author: **Martin Obschonka**, U. of Amsterdam
Author: **David Audretsch**, Indiana U., Bloomington
Author: **Dietmar W. Hutmacher**, Queensland U. of Technology

University technology transfer has received considerable attention in the innovation and entrepreneurship literature where a main focus has been on the relative performance of technology transfer offices (TTOs) or university level outcomes. In contrast to TTOs, major publicly funded innovation-driven research centers, a key funding strategy that aims at promoting impactful university technology transfer in a particularly direct and thus efficient way, have been neglected in this research. To fill this gap, we study the technology transfer efficiency (TTE) of 46 innovation-driven university research centers funded by the Australian Research Council between 2013 and 2021. Combining data envelopment analysis and fuzzy set qualitative comparative analysis allows us to not only evaluate their TTE but also analyze the interdependence of causal conditions and identify equifinal case-level pathways to high (and alternatively low) TTE outcomes. We found respectable performance in most research centers, but substantial inefficiencies relating to master's and PhD students and collaborations between the research centers and external universities, industry partners, and government entities. Our results reveal three configurational pathways to high TTE, and five pathways to low TTE, demonstrating the complex causality of the technology transfer process and providing implications for research policy and for such research centers.

TIM: Technological Novelty and Technology Transfer of University Patents: Evidence from China

Author: **Zhi Yang**, School of Management, Huazhong U. of Science and Technology
Author: **Zeyu Chen**, School of Management, Huazhong U. of Science and Technology
Author: **Ruichen Zhang**, School of Management, Huazhong U. of Science and Technology

Technology transfer from universities to industries represents a critical phase in the innovation process. However, a comprehensive understanding of the determinants facilitating the commercialization of university technologies remains elusive. As a fundamental characteristic of technology, we contend that technological novelty plays a significant role in influencing technology transfer. Specifically, drawing from organizational learning and transaction cost theories, we propose a conceptual framework to elucidate the inverted U-shaped relationship between technological novelty and technology transfer. Furthermore, collaborations in research and development between universities and industries, the marketization level in the location of patent applicants, and whether patents belong to strategic emerging industries will moderate the inverted U-shaped relationship between technological novelty and technology transfer in distinct ways. To test our hypotheses, we employ a sample of 2,635,464 Chinese university patents spanning from 2003 to 2021. The implications of our findings are anticipated to contribute discerning insights within the domains of innovation management, the commercialization of university technologies, and the intricate facets of technological novelty.

Ecosystem Evolution and Transformation

Session Moderator: **Fabien Rezac**, Aarhus U., Department of Business Development and Technology

TIM: Friends Close, Enemies Closer? The Role of Trust in Disrupting Ecosystems  

Author: **Fabien Rezac**, Aarhus U., Department of Business Development and Technology

From an ecosystem perspective, the discourse dedicated to incumbents has been receiving extensive attention; however, only little is known about the challenges faced by entrants, particularly in relation to gaining support of the very same incumbent ecosystem they seek to disrupt. Facing this paradox known as disruptor's dilemma, the entrants are exposed to various forms of incumbent resistance. While several researchers explored how the resulting tensions could be mitigated, the extant literature fails to consider a factor that have been consistently proving itself crucial in developing and maintaining effective interorganizational relationships – trust. This this two-phase abductive case study positioned in the context of UK insurtech contributes to the literature by unfolding how entrants use trust to mitigate tensions with incumbents in ecosystem-level disruption. In particular, it examines the intricate dynamics of their strategic efforts by the means of a conceptual model and discusses the emerging findings in the context of theory as well as managerial practice.

TIM: Multi-Dimensional Time and Innovation Ecosystems: A Critical Realist View  

Author: **Christos Kalantaridis**, U. of Westminster

Author: **Merle Kuttim**, Tallinn U. of Technology

Time constitutes a relatively overlooked dimension of innovation ecosystems. This is even though the eco prefix, that differentiates this body of research from earlier systemic (regional, national and sectoral) approaches, highlights the interdependency among actors, and the co-evolution that binds them together over time. In response, our paper sets out to develop a coherent framework for the conduct of temporal analysis of innovation ecosystems and use it in order to bring together existing research. This framework draws on critical realism and offers observers of innovation ecosystems the intellectual tools needed in order to decipher actors and actions, and shape an emergent agenda for future temporal studies. We create a designed intellectual construct that advances the concepts of the confluence and the spirality of time(s). The latter offers actors a kaleidoscope of choices: new, continuing or re-emerging. Whilst our ability to draw policy and practice implications is constrained, because of the relatively limited amount of existing research, we argue that the innovation ecosystem concept offers promise. Promise both regarding policy action but also in gaining new insights underpinned by the scope to facilitate temporality that it entails.

TIM: Big Tech, Small Tech, and the Dynamics of Technology Life Cycle: The Case of AI's Evolution  

Author: **YANGYANG CHENG**, Department of Management and Technology, Bocconi U.

Author: **Carmelo Cennamo**, Copenhagen Business School

Author: **Claudio Panico**, Bocconi U.

We investigate the dynamic interplay between large incumbents (particularly Big Techs) that engages in corporate venture capital (CVC) investments and mergers and acquisitions (M&A), venture capital (VC) that finances startups, and startups that enter and exit the market. We aim to investigate the intricate mechanisms linking incumbents' VCs', and startups' activities and affecting the technology life cycle. Theoretically, we build on previous research pointing to the "kill zone" and "innovation zone" effects of incumbents' M&A activities, enlarging the analysis to CVC activities and moving from static to dynamic effects. Empirically, we juxtapose our findings from the Artificial Intelligence (AI) technology space with established frameworks of technology and industry evolution. Our research underscores the multifaceted roles played by incumbents in shaping the innovation ecosystem, especially within rapidly evolving domains like AI.

TIM: Overcrowded or Avoided? How Business Model Ambiguities Inhibit Ecosystem Transformation   

Author: **Rami Darwish**, KTH Stockholm

Author: **Adam Uhrdin**, KTH, Royal Institute of Technology

Author: **Mats Engwall**, KTH Royal Institute of Technology

Author: **Mats Magnusson**, KTH Royal Institute of Technology

In response to the growing demand for sustainability, green technologies have been introduced. However, for these technologies to break through, existing business models must be innovated, and established ecosystems may need to be transformed. Moreover, innovation ecosystems arise and evolve to deliver both economic and sustainability benefits. Our article delves into the intricate transformation of an ecosystem to electrify truck and bus systems in a highly uncoordinated setting, influenced by historical forces. Through an in-depth case study, we examine the underlying factors that have made this transformation challenging in the face of a radical technological shift. Our findings highlight two opposing dynamics: a void and overcrowdedness, which have both contributed to inertia blocking the desired ecosystem transformation for sustainability in both cases. While value capture ambiguity has led to an overcrowded scene in the electric bus case, value creation, and value capture ambiguities have left a void surrounding a key position in the ecosystem in the electric truck case. These results suggest that business model ambiguities interact with ecosystem transformation, and resolving them is vital to shaping future ecosystems. Our findings have significant implications for works of literature on ecosystems and business models.

Dynamic Capability and Attentional Perspectives on Digitalization

Session Moderator: **Wanyu Zhang**, *Alliance Manchester Business School, U. of Manchester*

TIM: Digital Transformation of SMEs: A Dynamic Capabilities Perspective 

Author: **Wanyu Zhang**, *Alliance Manchester Business School, U. of Manchester*

Author: **Khaleel Malik**, *Alliance Manchester Business School, U. of Manchester*

Author: **Dimitri Gagliardi**, *U. of Manchester*

This research explores how Small and medium-sized Enterprises (SMEs) in the manufacturing industry with limited resources get opportunities from digital transformation and overcome challenges. Although digital transformation has gained attention in recent years, many of the aspects of how they generate impact and how they help organizations to prosper are still unknown. Dynamic capabilities are an important theoretical foundation for understanding digital transformation, but limited literature focuses on the SME context and connects with dynamic managerial capabilities perspectives. This paper fills the gap in extant academic and practitioner literature related to how and which dynamic capabilities are essential for the digital transformation of SMEs. We conduct semi-structured interviews to collect data from manufacturing-based SME firm managers and external experts to build a theoretical framework for advancing our theoretical understanding of dynamic capabilities and digital transformation. Our framework identifies six clusters of dynamic capabilities and explores each microfoundation, it also emphasizes the role of dynamic managerial capabilities, especially managerial social capital. Our findings emphasized the crucial role of seizing capabilities and agility in digital transformation of SMEs, offering managerial implications for SME firm management teams.

TIM: How Organizations Survive in Disruptive Digital Transformation: A Co-Evolution Perspective 

Author: **Anmol Basant**, *Doctoral Student at IIM Ahmedabad*

The study explores organizational survival in the context of disruptive digital transformation from the perspective of the co-evolution of technology and organization. It presents the rationale for shifting from technological determinism to co-evolution perspective. Under the co-evolution perspective, scholars argue that organizational change is a result of ongoing social interactions, wherein humans adapt to the limitations and opportunities presented by technology, as well as to their interactions with one another. The study seeks guidance from Leonard and Barley's (2010) review paper to structure the literature. Moreover, the study comprehensively reviews the alignment of technology and organizational structure literature to generate insights for organizational survival. Further, the study develops four mechanisms: innovative organizational culture, the role of a leader, communication and collaborative interaction, and dynamic knowledge management system to improve the likelihood of organizational survival in the face of disruptive digital transformation.

TIM: How Do Firms' Digital Innovation Dynamically Change in Response to Shifting Search Attention? 

Author: **Xiao Feng**, *Southwest U. of Political Science & Law*

How do firms' digital innovation decisions evolve over time? This study explores the changing dynamics of firms' digital innovation activities by investigating the problem search mechanism within the framework of the behavioral theory of the firm. We empirically examine the evolutionary trajectory of firms' digital innovation activities in response to shifting search attention. By leveraging a comprehensive dataset comprising A-share listed manufacturing companies in China from 2008 to 2020, we unveil a U-shaped relationship between the firms' underperformance duration and digital innovation. This noteworthy finding implies that fluctuations in firms' search attention, whether contracting or expanding, play a crucial role in shaping the dynamics of firms' digital innovation. Moreover, we conduct an exploration of the contextual factors that delineate the boundaries of the U-shaped relationship, particularly focusing on the influence of demand-side factors on firms' search attention. Notably, the degree of customer concentration emerges as a pivotal factor that affects the aforementioned relationship. Overall, this study significantly enriches the scholarship in the domains of digital innovation and the behavioral theory of the firm.

TIM: Digitalization and Convergence of Management Attention Across Industries

Author: **Lei Fang**, *Cass Business School, City U. London*

Author: **Gianvito Lanzolla**, *Bayes Business School*

Author: **Andreas Tsanakas**, *Cass Business School, City U. London*

In this paper, we argue that digitalization is positively associated to convergence in management attention in firms across industries – including industries which are usually considered as unrelated. We further argue that such impacts on convergence in management attention are invariant across firms' organizational functions. We test our hypotheses in the context of banks, insurers and pharmaceutical companies (934 banks; 221 insurers; 223 pharmaceuticals) on text data from the Business and Risk sections of their 10-K reports (2006 to 2018). We develop a novel text-based measure of convergence in attention, using machine learning and text classification techniques. Model estimates find support for the hypotheses that digitalization is linked to convergence in management attention in firms across industries, and that this effect holds across organizational functions.

TIM: The Electrification Journey: Assessing China's Transition to Greener Roads and Reduced Emissions

Author: **Wenjing Lyu**, Zhejiang U.; Massachusetts Institute of Technology

Author: **?? Wang**, Beijing Institute of Technology

Author: **Jin Liu**, Beijing Institute of Technology

The global energy crisis and climate change present pressing challenges that necessitate innovative policy responses and technological adaptations. This study focuses on China's 13th Five-Year Plan, implemented from 2016 to 2021, as a critical policy window to examine the country's strides in road transport electrification. Utilizing the entropy method, we develop a comprehensive index to assess the level of road transport electrification in China, capturing its evolution in tandem with policy shifts. Employing the Spatial Durbin Model (SDM), we empirically analyze the impact of transportation electrification on carbon emissions, including its inter-provincial spatial spillover effects. Additionally, a dynamic SDM model is used to explore the time-spatial lag effects of these changes. Our findings indicate a steady increase in the level of transportation electrification in China during this period, leading to a significant reduction in carbon emissions. This decline not only manifests within the regions directly implementing electrification strategies but also exerts a dampening effect on carbon emissions in adjacent provinces. The dynamic SDM results suggest that the short-term impacts of transportation electrification are more pronounced than the long-term effects, both directly within provinces and indirectly in neighboring regions.

TIM: Go with Pressure: Climate Risk, Institutional Investors, and Green Innovation

Author: **Yuhui Wang**, Northwestern Polytechnical U.

Author: **Zhen Huang**, -

Author: **Ming Jia**, Northwestern Polytechnical U.

The urgency to combat climate risk has attracted a great deal of attention from firms and their stakeholders to green innovation. This paper examines how firm-level climate risk affects green innovation and the moderating effects of institutional investors. We propose that climate risk promotes green innovation through the channel of institutional investors pressure. We further explore the moderating effect of long-term institutional investors and green investors in the relationship between climate risk and green innovation and validate the institutional investor pressure mechanism. Using A-share firms listed on the Shanghai and Shenzhen Stock Exchanges in China from 2014 to 2022, we find that climate risk promotes firms to engage in green innovation, and this relationship is more significant when the firms have more long-term institutional investors or more green investors. The implications of our paper for addressing climate risk and achieving sustainability are discussed.

TIM: Catalysts of Green Innovation: Exploring Firm Responses to Climate Risk and Institutional Pressure

Author: **Jona Benedikt Sander**, Westfälische Wilhelms-U. Münster

Author: **Colin Schulz**, U. of Muenster

In recent years, the effect of climate change on society and firms, both physically and regulatory, has become increasingly evident and calls for adaption and mitigation have become more urgent. By combining institutional theory with the attention-based view, we aim to explore whether firms' proximity to the effects of climate change motivates them to proactively combat it through accelerated green innovation. Building on existing climate risk measurement research, we develop a comprehensive model of climate risk exposure and employ a fixed effects poisson regression analysis with a control function approach. We find that a rise in the duration of natural disasters in the proximity of firms, increased CO2 emissions and stricter enforcement of environmental regulations, increase the prevalence of green innovation within S&P 500 firms between 2010 and 2020. We also observe that this increase is stronger after the 2015 Paris Agreement. Our findings contribute to the literature on drivers of green innovation, normative and coercive institutional pressure, and catalysts for directing managers' attention to climate risks.

TIM: Unpacking Mechanisms Behind Environmental Subsidies and Green Innovation: A Dual-Pathway Story

Author: **NINGJUAN LI**, Northwest Polytechnical U.

Author: **Zhuoer Yang**, Northwestern Polytechnical U.

Can environmental subsidies effectively fulfill the objective of promoting green innovation in firms? Existing studies remains insufficiently address this question. We argue that a more comprehensive understanding of the relationship between environmental subsidies and green innovation needs to consider the interplay of institutional, market, and cognitive logic simultaneously. To this end, we propose a theoretical mode. Empirical results from panel data of listed firms of China reveal that, environmental subsidies exert a U-shaped influence on a firm's green innovation endeavors. Further analysis uncovers that alleviation of financial constraints and enhancement of managerial environmental cognition serve as dual mediators, facilitating the transition from government environmental subsidies to green innovation. Moreover, environmental regulations and marketization degree, as critical boundary conditions, undertake significant moderating role, and can affect the efficacy of governmental subsidies in stimulating green innovation efforts of firms. Our study offers nuanced understandings on how environmental subsidies motivate firms to go green.

Panelist: **Linyang Yu**, *Schulich School of Business*

We propose this symposium to serve as a clarion call for theory and research that addresses the complex and multidimensional intersection of strategic leadership, digital transformation, and the Fourth Industrial Revolution. The symposium addresses three core questions. First, what new types and forms of strategic tensions does the Fourth Industrial Revolution engender for strategic leaders? Second, what capabilities of strategic leaders are most relevant to navigating these tensions, and how can these capabilities be honed, developed and renewed? Third, how do the technologies of the 4IR influence the practice, influence mechanisms, roles, and capabilities of strategic leaders?

Presenter: **Mia Chang-Zunino**, *ESCP Business School*
Presenter: **Brandon H. Lee**, *Melbourne Business School*

This symposium delves into the complexities of emerging technological fields and market categories, and how they gain wider adoption despite their novelty and associated challenges. The symposium will include discussions on the various stages of their evolution, the dynamics of their legitimacy, their impact on existing structures and industries, and the relationships among various stakeholders. Scholars will scrutinize the theoretical aspects and practical implications of these emerging fields, providing invaluable insights for navigating these evolving landscapes. The discussions aim to provide insights into the complexities underpinning the birth, development, and growth of innovative fields and categories, acknowledging their role as fertile ground for theorizing.

Can we eat real food with synthetic spoons? – thoughts on digitally mediated management learning and education*

What if digitally mediated management learning and education (MLE) – if advanced unreflexively at the current pace – transitions eventually into synthetic learning and education? In this keynote speech, I argue that when this occurs, synthetic learning will reduce our motivation and ability to acquire first-hand experiences and cope with vital adaptations in the real-world, both of which interfere with everyday (social) practises of managers at work. I propose two crucial mechanisms through which digitally mediated MLE can transform into its synthetic incarnation.

Is it our value preferences or technological determinism that influence whether digitally mediated MLE will move to an entirely synthetic incarnation?

Join us for this interactive keynote event to be part of a solution- focused conversation.

OSCM Division Chan Hahn Best Paper Award Session

Session Moderator: **Anand Nair**, *Northeastern U., D'Amore-McKim School of Business*

OSCM: **Collaborative Human-Machine Learning for Demand Planning**

Author: **Rebekah Inez Brau**, *Brigham Young U.*
Author: **Finnegan McKinley**, *U. of Arkansas*
Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*
Author: **Enno Siemsen**, *U. of Wisconsin, Madison*

Prior research and evidence from industry practitioners have shown that firms must understand how humans interact with machine learning systems to implement them successfully. The process used to integrate human judgment with machine learning algorithms is governed by a sequence of messages and actions, which is termed an economic institution. This institution is crucial in facilitating the efficacy of human-machine partnerships; however, many implementations fail to consider the institution. Our research introduces Collaborative Human-Machine Learning, a new institution that leverages the strengths of humans and algorithms and ameliorates their limitations. The process is derived by identifying elements of learning systems from prior literature and theory on machine learning, behavioral economics and operations, and human-algorithm interactions. We evaluate the efficacy of Collaborative Human-Machine Learning using a dataset with over 1.2 million observations over approximately 66 weeks from a retail firm. We demonstrate that Collaborative Human-Machine Learning outperforms the firm's ensemble machine-learning system in forecast accuracy by 60.99% and the most common institution used in practice, including the firm, judgmental adjustment by 64.20%. The innovation provided by reengineering the process that integrates machine learning with humans thus has the potential to radically change and accelerate the deployment of Artificial Intelligence.

OSCM: **Decoupling Firm Growth from Carbon Emissions: A Supply Network Perspective**

Author: **Iryna Malacina**, *LUT U., LUT Business School*
Author: **Jaan-Pauli Kimpimäki**, *LUT Business School*
Author: **Heli Arminen**, *LUT U., LUT Business School*
Author: **Axel Zehendner**, *LUT Business School*

ABSTRACT A key question facing firms today is how to continue expanding their operations while reducing the ensuing emissions. Decoupling carbon emissions requires a holistic approach that simultaneously accounts for the structural and internal factors shaping firm growth. In this research, we focus on the roles that firms adopt within supply networks and the relationship between role orientations and emissions decoupling. Using an ego-temporal exponential random graph model, we empirically infer the distinct roles of firms from the aerospace and defense supply network. The inferred roles indicate great heterogeneity in the firm behaviors and role-generative processes shaping the supply network. In the following analysis, we discover the decoupling performance differences between firms with distinct role orientations. Firstly, our exploration indicates that firms in central network positions tend to have poorer decoupling performance, with those in monopolistic positions within disconnected networks faring the worst. Secondly, firms occupying roles within interconnected and balanced networks demonstrate relatively effective decoupling efforts. Thirdly, disconnected networks generally perform worse compared to their more connected counterparts. These findings contribute to the evolving perspective on the role of firms within supply networks, offering practitioners valuable insights into the roles their firms play and the subsequent impact on decoupling performance.

OSCM: **Diffusion of Irresponsible Workplace Practices in Supply Chains: The Chinese Industrial Sector Case**

Author: **Christian Felix Durach**, *ESCP Business School*
Author: **Di Fan**, *The Hong Kong Polytechnic U.*
Author: **Frank Wiengarten**, *ESADE Business School*
Author: **Veronica Haydee Villena**, *W. P. Carey School of Business, Arizona State U.*

This study explores a potential contributing factor to the issue of workplace accidents in China, where the fatality rate is 2.5 and 3.5 times greater than in the United States and Europe. Focusing on the supply chain, it draws on institutional and diffusion literature to theorize and test conditions under which accidents at industrial buying firms in China affect the casualty rate in their national supply base. Analyzing data from four databases, covering 4,679 listed Chinese industrial firms and their national suppliers from 2007 to 2020, our results indicate that workplace accidents in buyers significantly increase casualties in their supply base, with a relative increase of casualty rates by up to 267% in the following two years. This effect is more pronounced when buyers have high government shareholding, strong operational performance, and lower recent accident rates in their supply base. Interestingly, we found no significant effect of media coverage on this phenomenon. The study's insights deepen our knowledge of how irresponsible workplace practices proliferate within supply chains and present important consequences for government bodies, inspection authorities, managers, and societal stakeholders, providing levers to mitigate or halt this propagation

OSCM: **Buyer-Supplier Networks and Innovation: The Role of Technological Knowledge Spillovers**

Author: **Shubhbrata Palit**, *ESADE Business School*
Author: **Manpreet Hora**, *Georgia Institute of Technology*
Author: **Soumen Ghosh**, *Georgia Institute of Technology*

A firm's buyers are an important source of technological knowledge spillovers. Existing literature has shown that suppliers tend to benefit from innovative buyers. In this study, we uncover a mechanism underlying enhanced supplier innovation performance when buyer innovation is high. Using a panel data of supplier-buyer relationships and the patenting activities of the respective firms, we address the following research questions: How does buyer innovation influence supplier innovation performance? What moderating role does a supplier's structural position play on the association between buyer innovation and supplier innovation performance? What moderating role does a supplier's R&D intensity play on the association between buyer innovation and supplier innovation performance? We show that the extent of supplier's knowledge accumulation from its buyers mediates the relationship between buyer innovation and supplier innovation performance. In addition, we also show that a supplier's position within its supply network weakens this indirect effect.

 Participant: **Laurie Barclay**, *U. of Guelph*

Recent times have seen a surge in societal and organizational disruptions - all posing critical justice events for organizations. This casted a stark light on organizational responses, managerial behavior, and employee experiences. Gathering an international panel of scholars from Australia, Canada, Finland, the Netherlands, and the United States, our symposium, "Dealing with the Aftermath of Critical Justice Events," navigates the multifaceted challenges faced by organizations today, thereby "Innovating for the Future" and potential disruptions to come (Academy of Management, 2024). Combining various methodological approaches, each paper spotlights a critical justice-event, including (a) contrasting employees' and managers' choice of beliefs and strategies in the wake of managerial inaction, (b) the aftermath of employees' voice behavior that failed to gain the endorsement of managers, (c) how the repeated exposure to mass layoffs in an entire industry affects emotional, moral and job-related concerns of various actors, (d) coworkers' work-related mistrust after lifting the Covid-19 lockdowns and its implications for deviance and socializing, and (e) how leaders seek institutional redemption for sins of the past exemplified by organizational scandals from Canada, Germany, and the United States. Dr. Joel Brockner, esteemed for his fundamental contributions to the management discipline broadly and justice events specifically, will conclude the symposium with an engaging, interactive discussion that highlights key insights and future research directions. Interweaving recent disruptive events with scientific inquiry, this symposium delivers critical insights into the aftermath of crises and actionable solutions crucial for institutional redemption, interpersonal relationships, and individual behavior in a post-crisis landscape.

Join us for the innovative twist of our annual keynote. This year we are reimagining the keynote as a polyvocal and inclusive occasion – a keytune – which weaves together the diverse voices of our community in resonance. Come and learn what ‘critical innovations’ mean to CMS scholars, how CMS scholars are innovating as researchers, educators, and activists, and what the particular strengths of CMS are in terms of innovating critically. Join the conversation and have your say on what critical social and organizational innovations are needed right now, and how CMS itself needs to be critically innovated. Whether you are already a member of the CMS Division or are interested in joining, the keytune is the ideal opportunity to become (more) involved in the CMS community. Everyone is welcome!

AI Effects on Firm Innovation and Performance

Session Moderator: **Yasser Rahrovani**, *Ivey Business School*

CTO: **Competitive Dynamics of AI Innovation, Product and Service Introduction, and Business Environments**  

Author: **Inmyung Choi**, *Texas Tech U.*
Author: **Likoebe Maruping**, *Georgia State U.*

Artificial intelligence (AI) is ubiquitous and there are open questions regarding whether firms can realize financial benefits from innovations involving the technology. At present, there appears to be some empirical ambiguity regarding the value proposition of AI innovation for firms' financial performance. Although empirical research at the firm level is lacking, evidence at other levels of analysis highlights this ambiguity, with some studies finding a positive effect of AI innovation and others finding no effect or even a negative effect on important outcomes. In this study, we draw on competitive dynamics theory to conceptualize and test the relationship among AI innovation, new product and service introduction, and firm performance in inter-firm rivalry. Specifically, we argue and find the complementary effect of focal firms' AI innovation and their new product and service introduction in attaining superior firm performance. We then provide evidence that rival firms with AI innovation impede focal firms' financial performance when they introduce new products and services. Furthermore, the financial impact of AI innovation and new product and service introduction is more pronounced in munificent, dynamic, and concentrated business environments. This study provides support for the complementary role of AI innovation and underscores the need for IS research to consider the commercialization of AI innovation, the actions of industry rivals and conditions in the industry environment to understand the business value of AI innovation.

 CTO: **Influence of Artificial Intelligence on Firm Innovation Behavior**   

Author: **Seyed Mohamad Hosseinioun**, *Kellogg School of Management, Northwestern U.*
Author: **Ali Tafti**, *U. of Illinois at Chicago*

The value of Artificial Intelligence (AI), as a general-purpose technology, to the firm is a central topic across disciplines. While the generality of AI is considered a key driver of its value, the resource-based theory offers the contrary view that the generality of a resource diminishes its payoffs. We address this knowledge gap by examining AI's role in shaping the firm's ability to produce innovative resources. Analyzing patenting data from thousands of US firms over five decades, we establish that firms with a broad AI resource base engage in more explorative and unrelated search behaviors. However, our findings reveal a discrepancy between accounting metrics (sales, ROA, Net Income) and market valuation (Tobin's Q), suggesting that while AI-induced exploration and unrelated search positively impact market perception, they do not immediately translate into accounting performance, potentially contributing to macroeconomic stagnation. Our research highlights AI's profound influence on firms' innovation strategies and the intricate relationship between AI's generality, search behaviors, and divergent performance outcomes, underscoring the need for a nuanced understanding of AI's role in the contemporary business landscape.

CTO: **Navigating the Curves: Unraveling the Link Between Artificial Intelligence and Firm Performance** 

Author: **Ann-Katrin Eicke**, *U. of Muenster*

The growing corporate use of Artificial Intelligence (AI) has raised expectations to increase firm performance. However, as firms mostly use AI for efficiency gains, i.e., exploitation, the relationship is likely more complex, given that extensive exploitation risks overly leveraging existing sources of competitive advantage and neglecting to find future ones. Bridging the Carnegie School literature on exploitation and the research stream on resource orchestration, I introduce the notion of exploitative AI orientation and hypothesize an inverted U-shaped relationship between exploitative AI orientation and firm performance. Building on state-of-the-art natural language processing techniques, I develop a novel measurement of exploitative AI orientation and test the hypotheses based on a unique longitudinal dataset of US S&P 1500 firms between 2012 and 2022 covering 10,644 firm-year observations. As the findings underline an inverted U shape, I contribute to the literature by introducing a curvilinear link between exploitative AI orientation and firm performance.

The Role of Enterprise Social Media in Creativity and Innovation

Session Moderator: **Indra Ponnuswamy**, *Graduate Student - U. of New Haven*

CTO: **Innovation use of Enterprise Social Media in Stimulating Employee Innovative Performance: Enterprise Social Media Self-efficacy as Moderator**

Author: **Abdul Hameed Pitafi**, *Sir Syed U. of Engineering and Technology Karachi*

In the rapidly evolving landscape of contemporary organizations, this study delves into the intricate dynamics of Enterprise Social Media (ESM) utilization and its consequential impact on employee innovative performance. Grounded in the nuanced framework of Advanced Technology Use Theory (ATUT), our research advances the theoretical understanding of technology adoption by unraveling the multifaceted interplay between perceived innovation possibilities, values, and support in shaping the ESM landscape. Extending beyond conventional perspectives, we investigate the pivotal role of information processing dimensions—specifically, information equality and overload, in influencing employee innovative performance. Drawing on a comprehensive synthesis of literature, our study unveils the complex relationships between ESM functionalities, perceived innovation values, and the broader organizational climate, offering novel insights into the complex mechanisms that underpin the transformative potential of ESM in fostering a culture of innovation. The findings not only contribute to theoretical advancements in the domain of technology adoption but also bear significant implications for practitioners seeking to leverage ESM as a catalyst for unlocking and harnessing the creative potential of their workforce in an era of dynamic digital collaboration.

CTO: **Enterprise Social Media Ostracism Influence on Digital Creativity** 

Author: **Ahsan Ali**, *School of Economics and Management, Zhejiang Sci-Tech U.*

Author: **Xianfang Xue**, *Zhejiang Sci-Tech U.*

Author: **Tahir Islam**, *Leeds Trinity U. Business School, Leeds Trinity U., Leeds, UK*

Author: **Xiongfei Cao**, *School of Management, Hefei U. of Technology China*

This research examines the impact of enterprise social media (ESM) ostracism on digital creativity among employees. While previous studies have explored how ESM can boost employee creativity, the negative influence of social exclusion, such as ESM ostracism, has been largely overlooked. This study draws on self-determination theory to propose a moderated serial mediation model linking ESM ostracism with digital creativity through harmonious creative passion and creative process engagement, including leader support for creativity as moderating variable. Empirical results based on data collected from 350 employees working in organizations in China support proposed relationships. Results reveal that ESM ostracism has a negative relationship with digital creativity and this relationship is mediated by harmonious creative passion and creative process engagement. Additionally, employees with high leader support for creativity are less affected by ESM ostracism than those having low level of leader support for creativity. Contributions to the theory and implications for managers are discussed in later section.

CTO: **Nonwork-Related Creativity: Toward A New Perspective About Creativity via Enterprise Social Media**  

Author: **Mohamed Hédi Charki**, *EDHEC Business School*

Author: **Nabila Boukef**, *U. côte d'Azur, Skema, France*

Author: **Murad Moqbel**, *U. of Texas Rio Grande Valley*

Author: **Wietske Van Osch**, *HEC Montreal*

Author: **Stefan Tams**, *HEC Montreal*

Organizations are increasingly relying on enterprise social media (ESM) platforms to develop their employee capacity to generate new and useful ideas. In this article, we argue that ESM allows employees to generate creative ideas, not only in the work domain but also in the nonwork domain. However, the combination of nonwork-related creativity and work-related creativity has not been examined despite prior qualitative research pointing to the capacity of employees to discover work-related ideas when they are exposed to nonwork-related ideas on ESM. We contribute to the IS literature on ESM by examining an increasingly common, yet understudied form of creativity embedded in the nonwork domain of ESM. Through the lens of the spillover theory (ST), this study develops a research model to examine the role of nonwork-related creativity in fostering employee idea generation. We use two field studies to develop a theoretically informed and empirically tested model. We show that nonwork-related creativity is negatively associated with employee idea generation. Still, such association becomes positive when mediated with work-related creativity. Our study extends research in two main ways. First, it proposes the new concept of nonwork-related creativity to embrace a specific category of useful and new nonwork-related ideas that emerge on ESM. Second, our results extend prior qualitative work by theorizing and empirically supporting the idea that, while nonwork-related and work-related ESM uses are semantically independent, nonwork-related creativity and work-related creativity are dependent on each other notably in regard to their influence on employee idea generation.

Social Media: Content Creation, Engagement, and Impact

Session Moderator: **Georgia Meyer**, *London School of Economics and Political Science*

CTO: **Harnessing Popularity: Using Popular Topics and User Engagement on Content Creation Platforms**

Author: **Yuhan Zuo**, *Central U. of Finance and Economics*
Author: **Hongling Ye**, *School of management, Zhejiang U.*
Author: **Junjie WEI**, *School of management, Zhejiang U.*
Author: **Xiaoyun Xie**, *Zhejiang U.*

Content creation platforms like YouTube, Instagram, and Bilibili have become arenas where social media entrepreneurs can generate revenue by promoting users to engage with their creative works. While reconfiguring popular topics is a prevalent content creation strategy on these platforms, there is limited knowledge regarding whether or not using popular topics guarantees users' engagement. Based on the "wanting-liking" framework, the present study aims to investigate the influence of using popular topics on user engagement. Utilizing 300,367 posts from a prominent content creation platform, we find that using popular topics is negatively associated with users' attention (i.e., number of views). Additionally, there exists an inverted U-shaped correlation between using popular topics and users' endorsement, indicating that moderate level of using popular topics is more favorable in terms of users' endorsement. This study contributes to the body of knowledge about digital entrepreneurship in the context of content creation platforms and offers a more nuanced understanding toward the relationship between content creation strategy and different types of user engagement. It underscores the importance of strategically choosing topics for creative works in order to optimize user engagement.

CTO: **Perceived Personalized Recommendation and Content Creation Strategies in Content Creation Platforms**

Author: **Yuhan Zuo**, *Central U. of Finance and Economics*
Author: **Yu Yang**, *Central U. of Finance and Economics, Beijing, China*
Author: **Xiji Zhu**, *School of Business Administration, Hitotsubashi U.*
Author: **Junjie WEI**, *School of management, Zhejiang U.*

This study explores the evolving landscape of content creation platforms such as YouTube, Instagram, and Flickr, and the new mode of creative production on these platforms. We examine how content creators interpret and react to platform recommendation algorithms and how this affects their creative performance. In order to answer this research question, we first developed and validate measurement tool for perceived personalized recommendation. We then combined survey data and platform unobtrusive data from video bloggers (N = 195) on a Chinese content creation platform to test our hypotheses. Based on signaling theory, we propose and empirically demonstrate that content creators' perceived personalized recommendation promotes their content novelty and further boost their creative performance; moreover, their platform embeddedness strengthens these effects. Our research diverges from existing user-centric studies on the influences of platform algorithms, providing preliminary empirical evidence on content creators' responses to platform recommendation algorithms and their impact on creative performance. It also contributes to understanding the social consequences of algorithms in cultural production and extends creativity studies into the arena of human-algorithmic interaction.

CTO: **Muse or Distraction? The Effect of Daily Social Media Usage on Employee Creativity**

Author: **Yueting Ji**, *Central U. of Finance and Economics*
Author: **Scott Dust**, *U. of Cincinnati*
Author: **Shengming Liu**, *Fudan U.*
Author: **Fengying Lan**, *Ping An Healthcare and Technology Company Limited*

The assumption to date is that social media usage at work is an unfortunate distraction. Drawing from affective events theory (AET), we suggest that social media usage can be both detrimental and beneficial as it relates to creativity through affective-laden processes. Specifically, we hypothesize a dual-process model whereby daily social media usage at work is negatively related to daily creativity through task distraction and positively related to daily creativity through emodiversity (i.e., the richness and evenness of experienced emotions). Additionally, we evaluate extraversion as a boundary condition of this model. We expected that employees higher in extraversion would more efficiently process social media-induced stimulations, attenuating the detrimental pathway via task distraction and enhancing the beneficial pathway via emodiversity. We investigated these hypotheses using an experience sampling methodology (four times a day across 10 business days) and surveyed 145 full-time employees. All of our hypotheses were supported. The implications of this work contribute to several areas of research, including social media usage at work, emotions at work, and creativity.

CTO: **Understanding the Personal Aspirations and Wellbeing of Youth in Singapore During the Pandemic**

Author: **Sarah Cheah**, *National U. of Singapore*
Author: **Yuen-Ping Ho**, *National U. of Singapore*

Extant research on youth are replete with studies on how social structure and neighbourhoods impact educational and occupational aspirations. However, the rise in social media adoption in schools and workplaces since the onset of the Covid-19 pandemic, and their effect on the outlook and mental health of youth has been under-studied. Our research aims to examine how personal factors (personal values and motivation), technological factors (social media) and social factors (social relationships including loneliness) affect the personal aspirations and wellbeing of youth during the pandemic. Our findings have established that personal values, motivation needs (autonomy and relatedness) and social relationship have a positive significant association with personal aspirations. Technology factor (social media) is found to have a significant u-shaped association with the personal aspirations subconstructs of affiliation and financial success. While the pandemic weakens the positive link that personal aspirations has with conformity, competence and social relationship, it enhances the positive link personal aspirations has with tradition and self-direction. Personal values (conformity and self-direction) and motivation (autonomy) have a negative significant association with wellbeing. However, motivation (competence and relatedness), social factor (social relationship and loneliness resilience) have a positive relationship with wellbeing. Technology (social media), on the other hand, was found to have an inverted U relationship with wellbeing. While the pandemic strengthens the positive relationship that wellbeing has with competence and loneliness resilience, it weakens that between wellbeing and autonomy/ social relationship. These results have important implications for youth living in certain financial situations and employment status.

Open Innovation and Crowd-Based Innovation Dynamics

Session Moderator: **Aljona Zorina**, *IESEG School of Management (LEM-CNRS 9221)*

CTO: **Faceted Search and Crowd-Based Innovation**

Author: **Junyi Li**, *National U. of Singapore*

Author: **Junjie Zhou**, *National U. of Singapore*

Author: **Jungpil Hahn**, *National U. of Singapore*

Crowd-based innovation is used to tackle the complex and highly uncertain nature of innovation. It has been guided by the prevailing notion of parallel search, acknowledging the importance of crowd diversity and individual independence. Although using massive parallel paths to address uncertainty can help, it falls short of pursuing a well-organized crowd for innovation. Our parallelism abandons coordination potential too soon as parallel paths never interact. In response, we propose the notion of faceted search. With imperfect knowledge, individuals may mis-perceive the problem and focus on reduced facets. It re-opens the coordination opportunities in that different search facets can resonate with each other. Crowd wisdom is thus not simply the sum of parallel efforts, but naturally emerges from the interaction of individuals' wisdoms. We propose a tension in coordination between joint confirmation and mutual deviation to specify such resonance. We provide a concise and transparent computational model for scholars to advance the proposed faceted search theory. This paper contributes to the emerging literature on loose organizationality and offers practical implications for crowd-based innovation.

CTO: **The Role of Imaginaries in the Governance of Online Communities of Creation: A Netnographic Study**

Author: **Felippe Oliveira**, *U. of Dundee*

Author: **Harry Scarbrough**, *Bayes Business School (formerly Cass), City, U. of London*

Author: **Stefan Haefliger**, *Stockholm School of Economics*

Author: **Kim Carlota Von Schönfeld**, *Høgskulen på Vestlandet*

Online communities (OCs) of creation are powerful innovation sources that are highly valued by private sector organizations and have prompted the adoption of various governance models. However, OCs lacking corporate sponsorship also arise spontaneously on social media to address pressing societal problems. These independently forming, evolving, and self-organizing entities are capable of engendering innovative solutions to such problems. Our study empirically investigates the interplay between governance and innovation in such online communities of creation by employing an immersive netnography, focussed on a long-standing urban planning controversy, the so-called 'Big Worm' in Sao Paulo, Brazil. Our findings show how imaginaries related to this controversy played a crucial role in the spontaneous formation of online communities of creation, fostering solution development, and helping to guide self-organized interactions based on community creativity. Our study underscores the role of imaginaries in self-organization, contrasting this with firm-sponsored governance models. We conclude that imaginaries enable unsponsored communities of creation to demonstrate the ability to self-organize and generate innovative solutions, contributing to both the private sector and civil society outcomes.

CTO: **Which Ideas to Endorse? How Users' Idea Framing Biases Moderators' Endorsements**

Author: **Xuemei Xie**, *Tongji U., Shanghai, PR. China*

Author: **Lei Yu**, *Tongji U.*

Recently, many companies have established online open innovation communities and employ moderators to obtain valuable ideas from regular product users. However, users' idea framing as a source of bias has been ignored in the literature. To address this research gap, we theorize and then investigate how users' idea framing might affect moderators' endorsements, thereby contributing to the rich stream of research on idea framing and idea endorsement. Based on dual-processing theory, we identify both systematic processing and heuristic processing mechanisms through which users' idea framing—specifically, the cognitive, emotional, and behavioral framing of users' ideas—can affect moderators' endorsements in open innovation community contexts. This work involves three studies. First, using a sample of 1,077,077 real-world user ideas collected from the Xiaomi Company's online community, Study 1 shows that user ideas with higher levels of idea framing are more likely to be endorsed by moderators, and that this relationship is mediated by peer recognition and peer evaluations. Study 2 is an experiment with 498 participants used to examine the contingent role played by the perceived sender's authenticity in the relationship between users' idea framing and moderators' endorsements. Study 2 reveals that higher levels of perceived sender authenticity decrease the effectiveness of users' idea framing. Study 3 is an experiment with 500 participants used to examine the contingent role played by perceived message trustworthiness in the relationship between users' idea framing and moderators' endorsements. Study 3 establishes that higher levels of perceived message trustworthiness increase the effectiveness of users' idea framing. Taken overall, our findings uncover how users' idea framing can affect moderators' endorsements in open innovation community settings, offering new implications for open innovation community managers.

As an integral part of today's technological landscape, artificial intelligence (AI) is rapidly becoming part of creative knowledge work, bringing innovation to organizations. With the capacity "to learn, adapt, and act" independently of human instructions, AI can mimic human thought processes, behavior, and decision-making. This technological advancement transforms AI into "agentic IS artifacts", exemplified by recent generative AI tools like ChatGPT and Midjourney, which promote idea generation and knowledge work. Generative AI challenges the uniqueness of human creativity, as it becomes capable of performing tasks once thought exclusive to human cognition; for example, recognizing patterns, generating images, understanding natural languages, and creating artwork and music. Accordingly, literature on technology and innovation management has started to explore the impact of AI on various aspects of innovation, such as open innovation, digital transformation, disruptive innovation, innovation processes, and practices. Following these, there is a growing interest in understanding how generative technologies transform the nature and organizing of creative work. In light of the need to understand generative AI and its impact on creative processes, the symposium seeks to advance scholarly understanding and foster discussions on recent perspectives and insights around the implications of AI. The integration of AI into knowledge and creative work necessitates an evaluation of the legitimacy of human and machine knowledge work, the relationality of human and machine knowledge, as well as the differences between human and machine generated output. As such, the symposium provides a timely opportunity for scholars to engage in conversations about the present and future of work in the era of AI. The symposium features five paper presentations and an integrative discussion, which will explore how generative AI technologies shape organizational innovation processes, in both desirable and undesirable ways, and integrate different views that provide avenues for future research.

The introduction of AI into organizations seems to affect expertise in unprecedented ways, requiring novel engagement with the concept of expertise. Scholars are bringing forth questions concerning whether and how AI can transform human expertise, if there is something distinctly human when it comes to expertise. Furthermore, the entanglement of AI and expertise may also induce changes in what knowledge and expertise is considered valuable, and how such expertise may be grown, maintained, and managed in organizations. This symposium brings together four research projects at the intersection of these emerging issues in technology and organizing, to present early observations and engage in collective discussion and sense making.

Equality, Hierarchy and Progress

Session Moderator: **Hannah Benner Waldfogel**, *Princeton U.*

DEI: Reducing Social Class Gaps in Political Engagement by Reframing Voting as a Duty to Others  

Author: **Hannah Benner Waldfogel**, *Princeton U.*

Author: **Hannah Birnbaum**, *Washington U. in St. Louis, Olin Business School*

In the United States, people from working-class contexts vote less than their middle-class counterparts. While structural (e.g., difficulty of voting) and individual factors (e.g., political efficacy) contribute to the gap, we adopt a sociocultural perspective and examine class-based differences in how people construe – or make sense of – the duty to vote. We theorize that the default construal of voting duty reflects independent middle-class norms (i.e., a duty to self), which are misaligned with interdependent working-class norms, creating a cultural mismatch. Results from a preregistered survey support the notion that the default conception of voting duty in the US emphasizes independence. Archival analysis documents that class-based differences in duty perceptions predict turnout accounting for individual and structural controls. A second preregistered survey suggests that among individuals from working-class contexts, interdependent reasons for voting are associated with increased perceived duty to vote. Finally, two preregistered experiments test strategies to directly alleviate the cultural mismatch. We find that affirming interdependence and explicitly reframing the duty to vote as interdependent (i.e., a duty to others) increases voting interest among those from working-class contexts without negatively affecting those from middle-class contexts, suggesting that subtle shifts in framing may boost turnout for an underrepresented constituency.

DEI: Examining Women’s Experiences of Gender Equality Progress - A Capabilities Approach    

Author: **Chidozie Umeh**, *U. of York*

Author: **Asmahan Alsalmán**, *Hull U. Business School*

Author: **Nelarine Cornelius**, *QMUL*

Author: **Mathias Ndoma-Egba**, *Nottingham Business School, Nottingham Trent U.*

Author: **James Wallace**, *U. of Hertfordshire*

Gender equality progress has been reported in many organisations in the Global North. However, concerns remain regarding the effectiveness of international gender diversity management (GDM) norms in addressing workplace gender discrimination and limitations on women’s capabilities in the Global South. This article draws on Amartya Sen’s capabilities approach to explore women’s lived experiences of diversity and equality under workplace diversity practices in a Global South context. Based on interview data from women who work in two public-sector higher educational institutions in Saudi Arabia, the construct ‘polychronous gender diversity management’ is introduced, showing the relevance of addressing the pace at which specific equality issues arise and should be engaged proactively by organisations. This research suggests that curbing gender inequalities requires a targeted application of equality and diversity practices to effectively bridge the gap between organisational readiness to enact change, societal constraints, and legal and regulatory support and protections.

DEI: Seeking Connection: Affiliation Motives Underlie the Feminization of Products 

Author: **Ashley E. Martin**, *Stanford Graduate School of Business*

Author: **Charles Chu**, *Boston U. Questrom School of Business*

“Female” anthropomorphized products are ubiquitous, from voice assistants like “Siri” to humanoid robots like “Sophia,” the first robot granted citizenship in Saudi Arabia. Advocates for equality warn that such gendering arises from problematic gender beliefs; however, we unearth a unique motivation for feminizing anthropomorphized products: desire for social affiliation. Across six independent studies (N = 5,016), we find that a desire for affiliation, above and beyond other motivations (i.e., power) and beliefs (i.e., sexism), underlies people’s gendering of, and choice for, feminized products. In demonstrating the association between desire for affiliation and feminization, we unearth one reason why anthropomorphized technology—technology often meant to fulfil affiliative needs—is gendered as female. We also provide one potential solution to counter it: imbuing products with feminine stereotypes (but not feminine gender). These results speak to the paradox of gendering anthropomorphized products in an increasingly digitized world.

Migrants and Exclusion

Session Moderator: **Sreenita Mukherjee**, *Queen Mary U. of London*

DEI: Intersection of Gender, Race and Migration: Becoming Non-Western Other 

Author: **Sreenita Mukherjee**, *Queen Mary U. of London*

The architecture profession is under-theorised from a gender perspective, but little scholarly focus has been accorded to understanding the significance of migration and race in architecture – despite its important implications for the profession. This article presents the findings of a research project on the lived experiences and career outcomes experiences of female migrant architects from India in the UK architectural profession. The research design is qualitative, and forty-three semi-structured interviews were conducted with female migrant architects. Theoretically, this article originally contributes to the existing literature on gender, race and migration in architecture by combining Spivak's concept of subaltern. I argue that the study provides broader insights into the gendered, racialised organising processes affecting non-white, highly skilled female migrants' careers. This research demonstrates how the female migrants I interviewed were aware of how their subordinate social locations in terms of gender, race and migration impact their career outcomes, and they felt that they occupied a position of marginalised other, which positioned them as the subaltern (Spivak, 1988).

DEI: Migrants' Skill Wastage in Australia 

Author: **Thi Tuyet Tran**, *RMIT U., Australia*

In this paper, we challenge the popular belief that skilled migrants' skills are non-transferable and argue that skilled migrants often have to accept underemployment as a response to the numerous institutional barriers to employment in the host country labour market. "Among the most fundamental human freedoms is the freedom to move – to leave one place to pursue a better life in another" (Institute for Humane Studies, 2023), and that better life is not possible without a quality job and the acknowledgement of the mobile worker's prior knowledge, skills and experience in the new destination. Our research contributes a voice in clearing the stereotyping and the under-evaluating the skills and experience migrants bring along with them to the host country. This will enhance migrants' mental well-being and contribute to the economic development of migrants' receiving countries.

DEI: The Role of Unequal Spatial Distribution of African Migration in Chinese Exports to Africa    

Author: **Zhiling Wang**, *Erasmus School of Economics, Rotterdam*

Author: **Lijuan Yin**, *Liaoning U.*

Author: **Ajay Bhaskarabhatla**, *Erasmus U. Rotterdam*

Using administrative data on Chinese exports during 2000-2015 of more than 110 million transactions, we examine whether Guangzhou, a city host to the largest spatial concentration of African migrants in China, confers an advantage to exporting firms based in Guangzhou compared to other Chinese firms based outside Guangzhou. We find evidence of a significant location-based advantage: In narrowly defined product markets, Guangzhou-based firms export eight percent more in value terms than firms based outside Guangzhou to African countries compared to countries in Asia or the rest of the world. Within Africa, the advantage for Guangzhou-based firms is stronger in exporting to those African countries that send the most migrants to Guangzhou. The advantage is also stronger for (i) products in the bottom quartile of the price distribution, and (ii) goods transported by river and sea, consistent with the beneficial role migrant traders play in lower-priced variants in narrowly defined product markets. We rule out (i) the intensity of local competition, (ii) peer effects in exporting to Africa, (iii) complementarities with importing from Africa, (iv) the scope of exporting to outside Africa, and (v) stronger travel connections as potential mechanisms in explaining Guangzhou's regional advantage in exporting. Additional analyses show that Guangzhou's advantage is limited to exporting but does not extend to importing from Africa. We conclude that African migrants in Guangzhou, although episodically in strife with local authorities, are a scarce resource that serves as a localized source of competitive advantage in exporting by connecting Chinese manufacturers and African markets.

DEI: The (Mis) Recognition of Migrants' Skills: Identification & Rationalisation Processes in Recruitment 

Author: **Laurence Romani**, *Stockholm School of Economics*

Author: **Miguel Morillas**, *Stockholm School of Economics*

Author: **Andreas Diedrich**, *U. of Gothenburg*

Author: **Charlotte Holgersson**, *KTH Royal Institute of Technology*

How does the misrecognition of their skills explain the under-employment of educated migrants in Europe? Our study addresses this question at the level of recruitment. Current research points to the potential limitations of recruitment processes, in particular in the screening of candidates with foreign sounding names, and in the international experience of the hiring team. In contrast to this recruiters' center approach, we opt for a process view. We approach recruitment as a social process of recognition that balances acts of identification and rationalisation of the boundaries established between those seen as worthy of employment, and those who are not. We take the case of an initiative specially designed for the recruitment of skilled migrants in a large Swedish organisation. By focusing on six steps in the recruitment process of skilled migrants -analysis of needs, position advertising, pre-selection, internal screening, speed interviewing, recruitment decision-making- we show how the perceived worth of skilled migrants is weak in early stages of the process, and how sometimes migrants' ethnic capital, rather than their academic education is valued. We elucidate how each step of the recruitment process is about establishing a boundary and rationalizing it, in view of the perceived worth of candidates, itself judged in relation to other groups in society. This study stresses that the earliest phases of the recruitment process, thus before screening, are decisive in the establishment of the recognition of migrants' skills and merit more attention in our theorizing of inclusive recruitment. Theoretically, the paper suggests the underemployment of skilled migrants is linked to their devaluation in routine recruitment practices that reflect an order of worth between social groups in society, rather than individual biases of evaluators and HR managers.

Gender Diversity and Equality

Session Moderator: **Maria Jose Tonelli**, *Fundacao Getulio Vargas*

DEI: Does Gender Equality Just Happen? The “Naturalization of Inclusion”   

Author: **Maria Jose Tonelli**, *Fundacao Getulio Vargas*

Author: **Carolina Gomes Araujo**, *Fundação Getulio Vargas - EAESP*

Author: **Vinicius Galante**, *FGV EAESP Sao Paulo School of Business Administration*

Author: **Amanda Albuquerque Gross**, *Fundação Getulio Vargas - EAESP*

Male leaders play a critical role in promoting gender equality in organizations. Despite scholarly attention, understanding how they resist gender inclusion remains incomplete. We explore perceptions of gender-related policies among white cisgender men in C-level positions within 30 organizations recognized by a global consultancy firm as the best workplaces for women in Brazil. Drawing from 24 interviews from a total of 86, including CEOs from national and international companies with different diversity programs' maturity. The pattern of findings reveals an intriguing paradox: despite the award recognition for inclusive practices, these leaders consider that gender equity occurs organically. They share a vision we describe as the "naturalization of inclusion" concept, in which women and other groups are included naturally without direct intervention. By advocating inclusion as a "natural" process, this perception reveals subtle resistance to targeted efforts and formal policies while presenting conflicting discourses on gender-related topics. Results illustrate how stereotyping, meritocracy, and humor are manifestations of subtle diversity resistance during the naturalization of inclusion phenomenon. Furthermore, findings indicate that diversity program maturity only partly impacts C-level perceptions of gender inclusion. Practical contributions highlight the need for the maturation of targeted diversity programs and leadership training to face constant change.

DEI: The Challenge of Inclusive Leadership: Uncovering Paradoxical Inclusive Leadership Behaviors   

Author: **Wei Zheng**, *Stevens Institute of Technology*

Author: **Jennifer Kim**, *Tufts School of Medicine, Center for the Study of Drug Development*

Author: **Ronit Kark**, *Bar Ilan U.*

Increasing attention has been placed on inclusive leadership practices that aim to foster psychological safety, belongingness, and authenticity among organizational members. However, according to optimal distinctiveness theory, inclusion involves a paradoxical tension between belongingness and uniqueness. This tension, which leaders of inclusion are struggling with, has received limited attention in the conceptualization of inclusive leadership, which constrains further theory development of its antecedents and outcomes. Taking on a paradox lens, we use interview data from 39 exemplary inclusive leaders to identify the main tension underlying inclusive leadership practices: diversification (focusing on encouraging divergence, providing differentiated support, and promoting subgrouping) and integration (focusing on finding similarities, providing equality, and building intersecting connections). We call the phenomenon of blending diversification and integration paradoxical inclusive leadership. We reveal three sub-tensions that manifest in the exemplars' paradoxical inclusive practices: (1) seeking out divergent people and perspectives vs. seeking out similarities among people, (2) supporting people differently vs. supporting everyone equally, and (3) encouraging subgroupings vs. connecting across subgroups. We also found personal and contextual factors that relate to how these tensions show up. This research offers a novel, tension-centered perspective to inclusive leadership, which challenges a dominant, more simplistic, and overly optimistic depiction of it. Based on our findings, we suggest a fresh perspective to enrich the conceptualization of inclusive leadership and provide implications on how to develop inclusive leaders.

DEI: The “Dreaded” Daughter-in-Law in Australian Farm Business Succession

Author: **Lucie Newsome**, *U. of New England*

Author: **Alison Sheridan**, *U. of New England*

Author: **Andrew Lawson**, *U. of New England, Australia*

Author: **Skye Charry**, *U. of New England*

Author: **Sue Field**, *U. of New England*

Gendered analyses of simple commodity production find that the flexibility of family labour and patriarchal gender relations enable the survival of the family farm. This article examines how the land holding generation perceives the role of the farm daughter-in-law in relation to family labour dynamics and broader succession processes. Drawing on interviews with 22 farm succession professionals, our analysis demonstrates that the daughter-in-law's contribution to the family farm is perceived as producing the next generation of the farming family and providing off farm income to enable farm viability during weather and commodity price fluctuations. Egalitarian gender norms impacting legislative rights to property are seen as a threat to the successful transfer of the family farm. Attempts by the daughter-in-law to influence the farm succession process are met with discursive and material defensive mechanisms. Given the reliance of Australian family farms on women's labour contributions, these actions may threaten rather than ensure the continuity of family farming.

DEI: The Legacy of Early 20th Century Protestant Education on Modern Chinese Corporate Gender Diversity  

Author: **Hailin Helen Lu**, *Shanghai U. of Finance and Economics*

Author: **Danyang Chen**, *Shanghai U. of Finance and Economics*

Prior studies on antecedents of corporate gender diversity have taken an institutional view, but have paid less attention to the emergence and persistence of institutional impact. This study takes early 20th-century Protestantism activities of building girls' schools in China as exogenous shocks that exert an enduring impact on the gender diversity within top management teams (TMTs) in modern Chinese firms. Based on a sample of 3303 Chinese publicly listed firms from 2001-2021, we find that firms with chairmen born in cities with more Protestant girls' schools tend to exhibit a higher ratio of females in TMTs. This result is robust when using river length as an instrument for the distribution of Protestant girls' schools. We also reveal the mechanisms of norm transmission regarding contemporary women's educational rights and familial roles. This enduring impact is particularly pronounced when the chairman is female.

Presenter: **Alyssa Tedder-King**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Participant: **Elad Netanel Sherf**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

Existing work on ally development recognizes that self-identification as an ally does not make a person an ally (Carlson et al., 2020; Salter & Migliaccio, 2019), but simultaneously often treats identifying as an ally as an outcome rather than a unique and flexible social identity. However, some recent work has started to reconceptualize ally as an identity that individuals may or may not adopt for themselves that may change over time (Martinez et al., 2023). Importantly, in their ally identity development model, Martinez and colleagues (2023) argue that how an individual conceptualizes their identity as an ally influences the kinds of ally behaviors they may engage in and the effectiveness of those behaviors. Therefore, while ‘ally’ is not an identity that individuals can (or should) self-identify as, developing one’s identity as an ally may have important implications for engagement in effective ally behaviors and increasing positive outcomes for people with marginalized identities. Given this paradox, this symposium aims to provide novel theoretical and empirical insights that advance our collective understanding of how individuals construct, change, and navigate their own identity journeys as allies and the specific ways this ally identity may influence both perceptions of ally behavior from allyship targets (i.e., marginalized groups) and enacted ally behavior by allies themselves (i.e., privileged groups). This symposium synthesizes management research at the cutting edge of allyship scholarship with the aim of transforming how we think about allyship in the workplace and society more broadly.

Panelist: **Johanna Mair**, *Hertie School of Governance*
Panelist: **Metin Sengul**, *Boston College*
Panelist: **Laurie R. Weingart**, *Carnegie Mellon U.*

This symposium, aligning with the theme “Innovating for the Future”, aims to bring together management scholars from the fields of diversity and inclusion (D&I) and organizational design (OD). The goal is to identify how research at the intersection of these disciplines can provide insights to enhance D&I outcomes that also lead to improved organizational performance. D&I initiatives can face a variety of challenges during implementation. These challenges can arise when existing practices are not taken into consideration, leading to ineffective or underwhelming outcomes. To address these challenges, it is essential to examine the broader organizational context and how D&I practices interact as a bundle of practices. This can help achieve both D&I and organizational goals. Additionally, since the OD literature tends to focus more on the organization being the primary beneficiary of value creation and less on how organizational members can be beneficiaries of value creation, incorporating a D&I lens to OD theories can shed light on organizational arrangements suited for accomplishing multiple objectives. The symposium panel will showcase distinguished scholars in the fields of D&I and OD. They will share their perspectives on "Organizing for Inclusion" and examine the limitations and findings from their respective fields. The conversation will also delve into how each discipline can contribute to research in the panelists' respective fields and vice versa. The session will conclude with a presentation by the session organizers on opportunities for intervention and data collection to support research in this area.

On Failing

Session Moderator: **Min Chang Choi**, *Dankook U.*

ENT: **Uncovering the Effect of Fear of Failure on Entrepreneurship Intention: Three-Way Moderating Effects**

Author: **Min Chang Choi**, *Dankook U.*

Author: **Jung Min Nam**, *Dankook U.*

Author: **Jae Hyeung Kang**, *Oakland U.*

The purpose of this study is to investigate the differences in the impact of fear of failure on entrepreneurial intention, and the three-way moderating effects of cross-country differences (between Korea and the USA) and entrepreneurial experience. Utilizing the 2019 Global Entrepreneurship Monitor (GEM) data, the results showed that Koreans had a higher impact of fear of failure on entrepreneurial intention than Americans. We also found that the negative impact of fear of failure on entrepreneurial intentions was reduced when Koreans had previous entrepreneurial experiences. For USA, Americans with and without startup experience were not significantly affected by the fear of failure. This result suggests that Korean entrepreneurs need to have an entrepreneurship experience to overcome their fear of failure and decide to start a business. Meanwhile, American entrepreneurs tend to overcome their fear of failure and decide to start a business, regardless of entrepreneurship experience.

ENT: **Overcoming Fear of Failure: Examining the Moderating Effects of Gender and Perceived Social Support**

Author: **Viva Nsair**, *Western Michigan U.*

Author: **Jaegul Lee**, *Wayne State U.*

Efforts are being made to reduce the gender gap in entrepreneurship across the world (Kelley et al., 2017). Studies have established that the gender gap can be explained through the relationship of risk aversion predicting entrepreneurial intention and activity (Dawson & Henley, 2015; Ozaralli & Rivenburgh, 2016; Shinnar, Giacomini, & Janssen, 2012; Zhao, Seibert, & Lumpkin, 2010). We move the literature forward by showing evidence that fear of failure, a state-based construct capturing fear of failing to achieve one's goals is an antecedent to entrepreneurial activity above and beyond what can be explained by risk aversion. We also provide theoretical justification and empirical evidence that the fear of failure-entrepreneurial activity relationship is moderated by gender and perceived social support in a three-way interaction. While men experience less fear of failure than women, men are the ones that benefit from social support and experience a mitigating effect on how fear influences entrepreneurial activity. We discuss the theoretical and practical implications of our findings.

ENT: **Staying Ablaze - Passion Regulation in Failing and Non-Failing Entrepreneurial Teams**

Author: **Andreas Schunk**, *U. of Bayreuth*

Author: **Sonja Kristin Franzke**, *U. of Bayreuth*

Author: **Rebecca Preller**, *U. of Bayreuth*

Author: **Matthias Baum**, *U. of Bayreuth*

Entrepreneurial passion can be a strong proponent of new ventures success, but also has a disruptive potential in entrepreneurial teams. We use an in-depth longitudinal, qualitative study of 6 entrepreneurial teams - three failing and three surviving teams - over 12 months (up to 4 interview waves; 73 interviews in total) to develop a process model of (team) passion regulation, revealing team-focused and individual-focused pathways of passion dynamics that define whether passion leads to a successful entrepreneurial team development or not. Hence, the study offers important theoretical contributions to research on individual and team-level passion dynamics, interpersonal regulation, and entrepreneurial team survival.

Session Chair: **Jim Whitbeck**, *Oregon State U.*

Organizer: **Jacob Andrew Klopp**, *Penn State Smeal College of Business*

Organizer: **Jim Whitbeck**, *Oregon State U.*

Entrepreneurial storytelling refers to the construction of 'plot-like' accounts of the events surrounding a venture complete with heroes to invest in, villains to compete against, etc. which serve as an essential vehicle for mobilizing extant entrepreneurial resources to generate wealth or pursue other strategic objectives. However, the existing research on storytelling in entrepreneurship contains significant theoretical "blind spots," largely due to an emphasis on performance outcomes in the literature to date. While these contributions are valuable, there is a opportunity for future research to extend beyond these dimensions, as entrepreneurial storytelling is a dynamic and complex process, involving a multitude of interrelated mechanisms to achieve diverse objectives. The central task of this symposium is twofold: first, to showcase a range of research possibilities that emerge from a comprehensive exploration of entrepreneurial storytelling, and second, to illustrate the possibility of a more diverse understanding of what can be accomplished with entrepreneurship. Put simply, we see an opportunity to tell a new story about entrepreneurial storytelling specifically and entrepreneurship generally.

Legacy and Legitimacy

Session Moderator: **Marcelius Lewis**, -

ENT: **Recursive Legitimation: Recursive Legitimation: How do Startups Validate Corporate Legitimacy?**

Author: **Ronit Yitshaki**, *Department of Economics and Business Administration, Ariel U.*

Legitimation is essential for startups because of their liability of newness. Although the corporate need for legitimacy is well-explored, less is known about how startups acquire, maintain and regain their legitimacy. Based on an extensive data collection from an international corporate accelerator, the corporate accelerator team and client startups, this study explores the recursive relations between startups and the corporate legitimacy. The findings indicate that establishing corporate accelerators is a strategic move that helps startups gain legitimacy and corporations regain multiple types of legitimacy. This takes place through recursive symbiotic legitimation, where young startups generate reverse legitimation that has a positive influence on the corporation's reputation as moral and innovative. These findings thus extend the literature on organizational legitimacy and corporate accelerators.

ENT: **Reconstructing Legacy Across Generations: A Case of Grand Seiko's Launching of the "Spring Drive"**

Author: **Masaru Karube**, *Hitotsubashi U.*

Author: **Avimanyu Datta**, *Illinois State U.*

Author: **Yuki Miyazawa**, *Hitotsubashi U.*

Author: **Tatsuki Tachibana**, *Hitotsubashi U.*

Legacy is a double-edged sword of two seemingly contradictory principles of continuity and change. Managing the two contradictions is often critical to a firm's survival. Prior research has only pointed out general courses of action firms can take as opposed to what concrete strategies firms can take and how these strategies can be deployed over time. Deployment of such concrete strategies has primarily remained a black box. Our research takes a qualitative case study approach to show what's in the box. It examines how a Japanese firm called Seiko Epson reconstructed its legacy by developing and commercializing a new type of wristwatch movement—the Spring Drive. The movement was a hybrid between mechanical and quartz without needing a battery and meets the accuracy of quartz while not compromising the beauty of a mechanical movement. Seiko Epson took nearly twenty years to develop the movement, and its commercialization resulted in a new product category called "Accurate Luxury." This case study reveals a repertoire of strategies to manage the continuity and change of a legacy, when these strategies can be taken, how they can be combined over time, and how the intergenerational transmission of entrepreneurial mindsets enables the trial-and-error process for realizing and deploying these strategies.

ENT: **Puffing Up a Prelaunch Project: Hype Generation via Entrepreneurial Framing**

Author: **Greg Fisher**, *Indiana U.*

Author: **Shannon LT Younger**, *U. of Arkansas*

Author: **Alex Kier**, *Washington State U.*

To bring something new into being, entrepreneurs often need to frame their ideas to generate collective promise and excitement about their endeavor even before they have delivered the venture's offering for the first time. In other words, entrepreneurs need to generate hype around their new endeavor, and they use various entrepreneurial framing combinations to do so. To better understand this, we examine how the framing configurations used by the founders of the Premier Lacrosse League were associated with varying levels of collective promise and excitement among venture audiences, thereby uncovering how entrepreneurial framing configurations generate hype for a new venture.

ENT: **Relationship Dissolution, Relationship Formation, and Interpretation**

Author: **Bin Hao**, *Xi'an Jiaotong-Liverpool U.*

Author: **Jing Jin**, *U. of International Business and Economics*

Author: **Shiyun Zhang**, *East China Normal U.*

Author: **Bingqing Zhao**, *Xi'an Jiaotong-Liverpool U.*

Existing literature underscores that forming relationships with venture capital (VC) investors releases a positive signal regarding firm quality, whilst the dissolution of such relationships conversely imparts a negative information cue that impedes firm growth. This study delves into the simultaneous occurrence of relationship formation and dissolution within equity transactions in secondary markets, and its impact on subsequent financing for start-up firms. Despite the coexistence of positive and negative information cues within these transactions, we posit that the adverse interpretation outweighs the favorable one in the decision-making processes of potential investors, consequently diminishing the likelihood of subsequent financing for the focal firm. Moreover, we contend that this negative effect is strengthened by the selling VC's status, while mitigated by the acquiring investor's status and start-up maturity.

Resources

Session Moderator: **Bingbing Ge**, *Lancaster U. Management School*

ENT: **Resource Aggregates, Acquisition Decisions, and Resource-Rich Environments: An Inductive Study**

Author: **Qian Li**, *Warwick Business School*

Research on resource acquisition tends to focus on resource-constrained environments. However, recent research argues that small technology-based firms may be surrounded by a high level of aggregated resources, suggesting resource-rich environments. Based on a sample of small technology-based firms participating in various accelerator Programs, this study inductively explores small firms' resource acquisition decisions in such environments. I find various reference points that resource seekers activate when interpreting the value of resources in an aggregate and identify three dimensions of a holistic perception that grounds a firm's acquisition decision in a resource-rich environment. Based on these findings, I construct a conceptual model that elucidates how resource seekers concretise, abstract, and deliberate on resource aggregates and how these mechanisms may be repeated over time. The study unpacks the complexity underlying resource acquisition in resource-rich environments and demonstrates that a resource strategy can emerge as a series of individual acquisition decisions.

ENT: **Stick to the Knitting? Legacy Beyond the Original Family Businesses Through Rhetorical History**

Author: **Bingbing Ge**, *Lancaster U. Management School*

Author: **Florian Bauer**, *Lancaster U.*

Author: **Lara Pecis**, *Cardiff U. Business School*

Our research addressed one of the most common in practice but least looked into question of what happens to family businesses after family ownership is ceased. We argue that family business research has so far maintained a "family bias", which may significantly limit the understanding of family businesses' contributions to social-economic development in reality. Based on business restructurings (and in particular acquisitions) and through the rhetorical history lens, we address the question through one of the most important managerial rhetoric – legacy and how its agentic and co-constructive nature. We conceptualize a model of family business legacy that goes beyond the family to legacy beyond the original family (LBOF). We illustrate the theoretical mechanisms of LBOF, decoupling, selecting, and re-coupling, with two exemplifying extreme family business restructuring cases. We further develop an agenda for future research aimed at understanding different forms of legacy and the wider process of LBOF. Our research expands the boundary of family business research by highlighting its potential contribution to the economy beyond its existence. Managers can navigate the framework to narrate and leverage LBOF to create competitive advantages during business restructuring.

ENT: **Risk Preferences of Female Entrepreneurs – Closing the Gender Data Gap in Entrepreneurship**

Author: **Nadine Alexandra Chochoiek**, *Munich Business School*

Author: **Laura Rosendahl Huber**, *Erasmus U. Rotterdam*

Our study addresses the gender data gap in entrepreneurship research, particularly in risk propensity which is among the most researched motives for entrepreneurial activity (Åstebro, Herz, Nanda, & Weber, 2014; Kerr, Kerr, & Xu, 2018). We analyze a large, multi-wave online experiment from the Netherlands, using survey and choice-based measures to compare risk propensities among male and female entrepreneurs and employees. Our findings reveal that female entrepreneurs are more risk-tolerant than female employees, a trait also observed in owners of early-stage businesses. This suggests risk tolerance influences women's decision to pursue entrepreneurship. While women employees generally exhibit lower risk-taking than men, this gender gap in risk propensity is not significant among entrepreneurs, especially those with incorporated businesses. Our results support the theory that higher risk tolerance is crucial for entrepreneurship and indicate that gender differences in risk-taking may contribute to the entrepreneurship gender gap. Therefore, policies reducing the perceived riskiness of entrepreneurial activities could significantly encourage women's entrepreneurship, benefiting business owners of all genders.

ENT: **Risk-Taking? Entrepreneurial Context, Individual Risk and Self-Esteem Moderator Role: An Experiment**

Author: **Antonio Benedito De Oliveira Junior**, *FEI - Centro U. FEI*

Psychological factors and personal attitudes (such as self-esteem) underlie many entrepreneurial decisions. Although allocating resources for starting a business between two different entrepreneurial environments contexts (safe vs. risky) is a critical risk decision, relevant research is limited, especially regarding self-esteem moderating effect between environmental contexts (safe vs risky) and individual risk attitude. Focusing on risk across entrepreneurial environment groups, we consider the individual risk behavioral consequences of between-group environment contexts. Building on the individual risk and self-esteem literature, we propose that individuals (entrepreneurs and non-entrepreneurs) have a higher individual risk attitude in a safe context in an entrepreneurial environment than in a risky context. We also propose that the moderating effect of self-esteem (low vs. high) between the entrepreneurial environment manipulation contexts (safe vs. risky) and individual risk attitude eliminates that effect for high self-esteem individuals. However, low self-esteem individuals still have a higher individual risk attitude in a safe context. We present supportive evidence of the hypotheses using two studies with different methodologies (Study 1: a quantitative survey of 195 individuals – 56.9% entrepreneurs; Study 2: randomized experiment between two contexts: safe vs. risky with 113 individuals – 42.5% entrepreneurs).

Communication and Persuasion

Session Moderator: **Jintong Tang**, *Saint Louis U.*

ENT: **Linguistic Relativity and Entrepreneurial Alertness**

Author: **Jintong Tang**, *Saint Louis U.*

Author: **Wenping Ye**, *school of management, Jinan U.*

Author: **Shaji Khan**, *U. of Missouri at Saint Louis*

Author: **Jun Yang**, *School of management, Zhejiang U.*

Drawing upon linguistic relativity theory, we investigate the underlying mechanisms of entrepreneurial alertness with respect to one of the most salient, yet underexplored, aspects of linguistic structures: the future-time-reference (FTR). We also explore how the relationship between the Stronger-FTR and alertness is mediated by entrepreneurs' future temporal focus and moderated by linguistic diversity. Study 1 conducted an experiment with 192 German-English bilingual entrepreneurs and a replication experiment with 137 Mandarin-English bilingual entrepreneurs. Study 2 conducted a two-wave field study with 1,941 entrepreneurs speaking 17 different languages, and administered a robustness test with 618 entrepreneurs speaking four different languages.

ENT: **The Power of Persuasion: New Venture Presentations and Audience Support**

Author: **Kim Saxton**, *Indiana U.*

Author: **Todd Saxton**, *Indiana U. - Kelley School of Business*

Author: **Erik Monsen**, *U. of Vermont*

Research on venture pitch elements and audience support has proliferated, but we lack a unifying theoretical framework to build on to interpret past and as well as future research. We draw on the persuasion knowledge model from marketing to better understand how pitch elements including venture and founding team characteristics impact evaluations of the pitch attempt and affect audience member support. We analyze pitch evaluations for three types of respondents: established venture community members, Evening MBA students with startup experience, and Evening MBA students who do not have startup experience. Overall, we find robust support for the persuasion knowledge model. For inexperienced audiences, the persuasion attempt (i.e., passion and presentation quality) mediates the relationship between agent/topic characteristics and willingness to support. With increased venturing experience, persuasion attempt mediation disappears and only topic characteristics are related to willingness to support. Importantly though, both persuasion attempt quality and agent characteristics are predictive of venture survival at 5 to 9 and 15 to 19 years after the pitch.

ENT: **True or False? How Audiences Collectively Identify Deceptive Entrepreneurial Storytelling**

Author: **Tim Risse**, *EBS Business School*

Author: **Marie Madeleine Meurer**, *Jönköping International Business School, Incoming Rotterdam School of Management*

Author: **Matthias Waldkirch**, *EBS Business School*

Entrepreneurs often use storytelling to communicate an uncertain future, which can lead to exaggeration or outright deception. This study aims to understand how audiences jointly detect such deceptive storytelling by analyzing 399,133 Reddit posts through the lens of Truth Default Theory (TDT). Using Latent Dirichlet Allocation (LDA) topic modeling, we identified recurring conversation patterns related to audiences' active role in identifying and dissecting deceptive stories. This study provides insights into how audiences engage with and scrutinize narratives, moving beyond the observation of final reactions. This study also extends TDT, which traditionally focuses on individual deception detection in face-to-face interactions, to a collective setting on digital platforms. This extension includes propositions about the collective ability to detect and respond to deceptive narratives.

ENT: **Are Entrepreneurs Incentivized to Use Language-Based Signals Opportunistically in Hyped Markets?**

Author: **Beauregard Berton**, *Amsterdam Business School, U. of Amsterdam*

Author: **Mohammad Taghi Ramezan Zadeh**, *Amsterdam Business School, U. of Amsterdam*

In hyped markets, entrepreneurs can leverage language-based signals to jumpstart their ventures. Our study adds to this growing body of research by exploring how investors attend to linguistic cues in initial coin offering (ICO) prospectuses during the ICO hype. Departing from earlier studies, this study argues that hype is a signaling environment that incentivizes entrepreneurs to be opportunistic in their use of language-based signals. To test our hypotheses, we draw on a sample of 812 ICOs. Our results suggest that investors favor linguistic complexity over simplicity and that emotional language affects the persuasiveness of prospectuses. Controlling for ICO, market, and venture characteristics, we find that more money was raised when prospectuses positively violated investors' language expectations and evoked emotions. Our findings imply a risk of moral hazard in hyped technology markets: hype incentivizes entrepreneurs to use investors' emotions and expectations opportunistically if they wish to raise more money in the short term.

Session Moderator: **Agnieszka Kwapisz**, *Montana State U.*

ENT: **Tokenomics: Financial Challenges for All-Female Founding Teams in Accelerator Cohorts**

Author: **Agnieszka Kwapisz**, *Montana State U.*
Author: **Diana Maria Hechavarría**, *Texas Tech U.*

This research explores the relationship between the gender composition of founding teams and the gender composition of accelerator cohorts on the financial outcomes one year after the acceleration process. Using tokenism theory, we argue that the experiences of female founders in accelerators differ from those of male founders, and the relationship is further shaped by the cohort's gender composition. Through an analysis of pre- and post-acceleration data for startups in the United States, our findings indicate that all-female teams receive significantly less equity after the acceleration process. We also find a negative association between the proportion of all-female teams in an accelerator and the levels of equity and philanthropic support received by the startups. Furthermore, all-male teams experience enhanced equity, philanthropic support, and debt outcomes when they operate within accelerator cohorts that have a higher representation of female founders. These benefits are not seen in all-female or mixed-gender teams.

ENT: **Geographical Dynamics and Cohort Influences: Unravelling the Impact of Accelerators on New Ventures**

Author: **Pramendra Singh Tank**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*
Author: **Devanshi Agarwal**, *Research Associate Indian Institute of Management Ahmedabad*
Author: **Sumit Kumar Jaiswal**, *Doctoral Student at IIM Ahmedabad*

In the last two decades, accelerators have proliferated and assumed a vital role in the entrepreneurial ecosystem. Prompted by their impact and prominence, researchers have begun to study their effects on participating ventures and examine the differential performance impacts of various accelerator programs. Two different approaches to program design and implementation - top-down (centrally designed and managed by accelerator) and bottom-up (prioritize flexibility, autonomy, and adaptability for participating startups) - have been touted to influence this differential performance. Our research sits at the interaction of these top-down and bottom-up features. Specifically, we study the location of the accelerator with respect to the ventures' place of origin as a determinant of differential performance among participating ventures. In addition, we assess the impact of an accelerator's cohort size on the strength of this relationship. We use equity raised to measure start-up performance and find that non-local accelerator participation leads to better fundraising for ventures, and cohort size negatively moderates the latter relationship. We explain these effects using networking and signaling benefits that accelerator participation bestows upon participating ventures.

ENT: **Short-Term Hype or Long-Term Hope? Demo Days, Hype, and Startup Performance**

Author: **Sheryl Winston Smith**, *BI Norwegian Business School*

Financially backing early-stage ventures requires potential investors to commit resources to founders and companies that are relatively unknown, with little track record, and often sparsely available information. At the same time, investment in startups with long-term potential for blockbuster success affords the earliest investors the opportunity for outsized return. Clues about a venture's long-term likelihood of success are thus particularly valuable; however, promises about potential in nascent startups may not translate into long-term performance. This paper draws on the growing literature on hype in entrepreneurship to elucidate the relationship between early hype and subsequent investment and long-term success in new ventures. The paper leverages granular data on startups, founders, and investors matched to measures of hype drawn from online search analytics surrounding demo days in 394 startups participating in the first 25 cohorts of the two longest-running accelerators in the U.S. over the period 2005-2011 to examine the relationship between early excitement in demo day settings and subsequent performance outcomes through 2023. The results suggest that demo days lead to early hype where investors are drawn to the startups with the greatest initial buzz. While this facilitates short-term fundraising for these startups the long-term performance outcomes diverge.

ENT: **Learning-by-Advising? Startup Learning as an Advice-Giver in Accelerators**

Author: **Zhuoxuan Li**, *Engineering Dept., Stanford U.*
Author: **JungYun Han**, *National Taiwan U.*

How do entrepreneurs learn from peer advising and enhance business idea development? Prior research views peer relationships as symmetric and discusses advice-receivers' benefits assuming they will return the same favors to advice-givers. In this study, we question the assumption of symmetry and investigate whether peer advising itself can enhance the advice-givers' business ideas in accelerators. We conducted a randomized controlled trial with 167 startups, in which founders in a treatment group were asked to review peers' pitch decks and give advice. After four rounds of peer advising, we found that entrepreneurs who advised peers significantly improved their business idea usefulness but not idea novelty in their pitch decks. Furthermore, experienced entrepreneurs experience a higher improvement in idea novelty and usefulness when treated, while teams with sales records are associated with a higher improvement in idea usefulness when treated. Our findings suggest a novel mechanism of peer learning from an advice-giver's perspective and emphasize the necessity of distinguishing idea domains in studying entrepreneurs' business ideas as an important element of firm success.

Equity Crowdfunding

Session Moderator: **Smita Srivastava**, *Wichita State U.*

ENT: **Angels in the Crowd: Exploring Business Angels' Impact on Ventures Invested via Equity Crowdfunding**

Author: **Vincenzo Capizzi**, *U. del Piemonte Orientale*
Author: **Benedetta Montanaro**, *Politecnico di Milano*
Author: **Francesca Tenca**, *U. del Piemonte Orientale*

This paper investigates the investments of Business Angels (BAs) through Equity Crowdfunding (ECF) platforms. Using a dataset of 254 successful crowdfunding campaigns launched by Italian ventures between 2014 and 2020, we identify the effect of individual BAs (i.e., former entrepreneurs that successfully exited their companies with proceedings to reinvest) and BAs affiliated to BA networks or groups on the post-campaign performances of ECF ventures. We find that, in general, companies invested by BAs during their first ECF campaign are more likely to realize a follow-on successful external equity round (specifically, a second ECF campaign over a second VC-BA round or exit) compared to companies invested by non-BA crowd-investors only. Moreover, this effect is mainly driven by individual BAs not affiliated with BA networks or groups. Results are robust after controlling for the endogeneity of BA investment in ECF, using tax shocks for BA investing in startups and market volume of BA investing through ECF as instrumental variables.

ENT: **Swaying Equity Crowdfunding Investors: A Configurational Investigation of Signals and Narratives**

Author: **Jiahe Wang**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*
Author: **Lien Denoo**, *Tilburg U.*
Author: **Joris Knoben**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*

Small individual investors on equity crowdfunding (ECF) markets, though constrained by bounded rationality and limited expertise, have become a major source of new venture financing. Integrating the cognitive perspective of signaling and the literature on narratives, we adopt a configurational approach to explore how new ventures attract ECF investors with combinations of signals embedded in entrepreneurial narratives. By tracking and scraping a leading UK-based ECF platform daily between November 2022 and August 2023, we constructed a dataset of 98 new ventures that raised external capital, which we analyzed via Qualitative Comparative Analysis (QCA). The results show distinct configurational patterns of signals, narratives, and ECF performance: pre-market and post-market ventures attract ECF investors with qualitatively different combinations of signals, which are embedded in entrepreneurial narratives with varying degrees of specificity and/or coherence. We therefore contribute to the literature on entrepreneurial finance, signaling and narratives with a configurational understanding of signals, narratives and new venture financing, which can also assist entrepreneurs at different stages in creating compelling campaigns for better fundraising performance.

ENT: **Platforms as Active Intermediaries in the Signaling Process: Evidence from Equity Crowdfunding**

Author: **Simon Kleinert**, *Maastricht U., School of Business & Economics*
Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*
Author: **Silvio Vismara**, *U. of Bergamo*

In prior research, new firms are expected to convey observable signals of their latent quality directly to potential resource-providers in an effort to reduce uncertainty and ease resource mobilization. However, platforms increasingly intermediate between new firms and prospective resource-providers. This paper examines the use of signals by platforms for their gatekeeping (selection) and brokerage (selective promotion) decisions. Adopting a cognitive perspective on signaling, we posit that social impact signals will affect platforms' gatekeeping less than their brokerage decisions. Moreover, we hypothesize that platform decision-makers' personal pro-social motivation will amplify the effect of social impact signals on their decision-making, and especially so for brokerage decisions. We test and validate our theory through a conjoint experiment with decision-makers of equity crowdfunding platforms, an important intermediary between new firms and investors. Overall, our study contributes by integrating the role of intermediaries into signaling theory and highlighting how platform decision-makers employ signals differentially to determine what prospective resource-providers can see through their gatekeeping and how they see it through their brokering activities.

ENT: **Redefining Investor Engagement: A Behavioural Analysis of Equity Crowdfunding Dynamics**

Author: **Camilla Civardi**, *U. of Milano-Bicocca*
Author: **Andrea Moro**, *Circle - Lund U.*
Author: **Joakim Winborg**, *Halmstad U.*

Our research explores equity crowdfunding investors' motivations and post-investment behaviours by relying on Statman's (2017, 2019) framework. We uncover a diverse spectrum of motivations behind equity crowdfunding investors' decisions, including significant emotional and expressive elements. Moreover, by challenging the notion of crowdfunders as passive financiers, our research highlights the connection between motives and post-investment decisions, suggesting the relevance of active involvement such as professional advice, board participation, social media promotion and monitoring, more pronounced among experienced and older investors. By uncovering the varied nature of investor motives and behaviours, this research offers valuable insights for enhancing engagement strategies and understanding the dynamics of the equity crowdfunding ecosystem.

Community Entrepreneurship

Session Moderator: **Sonic Wu**, *Yuan Ze*

ENT: **Community Socioemotional Wealth As The Glue That Binds Distinct Communities In Enterprising (WITHDRAWN)**    

Author: **Sonia Siraz**, *U. of Essex, United Kingdom*

Author: **Bjorn Paul Claes**, *The Open U.*

Author: **Deycy Sanchez Preciado**, *Halmstad U., U. del Cauca-CREPIC*

Author: **Nicholas Theodorakopoulos**, *Aston Business School*

Recent advances in research have shed light on why and how community-based enterprises (CBE) emerge. Nevertheless, little is known about the underlying factors that contribute to their success over time. This lack of attention is intriguing given CBEs' widespread proliferation as an instrument for socioeconomic development. We contribute to the CBE literature by applying and extending socioemotional wealth to the CBE context. Our findings demonstrate how the presence of community socioemotional wealth enables CBEs to achieve enduring success. Beyond the presence of socioemotional wealth's five traditional dimensions, we identify two new dimensions (empowerment and holistic mission) unique to CBEs. These seven dimensions, when jointly present, explain how community socioemotional wealth creates a favorable terrain for the CBE to succeed.

ENT: **Crossing the River by Feeling the Stones: Pathways Navigated by Asian Startups Chasing Global Dreams**

Author: **Sonic Wu**, *Yuan Ze*

Author: **Xin-Bei Xie**, *College of Management, Yuan Ze U.*

Author: **HAO YUN LIN**, *Yuan Ze*

This study explores the unique pathways crafted by Asian startups in pursuing early globalization, often divergent from conceived Born Global models stressing accelerated worldwide expansion. Given voids in funding access, talent pipelines and institutional support, fledging firms originating from developing Asia balance global visions with situational constraints by forging calculated incremental moves leveraging partnerships and configurational resilience. In-depth, semi-structured interviews with four new ventures based in Taiwan unveil key decision points and strategic reflections guiding overseas exploration spanning technology services, advertising and media sectors. By elucidating push-pull factors, pivots and pacing underscoring measured augmentations ultimately aggregating global presence, findings advance conceptions on new venture internationalization suits developing economy conditions through situating metrics in context. Analysis reveals that conventional temporal yardsticks discount latent strategic essence directing overseas undertaking by overlooking impeders. Findings affirm global orientation as differentiating nucleus rather than distal outcome indicator. Partnership channels also critically expand restricted resource frontiers serving initiation function. Finally, informal institutional divides penetrating advanced markets pose layered learning burdens. Accordingly, key contributions lie in empirically showcasing limitations applying extant models universally, and expanding theoretical conceptions with evidence-based alternate dimensions suiting startups charting global pursuits from infrastructure peripheries in Asia. Findings provide reference pathways balancing ambition, change adaptation and configurational resilience for regional entities seeking calculated global expansion.

ENT: **Constructing Collaborative Spaces: An Ethnography of Entrepreneurial Place-Making**

Author: **Amadou Lô**, *Toulouse Business School*

Author: **Pascal Dey**, *Bern U. of Applied Sciences*

Author: **Pauline Fatien**, *Grenoble Ecole de Management*

Entrepreneurship increasingly takes place in new collaborative spaces, such as incubators, science parks, or coworking spaces. Despite the broad consensus on the various benefits that collaborative spaces can have for entrepreneurs, we are only just beginning to understand how entrepreneurs are implicated in the construction of these supportive contexts. In response, we draw on the phenomenological literature on place to create a conceptual vocabulary attentive to how collaborative space and entrepreneurial processes are related. Based on an ethnography of a coworking space in Paris, we identify three types of place-making entrepreneurs engage in to nurture their entrepreneurial journey: (a) projective identity formation, where entrepreneurs use place as a symbolic signifier to give form to their nascent venture and entrepreneurial identity; (b) rudimentary inscriptions, in which entrepreneurs define the purpose of the collaborative space in a deliberately vague manner so as not to limit the range of activities that the place can accommodate, (c) spatial appropriation, in which entrepreneurs re-create, manipulate, and personalize the material arrangement of place according to their specific needs. Our contribution is to show how entrepreneurs – through place-making – construct collaborative spaces both at the level of representation, affect, and materiality, and how this in turn can be generative for entrepreneurship.

ENT: **Community Entrepreneurship: A Strategic Process for Civic Wealth Creation**

Author: **Rossella Rocchino**, *Technical U. of Munich*

Author: **Christina Julia Hertel**, *GSEM - U. of Geneva*

Solving societal challenges manifesting at the local level requires concerted efforts involving communities, enterprises, and support organizations. The process unfolding around these collaborations is called civic wealth creation (CWC)—defined as “the generation of social, economic, and communal endowments that benefit local communities”. While research has repeatedly highlighted the potential of community entrepreneurship to generate civic wealth, it has not explored how this potential can be explained or leveraged. In this paper, we delineate four strategic orientations that characterize community entrepreneurship (i.e., holisticness, embeddedness, inclusiveness, and collectiveness) and describe practices used to enact these strategies along a spectrum from low to high. We theorize how, through the enactment of these four strategic orientations, community entrepreneurship can trigger a reinforcing process of CWC. Furthermore, by positioning community entrepreneurship as a strategic endeavor, we discuss how diverse types of organizations can, in different combinations and to varying degrees, capitalize on community entrepreneurship strategic orientations, thereby unleashing their potential to create civic wealth. Our paper makes important contributions to the literature on community entrepreneurship and CWC but is equally relevant to a broader audience of entrepreneurship and organization scholars and practitioners interested in investigating the richness of entrepreneurial endeavors for society.

Nursing's Role in Healthcare

Session Moderator: **Jessica Peck**, *Cleveland State U.*

HCM: **Burned Out and Thinking of Quitting: A Moderated-Mediation Model of Nurse Occupational Stigma**

Author: **Jessica Peck**, *Cleveland State U.*

Author: **Tracy Hopkins Porter**, *Cleveland State U.*

Author: **Candice Vander Weerd**, *Cleveland State U.*

Nurses are a critical part of the U.S. healthcare system. Yet, nurse turnover remains high. While many causes of nurse turnover exist, one understudied area is COVID-19 occupational stigma. Nurses may experience occupational stigma as they are in close proximity to sick patients, and the public may fear that they carry the disease. Nurse awareness of such stigma may cause them to experience occupational stigma consciousness. We examine the effects of nurse COVID-19 occupational stigma consciousness (OSC) on work burnout and job turnover intentions. We examine this through the lens of Conservation of Resources Theory with perceived supervisor support and supportive work climate as possible resource interventions. Results suggest that COVID-19 OSC contributes to work burnout, and work burnout fully mediates the relationship between COVID-19 OSC and job turnover intentions. Further, perceived supervisor support reduces both job turnover intentions and work burnout but neither moderate the negative impact of COVID-19 OSC on work burnout. This research contributes to our understanding of underlying causes of work burnout and job turnover intentions, the particularly harmful nature of COVID-19 OSC and highlights the need for additional interventions to reduce the negative impact of occupational stigma.

HCM: **A Caring Ethic in Advocacy Work: Advanced Practice Nurses' Professionalism in Restrictive States**

Author: **Scott Feyereisen**, *Florida Atlantic U.*

Author: **Clayton Thomas**, *Iowa State U.*

Author: **Neeraj Puro**, *Florida Atlantic U.*

Author: **Louise Buie**, *Florida Atlantic U.*

Author: **Niccolas Vechiola**, *Florida Atlantic U.*

Author: **Sydney Gibbons**, *Florida Atlantic U.*

Author: **Jaime Fuller**, *U. of South Carolina*

Advanced practice nurses present a paradox of professionalism. As an occupational group, advanced practice nurses have experienced the hallmarks of professionalization. Yet, some states restrict their autonomous practice, limiting their ability to exercise their professional knowledge. In this paper, we ask the novel question: What is the lived experience of advanced practice nurses as they address legal restrictions that prevent them from practicing as fully autonomous professionals in their field? Drawing on in-depth, semi-structured interviews with nurse practitioners and certified registered nurse anesthetists in restrictive practice environments, we find that a caring ethic, specifically the Six C's of Caring, structures advanced practice nurses' advocacy work. Advanced practice nurses emphasize their competence in the form of their knowledge and unique skill set. They demonstrate their conscience by verbalizing their values, such as increasing access to equitable care. Advanced practice nurses remain committed to the pursuit of autonomy despite setbacks, and they use stories of addressing patients' pain to demonstrate their compassion. Advanced practice nurses comport themselves as respectable professionals and instill confidence in their abilities through building relationships with patients, though they struggle to build such relationships with select legislators. Taken together, these findings underscore an important extension of advanced practice nursing's professionalism. This paper illustrates how a caring ethic is taken beyond the bedside and into legislative chambers to give voice to advanced practice nurses who take on the extra burden of advocating for policy change. Healthcare managers and nursing leadership should recognize the importance of caring to advanced practice nurses and note the additional stressors advanced practice nurses adopt when working in restrictive policy environments.

HCM: **RN Staffing Intensity and Quality: Implications for Organizational Performance**

Author: **Josue Patien Epane**, *Loma Linda U.*

Author: **IWIMBONG Kum Ghabowen**, *U. of Nevada Las Vegas*

Author: **Zo Ramamonjirivelo**, *Texas State U.*

Author: **Ferhat Zengul**, *U. of Alabama, Birmingham*

Author: **Luceta Mckroy**, *Lander U.*

Introduction: The study investigates the relationship between Registered Nurse (RN) staffing intensity, healthcare quality, hospital total performance score, overall star rating, and financial performance in US acute care hospitals. With escalating healthcare costs and persistent challenges in delivering high-quality care, understanding these interdependencies is crucial for enhancing patient outcomes and sustainable healthcare systems. Methods: Utilizing a comprehensive longitudinal approach, the research draws on David Donabedian's structure-process-outcome conceptual framework. Data sources include the American Hospitals Association Annual Survey, Area Health Resources File, and Centers for Medicare & Medicaid Services Hospital Compare and Case Mix Index data. A linear regression model with hospital and year-fixed effects is employed, controlling for unmeasured time-invariant characteristics. Results: Significant findings reveal that hospitals transitioning from low to high RN staffing intensity experience a notable increase in the linear mean score of overall hospital star ratings ($\beta = 0.10$, $p=0.05$). Further analysis indicates that such transitions are associated with higher operating revenues ($\beta = \$258.64$, $p=0.0001$ and $\beta = \$696.57$, $p=0.0001$) and costs ($\beta = \$254.29$, $p=0.0001$ and $\beta = \$751.51$, $p=0.0001$) when compared to low RN staffing intensity. Conclusion: The study highlights a positive correlation between RN staffing intensity and healthcare quality, as reflected in hospital star ratings. Additionally, the transition from low to high RN staffing intensity is linked to improved financial performance, with increased operating revenues and costs. These findings underscore the importance of strategic staffing decisions in hospitals for enhancing patient care and optimizing financial outcomes. Keywords: RN Staffing, Hospital Total Performance Score, Hospital Overall Star Rating, Hospital Financial Performance

Author: **Richard J. Tarpey**, *Middle Tennessee State U.*

Author: **Millicent F. Nelson**, *Middle Tennessee State U.*

This paper explores the role of organizational justice in the dissatisfaction with centralized staff scheduling and automation. A large-scale implementation of centralized scheduling and automation across three hospitals (one small and two medium-sized facilities) was investigated. While centralized scheduling effort was successful concerning higher quality nurse schedules better mapped to demand expectations, the project suffered from low staff support and staff satisfaction. Scheduling decisions were more objective, but nurse satisfaction did not significantly improve and became an inhibiting factor. Following descriptive phenomenology, this paper utilizes actual feedback from the nurses and other staff to investigate the underlying causes of staff hesitancy and resistance. The analysis of participants' feedback revealed five areas or themes indicating dissatisfaction with organizational justice for scheduling. Two of those themes, supervisor relationship and process, indicated a perception of procedural justice or employee dissatisfaction with the procedures and methods used for the development of schedules. The remaining themes, union contract compliance, seniority, and fairness, demonstrated distributive justice or dissatisfaction with the fairness of outcomes.

Innovations in Selection and Hiring: Insights on Applicant Reactions and HR Practices

Session Moderator: **Josephine Mago Moritz**, *Heinrich-Heine U. of Dusseldorf*

HR: **In Algorithms We Trust? Exploring the Role of Human-in-the-Loop and Social Presence**

Author: **Josephine Mago Moritz**, *Heinrich-Heine U. of Dusseldorf*

Author: **Janis Witte**, *Heinrich Heine U. Düsseldorf*

Author: **Nadine R. Gier-Reinartz**, *Heinrich Heine U. Düsseldorf*

Algorithmic decision-making (ADM) is widely applied in organizations and is associated with increased objectivity, consistency, and efficacy. However, when tasks are associated with social or emotional skills, as is often the case in personnel selection, humans commonly view its use as untrustworthy. We suggest that social presence accounts for negative perceptions of the use of ADM and propose the incorporation of a human-in-the-loop (HITL) approach mitigates perceptions of untrustworthiness. We conducted an online experiment ($n = 416$) to examine applicants' perceptions of ADM and HITL in comparison to human decision-making (HDM). We found social presence is significantly associated with trust, although it did not differ significantly between decision entities. Further, our results contribute to the literature by identifying that a HITL design not only enhances trust in ADM systems but is also perceived as more trustworthy compared to HDM alone. Further, our findings demonstrate that trust mediates the relationship between decision entities and organizational attractiveness.

HR: **Reactions to Algorithmic Decision-Making in Human Resource Management: A Meta-Analysis**

Author: **Josephine Mago Moritz**, *Heinrich-Heine U. of Dusseldorf*

Author: **Larissa Pomrehn**, *Heinrich Heine U. Düsseldorf*

Author: **Holger Steinmetz**, *U. of Paderborn*

Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

The introduction of algorithmic decision-making in human resource management increases continuously, while the knowledge about how the implementation of such systems is perceived is scattered. We synthesize current research by conducting a meta-analysis to examine employee and applicant reactions to the use of algorithmic decision-making for human resource management tasks. We analyzed 591 effect sizes from 42 samples ($N = 10,601$) in 30 studies. Findings demonstrate that the use of algorithmic decision-making has a negative relation with system-related reactions (e.g., fairness, trust) and organization-related reactions (e.g., turnover intention, organizational attractiveness). Moderator analysis indicates that algorithmic decision-making is perceived negatively in the Anglo and European region, while not having a moderating effect in the Asian region. Type of tasks (interviews versus screening) and extent of decision (algorithmic decision-making as the single decision entity) significantly moderated the relationship between system- and organization-related reactions, whereas algorithmic decision-making as a decision support had no moderating effects. Further, we did not find any moderating effects for age or gender. Overall, the findings suggest that reactions towards algorithmic decision-making are predominantly negative and context-dependent, hence we caution organizations to implement algorithmic decision-making in human resource practices depending on the context.

HR: **Effects of Contextualization on Subgroup Differences and Applicant Perceptions**

Author: **Jan Corstjens**, *Singapore Management U.*

Author: **Filip Lievens**, *Singapore Management U.*

Author: **Jonas W. B. Lang**, *U. of Exeter*

Author: **Chad Van Iddekinge**, *U. of Iowa*

Contextualization is a key feature of many selection procedures. It is assumed that placing applicants into a job-related context contributes to validity by increasing the point-to-point correspondence with the criterion. Yet, a job-related contextual frame might also have unintended effects, such as disadvantaging applicants who possess the desired knowledge, skills, and abilities, but lack context-specific experience. In our theorizing, we draw on narrative comprehension models and introduce the key concept of context familiarity to develop hypotheses related to three different contextual frames: a job-related context, an everyday context, and an idiosyncratic context. With data from two online sample providers, we investigated the impact of contextualization variations in situational judgment test (SJT) items on applicant perceptions and subgroup differences. Results showed that subgroup differences were smallest in a job-related context compared to everyday and idiosyncratic contexts. In terms of applicant perceptions, we found that perceived cognitive load was significantly higher in less familiar contexts, while test anxiety was not. Test anxiety served as a mediator in the relationship between ethnicity and SJT scores regardless of the contextualization format. There was also some evidence of lower test motivation in the ethnic minority group when SJT items contained an everyday context. These findings highlight the role that contextualization can play in the search for selection procedures that produce lower subgroup differences and a positive candidate experience.

HR: **What Would You Do? A Motivated Cognition Model of Response Emergence in Situational Interviews**

Author: **Sara Murphy**, *U. of Winnipeg*

Author: **Allen I. Huffcutt**, -

Situational interviews (SIs) remain one of the most valid selection tools used in industry today. Original theorizing about their functionality proposed that intentions stated in SIs predict performance because they represent candidate goals, which are then carried out on the job. However, there are limitations when considering the response emergence process from a goal setting perspective. Namely, that the nature of the goals carried into SIs is unclear and the SI context makes it difficult to effectively set and pursue goals. The perspective taken in the present paper outlines the SI response from a motivated reasoning perspective, and digs deeper into the critical role of motivation in directing this process. Initial implications of this model are discussed.

Wellness and Work/Life Harmony: Strategies for Healthier Workplaces

Session Moderator: **Sunanda Nayak**, *FORE School of Management*

HR: **The Influence of Commitment-based HRM Practices on Work-family Balance**

Author: **Sunanda Nayak**, *FORE School of Management*

The majority of the extant research on thriving draws conclusions based on evidence from individuals thriving in organizations. In response to calls for the further exploration of thriving in organizations, this study brings the human resource management (HRM) perspective by highlighting the crucial role played by Commitment based HRM practices (CBHRMP) in the collective thriving literature. Using two-wave survey data collected from 287 employees, we found empirical evidence on our serially mediated moderation model. We found that employees in organizations with higher utilization of commitment HRM practices reflected higher development of psychological capital as well as increased collective thriving. Moreover, those experiencing higher collective thriving are related to better work-family balance. Besides, this study highlights how the work resources of the employees positively affect their family life. Theoretical and practical implications are discussed.

HR: **Polychronic Time Management and Employee Burnout: Supportive Roles of Organization and Supervisor**

Author: **Wangxi Xu**, *U. of Melbourne*

Author: **Andrew Yu**, *U. of Melbourne*

Employees' multitasking approach to managing time has been considered desirable in today's dynamic business world. Yet, its detrimental effects on employee well-being have rarely been recognized and investigated. Building upon resource drain theory, we operationalized this time management approach with employee polychronicity and built a theoretical model to test its relationship with interdomain conflicts and employee well-being with a time-lagged research design and multi-sourced data. We found that approaching time polychronically led employees to juggle work and family tasks simultaneously, experience intensified work-family conflicts, and therefore suffer from burnout syndromes. We further found that this undesirable side of polychronic time management can be weakened by a supportive work environment characterized by organizational support for work-family boundaries and creative family-supportive supervisor behaviors.

HR: **Beyond the Individual: An Interactive Multilevel Model of Boundary Control in Organizations**

Author: **Frederik Hesse**, *U. of St. Gallen*

Author: **Nils Fürstenberg**, *U. of St. Gallen*

The boundaries between work and the private domain are becoming increasingly blurred. Recent studies show that this blurring often coincides with lower levels of individual health and performance. In this context, research has highlighted boundary control - the degree to which a person perceives that he or she is in control of how he or she manages the boundaries between work life and personal life - as a critical resource. However, boundary control has been studied only as an individual-level construct and without consideration of the organizational context, leaving several important questions unanswered: First, it remains to be understood how organizational contexts and factors influence boundary control and to what extent they shape its impact on employees. Second, it is not yet clear whether organizations, at a collective level, also benefit from granting boundary control to their employees. To address these gaps, we draw on conservation of resources theory to develop and test a multilevel model of boundary control in organizations. We propose that both competence-enhancing HR systems and decentralization foster boundary control, which in turn, is expected to promote organizational performance and individual health. Finally, we hypothesize that boundary control becomes more important for employee health in organizations characterized by higher levels of virtual communication. Results from multilevel modeling of multi-source survey data from 8,273 employees and 154 human resource professionals nested in 154 German organizations across several industries and matched with archival performance data confirmed our hypotheses.

HR: **At Home, On the Train, Or at the Beach: How Does Mobile Work Affect Employees' Environments?**

Author: **Beatrice Schuldt**, *U. of Münster*

All over the world, employees seek more flexibility and freedom regarding their work-ing arrangements. The terms remote, hybrid, or mobile work are rising and being discussed across personal and professional boundaries. Yet, less is known about the meaning and consequences, whether positive or negative, of working in such flexible environments for employees and their organisations. Semi-structured interviews with seven board directors, six managers and 22 employees from two German companies were conducted and analysed through grounded theory, using inductive and deductive coding cycles combined with a content analysis with MAXQDA. A conceptual framework summarises the factors influencing and influenced by mobile work. The results show how mobile work relates to employees' personal environment and organisations' political dimensions. Moreover, mobile work seems to influence several areas. The most critical aspects are isolation and belongingness, team spirit and personal bond, support, and well-being, as reported by employees and managers.

How do MNEs Respond to Political Disruptions in the Host Country?

Session Moderator: **Barclay James**, *St. Mary's U. (San Antonio)*

IM: **Where Angels Fear To Tread: FDI Into Sanctions Locations** →

Author: **Chris Michael Jones**, *Aston U.*

Author: **Nigel Driffield**, *Warwick Business School*

Author: **Saul Estrin**, *LSE*

Author: **HA PHUONG LUONG**, *Aston U.*

We apply the resource-based view (RBV) to explore the determinants of FDI into sanctioned locations. We argue that both greater resources and greater experience will help multinational enterprises (MNEs) to overcome sanctions, a dark side to resource munificence. We also build on institutional theory to examine contextual conditions and find that effective home country institutions deter FDI to sanctioned locations and decrease the magnitude of the moderating effect of firm resources and experience. Moreover, FDI to sanctioned locations will be greater from firms in home countries that are themselves sanctioned because of the resulting specific ownership advantages: such home country advantages also weaken the impact of firm resources and experience. We test these ideas on a large panel dataset and find support for our arguments.

IM: **How Geopolitical Tensions Influence the Innovation of MNC's Foreign Subsidiaries?** →

Author: **Shan Zhu**, *School of management, Zhejiang U.*

Author: **Nuruzzaman Nuruzzaman**, *Alliance Manchester Business School, U. of Manchester*

Author: **Niron Hashai**, *Arison School of Business, The Interdisciplinary Center (IDC), Israel*

This study investigates how inter-state political tensions affect the innovation performance of foreign R&D subsidiaries in the host country, and how this impact varies according to the number of the subsidiary's local same-parent sisters and innovation partners. Using a sample of Chinese listed firms' foreign R&D subsidiaries, we find subsidiaries are less likely to be innovative when there is an increasing political tension between home and host countries. The number of local same-parent sisters of a foreign R&D subsidiary can exacerbate the negative effect of unfriendly political relations on its innovation pursuits, while its local innovation partners can help mitigate such an adverse impact. Overall, our findings shed light on how bilateral political tensions adversely impact MNE subsidiary innovation and demonstrate boundary conditions for such adverse effects.

IM: **Populism's "Interference Capacity" and Investment Project Distress in Developing Countries** →

Author: **Barclay James**, *St. Mary's U. (San Antonio)*

We develop and test theory that suggests that as the capacity for populist governments to interfere in countries' institutions and in investment projects (projects) increases, projects are more likely to be distressed or cancelled. Populist politicians employ rhetoric and policy aimed at disrupting a country's political institutional framework that undergirds private investors' assets. We propose that populists' "interference capacity" to disrupt increases: 1) with more autocratic (less democratic) political regimes, 2) with more time in power, and 3) with government ownership sharing with private investors in projects. Such interference capacity will increase the likelihood of project distress or cancellation. Our analyses of 2748 energy projects across 27 developing countries initiated between 1990-2015 (allowing until 2019 for distress or cancellation to occur) are consistent with this proposition. Projects are more likely to be distressed or cancelled if located in a country with a populist-led government. And this likelihood is heightened under the following conditions: 1) host-country autocracy level increases, 2) populist leaders' time in office increases, and 3) projects share ownership with governments led by populists. Our study outlines the mechanisms through which populist government interference may disrupt project success and documents supporting evidence of such populist "interference capacity".

IM: **Navigating Political System Change in a Transitional Economy**

Author: **Christiaan Roell**, *U. of New South Wales*

Author: **Wilson Ng**, *IDRAC Business School*

Author: **Felix Arndt**, *U. of Guelph*

We examine how multinational enterprises (MNEs) respond to a sudden transition of political systems in the emerging market of Indonesia. We draw on the political science and nonmarket strategy literature to explain how local subsidiary firms of MNEs ('subsidiaries') adapted their nonmarket strategy during the transformation of Indonesia's political landscape from an autocratic regime (1967-1998) to the current democratic and decentralized system. Based on multiple qualitative case studies of Western European subsidiaries, we found that MNEs adapted their business strategies to relate with multiple layers of government in an environment of rampant corruption. Under Suharto, MNEs sought to develop relations with his regime, while also seeking to avoid informal transaction costs. From 1998, MNEs began to conduct survival strategies by partnering with local firms and leveraging local political networks. Later however MNEs adopted proactive, innovative strategies that replaced corrupt activities, for example, by leveraging government-level partnerships and forming long-term relationships with local communities. These findings suggest that MNEs need active agency and proactive nonmarket strategies to address the negative challenges of unstable political environments.

Multinationals, Industry 4.0, and Purpose: Challenges, Constraints, and Hindrances

Participant: **Rui Torres de Oliveira**, *Queensland U. of Technology*

Participant: **Ajai Singh Gaur**, *Rutgers U.*

Participant: **Martie-Louise Verreynne**, *U. of Queensland*

Participant: **Agnes Toth-Peter**, *Queensland U. of Technology*

Participant: **Roland Z. Szabó**, *Széchenyi István U.*

The objective of this panel symposium is to explore and analyse the dynamic interplay between multinational enterprises (MNEs), the evolving landscape of Industry 4.0, and the integration of purpose-driven initiatives, such as sustainability and circular economy principles, within global business strategies. The symposium aims to shed light on the challenges, constraints, and hindrances faced by MNEs as they navigate the complex intersection of Industry 4.0 and purpose-driven practices. This panel will be very interactive with the audience as we want to answer as many questions as possible.

Wisdoms of the World and Global Leadership

Participant: **Eric H. Kessler**, *Pace U.*

Participant: **Diana J. Wong**, *Eastern Michigan U.*

Participant: **Noha Elbassiouny**, *German U. in Cairo*

Participant: **NURIT NAHUM**, *PhD*

Participant: **Afsaneh Nahavandi**, *U. of San Diego*

Participant: **Aloysius Marcus Newenham-Kahindi**, *U. of Victoria*

Our Symposium is based on the premise that language - and especially critical hard-to-translate terms - reveals deep-seeded assumptions, values, and praxis that are often misread outside of its local context. In this sense they can be seen as entranceways into exploring core yet mysterious local perspectives along with the accompanying best practices that guide leaders in navigating the complexities of international business. By combing insights across different language cultures around the globe, these 'wisdoms of the world' offer organizations and their leaders important tools for enlightening understanding, enhancing practice, deepening learning, spanning environments, and making a sustainable positive impact. Here we a) analyze leadership wisdom throughout its varied dimensions - cognition (logic), emotion (aesthetics), integrity (ethics), vision (metaphysics), coordination (social epistemology), and execution (politics) - and b) compare them across the spectrums of six diverse language cultures: Arabic, Chinese, (American) English, Farsi, Hebrew, and Swahili. Implications are explored for enhancing leadership 'literacy' in effectively engaging in and bridging different global contexts.

Managing Innovation in the MNE

Session Moderator: **Ziyi Wang**, *Fudan U.*

IM: **Organisational Structure and Product Innovation: A Cross-Cultural Moderated Mediation Analysis**

Author: **Yian Chen**, *Aalto U. School of Business*
Author: **Carl Fey**, *BI Norwegian Business School*

Organisations with a decentralised structure is generally believed to facilitate product innovation. However, certain mechanistic structural elements also have merits in the process. We argue that the configuration of an innovation-enhancing organisational structure is not a universally applicable model, but rather it would also depend on the cultural context. Building upon Burns and Stalker's (1961) contingency theory of organic/mechanistic structures and using survey data from 356 Chinese, Finnish, and Swedish firms, we examine the underlying moderated mediation mechanisms and contextual conditions in the relationship between decentralisation and product innovation in China and the Nordics with contrasting cultural values on power distance. Our results demonstrate that internal knowledge sharing mediates the relationship between decentralisation and product innovation for firms in the Nordics with a low power distance. Formalisation only moderates the association between decentralisation and internal knowledge sharing for firms in China with a high power distance, such that the positive indirect effect of decentralisation on product innovation via internal knowledge sharing is only significant when the level of formalisation is high. The findings enrich the contingency theory by discussing the mixture of both organic and mechanistic structural characteristics and the different mechanisms for product innovation in a cross-cultural context.

IM: **Internationalization Rhythm and Innovation in Emerging Market Enterprises: Evidence from China**

Author: **Ziyi Wang**, *Fudan U.*
Author: **Xiuyuan Fang**, *Fudan U.*
Author: **Yuanxu Li**, *Fudan U.*

Although most studies argue that the irregular internationalization rhythm has a negative impact on corporate innovation, these studies rarely consider the volatile external environment, sudden existential pressures, and strategic opportunities faced by firms, especially those in emerging markets. Therefore, existing studies do not provide adequate insights into the phenomenon that the internationalization of EMNEs (Emerging-market Multinational Enterprises) has been developing in a "jumping fashion". To address this research gap, we investigate how EMNEs' internationalization rhythms influence their innovation performance, and examine the moderating role of internationalization depth and TMT (top management team) international experience based on Chinese listed companies from 2008 to 2020. The results show that the relationship between internationalization rhythm irregularity and innovation in emerging market enterprises is curvilinear (U-shaped), and this U-shaped relationship is steeper when firms have higher internationalization depth. This study reveals the characteristics and role of EMNEs' internationalization rhythms, which extends previous research on the relationship between internationalization rhythm and corporate innovation.

IM: **Innovation of Pharmaceutical EMNEs: Roles of Absorptive Capacity, Internationalization and Government**

Author: **Ruiyi Luo**, *U. of Nottingham Ningbo China*
Author: **Lei Li**, *U. of Nottingham Ningbo China*
Author: **Martin Lockett**, *Nottingham U. Business School China*

This study examines the relationship between absorptive capacity and innovation performance of emerging market multinational enterprises (EMNEs). We find that absorptive capacity contributes to not only firm innovation in general but also exploitative and exploratory innovation in particular when outward FDI breadth increases. In contrast, when outward FDI depth is invoked, there is no clear impact on the firm innovation in general. In addition, we reveal the positive moderating roles of government subsidies and double-edged effects of government intervention. Our study contributes to the exploitation and exploration literature in the context of EMNEs.

IM: **Dispersed Innovation, Strategy, and Innovativeness**

Author: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*

While previous studies show that the effect of dispersed innovation on firm innovativeness remains unclear, we focus on contingencies that help us understand the mechanisms through which firms manage their innovation activities across locations. We present four findings that explain how dispersed innovation influence firm innovativeness. First, the greater the dispersed innovation, the higher innovativeness the firm performs. Second, the effect of dispersed innovation on firm innovativeness is larger when a corporate-wide offshoring strategy is adopted by the firm. Third, the effect of dispersed innovation on firm innovativeness is larger when the governance mode of captive operations is taken. Fourth, while the benefits of diversity and learning may guide firms to offshore many innovation activities across geographical locations, they are able to gain the most returns from dispersed innovation when they highlight the advantages of orchestration and ownership by adopting both a corporate-wide offshoring strategy and a captive governance mode.

Performance Feedback Effects in International Operations

Session Moderator: **Vanessa C. Hasse**, *Ivey Business School*

IM: **Compared to Whom? Performance Feedback and Foreign Divestment of MNEs**

Author: **Dam Yoo**, *Korea U. Business School*

Author: **Jon Jungbien Moon**, *Korea U.*

Drawing on the behavioral theory of the firm and attribution theory, this study examines how performance feedback influences MNEs' decisions to divest foreign affiliates. Based on foreign divestment deals of U.S. MNEs (2017-2022), we found that MNEs' decisions on foreign divestment strongly depend on the type of aspiration level, which serves as a benchmark in organizational performance assessment. Considering the inherent differences between historical and social aspiration levels, we further examine how performance feedback based on the two referents interacts to jointly determine foreign divestment decisions of MNEs. Overall findings suggest that historical and social performance feedback exerts contrasting influences on foreign divestment in isolation. At the same time, they also complement each other in guiding MNEs' foreign divestment strategies into specific directions.

IM: **Temporality of Institutional Reforms and Corporate Renewal Actions of Firms**

Author: **Manish Popli**, *Indian Institute of Management, Indore*

Author: **Mehul Raithatha**, *Indian Institute of Management, Indore*

This study looks into the strategic renewal actions of emerging market firms (EMFs) as pro-market reforms evolve. We discover that as pace of reforms increase, EMFs engage in path dependence (augmentation of internal capabilities) and path creation (cross-border acquisitions) actions. Furthermore, we hypothesize and find support for the idea that the relationship between the pace of reforms and EMFs' selection of future-focused strategic renewal actions is moderated by their performance feedback. Our findings show that firms with performance above the aspiration level prioritize focus on internal capabilities, whereas firms with performance below the aspiration level prioritize cross-border acquisitions. We found support for our hypotheses using a data set of 55,068 firm-year observations from 37 emerging nations from 1998 to 2019.

IM: **Performance Shortfall and R&D Project Termination: A Contingency Approach**

Author: **Renuka Devi S Karthikeyan**, *Grenoble Ecole de Management*

Research projects are expensive and laden with uncertainties making project terminations more likely. Firms rely on various heuristics and environmental cues beyond the focal project's performance or outcomes for project-related decisions. In this study, we aim to explore the role of performance feedback in project termination decisions, which we hypothesize is a U-shaped relationship. We also consider the contingent effect of firm's expertise with respect to project-level attributes: technology and location, on the main relationship. We postulate that both prior experience in the project's technology and the administrative distance, which captures the institutional difference between firm's headquarters' location and project's location, strengthens the U-shaped relationship. We test our hypotheses on a panel dataset of drug development projects undertaken by 230 pharmaceutical firms from 2008 to 2020. Our study contributes to the understanding the influence of performance feedback theory on project-related decision making.

IM: **Reference Point and Risk Behavior by Co-located MNC Subsidiaries**

Author: **Afshin Hamrabadi**, *U. of Trento*

Author: **Fabio Zona**, *U. of Trento*

While the existing international business (IB) research primarily focuses on the risk behavior of multinational corporations as a whole, this study shifts attention toward subsidiary-level risk behavior. Building on the behavioral theory of the firm (BTOF), it accepts that firm risk stems from performance feedback, as organizations compare their performance with a reference point. Thus, this study proposes a novel reference point for an MNC subsidiary, i.e., a reference point at the country level, suggesting that deviations below or above this target represent a key driver of subsidiary risk behaviors. Furthermore, it examines the moderating effect of subsidiary age, explaining why this effect becomes more pronounced in longstanding subsidiaries compared to younger subsidiaries. An analysis of a large sample of foreign subsidiaries located in the United Kingdom, Germany, Italy, France, and Spain supports the hypotheses. This study enriches the literature on subsidiary risk behavior and extends the behavioral theory of the firm by introducing a novel reference point within the subsidiary context. New promising perspectives for scholars and practitioners are offered and discussed.

IM: **Adapting to Economic Challenges: A Study of Resilience in MNE Subsidiaries**      

Author: **Omid Aliasghar**, *U. of Auckland*
Author: **Kazuhiro Asakawa**, *Keio U.*
Author: **Pedro Mendi**, *U. of Navarra*
Author: **Annique A. Un**, *Northeastern U.*

We analyze the resilience of subsidiaries of foreign multinational enterprises (MNEs) and domestic firms' investment in innovation during economic disruption. We argue that these subsidiaries of foreign MNEs are likely to be more resilient from disruptions than domestic firms in times of crises. This resilience arises from their "foreignness," utilizing their foreign identity and MNE affiliation. The foreign identity enables strategic exploration, allowing these firms to innovate rather than conform to host-country pressures, thereby fostering external resilience. Additionally, their MNE affiliation allows reliance on internal resources, reducing dependence on host-country resources and contributing to internal resilience. Empirical analysis covering 74,131 firm-year observations from 2005-2013 supports these assertions, demonstrating that, despite disruptions, foreign firms are more likely to sustain investment in innovation compared to domestic peers.

IM: **Global City Investment: The Impact of Immigrants and International Experience as Knowledge Sources**  

Author: **Julia Mittermayr**, *Vienna U. of Economics and Business*
Author: **Vera Kunczer**, *Luiss U.*

Foreign investors typically prefer global cities as locations for their foreign direct investments to mitigate liabilities of foreignness (LOF) when investing in a target country. This study posits that firms with access to immigrants from the target country and international experience are better equipped to mitigate these liabilities, making them less dependent on the LOF-reducing benefits of global cities and more inclined to invest outside global cities. Furthermore, we shed light on whether internal knowledge gained through international experience and external migrant knowledge function as complements or substitutes. We test our hypotheses by analyzing 2,591 investments made by MNEs from 20 different OECD home countries in 48 different target countries over a 13-year period from 2003 to 2015. The results demonstrate a positive influence of immigrants and international experience on a firm's likelihood to invest outside global cities. The data further indicate that the effect of immigrants on the probability to invest outside global cities is weaker for internationally experienced firms, suggesting a substitutive dynamic between external migrant knowledge and internal knowledge derived from first-hand experience.

IM: **Exploring Business Network Dynamics When Reshoring** 

Author: **Daniel Pedroletti**, *Uppsala U.*
Author: **Francesco Ciabuschi**, *Uppsala U.*

This paper builds on an explorative case study of a firm reshoring outsourced activities from a host country. We depart from the assumption that reshoring hampers business relationships with suppliers in the host country and, consequently, that the reshoring firm's access to important resources and business opportunities will be restrained. However, our findings show a more complex set of effects at the network level in the host country. In fact, the firm tangible commitment to the host country network reduces, while its intangible commitment increases. We also find a corresponding mixed-impact on the firm's network position, whereby structural embeddedness is weakened by suppliers terminating their relationship with the reshoring firm, while relational embeddedness is conversely expanded in the remaining relationships. This shows that, although the scope of the network is reduced, access to resources in the host country is preserved by mean of fewer but deeper relationships. This study contributes to our understanding of both the network effects of reshoring in the host country and provides more fine-grained elements to the network view of (de-)internationalization.

IM: **A Knowledge-Based View of MNE Support for Inclusive Economic Growth**    

Author: **Vladislav Maksimov**, *U. of North Carolina, Greensboro*
Author: **Can Ouyang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

We examine knowledge-based enablers of MNE solutions for inclusive economic growth. We distinguish between product adaptation and resource sharing practices as different mechanisms for disenfranchised members of society to obtain access to resources and opportunities that enhance their social and economic well-being. The former is aligned with the MNE's short-term profit-maximization motive, while the latter with its long-term success. We focus on managerial diversity and cross-sector connections as knowledge-based factors that increase managerial awareness of socioeconomic issues and strengthen the organizational problem-solving capacity to identify effective solutions. We argue that managerial diversity and cross-sector connections contribute positively to both types of practices, but their effects are more pronounced on product adaptation practices because these are more directly related to the profit-maximization motive of the MNE. Home government social welfare provision affects MNEs' domestic experiences with inclusion practices, and hence the degree to which these can supplement the knowledge needed for international adoption. We argue that home government social welfare provision reduces the need for product adaptation inclusion practices but raises the likelihood for resource sharing practices. We find support for our arguments by analyzing inclusion practices by 760 high-tech MNEs from 48 countries in the period 2005-2016.

The release of ChatGPT at the end of 2022 has sparked unprecedented interest in and applications of generative AI tools in business education. Combining the technology acceptance model and the goal orientation framework, we explored the factors influencing students' perception and application of generative AI tools and their potential consequences in business education. In Study 1 with a sample of 279 business students in a large Master's program, we found that students who perceived generative AI tools like ChatGPT as useful for their learning and easy to use, and those with strong learning goal orientation and strong avoiding performance goal orientations were more likely to use generative AI in coursework. In Study 2, after students had some time to explore and use generative AI as explicitly encouraged by the course instructor, we found that their perceived ease of use increased over time, but their perceived usefulness did not. Using AI tools in coursework resulted in better-perceived skill development and higher self-reported learning but did not reflect higher grades in the course. In Study 3, we interviewed another 30 graduate business students to understand further their perceptions, adoption, and views on the role of the business school and university in this new AI game. We call for business schools to actively engage their faculty and students in conversations about generative AI in learning to make the best use of this inevitable trend.

MED: The Criticality of Organisational Readiness of Business Schools for AI: The Time is Now 

Author: **Catherine Denise Cawley**, *Trinity Business School, Trinity College Dublin*

Author: **Mairead Brady**, *Trinity Business School, Trinity College Dublin*

Business schools, already complex endeavours involving multiple stakeholders and increased competition, are facing further disruption from rapid technology advancements in the artificial intelligence (AI)/machine learning space. We explore how business schools need to adapt to AI through two sections: Understanding the Context of AI in Business Education, and Organisational Readiness for AI in Business Schools. The first section provides a landscape of technology adoption in industry and higher education, and the different perspectives, academic, student, and organisational, that can be taken to better understand AI in this context. In the second section we further examine the organisational perspective and propose the use of organisational readiness frameworks, which are prevalent in industry, to assess the readiness of business schools for AI. We particularly study the socio-technical elements identified in AI readiness literature of People, Process, Technology, and Data. Our paper provides a path forward in the form of a framework to study the readiness of business schools with the practical goal of supporting business school leadership as they engage with new developments around AI, and its implications for the organisation.

MED: In Tandem with ChatGPT-4: How LLM Enhance Entrepreneurship Education and Business Model Innovation  

Author: **Sarah Mueller-Saegebrecht**, *TU Dresden*

Author: **Isabell Lippert**, *TU Dresden*

The dynamic landscape of entrepreneurship education requires continuous innovation in pedagogical approaches. In this sense, the introduction of ChatGPT, a leading artificial intelligence (AI)-based large language model (LLM), represents a transformative shift in digital learning. This case study presents a pioneering exploration of the integration of LLMs into undergraduate entrepreneurship education, with a particular focus on business model (BM) design and business model innovation (BMI). Through a three-day interactive workshop, we explored how LLMs, in particular the third and fourth generation of ChatGPT, can help students develop new business models of well-known companies and transform existing ones. In this case study, we draw on the 'tandem' between university students and LLM that is literally driving the lineage of tomorrow's higher education. We argue that it requires the interaction of both parts - the students and the LLM - to produce valuable and efficient content. In this context, we present criteria for assessing the validity, precision and quality of AI-generated outputs. Based on our observations, we also report on what opportunities and threats arise when using generative AI in education. Finally, we discuss which competencies are crucial for students and teachers in the future when LLMs could be established in entrepreneurship education. Our case study suggests that LLMs indeed help students to prototype business models faster and more accurately. This also allows us to contradict the still widespread opinion that ChatGPT provides too superficial results. Our results have the potential to push entrepreneurship pedagogy to the next level.

MED: The Search for the Golden Ticket: A Value Chain and VRIO Experiential Exercise  

Author: **Tera L. Galloway**, *U. of St. Thomas*

Experiential learning is used throughout management and business courses, and while the benefits of experiential learning are well established, they are less often used when teaching strategic management. Yet, many concepts in strategy, such as the value chain, are often difficult for students to understand. The abstract nature of these topics, coupled with the limited real-life exposure to strategy in general, make these topics particularly difficult for students to understand and apply. The Golden Ticket exercise was designed to help students correctly apply the VRIO framework and conduct a value chain analysis. At the end of the exercise, students are able to see the big picture of the firm's value creating activities, identify the firms' core competencies, and create the value chain for the firm. This exercise can be used in undergraduate and graduate strategy, marketing and management classes, and can be taught face to face or online. Student feedback suggests that they found this exercise engaging, practical and an enlightening way to learn about value chain analysis and core competencies.

Session Type: **Symposium**
Program Session: **1593** | Submission: **10636** | Sponsor(s): **(MH, ENT)**
Scheduled: **Monday, Aug 12 2024 3:00PM - 4:30PM CT (UTC-5)** at **Swissotel Chicago** in **Monte Rosa**

Then & Now: Stewardship Theory

Session Chair: **Sarah Burrows**, *Smith School of Business, Queen's U.*

Session Chair: **Catherine Faherty**, *Dublin City U.*

Distinguished Speaker: **James H. Davis**, *Utah State U.*

Distinguished Speaker: **David Schoorman**, *Purdue U.*

Moderator: **Craig D. Crossley**, *U. of Central Florida*

This is designed to be a fun and interactive session focused on the stories and people behind some of our major management theories. As a relatively young academic discipline, we are fortunate to have many pioneers and second-generation thought leaders that have observed and participated in the evolution of our theories from inception to present day. "Then & Now" is an annual symposium that appeals to new and seasoned scholars from across the academy. This year's session focuses on Stewardship Theory. The symposium will begin with Jim Davis and David Schoorman describing how they became interested in this topic, collaborators/supporters, and how this construct developed. Sarah Burrows and Catherine Faherty will then describe how their recent research on stewardship has evolved from the original body of work, how it has provided inroads for research partnerships with family businesses, and possible future directions. The symposium concludes with the audience sharing their own perspectives and stories related to the ideas and people who have shaped this growing body of research.

Navigating Team Dynamics and Organizational Identification

Session Moderator: **Tingting Lang**, *School of Business, Renmin U. of China*

MOC: **How to Manage the Duality of Multiple Team Membership: The Role of External and Internal Diversity**  

Author: **Tingting Lang**, *School of Business, Renmin U. of China*
Author: **Thomas Arend De Vries**, *U. of Groningen, Faculty of Economics and Business*
Author: **Haoyuan Li**, *U. of International Business and Economics*
Author: **Jason D. Shaw**, *Nanyang Technological U.*

It has long been recognized that multiple team membership is a double-edged sword for teams, but the search for mechanisms and contingencies continues to puzzle researchers. From a social network perspective, our theory posits that accessing heterogeneous external resources through a team's external network ties underlies the benefits of multiple team membership for team performance. In the meanwhile, drawing upon attention and role theories, we suggest that multiple team membership can negatively impact team productivity by diminishing the heterogeneity of team members' external roles. To reconcile these divergent theoretical perspectives on the team consequences of multiple team membership, we introduce an informational perspective. This perspective suggests that teams can strengthen the upsides of multiple team membership and mitigate the associated downsides by adjusting the level of their internal informational diversity. Through this integrated approach, our framework aims to provide theoretical insights into the mechanisms and contingencies determining why and when multiple team membership is beneficial or detrimental for teams.

MOC: **Meso Mindfulness in Teams: The Moderating Roles of Peer Mindfulness and Peer Mindfulness Diversity**  

Author: **Neetu Choudhary**, *U. of Melbourne*
Author: **Carol Gill**, *Melbourne Business School*

We investigate the relationship between an employee and their peers to advance understanding of interpersonal mindfulness dynamics in teams. First, we replicate the relationship between employee mindfulness and emotional exhaustion via surface acting. We then examine whether mindfulness amongst team peers moderates this relationship. Specifically, we propose that having team peers high in mindfulness will strengthen the negative relationship between employee mindfulness and surface acting; we further argue that high team peer mindfulness diversity will weaken the moderating effect of peer mindfulness through a dilution effect in teams. Across two independent studies examining individuals in teams over time, we found support for our theoretical model. This is the first examination of the role of peer mindfulness on individual team members, using a unique meso-level approach. We highlight social identification, social learning, and social and emotional contagion as vehicles for meso effects. Keywords: mindfulness, peer mindfulness, peer mindfulness diversity, surface acting, emotional exhaustion

MOC: **Identification in Temporary Organizations: A Framework of Identification as a Cross-Level Construct** 

Author: **Peter Foreman**, *Illinois State U.*

Identification can be framed and operationalized across levels of social aggregation. In organizations, this takes the form of identification with one's work group, unit or division, and overall organization (Van Knippenberg & Van Schie, 2000). While scholars have examined multi-level identification [MLI] and its effects in the workplace (Ashforth et al, 2008; Riketta & Van Dick, 2005), significant questions and gaps remain. In particular, there is a lack of integrative models that combine multiple levels, research has not examined possible cross-level differences in motives for identification, and scholars have made only limited connections with other organization studies concepts. In this paper, we attempt to address these gaps by developing a conceptual framework of multi-level identification within the unique context of iterative (temporary) organizations—specifically the Olympics. We develop a model of MLI wherein the specific local event and the overarching association act as concurrent targets of identification in a two-dimensional space, leading to four types of identification. We propose different motives, referents, mechanisms, and consequences of identification with the four types, and make connections to other organizational concepts and literatures. We discuss the model's applicability to other types of temporary organizations—and to organizations in general, and we examine the implications of the framework with respect to theory and practice.

MOC: **Courage in the Workplace: Unraveling the Duplicitous Effects of Organizational Identification**

Author: **Philip Holmes**, *Pensacola Christian College, Department of Business*
Author: **Justin Scott**, -
Author: **Matt Oglesby**, *U. of North Alabama*

The construct of courage has proved to offer invigorating discussions for thousands of years; however, courage, as it relates to its influence in the workplace, remains understudied in empirical research. While intuitive assumptions suggest primarily positive associations with courage, some antecedents of social courage also relate to deleterious outcomes. Organizational identification represents one such antecedent. The current manuscript adopts social identity theory (SIT) to hypothesize two mediating mechanisms (i.e. risk openness and psychological entitlement) between organizational identification and workplace social courage, as well as between organizational identification and unethical pro-organizational behaviors (UPB). We also use social learning theory to hypothesize the moderating effects ethical leadership may have on organizational identification's relationship with UPB, through both the direct path and indirectly through psychological entitlement. Our study supports most of the hypothesized relationships, with the exception that risk openness did not mediate the relationship between organizational identification and UPB. The research offers nuanced insights explaining the duplicitous effects organizational identification may prompt. We suggest that while fostering organizational identification may help facilitate conditions where individuals engage in the appropriate risks associated with social courage, organizational leaders must adopt ethical principles to help mitigate the tendency for highly identified individuals to develop psychological entitlement and perform unethical behaviors on behalf of themselves and/or the organization. We provide valuable guidance for organizational leaders seeking to cultivate a courageous yet ethical workplace culture and offer suggestions researchers might use to further investigate the construct of social courage.

Participant: **Shaocong Ma**, -
Participant: **Martha Jeong**, *Hong Kong U. of Science and Technology*
Presenter: **Bushra Sarah Guenoun**, *Harvard Business School*

In this symposium, we consider the beliefs and behaviors that impact how leaders provide development, ultimately aiming to help leaders create more developmental organizations. In particular, we advance research on developing development by examining how these core beliefs and behaviors underlie the following questions: 1) What are the different forms of developmental activities that enable individuals to learn and grow? 2) Who can provide sources of development?, and 3) How is development provided?). The symposium program brings together research on feedback, advice, and coaching, and considers activities ranging from informal interactions (e.g., seeking feedback or advice) to formalized processes (e.g., annual feedback processes and structured coaching conversations). By bringing together these papers, we enable our field to think more holistically about the wide range of ways people receive development in organizational life with an eye towards improving its outcomes.

 Presenter: **Chad Benjamin Murphy**, *Oregon State U.*
 Presenter: **James Hughey**, *U. of Utah, David Eccles School of Business*

Amidst the transition to a post-industrial economy and the rise of nonstandard work arrangements, researchers have been encouraged to follow the flow of work—and workers—from organizations toward more modern (and increasingly prominent) forms of organizing like occupations. Questions abound, however, with respect to how identity work—the forming, repairing, maintaining, strengthening, and/or revising of one's self-concept—is conducted outside of traditional organizational structures and, further, the extent to which existing theories accurately describe the full breadth of identity work in such contexts. This symposium aims to highlight ongoing research on identity work in the new world of work—i.e., occupations and their occupants—with a specific emphasis on comparing and contrasting identity phenomena in occupations with existing theory. To advance our thinking on this important topic, we bring together a diversity of research (and researchers) to help explicate this increasingly prevalent phenomenon.

Exploring the Intersection of Spirituality, Religion and Business

Session Moderator: **Tianyuan Yu**, *Mount Saint Vincent U.*

This session explores the intersection of spirituality, religion, and business through various philosophical, empirical, and applied lenses. It brings together diverse perspectives to foster a rich dialogue on the ways in which spirituality and religion can contribute to more meaningful, ethical, and socially responsible business practices.

MSR: Towards a Zen-Informed Spiritual Research Paradigm: Philosophy, Methodology, and Evaluation Criteria

Author: **Tianyuan Yu**, *Mount Saint Vincent U.*

This article explicates a Zen-informed spiritual research paradigm based on an Eastern Buddhist worldview that fundamentally transcends the Western mainstream assumptions. Beginning with a proposed definition of “spiritual research”, this article systematically discusses the features of a Zen-informed spiritual research paradigm in terms of ontology, epistemology, axiology, and methodology. The author uses a field study (Yu, 2021; Yu & Mills, 2023; Yu, 2024) to showcase the application of Zen methodologies with respect to research design, data sampling, data collection, data analysis, theorizing, and report writing. The author also proposes a list of criteria for evaluating spiritual research along with applicable methodological strategies. This research potentially opens a new field in the MSR domain, namely, Zen-informed spiritual research.

MSR: Exploring the Role of Religious Rituals in Family Firm Identity Work: An Ethnographic Study

Author: **Mustafa Kavaz**, *Sheffield U. Management School*
Author: **Tom Buckley**, *Senior Lecturer in International Business*
Author: **Alex Wright**, *Audencia Business School*

This study explores the constitutive role of religious rituals in identity work within family firms, focusing on a faith-led family business in Anatolia, Turkey. Employing an ethnographic approach, we examine how firms integrate religious rituals into their daily operations, shaping identity and culture. Our investigation reveals three key dynamics: fostering unity and egalitarianism, weaving faith into business practices, and cultivating communal bonds and cultural integration. These dynamics underscore the transformative role of religious rituals in creating liminal spaces for identity work, where traditional structures and roles are temporarily dissolved, facilitating alternate understandings and identities. This research makes three significant contributions to the literature on family firms and identity work. Firstly, it delineates how religious rituals inherently constitute identity work, emphasizing their dynamic role in fostering unity, weaving faith into business practice, and cultivating communal bonds. Secondly, this research broadens the discourse on identity work in family firms by underscoring an intrinsic role for religious rituals. Lastly, it extends knowledge on religious values in family firms, focusing on how rituals embed preferred values within a business's cultural and operational fabric, thereby enriching our understanding of the role of rituals in shaping the character and ethos of family firms.

MSR: The Morality of Markets: Buddhism, Emptiness, and a Process Philosophy Theory of Markets

Author: **Chris Meyer**, *Baruch College*
Author: **Sudhir Nair**, *U. of Victoria*
Author: **David Gordon Cohen**, *Skidmore College*

Markets have become identified with a set of attributions based on political perspectives. Many progressives call for public policy to trump markets just as many conservatives call for them to be used without intervention. One side views them with suspicion and the other as the answer to everything. What is the solution to this conundrum? Are markets moral or immoral? Buddhist philosophical tenets and Process Philosophy offer an alternative ontological approach to markets that sets aside these reifications as misguided. They argue that markets are empty of any core, fixed, essence. These concepts suggest we study how markets operate and what they do, which is aggregate collective knowledge and disseminate information. This theoretical perspective uses markets' causal relations to build a useful antidote to common socio-political assertions about markets and market-based economies. In an age of increasing social and political polarization, this can help replace partisan arguments with guidance as to how we might use and regulate markets.

MSR: Fair Wage: An Analysis of Executive Compensation Through the Lens of Catholic Social Teaching

Author: **Brian Michael Saxton**, *John Carroll U.*
Author: **Mariah Webinger**, *John Carroll U.*
Author: **James Martin**, -

The controversy surrounding executive compensation has received attention in the popular press and in academic literature. We explore executive compensation through the lens of Catholic Social Teaching (CST). First, we discuss fairness of executive compensation through an economic perspective and a Corporate Social Responsibility (CSR) perspective. Next we outline the basic principles of CST and compare and contrast them with CSR. We identify human dignity, in contrast to profit maximization, to be the differentiator between the two. Next, we use CST to develop a model for measuring excessive executive compensation. We then conduct a cluster analysis of our measure of excessive compensation with another CST variable, investment in employees. Lastly, we examine differences in the clusters regarding environmental performance. In the full sample, we find that firms that pay their executives more excessively invest less in employees and environmental performance to be significantly and positively correlated with excessive executive compensation. This suggests that firms either pay their executives excessively for better environmental performance or use “greenwashing” to distract society from the justice issues of executive compensation. Next, we break the sample into clusters based on excessive executive compensation and investment in employees. Within the cluster that most closely aligns with CST, a greater investment in employees suggests a greater environmental performance; solidarity among people is positively and significantly related to solidarity with the earth. However, in cluster one there is no relationship and in cluster two environmental performance is related to higher excessive executive compensation which is also related to lower investment in employees.

Team Neurophysiological Synchrony: Evolutionary Foundations of Team Dynamics

Organizer: **Chen Erez**, *Bar-Ilan U.*
Discussant: **Yair Berson**, *McMaster U.*
Presenter: **Florence Jauvin**, *U. du Québec à Montréal*
Presenter: **Alon Burns**, *Bar Ilan U., Department of Psychology, Israel*
Presenter: **Chen Erez**, *Bar-Ilan U.*
Presenter: **Imogen Weigall**, *U. of South Australia*

There are moments in life when we feel as one. When we share a laugh, high-five after a win, clap in unison with a huge crowd in a concert, dance, and even when watching an emotional moment on TV. These are times we feel together. Times we are in sync. Such moments and feelings have sprung the curiosity of academics and gave rise to the research field of interpersonal synchrony - the temporal coupling of relationship-relevant events between partners. Interpersonal synchrony is essential for bonding since it functions as an evolutionary 'social glue' - a natural, organizing mechanism, that coordinates the ongoing exchanges of sensory, hormonal, and physiological stimuli. In its infancy, synchrony research focused on dyadic relationships - parent-child, romantic couples, etc. Understandably, teams and organizational researchers have gradually taken an interest in studying the function and antecedents of neurophysiological synchrony in teams in a variety of contexts and with many issues in mind (e.g., team dynamics and outcomes). In this symposium, a diverse group of scholars would share insight from cutting-edge, large-scale scientific endeavors on teams, in and out of the lab. We will discuss synchrony in multiple physiological modalities, such as heart rate and specific brain activity patterns, and what each could add to our understating of team processes while focusing on issues such as team dynamics, leadership, composition, emotion regulation, and performance. Thus, we hope to contribute both to our current understanding of teams, as well as share hands-on experience in how team scholars and professionals could use similar practices in their respective fields and environments.

Learning to Fly (Creatively)

Session Moderator: **Fu Yang**, *Southwestern U. of Finance and Economics*

OB: **Hindrance or Impetus? The Divergent Effects of Procrastination Today on Next-Day Creativity**

Author: **Fu Yang**, *Southwestern U. of Finance and Economics*
Author: **Zhou Zihan**, *Southwestern U. of Finance and Economics*
Author: **Deping Wen**, *Southwestern U. of Finance and Economics*
Author: **Mengying Xie**, *Southwestern U. of Finance and Economics*

Previous research has accumulated fruitful literature examining the deleterious effects of procrastination. However, looking at research on procrastination and creativity, not all types of procrastination have equal effects. Drawing on the control theory perspective, we supplement this line of research by distinguishing the different effects of passive and intentional procrastination on creativity. In specific, this research proposes that daily passive procrastination hinders creativity the next day via rumination at night, while intentional procrastination on days is positively related to next-day creativity by facilitating reflexivity at night. Furthermore, role breadth self-efficacy, as a key individual belief, is designated as an important boundary condition of the above relationships, wherein the effects of passive procrastination are mitigated, but the effects of intentional procrastination are accentuated as role breadth self-efficacy increases. Using a time-lagged experience sampling study of 145 employees' 1,003 daily surveys, the results from multilevel path analysis support our hypotheses. These findings bring a richer understanding of procrastination consequences and throw light on the importance of personal beliefs to ease the burdens and ensure the benefits.

OB: **Influencing Factors and Trigger Path Mechanisms of Creative Deviance**

Author: **Pengcheng Zhang**, *Huazhong U. of Science and Technology*
Author: **Wang Yunru**, *Huazhong U. of Science and Technology*
Author: **Xuhong Zhao**, *Huazhong U. of Science and Technology*

The importance of employee innovation to enterprises is self-evident. Compared with formal innovation, creative deviance that is not constrained by the organization may be the norm of innovation in enterprises. However, prior research lacks a systematic exploration of how to energize employees' creative deviance. From the perspective of MOA theory, this study extracts six antecedent conditions of creative deviance at the levels of motivation, ability, and opportunity by using the rooted theory approach and fuzzy-set qualitative comparative analysis (fsQCA), and explores the multiple triggering mechanisms of employees' creative deviance. Taking employees of high-tech enterprises as a sample, we found three types of triggering paths for employees' creative deviance: (a) Ability-Driven, (b) Creativity-driven norm-breaking motives-Job autonomy Substitution (i.e.CNM-JA Substitution), and (c) Structural strain-Resource bricolage Combination (i.e.SS-RB Combination). The results of the study not only deepen and broaden the conditions for the formation of individual creative deviance, but also provide a reference for enterprises to adopt targeted innovation strategies.

OB: **Does Cyberloafing Always Impair Creative Performance? A Knowledge-Based Perspective**

Author: **Jingni Dong**, *School of Business, Renmin U. of China*
Author: **Wenxin Du**, *Renmin Business School Renmin U. of China*

The use of the Internet as a critical component of business activities has led to increasing interest in the impact of employee cyberloafing. While much of the extant research has focused on the negative effects of cyberloafing, we advance the literature by examining how and when cyberloafing may facilitate employee creative performance. In taking a knowledge-based perspective, we specifically focus on browsing-related cyberloafing and propose that it can enhance creative performance due to its positive relationship with knowledge acquisition. We also hypothesize that job demands serves as a key boundary condition to this pathway such that when job demands is lower (rather than higher), the positive relationship between browsing-related cyberloafing and creative performance via knowledge acquisition is strengthened. Our results using multi-level path analysis from a two-wave field study involving 203 employees and their 35 direct supervisors provide support for our hypothesized relationships. We discuss the implications to the cyberloafing literature and the managerial practice.

OB: **Employee Deep Learning and Surface Learning in the Workplace**

Author: **Changjun Li**, *Wuhan U., Economics and Management School*
Author: **Kunjing Li**, *School of Innovation and Entrepreneurship, Hubei U. of Economics*
Author: **Xu Huang**, *Hong Kong Baptist U.*
Author: **Jingyu Dong**, *Xi'an Jiaotong U.*

Learning is crucial for employees' self-improvement and work success. While some forms of learning are effective in promoting expected results, certain types of learning might be inefficient and less helpful, draining organizational resources and hindering performance improvement. In three studies, we propose and differentiate two workplace learning strategies—deep learning and surface learning that employees may adopt in job-related learning. We theorize that deep learning focuses on truly comprehending knowledge, whereas surface learning merely focuses on memorizing and reproducing knowledge. Given such difference, we hypothesize that only deep learning, instead of surface learning, is effective in enhancing employees' cognitive flexibility and subsequent creativity, especially when completing complex tasks. We also propose that deep learning tend to be triggered by learning-related job demands, while surface learning is likely to be induced by performing-related job demands. In Study 1, using four independent samples with qualitative and quantitative data, we developed the conceptualizations and measures of deep and surface learning. In Study 2, we examined the consequences and antecedents of deep and surface learning in an on-site training context. Results showed that compared to surface learning, deep learning had a stronger positive effect on employees' cognitive flexibility and subsequent creativity. Learning demands were positively associated with deep learning, whereas performing demands were positively associated with surface learning. We replicated these findings in Study 3, a three-wave, multi-source survey conducted in a general field context. Additionally, Study 3 also found that the advantages of deep learning became more salient in complex (vs. simple) tasks.

OB: The Causes and Consequences of Deviant Side Hustles: A Three Sample Exploration    

Author: **Jarrold Haar**, *Massey U. Business School*
Author: **David Brougham**, *Massey U. Palmerston North*

The idea of a 'side hustle' has received growing interest due to the global cost-of-living crisis. This study explores deviant side hustles (DSH) when employees aim to earn additional income from an additional job at the same time as their main job. We conduct two studies to extend our understanding on side hustles relating to doing two jobs simultaneously. Study 1 has two samples (n=769 employees and n=268 managers) and we explore the antecedents (e.g., working-from-home) of a DSH. We find shared and distinct drivers for each sample, and we find a DSH occurs at low levels, although managers have significantly higher levels than employees. Study 2 explores behavioral outcomes of engaging in a DSH using time-lagged data on 596 workers. We find largely detrimental effects – higher turnover intentions and counterproductive work behaviors – but also a beneficial effect towards innovation behaviors. The overall conclusion is that DSH appear real and occur infrequently, but when they do occur, they are largely detrimental for employees and their employers.

OB: The Sun is Bright, but too Bright to Stare at: Employee Approach and Avoidance Networking Behaviors

Author: **Tingxi Wang**, *Xi'an Jiaotong-Liverpool U.*
Author: **Qi Wang**, -
Author: **Yue Xu**, *Xi'an Jiaotong-Liverpool U.*

There are inconsistent conclusions on the effectiveness of leader sacrifice. Revisiting the two faces of leader sacrifice (i.e., benefiting the collective while being personally risky), we propose that leader sacrifice is a double-edged sword. Drawing on the fundamental approach and avoidance behavioral system, we explore how and when leader sacrifice shapes employee networking behaviors. Specifically, leader sacrifice's bright side of benefiting the collective can facilitate employee elevation, further promoting employee approach behaviors of leader-directed citizenship behavior. On the other hand, the leader sacrifice's dark side of being personally risky can elicit employee self-interest concern, resulting in employee avoidance behaviors of alienation toward the leader. Further, employee collectivism will influence when leader sacrifice's bright or dark sides exhibit. Results from a time-lagged field study with 241 employees and their paired leaders in China supported our hypothetical model. Theoretical and practical implications are discussed.

OB: Effect of Family Motivation on Time Theft from An Impression Management Perspective

Author: **Dandan Li**, *Shanghai International Studies U.*
Author: **Liang Meng**, *Shanghai International Studies U.*
Author: **Biyun Hu**, *Shanghai International Studies U.*

Employee time theft, a prevalent unethical work behavior, can incur substantial costs for organizations, thus garnering increased attention from both scholars and practitioners. Family motivation, a primary driver for many employees, may exhibit a dual relationship with time theft, potentially increasing such behavior due to individuals' self-interest-seeking tendencies while also decreasing it due to concerns about job security. Thus, understanding the intricate relationship between family motivation and time theft is of paramount importance. Drawing from an impression management perspective, we posit that employees with strong family motivation are inclined to reduce time theft as a means to cultivate a positive professional image. This tendency is particularly pronounced in workplaces where time theft norms are strong. Through a three-wave online survey and a scenario-based experiment, our findings support that employees with higher family motivation are more likely to manage the impressions others form of them, leading to fewer identifiable time theft behaviors, including taking unsanctioned breaks, falsifying work hours, and excessive socialization, particularly when they work in organizations where strong time theft norms are in place.

OB: Do They See Eye to Eye? Supervisor and Employee Perspectives of Unethical Pro-Organization Behavior  

Author: **Soojin Lee**, *Korea U. at Sejong*
Author: **Ji Hoon Lee**, *Southern Illinois U.*
Author: **Gukdo Byun**, *Chungbuk National U. South Korea*

Drawing on the halo effect, this study examines how employees' unethical pro-organizational behavior (UPB) is perceived by their supervisors and how it affects overall evaluation of employees. First, we propose that an employee's UPB may be seen as either UPB or organizational citizenship behavior (OCB) depending on the supervisor's perspective. Second, we suggest that the employee's task performance serves as a boundary condition for whether the supervisors perceive the employee's UPB as UPB or OCB. Third, we contend that the overall evaluation of the employee differs depending on whether the supervisors perceive the employee's UPB to be UPB or OCB. A total of 280 supervisor-employee pairs were analyzed to test our hypotheses. Our findings suggest that supervisors see an employee's UPB as either UPB or OCB, and the intensity of this perception is moderated by the employee's task performance. Specifically, a supervisor perceives an employee's UPB to be lower when the employee's task performance is high, regardless of whether the employee's UPB was high or low. Additionally, we found that supervisors perceive an employee's UPB more as OCB when the employee's task performance is high rather than low. Furthermore, our findings demonstrate that the supervisor's perception of an employee's UPB—whether it be UPB or OCB—impacts the overall evaluation of the employee. Lastly, theoretical and practical implications are discussed.

Nature, Nurture, and Emotions

Session Moderator: **Kimberly K. Merriman**, *U. of Massachusetts, Lowell*

OB: **Nature at Work: Unraveling the Psychological Valuation of Biophilic Work Environments** 

Author: **Kimberly K. Merriman**, *U. of Massachusetts, Lowell*
Author: **Nabi Ebrahimi**, *UMass Lowell Manning School of Business*
Author: **Sarah Kostanski**, *PhD Student at UMass Lowell*

Organizations increasingly design workplaces to incorporate biophilic elements – i.e., elements of nature. Whereas extant research follows the evolutionary foundation of biophilic theory to emphasize the effect of nature on workers, this study extends inquiry to the sensemaking pathways through which individuals ascribe value to biophilic work environments. Drawing on hedonic valuation and affective events theory, we delineate a preference and “willingness to pay” for nature at work via a direct path of anticipated hedonic utility and an indirect path of affective spillover and attributions towards the employing organization. We triangulate support for this model through national survey data (Study 1), a between-person experiment (Study 2), and a within-person experiment combined with qualitative data (Study 3). These findings contribute an interpretivist perspective to biophilic theory and inform understanding of subjectively perceived physical work environments and non-pecuniary workplace benefits, particularly in relation to biophilic design.

OB: **Examining Stressors' Impact on Occupational Attitudes: A Psychological Resource Framework Study**  

Author: **Hsin-Hung Chen**, *Feng Chia U.*
Author: **Julia Anna Przybylska**, *College of Management, Yuan Ze U.*
Author: **Ching-Fang Wei**, *ORGANIZATIONAL BEHAVIOR*
Author: **Khine Zar Lwin**, *College of Management, Yuan Ze U.*

This investigation extends the theoretical foundations of the Conservation of Resources (COR) framework by scrutinizing the impact of challenge and hindrance stressors on employees' work engagement and meaningful work. The study delves into the underlying mechanisms and contextual nuances of these associations, elucidating the roles of ego depletion and psychological capital as potential mediators, and social support as a moderator. Employing structural equation modeling, the research administers 238 questionnaires in a two-stage data collection process, encompassing both single and multiple job holders. The findings underscore the pivotal role of both internal and external resources in mitigating the effects of stressors, ultimately fostering positive working attitudes among employees. This investigation provides actionable insights for managers and organizations, facilitating a nuanced understanding and effective management of the intricate impacts of stressors on employee engagement and meaningful work.

OB: **Beyond Happiness: Toward a Resource-Based Understanding of Emotional Preferences**  

Author: **Florence Bernays**, *U. of Zurich*
Author: **Lauren Christine Howe**, *U. of Zurich*
Author: **Jochen I. Menges**, *U. of Zurich*

We introduce emotional preferences to management research, capturing the specific emotional states people want to feel at work. Integrating control theory with a resource-based perspective, we propose that emotional preferences reflect the ideal states that employees pursue when regulating their emotions at work and that the degree to which employees can experience their emotional preferences at work – what we call emotional fit – predicts how depleted employees become in the short (daily) and longer-term (over weeks). Specifically, we argue that daily emotional fit predicts task performance in the short term and that accumulated emotional fit predicts job satisfaction and emotional exhaustion in the long term. We further outline why these long-term effects of accumulated emotional fit depend on how consistently emotional preferences are experienced over time. Data from an experience sampling study generally supports our hypotheses and shows that the effect of emotional fit is different from happiness and general positive affect. Together, our findings demonstrate the importance of considering individual preference in theories of positive emotions and in doing so, spark new lines of inquiry to examine the nomological network of emotional preferences in management and beyond.

OB: **Differential Impacts of Binary Work Stressors on Work Procrastination**

Author: **Jiajing Wang**, *School of Management, Harbin Institute of Technology*
Author: **Huimin Luo**, *School of Management, Harbin Institute of Technology*
Author: **Ali Hasan Mumtaz**, *Harbin Institute of Technology*
Author: **Li Zhang**, *Harbin Institute of Technology*

The high costs of work procrastination underscore the necessity of understanding this phenomenon. Drawing from the emotional events theory and the regulatory focus theory, this paper adopts an emotional-based perspective to suggest differential effects of binary work stressors on work procrastination, mediated by two forms of emotions (work attentiveness and emotional exhaustion) and moderated by individual regulatory focus. A two-wave survey study tests the proposed model; challenge stressors impede employees from engaging in work procrastination through increased work attentiveness, especially among those with a high promotion regulatory focus. Hindrance stressors prompt work procrastination through increased emotional exhaustion, especially among employees with a high prevention regulatory focus. These findings have notable practical and theoretical implications.

Are You Talking to Me? Communication at Work

Session Moderator: **Lan Wang**, *Peking U.*

OB: **A Digital Heart in the Gig Economy: How Algorithmic Norms Influence Doctors' Compassion Expression**   

Author: **Lan Wang**, *Peking U.*

Author: **Xiao-Ping Chen**, *U. of Washington*

Author: **Chen Chen**, *The Chinese U. of Hong Kong, Shenzhen*

Existing research has extensively examined injunctive and descriptive norms in traditional work settings. However, little is known about how gig workers respond to norms shaped by algorithms. We conceptualize “algorithmic norm,” defined as people’s perception of behavioral patterns shaped explicitly or implicitly by the logic embedded in algorithm(s) adopted by digital platforms. Using a dataset of 1,470 doctors and 225,766 responses collected over 472 days from a digital health platform in China, along with six vignette-based experiments involving 1,164 doctors, we investigate how and why the algorithmic norm supersedes descriptive and injunctive norms to impact web doctors’ compassion expression. Drawing on the focus theory of normative conduct, we predict that prior to algorithm adoption, web doctors conform to the descriptive norm to seek social approval from peers. However, post-algorithm implementation, their focus gradually shifts towards the algorithmic norm, motivated by a desire for system approval. Results across all studies support these predictions. Additionally, we find the enduring independent influence of injunctive norms in shaping individual online behavior. Our findings thus extend the focus theory into a bi-focal framework. This research underscores the significance of theorizing and examining the algorithmic norm as a key driver of worker behavior in the gig economy.

OB: **The Backlash of Email Punctuation for Women: Warmth and Discriminatory Behavioral Intentions**  

Author: **Jaelyn Ann Margolis**, *Pepperdine U.*

Author: **Jennifer Franczak**, *Pepperdine U.*

Research has shown that the behaviors of men and women are often interpreted differently in the workplace. However, the existing literature has largely focused on the gendered implications of face-to-face interactions, with less attention being placed on the gendered implications of computer-mediated communication. This study aims to better understand how (un)friendly computer-mediated communication can be beneficial or costly for employees. Adopting parallel-constraint-satisfaction theory (PCST), which holds that neither a stereotype nor observed behavior can fully explain impression formation alone, the current study posits that friendly communication in the form of email exclamation mark usage (i.e., the behavior) will ultimately be interpreted differently for men and women (i.e., the stereotype). Building upon the stereotypical expectation of women to be more communal than men, it is predicted that women who adhere to the norm of friendliness via their exclamation usage in emails are perceived as warm and encounter fewer discriminatory behavioral intentions. However, women who buck this norm and do not use exclamation marks face backlash in the form of increased discriminatory behavioral intentions as a result of perceived lowered levels of warmth. It is predicted that men’s exclamation usage does not have as large of an impact on recipient discrimination assessments. Results across two samples, an experimental manipulation and an analysis of actual emails received, provide support for the proposed model.

OB: **Local and Global Status Concerns Independently Predict Jargon Use**

Author: **Zachariah Brown**, *HKUST Business School*

When do academicians utilize circumlocutions and sesquipedalian pleonasms to elucidate discoveries and promulgate pedagogical proclamations? That is, when do scientists use jargon to describe their research? We argue that a speaker’s social goals, above and beyond their communicative ones, influence their language use. The current research explores the use of one form of language—jargon—to symbolically signal a speaker’s social standing. Existing theories in sociology, economics, and linguistics, which suggest that higher-status and embedded individuals within professional networks use more jargon than lower-status and newer members. In contrast, we propose that low status, both global (e.g., organizational status within an industry) and local (e.g., individual status within a team), increase jargon use in the hopes of securing higher status from audiences. To test our hypotheses, we constructed a novel dataset using seven years of academic poster titles presented at the largest annual personality and social psychology conference (N = 8,239). As public presentations, posters represent a highly evaluative context where people hope to secure respect from an audience. Analyses revealed that both global and local status concerns independently predicted jargon use in poster titles. For global status, the status of the authors’ universities predicted jargon use; authors from lower-status schools included more jargon in their poster titles. For local status, first authors with a co-author from a higher-status university included more jargon in their titles. These results suggest that individuals use jargon to secure status, regardless of whether the source of their status concerns are global or local.

OB: **Supervisor Positive Gossip and Employee Receivers: The Moderation of Performance Goal Orientation** 

Author: **Fangliang Zhang**, *Guangxi U.*

Author: **Xiaoyu Wang**, *Guangxi U.*

Author: **Wanwan Huo**, *School of Business, Renmin U. of China*

Author: **Yanfang Xu**, *Renmin U. of China*

Although research on supervisor gossip has taken a balanced view to examine its functions and dysfunctions for employee receivers, there is notable gap in the exploration of supervisor positive gossip compared to negative gossip. By integrating social comparison theory and goal orientation theory, we contend that the influences of supervisor positive gossip on employee receivers’ self-efficacy and job performance depend on the level of receivers’ performance goal orientation (PGO). Specifically, we propose a negative effect of supervisor positive gossip on receivers’ self-efficacy for high-PGO receivers, and a positive effect for low-PGO receivers. Furthermore, we argue that receivers’ self-efficacy mediates the relationship between supervisor positive gossip and their job performance. Empirical findings from dyadic data collected from 161 supervisors and 556 employees in a Chinese company provides support for our hypotheses. This study contributes to the nuanced understanding of the dual nature of supervisor positive gossip, and deepens the integration of goal orientation theory into the gossip literature.

Taking Control: Self-Regulation Processes at Work

Session Moderator: **Jie Guo**, *U. of North Georgia*

OB: The Opposite of Procrastination? Conceptualization and Measurement of Workplace Precrastination   

Author: **Jie Guo**, *U. of North Georgia*

Author: **Inchul Cho**, *U. of North Georgia*

Author: **Sushil Nifadkar**, *U. of Nebraska, Lincoln*

Author: **Rao Fu**, *U. of Wisconsin at Madison*

Precrastination is the phenomenon wherein individuals exhibit a propensity to rush task-related activities and complete them as soon as possible. Studies have demonstrated that precrastination is a common phenomenon in several domains; due to its widespread use in everyday life (e.g., answering emails quickly, finishing work rapidly), precrastination has received significant media and scholarly attention. However, despite growing interest in the topic, no psychometrically sound measure exists to capture precrastination, which impedes progress in precrastination research in organizations. This is important, as some scholars view precrastination as conceptually and empirically opposite to the more commonly known construct of procrastination. In this study, we develop and validate a measure of workplace precrastination for use in future research. Our findings suggest that precrastination is distinct from procrastination and that it contributes unique variance to several organizationally relevant behavioral and attitudinal constructs.

OB: A Cross-National Meta-Analytic Investigation of Antecedents and Consequences of Regulatory Focus  

Author: **Yan Tu**, *Central China Normal U.*

Author: **Lixin Jiang**, *U. of Auckland*

Author: **Guanyu Zhang**, *U. of Auckland*

Regulatory focus theory (Higgins, 1997) has attracted increasing attention in management and organizational behavior research. Building on and expanding upon the current application of regulatory focus theory, we develop a theory-driven nomological network of regulatory focus to comprehensively understand its predictors and outcomes and to unravel the mechanisms and boundary conditions for its implications. Specifically, our meta-analysis aims to: (a) summarize demographic, dispositional, and contextual antecedents and various outcomes of regulatory focus, (b) investigate the processes (i.e., work engagement and emotional exhaustion) underlying regulatory focus effects, and (c) explore theoretical (i.e., cultural individualism-collectivism) and methodological moderators (i.e., regulatory focus types and behavioral rating sources) for regulatory focus implications. Based on 213 articles with 250 samples and 70,673 participants from 30 countries/regions, we found that individual dispositions and contextual factors of leadership and job characteristics were meaningful predictors of regulatory focus. Promotion focus influenced distal attitudinal and behavioral outcomes (except task performance) via both work engagement and emotional exhaustion, whereas prevention focus affected distal work outcomes via work engagement but not via emotional exhaustion. Additionally, the fit between prevention focus and national collectivist cultures enhanced work engagement and reduced emotional exhaustion. Common method bias inflated the relationships between promotion focus and work behaviors. Our findings have important theoretical and practical implications.

OB: Development and Validation of a Work Regulatory Mode Scale

Author: **WEICHENG LU**, *Peking U., School of Psychological and Cognitive Sciences*

Author: **Guiquan Li**, *Peking U., School of Psychological and Cognitive Sciences*

Author: **Haixin Liu**, *Beijing Jiaotong U.*

Regulatory Mode Theory articulates two core components of self-regulation: locomotion, which focuses on the aspect of movement implementation towards achieving goals, and assessment, which involves critical deliberation and comparison of alternatives. While the theory inherently posits both chronic and situational aspects of these modes, empirical research has predominantly concentrated on the chronic component. This skew in focus is largely due to the lack of a reliable measure for the situational aspect, resulting in a critical gap in the theory's application and understanding, particularly in dynamic settings such as the workplace. Addressing this crucial shortfall, we introduce the development and validation of a Work Regulatory Mode Scale, explicitly designed to assess the situational component of regulatory modes. This research is pivotal as it not only provides a much-needed empirical tool to measure situational regulatory modes at the workplace, but also aligns theoretical postulations with practical research applications, enhancing the comprehensiveness of Regulatory Mode Theory.

OB: Proactive or Withdrawal? When and How Digital Learning Demands Influences Employee Behavior 

Author: **Jie Liu**, *School of Economics and Management, Beijing U. of Posts and Telecommunic*

Author: **Hui Chen**, *Beijing U. of Posts and Telecommunications*

Author: **Xiao-Hua Wang**, *Beijing Normal U.*

Author: **Xin-Qian Ding**, *Beijing U. of Posts and Telecommunications*

Digital learning demands refers to the requirement for employees to acquire knowledge and skills related to digital technologies and to adapt to new work methods and processes. Drawing on the conservation of resources theory, this study aims to provide a nuanced understanding of the impact of digital learning demands on employee psychological states and behaviors. We propose that digital learning demands can either lead to employee proactive behavior by enhanced energy or result in withdrawal behavior through increased ego depletion, with digital transformational leadership serving as a crucial boundary condition that determines whether digital learning demands may lead to positive vs. negative employee outcomes. We tested our conceptual model using three-wave multi-source survey data collected from 425 employees and 55 team leaders across various private enterprises in China. The results showed that when digital transformational leadership is high, digital learning demands has a positive indirect effect on proactive behavior through energy. Conversely, when digital transformational leadership is low, digital learning demands exerts a positive indirect impact on withdrawal behavior through ego depletion. Theoretical contributions and practical implications of the findings are discussed.

The Good and Bad of Leadership

Session Moderator: **Hai Viet Nguyen**, *National Sun-Yat Sen U.*

OB: Leader-Member Fit on Follower Perceptions of Authoritarian Leadership and Self-Efficacy

Author: **Hai Viet Nguyen**, *National Sun-Yat Sen U.*

Author: **Hao-Chieh Lin**, *National Sun Yat-Sen U.*

Effective management requires adaptable behaviors and leadership styles tailored to staff needs and circumstances. However, research often isolates individual leadership styles, overlooking their interaction and the intricate dynamics between leaders and followers. Leaders exhibit behavior fluctuations daily or based on individual followers, warranting exploration into how and when they adapt styles to grasp nuanced leadership dynamics. Drawing on complementary fit theory and ambidextrous leadership theory, we propose that the degree of fit between leader transformational leadership and follower proactive personality will determine his/her control toward the follower, captured by follower perceived authoritarian leadership. As leadership control is also crucial to organizational effectiveness, we also examine the relationship between authoritarian leadership and follower self-efficacy. Our study of 102 leaders and 342 followers in Taiwan reveals that misalignment heightens perceived authoritarianism. Also, authoritarian leadership exhibits a U-shaped relationship with follower self-efficacy, peaking when leaders display very high or very low authoritarianism. This study significantly contributes to team leadership and followership literature by illuminating adaptive leadership dynamics. Our findings offer key insights for effective leadership practices, emphasizing the intricate connections between leader styles, follower perceptions, and outcomes.

OB: Crossover Effects of Servant Leadership on Employee Spouses: The Social Mindfulness Lens

Author: **Zhou Xiaozhou**, *School of Management, Harbin Institute of Technology*

Author: **Jie Zhong**, *School of Economics and Management, Tsinghua U.*

Author: **Chuqi Hang**, *Harbin Institute of Technology*

Author: **Li Zhang**, *Harbin Institute of Technology*

Drawing on work-family enrichment theory, the study focus on how servant leadership as an other-oriented leadership style enhances employee spousal ratings of family life quality through its effect on employees' other-orientedness. Specially, we propose that servant leadership can increase employees' social mindfulness (i.e., perspective taking and empathic concern) so that to understand spouses' thoughts and care for their feelings, which improve their perception-family life quality. Besides, the study examines the moderating effect of job demands on the relationships. A statistical analysis of 307 three-wave, employee-spouse dyad data shows that both perspective taking and empathic concern mediate the positive effect of servant leadership on employee spouses' family life quality. Job demands positively moderates the relationship. The indirect effect of servant leadership on employee spouses' family life quality be strengthened when employees are in high job demands context. Finally, we discuss the theoretical and practical implications as well as future research directions of the findings.

OB: The Dual Effects of Leader Self-Complexity on Leadership Adaptability: The Underlying Mechanisms 

Author: **Lanyue Fan**, *Surrey Business School*

Author: **YanJun Guan**, *U. Nottingham Ningbo China*

Author: **Zhuang Liu**, *U. of Western Ontario*

In a complex and dynamic business world, effective leadership requires adaptability. Researchers have long recognized the importance of leader self-complexity in enhancing this adaptability. However, the underlying mechanisms by which leader self-complexity affects adaptability remain unclear. Furthermore, current theories and empirical studies on leader self-complexity mainly emphasize its advantages in facilitating leadership adaptability, while often overlooking potential costs. This research employs conservation of resources theory to uncover two distinct processes linking leader self-complexity to adaptability: a cognitive pathway (i.e., cognitive flexibility) and an affective pathway (i.e., role conflict and well-being), thereby exploring its dual effects. Data were collected from 330 US leaders at three time points. The results demonstrated that different components of leader self-complexity influenced adaptability via cognitive and affective pathways differently. The number of leadership roles did not show any significant positive or negative effect on adaptability through either pathway. Differentiation among roles increased role conflict and decreased well-being, which in turn negatively influenced cognitive flexibility and adaptability. Conversely, integration among roles showed positive effects on adaptability through both pathways.

OB: The Impact of Shared Leadership on Informal Learning and Team Commitment: A Cross-Level Analysis

Author: **Lauren D'Innocenzo**, *Drexel U.*

Author: **Will Ramey**, *US Army*

Author: **Michael Kukenberger**, *U. of New Hampshire*

In contemporary work environments, there is a shift towards distributing leadership roles within teams based on members' talents, emphasizing shared leadership where influence and responsibilities are collectively shared among team members. Extensive research has shown that shared leadership positively impacts team performance, cognitive and motivational processes, and various team behaviors. However, limited attention has been paid to how shared leadership affects individual team members. This study investigates its influence on informal learning within teams. Additionally, it examines the impact of shared leadership on team commitment at both individual and team levels. We explore our hypothesized relationship between shared leadership, individual informal learning, and team commitment in two distinct samples, including 55 teams in a Fortune 500 manufacturing firm and 58 student teams working on a complex semester-long simulation. By delving into these dynamics across different levels of analysis, this research aims to provide insights into the multifaceted effects of shared leadership on individual learning and commitment within teams, offering valuable implications for organizations seeking to foster collaborative leadership and enhance team effectiveness and commitment.

Leaders Are People, My Friends: Leadership Traits Research

Session Moderator: **Yue Wang**, *U. of Illinois at Chicago*

OB: **How Leader Workaholism Influences Follower Job Satisfaction and Goal Progress** 

Author: **Yue Wang**, *U. of Illinois at Chicago*

While workaholic leaders are common in today's workplace, the influence of leader workaholism in the workplace remains a question requiring further exploration. Drawing on workaholism literature as well as social information processing theory, we proposed an individual-level model from an other-centric perspective to answer the questions of how, why, and when leader workaholism influences followers' work attitude and performance. Results of a three-wave survey study with a sample size of 135 suggested that leader workaholism has a positive relationship with follower work effort pressure. Through follower work effort pressure, leader workaholism has negative indirect relationships with follower job satisfaction and goal progress. In addition, we found that task-oriented leading behaviors strengthen the indirect relationships between leader workaholism and follower job satisfaction and goal progress through follower work effort pressure. Altogether, our investigation advances theory by improving the understanding of workaholism's impacts in the workplace.

OB: **CEO Humility and Strategic Inertia: A Moderated Mediation Model of the CEO-TMT Interface** 

Author: **Sicheng Luo**, *The Hong Kong Polytechnic U.*

Author: **Pepijn Van Neerijnen**, *U. of Amsterdam*

Author: **Siqi Luo**, *Macau U. of Science and Technology*

Author: **Roger Chou**, *Advanced Business Consulting, Inc*

In today's dynamic business landscape, firms grapple with constant shifts in technological, political, economic, and social dimensions, necessitating strategic change for sustained relevance. However, strategic inertia afflicts many firms, hindering adaptation and impeding progress. Existing literature primarily explores industry and organizational antecedents, leaving it unclear how managers, especially CEOs, influence strategic inertia. To fill the void, we turn to the literature on CEO-TMT interface, proposing that CEO humility—a positive personality trait exhibited by CEO—shapes TMT reflexivity, which is a shared cognitive state vital for adaptive decision-making. The findings based on multiple sources and three-wave survey data from 141 firms indicate that CEO humility indirectly affects strategic inertia through TMT reflexivity. Moreover, the relationship is moderated by the CEO-TMT exchange differentiation. Our study offers insights into reducing organizational inertia, elucidating the microfoundations and cognitive dynamics of strategic change. We also advance the understanding of strategic implications of humble CEOs by exploring their interaction with TMT members.

OB: **Romanticism: A Trait That can Turn Narcissistic Leaders into Visionaries** 

Author: **Martin Buss**, *U. of Potsdam, Germany*

Author: **Eric Kearney**, *U. of Potsdam*

Author: **Mara Metzger**, *U. of Potsdam*

Although there are many examples of highly narcissistic leaders who were celebrated for their visionary foresight, empirical studies have thus far provided only mixed and indirect evidence for the idea that leader narcissism could be an antecedent of visionary leadership. In this research, we argue that narcissism alone does not make a visionary leader, but that narcissism only engenders visionary leadership and positive follower outcomes when leaders possess an additional trait: romanticism. We draw on contingencies of self-worth theory to argue that it is the combination of a narcissist's extreme desire to feel special paired with the romantic tendency to search for and passionately work toward a more abstract ideal that fosters visionary leadership. We propose that leader narcissism's effects on visionary leadership and, in turn, follower identification with the leader and follower performance are more strongly positive for leaders high in romanticism. We find support for these predictions in a three-wave, lagged design field study with 310 leader-follower dyads. Overall, our research suggests that it is romanticism that turns narcissistic leaders into visionaries.

OB: **Directing or Not? An Adaptive Leadership Perspective on Directive Leadership**

Author: **Hua Li**, *Xi'an Jiaotong U.*

Author: **Haoyu Wang**, *Xi'an Jiaotong U.*

Although the value of directive leadership has been widely recognized, there is a very limited understanding on the antecedents of such leadership behaviors. By integrating adaptive leadership theory and trait-activation theory, we propose that leaders' directive behaviors are their adaptive outcomes through the interaction with team members: high core self-evaluation (CSE) leaders are more likely to adopt directive leadership behaviors when team collective CSE is lower, but reduce such behaviors when team collective CSE is higher. We further hypothesize a three-way interaction in which team collective CSE and team performance jointly moderate the relationship between leader CSE and directive leadership. Results from a multi-source two-wave field study with 203 leaders and their team members corroborated our hypotheses. Overall, the research illustrates a contingency model of directive leadership's origins. We advance directive leadership literature by offering new insights into the complex adaptation processes that facilitate or constrain leaders to demonstrate directive leadership.

Repetition Pays: Insights from ESM Research

Session Moderator: **Chen Kangyu**, *school of management, Jinan U.*

OB: **Family Strain, Work Passion Drain: The Impact of Daily Family Demands on Daily Work Passion**

Author: **Chen Kangyu**, *school of management, Jinan U.*

Author: **Guan Zehui**, *school of management, Jinan U.*

Author: **Lihua Shi**, *Guangzhou U.*

Author: **Jessica (Yongyi) Liang**, *school of management, Jinan U.*

The determinants of work passion have garnered increased attention from scholars and practitioners. However, little is known about whether and how family-related factors impact work passion. Drawing on Conservation of Resources (COR) theory, this research investigated the effects of daily family demands on daily work passion by examining the mediating role of daily psychological detachment from family and the moderating roles of work-life balance self-efficacy and availability of family-friendly policies. Employing a daily diary design involving 161 participants across three consecutive weeks, this study reveals that employees encountering a day with high family demands tend to experience diminished psychological detachment from family on the subsequent day. This, in turn, translates to decreased levels of work passion. Furthermore, employees' work-life balance self-efficacy and availability of family-friendly policies buffer the adverse impact of daily family demands on daily psychological detachment from family and attenuate the indirect effects of daily family demands on daily work passion via daily psychological detachment from family. This research extends the literature on work passion and psychological detachment by shifting the current focus the work to the family domain.

OB: **Strategic Utilization of Microbreaks: Linking Regulatory Focus for Enhanced Work Outcomes**

Author: **Zhuyi Li**, *Renmin U. of China*

Author: **Sooyeol Kim**, *National U. of Singapore (NUS)*

Challenging the traditional notion of microbreaks as merely a passive response to work demands, our research introduces a novel perspective: microbreaks can be strategically utilized by employees to fulfill their specific work goals. By integrating the goal-setting framework with the regulatory focus theory, we investigate how employees' daily goals, especially prevention-focused and promotion-focused ones, serve as catalysts for taking four unique microbreaks: relaxation, nutrition-intake, social, and cognitive, and the subsequent impact on their work outcomes. In our research, we conducted two studies: a multi-wave study and an experience sampling method (ESM) study, encompassing 113 full-time employees across 10 days, accumulating 1,005 daily observations. Our findings suggest that when driven by prevention-focused goals, employees were more inclined to take relaxation microbreaks, which decreased fatigue and subsequently increased task performance and reduced work withdrawal. Conversely, when driven by promotion-focused goals, employees were more inclined to take social microbreaks, leading to an increase in state self-efficacy and subsequently enhanced task performance and creative behaviors.

OB: **Microbreaks and Recovery at Home**

Author: **Sooyeol Kim**, *National U. of Singapore (NUS)*

Author: **Kai Chi Yam**, *National U. of Singapore*

Author: **Wonjoon Chung**, *Soongsil U.*

Drawing from effort-recovery model, the current study examines the spillover effects of employees' short recovery at work (i.e., microbreaks) on their recovery at home (i.e., relaxation, psychological detachment, mastery, and physical activity) as well as sleep quality. To test our hypothesized model, we conducted two experience sampling method (ESM) studies, encompassing 133 full-time employees in the U.K. across 10 days, accumulating 1,038 daily observations (Study 1) and 113 full-time employees in South Korea across 10 days, accumulating 1,005 daily observations (Study 2). Our findings suggest that on days when employees take more microbreaks at work, they are less likely to experience energy depletion at the end of the workday, which increased more high-effort recovery experiences (i.e., mastery and physical activity), engage in less relaxation, and experience increased sleep quality. Additionally, Study 2 suggested employees' boundary management strategy (separation vs. integration) as a cross-level moderator that shapes the relationship of energy depletion after work with microbreaks at work.

OB: **Toward Understanding Employees' Pro-Social and Pro-Self Reactions to Coworkers' Proactive Behavior**

Author: **Yahua Cai**, *Shanghai U. of Finance and Economics*

Author: **Weili Zheng**, *Shanghai U. of Finance and Economics*

Author: **Sebastian C. Schuh**, *China Europe International Business School (CEIBS)*

Author: **Kan Ouyang**, *Shanghai U. of Finance and Economics*

Author: **Depeng Liu**, *Shandong U.*

Building on social-learning and self-enhancement theories, we develop and test a dual-path model that explains when and why observing coworkers' team-oriented proactive behavior can trigger positive (i.e., pro-social behavior) and negative (i.e., unethical pro-self behavior) employee responses. We tested our model in three studies, including a multi-wave, multi-source study using a round-robin design (Study 1), a pre-registered experience sampling study (Study 2), and a pre-registered scenario experiment (Study 3). Consistent with our hypotheses, we found that when employees witnessed their co-workers engaging in team-oriented proactive behaviors, they experienced heightened pro-team motivation and, subsequently showed more team-oriented and citizenship behaviors. However, observing coworkers' team-oriented proactive behavior was also positively related to employees' self-enhancement motive, which enhanced their unethical pro-self behavior. Moreover, these effects depended on observers' identification with their teams. Specifically, as employees' team identification increased, the positive impact of coworkers' team-oriented proactive behavior on pro-team motive (self-enhancement motive) was strengthened (weakened). We discuss the theoretical and practical implications of this new, observer-oriented perspective to proactive behavior.

 **OB: Using the “Situational Eight DIAMONDS Model” to Understand Daily Moral Disengagement at Work**

Author: **Babatunde Ogunfowora**, *Haskayne School of Business, U. of Calgary*

Author: **Varun Sharma**, *Indian Institute of Management Indore*

Author: **Mohammad Khalilnejad**, *Haskayne School of Business, U. of Calgary*

Author: **Kimberly Weston Moore**, *North Carolina Central U.*

According to Bandura (1986), people employ moral disengagement not only to justify wrongdoing on a grand scale, but also in everyday situations. However, our understanding of how daily situational encounters activate moral disengagement at work is limited. Integrating the Situational Eight DIAMONDS model with the Self-enhancement/Self-protection framework, the current research a) explores the key characteristics of work situations associated with daily fluctuations in moral disengagement, b) investigates whether in such daily situations, “good” or “normal” people are likely to morally disengage in line with Bandura’s assertion, and c) tests the impact of daily moral disengagement on daily enactment of genuine and instrumental OCBs. In a three-week diary study, we find broad support for our prediction that daily self-protection (characterized by Adversity/Negativity) and self-enhancing (Deception) situations trigger daily moral disengagement at work. Unexpectedly, work situations perceived to have sexual/romantic potential (“Mating”) also triggered moral engagement. All four situation effects were significant for employees low to moderately high (up to the 74th percentile) on trait Honesty-Humility. Lastly, daily moral disengagement was subsequently associated with greater daily instrumental OCB and fewer genuine OCB, especially for low to moderately high Honesty-Humility. We discuss the implications of our findings for moral disengagement theory and research.

Qualitative Insights Regarding New Workplace Phenomena and Challenges

Session Moderator: **Arik Cheshin**, *U. of Haifa*

OB: Digital Emotional Labor: Unravelling the Benefits and Challenges of Text-Based Service Exchanges 

Author: **Arik Cheshin**, *U. of Haifa*

Author: **Einat Lavee**, *U. of Haifa, Department of Human Services*

Although it is well-established that emotional labor presents many challenges for service employees, much of the preexisting literature is based on assumptions and empirical research grounded in face-to-face or voice-to-voice service exchanges. Within this qualitative work, we delve into the emotional labor experience of customer service representatives (CSRs) who engage in emotional labor via two modalities - phone and text-based chat. Using qualitative interviews of 40 CSRs from a large utilities company, as well as additional 7 managers and experts from other service organizations, and observations of the service center, we compared their experiences. We found that text-based service yields a different experience of emotional labor. First and foremost, despite the presence of emotions in text-based service, they are experienced as more subdued and have less of an impact on the CSR compared with traditional emotional labor. Moreover, the ability to interact in text-based exchanges with multiple customers at once, and the leanness of non-verbal cues, such as demographic indicators, make the customers seem more like tasks than people. Yet, CSRs are now faced with a new challenge - to appear human and prove they are not bots. We refer to this new form of emotional labor - digital emotional labor.

OB: High Visibility: The Internal Processing and Management of Visibility in Micro-Celebrities 

Author: **Brandon Mathew Fogel**, *U. of Nebraska, Lincoln*

Author: **Amy Bartels**, *U. of Nebraska, Lincoln*

Author: **Jonathan Hendricks**, *U. of Nebraska, Lincoln*

Research on visibility has provided insights into how others perceive the visible, yet there has been little consideration of how visible employees process and manage their own visibility. We develop a grounded theory model of the internal experience of visibility through 52 interviews conducted with micro-celebrities, or individuals famous in a specific community. We find that after becoming visible, these individuals are dropped into a "pressurized environment" that stimulates their desires and expectations about their visibility. These individuals then make choices surrounding their reactions to and strategies to manage their high visibility. Our findings reveal four visibility management approaches that capture their focus, presentation, and primary audience and prompt a unique set of consequences for the individual. Our grounded process model serves as an initial step in uncovering how the visible feel about their own visibility.

OB: Negotiating the Challenges of Relational Work Meaningfulness: Multiple Role Images in Nursing Home

Author: **Jiaxin Lin**, *PhD candidate, School of Economics and Management*

Author: **Chen Qian**, *School of Economics and Management Tsinghua U.*

I draw upon a year-long inductive study involving 42 interviews, observations and archival documents, surrounding nursing workers who face daily challenges presented by their clients (the elderly), and how they navigate the meaningfulness of their work. Through an inductive analysis of these interviews and observations, we discern four distinct 'role experiences' and scrutinize how employees react to and cope with challenges, as well as the ensuing ramifications.

OB: Solitude in Remote Work: Navigating the Challenges of Agency and Self-Management  

Author: **ZhengPeng(Matt) Wang**, *U. of Toronto*

Author: **Jana L. Raver**, *Queen's U.*

Employees returned to in-person work globally with ease of the COVID-19 pandemic, yet working remotely for at least a portion of one's workdays (i.e., hybrid work) has remained prevalent and popular. Employees are therefore choosing to continue working alone in solitude. Scholars have often assumed that solitude leads to loneliness, but this sole focus on the negative side of solitude does not allow for the possibility that many employees embrace and enjoy solitude in remote work. In this research, through a qualitative study that analyzes 801 employees' naturalistic reports of solitude from Reddit, we explore employees' experiences of solitude in remote work from a more balanced perspective. We find that employees' experiences of solitude depend on how well they internalize and mentally represent their immediate, physical environment, as well as their distant, socially embedded community. Such representations and preservations then depend on the implicit relationship theories about the relationships between their selves and these two environments that they form and carry with them from in-person work. These theories influence their experiences of solitude, at the beginning, and their coping with such experiences afterward.

When Emotions Drive Work Outcomes

Session Moderator: **Bo Lv**, *Renmin U. of China*

OB: **When Follower Expresses Anxiety to the Leader: Leader Emotional Reaction and Cognitive Inference**      

Author: **Bo Lv**, *Renmin U. of China*

Author: **Xin Liu**, *Renmin U. of China*

Author: **Byron Y. Lee**, *China Europe International Business School (CEIBS)*

Author: **Long Zhang**, *Hunan U.*

While emotional expression literature has garnered considerable attention in the field of organizational behavior, research has mainly paid attention to the effect of leader emotional expression on follower outcomes. However, an increasingly prevalent phenomenon that followers express emotions to the leader has been unexamined. In this regard, our research shifts the focus of emotional expression from a leader-centric to a follower-centric lens by exploring the impacts of follower anxiety expression to the leader on the leader's role performance (i.e., leader effectiveness) and well-being (i.e., insomnia). Drawing upon the EASI model, we propose that follower anxiety expression hurts leader effectiveness and enhances the likelihood of insomnia through leader anxiety as an emotional pathway, whereas it also benefits leader effectiveness and reduces insomnia through leader feeling trusted as an inferential pathway. Moreover, servant leadership acts as a vital contingency which amplifies the double-edged impacts of follower anxiety expression on leaders through both emotional and inferential pathways. The results from a pre-registered two-wave, multi-source survey study containing 286 leader-follower dyads from China supported our hypotheses. Theoretical contributions to the literature on emotional expression, servant leadership, and trust are discussed.

OB: **Workplace Fun Practices and Their Influences on Job Outcomes: An Affective Events Theory**

Author: **Thomas A. Birtch**, *U. of Exeter*

Author: **Zhenyao Cai**, *Shanghai U.*

Author: **Flora Chiang**, *China Europe International Business School (CEIBS)*

This research investigated the effect of workplace fun (WPF) practices on two job attitudinal outcomes (job satisfaction and job stress). Building on affective events theory (AET), this study proposes a mediating role of fun experience and a moderating role of employee cynicism between WPF practices and two job outcomes. Two independent studies were conducted to test the hypotheses. Study 1 includes the data collected from three service organizations in Hong Kong, China and study 2 includes the data collected through an online survey platform. The results show that fun experience mediates the relationship between WPF practices and two job outcomes. Moreover, employee cynicism serves as a boundary condition between WPF practices and fun experiences. A first-stage moderated mediation model was supported. Discussion and future research directions were discussed.

OB: **Exploring the Impact of Parenting Stress on Employees' Intention to Quit and Work-Family Balance**

Author: **Juthaporn Boonyaphen**, *Southwestern U. of Finance and Economics*

Author: **Yang Ye**, *Southwestern U. of Finance and Economics*

Author: **Siyuan Li**, *Southwestern U. of Finance and Economics*

Parenting stress poses a significant challenge for working parents, impacting their well-being and work outcomes, especially when considering traditional gender role contexts. This study employs a dual-stage moderated mediation model to explore the way parenting stress influences employees' intention to quit and work-family balance. Using data from the Household, Income, and Labor Dynamics survey in Australia (HILDA) spanning from 2002 to 2021, we apply a Generalized Structural Equation Modeling (GSEM) and bootstrapping for empirical analysis. A positive link between parenting stress and the intention to quit is identified, alongside an impact on work-family balance mediated by factors as work pressure and self-discrepancy. Crucially, gender and marital status emerge as key determinants in defining the impact of parenting stress.

OB: **When Follower Anxiety Expression Promotes Task Performance? A Self-Concordance Model Perspective**     

Author: **Bo Lv**, *Renmin U. of China*

In the face of escalating competition, followers are increasingly susceptible to anxiety. In this regard, an important approach that might help to alleviate anxiety is to express it to the leader. However, it remains unclear about the intrapersonal effects of follower anxiety expression on follower task performance. Building upon the self-concordance model, we posit that follower anxiety expression enhances task performance through both individual (i.e., recovery level) and social (i.e., leader empathy) resource pathways. However, this positive effect is offset when followers have higher trait narcissism due to the incongruity between their anxious expressions and grandiose personality tendencies. Our pre-registered two-wave, multi-source survey study data involving 273 leader-follower dyads from China largely supported our hypotheses. Theoretical contributions to emotional expression, SCM, narcissism, and leadership literature are also discussed.

It's About Time: The Meaning of Time and Work

Session Moderator: **Natasha Zimmerman**, *U. of Canterbury*

OB: Belongingness at Work: The Unveiled, Relational, and Seen Selves

Author: **Natasha Zimmerman**, *U. of Canterbury*

Author: **Joana Kuntz**, *U. of Canterbury*

Author: **Sarah Wright**, *U. of Canterbury*

The extant literature suggests that belongingness is a human imperative, and a necessary element of a fulfilling life. Whereas belongingness and its proximate constructs have been explored in a variety of contexts, an understanding of its essence remains elusive in organisational contexts. This qualitative research explores employees' experiences of belongingness at work. Data were collected from in-depth interviews of twelve participants in the United States and New Zealand. A grounded theory approach was utilised to develop three theoretical categories identified as the unveiled self, the relational self, and the seen self. These dimensions of self illuminate the importance of authenticity, meaningful workplace relationships, and recognition as unique contributions to belongingness at work. The data further reveals the ways in which employees covertly survey the organisational environment for cues of belongingness and moderate their behaviour accordingly.

OB: Chasing Two Hares at Once: The Perils of Mixed Goal Orientations in Teams

Author: **Wonbin Sohn**, *Shidler College of Business, the U. of Hawaii at Manoa*

Author: **Jean-François Harvey**, *HEC Montréal*

In an era where team dynamics are central to organizational success, we studied the interplay between team goal orientations and its impact on performance, revealing the potential pitfalls of teams simultaneously pursuing both learning- and performance goal orientations. Three-wave, multisource data were collected from 109 teams at a large North American mortgage company. We found that teams that pursue both learning- and performance goal orientations find their task less meaningful, ultimately hindering their performance. Indeed, the relationship between team learning goal orientation and team performance via team task meaningfulness becomes more positive when team performance goal orientation is lower, and the relationship between team performance goal orientation and team performance via team task meaningfulness becomes more positive when team learning goal orientation is lower. Theoretical and managerial implications are discussed.

OB: Time is Hunting: Investigating Time Pressure and Bottom-Line Mentality with an Eye-tracking Approach 

Author: **Zhe Zhang**, *School of Management, Xi'an Jiaotong U.*

Author: **Xingze Jia**, *Xi'an Jiaotong U. School of Management*

Author: **Rebecca Lee Greenbaum**, *Rutgers U., New Brunswick*

Author: **Nazifa Zaman**, *Rutgers U., School of Management and Labor Relations*

Taking a static approach and treating bottom-line mentality (BLM) as an individual difference limits our understanding of when and why people adopt BLM thinking as an activated mental state or strategy. This research explores the dynamic antecedents of the BLM state. Based on threat rigidity theory, we propose that time pressure can drive people to adopt BLM through local processing. We also propose that temporal leadership moderates the relationship between time pressure and local processing, thus mitigating subsequent BLM. In Study 1, we conduct a laboratory experiment with an eye-tracking approach to establish causal support for the effect of time pressure on local processing. In Study 2, we perform an online experiment and then test the causal link between local processing and BLM by manipulating local processing. In Study 3, we test the proposed full theoretical model through an experience sampling methodology study for 10 workdays with data from 93 employees. Obtained results supported our hypotheses. We conclude this research by discussing the theoretical and practical implications of our findings as well as future research directions.

OB: Responsible Leadership and Employees' Innovative Work Behavior: A Moderated-Mediation Analysis  

Author: **PRIYANKA PATHAK**, *Indian Institute of Management Mumbai*

Author: **Sumi Jha**, *National Institute of Industrial Engineering (NITIE), Mumbai, India*

Recently, the concept of responsible leaders in business has received significant attention and motivated scholars to explore its dominance in different cultures. Accordingly, the study examines the relationship between instrumental and integrative responsible leadership behavioral styles (RLBS) and employees' innovative work behaviors with a mediating role of meaningful work (MFW). Knowledge sharing is a moderator, and the study is anchored on social learning theory. Data has been collected from 230 employees at different levels working in India's manufacturing and service sectors. The PROCESS macros were used to analyze moderated mediation, mediation, and moderation results. All the hypothesized relationships are supported except the mediating role of MFW in the integrative RLBS-innovative work behavior relationship, which is partially supported. The findings demonstrated that knowledge-sharing strengthens the instrumental and integrative RLBS direct effect on MFW and its indirect effect on employees' innovative work behavior. The study would be helpful to industrial experts and academicians to create an innovative environment in the organization.

Social Network Dynamics

Session Moderator: **Yixi Chen**, *Columbia Business School*

OB: **How Culturally Gendered Identity Shapes Professional Tie Formation**  

Author: **Yixi Chen**, *Columbia Business School*
Author: **Paul Ingram**, *Columbia U.*

Existing research has found that women's networks tend to be less advantageous than those of men, with women often occupying peripheral positions and reaping fewer career benefits from networking. However, past study often conflates gender with sex, and therefore invokes an implicit assumption that female disadvantage equals feminine disadvantage in professional networks. Our study challenges this assumption by disentangling the cultural meaning of gender from sex categories and examining their separate influences on professional network formation. By analyzing the professional networks of executive MBA students, we find that women with more masculine identity elements are more likely to be selected as network contacts, particularly among men. Our follow-on experiment reveals that masculine women are rated higher on competency without suffering likability loss. Our work provides new insights into the role of gender identity in professional network formation and contests the prevailing assumptions of female disadvantage in managerial professional networks. This research highlights the importance of considering cultural perceptions of gender when examining professional networks and contributes to a more nuanced understanding of how gendered perceptions of identities shape network outcomes.

OB: **When Leaders Follow: The Effect of One's Path to Power on Conformity Behavior**  

Author: **Kelly Nault**, *IE Business School*
Author: **Andy Jiexiong Yap**, *INSEAD*

Employees attain positions of power via different paths, such as the support of their professional networks and/or their valued domain-specific expertise. Once in these positions, powerholders are tasked with motivating their followers to achieve organizational objectives, acting as leaders even in difficult situations where there may be conformity pressures to comply with existing opinions and beliefs. Can leaders' paths to power influence their propensity to conform? Across 4 studies including leveraging 10 years of voting history data from the US Senate, we show that individuals who attain positions of power via their network (vs. expertise) conform more to the opinions of others because of their awareness of their dependency on these others. Studies 1-2 demonstrate that individuals attaining positions of power due to their networks (vs. expertise) are more likely to conform to others once in these positions. Study 3 experimentally identifies a key mechanism of this effect, revealing that individuals gaining positions of power due to their network (vs. expertise) conform at higher rates because they are more aware of their dependency on these others. Study 4 examines the positive relationship between dependency and conformity in the context of high-stakes powerholders: US senators. Our research demonstrates that how one attains their position of power affects their behavior once in that position. Securing a position of power via one's network may encourage leaders to follow, rather than to lead.

OB: **How and Why Others Affect Employee Task Crafting and Job Satisfaction: A Social Networks Approach**   

Author: **Juan Du**, *U. of Mississippi*
Author: **Cynthia Kay Maupin**, *U. of Mississippi*

Job satisfaction is critical for both job performance and organizational effectiveness. A major contributor to employee job satisfaction is creating effective fit between an employee and their job responsibilities. Although traditional work design models have emphasized the role of managers in creating jobs that fit employees to enhance job satisfaction, contemporary organizations have recognized the importance of employee job crafting, whereby employees have control over designing their jobs to more closely fit their capabilities. Job crafting, and specifically task crafting (i.e., changing the number, scope, and procedures of tasks), plays an important role in fulfilling employees' personal preferences and improving their job satisfaction. However, little is known about the sources of potential task crafting approaches. Adopting a social networks approach, we propose that weak instrumental ties and strong expressive ties play a critical role for both task crafting and job satisfaction. This study contributes to the job crafting literature by creating a framework that defines who provides the social resources that are critical to task crafting and explaining how and why different social resources embedded in different workplace relationships promote the task crafting process.

OB: **On Getting Ahead: How Proactive Personality Contributes to Friendship and Competence Perceptions** 

Author: **Evgenia Dolgova**, *Erasmus U. Rotterdam*
Author: **Zuzana Sasovova**, *Vrije U. Amsterdam*
Author: **Michaela Schippers**, *Erasmus U. Rotterdam*

To understand how people form relationships in teams, we explore how proactive personality affects the interplay between perceptions of competence and friendship formation. We theorize and explore how proactive personality influences a reciprocal relation between perceptions of task competence and friendship—perceiving others as competent fosters friendship formation and team members attribute higher competence to their friends. We used longitudinal data obtained from 650 individuals working in 130 project teams to analyze these processes. Stochastic actor-based modeling of network dynamics (RSiena) indicated that participants attributed higher competence to proactive individuals, which, in turn, positively influenced friendship formation. Proactive individuals also recognized (actual) competence of their peers better. Overall, proactive individuals changed their friends more frequently. Our findings extend existing research on microfoundations of social network formation by highlighting how proactive individuals leverage on the self-reinforcing loop between perceptions of competence and friendship. Doing so, we contribute to better understanding of how proactive individuals shape their social environment through their perceptions and behaviors.

Promoting Diversity, Equity, and Inclusion (DEI) is crucial for organizations, yet these efforts can inadvertently lead to negative consequences for women and racial minorities. This symposium aims to delve into the underlying mechanisms of these unintended outcomes and highlight effective solutions. By inviting leading scholars in this domain to share ongoing research, this platform seeks to dissect the complexities of DEI implementation, paving the way for more nuanced strategies. It also aims to identify proactive measures to minimize negative impacts and amplify positive outcomes. With a forward-looking approach, this symposium endeavors to shape the future trajectory of DEI research and practice, offering valuable insights for fostering inclusive and equitable organizational environments.

The past decades have witnessed an increasing appeal for considering the critical roles individuals play in facilitating the building and leveraging patterns of social relations in organizations for their benefits at work in response to the extreme structural perspective, which regards individual behaviors, affect, cognitions, and other outcomes as the result of social structure in which individuals are embedded. Recent methodological advances and theoretical frameworks have opened the door for researchers to examine the interplay of individual attributes and social networks with greater fidelity. The papers in this symposium build on these recent developments. The result is a set of papers that explore the dynamic relationship between various individual attributes and intraorganizational networks and, in doing so, give a more accurate account of the reciprocal relationship between individual agency and social structure. Specifically, the first two papers explore the processes through which network brokerage and individual predispositions (i.e., personality traits and different types of brokerage orientations) mutually influence each other over time. The third paper investigates the dynamic relationship between work self-efficacy and help-seeking network ties and how the strength of this relationship is dependent upon a focal employee's predisposition for self-monitoring. The last paper examines the effect of friends' turnover on employees' organizational commitment and how its direction and magnitude vary as a function of leavers' organizational commitment and the stayers' gender. These cutting-edge research projects aim to spur discussions on the complex and multifaceted phenomenon of the dynamic interplay between individual attributes and social networks.

Emotions have important implications for social interaction in the workplace. However, research has primarily focused on the effects of non-verbal displays of one's own emotions and responses to the emotions of others. Important questions remain regarding the consequences of how individuals talk about their own emotions and the emotions of others at work. The five papers presented cover a broad range of interrelated topics (e.g., collective emotion regulation, verbal emotional expression) and represent different theoretical and empirical perspectives. Our discussant, Stéphane Côté, a leading scholar in the study of emotions, will close our session by offering a synthesis of papers and discussing with the audience future directions for the study of talking about emotions in the workplace. Through this symposium, we aim to generate new insights about how scholars can continue to study and improve the research on talking about the emotions of oneself and others at work.

Be Who You Are? Identity And Organizational Challenges To Authenticity

Presenter: **Jacob Brown**, *U. of Illinois Urbana-Champaign*
Presenter: **Erica Bailey**, *Haas School of Business, UC Berkeley*
Presenter: **Belinda Zakrzewska**, *U. of Sussex Business School*
Presenter: **Julianna Pillemer**, *New York U.*
Discussant: **Brianna Barker Caza**, *U. of North Carolina, Greensboro*

As described in decades of authenticity research, there are numerous psychological and social benefits to authenticity in and outside of the workplace. For example, authenticity is a robust predictor of subjective well-being (Sutton, 2020) and higher quality relationships (Brunell et al., 2010; Le & Impett, 2013). In addition, experiencing authenticity at work can increase engagement with work tasks (Bailey et al., 2023; Cable et al., 2013), less depleted (Reis et al., 2016), and even increase work performance (Van den Bosch & Taris, 2014). For those in leadership positions, authenticity reaps significant benefits in terms of increasing support (Steffens et al., 2021) and commitment by followers (Leroy et al., 2012). Indeed, “authenticity” was Merriam-Webster’s word of the year in 2023, suggesting a strong societal hunger for understanding the topic and its application in personal and professional life. Given these seemingly numerous benefits to authenticity, less is known about how individuals can access or increase authenticity (Beer & Brandler 2021) and the identity-based constraints surrounding who can be authentic (Martinez et al., 2017). Even more crucially for workers, the nature of authenticity in constrained roles, demanding organizations, or challenging identities remains elusive. Given this, the goal of this symposium is to bring together a set of researchers seeking to understand authenticity in context, specifically situating authenticity in specific roles, identities, and situations. By positioning authenticity in terms of social demands, our findings provide concrete prescriptions on the antecedents of this important construct. We have curated a broad collection of studies which consider the concept of authenticity at various levels of analysis and using various methods, and which address the key points of identity and organizational constraints in distinctive yet complementary ways. We believe that this symposium will offer a productive opportunity to consider how the pursuit and achievement of authenticity in the workplace is enabled and undermined, pursuant to important scholarly and practical innovations in the study of authenticity at work.

Participant: **Daniel Newton**, *U. of Iowa*

Employee voice is a major concern of management scholarship. This symposium explores new lines of thought in employee voice research. A concern in contemporary voice literature is the intricate social dynamics that involve multiple voice actors and diverse voice channels. In addition to the well-examined role of voicer, interest is growing in other voice actors, such as voice endorsers, voice cultivators, voice allies, and voice implementers. This evolution of the voice literature coincides with the development of digital technology that has dramatically transformed when and where employees work and, consequently, how, when and the way employees communicate and speak up their ideas, concerns and suggestions. The digitization of the workplace challenges many conventional understandings of employee voice that were developed when people took it for granted the traditional 'physical' workplace and in-person communications. In this symposium, we bring together an internationally diverse team of scholars to discuss and extend the voice literature theoretically, empirically and methodologically (e.g., applying machine learning techniques to analyze big data on e-voice) with a shared focus on employee voice processes in the new workplace environment. More specifically, the symposium includes five presentations, in which authors 1) apply machine learning techniques to explore employees' online voice activities, 2) report novel empirical insights about voice rejection and subsequent idea generation processes, 3) theorize about issue-selling processes specific to environmental issues, 4) share conceptual developments of employee voice as learned pattern of behavior within teams as network configurations, and lastly 5) examine employee voice in remote/virtual contexts. These studies also cover individual, team, and firm levels of analysis.

Sleep and Work: Implications for Performance and Human Sustainability

Organizer: **Matej Cerne**, School of Economics and Business, U. of Ljubljana, Slovenia
Organizer: **Miha Skerlavaj**, U. of Ljubljana, School of Economics and Business
Discussant: **Christopher Barnes**, U. of Washington

This symposium covers diverse aspects of the relationship between sleep, work performance, and well-being. The first study investigates the influence of entrepreneurs' creative work on entrepreneurial action, revealing that daily variations in entrepreneurial activities are linked to creative work, particularly when entrepreneurs experience poorer physical recovery. The second study focuses on professional handball players, finding that muscle soreness is associated with poorer sleep outcomes, with deep sleep quality significantly mediating the relationship between muscle soreness and cognitive focus. The third study explores the connection between nightly variations in sleep quantity and quality, particularly REM sleep, and improved employee task performance. The fourth study delves into the impact of sleep quality on work demands, highlighting the role of individual beliefs about sleep and proposing that addressing these beliefs could enhance workplace well-being. Lastly, a time-lagged design study reveals a bidirectional relationship between sleep and counterproductive work behaviors, challenging the assumption of a unidirectional link and demonstrating a complex, reciprocal relationship over time. Overall, the studies contribute valuable insights into the interplay between sleep, work-related outcomes, and well-being across different professional contexts, and inform setting up the work-nonwork interface in a way to maximize beneficial individual outcomes (focus, creativity, performance) and minimizing negative ones (strain, depletion, counterproductive work behavior). Taken together, themes of work-nonwork spill-over effects, conceptualizations of performance across contexts, demands/control and resource replenishment, and human sustainability emerge, and also a more objective approach of capturing sleep in natural settings using validated wearable devices with a longitudinal approach, comparing these to self-perceptions and individual beliefs of sleep.

Presenter: **Aldijana Bunjak**, *U. of Stavanger*

Identity is crucial for our understanding of how and why individuals categorize themselves as leaders. Leader identities are dynamic, and they can shift momentarily due to internal and external influences. Theoretical and empirical evidence to explain how and why identity influences the leadership process is currently limited. Accordingly, there is a need for further theorizing and investigation into the antecedents, situational triggers, boundary conditions and outcomes of leader identity dynamics. As well as further validation and precision of measurement tools. We aim to fill these gaps in the literature by integrating the conceptual spaces of identity threat and impostorism as complementary perspectives to explain how and why leader identities change. Through a combination of five theoretical and empirical papers, this symposium contributes to the field by examining the influence of identity conflict and enhancement on meaningful work, unearthing the triggers of identity threat, testing the effects of leader identity and impostorism on wellbeing, enhancing the measurement of leader impostorism and offering new directions for authentic leadership theory. To conclude, an expert in the psychology of identities in organizations will synthesize and critically review the insights from the five presentations to kick off a fruitful discussion with the audience.

The last two decades have seen a significant uptick in research on meaningful work, defined as work that is purposeful and significant. Prior work has established the link between experienced meaningfulness and positive organizational and employee outcomes, revealed how workers can make their jobs more meaningful, and illuminated numerous downsides of experiencing one's work as meaningful. Recent reviews highlight that meaningful work has become a central topic in the organizational literature. At the same time, these reviews also highlight several limitations that currently hold the field back, including a predominant focus on calling orientations, an assumption that work orientations are static, a lack of standardized definitions and measures, and limited generalizability. Having now firmly established its place in the organizational literature, we believe it is time to "take stock" of where we are and, with a thought to addressing these limitations in mind, set the foundation for the next generation of meaningful work research. This symposium aims to take a step toward addressing this gap. It features the work of 13 early career researchers whose work begins to build on and move beyond these limitations. Guided by experienced scholars who will act as discussants, we hope this forum will encourage dialogue that will guide and enhance the next generation of meaningful work research. By showcasing diverse methods and topics, we also aim to attract scholars beyond the meaningful work community, fostering new perspectives and integrating them into the field.

Panelist: **Terri A Scandura**, *Miami Herbert Business School*

Leadership research has garnered tremendous interest from researchers and practitioners alike. Recently, however, critical reviews have called into question the validity of leadership constructs yet vary in the severity of their conclusions. Some maintain that reports of leadership constructs' flaws are exaggerated, whereas others determine that fatal flaws exist in their conceptual foundations, while still others conclude that issues exist, but these challenges represent a normal part of a construct's evolution (i.e. growing pains). This panel symposium brings together a set of distinguished leadership scholars to discuss problems endemic to the leadership domain and illuminate perspectives on how to overcome them. The panelists will draw from their combined experience of 120 years studying leadership and publishing nearly 350 leadership manuscripts to address critical questions, challenges, and opportunities that confront the next decade of leadership research. The insights shared will aid attendees in understanding the current criticisms of leadership research and offer guidance for avoiding fatal pitfalls and pursuing the most viable paths forward in the leadership landscape.

Navigating Paradox: Exploring Contradictions in Organizational Change

Session Moderator: **Jean M. Bartunek**, *Boston College*

ODC: **Liberating Resistance**

Author: **Jean M. Bartunek**, *Boston College*

Author: **Hans Hansen**, *Texas Tech U.*

Author: **Mara Cable**, *Boston College*

Author: **Angela Ianniello**, *Boston College*

Resistance to change is often treated as the shadow side of organizational change or control. In a sense, it is tethered to these constructs. However, it is important to liberate resistance from change and control, to recognize both its positive value in its own right and its conceptual contributions to dialectics and paradox. In this paper we present three examples of resistance that illustrate facets of these contributions. Our examples include the differing responses of evangelical Christians and Human Rights groups to lessening strictures on marriage by World Vision, a humanitarian aid association, Roman Catholic women religious' response to a Vatican Apostolic Visitation, and the steps taken by attorneys in Texas to enable prisoners convicted of murder to escape the death penalty but be sentenced to life in prison instead. These examples illustrate ways that resistance can surface deep rooted societal conflicts, can help foster and clarify identity, and sustain differences in ways that keep them salient. All of these highlight means through which resistance can generate productive dialectical and paradoxical processes.

ODC: **(Un) Knotting Paradoxes to Dynamic Disequilibrium: A Process Study of Cross-Units Collaboration**

Author: **Changwei Guo**, *School of Business, Renmin U. of China*

Author: **Fengbin Wang**, *School of Business, Renmin U. of China*

Author: **Yuan Li**, *Saint Mary's College of California*

Multiple paradoxes within cross-unit collaboration intertwine to form paradox knots. However, the process through which these paradoxes are knotted and unknotted, impacting dynamic disequilibrium, remains unclear. This paper conducts a longitudinal case study on the growth of a newly established online unit navigating multiple paradoxes in cross-unit collaboration. Our research reveals how multiple paradoxes transition from latent states to salient conditions, thereby influencing organizational disequilibrium through a cyclical process of knotting and unknitting. We introduce a process model that delineates two sub-processes affecting dynamic disequilibrium. Firstly, organizational-level generative reorganization and transparadoxical metaphor render paradoxes salient, while elastic enactments at the business unit level knot these paradoxes, amplifying disequilibrium. Secondly, this disequilibrium triggers new generative reorganizations that make the paradoxes latent and unknot them, thus returning the organization to a state of orderly disequilibrium. The study contributes to paradox theory by integrating the concepts of latency and salience into paradox knots, offering a cyclical process from knotting to unknitting, and providing insights into the states of dynamic disequilibrium.

ODC: **Revisiting the Paradox of Change and Stability in a Turnaround by Flexing Time and Boundaries**

Author: **Alperen Manisalıgil**, *BOGAZIÇI U.*

Author: **Oguz N. Baburoglu**, *Sabancı U.*

We examine how organizations manage the boundaries of the paradoxical poles to make progress toward turnaround. We conducted a single case study in a manufacturing firm in Turkey, collecting data through observations, semi-structured interviews, and archival sources over a period of three years. We build on the dynamic equilibrium model of the organization to illuminate the turnaround process, and in turn, our findings about effective turnaround management extend the dynamic equilibrium model of the organization. First, we find that multiple temporal foci, i.e., attention to past, present, and future time, perpetuate the opposite poles of change and stability in the turnaround process. We also show that the boundaries of the paradoxical poles are fluid and asymmetric, and in the turnaround context, this fluidity and asymmetry is constituted by multiple domains of change and domains of stability. This multiplicity helps managers adapt the organization to different conditions throughout the turnaround process by contracting or expanding the paradox boundaries without stopping change or stability as a whole.

ODC: **Going Circular in a Linear Business Context: Squaring the Circle?**

Author: **Sophie Felicia Graessler**, *Maastricht U., School of Business & Economics*

Author: **Hannes Guenter**, *Maastricht U.*

Author: **Simon Barend De Jong**, *Maastricht U., School of Business & Economics*

In this paper, we explore tensions that organizations may encounter when transitioning from linear to circular modes of operation. We adopt a paradox perspective to gain insights into these tensions, and to investigate how project members respond to them. We conducted a multiple case study involving five circular economy change initiatives in a multinational life sciences organization. Our findings indicate that circular economy change initiatives create three kinds of paradoxical tensions: the paradox of organizing, the paradox of scale, and the paradox of responsibility. Moreover, we uncover several ways in which project members deal with these paradoxical tensions. Initially, project members tried to integrate linear and circular demands by engaging in learning and aligning efforts. If unsuccessful, project members would focus on one-sided approaches by (a) questioning the paradox, (b) avoiding the paradox, (c) sacrificing circular product features, or (d) prioritizing linearity more broadly. We contribute with this paper to the literature on paradoxes in circular economy transitions and their responses and develop a theoretical framework as a potential starting point for future research.

Author: **Eleonora Annunziata**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*

Author: **Murat Mirata**, *Linköping U.*

Author: **Francesco Rizzi**, -

Author: **Marco Frey**, *Scuola Superiore Sant'Anna*

Despite the growing body of literature on paradox theory, the research has only marginally extended beyond companies' boundaries, missing exploring inter-organisational dynamics. This study analyses the interlinks between paradox theory and Industrial Symbiosis (IS), investigating the identification and management of paradoxical tensions in eight case studies. The empirical analysis shows that IS relationships trigger paradoxical tensions at the strategic level, concerning performing, belonging, and organising tensions, and at the operational level, concerning performing tensions. Notably, these paradoxical tensions surfaced within and across the organisations. Furthermore, similarities in paradoxical tension management emerged at organisational and inter-organisational levels regarding the role of open dialogue, transparency and collaboration. Thus, this study contributes to the literature on both paradox theory at the inter-organisational level and IS development by providing insights into the factors influencing the integration of tension and IS management and revealing that dialogue and trust are not sufficient conditions to establish active management of tensions. The study concludes with managerial implications concerning the pivotal role of facilitators in unleashing paradoxical tension management benefits.

While circular strategies have become a relevant topic of interest for business practice and research for the last years, only little is known about how to properly design and implement them in a way that they are not only from an ecological, but also from a social and especially an economic point of view viable. In this panel symposium, we will outline relevant strategic approaches to circularity and discuss their basic determinants, preconditions of their application and ways how they can successfully be implemented. We will further address their possible future impact on firms as well as society in general.

Theorizing Gender Impacts on Organizational Outcomes: Who Runs the World?

Session Moderator: **Minjae Kim**, *Rice U.*

OMT: **Unanswered Outreaches: Mechanisms of Gender-Based Network Segregation in Entrepreneurship**  

Author: **Minjae Kim**, *Rice U.*

Author: **Ethan Poskanzer**, *U. of Colorado*

Network segregation is one of major culprits behind gender-based inequality in entrepreneurship. But while the popular message of “lean in” implies that “outreach homophily”—e.g., women’s tendency to reach out to other women more than to men—is the sole or more responsible factor for such network segregation, “acceptance homophily”—e.g., men’s tendency to accept outreaches from fellow men more—may also or instead be more responsible. These mechanisms are separately examined here in an entrepreneurship accelerator in the northeast US, where budding startup founders (as resource-seeking “mentees”) and seasoned advisors (as resource-holding “mentors”) cultivate interactional ties by sending mentorship requests or accepting them. Although advisors are more likely to form such relationships with same-gender founders, both female and male founders are equally likely to reach out to advisors of either gender. Instead, we find that such network segregation is driven by male (but not female) advisors accepting more outreaches from founders of their own gender. These patterns seem largely explained not by selection but by cultural fit male advisors may perceive as lower when considering outreaches from female founders. The upshot is evidence of acceptance homophily as a sufficient and distinctive mechanism of network segregation in entrepreneurship.

OMT: **Unpacking the Gender Gap in Technology Entrepreneurship: A Set-Analytic Approach**

Author: **Milan Miric**, *U. of Southern California -Marshall School of Business*

Author: **Peer Fiss**, *U. of Southern California*

The gender gap in technology entrepreneurship has been extensively documented, and a number of recent studies have sought the impact of individual factors such as education or professional experience. However, these factors are highly related and potentially offer compounding advantages or disadvantages to entrepreneurs. In this paper, we use a set-analytic approach that allows us to understand the combination of factors commonly exhibited by successful founders within the highly important context of digital technology ventures. We find that men have more pathways to tech entrepreneurship, and these pathways are less complex (more flexible), enabling more individuals to become founders. Reducing the gender gap in entrepreneurship requires finding opportunities for women to become founders through a greater variety of business and educational backgrounds.

OMT: **Political Polarization and Gender: Audience Reactions to Gender Disclosure in Women-Owned Businesses** 

Author: **Xiaofei Qu**, *U. Carlos III de Madrid*

This study investigates the interaction between political polarization and audience responses to gender identity disclosure by women-owned businesses. Grounded in organizational identity and gender role theory, we explore the divergent impact of gender disclosure on organizational popularity and appeal, and how this is moderated by political polarization. We posit that in a politically polarized environment, gender identity disclosure shifts audience evaluations from neutral to gender-focused appraisals, influenced by heightened political awareness. Utilizing a quasi-experiment on Yelp, which introduced a “Women-Owned” highlight in March 2019, we analyze the responses to women-owned small and medium-sized enterprises (SMEs). We employ a difference-in-differences approach complemented by propensity score matching, analyzing data from 3,740 women-owned businesses across eight states over an 11-month period. Our findings contribute to understanding the effects of social identity and audience heterogeneity in organizational evaluation. We demonstrate how gender identity disclosure, interwoven with political polarization, affects organizational performance. This research provides insights for female entrepreneurs on navigating gender-based evaluations in politically diverse environments, highlighting the significance of audience perception in shaping business outcomes.

Participant: **Jingyuan Li**, *cuhksz*
Participant: **Matthew Yeaton**, *HEC Paris*
Participant: **Sameer B. Srivastava**, *U. of California, Berkeley*

Recent scholarship indicates renewed interest in the intersections between political life and cultural production. Polarization (Rawlings & Childress, 2023), boundaries (Oshotse, Berda, & Goldberg, 2023; Godart, Hsu, & Negro, 2023), and associations (Goldberg & Stein, 2018) that initially manifested in the political sphere have begun to play out in cultural production and consumption. In this symposium, we bring four papers together that explore the intricate relationship between culture and political dynamics within the realms of creative industries. Each paper focuses on expression, either in art or politics, and highlights organizational and social factors that impact such expression and drive further important ramifications in markets, organizations, and society. Collectively, they call attention to the growing intersection between the two realms of social life and offer implications for management theory and practice. Hsu, Kovács, and Sharkey investigate how gatekeepers in the literary world influence artistic expression, driving a balance between conformity and differentiation among artists. Byun's research examines how artists penetrate non-local markets in the popular music industry and investigates the impact of their initial entry strategies on subsequent behavior and performance within these markets. Lee, Kim, and Li explore the intersection of art and politics, examining the career impacts on artists entangled in political blacklisting scandals in South Korea. Oshotse, Yeaton, and Srivastava present a study on the effects of public opinion expression on political polarization and entrenchment. Together, these papers offer novel insights into how creative industries navigate the complex interplay of art and politics, highlighting both the challenges and opportunities arising from this dynamic relationship.

Systemic Paradoxes In Times of Transition and Crises: Containing Multitudes

Session Moderator: **Derek Dubois**, *U. of Rhode Island*

OMT: **Paradoxes in the US Political News Media Supply Chain**

Author: **Derek Dubois**, *U. of Rhode Island*

Author: **Muhammad Hasan Ashraf**, *California State U., Long Beach*

Author: **Mehmet Gokhan Yalcin**, *U. of Rhode Island*

Transferring intangible product/service offerings (PSOs) from service suppliers to service consumers is a pathway to value creation in the services sector (Baltacioglu et al., 2007). However, while news media has been singled out as an industry in the service supply chain (Berry et al., 2006), the structure of the news media supply chain has not yet been conceptualized into an operational framework. Meanwhile, the industry has recently changed due to the impacts of New Media and sociocultural upheaval fostering political polarization. These shifts have transformed the supply chain, enabling the rise of niche news that caters to specific political ideologies. As a result, paradoxes have emerged, such as the organizational tensions embedded in supply chain transformation, the shifting importance of objectivity at the center of political journalism, and how the supply chain defines customer satisfaction when so much news content is created to engender outrage and anxiety. Paradox theory may point the way forward with recommendations to embrace these tensions and respond in ways that permit creative solutions. This paper aims to categorize unique paradoxes within the news media supply chain and evaluate what paradox theory says about working through paradoxical tensions. Addressing destabilizing paradoxes can repair the eroding trust in the news media institution and extend the literature on service supply chains.

OMT: **Firms' Resilience During Crises as a Function of a Paradoxical Approach to Sustainability Tensions**

Author: **Vincio Di Iorio**, *Sant'Anna School of Advanced Studies*

Author: **Francesco Testa**, *Scuola Superiore Sant'Anna*

Author: **Daniel Korschun**, *Drexel U.*

Author: **Guia Bianchi**, *Scuola Superiore Sant'Anna*

The notion of sustainability, or “meeting the needs of the present without compromising the ability of future generations to meet their own needs,” suggests inherent tensions and tradeoffs. Corporate sustainability initiatives require a delicate balance which make them quite susceptible to exogenous shocks. This paper examines the resiliency of firms' sustainability commitments in the face the Covid-19 pandemic. We contend that firms that exhibit more of a paradox approach to sustainability-related tensions are better equipped to handle competing demands and stark choices during such a crisis. This variance-based study examines interviews, internal company data, and external communications from 2018 to 2021, finding not only that firms with such a paradox approach were more resilient than peers but that some were able to use the crisis as a springboard for a deeper commitment (what we call transformational resilience). Furthermore, we trace the decision-making process through which firms with a paradox approach interlace absorptive and adaptive capabilities. The research contributes to the theory on resilience during a crisis by linking a paradox approach to strategy change and by challenging the notion that linear and deliberative decision making is always the best path to reconcile competing demands and tradeoffs.

OMT: **A State-Business Paradox Under State Capitalism: An Outside-the-System View of Tensions**

Author: **Bing Wu**, *East China U. of Science and Technology*

Author: **Ping Deng**, *Cleveland State U.*

Paradox theory has become an increasingly influential theory by advocating an integrative (both/and) approach to organizational tensions and their management. But an exclusive focus on innate tensions limits paradox scholarship only to market capitalism. To preserve paradox's vitality, we unpack tensions into two categories – within-the-system tensions and outside-the-system tensions, with the former intrinsic to organizing and the latter inherent in macro-institutional context. An outside-the-system view of tensions helps to depict the paradoxical nature of state capitalism as its survival hinges on interdependent contradictions of politics and economics. Because of formidable state power supremacy, such latent country-level paradoxical tensions may inevitably manifest in corporate strategic decisions (e.g., innovation), reflecting the political-economic nature of firms. Based on empirical analysis of Chinese firms' innovation from 2001-2019, we verify an outside-the-system view and identify government resources as a pivotal mechanism to rendering country-level state-business tensions into salient organizational paradoxes. We contribute to the literature on paradox and innovation under state capitalism in three ways: finding a new way of thinking about organizational paradoxes, integrating paradox and institutional complexity, and bridging political and economic views of firms.

OMT: **Waxing and Waning: A Comparative Case Study of Transitional Events in Organizational Paradoxes**

Author: **Jiayi Sun**, *Nanjing U. School of business*

Author: **Sen Xu**, *nanjing tech U.*

Author: **Yi Ren**, *Montclair State U.*

Prior research has focused on how organizations manage paradoxes to achieve dynamic equilibrium. However, it is not clear how organizations change from one equilibrium to another. To understand the dynamics between equilibrium and disequilibrium, we investigate organization paradoxes in two scientific research and technology transfer institutions. We found four states of paradox: paradox retention, paradox concentration, paradox shift, and paradox fusion. Our analysis reveals that transitional events prompted paradox state conversion through three mechanisms: consolidating, activating, and shaping. Through constantly moving between equilibrium and disequilibrium, organizations navigated paradoxical tensions to achieve transient resolutions that enabled further development. Our study makes two contributions. First, we reveal the role of transitional events as triggers that reframe the paradox state. Second, we delineate organizational paradox as an ongoing process through dynamic equilibrium, fueled by tensions lurking within each fragile equilibrium.

Discourse, Rhetoric and Dialogue: All The World's a Stage

Session Moderator: **Chiara Giulia De Leo**, *U. of Bologna*

OMT: **"The Medium is the Message:" Discourse, Meaning, and Materiality**

Author: **Chiara Giulia De Leo**, *U. of Bologna*

This paper extends the literature on materiality, meaning, and multimodality by exploring the meaning potentials of texts as material artifacts. Drawing on publicly available materials produced by the International Council of Museums over twenty years, we investigate how discourse's verbal, visual, and material characteristics interact in producing, reproducing, and stabilizing field-level meanings around digital transformation. We highlight how the verbal, visual, and material are semiotic modes with different meaning potentials realized in the materialization of discourse, showing that texts' materiality should not be understood only as a medium but as an integral mode in discourses' configuration. We found that materiality can trigger the emergence and consolidation of meaning by reifying and embodying the message that the visual depicts and evokes and the verbal specifies and argues.

OMT: **Narratives in Organizations: A Review and Future Directions**

Author: **Rebecca Elea Senger**, *European Business School, Wiesbaden*

Author: **Markus Kreuzer**, *EBS Business School*

Author: **Tobias Gutmann**, *EBS Business School*

Narratives are increasingly important in organizational and management research, as they offer insights into the meanings, experiences, and actions of individuals and groups. However, the literature on narratives is diverse and fragmented, lacking a coherent synthesis and a common terminology. In this paper we address this gap by reviewing over 30 years of research on narratives in organizations, from various disciplines and perspectives. We propose a conceptual framework that integrates existing knowledge and defines key concepts and categories. The framework consists of eight narrative categories: quality, functions, themes, types, levels, forms, objects, and temporality and space. We discuss how these categories can be used to analyze and compare different types of narratives in organizations, and how they can inform future research directions and applications. We contribute to the advancement of narrative research in organizational and management studies, by providing a systematic and integrative overview of the field.

OMT: **The Grammar of Imagined Futures: A Social Semiotic Approach to Multimodal Representation**

Author: **Ines Kuric**, *WU Vienna*

How do social actors construct multimodal representations of the future—that is, representations of imagined futures using different combinations of modes (e.g., words, images, numbers)—to enable and constrain audiences in engaging with the future? Despite growing interest in the role of imagined futures, research has not fully addressed this question, with extant work positing that imagined futures are either enacted together or imposed on audiences by more powerful actors. Highlighting the shared act of representation, we argue that these two approaches can be merged into a new understanding, bringing to light how the structure or 'grammar' of multimodal representations of the future can construe opportunities for participation in different gradients between openness and closure. We conceptualize representations of the future as incomplete, malleable, and evaluative, and employ social semiotic theory to draw out the implications of taking seriously their multimodal character. Drawing on a multimodal corpus of archival urban planning data, we show how representations constitute different multimodal configurations offering, recommending, demonstrating, or predicting imagined futures. Our study advances research on the communicative underpinnings of imagined futures by moving beyond the dichotomy of open and closed futures. We further contribute to multimodal scholarship in organization and management theory by unpacking the affordances of multimodality for imagined futures.

OMT: **The Organizational Field as a Dialogical Space**

Author: **Luc K. Audebrand**, *FSA ULaval (Laval U.)*

The notion of a field continues to be a topic of discussion in organizational scholarship, even after nearly a century of theoretical exploration. Scholars are increasingly acknowledging the importance of addressing both heterogeneity and homogeneity in how participants share issues within a field. In this essay, I suggest a dialogical account of the field, inspired by the work of the late Russian literary scholar Mikhail Bakhtin. I begin by presenting key concepts from Bakhtin's dialogical perspective, and I show how these concepts can improve understandings of fields' dynamics. I then describe the field as a dialogical space in which issues are shared in various ways, in terms of degree of concern and controversy. By combining those two dimensions, I identify four broad "zones": axiomatic, consensual, conflictual, and idiosyncratic. I conclude with directions for future research on field dynamics.

Institutional Innovation and Change: One Giant Leap

Session Moderator: **Ashenafi Gebremichael Biru**, *RMIT U.*

OMT: **Circumventing the Hurdles: How Small Firms Bypass Institutional Challenges in a Developing Economy** 

Author: **Ashenafi Gebremichael Biru**, *RMIT U.*

Author: **Pia Maria Arenius**, *EMLYON Business School*

This paper explores how small firms that cannot abide by or defy institutional challenges manage to survive and persist in an ambiguous and complex environment. We seek to extend current literature by investigating the strategies of small firms in a developing country context that are not in the position to conform to institutions or alter them, which was the prominent assumption in previous studies. Drawing on in-depth interviews with Ethiopian small business owners, our findings show that bypassing strategies are evident in constraining institutional environments, and elaborate on how these strategies enable organizations to persist and perform. We argue that the institution-bypassing view can help us to understand how business enterprises attenuate the influence of institutions or use them to their advantage. We conclude by offering theoretical and policy implications for future work on the interaction between institutions and small firms.

OMT: **Responsible Innovation In the Wild: Institutionalising Responsibility in Digital Innovation** 

Author: **Sam Applebee**, *Nova School of Business and Economics, U. Nova de Lisboa*

Author: **Leid Zejnilovic**, *NOVA School of Business and Economics*

We propose a new decentralised and emergent perspective on the institutionalisation of responsible innovation 'in the wild', complimenting the existing top-down, centralised account of structured settings. Drawing on case studies of heterogeneous networks of organisations jointly developing digital innovation projects for civil war settings, we identify heterogenous approaches to managing tensions between the conflicting institutional logics of 'disruptive innovation' and 'social responsibility', shaping the potential for institutional change. As the power and pervasiveness of digital innovation outpaces regulation for managing the consequences, the development of effective governance mechanisms has been recognised as a societal imperative. For policymakers seeking to promote responsible innovation our findings elevate the importance of cultivating organisationally diverse innovation networks, particularly in the context of digital innovation.

OMT: **Saving Bees: Understanding Cross-Field Institutional Work of Swiss Beekeepers**

Author: **Anna Kravchenko**, *ESSEC Business School*

Grand challenges can potentially be solved by changing the institutional context in which they are embedded. However, these social and environmental problems are so large and complex that they call for institutional work across multiple fields. Previous research has tended to focus on institutional change within single fields or between pairs of fields, but has paid only limited attention to the more complex architectures of fields and the ways in which interested actors can engage in institutional work across multiple fields. This study examines the institutional work of Apisuisse, the Swiss umbrella organization of beekeeping associations, and shows that this actor navigated across fields of different levels and types in an attempt to alter the institutional context outside its focal field and tackle the grand challenge of bees. The findings also reveal mediated institutional work as attempts to have an influence on the target field by working in another, intermediate field, which included relying on vertical, i.e., hierarchical, and horizontal relationships between fields, as well as drawing on the composite nature of fields. This study advances research on fields, institutional work, and grand challenges.

This symposium features scholarship on how organizations engage with political processes, including how organizations work to actively shape their legal or political environments. Papers in this session consider interactions between firms and other organizational forms, including courts, governments, and non-governmental organizations. The four papers in this symposium propose a framework for theorizing about institutional variation in stakeholder governance, consider how political polarization affects the U.S. hydraulic fracturing industry, investigate corporate contributions to judicial elections, and examine firm-state disputes in international investment.

Environmental Dynamics and Organizational Responses in Sustainability Research

Session Moderator: **Brooke A. Lahneman**, *Montana State U.*

ONE: **(Re) Focusing on Planetary Boundaries for Corporate Sustainability Research**

Author: **Brooke A. Lahneman**, *Montana State U.*

With a growing body of conceptual work making a strong case for using the 'social-ecological systems' (SES) framework to theorize on corporate sustainability, we need to pursue more empirical research in this domain. In this paper, I advocate for a (re)focus on the planetary boundaries framework as an effective foundation for empirical research in corporate sustainability that adopts an SES perspective. I combine a review of the literature on planetary boundaries in management with characteristics of the framework itself to develop a conceptual model of how scholarship can utilize this framework to progress our empirical research through an SES perspective. With this conceptual model, I offer three pathways for future research on corporate sustainability applying an SES lens, including: focusing on organizations' interactions with individual PBs rather than the framework as a whole; investigating organizations' interactions with interdependencies among PBs; and researching whether and how collaborations with scientific groups with expertise on PBs can be most effective, with a focus on scale and place.

ONE: **The Effects of Natural Disasters on Green Innovation**

Author: **Lisa Keding**, *RWTHAachen U.*

Author: **Marten Christian Ritterrath**, *U. of Cologne*

The impacts of climate change are already shaping people's lives today: Natural disasters are increasing in frequency and severity. Innovation is often hailed as the only path to sustainable prosperity. In this article, we study how inventors respond to natural disasters. We combine patent data with the geolocations of French inventors and spatially match these to detailed information on local natural disasters for the years 1994-2014. We exploit this quasi-experimental variation of the disasters to estimate event study designs. We find that in affected areas exposure to natural disasters leads to a persistent increase in green patents of roughly 20%, compared to the sample average. Green patents are patents pertaining to technologies or applications for mitigation or adaptation against climate change. The strongest disasters lead to an increase of about 50%, and the most unexpected to an increase of up to 70%. The effect is primarily driven by mitigation technologies aiming to reduce emissions, thus by the technologies combating the root cause of climate change. We find that disasters have no effect on non-green innovation. Natural disaster exposure carries information on climate change for the inventors. Our results imply that there is an opportunity for policy to act, by providing the information carried by the disasters

ONE: **Is It Still None of My Business? Firms' Exposure to CC-Related Natural Disasters and GHG Emissions**

Author: **Soolim Park**, *George Washington U.*

Although natural disasters, exacerbated by climate change, disrupt businesses, the existing literature on natural disasters and climate change is fragmented when it comes to explaining how a firm's exposure to natural disasters can lead to the adoption of climate change mitigation strategies. Through the lens of the literature on the attention-based view, this study aims to investigate whether the number of climate change-related natural disasters at headquarters and facilities can explain changes in firms' greenhouse gas (GHG) emissions. Using data on large GHG emitters in the U.S., this study explores whether a firm's exposure to natural disasters can explain climate change mitigation by the firm. Specifically, it will delve into the relationship between a firm's headquarters' and facilities' exposure to natural disasters and the subsequent reduction in GHG emissions. This study seeks to integrate the literature on natural disasters and climate change by elucidating how exposure to natural disasters leads to climate change mitigation based on the attention-based view. Additionally, it aims to contribute to the attention-based view by examining the relationships between top-down and bottom-up attentional processes at headquarters and facilities.

ONE: **How First-Responder Occupations Condition Climate Futures**

Author: **Laura Albareda**, *LUT Business School*

Author: **Oana Branzei**, *Ivey Business School*

Author: **Marc Castellnou**, *GRAF*

Adopting an insider-outsider approach and combining multi-sited and public ethnographies, we induce a process model of occupational adaptation to climate change. We focus on first-responder occupations, following firefighters in one of the regions in the Mediterranean regions over a 14-year window (2009-2023) as they brace for three successive transitions in the fire regime. Our inductive insights reveal the critical role of first-responders as temporal workers who recognize and leverage temporal leads to futureproof expertise in anticipation of undesirable futures. Before worse comes, experts derive key contingencies by reaching out across occupational jurisdictions and rehearsing responses to next generation fires in their own. We contribute to the literature on occupational adaptation to changes in technical, social and environmental regimes, extend the emerging literature on future-making, and inform the sociology of tomorrow's expertise.

Corporate Social Responsibility: Employee Engagement and Organizational Dynamics

Session Moderator: **Subhadarsini Parida**, *lecturer, U. of South Australia*

ONE: **CSR and Employee Constructive Deviance: The Roles of Calling and CSR Attribution**

Author: **Xue Han**, *Renmin U. of China*

Author: **Yuhui Li**, *Renmin U. of China*

Author: **Vivien Lim**, *National U. of Singapore*

Author: **Jie Li**, *Xi'an Jiaotong-Liverpool U.*

Drawing from social information processing theory (SIP) and attribution theory, we proposed a moderated mediation model, through which we examined how corporate social responsibility (CSR) impacts employee constructive deviance. Data were collected from two studies, a scenario experiment (N = 168) and a time-lagged survey (N = 281), which provided support for our hypotheses. Specifically, we found that CSR is positively related to employee constructive deviance, and calling mediates this relationship. CSR perception translates into greater calling and more constructive deviance when employees attribute CSR to intrinsic attribution than extrinsic attribution. Implications for research and practice are discussed.

ONE: **Can 'Psychological Reactance' be the Secret Sauce to Pro-Environmental Behaviours?**

Author: **Subhadarsini Parida**, *lecturer, U. of South Australia*

Author: **Deepak Sardana**, *College of Business and Law, RMIT U.*

Author: **Narain Gupta**, *Management Development Institute Gurgaon*

Author: **Sameer Deshpande**, *Griffith U., Australia*

Author: **Graham Bradley**, *Griffith U., Australia*

This paper explores the complex relationship between psychological reactance and individuals' willingness to engage in pro-environmental behaviours (WEPEB). The study draws upon the Theory of Planned Behaviour (TPB) and Agency theory to investigate how psychological reactance impacts subjective agency factors such as subjective personal norms and green identity differently from individual agency factors such as personal causal contribution and climate change distress, as they can differentially influence individuals' commitment to ethical and environmentally friendly practices. This quantitative study collected data from 3,915 individuals in Australia. The study reveals the duality nature of psychological reactance as moderator, reflecting as suppressor for subjective personal norms and green identity on WEPEBs and enabler for personal causal contribution and climate change distress. By recognizing the nuanced interplay between reactance and various factors, our study is important for organizations and policymakers to develop more effective strategies for promoting ethical and environmentally responsible practices.

ONE: **Integrating CSR into Executive Compensation: Board Characteristics and Institutional Pressures**

Author: **Yuting Hou**, *Public U. of Navarre*

Author: **Alejandro Bello-Pintado**, *Public U. of Navarre*

Author: **Teresa Garcia-Marco**, *U. Publica de Navarra*

This study explores the core determinants that drive the adoption and implementation of Corporate Social Responsibility (CSR) contracting through the lenses of agency theory and institutional theory. Examining a dataset comprising 4,716 firm-year observations from European companies spanning 18 countries between 2016 and 2022, we investigated how board characteristics and institutional pressure impact CSR contracting. Employing a multilevel regression analysis, our findings highlight the positive impact of board specific skills and independence on CSR contracting. Notably, the study reveals the significant role of institutional pressure in shaping CSR contracting, specifically showcasing a positive correlation with control of corruption while indicating a negative association with regulatory quality. Moreover, the interaction between board characteristics and institutional pressures offers crucial insights for practitioners, policymakers, and regulators concerning corporate governance mechanisms and the country governance system in formulating corporate strategies.

ONE: **Sustainability Managers' Moral Role Identity and Moral (Dis) Engagement**

Author: **Carina Keller**, *EBS U. für Wirtschaft und Recht*

Author: **Diane Sophie Owin**, *EBS Business School EBS U. für Wirtschaft und Recht*

Author: **Karin Kreutzer**, *EBS U.*

Author: **Myriam N. Bechtoldt**, *EBS U. of Business and Law*

To address the responsibility to mitigate climate change, organizations employ sustainability managers who consider themselves moral 'change agents'. While previous research has pointed to the moral role identity of sustainability managers, it remains unclear how sustainability managers (de-)construct their moral role identity over time, and what follows from this (de-)moralization for their climate commitment. These questions were the focus of a longitudinal qualitative study involving 36 sustainability managers. Based on interview, observational, and documentary data, we explored how sustainability managers' role identity work involved (de-)constructing their own moral standards and relationality with others. We systematically identified four factors that influence moral commitment in the work of sustainability managers. These factors include the behavioral and material (ir)responsibility associated with their work role, as well as the affective and relational (dis)engagement associated with their work environment. Our findings suggest that these four determinants influenced how far sustainability managers guided climate (in)action showing deep moral commitment, surface moral commitment, or conditional moral commitment. The paper contributes to the literature on (moral) identity work and moral disengagement, as we elucidate how moral disengagement serves as a coping mechanism to intra-personal role identity conflicts, thereby being both detrimental and conducive to fostering moral organizational objectives.

Engaging Sustainability in and From the Field: Innovative Practices from ONE Teaching Award Winners

Organizer: **Stuart A. Allen**, *Robert Morris U.*
Moderator: **Stuart A. Allen**, *Robert Morris U.*
Facilitator: **Divya Singhal**, *Goa Institute of Management*
Presenter: **Rae Andre**, *Northeastern U.*
Presenter: **Christopher Craig**, *Murray State U.*
Presenter: **Sara B. Soderstrom**, *U. of Michigan*
Facilitator: **Georg Reischauer**, *WU Vienna & JKU Linz*

When learning in and from the field, students become psychologically and physically immersed with the objects of their inquiry and navigate the dynamics of doing so. For our purposes, a broader conceptualization of fieldwork includes various forms of learning that get the students out of the classroom and into the natural environment, as well as the manager's natural environment, or bring that environment into the classroom. Fieldwork can be leveraged to holistically develop a sustainability mindset amongst future managers, giving students exposure to innovative approaches to sustainability within communities and organizations. To promote fieldwork in sustainability courses, this symposium aims to share insights on how and when faculty can integrate fieldwork into their sustainability courses to enable students to develop a sustainability mindset. For this purpose, past ONE Distinguished Educator Award and ONE Early Career Teaching Award winners will provide insights from their teaching strategies, especially those that get students into the field, bring the field into the classroom, expose students to sustainability innovations in or from real-world contexts, or incorporate service-based learning or community immersion.

Project Management

Session Moderator: **Chunlin Yu**, *The London School of Economics and Political Science*

OSCM: **Exogenous and Endogenous Capability Development in PBEs: A Resource Orchestration Perspective**

Author: **Chunlin Yu**, *The London School of Economics and Political Science*

Author: **Juliano Denicol**, *U. College London*

Author: **Andrew Davies**, *SPRU U. of Sussex UK*

This paper investigates an unexplored question of how project-based enterprises (PBEs) manage to build capabilities from scratch within a limited period of time for project delivery. This paper conducts a multi-case study of five PBEs that act as the leading organization in delivering five large-scale and complex projects in China, based on a combination of 103 semi-structured interviews and substantial documental data. The findings show that PBEs orchestrate resource to build their capabilities exogenously and endogenously through two underlying mechanisms – dynamic resource configuration and recursive learning cycle. Overviewing the overall capability building trajectory, PBEs' role in resource orchestration transforms from “resource possessor” to “resource integrator” during exogenous process then to “capability iterator” during endogenous process. Dynamic capabilities are the essence of such organization evolution and capability building. This study thus extends and enriches the operations management (OM) literature on resource orchestration theory by providing new empirical insights on the operations strategy of developing capabilities in PBEs. This work highlights how two research areas of OM – resource orchestration and dynamic capabilities – are fruitfully combined to gain new insights into capability building.

OSCM: **The Comparison of Benefits in the Project Investment Decision**

Author: **Mehdi Rajabi Asadabadi**, *The U. of Western Australia*

This paper addresses a long-standing problem as to how the non-monetary benefits of projects can be compared in the project selection process. Executives often face the challenge of making a project investment decision, that is, to select projects that will most enhance the organisation's performance. This requires the comparison of the different characteristics of projects, the resources needed to complete the project, and the benefits offered by the projects. The literature often treats the project investment decision as a problem with multiple criteria, where projects are evaluated with respect to these criteria, and the best projects to fund are identified. It might be straightforward to compare some characteristics of projects such as the costs and monetary (aka financial) benefits. However, there is less clarity around how to compare non-monetary benefits when projects are quite different and deliver a range of disparate benefits (e.g. the benefits of a hospital construction project vs. a railway). This paper develops a novel straightforward method to compare project dissimilar benefits. In addition to this methodological contribution, this paper also contributes to the literature by facilitating an effective comparison of the non-monetary benefits (and hence enhancing the quality of the project investment decision). The paper also sheds light on how the reasoning structures of different projects decision makers may be impacted by their degree of optimism.

OSCM: **Supply Chain Narratives and the Success of Crowdfunding**

Author: **Jiaying Ou**, *School of Mathematics, Shenzhen U.*

Author: **Shuijing Jie**, *Xi'an Jiaotong-Liverpool U.*

Author: **Yifu Li**, *International Institute of Finance, School of Management, U. of Science*

Author: **Peng Luo**, *School of Mathematics, Shenzhen U., Shenzhen, China*

This study aims to investigate the impact of the narratives of supply chain-related information on the success of crowdfunding campaigns. We developed a supply chain dictionary to measure the supply chain narratives in crowdfunding through text mining. Our empirical results show that more comprehensive supply chain narratives significantly positively lead to higher financial performance in crowdfunding projects. Additionally, we identified an “inverted U-shaped” relationship between the narratives of the “deliver” in the supply chain and the project's success. Results of the moderating analyses show that the number of images, videos, and updates negatively moderates the narrative-crowdfunding success relationship.

Networked Impact: Harnessing Inter-Organizational Synergy for Public Good

Session Moderator: **Robin Hargroder Lemaire**, *Louisiana State U.*

This presentation will examine the efficacy of social capital among leadership during disasters, the challenges of jurisdictional boundaries in policing, the strength of purpose-oriented networks, and the potential of place-based collaborations for impactful cross-sectoral work.

PNP: A Place-Based Perspective of Cross-Sectoral Collaborations

Author: **Lei Liu**, *U. of Exeter Business School*

Author: **Angela Aristidou**, *UCL SoM & Stanford CASBS*

Cross-sectoral collaborations (XSPs) are promising solutions to addressing societal problems. Yet the understanding is limited regarding how these collaborations unfold when they are bounded in a geographical location (i.e., place-based) and organizations need to repeatedly collaborate due to limited choice of partners. To develop insights into the dynamics in place-based XSPs, we conducted a qualitative study of the collaborations between a National Health Service hospital and third-sector organizations in a community located in the East England area. We found that informal relationships play crucial roles and interact with formal relationships to drive place-based XSPs. We demonstrated how the shadow of the past and the shadow of the future jointly affect XSPs in both positive and negative ways, shaping the management of challenges in these collaborations. Moreover, we revealed the unique externalities of place-based XSPs. Integrating our findings, we developed a model to theorize how different components interact in place-based XSPs and the associated outcomes. By bringing the role of places to the surface, we provide a comprehensive depiction of the dynamics in place-based collaborations and contribute to the literature on XSPs and on interorganizational relationships.

PNP: Crime May “Know No Boundaries” but Police Departments Do: Examining Boundaries by Rank in Policing

Author: **Donna Sedgwick**, *Virginia Tech*

Author: **Stacey Clifton**, *Radford U.*

This study explores the dynamics of interorganizational relationships (IORs) among police departments in a region in Southwest, Virginia. We focus on the perceptions of jurisdictional/organizational and policy/procedure boundaries in regional IORs, closely following Giacomantonio's (2014) typology of policing boundaries. Through a qualitative analysis of over 700 excerpts that resulted from 22 semi-structured interviews with law enforcement personnel, we identified significant themes of 'bridging' and 'separation' across these boundaries. Data revealed more discussion of bridging in jurisdictional/organizational boundaries (82%) compared to policy/procedure boundaries (60%). Findings suggest that bridging and separating at jurisdictional/organizational and policy/procedure boundaries is influenced by rank within law enforcement agencies. Variations in perceptions of IORs by rank align with fragmentation of police occupational culture within an agency (Reuss-Ianni 1983; Paoline 2003; Cohen 2018). We argue that our findings support the inclusion of boundary types in collaborative process frameworks and also add to understanding the complexities of law enforcement IORs when developing strategies to enhance and improve these efforts across varying ranks of law enforcement.

PNP: Purpose-Oriented Networks and System Robustness: Core Redundancy and Diversity

Author: **Robin Hargroder Lemaire**, *Louisiana State U.*

Author: **Donna Sedgwick**, *Virginia Tech*

Author: **Lauren McKeague**, *U. of Montana*

In the aftermath of the COVID-19 pandemic, there is greater recognition of the important aim of strengthening the robustness of service systems. As an aim of some purpose-oriented networks (PONs) is to strengthen service systems, we argue robustness should be considered as an outcome for these cross-organizational collaborative efforts in public administration. Thus, the question motivating our research is how collective efforts, like PONs, can improve the robustness of a system? Specifically, our research is guided by the questions of which structural factors may be key to achieving system robustness and how does a PON strengthen the system to achieve those structural characteristics? Drawing on a longitudinal mixed methods study of a child education and development (CED) network, we examine the change in the CED system structure from dependence on a few hub organizations, and the inherent vulnerabilities of that structure, to one with a large core and less likely to fragment. We then analyze how redundancy and diversity of the core increases the robustness of the system. Last, we identify the PON processes that lead to these core characteristics. We use our findings to offer implications for theory and practice on how PONs can strengthen the robustness of service systems.

PNP: The Weakness of Weak Ties: Do Social Capital Investments Among Leaders Pay off During Disasters

Author: **Brenda Nowell**, *North Carolina State U.*

Author: **Toddi Steelman**, *U. of Saskatchewan*

The theoretical literature on social capital and disasters, as well as conventional wisdom, suggests the importance of pre-disaster relationship building among leaders of responding organizations and agencies for disaster readiness and response. Often implied, but rarely tested empirically, research presumes a positive and linear relationship associated with investments in social capital for effective disaster response. Any amount of relationship building is better than none, but more is better. But is it? In this article, we use a rare longitudinal, pre-post disaster dataset of dyadic ties among leaders to examine key questions related to investments in social capital before a disaster, the expected payoffs from these investments, the actual payoffs of these investments and the marginal effects of such investments. Our findings indicate that pre-disaster relationship building has a non-linear relationship to expected payoffs and actual payoffs. Marginal effects analysis suggests three interesting, though perhaps counter-intuitive, relationships between the investment and expected and actual payoffs in social capital. First, leaders reported expecting disproportionately high payoffs from relatively small relationship investments prior to the incident. Second, infrequent pre-disaster interactions were found to be no different than no prior interaction when looking at actual payoffs from these investments. Finally, relationships that were deemed most problematic were among those with weak ties. Overall, results suggest that the efficacy of pre-disaster relationship building is more complicated than one would expect based on extant literature. More investment in social capital may be better in some cases, but the benefits from these investments appear only after a certain threshold is met and, in some cases, may have diminishing returns. Potential theoretical drivers for these seemingly counter-intuitive findings are discussed while calling for further research to investigate these dynamics in other contexts.

Shadows in Service: Addressing Misconduct & Stigma in Public Work

Session Moderator: **Diep Nguyen**, *Northumbria U.*

This presentation will explore the dark side of public workplaces, sharing research on the nuanced relationships between supervisor humor and employee well-being, moral disengagement and workplace bullying, police misconduct and community trust, and public sector stereotypes and job appeal.

PNP: **Moral Disengagement's Impact on Ethical Leadership, Witnessing Bullying and Meaningful Work**  

Author: **Diep Nguyen**, *Northumbria U.*

Author: **Stephen Teo**, *La Trobe U.*

Author: **Nhung Nguyen**, *Newcastle Business School, Northumbria U., UK*

Observing workplace bullying could shape bystanders' undesirable perceptions of their work. This study addresses a gap in the scarce literature on witnessing workplace bullying within public administration by examining the moderating role of moral disengagement in the relationships between ethical leadership (EL), witnessing workplace bullying, and employee perceptions of meaningful work (MNW). Aligned with Bandura's (1991) overarching social cognitive theory of morality, we posit that EL, a critical component of work environment, diminishes instances of workplace bullying witnessed by bystanders while concurrently enhancing the perceived MNW of public servants. However, considering moral disengagement as cognitively moral judgement, it could crucially influence the impact of EL on witnessing workplace bullying and the subsequent effect of witnessing workplace bullying on perceived MNW. Leveraging a two-wave study involving 246 public sector employees in the United States, our findings reveal a negative association between EL and witnessing workplace bullying, alongside a positive relationship between EL and MNW. Moreover, witnessing workplace bullying is negatively associated with MNW. Intriguingly, low moral disengagement amplifies the impact of high EL on witnessing workplace bullying while intensifying the detrimental influence of witnessing workplace bullying on MNW. These results align with the social cognitive theory of morality perspective. We discuss theoretical contributions and offer managerial insights, particularly relevant for the public sector and broader organizational contexts.

PNP: **"You are Not That Funny": Supervisor's Humor Use on Psychological Contract Breach and Mental Health**   

Author: **Stephen Teo**, *La Trobe U.*

Author: **Diep Nguyen**, *Northumbria U.*

Author: **David Chee-mun Cheng**, *Australian National U.*

The examination of humor use by supervisors has garnered an increasing attention in organizational behavior literature, revealing its dual impact on employees' mental well-being. Grounded in the benign violation theory of humor and social exchange principles, this study delves into the adverse influences of humor use on psychological contract breach (PCB) and psychological distress among public sector employees during a period of persistent change and uncertainty in the Australian public administration. Two studies were conducted to gather data: an experimental study and a time-lagged cross sectional field work. In the first study, a cross-sectional sample of 101 working adults were surveyed to explore the impact of leader humor on PCB and psychological distress. The findings provided empirical support for the positive and causal effect of a humorous leader on PCB. Additionally, evidence emerged for an indirect effect of a humorous leader on psychological distress, mediated by PCB. The second study employed a four-week internal separation design, involving 236 public sector employees who participated in an online survey assessing their perceptions of immediate supervisor's use of humor, PCB and psychological uncertainty during organizational change period in Time 1, and the ultimate psychological distress in Time 2. The results indicated that a supervisor's humor use had an indirect effect on psychological distress, mediated by PCB. Furthermore, psychological uncertainty intensified the positive relationship between the use of humor by a supervisor and PCB. This study sheds lights on the nuanced dynamics of humor use in the workplace, revealing potential detrimental effects on employees' psychological well-being amid organizational change and uncertainty.

PNP: **It's Not Always as We Think: The Missing Link Between Public Sector Stereotypes and Attraction** 

Author: **Mette Jakobsen**, *Aarhus U., Department of Management*

Author: **Fabian Homberg**, *Department of Business and Management, LUISS Guido Carli U.*

Public sector workers are often negatively portrayed with ascriptions such as 'ineffective' and 'lazy'. Such negative connotations might disadvantage public sector organizations when trying to attract applicants, as it can reflect negatively on individuals' social identities. With this pre-registered experimental study, we therefore examine stereotypes of similar administrative occupations across the public and private sector and how this influences attraction in the initial phases of a job search before tangible job attributes even become visible. Our study among 290 job seekers in the United Kingdom provides evidence for a generic public worker bias, but this bias diminishes when the specific occupation is known. Further, we do not find that sector affects attraction or that this relationship is moderated by stereotypes. We discuss theoretical and practical implications of the findings and provide directions for future research.

PNP: **Police Misconduct and the Social Connectedness Between the Police and Small Business Communities**

Author: **Cheng Wang**, *California State U. Sacramento*

Author: **Dali Ma**, *Drexel U.*

This study examines police officers' perceptions of two types of misconduct behaviors related to small business communities – the community-based misconduct and the self-interests-based misconduct. This study proposes that police officers' occupational characteristics – the job duty and the rank as a supervisor, can impact their perceptions of the seriousness of the two types of police misconduct. Using data from the Police Corruption in Thirty Agencies in the United States – 1997, this study shows the strong consensus that the majority of police officers perceive the community-based misconduct as less serious, but perceive self-interests-based misconduct as more serious. This study has implications for the relationship between police and small business communities in creating and maintaining community collective goods. The community-based misconduct differs from the self-interests-based misconduct because the former can establish and enhance social connectedness and solidarity between the organization and the community. This study also shines lights on the conversation of organizational misconduct. Organizational misconduct behaviors differ not only by their seriousness but also by their nature, such that some misconduct behaviors contribute to the community's public goods while some misconduct behaviors are more the pursuits of self-interest.

Participant: **Yue Ming**, *Indiana U. - Lilly Family School of Philanthropy*
Discussant: **Julie Langer**, -

This symposium leverages the context of community foundations (CFs), public charities that raise and distribute philanthropic funds in a defined geographic place to meet broad community needs, to examine how community foundations pursue change towards justice philanthropy in light of an environmental context that increasingly politicizes DEI. Specifically, papers in this panel conceptually explore the relationship between power and philanthropy, describe the institutional logics shaping justice philanthropy in community foundations, and empirically examine community foundation practice to advance social equity and justice.

Methodological Advances and Challenges in Management Research

Session Moderator: **Daniel A. Newman**, *U. of Illinois at Urbana-Champaign*

RM: **EventMining: Natural Language Processing-based Event Discovery for Online Business Information**   

Author: **Mingze Xu**, *Leeds U. Business School*
Author: **Chee Yew Wong**, *Leeds U. Business School*
Author: **Christina Wong**, *Hong Kong Polytechnic U.*
Author: **Sakun Boon-itt**, *Thammasat U.*

Unexpected events can have a “Black Swan” effect on companies and lead to operations and market disruption. Researchers have been exploring various events to support companies in optimizing their strategies, where recognizing events is the first and most important step. However, in an era of information explosion, discovering events from mass volume of online information is literally a challenging work for both researchers and managers. In this paper, we propose EventMining, an approach to discover events from online information combines natural language processing (NLP) and machine learning (ML) techniques. Through integrated functions of online information scanning, NLP model development, textual data preprocessing and hyperparameter analysis, event cases are automatically generated and can be used to research for findings. In doing so, EventMining can provide a significant step forward for advancing the traditional event recognition approach with more efficient and insightful features, helping researchers and managers better discover events and also contribute to managers in advancing their operations and strategy-making.

RM: **Diversity Hiring with Local Accuracy: Local, Meta-analytic, and Bayesian Approaches**

Author: **Chen Tang**, *American U., Kogod School of Business*
Author: **Daniel A. Newman**, *U. of Illinois at Urbana-Champaign*
Author: **Chelsea Song**, *Indiana U. - Kelley School of Business*
Author: **Serena Wee**, *U. of Western Australia*

For reducing adverse impact, the diversity-validity tradeoff curve approach provides sets of selection predictor weights that can often substantially enhance diversity (increase AI ratio and number of minority job offers), with no loss of job performance in comparison to unit weights (Wee et al., 2014). A key limitation of this diversity-enhancing approach is the tendency for tradeoff curves to shrink, leading to lesser job performance and diversity outcomes upon cross-validation (Song et al., 2017). The current paper evaluates and compares tradeoff curve shrinkage (both validity shrinkage and diversity shrinkage) using three types of validity evidence/calibration studies: (a) a local validity study, (b) a meta-analysis (Schmidt & Hunter, 1977), and (c) a Bayes-analysis with empirical priors, which is a weighted combination of both a local study and meta-analysis (Newman et al., 2007). Using simulation, we show conditions where each approach performs best, offering recommendations on ideal methods for diversity improvement (reducing shrinkage and maximizing cross-validity) in local selection settings. Results guide selection practitioners in novel methods (integrating the advantages of meta-analysis, Bayes-analysis, and Pareto-optimal weighting) to best combine predictors to simultaneously achieve job performance and diversity objectives in local selection settings.

RM: **Hypothetical Nudges Provide Misleading Estimates of Real Behavior Change**  

Author: **Linnea Gandhi**, *The Wharton School, U. of Pennsylvania*
Author: **Anoushka Kiyawat**, *Harvard Business School*
Author: **Colin F. Camerer**, -
Author: **Duncan J. Watts**, *U. of Pennsylvania*

Hypothetical scenarios provide a popular alternative to field experiments for scholars interested in nudging behavior change, comprising a substantial proportion of such studies in the domains of finance, transportation, and sustainability. Yet their validity as proxies for real-world contexts is unclear. To investigate, we designed four styles of hypothetical scenarios to approximate five recent field studies of nudges in distinct domains, running a total of 20 pre-registered experiments (N=16,071, n>200 per cell). This design allows clear comparison of old field data with new hypothetical data. We find that hypothetical outcomes are consistently biased upwards – participants engage more in target behaviors by a median factor of 3.81 compared to the original field experiment – while their estimations of treatment effects are unpredictable: sometimes bigger, sometimes smaller, sometimes calibrated. Further, none of our four hypothetical designs reliably reduced estimation error. Without a gold standard approach to constructing hypothetical scenarios, behavioral researchers and practitioners should use caution when employing this low-cost but unreliable tool to evaluate nudge interventions.

RM: **Revisiting the Paradoxes of Knowledge Diversity and Network Structure for Team Innovation**

Author: **XIN GAO**, *U. Of Chicago*
Author: **Jarder Luo**, *Tsinghua U.*
Author: **Song Wang**, *Zhejiang U.*
Author: **Peter Ping Li**, *Copenhagen Business School*

Innovation output within a team is nurtured by the combination of team members' diverse knowledge in the context of collaborative teamwork. Most previous research has assumed a linear, interactive effect of knowledge diversity and network structure in predicting team innovation. However, more recent research suggests that the relationship among knowledge diversity, network structure, and team innovation is a multifaceted and dynamic issue. A critical question remains: How does the interaction of high or low knowledge diversity with high or low network density contribute to team innovation? To address this question, we adopted the perspective of 'knowledge networks' and conducted a machine-learning inductive method to examine the interactive effect of knowledge diversity and network density on team innovation. We gathered multisource data from 2,202 teams within a large high-technology firm in China spanning from 2014 to 2017. The results indicate that knowledge diversity and network density exhibit a curvilinear interactive effect on team innovation. The two factors reinforce each other in the initial stage and reach the optimum outcome at a moderate level. However, beyond this threshold, the two factors start restraining each other. This study deepens our understanding of the paradoxical joint effects of knowledge diversity and network density on team innovation.

How to Analyze and Build Theory on Silence and the Unspoken in Qualitative Work?

Organizer: **Hodar Lam**, *Lingnan U.*
Organizer: **Chujiao Zhou**, *W. P. Carey School of Business, Arizona State U.*
Organizer: **Mirjam Werner**, *Erasmus U. Rotterdam*
Panelist: **Gail T. Fairhurst**, *U. of Cincinnati*
Panelist: **Bryant A. Hudson**, *IÉSEG School of Management*
Panelist: **Laurence Romani**, *Stockholm School of Economics*
Panelist: **Tammar B. Zilber**, *Hebrew U. of Jerusalem*

With growing scholarly interest in qualitative research in organizational studies, a critical challenge lies in navigating through qualitative data pertaining to silence and the unspoken in interviews or observations. Even though there is scant yet relevant attention in the organizational and psychotherapy literatures, how qualitative researchers, especially early-career ones, should make sense of the type of data has yet to receive methodological exploration or discussions. In this instructional symposium, a new format at RM Division, we bring together worldwide qualitative scholars to share their experiences and insights into how they have handled and managed silence and the unspoken in potentially stigmatized or sensitive contexts. In addition to a panel discussion facilitated by the organizers, participants will join roundtables and discuss how to analyze, theorize, and present data on silence and the unspoken for theory building. We aim to provide both theoretical and practical insights into being aware of and making good use of data on silence and the unspoken for interested qualitative researchers.

Strategists' Identities and Subjectivities

Session Moderator: **Anniina Rantakari**, *U. of Oulu*

SAP: **Exploring Middle Manager Identity Work During Strategic Change** 

Author: **Lisa Day**, *U. of Liverpool*
Author: **Julia Balogun**, *U. of Liverpool*
Author: **Carola Wolf**, *U. of Liverpool*

Research has shown middle managers to be important players in strategic change implementation. As strategic change agents they provide a pivotal link between top-down strategy and operational delivery. However, we know much less about why some individual middle managers adapt well to this strategic change agent role whilst others do not, or why sometimes managers that appear likely to adapt well, surprisingly, do not. Through a two-year, real-time study of an internal merger, this paper explores how middle managers' identity work influences the adaptation of their role as strategic change agents. We develop a process model of the interplay between individual identity work and identity regulation during strategic change, and extend understanding of middle manager strategizing behaviour through a processual analysis of individual level identity dynamics

SAP: **Senior Strategists' Self-Narratives: Positioning Occupational Background to Frame Strategic Identity**

Author: **Diogo Campos-Teixeira**, *Macquarie Business School, Macquarie U.*
Author: **Yvonne Breyer**, *Macquarie Graduate School of Management*
Author: **Eric Knight**, *Macquarie Business School, Macquarie U.*

Although much of the strategy scholarship to date has examined the narratives of strategists primarily in terms of how they shape the work of the organization, this document explores how strategists frame their occupational backgrounds to position their self-narratives. Self-narratives, therefore, not only have the capacity to reveal the challenges experienced by individuals but also the senses of self that emerge in response. Their sense of self constructs their professional identity as strategists, which we denominated strategic identity. We analyzed the self-narratives from 47 senior strategists operating across a variety of sectors and geographies, who took very different paths to obtain their current full-time, in-house strategy positions. This analysis showed that senior strategists frame their self-narratives in order to highlight, downplay, or selectively emphasize aspects of their occupational backgrounds. Consequently, they can position strategic identity as technical, humanistic, and processual identity respectively according to present necessities and previous experiences. Understanding how strategists frame their occupational backgrounds to construct their identities is an important issue for organizations' hiring decisions. Due to their strategic skills, organizations hire strategists with a varied occupational background for leadership positions, in which their identity has to be framed strategically.

SAP: **Celebrity and Reputation Uncertainty in a Rapidly Growing Financial Services Firm**    

Author: **Hongqin Li**, *Nottingham U. Business School*
Author: **William Stopford Harvey**, *Melbourne Business School*
Author: **Jingjing Qu**, *Shanghai Artificial Intelligence Laboratory*

We offer novel insights into the role of celebrity in navigating reputation uncertainty, based on a rapidly growing financial services firm. Unusually, celebrity was used to signal prudence, and helped draw attention to changes in the firm's product mix in response to a favourable regulatory change that had the effect of mitigating reputation uncertainty. Yet paradoxically, the inherently fleeting nature of celebrity raised persistent worries about the firm's future. We draw out the implications of these findings for how we theorize celebrity in relation to reputation reconstruction. First, as spatially and temporarily bounded and conditioned. Second, as symbiotically linked to particular organizations. Third, through the co-usage of media and traditional social ties. Finally, we argue that successful reputation building cannot succeed without the ability to pick favourable circumstances.

SAP: **Shifting Organizational Roles in Creating Exceptional Strategic Performance**

Author: **Anniina Rantakari**, *U. of Oulu*

This paper examines the relation between role ambiguity and exceptional strategic performance. In particular, this study reveals how organizational actors purposefully created ambiguity in organizational roles and how continuously shifting roles and role expectations build and sustain extreme strategic performance in and through daily practices. We draw on in-depth empirical material collected over three years from a professional Finnish ice hockey organization that has been able to be exceptionally successful both in terms of 'the game' and 'the money'. Our analysis reveals how different organizational members shift between different and sometimes even contradicting roles and expectations in their pursuit of extreme strategic performance. Based on our analysis we conceptualize three shifts in organizational roles: temporal shifts, embodiment shifts, and priority shift. With these findings we contribute to our understanding of the fluid nature of organizational roles as well as how these shifting roles impact strategic performance.

Ethics (Or Not) at Work: Wrongdoing, Unethical Pro-Organizational Behavior (UPOB), and Moral Repair

Session Moderator: **Scott Reynolds**, *U. of Washington*

SIM: Gaming Rules in Liminal Settings Leading to Corruption: An Experimental Approach

Author: **Miguel Velasco**, *CUNEF U.*

We examine the question of why corruption exists and what may explain its resilience in the face of efforts to eradicate it. We focus our analysis on the psychological antecedents of corrupt behavior and develop the hypothesis that an adaptive form of problem-solving behavior called gaming is at the heart of corruption. We show how the adoption of small unethical actions can evolve into organizational routines more rapidly and with less awareness than agents who engage in these behaviors expect. Over time, if left unchecked, the behaviors of gaming can become a de facto way of achieving goals. In settings in which the performance of the agent is embedded within a specific organization, this dependence on gaming can extend to organizational level performance. Under this analysis corruption emerges as an intentional behavior in which deception is used to cover up the prevalence and dependence on gaming as a means of achieving goals in organizational settings. Once intentionality is present and deception is deployed, corruption becomes institutionalized and self-sustaining. In what follows we address two questions: (1) what type of situation or problem prompts the behaviors of gaming? and (2) in the face of the prevalence of gaming, what strategies of thinking lead to the transition from gaming to corrupt acts as an acceptable or even preferred form of problem solution? We adopt a cognitive approach to answer these questions. Using Simon's concept of bounded rationality as a guiding principle, we develop the concept of gaming and describe its psychological foundations, framing it as an adaptive and frequent form of problem-solving behavior that takes advantage of ambiguity in rules to achieve a personal advantage. We first present a framework for the study of corruption based on our analysis of gaming and the unintended consequences it has in organizational settings. We then test our framework with an experiment.

SIM: Group Allegiance Versus Societal Norms: Cultural Influences on Unethical Pro-Organizational Behavior

Author: **Shaun Parkinson**, *Washington State U.*

Author: **Jay Bates**, *Washington State U.*

Author: **Jeremy M. Beus**, *Washington State U.*

This study explores unethical pro-organizational behavior (UPB) within the context of varying cultural values. We explore how societal norms and group allegiances, shaped by cultural underpinnings, influence the propensity of individuals to engage in UPB. Central to our investigation are two societal values: group well-being (collectivism) and hierarchical orientation. Using a meta-analytic approach with a sample size of 43,648 across 166 studies, we examine the moderating role of these cultural dimensions on the propensity to prioritize subgroup interests over societal expectations. Our findings show the complexities associated with individual ethical frameworks and their societal environment. In cultures with a strong emphasis on group well-being, we observe a heightened propensity for individuals to prioritize organizational interests, but also find that in these same environments, the negative relationship between societal expectation adherence and UPB is exacerbated, meaning individuals that give higher self-meaning to their adherence to morals are even less likely to commit UPB. Additionally, in hierarchical societies, we generally find support for a de-emphasis of societal norms evidenced by a strengthening of both the relationship between organizational bonds and UPB, as well as the relationship between moral disengagement and UPB. We explore and offer potential explanations for some of the conflicting findings in this study. This research contributes to organizational ethics literature by underscoring the pivotal role of cultural context in shaping individual ethical decision-making, offering valuable insights for multinational organizations in understanding and managing ethical behaviors across diverse cultural landscapes.

SIM: When Moral Leads to Immoral: Differential Effect of Corporate Social Responsibility on Employee UPOB

Author: **Xiang Yi**, *Jacksonville State U.*

Author: **Shuhong A. Wang**, *Radford U.*

Author: **Benjamin Biermeier-Hanson**, *Radford U.*

Author: **Yueru Ma**, *Central South U.*

Author: **Weibo Cheng**, *Central South U.*

In recent years, Corporate Social Responsibility (CSR) has gained prominence as a reflection of a company's commitment to ethical and sustainable practices, alongside its contribution to societal well-being. However, CSR as a multifaceted concept with diverse dimensions that can influence various organizational outcomes has rarely been examined. This paper explores CSR's intricate nature by distinguishing between key dimensions focused on employees, customers, and society. We examine how these dimensions exert varying impacts on employee unethical behaviors that, paradoxically, aim to benefit the organization. These behaviors, referred to as Unethical Pro-organizational Behaviors (UPOB), often emerge when employees believe that their ethically questionable actions can be justified in the name of the organization's benefit. We found that CSR activities focused on employees and customers could have different impacts on employee UPOB, and these impacts may be subjective to the interaction with ethical leadership and CSR activities focused on society. We discuss how the findings shed light on the complexities of ethical practices and environments in an organization. Limitations and directions for future research are also discussed.

SIM: Manager-Facilitated Moral Repair: What Managers Think Helps vs. What Does Help

Author: **Mengjiao (Rebecca) He**, *Gettysburg College*
Author: **Kenneth D. Butterfield**, *Washington State U.*
Author: **Kristine Kuhn**, *Washington State U.*
Author: **Thomas M. Tripp**, *Washington State U.*
Author: **Natalie Liberman**, *Indiana U., Bloomington*

Although there is growing awareness of the importance of moral repair in understanding processes and outcomes of workplace wrongdoing, we know little about the role of the manager in facilitating moral repair of offenders. Based on qualitative accounts from 70 managers, Study 1 develops an inductive model of the manager-facilitated moral repair process, including motivating factors, manager-initiated actions intended to facilitate offender moral repair, facilitators and inhibitors, and outcomes of the moral repair process. Study 2 tests the proposed relationships between manager-facilitated moral repair actions and offender-related outcomes using quantitative survey data from 283 employees. The results of both studies indicate that manager-facilitated moral repair actions can positively influence offender satisfaction, commitment, and organizational citizenship behaviors, and reduce the likelihood of reoffending. Contrary to manager expectations, however, Study 2's results suggest that including third parties in reparative meetings may be counterproductive in terms of improving offender outcomes. Implications for incorporating organizational dynamics in the study of moral repair and for improving management practice are discussed.

SIM: The Dark Side of Manager-Facilitated Moral Repair

Author: **Mengjiao (Rebecca) He**, *Gettysburg College*
Author: **Kenneth D. Butterfield**, *Washington State U.*
Author: **Kristine Kuhn**, *Washington State U.*
Author: **Thomas M. Tripp**, *Washington State U.*

While prior research indicates that managers' efforts to facilitate moral repair in the aftermath of workplace wrongdoing can benefit both offenders and organizations, in this study we build on the restorative justice and unethical prosocial behavior theoretical frameworks to examine the potential dark side of managerial-facilitated moral repair. Results from a multi-wave survey of 244 full-time employees, where employees were asked to recall an incident where they had intentionally or unintentionally caused harm at work, show that their managers' restorative justice actions are associated with employees engaging in unethical pro-supervisor behavior (UPSBS). This effect is mediated by their gratitude, desire to reciprocate, and identification with their manager. Importantly, the relationships between offending employees' gratitude and desire to reciprocate positive treatment and UPSBS are weaker for employees with a strong moral identity. Implications for restorative justice theory and managerial practice are discussed.

Social Responsibility and Human Resource Management (HRM)

Session Moderator: **Jegoo Lee**, *U. of Rhode Island*

SIM: How and When Socially Responsible HRM Influences Promotive and Prohibitive Ethical Voice

Author: **Hanyue Dai**, *School of Management, Northwestern Polytechnical U., Xi'an, Shaanxi, China*

Author: **Wang Juan**, *Northwestern Polytechnical U.*

Author: **Ming Jia**, *Northwestern Polytechnical U.*

Author: **Wenxiu You**, *Northwestern Polytechnical U.*

Although employees' ethical voice is important for organization development. Knowledge about how to inspires employees' ethical voice is limited. Drawing on conservation of resources theory, we develop and test a theoretical model that exploring how and when socially responsible human resource management influence employee promotive and prohibitive ethical voice. Using data from 265 employees at two time points, our results show that SRHRM practices increase employees' promotive ethical voice via improve their job calling, and improve their prohibitive ethical voice via decrease their job anxiety. Furthermore, we find that promotion climate strengthens the positive relationship between SRHRM and job calling. Our findings help scholars and managers understanding the key role of SRHRM in triggering employees' different kinds of ethical voice, and shed light on the social impact of SRHRM.

SIM: Humanizing Performance Measurement: Assessing the Non-Maleficence of Performance Measurement Systems

Author: **Veronica Casarin**, *ESSEC Business School*

Author: **Stefan Linder**, *ESSEC Business School*

It is widely acknowledged that employers have a duty to protect the well-being of their employees. This paper develops and validates a measurement instrument to capture the extent to which an organization's performance measurement systems (PMS) avoid harming the well-being of employees. PMS are pervasively used in today's organizations and extant research suggests that PMS can harm employees' well-being by heightening job-related stress, the likelihood of anxiety, burnout, or feelings of anomie, disgrace, futility, and isolation. Scholars as well as practitioners, therefore, stand to gain from being better able to assess organizations' PMS in terms of how well they avoid harming employees' well-being. Drawing on the conceptualization of non-maleficence in bioethics, data collected in two independent samples from 179 and 188 employees in the U.S. and the UK, we develop and validate a parsimonious five-item measurement instrument, which allows to measure reliably and validly the non-maleficence of an organizations' PMS.

SIM: How and When Does Socially Responsible Human Resource Management Improve Employee Thriving at Work

Author: **Zhe Zhang**, *School of Management, Xi'an Jiaotong U.*

Author: **Ke Shang**, *Xianjiaotong U., School of Management*

Existing studies have established that socially responsible human resource management (SRHRM) positively affects employee outcomes. However, all of these investigations overlook the impact of SRHRM on employee thriving, a positive psychological state that may contribute to organizations' long-term sustainability. Guided by ethical climate theory and the multi-experience model of ethical climate, we investigate whether, how, and when SRHRM improves employees' thriving at work. Using a scenario-based experiment (Study 1, a 2 × 2 design) and a multi-wave field study (Study 2), we find that SRHRM positively predicts employees' thriving at work, and this relationship is mediated by other-focused and self-focused climates. Furthermore, the relationship between SRHRM and the two types of ethical climates is strengthened by promotion-focused ethical leadership but weakened by prevention-focused ethical leadership. Moreover, the indirect relationship between SRHRM and employees' thriving at work via the two types of ethical climates is strengthened by promotion-focused ethical leadership but weakened by prevention-focused ethical leadership. Our study extends SRHRM literature and meaningfully guides organizations that aim to sustain a thriving workforce.

SIM: Creating Shared Value Through Meta-Organizational Common Good Human Resource Management

Author: **Maria Strobel**, *TUM School of Management, Technische U. München*

Author: **Kelsey Taylor**, *U. of Manitoba*

Author: **Lydia Bals**, *Mainz U. of Applied Sciences*

Author: **Eugenia Rosca**, *U. of Groningen*

Research on the role of Human Resource Management (HRM) in fostering sustainability has pointed to the difficulty of changing organizations that have been built and optimized for economic profit. An emerging stream of research on sustainable businesses therefore focuses on organizations that are designed for sustainability from inception. Based on qualitative data, this empirical study investigates the design and functionality of HRM systems in companies that have received awards for their high level of environmental sustainability. Moreover, it examines how these systems contribute to the creation of shared value for the common good. Integrating existing insights from common good HRM and meta-organizational HRM, we elaborate theory of shared HR value creation by firms with exceptional environmental performance. We identify five principles through which common good HR practices are implemented and related outcomes of the HRM system. Our elaborated framework highlights relevant inputs, practices and outputs required for common good HRM and meta-organizational characteristics enabling the shared value creation of the HRM system. Our research has implications for designing strategically targeted HRM systems for environmental sustainability.

Examining Purpose: Conceptual and Empirical Insights for Responsible Organizing

Session Moderator: **David Wasieleski**, *Duquesne U.*

SIM: How Corporate Purpose Shapes Companies' Actions on the SDGs: Goal-Based and Duty-Based Perspectives    

Author: **Kyoko Sasaki**, *Monash U.*
Author: **Wendy Stubbs**, *Monash U.*

The growing severity of societal issues such as climate change and widening inequalities has raised questions about companies' purpose and their roles in solving these issues. The Sustainable Development Goals (SDGs), adopted in 2015 at the United Nations (UN) Sustainable Development Summit, are expected to transform companies' corporate purpose and business models to address societal challenges. However, the literature about the relationship between corporate purpose and companies' actions on the SDGs is sparse and largely conceptual. This paper poses the research question: how does corporate purpose shape companies' actions on the SDGs? It explores this relationship drawing upon interviews with 28 managers from 16 large companies in Australia and Japan. The findings indicate that the two perspectives of corporate purpose (goal-based and duty-based) facilitate how companies integrate the SDGs into their management practices. The paper also revealed that companies implementing both perspectives of corporate purpose ("hybrid type") are more advanced in integrating the SDGs and their corporate purpose than those who implement only one perspective. The paper contributes to the corporate purpose and corporate sustainability literatures by identifying an "ideal type" of corporate purpose and implementation pathways to integrate the SDGs more comprehensively into organizations.

SIM: How to Make Organizations Highly Resilient. The Role of Purpose-Driven Leadership and Shared Purpose 

Author: **María Paula Florez-Jimenez**, *U. of Navarra*
Author: **Alvaro Lleo**, *U. of Navarra*
Author: **PABLO RUIZ-PALOMINO**, *U. de Castilla-La Mancha*
Author: **Carlos Rey**, *U. Internacional de Catalunya*

Some authors have noted that when corporations are resilient, they may be better positioned and prepared to deal with the demands of high-impact events and be able to seek opportunities and gains despite or even because of uncertainty. Thus, being resilient has become an important goal for organizations and some scholars have stated that when organizational purpose is shared among the members of the organization, it enhances organizational resilience. However, there is a lack of literature that thoroughly explains the mechanisms underlying the occurrence of a genuine shared corporate purpose and how this impacts each of the organizational resilience dimensions, namely planned and adaptive resilience. With a sample of 3,750 employees across 20 worldwide organizations, we demonstrated using structural equation modelling analysis that purpose-driven managers and purpose-driven co-workers are critical drivers of shared corporate purpose, and that shared corporate purpose, in turn, enhances planned and adaptive organizational resilience. Our findings have critical implications because they suggest that managers should not only lead with a clear purpose in mind but also involve all organizational members in the proper implementation of such purpose, such that the shared corporate purpose achieved as a result can make organizations become highly resilient.

SIM: Purpose and Identity Work: How to Stay Purpose-Driven in a For-Profit Professional Service Firm? 

Author: **Clara Scheve**, *Institute of management and Organization, Leuphana U. of Lüneburg*
Author: **Ines Lietzke-Prinz**, *FH Westküste*
Author: **Markus Reihlen**, *Leuphana U. Lüneburg*

Recent management research and practitioners suggest that purpose is vital for enhancing social impact and economic performance. Surprisingly, this zeitgeist debate reflecting the pronounced sense of purpose has not been reflected in the field of professional service firms (PSFs), mainly driven by what has been called "commercialized professionalism". This study investigates the purpose-organizational identity nexus by conducting a case study of a B Corp-certified marketing agency. Methodologically, we use the Zaltman Metaphor Elicitation Technique (ZMET), which uses visual imagery and in-depth interviews to uncover people's subconscious thoughts and feelings. Our study shows how organization members establish and sustain their firm's purpose through explorative and affirmative identity work. Explorative identity work is a form of organizational learning, ultimately leading to an adaption of organizational identity. In contrast, affirmative identity work uses established organizational routines that help reconstitute the organizational identity.

SIM: For Whom do We Exist: Firm Purpose in the Eyes of the Stakeholders

Author: **Sybille Sachs**, *U. of Applied Sciences in Business Administration Zurich*
Author: **Johanna Kujala**, *Tampere U.*
Author: **Riikka Tapaninaho**, *Tampere U.*

Although discussions of the purpose of firms and for whom firms exist have been the focal elements of stakeholder theory since Ed Freeman's seminal book was published in 1984, little is known about how the motivation and orientation of firms regarding value creation from the stakeholder perspective relate to different types of firm purpose. Using intrinsic and extrinsic motivational states and single and multiple value orientations, the present study proposes the following types of firm purpose: (1) self-serving purpose, (2) strategic purpose, (3) moral purpose and (4) problem-solving purpose. Moreover, the study examines the concept of firm purpose in relation to different types of stakeholder cooperation strategies and impacts of cooperation on value creation, leading to four propositions that could serve as a foundation for future empirical research.

Author: **Andrew Montandon**, *HEC Paris*

To demonstrate a commitment to a corporate purpose, firms will often enact a range of Corporate Social Responsibility (CSR) actions which benefit society and the natural environment. Despite their efforts, however, we theorize that in general an increased number of CSR actions will induce confusion for employees about their firm's corporate purpose. Using literature on incongruent signaling, we argue that firms enacting a great number of CSR actions will on average be interpreted by employees as an incongruent set of signals relating to organizational goals which will degrade employee perceptions of purpose clarity. However, if firms can demonstrate salience for a narrower range of societal or environmental issues – increased CSR actions should have the opposite effect. We test this theory using survey data from 600,000+ employee-observations within 120 public firms between the years 2015-2021. We find a direct and negative relationship between the number of CSR actions communicated to employees and Purpose-Clarity. When we include an interaction term of Issue Specialization – the effect of CSR actions becomes strongly positively moderated. Our results support the idea that firms which specialize in solving similar social issues can offer a clearer conception of purpose for their employees, while continuing to engage purposefully with society and/or the environment.

Leveraging Digital Technologies: Social Innovation, Sustainability, and Governance Considerations

Session Moderator: **Felix Arndt**, *U. of Guelph*

SIM: CSR and Firm Performance in Times of Crisis: The Roles of Resilience and Digital Technology

Author: **YAO ZHANG**, *Harbin Institute of Technology*

Author: **SHASHA LIU**, *Shandong U.*

Despite many firms actively embracing Corporate Social Responsibility (CSR) in times of crisis, the impact of CSR on firm performance in such situations remains uncertain. Drawing on stakeholder theory and dynamic capabilities theory, this study aims to examine the influence of CSR on firm performance during crises. Furthermore, we explore the mediating effect of organizational resilience and the moderating effect of digital technology. By analyzing data collected from 2,294 Chinese listed firms amid the COVID-19 pandemic, and by disaggregating organizational resilience into two dimensions—stability and flexibility—the study reveals several key findings. Firstly, CSR has a positive effect on firm performance. Secondly, stability and flexibility act as sequential mediators in the relationship between CSR and firm performance. Thirdly, digital technology strengthens the impact of CSR on stability, as well as the impact of stability on flexibility, whereas digital technology weakens the impact of CSR on firm performance. These findings offer fresh insights into how CSR, combined with organizational resilience and digital technology, impacts firm performance during crises, thereby enabling firms to navigate crises and achieve sustainable development in the future.

SIM: Responsible Innovation in Digital Health and Welfare: A Longitudinal Study of Start-Up Governance and Stakeholder Engagement

Author: **Tatiana Iakovleva**, *U. of Stavanger*

Author: **Raj Kumar Thapa**, *Nordland Research Institute*

Author: **Anna Szopa**, *U. of Central Florida*

Digital innovations, particularly in the healthcare and welfare sectors, promise enhanced productivity, improved outcomes, and increased reliability for users. The effective realization of these benefits, however, hinges on the strategic management of the innovation process to address the concerns and expectations of stakeholders, users, and the public. This is especially pertinent in the context of complex social challenges, such as the sustainability and cost-effectiveness of health and welfare services. Responsible Innovation (RI) is posited as a strategic framework for guiding the development of innovations towards socially beneficial outcomes. RI emphasizes inclusive stakeholder engagement in decision-making, proactive anticipation of needs and challenges, reflective practices, and adaptability to stakeholder feedback. Despite the theoretical appeal of RI, empirical investigations into its practical applicability in guiding firm-level innovation processes are limited. This research seeks to bridge this gap by examining the innovation processes within digital healthcare and welfare start-ups over an extended period from 2016 to 2023. Our methodology involves longitudinal case studies of six start-ups, tracking their innovation journeys, pivotal moments, and the evolution of need-solution dynamics through the prism of RI's four key constructs: inclusion, anticipation, reflexivity, and responsiveness. The principal contribution of this paper lies in its analysis of RI's effectiveness as a governance tool in the realm of digital innovations. We discovered that ongoing interactions between the innovating entities (the firms) and various stakeholders (distributed agencies) foster a dynamic ecosystem of need-solution pairings. This, in turn, cultivates desirable innovation outcomes, affirming the utility of RI principles in governing digital innovation processes in the health and welfare sectors.

SIM: Value-Sensitive Digital Social Innovations for Marginalized Individuals: Towards a Research Agenda

Author: **Larissa Gebken**, *U. of Hamburg*

Author: **Ingrid Schirmer**, *U. of Hamburg*

Author: **Judith Simon**, *U. of Hamburg*

Author: **Paul Drews**, *Leuphana U. Lüneburg*

In this paper, we introduce Value-Sensitive Digital Social Innovation (VSDSI) as a new research field. Integrating insights, goals and methods from Digital Social Innovations (DSI), Value Sensitive Design (VSD), Participatory Design and Research Ethics guidelines, we propose a new research agenda for a more ethically and socially responsible research, design and development of novel technologies. We argue that VSDSI can improve research and design processes in general, but is particularly needed when developing technologies for and with marginalized groups and individuals.

SIM: A Moderated Mediation Model Linking Digital Transformation to Sustainable Supply Chain Performance

Author: **Adnan Ali**, *School of Management, Northwestern Polytechnical U., Xi'an, Shaanxi, Chi*

Author: **Qian Yang**, *Northwestern Polytechnical U.*

Author: **Zeeshan Ali**, *Three Gorges U.*

Author: **Wenzong Zhang**, *Xi'an Jiaotong U. School of Management*

In the contemporary digital landscape, organizations are increasingly adopting digital transformation strategies to elevate operational efficiency and gain a competitive edge within their supply chain processes, thereby influencing overall performance outcomes. However, existing literature lacks a thorough exploration of the effects of digital transformation on sustainable supply chain performance (SSCP) and the intricacies of the underlying mechanisms involved. To bridge these knowledge gaps, this research, grounded in the dynamic capability view, introduces a comprehensive Moderated Mediation (MODMED) model. This model delves into the relationship between digital transformation and SSCP, emphasizing the mediating role of environmental collaboration with suppliers (ECS) and the moderating influence of dynamic capability. Examined through a sample of 293 Chinese firms spanning diverse industries, the findings reveal a positive impact of digital transformation on SSCP, with ECS playing a mediating role. Furthermore, the MODMED analysis indicates that dynamic capability acts as a moderator, influencing the indirect impact of digitalization on firm SSCP through ECS. This study contributes valuable insights to the evolving literature on digitalization and supply chain management in the sustainability context, offering a nuanced understanding of the relationship between digitalization and SSCP, along with the associated mechanisms.

Author: **Aaron McDonald**, *California State U., San Marcos*

Author: **Catalin Ratiu**, *California State U., San Marcos*

Author: **Beverlee Anderson**, *California State U. San Marcos*

Disruptive technologies and innovations (DTI), such as artificial intelligence, big data, and cryptocurrencies, are increasing in creation, development, and adoption rates. As such, DTIs impact on markets and society is growing in prominence, and DTI governance is increasing in importance. Yet, DTI governance has remained challenging given the high knowledge barriers to understanding the technology and how quickly DTIs develop and deploy. Given these challenges and the growing impact of DTIs, we propose a scalable market-based governance model for DTIs. This conceptual framework utilizes an independent oversight board at the firm level to mitigate the information asymmetry between the governing body and the governed DTI firm. The independent oversight board will then expand to a social alliance and eventually create an industry association to produce standards and practices for the DTI industry. We discuss the model's theoretical and practical contributions.

STR 2024 Best Dissertation Finalists' Presentations

Division Chair-Elect: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*

This session features the five finalists for the 2024 STR Division Wiley Blackwell Outstanding Dissertation Award. The finalists will present summaries of their dissertations. The finalists are:

Sukhun Kang (PhD from London Business School), Assistant Professor at University of California, Santa Barbara. Dissertation Title: "Essays on Innovation Commercialization", Dissertation Chair: Gary Dushnitsky

Amisha Miller (PhD from Boston University (Questrom)), Assistant Professor at New York University (Stern). Dissertation Title: "Changing the System, Not the Seeker: How Do Investment Organizations' Evaluation Practices Shape the Demographic Diversity of Innovators Funded?", Dissertation Chair: Siobhan O'Mahony

Michael Park (PhD from University of Minnesota (Carlson)), Assistant Professor at INSEAD. Dissertation Title: "Essays on the Politics of Innovation", Dissertation Co-Chairs: Aks Zaheer and Russell Funk

Xiaoli (Shirley) Tang (PhD from Washington University (Olin)), Assistant Professor at Bocconi University. Dissertation Title: "The Transparency Dilemma: Competition, Innovation, and Organizational Performance with Corporate Transparency", Dissertation Co-Chairs: Nicholas S. Argyres and Lamar Pierce

Daniel H. Wilde (PhD from University of Pennsylvania (Wharton)), Assistant Professor at Indiana University (Kelley). Dissertation Title: "Cognitive Microfoundations of Industry Foresight and Strategic Commitments: Evidence Within the Global Automotive Industry", Dissertation Chair: Rahul Kapoor

The winner of the 2024 STR Dissertation Award will be announced during the STR Business meeting, which follows this event in the same room.

Panelist: **Paul Nary**, *The Wharton School, U. of Pennsylvania*

Panelist: **David Souder**, *U. of Connecticut*

This symposium addresses short-termism, marked by a preference for immediate gains over long-term value by managers and investors. Half a decade after the 2019 symposium on the same topic, extensive research has illuminated the multifaceted nature of short-termism. Despite recent advancements, many concerns and opportunities surrounding this phenomenon still remain unexplored. To address this, a panel of experts will share reflections and updates over the past five years of research, fostering nuanced dialogue on firm and market time horizons. Particularly relevant to scholars interested in the role of time in strategy, innovation, organizations, and society, this symposium provides a platform for interdisciplinary discussions on the temporal dimensions of organizational choices and outcomes.

Presenter: **Abhishek Bhatia**, *London Business School*

This symposium explores how organizational factors affect the adoption of predictive technologies (e.g., AI, algorithms, and IoT sensors) and the performance implications of utilizing such technologies in innovation contexts. Four empirical studies in this symposium investigate how the successful use of predictive technologies relies on the interplay between organizational factors such as domain knowledge, existing resources, and flexibility, and task characteristics such as knowledge generation, evaluation, or implementation. These studies explore antecedents and outcomes of using predictive technologies in diverse sectors such as pharmaceuticals, entrepreneurial finance, mutual funds, and video games. Methodologically, these studies employ rigorous data collection, robust empirical designs, or carefully controlled field experiments.

Scaling Strategies: Enabling Scalability and Overcoming Constraints

Discussant: **Justin J.P. Jansen**, *Erasmus U. Rotterdam*

Organizer: **Gianluigi Giustiziero**, *IE Business School*

Organizer: **Jingya You**, *U. of Illinois at Urbana-Champaign*

Recently there has been a growing interest in the topic of scaling from both academia and practitioners. However, our knowledge of the processes that lead to scaling, as well as their implications for organizational design, ecosystems, human capital management, and corporate strategies, remain significantly understudied. The proposed symposium addresses this pressing challenge by bringing together a set of scholars from diverse research streams to advance our understanding of how firms undertake scaling strategies by both enabling scalability in their businesses and mitigating constraints to scaling. The papers in this symposium have different foci with respect to the symposium theme, including one conceptual work, one theory-building case study, and two empirical studies. The papers are also different in their focal research problem, including issues related to the scaling lifecycle, challenges to scaling in less “hospitable” locations (e.g., outside Silicon Valley), human capital strategies for scaling, and scaling-related acquisitions by startups. We suggest that through a combination of complementary perspectives the proposed symposium advances a more comprehensive and nuanced view on the scaling phenomenon and creates a platform for further research on the topic.

Geography plays an important role in firms' decision-making and consequent performance. Firms choose geographic locations for a variety of reasons, such as expanding to new markets, accessing new resources—including knowledge and human capital—or benefiting from positive agglomeration spillovers (Shaver and Flyer, 2000). Yet, understanding the relationship between firm strategy and geography is challenging, given variations in competition levels, regulatory intensity, and other institutional factors across different geographic markets and over time. The objective of this symposium is to bring together a diverse set of papers and scholars interested in the intersection of geography and strategy. The symposium highlights four papers related to how geography shapes firm knowledge flows and innovation, as well as firm location choices.

Corporate Influence in Innovation Ecosystems

Session Moderator: **James Bessen**, *Boston U.*

TIM: Competing for Talent: Large Firms and Startup Growth

Author: **James Bessen**, *Boston U.*

Author: **Felix Poege**, *Bocconi U.*

Author: **Ronja Röttger**, *BU*

This paper explores the impact of large firms' hiring in local labor markets on the salaries offered by startups and on startup growth and performance. We analyze firm data matched to help-wanted ads and find strong evidence of "crowding out." A standard deviation increase in the share of ads posted by large firms raises startup pay offers by 5-10% for critical managerial, STEM, and sales jobs, and it reduces expected startup growth by 36%. Crowding is diminished by employee mobility and by spillovers to startups in closely related businesses. It is increased by big firm markups, which may have a large effect on startups. Results are robust to a shift-share instrumental variable strategy. Crowding has important implications for firm strategy, regional policy, and for understanding the slowdown in the aggregate growth of startup firms.

TIM: Does a Future Exist After the Acceleration Program? The Challenges of Collaboration

Author: **Michal Banka**, *Warsaw U. of Technology*

Author: **Magdalena Marczewska**, *U. of Warsaw*

Author: **Norbert Chmiel**, *Warsaw U. of Technology*

Start-ups that are members of accelerator programs gain the experience necessary for further development and selling the solutions offered on the market, and most importantly, they establish relationships with corporations. The established relationships represent the starting point for further market negotiations concerning start-ups' need to carry out commercial sales of products and services. This paper aims to explore the preferred forms of collaboration between start-ups and corporations once the acceleration phase is over. There are four basic forms of interaction in the post-acceleration phase: 1) purchase of services and, products, 2) licensing, 3) venture building, 4) acquisition of /investment in the start-up. Next, the attitudes of start-ups towards each of the above-mentioned forms of collaboration were examined, and it was verified whether these attitudes change depending on the start-up characteristics. The characteristics encompassed: a) the start-up development phase, b) the moment of establishing collaboration with the corporation, c) the length of market operation, d) the average level of monthly revenues, e) the positions held by foreigners in the start-up. The survey was carried out in a population of 101 start-ups that collaborated with corporations by participating in acceleration programs managed by start-up accelerators.

TIM: Value Dynamics in Corporate Startup Programs - Organizational Framework and Theoretical Explanations

Author: **Benedikt Unger**, *Free U. of Bozen-Bolzano*

This systematic literature review provides an in-depth analysis of Corporate Startup Programs (CSPs), focusing on the different configurations and mechanisms and how these influence the value dynamics and outcomes of these programs. CSPs, including but not limited to corporate accelerators, have become a focus of both corporate practice and academic research because they are perceived as a reliable, safe, and fast way to bridge the gap between entrepreneurial innovation and established corporate structures and to tackle incumbent inertia and rigidities. However, they are not a panacea for all types of corporate innovation challenges, as was perhaps initially expected. Therefore, this study goes beyond views of CSPs as a one-size-fits-all solution to innovation challenges and recognizes the diverse value they provide to their sponsoring companies, including often overlooked effects that go beyond the often-cited innovation insourcing applications. Moreover, the study not only synthesizes different strands of existing literature, but also applies a meta-analytic approach to provide generalizable insights and theoretical explanations into the mechanisms that influence firm-level outcomes in different CSP scenarios. Therefore, based on a thorough literature review of more than 900 papers and a detailed analysis of 60 key publications, the study applies a CIMO (Context, Interventions, Mechanisms, Outcomes) approach to deconstruct the complex value dynamics within CSPs. The findings make a dual contribution: they advance the theoretical understanding of CSPs and provide a nuanced, practical guide for their effective implementation and execution. In addition, a four-point agenda for future research in this area is presented, and finally, the implications of these findings for the development of corporate venturing systems and strategies are discussed.

TIM: Crossing the Valley of Death: Venture-Incumbent Collaborations in Capital-Intensive Industries

Author: **Susanne Koster**, *Erasmus U. Rotterdam*

Author: **Ivanka Visnjic**, *ESADE Business School*

Author: **Luiz Felipe Monteiro**, *INSEAD*

Large incumbent firms in capital-intensive industries currently face important challenges, such as the transition to renewable energy and the digital transformation. Although many incumbents in less capital-intensive industries have positive experience in collaborating with ventures that invent the necessary transformative innovations, incumbents in capital-intensive industries rarely collaborate with them because, in these industries, ventures face a "valley of death" in which financial and human capital to scale their inventions is extremely scarce. We, therefore, investigate the conditions under which collaboration with large incumbent firms allows ventures to scale in capital-intensive industries. We collected a unique dataset of more than 1,000 collaboration proposals submitted by ventures that requested access to the test facilities, infrastructure, and engineers of a large European incumbent energy firm. We compared the scale-up outcomes of ventures that were selected for collaboration by the energy firm to those of ventures that were nearly selected for collaboration. Our results reveal that collaborating with an incumbent firm indeed helps ventures to scale, as it increases their survival rate and exit probabilities, and it allows ventures to attract more employees, investors, and partners. We also did not find that collaborating with a large incumbent firm pushes ventures into a technological lock-in. While we control for sorting and signaling, our results show that access to complementary assets is an important mechanism through which large incumbent firms offer ventures a way out of the valley of death.

Innovation Leaders and Laggards

Session Moderator: **Shilong Jia**, *School of Economics and Management Tsinghua U.*

TIM: How Non-Dominant Laggards Remedy Challenges Inherent in Continuous Innovations   

Author: **Shilong Jia**, *School of Economics and Management Tsinghua U.*
Author: **Delin Yang**, *School of Economics and Management Tsinghua U.*
Author: **Qian Ma**, *School of Economics and Management Tsinghua U.*
Author: **Pengxiang Zhang**, *Guanghua School of Management, Peking U.*

Continuous innovations substantially benefit customer adoption yet exert negative effects. As most of the economy, non-dominant (non-market-leading) laggards (long technological legacies) face unique challenges in continuous innovations compared to dominant leaders. By studying six B2B products in China's software industry, we develop a theoretical framework for how they remedy challenges inherent in continuous innovations: Patching on the Dark Side. They are patching (1) to the future market leadership, (2) to the present legacy lever, and (3) between the present and the future. This process effectively balances and combines future iterative time and existing technology complexity, primarily contributing to continuous innovations of non-dominant laggards. Broadly, we contribute to technology evolution on customer adoption by clarifying remedy effectiveness among effective non-dominant laggards.

TIM: Hold or Hurry? How Firms Adjust Their Speed of Imitation in the Face of Technological Transitions 

Author: **Claudio Giachetti**, *Alma Mater Studiorum U. di Bologna*
Author: **Marco Balzano**, *Ca' Foscari U. of Venice*

This study delves into the determinants of the pace at which firms imitate innovations introduced by rivals, particularly examining periods of technological stability compared to those of technological transition. By bridging theories of rivalry-based and information-based imitation with the existing technological change literature, we argue that during periods of technological transition the speed of imitation of rivals' innovations is lower than during periods of technological stability. Furthermore, we explore various contingencies that influence this relationship, including the characteristics of the imitator, the imitated firm, and the imitated technology. We test our hypotheses using data on more than 9,000 mobile phone models and related technological innovations introduced from 1992 to 2019. Overall, this study contributes to the current literature on imitation and technological change.

TIM: Shaping Hypercompetitive Industries: Implications for Innovation and Imitation Strategies   

Author: **Stefano Li Pira**, *Warwick Business School*
Author: **Adrien Querbes**, *U. of Manchester*

This research addresses a critical gap in strategic management literature by integrating macro-dynamics and micro-dynamics in analyzing innovation and imitation strategies within hypercompetitive industries. We propose a simulation model emphasizing the interplay between industry-level complexities and firm-level responses. Our model explores how firms actively shape their competitive landscapes, considering the impact of industry macro-dynamics on firm micro-dynamics, and highlighting the dual analysis of external competition and internal resource accumulation. Grounded in the fundamental importance of innovation and imitation for firms' growth and competitive advantage, we extend existing models by incorporating shaping strategies into the NK model. This model underscores the dynamic calibration required in hypercompetitive environments, where firms actively shape industry contexts to align with emerging opportunities. Our findings provide nuanced insights into the sustainability of competitive advantages in hypercompetitive environments. The first and second scenarios demonstrate outcomes achieved by countering imitators' technological displacement, resulting in differentiation between firms or competence-destroying transformations. The third scenario, involving adaptive innovative search and coordinated industry shaping, yields significant successes but vulnerability to imitation. These insights deepen our understanding of the complex dynamics governing competitive advantage sustainability in hypercompetitive environments, offering valuable strategic implications for firms in such contexts.

TIM: Market Size Inversion: How Diffusion Dynamics Obfuscate the Market Size of Novel Innovations   

Author: **Ryan Allen**, *U. of Washington*

This study examines "market size inversion": where novel innovations succeed despite initially low market size projections, and traditional innovations fail despite high projections. Contrasting the strategy literature's supply-side competition-centric view, this paper introduces a demand-side model. It posits that because customer evaluations of novel innovations are heavily influenced by early adopters, a significant portion of demand is observable only post-diffusion. Therefore, pre-launch observable demand for novel innovations is downward biased. Utilizing agent-based diffusion simulations and empirical analysis of over 33,000 consumer product launches, the results confirm that novel products outperform non-novel ones with equivalent pre-launch observable market sizes. Further analysis demonstrates that successful innovation selection by firms involves balancing novelty with observable market demand. This paper contributes to the strategic innovation literature by offering a demand-side perspective on the value of novel innovations, and articulating the limits of data-driven innovation.

Industry Partnerships for Green Innovation

Session Moderator: **Tomonari Komiyama**, *Hitotsubashi U.*

TIM: Technological Collaboration and Green Innovation: Role of R&D Structure and Managerial Orientation

Author: **Songyang Wu**, *Queen Mary U. of London*
Author: **Lutao Ning**, *Queen Mary U. of London*
Author: **Shijun Mu**, *Queen Mary U. of London*

Green innovation literature emphasises that technological collaboration can help firms to absorb the extensive knowledge required to develop green innovations. However, we know little about the potential drawbacks of technological collaboration on green innovation and the specific role of firms' R&D structure and managerial orientation in this process. Drawing upon the knowledge- and attention-based views, this study investigates the effect of technological collaboration on green innovation performance with the moderating roles of R&D decentralisation and the managerial short-term orientation. Using panel data of 2,333 Chinese listed manufacturing firms from 2010 to 2020, our results reveal that the technological collaboration has an inverted U-shaped relationship with the firms' green technological innovation. High-level technological collaboration could hinder firms' green innovation performance by diverting attention away from valuable knowledge recombination. Moreover, R&D decentralisation and short-term orientation can flatten the curvilinear relationship and mitigate the drawbacks of high-level technological collaboration.

TIM: Intellectual Property Protection, Managerial Perception and Green Innovation

Author: **Jingwen Yi**, *School of Economics & Management, Tongji U.*
Author: **Kaicheng Liao**, *Institute of Economics, Tsinghua U.*
Author: **Feifei Xv**, *Business School of Jishou U.*

Given that enhancing green innovation capability is crucial for achieving economic green transformation and is a significant driving force for sustainable development, this study employs the Intellectual Property Rights City Policy (IPRP) as a quasi-natural experiment and designs a staggered difference-in-differences (DID) model to examine the green innovation effects of intellectual property policy. The findings indicate that IPRP can improve the quality and quantity of corporate green innovation, with a more pronounced impact on enhancing the quality. However, the impact is influenced by top management teams' (TMT) green perception (TGP) and subjective perception of economic policy uncertainty (SEPU). Specifically, TGP weakens the impact of IPRP on green innovation, while SEPU strengthens the positive impact. Heterogeneity test reveals that the green innovation effects of IPRP are more prominent in enterprises that are non-state-owned, with political resources, and with lower managerial shortsightedness. Additionally, industries characterized by light to heavy pollution, high technology, and high competition exhibit better green innovation outcomes. The findings not only enrich the policy-effect studies on IPRP, but also provide policy implications to realize green economy and managerial insights to improve green innovation.

TIM: Structural Ambidexterity and Coopetition Capability: Incubation of Japan's Hydrogen Station Industry

Author: **Tomonari Komiyama**, *Hitotsubashi U.*

"Why can industry partners work together to incubate a new industry at the expense of their own core business interests and opportunities?" From an economics-based theory, this phenomenon cannot occur. However, the energy industry today faces this conundrum as the transition to a carbon-neutral society is accelerated toward the year 2050 under the Paris Agreement. To answer this paradoxical research question, under the theoretical framework of ambidexterity, which can shed analytical light on both exploitation and exploration, a case study method is applied to the formation process of an industrial collective enterprise that consolidates the hydrogen station business units spun off from each Japanese fossil fuel firm. A conceptual model is proposed to explain why and how, under structural ambidexterity, industrial partners in competition with each other cooperate to establish a collective enterprise for an industry incubation to solve climate change at the expense of their core businesses. This study contributes to the research on extending the concept of structural ambidexterity from the firm level to the industry level, as well as the proximity between coopetition capability and structural ambidexterity to manage the paradoxical tension. This study also shows practical implications that promoting structural ambidexterity at the industry level under government initiatives may be useful in implementing policies to promote industrial structural transformation in response to climate change, accelerating the development of renewable energy while transitioning away from fossil fuels.

TIM: The Impact of Multidimensional Proximity on Enterprise Cooperative Innovation Performance

Author: **Ling Zhang**, *the school of management of Xi'an JiaoTong U.*
Author: **Jianjun Yang**, *Xi'an Jiaotong U.*

From the perspective of governance mechanism, based on transaction cost theory and social exchange theory, this paper discusses the relationship between multi-dimensional proximity and enterprise cooperative innovation performance under different governance mechanisms (contract governance and trust governance). Through the empirical test of the questionnaire survey data of 242 manufacturing enterprises, the research shows that: (1) There is a significant U-shaped relationship between geographical proximity and cooperative innovation performance. (2) Organizational proximity and technological proximity have significant positive effects on enterprise cooperative innovation performance of. (3) Contract governance positively moderates the U-shaped relationship between geographic proximity and cooperative innovation performance, and negatively moderates the positive impact of organizational proximity on cooperative innovation performance. (4) Trust governance positively regulates the relationship between geographic proximity, organizational proximity, technological proximity and cooperative innovation performance.

Ecosystem Coordination

Session Moderator: **Thomas Draschbacher**, *Graz U. of Technology*

TIM: How Bottlenecks Shape Coordination Choices During Ecosystem Evolution

Author: **Thomas Draschbacher**, *Graz U. of Technology*

Author: **Michael Rachinger**, *Graz U. of Technology*

An important role in innovation ecosystems comes to the task of coordinating actors' contributions. This coordination task is especially complex in an ecosystem's bottleneck areas. Additionally, the requirements for this task constantly change as the ecosystem evolves. Although existing studies have stressed the importance of coordination choices in these contexts, it remains unclear, how coordination choices in bottleneck areas change as nascent innovation ecosystems evolve. We fill this gap by empirically tracking central actors' coordination choice changes in bottleneck areas of their ecosystems over the course of the first phases of the ecosystem lifecycle. We apply a multiple case study research design, focusing on original equipment manufacturers of battery electric vehicles and the coordination mechanisms they apply in bottleneck areas. We show how coordination choices evolve over an innovation ecosystem's lifecycle, and reveal the rationale behind coordination choice changes. The results of this study provide guidance to practitioners in coordinating other actors so that the emergence of their ecosystems can be promoted despite bottlenecks.

TIM: Modularization of Activities in Ecosystems and Business Models

Author: **Sergei Mozheiko**, *Roskilde U.*

This theoretical paper integrates ecosystems and business models as teleologically related concepts on two different levels of observation: cross-firm and cross-industrial activity systems. Drawing on modularity theory I argue that succumbing to advantages of specialization and integration, and on the premise that coordination technology is in place, industries increasingly evolve towards ecosystems comprised of very fine-tuned mutually dependent business models, incorporating both advantages that prior came at the expense of one another. The paper develops a framework to help researchers and practitioners identify and anticipate modularization of value activities in ecosystems and business models.

TIM: The Evolving Role of Strategic Leadership in (Platform-Based) Innovation Ecosystem

Author: **Angelo Cavallo**, *Politecnico di Milano*

Author: **Henri Burgers**, *U. of Queensland Business School*

While an abundance of research is present on established context, little is known about (platform based) innovation ecosystem development and evolution within nascent industries. The formation of new ecosystems entails strategic challenges for leaders because of the definition of interactions, governance structure, and platform market scope to put in place and manage. This research project aims to deep-dive into how does strategic leadership deal with (platform-based) innovation ecosystem emergence and evolution within emerging industries. These questions are addressed by thoroughly investigating the emergence and evolution of two intertwined platform ecosystems driven by the established Space and Services company Spacel in the nascent "new space economy" industry. Three main phases of evolution are identified, within which the decisions of the different members of the ecosystems play a crucial role in shaping it. Based on these insights, implications for the role of strategic leadership in innovation ecosystem evolution are developed.

TIM: Manoeuvring National Innovation Systems-Catalysed Innovation Ecosystems Under Salient Paradox

Author: **Jiang Yu**, *Chinese Academy of Sciences*

Author: **Yingxiu Zhang**, *University of Chinese Academic of Science*

Author: **Haibo Zhou**, *U. of Nottingham, China*

Author: **Jin Han**, *U. of Nottingham, China*

Author: **Feng Chen**, *U. of China Academy of Science*

The development of emerging industries requires close interaction between national strategies and market entities by establishing a national innovation system catalysed innovation ecosystem (NIS-catalysed IE). However, the different needs of stakeholders lead to conflicts, which requires the focal firm to adopt a paradoxical perspective for ecosystem governance. We investigate the strategies adopted by Baidu Apollo, one of the leading autonomous driving enterprises in China to govern the paradoxes of the ecosystem to achieve its goal of business growth as well as the national requirement of industry leadership. We find that the focal firm proposed strategies including 1) Trust-driven motivation construction, 2) third-party orchestration, and 3) intertemporal value acquisition to address the paradox exists in NIS-catalysed IE as conflicts in different aspects. We contribute by unveiling the importance of the intertwining of national strategic direction and commercial development in emerging industries and by detailing how the focal firm performs ecosystem governance in the context of NIS-catalysed IE.

 **OSCM: Are Chief Sustainability Officers Guardians of Environmental Justice? An Empirical Evaluation**

Author: **Finn Petersen**, *U. of Minnesota Carlson School of Management*
Author: **Vibhuti Dhingra**, *Schulich School of Business, York U.*
Author: **Rachna Shah**, *U. of Minnesota Twin Cities*

The U.S. have a environmental injustice problem. Manufacturing facilities in underserved communities release more toxic waste than facilities in better-served communities. In this study we examine the potential of a firm governance decision– appointing a Chief Sustainability Officer (CSO)– to reduce toxic releases. We use data from 2004-2020 on the toxic releases of U.S. manufacturing facilities and a difference-in-differences research design with matching to account for the endogenous decision to appoint a CSO. Our findings show that appointing a CSO leads to a reduction of toxic releases and that this reduction is mostly driven by facilities that are located in underserved communities. Thereby decreasing environmental injustice. These findings contribute to the sustainable operations management literature by introducing the concept of environmental justice and by empirically demonstrating the environmental benefits of appointing a CSO.

 **OSCM: Health Insurance and Labor Productivity in US Manufacturing: Evidence from Medicaid Expansion** 

Author: **Yasaman Asayesh**, *U. of Minnesota Carlson School of Management*
Author: **Anant Mishra**, *U. of Minnesota*
Author: **Arzi Adbi**, *National U. of Singapore (NUS)*

How does health insurance affect labor productivity? We examine this question in the context of the US manufacturing sector by leveraging the quasi-exogenous variation across states in the adoption of Medicaid expansion in 2014. We conduct a difference-in-differences analysis of county-level labor productivity data and find a notable positive impact (2.5%) of Medicaid expansion on labor productivity in the US manufacturing sector. This finding remains robust using synthetic control method, falsification tests, and alternative productivity measures. Our analysis of underlying channels reveals that this positive impact is driven not by a reduction in employment but by increased economic output. In addition, we examine the heterogeneity of Medicaid expansion's impact on labor productivity. We find that the positive impact on labor productivity is discernible only in counties with adequate health capacity. Furthermore, we observe that political partisanship plays a crucial moderating role in the impact of Medicaid expansion on labor productivity. Divided branches of government tend to attenuate the positive impact, while divided legislatures amplify it. By elucidating the impact of health insurance on labor productivity, the underlying channels driving this impact, and the conditions that can moderate this impact, this study advances the literature on policy, politics, and productivity.

OSCM: Governance Trajectories Addressing Multiple Paradoxical Tensions in Public-Private Collaboration 

Author: **Liumiao Qin**, *School of Economics & Management, Tongji U.*
Author: **Qinghua HE**, *School of Economics and Management, Tongji U.*
Author: **Ge Wang**, *Chongqing U.*

How to implement appropriate governance arrangements in response to a dynamically changing environment poses one of the greatest challenges in sustaining public-private collaborations. While previous studies have acknowledged the significant impact of complexity and tensions on governance arrangements, insufficient attention has been given to the sources of complexity that shape the emergence of governance trajectories and their co-evolution with multiple paradoxical tensions. To address this gap, our longitudinal process study examines the West Bund Media Port project and its successful implementation of governance arrangements in the face of diverse complexity sources and multiple paradoxical tensions. Our theoretical process model captures the rational adjustments in governance that effectively address complexity arising from increased actor numbers or diversity, ultimately leading to a more-than response to multiple paradoxical tensions. We thus contribute to scholarship on public-private collaboration by highlighting the importance of adapting governance arrangements to different complex contexts to achieve effectiveness. Moreover, our findings contribute to paradox theory by shedding light on how responses to multiple paradoxical tensions co-evolve with governance trajectories.

 **OSCM: The Impact of Reshoring on Firm Risk and Operational Efficiency in Global Disruption** 

Author: **Shukai Zhang**, *U. of Bristol Business School*
Author: **Minhao Zhang**, *U. of Bristol Business School*
Author: **Xiaojun Wang**, *Birmingham Business School, U. of Birmingham*
Author: **Yusen Xia**, *Georgia State U.*

This study investigates the impact of reshoring on firm risk and operational efficiency among U.S. manufacturing firms during the COVID-19 pandemic, framed within the Transaction Cost Economics (TCE) theory. Utilizing data from the Bureau van Dijk ORBIS and Compustat databases, and employing a propensity score matching and difference-in-difference regression approach, we analyze the performance of reshored firms against non-reshored firms. Our findings reveal a nuanced trade-off: it significantly reduces firm risk by mitigating the vulnerabilities of global supply chains, aligning with TCE's emphasis on minimizing transaction risk in uncertain environments. However, this risk reduction comes at the cost of operational efficiency. The increase in local production costs, such as switching costs and higher labor expenses, especially during the pandemic, leads to a decrease in operational efficiency. This study advances the understanding of reshoring within the TCE framework, highlighting the critical balance between risk management and operational efficiency in the face of global supply chain disruptions.

Discussant: **Lieke Laura Ten Brummelhuis**, *Simon Fraser U.*

As management scholars have attempted to paint a more complete picture of the employee experience, the connection between the work and nonwork domains remains a large part of the conversation. While a vast collection of research focuses exclusively on an employee's work-specific factors, an ever-increasing body of literature acknowledges that the work and nonwork domains consistently spill over into one another (Edwards & Rothbard, 2000; Greenhaus & Beutell, 1985; Greenhaus & Powell, 2006). The literature has long recognized that these domains can come into conflict with one another while simultaneously enriching each other. Yet, the interplay between personal and professional has become increasingly complicated for the modern employee. Changes in the shape and structure of both the family and work domains have proven that these domains are not as static as once thought (Powell, Greenhaus, Allen, & Johnson, 2019). Instead, employees exist beyond the tight bounds of a single work domain and family domain with a spouse and kids. In response, the study of these domains has attempted to look beyond the common parameters of conflict and enrichment and turn instead to the lived experience of individuals as they traverse between the domains. Indeed, the latest concentrations on specific populations, such as breastfeeding mothers (Gabriel, Volpone, MacGowan, Butts, & Moran, 2020), or on specific activities in the nonwork domain, like exercise (Calderwood, Gabriel, ten Brummelhuis, Rosen, & Rost, 2021; ten Brummelhuis, Calderwood, Rosen, & Gabriel, 2022), inform that the nonwork domain contains a wide range of experiences. Recognizing these changes for employees, our symposium takes new angles to common types of spillover (including leisure activities' influence on work performance and the crossover effects from partners) while also considering new types of social interactions (such as online dating or participating in team-based leisure activities) that spillover in distinct ways. Through these explorations of spillover, we aim to provide novel examples of how the nonwork domain affects the work domain that better represents the modern workforce. Specifically, the papers in our symposium explore well-being outcomes of dating app usage, in-role and extra-role behavioral outcomes of partner sacrifice, proactivity benefits of hobby job participation, and team learning outcomes of team-based leisure activity participation.

CMS: Mnemonic Strategies of Resistance: Environmental Analysts Resisting Bolsonaro

Author: **Amon Barros**, *FGVEAESP Sao Paulo School of Business Administration*
Author: **Mariana Silveira**, *FGVEAESP Sao Paulo School of Business Administration*
Author: **Gabriela Lotta**, *Fundação Getulio Vargas - EAESP*
Author: **Alexandra Bristow**, *The Open U. Business School*

We bring together literatures on occupations and memory to investigate the case of an invasion of one occupation by another, in which battles over memory constituted key strategies of the jurisdictional dispute. During Jair Bolsonaro's presidential term in Brazil, he embarked on destroying the occupation of environmental analysts (EAs) as part of his anti-environmental agenda. This involved appointing the military to key leadership positions in the Ministry of the Environment (ME) to infiltrate and destroy the EAs' mission and ethos from within. Drawing on 54 in-depth interviews with EAs, combined with document analysis, we explore the meaning and role of occupational memory in enabling and empowering the EAs' resistance. We identify four strategies of mnemonic resistance involving occupational remembrance used by EAs to hold out against the strategies of occupational forgetting they saw the military employ against them. Our analysis highlights the importance of a deeper engagement between Occupations and Professions in Organizations (OPO) and Organizational Memory Studies (OMS) research. We argue for understanding occupations as mnemonic communities and jurisdictional battles as mnemonic battles, in which occupational memory – conceptualised as embodied mnemonic practices, routines, and shared remembering – can act both as a target and a weapon for the warring sides.

CMS: Controlling Care and Caring Control: The Role of Pastoral Power in Organising Refugee Integration

Author: **Marco Distinto**, *The Open U. Business School*
Author: **Cinzia Priola**, *The Open U. Business School*
Author: **Alexandra Bristow**, *The Open U. Business School*

This paper investigates the organisation of migrant integration, drawing on ethnographic research at two Italian refugee reception centres. We use Foucault's concept of pastoral power to expose the paradoxical power dynamics involved in the integration, showing how various stakeholders' discourses, interactions and practices shape the integration process, and how tensions in the ethics of the pastoral relations of care simultaneously empower and control the migrants. Acting as pastors, reception centre staff translate migration policies into practices aimed at promoting integration and autonomy, while reinforcing dominant discourses around citizenship as becoming self-responsible subjects. We argue that the integration process serves as a means to govern migrants' subjectivities in ways that both sustain and constrain their freedom and agency. Subsequently, we call for a greater awareness of such tensions as a step forward in the search for more caring and ethical frameworks for organising migrant reception.

CMS: "PLUS ÉCOUTÉ-E-S MORT-E-S QUE VIVANT-E-S": Gluing As Commoning to Challenge Social Norms

Author: **Louise Lecomte**, *PSL U. - U. Paris Dauphine*
Author: **Lucie Chartouny**, *PSL U. - U. Paris Dauphine*

In this article, we explore the organizing of a social movement that challenges gender and heteronormative norms and wants all lives to be considered as grievable (Butler, 2021). To do so, we rely on commoning as a way to operationalize Butler's works. Commoning has indeed been described as a social organizing process emerging through social actors' embodied interactions; the recognition of members' corporeal vulnerabilities creates reciprocity and embodied relationality in a group (Mandalaki & Fotaki, 2020). We explore the following question: how can commoning be a vehicle to challenge social norms? To do so, we rely on interviews and online observations of the feminist movement Collages Féminicides. We develop the concept of Gluing, in both a metaphorical and literary way. Gluing is a meta-practice of commoning, challenging social norms through recognizing precarized subjects, showing vulnerability while denouncing it, and enabling mourning conditions.

CMS: Performativity in Women's Courts' Initiatives for Gender-Based Violence Prevention in India

Author: **Poonam Barhoi**, *Institute of Management Technology Ghaziabad, India*
Author: **Ranjeet Nambudiri**, *Indian Institute of Management, Indore*

Scholars in the past have suggested that gender-based violence (GBV) can be studied with a performativity lens, as the act of violence is performative, which is performed to assert power and machoism over others. This study uses a performativity lens to explore all women's courts' GBV prevention initiatives that work with the restorative justice approach. While the literature indicated that the restorative approach can be helpful in creating empowering experiences for victims/survivors, many scholars have raised concerns about the reinforcement of gender roles and gender appropriation through the restorative approach. These contrasting perspectives provide opportunities for us to explore the work of women's courts in India that work in rural localities for GBV solutions and prevention. We analyze a few cases of GBV to uncover different performativity aspects in women's courts' work. For discussion, we borrowed from Butler's performativity lens. Our analysis adds to the literature on violence and performativity in three ways: (i) it discusses the relationship between GBV and gender performative expectations; (ii) it explores intersectional performative regulations by discussing boundaries of caste, class, and gender; and (iii) it discusses the disciplinary aspects of the women's court's application of the restorative approach with Foucauldian perspective. Keywords: Women's court, Gender-based Violence, Performativity, Intersectionality.

Author: **Hadar Elraz**, Swansea U.

Author: **Jen Remnant**, Edinburgh Business School - School of Social Sciences

This article draws on qualitative empirical data to examine how employees with mental health conditions (MHCs) have learnt to manage their condition in the contemporary, ableist workplace. Reflecting on contemporary debates relating to disability and ill-health in relation to work, the article identifies the significance of disclosure and stigmatisation in the experiences of disabled workers, and that they require further discussion to truly understand their continued marginalisation. Using data from 42 interviews with employees managing MHCs in the workplace, this paper focuses on two central methods by which employees reject with marginalisation at work. They do this firstly by identifying the value they place on employment, beyond income, and secondly by developing a collection of individual coping strategies to manage their MHCs without employer support. The findings show that work holds meaning to individuals in terms of their perceived value and that employees with MHCs resort to neoliberal understandings of personal responsibility.

Warriors, Rebels and Environmental Justice

Session Moderator: **Stephanie Daher**, *Grenoble Ecole de Management*

CMS: **Organizing at the End of the World: Ontological Perspectivism as an Approach to Ecological Crises**

Author: **Stephanie Daher**, *Grenoble Ecole de Management*

Ecological crises in the Anthropocene era pose fundamental challenges to concepts and practices of organizing, demanding a radical rethinking of how actors relate to each other and to a rapidly changing natural environment. The current paper discusses the question of relationality inherent to organizing in the Anthropocene, drawing on Amerindian perspectivism, a non-western translation of Indigenous knowledge. As an articulation of critical approaches and relational ontologies, we propose 'ontological perspectivism' as a kind of critical relational stance to organizing. We elaborate this stance by examining perspectivism in its ethical, ontological, epistemological and methodological dimensions. Because perspectivism radically decenters essentialist and anthropocentric categories, emphasizing species multiplicity and acknowledging difference, we argue that it can open pathways to address organizing questions at the Anthropocene. This study contributes to critical environmental discussions in and around organizations, extending relational approaches and responding to calls to engage with non-anthropocentric knowledge to think possible futures in organizational theory and practice.

CMS: **Body-Territory in Energy Transition: Wayúu Women's Struggle in Colombia**

Author: **Jacobo Ramirez**, *Copenhagen Business School*
Author: **Claudia Vélez-Zapata**, *U. Pontificia Bolivariana*
Author: **Rajiv Maher**, *EGADE Business School, Tecnológico de Monterrey*
Author: **Fabrina Acosta-Contreras**, *Asociación Evas&Adanes*

This article contextualises the implications of green-energy investment on the body-territories of the indigenous Wayúu women of La Guajira, Colombia. We conducted a qualitative study to explore the struggles of Wayúu women to preserve and defend their territories when impacted by large-scale investments through the theoretical frameworks of decolonial feminism and body-territory. The multidimensional problem that underpins wind-energy investment in La Guajira is intertwined with community conflicts caused by disputes over territorial control and lack of respect for indigenous peoples' epistemologies. This is economic colonialism under the rhetoric of a pressing need to invest in green-energy. Wayúu women are ready to use decolonial feminism to protect their lands from new green-investor colonists in defence of Mother Earth due to their cosmovision of body-territory: bodies suffer when the land suffers. We contextualise a dichotomy between 'decolonial feminism practices through body-territory cosmovision in defence of Mother Earth' and 'territorial control perpetrated by new green-investor colonisers'. Long-term investment and energy transition rhetoric that respects indigenous peoples' ancestral territories could aid in the development of coherent public policies towards decarbonisation while protecting the rights of indigenous women.

CMS: **The Underground Rebels: The History of Arab Resistance Against the Fossil State**

Author: **HELA YOUSFI**, *I'U. Paris-Dauphine (Paris IX), PSL*

Drawing upon the colonial history of Gafsa Phosphate Company (Tunisia) and that of workers' struggles, this article aims at exploring possibilities for resisting the dominant models of fossil economy. While these resistance movements are often framed in terms of the distribution of wealth, social justice or national sovereignty, I will develop the thesis that ecological issues and social or national struggles are more interconnected than they may appear. I will focus specifically on a topic seldomly discussed in managerial literature: the interpenetration of politics and religion in the anatomy of resistance to the fossil economy.

CMS: **Critical Governance Lessons from a Mining Dam Failure Disaster in Brumadinho, Brazil**

Author: **ALEX JOSE DE ALMEIDA**, *PUC Minas*
Author: **Patrícia Daniela Souza Dos Anjos**, *Pontifical Catholic U. of Minas Gerais*
Author: **Carolina Mateus De Melo**, *Brumadinho*
Author: **Armando Dos Santos De Sousa Teodosio**, *Pontifical Catholic U. of Minas Gerais*

On January 25, 2019, the rupture of Vale S.A.'s mining tailings dam in Brumadinho, State of Minas Gerais, Brazil, marked the largest workplace disaster in Brazilian history, resulting in 272 deaths and substantial environmental and social impacts. Given the significant implications of this mining industry disaster in the state of Minas Gerais, especially considering it is not the first of its kind in recent history, it is crucial to examine, using supportive critical literature, the governance model applied in the territory's reparation involving the actors in the process. This study aims to bridge the gap between analyses of governance in mining territories and investigations evaluating reparation in the post-disaster context of Brumadinho. The research delves into Governance in Mining Territories and Intersectoral Partnerships, drawing on critical concepts such as Transnational Power, exercised by mining companies, and Translocal Governance, emerging as an alternative for territory management. Additionally, the study provides theoretical insights into Brumadinho and its Reparation Governance, elucidating the applied reparation model. Employing a qualitative approach, the investigation explores concepts and ideas emerging from critical theories that challenge traditional forms used in the management of mining territories and persist in the reparation of Brumadinho's territory. As a result, beyond a comprehensive reflection on Reparation Governance five years after the studied disaster, this research facilitates discussions on popular participation, introduces new study agendas, and proposes perspectives for improvements in the ongoing model.

Innovating for ‘Middle Age’: Critical Management Education in Practice.

Organizer: **Jennifer Manning**, *Technological U. Dublin*

Organizer: **Richard Longman**, *The Open U., United Kingdom*

Panelist: **Todd Bridgman**, *Victoria U. of Wellington*

Panelist: **Alessia Contu**, *U. of Massachusetts, Boston*

Panelist: **Alexandre Faria**, *EBAPE/FGV*

Panelist: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*

This Panel Symposium on Critical Management Education (CME) aligns with the overall conference theme, “Innovating for the Future” in its focus on the interplay of innovation, policy, and purpose and in its attempts to rethink conventional ways of leading, managing, and organizing. Perriton and Reynolds (2018) suggest that Critical Management Education (CME) is reaching “middle-age,” a stage potentially marked by introspection and a need for evolution in practice. We begin by recognizing that CME holds a precarious position within business schools (Zald, 2002), and that questions remain about whether Critical Management Studies itself can survive in universities whose finances rely heavily on business education (Parker, 2021). The critique issued by Perriton and Reynolds (2018) regarding CME’s silence over its own privileges is invaluable. They highlight Breen’s (2013) findings on how criticality in CME varies based on educators’ seniority and gender, echoing Vince’s (2010) call for a reflexive examination of CME that addresses the emotions and politics of educational practice. This symposium aims to extend these conversations, focusing on the practical implementation of CME – both within our classrooms and institutions, and exploring the strategies that CME educators are employing. The evolving and dynamic nature of CME is evidenced by its diverse thematic contributions. Recent work demonstrates a critical pedagogy of management might be possible (c.f., Grey et al., 1996), encompassing themes such as the ethics of care in management education (Heath et al., 2019), the organization of work (Dashtipour and Vidaillet, 2020), class privilege and social inequality (Zulfiqar and Prasad, 2021), and the identity work integral to teaching (Knights et al., 2022). We are keen to explore how these themes materialize into practices – be it through developing critical awareness, implementing innovative and participatory teaching methods, addressing diversity and inclusion, understanding classroom dynamics, or balancing theory and practice. We aim to explore these themes, and allied questions, examining key elements crucial to CME practice. For instance, how might more innovative teaching methods, for example emphasizing improvisation, collaboration, and creativity (Bishop et al., 2022), help move from critical content to critical process? Could consciousness-raising experiences challenge students to confront how racial and ethnic differences lead to issues of diversity and inclusion (Edmondson et al., 2022)? How should critical scholars respond to calls for a performative turn in CMS (e.g., Contu, 2020)? Could this be embodying critical values in their teaching, curriculum development, and institutional engagement – could this be a form of intellectual activism praxis (Manning, 2023)?

Technology, Organizational Change, and Values

Session Moderator: **Richard Guse**, *Karlsruhe Institute of Technology*

CTO: **Displacing Purpose: How Public Libraries are Being Reconfigured in the Digital Era**

Author: **Wanda J Orlikowski**, *MIT*

Author: **Susan Scott**, *Imperial College Business School*

How are public libraries being remade in the digital era? Cultural institutions are increasingly expected to encompass 'digital' and prior research on digitalization in other sectors suggests that this will structure ways of organizing. Using longitudinal qualitative data, we explore how digital practices are creating significant changes in public libraries — not just shifting processes and services, but also critically, the very notion of what a public library is. We theorize our findings using agential realism which focuses us on performative outcomes. We consider how digitalization led to multiple shifts in the library's processes and services, generating direct changes in library work practices manifesting as intended and unintended consequences. We then extend our analysis to include the indirect corollary effects of library digitalization, examining how these dynamics are challenging core norms and values of the library. We find that digital transformation is displacing the central purpose of public libraries, with far reaching implications for the vital role that this cultural institution serves in sustaining communities. These findings shed a sobering light on the likely performative outcomes of digitalization for other cultural institutions.

CTO: **The Development of Value Proposition in Healthcare in the Course of Digital Transformation**

Author: **Richard Guse**, *Karlsruhe Institute of Technology*

Author: **Scott Thiebes**, *Karlsruhe Institute of Technology*

Author: **Philipp Winterhoff**, *Karlsruhe Institute of Technology*

Author: **Martin V. Alzate**, *Karlsruhe Institute of Technology*

Author: **Jonas Stangier**, *Karlsruhe Institute of Technology*

Author: **Ali Sunyaev**, *Karlsruhe Institute of Technology*

Recent research differentiates digital transformation from former transformations by the concept of value proposition. However, with this distinction, it remains unclear, particularly in knowledge-intensive sectors such as healthcare, how the core value-defining activities change and when they are considered extended or changed. As it is expected in research and practice that the healthcare sector is facing a fundamental digital transformation, this sector is particularly suitable for exploring how a changed value proposition can be conceptualized. This is particularly relevant as it helps further understand healthcare's underlying transformation dynamics. To identify core value-defining activities and their changes, we conducted 15 semi-structured interviews with employees from various healthcare organizations. We analyze the interviews with the inductive category formation of qualitative content analysis. The analysis enables us to classify the identified categories into five non-transformative cases, in which the value-adding activities of an organization are supported by IT, and four transformative cases, in which the value-adding activities of an organization are redefined. Overall, our findings contribute to a better understanding of the digital transformation at the organizational level in the healthcare sector. Furthermore, we highlight important areas for future research based on the four identified DT characteristics.

CTO: **Constructing Automation: Rethinking the Automation-Augmentation Paradigm in the Age of AI**

Author: **Roni Shen**, *U. of California, Santa Barbara*

There is a long-standing discussion in the technology and organizing literature regarding whether technology should automate or augment human labor, predominantly framing various approaches to technology use as either/or. The extant research on automation technology and technology use in practice has focused on the automation of manual, routine tasks or processes as most commonly thought of in manufacturing and service contexts. However, in the age of machine learning and algorithms that adapt to changing inputs, the definition of automation looks very different when applied to data-heavy, complex cognitive tasks such as decision making. Rethinking the concept of automation as constructed through structural, psychological, and ideological factors that shape user orientations towards algorithmic predictions may explain how these tools are used differentially in situ. The technology is not an automation or augmentation technology in and of itself or in relation to the task at hand, but the orientation of the user towards the technology as either a prescriptive or advisory tool determines whether the technology is used to automate or augment cognitive work. This theory is illustrated using ethnographic data drawn from a comparative field study of data-driven decision making in dairy farming.

AI, Digital Transformation, and Work Skills

Session Moderator: **Terri Griffith**, *Simon Fraser U.*

CTO: **Developing a Digital Transformation Skills Framework: A Systematic Literature Review**

Author: **Machiel Bouwmans**, *Hogeschool Utrecht*
Author: **Xander Lub**, *Hogeschool Utrecht*
Author: **Marissa Orlowski**, *MV Hospitality Solutions, LLC*
Author: **Thuy-Vy Nguyen**, *Hogeschool Utrecht*

Digital transformation (DT) involves integrating digital technologies into organizations to improve productivity, efficiency, and quality. Investing in the workforce's skillsets is essential for successful DT. However, it remains unclear which skills are essential. As such, our aim is to identify and define the essential skillsets needed for exploiting the full potential of DT, and to consolidate the identified skills into a comprehensive framework of DT skills. Using the PRISMA approach and thematic analysis, we conducted a systematic literature review of 37 articles. Based on our review, we developed the Digital Transformation Skills Framework (DTSF), which contains six overarching skillsets and 44 underlying skills. Our framework covers key skillsets in the areas of digital work, entrepreneurship, evidence-based work, collaboration, communication, and adaptation. By offering a comprehensive understanding of essential skills for today's evolving organizations, the DTSF addresses a critical gap in existing literature. It is also valuable for organizations and HR professionals, serving as a foundation for re- and upskilling initiatives.

CTO: **The Impact of Employees' Perceived Usefulness of AI on Creativity and Task Performance**

Author: **Yichuan Zeng**, *China Agricultural U.*
Author: **Fuxi Wang**, *China Agricultural U.*

Employees' interaction with emerging technologies such as artificial intelligence (AI) is not merely a passive acceptance process but also an active, bottom-up initiative to embrace change. Current research lacks exploration from the employee perspective on how individual perceptions of AI impact behaviors and outcomes. Through empirical analysis of 231 samples, we construct a moderated mediation model to investigate the effect of employees' perceived usefulness of AI on skill crafting behaviors, and in turn, on creativity and task performance. The findings reveal that perceived AI usefulness positively influences skill crafting. Skill crafting fully mediates the relationship between perceived AI usefulness and both employee creativity and task performance. Furthermore, transformational leadership positively moderates these direct effects and the indirect effect of perceived AI usefulness on creativity. These results extend the job crafting theory and offer suggestions for organizational management practice.

CTO: **Who Benefits from AI Adoption? Skill Complementarity and Labour Market Dynamics**

Author: **Dongmiao Zhang**, *Utrecht U., Department of Human Geography and Planning*

Recent studies on artificial intelligence (AI) and labour market outcomes often focus on the automation effects of AI. However, which skills might complement AI technologies and how AI adoption shapes employment and wage dynamics remain under-explored at the occupation level. Moving beyond the classic measurement of skills such as education, tenure or specific skill categories, I assess how many skills are combined in an occupation and their respective complexity. I refer to this as "complexity intelligence" and propose that occupations with high complexity intelligence will complement AI technologies. Most notably, the findings show that complex occupations are more likely to adopt AI technologies. In addition, there is a positive correlation between AI adoption and employment growth. AI adoption is associated with an increase in wage growth on average, with a larger increase for complex occupations.

CTO: **Redesigning Work for Artificial Intelligence in the Public Sector**

Author: **Reihaneh Bidar**, *U. of Queensland*
Author: **Ida Someh**, *The U. of Queensland*
Author: **Tapani Rinta-Kahila**, *The U. of Queensland*
Author: **Katie Williams**, *The U. of Queensland*
Author: **Marta Indulska**, *U. of Queensland*
Author: **Ian Ryan**, *Taranix*

Government organizations are increasingly seeking agility by leveraging artificial intelligence (AI) to change traditional ways of working. We explore different approaches to such work redesign through four case studies of government AI projects. Based on our findings, we provide a risk-informed work-redesign framework for AI implementation. It provides a four-pronged classification for tasks (mundane, high-reliability, expert, and wicked tasks) that can be handled by AI. Our recommendations guide public sector managers seeking to successfully incorporate AI into their processes while minimizing risks.

Platform Worker Relationships: Gig Workers and Gig Work

Session Moderator: **Melike Nur Findikoglu**, *Ozyegin U.*

CTO: **How Algorithmic Management Shapes Sticky Platform-Worker Relationships**      

Author: **Jing Zhan**, -

Author: **Meizhi Pan**, *Durham U. Business School*

Platform companies striving to mitigate the discontinuous intent of gig workers employ algorithmic systems. However, the role of algorithmic management under gig work settings is controversial. This study, grounded in the conservation of resources (COR) theory and the job demands-resources (JD-R) model, investigates how algorithmic management impacts workers' discontinuance intention. We conducted a three-wave, time-lagged survey among 331 Chinese gig workers, and discovered that algorithmic management is an effective managerial tool as it helps minimize gig workers' perceived work intensification, which in turn alleviates their discontinuance intention in the boundaryless organizational context. Also, algorithmic management is an invaluable external resource for gig workers with limited positive cognitive resources (i.e., uncertainty tolerance). This research contributes to the burgeoning body of literature on algorithmic management and provides several managerial implications for platform companies to sustain stable platform-worker relationships. We also discuss the directions for future research.

CTO: **Burning Desires & Cold Starts: Older Workers and Motivation-Reputation Misalignment in Platform Work**  

Author: **Sienna Helena S. Parker**, *U. of California, Santa Barbara*

Profession-based freelancing platforms use algorithmic reputation systems to match labor supply and demand by signaling a worker's competence through a platform-specific reputation. Freelancers new to a platform encounter the cold start problem; they lack platform-specific reputations and the interactions used by the platform's algorithms to build one. Studies on workers who overcome the cold start problem assume they are motivated to gradually build platform-specific reputations because they have a committed and long-term orientation to their work. Yet, these assumptions overlook groups with other motivations and how they can be successful. Older workers are one of the fastest-growing demographics of freelancers, which research suggests violates the assumptions of long-term and committed orientation. Because it is unknown how older workers can successfully overcome the cold start problem, we conducted a qualitative study of older workers who transitioned from conventional employment to online freelancing through Upwork. We found that older workers realized that building platform-specific reputations required accepting jobs misaligned with their initial motivations for pursuing platform work. This misalignment was particularly pronounced for older workers tethered to their career occupations who often decided to stop using the platform. In contrast, those who persisted in building reputations were less tethered to their prior occupations. Ironically, as these occupationally untethered older workers established platform-specific reputations, they found that the platform funneled them into taking jobs related to the occupations they intended to leave behind. We elaborate on how this ironic dynamic occurs and its implications for theories of platform work and the aging workforce.

CTO: **Follower Survival Strategies in a Virtual Context**

Author: **Diansha Wang**, *U. of York*

Author: **David Collinson**, *Lancaster U.*

Recent research on followership has highlighted the neglected importance of followers' agency and contribution to leadership processes. More critical studies have located followers in asymmetrical organizational power relations. This paper builds on earlier insights from critical organization studies to explore followers' survival strategies in a virtual and international workplace. The research draws on data from 40 semi-structured interviews with employees based in an outsourcing organization based in India employing financial assistants in China on temporary, insecure contracts. The findings show that the assistants engaged in two survival strategies in the virtual context: fiddling time and mental escaping. The strategies enabled them to limit their work engagement whilst simultaneously communicating to remote analysts their ever-present engagement, constant availability and commitment through two forms of what we term "dramaturgical presence": constantly available and insider. Followers are invited to rationalize, resist and even transform the inconsistent, contradictory but inherently interdependent leadership control and authority in the virtual and physical contexts. This paper, therefore, argues that the concept of "survival strategies" can be helpful and valuable in critical research on followership. We highlight the important role of virtual context as an amplifier of follower agency and knowledgeability, follower conformity and disguised dissent and resistance.

Technology-Driven Stress: Causes and Consequences

Session Moderator: **Martina Hartner-Tiefenthaler**, TU Wien

CTO: **From Distraction to Excessive Use: Examining the Influence of Distractions on Employees' Performance**

Author: **Sumera Saleem**, School of Management, U. of Science and Technology of China, Hefei
Author: **Feng Yang**, U. of Science and Technology of China

Despite the heightened levels of distraction caused by social networking sites (SNSs), its detrimental effects on user's life such as the emergence of conflicting behaviors, have not been adequately investigated. Given the importance of employee well-being to sustain their productivity, this represents a critical gap in the existing research. By utilizing stressor strain outcome (SSO) theory, our study addresses this gap by proposing a framework for analyzing employees' excessive use of social networking sites (ESU) through distractions within and outside SNS (D_WO SNS), ultimately influencing user behavior. The purpose of our study is to investigate the intricate relationship between D_WO SNS and excessive use of SNSs. We especially highlight how excessive use of SNSs impacts work performance and the emergence of task and relationship conflicts. In addition, we integrate dual theory into our study to investigate the moderating role of SNS use habit in shaping the impact of D_WO SNS on excessive SNS usage. The results of this research, which are based on cross-sectional data collected from 394 users in China, indicate that stressors do indeed contribute to behavioral strain in the form of ESU, which in turn increases the proclivity of TR conflicts and decreases work performance. However, our research uncovered a peculiar and counterintuitive stressor effect associated with D_WO SNS. We provide an extensive overview of this phenomenon and offer nuanced perspectives on its ramifications for the multifaceted dynamics of D_WO SNS in organizational contexts.

CTO: **The Dual Impact of Social Media-Induced Fear of Missing Out in Workplace**

Author: **Xiao Deng**, China U. of Political Science and Law
Author: **Jiayu Li**, China U. of Political Science and Law
Author: **Yaying Huang**, China U. of Political Science and Law

With the growth of social media and popularization of online offices, social media-induced fear of missing out (FoMO) has attracted widespread attention. How individuals respond to FoMO is unclear. Based on stress transaction and coping theories, and through a questionnaire survey of 192 employees, this study found that FoMO increased employees' active work interruption, which in turn leads to job burnout. In addition, FoMO leads employees to engage in more social network interactions, which in turn promote workplace relations. The perceived competitive climate positively moderates the indirect positive relationship between workplace FoMO through active work interruptions and job burnout. This study expands the understanding of the impact of workplace FoMO on employees and informs how managers can address FoMO in the workplace.

Author: **Xiao Deng**, China U. of Political Science and Law
Author: **Yaying Huang**, China U. of Political Science and Law
Author: **Jiayu Li**, China U. of Political Science and Law

Purpose –With the widespread use of ICT in the workplace, it has brought employees convenience as well as technostress. Numerous studies have showed the prevalence of this condition, prompting our interest in discussing how organizations and employees navigate and cope with technostress. The primary objective of this study is to investigate how technostress impact on employees' knowledge sharing behavior. And the diverse mechanisms of technostress to individuals and within various contexts have also captured our attention, so we explored two different boundary conditions. Design/methodology/approach –We collected questionnaires from 161 employees across various teams in China by using well-established scales in five waves. We analyzed the data using SPSS software for correlation analysis, linear regression analysis and path analysis. Findings –The result revealed that technostress positively influenced knowledge sharing behavior through the mediating role of employees' learning orientation. Employee' s resilience and team learning climate positively moderate the effect of technostress on knowledge sharing behavior through employee learning orientation. Originality –The findings of this study broaden the understanding of the impact of technostress on workplace behavior and provide suggestions on how to properly apply this influence mechanism.

CTO: **Self-Control Interventions for Digital Distractions**

Author: **Krutheeka Baskaran**, National U. of Singapore
Author: **Atreyi Kankanhalli**, National U. of Singapore
Author: **Narayan Ramasubbu**, U. of Pittsburgh

As more and more of our personal and professional activities shift online, we are increasingly subject to digital distractions that can offer respite at times, but also divert our focus and attention. Distractions, which are irrelevant interferences to be ignored, can be externally driven such as a notification on a smartphone, or internally driven such as the compulsion to refresh a social media webpage to get updates. Digital distractions often lead to task abandonment, delay or compromises in task execution. How then are we to mitigate the adverse effects of digital distraction? Prior research has mainly focused on analyzing and designing interventions for attention deviation due to IT interruptions that are purposefully attended to as a secondary task, and not digital distractions. Furthermore, a majority of the proposed interventions are restrictive and short-lived in nature, which aim to prevent individuals from accessing non-task related websites and apps rather than focusing on self-control interventions and their long-term effects. We build on recent research on self-control and conceptualize a process model that facilitates interventions aimed at attention regulation and breaking the cycle of digital distractions. We derive propositions based on the model that can be empirically examined in future. This paper contributes towards understanding self-control interventions for alleviating digital distraction with the ultimate aim of enhancing productivity and wellbeing.

Leadership Bias and Disparity

Session Moderator: **Tiffany Lilly Owens**, *Doctoral Student, U. of Houston*

DEI: A Human and Social Capital Perspective on Institutional Owner Reactions to Black CEO Appointments

Author: **Tiffany Lilly Owens**, *Doctoral Student, U. of Houston*
Author: **Curtis Wesley**, *U. of Houston*
Author: **Hermann Ndofor**, *Indiana U., Indianapolis*
Author: **Maria Del Carmen Triana**, *Owen Graduate School of Management Vanderbilt U.*

This study builds on recent research on Black CEO appointments by juxtaposing a pessimistic view, whereby discrimination leads to negative market responses, and an optimistic view, where accumulated human and social capital held by appointees overcomes prejudices, leading to positive market responses. As an influential firm shareholder, we focus on the institutional owner buy/sell behavior around CEO succession announcements. We hypothesize that their fiduciary responsibilities and interpretation of public and privileged information lead to more positive market responses for Black CEOs with high levels of human and social capital. Using a matched sample of 104 Black and non-Black CEO appointments from 1997 to 2022, we find an appointed Black CEO's accumulated human and social capital positively moderates the relationship between their announcement and institutional owner buy/sell behavior. Our findings support the optimistic view and contribute to the literature that addresses minority representation in the upper echelons. Keywords: minority CEOs, institutional owners, human capital, social capital

DEI: Called to Speak Up: How BIPOC Women Academics' Improved Sense of Power Leads to Constructive Voice

Author: **Tina Sharifi**, *York U., Toronto*
Author: **Ayesha Tabassum**, *York U., Canada*
Author: **Souha R. Ezzedeen**, *York U.*

Constructive voice behavior aims at challenging an organization's status quo and has been found to yield a myriad of individual- and organizational-level benefits. Despite these positive implications, speaking up is risky and can result in backlash for challenging existing power structures, particularly in university settings which are the focus of this investigation. These challenges are particularly pronounced for Black, Indigenous, People of Color (BIPOC) women academics who have historically experienced a reduced sense of power in higher education settings. Yet, little remains known about BIPOC women academic's sense of power, constructive voice behaviors, and contextual factors. Drawing on approach/inhibition theory of power and theory of planned behavior, we advance a novel framework exploring the moderating role of calling orientation between BIPOC women academic's sense of power and constructive voice behavior. We consider how the three psychological antecedents of voice behavior, namely attitude toward the behavior, subjective norms, and perceived behavior control, can be strengthened through calling orientation, motivating BIPOC women academics to enact constructive voice behavior. This relationship is examined through the two foci of calling, self-realization, and unification, which we posit will differently strengthen these psychological intentions of voice behavior. This paper presents significant theoretical and practical implications.

DEI: The Young Leader's Dilemma: Facing Implicit and Explicit Age Bias in Leadership Roles

Author: **Christoph Daldrop**, *Christian-Albrechts-U. of Kiel*

We examine the 'dilemma' for young leaders created by implicit and explicit age biases others hold against them. These biases are contrasted with those directed at older adults, women, and the intersections of age and gender. Across three experimental studies (N = 1,001, two pre-registered), we assess whether age-based discrimination is less recognized (implicit bias) and perceived as more fair (explicit bias) than age-based discrimination against older adults or gender-based discrimination. We argue that the bias toward young leaders is rooted in unique factors: young age's perceived relevance to leadership roles, its perceived controllability, and a lack of specific legal protections against age discrimination at work. Our results from three studies consistently illustrate implicit biases related to age in professional domains. However, findings on explicit biases are less consistent, suggesting they might be context-dependent, particularly in varied settings like political leader roles versus business leaders. The findings contribute to the expanding literature on age bias, workplace discrimination, and perceptions of justice, thereby illuminating the unique challenges that young leaders face

DEI: Beyond Bias: Gendered Action Potential and Its Role in Leadership Disparity

Author: **Kayla Stajkovic**, *U. of California, Davis*
Author: **Alexander Stajkovic**, *U. of Wisconsin, Madison*

Despite continued efforts to achieve gender equality in leadership roles, progress has stalled. This conceptual paper explores an alternative hypothesis to traditional theories of gender bias, positing that the work performed by women often goes unnoticed and unrecognized, contributing to the gender gap in senior leadership positions. We introduce the Gendered Action Potential (GAP) hypothesis, which suggests that gendered affordances in the workplace lead to greater invisibility of women's work. This lack of visibility is not solely attributable to bias but also to a lack of observable information, which influences the evaluation of job performance. By bridging the literature on domestic labor and perception affordances, this paper discusses how gendered perceptions of the potential for action in the workplace create disparities in workload distribution and recognition of work tasks, ultimately exerting downstream effects on evaluations and promotions. Addressing the gender gap in leadership requires multifaceted approaches targeting various underlying factors. The GAP hypothesis does not contradict existing theories on social roles and gendered work behaviors but rather complements them, offering novel insights for developing equitable recognition and promotion practices within organizations. Through this lens, we seek to promote dialogue on how to create a more equitable professional landscape.

Disadvantage and Vulnerability

Session Moderator: **Brandon Legacy**, *Smith School of Business, Queen's U.*

DEI: Barriers That Disadvantaged Women Face When Starting a Business in a Crises-Laden Country Context

Author: **Hayfaa A. Tlaiss**, *King Fahd U. of Petroleum and Minerals*

Author: **Dmitry Mikhail Khanin**, *The U. of New Mexico*

Author: **Stephen Page**, *U. of Hertfordshire*

Author: **Abdullah Al-Mashyekhi**, *King Fahd U. of Petroleum and Minerals*

Informed by postcolonial feminist theory and intersectionality theory, this study explores the barriers that women face with starting a business in a crisis, country-specific Arab context. It adopts an exploratory, qualitative, in-depth interviews-based approach as it explores the narratives of senior women who came from modest socio-economic backgrounds and never held a formal job. The findings highlight the adversities that these women are facing and how their role as mothers incentivizes them to start a business to support their families albeit with a lack of human capital. The findings also demonstrate the resistance that women face from family members in a patriarchal context and the importance of their agency which unfolds as political strategies that women use to fend off objectors. This study stresses the importance of contextualizing women entrepreneurs' studies within local contexts to better understand the embeddedness of their experiences, the barriers they face, and their agency and the various forms it takes to realize their entrepreneurial intentions.

DEI: Disadvantaged Young Men Falling Behind: A Review and Agenda for Diversity Management Research

Author: **Brandon Legacy**, *Smith School of Business, Queen's U.*

Author: **Eddy S. Ng**, *Queen's U.*

Author: **Alain Klarsfeld**, *Toulouse Business School*

While women are seeing positive advances regarding educational attainment and career opportunities, men from disadvantaged backgrounds are experiencing a negative trend on these fronts. Technological advancements, changing demographics, and cultural shifts have affected the labour market in a way that these men are inadequately prepared to navigate. Although men are generally considered to be privileged beneficiaries of patriarchal structures, we draw attention to contexts in which men are disadvantaged in employment and contemporary society. We first explore why disadvantaged young men are falling behind and identify the mega trends that affect these men entering the labour market. We then provide practical recommendations and propose suggestions for a future research agenda. Our paper highlights the specific issues young disadvantaged men face, which has been overlooked in diversity management scholarship.

DEI: Through Thick or Thin? The Impact of Racial Microaggressions on Social Network Ties

Author: **Feigu Zhou**, *The U. of Memphis*

Author: **Kyle Stockdall**, *The U. of Memphis*

This paper explores the impacts of racial microaggressions on interpersonal relationships. We leverage theory on social networks to distinguish how different types of relationships face unique challenges posed by microaggressions. We propose a conceptual model to describe how microaggressions interact with various types of relationships. Additionally, we explore longitudinal impacts of microaggressions that can potentially reshape the content of workplace relationships, or alter the structure of workplace networks altogether. Our paper extends understanding of microaggressions to include the victim's relationships with their aggressor, as well as exploring the longitudinal consequences of racial microaggressions.

DEI: Racial Dissimilarity, Psychological Safety, and the Effect of Vision on Facades

Author: **Patricia Faison Hewlin**, *Columbia U. - Teachers College*

Author: **Meredith Flowers Burnett**, *American U.*

Author: **Sung Soo Kim**, *U. of Denver*

Across three separate studies, we find that racially dissimilar individuals are likely to create facades of conformity due to feeling psychologically unsafe. We also find that a leader's visionary leadership behavior can heighten the negative relationship between racial dissimilarity and psychological safety. Findings show that when organizational members perceive their leader as having more vision, the tendency to suppress personal values and pretend to embrace organizational values in response to low psychological safety is heightened. We contribute to existing scholarship within multiple streams of literature and theoretical perspectives.

Inclusive Leadership Strategies

Session Moderator: **Maria Ximena Hincapie**, *School of Management, U. de los Andes*

DEI: Fostering Hybrid Teams' Performance Through Inclusive Leadership Strategies 

Author: **Maria Ximena Hincapie**, *School of Management, U. de los Andes*
Author: **Patricia Costa**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*

Over the past years, hybrid teams have emerged as a prevalent phenomenon in the new work arrangements. Effective inclusive leadership strategies are essential for leveraging the full potential of hybrid teams, fostering collaboration, achieving high performance, and improving team members' well-being. Hybrid teams have members who frequently shift between co-located and remote working. This made them face unique challenges with technology-mediated communication (e.g., trust development) and the leader's need to balance the preferences and needs of co-located and remote team members. Leaders must thus ensure that all team members feel valued and included, regardless of location or schedule, to achieve team objectives and enhance well-being. This paper explores hybrid team leaders' challenges in managing diversity, equity, and inclusion, offering evidence-based strategies and practical recommendations. Specifically, we emphasize strategies for building trust and psychological safety, leveraging diversity as a strength, promoting cross-cultural understanding, establishing clear communication channels, and encouraging collaboration. By empowering hybrid team leaders with these insights, we aim to foster a culture of inclusion and create an environment where all team members feel valued, ultimately leading to enhanced individual and team performance and team member well-being.

DEI: Someone Like Me Can Lead: Supervisors, Social Comparisons and Women's Leadership Aspiration

Author: **Vedika Lal**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Kathleen Ann Stephenson**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Janneke Oostrom**, *Tilburg U.*

The purpose of this study was to identify which factors can enable women to relate to and aspire for stereotype inconsistent roles, like leadership. Across two studies, we tested the effects of supervisor gender and supervisor characteristics (agency vs. communality) on women's social comparisons (perceptions of similarity and identification with their supervisors), and in turn, their leadership aspiration. In our first experiment (N = 465) we found that women had higher social comparisons with female supervisors and with communal supervisors. In our second, survey study (N = 303) we found that women had higher social comparisons with communal supervisors irrespective of supervisor gender. Across both studies, we found that these social comparisons served as a mediator by which supervisor communality enhanced women's leadership aspiration. By focusing on social comparisons as a psychological mechanism, we address the value of stereotype inconsistent supervisors as presenting women with the opportunity to relate to such exemplars and imagine themselves as occupying roles that dismantle existing gender-leader stereotypes through increased leadership aspiration. Keywords: gender stereotypes, supervisors, communality, social comparisons, leadership aspiration

DEI: Tracing Inclusive Leadership: A Systematic Literature Review and Recommendations for Future Research

Author: **Farhat Haque**, *XLRI-Xavier School of Management, Jamshedpur, India*
Author: **Anita Sarkar**, *Xavier Labour Relations Institute*
Author: **Alok Raj**, *XLRI-Xavier School of Management*
Author: **Prashant Kumar**, *XLRI-Xavier School of Management, Jamshedpur, India*

This study reviews the literature on inclusive leadership (IL), a leadership approach that facilitates the fulfilment of relatedness, distinctiveness and competence needs of employees. We develop a conceptual framework for IL through integrative review. By analysing 194 articles, this study (a) captures the theories considered in IL studies, (b) examines significant constructs studied in the existing literature, and (c) develops a nomological network. The empirical results of IL studies show elicitation of multiple positive outcomes, but critical examination of IL is rare in literature. Further, the co-citation and co-occurrence analyses of the bibliometric review is conducted for thematic tracing of IL literature. The patterns in the evolution of IL field, followed by observations of the current state and the trends in IL literature is presented. Therefore, our study provides a nuanced understanding of IL research and highlights the gaps in existing literature for future research.

DEI: Feeling Included in a Remote Working World: The Role of Virtual Leader Behavior

Author: **Magdalena Schertler**, *U. of St. Gallen*

Both remote work and workplace inclusion have gained relevance in recent years, spurred by increasing diversity, globalization, and digitalization. At least since COVID-19, remote work has become the new normal for many employees and is likely here to stay. Therefore, this study aims to investigate the potential side effects of remote work on workplace inclusion. Building on sociometer theory, we argue that remote settings hinder the successful signaling of inclusionary cues, thereby introducing a barrier to perceived inclusion in employees. Further, one potential lever for mitigating adverse effects – namely, virtual leader behavior – is explored. Employing correlated random effects models, we test our hypotheses in 1'092 employees of a German automotive company who participated in three online surveys over the course of six months. Our results indicate no significant main effect between higher extents of remote work and inclusion. However, when introducing virtual leader behavior as a moderator, a significant interaction emerges, with a negative relationship between remote work and inclusion in employees whose leader shows only low levels of appropriate virtual leader behavior. Our results have strong practical implications and highlight the importance of leaders in maintaining inclusion within teams, especially in remote settings.

Bridging Perspectives: Trends, Methodology, and Future Directions in Diversity and Social Networks Research

Moderator: **Alondrea Michelle Hubbard**, *Rutgers U., School of Management and Labor Relations*

Organizer: **Jessica R. Methot**, *Rutgers U., School of Management and Labor Relations*

Panelist: **Raina A. Brands**, *UCL School of Management*

Panelist: **Adina D. Sterling**, *Columbia Business School*

Panelist: **Adam M. Kleinbaum**, *Dartmouth College, Tuck School of Business*

Panelist: **Meredith Lauren Woehler**, *Purdue U.*

This panel symposium will explore new directions at the intersection of diversity and social networks research as we take stock of where we've been and where the research is headed. We aim to expand our understanding of topics including, but not limited to, gendered networks (e.g., Brands, Ertug, Fonti, & Tasselli, 2022; Sterling & Perry-Smith, 2013; Woehler, Cullen-Lester, Porter, & Frear, 2021; Wood, Kleinbaum, & Wheatly, 2023), the network utilization of underrepresented minorities (e.g., Khattab, van Knippenberg, Pieterse, & Hernandez, 2020; Obukhova & Kleinbaum, 2022), and intersectional identities in explaining network outcomes (e.g., Smith, Watkins, Ladge, & Carlton, 2019). Panelists will address questions regarding methodological and analytical issues, publishing barriers, and ways in which each domain complements the other. Considering the Academy of Management theme "Innovating for the Future," we see this as an emerging space for rethinking gender and racial/ethnic inequities that impact, and are deeply rooted in, established ways of organizing, managing, and leading. In this symposium, we aim to foster a platform for panelists to synthesize the current literature, identify promising trends, and spotlight ways to advance the field.

Stratification and Synergy: Navigating Social Class Dynamics in Contemporary Management

Session Chair: **Jiyin Cao**, *Chinese U. of Hong Kong*
Session Chair: **Siyu Yu**, *U. of Michigan*
Participant: **Nadav Klein**, *INSEAD*
Presenter: **Jean Joohyun Oh**, *Carnegie Mellon U. - Tepper School of Business*
Presenter: **Jiyoun Kim**, *Northwestern Kellogg School of Management*
Participant: **Peter Belmi**, *U. of Virginia*
Speaker: **Stephane Côté**, *U. of Toronto*

The symposium makes substantial contributions toward elucidating the influence of social class in the workplace. From exploring the social costs of upper-class networks to the trust dividends of upward mobility, the impact of class on creativity, and the intersection of founder and investor class origins, each study offers fresh insights into longstanding debates. Together, they challenge and refine our understanding of social class as a critical dimension of management, providing empirical evidence and theoretical advancements that pave the way for more nuanced approaches to leadership and organizational strategy in an era of increasing socioeconomic awareness.

Social Capital and Leadership: Building Human Capital in Organizations

Session Moderator: **Bibi Zhang**, *Swansea U.*

HR: **Objectification at Work: A Review, Synthesis, and Research Agenda**

Author: **Bibi Zhang**, *Swansea U.*
Author: **Barbara Wisse**, *U. of Groningen*

Objectification – treating human beings as instrumental tools that are deprived of agency and experience – is inherent in many organizational practices, as employers hope that it may further their interests of profit-making. However, objectification undermines target employees' interests and well-being. This review seeks to address this conflict by discussing relevant theories and empirical studies on workplace objectification. Specifically, this review summarizes and integrates what is known about antecedents and consequences of objectification from three different perspectives: Objectifying others, self-objectification, and experiencing objectification. This review shows that people often objectify others to achieve their extrinsic goals, such as money and power, or to reduce subjectivity uncertainty, while thwarting the objectified targets' fundamental control, belonging, and self-esteem needs. We provide a comprehensive framework that integrates the extant literature on objectification and offer theoretical and methodological recommendations. We conclude by discussing how juxtaposing conflicting elements in objectification can help create a more virtuous cycle.

HR: **The Interplay of Line Managers' HR Self-Efficacy, Brokerage and HRM Implementation**

Author: **Huadong Yang**, *U. of Liverpool*
Author: **Julia Brennecke**, *U. of Potsdam*
Author: **Salma Raheem**, *U. of Liverpool Management School*

Line managers' HRM implementation is a key challenge in achieving HRM competitive advantages. Drawing on the Ability-Motivation-Opportunity (AMO) framework and the social and human capital perspective, we investigate the joint effect of line managers' HR self-efficacy and their role as information brokers in HR advice-seeking networks on HRM implementation, and further explore the consequences of HRM implementation for team performance and identity. We conducted a survey study in six manufacturing firms in Indonesia and collected data from 88 line managers, 325 team members, and 69 directors. Our findings reveal an inverted U-shape relationship between HR self-efficacy and HRM implementation, with both low and excessive self-efficacy levels correlating with inadequate HRM implementation, whereas a medium level relates to better HRM implementation. The findings also confirm the moderating effect of brokerage on this relationship: the inverted U-shape curve flattens for line managers who are information brokers. Finally, the findings show that HRM implementation is positively associated with team performance and identity. These findings offer new insights into the interplay between human and social capital in HRM implementation. They also enhance our understanding of the configuration of ability, motivation, and opportunity within the AMO model in this context of HRM implementation.

HR: **Become Brokers Among Multiplex Relationships: Multiplex Brokerage, Trust and Leadership Emergence**

Author: **Man Cao**, *Nanjing U. of Science and Technology*
Author: **Yixuan Zhao**, *Nanjing U.*
Author: **Jiaxi Chen**, *Nanjing U. School of business*

Brokerage has been not only acknowledged as a critical social network concept but also a pervasive organizational phenomenon. Whereas prior research has documented multiple advantages of brokerage, a predominant point suggests that brokerage does not foster trust and even undermine it given the specific positions and related control benefits. In this paper, we challenge this point and identify a specific type of brokerage, multiplex brokerage, the brokerage in multiplex networks, that could promote trust. We contend that individuals' multiplex brokerage can enhance team members' trust, which ultimately promotes their leadership emergence. Further, we propose that gender plays a moderating role in the aforementioned relationships. By analyzing the whole network data from 91 teams and 604 employees, we found that team members' cognitive trust mediates the relationship between multiplex brokerage and leadership emergence, and the indirect effect is stronger when the focal person is male rather than female. However, the mediating role of team members' affective trust is not supported.

HR: **Shared Ambidextrous Leadership – Introducing a Collective Approach to Foster Innovative Performance**

Author: **Lena Rudolf**, *U. of St. Gallen*

This paper introduces shared ambidextrous leadership as a new approach for fostering innovative performance collectively. Despite the positive effects of vertical ambidextrous leadership on performance, recent studies have shown that the paradoxical requirements cause tension for leaders and employees. Drawing on the job demands-resources (JD-R) model, I argue that collective resources can help to resolve ambidexterity-induced tensions by sharing ambidextrous leadership tasks within the team. Combining shared and ambidextrous leadership research, I question the vertical conceptualization of ambidextrous leadership and introduce shared ambidextrous leadership to the field. In the first step, the mechanism identified by vertical ambidextrous leadership studies is examined before I explore antecedents and boundary conditions of shared ambidextrous leadership. Building on the JD-R model, social capital is introduced as an essential lever for strengthening the shared ambidextrous leadership–innovative performance link. The resulting moderated mediation model is tested in a sample of 646 work units from 73 companies, including 5,315 employees. The findings unveil the positive effect of shared ambidextrous leadership on unit innovative performance, moderated by social capital. Further, vertical transformational leadership acts as an antecedent for shared ambidextrous leadership. This study offers a new path to relieve leaders and employees from the increased demands in ambidextrous work contexts by sharing opening and closing leadership within a team. Leveraging collective resources in this way enables companies to increase their innovative performance.

Strategic HRM: Aligning HR Systems With Organizational Goals

Session Moderator: **Joonyoung Kim**, *U. of Missouri*

HR: **Does Investment in Formal HRM Pay off for New Firms? A Meta-Analytic Review**

Author: **Joonyoung Kim**, *U. of Missouri*
Author: **Huikun Chang**, *Seoul National U.*
Author: **Dongchul Kim**, *U. of Missouri*

Despite the growing interest in how human resource management (HRM) influences the success of new firms, there is considerable debate about its effectiveness, especially given the unique challenges these firms face. This paper presents a comprehensive meta-analysis of the relationship between formal HRM and new firm performance, exploring how various organizational and institutional factors moderate this relationship. Drawing on the liability of newness theory, the study investigates how the internal and external environments of a new firm, such as IPO status, firm size, employment regulations, and labor market conditions, interact with formal HRM to impact firm performance. The analysis, based on extensive literature search and rigorous criteria, encompasses 83 correlations encompassing over 200,000 organizations. The findings reveal a positive but context-dependent impact of formal HRM on new firm performance, with significant variations observed across different moderators. The study highlights that while formal HRM can be beneficial, its effectiveness is greatly influenced by a firm's alignment with various internal and external factors. These insights offer valuable theoretical and practical implications and set a direction for future research in the fields of HRM and entrepreneurship.

HR: **Voices for Innovation: The Interplay of Worker Representation and High-Performance Work System**

Author: **Ki-Jung Kim**, *Eastern Kentucky U.*

Innovation thrives on empowered voices of workers, but how individual (human resource management) and collective (worker representation) forms of voice interact remains murky. This study argues that worker representatives cultivate a cooperative environment where high-performance work systems can boost innovation. Analyzing South Korean data from 2005-2013 with establishment and year fixed-effects regressions, this study finds that worker representatives' involvement in strategic-level decision making strengthens the link between high-performance work systems and innovation. This research reframes worker representatives as innovation enablers, reconciles the human resource management-worker representation debate, offers an integrative voice framework, and expands the context to non-Western economies. By effectively combining voice channels and fostering good labor relations, organizations can unlock their innovation potential and drive equitable growth.

HR: **The Ripple Effect: Employee Variability in HPWS Perceptions, Well-Being, and Firm Performance**

Author: **Chloé Tuteleers**, *KU Leuven*
Author: **Patrick Wessa**, *KU Leuven, Faculty of Economics and Business*

To date, researchers have formulated contradicting theoretical views on employee variability in HPWS perceptions. The first view argues that consensus on perceptions should be created and variability eliminated while the second one argues that HR investments should be differentiated and employee variability in perceptions allowed to achieve optimal firm outcomes. Our research empirically examines the consequences of employee variability in HPWS perceptions for the workforce and the organization. Drawing on social information processing theory, we argue that variability in HPWS perceptions in the workforce affects exchange relationships within the workforce, which in turn would harm collective well-being but not firm performance. We test our hypotheses via a partial least squares multilevel model in R, relying on a sample of 839 employees nested in 72 Belgian SMEs. Results show that variability in employee-perceived HPWS is linked to (1) lower collective social exchange, which decreases collective affective organizational commitment (AOC) and firm performance and (2) higher collective economic exchange, which decreases collective AOC, and increases collective exhaustion and firm performance. The total effects found illustrate the need for investing in employee consensus, as employee variability in HPWS perceptions is negatively linked to collective AOC and firm performance and positively linked to collective exhaustion.

HR: **Unravelling the Threads: The Dynamics of HR Implementation and Employee Perceptions of HRM**

Author: **Hussein Kurdi-Nakra**, *Trinity College Dublin, Ph.D. Graduate*

The divergent patterns in human resource (HR) implementation and the variability in employee perceptions of HR practices are critical yet underexplored areas. This conceptual study develops insights into internal contextual factors within an organization that are central to explaining the variability in both areas. I view contextual factors, including HR policy design and institutional pressures (i.e., influence exertions and competing demands), as critical determinants in the early stages of the HR implementation process. I first elucidate the role and challenges of front-line managers (FLMs) in human resource management (HRM), explore the relational dynamics in HR implementation, and address variability in employee perceptions of HRM. This clarification involves integrating insights from FLMs' studies with literature on employee perceptions of HR practices. I then develop a framework for describing and studying the influence of contextual factors on FLMs' involvement in HR implementation and subsequent effects on employee perceptions of HRM. This framework draws on three theoretical perspectives: institutional logic, contingency, and sensemaking. I use the different perspectives to develop a set of testable research propositions. This article concludes with a discussion of the practical and theoretical implications of the proposed framework, capturing the dynamic interplay between HR implementation and employee perceptions of HRM. Keywords: HR implementation; flexible HR policy design; influence exertion; competing demands; front-line managers; sensemaking

Cultivating Human Capital: New Dimensions in Job Performance and Inclusion

Session Moderator: **Jason Marshall**, *Creighton U.*

HR: **Performance: A Review and Integration**

Author: **Jason Marshall**, *Creighton U.*

Author: **Herman Aguinis**, *George Washington U.*

Author: **Jose R. Beltran**, *Rutgers U.-Camden*

Performance is a critical construct across micro and macro management subfields (e.g., human resource management, organizational behavior, entrepreneurship, strategic management). However, there is little consensus on how performance should be conceptualized. There are parallel and siloed research streams addressing firm- and individual-level performance, and a never-ending search for seemingly novel theories without satisfactory progress toward explaining relations among them. To address these challenges, we engaged in an inductive review process to systematically integrate performance-related theories. We reviewed 15,535 journal articles published in 44 journals from 1946–2022 and uncovered 239 unique performance-related theories that we integrated into six meta-theoretical clusters: firm-level (1) capabilities, (2) structures, and (3) transactions; and individual-level (4) knowledge, skills, abilities, and other characteristics (KSAsOs), (5) roles, and (6) relationships. Moreover, we discovered that the meta-theoretical clusters are isomorphic across levels, which resulted in the CORE model of performance applicable at both levels of analysis: Performance (P) = Capacity (C) + Opportunity (O) + Relevant Exchanges (RE). Based on these findings, we describe how the CORE performance model will enable researchers to stop working in theoretical silos, stop aiming for illusory theoretical contributions, stop thinking dichotomously about performance as behaviors or outcomes, and start examining intersections among performance system components.

HR: **Founder CEO Human Capital, Workforce Gender Diversity, and Venture Firm Performance**

Author: **Eun-Ji Oh**, *Sungkyunkwan U.*

Author: **Youngsang Kim**, *Sungkyunkwan U.*

Author: **Yangxin Wang**, *business school of Central South U.*

Prior studies grounded in the categorization-elaboration model (CEM) have shown that gender diversity has negative, positive, or mixed effects on the outcomes of units. By integrating the CEM, resource complementarity, and human capital resource perspectives, we investigate whether the founder CEO's human capital resources can change the effect of workforce gender diversity as an untapped strategic resource on venture firm performance. We mainly focus on the context of knowledge- and technology-intensive venture firms and suggest that workforce gender diversity and the CEO's human capital resources can jointly influence on venture firm performance. To consider the different functional effects of the founder CEO's human capital resources, we categorize the resources into three types of prior work-related experience: entrepreneurial experience, human resource (HR) management experience, and same-industry experience. In an analysis of 1,413 venture firms, we find that gender diversity has a non-significant effect on venture firm performance but the founder CEO's entrepreneurial experience has a functional effect on the relationship between gender diversity and venture firm performance. We also find that the functional effect is stronger when venture firms are in the rapid growth stage. Our findings indicate that the founder CEO's human capital resources have a functional effect on the impact of gender diversity. This important finding contributes to the diversity and strategic human capital resource literature.

HR: **Wilting Under the Spotlight: The Darling Effect and Its Influence on Performance**

Author: **Patrick F. McKay**, *East Carolina U.*

Author: **Kent Alipour**, *East Carolina U.*

Author: **Joy Humphries Karriker**, *East Carolina U.*

Author: **Thomas Vitti II**, *East Carolina U.*

Author: **Caroline Harris**, *East Carolina U.*

Author: **Adam Tresidder**, *East Carolina U.*

Author: **Ashley Dickerson**, *East Carolina U.*

Author: **Madison Jones**, *East Carolina U.*

The present study introduces the darling effect concept, defined as the social conferral of high success expectations upon an individual, based on early performance success, which can inadvertently undermine subsequent performance. We drew from the performance and status literatures to propose that 'darlings' who fail to meet socially-conferred performance expectations face potential status loss. As such, we predicted that darling status would be associated with reduced performance under conditions of adversity and/or high negative scrutiny. Study hypotheses were tested across samples of professional boxers (Study 1) and top-20 ranked U.S. Professional Golf Association (PGA) golfers (Study 2). Study 1 results showed that darlings (Olympic medalist boxers) won a significantly lower percentage of their world title fights across their careers than matched, non-darling boxers (i.e., high-flyers) under adversity (i.e., losing their first world-title bout). Study 2 measured darling status continuously based on PGA golfers' pre-tournament ranks for The Masters, PGA Championship, The U.S. Open, and Open Championship tournaments from 2009–2019. Results showed that, compared to lower-ranked darlings, higher-ranked darlings performed worse (i.e., required more total strokes to complete golf tournaments) under conditions of high versus low negative media scrutiny. We discuss the theoretical and research implications of our findings.

Author: **Beini Liu**, *Beijing Technology and Business U.*

Author: **Huamei Cao**, *Beijing Technology and Business U.*

Author: **Baihui Sun**, *Beijing Technology and Business U.*

While organizations strive to cultivate high-performing employees, certain influential factors may originate outside the purview of the organization. Parenting styles experienced at an early age exert a profound and enduring influence on individuals' developmental outcomes, yet our understanding of their impact on workplace performance remains limited. To address this research void, we examine the relationships between early-age authoritative parenting and employee task performance and creativity. Drawing from self-determination theory, we argue that early-age authoritative parenting indirectly impacts employee task performance and creativity via resilience, with job stress functioning as a second-stage moderator. Results from multi-source, time-lagged data of 300 employees and their direct supervisors support our predictions. Specifically, early-age authoritative parenting was positively associated with employee task performance and creativity through resilience, with the positive effects being more pronounced for those experiencing higher levels of job stress. This paper thus expands our understanding of the link between employees' early family experiences and workplace effectiveness, providing a springboard for future research from parenting to productivity. It also provides valuable insights for organizations seeking to improve employee performance.

Enhancing Resilience in Global Operations

Session Moderator: **Joel Hassan**, *Victoria U. of Wellington (PhD student)*

IM: Situational Control and New Zealand SMEs Strategic Responses During a Global Supply Chain Disruption

Author: **Joel Hassan**, *Victoria U. of Wellington (PhD student)*

Author: **Monica Ren**, *Macquarie U.*

Author: **Hongzhi Gao**, *Victoria U. of Wellington*

Motivated by the global impact of COVID-19 on supply chains and the lack of understanding of supply chain resilience from an SME exporter perspective in the international business literature, this paper sets out to explore how New Zealand SME exporters achieve resilience during the pandemic. The study adopts a qualitative, multiple case studies approach to identify the key strategic drivers and contextual factors influencing supply chain resilience. We offer a nuanced understanding of three strategic choices during a global supply chain disruption: buffer, bridging and mixed strategies. Our study is guided by resource dependence theory and information processing theory; our study places exporters' situational control in the center of drivers to firms' strategic responses. We make a novel attempt to incorporate the contextual conditions of the COVID-19 pandemic into the theorization of supply chain resilience. We make managerial recommendations to help SME exporters navigate global supply chain disruption challenges.

IM: The Dark Side of GVC Resilience: A Complex Adaptive System View

Author: **Naomi Lutskes**, *WU Vienna*

Author: **Michael Herbert Wolfesberger**, *WU Vienna*

This paper explores the concept of GVC resilience. We offer a more nuanced view of how GVCs operate in a disruptive environment by applying the notion of complex adaptive systems (CAS) to our study of GVC resilience. We furthermore uncover trade-offs of GVC resilience, a topic that has otherwise received limited attention in the existing literature. We find that high levels of resilience, associated with close collaboration with long-term GVC partners, tight routines, and a risk-averse company culture, can hinder learning, exploration, and innovation. Consequently, we argue that GVC resilience should be conceptualized as a combination of robustness - the degree of steadiness in performance, and adaptability - the pace of recovery. Robustness, although advantageous for short term performance under disruptive circumstances, can nonetheless hinder exploration and impede long-term performance. Adaptability, however, enables firms to grow beyond the pre-disruption performance. This advantage of adaptability corresponds to the far-from equilibrium state of CAS theory which holds that systems that are forced to explore their range of possibilities tend to develop more diverse structures and novel patterns of connections. We investigate this mechanism in a GVC context and conduct a multi case study, focusing on three carmakers and the automotive industry, which is particularly relevant due to its complex GVCs and recent challenges like the semiconductor shortage and the COVID-19 pandemic.

IM: Toward a Loose Coupling View of Foreign Subsidiary Resilience in Emerging Multinationals

Author: **Chao Zhou**, *China International Intellectech Management Consulting Co.ltd*

Author: **Jian Du**, *Zhejiang U.*

Author: **Sihan Li**, *Zhejiang U.*

Emerging multinational corporations (EMNCs) depend on their dispersed foreign subsidiaries to search, obtain and utilize overseas resources, and subsidiary resilience hence acts as an important premise for their continuous expansion and international competitive advantage, in which headquarter-subsidiary structure (HQS) plays a critical role. Extant research has not reached a consensus on the relationship between HQS structure and subsidiary resilience. It remains to be addressed on how to choose HQS structure to help subsidiaries cope with the conflicting demands between resource slack and operational flexibility. Therefore, this paper introduces loose coupling theory, utilizes the dialectical attributes of responsiveness and distinctiveness contained in this construct, and tries to provide a solution from a new perspective for the resilience construction of foreign subsidiaries in emerging multinationals. Furthermore, the linking-leveraging-learning (LLL) capability view, which is proposed in the context of emerging economies, is further incorporated into the research framework to reveal the internal and external mechanisms and boundary conditions between HQS structure and foreign subsidiary resilience, providing a systematic explanatory framework for EMNCs to manage globally-dispersed subunits, which has important theoretical guidance and practical significance.

IM: A Synergic Approach for Resilience and Sustainability? An In-depth Study in a Semiconductor GVC

Author: **Federica Sacco**, *U. of Pavia*

Author: **Giovanna Magnani**, *U. of Pavia*

We are living in the "Decade of Action": 10 years - starting from 2020 - that should lead to the achievement of the Sustainable Development Goals (SDGs). In this context, multinational enterprises (MNEs) are regarded as playing an active role in establishing a sustainable development approach to the economy. Moreover, the challenges caused by environmental and social decay have made it imperative for MNEs to develop resilient production networks within their global value chains (GVCs). By addressing the underlying similarities between resilience and sustainability, the present study proposes to investigate whether MNEs can adopt synergistic approaches to achieve sustainable and resilient GVCs. The study develops an in-depth single-case study contextualized in the semiconductor industry.

How Does Top Managers Human Capital Shape Firm Strategy and Practices?

Session Moderator: **Dana B. Minbaeva**, *King's College London*

IM: **Leveraging Multicultural Human Capital for Competitive Advantage of MNEs**

Author: **Chanhyuk Shin**, *Korea U.*

Author: **DuckJung Shin**, *Korea U. Business School*

Managing a multicultural workforce is essential for multinational enterprises (MNEs) operating globally, yet its impact on organizational outcomes remains relatively underexplored. Drawing upon the recent integrated framework of multiculturalism and human capital resources emergence, we explore how multicultural human capital can be transformed and amplified into unit-level resources, contributing to the enhancement of MNEs' competitiveness. Additionally, we identify three distinct emergence enablers that amplify its positive impact on competitive advantage: (1) the cultural experiences of top management team (TMT) members; (2) the prominence of foreign languages within MNEs; and (3) the inflow of multicultural human capital. Utilizing a sample of 472 MNEs across 24 manufacturing sectors, encompassing 36,757 managers and employees from 2006 to 2015 in South Korea, we found a positive relationship between multicultural human capital and MNEs' competitive advantage. Moreover, the moderation effects of all three emergence enablers were supported. The findings underscore the importance of fostering a multicultural workforce and implementing supportive practices to enhance competitive advantage in the global business landscape.

IM: **Being from Abroad: CEO Foreignness and MNE Regional Strategic Focus**

Author: **Che Tang**, *U. of St. Gallen*

Author: **Dimitrios Georgakakis**, *U. of Leeds*

Author: **Winfried Ruigrok**, *U. of St. Gallen*

Whilst extant international business (IB) research has acknowledged the factors that drive most large multinational enterprises (MNEs) toward a regional (versus global) strategic orientation, relatively little attention has been paid to the role of corporate decision makers in this process. Taking a lens of IB strategic leadership, we theorize that foreign CEOs have strong international capabilities to apprehend the challenges of inter-regional diversification and are subject to personal liability of foreignness in the home country of their companies. Thus, although they tend to invest more internationally, they prefer a focused regional strategy in the quest of economizing internationalization risks. We also postulate that a foreign CEO's tenure in the MNE's home country, and other executives' level of foreignness impact this effect. Data from European MNEs from 2003 to 2018 support our predictions. Overall, our study demonstrates the crucial role strategic leaders play in MNE regional strategy.

IM: **CEO's Early Life Experience of Marketization and Corporate Internationalization**

Author: **Chen Huang**, *Central South U.*

Author: **Ya Su**, *Central South U.*

Author: **Liang Zhang**, *Business School, Central South U.*

Author: **Zhuang Pan**, *Central South U.*

Author: **Xiin Li**, *central south U. business school*

Author: **Yangfan Han**, *Central South U.*

Despite the growing literature exploring how CEOs' imprints shape their and corporate behaviors, little attention has been paid to the influence of changes in the institutional environment in a CEO's early life. We combine imprinting theory with literature on early life experience to investigate how growing up in China during market transition impacts CEOs' internationalization strategies. We argue that experiencing different stages of the transition may have an asymmetric impact on internationalization decisions. Specifically, we find that experience of the preliminary stage of marketization in a CEO's early life is negatively associated with corporate internationalization, while experience of the profound stage is positively associated with internationalization. We further find that whether the CEO lived in a former treaty port weakens the negative relationship between CEOs' experiences of the preliminary stage of marketization and their firms' internationalization, and the relationship is strengthened if a CEO who has educated abroad. Additionally, we find that foreign education experience strengthens the positive relationship between CEOs' experiences of the profound stage of the transition and their firms' internationalization. This study enriches the literature on the early lives of CEOs and provides new insights into the relationship between their early life experience and their company strategies.

IM: **The Role of International Experience in Executive Decision-Making and Fraud Prevention**

Author: **Nick Hajli**, *Loughborough U., School of Business and Economics*

Author: **Tahir M. Nisar**, *U. of Southampton*

This study uses upper echelons theory to explore how an executive's international experience influences their likelihood of engaging in corporate fraud. Executives who have lived or worked abroad gain exposure to various legal and corporate environments, potentially cultivating a deeper understanding of ethical practices, such as inclusivity and social responsibility. This international exposure is hypothesized to shape these executives into advocates for ethical corporate governance upon their return home. The study investigates the link between international experience and the incidence of corporate fraud using data from China's A-share listed companies over the period 2010-2020. It examines whether executives with international backgrounds demonstrate a lower propensity for engaging in fraudulent activities, which can harm stakeholders and tarnish the company's reputation. Additionally, the study looks at how international experience influences executive compensation. Our findings indicate a negative correlation between international background and the likelihood of corporate fraud. Robustness tests further reinforce these results, maintaining their validity across varied variables. A deeper examination shows that international executives in these companies exhibit a lesser connection between compensation and fraudulent behavior, compared to their peers in non-state-owned enterprises. Furthermore, executives with international work experience are found to have a more significant deterrent effect on fraud than those with only overseas study experience. The study also reveals that while executive compensation incentives generally discourage fraudulent practices, the addition of international experience amplifies this effect. These insights highlight the value of integrating executives with international experience in global business management strategies. Such executives bring a wider perspective and a stronger commitment to ethical business conduct, which is crucial for companies aiming to foster a culture of integrity and reduce the risk of fraud in an increasingly interconnected global business environment.

New Perspectives on Culture in International Management

Session Moderator: **Steve Michael Loren**, *U. of Massachusetts, Boston*

IM: Exploring Gender Inequality: A Comparative Study of Legal Origins and the Varieties of Capitalism

Author: **Steve Michael Loren**, *U. of Massachusetts, Boston*

The persistence of patterned disparities in gender segregation and the broader spectrum of labor market inequalities across nations is a complex issue that continues to defy resolution. Researchers delving into the 'gendered' nuances of capitalism's varied forms have shed light on the multifaceted nature of gender-based disparities internationally. These include the representation of women in prestigious roles, the gender-specific development of skills that correlate with national social policy, and the segmentation and hierarchy of labor markets along gender lines. Yet, despite these advancements in understanding, there are still critical gaps when it comes to explaining the divergent rates of female labor force engagement and other gender-specific variations in employment. This current analysis introduces an alternate framework rooted in the theory of legal origins, particularly building on the model found in Scandinavian countries. This method provides insights into a wider array of issues and places the discussion of gendered variations in capitalism within a more expansive theoretical structure. By doing so, this research adds to the body of work on Legal Origins and Diversity, Equity, and Inclusion (DEI) within the realm of International Business, pinpointing and elucidating the distinct aspects of the Scandinavian legal tradition.

IM: How Socially Responsible Firms Make International Investment Decisions?

Author: **Huimin Liang**, *Warwick Business School*
Author: **Irina Minodora Surdu**, *Warwick Business School*
Author: **Nigel Driffield**, *Warwick Business School*

There is increasing pressure on multinational enterprises (MNEs) to push the sustainable development goals global agenda forward. Multinationals are amongst the firms most exposed to the tensions and trade-offs between social, environmental, and economic aspects of growth. Although we are reminded of firms' efforts to engage in CSR, we know little of the real consequences on MNE investment. We explore the questions that do socially responsible firms protect high standards of social performance when investing in international markets? And when are firms open to adapt to weaker host market CSR norms? Contrary to most previous studies, we used a sample of 13,779 FDI events between 2013 and 2019 and found that socially responsible MNEs do not necessarily 'protect' their reputation by investing in international markets to maintain control over their operations. In fact, the top social performers, tend to opt for local partnerships when they are faced with normative, CSR distance between the home and host country.

IM: Between Past and Present: Unraveling Values across Generations

Author: **Audra I. Mockaitis**, *Maynooth U., Ireland*
Author: **Vilmante Kumpikaite-Valiuniene**, *Kaunas U. of Technology, School of Economics and Business*
Author: **Ineta Zickute-Daugelaviciene**, *Kaunas U. of Technology*
Author: **Jurga Duobiene**, *Kaunas U. of Technology*
Author: **Irma Baneviciene**, *Kaunas U. of Technology, School of Economics and Business*
Author: **Vilmante Liubiniene**, *Kaunas U. of Technology*

This study examines the change in individual-level cultural values of Lithuanians over time. We analyze available data for Lithuania from the European Social Survey (ESS) in six waves, to identify changes in values during the years 2010-2020. Using a cross-sectional repeated survey design and a total sample of 11,615 respondents, we compare Schwartz's higher order values dimensions over time and across birth cohorts. We find large differences in values within and across waves of the ESS as well as across birth cohorts. Generation effects are apparent for the openness to change and conservation values dimensions. Within cohorts, as people get older, self-enhancement declines and self-transcendence increases. Over time, Lithuanians are become more, not less, conservative.

IM: Impact of Gender and Ethnic Diversity on International Success of Hollywood Movies

Author: **Madhumita Nanda**, *U. Of Sydney*
Author: **Chinmay Pattnaik**, *U. Of Sydney*
Author: **Qiang (Steven) Lu**, *U. Of Sydney*

Does it pay to be more socially inclusive and diverse in cultural industries? We examine this research question in the context of the Hollywood movie industry by looking at the impact of women's representation and ethnic diversity of actors on the international box office success of movies. We argue that diversity is multifaceted and thus needs to be examined in a nuanced manner when it comes to cultural products. While a greater representation of women may be appreciated by the global audience, the same is not true for ethnic minorities due to the historically negative portrayal of ethnic minorities in Hollywood movies. Our findings, based on 20 years of data from 2000 to 2021 for more than 3000 Hollywood movies, suggest that representation of women has a positive impact, but representation of ethnic minorities has a negative impact on the international success of Hollywood movies. The relationship between gender and ethnic diversity and international success is, however, contingent on the movie genre (culture neutral versus culture sensitive) and the internationalization co-production of movies.

Gender Diversity and Pathways to International Business

Session Moderator: **Malika Richards**, *Pennsylvania State U.*

IM: How Political Ideology and Informal Societal Institutions Shape Gender Diversity on Board Committees → 🖱

Author: **Patricio Duran**, *U. of Richmond*
Author: **Roxana Turturea**, *Stockholm School of Economics*
Author: **Purseu Heugens**, *Rotterdam School of Management, Erasmus U.*
Author: **Jean Luc Arregle**, *EMLYON Business School*
Author: **Marc Van Essen**, *U. of South Carolina*

While gender diversity on the board of directors (BODs) has increased in recent years, the representation of women on major board committees has advanced at a slower pace. This indicates 'policy decoupling,' a form of tokenism whereby firms appoint women to their BODs to comply with regulatory and societal pressures but deny them access to positions of substantive influence. However, policy decoupling varies across societies, and women are more likely to 'take the gavel' in certain contexts than in others. We present a theory explaining how incumbent governments' political ideology, in isolation and in conjunction with the informal societal institutions of gender equality values and civil society participation, shapes policy decoupling. Our findings show that female representation in major board committees, relative to the overall percentage of women on BODs, is higher in countries ruled by left-leaning governments. Contrastingly, gender equality values weaken this positive effect, pointing to a diffusion of responsibility between government and society in tackling gender inequality. Lastly, civil society participation does not weaken the focal relationship, likely because strong civil society actors vigilantly prevent left-leaning governments from shifting responsibility for including women in positions of real influence elsewhere.

IM: Female Managers, Host-Country Social Patriarchy, and Family Firm Internationalization → 🖱

Author: **Patricio Duran**, *U. of Richmond*
Author: **Sam Tavassoli**, *Deakin Business School Melbourne Australia*
Author: **Viroj Jienwatcharamongkhol**, *Blekinge Institute of Technology*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*
Author: **Maria Lapeira**, *Suffolk U.*

Family firms tend to lag in export intensity compared to their non-family counterparts. Scholars attribute such exporting gap to the agency costs perceived by family firms in internationalization decisions. We argue, however, that this perspective overlooks gender distinctions in risk attitudes among agents. Therefore, we explore the role of female managers, theorizing that their unique risk attitudes and decision-making qualities alleviate family firms' managerial constraints, enhancing these firms' export intensity. Yet, we propose that the effectiveness of female managers in narrowing family firms' exporting gap is contingent on host countries with lower social patriarchy. Discriminatory attitudes against females may lead to perceiving female managers as liabilities in internationalization, intensifying constraints on family firms' export efforts, thus limiting their exporting scope. Based on a dataset of 11,915 Swedish private firms (2004–2016), we advance theory on family firm internationalization, providing evidence that female managers serve as facilitators of family firms' exporting. We also respond to calls for more research on host countries on family firms' internationalization by investigating the role host-country social patriarchy as a critical institutional contingency.

Author: **Jia Li**, *Swansea U.*
Author: **Natasha Evers**, *Trinity Business School, Trinity College Dublin*
Author: **Mohammad Jasim Uddin**, *Coastal Carolina U.*
Author: **Md Imtiaz Mostafiz**, *U. of Leicester, Leicester, UK*
Author: **Md Nafizur Rahman**, *Bangladesh U. of Professionals*

Drawing upon upper echelon theory (UE), we examine how strategic renewal impacts the relationship between top management team (TMT) composition – team size and team gender diversity – and early internationalizing firms' (EIFs) performance. Utilizing a sample of 195 EIFs, derived from the Bangladeshi apparel industry, we test these hypothesized relationships. We find that the TMT size and team gender diversity positively affects EIFs' performance and that strategic renewal mediates the relationship between team gender diversity and EIFs performance. Our study advances theoretical understanding by demonstrating the strategic renewal and performance consequences of gender diversity in TMT.

IM: Entrepreneurial Internationalization: Gender, Centralization, and Resource Fungibility (WITHDRAWN) → 🖱

Author: **Di Song**, *U. of electronic science*
Author: **Xuan Huang**, *U. Nottingham Ningbo China*

Several international entrepreneurship studies have suggested that new ventures led by female entrepreneurs are less likely to engage in risky international expansion than those led by male counterparts. We argue that our understanding of the gender-based difference in new venture internationalization could be enhanced by considering the circumstances where entrepreneurs make their decisions. In this study, we integrate the upper echelons theory and the gender literature to propose that managerial discretion will exhibit differential effects on female and male entrepreneurs' international engagement. Our findings show that, while there is indeed a gender-based difference in new ventures' international expansion, this gap is wider when the centralization of decision-making and resource fungibility increases.

Presenter: **Ioana Stefan**, *Mälardalen U.*
Participant: **Oana-Maria Pop**, *HYPE Innovation*

The objective of this symposium is twofold. First, this symposium highlights the nexus of cultural (and indigenous) factors and organizational strategies for innovation and value creation. In doing so, the symposium illuminates informal institutional conditions that enable or constrain long-term strategies in under-resourced institutional contexts in Africa. Second, this symposium reveals novel organizational and inter-organizational forms that support strategies that are aimed at balancing social and economic value creation. Findings from the studies of these novel organizational forms offer theoretical insight for the strategy and innovation literature.

Inclusion: Addressing Challenges and Driving Innovations

Session Moderator: **Bryan McCusker**, *Management Consultant*

This session explores innovative approaches to promoting inclusion in organizations. Topics include dynamics in community foundations, strategies for managing resistance to diversity initiatives, and the impact of organizational size on inclusive practices.

MC: **Big or Small -- Does Organizational Size Matter? A Comparative Analysis for Consulting**

Author: **Bryan McCusker**, *Management Consultant*

Author: **Therese F. Yaeger**, *Benedictine U.*

Author: **Heather Jarvis**, *Benedictine U.*

Author: **Peter Sorensen**, *Benedictine U.*

According to Forbes, 99.9% of businesses across the U.S. are small businesses. Although the nation's largest corporations get media coverage, headlines and spotlight, according to the U.S. Small Business Administration the reality is that the vast majority of businesses in the U.S. are small businesses. In the United States, while 33.2 million small businesses exist, the majority of organizational research data is from large organizations. Using the voice of the employee specific to trust and communication, is there a difference between small companies and a big corporation? Employee survey data from three organizations explores the elements of trust and communication efforts of middle managers. Employee survey responses from one large corporation, and two smaller organizations (small organization-1 in USA, and small organization-2 in Mexico), are comparatively analyzed. Findings indicate that communication and change styles are somewhat different with respect to organizational size. As organizational change efforts, trust and communication impact the levels of employee stress, the implications of communication and stress issues for consultants are discussed. Ongoing research for consultants intersecting the elements of trust, communication and stress within different organizations are discussed.

MC: **Identity in Action: Micro-Level Dynamics in Community Foundations' Pursuit of Social Justice**

Author: **Maham Ali**, *Ohio State U.: John Glenn College of Public Affairs*

DOCTORAL PAPER. This qualitative study investigates the role of social identity in organization-level efforts towards social justice within the community foundation field, where contrasting logics of market and community exist. Despite recent attention to how institutional logics are maintained, contested, or hybridized, a gap persists in understanding the bottom-up processes that facilitate changes in institutional logics. Focusing on community foundations that publicly committed to racial equity following the social movement activity of 2020, this qualitative study employs identity salience and framing theory to explore how individuals use their identity to navigate and shape meaning under coexisting or conflicting logics. The study emphasizes micro-level perspectives to draw attention to the everyday practices of actors as they engage with logics to address organizational demands. The findings contribute to the institutional logics literature by highlighting the bottom-up processes involved in interpreting and reinterpreting logics that move organizations toward change. The findings also contribute to the community foundations literature. The data for this study is based on interviews with leadership and staff in two community foundations in the United States.

MC: **Managing Resistance to DEI Consulting: a Temporal-Cyclical Perspective**

Author: **Caroline Julie Demeyere**, *Copenhagen Business School*

Author: **Florence Villeseche**, *Copenhagen Business School*

Author: **Emily Louise Thorsson Schöller**, *Copenhagen Business School*

Author: **Marie Northeved**, *mnortheved@yahoo.dk*

Resistance to diversity, equity and inclusion (DEI) work is widespread and jeopardizes its possible impact in the workplace. Such resistance is experienced by internal staff but also by an under-studied group of DEI workers: DEI consultants, who are hired to develop, implement or improve an organization's DEI efforts. In this paper we investigate and sketch out how DEI consultants encounter resistance and the tactics they deploy to manage this resistance. Reporting on a three-year project about DEI consultants in Denmark, our qualitative analysis derives insights from 35 interviews. On this basis, we show how DEI consultants' resistance management tactics constitute a three stages, temporal-cyclical process: 1) Preventing resistance - managing resistance before delivering the consulting service via individual and collective preparation 2) Responding to resistance - managing resistance in the moment and at the site of service delivery and 3) Processing and learning from resistance - managing resistance after having met it with peers in networking spaces, with colleagues or with clients. Our findings we offer a processual take on the work of DEI consultants. We thus contribute to better understanding how consultants manage resistance to DEI work before, during and after experiencing it, and how this temporal-cyclical dimensions brings us to consider where and with whom managing resistance to DEI work can be performed.

MC: **Revitalizing the Inanimate: The Influence of Anthropomorphism on Consumers' Repair Behavior**

Author: **Huanyu QIN**, *school of management, USTC*

Author: **Zhipeng Xie**, *Central China Normal U.*

Author: **Xu Yi**, *school of management, USTC*

Anthropomorphism has been recognized as a powerful marketing tool that imbues products with life, enhancing the feeling of aliveness for consumers. Despite the popularity of research into this topic, little attention has been given to its impact on consumers' repair behaviors after purchase. Based on Cognitive Metaphor Theory, this study seeks to understand the influence, mechanism, and boundary conditions of anthropomorphism on consumers' intentions to repair products. Results show that anthropomorphism leads consumers to overestimate a product's self-healing capability, consequently affecting their repair intentions. Specifically, (a) anthropomorphism reduces consumers' repair intentions; (b) the perception of self-healing ability mediates this effect; and (c) the gender features of products moderate the relationship. Products with more masculine characteristics exhibit lower repair intentions compared to those with more feminine attributes. This research offers an insightful look into how consumers interact with anthropomorphic products and provides businesses with valuable guidelines on how to develop product renewal strategies.

Innovative Approaches to Overcome Change Processes

Session Moderator: **Alexandros Psychogios**, *Loughborough Business School*

Centered on navigating change processes, this session covers topics such as cooperation within non-profit organizations, hybridization within local governments, and the application of neuroscience in change management practices.

MC: **A Brain Based Approach to Change Management: Neuroscientific implications in Managing Change**

Author: **Alexandros Psychogios**, *Loughborough Business School*
Author: **Nikolaos Dimitriadis**, *U. of York, Europe Campus, City College*
Author: **Dritjon Gruda**, *Catolica Porto, Portugal/Maynooth U., Ireland*
Author: **Feim Blakçori**, *AFG College with the U. of Aberdeen*

Drawing on an extensive literature of applied neuroscience and neuropsychology, in this conceptual paper, we propose a set of brain-based incentives to dissolve the detected change resistance, uncertainty, and other perceptions and attitudes about change in organizations. We argue that uncertainty, engagement, and attention may be conditioned with available biases affecting employees' perceptions and attitudes, and in response, outline how neuroscientific concepts can help resolve mistrust, and trigger engagement, and attention. We also discuss the role of mirror neurons in showing empathy, care, and relatedness towards employees, which increases intercommunication and reinforces organizational belongingness. We conclude by suggesting a conceptual model that can be tested through further research projects.

MC: **The Application of Agile HR Practices in Knowledge-Based Organizations**

Author: **Swati Suravi**, *Indian Institute of Management, Calcutta*
Author: **Amit Dhiman**, *Indian Institute of Management, Calcutta*

Knowledge-based organizations (KBOs), such as consulting firms, thrive by using existing knowledge and developing new knowledge to remain competitive and ensure long-term survival. In an increasingly competitive and dynamic business environment, KBOs must effectively and rapidly exploit and explore knowledge to respond to threats quickly and take advantage of opportunities. By adopting agile principles and practices, such as agile HR, in their systems and operations, KBOs can enhance their responsiveness and adaptiveness to sudden and unforeseen environmental changes and customer requirements. The KBOs achieve this by developing agile knowledge, learning, and innovation capabilities through appropriate knowledge management, team, and innovative work behaviours of employees. Such capabilities provide a source of competitive advantage to the KBOs and help them cope with modern-day challenges and uncertainties, such as those pertaining to rapid digital transformations. The paper studies how agile HR practices help KBOs enhance responsiveness and adaptability by achieving fast and efficient knowledge exploitation and exploration through appropriate behaviours of employees, rapid learning, and team processes such as quick relaying of feedback and information and rapid knowledge exchange. The discussion has been encapsulated in the form of a framework, and propositions have been put forth.

MC: **Cooperation of Employees and Volunteers Within NPOs - A Case Study in a French Humanitarian NPO**

Author: **Thibaut .. Dubois**, *CORHIS & U. Paul Valery, Montpellier*

Non-profit organizations are the only ones to employ both volunteers and salaried staff. Many of them structure their operations by adapting management practices according to the status of the actors involved. However, this compartmentalization makes cooperation between actors more delicate, and thus undermines the associations' performance. The aim of this paper is to present the results of a four-month research-intervention with an association, carried out as part of the preparation of a doctoral thesis. The first part (1.) presents the associative sector and our problematic, the second (2.) explains the theoretical and methodological frameworks, and the third (3.) presents our results.

MC: **Hybridization Within Local Authorities: Overcoming Tensions Between Representatives and Managers**

Author: **Eric Scarazzini**, *U. Paul Valery, Montpellier*
Author: **Florence Noguera**, *U. Paul Valery, Montpellier*
Author: **Jean-Michel Plane**, *U. Paul Valery, Montpellier*
Author: **Laurent Cappelletti**, *LIRSA-Cnam Paris*

Over the past thirty years, local and regional authorities have been faced with major reforms that have had an impact on management, particularly senior and middle management. Organizational hybridization, moving from a hierarchical duality to a tripartite relationship with strong stakeholder influence, has generated role tensions, as has unresolved institutional hybridization. The key idea is that in local authorities, the influence of political leadership in governance, which takes precedence over expert leadership, encourages role tensions. These, linked to organizational, relational, environmental or personal variables, have led to dysfunctions that have increased hidden costs. The implementation of a "Horivert" management style, derived from Socio-Economic Approach to Management (SEAM), would facilitate the evolution towards partnership-based governance, which would reduce role tensions, dysfunction and hidden costs. In addition, the use several indicators to measure hidden costs would make it easier to monitor variations in role tensions. Based on an empirical study of a local authority, the aim of this contribution is to analyze the role tensions experienced by local authority managers, to study how they manifest themselves, to measure (partially) the hidden costs and how to reduce them by acting on role tensions.

Author: **Vanessa Susan Hills**, *Western Michigan U.*

Generative organizational change theory presumes organizations are socially constructed and change occurs through new conversations and shared meanings (Bushe, 2020; Marshak & Bushe, 2018). Leaders play a crucial role in hosting the change process rather than controlling it. However, leaders may unconsciously resist relinquishing control or face other unconscious obstacles inhibiting the generative change process (Chouetier, 2023; Gilpin-Jackson, 2013). This conceptual paper proposes using the Free Association Narrative Interview (FANI) method as an intervention to uncover leaders' unconscious obstacles to hosting generative change. FANI techniques elicit narratives based on emotional pathways rather than rational logic; the narrative approach combined with analysis allows for deeper insights into the unconscious (Hollway & Jefferson, 2013). Using FANI in this context could enable leaders to identify unconscious fears, anxieties, and other defense mechanisms that inhibit their capability to embrace and host generative change.

Proactive Innovation Strategies: Survival and Development Imperatives

Session Moderator: **Raphael DE VITTORIS**, *Clermont Auvergne U.*

This session focuses on proactive strategies for innovation and development. Topics include the impact of project requests on risk and performance, the application of disruptive scenario planning, and perspectives on crisis management versus business continuity.

MC: **Crisis Management vs Business Continuity: Perspectives from Practitioners and Researcher**

Author: **Raphael DE VITTORIS**, *Clermont Auvergne U.*

In the realm of crisis management and continuity planning, this practitioner research proposes a groundbreaking approach by fostering interdisciplinary dialogue between traditionally distinct populations: researchers and practitioners. The study implemented a disputatio experience during a dedicated event on crisis management, assembling practitioners, consultants, researchers, and students in a simulated courtroom setting. Two groups presented arguments to a jury regarding the extent of overlap between crisis management and continuity planning. The outcomes of this unique workshop yielded valuable insights, serving as a foundation for subsequent innovation. Approximately a year later, a crisis manager at a multinational corporation employed the ideas generated during the disputatio in effectively navigating the challenges posed by the COVID-19 pandemic. The empirical evidence gleaned from this experiential initiative underscores the potential for innovation through the engagement of populations that traditionally lack opportunities for exchange. The catalysis of new concepts and models emerged as a result, demonstrating the practical applicability of this interdisciplinary dialogue in swiftly implementing organizational strategies during times of crisis. This research advances the understanding of crisis management by emphasizing the importance of cross-pollination between diverse knowledge domains and highlights the tangible benefits that arise from such collaborative endeavors

MC: **The Request for Proposal's Effect on Project Risk and Performance from the Perspective of Knowledge**

Author: **Xin Gao**, *Jilin U.*

Author: **Lawrence Haynes**, *U. of North Carolina-Charlotte*

Author: **Franz Kellermanns**, *U. of North Carolina, Charlotte*

Worldwide, the Request for Proposal (RFP) process is used extensively by industry and all levels of government for the procurement of products and services. While prior research has mostly focused on project execution, we investigate the effects of the overlap between members of the proposal development team who are also members of the corresponding project execution team. Utilizing Transactive Memory Systems (TMS) theory, we specifically investigate the relationship between project requirements risk and project performance and "proposal overlap" from the perspective of knowledge transformation. Implications for research and practice are discussed.

MC: **Winter is Coming: Management Style and Firm Success During the Energy Crisis**

Author: **Jae Cho**, *Ludwig Maximilian U. of Munich (LMU)*

What is the best management style during an energy crisis? I use the California energy crisis of 2000-2001 to investigate what management style allows firms to be more resilient during an energy crisis. I use an unsupervised learning algorithm to define management style based on the managers' personal attributes and their pre-crisis financial decision-making. The algorithm detects two styles of managers, which I designate Style 1 and Style 2. Style 1 managers have a tendency to be (P)resent focused and (L)ess confident about the future. Firms under Style 1 management tend to have (S)hort-term business goals and higher cash flow. Style 2 managers are more (F)uture oriented and more (C)onfident, which motivates them to invest in projects with (L)ong term goals. I adopt acronyms for the characteristics of each management type: PLS (present, less confident, short term) for Style 1 and FCL (future oriented, confident, long term) for style 2. Employing a difference-in-differences approach, I find that FCL managers are positively associated with firm performance during the energy crisis, owing to their flexibility towards labor expense reduction. Further investigation suggests that their flexibility is driven by FCL managers' tendency to invest in machinery before the crisis. The consistency in the alternative measures of managerial style proves the robustness of the findings.

MC: **Navigating Discontinuity: Applying the Disruptive Scenario Approach in Engineering Consultancy**

Author: **Lucas Cornaro**, *U. Of Marburg*

During times of rapid and discontinuous change, decision-making in business environments is increasingly challenging. Traditional approaches often fall short in navigating the complexities of such dynamic contexts. This paper introduces a novel approach termed 'disruptive scenario approach,' designed to enhance decision-making capabilities in times of discontinuous and disruptive change. The method leverages elements of threat / opportunity framing and strategic visualization to confront managers with a realistic, yet disruptive scenario of their industry. This approach was applied to the consulting engineering industry. By presenting a clear and highly likely scenario of industry disruption, the approach aims to overcome decision paralysis, organizational inertia, and cognitive biases inherent in traditional decision-making processes. The paper details the methodology, its application, and the resultant impact on strategic decision-making. We contribute to research on scenario planning and strategic foresight by introducing a potent tool for equipping managers to better navigate and lead through times of discontinuous change.

Social Responsibility and Sustainability

Session Moderator: **Elena P. Antonacopoulou**, *GNOSIS Institute*

MED: Innovating for the Future: A New Management Education Manifesto for a VUCA World      

Author: **Elena P. Antonacopoulou**, *GNOSIS Institute*

As we propel the 5th Industrial Revolution, we are perforce to revisit the essence of management as a concept not only as a business practice. Scientific management principles have shaped organizations' functioning and have defined why we associate their purpose with efficiency and effectiveness as a consistent feature of the history of industriousness. This paper is an invitation to cocreate a new management education manifesto. At the core of such a manifesto lies a reassessment of the practice of management, to not only rethink its essence but also its relationship to leadership, responsibility, practical judgement and collective action. Doing so would initiate a process of rediscovering that management as originally conceived is integral to human flourishing; as, management after all is also MAN-AGEMENT. Hence, management education as a manifesto is not only a pedagogy and a new mode of learning. It is also about cultivating stance-taking and responsabilization integral to human flourishing.

MED: Unlocking Student Action? Uncovering Hidden Curriculum-Responsible Management (Un) Learning Dynamics

Author: **Annette Yunus Pendrey**, *Cranfield School of Management*

Why does inaction persist in students' practice of Responsible Management Learning (RML), despite extensive scholarship and long-standing reforms? Our longitudinal, qualitative study of 41 MBA students at four business schools reveals the key role of a two-way relationship between students' practical beliefs and their school's Hidden Curriculum (HC), which may or may not match. Specifically, we found responsibility (un)learning to be a process of noticing and reacting, then (dis)engaging, before resulting in responsibility undoing (coerced unlearning), overriding (deprioritizing) or unlearning (deliberate forgetting). Our results uncover the role of the job market and the business school career's service at/after graduation in this process. We contribute to scholarship, first through our practice-focused operationalization of the HC concept, which extends prior understandings of how the HC works. Second, our introduction of the post-curriculum concept expands the literature's boundary conditions, suggesting that matters beyond the business school environment are even more critical to students' RM unlearning as the curriculum itself. Keywords Hidden curriculum, responsibility (un)learning, business schools, Bourdieu, practical beliefs, Principles for Responsible Management Education

MED: Ready to Tackle Sustainability Issues? Business Students' Knowledge of Sustainability 

Author: **Talia Stough**, *The Open U., Netherlands*

Author: **Wim Lambrechts**, *The Open U., Netherlands*

Author: **Alexander Brewer**, *Sulitest*

Author: **Arno Eerikki Kourula**, *U. of Amsterdam*

Author: **Dirk C. Moosmayer**, *Kedge Business School*

Author: **Kim Ceulemans**, *Toulouse Business School, TBS Education*

Author: **Maria Castillo**, *IESEG School of Management*

Author: **Aurelien Decamps**, *Kedge Business School*

Author: **Marjolein C.J. Caniels**, *The Open U., Netherlands*

The integration of sustainability has been a burgeoning topic in the field of management education. While business schools have been integrating themes of ethics, responsibility, and sustainability into curricula (i.e., processes) for more than four decades, little is known about business students' knowledge of sustainability (i.e., product). In this research we aim to fill this gap by analyzing business students' scores on The Assessment of Sustainability Knowledge (TASK). We explore business students' knowledge of sustainability by subject and type of knowledge. Our results indicate that for almost every subject, business students' knowledge of sustainability is less than that of their peers (except for 'Microeconomic Considerations, Business, & Industry'). Business students have more knowledge about 'Current State and Trends', but have less integrated knowledge about sustainability (i.e., 'Causes' and 'Effects'). We also analyze influences on business students' sustainability knowledge. Our results demonstrate that taking sustainability-related courses has a significant positive effect. While a moderate level of self-reported sustainability knowledge was positively correlated with TASK score, an expert level was negatively correlated. Congruent with the results of other studies, we found female students exhibit higher attainment of learning outcomes in the RME context. We discuss the implications of these findings for the future of management education.

MED: How Do Learners Make Sense of CSR Tensions? Implications for Sustainability Management Education  

Author: **Pauline De Montpellier**, *UCLouvain*

Author: **Valérie Swaen**, *U. Catholique de Louvain*

Author: **Mariane Frenay**, *UCLouvain*

Management education plays an important role in innovating for the future, particularly when teaching sustainability. This study analyzes learners' various perceptions of the triple bottom line of economic, social, and environmental considerations in companies. We focus on corporate social responsibility (CSR) courses, acknowledging the inherent tensions arising from its multidimensional nature. We examine how learners from different backgrounds make sense of these tensions through a thematic analysis of their CSR perceptions shared in Massive Open Online Courses discussion forums. Our classification into six cognitive frames reveals how learners articulate and navigate links among CSR dimensions. We therefore advance understanding of the framing of CSR perceptions and extend paradox research on CSR, refining business case and paradoxical frames. The study enriches the discussion on innovative pedagogical approaches in management education by promoting a paradoxical perspective for teaching sustainability-related topics, while focusing on the specific context of online educational platforms. It addresses challenges in management education by delving into learners' cognitive frames, emphasizing the importance of guiding learners to embrace complexity. With an enhanced understanding of the interconnectedness of sustainability issues and the ability to navigate tensions, future decision-makers will be better prepared to develop innovative solutions to sustainability challenges.

Author: **Yves Plourde**, *HEC Montreal*

Author: **Nicolas Ricci**, *MINES Paris - PSL Research U., Center for Management Science, i3 UMR CNR*

Author: **Marine Agogue**, *HEC Montreal*

Climate change is a complex issue that is difficult for most people to understand. As management educators, we need to think creatively about how we prepare students for the organizational and managerial challenges. In this paper, we report on the learning outcome of the Net Zero Bike Tour, an experiential learning course that adopts an integrative pedagogy to promote climate leadership. Throughout this nine-day course offered as an elective course in a master's program in management and sustainability, participants focus on real life problems, are asked to use cycling as their main mode of transportation and are invited to share their thoughts in a journal at the end of each day. Building on quantitative and qualitative data collected, we share our insights into the program and show how it impacted participants' learning, including their sense of agency.

Exploring Complexity and Control in Different Contexts

Session Moderator: **Ussama Ahmad Khan**, *London Business School*

MOC: A Mixed Methods Study of the Role of Dignity and Sanctity in Poverty Alleviation in Pakistan

Author: **Ussama Ahmad Khan**, *London Business School*

Millions of people around the world live under conditions of poverty and financial vulnerability. Organizations have played a key role in the fight against poverty. The most rigorous evidence to date gives mixed evidence on the effectiveness of current poverty alleviation interventions. In this paper, I propose that the current understanding of poverty alleviation hinges on the assumption that money is fungible. In this paper, I offer a new perspective built on the research on the social value of money. I propose that organizations give meaning to the money they give to the poor and that this can have effects on their downstream outcomes. For this research, I focused on Akhuwat, Pakistan's largest microfinance organization. Akhuwat charges zero interest on its loans and its mission is, "A poverty-free society built on the principles of compassion and equity". In Study 1, I conducted 44 interviews with Akhuwat borrowers and key stakeholders. I also observed Akhuwat's employees' interactions with the borrowers in their branch offices and during the loan disbursement ceremonies. Moreover, I visited borrowers' places of work to better situate myself in the sociocultural realities in which they were embedded. Finally, I was able to draw on archival data from Akhuwat including internal company documents and video documentaries. Drawing on this rich data, I built a theoretical model describing the role of selfless dignity and sanctity in giving meaning to the money that Akhuwat lends to its borrowers, and the process by which enable these borrowers experience positive outcomes. In Study 2, I conducted a field experiment with a sample of 300 Akhuwat borrowers to provide causal evidence for the model in Study 1. In Study 3, I conducted a multi-wave survey study on a sample of 380 Akhuwat borrowers, broadly replicating the results from Study 1 and 2, providing a test for the mechanisms. Taken together, this study highlights the importance of humanizing the process of poverty alleviation and giving meaning to money that the poor receive.

MOC: Understanding Organizational Control: The Role of Information and Context

Author: **Rebecca Downes**, *Victoria U. of Wellington*

Organizing requires some degree of organizational control, and organizational control requires some amount of information, via monitoring. Examining how we interpret information highlights the importance of context. However, not all environments provide equal access to information and context; for example, remote work reduces the ability to monitor work via observation and in doing so, reduces context awareness. Building on this, I propose that organizational environments can be understood as more or less context-providing, and organizational controls can be understood as more or less context-dependent. Recognizing the need to match highly-context-dependent controls with context-providing environments (and low-context controls with low-context environments) presents a previous unconsidered explanation for why organizational controls do not function equally well in all organizational environments, and can provide guidance for managers when considering which organizational control mechanisms will be appropriate in a given setting.

MOC: A Model Of Representation and Policy Search in Complex Environments

Author: **Stefano Benigni**, *Imperial College Business School*

Mental representations determine how individuals and firms make decisions and have implications for individual and firm performance. However, current research does not distinguish between ways of developing representations of different complexity across distinct dimensions of a decision problem. In this study, I explore the trade-offs associated with the allocation of representation search efforts across the distinct dimensions of a decision problem – that is, with the breadth of representation search strategies. To this end, I develop a NK model of dual search over policies and representations where agents can either refine their representations broadly across dimensions or deeply in one or few dimensions of a decision problem. Results obtained with this model show that the optimal representation search breadth is contingent on the complexity of the decision environment. Contrary to previous research, intermediate levels of search breadth are associated with optimal performance only for moderate levels of complexity. Higher levels of complexity demand narrow search strategies, while broad search strategies are optimal when complexity is low. A second set of results explores the relationship between the breadth of search strategies and the optimal degree of representational complexity. I find that, counterintuitively, less accurate representations can outperform more accurate ones – i.e., that the optimal degree of representational complexity does not necessarily match the true complexity of the environment. However, I show that less accurate representations can outperform more accurate ones only for broad rather than narrow representation search strategies. These findings contribute to research on learning and adaptation in complex environments and on the role of mental representation in organisational decisions.

MOC: Developing an Intersectional Framework of Emotional Expression and Labor

Author: **Terrance L. Boyd**, *Neeley School of Business - Texas Christian U.*

Scholars have studied how employees engage in emotional labor with customers, coworkers, and supervisors in organizations for decades (Grandey, 2000; Hochschild, 1983; Kim et al., 2013; Thomas et al., 2018). A considerable amount of the emotional labor literature explores the impact of gender in the hypothesized relationships, largely positing that women engage more often in emotional labor and feel the consequences more severely than men (e.g., Scott & Barnes, 2011; Simpson & Stroh, 2004; Ward et al., 2020). Although important and enlightening, this approach is limited in recognizing the more complete spectrum of social identities. It inhibits understanding of how other salient facets of one's social identity such as (dis)ability, sexual orientation, or age impact emotional performances. We employ a grounded theory technique to study emotional labor through the intersection of race and gender in the workplace. Through an interpretivist paradigm, we conduct a series of in-depth semi-structured interviews to explore the emotions that men and women from the three largest racial or ethnic groups in the United States – White/Caucasian, Hispanic/Latino/a, and Black/African American communities, respectively (U.S. Census Bureau, 2020) – express in the workplace, their targets, and contexts. Therefore, this work aims to fully consider the holistic person doing the emotional labor. Integral to understanding the whole person is acknowledging multiple, intersecting aspects of their social identities (Crenshaw, 1989; Rosette et al., 2018). This qualitative approach allows for a more open evaluation of the nature and emergence of felt and displayed emotions and their consequences in the workplace.

Entrepreneurial Resilience: Strategies for Success

Session Moderator: **Qiang Zheng**, *South China U. of Technology*

MOC: **Distal or Proximal Driven Goal setting: The Impact of TMT Regulatory Focus on Aspiration Formation**

Author: **Qiang Zheng**, *South China U. of Technology*
Author: **Weiwen Li**, *Sun Yat-Sen U.*
Author: **Manli Huang**, *South China U. of Technology*

Behavioral theory of the firm suggests that aspirations are largely based on social aspirations and historical aspirations (encompassing past historical aspiration and past performance), and are adaptively adjusted in response to environmental information and organizational practices. However, few studies have considered the attention to and selection of external and novel information by strategic leaders, particularly top management teams (TMT). We synthesize the attention-based view and regulatory focus theory to argue that promotion-focused TMTs pay more attention to social aspirations (representing external information) and historical performance (representing novel information) when setting aspirations, while prevention-focused TMTs pay more attention to their own aspirations (representing internal information) and historical aspirations (representing organizational inertia). We provide support for these inferences by utilizing a longitudinal panel of sale goal-setting data disclosed by listed companies in China from 2007 to 2019.

MOC: **How to Turn Crises into Opportunities? The Effect of Uncertainty on Entrepreneurial Overconfidence**

Author: **Xi Chen**, *MacEwan U.*
Author: **Hao-Tien Lan**, *U. of Nottingham Ningbo China*
Author: **Iuliia Pavlova**, *Ivan Boberskyj Lviv State U. of Physical Culture*
Author: **Mariia Paska**, *Ivan Boberskyj Lviv State U. of Physical Culture*

Crises such as the COVID-19 pandemic and the Ukraine war have destabilized company operations and created deep uncertainty for entrepreneurs. Previous research has primarily found a negative effect of uncertainty on entrepreneurial activities. This paper investigates whether the uncertainty instigated by the crises may have a positive effect on entrepreneurial intentions through overconfidence. We argue that uncertainty and difficulty in predicting how the world develops during crises generate cognitive dissonance for entrepreneurs, who may increase their confidence in their knowledge, resulting in overconfidence. An experiment with 106 entrepreneurs in the Greater China region during COVID and a survey with 224 entrepreneurs in Ukraine show that uncertainty increases overconfidence, which is further associated with their intentions to continue the existing business and enter new businesses. The findings have important implications for situational influence on overconfidence and how overconfidence plays a role in addressing the uncertainty instigated by crises.

MOC: **The Framing of Technological Discontinuity**

Author: **Philip Gordon Stiles**, *U. of Cambridge*
Author: **Kishore Sengupta**, *U. of Cambridge*
Author: **Stephen Cassidy**, *Industry*

Research on discontinuous technology has generally devoted little attention to the legacy technology, possibly due to a pro-innovation bias in organizational theory. The usual route for legacy technologies is displacement, in which the technology is assumed to have no further utility and will disappear. The prevailing view that the displaced legacy technology will be simply "swept away" however may mask important issues of transition and identity that are inherent in technological discontinuity. We develop an understanding of discontinuous technology adoption by examining how employees cognitively and emotionally frame the transition between existing and new technologies. Framing is important since discontinuous technologies by their very nature deviate from prevailing logics and mindsets, but we know little about how employees both cognitively and emotionally frame transitions, particularly in displacement contexts. We use an in-depth case study of a major technology company to look at the micro-processes of framing. We highlight a number of core mechanisms and show a continuum from frame contraction, ambivalence through to expansion. We contribute more generally to research on technological discontinuity by developing a process model of employee reframing of the transition between existing and new technologies.

MOC: **Avoiding Critical Entrepreneurial Cognitive Errors Through Linear/Nonlinear Thinking Style Balance**

Author: **Kevin S. Groves**, *Pepperdine U.*
Author: **Charles M Vance**, *Loyola Marymount U.*

This study provides empirical evidence for why linear (e.g., analytical and logical) and nonlinear (e.g., intuitive and creative) thinking style balance is associated with effective entrepreneurial decision making and essential for cultivating organizational innovation. This study examined the relationship between linear and nonlinear thinking style and two common detrimental cognitive biases or errors that often interfere with effective entrepreneurial decision making: representativeness bias and status-quo bias. A sample of 261 business professionals completed a survey measuring linear/nonlinear thinking style profile and decision-making scenarios that assess each cognitive bias. The results provided evidence that linear thinking style is helpful in avoiding the representativeness bias, nonlinear thinking style is beneficial for lessening the status-quo bias, and linear/nonlinear thinking style balance is effective in averting both cognitive biases. We discuss the implications of these results and future research directions for advancing theory and practice, and particularly for guiding the design of entrepreneurship education.

Author: **Sanoon Fathima Fasana**, *U. of Waikato*

Author: **Jenny Gibb**, *U. of Waikato*

Author: **Antoine Gilbert-Saad**, *U. of Waikato*

Entrepreneurial well-being is integral to entrepreneurs' lives, enabling them to effectively overcome challenges while achieving business success. Passionate engagement in entrepreneurial activities enhances well-being by generating positive outcomes. However, entrepreneurial passion also leads to poor well-being outcomes, referred to as obsessive entrepreneurial passion. Obsessively passionate entrepreneurs enjoy the attachment to their business but experience greater stress and negative emotions due to its rigid and controlling nature. Thus, it is critical for entrepreneurs to regulate their passion while coping with stress and associated negative emotions to pursue desired outcomes. To address this issue, we propose a dynamic model to explain how obsessively passionate entrepreneurs can manage negative emotions triggered by stress and to regulate their obsessive entrepreneurial passion to shape their well-being. Using the lens of cognitive appraisal theory, we explain that obsessively passionate entrepreneurs will appraise stress as challenges or threats depending on their goals, beliefs, and ability to access resources to cope with the negative emotions triggered by stress. We highlight entrepreneurs who employ approach strategies to cope with negative emotions can regulate their passion by enhancing the level of obsessive entrepreneurial passion without detriment to their well-being. However, using avoidance strategies will cause them to reduce their attachment towards business, leading to lower well-being.

Networking Dynamics and Gender Equity in Professional Contexts

Session Moderator: **Elizabeth Lauren Campbell**, *Rady School of Management, U. of California San Diego*

MOC: **Gendered Complexity of Sponsorship: Gender, Goals, and Social Network Strategies**  

Author: **Elizabeth Lauren Campbell**, *Rady School of Management, U. of California San Diego*

Sponsorship, when senior colleagues (sponsors), mobilize resources in their social network on junior colleagues' (protégés) behalf, is consequential to career advancement. However, men and women do not benefit equally: male sponsors' protégés experience better outcomes than those of female sponsors. Considering the reputational benefits of being associated with successful protégés, this suggests women do not reap the same returns from providing sponsorship. To explore why gender gaps in sponsor effectiveness exist, we examine men's and women's goals when providing sponsorship and the resulting impact on their approach to mobilizing resources in their social networks. Converging evidence across qualitative and quantitative data shows women view and approach sponsorship as a more complex endeavor than men: female sponsors generate more and different goals than male sponsors (Study 1 & Studies 2a-b). Moreover, this results in female sponsors engaging in suboptimal social network strategies: women balancing multiple goals cognitively activate networks higher in closure (Study 3). Considering these types of networks are less likely to yield a diverse selection of resources, opportunities, and contacts most crucial for effective sponsorship, these findings provide insight into one psychological mechanism likely contributing to gender gaps in sponsor effectiveness.

MOC: **Associative Status Elevation Dynamics Between Women in Lower and Higher Status Occupations**  

Author: **Michelle Checketts**, *U. of Illinois Urbana-Champaign*
Author: **Teresa Cardador**, *U. of Illinois at Urbana-Champaign*

An extensive literature on gender status inequality in the workplace shows how such inequality disadvantages women, particularly high-status women. While important, this focus has shed limited light on the experiences of lower occupational status women. For these women, a novel challenge is attaining status in occupations where they must simultaneously navigate two institutional hierarchies linked to lower status—gender and occupation. Drawing from interviews with 42 nurses, we present a model illustrating what we refer to as “associative status elevation” dynamics between low and high occupational status women. Our model highlights how organizational and occupational systems characterized by high gender and occupational status inequality set the stage for low-status women's need for status elevation and explains how such need shapes low-status women's interactions with high-status actors, particularly high-status women. The findings shed new light on gender dynamics in the workplace, reveal a novel explanation for tensions and expectations between women collaborating across occupations, and suggest new avenues for research at the intersection of gender and occupational status inequality in the workplace.

MOC: **A Playful Path to More Professional Equity? Networking Across Diversity via Sport**     

Author: **Jamie L. Gloor**, *U. of St. Gallen*
Author: **Eugenia Bajet Mestre**, *U. of St. Gallen, Switzerland*
Author: **Huong Pham**, *U. of St. Gallen (HSG)*
Author: **Mihwa Seong**, *U. of St. Gallen (HSG)*
Author: **Isabelle Engeler**, *U. of Lausanne, HEC Lausanne*

Leaders develop via all domains of their lives. Yet, leaders' sports involvement has been largely overlooked despite its theoretical and practical relevance, particularly for social development. Moreover, the limited research on the downstream social consequences of leaders' sports involvement reveals different effects for men and women leaders—even opposing effects for the latter. Thus, we integrate social cognitive theory from developmental psychology to make sense of these contradictory findings. We theorize that sports contexts facilitate women's networking with higher-status (male) leaders through its playfulness (i.e., leisurely, spontaneous, and socially interactive). An archival study of 644 leaders' Twitter/X posts shows that sports generate more engagement—especially men interacting with women leaders' sports posts (Study 1). A qualitative study with 58 leaders suggests sports' playfulness facilitates these interactions as well as networking, results that we also quantitatively validated using ChatGPT (Study 2). Two recall experiments (Ntotal = 1,076) showed women leaders' networking in sports (vs. traditional) contexts was more playful, and more playful sports contexts facilitated women (vs. men) leaders' networking across gender and status differences (Pilot Study, Study 3). Our results show that more playful sports contexts facilitate women leaders' successful networking across gender and status diversity—an innovation helping to level the playing field of gendered social capital development and future leadership inequalities in organizations. These results advance our understanding of conventional ways of networking as not always strategic and planned while also adding to diversity research by showing that sports—often framed as exclusionary—can also be inclusive.

MOC: **Network Penalty: Unveiling the Perceptual Consequences of Using Your Network**  

Author: **Jennifer Chijen Lee**, *INSEAD*
Author: **Hazel Lim**, *INSEAD*
Author: **Andy Jiexiong Yap**, *INSEAD*

This research investigates the perceptual consequences of network use in the workplace. We argue that the possession and use of a network to accomplish a task or goal have different implications for perceptual outcomes and workplace relationships. Across 4 studies (N= 1,609), we demonstrate that individuals who use their network (versus their expertise) may incur perceptual penalties, challenging the existing assumption that networks provide benefits to individuals. In Study 1, participants who were asked to recall a colleague who used their network rated their colleague as less competent and were less willing to work with them compared to participants who were asked to recall a colleague who used their expertise or colleague who possessed a network. Study 2 tested the boundary condition of task-interdependence on the relationship between network use and perceptual outcomes, showing that task-interdependence moderates the relationship between network use and perceived competence. In Study 3, we demonstrate that an observer's perception of their colleague's use of network was mediated by procedural fairness. Lastly, Study 4 examined the role of culture norms on the relationship between network use and procedural fairness, demonstrating that cultural norms indirectly influence the perception of those that use the network.

MOC: Exploring Team Efficiency and Creativity Under Moral Leadership: A Moral Foundations Perspective

Author: **Qianyao Huang**, *Xi'an Jiaotong-Liverpool U.*
Author: **Jun Yin**, *National School of Development at Peking U.*
Author: **Anni Chen**, *Southeast U., Nanjing, China*

While extant research has examined the relationships between leader morality and team efficiency and creativity, there is still ambiguity regarding whether leader morality can positively impact both team outcomes. Based on moral foundations theory, this paper investigates the mediating roles of leader rule adherence and supervisory justice in connecting leader moral identity internalization to both team in-role performance and creativity. Further, we introduce leader traditionality and leader modernity as distinct manifestations of two moral foundations sets to moderate these relationships. We initially employ the implicit association test to validate the use of traditionality and modernity as measures of moral foundations. Subsequently, survey data, collected through a multiple-source, multiple-wave design, are utilized to scrutinize the proposed model. Our findings reveal that leader moral identity internalization indirectly influences team in-role performance and team creativity via leader rule adherence and supervisory justice respectively. Furthermore, the study uncovers the positive association between leader moral identity internalization and leader rule adherence is significantly strengthened in the presence of high leader traditionality. Leader moral identity internalization is significantly more positively related to supervisory justice when the leader has a high level of modernity. Theoretical and practical implications regarding leader morality and team performance are thoroughly discussed.

MOC: Impasse Work in Creative Processes

Author: **Philip Gylfe**, *Aalto U. School of Business*
Author: **Spencer Harrison**, *INSEAD*
Author: **Saku Mantere**, *McGill U.*
Author: **Henri Schildt**, *Aalto U. School of Business*

In this qualitative study we explore how groups who are deeply engaged in creative work cope with impasses. We take a process and practice approach to creativity and analyze group interaction through which members find new ways for progress when they are stuck in a creative process. Through ethnographic field video data of group interaction at a documentary film production company we theorize practices that creative workers use to overcome such pressing situations. Our multimodal analysis reveals three distinct impasse work practices: isolating, managing competing ideas and sidestepping through which groups move through impasses or fail to do so and we show the implications that each of these practices have for creative group engagement. Leveraging our field video data our study shows that groups sense impasses before they verbally explore novel solutions. Our study is unique in that it combines verbal, embodied and material interaction in the development of a general theory of impasse work in creative processes. The findings have implications for how creative groups deal with deeply engaging work, the role of iteration in creativity and advances the embodied perspective on creative interaction.

MOC: Translating Team's Creative Ideas Into Action: Tension During Idea Elaboration

Author: **Hyunjee Hannah Kim**, *Korea Aerospace U.*

Given the rapid environmental changes resulting from new technological and market trends, work teams are increasingly recognized as a source of organizational innovation. A core challenge for team innovation is the successful translation of creative ideas into innovation through implementation. This study examines the tension between internal and external team behaviors that account for how teams translate their creative ideas into implemented innovation, particularly during the idea elaboration phase. Drawing on conservation of resource theory, this study proposes that motivational underpinnings of team idea generation predict team behaviors that directly affect team innovation implementation. Path analysis of a field survey data collected from 91 teams showed that teams that generated creative ideas proactively for internal interest effectively utilized internal resources via idea reflexivity in elaboration phase, but failed to acquire external resources for innovation implementation due to limited social reflexivity. By contrast, teams that generated ideas in response to external demands effectively acquired external resources via high social reflexivity when elaborate ideas but encountered diminished internal resources. This study offers new theoretical insights into the transition between idea generation and implementation by identifying tension between teams' internal and external behaviors in idea elaboration stage as the core intermediating mechanism.

MOC: Synergies in Silicon: Navigating the Interplay of Tech Alliances, Dynamism, and R&D Signaling

Author: **Parisa Haim Faridian**, *San Diego State U., Fowler College of Business*

This study draws on organizational learning and knowledge transfer theories, to examine the nuanced impact of technological alliances on firm performance through contingencies associated with R&D capabilities, industry dynamism, and age disparity. The findings of this study suggest that despite some of the skepticism surrounding the efficacy and effectiveness of alliances, forming technological alliances improves firm performance in terms of both gross profit and market value. The findings also suggest the negative moderation effect associated with industry dynamism and the positive moderation effect associated with age disparity between alliance partners. Interestingly, R&D capability was shown to strengthen the effect of technological alliances on the subjective and perceived measure of firm market value but the same cannot be said about the objective financial measure of firm profit. This disparity suggests that R&D capabilities strengthen the outcome of technological alliances mainly through mechanisms such as signaling that impact perception of stakeholders, as opposed to processes contributing to tangible outcomes.

Presenter: **Jennifer Marie Logg**, *Georgetown U.*
Presenter: **Rafael Batista**, *U. of Chicago Booth School of business*
Organizer: **Sophia Pink**, *The Wharton School, U. of Pennsylvania*

Organizations are increasingly using algorithms to aid with decision-making. However, these algorithms often ignore human psychology, which can lead to both biased algorithms and missed opportunities. The first set of presentations focuses on how algorithms learn from human behavior data. They show how training algorithms on human behavior data without taking psychology into account can lead to unintended consequences, such as discrimination in resume screening or distorted social perceptions fueled by social media algorithms. The latter talks study how employees learn from algorithms. They uncover insights into how people leverage algorithmic advice in real-world situations versus hypothetical scenarios, and present a method for using algorithms to generate novel hypotheses about behavior.

Enhancing Job Performance

Session Moderator: **Huy Le**, *U. of Texas At San Antonio*

OB: Effects of Situational Contexts on the Personality-Job Performance Relationships 

Author: **Huy Le**, *U. of Texas At San Antonio*
Author: **Deeksha Munjal**, *Springfield College, MA*

In this study, we used a cross-classified multilevel model to examine the moderation effects of occupation, organization, societal culture, organizational tenure, and the interaction between occupation and organization on the relationships between personality traits and job performance. We tested our models across Anglo, Latin American, and Confucian Asian cultural clusters using data from 5,202 incumbent workers who completed personality measures and provided standardized supervisor ratings of their workplace performance. The workers were sampled from 16 different O*NET job families. As anticipated, Achievement, a facet of Conscientiousness in the Five Factor Model of personality, is associated with job performance regardless of occupation, organization, or societal culture. Occupation, societal culture, and organization generally did not seem to moderate the relationships between personality and job performance. However, we did find moderating effects for organizational tenure on the relationships between three personality traits, Cooperation, Order, and Achievement, and job performance. As previous research has suggested, over time the salience of key situational cues may shift, leading to changes in validities of personality measures. Our results suggest a complex relationship between personality, time on the job (as reflected by organizational tenure), and job performance. These findings provide new perspective into the person x situation research in the industrial and organizational context as we seek to understand the determinants of workplace performance.

OB: How Promotive Psychological Ownership Helps Employees High in Competitive Orientation Become Stars 

Author: **Jinyi Zhou**, *U. of Science and Technology Beijing*
Author: **Chengxi Ren**, *Renmin U. of China*
Author: **Shiyong Xu**, *Renmin U. of China*
Author: **Yawen Li**, *Beijing U. of Posts and Telecommunications*

Although previous studies have examined different influences of star employees, limited research attention was given to the predictors and underlying mechanisms of star formation, especially how stars can be cultivated from within organizations. Integrating theories of the extended self and psychological ownership, we propose a self-extension process wherein employees are motivated to become stars in their team. Specifically, we suggest that when employees' competitive orientation is high, empowering leadership will facilitate them to extend their self to their team, as manifested by their team-based promotive psychological ownership, which will foster their progression toward stardom. A field survey and two scenario-based experiments were conducted to test our model. Our study helps understand an important mechanism underlying the internal cultivation of stars within organizations.

OB: Ambivalence in the Leader-Member Exchange and Task Performance: A Conservation of Resources Theory 

Author: **Seckyoung Loretta Kim**, *Incheon National U.*
Author: **Seung Yeon Son**, *Korea National Defense U.*

Integrating a relational perspective and Conservation of Resources (COR) theory, the present research intends to examine how LMX ambivalence reduces task performance by depleting the relational energy. Moreover, this research examines exchange ideology as a relational moderator in the relationship between LMX ambivalence on task performance via relational energy. Employing a sample of 163 supervisor-subordinate dyads, we carried out a survey in Republic of Korea army. Consistent with our hypotheses, our results demonstrated the deleterious impact of LMX ambivalence on task performance via relational energy. Most significantly, our findings showed that this mediated relationship is contingent on the level of exchange ideology. The negative influence of LMX ambivalence on task performance via relational energy was strengthened when exchange ideology is high. Theoretical and practical implications are discussed.

OB: That's What Friends Are For: Attachment Style, Workplace Friendship and Job Performance 

Author: **Zexi Li**, *U. of Exeter Business School*
Author: **Cécile Emery**, *U. of Exeter Business School*
Author: **Allan Lee**, *U. of Exeter Business School*

According to attachment theory, variations in the quality of parent-child interactions have a long lasting effect on adult relationships. While some are secure in their relationships, others develop an insecure (anxious or avoidant) attachment style towards others. Despite the prominence of attachment theory in psychological and social sciences, no research has examined the role of attachment styles in the formation of intra-organizational networks. This research addresses this gap and contributes to research on the micro-foundation of social networks by investigating how attachment styles relate to the formation of friendship networks in the workplace. Furthermore, we explore the indirect association between attachment styles and job performance via centrality in friendship networks. We explore these research questions using a multi-method, multi-study approach that combines longitudinal analysis of friendship networks collected from MBA students (Study 1) and complete network data from a company based in China (Study 2). We found that individuals higher in attachment avoidance are less likely to have friends at work and that friendship degree centrality mediates the negative relationship between avoidance and job performance. Interestingly, we found counterintuitive results regarding anxious attachment which suggest that anxiously attached individuals attempt to make friends while simultaneously dissolving those same relationships.

Advances in Stress and Well-Being Research

Session Moderator: **Feng Wang**, *Southwestern U. of Finance and Economics*

OB: Citizenship Under Pressure: A Daily Dual Pathway Model

Author: **Feng Wang**, *Southwestern U. of Finance and Economics*

Extant research on citizenship pressure typically posit that employees will engage in more organizational citizenship behaviors (OCB) in response. Drawing from research on the instrumental lens of workplace behavior, we pivot from this single doing good logic to argue that employees will also strive to look good when encountering such pressure on a daily basis. We posit that daily citizenship pressure leads to heightened prosocial motivation, promoting within-person increases in OCB on that day. Simultaneously, daily citizenship pressure also leads to elevated impression management motivation, resulting in within-person increases in daily humor as a pivotal impression management tactic. Trait extraversion and agreeableness are identified as key moderators that enhance the looking good and doing good responses, respectively. Results from an experience-sampling study provide support for these predictions. Implications for theory, practice, and future research are discussed.

OB: Employee Well-Being as Being, Having, Loving, Doing – An Integrative Framework 

Author: **Frank Martela**, *Aalto U.*

Employee well-being is one of the most studied outcomes in organizational research, operationalized variously as job satisfaction, affective well-being, work engagement, work meaningfulness, or lack of burnout – with critics arguing that also more eudaimonic dimensions focusing on optimal functioning and need satisfaction should be included. What is lacking is a unified theoretical framework integrating various disparate research streams around separate well-being indicators. The present work offers one such organizing framework, building on self-determination theory and Erik Allardt's multidimensional theory of well-being, which sees key dimensions of well-being as emanating from human nature. In particular, I identify four existential conditions for well-being: Being focuses on experiencing well-being at work (evaluative, affective, and conative well-being), having focuses on getting the resources required for survival and safety from work, loving focuses on getting one's interpersonal needs met at work, and doing focuses on getting one's agentic needs for autonomy and competence met at work. Functional well-being emanates from having needs related to having, loving, and doing satisfied at work, explaining to a large degree how much experienced well-being employees have at work. This integrative framework helps both scholars and practitioners to make more informed choices about what dimensions of employee well-being to measure.

OB: Flourishing in Online Learning: Why Being Lost Together Beats Being Lost Alone   

Author: **Ellen Choi**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Author: **Steven Kavaratzis**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Author: **Alexis Illes**, *Ted Rogers School of Management, Toronto Metropolitan U.*

In the decline of student well-being, more knowledge is needed on how synchronous and asynchronous learning models facilitate flourishing. To examine whether and how online learning modalities can enhance flourishing, this research examines a randomized controlled trial of two online versions of the same organizational wellness intervention (synchronous learning with video conferencing versus asynchronous self-guided learning) over ten-weeks on a large sample of Canadian business school students. Data was collected over two terms during COVID-19 and measures were assessed at baseline, program completion, and 4-weeks post-program. Applying theory from community of inquiry frameworks, we examine the role of a climate of authenticity as a program mechanism that explains increases in flourishing. Additionally, we expect the synchronous condition will be more likely to experience a climate of authenticity and argue that shared distress fills psychological needs that underpin flourishing. Our findings confirm that the link between the intervention condition and flourishing is mediated by a climate of authenticity and that students in the synchronous condition reported a higher climate of authenticity than the asynchronous condition post-program. These results reveal that sharing distress is an important contextual process mechanism that promotes flourishing.

OB: Linking Health-Specific Leadership to Helping Behavior: The Role of Psychosocial Safety Climate

Author: **Hao-Hsin Hsu**, *Fu Jen Catholic U.*

Author: **Kuo-Yang Kao**, *National Yang Ming Chiao Tung U.*

Author: **Hsiao-Feng Li**, *National Yang Ming Chiao Tung U.*

Author: **Li Pan**, *National Yang Ming Chiao Tung U.*

Author: **Mi-Ting Lin**, *Department of Counseling and Industrial/Organizational Psychology, Ming Chuan Un*

Drawing upon the conservation of resources theory, the current research aims to investigate a cross-level moderated mediation model which explored the interactive effect of health-specific leadership and psychosocial safety climate on work-related burnout and helping behavior. Two-wave time-lagged study design was conducted in this study. Data were collected from 241 employees in 60 groups. As expected, the results also revealed that the indirect effects of health-specific leadership on helping behavior through work-related burnout were relatively stronger when psychosocial safety climate is high rather than when psychosocial safety climate is low. Theoretical contributions and implication for practice are discussed.

Knowledge Utilization and Creativity

Session Moderator: **Abraham Cyril Issac**, *Indian Institute of Technology - Guwahati*

OB: Creative Elaboration: When Persistence Outperforms Flexibility 

Author: **Thomas Gillier**, *Grenoble Ecole de Management*
Author: **Barry Bayus**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*
Author: **Sergio Torral Marin**, *U. de Sevilla*
Author: **Rocio Martinez-Torres**, *U. of Sevilla*

After being generated, a new idea is rarely perfect but must be clarified, improved, and developed in more detail. Unfortunately, idea elaboration and creativity do not always come together: many new ideas become less creative when elaborated. This research examines who elaborate new ideas the more creatively. We propose and test hypotheses that compare when creators elaborate new ideas they created (i.e., internal revision) vs. when creators elaborate new idea that they did not create (i.e., external revision). Drawing upon creative cognition theories, we propose that, on average, internal revision outperforms external revision because the original creators are more persistent. We further hypothesize that the advantage of internal revision over external revision depends on the initial level of creativity of the idea. Specifically, the positive effect of internal revision is strengthened for highly creative ideas; inversely, external revision is more beneficial when ideas initially lack creativity. We tested and found support for our hypotheses in an archival study of an online 3D printing platform with 13,912 prototypes. This research contributes to the creativity literature by advancing our knowledge of the creative processes after the idea generation stage. We empirically establish the causal effect of internal and external revision on creative elaboration and identify boundary conditions.

OB: How Does Work Curiosity Affect Employees' Creativity and Innovation: Does Task Complexity Matter?

Author: **Yu-Yu Chang**, *National Cheng Kung U., Taiwan*
Author: **Huei-Ying Chen**, *National Cheng Kung U., Taiwan*
Author: **Yun-Ju Yang**, *Rotterdam School of Management, Erasmus U.*

This paper examines the effects of interest-induced curiosity (I-type) and deprivation-eliminating (D-type) curiosity on employees' creativity and innovation performance. Drawing on self-determination theory and the view of person-environment fit, we investigate the relationship between employees' work curiosity and innovation performance and the moderating role of task complexity. Hierarchical regression analysis on a sample of 402 employees from high-tech industries in Taiwan shows that employees with I-type curiosity have better incremental and radical creativity when engaging in tasks that require exploration into different knowledge domains. Employees with D-type curiosity generate more creative ideas and achieve radical creativity when their tasks are focused on exploiting a certain knowledge domain. This study contributes to the existing organizational behavior research by empirically examining the role of individual curiosity in work settings and showing the importance of fit between employees' curiosity states and task characteristics in their innovative behavior.

OB: Complements or Substitutes? A Meta-Analysis of the Role of Social Capital for Knowledge Transfer 

Author: **Yaqi Huang**, *Zhejiang Normal U.*
Author: **Changfeng Wang**, *Zhejiang Normal U.*
Author: **Rui Sun**, *Chinese Academy of Personnel Science*
Author: **Lei Chen**, *Zhejiang Normal U.*
Author: **Zhenzhen Lin**, *Zhejiang Normal U.*

Considerable studies focused on the social capital's influence on individual knowledge transfer, but the findings lack coherence. In this study, we conducted a meta-analysis with 108 independent empirical studies to examine the different dimensions of social capital-knowledge transfer relationships and the effects of various contexts. We also explored the internal relationships among social capital dimensions. Results show that structural, relational, and cognitive social capital are all positively related to knowledge transfer, with cognitive social capital being the strongest facilitator. In addition, different dimensions of social capital act as complements to one another. Further examinations reveal that the level of economic development has no significant moderating effect on the relationship between social capital and knowledge transfer. Then, the cultural context moderates the relationship between relational and cognitive social capital and knowledge transfer. Finally, profit climate characteristics moderate the relationship between structural social capital and knowledge transfer. Our study quantitatively integrates different dimensions of social capital and knowledge transfer relationships using meta-analytic techniques. This study also reconciles the present disparate findings and obtains highly generalized conclusions. This study identifies explanations that help understand the mixed results through the moderating effect analysis. Furthermore, this study demonstrates the validity of different dimensional social capital interactions, pointing to important directions for future research.

OB: Embedding Bootlegging in Team Culture Tightness: Is Innovation from Coworkers a Blessing or a Curse

Author: **Jinzhao Qu**, *Xi'an Jiaotong Liverpool U.*
Author: **Peikai Li**, *U. of Leeds*
Author: **Shiyong Xu**, *Renmin U. of China*

Innovation has been viewed as the foundation for organizational success. However, the innovative behavior of coworkers can sometimes yield undesirable effects, manifested in the form of bootlegging, which refers to bottom-up innovation through non-programmed activities without formal authorization. Drawing upon transactional stress theory, this study investigates the complex dynamics of coworker innovative behavior on bootlegging, influenced by individual appraisals and the team culture. Specifically, we examine (a) the impact of coworker innovative behavior on bootlegging through different appraisals (i.e., challenge and hindrance) and (b) the moderating role of team culture tightness in this stressor-appraisal process. We test our hypotheses in a multi-sauce, multi-wave study design, involving 304 full-time Chinese employees from 59 teams. The results show that coworker innovative behavior has both positive and negative effects on bootlegging through challenge and hindrance appraisals, respectively. Importantly, team culture tightness strengthened the effect of coworker innovative behavior on hindrance appraisals by transmitting the detrimental effect of coworker innovative behavior on bootlegging. These findings provide a novel perspective on the person-situation interaction in understanding the emergence of bottom-up innovation.

Presenter: **Xixi Ai**, *Vrije U. Amsterdam, School of Business and Economics*

Presenter: **Julia Grgic**, *EBS Business School EBS U. für Wirtschaft und Recht*

The four papers in this symposium highlight the complex ways in which gender, leadership, and individual and organizational dynamics are intricately tied. Despite the strides that have been made, organizations seem to persistently face challenges concerning gender, leadership and identity barriers (e.g. Catalyst, 2022; Heilman et al., 2024; Leslie & Flynn, 2022), calling for research that addresses how to manage those challenges. In navigating these multifaceted dynamics, our symposium highlights the need for organizations to recognize the complexities associated with gender, leadership, and both the promises and potential challenges arising from diversity policies and initiatives (Carli & Eagly, 2011; Leslie, 2019; Lyness & Groto, 2018). We therefore aim to enhance an understanding of women's career advancement and their experiences at the workplace by investigating how leader identity and leader behaviors are differently perceived and enacted by men and women (Papers 1 and 2). Further, we aim to offer insights into the effects of gender diversity to understand how organizations can promote gender equality and female representation in leadership position while accounting for both intended and unintended effects of these organizational initiatives (Papers 3 and 4).

Competing Over Ideas and Status in Teams

Session Moderator: **Dean Baltiansky**, *Columbia Business School*

OB: **Opponent or Partner: Do Negotiation Counterpart Labels Matter?**

Author: **Dean Baltiansky**, *Columbia Business School*

Author: **Daniel Ames**, *Columbia Business School*

Many social situations are ambiguous. In negotiations, a crucial aspect of this ambiguity lies in their competitiveness: Is it better to compete or cooperate with a counterpart? To resolve this uncertainty, negotiators often drawn from seemingly diagnostic signals. In this research, we test the perceived diagnosticity of counterpart labels (opponent versus partner) in shaping competitive attitudes and behavioral intentions of negotiations. In four online experiments (total N = 1214), participants imagined themselves heading into various negotiation scenarios. Depending on condition, the counterpart they read about was labeled as either an opponent or partner. The studies varied in the negotiation context (e.g., tenant-landlord, antique sale) and in the source of the label manipulation (e.g., situation description, advice from a third-party). Overall, participants in the opponent condition reported a higher likelihood of behaving competitively, a stronger belief that the counterpart would behave competitively, and a stronger belief that competitive behavior would be effective. Mediation analyses showed that the relationship between label and behavioral intentions was better explained by the perceived effectiveness of competitive behavior than by expected counterpart behavior, suggesting that exposure to these labels impacts negotiators' framing of the entire situation, rather than just mimicry of anticipated counterpart behavior. This research adds external validity to the competitive framing literature, it contributes to our understanding of the ways in which labels impact framing, and it highlights the importance of label exposure in ambiguous situations that afford a range of competitive and cooperative approaches.

OB: **A Good Seaman Weathers the Storm: Paradox Mindset Promotes Performance Amidst Relationship Conflict**

Author: **Matthew Rubin**, *INSEAD*

Author: **Ella Miron-Spektor**, *INSEAD*

Despite accumulative research uniformly demonstrating that relationship conflict harms team performance, there is a dearth of knowledge on how to address it effectively. In this study, we contribute to research on the microfoundations of organizational paradox by exploring the role of paradox mindset in mitigating the negative effects of relationship conflict. We propose that team members with a high paradox mindset actively embrace and examine conflicting perspectives and interpersonal tensions. This proactive approach to tensions allows the team to effectively address, rather than avoid, relationship conflicts, leading to increased potency, which enhances performance. We tested our theoretical model in a longitudinal study comprising 60 diverse MBA teams, which intensively worked on various tasks for eight weeks and competed in a concluding hackathon. We show that relationship conflict diminishes team potency and performance. However, the presence of high paradox mindset team members buffers against these negative effects because these members facilitate information exchange while scrutinizing and reconciling conflict effectively. Our findings underscore the pivotal role of paradox mindset in harnessing interpersonal tensions.

OB: **Validation and Test of a Multidimensional Measure of Team Information Consolidation**

Author: **Yoonsung Cho**, *U. of Alabama*

Author: **Daniel Gregory Bachrach**, *U. of Alabama*

Author: **Pankaj C. Patel**, *Villanova U.*

Author: **Maria Guedes**, *ISEG (Lisbon School of Economics & Management), U. de Lisboa*

Transactive memory systems (TMS) are an inclusive knowledge infrastructure enabling groups and teams to use task-critical knowledge and information in ways that increase task, creative, and affective performance. Although mechanisms accounting for these outcomes emphasize the capacity of TMS to enhance collectives' ability to encode, store, and retrieve task-critical knowledge and information, absent from the domain is a validated measure capturing variation in teams' encoding, storage, and retrieval capabilities. Our purposes in this research are: 1) to develop and test a measure of teams' encoding, storage, and retrieval capabilities, which we define as team information consolidation (TIC), and 2) to test a theoretically derived model explaining variation in the relationships between TMS and team performance outcomes through TIC. Adopting a multi-trait multi-method approach in a series of three studies, and consistently demonstrating distinctiveness of TMS and TIC subconstructs, we test theoretically derived hypotheses focused on the role played by TIC. Implications for theory building and future research are discussed.

OB: **Smart, Generous, Committed, and Happy: Examining Four Antecedents of Status Conferral in Groups**

Author: **Nicholas Hays**, *Michigan State U.*

Author: **Steven Blader**, *New York U.*

Author: **Ya-Ru Chen**, *Cornell U.*

Status, defined as the extent to which one is respected and admired, is a ubiquitous and fundamental force in all groups and organizations. Yet, scholars' understanding of the attributes that garner status is limited in several ways. First, prior status theorizing and research tends to prioritize the task-related needs of groups, focusing on competence and generosity as bases of status because these are important attributes for achieving successful task performance. However, status research has paid little attention to the attributes that address groups' socioemotional needs, which are likewise central to overall group effectiveness. Second, prior work has tended to conflate status with influence, even though they are distinct. However, influence can derive from factors that are quite different from, and even antithetical to, respect and admiration. This has created confusion about who attains status and how. In this research, we address both limitations and extend prior status research by providing greater conceptual clarity on the antecedents of status. We theorize that affective commitment and positive affect, in addition to competence and generosity, shape one's status in groups because they provide value by enhancing groups' socioemotional needs. We also clarify the role of dominance in status dynamics; although dominance can lead to influence, we predict that dominance is unrelated to one's status in work groups and can undermine others' desire to interact with the focal individual in the future.

Take Back Control: Self-Regulating Through Challenging Environments

Session Moderator: **Phyllis Anne Siegel**, *Rutgers Business School*

OB: Pay Secrecy, Self-esteem, and Pay Exchange: Predicting Withdrawal Through a Three-way Interaction

Author: **Yingni Cai**, *The Chinese U. of Hong Kong, Shenzhen*
Author: **Xiaomin Xu**, *The Chinese U. of Hong Kong, Shenzhen*
Author: **Feiran GE**, -
Author: **Wenjing LUO**, -

Prior studies have shown that pay secrecy may yield inconsistent effects on relationship conflicts in the workplace. However, limited research examines the potential boundary condition underlying the relationship between pay secrecy and coworker relationship conflicts. Drawing from uncertainty management theory, we propose a two-way interaction effect of pay secrecy (i.e., environmental uncertainty) and self-esteem (i.e., self-uncertainty) on relationship conflicts and further on employee withdrawal, including interaction avoidance and silence. Incorporating social comparison theory, we further propose a three-way interaction among pay secrecy, self-esteem, and pay information exchange preference on relationship conflicts and employee withdrawal. To test our research model, we conducted a three-wave study with UK employees (N = 308) and a two-wave field study with Chinese employees (N = 456). Results reveal that the two-way and three-way interaction effects are significant in predicting relationship conflicts and further interaction avoidance and silence. We suggest that pay secrecy has a positive effect on employee withdrawal through relationship conflict only when self-esteem is low and pay information exchange preference is high. Theoretical and managerial implications are discussed.

OB: High Process Fairness Reduces Self-Handicapping in the Face of Greater Personal Uncertainty 

Author: **Phyllis Anne Siegel**, *Rutgers Business School*
Author: **Joel Brockner**, *Columbia U.*
Author: **Alice Wieland**, *Southern Connecticut State U.*

Within the justice literature, process fairness has been shown to have more of an effect on a wide variety of beliefs and behaviors in the face of greater personal uncertainty. Within the self-handicapping literature, it has been suggested that individuals who experience greater personal uncertainty are more likely to engage in self-handicapping. In attempting to integrate these two literatures, the present research examined high process fairness as a possible antidote to self-handicapping, especially under conditions of greater personal uncertainty. As predicted, in two methodologically different studies we found that personal uncertainty moderated the relationship between process fairness and self-handicapping, such that the tendency for higher process fairness to reduce self-handicapping was stronger when personal uncertainty was relatively high. Implications for the self-handicapping and justice literatures are discussed, as are limitations and practical implications.

OB: Shifting Perspectives: How Daily Work Interruptions Relate to the Interrupters' Work Engagement  

Author: **Leon Többen**, *U. of Mannheim*
Author: **Sabine Sonntag**, *U. of Mannheim*

Past research studied how daily interruptions are job demands that reduce interrupted employees' work engagement. We shifted perspectives to the interrupting employees and examined how interruptions may be positively related to job resources conducive to their work engagement. In doing so, we differentiated between four interruption types that we derived from key reasons for interruptions. We expected these interruption types to serve distinct functions for interrupting employees, allowing them to attain different job resources. Building on the motivational process of the job demands-resources model, we hypothesized that performing interruptions would be positively associated with interrupting employees' work engagement by contributing to three social job resources: received task support, belongingness, and prosocial impact. We report findings from a two-week diary study with two daily measurement occasions (N = 390 employees; n = 3,383 days). Multilevel path analysis showed that three of the four interruption types were indirectly positively related to interrupting employees' work engagement via the three job resources. Altogether, we contribute to a more nuanced understanding of interruptions by studying two important yet overlooked aspects of interruptions: the interrupting employees and their reasons for interruptions. Our new approach to examining interruptions suggests that interruptions can also facilitate work engagement.

OB: The Relational Dimensions of Multiple Team Membership: A Social Network Exploration  

Author: **Hongzhi Chen**, *Fudan U. School of Management*
Author: **Jie Huang**, *Nanjing U. School of business*
Author: **Jianquan Lyu**, *Nanjing U. School of business*
Author: **Dejun Cheng**, *Nanjing U.*

In modern organizations, workers often simultaneously contribute to multiple project teams in a dynamic fashion. These multi-teamers and their coworkers must collaborate with a diverse sets of shifting work contacts across projects and over time. Prior research has focused mainly on the number of teams that an individual worker contributes to, with limited attention to multi-teamers' and their coworkers' relational context. In this explorative study, we focus on individual workers' relational context shaped by multiple team membership and dynamic project participation. Adopting a social network approach, we explore how individual workers' relational variety and dynamics affect work performance, as well as the boundary conditions. Based on project co-participation networks, we construe relational variety as network openness and relational dynamics as network churn. Using a sample of one thousand engineers in a leading information technology firm in East China, we found a negative effect of relational variety on low-status workers' performance and a curvilinear effect of relational dynamics on individual performance. We discuss the implications of team boundary blurring that arises from multiple team membership and dynamic project participation.

Presenter: **Charmi Patel**, *Henley Business School, U. of Reading*
Presenter: **Ryan Musselman**, *Virginia Tech*
Presenter: **Lindsay Hastings**, *U. of Nebraska - Lincoln*

Generativity, defined as the motivation for developing the next generation of the workforce, remains an underexplored yet pivotal facet of organizational dynamics. Workplace generativity emphasizes developmental relationships and organizational sustainability. Experienced leaders pass on knowledge, empowering younger workers through mentoring and reciprocal assistance. The symposium delves into the multifaceted nature of generativity within the workplace, addressing its significance in shaping individual legacies, fostering organizational growth, and nurturing future generations. The discussion emphasizes the proactive management of legacies in organizational contexts, challenging conventional perceptions of departing employees and advocating for intentional legacy construction. By prioritizing generative behaviors, individuals can influence their organizational imprint positively and contribute to the development of successive cohorts within the workforce. Generative mindsets can be activated, underscoring how such situations can catalyze a paradigm shift towards mentoring and nurturing the next generation, thereby enriching succession planning strategies. Legacy motivation can help to proactively align legacy building behaviors with personal values that support prosocial behaviors, future-oriented perspectives, and collaborative endeavors among employees. The double-edged nature of legacy motivation and generativity sheds light on altruistic aspects while unearthing potential unintended negative consequences. Collectively, these presentations underscore the pivotal role of generativity in shaping organizational cultures, fostering knowledge transfer, and fortifying intergenerational relationships within the workplace, thereby highlighting avenues for further research and practical implications in organizational settings. Keywords: Generativity, Legacy, Intergenerational Behavior, Prosocial, Mentoring, Succession Planning

I've Got to Break Free! Reactions to Stressful Work Environments

Session Moderator: **Ryan Ragaglia**, *U. of Colorado, Boulder*

OB: I Want to Break Free: The Influence of Perceived Entrapment on Employee Turnover Intention

Author: **Ryan Ragaglia**, *U. of Colorado, Boulder*

Author: **David R. Hekman**, *U. of Colorado, Boulder*

We extend turnover research by proposing and testing the counterintuitive idea from the suicide literature that a type of attachment to one's workplace can increase turnover intentions. Specifically, we argue that employees' perceptions of perceived entrapment - a negative form of attachment to their workplace - arise from perceptions of defeat at work and ultimately lead to turnover intentions. Across two studies, we found consistent evidence supporting this model, showing that employees feeling "brought down" through workplace defeat experience heightened sensations of entrapment, further escalating their intentions to leave. Our findings contribute primarily to the turnover literature by challenging prevailing paradigms. In contrast to established constructs like job satisfaction, employee engagement, organizational commitment, and job embeddedness that suggest stronger organizational attachment decreases turnover, our research reveals a counterintuitive insight: excessive feelings of a negative type of attachment in the form of perceived entrapment can paradoxically increase turnover intentions. This novel insight underscores the importance of considering both positive and negative organizational attachments, raising questions about how different "types" of attachments affect turnover.

OB: Is Consistent and Low the Only Way to Go? A Commentary on the Study Made by Yoon et al. (2023) 

Author: **Yongheng Yao**, *Wilfrid Laurier U.*

Yoon et al. (2023) took a polynomial regression approach to confront and challenge the extant knowledge on abusive supervision. Their theorization of the effect of abusive supervision inconsistency and their examination of two sampling studies lead to several conclusions. First, when it comes to abusive supervision, consistency matters: even a drop in the present may create anxiety. Second, when it comes to examining temporal phenomena, proper time lags may not matter: different time lags (i.e., 1 month in Study 1 vs. 1 week in Study 2) may generate converging effects. Third, managers should realize that to deal with abusive supervision, consistent and low is the only path to go. These conclusions, however, are based on the theorization of one aspect of congruence effects (i.e., focusing on a comparison between consistency and inconsistency) and the examination of one type of testing option (i.e., focusing on the principal axes to test lateral shift). In this commentary, we bring in a more complete theorization of congruence effects and different testing options. Our aim is to apply the polynomial regression approach in a more holistic manner to integrate Yoon et al.'s idea of abusive supervision consistency and the existing literature on abusive supervision, shedding new light on the key conclusions they made.

OB: The Curvilinear Relationship Between Age and Tolerance of Workplace Exploitation 

Author: **Tang ZiYang**, *School of Economics & Management, Tongji U.*

Author: **Jian Liang**, *Tongji U.*

Although middle-aged employees consist of the largest segment of the working population, they often encounter heightened challenges in both the work and family domains. However, existing literature only briefly mentions the midlife dips phenomenon without thoroughly exploring its underlying mechanisms. Drawing upon power dependence theory, we theorize that age has a non-linear effect on employee outcomes via tolerance of exploitation. Furthermore, the inverted U-shaped relationship between age and tolerance of exploitation is more pronounced in employees who are highly family-motivated and have lower external employability. To test our hypotheses, we conducted two studies: a scenario-based experiment in Mainland China (Study 1) and a survey-based field study in Hong Kong (Study 2). Overall, the results largely support our theoretical model. These findings have implications for research on aging, organizational exploitation and power dependence theory.

OB: When Humans Collaborate With AI: A Text-Mining Analysis About Strain Reactions to ChatGPT   

Author: **Florian Erik Klonek**, *Deakin U.*

With 'AI-human teaming' on the rise, different perspectives exist on how these novel forms of collaboration link to human wellbeing. Our goal was to understand how humans perceive collaborations with an AI agent from a 'team process' lens. Building on job demand-resources theory, we propose that individual perceptions of human-AI collaboration processes are negatively associated with human strain because AI helps people achieve goals and reduce their job demands. More importantly, we propose that AI agent level of control is a critical moderator for the link between individual perceptions of human-AI collaboration processes and human strain. Drawing on over 490,000 tweets about #ChatGPT, we analyze tweets specifically focusing on human-AI team collaboration. Using a mixed-methods approach combined with computer-aided text analyses (CATA), we explore how humans engage in (or anticipate) interactions with AI agents falling into transition, action, and interpersonal processes. Furthermore, we index AI agent control levels and human strain using CATA. Our results show that individual perceptions of human-AI team processes are negatively associated with human strain. We also find support for AI control moderating this relationship, that is, when AI agent control is high, human-AI action processes are positively associated with human strain.

Bringing Your Whole [Diverse] Self to Work

Session Moderator: **Tobias Marc Härtel**, *Hochschule Osnabrück*

OB: **Trait Expression and Impression Formation Based on Contextual Virtual Meeting Cues**   

Author: **Tobias Marc Härtel**, *Hochschule Osnabrück*
Author: **Felix Hoch**, *U. of Münster*

Virtual meetings represent a key communication channel in organizations, introducing a range of contextual cues (e.g., background objects, lighting, positioning). Building on the lens model, we examine whether contextual virtual meeting cues signal traits of the displayer (big five, narcissism, intelligence) and are used to form interpersonal impressions (assertive, trustworthy, calm, competent). We assessed personality and ability tests of 362 participants (mostly business students) engaging in an assessment center group task via Zoom. Based on a set of 26 contextual virtual meeting cues, we identified valid cues signaling each of the traits and utilized cues for forming each of the interpersonal impressions, except for being seen as calm. Whereas contextual virtual meeting cues explained significant variance beyond basic demographics in traits and impressions, cue validities and utilizations were only moderate ($r < .19$), as were the incremental explained variances ($R^2 < .12$). Overall, there seems to be some substance to the notion that traits can manifest through contextual virtual meeting cues and that these cues may shape impression formation. We contribute to the literature on trait expression and impression formation in virtual business meetings and offer practical implications for organizations and meeting attendees aiming to manage their virtual impressions.

OB: **The Politics of Minority Representation: Perceptions of Stereotype Portrayal Depend on Ideology**    

Author: **Elizabeth Jiang**, *UCLA*
Author: **Margaret Shih**, *U. of California, Los Angeles*

The two trends of widening political divide and increasing attention given to social justice-related issues in the U.S. have implications for social progress. We assert that these two forces converge to affect perceptions of minorities in general and stereotype endorsement in particular. In this working paper, we seek to understand how political ideology affects the way Americans evaluate minority representations that are either stereotype congruent or incongruent. Specifically, we predict that perceptions of minority representations will depend on political ideology, such that conservative-minded individuals will prefer stereotype congruent portrayals, while liberal-minded individuals will prefer stereotype incongruent portrayals. Further, we test competing affective interventions that we propose may be effective at mitigating conservatives' negative perceptions of incongruent minority representations. Across three pre-registered experiments ($N = 1,557$) that measure attitudes, financial evaluations, and downstream behavioral choices, we find evidence in support of our hypotheses that, firstly, political ideology moderates minority perceptions and, secondly, that a positive mood manipulation effectively boosts conservatives' perceptions of incongruent representations. Our initial findings provide an emerging story on the interaction between political ideology and minority representation in American society.

OB: **Gender, Children, and Employment: A Study of the Effects of Children on Job Satisfaction** 

Author: **Asli Guler**, *U. at Buffalo, The State U. of New York*

The paper aims to investigate the determinants of job satisfaction for women and men, exploring the influence of children and gender perceptions on their professional work life. It aims to formulate hypotheses regarding how men and women perceive child-rearing responsibilities and how they believe their work affects their preschool-aged children. The extant literature offers conflicting findings about the relationship between the presence of children and parents job satisfaction. This study takes a step further to investigate parents' perception and feelings about their preschool children and the effects of these perceptions and feelings on their job satisfaction. This study delves into women's and men's job satisfaction using data from the US General Social Survey (GSS) spanning 2002 to 2014. The study discovered that a woman's job satisfaction is more likely to be influenced by her perception of negative impacts on preschool-aged children due to her work, compared to men. This suggests that gender significantly shapes how individuals perceive their children's well-being in relation to their job satisfaction. Data collected in this study show that a woman's perception of whether her children are suffering from her work is more likely to affect her job satisfaction than a man's. After controlling for personal and job characteristics, multivariate analysis indicates gender is a significant predictor of women and men's job satisfaction. Policy implications regarding these conclusions are also discussed in the study.

OB: **The Privilege to Reveal Who You Truly Are: Childhood Home Income & Accurate Personality Expression** 

Author: **Marie-Catherine Mignault**, *Cornell U.*
Author: **Lauren Human**, *U. of British Columbia, Okanagan*

Accurately expressing one's unique personality in first impressions generally feels good (Mignault et al., 2022) and promotes positive social interactions (Human et al., 2020). However, people from higher socioeconomic status could have a privileged access to making accurate first impressions. Indeed, childhood home income relates to greater self-confidence and social skills (Hosokawa & Katsura, 2017; Li et al., 2018), characteristics which could foster accurate personality expression. Therefore, could household income in childhood relate to being accurately perceived in adulthood? To test this question, we conducted two naturalistic "speed-networking style" getting-acquainted studies, one exploratory in-person study ($N=863$; $NDyads=4608$) and one pre-registered videoconferencing study ($N=879$; $NDyads=4990$). Across studies, childhood home income related to accurate personality expression specifically for extraverts, potentially because extraverts generally make more personality cues available. Overall, childhood home income may promote accurate self-expression for those who provide ample information to others, likely leading to smoother and more positive interactions.

Emotions and Work Outcomes

Session Moderator: **Christina Bradley**, *U. of Michigan, Ross School of Business*

OB: Getting to the Heart of Conflict: How Leader Emotional Acknowledgment Focuses Task Conflict 

Author: **Christina Bradley**, *U. of Michigan, Ross School of Business*

When negative emotions arise during task conflicts, team performance depends on how the team's leader navigates the paradox of needing to both unpack the emotion's informational value to support conflict resolution and contain the negative emotionality that can impair conflict resolution. Because of the difficulty in resolving this paradox, past work has often concluded that a leader's best choice is to avoid acknowledging negative emotions in conflict. We leverage emotion-response theory to challenge this conclusion, positing instead that leader acknowledgment of followers' emotions allows teams to get to the heart of their task conflicts and improve their performance. We propose that leader emotional acknowledgment (i.e., expressing recognition of an emotion without seeking to change it), more than avoidance, can reduce negative emotionality in teams, thereby increasing performance-benefiting elaboration of task conflict-relevant information and reducing performance-harming mutation of task conflicts into process or relationship conflicts. We show support for our model in an experiment of 189 face-to-face teams and a pre-registered online experiment. Our findings offer a resolution for the paradox of negative emotions in team conflicts and a counterpoint to the common assumption that leaders should avoid followers' emotions during conflict.

OB: Too Grateful to be Unethical? The Mediating Role of Gratitude in Shaping Ethical Decision Making

Author: **Michelle Gibbings**, *Swinburne U. of Technology*

Author: **Sen Sendjaya**, *RMIT U.*

Author: **Anne Bardoel**, *Swinburne Business School, Swinburne U. of Technology*

The role of emotional, as opposed to cognitive and behavioral, mechanisms linking leadership and ethical decision making is a nascent area of research. Drawing on affective events theory and the affect theory of social exchange, we extend prior research on gratitude as a moral emotion that may positively or negatively affect employees' ethical decision making as a consequence of receiving other-centric leadership behaviors. That is, an employee could benefit one party with whom they have a close relationship (i.e., a servant leader), which has a corresponding negative impact on a third party (i.e., a customer). The purpose of the current research is to examine how the experience of gratitude shifts based on the stimulus from servant leadership behaviors, and, in turn, leads to the appraisal of that event that affects their ethical decision making. In addition, we include in our study model the moderating roles of psychological entitlement and perspective taking. Across three sequential studies, multisource data was collected to test the six study hypotheses: independent surveys using Prolific for Study 1 (n = 105) and Study 2 (n = 169), and experience sampling methodology for Study 3 (n = 114). The research findings suggest the important role that servant leaders can play in nurturing employee gratitude in the workplace. It also outlined boundary conditions that impinge on the relationship between employee gratitude and employee ethical decision making. Theoretical and practical contributions of the study are discussed at the conclusion.

OB: The Double-Edged Effects of Subordinate Jealousy Display on Leader Justice Rule Adherence

Author: **Xueqi Wen**, *Tongji U.*

Author: **Feng Qiu**, *U. of Massachusetts, Amherst*

Author: **Lingtao Yu**, *U. of British Columbia*

Author: **Zihan Liu**, *U. of Illinois at Springfield*

Jealousy is a complex social emotion triggered by the fear of losing a valued relationship due to the perceived threat of a rival (Andiappan & Dufour, 2020). While previous research has often focused on studying jealousy from the perspective of the jealous individual, limited attention has been devoted to understand its effects on the valued partner, particularly within the workplace context. To address this gap, we drew upon the emotions as social information model to examine how the display of jealousy by subordinates may influence the emotional and behavioral responses of the valued partner, which is the leader in a professional setting. With a multi-wave, multi-source field study (Study 1) and a scenario-based experiment (Study 2), we found that, with lower leader-member exchange (LMX) differentiation, subordinate jealousy display would elicit leader anger, reducing leader adherence to justice rules. In contrast, with higher LMX differentiation, subordinate jealousy display would lead to leader guilt, enhancing leader justice rule adherence. Our study contributes to a better understanding of the interpersonal consequences of jealousy display at work.

OB: Challenge or Hindrance: The Influence of Work Gamification on Gig Workers' Safety Performance

Author: **XIAO-JIE WANG**, *Henan U. of Economics and Law*

Author: **Xiao-yu Liu**, *U. of International Business and Economics*

Under the background of the rapid development of gig economy, work gamification has emerged as a prevalent performance management tool and information incentive system within gig platforms. With the escalating safety concerns of gig workers, this article, based on the cognitive appraisal theory of emotion, takes 237 take-out riders as research samples to explore the impact mechanism of work gamification on safety performance. The results show that work gamification can improve challenge appraisal and reduce hindrance appraisal. While challenge appraisal is positively related to challenge emotions, hindrance appraisal is positively related to loss emotions. Both challenge emotions and loss emotions could reduce safety performance. Challenge appraisal and challenge emotions, as well as hindrance appraisal and loss emotions, play the serial mediating role. Algorithm technology trust enhances the positive impact of achievement elements and social elements on challenge appraisal, as well as the negative impact of immersion elements on hindrance appraisal. The research helps to expand the discussion on dark sides and impact mechanisms of work gamification, reveal the differences among specific gamification elements, and provide valuable insights for optimizing gamification design.

When Leaders and Members Exchange

Session Moderator: **Chen Wang**, *Western Michigan U.*

OB: Team Network Centrality and LMX: A Better Way to Differentiate?  

Author: **Chen Wang**, *Western Michigan U.*

Author: **Hock-Peng Sin**, *Florida International U.*

The leader-member exchange (LMX) literature highlights the challenge leaders face in building strong relationships with all team members. As a result, leaders often form high-quality exchange with a select few members, while maintaining formal relationships with others. This form of differentiated treatment of members creates tensions in team dynamics. In this paper, we propose that leaders can more effectively overcome the downsides of leader-member exchange differentiation (LMXD) for team dynamics by purposefully and strategically developing high-quality LMX with key members in central positions within the team's social networks, motivating and empowering them to help leaders buffer the negative impact of LMXD. Our framework integrates LMX theory with perspectives from social network research to illustrate how strategic differentiation influences task and relational team dynamics. Finally, the paper concludes with discussions on theoretical extensions and recommendations for future research.

OB: Fox Borrowing the Tiger's Authority: Coworker React to Their Leader When Lieutenant are Narcissism

Author: **Zijing Wang**, *Huazhong U. of Science and Technology*

Author: **Yijie Zhang**, *School of Economics and Management Tsinghua U.*

The Leader-Member Exchange (LMX) theory posits that leaders form varied relationships with employees, leading to the emergence of lieutenants – members who hold the highest LMX within a team. Due to their favorable relationship with leaders, lieutenants play a pivotal role in shaping the perceptions and behaviors of coworkers towards leaders. Despite their importance, this aspect has received limited attention in existing research. Our study employs a signaling perspective to examine the dual impact of lieutenant narcissism and expertise on coworker perceptions and interactions with leaders. We propose that lieutenant narcissism acts as a negative signal, indirectly impeding coworker voice through diminished trust in the leader. In contrast, lieutenant expertise is posited to serve as a positive signal, counterbalancing the detrimental effects of lieutenant narcissism. The findings from two field studies consistently support our hypotheses. Our study contributes to the existing research by providing a nuanced understanding of the consequences of lieutenant narcissism on coworker voice, thereby advancing our knowledge of the triadic leader-lieutenant-coworker interactions within organizational teams.

OB: Leader-Member Exchange: An Investigation into Dyadic Measures

Author: **Huanxin Liu**, *Binghamton U.-State U. of New York*

Author: **Jayoung Kim**, *Binghamton U.-State U. of New York*

Leader-Member Exchange (LMX) theory provides a relational framework central to leadership studies, emphasizing the dyadic interactions between leaders and followers and their impact on organizational outcomes. This study addresses the measurement integrity of three widely used LMX scales—LMX-7, LMX-MDM, and LMSX—regarding their capacity to reflect the theory's core aspects of role negotiation and social exchange. Employing exploratory factor analysis (EFA), we assess the factor structure hypothesized in these three. Furthermore, we propose ensuring item-level measurement equivalence between leader and follower perspectives through differential item functioning (DIF) analysis among these three scales. Additionally, we compare the test information among three LMX scales before and after DIF items to see how the item-level measurement equivalence will influence the construct level evaluation. The findings support a bifactorial structure of role negotiation and social exchange within LMX, highlight the necessity of examining item-level measurement equivalence in dyadic LMX measurement, and emphasize the importance of aligning theory and measurement in LMX research.

OB: Impact of Team Variability in Members' Performance on LMX Differentiation and Leadership Outcomes

Author: **Siting Wang**, *Hong Kong Baptist U.*

Author: **Sihong Huang**, *Hong Kong Baptist U.*

Author: **Sandy J. Wayne**, *U. of Illinois Chicago*

According to leader-member exchange (LMX) theory, developing differentiated LMX among team members is an effective managerial practice for team leaders to promote work efficiency and team performance; however, little is known about how leaders establish LMX differentiation (LMXD) and its subsequent impacts on leaders themselves. Building on LMX theory, this study explores whether and when LMXD is shaped by members' variabilities in in-role performance as well as leader-directed organizational citizenship behavior (OCB) within a team. We further propose that leader-member exchange (LMX) plays a different role in moderating the relationship between these team-level variabilities and LMXD. Finally, we argue that LMXD has a negative effect on members' perceived leadership effectiveness. Data from 1178 team members and 209 team leaders supported our model. Results showed that both team members' in-role performance variability and leader-directed OCB variability had a positive effect on LMXD. The positive relationship between team members' in-role performance variability and LMXD was stronger for leaders with low levels of LMX. In contrast, the positive relationship between team members' leader-directed OCB variability and LMXD was stronger for leaders with high levels of LMX. Furthermore, LMXD was negatively related to leadership effectiveness. This study contributes to a more complete theorization of the formation and leadership outcomes of LMXD.

On Again, Off Again: Attaching and Detaching from Work

Session Moderator: **Helen Zhao**, *U. of Amsterdam, Amsterdam Business School*

OB: **Tracking the Process of Resilience on Work Engagement: The Role of Emotional Inertia**

Author: **Helen Zhao**, *U. of Amsterdam, Amsterdam Business School*
Author: **Corine Boon**, *U. of Amsterdam*
Author: **Armin Pircher Verdorfer**, *Amsterdam Business School, U. of Amsterdam*
Author: **Deanne N. Den Hartog**, *U. of Amsterdam*
Author: **Joanna Ritz**, *U. of Amsterdam, Amsterdam Business School*

Adopting a dynamic approach, this study explores the emotional mechanisms through which trait resilience promotes employees' work engagement. Specifically, we focus on emotional inertia, a key feature of emotional dynamics that refers to the degree to which emotional states are self-predictive and reflects the inflexibility to regulate one's emotions. This study investigated whether emotional inertia mediates between resilience and work engagement—above and beyond the mean level of emotional intensity. Additionally, the study explored whether employees' perceived stress at work moderates this indirect effect. Data were collected from 171 employees who completed emotion surveys five times a day over five days, yielding a total of 3,895 observations. We found that resilience was negatively related to emotional inertia, emotional inertia was negatively related to work engagement, and resilience had a significant indirect effect on work engagement through emotional inertia. The relationship between resilience and emotional inertia, as well as the indirect effect through emotional inertia, was moderated by perceived stress. The effects were only significant when perceived stress was high. It is noteworthy that the above effects apply to both positive and negative emotions. Our study shows the importance of examining employees' emotional experiences that unfold over time, through which resilience translates into well-being outcomes.

OB: **Escaping from Reality to the Virtual**

Author: **Li Guo**, *U. of International Business and Economics*
Author: **Min Cui**, *U. of International Business and Economics*
Author: **Jih-Yu Mao**, *U. of Nottingham Ningbo China*
Author: **Lu Wang**, *U. of Alberta*

Although workplaces can be supportive environments for creating meaningful relationships, anyone, even on the best teams, can still experience feelings of loneliness at work from time to time. However, current understandings provide only a limited account of workplace loneliness and its consequences in organizations. Therefore, developing a more comprehensive understanding of workplace loneliness would not only add theoretical value but also have practical implications. By integrating the regulatory loop model of loneliness and social compensation theory, we develop and test an expanded model that examines the online and offline performance implications of workplace loneliness. Using a multi-method approach that involved an experiment in the United States and an experience sampling study in China, we found that workplace loneliness can lead to an offline-to-online transition and have negative effects on employee performance. Specifically, feeling lonely at the workplace can hinder employees' progress towards work goals (work goal progress) by leading to offline work frustration. Additionally, feeling lonely can heighten Internet presence and lead to spending time on non-work-related activities online (cyberloafing) because the Internet can provide a sense of elevated social presence for those who feel lonely. We also found that employees with higher trait adaptive coping for loneliness are less likely to engage in this offline-to-online transition.

OB: **How and When Procrastination Leads to Unethical Pro-Organizational Behaviour Among Hotel Employees**

Author: **Shanghao Song**, *Beijing Normal U.*
Author: **Yunsheng Shi**, *Beijing Normal U.*
Author: **Longdi Li**, *Renmin U. of China*
Author: **Wendi Jiang**, *Beijing Normal U.*
Author: **Wenzhou Wang**, *Beijing Normal U.*
Author: **Haibo Yu**, *Beijing Normal U.*

As the attention given to ethical issues in the hospitality industry has gradually increased, several scholars have focused on the causes of the unethical behaviours of hotel employees and ways of preventing them from engaging in unethical behaviours. In this article, based on the cognitive appraisal theory of emotion, we investigate how and when hotel employees' workplace procrastination triggers unethical pro-organizational behaviour directed at customers (UPB-C). By conducting two studies—using an experience sampling method design and a vignette experimental design—we found that hotel employees' workplace procrastination leads to UPB-C through guilt (towards the supervisor). In addition, as a boundary condition, high performance expectations on the part of the supervisor strengthen this mediated relationship. The theoretical and practical implications of these findings are also discussed.

OB: **Learning to Prepare for Work: The Effects of a Training to Promote Psychological Reattachment**

Author: **Ricarda Schlepuner**, *U. of Vienna*
Author: **Klaus Melchers**, *Ulm U.*
Author: **Jana Kühnel**, *Goethe U. Frankfurt*

Psychological reattachment to work means to mentally prepare for one's work before work starts. For this daily diary study employing a randomized controlled trial approach, based on a preliminary qualitative study, we developed a two-hour online training and investigated its effects on day-specific psychological reattachment and subsequent work engagement, proactivity, and self-efficacy at work. We collected data from 148 employees on 10 consecutive workdays (total of 1,064 workdays) and randomly assigned 93 employees to the training group and 55 employees to a waitlist control group. Analyses showed that psychological reattachment increased from before to after the training in the training group. Furthermore, day-specific psychological reattachment was positively related to day-specific work engagement, proactivity, and self-efficacy. The training had significant indirect effects on day-specific work engagement, proactivity, and self-efficacy via day-specific psychological reattachment. Overall, our results show that it is possible to foster employees' psychological reattachment, which, in turn, has benefits for employees' overall work experience.

Company People: OB Research on Firms

Session Moderator: **Monica Franco-Santos**, *Cranfield School of Management*

OB: **Partners and Contenders: Interdependence in the Top Management Team**

Author: **Monica Franco-Santos**, *Cranfield School of Management*

This research paper aims to address the paradox of interdependence within top management teams (TMTs) and investigate how interdependence manifests in TMT behaviour. The paper draws on insights from strategic leadership, multiteam systems, and small teams literature to explore the nature of interdependence within TMTs. The research uses an induction-driven approach, qualitative data, and a comparative case format to gain a comprehensive understanding of TMT interdependence. The study finds that TMTs engage in multiple processes such as information-sharing, deliberation, joint decision-making, and coordination during the diagnosis, decision-making, implementation, and interpersonal processes phases. The analysis reveals variations in the extent of information-sharing and strategic analysis among TMTs, with some teams demonstrating stronger interdependence and others relying on external entities for strategic decisions. The findings also highlight the influence of diversification, reward structures, and interpersonal processes on TMT interdependence. Overall, this research contributes to the understanding of how TMTs effectively function as strategy-oriented teams and provides valuable insights for scholars and practitioners in the field of strategic leadership.

OB: **A Tripartite Evolutionary Game Analysis on REITs Supervision Under Shareholders' Dual Roles**

Author: **Hui Sun**, *College of Management and Economics, Tianjin U.*

Author: **Wu Huicang**, *College of Management and Economics, Tianjin U.*

Author: **Yingzi Liang**, *School of Economics and Management, Inner Mongolia U.*

Author: **Wang Yihan**, *Tianjin U., College of Management and Economics*

It is of great significance to supervise the opportunism behavior caused by "investor-operator" shareholders in Infrastructure REITs (Real Estate Investment Trusts) in China. However, limited effort has been made to explore this scheme due to poor data availability and the short implementation time. This study establishes a tripartite evolutionary game model based on the assumptions of bounded rationality and the interaction behavior of dual-role investors, pure investors and government regulators to examine how strategies are changing. The theoretical model was validated and the effects of critical factors on evolutionary stability are discussed using numerical simulation. The results show that (1) the choice of opportunism strategy in REITs is affected by the interactive behavior of participants in the game, (2) the reasonable equity ratio and benefit loss ratio contribute to the reduce opportunism, (3) strategy benefit of different participants can promote to supervise the opportunism, and (4) The ideal stable strategy is not sensitive to the penalty that may be caused by delinquency with opportunism. And some suggestions are put forward toward improving the supervision of opportunism of dual-role investors on the basis of findings. This study contributes to current understanding of the interactions of investors in REITs, as well as provide valuable management implications for the governance of dual-role subjects.

OB: **Equity Splits, Temptations to Quit, and Battles of Wit: Faultline Evolution During New Venture Team**

Author: **Michael Lerman**, *Iowa State U.*

Author: **Melissa S. Cardon**, *U. of Tennessee, Knoxville*

Author: **Sherry M. B. Thatcher**, *U. of Tennessee, Knoxville*

Using ethnographic methods, we examine faultline processes within a 12-person new venture team (NVT) called Baby Avengers during its inception phase. Our analysis of Baby Avengers reveals important knowledge about faultline processes that shift literature from a positivist perspective to a constructivist one. With this shift in lens, we identify that faultlines (1) can exist in subgroup structures that are unique to previous theory, (2) can be based on non-visible or non-task-related attributes, such as founder status, (3) operate as dimmer light switches that are unique to each individual, as opposed to a singular on-off switch for the entire team, and (4) are dynamic over time as contextually-relevant team events unfold, resulting in a continued integration of unique individual experiences and perceptions as faultline layering occurs. This work fundamentally changes the way faultlines are described and understood, and opens the door to further in-depth theorizing on faultline processes.

OB: **Unveiling Quiet Quitting: Multilayered Dynamics of Workplace Disengagement**

Author: **Jeonghyun Oh**, *U. of Alabama*

Author: **Hayden Barber**, *South Dakota State U.*

Author: **Junyeong Lee**, *Chungbuk National U. South Korea*

This study investigates an emerging workplace phenomenon termed 'quiet quitting,' which involves minimal engagement and enthusiasm, where one fulfills only the essential requirements of their job. To understand the factors shaping this subtle yet impactful behavior, we analyzed online discourse about quiet quitting. Integrating our data with existing literature using the Gioia methodology, we expanded ecological systems theory, introducing the exogenous system as an additional layer, alongside the ontogenic (individual), microsystem (interpersonal and organizational), macrosystem (societal), and chronsosystem (historical). Our findings affirm the relevance of ecological systems theory with the addition of the exogeneous system highlighting job-related factors as a distinct dimension influencing disengagement. This study contributes novel insights into organizational disengagement literature through its emphasis on a holistic approach and offers practical insights for tailored interventions considering multilevel influences.

Participant: **Lucia Naldi**, *Jonkoping International Business School*

Although women make up about 47% of the U.S. labor force (U.S. Bureau of Labor Statistics, 2023), there is still a gender gap in diverse contexts. For example, only 2% of venture capital (VC) funding is received by female founders (TechCrunch, 2023), and females remain significantly underrepresented in computer (25%) and engineering (15%) jobs. Scholars have proposed various reasons to explain this gender gap (Woehler, Cullen-Lester, Porter, & Frear, 2021). The first explanation is that gender shapes resource generation: there is a direct gender gap in terms of creating and gaining resources. The second explanation is that gender shapes resource utilization: even when men and women have the same access to resources, they yield different degrees of returns. Thus, our integrative symposium revisits gender differences in resource generation and utilization, contributing to the theoretical development of gender. Building on the two overarching explanations, we bring together five papers that offer new theoretical developments and deepen our understanding of gender in diverse contexts. Specifically, these papers push the knowledge boundaries forward in two dimensions. First, regarding resource utilization, the first half of papers will explore how females, after taking elite positions in universities (e.g., professors) and public firms (e.g., directors), yield different influences on individual careers and firm strategies. Second, concerning resource creation, the second half of the presentations will help us to better understand why the gender gap (or premium) exists in the labor market and entrepreneurship contexts.

Given the prominent role of leaders in the workplace, accumulated research has demonstrated that leaders have consequential influences on important employee outcomes. More recently, our understanding of leadership has been further refined by emerging research taking a leader-centric perspective. Extending this line of research, as well as in recognition of the importance of identifying challenges leaders face to enhance their effectiveness and well-being, this symposium showcases four papers that each explores a unique challenge that leaders need to cope with while carrying out their responsibility. To provide a comprehensive view of research in this trend, we feature papers that each represents one of four leadership research categories proposed in Carton's (2022) leadership framework. Following the presentations, Trevor Foulk—a scholar who has pioneered research in this area—will provide an overview of future research avenues and lead the audience in an interactive group discussion.

Participant: **Claudio Barbaranelli**, *Sapienza U. of Rome*

Global political instability, economic fluctuations, health pandemics, and rapid technological advancements have contributed to an increased sense of job insecurity among workers worldwide. Against this backdrop, this symposium brings together five evidence-based presentations, laying the foundation for the future of job-insecurity research. The first two presentations focus on non-traditional behavioral outcomes of job insecurity by examining its relationships with territorial behaviors and knowledge hiding behaviors. Meanwhile, they leverage novel theoretical frameworks to understand the underlying mechanisms of job insecurity and propose different moderators in altering the consequences of job insecurity. To cope with job insecurity from one's full-time job, the third presentation examines whether side hustles may reduce the initial level and the slope of job insecurity trajectory. Building on the growing usage of robots, the fourth presentation examines how, why, and when robot (physical and psychological) anthropomorphism (i.e., human-like appearance and autonomy) may impact employee perceived job insecurity. The final presentation develops a new conceptualization of job insecurity — technology-induced job insecurity, and examines whether, how, and when it may directly and indirectly impact employee in-role behaviors and organizational citizenship behaviors via burnout. Together, this symposium presents innovative research findings aimed at understanding and addressing the persistent problem of job insecurity.

Organizer: **Laura Maria Giurge**, *The London School of Economics and Political Science (LSE)*
Organizer: **Philip Rogiers**, *ESADE Business School*

This symposium draws attention to novel insights around how employees navigate boundaries in the new world of work. The four papers included in this symposium move beyond the traditional treatment of boundaries at the domain level of work and home (or in some cases work and family) to introduce a much-needed nuanced view of boundaries around tasks, digital technology, diverse teams, organizations, and multiple role-demands. First, Lauren Howe will present a paper investigating how workers make decisions about controlling (i.e., limiting access to or revealing) aspects of their identities in video calls, which shows important disconnects between what workers experience as authentic and what observers perceive as authentic. Second, Laura Giurge will present a paper documenting the performance and well-being benefits of crafting temporal boundaries around work and non-work activities. Third, Zoe Jonassen will present a theoretical paper on the conditions and practices that enable boundary-spanning teams to learn and innovate across organizational boundaries even when collaborations fail. Finally, Philip Rogiers will offer a theoretical paper on how people navigate multiple role demands by engaging in “bounded contributions”—that is, restricting one’s time spent across various roles—to navigate a progressively more boundaryless world made up of multiple competing role demands. Collectively, these papers aim to spark conversations that recognize emerging aspects of boundaries. More broadly, this symposium illustrates how ignoring the diverse and complex nature of boundaries, enhanced in part by technology and workplace innovations, can be costly for employees and organizations who want to maintain a competitive advantage as well as for management scholars who care about expanding our understanding of how technology and workplace innovations are revolutionizing boundaries among different aspects of our lives.

Presenter: **Spencer Harrison**, *INSEAD*

To date, co-creation research in the management literature has tended to examine creativity within predefined organizational structures and workgroups. The papers in this symposium focus on how co-creation unfolds in more open, flexible environments – within various creative industries – as well as across different stages of the co-creation process relative to the final product delivery. This theme highlights the evolving nature of collaboration between creators and clients or audiences and how this interplay affects the final creative outcome. By examining co-creation at different phases – from pre-interaction to post-delivery audience engagement – this symposium sheds light on the unique processes and outcomes that emerge absent the traditional constraints of workgroups or organizations.
