Research suggests link between the arrival of immigrants in a region and the region's subsequent economic growth through entrepreneurial activity. Yet, a gap remains in our understanding of whether higher rates of immigration might impact regional entrepreneurship by also boosting the quality of the region's entrepreneurship. We leverage country-wide publicly available administrative data of immigrants migrating to the United States on H-1B and H-2B visas to find that the arrival of high-skilled immigrants through new H-1B visas increases regional entrepreneurship. A doubling of immigrants is associated with an increase of 6% in the three-year quality-adjusted entrepreneurship at the city (CBSA) level and 5.8% at the neighborhood (ZIP Code) level. In contrast, continuing H-1Bs and the arrival of unskilled immigrants (H-2Bs) largely do not increase regional entrepreneurship. The effect of immigrants is concentrated in increasing the quality, rather than the quantity, of startups. Heterogeneity analyses suggest the effect is sensitive to the concentration of immigrant enclaves, but not to the overall income or education of the receiving region.

ENT: **The Ethnic Composition of Immigrant Teams in Start-Ups on Funding and Innovation Capabilities**

Author: **Honghua Li**, *Morgan State U.*
Author: **Chunhu Jeon**, *Morgan State U.*
Author: **Tolulope Bewaji**, *Asbury U.*

Immigrant start-ups may pursue an ethnically homogeneous team as it is easier to identify and attract talents from the same ethnic group. In contrast, they may pursue a heterogeneous team to diversify their social network. This study examines impacts of ethnic diversity in immigrant founding teams on innovation and funding capabilities of high-tech start-ups. Using a manually collected dataset of 132 high-tech ventures in the U.S. between 2009 and 2022, we found that ethnic-heterogeneous immigrant teams outperform ethnic-homogeneous teams in innovation and total funding raised. Our results also show that the positive impact of ethnic-heterogeneous teams on innovation and start-up funding do not increase or decrease as the team size increases. We add evidence to research on immigrant entrepreneurship by showing advantages of ethnic diversity in immigrant entrepreneurship.

ENT: **Scrambling for Talent: U.S. Startups' Reactive Strategy to Cope with Visa Restrictions**

Author: **Ashlee Li**, *Georgia Institute of Technology*

Access to foreign talent is considered a pivotal determinant shaping firm competitive advantage, for its perceived potential to propel growth. U.S. firms heavily rely on skilled immigrant workers to fill critical labor gaps. As the skilled immigration pathways get more restrictive in the U.S., how do U.S. firms respond when those restrictions constrain their ability to obtain the scarce human capital that they need? In this paper, I study an important but overlooked firm response to policy restrictions on skilled immigration - hiring existing visa-holders from other employers, and focus on an import group of firms - startups. My empirical approach uses the exogenous variation in firms' access to skilled foreign workers as a result of the H-1B visa lotteries. I find that U.S. startups responded to constrained labor supply of new skilled immigrant workers by sourcing existing visa holders from other firms to fill the vacant positions resulting from visa rationing. In pursuing this reactive strategy, they had to pay these workers a substantial salary premium above what was commensurate with skills and experience. Small startups were disproportionately disadvantaged in such job market scramble, paying almost twice the average salary premium. Besides adopting the reactive strategy, adversely impacted micro startups proactively adapt their hiring strategy by prioritizing existing visa-holders even prior to visa rationing.

Exploring Opportunities

Session Moderator: **Dev K. Dutta**, *U. of New Hampshire*

ENT: The Trajectory of External Enablers and the Reasoning Behind Perceived Entrepreneurial Potential

Author: **Jiyoung Kim**, *Jonkoping International Business School*

Using “think-aloud” responses to scenario-based experiments, this research explores the reasoning individuals use to evaluate and justify the perceived entrepreneurial potential of environmental changes. Building on the notion of external enablers (EEs)—i.e., external changes to the business environment assumed to enable some entrepreneurial pursuits—and the associated framework, this study examines whether and how gradual vs. radical trajectories of EEs lead individuals to perceive different levels of entrepreneurial potential. The analyses of verbalizations reveal that variance in the trajectory of EE causes substantial differences in reasoning profiles and in the cognitive effort devoted to particular facets of reasoning. The findings are largely consistent across regulatory, natural-environmental, and demographic types of EEs. This research provides theoretical interpretations of systematic relationships between EE characteristics and cognitive responses to EEs’ entrepreneurial potential.

ENT: The Unintended Consequences of Eliminating Mandatory Retirement on Entrepreneurship

Author: **Ahmed Maged Nofal**, *EMLYON Business School*

Author: **Kira Choi**, *EMLYON Business School*

Eliminating mandatory retirement seeks to provide employees equitable opportunities in the labor market, enabling a larger number of people to continue working beyond a certain age. However, it may have unintended consequences for those not immediately affected or targeted. This paper presents novel evidence that highlights the influence of the elimination of mandatory retirement on pre-retirement employees’ career choices. We theorize that the continued employment of retirement deferrers will reduce pre-retirement employees’ opportunity costs of entrepreneurship, ultimately leading them to consider becoming entrepreneurs. We test our predictions by exploiting a phasing-out of the default retirement age in the UK. Consistent with our hypotheses, we find that the elimination of mandatory retirement increases the likelihood of pre-retirement employees’ entrepreneurial entry. We observe this pattern to be stronger when career advancement and income growth are constrained. We also observe that this pattern holds when excluding low quality of entrepreneurship.

ENT: The Value of Pure Experimentation

Author: **Zahra Jamshidi**, *PhD Candidate Haskayne School of Business*

Author: **Mohammad Keyhani**, *U. of Calgary*

Author: **Young Jin Choi**, *Associate Professor • Haskayne-Acad Areas & Faculty*

Experimentation is a vital tool in innovation, entrepreneurship and business in general. We observe that the value of experimentation often lies in the contrast between the anticipated value of the top result among two or more trials and the expected value of a single attempt. This concept aligns with the statistical theory of the maximum of multiple draws from a probability distribution, known as the last order statistic. The implications of this alignment between experimentation and order statistics have not been fully appreciated or elaborated on in the management literature. We demonstrate that when the probability distribution of potential outcomes is known, the properties of the last-order statistic can provide us with a precise imputation of value to experimentation such that values can be calculated for the advantage of conducting multiple experiments over one. This advantage comes in the form of increase in central tendency (mean or median) and change in dispersion (variance or standard deviation), as well as increased likelihood of outliers. We calculate a number of measures of the advantage of pure experimentation for two common types of probability distribution commonly observed in business outcomes: the Normal Distribution and the Pareto (Power Law) Distribution. We find interesting insights including a “golden rule” of variance reduction that applies to any normal distribution regardless of its parameters.

ENT: The Wellbeing Causes and Consequences of Self-Employment Transitions for Employees and Retirees

Author: **Hien Tran**, *Telfer School of Management, U. of Ottawa*

Author: **Mark Freel**, *Telfer School of Management, U. of Ottawa*

Drawing upon data from the Canadian Longitudinal Survey of Adults, we investigate the extent to which satisfaction with finances, with jobs and with life variably motivate transitions into self-employment for workers and retirees. Our data also allows us to calculate the returns to entrepreneurial transitions in similar terms and to estimate their persistence for the different groups. Our findings suggest important considerations for practitioners and policy-makers alike.

Digital Entrepreneurship 1

Session Moderator: **Raysa Geaquinto Rocha**, *U. of Essex*

ENT: **Digital Entrepreneurial Ecosystems in Advanced and Emerging Economies: An NCA & fs/QCA Analysis**

Author: **Roberta Andrade**, *NECE - Research Center in Business Sciences, U. of Beira Interior*

Author: **Raysa Geaquinto Rocha**, *U. of Essex*

Author: **Paulo Gonçalves Pinheiro**, -

Author: **Luísa Carvalho**, *Polytechnic Institute of Setubal*

The pivotal role of Digital Entrepreneurial Ecosystems (DEEs) in nurturing digital unicorns is undeniable. Yet, two questions remain: Are all elements of DEEs equally influential in supporting unicorns? and do they necessitate distinct conditions? The answers are crucial for optimising entrepreneurial ecosystems in the digital era. A dyadic method was employed in this study. Findings from fs/QCA indicate that physical infrastructure is the sole indispensable condition for startups. Conversely, NCA reveals that all elements of DEEs are vital for startups, with the majority also being crucial for unicorns. Across all economies, formal institutions, regulations, and taxation are identified as bottlenecks. However, network support and physical infrastructure do not pose as bottlenecks for any economic outcome. Furthermore, the necessity for other conditions varies between emerging and advanced economies, highlighting their complex interplay. Only a handful of DEE elements are pertinent to digitally enabled unicorns, prompting policymakers to strategically address hindrances specific to each outcome. We emphasise the significance of using NCA in conjunction with fs/QCA for a holistic understanding, thereby aiding professionals in the optimal allocation of political resources. By employing new, high-quality entrepreneurship measures through Complex Adaptive Systems lenses, we introduce an innovative conceptual framework that amalgamates the diverse layers of DEE. It elucidates their interconnections in a multi-level, circular, and non-hierarchical fashion.

ENT: **Digitalization in Asian Family Business: A Systematic Review (WITHDRAWN)**

Author: **Cat My Dang**, *Royal Melbourne Institute of Technology U.*

Author: **Que Tran**, *Royal Melbourne Institute of Technology U.*

Author: **Thanh-Thao Luong**, *The Business School, RMIT U., Ho Chi Minh, Vietnam*

This paper explores how digitalization affects family-owned businesses in Asia. It uses the ADO model to review the literature on digital technology integration in these firms. It finds that digitalization is influenced by the COVID-19 pandemic, governmental initiatives, and business networks, but also poses challenges for management teams. It also notes that the adoption of advanced technologies and the transition of supportive networks are limited and need more research. It also calls for more attention to sustainability and corporate social responsibility issues. The paper provides a comprehensive review of digitalization in Asian family-owned businesses and suggests future directions for digital transformation.

ENT: **Deciphering the Dialect of Hype: A Dual Process Theory Approach to Technological Entrepreneurship**

Author: **Agnieszka Kwapisz**, *Montana State U.*

Author: **Mujtaba Ahsan**, *San Diego State U.*

This study explores the dynamics and implications of hype in technological innovations, focusing on Generative AI and Cryptocurrency. By leveraging the Dual Process Theory (DPT), we propose two hypotheses: The Hype Intensity Hypothesis (HIH) and the Hype Effectiveness Hypothesis (HEH). We postulate that less technical and less risky innovations induce higher hype levels and that hype's effectiveness is pronounced for less understood and riskier innovations. Analyzing 1782 articles from SSRN hubs, our findings validate both hypotheses. The study's insights underscore the nuanced role of hype in influencing engagement with innovations, with significant implications for entrepreneurs navigating hype.

ENT: **Women Immigrant Entrepreneurs and Their Legitimation Strategies: The Role of Digital Technologies**

Author: **Luise Kaufmann**, *TUM School of Management, Technical U. of Munich*

Author: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*

This paper examines the role of digital technologies in the legitimation process of women immigrant entrepreneurs to mobilize resources. To gain legitimacy, women immigrant entrepreneurs must fulfill multiple roles as (1) entrepreneurs, (2) women, and (3) immigrants. Recent research knows little about how different roles women immigrant entrepreneurs take influence the resource mobilization process. In this study, we followed ten immigrant entrepreneurs who participated in an accelerator program in Sweden, their private surroundings, the accelerator program organizers, and non-women immigrant entrepreneurs. We build a model of the resource mobilization process and how digital technologies facilitate the entrepreneurs' role formation. The model proposes that women immigrant entrepreneurs form a legitimate entrepreneurial role, using digital technologies, which helps them build a supportive professional network to mobilize resources. Our findings offer new insights into the literatures on role theory and resource mobilization of women immigrant entrepreneurs.

Entrepreneurship Life-Cycle

Session Moderator: **Andreea Noemi Kiss**, *Lehigh U.*

ENT: **Shifting Ambitions: Unraveling the Dynamics of Growth Intentions in Social Entrepreneurship** 

Author: **Pourya Darnihamedani**, *Nyenrode Business U.*

This study investigates the evolution of growth ambitions in social entrepreneurs across different stages of their entrepreneurial life cycle. It explores how these ambitions, encompassing both social and financial objectives, change over time and are influenced by factors like entrepreneurs' human capital. The research utilizes a quantitative approach, analyzing data from the GEM 2015 APS Global Individual Data with a focus on social entrepreneurship. Key findings reveal a decrease in growth ambitions among social entrepreneurs as they progress through their life cycle. Contrary to expectations, social entrepreneurs exhibit higher growth ambitions than commercial entrepreneurs. Additionally, the study uncovers that social entrepreneurs with a university degree demonstrate greater growth ambitions, although these ambitions still diminish over time. The impact of previous entrepreneurial experience on growth ambitions was found to be insignificant. These insights are crucial for understanding the long-term performance and potential challenges in the growth of social ventures. The study highlights the importance of human capital, particularly educational attainment, in fostering growth ambitions in social entrepreneurs.

ENT: **Entrepreneurial Ambivalence and Venture Idea Revision**   

Author: **Andreea Noemi Kiss**, *Lehigh U.*

Author: **Naomi Beth Rothman**, *Lehigh U.*

Author: **Willy Das**, *Lehigh@Nasdaq Centre*

Author: **Insung Hwang**, *Columbus State U.*

In this study, we investigate the effects of entrepreneurial ambivalence on venture idea revision. Building on the affect as information perspective we propose a model of whether and why entrepreneurial ambivalence increases venture idea revision. The results of a longitudinal repeated-measures field study based on 172 entrepreneurs in a top incubator program show that higher entrepreneurial ambivalence experienced when receiving mentor feedback regarding their new ventures has a positive indirect effect on venture idea revision (compared to lower entrepreneurial ambivalence) through information search behaviors that are not only intense but also broad. We discuss implications of our findings for work on affect in entrepreneurial decision-making, on creative revision, and on ambivalence in organizations, as well as for formal entrepreneurial mentoring programs.

ENT: **Adaptive Framing Strategies: Shifting Dominance of New Ventures' Frames through Organizational Life** 

Author: **Zahra Kashanizadeh**, *Amsterdam Business School, U. of Amsterdam*

Author: **Pourya Darnihamedani**, *Nyenrode Business U.*

In today's dynamic business landscape, the effective communication of a new venture's value proposition and innovation is critical for its survival and growth. In this study, we explore the role of framing strategies as an effective approach for new ventures to communicate and clarify the unique features of their innovations to potential customers. Our research delves into 58 new ventures operating at different stages of the organizational lifecycle (i.e., conception, commercialization, or growth phases). We identified three framing strategies, including innovation clarity and brand positioning, product value communication and trust building, and organizational adaptability and legacy building, which can be utilized throughout all phases of the organizational lifecycle. However, our findings reveal that the dominance and focus of these frames shift as time progresses and can be influenced by the type of innovation, whether radical or incremental. The insights provided by our integrated framing strategies enable new ventures to strategically adjust their framing approaches according to the evolving challenges over time. This adaptability ensures that framing endeavors remain responsive to the changing needs of potential customers and the market dynamics of the venture.

ENT: **Standing the Test of Time: Unveiling the Age-Varying Effects of the Dimensions of EO**

Author: **Martin Röder**, *Philipps-U. Marburg*

Author: **Werner Boente**, *U. of Wuppertal/ Jackstädt Center of Entrepreneurship and Innovation Research*

Author: **Vivien Procher**, *Philipps U. Marburg*

Author: **Christoph Stöckmann**, *Free U. of Bozen-Bolzano*

Prior research provides conflicting evidence on whether entrepreneurial orientation (EO) has a positive or negative effect on firm failure. In this study, we hypothesize that the sign of the effect of EO on firm failure is not constant over the life cycle of a firm, but changes as young firms evolve into mature firms. Moreover, we show that to better understand the age-varying effects of EO on firm failure, it is essential to examine the effects of each EO dimension, i.e., risk-taking, innovativeness, and proactiveness, on firm failure, as they differ in terms of mechanisms and intertemporal patterns. Our empirical analysis is based on a panel data set of 8,518 startups tracked over several years. We find that risk-taking and innovativeness hinder the survival of very young firms, while proactiveness favors survival. However, the sign of the effects of the EO dimensions of risk-taking and innovativeness becomes positive as firms mature.

Board Oversight

Session Moderator: **Athina Skiadopoulou**, *U. of Alabama*

ENT: **Do Boards in New Ventures Monitor Management: The Impact of New Venture Boards on CEO Pay**

Author: **Ruidong Zhu**, *Freie U. Berlin*

Author: **Jakob Arnoldi**, *Aarhus U.*

Author: **Miriam Nicole Flickinger**, *Freie U. Berlin*

Author: **Jacek Piosik**, *Copenhagen Business School*

The existing literature holds that new venture boards greatly influence firm performance through frequent involvement in daily operations. This literature highlights the service function of the new venture board while neglecting its monitoring function. Based on the board monitoring literature and the managerial power theory, we shed light on how new venture boards monitor CEO pay and how the monitoring is affected by the power balance between boards and CEOs. Drawing on 121,031 firm-year observations of Danish new ventures between 2015 and 2020, we observe significant board's monitoring of the CEO pay. We also provide evidence that the CEO duality weakens the new venture board monitoring. Our findings suggest the need to consider new venture boards' monitoring function from the power perspective.

ENT: **Venture Board Formation: The Role of Founder Organizational Identification**

Author: **Ruidong Zhu**, *Freie U. Berlin*

In this study, I examine the factors that influence the formation of venture boards, particularly emphasizing the role of founders' organizational identification (OI). By analyzing a unique dataset of 640 new ventures in Germany, I find that founders with lower OI, especially those with higher educational levels, are more likely to form a venture board. Furthermore, I investigate the impact of founding team diversity on the formation of venture boards. The findings suggest that a diverse founding team, which typically reflects a low overall OI, is positively associated with the formation of venture boards. Therefore, my research suggests that while a founder's OI predicts the formation of venture boards, the influence of OI varies depending on different sources of OI and founding team diversity.

ENT: **Unveiling the Emotional Dynamics: A Novel Perspective on Gender Equality in Boardrooms**

Author: **Carolin Kaufmann**, *U. of St. Gallen*

Author: **Manuel Hess**, *Grenoble Ecole de Management*

Author: **Joakim Wincent**, *U. of St. Gallen*

Author: **Dietmar Gricchnik**, *U. of St. Gallen*

Gender equality has become a social ideal and widely studied especially regarding board of directors. Interestingly, existing academic work has left out the role of emotions in the analyses of boardroom gender diversity issues. We develop an emotional labor perspective to explain if and how individual board members experience discrepancy between genuine felt and outwardly expressed emotions when being confronted with the topic of gender equality in the boardroom. We initiated a natural experiment where we analyzed a combination of facially expressed emotion and verbal emotional responses of venture board stakeholders. Based upon the idea that board members suppress and simulate positive and negative emotions in gender equality encounters, we propose and operationalize four different types of emotional labor strategies professionals may engage in to align their external emotion expression with societal expectations that encompass their professional roles. Our research finds support for men being more inclined to suppress genuine negative emotions towards gender equality in the boardroom and simulate positive emotions when experiencing negative ones compared to women. Our study reveals that emotional labor occurs in the boardroom affecting female inclusion.

ENT: **Board Oversight in Start-Up Fraud: Unveiling the Risks of Shared Ownership**

Author: **Janine Crivelli**, *U. of St. Gallen*

Author: **Manuel Hess**, *Grenoble Ecole de Management*

Author: **Joakim Wincent**, *Luleå U. of Technology*

Author: **April Spivack**, *Hanken School of Economics, Finland*

Research into venture fraud is still scant and there is limited insight for why and how it occurs beyond that the founding entrepreneur usually constitutes the main suspects. In this study, we examine the monitoring behavior of board members in start-up fraud and their potentially compromising relationships with the founding entrepreneur leading the venture. In contrast to emerging recommendations in the literature, our qualitative study of 14 prominent fraud cases exposes the limitations of shared stock ownership between founding entrepreneurs in the executive lead and board members. Whereas guidelines from previous work mostly related to agency theory suggest shared ownership should produce improved alignment with venture goals, we show this alignment mechanism indicates risk of monitoring failures and the perpetuation of insufficient supervision, enabling fraudulent activities among boards and CEOs. Furthermore, our model identifies the founding entrepreneur in the lead as a central issue, alongside a considerable risk of fraud reinforcement mechanisms. This risk is compounded by the tendency of board members to resort to 'freeze' or 'flight' responses as initial coping strategies when detecting fraudulent activities before confronting problems directly.

Presenter: **Innessa Colaiaacovo**, -

Human capital is a key source of competitive advantage for organizations, and new ventures are not an exception. However, hiring tends to be more challenging for new ventures than for older and larger firms. The emergence and rapid development of online platforms suitable for recruitment alleviated some of those challenges, but many remain to be tackled. The complex dynamics of entrepreneurial labor markets have attracted increasing attention and curiosity among scholars, and recent years witnessed growing research at the crossroads of strategy, human capital, and entrepreneurship. This symposium invites scholars interested in topics related to entrepreneurship and strategic human capital to present and discuss their views on the demand- and supply-sides of the entrepreneurial labor market. By adopting a two-sided approach to the examination of factors related to startups' attraction of joiners, we hope to open conversations and avenues for future research with the objective of shedding light on the multiple mechanisms that contribute to improving the match between founders and high-quality joiners.

New Trends in Entrepreneurial Finance Research

Organizer: **Jeroen Verbouw**, *Ghent U. and Tilburg U.*

Organizer: **Katja Bringmann**, *U. Ghent*

Panelist: **Jorge Guzman**, *Columbia Business School*

Panelist: **Paul Momtaz**, *Technische U. München, TUM School of Management*

Panelist: **Alex Michael Murray**, *U. of Oregon*

Panelist: **Olav Sorenson**, *UCLA Anderson School of Management*

Panelist: **Luisa Alemany**, *London Business School*

Entrepreneurial finance scholars address the questions and themes related to which, how, when, and why ventures attract external funding and how it affects their future development (Bellavitis et al., 2017; Block et al., 2018; Cumming et al., 2019; Cumming et al., 2022a). Most attention has been devoted to equity capital because of its pivotal role in the financing of high-growth entrepreneurship (Drover et al., 2017) and significant firm-level implications (Bonini et al., 2019; Eldridge et al., 2021; Manigart et al., 2002). While the entrepreneurial finance field is well-established, recent trends have attracted substantial scholarly attention. Specifically, an increasing focus on addressing enduring challenges, environmental, social, and governance aspects, and artificial intelligence have created a promising and exciting space to study entrepreneurial finance.

Participant: **Xiaoshuang Lin**, *U. of South Australia*

New forms of work such as hybrid working, homeworking, alternative work arrangements have become a norm, and thus a strategic policy decision in organizations because of the advent of new technologies. The need for new forms of work has recently accelerated due to changes in societal attitudes, employee expectations, the need for flexibility and external factors such Covid-19. Despite their growing importance and research attention, research on new forms of work is still limited and imbalanced between these forms, i.e., more on homeworking but less on hybrid working. This lack of research and balance holds back understanding, meaning that scholarly insight as well as guidance to practitioners is limited. This symposium (consisting of 4 papers: two focused on hybrid working, one on alternative working arrangements, and another on homeworking) aims to address this important gap by shedding light on (1) the role of new forms of work and their effects on employee experiences of work, wellbeing and performance, (2) the variations of new forms of work from the perspective of different stakeholders, within different contexts and based on a range of methodologies, and (3) how the 'rhetoric versus reality' of new forms of work is challenged to understand their real effects. Collectively, the papers suggest that each form of work may have a differential effect on employee performance and wellbeing, depending on how and where it is implemented as well as how employees experience and perceive it. This symposium therefore has important implications for both academics and practitioners.

Human Capital Development: Innovative Strategies for Talent Management and Growth

Session Moderator: **Yueying Tao**, *Xinxiang Medical U.*

HR: **How Developmental Human Resource Management Practices Drive Employee Improvisation Behavior**

Author: **Yueying Tao**, *Xinxiang Medical U.*

Author: **Genqiang Li**, *Xinxiang Medical U.*

Author: **Yong Meng**, *Xinxiang Medical U.*

Based on conservation of resource theory and proactive motivation model, this study explores the impact mechanisms of developmental human resource management practices and employee improvisation. It examines the parallel mediating effects of employee resilience, exploratory willingness, and thriving at work through three paths “Can do motivation”, “Reason to motivation”, and “Energized to motivation” and the moderating effect of proactive personality. Through a three-stage longitudinal tracking collection of 773 sets of effective data and analysis using structural equation modeling and bootstrap methods. The research results show that: (1) Developmental human resource management practices positively affect employee improvisation. (2) Employee resilience, exploratory willingness, and thriving at work play a parallel mediation role between developmental human resource management practices and employee improvisation. (3) Proactive personality has positive moderating effects in the relationship mechanism between D-HRMPs and employee improvisation. This study expands and enriches the relevant research on developmental human resource management practices and employee improvisation, providing a theoretical basis and practical guidance for enterprises and managers to effectively drive employee improvisation through developmental human resource management practices.

HR: **The Impact of Green Human Resource Management and Green Internal Integration on Green Innovation**

Author: **Honghong Zhang**, *Xi'an Jiaotong U.*

In an effort to stem down industrial emissions, Chinese manufacturing firms are paying more attention to the concept of Carbon neutrality, the development and application of various types of digital technologies such as industrial internet, and green innovation. To this end, the concept of green innovation is a relevant and contemporary stream of research that scholars need to delve into and offer suggestions to practitioners on various ways of reducing carbon foot print. Despite this state of affairs, scholars have not yet fully explored the empirical relationships between green management practices and green innovations. While the existing literature has confirmed that green Human Resource Management (GHRM) is a key driver of green innovation (GI), the underlying mediation mechanisms have not yet been fully revealed. This paper therefore introduces intrinsic motivation as key mediators comprising of three components namely: Green Organizational Identity (GOI), Green Collective Efficacy (GCE) and Pro-environmental harmonious Passions (PHP). Further, the paper explores Green Internal Integration (GII) as a key antecedent of green innovation. The paper further subjects this empirical relationship to the three mediators. Data were gathered from 262 Chinese manufacturing firms from where we tested our hypothesis through hierarchical regression analysis and bootstrapping methods. Our analysis reveals that both GHRM and GII are key antecedents of green innovation and intrinsic motivation comprising of GOI, GCE, and PHP are key mediators in these relationships. The empirical revelations enrich the existing literature that has failed to identify key mediators between the green management practices of GHRM and GI. Further, the study introduces GII as phenomenal antecedent of GI. Taken together, the findings of this paper are applicable in the industry setting in enhancing green innovation and promoting carbon neutrality within the industrial ecosystems.

HR: **Indicators Beyond Training Cost: The Longitudinal Impact of Training on Organizational Outcomes**

Author: **Sangok Yoo**, *U. of Texas at Tyler*

Author: **Sehoon Kim**, *U. of Minnesota Twin Cities*

Author: **Yunsoo Lee**, *Hanyang U.*

Author: **Kyungae Lim**, *Hanyang U.*

This study explores the longitudinal relationship between training indicators and organizational outcomes, including financial performance and turnover rate. Using generalized estimating equations, we first develop and test models with training indicators, beyond training expenditure, to explain two-year lagged organizational outcomes, using three basic training indicators, training cost per employee, training time per employee, and enrollment rate (i.e., proportion of employees who participated in employer-supported training programs). Next, models with two composite indicators combining training cost with time and enrollment rate are tested. Additionally, we test models with two training-slack indicators, combining training cost with financial and HR slack. We find that all training indicators are related to financial performance, and most training indicators, except training time to cost and training cost to financial slack, are related to turnover rate. The model with the training indicator considering HR slack, training cost to HR slack, is identified as the best model to explain both financial performance and turnover rate. Additional models with basic training indicators and slack resource variables are tested to further explore the main findings. This study provides theoretical and practical implications for effective training indicators for explaining organizational outcomes and the firm-level training-performance relationship.

Author: **Shuye Lu**, *Tsinghua U.*

Numerous organizations have emphasized the importance of unlocking the strategic value from human capital resources by incorporating Chief Human Resource Officers (CHROs) or Chief People Officers (CPOs) into their top management teams. Despite this, the impact of such roles on firm performance has been insufficiently explored. This paper delves into the role of CHROs in effectively deploying human capital resources to cultivate competitive advantages. Employing the “alignment” perspectives from the literatures on both human capital resources (HCR) and top management teams (TMT), we posit that CHROs amplify organizational efficiency by aligning the strategic oversight typical of top management with the operational insight characteristic of HR department leadership. This alignment is critical in managing the complex, cross-hierarchical activities involved in human capital resources deployment. We hypothesize that the presence of CHROs will moderate the relationship between a firm’s human capital resource stocks and its performance, with this effect intensifying when the CHRO wields greater power within the top management team and possesses substantial personal HR-related expertise and experience. Our empirical analysis of publicly listed Chinese companies from the Shanghai and Shenzhen Stock Exchanges between 2003 and 2020 largely corroborates our hypotheses. The paper concludes by outlining the significant theoretical and practical implications of our findings, highlighting the strategic value of CHROs in contemporary organizational structures and performance.

Participant: **Rebecca Rheinhardt Kehoe**, *Cornell U.*
Participant: **Federico Aime**, *Oklahoma State U.*

Employee mobility scholars have demonstrated a longstanding interest in the performance implications of internal and external hiring. Scholars examining direct comparisons have found that internal hires perform better initially, with external hires eventually closing the performance gap over time. Meanwhile, scholars focusing on the integration of external hires have documented factors (e.g., co-mobility, external social capital, hiring firm capabilities) that ease the performance challenges external hires face as they enter new firm. This symposium presents four papers that extend this work in several ways. First, the papers highlight that the outcomes associated with moves across jobs and firms are heavily shaped by a variety of contextual factors, including organizational strategy and structure, the status dynamics within and between work groups, and the availability of mobility options outside a firm. Additionally, the papers examine the implications of internal and external mobility for a range of outcomes, extending the focus from new hires' individual job performance (e.g., performance ratings) to include differences in exploratory innovation and new hires' socialization experiences at the individual level, quality rankings at the law practice level, and workplace accidents at the firm level. The authors of these papers examine their research questions across a variety of empirical contexts (e.g., health care, legal services, multi-business firms) and draw on a variety of data sources, including administrative data, market intelligence data, and company survey data, which collectively provides future scholars with a roadmap of potential options for studying mobility-related questions.

Management Teams and CEOs Drive International Strategy

Session Moderator: **Markus Pudelko**, *U. of Tuebingen*

IM: **Personality Matters: How Dark Traits Drive SME's Degree of Internationalization**

Author: **Javad Esmaeili Nooshabadi**, *Maynooth U.*
Author: **Audra I. Mockaitis**, *Maynooth U., Ireland*
Author: **Richa Chugh**, *Te Herenga Waka - Victoria U. of Wellington*

This study aims to investigate the relationships between CEO dark triad personality traits, firm internationalization performance, and the mediating role of entrepreneurial orientation. Drawing on upper echelons perspective and the growing literature on dark traits in leadership, we explore how CEOs' narcissism, psychopathy, and Machiavellianism influence the firm's internationalization efforts. Our analysis, conducted on 405 small firms from the United Kingdom and the United States, reveals that only CEO Machiavellianism directly influences firm internationalization performance. However, all three dark traits (CEO narcissism, psychopathy, and Machiavellianism) indirectly affect firm internationalization performance through the mechanism of entrepreneurial orientation.

IM: **It's Also About Me: Narcissistic CEOs and Their Impacts on MNEs' Response to Geopolitical Conflicts**

Author: **Dongdong Huang**, *Business School, Nankai U.*
Author: **Huinan Zhang**, *Nankai U.*

Our era is characterized by increasing prevalence of geopolitical conflicts, which significantly disrupt international business environment and necessitate multinational enterprises (MNEs) to implement prompt and effective responses. Literature on antecedents leading to MNEs' response remain at a nascent stage and largely ignore individual-level antecedents, especially psychological traits. This study aims to address this research gap by focusing on CEO narcissism that has been found to significantly affect a firm's non-market strategies. Based on prior literature about CEO narcissism and the stakeholder alignment perspective, this paper argues that narcissistic CEOs, driven by their desires for attention, self-aggrandizement, and aversion to criticism, are more likely to scale back business operations in a host country perceived as an aggressor in a major geopolitical conflict. Such an activism is facilitated if these CEO perceived anticipated support from proximal stakeholders. Using data from various sources, we tested our hypotheses in the context of the ongoing high-profile Russo-Ukrainian War commencing in 2022. The results supported our predictions and reveals the crucial role of CEO narcissism in shaping MNEs' social-political activism amidst geopolitical conflicts.

IM: **Intergroup Conflicts and Investment Decisions in High-Risk Environments**

Author: **Tony Lizhang He**, *Rutgers Business School*
Author: **Anne Jamison**, *Copenhagen Business School*

We examine how firms enter countries with high conflict risk. We develop new measures of within-country intergroup conflict risk derived from global media articles (2003-2020), and we find that although globally experienced firms avoid unfamiliar conflict environments, they exhibit a preference towards high-risk environments with which they have direct (or adjacent) experiences with the same (or similar) types of conflict actors present. Furthermore, when entering a new high-risk country, firms commit to more capital investment and job creation if they can leverage previous experiences with conflict management. Our results suggest that firms may strategically expand to diversify knowledge about different conflict actors, and that the management of specific conflict actors might be an important dimension of competitive differentiation for firms operating in high-risk environments.

IM: **Collaborative Leadership Dynamics: Joint Evolution of Chair and CEO Roles at the Organizational Apex**

Author: **Faisal AlReshaid**, *American U. of Kuwait*
Author: **Kathleen Park**, *Boston U.*
Author: **Bernd Vogel**, *Henley Business School, U. of Reading*
Author: **Ana Margarida De Faria E Silva C. Graça**, *Henley Business School, U. of Reading, United Kingdom*
Author: **Obinna Ikwuegbu**, *American International U.*

Engaging a former dual CEO-chair solely as a chairperson, with the appointment of a new CEO, not only preserves the expertise of the incumbent but also mitigates the customary disruptions associated with CEO and chair successions. Existing studies on the division of CEO and chair roles in top organizational leadership have explored various aspects, including power dynamics, succession patterns, and leadership during crises. However, there remains a conceptual and empirical gap in understanding how organizations can effectively harness the collaborative potential of two leaders at the helm, while concurrently shaping and refining their distinct roles. Leveraging qualitative data from an emerging markets context after the statutory separation of chair and CEO roles, our study delves into the joint creation of separate yet interconnected roles by the individual previously occupying the dual position and the individual who succeeds into one of the newly separated top two positions. We also examine implications for organizational functioning ensuing from the new collaborative evolution of the top two roles. This research offers a practical roadmap for organizations globally, especially those navigating the increasing trend of separating top executive positions in strategic leadership and governance.

Managing Divergent Stakeholder Expectations Abroad

Session Moderator: **Jonas F. Puck**, *WU Vienna*

IM: The Effect of Internationalization and Partisan Ambidexterity on Firms' Sensitivity to Elections

Author: **Evelyn Reithofer**, *WirtschaftsU. Wien*
Author: **Jonas F. Puck**, *WU Vienna*
Author: **Jakob Müllner**, *WU Vienna U. of Economics and Business*

Rising partisan polarization, protectionist tendencies, and electoral and policy uncertainty not only increased risks of firms' international operations, but also in their national business habitat. In this paper, we study the effect of election-related uncertainty on firms' stock prices. In addition to firm internationalization as a mitigating effect against home-country policy risk, introduce the concept of partisan ambidexterity to describe firms that have expertise, legitimacy and operations in locations with opposing ruling political ideologies. Specifically, we conduct an event study of the US presidential elections in 2008, 2016, and 2020 and their effect on 2,941 listed US firms. We contribute to strategic management research by exploring whether firms' with a bi-partisan national footprint can act as a safeguard against market fluctuations related to political events. Managerial Summary

IM: When Stigma Harms Legitimacy: Managing the Dynamics of Stigmatization and Legitimation

Author: **Christiaan Roell**, *U. of New South Wales*
Author: **Felix Arndt**, *U. of Guelph*
Author: **Wilson Ng**, *IDRAC Business School*

When politico-religious audiences perceive the behavior of a multinational enterprise (MNE) as socially harmful, they stigmatize the MNE and threaten its legitimacy. While the negative economic ramifications of stigmatization have been studied, we know less about the process of managing the growing, damaging influence of 'pockets of opposition' and their labeling of MNEs. We fill this gap by investigating how a stigmatized MNE maintains its legitimacy against increasing opposition from stigmatizing audiences, using the case of a century-old subsidiary company of a Dutch beer-brewer in Indonesia, the largest Muslim-majority country, where alcohol consumption is proscribed. We articulate the dynamics of managing core-stigma in this environment and theorize the process of maintaining the MNE's legitimacy when well-supported stigmatizers gain considerable influence and systematic and proactive intervention is required. An important part of this intervention is the way in which our MNE was able to draw on its longstanding knowledge of its industry to craft strategies addressing a major social issue, in turn supporting its legitimacy.

IM: Taking a Stand While Abroad? Towards a Theory of MNCs' Sociopolitical Activism in Host Countries

Author: **Ishva Minefee**, *U. of Illinois at Urbana-Champaign*
Author: **Lori Qingyuan Yue**, *Columbia Business School*

Increasingly, multinational corporations (MNCs) have taken public stances on sociopolitical issues such as immigration, LGBTQ rights, and racism. Although MNCs may engage in sociopolitical activism (SPA) in their home countries in response to a sociopolitical issue, stakeholders have criticized them for behaving inconsistently in response to the same issue in a host country. In this paper, we develop a theory of MNCs' (in)consistency in SPA across home and host countries. Specifically, we argue that MNCs' SPA in a host country stems from a desire to consistently express organizational values across countries. This baseline argument, however, is conditioned upon institutional complexity at three levels: within a host country, between home and host countries, and among the international community. This paper contributes to the International Business (IB) literature by situating MNCs' SPA as a new, complementary area within international nonmarket strategy research. Furthermore, we extend IB research on institutional complexity by theorizing how heterogeneity not only within but between normative and regulatory institutions in a host country influences MNCs' behaviors. Lastly, we expand the literature on corporate SPA from a focus on domestic firms to MNCs.

IM: Spillovers in Stakeholder Assessments: Country Reputation Perceptions and Acquisition Completion

Author: **Xiaojie Wu**, *Guangdong U. of Technology*
Author: **Wenyu Zhong**, *South China U. of Technology*
Author: **Xi Zhong**, *Guangdong U. of Technology*

Drawing on the legitimacy spillover perspective on institutional theory, we argue that differentiation in home-host country reputation perceptions triggers the cognitive spillover effect, which reduce stakeholder concerns and resistance to acquisitions and thus facilitate acquisition completion. When an acquirer enters a host country where union authority is stronger, higher labour standards can raise the legitimacy threshold of the host country. When the acquirer is in a politically sensitive industry, the risk of security review is higher due to the industry's strategic importance. Furthermore, negative media coverage of the acquirer is more likely to attract more stakeholder attention, blurring their categorization and judgement based on the country reputation perceptions. Our theoretical arguments are supported by a dataset of Chinese firms from 2009 to 2019. We contribute to research on legitimacy spillover and cross-border acquisitions.

Home Country Influences on Global Strategy

Session Moderator: **Jing Li**, *Simon Fraser U.*

IM: Rethinking a Positive-Sum Game: Chinese OFDI and US MNEs' FDI Location Decisions 

Author: **Injae Jeon**, *Korea U. Business School*
Author: **Jon Jungbien Moon**, *Korea U.*

This study explores the dynamic interplay between international politics and US multinational enterprises' (MNEs) foreign direct investment (FDI) strategies. Drawing on hegemonic stability theory, our research examines how the transition from a unipolar to a multipolar world influences investment decisions, which have been based on positive-sum thinking. We analyze firm-level FDI data from 2013 to 2021, uncovering a notable trend: US MNEs increasingly invest in countries that show rising Chinese outbound FDI (OFDI) within stable international institutions supported by the hegemon. However, this trend diminishes amid diverging international institutions due to the evolving geopolitical landscape driven by the US-China rivalry, particularly in host countries participating in the Belt and Road Initiative (BRI), during periods of intensified US-China tensions, and in strategically important sectors for national security. Our findings challenge traditional frameworks that mainly focus on economic rationale for FDI location decisions and evaluate host country institutions solely on economic criteria or deviations from those of the home country. Instead, we highlight the need for a nuanced understanding of institutional divergence at a transnational level, recognizing the implications of a multipolar world order on international business.

IM: Anti-Corruption Campaigns and Foreign Entry Attempts by Chinese Firms

Author: **Zhaowei CHEN**, *National U. of Singapore (NUS)*
Author: **Andrew Delios**, *National U. of Singapore*

What drives outward foreign direct investments (OFDIs) by emerging market firms (EMFs)? In emerging markets, firms can use entertainment expenses to build corporate relationships with governments and other important stakeholders. Developing local embeddedness is critical for foreign entrants to better learn and understand the host country and thus increase the likelihood of successful foreign entry. In 2012, China accelerated its anti-corruption campaigns, which limited the entertainment and travelling expenses for state-owned enterprises (SOEs). Leveraging this quasi-natural experiment, this paper shows that after the acceleration of the anti-corruption campaign, SOEs initiated less new OFDIs compared to non-SOEs. Further, as a reaction to this policy: firms prioritized their limited resources to OFDIs that were to a new country, which were in more need of a substantial resource commitment. However, firm-level anti-corruption CSR measures were not effective as a credible signal to a firm being corruption-free. We thus provide important implications for OFDI strategies for policy makers and firms in emerging economies.

IM: Imitation of Location Choices for Tax-Motivated HQ Relocations: Uncertainty Reduction & Legitimation 

Author: **Aleksi Otto Eerola**, *HEC Montréal*
Author: **Arjen Slangen**, *KU Leuven*

In recent decades an increasing number of firms has engaged in relocations of their HQ abroad to save on income taxes. Most of these tax-motivated HQ relocations have been targeted to the same relatively limited number of countries, raising the question whether this imitation tendency among relocating firms is purely explained by their desire to benefit from some countries' greater tax friendliness or whether other corporate motives are also at play. Drawing on organizational institutionalism, we propose that two important additional motives for firms to imitate their peers' most popular location choices for tax-motivated HQ relocations are to reduce outcome uncertainty and to legitimize the focal relocation to domestic non-market stakeholders. Separating a firm's peers into domestic rivals and non-rival compatriots and controlling for countries' tax friendliness, we find support for the existence of these dual motives in conditional logit analyses of a sample of 127 listed US firms that launched tax-motivated HQ relocations over the period 1995-2017. Our findings contribute to international strategy research on HQ relocations by shedding further light on why HQs that have mainly been relocated abroad for tax purposes are concentrated in a limited number of countries.

IM: Image of MNE's Home Country in South Africa and the MNE's Regulatory Compliance in CSR

Author: **Michelle Amy Montague-Mfuni**, *Assistant Professor of Management, U. of Richmond*
Author: **Yuanyuan Li**, *California State U., Los Angeles*

Foreign MNEs in emerging markets vary in complying with local corporate social responsibility regulations. Our study builds on the legitimacy-based view of MNEs and the institutional logic approach to liability of foreignness in understanding how the perceived liability of MNEs varies based on their country of origin and compliance with local regulations. We hypothesize that MNEs from home countries where their ethnic group perceived higher status in the host country are less incentivized to comply with local regulations on corporate social responsibility. Our hypotheses are tested in South Africa, using Black Economic Empowerment as a background. We discuss how this research contributes to the further understanding the legitimacy-based view in an African context, corporate non-market strategy at the micro-level and the implications of public policy effectiveness regarding diversity and inclusion.

Impact of Regulatory and Policy Uncertainty on the FDI Strategies of MNEs in a Connected World

Organizer: **Soni K. Jha**, *Purdue U. Fort Wayne*
Panelist: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*
Panelist: **Chang Hoon Oh**, *U. of Kansas*
Discussant: **Sjoerd Beugelsdijk**, *Darla Moore School of Business, U. of South Carolina*
Organizer: **Shubham Singh**, *Rutgers Business School*
Panelist: **Luciano Ciravegna**, *INCAE Business School*

This panel symposium aims to bring a multilateral perspective to the studies examining the impact of policy uncertainty on the foreign direct investment (FDI) strategies of multinational enterprises (MNEs). MNEs are 'border-crossing multi-locational enterprises' that use FDI to increase the efficiency of their assets/operations and, thus, performance. But in the most recent decade, the ascension of populist governments, increasing prevalence of protectionist policies, and increasing geopolitical conflicts have significantly increased the policy uncertainty in the global trade environment, adversely impacting the FDI strategies of the MNEs. At the same time, however, increasing multilateralism in global trade systems has significantly increased the geopolitical connectedness of the MNEs. Thus, in this panel, we begin by discussing the traditional explanations proffered by literature examining the FDI strategies of MNEs amidst policy uncertainty. We then discuss important implications that emerge from these explanations when we use a multilateral perspective, such as the strategic implications of an absolute versus a relativistic view of policy uncertainty for research examining MNEs' FDI strategies, how policy uncertainty interacts with the multilateral global economic order to influence the performance outcomes of the MNEs, and how this multilateralism impacts state interventions seeking to protect their MNEs from increasing policy uncertainty.

The Drivers of Exporting

Session Moderator: **Matthew David Griffith**, *U. of Central Florida*

IM: Boosting Learning-by-Exporting: The Influence of Firms' Servitization, Export Depth and Breadth  

Author: **Joan Freixanet**, *Graduate School of Management, Saint Petersburg U.*

Author: **Josep Rialp**, *Autonomous U. of Barcelona*

Author: **Ferran Vendrell-Herrero**, *U. of Edinburgh business school*

Flourishing international economics and management research has provided evidence on the learning-by-exporting (LBE) hypothesis for product-centric firms and, more importantly, have started to search for factors that may foster or deter these learning opportunities. However, there is scant research on LBE on service-centric firms, despite the importance of the service economy in most countries. This study answers recurring calls for research on this topic. Drawing on organizational learning theory, we contend that the influence of servitization on the LBE effect is nuanced and intricate. To explore this, we scrutinize different firm-level boundary conditions. We posit an ambivalent impact of servitization on LBE contingent upon the firm's internationalization strategy. Specifically, our argument suggests that while servitization may enhance LBE among geographically diversified exporters, it might not yield similar effects for those focused on one or a few markets. We also explore variations in LBE based on the servitization strategy. Our contention is that co-created and green servitization can potentially augment exporters' LBE, irrespective of their internationalization strategy, by amplifying their innovation incentives, access to information, and organizational capabilities. We test these arguments by examining a sample of 1,497 firms for the years 2011 and 2015, with results that hold novel implications for researchers, managers and policymakers.

IM: A Longitudinal Study of the Antecedents of Population-Level Exporting Entry Rates from 62 Countries  

Author: **Rakesh B. Sambharya**, *5807*

The literature on exporting has mainly focused on export performance and not on export propensity or export entry rates. Literature reviews indicate that the vast majority of research is on firm-level and ownership-related factors and overlooked industry and largely ignored host-country institutional factors. This study utilizing perspective looks at the export entry rate of the entire population of first-time exporters in sixty-two (62) countries over 17 years from 1997 to 2014 to 248 possible destination countries. Hypotheses were generated using the 'strategy tripod' perspectives that incorporate firm-, industry-, and host-country-level variables. Results indicate that firm size, firm pricing, and industry concentration in the domestic market were positively related to export entry whereas firm product diversification, and industry competition were negatively and significantly related to export entry. The host-country effects on export entry rates were for positive for the regulatory quality but negative for the rule of law.

IM: Stock Market Liberalization and Internationalization of Small and Medium-Sized Enterprises  

Author: **Lerong He**, *State U. of New York at Geneseo*

Author: **Liting Fang**, *Fuzhou U.*

The paper investigates how stock market liberalization influences the internationalization of small and medium-sized enterprises (SMEs). Using the launch of China's ShenZhen-HongKong Stock Connect Program as a quasi-experiment, we apply a difference-in-differences design to examine how the relaxation of foreign investment in listed Chinese SMEs stimulates these firms' exports. We find that SMEs qualified for the Stock Connect program are associated with a larger increase in export propensity and export intensity in the post-liberalization period compared to the control group of SMEs excluded from the program. Our results also confirm the financing and risk-sharing channels underlying this relationship. We document that stock market liberalization relaxes financing constraints of qualified SMEs, boosts investments of foreign institutional investors, and consequently increases their export propensity and intensity. In addition, we show that the influence of stock market liberalization on SMEs' exports is larger in firms competing in industries more dependent on external financing, more export-oriented, and more innovative. The relationship is also greater in firms facing larger financing constraints, investing more in R&D, or being privately controlled, as well as those managed by CEOs with foreign experience. Our results are also robust to alternative models and measures. Overall, our paper confirms the facilitating role of stock market liberalization in boosting SMEs' exporting.

IM: How Does SMEs' Export Strategy React to Government Subsidies? The Mediating Effect of R&D

Author: **Yueling Sima**, *U. College Cork*

Author: **Thomas Lawton**, *U. College Cork*

Author: **Justin Doran**, *U. College Cork*

Author: **Norin Mccarthy**, *U. College Cork*

In a turbulent global environment, small and medium-sized enterprises (SMEs) that drive technological change and contribute significantly to economies are facing mounting challenges. How to efficiently support SMEs has always been a focal point of attention for government and policymakers. Therefore, this paper investigates how SMEs' export strategies react to government support via the mediating role of innovation. Based on a novel and rich longitude dataset of Irish SMEs covering 2006-2018, we firstly examine how government subsidies impact SMEs' innovation performance, particularly investment in research and development (R&D). Secondly, using propensity score matching, we evaluate the indirect contribution of government subsidies to SMEs' export development. We do so by identifying the mediating role of policy-induced R&D in an SMEs' propensity to export, export product diversification, export market diversification, and export value. Empirical results indicate that government subsidies indeed incentivize SMEs to increase their R&D and initiate export activities and positively diversify their export portfolios. Our findings contribute to understanding how institutional factors affect firms' innovation activities and SMEs' export development process. They provide insights for policymakers on how government subsidies can best equip their home-grown businesses to succeed in international markets, especially those in small, open, and advanced economies.

Rethinking Globalization: What Has Changed? What's Next? And What Does It Mean for Management?

Session Chair: **Lilac Nachum**, *City U. New York*

Distinguished Speaker: **Steven Altman**, *NYU Stern School of Business*

Panelist: **Geoffrey Jones**, *Harvard Business School*

Panelist: **Minyoung Kim**, *The Ohio State U.*

Panelist: **Ari Van Assche**, *HEC Montreal*

Panelist: **Alain C. Verbeke**, *U. of Calgary*

The possibility of a significant reversal of globalization has emerged recently as a central political issue with potentially fundamental economic consequences, reversing the trends towards greater openness and liberalization that have characterized world business since the Second World War. Such a major break away from past trends could have enormous consequences for all firms and especially for those engaged in international business. Against this backdrop, we propose to convene a symposium panel designed to deepen the understanding of the actual trajectory of globalization from multiple perspectives and draw the implications of these developments for the field of management. We do so with the aid of advanced data and empirical measures, as captured in the DHL Global Connectedness Index, which examines globalization based on the size and geography of international trade, capital, information, and people flows, offering a multi-dimensional representation of globalization worldwide and at the level of individual countries. Reflecting on the DHL Index empirical data, the panel will consider the trajectory of globalization from a variety of perspectives, historical and current, and will draw its implications for management research and practice. The panel will also outline likely future trajectories of globalization/de-globalization and draw their likely implications for strategy, public policy, knowledge-sourcing/innovation, and the rise of emerging/frontier markets.

Wellbeing in Management Education

Session Moderator: **John Edward Fiset**, *Sobey School of Business, Saint Mary's U.*

MED: Walking the Talk: Toward Creating Mentally Healthy Business Schools

Author: **John Edward Fiset**, *Sobey School of Business, Saint Mary's U.*

Author: **Maria Carolina Saffie Robertson**, *St. John Fisher*

Institutions of post-secondary management education are facing increased pressure to address the mental health challenges of their student population. Yet, many institutional members are unsure or unaware of measures they can engage in to improve mental health outcomes for students. In this paper, we build on the work of the Okanagan Charter: An International Charter for Health Promoting University and Colleges as well as Canada's National Standard for Mental Health and Well-Being for Post-Secondary Students to provide concrete actions for business school stakeholders (e.g., administration, faculty, staff, and students), to craft policies, develop programs, and offer individualized services that meet the emerging needs of students. By viewing mental health as a shared responsibility and working together to improve student outcomes and embedding mental health and wellness into core institutional activities, business schools have the opportunity to strengthen their mandate of contributing to business and society.

MED: Geek up or Not to Geek up? University Educators' Digital Competence in Stress Management

Author: **Milton Paredes**, *Tecnologico de Monterrey / Escuela Superior Politecnica del Litoral*

Author: **Olivia Hernandez-Pozas**, *Tecnologico de Monterrey*

Author: **Yarid Ayala**, *EGADE Business School*

Author: **Ronald Campoverde Aguirre**, *Escuela Superior Politecnica del Litoral*

Despite their significant influence, university educators face distinct and demanding challenges, particularly in the context of the ongoing digital transformation. These profession-related stressors impede their ability to achieve psychological detachment, which is crucial for their overall well-being. To address these challenges effectively, educators must acquire a specific set of skills tailored to the evolving demands of the digital era. Based on the Stressor-Detachment model, this study investigates the moderating effect of educators' Digital Competence on the negative relationship between Job Stressors and Psychological Detachment. In a sample of 731 university educators in Ecuador, our findings confirm the established negative associations between Workload and Work-family Conflict with Psychological Detachment and a positive link between Organizational Support and Psychological Detachment. Unexpectedly, Family-work Conflict was positively associated with Psychological Detachment. The moderation analysis shows that the composite construct of Digital Competence does not universally moderate all stressors but mitigates Family-work Conflict. This finding underscores the role of educators' digital proficiency in specific stressful contexts. Additionally, moderation analysis for each individual dimension of Digital Competence indicated that specific dimensions may exert more pronounced effects than others.

MED: Leveraging Hobbies for Positive Student Outcomes: The Role of Higher Education Faculty and Staff

Author: **Jesse E. Olsen**, *U. of Melbourne*

Research suggests that leisure and extracurricular activities not only enhance individual well-being, but they also provide work-relevant skills and experiences that lead to such beneficial work outcomes as greater creativity and improved problem solving. However, research also suggests that students often struggle to understand how their various activities concretely relate to their chosen career paths. In this conceptual paper, I present a model and associated propositions by which faculty and staff at institutions of higher education can help students to engage meaningfully with their hobbies to ultimately promote well-being, employment, and career success. Drawing on theoretical work on social identity and self-efficacy, I propose that faculty and staff should engage in supportive behaviors to aid students in developing personal and social identities, domain-relevant self-efficacy, and work-relevant skills based on their hobbies. I conclude the paper with a discussion of the scholarly and practical implications of this model, as well as future directions for this work.

MED: How Mindfulness-Trained Leaders Drive Compassion in Organizations

Author: **Laura Ilona Urrila**, *U. of Vaasa*

Author: **William Degbey**, *U. of Vaasa*

Author: **Benjamin Laker**, *Henley Business School, U. of Reading*

Author: **Baniyelme D. Zoogah**, *DeGroote School of Business, McMaster U.*

In this paper we explore the role of mindfulness interventions in developing self- and other-oriented compassion among leaders within organizational settings. We draw on a longitudinal study of 62 organizational leaders who participated in an eight-week mindfulness training to examine how mindfulness contributes to the cultivation of a compassionate mindset and leadership practices. The data for analysis, collected at four time-points, comprises pre-intervention assessments and post-intervention interviews (in total 159 interviews), including six- and twelve-month follow-ups. We find mechanisms underpinning co-active compassion, such as interconnectedness, perspective-taking, and mutual support, which manifest at the collective level. Co-active compassion reveals a reciprocal interplay between self-care and the care for others, enhancing both individual and collective compassionate competencies in leadership. This study contributes significantly to both mindfulness and compassion in leadership literatures by showing that mindful self-compassion in leadership is a dynamic, interpersonal phenomenon, crucial for leaders who aim to effectively balance self-care with their responsibility towards others. We also extend current understanding of compassion in leadership by providing empirical evidence of the role of mindfulness in fostering both self- and other-oriented compassion. We discuss theoretical and practical insights for developing compassionate leadership competencies in the face of modern organizational challenges.

Author: **Ming Li**, *U. of Liverpool Management School*

Author: **Michal Wilczewski**, *U. of Economics and Human Sciences in Warsaw*

Author: **Paola Giuri**, *Bologna U.*

Author: **Zhixi Zhuang**, *Ryerson U.*

Drawing on the conservation of resource (COR) theory, this study examines individual psychological resource as a necessary condition for students' mental health and study adjustment during the Covid-19 pandemic. We further examine how international and domestic students differ in their resources, mental health and study adjustment. Employing partial least squares structural equation modeling (PLS-SEM), the study tests the hypothesized effects of psychological resources utilizing online survey data from 2,136 domestic and international students across five countries. The necessary condition analysis demonstrates psychological resources as necessary but not sufficient conditions for mental health and study adjustment. Additionally, one-way analysis of variance reveals that international students surpass domestic students in psychological resources, mental health, and adjustment. This research makes a novel contribution to the COR theory by proposing the "necessary resource principle," which underscores that certain resources constitute necessary conditions in the event of significant losses of other resources. It provides evidence that individual psychological resources are not only desirable but also indispensable for students' mental health and study outcomes during stressful periods. Furthermore, it contributes to adjustment theory by emphasizing the pivotal role of mental health in students' adjustment. The implications for management and higher education are discussed.

CEO Personality and Strategic Decision-Making in Innovation

Session Moderator: **Yijie Tseng**, *Fu Jen Catholic U.*

MOC: **CEO Neuroticism and Text-Based Communicative Value of Annual Reports**

Author: **Tsung-Kang Chen**, *National Yang Ming Chiao Tung U.*

Author: **Yijie Tseng**, *Fu Jen Catholic U.*

Author: **Yu-Chun Lin**, *National Yang Ming Chiao Tung U.*

Author: **Yun Hao**, *National Yang Ming Chiao Tung U.*

We investigate whether and how CEO neuroticism affects the text-based communicative value of annual reports using S&P 1500 firms. We employ annual report readability as the proxy of the text-based communicative value of annual reports. We find that CEO neuroticism is significantly and positively related to annual report readability due to the increase in the CEOs' incentives to alleviate outside investors' information uncertainty perceptions. Moreover, CEO neuroticism improves annual report readability via the mechanism of less severe management-equity agency problems, enhancing the CEOs' incentives of alleviating outside investors' information uncertainty perceptions. In addition, we also find that the CEO neuroticism effect becomes weaker when the firm has higher internal governance quality, better firm profitability, and greater management resources. Finally, our findings are robust when considering endogeneity issues and controlling for other CEO personality traits.

MOC: **Acting or Abstaining: CEO Neuroticism and AI Innovation**

Author: **Yishu CAI**, *Department of Management, Business School, The Chinese U. of Hong Kong, HK*

Author: **Ya Lin**, *Chinese U. of Hong Kong*

Author: **Qingliang Fan**, *The Chinese U. of Hong Kong*

We examined neurotic CEOs' engagement with a paradigm-shifting technology, artificial intelligence (AI) innovation. While paradigm-shift technologies like AI have been transformative for organizations and society, the psychological antecedents, particularly neuroticism, remain underexplored. Neuroticism, a key dimension of the Big Five (Big-5) personality traits, is characterized by anxiety, self-defense, and emotional instability. Neurotic CEOs' perception on the risk of commission due to ambiguous returns and the risk of omission driven by the burgeoning potential of the technology, drive their engagement in AI innovation. We leveraged the context of the milestone event of AlphaGo's victory in 2016 to showcase the paradoxical effects of neuroticism personality. We hypothesized that neurotic CEOs made less AI innovation due to the perceived risks of commission, but this attitude shifts post-AlphaGo's victory, driven by a fear of missing out on industry trends, leading to increased more AI innovations. We also theorized that this neurotic bias will be enhanced by a self-regarding cognitive style but mitigated by AI-related education. Using a sample from the Standard & Poor's (S&P) 1500 firms (2013-2019), we analyzed CEO personalities through their language in earnings call transcripts and AI patent data. This study contributes to the understanding of corporate engagement in paradigm-shift technologies by highlighting neurotic personality in CEOs. We also discussed the theoretical potential in the research on managerial risk-taking and the theories on subjects and agents of action in the social context.

MOC: **Future- or Past-Focused CEOs: Who Meets the Interests of Long-Term Institutional Investors?**

Author: **Atefeh Maghzi**, *Southampton Business School, U. of Southampton*

Author: **Ali C. Akyol**, *U. of Ottawa*

Misalignment of interests between long-term institutional investors and CEOs lies at the core of the agency problem. We postulate that future-focused CEOs might mitigate this problem as they prioritise long-term goals. Our analysis, drawing on data from 17,983 firm-year observations between 2001 and 2016, did not support our argument. It, contrarily, showed a positive relationship between past-focused CEOs and the fraction of shares held by quasi-indexers and investment advisors, which are long-term investors. Information asymmetry may explain this finding. The uncertainty associated with long-term investment amplifies the extent of information asymmetry between investors and CEOs. However, past-focused CEOs reflect on past experience, which improves reliability and reduces uncertainty. We add insight to the understanding of the agency problem, and contribute to research in temporal focus.

MOC: **Navigating Uncertainty: Examining the Role of CEO Dialectical Thinking on Firm Innovation Decision**

Author: **Liping JIN**, *Peking U.*

Author: **Yang Bai**, *Guanghua School of Management, Peking U.*

Author: **Lan LI**, *Development Research Centre of The State Council*

Author: **Xiaofei Teng**, *Guanghua School of Management, Peking U.*

In today's dynamic commercial landscape characterized by volatility, complexity, and uncertainty, chief executive officers (CEOs) particularly require advanced information processing capabilities for effective navigation. Dialectical thinking, an overarching and sophisticated information processing style that involves seeing the world in a changeable, contradictory, and holistic way (Peng & Nisbett, 1999), stands out such a capability well-suited for navigating uncertainty and has been widely examined in management at both individual and team levels. This article extends the existing research by integrating the dialectical thinking literature into upper echelons theory to explore its influence at the firm level. We argue that CEO dialectical thinking predicts firm R&D intensity and new product performance through the successive mediation of cognitive flexibility and information search. We further draw on information processing theory to elaborate how these sequentially indirect effects are more positive when environmental uncertainty is high versus low. The theorized model was tested across two studies: an online experiment (Study 1) and a field study with a large CEO sample from China (Study 2). Our results consistently supported our model, shedding light on the impact of dialectical thinking on innovation decision. Implications for theory and practice are discussed.

Cognitive Diversity and Team Performance: Contingencies of the Cost and Benefits

Moderator: **Matthias Qian**, *ESMT Berlin*

Presenter: **Peter Dahlin**, *Mälardalen U.*
Presenter: **Ki-Won Haan**, *Carnegie Mellon U. in Qatar*
Discussant: **Scott Page**, *U. of Michigan*
Presenter: **Sorin Krammer**, *Surrey Business School*

This session explores the nuanced role of cognitive diversity in team and organizational performance, focusing on contrasting perspectives and emerging research. Cognitive diversity, defined as variations in thought processes, perceptions, and information processing, is generally perceived as beneficial for team decision-making and organizational value, as supported by studies from McKinsey and Deloitte, amongst others. However, recent literature suggests that its effectiveness is context-dependent. For example, firms with an innovator strategy or those in less competitive environments may benefit less from cognitive diversity. This complexity is further highlighted in startup contexts, where the role of early joiners and non-founding employees becomes significant. Empirical studies, such as those by Sako, Qian, & Verhagen (2021), and theoretical models from the organizational learning literature, propose a reevaluation of decision-making processes and the importance of leveraging knowledge diversity. The session underscores the importance of recognizing cognitive diversity's nuanced impacts, particularly in startups and innovative environments.

Participant: **Huong Le**, *Central Queensland U.*

A variety of occupational aspects and factors have been much changed since the unexpected global crisis (e.g., Covid-19 pandemic) and the advancement of artificial intelligence. Despite research efforts and interests in those new areas, these happenings paradoxically revealed that emotion regulation which features human beings is still important across diverse workplaces and technological breakthrough cannot substitute for the roles of employees' emotion regulation in workplaces. Given the importance of emotion regulation at work and the Annual Meeting theme of "Innovating for the Future: Policy, Purpose, and Organizations," we are interested in how emotion regulation functions at work. This symposium focuses on emotion regulation, defined as the process by which an individual forms, interprets, and modifies a specific feeling in one's social/work context (Grandey, 2000). Emotion, as one of the key components in occupational and social contexts, orients an individual's attitudes and behaviors in specific directions (Spector & Fox, 2002). It affects the way organizational members manage their feelings according to social norms and expectations. Hence, emotion regulation becomes important to employees, managers, and their organizations because effectively regulating emotions interconnects with and influences individual and collective performance at work. The main purpose of our symposium is to attract scholars to pay more attention on emotion regulation, encompassing its potential effects across work and non-work areas, and delve into the challenges and consequences of this pervasive but understudied phenomenon. This collection of studies investigates various occupational contexts in which emotion regulation plays its unique, significant roles in relation to several work outcomes. By attempting to look into those aspects from multiple theoretical backgrounds, this symposium contributes to enhancing our understanding of emotion regulations for employees, managers, and organizations.

Purposeful Innovation: Leading Organizations to Foster Peaceful Co-existence

Organizer: **Satinder Dhiman**, *Woodbury U.*
Organizer: **A.D. Amar**, *Seton Hall U.*
Presenter: **Joan F. Marques**, *Woodbury U.*
Presenter: **Dung Tran**, *Gonzaga U.*
Presenter: **Gursharan Kaur**, *Vrije U. Amsterdam*

Humanity is facing major global challenges and finds itself at divergent cross-roads of precarious consequences. The disruptive change triggered by the global pandemic has called into question much of our settled views about how workplaces and other social institutions are supposed to operate. We are facing crisis in which we no longer feel that we can control the situation. Now even a bigger threat looms large on humanity's horizon sparked by growing geopolitical polarities and incessant wars of narratives, necessitating to choose between self-annihilation and peaceful co-existence. Organizations and leaders can play a key role in helping us choose wisely between peaceful co-existence and no existence. It means, above all, peace for us all and our loved ones, a chance for our children to grow up as happy and useful citizens rather than to end their days in wooden boxes on distant battlefields. During these high-intensity moments, we must build on the lessons we have learned so far and help leaders and organizations to embrace innovative principles and values to not only survive but also to thrive during turbulent times. The symposium draws upon various wisdom and contemplative traditions of the world in leading organizations to harness peaceful co-existence.

Bad to the Bone: Unethical Behavior at Work

Session Moderator: **Miaojia Huang**, *U. of Western Australia*

OB: **Perpetrator-Directed Outcomes of Customer Mistreatment Events: The Role of Perpetrator Social Status**     

Author: **Miaojia Huang**, *U. of Western Australia*
Author: **Rajiv Amarnani**, *U. of Western Australia*
Author: **March To**, *Graduate School of Business and Law RMIT U., Melbourne, Australia*
Author: **Gillian Yeo**, *U. of Western Australia*

Customer mistreatment—the poor-quality interpersonal treatment of service workers by customers—is a widespread issue linked to employees' diminished performance to customers in general. However, little is known about how employees treat the customers who actually perpetrate mistreatment toward them. This study explores how perpetrator characteristics, specifically perpetrator status, influence what employees do and feel during mistreatment events. Drawing from social information processing theory, we propose that high-status perpetrators of customer mistreatment receive more perspective-taking and ultimately more perpetrator-directed help from targets of customer mistreatment, while also reinforcing job-related stigma and eliciting perpetrator-instigated shame in the focal employee. We conducted two studies to test the proposed model, with Study 1 using an experiment with high-fidelity audio-recorded vignettes, and Study 2 using the critical incident technique to solicit detailed descriptions and ratings of real-world customer mistreatment events. Our theoretical model was supported and remained robust to adjustments for alternative explanations. Implications for research in customer mistreatment events, the role of the perpetrator, and the influence of perceived perpetrator status are discussed.

OB: **Exploring the Effect of Line Manager Gratitude Expression on Employees' Unethical Behaviors**   

Author: **Zhu YAO**, *Hunan U.*
Author: **Chenqian XU**, *Xiangtan U.*

As a low-cost and effective way to maintain good interpersonal relations, gratitude expression has moved into the public glare of organizational management arena. Nonetheless, leader gratitude expression and its impact on employees' behavior have received scarce attention. Our study aims to elucidate the mechanisms underlying the effect of line manager gratitude expression on employees' unethical behaviors, i.e., unethical pro-supervisor behavior (UPSB) and knowledge hiding. Based on social information processing theory, we conducted experimental study and field study. Experimental study finds that line manager gratitude expression positively correlates with UPSB while negatively correlates with knowledge hiding. Line manager identification plays a mediating role in the above relationships. Field study confirms this finding and further finds that emotional expression authenticity moderates the relationship between line manager gratitude expression and line manager identification, as well as the indirect effect between line manager gratitude expression and employees' unethical behaviors (i.e., UPSB and knowledge hiding). Overall, our findings expand the knowledge of why, how, and when employees exhibit unethical behaviors (i.e., UPSB and knowledge hiding) after they perceive line manager gratitude expression.

OB: **Embedded and Unethical: Why and When Job Embeddedness Facilitates Unethical Behavior**

Author: **Alexander Landry**, *Stanford U.*
Author: **Jocelyn J. Bélanger**, *New York U. Abu Dhabi*
Author: **Daniel Snook**, *Florida Gulf Coast U.*
Author: **Arie Kruglanski**, *U. of Maryland*
Author: **Michele Joy Gelfand**, *U. of Maryland*

Job embeddedness—the organizational and community forces that anchor employees in their jobs—consistently predicts a wide array of positive outcomes for both individuals and organizations. Still, we question whether high job embeddedness always has normatively desirable effects. Drawing on theories of social identity and organizational climate, we develop a model of why and when embeddedness can motivate unethical behavior. Embedded employees strongly identify with their organization, and thus, we reasoned, are highly motivated to comply with their organization's social norms. This can inspire embedded individuals to further their organization's cause through unethical behavior. This is especially likely if they are embedded in a normative climate that privileges organizational interests above all else (i.e., a local egoism climate). We support this model across multiple organizational contexts and empirical methods. We first examined members of terrorist organizations (N = 18,154), finding embeddedness to predict their support for a particularly destructive form of unethical behavior: the use of extreme violence to achieve organizational objectives. We then tested our full theoretical model in a series of preregistered experiments among US employees (N = 5,476). We found that embeddedness causes unethical behavior, and this effect is mediated by norm compliance—but only in a local egoism climate. Encouragingly, more principled climates constrained the deleterious effect of embeddedness by cutting off the relationship between embedded employees' motivation to comply with norms and their unethical behavior. Collectively, this work advances job embeddedness theory and suggests a means to harness its benefits while curtailing its costs.

OB: **A Meta-Analytic Study of Ethical Leadership and Employee Unethical Behaviors**   

Author: **Jie Xiao**, *Renmin U. of China*
Author: **Yan Liu**, *Wuhan U.*
Author: **Rui Han**, *Nanjing U.*

Despite ethical leadership is a crucial moral practice for organizations, prior studies reported the negative, non-significant, positive or even inverted u-shaped relationships between ethical leadership and employee unethical behaviors. Few studies have provided a comprehensive framework for explaining why. In this research, we propose three theoretical perspectives (i.e., moral cognition, social exchange, and social identification) to understand the association of ethical leadership with unethical self-serving behavior and unethical pro-organizational behavior. We further compare the relative weights of five mediators underlying each perspective and propose cultural values as boundary conditions. This conceptual model is tested using meta-analytic structural equation modeling (MASEM) from 248 samples (N = 77,309) and relevant meta-analytic correlations reported in previous study. The results reveal that ethical leadership exhibits a double-edged sword effect on unethical behaviors (both self-serving and pro-organizational) via different paths and that ethical leadership is more negatively related to unethical self-serving behavior in cultures of high uncertainty avoidance. Overall, this study contributes to ethical leadership research by deepening the understanding of whether, why and when ethical leadership influences employee unethical behaviors.

Help, I Need Somebody! Helping Behavior at Work

Session Moderator: **Yingming Li**, *School of Business, Sun Yat-sen U.*

OB: Investigating How and When Follower Helping Behavior Leads to Leader Exploitation

Author: **Yingming Li**, *School of Business, Sun Yat-sen U.*
Author: **Xin Qin**, *Sun Yat-sen Business School, Sun Yat-sen U.*

Although follower helping behavior has been widely studied, knowledge about how such behavior promotes negative leader behavior is still limited. Drawing upon social cognitive theory, we develop and test a theoretical model of how and when follower helping behavior leads to leader exploitation. Through an experiment and a multi-wave field study, we found that follower helping behavior was positively related to leader perceptions of follower's willingness to self-sacrifice, which increased the possibility of leader exploitation. Furthermore, we found that leader bottom-line mentality moderated the indirect effect between follower helping behavior and leader exploitation; leader with high bottom-line mentality was more likely to exploit follower after perceiving follower as willing to self-sacrifice. Taken together, our findings present a novel framework for understanding how follower helping behavior can give rise to negative leader behavior, thereby inspiring the ongoing interest of scholars and practitioners in helping behavior research and leadership research.

OB: The Interactive Effect Between Employee Helping and Voice on Supervisory Performance Evaluation

Author: **Jian Guan**, *Currently a PhD student at Shanghai Jiao Tong U., Shanghai, China*
Author: **QIAN CHEN**, *Shanghai Jiaotong U.*
Author: **Xin-an Zhang**, *Shanghai Jiao Tong U.*

Mainstream studies on the interaction between voice and helping believe that helping behavior with an affiliative characteristic can mitigate the potential threat posed by voice that has a challenging nature, and thus enables voice to perform a positive impact on supervisory performance evaluation. Drawing upon role incongruity theory, however, this research challenges this view by developing and testing a model in which employees who exhibit both voice and helping behaviors are expected to achieve lower levels of affective liking and thus lower performance evaluations from their supervisors than those who exhibit only voice or helping behavior. Results from a multi-source field study and a scenario-based experiment consistently provided supporting evidence that helping behavior (or voice) promoted managerial performance evaluation only when voice (or helping behavior) was low, in which affective liking serves as the mechanism. Implications for both theory and practice were discussed.

OB: Saying "No" to Coworkers at Work: The Consequences of Help Request Rejection 

Author: **Xiaofei Hu**, *Hong Kong Polytechnic U.*
Author: **Katrina Jia Lin**, *Hong Kong Polytechnic U.*

Research on the dark side of being prosocial at work has flourished in the past two decades. Given the personal costs of helping others at work, researchers and executive coaches have encouraged employees to say "no" bravely upon receiving help requests and highlighted the benefits of saying "no". However, empirical testing of the personal implications of rejecting coworkers' help requests (i.e., help request rejection) at work remains rare. Drawing on identity threat theory, this research challenges the view that help request rejection is beneficial to the request receivers by examining whether and when request receivers experience psychological burden after rejecting coworkers' help requests. In a time-lagged field study, we found that rejecting coworkers' help requests could bring about prosocial identity threat, which further led to disparate outcomes (i.e., increased public, but not private, helping and reduced task performance). The above effects were exacerbated among request receivers who held a higher level of helping identity or perceived higher helping pressure in the focal team. Theoretical and practical implications for helping decisions, prosocial identity, and identity threat management are discussed.

 **OB: From Inspiration to Shame: When and How Receiving Coworker Help Impact Relational Behaviors**

Author: **Ziyi Li**, *Changsha U. of Science & Technology*
Author: **Yong Zhang**, *Chongqing U.*
Author: **Beijing Tan**, *Huazhong U. of Science and Technology*
Author: **Yuan-Fang Zhan**, *Central China Normal U.*
Author: **Huan Cheng**, *Huazhong U. of Science and Technology*

Receiving help inherently implies a disparity between the helper and the recipient, potentially triggering upward social comparison. Embracing the autonomous-dependent distinction of received help, we theorize and examine the assimilative and contrastive emotional reactions, as well as the approach and avoidance relational behavior induced by receiving autonomous and dependent help from coworkers. Utilizing a daily diary study involving 114 employees across 10 working days, we find that receiving autonomous help from coworkers is associated with inspiration and subsequent social expansion, and relationship closeness further augmented this relationship. In contrast, receiving dependent help from coworkers is associated to shame and subsequent social withdrawal, and relationship closeness further attenuated this relationship. We discuss the implications of our findings for both theory and practice.

Hey, That Hurts! Responses to Mistreatment at Work

Session Moderator: **Kirsten Marie-Paule Robertson**, *U. of the Fraser Valley*

OB: Playing the Favorite Game: A Contextual Examination of Workplace Favoritism

Author: **Kirsten Marie-Paule Robertson**, *U. of the Fraser Valley*
Author: **Jane O'Reilly**, *Telfer School of Management, U. of Ottawa*

Workplace favoritism, in which a supervisor engages in ongoing preferential treatment of one or a few employees, is a common occurrence in many workgroups. Despite the prevalence of the phenomenon, however, workplace favoritism has not received much devoted scholarly attention in management research. Often the topic is studied either as one of many types of workplace mistreatment behaviors, through the lens of formal discrimination associated with nepotism/cronyism, or as a proxy when employees perceive dissimilarity in the quality of their relationships with their supervisor. Engaging in in-depth interviews with 77 individuals employed in the service industry and applying abductive methods, we uncover a previously unappreciated rich and complex set of interpersonal dynamics surrounding workplace favoritism. In this working model, we make sense of these dynamics by applying a role theory lens: conceptualizing workplace favorites as a special type of informal social role that can emerge in workgroups. How this role is enacted has important implications for non-favorites' ongoing relationships with their supervisor, the favorites, and one another. Our research identifies five distinct favorite profiles that can emerge in workgroups and can range in terms of having a more benign versus antagonistic presence.

OB: Pat a Tiger on the Butt and Walk Away Safely: It Depends on Your Performance

Author: **Shou Gao**, *School of Public Administration, Zhongnan U. of Economics and Law*
Author: **Si Li**, *Zhongnan U. of Economics and Law*
Author: **Huisha Bai**, *GuangdongNo.2HydropowerEngineeringCompany,Ltd*

Integrating the perpetrator predation framework with moral exclusion theory, we develop a theoretical model to understand when and why supervisors are likely to ostracize employees who engage in challenging voice. The results of a multi-wave, multi-source survey study of 289 pairings of leader-subordinate dyads indicate that employee challenging voice can lead to supervisor-subordinate relationship conflict, which in turn leads to supervisor ostracism. We further find that subordinate job performance moderates the relationship between challenging voice and supervisor-subordinate relationship conflict, such that the relationship is stronger when subordinate job performance is low rather than high. Moreover, we suggest subordinate job performance as a moderator to mitigate the deleterious effects of challenging voice on supervisor ostracism through supervisor-subordinate relationship conflict. Implications for theory, practice, and future research are also discussed.

OB: The Weekly Change Trajectory of Workplace Ostracism: Your Monday Reaction Matters  

Author: **Xiaowan Lin**, *U. of Macau*
Author: **Shanshan Gao**, *U. of Macau*

The weekly rhythms of working states greatly influence employees' social experience. Drawing on entrainment theory and anchoring model of social exchange, this study proposed a moderated mediation model, illustrating why employees' experience of workplace ostracism declines naturally over the week and how victims' epistemic motivation interacts with their behavioral reactions (i.e., OCBI and interpersonal deviance) on Monday and dynamically influence the weekly change trajectory of their ostracism experience. By recruiting 223 full-time employees in China, we conducted a longitudinal daily study over five consecutive working days. Our findings supported most of our hypotheses. Compared with victims' decreased prosocial behavior (i.e., OCBI), their increased anti-social behavior (i.e., interpersonal deviance) on Monday more strongly mediated their ostracism experience on Monday and the weekly change trajectory of their ostracism experience, making it hard to decline as usual. We also found that only when victims' epistemic motivation was low rather than high, they were more likely to withdraw their OCBI and engage in interpersonal deviance on Monday. Through this unique temporal perspective, our study highlights the salience of considering temporal effects and the dynamic nature of ostracism. The theoretical and practical implications of the findings are discussed.

OB: It is Not Only How I am Treated, But also How My Team is Treated That Matters (WITHDRAWN) 

Author: **Fan Yang**, *Southeast U.*
Author: **Run Ren**, *Peking U.*

Extant research on workplace justice mainly discussed how fairly an individual employee is treated and how he or she reciprocally responds to this treatment. In this study, we focus on the effects of individual team member's perception on how fairly his or her team is treated (i.e., perception of between-team distributive justice) on their within-team helping behaviors. Drawing upon social identity theory, we propose that employees' perception of between-team distributive justice could influence their identification with the team, which further leads to their within-team helping behavior. In addition, the perception of within-team distributive justice moderates the aforementioned relationship such that when within-team distributive justice perception is high, the effects of between-team distributive justice perception on within-team helping, via team identification, become stronger. Results of a time-lagged survey and an experiment both support our hypotheses. Theoretical contributions and practical implications are discussed.

You Feel Me? Emotion and Proactive Behaviors

Session Moderator: **Yudong Guo**, *Shanghai U. of Finance and Economics*

OB: Team Affective Tone and Team Innovation: The Role of Affect Intensity and Diversity

Author: **Hector Madrid**, *Business School, U. Adolfo Ibanez*
Author: **Ignacio Perez Sepulveda**, *U. of Sheffield Management School*
Author: **Jeremy F. Dawson**, *U. of Sheffield*

In organizations, innovation outcomes are a substantive function of the affective experience of their members. In the context of teamwork, team affective tone namely, the shared experience of either positive or negative feelings among team members, captured by the mean level of their affect, is associated with team innovation. This effect of affective tone intensity relies on the assumption that affect is a homogenous experience within teams. However, this approach neglects the possible degree of heterogeneity of the affective experience among team members, described as team affective tone diversity, which has relevant implications for collective cognitive and behavioral processes. Drawing on affect-as-information theory and the categorization-elaboration model of group diversity; we argue that the effect of team affective tone intensity on team innovation depends on affective tone diversity. Accordingly, a multisource survey study, conducted with 527 teams comprising 2939 team members from a financial corporation, supported an interaction effect in which the positive relationship between team positive affective tone intensity and team innovation is positive only when the diversity of this affective tone is high. Similarly, the negative relationship between team negative affective tone and team innovation occurs only under an increased diversity of team negative affective tone. These results expand knowledge about whether, when, and how the affective experience is conducive to innovation in teams, which has substantive implications for theory development and professional practice in this field of research.

OB: Why Leaders Prefer Promotive Voice over Prohibitive Voice? A Construal Level Perspective 

Author: **Yudong Guo**, *Shanghai U. of Finance and Economics*
Author: **Kan Ouyang**, *Shanghai U. of Finance and Economics*

Voice literature has been flourished for decades, but scant studies have directly examined how leaders respond emotionally to employee voice. Drawing on construal level theory and its descendent, the social distance theory of power, we theorize that promotive voice has a higher construal level than prohibitive voice. Based on the different construal level of the two voice types, we propose that promotive voice, compared with prohibitive voice, has an advantage in fitting the asymmetric social distance that arises from the asymmetric power dependence between subordinates and their leader, which results in leader's positive emotions (i.e., increased gratitude and decreased disgust) and in turn enhances voice endorsement. In addition, as leader's dependence on subordinates increases, such more balanced power dependence would make the social distance between the two parties more symmetric and consequently attenuate leader's distancing tendency and weaken the advantage of promotive voice. Through four experiments (Study 1), we found that promotive voice would generally be construed at a higher level than prohibitive voice. We tested our research model in an additional experiment (Study 2) and found partial support. This research introduces a construal level perspective on employee voice behavior and enriches the literature on voice and construal fit from emotional mechanisms.

OB: How can Employees Become Both Creative and Ethical? The Role of State Authenticity at Work

Author: **Cathy Y. GUO**, *IESEG School of Management*
Author: **Remus Ilies**, *Bocconi U.*
Author: **Haiying Kang**, *RMIT U.*

Prior research has largely regarded authenticity as a static trait not varying within individuals. In contrast, we aim to highlight the dynamic nature of authenticity and unveil its implications for all employees, regardless of their levels of trait authenticity. Drawing upon self-determination theory (SDT), we develop and test a model that specifies whether and how employees' state authenticity—as a dynamic state fluctuating within individuals—affects their own creativity and unethical behavior, which can have far-reaching effects on organizations. Specifically, we predict that state authenticity fuels focal employees' creativity through evoking their harmonious passion, especially for those high in proactive personality. We also predict that state authenticity can inhibit unethical behavior through eliciting the sense of self-integrity in focal employees. Findings from an experiment and an experience-sampling study supported our predictions. We conclude with theoretical and practical implications.

OB: Why Individuals with Power-Status Incongruence Do (Don't) Share Knowledge? 

Author: **Longjun Liu**, *School of Business Nanjing U.*
Author: **Ruhong Liu**, *School of Business Nanjing U.*
Author: **Jing Long**, *Nanjing U.*

Under the background of knowledge economy, knowledge exchange and sharing among team members is extremely important for team development and organizational innovation. However, previous studies have neglected the root dilemma of individual sharing behavior. Based on costly signaling theory and social hierarchy theory, this study discusses the influence of individual power-status inconsistency on knowledge sharing. Study 1 issued 629 questionnaires to team members of high-tech industries. The results shows that power-status inconsistency has a positive impact on knowledge sharing, and the knowledge sharing level of those with high power and low status is higher than that of those with low power and high status. In study 2, the psychological mechanism of two types of individuals with inconsistent power and status was deeply explored through experiments, which affected individual knowledge sharing by positive cognitive self-efficacy and negative emotion. This paper is helpful to broaden the social hierarchy theory and provide suggestions for knowledge management within the team.

Take a Walk on the Dark Side

Session Moderator: **Collins Opoku Antwi**, *Zhejiang Normal U.*

OB: Frontline Employees' Job Insecurity & (Counter) Productive Service Behaviors: A Resource Perspective 

Author: **Collins Opoku Antwi**, *Zhejiang Normal U.*

Author: **Michelle Belle**, *Zhejiang Normal U.*

Author: **Peter Darko**, *Zhejiang Normal U.*

Author: **Eric Adom Asante**, *U. of Nottingham Ningbo China*

Frontline hospitality service employee (FLE) behaviors determine the service-profit link or even business survival. However, FLE roles are often low-paid, low-status, and insecure, particularly in economically uncertain times. We harmonized relevant tenets of conservation of resource theory to develop and test a resource-based theoretical model that specifies that FLEs' job insecurity induces anxiety about their job, which impairs affective delivery while exacerbating service sabotage behaviors. FLEs' habitual cognitive reappraisal tendency is proposed to mitigate the effect of job insecurity on job anxiety and further attenuate the indirect effect of job insecurity on service behaviors via job anxiety. Our empirical findings across a three-wave survey panel (Study 1 [US sample = 401]) and time-lagged employee-customer dyads (Study 2 [Ghana sample = 327]) provide robust, consistent, and confirmatory support for our model. Discussion of the theoretical and managerial implications and the limitations of our results conclude the paper.

OB: I Never Know What Happen: The Impact Of Abusive Supervision Inconsistency on Leader-Directed Deviance 

Author: **Hwayoung Kim**, *U. of Texas at Dallas*

Author: **Riki Takeuchi**, *U. of Texas at Dallas*

The current study tackles the prevailing assumption that a supervisor consistently displays hostile behaviors in order for employees to identify the presence of abusive supervision and suggests, instead, that abusive supervision can be viewed as an unfolding event – one that occurs over the course of time. From this new perspective, frequencies of experienced abusive supervision can vary over time, yielding distinct outcomes. By applying a temporal lens, the current study suggests abusive supervision frequency inconsistency – an employee's experience of different levels of abusive supervision in frequency between a current time period compared to a prior period – as a distinct phenomenon that is potentially more damaging to the employee and organization than the experience of consistent abusive supervision. Drawing on events system theory, the current study suggests that abusive supervision inconsistency increase unpredictability of the supervisor-employee relationship, increasing leader-directed retaliation. In addition, we introduced perceived supervisor power as a boundary condition, which makes employees unconsciously accept mistreatment. The current study employs polynomial regression and response surface analysis to determine the impact of temporal comparison. The results largely support the suggested hypotheses. Theoretical and practical implications are discussed.

OB: Does Work Dirtiness Motivate Pro-Group Behavior? The Role of Stigmatized Occupational Identity

Author: **Dongchul Kim**, *U. of Missouri*

Author: **Chunyan Peng**, *U. of Missouri*

Author: **John Schaubroeck**, *U. of Missouri*

Author: **Wei Zeng**, *School of Business Administration, Hunan U.*

Qualitative research suggests that individuals performing dirty work tend to develop positive work attitudes. Recent quantitative work, however, shows that work dirtiness (i.e., the experience of enacting dirty tasks at work) leads to disengagement from work. We draw from self-categorization theory to develop a model reconciling these seemingly contradictory findings. We argue that when one perceives high occupational stigma, work dirtiness activates social identity as a member of the organization, motivating individuals to engage in pro-group behavior that supports one's organization. Perceiving relatively low occupational stigma is linked to lower pro-group behavior because employees reporting high work dirtiness are mainly concerned about their personal identity. Results from three studies using survey and experimental designs largely support our hypotheses. Perceived occupational stigma moderates the relationship between work dirtiness and pro-group behavior such that the relationship tends to be positive (or negative) when perceived stigma is high (or low). The diverging responses toward work dirtiness are explained by organizational identification.

OB: Your Fire is Burning Me! Examining why Leaders' Work Passion Leads to Exploitation of Employees 

Author: **Manyi Wang**, *School of Business, Renmin U. of China*

Author: **Hui Fu**, *Sun Yat-Sen U.*

Author: **Shaoshuai Zhang**, *Sun Yat-Sen U.*

In contrast to previous extreme and harsh descriptions of exploitation, exploitation persists in today's society in a more subtle form, posing significant risks to the physical and mental well-being of workers. Based on the dualistic model of passion and moral disengagement theory, this manuscript focuses on leaders' exploitative behaviors towards employees and explores the antecedents and triggering mechanisms of such behaviors from the perspective of leaders. We argue that harmonious and obsessive work passion differentially impacted leaders' moral disengagement, thereby influencing their exploitative behaviors towards employees. Specifically, leaders' obsessive work passion triggers the shielding of moral goals to facilitate work goals and deplete their self-control resources, thus activating moral disengagement. Leaders' harmonious work passion facilitates the alignment of moral goals and work goals and supplement self-control resources, thus inhibiting the activation of moral disengagement. Our research results provided preliminary support for these hypotheses. This research expands our understanding of the causes of exploitative behavior in the workplace and holds important implications for employee welfare protection.

Employee Cognition and Behavior

Session Moderator: **Zhenxing Gong**, *Liaocheng U. Business School*

OB: Reverse Mentoring in an Aging Workplace: Research Review and Future Prospects 

Author: **Zhenxing Gong**, *Liaocheng U. Business School*
Author: **Jianlong Wu**, *Liaocheng U. Business School*
Author: **Haotian Sun**, *U. of Science and Technology Beijing*
Author: **Miaomiao Li**, *Beijing Information Science and Technology U.*

As an institutional innovation used to cope with the aging workplace, reverse mentoring is regarded as the best way to advance the research goal of encouraging active aging. To promote the study of the reverse mentoring system, this paper explores and analyzes its realistic background, theoretical origin, progress and direction. First, the realistic demand for the reverse mentoring system in the workplace is clarified, and the driving force underlying the research on the reverse mentoring system is explored in terms of three aspects: the guidance of humanistic management thought, the expansion of the concept of lifelong development and the deepening of systematic integration thinking. Second, the value connotations of the reverse mentoring system are summarized in terms of three dimensions, i.e., professional support, social psychological support and role models, and the value realization mechanism underlying the reverse mentoring system is refined, thereby revealing the influence paths of the reverse mentoring system on teachers, apprentices and organizations. Finally, research prospects are explored in terms of five aspects: the excavation of the value connotations, the clear logic of value realization, the construction of theoretical model, the exploration of action paths and the investigation of long-term mechanisms. This study can thereby shed light on the theoretical development and practical innovation of the reverse mentoring system.

OB: The Effect of Growth Mindset on Work Engagement and Performance via Cognitive Appraisals

Author: **Tatiana Iwai**, *Inspere Institute of Education and Research*
Author: **Rinaldo Artes**, *Inspere Institute of Education and Research*
Author: **Camila Prado**, *Inspere Institute of Education and Research*

The positive influence of mindsets on motivation and academic performance in educational settings is well-established. Recently, there has been increasing recognition of the relevance of applying mindsets to organizational contexts, especially in light of the distinct challenges faced in the workplace. To contribute to this expanding literature, we integrate the job demands-resources (JD-R) model and the transactional model of stress to explore the open question of whether and how mindsets influence engagement and performance at work. We also investigate the mediating role of job demands appraisals in this relationship. Employing a multisource data approach, we gathered self-assessments of mindsets and job demands appraisals from focal employees, work engagement evaluations from supervisors, and performance data from archival records of annual performance ratings. Our results show that employees endorsing more of a growth mindset exhibit high levels of engagement and performance at work. This relationship is mediated by cognitive appraisals of job demands. In essence, the positive effect of a growth mindset on performance at work is driven by a two-part mediating mechanism. Employees with a growth mindset appraise job demands as more challenging. Such appraisals are associated with higher work engagement, positively influencing performance at work.

OB: Increased Help Breeds Ingrates: A Dynamic Perspective on Recipients' Responses Toward Receiving Help 

Author: **Erica Xu**, *Hong Kong Baptist U.*
Author: **Jieying Xu**, *Beijing Normal U.-Hong Kong Baptist U. United International College*
Author: **Xu Huang**, *Hong Kong Baptist U.*

Adopting a dyadic perspective of help-recipients' responses, we track the changing dynamics in recipients' responses toward receiving help over time, delving into why continuous and increasing help over an extended period turns recipients into ingrates. Drawing on the integration of the theory of indebtedness and the principle of diminishing marginal utility, along with literature on individuals' sense of entitlement, we propose that the decreased sense of indebtedness and the increased sense of entitlement serve as the underlying mechanisms in this transition. Results from a longitudinal field study support the predictions. An increase in received help over time elicits a decrease in recipients' sense of indebtedness and a concomitant increase in recipients' sense of entitlement, which ultimately results in a decrease in recipients' engagement in reciprocal individual-targeted organizational citizenship behaviors.

OB: How Does The Adoption of Artificial Intelligence Affect Employees? A Double-Edged Sword Study

Author: **Xin-Qian Ding**, *Beijing U. of Posts and Telecommunications*
Author: **Hui Chen**, *Beijing U. of Posts and Telecommunications*
Author: **Jie Liu**, *School of Economics and Management, Beijing U. of Posts and Telecommunications*

In the era of intelligence, organizations are increasingly introducing artificial intelligence technology into the workplace. However, how employees perceive artificial intelligence and how this cognition affects their motivation and behavior need to be explored in depth. Drawing on transactional stress theory and conservation of resources theory, our research examines the impacts of the adoption of artificial intelligence on employee behaviors. Based on data from 430 employees of private enterprises in China and 55 teams at three time points, we found that the adoption of artificial intelligence positively affects employees' both challenge appraisal and threat appraisal. Challenge appraisal mediates the positive indirect impact of the adoption of artificial intelligence on energy, and threat appraisal mediates the positive indirect impact of the adoption of artificial intelligence on ego depletion. Energy positively affects work performance, and ego depletion positively affects deviant behavior. Through challenge appraisal and energy, the adoption of artificial intelligence has a positive indirect impact on work performance. Through threat appraisal and ego depletion, the adoption of artificial intelligence has a positive indirect impact on deviant behavior. The implications and limitations of this study are discussed.

Does It Make Sense? The Study of Paradoxical Phenomena

Session Moderator: **My Nguyen**, *Singapore Management U.*

OB: **Relinquishing Control: A Paradox Perspective on Downward Deference and Leadership Effectiveness**  

Author: **My Nguyen**, *Singapore Management U.*

Author: **Michael Schaerer**, *Singapore Management U.*

Contemporary leaders are tasked with the tremendous challenge of navigating paradoxes between both structural and interpersonal competing demands, one of which is the paradox between maintaining or letting go of control. While past work assumes that to be effective, it is best for leaders to balance both opposite demands, based on evidence from the leadership and power literatures, we propose that downward deference (i.e.: the practice of relinquishing authority to lower-power others) which is prioritizing flexibility over control can still increase effectiveness. Building on social perception research, we argue that downward deference enhances, rather than deters, leadership effectiveness through increasing perceptions of both leader warmth and leader competence. We first developed and validated a scale to measure downward deference at work (Study 1). Then, via one multi-wave field survey and one preregistered experiment (Study 2 & 3), we tested our hypotheses by exploring the relationship between downward deference and leader outcomes. Our research has several theoretical and practical implications for our knowledge of paradox, leadership, power, and social perception at work.

OB: **Humble Leadership and the Purpose-Profit Paradox: Causal Effects on Creative Problem Solving** 

Author: **Ana Martini**, *Pontificia U. Catolica de Rio de Janeiro*

Author: **Flavia Cavazotte**, *Pontificia U. Catolica de Rio de Janeiro*

Author: **Liliane Furtado**, *COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro*

Considering the challenge of harmonizing economic, social, and environmental dimensions through sustainable development, the present research argues that leader humility is a promising style to assist followers in expanding their cognitions and behaviors, thus enabling them to navigate the paradoxical realm of purpose and profit effectively. We propose and analyze two cognitive mechanisms through which humble leadership can promote sustainability-oriented creative problem-solving: follower paradox mindset and perspective-taking. To test these hypotheses, we conducted a quasi-experiment, manipulating leadership styles using videos and vignettes of a fictitious company CEO and a business case challenge presented to participants. The results confirmed that leader humility drives higher levels of paradox mindset and sustainability-oriented creative problem-solving while perspective-taking did not have the same effect. The findings of this study contribute to the existing literature on humble leadership and employee creativity, especially on the mechanisms between these factors.

OB: **Paradoxical Leadership: An Integrative Review and Future Research Agenda**

Author: **Djordje Zivkovic**, *U. of St. Gallen (HSG)*

Author: **Mirjam Langenbacher**, *U. of Liechtenstein*

Author: **Alexander Zimmermann**, *U. of St. Gallen*

Research on paradoxical leadership (PL), defined as leaders' seemingly contradictory, yet interrelated behaviors that entail a 'both-and' approach to address tensions has gained increasing momentum in recent years. However, to date, there is no literature review that integrates the partly disconnected research streams and cumulates empirical findings. In this article, we distinguish between different types of paradoxical tensions on multiple levels of analysis and discuss individual and organizational management approaches to cope with these tensions. By doing so, we extend the notion of PL to the management of paradoxes on the individual and organizational level. Based on our framework, we discuss shortcomings and gaps with respect to the interplay of drivers, different levels of analysis as well as boundaries and outcomes and present an agenda for future research that contributes to a more holistic understanding of PL.

OB: **Performance Implications of Gig Workers' Reactions to Daily Paradoxical Experiences**

Author: **Jiaxin Xue**, *School of Labor and Human Resources, Renmin U. of China*

Author: **Jinghao Zhang**, *Faculty of Economics and Business, U. of Groningen*

Author: **Yingxin Deng**, *School of Management, Beijing Institute of Technology, Beijing*

Author: **Zongbo Li**, *China U. of Mining and Technology*

As a novel form of contemporary jobs, gig work emerges from a highly dynamic and complex organization environment. Thus, gig work is inherently filled with plurality of stakeholders, change in daily work, and scarcity of resources, which are exactly three typical sources of paradoxes. Nevertheless, little scholarly attention was paid to the paradoxical side of gig work. Drawing on paradox theory, the present paper proposes a model linking gig workers' paradoxical experiences and their service performance. We focus on emotional exhaustion as a key underlying mechanism to explain why gig workers fail to address tensions in some circumstances. Furthermore, we hypothesize that paradox mindset acts as a protective factor in gig workers' coping process on paradoxical experiences. To examine our model, we conducted a 14-day diary study with a sample of food delivery workers. Our results found that gig workers with low paradox mindset were more prone to experience emotional exhaustion under salient paradoxical tensions in their daily work, which further weakened their service performance in dealing with food orders. Our research sheds light on gig work by identifying its paradoxical nature and implying its downstream consequences as well as the preventing approach.

Brave New World: Artificial Intelligence at Work

Session Moderator: **Jia Luo**, *Chengdu U.*

OB: AI-Related Job Crafting to (In) Congruence Between Human-AI Collaboration Job Demands and Resources

Author: **Yuan LIANG**, *Harbin Institute of Technology*
Author: **Tung-Ju WU**, *Harbin Institute of Technology*
Author: **Wen-Yan DUAN**, *Harbin Institute of Technology*
Author: **Shi-Jia Li**, *Harbin Institute of Technology*
Author: **Xuan Xuan Cui**, *Harbin Institute of Technology*

Human-AI collaboration (HAI-C) becomes the new working model and brings a range of novel job demands and job resources. Based on the job demands-resources model (JD-R), this research conceptualizes and develops the concept of HAI-C job demands and job resources and explores how (in)congruence between HAI-C job demands and job resources impacts employee's AI-related job crafting. In Study 1, we establish a reliable, valid scale to measure HAI-C job demands and job resources based on a semi-structured review and literature analysis. Results suggested that the six factors explain the construct of HAI-C job demands and job resources well, with high reliability and quality. In Study 2, we recruited employees from a range of industries who work with AI in daily tasks. After that, 400 valid three-wave lagged questionnaires were collected. Results showed that employees behave more AI-related job crafting when there is a fit between HAI-C job demands and job resources, even when fit at low levels. When HAI-C job demands extends or falls short of an employee's HAI-C job resources, employees should behave less in job crafting. Theoretical and practical contributions are discussed.

OB: Dual Effects of AI Enabled Job Non-Routinization on Proactive and Responsive Creativity

Author: **Zhao Dan**, *Hainan U.*
Author: **Ningyu Tang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Shenyang Hai**, *Hainan U.*

AI enabled job non-routinization (AI-JN) focuses the extent to which tasks involving higher level of problem-solving, higher degree of uncertainty and fewer set procedures when AI automates some repetitive and modularized aspects of tasks. It is unclear, however, whether AI-JN serves as a catalyst or an impediment to employee creativity. Our research aims to address this issue by theorizing that employees' responses to AI-JN are influenced by how AI-JN is appraised, and these appraisals can have different implications for creativity. Drawing from transactional theory of stress, we (a) distinguish the consequences of AI-JN for proactive versus responsive creativity through different appraisals (i.e., challenge and hindrance appraisals) and (b) introduce the moderating role of tacit knowledge awareness (TKA) as a key personal resource in the stress appraisals process. Results from an online study and a field study revealed that AI-JN induced challenge appraisals and further led to proactive creativity, whereas hindrance appraisals of AI-JN resulted in responsive creativity. We further found that employees with higher TKA were likely to regard AI-JN as more challenging and less hindering, which led them to engage in proactive creativity or responsive creativity. We discuss future research directions and provide several practical implications for both organizational leaders and human resource (HR) practitioners.

OB: Artificial Intelligence As a Double-Edged Sword For Employee Empathetic Creativity

Author: **Jia Luo**, *Chengdu U.*
Author: **Xinyan Mu**, *NingboTech U.*

Artificial intelligence (AI) technologies are being integrated into the service workplace for customer interactions. At the same time, service organizations continue to rely on human employees to perform service work in the service encounter. However, whether and when the use of AI helps or hinders employees is underexplored. Drawing on social interdependence theory, this study develops an integrative framework to examine AI-employee interactions under the role of laissez-faire leadership in the service context. Results from a three-wave survey suggest that under the supervision of laissez-faire leaders, employees working with AI experience more workload on repetitive tasks and experience more role ambiguity, which further prevents them from exerting their comparative advantage of empathetic creativity – showing empathy to customers in creative ways. Our research offers a comprehensive view for understanding the impact of AI on service workers, with theoretical and practical implications.

OB: Escaping to a Structured World: Opacity of AI, Work Withdrawal, and Interpersonal Objectification

Author: **Guoyang Zheng**, *Peking U.*
Author: **Guiquan Li**, *Peking U., School of Psychological and Cognitive Sciences*

The current study aims to understand how the workplace new “coworker” AI exerts opacity challenges to human employees and its downstream outcomes, as well as how organizations could help alleviate the detrimental effects. Drawing on compensatory control theory and literature on workplace AI, we argue that, when viewing AI as a new “coworker”, AI exhibits opacity to human employees and propose that opacity of AI affects human employees' perceived lack of control, which in turn impacts task and social structures in a broader organizational context. We also identified the important role of organizational AI socialization practice in mitigating the undesired effects of opacity of AI. We conducted a pre-registered online experiment and two time-lagged survey studies to test our hypothesized model. Results indicated that opacity of AI positively predicted employees' perceived lack of control, which in turn was positively related to work withdrawal and objectification towards coworkers. Moreover, organizational AI socialization practice mitigated the effects of perceived lack of control on work withdrawal and objectification towards coworkers. We conclude the article with discussions of our theoretical and practical contributions.

Morality Research in Organizations

Session Moderator: **Junting Lu**, *school of business, shandong U.*

OB: **Inside vs Outside-Based Moral License: An Integrated View on Self-Concepts**

Author: **Junting Lu**, *school of business, shandong U.*

Author: **Yinghao Qi**, *Nanyang Technological U.*

Author: **Zhe Zhang**, *Xi'an Jiaotong U.*

Author: **Xinyang Guo**, *U. of Chinese Academy of Sciences*

Although various studies recognize the moral licensing effect of good soldiers becoming bad apples, they overlook the (in)congruence of self-concept and good deeds, as well as different types of moral license. Integrating the self-concept literature with moral license theory, we employ a dyadic approach to consider self-concept and organizational citizenship behavior (OCB) simultaneously. We investigate whether the (in)congruence of self-concept and OCB affects different types of moral license on subsequent unethical behavior. To test our hypotheses, a multiphase and multisource field study was conducted. Our polynomial regression analyses revealed that inside-based (outside-based) moral license did not exist when the levels of relational (collective) self-concept and OCB-I (OCB-O) were congruent (i.e., low-low or high-high congruent dyads). Asymmetric incongruence effects were also found: employees felt the strongest inside-based (outside-based) moral license when their OCB-I (OCB-O) levels were higher than their relational (collective) self-concept levels. In a laboratory experiment, we further found that inside-based and outside-based moral licenses were positively correlated with unethical behavior respectively. Last, we discussed the contributions and practical implications of our findings.

OB: **Discrete Emotions and Moral Insight**

Author: **Thamer Alanazi**, *Academy of Management*

Author: **Zainab Alsayed**, *Surrey Business School*

Author: **Irina Cojuharenco**, *Surrey Business School*

Author: **Sebastiano Massaro**, *Surrey Business School*

Moral insight, - the identification of solutions to right-right moral dilemmas that satisfy competing moral norms, - is an important antecedent of ethical decision-making, yet it remains poorly understood. We investigate the impact of discrete emotions of joy, awe, love, positive surprise, negative surprise, fear, loneliness, and anger, on moral insight. Predictions are formulated drawing on negotiational self theory (Nir, 2016) and the appraisal tendency framework of emotions (Lerner & Keltner, 2000), and undergo empirical testing in a pre-registered experiment with a recall-based emotional induction (N=1118). Participants are tasked with finding solutions to moral dilemmas that are both generic and situated in the context of COVID-19 pandemic. We find that discrete emotions may operate differently depending on their associated appraisal tendencies. For example, although both positive surprise and joy are positive emotions, positive surprise fosters moral insight more than joy. We discuss the implications of our findings for the theory and practice of ethical decision-making in organizations.

OB: **Sweep My Mistakes Under the Rug: Social Robots as Enablers of Immoral Behavior in Human-Robot Joint**

Author: **Chao Lei**, *School of Management, Huazhong U. of Science and Technology*

Author: **Pengcheng Zhang**, *Huazhong U. of Science and Technology*

Author: **Pan Jingjing**, *School of Management, Huazhong U. of Science and Technology*

Author: **Huan Tao**, *School of Management, Huazhong U. of Science and Technology*

People commonly desire to have a positive self-image and social image, but they may occasionally engage in immoral behaviors (e.g., responsibility-deflection) when facing moral dilemmas involving conflicts of interest. Today, social robots are widely applied in our lives, and they perform peer roles in many businesses. However, knowledge regarding whether and to what extent robot peers enable humans to engage in immoral acts (e.g., deflecting their responsibility) during human-robot joint actions is limited, particularly in situations where human responsibility leads to failures. This research evaluated responsibility-deflection experiments on human-robot joint actions involving adults and children. First, we find robots to be enablers of the immoral behavior of adults, namely, adults are likely to exhibit more immoral intentions with robot peers than with human peers. Furthermore, as people perceive a robot with lower anthropomorphism, immoral intentions tend to increase. Second, in this study involving 9- to 11-year-old children, we show that children resist the enabler effect. We further theorize that interaction with robots (vs. humans) evokes a decreased feeling of guilt as well as pressure, and ultimately increases immoral intentions. Our evaluation of social robots, functioning as peers to adults, demonstrates the development of robots and raises concerns about adults' comparatively increased immoral behaviors; thus, the potential impact of the enabler effect in organizations cannot be ignored.

OB: **The Effects of CEO Political Activism on Employee Perceptions at Work**

Author: **Andrew Soderberg**, *U. of Wisconsin, Oshkosh*

Author: **Teng Zhang**, *Penn State Harrisburg*

Throughout the world, political differences are an inherent part of life. Regardless of the type of government in a given locale, people will have varying opinions about a variety of issues including the effectiveness of certain policies, the best way to approach problems, and the role that government should play in solving these problems. Although these differences are often manifest in political debates, they are not typically thought of as an inherent aspect of people' regular day-to-day work life. However, as a result of the increasing political polarization, more organizations are becoming vocal and active in advocating for or against certain political causes. This often occurs when the CEOs of organizations engage in political activism in which they assert their own political preferences and beliefs on behalf of the organizations they lead. We find that employees generally perceive CEO political activism as an inappropriate endeavor. We also find that these perceptions—regardless of the personal political beliefs of the employees—differ depending on the context of CEO political activism (i.e., whether the CEO engages in political activism related to liberal vs. conservative causes).

Do Leaders Make the Place?

Session Moderator: **Moritz Johannes Volk**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*

OB: The Association Between CEO Political Ideology and Corporate Culture

Author: **Moritz Johannes Volk**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*

It is the often intangible force of corporate culture (CC) that drives companies to great success or unexpected challenges. As the primary decision-maker, the CEO plays a central role in shaping the firm's culture. Nonetheless, current research falls short of understanding how the values and political views of the CEO influence CC. Drawing on upper echelons theory, we find that CEO political liberalism is positively associated with the firm's culture. However, environmental dynamism and the CEO's firm variety can negatively influence this relationship. In this study, we leverage a novel text-based method to measure CC and analyze a sample of 1,431 firm-year observations from 246 distinct companies from the S&P 500 spanning from 2005 to 2020. We contribute to the understanding of how the CEO influences CC and provide meaningful theoretical and managerial implications to the literature on CC.

OB: Simultaneously and Over Time? A Temporal Investigation of Paradoxical Leader Behavior  

Author: **Nils Fürstenberg**, *U. of St. Gallen*

Paradoxical leader behavior (PLB), or leaders adopting contrasting behaviors to address apparently conflicting demands (Zhang, Waldman, Han, & Li, 2015) has been linked to outcomes such as increased follower performance and creativity: But how does it influence employee health? And—does it make a difference how leaders enact such behaviors? I begin to address these questions by differentiating between two PLB strategies: longitudinal PLB (adopting contrasting behaviors over time) and momentary PLB (adopting contrasting behaviors concurrently at a particular moment). I then interrogate daily experience sampling and biometric data from individuals at a multinational company to find that longitudinal, but not momentary, PLB by managers decreases employees' daily feelings of emotional exhaustion and increases heart-rate variability during sleep. My results also show a cross-level interaction effect between longitudinal- and momentary PLB on employees' emotional exhaustion, but in contrast to what current “both-and” theorizing predicts: paradoxical behavior in the moment weakens the apparently protective effects on employee emotional exhaustion of PLB over time. These findings shed light on the homology of PLB theory and emphasize the importance of understanding not only if but also how leaders engage in PLB.

OB: The impact of CEO Narcissism on Organizational Flexibility: A Moderated Mediation Model 

Author: **Xiaoxuan Chen**, *Guanghua School of Management, Peking U.*

Author: **Wenzhou Wang**, *Beijing Normal U.*

Organizational flexibility is very important for firms to better cope with the turbulent external environment, adapt to technological changes and innovate better. Following the literature on the bright and dark sides of narcissism, we develop a moderated mediation model to examine the impact of Chief Executive Officer (CEO) narcissism on organizational flexibility. Using a sample of 116 firms in mainland China, we found support for the moderated mediating process. When narcissistic CEOs strongly identify with their organization, the mediating effect is positive on organizational flexibility through the TMT collaborative conflict culture. When narcissistic CEOs weakly identify with their organization, the mediating effect is negative. Our research identified both a mediating mechanism (i.e., the TMT collaborative conflict culture) and a boundary condition (i.e., CEO organizational identification) for the relationship between CEO narcissism and organizational flexibility. We corroborate earlier research on the crucial role of CEO organizational identification in suppressing the detrimental effects of CEO narcissism and enlarging its beneficial influence. We also focus on the collaborative conflict culture as a more practice-oriented TMT process.

OB: Hide the Spark, Dig Deep in the Dark: How and When Uncertainty Avoidance Employees Get Promoted

Author: **Jinzhao Qu**, *Xi'an Jiaotong Liverpool U.*

Author: **Zhijie Xing**, *Zhongnan U. of Economics and Law*

Uncertainty avoidance, which refers to individuals' attempts to avoid uncertainty, is increasingly recognized as an important personal characteristic in today's increasingly dynamic and uncertain work environment. Research has mainly focused on its influence on rehearsing job components and skills for efficient performance. Little is known about whether and when supervisors will evaluate those with high uncertainty avoidance as more or less promotable. Drawing on trait activation theory, we propose that, relative to low-humility supervisors, high-humility supervisors interact with those with uncertainty avoidance employees who engage in bootlegging as underground creative endeavors and subsequently evaluate these employees as more promotable. Using a four-wave survey of 214 supervisor-subordinate dyads in a company specializing in artificial intelligence, we find that under high leader humility, uncertainty avoidance is positively related to bootlegging, which in turn increases promotability. These findings provide new insights into understanding the impact of uncertainty avoidance and the importance of leader humility in activating this trait.

OB: Beyond Short-Term Impressions: Construed Temporal Distance, Trustworthiness, and Leader Emergence 

Author: **Andrew A. Hanna**, *U. of Nebraska, Lincoln*

Author: **Brett Neely**, *U. of Nebraska, Lincoln*

Researchers have continued to explore the impact that impression management (IM) behaviors have on emerging as an informal leader based on the perceptions of one's peers (Hanna, 2021a, 2021b). Such studies have proposed that individuals use these behaviors as signals of characteristics befitting of an emergent leader, such as being seen as trustworthy. But are all such personal characteristics equally relevant to predicting leader emergence across team contexts? Construal-level theory (CLT; Trope & Liberman, 2010) suggests that the length of the team's outcome time horizon may determine when peers see certain qualities as characteristic of emergent leadership and when they do not. In this paper, we apply CLT to the relationships between IM behaviors, trustworthiness, and leader emergence, arguing that peers will evaluate leadership qualities differently based on the temporal context (i.e., short-term and long-term) of their current team collaboration. We test hypotheses using two different samples, one working in short-term collaboration (90 minutes; 189 individuals, 52 teams) and one in long-term collaboration (12 weeks; 191 individuals, 53 teams). Results suggest that behaviors and perceptions relating to one's ability to achieve the task at hand are always relevant to leader emergence across contexts, while those related to one's benevolence are only relevant to emergent leadership in longer-term collaboration contexts. Based on CLT and these initial findings, we suggest that individuals may prioritize task-related abilities and behaviors in shorter-term team contexts, while considering a broader range of interpersonal qualities, like benevolence, in longer-term team contexts.

OB: Exploring Overqualified Talent in the Workplace: A Comprehensive Review

Author: **Muskaan Virdi**, *Doctoral Student at Indian Institute of Management Lucknow*

Author: **Nishtha Arora**, *Indian Institute of Management, Lucknow*

Author: **Nishant Uppal**, *Indian Institute of Management, Lucknow*

Employee overqualification denotes underemployment, where employees possess more education, skills and abilities than the job requires. Despite being a widely observed phenomenon, the field lacks comprehensive reviews synthesizing all its dimensions with major existing review studies focusing on a few chosen dimensions, primarily perceived overqualification. Aiming to address this gap and to review the field scientifically, this paper conducts a bibliometric analysis of the research on employee overqualification. For the study, 610 overqualification articles were analyzed using citation and co-citation analyses, followed by content analysis to form thematic clusters. By uncovering the topic's core intellectual structure, recognizing patterns and providing directions for further research after a comprehensive synthesis of past literature, this paper adds value to the field of employee overqualification. We contribute to practice by establishing clarity regarding overqualification, aiding in improving recruitment processes.

OB: Recipients' Reactions to Workplace Gossip: The Critical Role of Attributed Motives

Author: **Chen Ding**, *Nanjing U.*

Author: **Mengting Su**, *Mahidol U.*

Author: **Jialiang Pei**, *South China U. of Technology*

Despite the pervasiveness of gossip in the workplace, there is a lack of comprehensive research on how recipients respond to it. It is crucial to consider how recipients interpret the senders' intentions and their subsequent internal and external outcomes. We develop a process model combining attribution theory, social value orientation theory, and the social functional view of emotions. Specifically, we propose that gossip receivers will interpret and evaluate the intentions, needs, and goals behind the gossip event, attributing them to prosocial or proself motives. These attribution tendencies interact with gossip of different valences, activating receivers' internal emotions targeting either the gossip or the gossiped-about, which, in turn, influence the recipients' own positive or negative behaviors. This attributional process, along with the transformation of intrinsic emotions into extrinsic behaviors, is bounded by the exchange relationships between the parties involved. The proposed model suggests that gossip valence does not always determine its impact, as negative gossip can have beneficial repercussions while positive gossip can have detrimental consequences, depending on the attributed motives of the gossip receiver.

OB: Unveiling Coworker Capitalization: Motive Attribution and its Workplace Implications 

Author: **Chenduo Du**, *Purdue U. Northwest*

Coworker capitalization refers to employees sharing work-related positive events with their coworkers (Watkins, 2021). Existing research suggests that individuals can benefit from sharing positive events with those in close relationships. However, this phenomenon may not hold true when it comes to sharing such events in coworker relationships. Unlike close relationships, coworker relationships involve more unknowns, leading recipients to form diverse interpretations regarding why their coworkers share work-related positive events with them. To shed light on this, we introduce attribution theory (Heider, 1958) as a novel perspective to understand the effects of coworker capitalization. We propose that coworker capitalization may prompt recipients to attribute three distinct motives to disclosers: a self-promotion motive, an other performance promotion motive, and an expressing positive affect motive. These attributed motives serve to explain why coworker capitalization may or may not result in benefits for disclosers, because the motives would impact social undermining behaviors, interpersonal citizenship behaviors, and supportive responsiveness from recipients toward the discloser, respectively. Drawing from attribution theory, we also propose that recipients' preexisting impression about the discloser's narcissism may moderate how they attribute motives to their coworkers' capitalizing behaviors. We found partial support for this hypothesized model through a quasi-experimental experience sampling study.

Situational Triggers of Emotions at Work

Session Moderator: **Fang Li**, *U. of Hong Kong*

OB: Work Stressors and Job Performance: A Meta-Analysis of the Affective Mechanisms

Author: **Fang Li**, *U. of Hong Kong*
Author: **Yiwen Zhang**, *U. of Hong Kong*
Author: **Ying Zhang**, *U. of Arkansas Sam M. Walton College of Business*

This study employed a meta-analytic approach to investigate the affective mechanisms underlying the relationship between work stressors and job performance (i.e., task performance, organizational citizenship behaviors, and counterproductive behaviors). Specifically, the results confirmed our hypotheses that hindrance stressors and interpersonal stressors are negatively related to positive affect and positively related to negative affect, whereas challenge stressors are positively related to both positive affect and negative affect. Path analyses also supported the mediating role of positive and negative affect in the stressor-job performance relationship. Specifically, both hindrance and interpersonal stressors have a negative indirect effect on task performance and OCBs and a positive indirect effect on CWBs through positive affect, whereas challenge stressors have a positive indirect effect on task performance and OCBs and a negative indirect effect on CWBs through positive affect. All three types of stressors have a negative indirect effect on task performance and a positive indirect effect on CWBs through negative affect. That being said, challenge stressors did not correlate with emotional ambivalence (i.e., the simultaneous experience of positive and negative emotional orientations toward a person, object, task, goal, or idea). Instead, hindrance stressors and interpersonal stressors were found to be positively associated with emotional ambivalence.

OB: The Interpersonal Emotion Regulation Roots of Leader Affective Presence in Teams

Author: **Hector Madrid**, *Business School, U. Adolfo Ibanez*
Author: **Cristian Vasquez**, *Sheffield U. Management School*
Author: **Stephen Woods**, *U. of Liverpool Management School*

Leader affective presence is the tendency of leaders to elicit the same shared feelings among their team members and is supported as a substantive influence on teamwork outcomes. Nevertheless, there is a dearth of knowledge about the etiological factors leading to the construction of leader affective presence. Based on emotion regulation theory, we propose that leaders' strategies to generate positive affect among team members, namely, leader affect-improving emotion regulation, is a source of their positive affective presence. In contrast, leader affect-worsening interpersonal emotion regulation could drive leader negative affective presence. We tested these proposals in a two-wave longitudinal survey study based on 479 members and 61 leaders of their teams, using cross-lagged structural equation modeling. Thus, this study contributes to the nascent literature on leader affective presence by showing its behavioral roots.

OB: Am I the Only One Angry? How Collective Anger Shapes the Effect of Abusive Supervision on Voice

Author: **Yujun Sha**, *City U. of Hong Kong*
Author: **Junhyok Yim**, *City U. of Hong Kong*
Author: **You Jin Kim**, *City U. of Hong Kong*
Author: **Jo K. Oh**, *U. of Connecticut*
Author: **Jiajin Sophie Tong**, *School of Psychological and Cognitive Sciences*

Prior studies suggest that anger towards an unfavorable work situation may serve as a catalyst for employees to speak up to improve the workplace. However, other studies have shown that individuals who experience anger in the workplace may reduce voice behavior, deliberately withholding valuable input that could benefit the organization. That is, the relationship between anger and voice behavior remains inconclusive in the current literature. To reconcile these mixed findings, we draw from the literature on collection emotions and voice and present collective anger as a key moderator in the relationship between anger arising from abusive supervision and employee voice behavior. Utilizing multi-level and multi-wave data collected from 165 employees and 47 supervisors in a large department store, we theorize and find support that collective anger plays an important role in shaping the effects of abusive supervision on employee voice behavior. Results show that collective anger strengthens the positive relationship between abusive supervision and anger, while mitigating the relationship between anger and voice behavior at the same time. Specifically, we find that anger towards abusive supervisor is positively (negatively) associated with voice behavior only when collective anger is lower (higher). Collectively, our findings provide insights into the role of collective anger on the relationship between abusive supervision and employee voice behavior.

OB: Threat Demands and the Challenge Hindrance Stressor Framework (CHSF): Development of a Measure

Author: **Marcie LePine**, *Arizona State U.*
Author: **Soohyun Yoon**, *Arizona State U.*
Author: **Miriam Schilbach**, *Maastricht U.*
Author: **Jennica R. Webster**, *Marquette U.*

Interpersonal mistreatment in the workplace has gained significant attention over the past few years. Although interpersonal mistreatment is stress-inducing, little work has been done to examine whether interpersonal mistreatment is a hindrance demand (an obstacle to overcome) or a threat demand (resulting in personal harm or loss), whether differences in categorization exist by gender or race/ethnicity, and if differences in categorization exist, the impact of those differences on individual and organizational outcomes. To examine these questions, we use the Hinkin and Tracey (1999) content validation approach to determine the definitional correspondence and definitional distinctiveness (Colquitt et al. 2019, p. 1243) of our proposed threat demand items that we generated from existing mistreatment measures. We utilize common challenge and hindrance demands as the orbiting constructs. Our results reveal that hindrance demands and threat demands are separate constructs, with interpersonal mistreatment representing threat demands. Our results also reveal that women are significantly more likely to rate interpersonal mistreatment as a threat (vs. a hindrance) as compared to men. Implications of these findings are discussed.

How to Review a Manuscript? A Developmental Panel Sponsored by Journal of Managerial Psychology

Organizer: **Jeremy D. Meuser**, *Purdue U. Northwest*
Organizer: **Carrie A. Bulger**, *Quinnipiac U.*
Panelist: **Bella Galperin**, *U. of Tampa*
Panelist: **Jorge A. Gonzalez**, *U. of Texas Rio Grande Valley*
Presenter: **Frankie Jason Weinberg**, *Loyola U. New Orleans*
Presenter: **Jeremy D. Meuser**, *Purdue U. Northwest*

Reviewing a manuscript and providing solid recommendations to action editors is a critical part of the scientific process. Yet, as critical as it is, there seems to be little opportunity to develop this skill, called a “professional obligation” (Treviño, 2008). This panel, targeted at students and junior scholars, gathers JMP action editors to discuss reviewing experiences with current and potential reviewers in a round-table format. At the round tables, participants will discuss their reviewing experiences. Participants will receive resources for use later when executing their own reviews.

Dangerous Liaisons: When Leadership Intersects with Bad Behaviors

Session Moderator: **Yifan Li**, *School of Management, Xi'an Jiaotong U.*

OB: **Grandiose Narcissism Can be Good for Leadership Effectiveness: Political Skill as Game Changer (WITHDRAWN)** 

Author: **Franziska Böhm**, *U. of Bonn*

Author: **Gerhard Blickle**, *U. of Bonn*

In this study, we tested the productively tempering role of political skill, which is a developed level of social skill at work and an acquired interpersonal competence, on the relation between leader grandiose narcissism and leadership effectiveness. In a sample of 640 supervisors and 1259 employees, we found that at high levels of leader political skill, both low and high leader grandiose narcissism have beneficial consequences for leadership effectiveness, yielding a U-shaped relation between grandiose narcissism and leadership effectiveness. Individuals high on political skill and grandiose narcissism have the self-control capacity to temper aggressive impulses and simultaneously productively package and present their desire for admiration and adulation in a manner that allows them to gain subordinates' acceptance. Individuals low on grandiose narcissism display high honesty-humility. Supervisors high in political skill and low in grandiose narcissism effectively direct their motive to get along (honesty-humility) to be well-received by subordinates. If leader political skill is low, we found the inverse U-shaped relation between grandiose narcissism and leadership effectiveness previously established in meta-analytic research. We discuss how individuals can develop higher levels of political skill at work and limitations.

OB: **Restraint or Indulgence? The Effect of Leader Mindfulness on Subordinate Unethical Responses**

Author: **Yifan Li**, *School of Management, Xi'an Jiaotong U.*

Author: **Li Chengcheng**, *Xing Zhi College of Xi'an U. Of Finance and Economics*

Author: **Jie Li**, *Xi'an Jiaotong U. School of Management*

Author: **Zhuojing Li**, *the school of management of Xi'an JiaoTong U.*

While existing research has consistently confirmed that leader mindfulness is beneficial for employees, teams, and organizations, we challenge this consensus by revealing its hidden dark side effects. Drawing on social cognitive theory, we propose that leader mindfulness can inadvertently promote subordinate moral disengagement, which in turn induces unethical pro-organizational behavior (UPB). Specifically, we argue that subordinate bottom-line mentality (BLM) could serve as a reversal factor, such that leader mindfulness increases (vs. decreases) moral disengagement for subordinates with high (vs. low) BLM. Furthermore, we theorize that the indirect effect of leader mindfulness on UPB through moral disengagement is positive when subordinate BLM is high and negative when subordinate BLM is low. Data from a time-lagged field study with a sample of 262 leader-subordinate dyads supports our moderation and moderated mediation hypotheses. We thus highlight the potential hazards of leader mindfulness by combining the "good intentions" of leaders and the "bad traits" of subordinates to show the ethical decision-making process of UPB.

OB: **Too Varying of a Good Thing: The Effect of Inconsistent Empowering Leadership on Follower Outcomes** 

Author: **Sunghyuck Mah**, *Seoul National U.*

Author: **Minyoung Cheong**, *Kyung Hee U.*

Author: **Haeseen Park**, *Bowling Green State U.*

An ample body of research has enlightened us on the impact of desirable leadership by assessing it at a specific moment in time and tracking beneficial outcomes. Nonetheless, one significant aspect has been overlooked. Leadership may not be consistent. The onerous burden and incessant demands placed on leaders impede their ability to sustain a steady course of action. Empowering leadership (EPL), which requires great care in delegating responsibility and authority, is particularly susceptible to such variations. To capture this more realistic picture than the current literature, this study investigates how inconsistent EPL affects followers. Drawing on sensemaking theory, we predict that the degree of inconsistency between prior and current EPL may deplete followers' resources as they adapt to change, and this may subsequently hinder their creative performance. Extending the theory, we anticipate that the time followers have spent with their leaders (i.e., dyadic tenure) will help them more readily make sense of variations and mitigate these negative impacts. To test our hypotheses, three-wave surveys of leader-follower dyads from two major sources (an MBA and a private company) were analyzed using polynomial regression. These findings demonstrate that even positive behaviors, such as EPL, can have negative consequences when they vary considerably ('Too-Varying-of-a-Good-Thing'). This provides theoretical and practical implications for leadership literature.

 OB: **Where (and Why) do Narcissists Emerge as Leaders: A Cultural Perspective**  

Author: **Yuqi Liu**, *U. Ramon Llull, ESADE Business School*

Author: **Laura Guillén**, *U. Ramon Llull, ESADE Business School*

Author: **Francois Herve Collet**, *U. Ramon Llull, ESADE Business School*

Although narcissists often emerge as leaders, how and why the relationship may vary across cultures is unexplored. Drawing on implicit leadership theory, four experiments (N = 2911) explained why the effect of narcissism on leadership emergence is more positive in China compared with the US. While perceived agency (e.g., dominance, confidence) facilitated narcissists' way to the top in both countries, in China, narcissists were less perceived as lacking communion (e.g., warmth, forgiveness), so that such deficiency was less strongly punished. Study 4 further showed that paradoxical thinking and typical leadership prototype explained why Chinese were more likely than Americans to associate narcissism with communion. We discuss theoretical and practical implications.

Third-Party Perceptions of Victims in the Workplace: New Complexities and Opportunities

Organizer: **Samantha Dodson**, *Haskayne School of Business, U. of Calgary*
Organizer: **Rachael Goodwin**, *Syracuse U. Whitman School of Management*
Presenter: **Sarah Jensen**, *U. of Utah, David Eccles School of Business*

Third parties, or people who learn about or observe others' mistreatment at work without being directly involved (Skarlicki & Kulik, 2005; Treviño, 1992), play a crucial role in victims' future workplace outcomes following the initial mistreatment (Dodson et al., 2023). However, the intricacies of the relationship between victims and third parties are under-addressed in the current literature, and we believe scholars have merely scratched the surface of understanding how third-party responses affect victims of workplace misconduct or mistreatment. In this symposium, we present four papers that share novel findings related to how third parties respond in the aftermath of workplace mistreatment and highlight opportunities to continue to expand our understanding of complex interpersonal processes that occur in organizations between third parties, victims, perpetrators, and other organizational stakeholders following mistreatment.

Embracing Structure in Organizations: The Interplay Between Perceptions and Benefits of Structure

Organizer: **Kelly Harrington**, *Kellogg School of Management, Northwestern U.*
Presenter: **Nicole Abi-Esber**, *Harvard Business School*
Presenter: **Charles Adam Dorison**, -
Presenter: **Sophia Pink**, *The Wharton School, U. of Pennsylvania*
Participant: **Alison Wood Brooks**, *Harvard U.*
Participant: **Ariella Kristal**, *Harvard Business School*
Participant: **Loran F. Nordgren**, *Northwestern U.*

The idea that structure—explicit and predetermined rules that are imposed to guide behavior in situations and tasks—can elevate and improve performance is well established in the field of management. However, what is largely absent from the literature is an investigation of individuals' perceptions and attitudes towards the structures that are often embedded in tasks and situations necessary for our work. As perceptions are consequential antecedents of behavior, how individuals perceive these structured devices may have important implications for the tasks and experiences they choose to engage in and support. The papers in this symposium build on prior work on the topic of structure by making three important contributions: 1) they begin to investigate how people perceive the impact of adding structure on enjoyment and effectiveness; 2) they demonstrate how structure can provide interpersonal benefits—topic preparation improves conversations and precommitment strategies facilitate the development of interpersonal trust; and 3) they show how structural attributions shape perceptions of others, the self, and support for policy. Ultimately, the work presented in this symposium highlights the power of perceptions and how they might hinder our ability to capitalize on the benefits that structure can confer in organizations and society.

Participant: **Stephen Roll**, *Washington U. in St. Louis*

The five presentations tackle different questions about the vulnerability associated with organizational life. The session begins with defining the construct space and exploring what we currently know about vulnerability—what it is and what it is not. The symposium then focuses on trust—an area of management research that includes vulnerability in its major theories (e.g., Mayer et al., 1995). Vulnerability and trust are discussed through the perspective of stress, in which the vulnerability experienced by trustors is explained using principles of cognitive appraisal. Additionally, vulnerability is conceptualized temporally, in which the duration of vulnerability after information sharing helps to explain the relationship between transparency and trust. Finally, the symposium presentations end with empirical studies of underprivileged workers and their experiences with AI-mediated HRM, as well as low-wage workers and how volatile pay influences their well-being. Following the formal presentations, the discussant will then lead a conversation with the audience and presenters that integrates each respective set of insights.

Coordinating Creative Collectives: A Discussion on the Unique Challenges and Opportunities

Organizer: **Kaleigh May**, *Case Western Reserve U.*

Panelist: **John Paul Stephens**, *Case Western Reserve U.*

Panelist: **Justin M. Berg**, *U. of Michigan, Ross School of Business*

Panelist: **Giada Baldessarelli**, *Stockholm School of Economics*

There is much research on creative work groups and collectives' behaviors that enable creativity. The work of collectives coordinating for creativity offers a unique opportunity to find, redefine, and solve problems that could not happen without the collective (Hargadon & Bechky, 2006), but it also presents unique challenges when implementing ideas to create the final product. By incorporating insights from research on collective dynamics, such as coordination and routines, we can potentially address these challenges as well as open up new areas of inquiry. This session will convene scholars who are experts in one or both of the two constructs we will discuss: John Paul Stephens, Justin Berg, and Giada Baldessarelli. In this interactive and structured panel discussion, they will touch on the opportunities and tensions when incorporating insights from collective dynamics, coordination and routines, to creative work. Additionally, the discussion will explore the role of the organization and coordinating mechanisms in creative work and output over time and in relation to the consistency of that output for long-term success in creative work and fields.

This symposium is aimed at building and expanding this stream of research by bringing together four papers that coalesce around the main theme of unintended antecedents and consequences of psychological safety. Specifically, the papers in this symposium examine the utilization of psychological safety in high-performing teams, the curvilinear effects of team psychological safety on creative performance, leader's gaslighting as an antecedent of psychological safety, and associations between psychological safety and receipt of incivility from coworkers. Following the presentations, Dr. Zhike Lei, a renowned scholar in the field of psychological safety, will provide a synthesis and discussion of the papers themselves and broader research trends in the literature.

Recognizing how employees embark on a multifaceted "idea journey," encompassing intricate social processes following the inception of their creative ideas (Amabile & Pratt, 2016; Perry-Smith & Mannucci, 2017; Rouse, 2020), has become increasingly pivotal. Now in its fourth year since the 81st Academy of Management Annual Meeting in 2021, this symposium aims to continue the productive conversation among scholars and practitioners in examining creativity in its entirety. We seek to discuss recent advancements in creativity literature connected to other important research areas such as team dynamics, diversity, and human-AI interactions using a variety of methods and thus, delve deeper into the creative journey from ideation to evaluation.

Participant: **Laura Maria Giurge**, *The London School of Economics and Political Science (LSE)*
Participant: **Amy Randel**, *San Diego State U.*

The intersection of identity and creativity offers a set of nested puzzles: identity seemingly provides stability for creators but also seems to require creators to destabilize their identities to sustain creativity. The papers in this symposium explore managing identity boundaries in creative work, the influence of creator occupational identity on autonomy, how the degree of creative and personal identity integration affects creative recognition, the influence of leader creative catalyst identity on the ability to act as a creative catalyst, and identity conflicts in entrenched organizational creative identity.

Understanding the Emotional Landscape of Change: Insights and Implications

Session Moderator: **Maona Mu**, *North China U. of Technology*

ODC: Compassion Makes Change Happen: Unpacking the Effect of Compassionate Leader Behavior

Author: **Maona Mu**, *North China U. of Technology*
Author: **Wenhao Luo**, *North China U. of Technology*

How to obtain employees' support for organizational change is more important than ever for leaders in this era. Compassionate leader behavior, which refers to a set of behaviors that leaders adopt to assuage employees' suffering, has the potential to encourage employees' proactivity in change. Drawing on the model of proactive motivation, we develop a moderated mediation model outlining how and for whom compassionate leader behavior influences employee pro-change behavior. We conducted a three-wave field survey (N = 275) in 6 companies in China. Our findings revealed that compassionate leader behavior has a positive effect on employee pro-change behavior by increasing employees' change self-efficacy and decreasing their cynicism about organizational change. Moreover, employees' workplace anxiety weakens the relationship between employees' cynicism about organizational change and their pro-change behavior. By doing so, we highlight the constructive role of compassion in change management and offer meaningful insights for practice.

ODC: Rationalizing Vulnerability in Leadership: A Systematic Review and Future Prospects

Author: **Sai Naveen R**, *Sri Sathya Sai Institute of Higher Learning*
Author: **Suma Uppalury**, *Sri Sathya Sai Institute of Higher Learning*
Author: **Surya Prakash Pati**, *Indian Institute of Management, Kozhikode*

Vulnerability, defined as being physically or emotionally wounded is typically perceived as an undesirable human condition associated with defenselessness, criticism, and failure and often construed with behaviours best repressed. In contrast to this widely acknowledged understanding and the increasing redundancy of the heroic models of leadership, the current perspective reframes vulnerability as positive: manifest in the willingness to be honest and open, accepting one's fallibility, and abandon the pursuit for unattainable perfection. This systematic review sought to unravel the core themes associated with vulnerability in leadership from well-established sources of literature and also, propose future directions to draw the contours and possibilities of this nascent area. Strictly toying the PRISMA 2020 framework for systematic reviews, this study involved a constant dialectic process, sourcing literature published over the last two decades, across six reputed databases with a specific focus on reports involving the leader/leadership context only. A rigorous content analysis aided the delineation of five distinct themes associated with vulnerability in leadership along with a configuration of antecedents, deterrents and outcomes of such expressions of vulnerability by leaders. Also, future directions drafted in an interrogative format along with directive implications towards leadership development were identified in line with the clearly formulated research questions that drove the review.

ODC: The Impacts of Entrepreneurial Leadership on Employee's Emotional Exhaustion and Proactive Behavior

Author: **Giang Truong Hoang**, *RMIT U. Vietnam*
Author: **Tuan Trong Luu**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Mingjun Yang**, *La Trobe U.*

Drawing on the principles of the conservation of resources theory and the socially embedded model of thriving, our research aims to investigate the relationships between entrepreneurial leadership and both employee proactive behavior and emotional exhaustion. Additionally, we investigate the mediating effect of thriving at work and the moderating effect of entrepreneurial role identity on these relationships. Two distinct studies were undertaken to examine these associations. In the first study, a field survey conducted with time-lagged and multi-source data from hospitality firms in Vietnam establishes a positive correlation between entrepreneurial leadership and proactive behavior, alongside a negative association with emotional exhaustion. The mediation of thriving at work in these relationships is evident. In Study 2, where time-lagged and multisource data from Vietnamese new ventures are utilized, we discover that entrepreneurial role identity intensifies the negative link between thriving at work and emotional exhaustion. Furthermore, it strengthens the indirect effect of entrepreneurial leadership on emotional exhaustion through thriving at work. Intriguingly, Study 2 reveals unexpected results, positioning entrepreneurial role identity as a negative moderator, diminishing the positive impact of thriving on proactive behavior and the indirect effect of entrepreneurial leadership on proactive behavior via thriving. Our research not only enriches the landscape of entrepreneurial leadership literature but also provides implications for practice.

ODC: When Participation Leads to Change Fatigue: The Moderating Effect of Laissez-Faire Leadership

Author: **Patrick Michel Groulx**, *École des sciences de la gestion (ESG UQAM)*
Author: **Francis Maisonneuve**, *HEC Montreal*
Author: **Kevin J. Johnson**, *HEC Montreal*

Effectively engaging employees in the change process while preventing change fatigue is a significant organizational challenge. Communication and participation strategies are pivotal in change management, yet little research has explored their varying effectiveness under different conditions. Building on the Job Demand-Resource theory (JD-R), we present a moderated mediation model, proposing that communication and participation strategies enhance affective commitment to change by reducing change fatigue, with the moderation effect of laissez-faire leadership. Our empirical study, conducted within a Canadian governmental organization undergoing cultural and digital transformations, involved 340 employees. Path analysis results, while controlling for baseline affective commitment, demonstrate that communication and participation strategies mitigate change fatigue, directly and indirectly fostering affective commitment, particularly in contexts of low laissez-faire leadership. However, under high laissez-faire leadership, communication and participation may increase change fatigue in a subset of cases (11.47%). Our contributions to change management literature include identifying conditions where employee consultation is least effective, particularly under laissez-faire leadership. Additionally, we introduce laissez-faire leadership to the JD-R framework, exploring the impact of passive leadership on job demands and resources. Finally, we highlight change fatigue as an understudied phenomenon with significant consequences for employee well-being and organizational success.

The Many Faces of Organizational Change: Insights and Perspectives

Session Moderator: **Laura Reeves**, *U. of Suffolk*

ODC: **Collective Leadership - A Sociomaterial Perspective**

Author: **Laura Reeves**, *U. of Suffolk*

Author: **Clare Rigg**, *Lancaster U. Management School*

Author: **David Thuku**, *Leadership Presence*

How is collective leadership accomplished through the entangled intra-relations between human and non-human entities? Collective leadership (CL) is understood to be constructed in interaction, yet our understanding of these interactions has been dominated by a focus on the ways humans interact with each other. Less is explored on the ways material relations influence these interactions. This paper argues that CL emerges from the interactions between social, discursive, and material relations. We show how CL always has to emerge in situations that acknowledge the ways humans interact with each other and physical artefacts through discourse. Inspired by a more critical and sociomaterial perspective, we acknowledge the importance of social, discursive, and material relations in developing understandings of CL. We examine the relationship between CL and social, discursive, and physical artefacts by drawing on a year-long action research project implemented within a Kenyan bank. In so doing, we argue that CL involves the acknowledgement of interactions between social, discursive, and material relations. This involves the emergence of CL producing physical artefacts, as well as these physical artefacts influencing the nature of interactions which enables the continuing emergence of CL. We show that socio-materiality facilitates CL through conveying meaning, action-guiding anticipatory understanding, legitimisation of action and communication channels. Hence, neither discourse (human agency) nor materiality (non-human agency) exist prior to each other, nor is one superior or possessing of more agency than the other. Instead, they become 'something' when entangled in intra-actions.

ODC: **Just a Race Hire?: The Effects of Competency Microaggressions on Black Workers**

Author: **Malissa Alinor**, *U. of North Carolina at Chapel Hill*

Black professionals are often subjected to competency microaggressions in the workplace due to stereotypes of intellectual inferiority or assumptions of receiving undue merit from affirmative action policies. Competency microaggressions may undermine the credibility of Black professionals, which may influence their workplace behaviors. This study investigates the workplace behavior of deference, an important behavior in teams that has implications for employee evaluation and status. Through an experimental study with a sample of 295 Black online workers, this study examines the causal effect of competency microaggressions on deference. Those exposed to the competency microaggression exhibited conflict-avoidant responses, concealing self-reported negative emotions. Contrary to external expressions, participants reported increased negative emotions and demonstrated reduced deference than those in the control condition. Partner perception emerged as a causal pathway to explain why experiencing the microaggression affected deference. The findings contribute to microaggressions literature, emphasizing their causal impact and underscoring the role of enactor perception. The findings also suggest that interventions should be aimed at repairing interpersonal relationships, providing valuable insights for organizations addressing workplace microaggressions and mitigating harm to marginalized groups.

ODC: **Organizational Change Quality (OCQ) Scale – Development of a New Instrument**

Author: **Saskia Hasreiter**, *LMU Munich School of Management*

This study addresses the need for a concise and psychometrically sound instrument for assessing the effectiveness of organizational change projects. Drawing on a process as well as a human perspective of change management, we developed a measurement scale aimed at capturing the essential facets of organizational change quality (OCQ). The measurement scale encompasses key aspects of organizational change quality such as process quality (e.g., communication, participation), reactions to change, and outcomes. Using a rigorous step-by-step procedure, including expert consultation and a field study, we refined the OCQ scale to ensure reliability and validity. The resulting 30-item OCQ scale provides an efficient tool for assessing organizational change quality comprehensively. Our study contributes to the field of organizational change by offering a practical and theoretically grounded instrument that can benefit researchers and practitioners alike in diagnosing, understanding, and facilitating effective organizational change. The scale's brevity and robust psychometric properties make it a valuable addition to the toolkit for managing organizational change.

ODC: **A Practice-Based Taxonomy of Corporate Entrepreneurial Agents**

Author: **Aracely Soto-Simeone**, *Aalto U., Department of Industrial Engineering and Management*

Corporate entrepreneurship entails a conjoint effort of employees and their employing firm to create internal ventures, innovate, or instigate renewal. Such activities contribute to create, maintain, and develop further the dynamic capabilities of organizations. In the organizational context, employees who engage in corporate entrepreneurial activities or exhibit entrepreneurial agency are typically known as 'corporate entrepreneurs.' Surprisingly, while the literature on corporate entrepreneurship at the firm-level has advanced considerably, how employees 'do' corporate entrepreneurship has remained underexplored. Based on a qualitative analysis of 48 entrepreneurial employees from Finnish companies, we fill this void by bringing forward different forms of entrepreneurial agency that employees may exhibit. We elucidate the origins of such agency heterogeneity and the consequences of employees' entrepreneurial agency on both themselves and the organization. Drawing on a practice lens to corporate entrepreneurship, we introduce the first empirically-grounded taxonomy of corporate entrepreneurial agents, thus advancing the microfoundations of strategic capabilities literature by uncovering the link between types of employee entrepreneurial agency and capability-building within organizations.

Author: **Mohini Yadav**, Ph.D. Scholar, Faculty of Management Studies, U. of Delhi

Author: **Mahima Thakur**, Faculty of Management Studies, U. of Delhi

PMI has been studied for many decades due to its strong relation with the success rates of mergers and acquisitions (M&As), however, there is no study synthesizing the role played by PMI in one frame. This study aims to explore, analyze, and synthesize existing literature on PMI that facilitates organizational changes during M&As. The paper presents a systematic literature review (SLR) of 193 articles from four databases (Scopus, Web of Science, EBSCO, and JSTOR) on PMI. The Biblioshiny app (R package) is used to discover the most cited papers, leading authors, top journals, countries, institutions, and most used keywords. SLR results are condensed thematically, and the prominent antecedents of PMI and work outcomes are identified. Leadership (especially Rizz leaders) was a crucial factor between the employees with high PMI and M&A success. The impact of organizational culture and national culture are studied in isolation, leading to an incomplete assessment of the impact of cultural issues on PMI to ensure cross-border M&A success. This is the first SLR on PMI to explore the vast extant human resource management (HRM) and CM literature in the execution of successful M&As which is beneficial for academicians.

New Perspectives on the Interplay of Networks and Culture

Organizer: **Pietro Bonaccorsi**, *U. of Toronto, Rotman School of Management*
Organizer: **Bill McEvily**, *U. of Toronto*
Presenter: **Mitali Banerjee**, *McGill U. - Desautels Faculty of Management*

Presenter: **Julien Clement**, *Stanford U.*
Discussant: **Frederic Clement Godart**, *INSEAD*

Networks and Culture represent two foundational theoretical lenses through which scholarship in organizational theory has historically understood and analyzed organizational phenomena. The former focuses on the patterns and formal properties of social relationships in which organizations – or actors within them – are embedded; the latter on the sets of meanings, local practices, repertoires, narratives, beliefs and norms that organizational actors create, adopt and use. While most contributions within organizational theory that consider networks and culture as their explanatory lenses tend to privilege one or the other in isolation, several recent studies situate themselves at their nexus, considering how they mutually constitute each other in organizational contexts, or how their interaction can illuminate our understanding of a host of organizational phenomena. This symposium proposes the presentation of four scholarly papers, each of which examines a facet of the interplay between networks and culture, and brings together scholars of organizational theory, sociology, and strategy whose work reflects a theoretical interest within this space. It aims at advancing scholarly conversation and promote theoretical synthesis in organizational research in this area, exploring, in particular, the agentic mechanisms that individuals and organizations devise in navigating the opportunities or the constraints configured by the cultural and social structural relational spaces in which they are embedded.

Theorizing Values and Worth

Session Moderator: **Rachel Gifford**, *Maastricht U.*

OMT: **The Heroes Descent: How Value Statements Threaten the Wellbeing of Essential Workers**   

Author: **Rachel Gifford**, *Maastricht U.*

Author: **Daan Westra**, *Maastricht U.*

Author: **Bram Fleuren**, *Maastricht U.*

Terminology around the heroism of essential workers quickly surfaces during crises. Early in the COVID-19 pandemic, particularly nurses were lauded as heroes. In our fieldwork, we quickly discovered these essential workers resisted such labeling, but how it really affects them over time remains insufficiently understood. The present paper offers in-depth longitudinal mixed-methods research on how value statements may threaten essential workers' wellbeing. First, it presents qualitative findings combining 40 interviews with archival data to understand how nurses and relevant stakeholders in hospitals perceived the valuing of nurses and nursing work. Second, it presents quantitative findings based on four-wave longitudinal data from 548 nurses on how experienced appreciation by the organization, job control, and support developed over a year and how this relates to work engagement and burnout. Importantly, we find that the labeling of essential workers as heroes and the promises around this label might represent a purely symbolic form of support that never materializes and results in what we label the patronization of work which may threaten the dignity and wellbeing of workers. For example, we find that workers experiences of appreciation, job control, and support begin to decline, resulting in risks of burnout increase and reduced work engagement.

OMT: **Organizational Value Statements: A Symbolic Action Used by New CEOs to Align Employee's Attitudes** 

Author: **Ying Shi**, *Penn State Smeal College of Business*

Author: **Vilmos F. Misangyi**, *Pennsylvania State U.*

Author: **Tessa Recendes**, *Penn State Smeal College of Business*

We seek to advance the literature on symbolic actions and executive symbolism by examining whether and how changes to organizational value statements made by new CEOs affect employees' attitudes toward the organization. First, we suggest that changes in organizational value statements serve as symbolic actions that new CEOs can use to influence employees' attitudes toward the organizational shared values and strategic themes the new CEOs want to put forward. We also examine the moderating effect that the values of employees have on this relationship: we suggest that the effect that changes in organizational value statements have on employee attitudes will be weaker in organizations in which the employee values are unaligned with the changes in values. Second, we suggest that changes in organizational value statements following CEO successions reflect the CEOs' personal values, and we posit that such changes will more strongly reflect new CEOs' personal values in organizations with employees whose values are not aligned with the new CEOs' values—i.e., in situations where symbolic action has more of a potential for aligning values. We tested our hypotheses on a sample of S&P 1500 firms that had CEO successions between 2011 and 2015. Our results are highly supportive. We conclude with a discussion of the theoretical and future research implications of our study and its findings.

OMT: **Remaking Worth: Theorizing the Transformation of Institutional Values**   

Author: **Bandita Deka Kalita**, *U. of Alberta School of Management*

How can industries transition towards newer conceptions of good, and consequently, more sustainability outcomes? From a historical, inductive case study of Alberta's oil and gas industry between 1938 and 2019, I examine how values constituted the incumbent extractive institution's transformation. Using process theoretic methods and topic modeling, I theorize how this transformation transpired via an axiological motor consisting of two sets of opposing processes that remake "worth" across two dimensions. I conceptualize worth as a register, or measure, infusing "the good" in values. My theory of remaking worth primarily contributes by furthering "a constitutive approach" to institutional analysis, advancing institutional scholarship beyond overly cognitive explanations of change and maintenance. Second, it also explains how the remaking of worth, in driving values transformation, anchors the construction of grand challenges.

OMT: **Values as Metaphor: A Meta-Theoretical Framework of Values in, as, and Through Organizing (WITHDRAWN)** 

Author: **Meaghan Jean Girard**, *HEC Montreal*

Values have had a difficult relationship with organizational and management scholarship—one characterized at times by a skewed substance ontology, at other times by a mix of confusion, derision and hype. And yet, values continue to fascinate us. To address these challenges and propose a new foundation for values research, this conceptual paper problematizes the "values" construct and literature in order to introduce four metaphors, based on the literature, that explore archetypical relationships between values and organizing—values-as-biology, values-as-mechanism, values-as-structure, and values-as-interactions—through which to organize the extant literature, circumscribe persistent problems of ontological drift and concept creep, and identify new research avenues. Finally, noting the persistent influence of the dominant social psychology construct proposed following calls to develop an objective "science of values", I propose a fifth metaphor, values-as-dialectics, which grounds itself in the intersubjectivity and radical temporality of George Herbert Mead in order to propose an alternative, profoundly dynamic way to study values in a spirit of greater plurality.

Stigma, Conspiracy and Deviance ... Oh My!

Session Moderator: **Varkey Titus**, *U. of Nebraska, Lincoln*

OMT: **Organizational Blame: A Theoretical Model of How Stakeholders Blame Organizations**

Author: **Varkey Titus**, *U. of Nebraska, Lincoln*

Author: **Robert James Campbell**, *U. of Nebraska, Lincoln*

Author: **Izuchukwu Evans Mbaraonye**, *U. of Missouri, Kansas City*

When organizations engage in misconduct, they are subject to a variety of evaluations and actions from stakeholders. Yet research on organizational misconduct overlooks the concept of blame, and this is unfortunate because blame is an evaluation that animates important stakeholder reactions such as boycotts, stock market slumps, and others. We synthesize insights from philosophy, psychology, and corporate law to introduce the concept of organizational blame, which is a stakeholder evaluation resulting from a firm engaging in an act that violates a moral norm and is socially undesirable. We then develop a theoretical model for how stakeholders make blame assessments of organizations.

OMT: **The Dynamic Costs of Deviance: Status, Track Records, and Social Sanctions**

Author: **Lisha Liu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Pavel Ivanov Zhelyazkov**, *Hong Kong U. of Science and Technology*

Organizational theorists have extensively documented the effects of status on deviance and social sanctions. Their approaches, however, hold a static view of the audiences' expectations of and attention towards high-status actors. We theorize that when high-status actors enter a new domain they face higher expectations and more attention combined with lack of established priors, leading to intensive social sanctions on any early deviance; but once high-status actors have established a track record of expected behavior they become more shielded from the consequences of later deviance. Using a longitudinal dataset of loan guarantees among publicly listed Chinese firms, we find that higher-status firms receive more severe sanctions if they fail to meet the expectation to reciprocate their partners in the earlier involvement than in the later involvement of loan guarantees. We also show that this pattern of incentives translates into a positive linkage between status and norm compliance in the early stages but this linkage disappears in the later stages of involvement. This study adds a dynamic perspective of the relationship between status and potential social sanctions as well as the corresponding pattern of deviance following actors' initial entry into a new field.

OMT: **Organizational Stigma Formation**

Author: **Itziar Castelló**, *Bayes Business School (formerly Cass), City, U. of London*

Author: **Laura Illia**, *U. de Fribourg*

Author: **Alessandra Zamparini**, *U. della Svizzera Italiana*

Author: **Nicole Giorgi**, *U. of Fribourg*

Despite the increasing research into stigma management, little work has been done on how stigma emerges and reaches the necessary critical mass. We study the online stigmatization of Monte Paschi di Siena (MPS), one of Italy's biggest banks, over 5 years. We coin the term stigma formation and present a model of stigma formation integrated by three discursive mechanisms: borrowing, ascribing, and normalizing. We show how these mechanisms vilify the organization through the strategic use of cultural resources, moral statements, and emotions. We discuss the role played by different emotions in stigma formation. We contribute to stigma studies by identifying the micro-mechanisms of stigma formation and how these relate to the macro processes of stigma, the role of emotions in stigma formation, and the dynamics of stigma formation online.

OMT: **Organizations amid Conspiracy Theories**

Author: **Murad A. Mithani**, *Rutgers U., Camden*

While research has identified several forms of stigma, organizational conduct has been central to stigmatization. In this study, we argue that conspiracy theories give rise to a new form of stigma, illusory conduct stigma. It occurs when one or more stakeholder groups penalize organizations for imaginary actions. This study builds a theoretical foundation of illusory conduct stigma, how it affects organizations, and how organizations participate in its perpetuation. We identify three characteristics that are central to conspiracy theories: interlacing of relevant and irrelevant evidence, identification of actors, and the centrality of emotions. They affect organizations through claims of inexplicable actions, expansive expectations, and disparate beliefs. In turn, organizations, at times, perpetuate illusory conduct stigma through the production, facilitation, and forbearance of conspiracy theories. Contextualizing organizations and their place amid conspiracy theories, the study explains how illusory conduct stigma manifests and survives in the society.

Theories of Governance

Session Moderator: **Romain Boulongne, IESE**

OMT: **Demanding but Committed: The Organizational Consequences of Broadening Stakeholder Governance**   

Author: **Romain Boulongne, IESE**

Author: **Trevor Daniel Young-Hyman, U. of Pittsburgh**

Author: **Pascual Berrone, IESE Business School**

There has been substantial recent interest in bringing stakeholders into firm decision making, but current scholarship does not theorize both the costs and benefits of broadening stakeholder governance. We argue that expansion of governance rights to a larger and more heterogeneous set of stakeholders generates coordination costs and increased demands on organizational surplus, but also increases stakeholder willingness to compromise during moments of scarcity and invest in collaborative problem solving. As a consequence, we hypothesize that the broadening of stakeholder governance will be associated with declines in productivity and increases in organizational survival. To test these arguments, we examine the varied governance structures in the French context (conventional firms, worker cooperatives, and multi-stakeholder cooperatives) using longitudinal tax data (2001-2018). Our findings suggest that, as more stakeholders gain governance rights, productivity is diminished but survival likelihood is increased. Furthermore, stakeholders with governance rights both demand a greater share of firm resources during profitable times, and make greater sacrifices in their resource demands during economic downturns. Additionally, we observe evidence of both increased coordination costs and increased investments in innovation and adaptive ability in firms with broader stakeholder governance.

OMT: **Co-Owners as a Governance Mechanism for Principal-Principal Agency Problems: An SOE Case** 

Author: **Himanshu Shekhar, Doctoral Student at Indian Institute of Management Bangalore**

The Principal-Principal agency problem is often associated with the presence of one dominant owner and other distributed shareholders who may not be able to challenge them. However, with the growing influence of securities markets as a capital pool, institutional investors have become significant owners of firm equity in many markets worldwide. Institutional owners are seen to have the incentive and ability to monitor the firm's functioning, but their influence has mainly been studied on the firm's management. We bring in institutional investors as a governance mechanism for other block owners in most world economies. We use the sample of large Indian firms as the regulations mandate clear identification of promoter/ dominant owners, providing a better proxy for owner influence beyond individual shareholding / blockholding. We look at listed state-owned enterprises (SOEs) with the Government as the primary owner and analyze their impact on voluntary environmental disclosures with the moderating effect of institutional holdings. We further see the relationship between the Government and the domestic and foreign institutional investors as an essential factor to explain the interaction between the owners.

OMT: **Mixing It Up: A Role-Theoretic Perspective on the Effects of Selection Methods on Governance** 

Author: **Adrien Billiet, KU Leuven, Faculty of Economics and Business**

Author: **Simon Pek, U. of Victoria**

Author: **Frédéric Dufays, U. of Liège**

While decision-making styles are key to achieving good governance, the impact of how representatives are selected is a largely neglected area of research. Drawing on an in-depth case study of Smart, a Belgian-French cooperative that created a novel decision-making committee with members selected through three selection methods—random selection, expert appointment, and appointed self-selection—we adopt the lens of role theory to investigate how the use of different selection methods to select representatives in decision-making bodies affects decision-making styles. We find that these different selection methods, through their effects on different configurations of role behaviors, contribute to either political or procedural decision-making styles. Based on our analysis, we make three important contributions to management research. First, we develop theory about how different selection methods, which are ubiquitous in most organizations, contribute to different decision-making styles. Second, we contribute to theoretical work on representation by countering and confirming some of the purported benefits of random selection in organizational democracy by theorizing several behavioral mechanisms. Last, we offer a role theoretic perspective on the theory of representation by showing how conflicting expectations of representatives can be beneficial for organizational governance.

OMT: **Consensus Building within a Multistakeholder Governance Domain- A Qualitative Study**  

Author: **Shikha Khurana, Doctoral Scholar, Indian Institute of Management Ahmedabad**

The paper examines multi-stakeholder governance in a loss sharing environment. Drawing on consensus and governance literature, I undertake a qualitative study to bring out the difficulty in achieving consensus in a multi-stakeholder domain especially when the stakeholders differ in their perspectives on the valuation of a firm. Identifying the positions occupied by various stakeholders in the negotiation towards consensus building, I identify which of the actors in the multi-stakeholder governance process will have the greatest incentives to break down the barriers and the process adopted to bring about the resolution. The context is the Insolvency and Bankruptcy Code (IBC) in India that shifts the management control in financially distressed firms to its financial creditors for a defined period with a mandate to revive, restructure, and sell the firm as a "going concern". If the sale does not occur, the firm is sent for liquidation leading to losses for all stakeholders. Despite the criticality of time, the consensus remains elusive in many cases as stakeholders try to optimize their respective organization positions to reduce the loss. The paper offers a nuanced perspective on the consensus formation process and the role of governance in the multistakeholder environment.

Legacies and Lock-Ins: Understanding Path-Dependence

Session Moderator: **Prithwiraj Choudhury**, *Harvard U.*

OMT: **Crucibles, Multiple Sensitive Periods, and Career Progression**   

Author: **Prithwiraj Choudhury**, *Harvard U.*

Author: **Sunasir Dutta**, *U. of Minnesota*

Author: **Hise O. Gibson**, *Harvard Business School*

Author: **Eric Lin**, *United States Military Academy*

We study the effects of crucible experiences along multiple sensitive periods on career progression. While prior literature has hinted that individuals can be imprinted during multiple sensitive periods, not just during the early career, there has been scant attention to it theoretically and empirically. We use unique administrative data of 8662 U.S. Army officers who graduated from the United States Military Academy (USMA) at West Point from 1995 to 2004 and exploit a natural experiment to estimate robust treatment effects. In our setting, workers were quasi-randomly assigned to crucible locations such as war zones in Iraq and Afghanistan and, importantly for our study, the quasi-random assignment to crucibles could be during the early career of the individual (i.e., during the first five years of the career), mid-career (between the fifth and ninth year of the career), or both during the early- and mid-career. We exploit this allocation protocol to estimate robust treatment effects of crucible exposure on an objective measure of career advancement—promotion to the rank of major. We additionally exploit variation in whether the repeated crucible assignments are in the same or different geographic/cultural contexts to study whether crucible assignment triggers one of two possible human capital development and learning mechanisms: building absorptive capacity in a relatively narrow context or exaptation and developing dynamic capabilities. Our evidence suggests that based on task characteristics, the former mechanism is in play in our empirical context. Our results contribute to literatures on imprinting, development of managerial cognitive capabilities, learning and career experiences, and how the geographic/cultural context can shape human capital.

OMT: **Unpacking the Effects of Founding State Regulations and Violent Crimes on Bank Geographic Expansion**    

Author: **Kunyuan Qiao**, *Georgetown U.*

Author: **Christopher Marquis**, *Cambridge Judge Business School*

We argue that more stringent state-level branching regulations during a bank's founding period keep financial resources local and imprint it with a routine that focuses on local expansion. However, such processes may be reshaped by violent crimes—an important extra-institutional force—that shift resources away from small local banks toward larger ones and make the former more vulnerable. So, when the crime rate is high, stringent branching regulations make small local banks less likely to find potential buyers and more likely to fail, suggesting to newly founded banks the importance of exploring resources beyond the founding location. The two forces combined tend to imprint new banks with a routine for nonlocal expansion. Taken together, such an imprinting process leads to banks that are either jacks of all locations (i.e., expanding beyond the headquarter city) or masters of one (i.e., expanding within the headquarter city). Using a longitudinal bank-level sample that covers 9,686 U.S. banks founded between 1966 and 2021 in 3,342 zip-code-defined locations, we find supportive evidence for our hypotheses. Our research contributes to imprinting theory by unpacking the resource allocation mechanism behind the institutional production of imprints and unveiling that some imprints may reflect the opposite of institutional requirements. Relatedly, we contribute to institutional theory by showing how imprinting theory helps better understand what are commonly thought of as unintended consequences of institutions.

OMT: **Unlocking Lock-In: Exploring Path Dissolution Through a Dissipative and Inertial Systems Lens** 

Author: **Dermot Breslin**, *Rennes School of Business*

Path dependency describes the process through which action patterns become locked in over time under the driving force of self-reinforcing mechanisms. Whilst past research has explored the process through which paths are created and sustained, it is unclear how paths dissolve and break free the shackles of lock-in. This paper theorizes the process of path dissolution through the lens of both a dissipative and inertial systems viewpoint. Drawing on these different lenses, a number of propositions are developed in relation to the dissolution of paths. It is argued that in dissipative systems, patterns are created and sustained through the injection of energy through self-reinforcing mechanisms. When that energy source is removed or altered, then patterns change, and with this, the interconnectedness of actors. In inertial systems on the other hand, patterns persist as a result of the accumulation of self-reinforcing mechanisms over time, and as such, cannot be undone without the application of decreasing returns over a sustained period of time. This cumulative balance of 'forces' can however be facilitated by changing the interconnectedness of actors. History matters in path dependence. But how history matters changes depending on the lens one uses to conceptualize the phenomenon.

OMT: **The Shadow of the Predecessor: Predecessor Legacy and Successor Distance in U.S. Symphony Orchestras** 

Author: **Keun Woo Jeong**, *London Business School*

In this study, we examine whether the legacy of the predecessor casts a shadow over the successor's decision-making. Drawing on the concept of positional imprint, we argue that the legacy of the predecessor is introduced as a new imprint during succession, and the subsequent expectations attached to the position constrain the ability of the successors to distance themselves from the predecessor's past decisions. Using the dataset on the yearly repertoire selection of major U.S. symphony orchestras between 1900 and 1969 and exploiting World War II as an exogenous variation in the strength of the legacy of the predecessor, we show that successors with Axis nationality (Allied nationality) predecessors increasingly (decreasingly) distance their decisions vis-à-vis their predecessors following the outbreak of the war, an effect more pronounced in high-status orchestras. Additional analyses show that this effect remains robust even when other related measures such as peer-driven differentiation or general exploration are considered. Finally, in exploring the incentives for the successor's adherence to their predecessor's decision, we document a critical career concern, that distancing reduces the chances of commercial success and the longevity of the tenure.

Presenter: **Grady Wallace Raines**, *Cornell SC Johnson College of Business*

Entrepreneurs from under-represented groups, inherently face inequalities in starting and succeeding in their entrepreneurial endeavors. In recent years, significant progress has been made in understanding the entrepreneurial challenges faced by diverse under-represented groups, including racial minorities, women, immigrants, and justice-impacted individuals. While such previous work has been influential in identifying barriers such as restricted access to human, social, or financial resources (Kim, Aldrich, and Keister 2006) and biased evaluators (Fairlie and Robb 2008) faced by under-represented entrepreneurs, we have limited knowledge on how institutional barriers – ranging from formal regulations to informal societal and cultural norms – shape and aggravate entrepreneurial inequalities. Thus, our symposium aims to address the underexplored role and impact of diverse and novel institutional contexts in shaping entrepreneurial inequality for under-represented groups. This symposium addresses this question by focusing on different under-represented populations including individuals with criminal records, women, and racial minorities, leveraging a diverse set of experimental and archival methods. Each paper in our symposium explores distinct and novel institutional contexts encountered by under-represented groups such as formal regulations on financial access for individuals with criminal records, informal legacies from historical slavery, social and cultural norms around women entrepreneurs in Mexico, and gender bias in the start-up employee market. Our presenters further showcase novel consequences of such institutional contexts, by documenting that institutional barriers to entrepreneurship not only leads to stunted entry and success by under-represented entrepreneurs, but also perpetuate inequalities in unforeseen areas by exacerbating gender-bias in innovation and increasing crime among the most vulnerable populations. These presentations collectively broaden our understanding of the impact of institutional barriers on under-represented entrepreneurs, examining novel mechanisms across a variety of institutional contexts as well as unique consequences. Through our symposium, we hope to underscore the importance of creating inclusive formal and informal institutional ecosystems, which are crucial for leveling the playing field in entrepreneurship.

While decades of research have demonstrated that networks, through their structural configurations, powerfully influence people's behaviors, attitudes, and outcomes, recent work has sought to better understand the role of individuals in shaping network processes. There are increasing appeals to devote greater attention to the differences individuals exhibit in establishing, managing, and navigating social relations. Accumulated evidence underlines that 1) individuals may be able to actively position themselves in the network and that 2) agency and purposive action may look different for certain individuals despite occupying similar network positions. In response to these emerging discussions, our symposium aims to contribute to a better understanding of individual agency in network theory. Questions include: What role do individuals play in shaping the process of network evolution? And, how do these dynamics impact the distribution of social capital (positive or negative) among actors within networks? This line of work provides a promising starting point for network agency research. Our presenters' research highlights that a productive conceptualization of individual agency within organizational networks should be multifaceted. People might strategically leverage social relations and network relations for their own sake without meaningfully changing the structure of their networks. They can also take actions that meaningfully shape the architecture of their networks, intentionally or otherwise. During the processes of individuals exerting agency in shaping their social relations and exploiting network-related advantages, numerous potential mechanisms exist and should be systematically elaborated.

Presenter: **Thomas J. Roulet**, *U. of Cambridge*
Presenter: **Kaili Zhang**, *East China U. of Science & Technology*
Discussant: **Kristina Dahlin**, *Copenhagen Business School*

This symposium aims to explore the dynamics of organizational errors and failures in an integrated manner, departing from the traditional approach of studying these concepts separately. It will feature four papers employing diverse theoretical frameworks, methodologies, and levels of analysis across various empirical contexts. Together, these papers will address a compelling set of questions, significantly advancing our understanding of organizational errors and failures, as well as how organizations respond to and learn from these challenges. Based on the dynamic model of organizational error and failure, each author will delve into each component of this dynamic with an individual focus on error sharing, learning from failure, resilience, and organizational confidence.

This symposium showcases four papers that draw on a diverse array of theoretical perspectives to examine the rise of disruptive technologies such as cell-cultivated meat, non-fungible tokens (NFTs), artificial intelligence, and digital platforms. Collectively, the presentations in this symposium shed light on a variety of phenomena—including questions of how technologies that disrupt existing markets become legitimated over time; how technological advancements redefine the relationships between individuals, organizations, and the idea of what constitutes expertise; and how striving for 'better futures' drives the emergence of novel technological ideas and practices. The symposium integrates both macro- and micro-level perspectives to better understand the implications of novel technologies for organizations, markets, and fields. Taken together, the symposium aims to bring together scholars from various backgrounds to engage in an interdisciplinary dialogue on the pervasive implications of technological disruption for organizing.

Cultural Contexts and Sustainability: Navigating Local Identities and Global Challenges

Session Moderator: **Jacobo Ramirez**, *Copenhagen Business School*

ONE: Place Attachment and Emotions in Decision-Making: Wind Energy in La Guajira, Colombia   

Author: **Jacobo Ramirez**, *Copenhagen Business School*
Author: **Claudia Vélez-Zapata**, *U. Pontificia Bolivariana*
Author: **Steffen Boehm**, *U. of Exeter Business School*

How do emotions and place attachment influence sustainable development? We address this question through a longitudinal study of wind energy projects within Indigenous territories in La Guajira, Colombia (2019–2023). Our theoretical framework integrates the concept of place attachment, particularly its emotional dimensions, with decision-making processes concerning sustainable development. Our key contribution lies in developing a model to discuss the ontological and emotional roots of place attachment of actors from Indigenous communities, governments, and businesses. We posit that Indigenous communities have an experiential perspective of place, with deep and evolving connections to their ancestral territories that mold their aspirations for their territory's future. In contrast, businesses and governments have a functional perspective of place, viewing it primarily as a geographical location for implementing technological solutions for climate change mitigation. These diverging perspectives on place and space result in colliding emotions. The multifaceted emotional bonds that individuals or communities form with specific places instill a profound sense of belonging and identity, whereas firms' operations in such settings often involve superficial engagement through corporate social responsibility activities. Our findings provide insight into the intricate interplay between emotional attachment, space and place, and sustainable development. We argue that technological solutions are insufficient without societal acceptance, highlighting the importance of emotional bonds in the context of sustainable development.

ONE: Is it all Sunshine and Roses? The Surprising Dark Side of CSR Influencing Employees' Work Behavior

Author: **Miriam Kurth**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen Un*
Author: **Denise Fischer-Kreer**, *U. of Bonn*

Corporate Social Responsibility (CSR) is on everyone's lips. No other organizational behavior influences the subsequent behavior of employees as much as their perception of CSR. In general, employees' perceptions of CSR promote positive and minimize negative behaviors and attitudes. However, the controversial, dark sides of CSR are rarely considered. We investigate whether mere CSR perceptions not only prevent but also promote counterproductive work behavior (CWB) by employees. The analysis of survey data from 1,090 employees in over 400 companies in Germany initially supports the established view that CSR reduces CWB, partly mediated by organizational identification. However, by applying moral licensing theory, we introduce the underlying construct of moral credits as an opposing mediator and show that employee perceptions of CSR can actually promote CWB. Furthermore, we examine three moderated mediations. Task significance, substantive CSR attributions, and symbolic CSR attributions as moderators enhance the mediation effect of moral credit and, thus, further reinforce negative employee behavior. By conducting one of the first studies to take an integrative approach to show a good and a dark side of CSR perceptions side by side, we make three important theoretical contributions to the micro-CSR literature. In doing so, we emphasize the multifaceted nature of CSR.

ONE: The Role of Institutional Complexity in Business Response to Climate Change: An Experiment 

Author: **Arijit Paul**, *U. of Graz*
Author: **Giuseppe Danese**, *Department of Economics and Management "Marco Fanno", U. of Padova*
Author: **Rupert J. Baumgartner**, *U. of Graz*

Company managers face institutional complexity in dealing with competing institutional logics when making business decisions on climate change. We conducted an experimental vignette study to understand how managers would respond when encountering two competing logics: an "environmental logic" that promotes climate action and a "market logic" that prevents climate action. For each logic, we study the effect of its normative and mimetic forces, mediated through shareholders and competitors, respectively. In our study design, we predict how a hypothetical CEO of a fictitious oil and gas company would respond to these conflicting logics. We find evidence for the market logic's status as the default logic. However, we also find that the normative forces of the environmental logic are perceived as highly effective in increasing investments in decarbonization. In comparison, mimetic forces are perceived as less effective in achieving the same aim. Surprisingly, the threat of sanctions by divestment from the shareholder appears to have no effect. Implying shareholders are more likely to succeed in pushing companies towards decarbonization by engaging with the management than through divestment campaigns.

ONE: Indigenous Entrepreneurship in the Amazon Rainforest: Custodianship of Traditions and the Forest

Author: **Lucas Conde Stocco**, *U. of Sao Paulo (FEA-RP/USP)*
Author: **Lara Liboni**, *Ivey Business School*
Author: **Luciana Oranges Cezarino**, *U. Ca' Foscari of Venice - Dept. of Management*

Indigenous entrepreneurship is a vital phenomenon for the native communities of the Amazon. It is how these communities sustain themselves, bringing economic and social development. The relationship with the market becomes the channel for commercialising indigenous culture and the Amazon biodiversity. However, this interaction is frequently entrenched in tensions that represent a paradox: while, as entrepreneurs, they seek the development of the community, they also want to preserve the forest and maintain indigenous traditions and traditional knowledge. How do indigenous entrepreneurs deal with this duality? How do they balance this paradox, strengthening the protection of the forest, their traditions, and culture while dealing with the colonial legacy that emerges in their relationship with the market? This study delves into the Brazilian Amazon to investigate how indigenous entrepreneurship is critical in providing local social and economic development through entrepreneurship while maintaining and preserving traditions and nature despite the paradoxical duality that emerges from the relationship with the market. We theorise Custodian Entrepreneurship, connecting concepts of Intergenerational Traditional Knowledge, Place-based Worldview and Collective Governance as a triad that leads Indigenous entrepreneurship to play the role of Custodianship of Tradition and Forest.

Author: **Marc Craps**, *KU Leuven, Faculty of Economics and Business*

We aim to identify the potential and gaps of the sociomaterial network for the circular economy in a mid-size city in the Global South. A qualitative assessment of the local informal recycling sector and the nascent circular economy stakeholders (human and non-human) is used to assess the current network. The sociomaterial network in transformation has strengths that need to be reinforced but also significant gaps in how materials and relationships are valued in the transition to a CE. From a performative perspective there are several role gaps, such as reducing regulatory barriers to operate in a CE, actioning an extended producer responsibility and a value-based education. Circular transitions have mostly focused on the Global North. This study takes an entanglement approach to assess the potential of the informal sector in the Global South and the gaps in their networks that should be addressed for a just transition to a circular economy from a primarily linear and recycling economy.

Ecosystem Dynamics and Value Co-Creation in Circular Economies

Session Moderator: **Ida Eyi Heathcote-Fumador**, *Chalmers U. of Technology*

ONE: Circular Ecosystem Emergence and Orchestration by Sustainable Entrepreneurs

Author: **Ida Eyi Heathcote-Fumador**, *Chalmers U. of Technology*

Author: **Katharina Cepa**, *Vrije U. Amsterdam*

Author: **Robin Teigland**, *Chalmers U. of Technology*

In this study, we aim to explore the emergence and orchestration of circular ecosystems, which are considered crucial for addressing society's major challenges. However, there is a limited understanding of the factors influencing their development. Therefore, we focus on the following research questions: What factors contribute to the emergence and orchestration of a circular ecosystem? How do sustainable entrepreneurs play a role in these processes? To answer these questions, we conducted a process case study of a circular ecosystem upcycling ocean plastics in Europe. Our investigation highlights that sustainable entrepreneurs drive the emergence of circular ecosystems through decentralized strategies and collaborations with like-minded partners, responding to three fundamental ontological differences between the linear and circular economies: conflicting value systems, work ideals, and organizing principles. This research contributes to the strategic management literature by presenting a process model for the emergence of circular ecosystems, grounded in empirical evidence. Additionally, we introduce the concept of "distributed orchestration" as an alternative to traditional focal firm orchestration in the established business ecosystem literature.

ONE: Transforming Resource Flows: Exploring the Co-Creation of Value Propositions in Circular Ecosystems

Author: **Fabian Grimm**, *RWTH Aachen U.*

Author: **Torsten-Oliver Salge**, *Institute for Technology and Innovation Management at RWTH Aachen*

This study investigates the co-creation of value propositions in circular economy ecosystems, addressing a critical gap in understanding how these can be developed in a multilateral context and, at the same time, embody economic, ecological, and social values. Recognizing the unsustainable exploitation of natural resources and the need for systemic transformation, this research explores the transformation of resource flows to build a circular economy. Conducting a multi-case study across eleven emerging ecosystems in Germany, spanning various industries, we utilized structured interviews and secondary data analysis, guided by the ReSOLVE framework. Our findings reveal four distinct approaches to developing value propositions, contingent on resource type (finite or renewable) and flow maturity. Key insights include the critical role of resource type in the development process, with optimization and looping crucial for finite resources, and optimization and exchange for renewables. Notably, the study uncovers a neglect of looping in renewable resource ecosystems, potentially hindering their full integration into a circular economy. Our research contributes significantly to the field by offering a nuanced understanding of material flow ecosystems, emphasizing the importance of multilateral collaboration and the integration of social, ecological, and economic goals. This holistic perspective enriches the literature and provides a strategic framework for practitioners.

ONE: Circular Strategies as Practice: Connecting Circular Business Models to Circular Ecosystems

Author: **Amba Maria Van Erkelens**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Neil Aaron Thompson**, *Vrije U. Amsterdam*

Author: **Katinka J.P. Quintelier**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Koen Van Bommel**, *Vrije U. Amsterdam*

The transition towards the circular economy (CE) requires firms to operate in the current linear economy while at the same time changing it into a circular one. Transcending a firm-centric focus on circular business models (CBMs) or a system-level focus on circular ecosystems, this study addresses the connection between firms and the ecosystem in which they are embedded. We study how circular strategies connect CBMs to circular ecosystems, and help CBMs to operate in a linear ecosystem while changing it towards a circular ecosystem. We use a practice theory approach as a useful lens to study interactions between a focal firm's CBM and the ecosystem in which it is embedded. We report the results based on a three year longitudinal ethnographic study of the practices at a circular startup with a Product-as-a-Service (PaaS) model. The findings show four dynamic and iterating practice bundles that contribute to the integration of CBMs and ecosystems: practices of 1) imagining how to connect a CBM to an ecosystem, 2) experimenting with mutual value creation options, 3) building partnerships, and 4) influencing ecosystem actors. We contribute to the CE literature by providing a more lived and fine-grained understanding of circular strategies in an ecosystem, a more dynamic understanding of barriers and enablers, and a better understanding of how the firm level and ecosystem level in the CE are connected through practices.

In response to recent calls for a deeper understanding of how the circular economy can foster social inclusion, this paper employs a resource orchestration perspective to examine the internal and external resources necessary for implementing circular practices with social inclusion. It also explores how these resources and practices are coordinated within an urban ecosystem context. Employing exploratory qualitative research, the study focuses on the reverse logistics of packaging within a Brazilian urban ecosystem. We conducted twenty-seven interviews with twenty-four individuals from nineteen organizations spanning four categories: business companies, recycling cooperatives, sector associations, and non-governmental organizations (NGOs). The study identifies four models of resource and stakeholder orchestration for the circular economy within an urban ecosystem, each exhibiting varying levels of social inclusion. The two models with higher levels of social inclusion necessitate the engagement of multiple stakeholders and government levels, including municipalities. Interestingly, despite their complexity, these models reduce resource intensiveness. Conversely, the other two models highlight the pivotal role of digital resources. These findings contribute to the evolving literature on socially inclusive circular economies by considering an ecosystem context, delineating distinct levels of social inclusion, and incorporating various stakeholder groups, including vulnerable populations.

Integrating Environmental Challenges into Business and Management Practices

Session Moderator: **Kerrigan Marie Machado Unter**, *U. of St. Gallen*

ONE: Business and Biodiversity: Measurement of an Ambiguous Goal  

Author: **Kerrigan Marie Machado Unter**, *U. of St. Gallen*

Author: **Leo Vogel**, *HSG U. of St. Gallen*

Author: **Judith Louise Walls**, *HSG U. of St. Gallen*

Biodiversity serves as a silent partner to businesses by nurturing critical resources, providing natural infrastructure, and fostering an environment in which industries and businesses thrive. Increasingly, biodiversity loss threatens the natural foundations of businesses and the overall well-being of societies. However, while critical, the relationship between biodiversity and business is neither fully understood nor easily measured as it requires knowledge of biophysical and geospatial data. In this paper, we present a comprehensive framework for measuring biodiversity impacts and dependencies of businesses across ecosystems and species. We develop this framework through the lens of the natural resource dependence theory (NRDT), extending the boundary conditions of NRDT to include biodiversity as a source of uncertainty that affects organizational strategies and performance. Based on our framework, we offer six main categories of importance when measuring biodiversity: 1) organizational impacts on ecosystem, 2) organizational impacts on species, 3) ecosystem dependence, and 4) species dependence, 5) ecosystem impacts on organizations, and 6) species impacts on organizations. We delve into each category, describe measurement implications, highlight the main data sources, and examine the geographical scale of data sources. We make a methodological contribution by using geographic information system (GIS) data to connect biodiversity data to locations of organization facilities. Finally, we derive practically relevant measurement goals from our framework.

ONE: Incorporating Environmental Disruptions in Management Theories    

Author: **Murad A. Mithani**, *Rutgers U., Camden*

Management theories are built on Walrasian assumption of the continued availability of general equilibrium. Deviations from equilibrium are deemed temporary, and most firms are expected to promptly return to equilibrium. But what happens when general equilibrium is inaccessible due to climate change, war, or pandemic induced disruptions? Studying how equilibrium manifests as a destination, a constraint, or a comprise in management theories, we advance an understanding of how environmental disruptions push firms farther from equilibrium. They undermine market's capacity for self-regulation, limit information dissemination, and misdirect tâtonnement. These challenges are addressed by post-Walrasian remedies that include multiple equilibria, non-price mechanisms of coordination, and complex adaptive systems. We explain that post-Walrasian models of destination, constraint, and compromise theories not only offer a means to repurpose management theories to address escalating disruptions but also embed them with social motives that are equivalent to economic goals. They make public good integral to firms and markets.

ONE: Talks Much, Errs Much: Social Media Coverage on ESG Disclosure Quality in Emerging Markets

Author: **Jun Jin**, *Zhejiang U.*

Author: **Tailun Chen**, *School of management, Zhejiang U.*

Author: **Yuanting Zhao**, *ONE*

Social media platforms are bringing disruptive changes in various aspects of corporate business activities, while mechanism and characteristics of these impacts on specific ESG activities are still debatable. One major issue is the influence of social media on the quality of CSR disclosure, especially under the context of emerging market. Drawing upon institutional theory perspective, this study demonstrates the impact of social media coverage on corporate ESG disclosure quality under emerging market context with empirical methods. It indicates that companies within emerging markets tend to lower their ESG disclosure quality when facing a higher level of social media coverage under the logic of "talks much, errs much" in order to prevent the potential backlash effect. This mindset is partly mitigated by a higher level of industrial market competition and regional social trust. It fills current research gaps by clarifying influence of social media coverage on ESG disclosure quality, and pointing out the importance of incorporating the contextual characteristics of emerging market that may alter companies' logic and behavior when conducting ESG activities.

ONE: Addressing Tensions Through Practical Paradox Perspectives in Sustainability  

Author: **Julija Belec Gergek**, *ETH Zürich*

Companies increasingly face pressures to act sustainably and to tackle tensions when making sustainability decisions. While corporate sustainability literature highlights two main perspectives on tensions, the business case and paradox perspectives, much debate remains regarding which perspective companies should adopt when addressing tensions in sustainability. Further, sustainability scholars call for more empirical work to better understand how companies address tensions when making sustainability decisions. Scholars call for more insights on how managers learn to address tensions in sustainability. To address these shortcomings, we ask, how do future managers learn to address tensions when making sustainability decisions. We examine the reflection journals of 125 students throughout a 14-week Corporate Sustainability course and highlight important practical paradox approaches that combine business case and paradox perspectives. We hope to contribute to corporate sustainability scholars' understanding of perspectives on tensions. Additionally, we highlight role-play as a valuable teaching tool for developing future managers' understanding of tensions.

Organizational Considerations in Operations & Supply Chain Management - II

Session Moderator: **Mehadi Mamun**, *U. of Wollongong, Australia*

OSCM: **SCM, Ambidexterity, and Organisational Performance: Empirical Insights from SMEs in Australia**

Author: **Mehadi Mamun**, *U. of Wollongong, Australia*

Small and medium-sized enterprises (SMEs) are critical drivers of economic activities in world economies. However, despite the importance of SMEs to the world economy, the roles of organisational ambidexterity and the successful implementation of supply chain management (SCM) have been largely studied for larger firms, and SMEs have not received similar attention. This study, therefore, aims at contributing to the body of literature by investigating the relationships amongst SCM implementation, organisational ambidexterity, and SMEs performance in the Australian business context, which have not been addressed previously. To achieve the purpose of this study, a quantitative model was employed, and a multi-item survey questionnaire was developed to collect primary data. Cross-sectional surveys of a sample of 207 SMEs were undertaken to collect data, and factor analysis and structural equation modelling (SEM) were used to analyse data and test hypotheses. The empirical results inform that the successful implementation of SCM and organisational ambidexterity enhance SMEs' performance in Australia. In addition, organisational ambidexterity is found to mediate the relationship between SCM implementation and Australian SMEs' performance. This study is also expected to have a practical contribution to support SMEs in their strategic planning, performance enhancement, and survival.

OSCM: **Impact of Lean Six Sigma on Environmental Performance in Manufacturing Organizations**

Author: **Arsalan Fayyaz**, *School of Management, Northwestern Polytechnical U., Xi'an, Shaanxi, Chi*

Author: **ChenGuang Liu**, *Management School of Northwestern Polytechnic U.*

Author: **Yan Xu**, *School of Management, Northwestern Polytechnical U., Xi'an, Shaanxi, Chi*

Author: **Selim Ahmed**, *World U. of Bangladesh*

Author: **Md Moynul Hasan**, *School of Management, Northwestern Polytechnical U., Xi'an, Shaanxi, Chi*

Author: **Sidra Ramdan**, *Comsat U. Islamabad- Lahore Campus*

The continual growth of organizations depends on adopting continuous improvement programs such as lean six sigma (LSS) to eliminate wastage and reduce defects in manufacturing operations by fulfilling the customers' needs. Nevertheless, studies show that LSS programs are less studied and are ineffective, primarily when focusing on environmental performance (EP). This study explores the relationship between LSS, Organizational Cultural Practices (OCP), Green Supply Chain Management (GSCM), and EP within Pakistan's small and medium-sized manufacturing organizations. With an effective response rate of 39.48% from 383 respondents out of 970 invitations, this study adopts structural equation modeling in Smart PLS 4.0 and artificial neural network modeling in SPSS and Python to bolster its results. This study shows that OCP and GSCM partially mediate the relationship between LSS and EP. Extending the resource-based view and stakeholders theory, this study provides nuanced insights into the relationship between LSS, OCP, GSCM, and EP. By providing empirical evidence, this study adds depth to the understanding of these relationships in the unique context and its results represent a comprehensive conceptual framework that holds implications for managers and policymakers, highlighting the significant role of organizational dynamics in designing strategies for on-time manufacturing of a quality, cost-effective and eco-friendly product by enhancing EP. Drawing on the resource-based view and stakeholders theory, this study defines effective information sharing of LSS, OCP, and GSCM practices, which often opt for optimum resource consumption and minimize stakeholder complications to manufacturing eco-friendly products, consequently enhancing their overall EP. This concept underscores the significance of promoting the contributions of LSS, OCP, and GSCM within the organization, aligning with the principles of transparency to improve EP.

OSCM: **Feeling Exploited but Wanting to Stay? Playful Service Climate as a Double-Edged Sword**

Author: **Jan Eric Walsken**, *Doctoral Candidate - WHU Otto Beisheim School of Management*

Author: **Fabiola Heike Gerpott**, *WHU Otto Beisheim School of Management*

Author: **Carl Marcus Wallenburg**, *WHU Otto Beisheim School of Management*

Author: **Kimberley Breevaart**, *Erasmus school of Social and Behavioural Sciences*

Through three empirical studies, we examine the potential paradoxical effects of a Playful Service Climate (PSC) in service organizations. On the one hand, drawing from the service climate literature and social exchange theory, we propose a positive relation between PSC and employees' affective display during customer interactions, customer satisfaction, and their emotional ties to the organization (i.e., employees' affective commitment). On the other hand, we argue that employees' increased affective commitment may decrease employees' intentions to leave the organization when they are exploited by the organization. In Study I, we demonstrate that PSC relates to an enhanced emotional bond to the organization and increased display of positive affect (in text and video) in customer interactions. Study II shows that customers are more satisfied with PSC services compared to regular SC services. Study III reveals that a strong emotional bond to the organization nonlinearly moderates the relation between perceived exploitation and turnover intentions. Our research contributes to the service climate literature by considering PSC and its implications for employee and organizational outcomes as a double-edged sword.

OSCM: **Learning Organization and Product Quality Performance: A Moderated Mediation Model**

Author: **Jose Benedicto Duhaylongsod**, *IESEG School of Management*

Author: **Sheldon Carvalho**, *Middlesex U. Dubai*

Author: **Irene E. De Pater**, *School of Business and Law, Edith Cowan U.*

This paper examines how a learning organization affects product quality performance from a behavioral operations perspective. Drawing on social information processing theory and social capital theory, we develop a theoretical model proposing (1) how a learning organization positively affects product quality performance through internal integration and (2) how employees' supply chain management competencies amplify this relationship. We test our model using a longitudinal survey with three waves of data collection from employees in leadership positions in operations, manufacturing, and production functions located in the United Kingdom. Our findings support the proposed relationships. These results highlight the importance of aligning organizational processes and employees' competency development in driving cooperative work across functions and enhancing product quality performance.

Author: **Christian Wagner**, *ETH Zürich*

Author: **Christoph Schmidt**, *ETH Zürich*

Author: **Maximilian Klöckner**, *ETH Zürich*

Author: **Stephan M. Wagner**, *ETH Zürich*

Unsafe and unhealthy factory working conditions are still present in developed countries at large brand-name firms and do not solely occur at upstream suppliers in third-world countries. Based on 299 factory worker incidents, we conduct an international event study to estimate the performance implications of factory worker incidents. We find that firms experience significant mean abnormal returns of -0.15% on the incident day. We further analyze the impact of firm characteristics related to both manufacturing and organizational levels. Specifically, we find the negative abnormal returns to be strengthened when physical harm is caused to employees and the incident possibly affects supply chain partners. We further demonstrate that higher lean orientation and crisis preparedness reinforce the negative impact on shareholder value. Our results suggest that capacity slack mitigates the negative performance implications. Further posthoc analyses indicate negative spillover effects on customers and suppliers.

Managing Operations & Supply Chains for Circular Economy

Session Moderator: **Michelle Beck**, *Chair of Innovation Management / TIE Institute, TU Dortmund U.*

OSCM: **Going Circular to Become More Flexible – How Circular Economy Practices Enhance Volume Flexibility**

Author: **Michelle Beck**, *Chair of Innovation Management / TIE Institute, TU Dortmund U.*
Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*

Manufacturing firms deal with increasing demand uncertainty. Research shows that volume flexibility is a key operational capability that enables manufacturing firms to operate profitably at different product output levels and hence effectively navigate these uncertainties. However, while activities along the supply chain likely affect volume flexibility, little is known about the strategic actions that manufacturing firms can take to transform their supply chain to actively enhance volume flexibility. Drawing on the practice-based view (PBV), we argue that circular economy (CE) practices – a manufacturing firm's transition towards a more sustainable supply chain – enhance volume flexibility, as they alter the amount of supply sources, internal management processes, and production technology use. We analyze an extensive, longitudinal dataset, consisting of 2,377 firm-year observations from US manufacturing firms to examine the relationship between CE practices and volume flexibility. We find that CE practices foster the level of volume flexibility. Moreover, we explain that a manufacturing firm's R&D investment has a negative impact on this relationship. Our study advances the operations management literature and the PBV by introducing CE practices as an increasingly common set of management practices and a source of volume flexibility that can be applied to improve a firm's competitive performance.

OSCM: **Buyer-Supplier Relationships in Circular Supply Chains: A Power and Dependence Perspective**

Author: **Caterina Trevisan**, *U. of Trento*
Author: **Davide Bortoluzzi**, *U. of Trento*
Author: **Marco Formentini**, *OSCM*
Author: **Lisa Ellram**, *Miami U.*

The implementation of the circular economy (CE) implies disruptive changes to traditional supply chain management, due to the creation of reverse flow of value, materials and information. Through a longitudinal and embedded case study methodology, this research investigates the deployment of two circular economy initiatives pursued by a manufacturing firm at the supply chain level. In particular, resource dependence theory is adopted to investigate the evolving power and dependence dynamics occurring in buyer-supplier relationships. We begin with an in-depth analysis of the two subunits of case: the buyer-supplier relationships in the material flow of steel and plastics. Data collection is performed through semi-structured interviews conducted with both the buyer and the suppliers of steel and plastics. We develop a set of propositions highlighting how CE implementation strengthens actors' interdependence and emphasises a shared interest in a cooperative, long-term partnership marked by trust and mutual benefits. Moreover, a power imbalance shifts in favour of suppliers, but the strong mutual dependence deters opportunistic behaviour in favour of long-term relationship commitment. These findings challenge the traditional view suggesting that dependencies have to be reduced at all costs, thus calling for the adaptation and extension of traditional operations and supply chain management tools and theories to effectively address the complexities of the CE transition.

OSCM: **AI, the Firm and the Circular Economy: Towards a Maturity Model**

Author: **Donghao Huang**, *Birmingham Business School, U. of Birmingham, UK*
Author: **Yuanzhu Zhan**, *Birmingham Business School, U. of Birmingham, UK*
Author: **Christopher Lonsdale**, *Birmingham Business School, U. of Birmingham, UK*

Despite the climate imperative of a transition to a circular economy, current literature finds that companies globally are being slow to engage with such a transition. In this context, our paper that conducts a thematic review explores how artificial intelligence (AI) might accelerate companies' circular economy transition. In a departure from the dominant approach within the literature that adopts the product life cycle as its unit of analysis, the authors frame the potential of AI here in terms of how it might accelerate companies' journeys toward greater CE maturity. A maturity model is advanced, identifying four stages of company CE maturity, and then different AI techniques are applied to each of the stages, providing for managers and executives a guide to adopting the correct AI technique for the maturity stage they are at. As well as contributing to the literature by interpreting the potential use of AI in the CE context in this manner, the paper also makes a contribution via a novel method of undertaking a literature review. In the paper, the authors themselves utilise AI, via a machine learning algorithm that optimises manual classification outcomes. This method provides greater objectivity to a review based upon 601 papers and its use here points towards its future research potential.

OSCM: **Understanding Supply Chain Orchestration Mechanisms to Achieve Sustainability-Oriented Innovation**

Author: **Claudia Ermini**, *Rifò*
Author: **Filippo Visintin**, *U. degli Studi di Firenze*
Author: **Albachiara Boffelli**, *U. of Bergamo*

To establish a Circular Supply Chain (CSC), companies must instigate transformative changes at the supply chain level, engaging various stakeholders both within and beyond their organizational boundaries through collaborative and open innovation efforts. However, existing literature lacks both successful examples of companies implementing circular economy principles and practical guidance on the strategies firms should employ to effectively coordinate resources and capabilities for Sustainability-Oriented Innovation (SOI) within CSC. To address these gaps, this study conducts a longitudinal field study with embedded cases, focusing on the sustainable fashion company, that for confidentiality reasons will be referred to as Alpha, as the main unit of analysis. The investigation delves into the Resource Orchestration (RO) mechanisms employed to successfully develop various SOI initiatives (sub-units of analysis). The study provides valuable insights into strategies and practices conducive to achieving triple bottom line outcomes and introduces a RO Perspective framework for SOI within a CSC. Ultimately, the findings underscore the significance of tailoring Resource Orchestration mechanisms to different SOI initiatives. This research contributes to the accumulation of knowledge at the intersection of Circular Economy, SOI, and RO Perspective and offers practical implications for companies seeking to orchestrate their networks to achieve a CSC.

Author: **Lisa Ellram**, *Miami U.*

Author: **Sarah Schiffing**, *Professor, Hanken School of Economics, Finland*

Author: **Helleke Heikkinen**, *Hanken School of Economics, Finland*

Author: **Stina Lundin**, *Chalmers U. of Technology*

Author: **John Munyoro**, *Hanken School of Economics, Finland*

Author: **Anna Zhuravleva**, *Hanken School of Economics, Finland*

The purpose of this paper is to better understand the state of circular economy (CE) practices in place, and gain insight into some of the challenges (tensions) related to understanding and implementing CE, applying the lens of paradox theory to understand the tensions that are present in the circular economy at different levels of analysis and implementation. This research uses a combination of primary empirical data and secondary data to explore enablers, barriers, and tensions to CE in practice using the 10-R circular practices. Empirical sampling was used to try to identify a variety of industries, geographies, and organizational sizes. The paper presents five propositions based on the analysis. CE practices appear to be very much embedded in the traditional business model where profit maximization—or something that resembles profit maximization—drives decision making. The archetypal tension of financial performance/ cost reduction, part of doing business as private sector organization, especially one with shareholders, is an overarching factor shaping CE practice.

Corporate Social Responsibility

Session Moderator: **Mehrdokht Pournader**, *Faculty of Business and Economics, U. of Melbourne*

OSCM: **The Role of Gender Differences and Nudges in Supplier Retainment with Sustainability Risks**

Author: **Mehrdokht Pournader**, *Faculty of Business and Economics, U. of Melbourne*

Author: **Andrew Philip Kach**, *Willamette U.*

Author: **Arunachalam Narayanan**, *U. of North Texas*

Supplier sustainability risks (SSRs), such as human rights violations, continue to prevail at supplier locations globally. When considering how buying firm managers respond to these complex issues, moral disengagement is potentially a major underlying behavioral mechanism behind inaction toward SSRs. Moral disengagement has been shown to facilitate unethical decisions; and likewise, that men are more prone to moral disengagement compared to women. However, less is known regarding how to mitigate the negative effects of moral disengagement, particularly regarding SSRs. In addition to testing the role of moral disengagement in buyers' decisions toward SSRs, our goal in this study is to employ mechanisms known as nudges, which are behavioral change interventions aimed at producing socially desirable outcomes, in attempts to mitigate the unethical behavior associated with moral disengagement. We adopt two types of nudges, a text-based nudge outlining moral disengagement and a visual nudge showing affected workers in our proposed scenario. Using controlled behavioral experiments across two separate studies with a total sample of 314 participants, we find evidence for moral disengagement explaining supplier retainment tendencies and that men are more prone to retain suppliers in the presence of SSRs compared to women. We also find that while text-based nudges are a more effective tool for reducing the effects of moral disengagement on supplier retainment decisions, visual nudges are particularly more effective on men.

OSCM: **Organizing Supply Chain Modern Slavery Risks: A Regulatory Focus Perspective**

Author: **Andrew Philip Kach**, *Willamette U.*

Author: **Mehrdokht Pournader**, *Faculty of Business and Economics, U. of Melbourne*

Author: **Vikram Bhakoo**, *U. of Melbourne*

Human rights issues, specifically concerning labor conditions in the supply chain, have come under increased scrutiny due to legislation, media, and campaigns by NGO's. Despite recent attention from government, businesses, and scholars, modern slavery across supply chains continues to grow at an alarming rate globally. Thereby, to address this wicked problem, our research is aimed at understanding how managers organize these challenging risks contingent upon perceived organizational goals within a high-risk sector; namely, the construction industry in Australia. Through the lens of regulatory focus theory, we conducted and analyzed 32 in-depth interviews across five major construction firms and fourteen respective suppliers. This research offers insights into supply chain transparency problems and the associated risks of harm to people, providing recommendations for how to analyze and prioritize solutions for mitigating modern slavery challenges and risks.

OSCM: **Firm Ethical Culture and Competitiveness Under Environmental Uncertainty: The Role of SCSS Practices**

Author: **Chi Zhang**, *Kedge Business School*

Author: **Issam Laguir**, *Montpellier Business School*

Author: **Dr. Mani Venkatesh**, *Montpellier Business School*

Drawing on resource orchestration theory (ROT), this paper investigates the mediating role of supply chain social sustainability (SCSS) practices for organizational ethical culture (OEC) and competitiveness under conditions of environmental uncertainty. Using empirical data collected from 220 French manufacturing firms, the hypotheses were tested by using multiple mediation regression models. The results indicate OEC cannot generate organizational competitiveness itself, but through the mediating effect of certain SCSS practices such as health and safety practices, and human right practices. Furthermore, it finds that environmental uncertainty enhances the indirect effect of ethical culture on competitiveness through health and safety practices when the uncertainty is medium or high and through human rights practices when the uncertainty is low. This study extends the application of ROT to the domain of socially sustainable supply chain management. In addition, it pioneers the exploration of various SCSS practices as a coordinating mechanism that leverages the competitive advantages engendered by an OEC in the face of environmental uncertainty at different levels.

OSCM: **Social Washing in Project-Based Organizations**

Author: **Giorgio Locatelli**, *Politecnico di Milano School of Management*

Author: **Ilaria Zagaria**, *Politecnico di Milano School of Management*

Author: **Giacomo Dei**, *Politecnico di Milano School of Management*

Author: **Tristano Sainati**, *BI Norwegian Business School*

Author: **Elisa Rebosio**, *Politecnico di Milano School of Management*

The growing importance of social sustainability is pressing organizations to disclose their social impact, e.g., through ESG reporting. Unfortunately, organizations' practices are often not consistent with what they communicate. When action and communication on social sustainability are incongruent, social washing emerges. Despite the relevance of social washing, this topic is still relatively under-investigated, particularly in project studies literature and PBOs. This paper aims to provide an exploratory analysis of the dimensions and practices of social washing, explaining how and why PBOs engage in social washing. We also provide a novel and robust definition of social washing and propose a framework for operationalizing the analysis of social washing practices in PBOs. To explore social washing practices, we adopt the multiple case studies method. The results reveal that the main social washing practices are misleading assessment of impacts, cherry-picking, inadequate or absent involvement of the local community, and concealment of modern slavery practices. This study provides an overview of the dimensions and practices of social washing, laying the groundwork for future studies on the topic.

Ownership & Opportunity: Navigating Power & Equity in State-Owned Enterprises

Session Moderator: **Leonardo Henrique Lima De Pilla**, *Fundação Getúlio Vargas/EBAPE*

This presentation will share research on the complexities of state-owned enterprises, examining their political evolution, sale strategies, gender pay disparities, and their financial sustainability.

PNP: State-Owned Enterprises' Financial Sustainability and Government's Political Ideology

Author: **Leonardo Henrique Lima De Pilla**, *Fundação Getúlio Vargas/EBAPE*

Author: **Alketa Peci**, *EBAPE/FGV*

Author: **Rodrigo De Oliveira Leite**, *COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro*

State-Owned Enterprises (SOEs) are corporations created by governments that may combine different levels of state and private ownership and control. A burgeoning strand of public administration (PA) research suggests a growing corporatization trend in the public sector, driven by the political ideology of governments and the pursuit of financial sustainability in the provision of public goods and services. The resulting SOEs have multiple purposes, mixing a diverse set of financial objectives and public interest goals. Nevertheless, scant attention has been devoted to understanding whether governments' political ideology shapes SOEs' financial sustainability. We contend that the incumbent government's political ideology is not only relevant to understand growing corporatization but is also associated with the SOEs' tradeoffs between financial objectives and public interest goals, ultimately impacting their financial sustainability. The more right leaning the government, the greater the pressures guiding SOEs towards financial performance. Conversely, the more left leaning the government, the greater the pressures guiding SOEs to achieve public interest goals. We examine a 2018-2021 panel of 313 SOEs controlled by 27 different subnational governments in Brazil, a country with significant political ideology heterogeneity and that traditionally relies on PA corporatization through SOEs. The empirical results confirm the hypothesized association between political ideology of governments and financial sustainability. The findings hold in different econometric specifications, such as static and dynamic panel data regressions, with industry, state, or unit fixed effects, and with Coarsened Exact Matching.

PNP: State Intervention and Political Organization Work: The Evolution of the Canadian Wheat Board

Author: **Wei Hua**, *Texas Tech U.*

Author: **Wendy Chen**, *Texas Tech U.*

Author: **Ronald K. Mitchell**, *Texas Tech U.*

Author: **Rob Mitchell**, *Colorado State U.*

State-owned enterprises (SOEs) have received growing attention in the public management literature. This paper uses historical institutionalism and political theory to study the evolution of SOEs as the outcome of state intervention. Using the case of the Canadian Wheat Board from 1935 to 2011—focusing specifically on the final years of its existence as an SOE—we develop a political process model that explains how state intervention affects SOEs through political organization work. This research contributes to several research conversations in the SOE literature, to the research on public organization work and institutional work and their combination, and to the resurgent conversation of historical institutionalism in management research by providing an empirically-based grounded theory.

PNP: To Whom Are State-Owned Enterprises Sold? Strategic vs Financial Buyers

Author: **Francesco Baldi**, *Alma Mater Studiorum U. di Bologna*

Author: **Neophytos Lambertides**, *Cyprus U. of Technology*

Following the recent upward trend in privatizations, there has been a surge in the academic literature on M&A deal-making where State-owned enterprises (SOEs) are targeted by private firms (privatizations). However, the determinants of the privatization process design remain under-researched as little is still known about whether strategic or financial buyers are more interested in acquiring SOEs. Our study fills this gap making two contributions to the literature. First, it investigates the determinants of the sales method's choice made by a country's government when selling a SOE. Second, it enlightens the factors driving a strategic or a financial buyer to acquire a SOE. Our work is the first to address the above two issues, namely the sales method adopted by the government and the typology of the acquirer, in the context of M&A transactions involving SOEs. Based on 401 private-public deals completed globally in the 2013-2021 period (within or outside of privatization programs) in which the acquisition involves a company or a stake in a company from a Government seller by a non-Government acquirer, we find that private acquirers are more likely to bid in public auctions; cash is the preferred method of payment of the purchase price in auctions of SOEs; privatizations of SOEs are most likely arranged via auctions rather than direct negotiations; strategic buyers are more likely to participate in auctions of SOEs within privatization programs, while outside such programs financial buyers are more likely to bid. Implications for selling governments, policy-makers and researchers are drawn.

PNP: The Gender Pay Gap in Municipally Owned Corporations: Do Women in the Boardroom Make a Difference?

Author: **Rhys Andrews**, *Cardiff U.*

To evaluate whether active representation of women's interests can occur within municipally owned corporations (MOCs), this article presents an analysis of the relationship between women in the boardroom and the gender pay gap in more than 100 large MOCs in England for a six-year period (2017-2022). The findings suggest that MOCs led by female chief executive officers (CEOs) are likely to have a lower pay gap between male and female employees. The presence of more women directors on MOC boards is also negatively related to the pay gap, especially in MOCs led by male CEOs. The findings highlight the importance of executive discretion and board gender representation to address pay inequalities in corporatized public services.

Presenter: **Battulga Buyannemekh**, *U. at Albany, State U. of New York*

Digital transformation is expected to reshape local service delivery, organizations, and governance fundamentally across the globe. In many countries, local government is the most significant tier of public service delivery, ensuring proximity to citizens and a key player of digital transformation. While there is ample research on the theme of digital transformation of and in local governments, it is a matter of concern and criticism that in current comparative research concerning the digital transformation of the public sector, local levels of government have been insufficiently investigated. Addressing this shortcoming, the aim of this paper symposium is three-fold. First, it aims to make a first step towards taking stock of recent developments in the area of digital transformation in local governments. This is achieved by presenting the current literature on the topic based on a structured review. Second, it aims to showcase the breadth of the research topic, with respect to different branches of local government, geographical breadth (Europe, Asia and Africa) and the different organizational and governance settings in which digital transformation takes place. Third, it aims to discuss further avenues for research against the backdrop of particular characteristics of the branches of local governments, as well as developments in the wider institutional and social context in which they operate.

RM: Moderation in Response Surface Analysis: Current Shortcomings, Recommendations, and Software

Author: **Leander De Schutter**, *Vrije U. of Amsterdam*

Author: **Marius Van Dijke**, *Erasmus U. Rotterdam*

Author: **Jeffrey R. Edwards**, *U. of North Carolina*

Management scholars are often interested in congruence effects, which they analyze using polynomial regressions and response surface analyses. They also more and more frequently conduct moderation analyses of these polynomial regressions to understand how response surfaces change as a function of a third variable. Our review of the literature in management and applied psychology that tested moderation of response surface models reveals three shortcomings of the current practices: (1) hypotheses regarding moderation are more specific than what a general incremental variance test can assess, (2) probing and interpreting simple effects relies on a p-value heuristic – where a difference between conditional effects is assumed when an effect is significant at one level but not at another, and (3) there is no methodological guidance on how to assess moderation by congruence (i.e., cases where the effect of a variable is contingent on the degree of congruence between two other variables). To address these shortcomings, we (a) introduce indices of response surface moderation to directly test in what way a response surface shape changes as a function of a moderator, (b) we further detail how to analyze moderation by congruence, and (c) we wrote a user-friendly statistical program that facilitates conducting and interpreting moderation of congruence effects, and moderation by congruence effects.

RM: On One Small Change to the Classical Five-Parameter Testing Strategy

Author: **Yongheng Yao**, *Wilfrid Laurier U.*

The five-parameter strategy developed by Edwards (1994) and Edwards and Cable (2009) has been widely used in congruence research for testing the perfect fit effect. This classical testing strategy, however, has a vulnerability: it includes the curvature of the surface along the misfit line (a_4) and the intercept of the first principal axis (p_{10}) but excludes the slope of the surface along the misfit line (a_3). We argue that other things being equal, the combination of a_4 and p_{10} is less reliable for testing the variation of the outcome along the misfit line, compared to the combination of a_4 and a_3 . Due to this limitation, this popular five-parameter strategy, when used to close the empirical loop for congruence research, may lead to misleading conclusions, rather than accurate inferences and precise practical implications. To improve this situation, we propose to refine this classical testing strategy. Specifically, the new testing strategy we propose replaces p_{10} with a_3 , while retaining the other four parameters suggested by Edwards and Cable (2009). This one small change to the classical testing strategy allows a giant leap for congruence research, promising more robust theory development and scientific rigor.

RM: Being Smarter with Dummies: Using Bayes Factors for Hypothesis Tests Involving Dichotomous Variables

Author: **S. Trevis Certo**, *Arizona State U.*

Author: **Chi Hon Li**, *Tilburg U.*

Author: **Matthew Semadeni**, *W. P. Carey School of Business, Arizona State U.*

Author: **Kristen Raney**, *U. of Virginia - McIntire School of Commerce*

Researchers in strategic management often use independent variables operationalized as dummy variables to test hypotheses. A unique property of a dummy variable is that its standard deviation is directly determined by its mean. We use simulations to show how this unique property influences the results of OLS regression models that include dummy variables as predictors. Using a baseline of dummy variables with an equal number of 0s and 1s, our simulations show that while holding all else equal, increasing the imbalance of 0s vs. 1s increases standard errors, decreases statistical power, and decreases R-squared values. We also include Bayes factors in our simulations as a supplementary technique that scholars can employ in hypothesis testing. Bayes factors are particularly useful in helping to understand nonsignificant findings.

RM: Modeling Networks with Changeable Nodes

Author: **Viviana Amati**, *U. of Milan-Bicocca*

Author: **Alessandro Lomi**, *U. of Italian Switzerland*

Author: **Francesca Pallotti**, *U. of Exeter Business School*

Author: **Stefano Tasselli**, *U. of Exeter Business School*

Our current understanding of interorganizational networks rests on a substantial body of empirical evidence predicated upon the implicit assumption that organizations may be adequately represented as unitary network nodes. Yet, the existence of differentiated and partially changeable internal structures is one of the defining features of organizations as collective social actors. Network representations of interorganizational relations that preclude the possibility of nodes with changeable internal structure are analytically convenient. They are also theoretically incomplete and empirically implausible. This paper goes beyond our current understanding by proposing a novel class of network models that explicitly recognizes this constitutive aspect of organizations as collective actors. The model posits that processes of (internal) organizational and (external) network change shape one another, coevolving over time. We demonstrate that a model where organizational and network structure coevolve can reproduce with considerable accuracy the structure of interorganizational networks, the internal structure of the network nodes, and the distribution of organizational activities at the field level. Additionally, we illustrate how the model may assist in identifying and apportioning the mechanisms behind the tendency of interdependent organizations to have similar internal structures that is frequently observed in studies of interorganizational networks. An analysis of data that we have collected on networks of collaborative relations within a community of health care organizations exemplifies the compelling theoretical and empirical possibilities afforded by abandoning the analytically convenient assumption of organizations as unitary network nodes.

Author: **TC Eley**, *Weatherhead School of Management, Case Western Reserve U.*

Author: **Lili Bao**, *Eastern Washington U.*

While a number of valuable resources identify basic design options for building agent-based models (ABMs) (e.g., Gilbert, 2019; Rand and Rust, 2011), they do not offer clear guidance on the overarching concepts required for generating emerging outcomes. To encourage more researchers to engage in formally studying dynamics using ABM, we need to offer thorough design directions. We address this need by illuminating core design concepts. In this paper we offer four core conceptual distinctions in the design of ABMs that drive nonlinear relationships: (1) choosing a structure of relationships among the agents that create local impacts; (2) including opposing forces that constrain each other's effects; (3) defining the sequencing of agents' interactions and agents' decision rules that alter dynamics; and (4) identifying boundaries to create asymmetry in agents' interactions. Through a review of ABMs, we identified these concepts and developed criteria for making choices within them. We bring the concepts to life by illustrating them with examples from classic ABMs from several disciplines and from more recent management studies. Finally, we offer suggestions for moving from theories or phenomena to common design choices and provide key questions that researchers can use to guide the design of their ABMs to produce emerging outcomes.

Presenter: **Alyssa Birnbaum**, *Claremont Graduate U.*
Presenter: **M. Gloria Gonzalez-Morales**, *Claremont Graduate U.*
Presenter: **Tine Koehler**, *U. of Melbourne*
Presenter: **Angela Pei Ju Chen**, *U. of Melbourne*

Workplace mistreatment research has seen a surge of interest in recent years, and much progress has been made in construct definition, conceptualization, and theoretical development. However, arguably, relevant research methods to study these constructs have not developed at the same rate. Workplace mistreatment constructs are multifaceted, including such issues as bullying, harassment, discrimination, incivility, mobbing, and many others. They come with different requirements for studying them effectively. In the current presenter symposium, a group of four presentations advances methodological issues in workplace mistreatment research.

Institutional and Social-Symbolic Work

Session Moderator: **Steve Maguire**, *U. of Sydney Business School*

SAP: **The Evolution of Complex Resources: How Social-Symbolic Work Shapes Google Chrome**

Author: **Tyson Rallens**, *Oxford U., Saïd Business School*

Organizational resources are dynamic: successful organizations carefully manage the evolution of their resources over time to create value and sustain competitive advantage. Modern organizations must develop increasingly complex, often digital, resources, to carve out distinctive niches and harness the benefits of scale and specialization. However, most strategy scholarship takes a static view of resources—asking which characteristics of a resource in situ can confer a competitive advantage—while very few studies explore how organizations manage the evolution of complex resources in practice. I investigate the evolution of complex resources by conceptualizing an important digital resource, Google Chrome, as a social-symbolic object and analyzing how organizational actors engage in social-symbolic work to develop and maintain the source code behind the popular web browser. My analysis is based on digital records of the Chrome team's day-to-day work from Git and other open source tools. Based on my findings, I develop a process model of how social-symbolic work shapes the evolution of a complex digital resource. My model and findings contribute to the literatures on complex resources, digital technologies, and social-symbolic work.

SAP: **Exploring Performativity in Institutional Work: Towards a Strong Process Framework**

Author: **Paul C. Van Fenema**, *Netherlands Defence Academy*

Author: **Harry Sminia**, *U. of Strathclyde Business School*

Performative takes on institutional work have emphasized constant recreation efforts (Bjerregaard & Jonasson, 2014), sensemaking in a pluralistic manner (Boxenbaum & Strandgaard Pedersen, 2009), and translation (Latour, 1986). These socio-cognitive, inter-individual approaches tend to represent the social richness of institutional work processes (Czarniawska, 2009). To push a performative understanding of institutional work, a non-representationalist view is desirable in the spirit of strong process theorizing (Langley & Tsoukas, 2010). Early attempts have introduced problem solving (Sminia, 2011) and politics (Beunza & Ferraro, 2019) but remain virtually silent on how these approaches interplay along the process of institutionalization. The objective of this conceptual paper is therefore to further interpret institutional performative work as a process of problem-solving-cum-politics. We distinguish four processes pertaining to the ordering of action: decision making, developing meaning, dealing with practicality, and institutionalization. Institutional work concerns the dynamic relationship between these processes as modes of problematizing/ solutioning. We then explore the politics of the four processes and their relationships and arrive at a strong process model for conducting research on institutionalization.

SAP: **When Period Gone Public? Nexus of Practices in Stigma Dilution**

Author: **Vinayak Ram Tripathi**, *XLRI Xavier School of Management*

Author: **Swati Ghulyani**, *IMT Ghaziabad*

Author: **Shobha Shah**, *SEWA Rural, India*

We examine how organizational projects can dilute stigma against a widely prevalent yet invisible form of stigmatization in societies. To do so, we draw on an in-depth field study of menstrual health and hygiene project in rural-marginal community in two districts of western India. We explore how a non-profit organization worked alongside government and international agencies to change the deeply institutionalized social stigma through three intertwined strategies: enabling supporting actors from diverse local institutions to normalize an alternative meaning; creating local open spaces to become safe spaces for projecting the alternative meaning and question the status quo; and creating a local material infrastructure which symbolizes change through local production of tabooed material. We contribute to the literature by showing that supporting actors, beyond the stigmatized audience themselves, can be critical in diluting social stigma and organizational interventions can create a structure that sustains the social change.

SAP: **Open Strategy, Institutional Change, and Refashioning Research Culture in UK Universities**

Author: **Elie Chahda**, *Newcastle U. Business School*

Author: **Charles Edward Harvey**, *Newcastle U.*

Author: **Tom McGovern**, *Newcastle U.*

Despite the growing knowledge on open strategy, we are still lacking any empirical evidence of why and how it might be adopted as a mean for conducting institutional work. As such, we engage in a case study that delves into the context-driven work that aims to change research culture across the UK higher education field. Through informing our analysis with interview data, secondary data, and theory, we uncover three instances of institutional work: the discourse of field ideology change, disruption through embracing openness, and enactment by mobilizing the community. By unravelling detailed accounts of the reasoning behind the need for change, the premises for choosing openness, and the practices that institutions employed, we reconstruct the process of institutional change while attending to both, the context, and, causal mechanisms.

Navigating the Path to Diversity, Equity, and Inclusion in Strategy Making

Organizer: **Anna Plotnikova**, *Vrije U. Amsterdam, School of Business and Economics*
Organizer: **Theresa Langenmayr**, *U. of Zurich*
Panelist: **David Knights**, *Oxford Brookes U.*
Panelist: **Pikka-Maaria Laine**, *U. of Lapland*
Panelist: **Eddy S. Ng**, *Queen's U.*
Panelist: **Julia Hautz**, *U. of Innsbruck*
Panelist: **Janet Johansson**, *Department of Management and Engineering, Linköping U., Sweden*

Creating strategies has traditionally been a reserved and secretive endeavor, limited to a select few who possess the authority to make decisions. Unfortunately, these traditional strategists often lack diversity. In response to pressing societal issues and growing environmental complexities, organizations are now embracing collaboration and diversifying the actors involved in strategic management. Despite these positive shifts, the expectations for representation and equal rights for marginalized social groups in strategic management are not fully realized, maintaining persistent pressure for change. Current research on diversity in strategy making, whether concerning the diversity of top management teams or adopting open strategy approaches, primarily takes a utilitarian perspective on diversity and inclusion. This symposium aims to stimulate a critical dialogue on diversity, equity, and inclusion in strategy-making. By exploring various perspectives and research streams within the domain of diversity, equity, and inclusion, the symposium seeks to shed light on different methods to enhance diversity, equity, and inclusion in strategy making. The discussions will delve into understanding the inherent challenges and identifying effective strategies to overcome them within the context of strategy-making.

Unveiling Shadows: Insights on Startup Misconduct

Organizer: **Salem Alsanousi**, *London Business School*
Participant: **Natasha Overmeyer**, *Stanford Graduate School of Business*
Participant: **SHREEKANTH MAHENDIRAN**, *HEC Lausanne - UNIL*
Discussant: **Christopher B. Yenkey**, *U. of South Carolina- Moore School*

Recent public discourse and media coverage have highlighted misconduct in and by startups, revealing a complex landscape where innovation and rapid scaling sometimes transgress ethical and legal standards. High-profile cases have brought to light issues such as misrepresentation of product capabilities, financial fraud, and employee mistreatment. These instances are not isolated cases but rather indicators of a systemic problem within the startup ecosystem. Startups, often under pressure to achieve rapid growth and satisfy investors, may neglect essential ethical guidelines and regulatory frameworks. This behavior not only threatens their long-term viability but also poses significant risks to stakeholders and the broader industry. This symposium includes diverse research focused on misconduct in the context of startups. It illuminates widespread issues propelled by investor expectations, operational pressures, and the unique dynamics in startups. The collective research offers insights into the external perceptions and structural pressures faced by startups, leading to ethical dilemmas. These studies provide a thorough understanding of the risks and consequences of misconduct in startups, considering both internal and broader industry contexts. The findings underscore the need for a holistic approach in evaluating and mitigating risks in the startup sector, taking into account not just the actions of individual startups but also the wider effects of industry practices and perceptions.

Toward Sustainability: Corporate Environmentalism, Circular Economy, Ecosystems, and Biodiversity

Session Moderator: **Laura Albareda**, *LUT Business School*

SIM: Socio Critical Corporate Environmentalism - A Systematic Literature Review

Author: **Elíne Rianne Roomer**, *Trinity Business School, Trinity College Dublin*

Author: **Sheila Cannon**, *Trinity Business School, Trinity College Dublin*

Author: **David Coffey**, *Trinity Business School, Trinity College Dublin*

Corporate environmentalism has evolved in management literature and practice over the past three decades in response to increased political and public climate debate and action. This systematic literature review analyzes a more recent trend towards socio-critical perspectives in corporate environmentalism, that includes social change activities not traditionally explored in management literature departing from the more familiar business case for eco-efficiency. To make sense of this, and the concurrent trend from climate mitigation to adaptation, the authors propose a definition and model of socio-critical corporate environmentalism that distinguishes between concerns that support the continuation of business-as-usual, such as firm performance and reporting, from issues that demand societal change, such as climate justice and regulation. The model conceptualizes socio-critical corporate environmentalism as a spectrum with levels of social change at the micro-level (e.g., ethics and morality), meso-level (e.g., organizational form), and macro-level (e.g., system change), and degree of integration between social and environmental dimensions. This spectrum model can serve as a tool for organizing knowledge and facilitating the development of research that addresses climate change challenges in the corporate sphere, and provide guidance for future research endeavors in the area.

SIM: Unpacking Inter-Organizational Collaboration Capabilities in the Circular Economy

Author: **Virginie Litaudon**, *De Montfort U.*

Author: **Diego Alfonso Vazquez**, *Portsmouth Faculty of Business and Law*

In Circular Economy (CE) research, while the importance of inter-organisational collaboration is recognised, there is a significant gap in understanding the specific challenges and capabilities needed for successful multi-actor collaboration. This study addresses this gap by exploring the impact of internal and external challenges on inter-organisational collaboration in complex CE projects and identifying key capabilities to overcome these barriers. This paper uses an inductive action research approach to examine a European project focused on developing circular solutions for commercial plastic waste. The research, conducted over three years and involving participatory observation and interviews, highlights critical collaborative barriers such as inadequate facilitation, communication gaps, and role confusion. It also identifies four essential collaboration capabilities: collaborative integration, adaptive resource management, empathic relationship-building, and inclusive mutual support, contributing to CE and inter-organisational relationships literature. These findings indicate that while crucial in complex CE projects, effective collaboration capabilities have broader relevance across various project types, challenging the notion of unique collaboration capabilities for CE. Instead we suggest the need for new CE collaboration practices supported by the sequential orchestration of key capabilities.

SIM: Think Like a Ship: Ecosystems and Human Well-Being

Author: **Lee A. Swanson**, *U. of Saskatchewan*

Author: **Chelsea Willness**, *U. of Calgary*

The ecosystem concept borrowed from the natural sciences has provided social scientists with useful ways to study societal constructs like organizations and economic regions. Academics and practitioners have applied this lens to the business world to describe complex relationships between organizations and people, but such discussions typically neglect the normative issues, perspectives, and values that are inherent in social systems. Meanwhile, natural sciences scholars have developed the ecosystem services concept to assess how ecological ecosystems contribute to human well-being, which has enhanced their perceived, experienced, and economic value to society. Our paper uniquely integrates theory and research in the natural and organizational sciences to consider the limitations of the current ecosystems metaphor and to examine normative issues and the parallels and divergences between ecological and human-constructed ecosystems. Compelled by worldwide urgency surrounding sustainability and the role of organizations therein, we develop the case for expanding business ecosystems studies to emphasize the human well-being impacts, in particular with a new construct and research discipline focused on “business ecosystems services,” for which we will offer an analysis of well-being benefits and research questions to propel the field forward.

SIM: On Justification: Justifying Biodiversity in Sustainability Reporting

Author: **Annika Blomberg**, *Tampere U.*

Author: **Neha Neha**, *Tampere U.*

Author: **Riikka Tapaninaho**, *Tampere U.*

Author: **Johanna Kujala**, *Tampere U.*

While the importance of biodiversity is starting to become clear for managers and organizations, our understanding of what biodiversity means for business and how best to disclose it remains limited. The purpose of this study is to examine how biodiversity is justified and argued for in companies' sustainability reports. More specifically, the study focuses on what kinds of justifications are used and what is considered worthy and valuable in biodiversity reporting. We apply the conventionalist analysis to examine how biodiversity is justified in the sustainability reports of the mining sector and to reveal the socially accepted rationales the companies draw from in their biodiversity communication. The study contributes to the literature on biodiversity communication by showing how the common worlds of justification are used in sustainability reporting and how they bring forth certain assumptions and values while hindering others.

Taking Responsibility Seriously: Organizational Leadership and Ethical Implications

Session Moderator: **Meena Andiappan**, *DeGroot School of Business, McMaster U.*

SIM: Taking Stock of Responsible Leadership Research: A Systematic Literature Review and Research Agenda

Author: **Giang Ngo Tinh Nguyen**, *The U. of Newcastle*
Author: **Heidi Wechtler**, *U. of Newcastle Australia*
Author: **Po-Hsin Lai**, *The U. of Newcastle*

Recently, the burgeoning interest in responsible leadership (RL) has produced a research field rich in empirical evidence, with diverse research foci on determinants, boundary conditions, and outcomes across micro-, meso-, and macro-levels of analysis. While this research has produced a rich set of findings, the fragmented and ambiguous nature of this research complicates the derivation of general implications and the identification of key areas for future investigation. Thus, we systematically review and consolidate the latest empirical evidence to offer an interdisciplinary and comprehensive synthesis of mechanism linking RL vis-à-vis determinants, boundary conditions, and outcomes. We delineate five important research gap areas — the complex layering of RL, the boundary condition of RL, reconnecting RL with time, reconnecting RL with space and RL in the digital world — and multiple potential research directions that we believe will guide scholars in further advancing this crucial and growing domain of research.

SIM: The Influence of Artificial Intelligence-Driven Capabilities on Responsible Leadership

Author: **Sahadat Hossain**, *U. of Wollongong*
Author: **Mario Fernando**, *U. of Wollongong*
Author: **Shahriar Akter**, *U. of Wollongong*

The traditional leadership capabilities, such as goal analysis, constraint analysis, planning, forecasting, and idea evaluation, are found wanting in an Artificial Intelligence (AI)-driven environment. To complement traditional capabilities, a new form of human-machine collaborative capabilities has been called for to ensure higher but more responsible performance in AI-driven organizational environments. We conducted a systematic literature review to explore the extant literature on leadership in the AI context with two specific aims. First, this review aims to identify the essential AI-driven capabilities in responsible leadership. The second is to synthesize the systematic review findings into an integrated conceptual framework to highlight how leaders in AI-driven organizations could perform more responsibly. Describing the developments and trends in leadership in AI-driven organizations, the paper includes propositions and future research opportunities on how leaders in AI-driven organizations could perform better and more responsibly.

SIM: The Impact of Inclusive Leadership on Project Leaders' Stress

Author: **Khansa Zaman**, *Shaheed Zulfiqar Ali Bhutto Institute of Science and Technology, Islamabad*
Author: **Ahmad Nabeel Siddiquei**, *Bond Business School, Bond U., Australia*
Author: **Kamal Badar**, *Nottingham U. Business School (Malaysia)*
Author: **Amer Riaz Qureshi**, *SZABIST-Islamabad-Pakistan*

Drawing from the conservation of resource theory, our study explores the negative impact of inclusive leadership on project leaders' stress via role overload. We further proposed leader resilience as a moderating factor that reduces the indirect effect of inclusive leadership on leader's stress. We find a direct and positive relationship between inclusive leadership and leader stress via role overload using a multi-wave sample of 436 leader-member dyad from diverse project-based sectors, including IT, construction, non-governmental organizations, and petroleum. Importantly, we identify a buffering effect wherein higher levels of leader resilience reduce this stress. Our research highlights significant implications for leaders' stress in project management and points to future research directions.

SIM: Autocratic Leadership in Masculinity Contest Workplaces: Resistance and Counterproductivity

Author: **Khang Hoàng Lê**, *RMIT U. Vietnam*
Author: **Tuan Trong Luu**, *Swinburne Business School, Swinburne U. of Technology*
Author: **Giang Trung Hoang**, *RMIT U. Vietnam*

Autocratic leadership is sometimes viewed as a neutral or even positive style in certain situations, but its negative aspects, particularly at the employee-level, have not been fully understood. Drawing from the Conservation of Resources theory, we propose that autocratic leadership interacts with masculinity contest culture in predicting constructive resistance, which in turn influences counterproductive work behavior. We find support for these ideas in a study of 86 firms (315 employees and 117 managers) in the hospitality industry. The findings suggest that autocratic leaders may lead followers to protect their resources by discouraging positive reactions, such as constructive resistance. Moreover, when employees perceive a threat of resource depletion, they may prioritize self-interest, resorting to negative behaviors like counterproductive work behavior. Additionally, masculinity contest culture was found to positively moderate the impact of autocratic leadership on constructive resistance. This study contributes to the autocratic leadership literature by revealing the dark and unintended aspects of this leadership style. Furthermore, this study advances the Conservation of Resources theory by exploring how interactions between different sources of resource depletion, from leaders and colleagues, can trigger defensive reactions among employees seeking to safeguard their limited resources under multiple stressors.

Author: **Maria Bracamonte**, *Mississippi State U.*

Author: **Marcos Caiado**, *FGV-EAESP*

Author: **Miguel Caldas**, *U. of Texas at Tyler*

Author: **Michele Medina Craven**, *Mississippi State U.*

Leader's virtues have a rippling effect on their subordinates. In the present study, we investigate the influence of leader's virtues on perceptions of identification-based trust, LMX, and on engagement in organizational citizenship behaviors (OCBs). Using data collected from 341 employees across eleven family enterprises in Brazil, our findings demonstrate the employee's perception of their leader's virtues influence LMX, with this relationship being mediated by identification-based trust. Moreover, the serial mediation indicates that leader's virtues, identification-based trust, and LMX directly impact the employee's engagement in OCBs. We present and discuss these results and their implications for future studies and practice.

I. Executive, Board & Leadership Impacts on Corporate Social Responsibility (CSR) & Sustainability

Session Moderator: **Jiangtao Xie**, *Cork U. Business School*

SIM: The Social and Environmental Impact of CEOs, TMTs, and BODs: A Literature Review 

Author: **Andres Felipe Cortes**, *Sacred Heart U.*

Author: **Sebastian Cortes-Mejia**, *Pontificia U. Javeriana Bogotá*

Author: **Mehdi Samimi**, *City College - City U. of New York*

Author: **Minjoo Joo**, *Duke Kunshan U.*

Society is placing an increasing demand on organizations to surpass their legal obligations and exhibit more robust commitments to addressing social and environmental issues. As a result, business leaders are left with the important challenge to address these calls while ensuring their primary assignment of maximizing profits. Accordingly, scholars have been devoting attention to studying how chief executive officers (CEOs), top management teams (TMTs), and boards of directors (BODs) shape their organizations' social and environmental impact. What do we know about the influence of strategic leaders on social and environmental efforts and how can we move this research forward? Our study aims to address this question, provide an organizing framework, and highlight opportunities for future research by systematically reviewing 167 studies published between 2000 and 2022 across 34 journals. Taking a broad conceptualization of social and environmental impact, our review uncovers that theories on the impact of CEOs, TMTs, and BODs on social and environmental impact have coalesced around six major themes: moral duty, prior experiences, external forces and signals, diverse perspectives, financial motives, and power distribution. We synthesize research on each theme, advance integrative suggestions, and propose research opportunities within each strategic leadership level

SIM: The Complexity of CEO Dark Traits: CEO Greed and Corporate Social Responsibility 

Author: **Yuanyuan Hu**, *Tongji U.*

Author: **Jiasi Fan**, *U. of International Business and Economics*

Author: **Shouming Chen**, *Tongji U.*

This study investigates the impact of CEO greed on corporate social responsibility (CSR) practices. Drawing insights from the existing literature on greed and CSR, we develop the argument that CEO greed exerts a heterogeneous impact on different CSR activities, namely technical CSR and institutional CSR, based on their engagement with different stakeholder groups. To further enhance our understanding of the variation in the focal relationship between CEO greed and technical (institutional) CSR, we investigate how state ownership moderates the relationships. Using a sample of 1,588 CEOs from Chinese-listed firms, we find support for the argument.

SIM: Returnee CEO and Firm's Anti-Environmental Behaviors      

Author: **Muhammad Jameel Hussain**, *Doctoral Student at Xi'an Jiaotong U., Xi'an, Shaanxi, China*

Author: **Gaoliang Tian**, *Professor, vice president of management school, Xi'an Jiaotong U., China*

This study examines the impact of CEO foreign experience on anti-environmental behaviors such as corporate environment violations in Chinese listed firms. Using a hand-collected data of CEO foreign experience, we find a negative association between CEO foreign experience and corporate environment violations. Our results indicate that firms with CEOs who have foreign experience are less likely to violate environmental regulations. Furthermore, our findings suggest that the negative relationship is more pronounced in less financially constrained firms, state-owned enterprises, and less competitive industries. We contend that CEOs with foreign experience are more effective in managing resources and navigating complex business environments, and are therefore better equipped to reduce corporate environment violations in these contexts. Our findings are robust to different econometric techniques and alternative measure of CEO foreign experience and environmental violations.

SIM: Entrepreneurs and Corporate Social Irresponsibility     

Author: **Travis Howell**, *Arizona State U.*

Author: **David Welsh**, *Arizona State U.*

Author: **Bradley Hendricks**, *U. of North Carolina, Chapel Hill*

Prior literature suggests many benefits stemming from founders' strong identification with their firms. We suggest, however, that there is also a potential dark side. We argue that founders can become overidentified with their organizations, making them more likely to engage in irresponsible behavior that protects the firm but harms others, as moral and societal norms are viewed as obstacles to fulfilling an organization's goals. However, we also argue that the presence of a "second-in-command" can act as a key safeguard against founder CEOs' overidentification by reigning in some of the founders' worst impulses. We find support for our predictions using panel data with over 4,000 firm-years. Collectively, our findings offer fresh contributions to the literatures on organizational identification, founder leadership, and corporate social irresponsibility.

Micro Dynamics in Corporate Social Responsibility (CSR)

Session Moderator: **Sana (Shih-chi) Chiu**, *U. of Houston*

SIM: **Why and How Identification Matters for CSR Implementation: A Comparative Case Study of Four MNEs** → 📄

Author: **Marloes Korendijk**, *Macquarie Business School, Macquarie U.*

Author: **Jaco Lok**, *Macquarie Business School, Macquarie U.*

Author: **Alan Muller**, *U. of Groningen*

Understanding corporate social responsibility (CSR) practice implementation within multinational enterprises (MNEs) is of utmost importance for creating a more sustainable business world. While existing research acknowledges the individual-level discretion related to CSR implementation, it is still unclear how and why this discretion can influence variability in CSR implementation within MNEs. Through a comparative case study of 4 MNEs based on 73 semi-structured interviews across subsidiaries and headquarters, this study investigates how subsidiary managers' professional and organizational identifications influence their CSR implementation approach. Our findings show that the relative salience of different identification targets in a subsidiary managers' identity salience hierarchy, i.e. the strength of identification with the CSR profession, the subsidiary, and/or the MNE as a whole, influences whether subsidiaries comply with the global CSR strategy, translate it to their own needs, or go it alone and ignore the global strategy. We also find that the salience of subsidiary managers' identifications are impacted by their perception of the global CSR strategy and the relationship with their headquarters. This suggests that a personal relationship and clarity of a strategy can shape identification. With these findings, we showcase the importance of professional- and organization identification, headquarters-subsidiary relationships and a clear global strategy for strategy implementation within MNEs. Our research contributes to international management, CSR, and strategy scholarship by offering a deeper understanding of individual-level drivers of subsidiary CSR implementation.

SIM: **Inside the Black Box: Unpacking Employee Voice to Advance Employee-Centred CSR Research in Nigeria** 🌐 🗨️ 📄

Author: **Oluseyi Aju**, *Leeds Beckett U.*

Author: **Eshani Samantha Beddewela**, *U. of Huddersfield*

Author: **Hakeem Owolabi**, *U. of Bolton*

Author: **Babajide Oyewo**, *U. of Essex*

While there is extensive literature on the impact of corporate social responsibility (CSR) on employees, limited research takes an "inside-out" approach to explore employees' internal perspectives that shape their expectations of CSR. Based on psychological contract theory, this study examines employee expectations of employee-centred corporate social responsibility practices within the Nigerian oil industry. Twenty-five employees were interviewed across four public and private oil companies employees using semi-structured interviews within an interpretive paradigm. Thematic analysis revealed seven key categories of expectations: training, career progression, healthcare, infrastructure, employee involvement, employment security, and work-life balance. Unique context-specific expectations emerged, such as preferences for informal training driven by the African Ubuntu tradition. Public sector employees expressed greater infrastructure deprivations, while private sector counterparts sought ergonomic improvements. Despite assumptions about high power distance cultures, all employees articulated an interest in involvement in decision-making. Disparities were evident regarding employment security and gender-specific work-life balance expectations. Diverse factors shaped expectations, including peer benchmarking and individual exigencies like employability and healthcare. The study provides managers with critical insights into employees' localised expectations to enhance commitment and retention. It contributes novel empirical and theoretical insights into EC-CSR practices from an underrepresented African context.

SIM: **From Win-Win to Win-Some-Lose-Some** → 📄

Author: **Giovanni Radaelli**, *Warwick Business School*

Author: **Toloue Miandar Esfahani**, *Alma Mater Studiorum U. di Bologna*

Author: **Marco Guerci**, *U. degli Studi di Milano*

Our study investigates how CSR specialists and functional managers organised their collaboration when implementing a new CSR strategy. Our ethnography is set in a large-scale utility company, where the executive board expected CSR specialists and functional managers to evolve their coordination and cooperation in peripheral CSR towards full collaboration in an embedded CSR programme. We investigated how CSR managers and functional managers interpreted and responded to this demand for collaboration. Our results reveal that both CSR managers and functional managers had altruistic and boldness motives that supported the implementation of embedded CSR. However, they faced fears of exploitation and competition that prevented them from collaborating. Fearing marginalisation, the CSR specialists employed defensive voices and controlled pitches to gain control of the CSR implementation. Fearing exploitation, the functional managers employed defensive voice and defensive silence to gain autonomy from CSR implementation. Theoretically, we argue that CSR specialists and functional managers do not perceive collaborative CSR implementation as a win-win solution, but as a win-some-lose-some. As politically astute actors, they employ their voice and silence to preserve their managerial aspirations and protect their occupation.

SIM: **Temporal Dynamics: Internal CSR, Organizational Identification, and Job Performance** → 📄

Author: **Ying Chen**, *U. of Rhode Island*

Author: **Guozhen Zhao**, *Delta State U.*

Author: **Meng Yu Cheng**, *Feng Chia U.*

This study explores the longitudinal association between perceived internal Corporate Social Responsibility (CSR) change rate, organizational identification change rate, and job performance change rate. Utilizing a longitudinal, multilevel sample comprising 365 employees across 72 teams, findings from three waves of data over eight months indicate a positive correlation between an individual's perceived internal CSR change rate, organizational identification change rate, and subsequent effects on job performance change rate. Moreover, Time 1 team moral leadership emerges as a critical moderating factor, revealing a weaker correlation between an individual's perceived internal CSR change rate and organizational identification change rate when Time 1 team moral leadership is high. These results underscore the significance of adopting a change perspective when examining the effects of internal CSR on organizational identification and job performance in contemporary workplaces.

Author: **Agnieszka Paruzel**, *Bielefeld U.*

Author: **Günter Maier**, *Bielefeld U.*

As the world is facing severe challenges such as climate change, organizations strive to contribute to social justice and mitigate their negative impact on the environment. The United Nations has agreed on 17 goals of sustainable development to be achieved by 2030 and organizations can contribute to these goals, for example with policies such as corporate social responsibility (CSR). Up to now, CSR is regarded as a very positive strategy and research construct, among others due to its benefit for employees. Taking a resource perspective, we investigate under which conditions CSR may be perceived as stressful, gaining insights into the dark side of CSR. Based on the conservation of resources theory, we hypothesize that an imbalance of internal and external CSR is associated with stress. In this pre-registered study, we examined the interaction of employees' (N = 353) perceptions of internal and external CSR, autonomy, and meaningfulness and their relation to stress and work engagement. Results of regression analyses showed that internal and external CSR was positively associated with work engagement and internal CSR was negatively related to stress, whereas external CSR was positively related to stress. Moreover, we found a three-way interaction of meaningfulness, internal and external CSR when predicting stress ($B = -.18, p = .02$). When external CSR is high, and internal CSR is low (unfavorable distribution of resources for employees), stress is higher for those who derive meaning from their job. Our findings indicate that CSR is not always associated with positive outcomes for employees.

Workplace Sorting by Political Partisanship: Extent, Origins, and Implications

Organizer: **William Reuben Hurst**, *U. of Maryland R.H. Smith School of Business*

Discussant: **Haram Seo**, *Texas A&M U., Mays Business School*

Organizer: **Max Kagan**, *Columbia Business School*

Presenter: **Fabrizio Dell'Acqua**, *Harvard Business School*

Presenter: **Ray Fang**, *U. of Washington, Tacoma*

Presenter: **Jan Stuckatz**, *Copenhagen Business School*

Recent work suggests that the political partisanship of workers influences how firms engage with pressing social issues, and even how they fare financially. Little is known, however, regarding the extent to which workers are sorted by partisanship across workplaces or the underlying processes driving this sorting. The purpose of this symposium is to draw attention to ongoing scholarly efforts to address these questions. Scholars will present cutting edge research on this topic, often demonstrating how they leverage ideas from political science to address questions core to management and strategy research. An expert-led discussion and audience Q+A will follow. This symposium will be of particular interest to those interested in human capital strategy, corporate sociopolitical activism, and labor market segregation.

Corporate Strategy and Human Capital

Session Moderator: **Heejung Byun**, *Purdue U.*

STR: **Corporate Ownership and Employee Compensation**

Author: **Claudine Madras Gartenberg**, *The Wharton School, U. of Pennsylvania*
Author: **Elaine Seoyoung Pak**, *Management Department - The Wharton School, U. of Pennsylvania*

This study documents that firms with active corporate owners compensate their employees less than their peers. We analyze over 20 million employee records from 897 US firms and calculate pay differentials for comparable jobs across firms. The analysis yields three main insights. First, firms with external active owners (i.e., hedge funds and private equity firms) pay 3 to 5% less than other firms for comparable work. Second, these pay differentials correspond to differences in pay policies across these firms: firms with external active owners provide flatter incentives (i.e., lower bonus to base pay) and are less likely to grant equity to employees. Lastly, lower pay for comparable work does not correspond to higher profits for firms, even within industries that depend relatively more on cost management than on innovation. All together, these results are consistent with corporate owners having different orientations toward human capital, which in turn may reflect differing strategic approaches toward value creation and appropriation.

STR: **Unlocking Synergies Through Hiring: Post-M&A Complementarity Hiring and Its Performance Implications**

Author: **Koungjin Lim**, *Purdue U.*
Author: **Heejung Byun**, *Purdue U.*

When can firms create synergies by hiring human capital following acquisitions? A growing body of research emphasizes human capital as a key lever for creating synergies following mergers and acquisitions. While previous research has given primacy to post-merger retention, deletion, or reallocation of human capital for generating synergies, there has been less exploration of the post-merger addition of human capital. Using a dataset of job postings and information on 2,530 M&A transactions between publicly listed U.S. firms from 2011 to 2019, we examine this underexplored mechanism for creating synergies. We find that acquirers attempt to hire human capital that complements the combined entity's pre-existing talent pool, thereby improving acquisition performance.

STR: **Post-Acquisition Investment in Acquired Human Capital: Is it Good to be Targeted?**

Author: **Jeroen Neckebrouck**, *IESE Business School*
Author: **Philipp Meyer-Doyle**, *INSEAD*
Author: **Russell Coff**, *Wisconsin School of Business*

Much of the M&A literature has focused on the negative consequences of acquisitions for target employees. They may anticipate layoffs or cuts in pay, benefits, and training. Research has also highlighted how valuable human capital resources may often decide to leave post-acquisition to avoid the disruption that the acquisition and post-merger integration bring to their career. Consequently, one might expect post-acquisition investments in human capital to be rare or unwise. We draw on a unique sample of acquisitions in Belgium which includes detailed data on human capital investments (formal and informal training and compensation) before and after the acquisition. Our findings indicate that post-acquisition investment increases, both for compensation and training, when the deal rationale involves revenue growth or buyers are in unrelated industries. Notably, in our sample, the vast majority of buyers pursue growth-oriented objectives so human capital investment occurred most of the time. We also offer a more nuanced discussion breaking out different kinds of revenue growth strategies. Overall, our study advances research on acquisitions and strategic human capital.

STR: **Are WeTtoo (Dis) Similar? Acquirer-Target CEO Similarity and Post-Acquisition Target CEO Turnover**

Author: **Yunke WU**, *Leeds U. Business School*
Author: **Xiwei Yi**, *Peking U.*

This study introduces the similarity attraction theory into acquisition research, and examines how the relationship between the acquirer CEO and the target CEO can affect the target CEO's retention following acquisition completion. We propose that extraversion similarity can generate mutual like and facilitate better communication between the acquirer CEO and the target CEO during their interactions and negotiations, which can enhance the target CEO's likelihood of staying in the combined firm. We further suggest that the effect of extraversion similarity hinges on more observable surface-level demographic characteristics. Specifically, We propose the positive influence of extraversion similarity on target CEO retention will be stronger when the acquirer CEO and the target CEO lack similarity in ethnicity, education level, and alumni identity, which suggests that deep-level personality traits can serve as alternative bases to build common grounds in interpersonal interactions when the surface-level similarity is missing. Based on samples consisting of acquisitions undertaken between U.S. public firms, We find support for the above arguments.

Shareholders and Stakeholders

Session Moderator: **Carmen Weigelt**, *Tulane U.*

STR: **What Do Shareholder Want? A Systematic Literature Review on Investment Motives**

Author: **Jannik Werner**, *LMU Munich*
Author: **Simone Maria Eulitz**, *LMU Munich*
Author: **Anne Ixmeier**, *LMU Munich*

Shareholders invest to gain financial returns. While this is an undisputed fact, we aim to show that investment decisions are impacted by a variety of investments motives. Therefore, we systematically review the literature on investment motives. Based on management and finance literature, we investigate why shareholders invest in certain firms. We find that the shareholder's worldview is the premise for understanding investment motives and that shareholders assess their investment on the basis of personal principles as well as on tangible and intangible outcomes. We further analyze how principal- and outcome-based assessments of investments relate to each other and to what extent shareholders are willing to make trade-offs between them. Our review shows that shareholder motives are complex and multifaceted, leading to a plethora of research opportunities that will provide firms with vital insights into their shareholder base.

STR: **Corporate Purpose Breadth - An Institutional Perspective on Accountability for Stakeholders**

Author: **Jana Oehmichen**, *Johannes Gutenberg U. Mainz*
Author: **Jan Christoph Hennig**, *U. of Groningen*
Author: **Sarosh Asad**, *U. of Groningen*

Our study introduces the new concept of corporate purpose breadth – firms' equally distributed attention to all stakeholders. Intuitively, it might feel right that firms around the world address the needs of all stakeholders in their strategy communication since this indicates the willingness to create value for all stakeholders, which, in consequence, would lead to higher overall corporate sustainability. However, we challenge this reasoning and argue that corporate purpose breadth instead represents a lack of focus in the stakeholder strategy and consequently harms corporate sustainability. At the same time, we argue that corporate purpose breadth fulfills the shareholders' legitimacy need that all stakeholders are accounted for and hence increases firms' capital market performance. To understand the origins of corporate purpose breadth, we investigate its institutional antecedents and theorize that it increases with country-level stakeholder salience and shareholder rights. Our empirical study is based on 835 U.S. and European firms and supports our hypotheses that corporate purpose breadth is related to lower corporate sustainability but higher capital market performance. Interestingly, our institutional hypotheses are only partly supported. While high stakeholder salience is indeed associated with a broader corporate purpose, countries' strong shareholder rights seem to reduce corporate purpose breadth.

STR: **The Role of Customer Stakeholders and Income Disparities in Firm Sustainability Investments**

Author: **Carmen Weigelt**, *Tulane U.*
Author: **Ekundayo Shittu**, *George Washington U.*

This study explores how heterogeneity within the consumer stakeholder group relates to firm sustainability investments. Specifically, how consumer income disparities and prosumer presence interact to impact firm sustainability investments in the empirical context of community solar. We find that firms are less likely to make sustainability investments, the more their customer base is tilted toward lower and middle income (LMI) consumers, a finding supporting the notion that firms often underserve disadvantaged communities. However, powerful prosumer stakeholders positively impact firm sustainability investments directly, and when in closer proximity to LMI consumers. Powerful prosumer stakeholders may thus have positive externality effects for less powerful consumer stakeholders. We distinguish these effects for smaller, regional firms and larger firms by taking a more fine-grained view at the county-level.

STR: **Customer-Targeted Environmental Activism: Evidence from U.S. Upstream Oil and Gas Firms**

Author: **Yun Dong Yeo**, *Hongik U.*
Author: **Tae-Ung Choi**, *HKUST Business School*
Author: **Seung-Hyun Lee**, *U. of Texas at Dallas*
Author: **Pil-Seng Lee**, *Baylor U.*

This paper explores the impact of customer-targeted environmental activism on the investment strategies of supplier firms. By leveraging the context of oil and gas (O&G) industry, we contend that environmental activism targeting customer firms (e.g., midstream, downstream firms) compel them to adopt conservative measures, such as distancing themselves from fossil fuels. This shift in behavior may consequently lead to a demand shock for supplier firms (i.e., upstream firms), thereby affecting their investment strategies. Specifically, our findings indicate that when customers face environmental scrutiny, suppliers tend to decrease their investment in drilling activities while concurrently increasing the ratio of exploratory drilling, demonstrating a propensity to take on more risks. The paper contributes to the literature by illustrating that, instead of passively receiving negative shocks propagated through transactional relationships, firms proactively adjust their strategies in response.

Top Management Team Dynamics

Session Moderator: **Laura D'Oria**, *Iowa State U.*

STR: **Collaboration or Divergence? Investigating TMT Responses to Economic Policy Uncertainty**  

Author: **Yanni Chen**, *Huaqiao U.*

Author: **James C. Hayton**, *Warwick Business School*

We integrate firm growth theory and the behavioural theory of the firm to examine TMTs' responses to excess cash, identified as financial slack, within the context of Economic Policy Uncertainty (EPU) and its influence on firm performance. Utilizing a sample of companies listed on the Growth Enterprise Market in China spanning from 2012 to 2019, our findings indicate that financial slack is susceptible to appropriation, particularly by TMTs with longer or more diverse tenures, leading to compromised firm performance. EPU functions as a boundary condition, revealing that TMTs with longer tenures exhibit enhanced collaboration in securing cash during uncertain circumstances. However, our study also highlights that EPU does not mitigate the impact of TMT tenure heterogeneity on financial slack.

STR: **The Social Glue: The Effects of CEO Media Coverage on CEO-CFO Social Interaction in Earning Calls**

Author: **Yuting Yang**, *Iowa State U.*

Author: **Laura D'Oria**, *Iowa State U.*

Author: **Scott G. Johnson**, *Iowa State U.*

Author: **Cheng Nie**, -

Research has shown that CEO media coverage has important implications for organizational outcomes. Such influence is theorized to unfold mainly via two mechanisms—i.e., the effects that CEO media coverage has on i) CEOs' and ii) stakeholders' cognition and behavior. While research in the area has focused on investigating the effects of CEO media coverage on CEO cognition (e.g., overconfidence) and behavior (e.g., risk-taking and overcommitment), relatively less attention has been given to how media coverage of a CEO affects other members of the top management team (TMT). We address this issue and examine how the media coverage of a CEO affects the social interaction between the CEO and the CFO in a firm. Specifically, we focus on CFO mimicry of CEO—i.e., CFOs' nonconscious adoption of their CEOs' behavior during social interactions—and theorize that the valence of CEO media coverage affects CFO mimicry of CEO via the CFO's motivation to affiliate with and willingness to model the CEO. Specifically, we hypothesize that the positive valence of CEO media coverage increases CFO mimicry of CEO whereas the negative valence suppresses it. Drawing on theories of positive-negative asymmetry in evaluations, we theorize that the negative effect is greater than the positive effect. In addition, as more coverage elicits more attention, we expect that the volume of CEO media coverage strengthens both effects. We test our theory in the context of S&P 500 firms' earnings calls with a sample of 3734 CEO-quarter observations. This study contributes to media coverage literature by explicating how CEO media coverage affects stakeholders' cognition and behavior and to upper echelons theory by investigating an external source of TMT homogeneity.

STR: **TMT Gender Composition and Teamwork Culture**  

Author: **Jiayi Sun**, *City university of Hongkong*

Author: **Yishu Cai**, *Department of Management, Business School, The Chinese U. of Hong Kong, HK*

Multiple gender composition in top management teams is increasingly recognized as a crucial indicator of organizational inclusiveness, fostering group teamwork and contributing to corporate development. However, our observations regarding the impact of gender composition in leadership teams present a paradox. On one side, this diversity can lead to a more balanced and inclusive decision-making process, reflecting a wider range of perspectives and experiences. Contrastingly, multiple gender composition can create gender faultlines, leading to divisions and conflicts within the team. This study resolves this puzzle by positing that the impact of multiple gender composition in teams is a structural issue. We study the concept of gender composition from two angles: the macro-outcomes at the structural level, the diversity perspective, and the micro features of these structures, the faultline perspective. We posit that multiple gender composition in executive teams has a double-edged sword effect. While gender diversity promotes the formation of a cooperative team culture, gender faultline within these teams can hinder it. The study further finds that in a liberal-leaning social ideology, feminine traits in executive teams are more valued and effective, and men are more inclined to break gender behavior stereotypes. This can enhance the positive traits associated with feminine leadership, amplifying the beneficial impact of gender diversity on the cooperative climate. Utilizing a machine-learning-based topic modeling technique on manually collected texts from corporate surplus conference calls of S&P 1500 firms in the US, we found support for our theory.

Computational Models of Learning and Decision-Making

Session Moderator: **Daniel Albert**, *Drexel*

STR: **Seeing the Forest for the Trees: Why Complex Interdependencies Need Not Inhibit Effective Search**

Author: **Jon Atwell**, *Stanford Graduate School of Business*

The literature on exploration and learning in principle seeks to understand the behavior of actors in light of both their cognitive faculties and the environments they search. However, surprisingly little is known about the structure of the environment in the workhorse model, the NK fitness landscape. This model has been used to study the behavioral implications of ruggedness---the existences of many local fitness optima---, but we show that the parameter that tunes ruggedness, the eponymous K, also alters several features of the landscape that have relevance for behavior. This calls into question whether ruggedness is indeed the cause of the comparatively poor performance outcomes documented in the literature. We propose the Dirichlet Dot Product landscape to isolate the role of ruggedness. We document a complex relationship between ruggedness and the other characteristics and, in a pre-registered human-subject experiment, show that search on highly rugged Dirichlet Dot Product landscapes is as effective as search on single-peaked NK landscapes. Successful search behavior is compatible with rugged landscapes, suggesting human actors are not hopelessly myopic and in fact do well at apprehending the broader structure of the problem space. This finding suggests a need for more research on the macroscopic structure of decision-making environments and for revisiting the putative cognitive implications of the NK model.

STR: **The Interplay of Biases: How Initial Beliefs and Asymmetric Learning Jointly Shape Decision-Making**

Author: **Daniel Albert**, *Drexel*

This paper investigates the interplay and decision-making consequences of biases in a manager's initial beliefs and belief-updating behavior, with a focus on asymmetric biases in both domains. A manager's bias in initial beliefs manifests as either overestimation or underestimation of future outcomes. A manager's belief-updating can be biased by predominantly learning from feedback that is better than expected while discounting feedback that is lower or by learning from feedback that is worse than expected and discounting such that exceeds expectations. Using a multi-arm bandit model, we examine the spectrum of biases as types of pessimism and optimism, which can exist in any initial belief and belief-updating combination. The distinction and interaction between biases in beliefs and belief-updating demonstrate that neither is inherently detrimental and can indeed lead to high-performing decision-making in appropriate circumstances. Performance in optimistic belief-updating depends on the manager's commitment to exploration, while the efficacy of pessimistic belief-updating is enhanced by initially optimistic beliefs.

STR: **Hierarchy and Organizational Learning: Boundary Conditions for Flat Structure Primacy**

Author: **Sungho Kim**, *Southern Illinois U.*

Author: **Ji-hyun Kim**, *Yonsei U.*

Author: **Melissa Schilling**, *New York U.*

Author: **Min-Woo Ahn**, *Samsung Electro-Mechanics*

We explore the effects of hierarchical structures on organizational learning by critically examining the traditional belief that flat hierarchies are superior for learning and innovation. We challenge this notion by introducing varying hierarchical influences across hierarchical layers. By employing computational modeling, we demonstrate that the impact of hierarchy on organizational learning is more complex than previously understood. Our findings reveal that without taking into account hierarchical influences, contrary to conventional wisdom, tall structures consistently outperform flat structures. Flat organizations outperform tall ones when a significant hierarchical influence is present. We also show that lateral and random ties among individuals can significantly enhance learning performances of flat organizations. Our study establishes boundary conditions for the effectiveness of flat versus tall organizations, providing new insights into the interplay of hierarchy, organizational structure, and learning dynamics.

STR: **To Chase a Moving Target? Positive Versus Negative Shocks and the Role of Experience**

Author: **Juha Uotila**, *U. of Warwick*

Literature offers conflicting views on whether increased environmental dynamism warrants increased exploration. In this simulation study, we analytically unpack environmental dynamism and examine the impact of positive and negative shocks of different durations on experienced and inexperienced firms. We find that two contrasting incumbency effects, cognitive inertia and cognitive repertoire, make experienced firms worse at responding to positive shocks but better at responding to negative shocks. Consequently, highly experienced firms only benefit from high levels of exploration in the face of permanent positive shocks, whereas inexperienced firms also benefit from chasing after short-term environmental changes. These findings reconcile theoretical arguments in the search literature by demonstrating that the multidimensional nature of environmental dynamism can place different demands on different types of firms.

STR: **Digital Strategy Cognition and Transformation of Manufacturing Firms: Mediating Effect of Digital M&A**

Author: **Fuxin Lin**, *Zhejiang U.*

Author: **Xiaobo Wu**, *Zhejiang U.*

Digital technology is fundamentally revolutionizing established economic paradigms and hastening market evolution. For manufacturing enterprises, the integration of digital technology through M&A has emerged as a potent strategy for transformation and competitive enhancement. Despite its prevalence, there remains a dearth of theoretically coherent and systematic explanations for this trend. This study examines listed manufacturing companies in China to investigate the interplay between digital strategy cognition, M&A and transformation. Our research reveals that a robust digital strategy cognition correlates with a heightened propensity to adopt digital technology via M&A. Digital M&A acts as a direct catalyst for digital metamorphosis in manufacturing entities, serving as a pivotal avenue for organizational advancement. Additionally, prior M&A experiences are found to positively modulate the efficacy of digital M&A in facilitating digital transformation. However, these relationships do not hold the same significance within state-owned enterprises. The pursuit of digital technology through M&A by manufacturing enterprises represents a strategic process of capability enhancement and transformation. This approach enables rapid assimilation of digital technologies, bridging the chasm in digital transformation and upgrading. Our findings contribute to bridging the theoretical lacuna in domains such as strategic M&A and digital transformation, while also offering managerial insights for corporate practice.

STR: **United We Stand: An Ecosystem Approach to Integration-Autonomy Dilemma in Post-merger Integration**

Author: **Zhengyao Kang**, *U. of Bristol*

Author: **Xianwei Shi**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Ke Rong**, *Tsinghua U.*

Firms engaging in post-merger integration (PMI) confront a long-standing dilemma: integrating the target firm may render detrimental impacts due to loss of autonomy. To address such an integration-autonomy dilemma, we conducted an in-depth qualitative study on a home appliance ecosystem leader's merger and acquisitions. We develop a three-stage model of facilitating the PMI process with ecosystems that unfolds through a series of inter-connected mechanisms, i.e., harmonizing ecosystem identity, building ecosystem complementarities and nurturing ecosystem generativity. We introduce an ecosystem approach that features the multilateral interactions between the target firms with other constituents in the acquirer's broader ecosystem over time to balance the integration and autonomy. Our findings contribute by reconciling the integration-autonomy dichotomy in the traditional PMI literature and extending the scope of PMI from target-acquirer dyads to ecosystem triads amid integration with the acquirer's ecosystem.

STR: **Equity Shares in The Acquisition of State-Owned Enterprises**

Author: **Thorben Ipers**, *TUM School of Management, Technical U. of Munich*

Author: **Chengguang Li**, *TUM School of Management, Technical U. of Munich*

This study builds on real options theory (ROT) to examine the influence of the target firm's state ownership on equity stake decisions in cross-border acquisitions (CBAs). We hypothesize that acquirer firms prefer lower equity stakes in state-owned targets than in non-state-owned ones, given increased uncertainty due to lower transparency about the assets and capabilities of state-owned enterprises (SOEs) and less foreseeable post-acquisition integration outcome. We further postulate that objective and perceived uncertainties moderate state ownership's influence. Analyzing a sample of over 27 thousand CBAs, we find support for the target firm's public status and the moderating effect of perceived uncertainty in the form of the acquirer country's uncertainty avoidance, yet we do not find evidence for the moderating effect of objective uncertainty in the form of disclosure standards in the target country.

STR: **Generality of Artificial Intelligence Technology and Post-Acquisition Knowledge Integration**

Author: **Jae Young Cho**, *Post-Doctoral Researcher*

Author: **Jeffrey J. Reuer**, *Purdue U.*

Post-acquisition knowledge integration is an important indicator of knowledge transfer from acquirers to startups. As the emergence of AI technology increases coordination concern, it is important to explore how acquires integrate AI technology from the technological acquisitions. In this study, we argue that the generality of AI startup's technology increases post-acquisition integration, by providing various possibilities and alternatives for acquirers to utilize the general-purpose technology. We also argue that the positive relationship is strengthened by acquirer's investment in AI-application capabilities. From the panel-data analysis with 186 AI acquisitions conducted by incumbent firms, we find support for the above argument. Overall, through the additional analysis, we conclude that the generality of technology can facilitate knowledge integration in various directions, while it does not stimulate deep engagements between acquirers and startups.

STR: **Speaking About Mergers and Deal Outcomes: Analyst Report Tone Surrounding Merger Announcements**

Author: **Nicolaus Wallner**, *WU Vienna U. of Economics and Business*

Financial analysts play an important intermediary role in mergers due to information asymmetries among market participants. While most announced deals are completed, a considerable amount is terminated. I examine how announcements impact analysts' qualitative assessments (i.e., report tone), and if these assessments provide valuable insights to market participants early into the deal. Through construct validation tests, I find report tone decreasing in optimism following an announcement, likely reflecting analysts' caution for mergers bad long-term performance. This change in optimism is stronger for targets than for acquirers. Further, I show that the merger topic itself and usage of uncertainty-words shape analysts' assessments. Finally, I find evidence for analysts' assessments within 20-days of the announcement, particularly on the acquirer, strongly associate with the deal completion probability. These findings highlight that analysts' qualitative assessments offer early, valuable indicators to market participants regarding the potential success of mergers.

AI and Digital Transformation Effects

Session Moderator: **Patrick Lang**, *U. Wuerzburg*

STR: Virtual Metamorphosing: Digital Transformation and Organizational Responses to Performance Feedback (WITHDRAWN) 

Author: **Lingli Luo**, *Zhejiang U. International Business School*
Author: **George A. Shinkle**, *UNSW Sydney*

In the ever-evolving landscape of contemporary business, the onset of digital transformation (DT) has ushered in profound changes. Our research delves into organizational adaptation in the digital age, specifically investigating how DT strategies shape organizations' behavioral responses to performance feedback. We identified four distinct DT strategies: mission-compelled, technology-driven, organization-enabled, and ecosystem-supported, providing a nuanced understanding of how these DT strategies distinctly affect organizational learning and information processing, leading to varied behavioral responses to performance feedback. Drawing on a sample of Chinese publicly listed firms from 2011 to 2021, we find an "S"-shaped relationship between performance aspiration discrepancy and R&D search intensity. Importantly, this "S"-shaped pattern is distinctly modified by different DT strategies depending on their transformation locus and scope. Overall, our research spans the domains of behavioral theory, digital transformation, information processing, and organizational learning, promising to advance our comprehension of organizational adaptation in the digital age.

STR: Sustainability Committees and Digital Sustainability: An Attention-Based View 

Author: **Patrick Lang**, *U. Wuerzburg*
Author: **Sascha G. Walter**, *U. Wuerzburg*

The trends of sustainable development and digitalization led to the emergence of the concept of digital sustainability, i.e., tackling grand environmental challenges using digital technologies. Drawing on the attention-based view, we investigate how one organizational player—sustainability committees—affects digital sustainable innovation by firms, per se and in interaction with attention structures. Data from 258 firms from the US and Europe (2010-2017) suggest that sustainability committees nurture digital sustainability. The relationship is negatively moderated by sustainability knowledge and climate change commitment and positively moderated by sustainability incredibility.

STR: Government Digital Transformation and Corporate ESG: Insights from the Big Data Bureau in China

Author: **Jiexin Wang**, *Institute of Economics, Tsinghua U.*
Author: **Pengrui Ou**, *Department of Sociology, Tsinghua U.*

As a crucial stakeholder for enterprises, governments play a significant role in shaping corporate social responsibility behaviors. In this study, we investigate the impact of government digital transformation on corporate ESG performance based on stakeholder power theory. By exploiting the establishment of big data bureaus in China as a quasi-experiment and employing a difference-in-differences design with panel data of listed firms, we show that government digital transformation significantly improves corporate ESG performance. This effect exhibits persistence and gradual reinforcement following the establishment of big data bureaus. Mechanism analysis indicates that government digital transformation achieves heightened ESG performance by enhancing the government's regulation awareness and capacity over enterprises, improving the competitive environment among enterprises, and strengthening normative pressures from the public. Additionally, we observe that the effects of government digital transformation are more pronounced in state-owned enterprises, politically connected firms, highly competitive industries, and regions with higher digitalization levels. Overall, our study contributes to a deeper understanding of the role of stakeholder dynamics and digitalization in promoting corporate social responsibility.

STR: Collaboration Between Humans and AI: Complementarities Within and Across Skill

Author: **Kateryna Fomina**, *GSEM - U. of Geneva*
Author: **Sebastian Raisch**, *GSEM - U. of Geneva*

Management research explores the collaboration between humans and artificial intelligence (AI) algorithms on decision-making tasks, emphasizing the complementarity of human and AI's heterogeneous cognitive skills. Employing a resource-based view, we challenge the notion that such within-skills complementarity explains performance improvements through human-AI collaboration on structured decision-making tasks. Instead, we propose that performance improvements arise primarily from across-skills complementarity, where AI largely substitutes humans' cognitive skills, allowing them to leverage other skill domains, such as their unique social skills. Examining the adoption of an AI-based sales system in a leading wholesale company, we find that customer managers using AI's cognitive skills for structured decision-making tasks refocus on applying their unique social skills for relational tasks, which is associated with a higher sales performance. Our findings challenge the prevailing emphasis on cognitive complementarity, suggesting that, in structured decision-making contexts, human contributions to human-AI collaboration arise primarily from social skills complementing AI's cognitive functions.

What Drives Environmental Innovation?

Session Moderator: **Bryan W. Husted**, *Tecnologico de Monterrey*

STR: Legitimacy and Green Innovation: The Mediating Role of Green Alliance Partners

Author: **Jingyu Bi**, *School of Public Policy and Administration, Xi'an Jiaotong U.*

Author: **Shibin Sheng**, *U. of Alabama, Birmingham*

Author: **Ruijia Liu**, *School of Public Policy and Administration Xi'an Jiaotong U.*

Despite the growing interest in the drives of corporate green innovation, consensus has not been reached as to whether legitimacy plays a key role. Drawing on institutional theory, we investigate the differential effects of corporate legitimacy and industry legitimacy on firms' green innovation. Additionally, we integrate institutional theory with social network theory to explore the mediating role of green alliance partners in the relationship between legitimacy and green innovation. Using a dataset comprising 452 Chinese high-tech firms spanning a 20-year period (2000–2019), we reveal that corporate legitimacy positively relates to while industry legitimacy negatively relates to a firm's green innovation. These relationships are mediated by the number of green partners.

STR: Market-Oriented Institutional Reforms and Green Innovation in China 

Author: **Qadeer Abdul**, *Xi'an Jiaotong U. School of Management*

Do market-oriented institutional reforms stimulate firms to conduct green innovation? We seek to answer this question that previous studies have not addressed. Leveraging a dynamic institutional perspective, we reveal how market-oriented institutional reforms affect firms' green innovation subsidies and the subsequent conversion of such subsidies into green innovation. Results obtained with a sample of Chinese publicly listed firms from 2009 through 2018 indicate that market-oriented institutional reforms enable firms to obtain more green innovation subsidies. The conversion of these subsidies into green innovation is positively moderated by market-oriented institutional reforms, such that more extensive market-oriented institutional reforms enable firms to achieve higher green innovation. These findings provide implications for the dynamic institutional perspective by explaining how market-oriented institutional reforms facilitate green innovation.

STR: Environmental Innovation in Response to Institutional Pressure from Officials 

Author: **Qadeer Abdul**, *Xi'an Jiaotong U. School of Management*

Author: **Xu Jiang**, *Xi'an Jiaotong U.*

Most of the previous studies using institutional theory usually examined firms' response to general institutional pressure (comes from the state), however, less attention has been paid to the important role of singular institutional agents that link institutions and firms. This study investigates how and when firms respond to pressure from officials to comply with government policy. The predictions were tested with data describing 2,800 Chinese listed firms spanning 2009 to 2018. Firms operating in provinces led by officials with central government working experience (termed airborne officials) were found to have responded more actively to China's New Development Philosophy in terms of patenting more environment-oriented innovations. They also responded more actively if such officials had a technical background and/or overseas experience. However, firms responded less actively to the philosophy when airborne officials had a shorter or longer tenure, such that firms achieved the highest environmental innovation performance when airborne officials had an average tenure. These findings contribute to the literature on corporate environmentalism by uncovering the effect of political institutions within a major, albeit unusual, world economy.

STR: Does Board Political Diversity Stimulate Environmental Innovation?   

Author: **Bryan W. Husted**, *Tecnologico de Monterrey*

Author: **Huafang Liu**, *Zicklin School of Business, Baruch College, City U. of New York*

Author: **Shoeb Mohammad**, *Ontario Tech U.*

In this study, we investigate both why and in what contexts board political diversity is associated with environmental innovation. Drawing from upper echelons theory, political psychology, and stakeholder engagement theory, we explore the mediating role of stakeholder orientation, and moderating roles of diversity and inclusion culture, ESG controversies, and liberal state locations to explain the relationship between board political diversity and environmental innovation. We propose that a more politically diverse board is associated with increased environmental innovation because boards with political diversity prioritize stakeholder engagement and environmental issues. We test the hypotheses using a large panel data set with the S&P 1500 firms over the period of 2002–2018 and find evidence supporting the hypotheses. The results suggest that stakeholder orientation is a key mechanism through which a politically diverse board is positively associated with environmental innovation. There is also a synergistic interaction effect between a politically diverse board, diversity and inclusion culture, ESG controversies, and state political liberalism which facilitates environmental innovation.

Immigration and Firm Strategy in a New Era

Organizer: **Qingqing Chen**, *U. of Texas, Dallas*
Presenter: **Britta Glennon**, *The Wharton School, U. of Pennsylvania*
Discussant: **Exequiel Hernandez**, *Wharton*
Participant: **Elena Kulchina**, *North Carolina State U.*
Participant: **Astrid Marinoni**, *Georgia Tech Scheller College of Business*

This symposium aims to bring together pioneering studies that delve into the intricate relationship between immigration and firm strategy, taking into account the evolving socio-political dynamics and delivering valuable insights to inform firm strategic decisions. In recent years, the intersection of immigration and firm strategy has been a subject of growing interest and extensive research. Existing literature has contributed significantly to our understanding of the profound impacts of immigration on knowledge transfer (e.g., Wang, 2015; Yang, Mudambi & Meyer, 2008), entrepreneurship (e.g., Kulchina, 2016, 2017; Lee & Eesley, 2018), and firm strategy and performance (e.g., Hernandez, 2014; Kulchina & Hernandez, 2016; Glennon et al., 2022; Li, Hernandez & Gwon, 2019). However, the current global landscape is witnessing dramatic changes in the socio-political environment for migration and mobility of talents across borders. Shifting demographics in the labor market, resurgence of protectionism (e.g., Yue, et al., 2022), and changing immigration policies, among other factors, have introduced new challenges for firms seeking to harness the potential of talents from around the world. Given these transformative developments, there is an urgent need for further investigation into how businesses can craft effective strategies in this new era.

Strategic Management of Resources: Navigating Uncertainty and Leveraging Capabilities

Session Moderator: **Thomas P. Moliterno**, *Vrije U. Amsterdam*

STR: **Dynamic Capabilities: A New Review to Advance Research on a Dynamic New Competitive Context**  

Author: **Mathias A. Huber**, *Vrije U. Amsterdam*
Author: **Thomas P. Moliterno**, *Vrije U. Amsterdam*
Author: **Valentina Fani**, *Vrije U. Amsterdam*

This new literature review of dynamic capabilities scholarship is motivated by the need to explore how dynamic capabilities scholarship has laid the foundation for future research on dynamic new competitive contexts. Our review finds that extant scholarship has underemphasized the exploration of externally focused mechanisms associated with dynamic capabilities, creating a significant opportunity for research on dynamic competition. We propose “dynamic boundary capabilities” as a theoretical extension to the dynamic capabilities research and domain for future scholarship in this area.

STR: **A Re-Examination of Detroit’s Emergence - The Role of Production Capabilities**

Author: **Sandeep Pillai**, *Department of Management and Technology, Bocconi U.*
Author: **Aneesh Datar**, *NEOMA Business School*

The emergence of Detroit as the capital of the American automobile industry has been attributed to the process of spinoff formation in Detroit. We suggest that this assertion suffers from an omitted variable bias: it does not account for automobile production capabilities that were so vital early on in the industry. In contrast, we suggest that Detroit became the hub of the automobile industry because firms in Detroit figured out the complex process of automobile manufacturing. We also suggest that spinoffs were not the firms that successfully manufactured cars and that it was firms that engaged in economic experimentation that successfully manufactured vehicles. We propose manufacturing capabilities as a novel mechanism for industry agglomeration.

STR: **Strategic Resource Decay: Production in Texas Oil Fields** 

Author: **Reha Karadag**, *U. of Minnesota Duluth*
Author: **Laura Poppo**, *U. of Nebraska, Lincoln*

In the resource-based view (RBV), external dynamism poses the most significant threat to competitive advantage. Discontinuous and hard to predict, external changes can render strategic resources obsolete or common. Dynamic capabilities address how firms reconfigure their organizational capabilities in accordance with these changes. On the other hand, most strategic resources are not perpetual or infinite (Karadag & Poppo, 2023), an assertion that challenges one of the main tenets of the RBV regarding sustainable competitive advantage. In this study, we build upon the strategic resource decay (SRD) framework to answer whether firms are immune to the endogenous decay of their strategic resources, an implicit assumption held in the existing literature, and how firms can potentially deal with this threat. Further, we extend this framework by analyzing scarcity as another dynamic construct that moderates the decay-firm performance relationship. Using panel data of 631,515 firm-month observations from 2,696 upstream oil and gas operators, we found that, regardless of its predictable nature, the decay of their reserves in the largest oil basin in the US negatively affects the productivity of these firms and that this relationship is intensified by the ever-increasing scarcity of these reserves. All else constant, firms’ capability reconfiguration activity mostly does not suffice to retain productivity levels in the long run. The results from the first empirical examination of SRD validate it as a potential threat to firm performance, calling for further empirical investigation and the integration of the concept of SRD in the RBV and dynamic capability research.

STR: **Hitting a Curveball: Strategic Factor Markets, Uncertainty, and Performance**

Author: **Jason Sigler**, *The Ohio State U. Fisher College of Business*
Author: **ZEYNEP YAVIC**, *The Ohio State U. Fisher College of Business*
Author: **Jaideep Anand**, *Ohio State U.*
Author: **Tiberiu Sergiu Ungureanu**, *Appalachian State U.*

Strategic factor markets allow firms to obtain competitive advantages through having superior information and more accurate expectations about the value of resources compared to rivals. Interestingly, this theoretical statement has not found consistent empirical support. Using a comprehensive proprietary dataset, we analyze strategic factor markets under different forms of uncertainty, specifically market and resource uncertainty. Our findings parallel previous empirical work in showing that superior information does not always lead to competitive advantage; however, this relationship is contingent on both types of uncertainty. Furthermore, we uncover that firm-specific strategic factor market capabilities exist. We demonstrate that uncertainty and firm-specific capabilities are necessary, but not sufficient, for obtaining competitive advantages through strategic factor market exchanges. Our findings help explain prior mixed empirical results while demonstrating the importance of uncertainty and firm-specific capabilities to strategic factor market decision-making.

Serendipity in Strategy, Entrepreneurship, and Innovation

Session Chair: **Christian Busch**, *USC Marshall School of Business*
Session Chair: **Madeleine Stefanie Rauch**, *Cambridge Judge Business School*
Panelist: **Henry Mintzberg**, *McGill U. - Desautels Faculty of Management*
Panelist: **Walter Powell**, *Stanford U.*
Panelist: **Wendy K. Smith**, *U. of Delaware*
Panelist: **Matthew Grimes**, *Cambridge Judge Business School*
Panelist: **Christina Fang**, *New York U.*
Panelist: **Scott Duncan Anthony**, *Tuck School of Business at Dartmouth*
Panelist: **Saras Sarasvathy**, *U. of Virginia*

This symposium will focus on the role of serendipity in the organizational context. Leading scholars will discuss how and why serendipity matters in strategy, entrepreneurship, and innovation—and how companies can use it to their advantage. The focus of the short “panel sparks” is to highlight current state-of-the-art research, as well as relevant future research opportunities. We will conclude the symposium with reflections by an eminent management scholar (Henry Mintzberg), who will (serendipitously) “connect the dots” between the emerging themes.

AI and Decision-making

Session Moderator: **Jelena Cerar**, *WU Vienna*

TIM: When Do Decision-Makers Rely on AI? Cognitive Exhaustion in AI-Augmented Multi-Decision Settings

Author: **Jelena Cerar**, *WU Vienna*

Author: **Chiara Fabrizi**, *WU Vienna*

Author: **Phillip C. Nell**, *WU Vienna U. of Economics and Business*

Artificial intelligence (AI) is transforming decision-making in various organizational settings by supporting human decision-makers. However, although several AI-augmented decision-making applications occur in multi-decision settings, current literature treats AI reliance in those settings as purely influenced by single-decision level variables, fully neglecting factors specific to the multi-decision setting. Yet, understanding such factors is crucial, as reliance in single decisions might be contingent upon the overall cognitive experience with the task and the AI tool. In particular, the AI-augmented decision-making literature has overlooked two cognitive factors specific to multi-decision settings – i.e., cognitive load stemming from the task-level workload and cognitive dissonance from a task-level disagreement with AI in the multi-decision session. We theorize that a higher task-level workload increases AI reliance, whereas experiencing higher task-level disagreement with AI during the multi-decision session leads to reduced AI reliance in single decisions. We test our theoretical framework in two multi-decision innovation selection contexts by conducting a lab experiment with 53 young business professionals and a field experiment with 88 managers in one firm and further contextualize our results with 20 interviews. We explore the implications of these findings for theories of AI reliance in augmented decision-making and organizational practice.

TIM: Applicants' Fairness Perception of Human and AI Collaboration in Resume Screening

Author: **Bin Ling**, *Hohai U.*

Author: **Bowen Dong**, *City U. of Macau*

Author: **Fei Cai**, *Hohai U.*

Along with the acknowledgment that the AI-driven processes enhance consistency and efficiency, perceived unfairness with regard to AI-based decision-making has been noted and raised some concerns. Therefore, recent studies discuss human intervention and the collaborative roles of human and AI in the selection decision-making. In the context of resume screening, we conduct two online experiments (Study 1: N = 286; Study 2: N = 283) and examine if applicants perceive the human-AI collaborative decision-making as fairer than AI decision-making from a lens of responsibility attribution and if so, how about applicants' fairness perceptions and responsibility attributions with regard to three types of partnerships (human-led, balance, AI-led). Results in Study 1 show that applicants report higher fairness perceptions with regard to human-AI collaborative resume screening procedure than with regard to AI-only resume screening procedure. But if the outcome is unfavorable, there is no significant difference of fairness perception with regard to two types of resume screening procedures and applicants attribute more responsibility to employers in the human-AI collaborative resume screening procedure. Further insights from Study 2 illustrate that in the context of human-AI collaborative resume screening, applicants have higher fairness perceptions with regard to human-led procedure and balanced procedure than with regard to AI-led procedure. If the outcome is unfavorable, applicants report highest fairness towards balanced procedure and attribute less responsibility to employers in balanced procedure than to other procedures. These findings provide some theoretical and practical implications to recruitment literature about human-AI partnership.

TIM: Synergy Between Artificial Intelligence and Managerial Decision-Making: A Qualitative Inquiry

Author: **Rajagopal Rajagopal**, *EGADE Business School, Tecnologico de Monterrey*

Author: **Ananya Rajagopal**, *U. Anahuac Mexico*

Artificial intelligence and Machine learning can be perceived as strategic enablers of managerial and organizational cognition. The synergy between these two helps in developing repositories of metaknowledge diffused through management networks in new generation organizations. This study analyzes the role of artificial intelligence in improving managerial decision-making and enriching organizational cognition by building real-time knowledge repositories. The study also measures the decision-making process in which the managers use artificial-intelligence agent to derive various solutions and recommendations. Theories of meta-learning and metatheory of technological innovation have been used as the foundation for this study. This research has been conducted by collecting qualitative data from 15 middle management managers to measure the impact of metaknowledge and meta-learning on managerial decision-making in automobile manufacturing plants located in three cities within the geographic limits of Mexico. The results of the study show that metaknowledge and meta-learning help managers to create effective, consistent, and applied knowledge on crucial decision edges.

TIM: Artificial Intelligence and Corporate Investment Decisions

Author: **Dimitrios Gounopoulos**, *U. of Bath*

Author: **Chen Huang**, *Queen Mary U.*

Author: **Geoffrey T. Wood**, *U. of Western Ontario*

Author: **Aoran Zhang**, *Toronto Metropolitan U.*

Using mergers and acquisitions (M&As) as a proxy, and looking at the case of the US, we find that managers from firms that are more able to substitute human workers with artificial intelligence (AI) are likely to adopt aggressive corporate investment policies, and thereby are more prone to engage in M&As. We reveal that internal and external corporate governance moderates the relationship between AI automation susceptibility and M&A investments. The results hold after the consideration of selection bias and endogeneity issues. At a theoretical level, our study builds on earlier work that suggests a linkage between AI and market concentration. The structural intersectional theoretical literature focuses on the impact of AI-using firms on other actors, but intentionally casts a wide net; it is held that the AI has complex and polyvalent effects, and its usage of data and decision making is one that seeks to afford clear advantage to those deploying it. There is also an association between firm usage of AI and the concentration of markets. This study seeks to deepen this understanding by exploring the approach of AI deploying firms towards others in their sphere; they are more prone to acquiring those firms who supply them or who they supply, which in turn, is likely to contribute to the further foreclosure of competition. We draw out the implications for policy and practice.

Entrepreneurship is a central economic driver that leads to technological advancements and new business opportunities. However, entrepreneurship is an arena fraught with uncertainty, and entrepreneurs have to make various decisions under these uncertain conditions. In building a new venture, important characteristics that require investigation include the factors affecting entry, the team, the capital, and the idea itself, among other factors. Taken under uncertain conditions, these factors fundamentally impact the outcomes of the new venture and could dictate the potential direction the new ventures may take. Perhaps the highest uncertainty could be attributed to the very early stages of the new venture creation process, where even the idea and the team are still prone to changes. Despite some studies documenting the various stages of the new venture creation process, a dearth of studies zoom into the very early stages of the new venture creation process to shed light on how the decisions made during the pre-entry and early stages affect the new venture outcomes. Studying the very early stages of the venture creation process could provide critical insights that can potentially inform the strategic decisions that shape entrepreneurial journeys. Through the presentations and discussion of the proposed symposium, which involves both qualitative and quantitative studies, we aim to shed light on the factors affecting critical decisions made at the pre-entry and early-stage process of new venture creation as well as the potential outcomes of these decisions for new venture outcomes and success.

Digital Servitization as Innovation Strategy

Session Moderator: **Keyi Fang**, *Hangzhou Dianzi U.*

TIM: Pathways for the Implementation of Digital Servitization: Effects on Firm Performance (WITHDRAWN) 

Author: **Ferran Vendrell-Herrero**, *U. of Edinburgh business school*

Author: **Lorena Para-González**, *U. of Murcia*

Author: **Carlos Mascaraque-Ramírez**, *Technical U. of Cartagena*

Author: **Joan Freixanet**, *Graduate School of Management, Saint Petersburg U.*

This article draws on existing debates on standardization versus adaptation to propose two possible pathways for digital servitization. On the one hand, the standardization pathway posits that digital transformation enables servitized firms to make their service-based business model more standardized, and as a result, scalable. On the other hand, the adaptation pathway advocates that servitization enables highly digitalized firms to make their digital offerings more adaptable to heterogeneous customer needs, and as a result, customizable. We investigate which of these two paths integrates more effectively, and which one is thus likely to prevail in the long run. We use a purpose-built survey of 127 Spanish product firms to test these relationships using partial least squares structural equation modelling (PLS-SEM), and test single- and multi-mediation models. The results corroborate the existence of both pathways, but also suggest that the standardization pathway contributes more to performance than the adaptation pathway. This is consistent with historical transitions in adoption (services existed before digital transformation) and services being dependent on digital technologies delivered remotely. These findings suggest the benefits of customization in digital servitization are lower than previous studies seem to imply, and provide important managerial implications.

TIM: How to Leverage the Innovation Effect of Servitization?-- A Moderated Mediation Model  

Author: **Keyi Fang**, *Hangzhou Dianzi U.*

Author: **Tanfei Liu**, *School of management, Zhejiang U.*

With the integration of corporate boundaries, manufacturing servitization in the digital landscape encompasses more intricate operational systems. Supply chain partners are transitioning from transaction-based relationships to value co-creation. Consequently, the management and coordination of relationships become particularly critical. However, the concrete performance outcomes brought about by manufacturing servitization, especially how enterprises engaged in manufacturing servitization can better manage supply chain relationships to achieve innovation, remain unknown to academia. Therefore, this study revolves around the central questions: "What are the specific impacts of manufacturing servitization on innovation in the digital context? How can the 'integration-governance' mechanism of the supply chain be effectively leveraged?" Through large-sample empirical analysis, this research seeks to address the quantitative analysis gaps in the current field of manufacturing servitization and supplement deficiencies in research on manufacturing innovation performance.

TIM: Unpacking Digital Servitization, Digital Service Offerings, and Firm Performance 

Author: **Kiho Kwak**, *Hanbat National U.*

Author: **Namil Kim**, *Konkuk U.*

Author: **Haneul Lee**, *Thoth Business and Advisory Co., Inc*

Digital servitization (DS) is the radical process of shifting a business model (BM) from a product- to a service-centered, using digital technologies. This is seen as a competitive advantage for manufacturing firms, but previous research has identified paradoxes in which these firms do not achieve the expected financial performance from the investment in DS. These paradoxes lead us uncertain about whether DS provides a positive return on investment. In addition, there is limited research on the various types of digital service offerings (DSOs) and their impact on firm performance. To address these gaps, we developed a measurement of DS and identified typologies of DSOs based on the level of digitalization and service orientation, using textual analysis of firm documents. We found that there is an inverted U-shaped relationship between DS and firm profitability. We also observe the heterogeneity in profitability across six different DSOs. In doing so, we contribute to DS literatures by disentangling the complex DS-performance relationship, indicating the necessity of further studies on DS to better understand the digital servitization paradoxes and the variability in profitability of DSOs.

TIM: Servitization as a Strategy for Diffusing Radical Technologies: An Analysis of US Top R&D Investors  

Author: **Shukhrat Nasirov**, *U. of Manchester*

Author: **Carolina Castaldi**, *Utrecht U., Department of Human Geography and Planning*

The diffusion of radical technologies poses a significant challenge for firms, particularly large ones, as they need to cut across existing organizational structures and overcome various barriers, including a preference for lower risk and immediate rewards. While extant studies have mainly concentrated on organizing for radical innovation, less attention has been given to strategies that enable firms to bring these technologies to the product market. In this paper, we maintain that servitization – the addition of product-related services to tangible product offerings – can serve as a potential solution, largely owing to its ability to reduce customer uncertainty about the nature and utilization of radical technologies. Yet, there are limits to deploying this strategy: developing and implementing service-generating capabilities, together with maintaining and advancing the capability to generate radical technologies, can be costly and risky. Our empirical analysis of 503 top corporate R&D investors from the US manufacturing sector confirms a significant association between technological radicalness and servitization. At the same time, this association is nuanced and depends on the level of financial resources available to firms, known as financial resource slack. More specifically, firms with higher slack tend to engage in more servitization when their technologies are more radical. In turn, firms with lower slack tend to engage in more servitization when their technologies fall within the middle range of the radicalness spectrum. Based on these findings, we draw implications for practice and policy.

Innovation Funding

Session Moderator: **Julia Demmer-Nolden**, *U. of Duesseldorf*

TIM: When Do Corporate Venture Capital Investments Drive Product and Business Model Innovations?

Author: **Julia Demmer-Nolden**, *U. of Duesseldorf*
Author: **Andreas Engelen**, *Heinrich-Heine U. of Dusseldorf*

Corporations pursue Corporate Venture Capital (CVC) investments to get access to knowledge sets that reside in new ventures to boost their innovation. Indeed, while some existing studies find such positive innovation effects of CVC investments, others do not. Therefore, the present study takes a more nuanced perspective by differentiating between new and follow-on CVC investments and by taking both product and business model innovations into account. Further, following an upper-echelon perspective, we argue that the presence of a Chief Strategy Officer (CSO), i.e., a TMT member with a job description that unites investments in external organizations, including new ventures, and new business generation, facilitates the transformation of CVC investments into innovation. The theoretically derived research is empirically tested with a multi-source dataset on 722 corporate firms that pursued 501 new CVC investments and 363 follow-on CVC investments in the period of 2005-2019. The findings indicate that product innovations are driven by new CVC investments, while business model innovations are especially fostered by follow-on CVC investments, emphasizing the need to take a temporal, round-specific perspective on CVC investment's effect on innovation. Further, the presence of a CSO facilitates the transformation of CVC investments into business model innovation.

TIM: Funding Black High-Growth Startups

Author: **Lisa Cook**, *Michigan State U.*
Author: **Matt Marx**, *Cornell U.*
Author: **Emmanuel Yimfor**, *Columbia U.*

We characterize the gap in venture-capital funding for Black entrepreneurs. Combining face-detection algorithms with extensive manual review, we classify the race of more than 150,000 U.S.-based founders and investors since 2000. Only 3.5% of founders seeking VC funding are Black, and those who raise VC funding obtain substantially less than others. We attribute some of this gap to Black founders having fewer traditionally observable markers, such as past startup experience, patents, or networks. However, Black founders with these markers are just as likely to be receive funding. Interestingly, while Black partners at VC firms rely less on these traditional markers, they are more likely than their fellow partners to invest in Black founders, and these startups tend to have more successful outcomes when backed by Black partners compared to other VCs, even within the same firm. Our results suggest that Black partners are better able to select Black entrepreneurs who will succeed, due in part to lower information asymmetries given their overlapping prior professional experience.

TIM: Market Value vs. Private Value: How Firms Navigate the Dilemma in Pledging Patents for Loans

Author: **Yuandi Wang**, *U. of Science and Technology of China*
Author: **Zi Li**, *Anhui U.*
Author: **Qianbin Dou**, *Anhui U. of Finance and Economics*
Author: **Jiashun Huang**, *School of Public Affairs, USTC*
Author: **Zhao Zhou**, *Shanghai U. of Finance and Economics*

According to the incomplete contract literature, the creditors in the debt financing market should emphasize the collaterals' liquidity and market value since it helps compensate the creditors' loss in the case of loan default. However, these propositions cannot well explain the fact that the creditor tends to take the debtors' core technologies, which are closely associated with asset specificity and are difficult to redeploy. In this study, we show that the decisions of pledging patents as collaterals are jointly influenced by both lenders and borrowers. This is because the lenders face a tradeoff to balance the collateral's market value (i.e., salvage value in the market) and private firm value (i.e., value to the borrowing firm). The borrowers also face a dilemma between fulfilling their liquidity needs and the risk of losing a critical asset in their pledging decision. By examining how creditors and debtors manage the dual tradeoffs, this study suggests that pledging technologies of high market value and high private value may be unrealistic. Instead, we suggest a scenario in which technologies belonging to the borrowers' core technology domain but not with high asset specificity are more likely to be pledged as collaterals.

TIM: Relational Social Ties, Resource Bootstrapping and Micro-Entrepreneurs' Innovative Behavior

Author: **Jing A. Zhang**, *U. of Otago*
Author: **Conor O'Kane**, *U. of Otago*
Author: **Denis John Griffin**, *U. of Otago*

Drawing on the perspective of entrepreneurial resourcefulness, this study examines the mechanisms shaping the value-oriented innovative behavior of micro-entrepreneurs in the developing world. Specifically, we investigate how relational social ties in microfinance facilitate self-reliant financial bootstrapping. This, in turn, enhances value-oriented innovative behavior. Furthermore, we explore the interaction between joint bootstrapping and self-reliant financial bootstrapping in influencing value-oriented innovative behavior. We apply both symmetrical (PLS-SEM) and asymmetrical (fsQCA) approaches to a sample of 292 micro-entrepreneurs in microfinance in Mexico. The PLS-SEM results demonstrate that self-reliant financial bootstrapping is an effective mechanism through which relational social ties positively impact value-oriented innovative behavior. Additionally, the positive role of self-reliant financial bootstrapping in value-oriented innovative behavior is more significant when micro-entrepreneurs have a low level of joint bootstrapping. These findings are reinforced by the fsQCA results, which show that value-oriented innovative behavior arises from various combinations of relational social ties, self-reliant financial bootstrapping, joint bootstrapping, and other factors. Our findings offer both theoretical and practical implications.

Inventor Resources and Rewards

Session Moderator: **Tom Ngo**, *Pennsylvania State U.*

TIM: Who Collaborates with Whom and So What? The Role of Expertise Complementarity/ Similarity

Author: **Tom Ngo**, *Pennsylvania State U.*

This study contributes to the knowledge recombination literature by presenting a conceptualization of recombination as a two-stage process—pre-formation stage and post-formation stage—wherein knowledge inputs become available and are recombined through interpersonal collaborations. Taking a dyadic-level perspective and considering both resource and behavioral drivers of co-authoring relationships, this study investigates potential differences regarding the impacts of expertise complementarity and expertise similarity on collaboration formation (pre-formation stage) and collaboration performance (post-formation stage). To empirically test the hypotheses, a unique dataset comprising collaborations among management researchers at Academy of Management (AoM) conferences over a 14-year period (2001-2014) is employed. The findings reveal that individuals with high expertise similarity are more likely to collaborate, and similarity-based collaborations are more likely to successfully generate new knowledge. There is however no empirical evidence supporting the impact of expertise complementarity on both collaboration formation and performance, suggesting that the potential/actual challenges may outweigh the potential/actual benefits when it comes to complementarity-based collaborations. In addition, the findings provide some empirical evidence for possible biases in studying knowledge recombination as a one-stage process.

TIM: Age, Death, and the Nucleus of Invention

Author: **Christopher Esposito**, *UCLA Anderson School of Management*

This paper identifies the relationship between the age of inventors and knowledge spillovers that they generate. Linking age and death information from 13,305 patent inventors that died prematurely to 56,700 co-inventors, I show that inventors who lose early-career collaborators to premature deaths subsequently produce 8.5% fewer patents and 17% fewer highly cited patents than do inventors who lose mid-career collaborators, with spillovers peaking between ages 35 and 44. I explore two potential mechanisms for these results: younger collaborators may be more productive, and younger collaborators may hold newer and more useful knowledge. I find stronger support for the latter mechanism.

TIM: Inventors' Expected Rewards for Ownership Transfer of Their Ideas and Gender Effects on Creativity

Author: **Wei Wei**, *Imperial College Business School*
Author: **Paola Criscuolo**, *Imperial College London*
Author: **Bárbara Larrañeta**, *Pablo de Olavide U.*

This study investigates the impact of institutional reward systems related to ownership of inventions on employees' creativity. We argue that due to differences in legal regulations across countries, inventors from different nationalities may hold distinct expectations regarding whether their innovative ideas should be owned by them or their organization, and how they should be compensated for transferring the ownership to their employer. Misalignments in expected and actual rewards can impact inventors' creative output by influencing perceptions of psychological ownership and fairness. Using a unique dataset from a multinational corporation, our findings indicate that inventors who anticipate being rewarded for transferring ownership of their creative ideas but receive no reward—those perceiving removed ownership rights—are less likely to generate creative ideas. In contrast, inventors who do not expect such a reward but receive it—those perceiving an attribution of ownership rights—are more likely to generate creative ideas. We also find that the negative impact associated with the removal of ownership rights is more pronounced for female inventors compared to their male counterparts while the positive impact associated with the attribution of ownership rights is higher for male inventors. Our study contributes to psychological ownership, fairness, and gender literatures, and underscores the importance of organizations designing their institutional reward systems thoughtfully to foster creativity.

TIM: Co-Authorship as the Means to Build Social Capital and its Effects on Scientific Productivity

Author: **Zakaria Babutsidze**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*
Author: **Ecem Bilge DELICIK**, *CRG Ecole Polytechnique*
Author: **Ludovic Dibiaggio**, *SKEMA Business School*

We formalise the idea that co-authorship allows scientists to build their social capital by receiving an access to resources embedded in their co-authors. Higher social capital, in turn, results in increased productivity. We emphasize the trade-off between co-authoring with many other scientists to get direct access to their resources, and co-authoring with a few (but well connected) scientists who could provide indirect access to resources of their co-authors. The latter option implies degrading the quality of resource access compared to the former, but can result in cost reduction by minimizing the number of links focal scientist needs to maintain. The trade-off comes from the fact that maintaining a collaboration link is costly - it requires attention from a scientist, which is a limited resource. Based on a formal model, we quantify the value of social capital for a scientist embedded in an arbitrary collaborative network. We show that the relationship between the direct resource access share (i.e., the resources that the scientist can access through direct relations as a fraction of all available resources in their network) and the value of the focal scientist's social capital has a U shape. We also derive secondary implications of the model concerning the effects of the collaboration patterns among other scientists on the productivity of the focal scientist. The analysis of patenting data of French inventors supports hypotheses derived from the formal model. Implications for the optimal co-author selection, as well as the optimal research team design are discussed.

Tensions in Opening up Innovation

Session Moderator: **Mathias Beck**, *ETH Zürich*

TIM: Digitalization as a Driver of Open Innovation Performance: The Role of Appropriability Concerns  

Author: **Mathias Beck**, *ETH Zürich*

Author: **Stefan Naef**, *ETH Zürich*

Author: **Martin Wörter**, *ETH Zürich*

Openness in innovation is constrained by a firm's limited absorptive capacity and appropriability concerns. We clarify whether by investing in information technologies (IT), firms can overcome some of these constraints and increase openness and innovation performance. We test our hypotheses in a dynamic panel model of manufacturing firms based on a representative sample of Swiss enterprises. Our results show that the combination of IT investment and openness in terms of external knowledge search depth can increase innovation performance. This effect is contingent on a firm's ability to appropriate value from its innovations. High imitation concerns and ineffective means of innovation protection may threaten the benefits a firm can draw from IT investment in the context of open innovation.

TIM: Openness, Tensions and Organisational Configurations for Innovation Performance 

Author: **Despoina Filiou**, *The Open U. Business School*

Author: **Areti Gkypali**, -

Author: **Charalampos Saridakis**, *Athens U. of Economics and Business*

Firms engaging in Open Innovation (OI) face organisational challenges arising from organisational tensions linked to the need to create and capture value. Fundamental to these tensions is the need to increase protectiveness when sharing knowledge in OI due to the knowledge disclosure paradox. In addition, firms engaging in OI need to manage increasing organisational tendencies to undervalue external knowledge which can inhibit external knowledge absorption. Investments in absorptive capacity can ameliorate the implications of a biased evaluation of external knowledge on innovation performance. Using fsQCA analysis, we explore alternative pathways to innovation performance and reveal how firms configure internal innovation practices with OI practices, absorptive capacity and inertial tendencies, to temporarily manage the complexity of openness and the ensuing tensions to achieve high innovation performance. Our findings are based on publicly available survey data of UK firms provided by the Data Service.

TIM: Resolving the Paradox of Openness for Community-Based Digital Ventures 

Author: **Tian Wei**, *Fudan U.*

Author: **Yuanshen Chen**, *Fudan U. School of Management*

Openness is a double-edged sword for new ventures to create and capture value, particularly in the digital era. However, it remains unclear how digital ventures dynamically manage the paradox of openness in open-source communities with high fluidity. Through a longitudinal case study, we develop an integrated framework of the openness dynamics of community-based digital ventures based on resource dependence theory. First, we adopt a process perspective to deepen the understanding of the paradox of openness. Second, we find that managing resource dependence is the underlying mechanism to resolve the paradox of openness in open-source collaboration. Third, we enrich the understanding of managing fluid resource providers by explicating the four strategies, including technology sharing, visibility enhancing, fast resource absorption, and dynamical boundary changes. Our study contributes to the paradox of openness, resource dependence theory, and fluid community management.

TIM: If I Need Help, I Can't Be Quiet: Secrecy, Openness, And Knowledge In Online Innovation Communities

Author: **Lukas Vogelgsang**, *LMU Munich School of Management*

Author: **Birke Dorothea Otto**, *Copenhagen Business School, Department of Business Humanities and Law*

Author: **Ghita Dragsdahl Lauritzen**, *U. of Copenhagen*

Online communities can serve as vibrant hubs for collaborative innovation beyond formal organizational boundaries. Particularly through open and fluid participation, they enable knowledge exchange in previously unparalleled scale. However, this participatory fluidity also exposes vulnerabilities within knowledge work in online communities, creating a challenge of organizing for openness while protecting against abuse and malevolent exploitation. Focusing on the open-source project HackerToy—a tool enabling access to and manipulation of wireless devices—we investigate how the associated online community navigates the conflicting objectives of both open collaboration to advance the device's features and closure to shield against misuse and illegal transgressions. Through a qualitative analysis of netnographic and interview data, we uncover 'public secrecy' as an organizing principle to manage the limits of open participation in online innovation communities characterized by a lack of formal organizational structures. The shared understanding "not to acknowledge what everybody knows" constitutive of public secrecy acts as a defining element of membership evaluation, guiding the community's knowledge processes, and thus protecting against both internal and external threats. These findings advance theory on social processes that organize online innovation communities by illustrating how practices of secrecy both establish group membership and foster exploration within open innovation processes. Thereby, this study offers novel insights on the social aspect of secrecy in online innovation communities by highlighting how it not only protects but also advances knowledge.

Disrupting Tech Giants

Session Moderator: **Ignas Caryn**, *ETHZ*

TIM: Understanding Incumbents' Reactions to Supply-Side Disruption of the Business Ecosystem

Author: **Ignas Caryn**, *ETHZ*
Author: **Bart Clarysse**, *ETH Zürich*
Author: **Laurens Vandeweghe**, *ETH Zürich*

In the realm of contemporary research on disruption, the focus often centers on the competitive dynamics between incumbent firms and innovative new entrants wielding potentially disruptive technologies. While existing disruption theory emphasizes strategies to address the potential impact of new technologies on individual incumbents, a notable gap exists in understanding how incumbents navigate responses when faced with technologies threatening their entire business ecosystem. Addressing this gap, our study delves into the distinctive dynamics of senior management responses within incumbent firms. Through extensive case studies spanning the airline industry from 2014 to 2023, we scrutinize senior management reactions to a disruptive technology capable of rendering distribution intermediaries obsolete, pivotal components of their business ecosystem. Drawing on a comprehensive dataset comprising first-hand field data, insights from senior management, and publicly available information, we closely examine four airlines. The analysis reveals substantial variations in response profiles influenced by senior management's attitudes toward technology adoption. Our findings highlight the pivotal role of senior management in determining whether a new technology disrupts the business ecosystem. Varied attitudes towards adoption lead to markedly different response profiles among airlines. This insight underscores the decisive impact of senior management within incumbent firms on the broader business ecosystem, contributing to the intersection of disruptive innovation, business ecosystems, and response profiles. Our study offers valuable insights into the intricate relationships shaping the response of incumbents to evolving technological landscapes.

TIM: Tech Giants and New Entry Threats

Author: **Yang Pan**, *Tulane U.*
Author: **Wei-Ling Song**, *Louisiana State U., Baton Rouge*

Tech giants like Amazon, Apple, Facebook, Google, and Microsoft have drawn antitrust concerns due to their perceived power, potentially stifling new startups, especially through the so-called kill zone within their product domains. This study demonstrates that tech-giant entrants face a significantly lower likelihood of obtaining follow-on financing and achieving long-term survival in recent years. However, such phenomena are transitory and concentrated among tech-giant entrants lacking patents and operating within segments characterized by high network effects. There is no evidence that the M&As conducted by tech giants deter entries. Furthermore, tech giants experience more entries compared to the average tech incumbent.

TIM: Complementors and Competition in Discontinuous Technological Generations  

Author: **Grace Liu**, *ETH Zurich*

While prior research suggests that product complementarity may provide an essential mechanism in firms' market entry behaviors, it remains unclear whether this relationship may hold in industries characterized by discontinuous technological generations. In this study, we suggest that changes in technological generations are a critical source of misalignment among complementary firms by focusing on the entry decisions of complementary firms. Using a unique dataset drawn from the computer printer industry, we conduct empirical tests on our hypotheses on market entry within various technological generations throughout its entire life cycle and found that firms in a specific product complementary market, vis-à-vis a generic market, have a higher likelihood of market entry into the focal industry characterized by multiple discontinuous technological generations.

TIM: The Hidden Costs of the Platform Economy: Tax Dishonesty by Airbnb Hosts  

Author: **Johannes Ross**, *Copenhagen Business School - Department of Strategy and Innovation*
Author: **Vera Rocha**, *Copenhagen Business School*
Author: **Tom Grad**, *Copenhagen Business School*
Author: **Jörg Claussen**, *LMU Munich & Copenhagen Business School*

The rise of the platform economy has made the use of resources more efficient by enabling peer-to-peer transactions, which can generate meaningful income streams for those sharing their resources on digital platforms. In this paper, we study one of the potential dark sides of this phenomenon: the potential taxes evaded in those transactions. Leveraging both the strict housing regulations and recent regulatory changes in Denmark, we integrate detailed data on Airbnb rental activities with individual-level administrative data to address two research questions: First, which hosts are more likely to under-report the income earned on short-term rentals, and how substantial is income under-reporting associated with Airbnb activity? Second, how did income under-reporting and other hosts' behavior change on the platform when the information-sharing agreement between Airbnb and the Danish tax authorities was introduced? We use unique data on 26,663 listings and about 22,000 hosts active in Copenhagen and its surroundings in 2017-2019 to answer those questions. We shed light on non-negligible amounts of unreported income from short-rental activities. We find that nearly 339 million DKK (45.5 million Euro) may have been unreported within our sample of hosts in 2017-2019. Importantly, not all Airbnb hosts seem equally likely to evade their taxes. We find modest declines in income under-reporting following recent regulatory efforts and uncover some of the mechanisms underlying those trends. Our findings are informative for both scholars and policymakers on the effects of platform regulation on individual behavior.

AI and Organizational Change: Navigating the New Frontier of Work and Innovation

Presenter: **Manav Raj**, *The Wharton School, U. of Pennsylvania*
Presenter: **Matthias Qian**, *ESMT Berlin*
Presenter: **Miaomiao Zhang**, *Harvard Business School*
Presenter: **Hyunjin Kim**, *INSEAD*
Presenter: **Manuel Hoffmann**, *Harvard Business School*

Despite the growing literature on AI, there are still important questions to answer about its impact on companies. For AI to change our work lives, it can depend on complementary organizational change to translate technological change into a change of daily work routines. Failure to scrutinize the organizational adjustments companies make in response to these technological advances will lead to an incomplete comprehension of the evolution of work dynamics. We lack an understanding of the barriers that prevent companies from integrating AI into their current work processes, the areas where reorganization contributes to overcoming these barriers, and identify the mechanisms whereby organizational change complements AI adoption. We need to better understand how AI is redefining the boundaries of a company, specifically how they are changing the organization of work both inside and outside the firm. This symposium contains new research aimed at filling this research gap on the new frontiers of organizing work within firms. Each project offers fresh perspectives for the successful integration of AI within the existing information processing routines of the firm.

Panelist: **Michael J. Leiblein**, *Ohio State U.*

Management researchers, whether in Entrepreneurship (ENT), Strategy (STR), and Technology and Innovation Management (TIM), have developed many valuable theories, models, and tools. Nevertheless, a recurring complaint is that our fields produce work that is of limited value to managerial practice. In part, this limitation is inherent in the trade-offs scholars must make between different theoretical virtues. As noted by (Weick, 1979) theories that seek conceptual simplicity and general applicability—such as the resource-based view in strategy or the individual-opportunity nexus in entrepreneurship—achieve this by compromising the descriptive accuracy needed to ground prescriptions in specific real-world situations. In contrast, theories that stay close to the particulars of phenomena often do so at the cost of reduced simplicity and generalizability. In this symposium, we will discuss whether viewing management in general, and strategy, entrepreneurship, and technology and innovation management in particular, as a form of design can cut the gordian knot by providing a meta-theoretical framework that can relate general and descriptive theory with more detailed prescriptions. Through this discussion, we hope to encourage more actionable research and to spur a new series of conversations across the ENT, STR, and TIM divisions.

Careers at the Interplay Between Individuals and Organizations

Session Moderator: **Samantha D. Hansen**, *U. of Toronto*

CAR: **Navigating the Maze of Psychological Contract Breach with Swift Informational Intervention**

Author: **Samantha D. Hansen**, *U. of Toronto*
Author: **Yannick Griep**, *Radboud U., Netherlands*
Author: **Johannes Marcelus Kraak**, *Kedge Business School*
Author: **Tinne Vander Elst**, *Tilburg U.*
Author: **Elizabeth Beekman**, *Radboud U., Netherlands*

Although scholars and practitioners argue that organizations should provide justice information in the aftermath of a psychological contract breach (PC breach) to prevent or reduce violation feelings, it remains unclear whether that information should be provided within a few hours, days, or weeks following a PC breach. We estimated a 2-level time-lagged regression model on experience sampling data from 76 (226 observations), 70 (213 observations), and 70 (344 observations) employees with different intervals to test the durability of the moderating role of informational justice on the PC breach-violation feelings relationship. We found that justice information should be provided in close temporal proximity (i.e., within the same day; Study 1) of PC breach to reduce violation feelings. In contrast, neither justice information provided the day (Study 2) or week (Study 3) after a PC breach successfully moderated the PC breach-violation feelings relationship. The current paper underscores the importance of being informationally just in close temporal proximity to a PC breach in line with resolution velocity as an indicator of the effectiveness of the recovery process. We discuss theoretical and practical implications of these findings.

CAR: **Measuring First-Order Legitimacy Judgments: Development of the Corporate Profession Legitimacy Scale**

Author: **Cynthia Loos**, *RPTU Kaiserslautern-Landau*
Author: **Katharina Stefanie Spraul**, *RPTU Kaiserslautern-Landau*

Legitimacy is a widely studied concept in institutional research and is seen as crucial for access to resources and the survival of various social entities. In the context of occupations, legitimacy is often associated with professionalization. However, this changes with the emergence of new occupational categories relying on other sources of legitimacy, such as corporate professions. Despite the extensive research on legitimacy, the development of measurement instruments poses researchers with various challenges, such as the level and the type of judgment. Therefore, we aim to develop a scale to measure corporate profession legitimacy at the micro level that considers the multidimensionality of legitimacy. We conceptualize corporate profession legitimacy as a second-order formative construct comprising three unique legitimacy dimensions: instrumental, social, and technical. The results of the scale development process largely support the validity of the corporate profession legitimacy construct, providing a robust instrument for assessing the legitimization process of a corporate profession, facilitating evaluations of legitimacy strategies, and revealing nuanced insights on legitimacy-seeking corporate professions such as sustainability managers.

CAR: **Implementing I-Deals: Coworkers' Reactions To I-Deals**

Author: **Sona Gachayeva**, *U. of Stirling*
Author: **Susan E. Murphy**, *U. of Edinburgh*

Drawing upon conceptual foundations laid by previous studies on multi-staged i-deal implementation, we theorize that different stages of i-deal implementation, specifically allocation, communication, and consequences stages, individually and collectively affect coworkers' perceptions of justice, leading to subsequent employee outcomes. Our findings reveal that (a) the performance level of the i-dealer and the burdens imposed on others by the i-deals predict coworkers' distributive justice perceptions, (b) the way i-deals are communicated significantly affects coworkers' informational justice perceptions, (c) these three factors, influencing distinctive justice perceptions at various i-deal implementation stages, collectively shape coworkers' perceived overall justice perceptions (POJ) within the organization, (d) POJ fully mediates the link between work engagement and turnover intentions, suggesting the significant impact of perceived overall justice on employee retention even among highly engaged individuals. We also demonstrate that without managerial communication, i-deals imposing burdens on coworkers granted even to high performers can lead to decreased perceptions of justice among coworkers. Conversely, managerial communication can mitigate this negative impact, maintaining positive justice perceptions even in the presence of burdens.

CAR: **The "Double-Edged Sword" Effects of Leader Support on Employability: How and When it Helps or Hurts**

Author: **Lin Jiang**, *Vrije U. Amsterdam*
Author: **Wenjing Cai**, *Vrije U. Amsterdam*

Leader support, as the most direct, timely and effective external factor, is essential for the development of employability among employees in public institutions. However, the link between leader support and employee employability is divided, and some research on the "dark side" of leader support has gradually emerged. Therefore, based on the conservation of resources theory and social exchange theory, this study builds a dual mediation model with career exploration as the promotion mechanism and job embeddedness as the inhibition mechanism. We introduce the personal factor of public service motivation of public institution employees as a moderator to examine the boundary conditions of the mechanism. Through conducting three independent studies, the results display that the dual parallel mediation effect between leader support and employee employability is significant, which is composed of career exploration and job embeddedness. On one hand, leader support brings about career exploration behavior of employees, which helps to improve employability. On the other hand, it may also improve the sense of job embeddedness and reduce the ability of flexible employment of employees. Public service motivation positively moderates the connection between leader support and career exploration, and the correlation between leader support and job embeddedness.

Academic publications on careers date back to the early 20th century. One of the earliest publications, for example, is Parson's trait and factor theory, which was developed in the early 1900s but not published until after his death in 1909. The continued interest in career studies since then is not surprising, as the "evolving sequence of a person's work experiences over time" (Arthur et al., 1989, p. 4) has also developed along with spatial, ontic and temporal changes in the context of organizations (Gunz & Mayrhofer, 2017). However, taking a critical look at the publications in career research, a majority of the studies refer to the careers of middle-class, middle-aged, Caucasian, Catholic, male career actors, preferably MBA graduates. Indeed, this focus is WEIRD (Heinrich et al., 2010) – it reflects the generalization of the Western, Educated, Industrialized, Rich and Democratic population to the rest of the world. This is even though Parsons already in 1909 differentiated between traits and factors in his career theory. The 'factors' refer to possible jobs and occupations, while the 'traits' refer to the qualities of people who aspire to a career. Especially when it comes to 'traits', much research is still needed. A growing discourse in the field of diversity assumes that the samples do not fully represent the occupations and traits of today's highly heterogeneous workforce. For example, employability – a term that continues to characterize career research (Fugate et al., 2021) – arguably looks different depending on one's position in social space. In the careers literature measures and analyses of career outcomes typically focus on objective dimensions including income, job level, promotion history, and occupational status; and subjective aspects such as career satisfaction, perceived career success, or commitment (Spurk et al., 2019). However, too little is known about the extent to which the diversity characteristics of career actors influence their career outcomes. Are the seeds for career success already sown in one's childhood (and is career success therefore a function of psychological or social inheritance)? Do career outcomes depend on one's decisions (as in the case in path dependency) and are they the result of individual action? What role do structural factors play (e.g., support from superiors, mentoring) and to what extent do they have a positive or negative effect on career outcomes? After all, career outcomes will look different in certain parts of the world (see e.g., Briscoe et al., 2021). Which contextual factors at country level (e.g., educational expenditure) moderate the observed correlations between diversity and career outcomes and have the potential to bring about change? Against this backdrop, the symposium presents papers which address five diversity-related issues connected to social origin, age, gender, parental status, and culture. All papers combine a strong theoretical background and empirical focus and use a range of methodologies, ranging from large-scale surveys to experiments to establish causation. Four papers employ multi-national datasets, with the 'social origin' paper (Paper 1) using survey data from an impressive 19,452 individuals in 30 countries, the 'age' paper (Paper 2) using survey data from 6,968 individuals in 29 countries, the 'gender and parental status' paper (Paper 4) using survey data from 6,727 professionals and managers in 27 countries, and the 'culture' paper (Paper 5) using survey data from 6,134 individuals nested in 12 countries. Each of these studies is based on a multi-level analysis and examination of macro-level variables – relational social capital (Paper 1), education expenditure and unemployment rate (Paper 2), gender inequality index (Paper 4), individualism/collectivism (Paper 5) – as cross-level moderators. The further study (Paper 3) uses 396 undergraduate business students from a Canadian University and 329 American employees to experimentally test the effect of allyship (vs no allyship) on career consequences for women and men. These diverse studies are aligned in their effort to provide in-depth insights and a better understanding of careers and career-related outcomes through a diversity perspective – that is, do career outcomes differ for women and minority group members – with the career outcomes under examination in these papers including subjective financial career success (Paper 1), career resilience and career optimism (Paper 2), career consequences in form of perceived promotability, leadership effectiveness, and recommendations for work-related rewards and penalties (Paper 3), proactive career behaviors (Paper 4), and work engagement as a result of perceived career self-congruence (Paper 5).

In contemporary professional landscapes, people frequently undergo diverse work-role transitions, encompassing shifts between jobs, careers, or professions (macro-role transitions), traversing the boundaries of concurrently held roles (micro-role transitions), or redefining their perception of a current role (intra-role transitions). These transitions occur within specific social and historical contexts that prescribe normative scripts dictating the initiation, progression, and expected outcomes of role changes. However, people increasingly engage in noninstitutionalized role transitions, deviating from established norms and diverging from mainstream career trajectories. While holding, to date, only limited scholarly attention, preliminary empirical findings suggest noninstitutionalized transitions to offer enriching experiences and pose challenges for individuals. This symposium explores noninstitutionalized work-role transitions across various magnitudes (i.e., macro, micro, and intra-role transitions). We inquire into the nature of noninstitutionalized work-role transitions (i.e., their types and defining characteristics), their antecedents (i.e., the motivations behind people opting for them), their unfolding processes (i.e., the mechanisms in their progression), and their psychological and career-related outcomes (i.e., their impact on people's identities, social connections, careers, and well-being). By delving into these aspects, our symposium contributes to the advancement of research in this field, shedding light on how people, workplaces, and society can effectively navigate and manage noninstitutionalized work-role transitions.

Ethics, Negotiations, and Behavioral Responses to Questions of Hiring, Training, and Pay

Session Moderator: **Sunita Sah**, *Sunita Sah*

CM: **Just Don't Ask: Different Perceptions Between Recruiters and Candidates for Asking Illegal Questions**

Author: **Sunita Sah**, *Sunita Sah*

Job candidates often encounter illegal questions about their personal life during interviews. Through five multi-method studies, we delve into the reasons behind interviewers asking such questions and the motivations driving candidates to answer them. Our findings illuminate a stark contrast in perceived motivations between interviewers and interviewees for why illegal questions are asked: while interviewers deem their queries as well-intentioned, job candidates, especially women, interpret them as veiled attempts at discrimination. We also identify two factors—insinuation anxiety and mistrust—that arise when candidates face such questions. Insinuation anxiety pressures candidates to comply with interviewers' requests to disclose personal information that they would rather not reveal to avoid insinuating that the interviewer may be biased for asking such questions. Mistrust reduces the job candidates' desire for the job. Our studies highlight how the presence of illegal demographic questions can alienate women and marginalized groups from the workforce.

CM: **Does Size Matter? The Effect of Pay Range Transparency on Gender Disparity**

Author: **Alice J. Lee**, *Cornell U.*

Author: **Tae-Youn Park**, *SKK Business School*

The recent introduction of pay transparency laws marks a significant shift in the labor market, yet a notable gap in research remains in examining its effects. The current research seeks to address this gap and examine the gendered implications of pay range transparency policies. Drawing on research on gender sorting in the labor market, we propose that women show a greater preference for jobs with narrower (vs. wider) pay ranges compared to men, and that this preference is driven by women's greater risk aversion tendencies. In addition, we propose the gender-based application sorting subsequently affects negotiation behavior, such that applicants to jobs with narrower (vs. wider) pay ranges (which are favored by women), exhibit less assertive negotiation behavior (e.g., asking for lower pay), thereby contributing to the perpetuation of gender pay disparities. We test these predictions in six studies, involving two online worker samples (N=2,077), a survey New York State residents (N=2,664), MBA students (N=276), undergraduate seniors (N=150), and a field experiment involving a real job posting (N=1,699).

CM: **Understand Remainers' Responses to Fire-and-Rehire After Layoffs**

Author: **Wen Wang**, *U. of Leicester*

Author: **Roger Seifert**, *Keele Business School, Keele U., Newcastle ST55BG, UK*

Author: **Constantin Orasan**, *Centre of Translation Studies, U. of Surrey, Stag Hill, Guildford GU2XH*

Author: **Hadeel Saadany**, *Centre of Translation Studies, U. of Surrey, Stag Hill, Guildford GU2XH*

The controversial fire-and-rehire employment practice has surged in the last a few years to cushion business uncertainty caused by external market shocks. Layoffs simultaneously distress those still in work (kept due to their relevant skills—the remainers) and present them with opportunities to grow. Extant studies have revealed the downsizing survivors' syndrome mainly derived from moral stance towards co-workers who were, often perceived being unfairly laid off, however, the impact of fire-and-rehire, some of former colleagues were rehired on different employment terms and condition, on remainers has been under studied. Theorising from organisational justice and motivated reasoning, this article examines the association between the presence of a high proportion of skilled workers on flexible employment contracts (many are fired-and-rehired former workers), remainers' job satisfaction, and their job search behaviour. Setting in the British engineering manufacturing sector that was 'shocked' by the 'Brexit'-Britain exit the European Union between 2016 and 2020, we use a novel triangulated dataset of 3,007 anonymous online employees' reviews of firms that made staff redundant, annual corporate responsible reports, and publicised financial performance reports. The analysis reveals the paradoxical sentiments (empathy and tension out of self-interest) of remainers towards rehired co-workers, this has worsened their sense of organisational justice, led to a low level of job satisfaction and a high level of on-the-job search activities. The findings offer a nuanced understanding of remainers' responses and the unintended damage to employment relations with regard to fire-and-rehire practices after layoffs, adding valuable theoretical and practical implications to the debate.

CM: **Assessment Of Team Training Effectiveness In The MDHT Environment**

Author: **RAMI ALZHRANI**, *U. of Newcastle, Australia*

Abstract: In the MDHT environment, the current research landscape on the quality of MDHT collaboration and teamwork has asserted the influential role of training. However, the dynamic, complex, intertwined and interdependent nature of MDHT collaboration and teamwork necessitates further comprehensive assessment of team training effectiveness in enhancing the quality of MDHT collaboration and teamwork. As such, this paper revealed the importance of training access, perceived value, functionality, and effectiveness. Through a qualitative approach, these dimensions were examined using the perceptions of fifty health providers from various Saudi hospitals to assess team training effectiveness within the clinical environment of MDHT. Practical strategies were proposed to enhance the effectiveness of team training in hospitals to foster the quality of MDHT collaboration and teamwork. The improvement of the intrinsic motivation of members toward training by raising their awareness about training benefits under the self-determination theory is required. This approach also requires stimulating the willingness of members to accept training and avoid conflicts based on personal and social identities by increasing team loyalty.

Participant: **Chloe Levin**, *Columbia U.*

Participant: **Hannah Riley Bowles**, *Harvard U.*

Hierarchy is an essential component of social life, which emerges spontaneously and organizes the social dynamics (Durkheim, 1960; Magee & Galinsky, 2008). Two of the most widely studied and fundamental hierarchical dimensions are status and power (Blader & Chen, 2012; Fiske, 2010; Kemper, 2006; Weber, 1964). Status is defined as the prestige, respect, and esteem that an individual or a group has in the eyes of others (Anderson & Kilduff, 2009; Magee & Galinsky, 2008) and power is defined as individuals' asymmetric control over valuable resources (Blau, 1964; Greer et al., 2017; Magee & Galinsky, 2008). Previous studies on status and power have shown their impacts on a variety of important outcomes, such as social resources (Lin, 1999), emotions (Kemper, 2006), learning (Bunderson & Reagans, 2011), and goal seeking (Guinote, 2017). This symposium aims to contribute to continuing the discussion of social hierarchy in impacting social life with novel perspectives on both traditional concepts such as gender differences and competition/cooperation, and understudied yet important phenomena such as individual exploration and discrimination recognition. We believe that our symposium will help generate new perspectives and important questions regarding social hierarchy and its relationships with various constructs. We hope that it will facilitate sophisticated theorizing and rigorous empirical research in this line of research.

Work, Virtuality, and Work-Life Balance

Session Moderator: **Sumera Saleem**, *School of Management, U. of Science and Technology of China, Hefei*

CTO: **Coworker Influences on Employee Responsiveness After Work, Vigor, and Creativity**

Author: **Thomas Ng**, *U. of Hong Kong*
Author: **Yu Wei Hsu**, *National Chengchi U.*
Author: **Hong Kit Yim**, *Hong Kong Baptist U.*
Author: **Soojin Oh**, *U. of Hong Kong*

While prior research has identified the harmful effects of off-the-job responsiveness on employees, coworkers' roles in this process have been largely unknown. Guided by social learning theory and conservation of resource theory, we contend that coworkers' daily off-the-job responsiveness can spread to affect employees' daily off-the-job responsiveness, thereby impacting employees' daily on-the-job vigor and hence daily creativity. We collected data from 235 employee-coworker dyads over 10 workdays and showed that (a) coworkers' daily off-the-job responsiveness (and on-the-job vigor) were indeed positively related to employees' daily off-the-job responsiveness (and on-the-job vigor), and (b) employees' daily off-the-job responsiveness negatively predicted their own daily on-the-job vigor, lowering their daily creativity. Moreover, extraverts (vs. introverts) were even more likely to experience these effects. This study contributes to the employee communication and work-life balance literatures by revealing why coworkers' daily off-the-job responsiveness and on-the-job vigor can be contagious, shaping employee daily creativity, especially for extraverts.

CTO: **The Dual Effects of Team Virtuality on Employees' Work and Life**

Author: **Shi Zheng**, *school of management, Jinan U.*
Author: **Ming Nick Yan**, *Jinan U.*
Author: **Yuanyi, Amy Chen**, *Hong Kong Baptist U.*
Author: **Qi Wei**, *school of management, Jinan U.*
Author: **Ting Huang**, *school of management, Jinan U.*
Author: **Shankuo Xiong**, *school of management, Jinan U.*
Author: **Wei Fan**, *school of management, Jinan U.*

Team virtuality not only breaks boundaries within the work domain, but also lead to the fusion of boundaries between the work and life. Previous researches on the effect of team virtuality on employees from the resource perspective mainly focused on the former situation, limiting the applicability of research in the life domain. We further explore the dual effects of team virtuality on employees' work and life based on conservation of resources theory. Through a multilevel analysis on the matching data of 212 questionnaires collected in multistage, we find that team virtuality not only enhances employees' sense of work control by breaking boundaries in the work domain and thus reduces work stress but also decreases psychological detachment by the fusion of boundaries between work and life and thus increases life stress. Additionally, AR use not only enhances the positive effect of sense of work control on work stress by facilitating the integration of similar resources in the work domain but also alleviates the negative effect of psychological detachment on life stress by diminishing the disparities in resources between work and life domains. The implications for the team virtuality literature and virtual work managerial practices are discussed.

CTO: **How Does Team Virtuality Influence Work-Life Balance: A Moderated Mediation Model**

Author: **Qi Wei**, *school of management, Jinan U.*
Author: **Ming Nick Yan**, *Jinan U.*
Author: **Yuanyi, Amy Chen**, *Hong Kong Baptist U.*
Author: **Shi Zheng**, *school of management, Jinan U.*
Author: **Ting Huang**, *school of management, Jinan U.*
Author: **Shankuo Xiong**, *school of management, Jinan U.*
Author: **Wei Fan**, *school of management, Jinan U.*

The prevalence of virtual teamwork arrangement endows organizations with managerial flexibility and efficiency but also gives rise to problems involving work-life balance of employees. Previous studies based on boundary-separation perspective to hold that high reliance on ICT leads employees in virtual teamwork arrangement to work in life space or life time and thus undermine their work-life balance. However, there is no clear boundaries to separate work from life in terms of space and time in virtual teamwork arrangement. This study pointed out the boundary-crossing perspective and argued that team virtuality undermines work-life balance by diminishing the social cues that help employees cross their role boundary. Using multilevel path analysis and data from 260 employees in 65 teams, this study verified that team virtuality is negatively related to work-life balance via psychological detachment, and that AR use and VR use moderate the relationship between team virtuality and psychological detachment by their influence on individuals' sensitivity to social cues. Theoretical and practical implications for work-life balance in virtual teamwork arrangement are discussed.

Knowledge Search, Sharing, and Innovation From Networks To Organizations, To Teams

Session Moderator: **Spyros Angelopoulos**, *Durham U. Business School*

CTO: **Cross-Boundary AI Innovation as Recombinant Search in Heterogeneous Landscapes**    

Author: **Kaige Gao**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Dongyeob Kim**, *Weatherhead School of Management, Case Western Reserve U.*
Author: **Zhewei Zhang**, *Warwick Business School*
Author: **Youngjin Yoo**, *Case Western Reserve U.*

AI has rapidly penetrated various industries, hailed as a universal problem-solving tool. Scholars have studied AI innovation across the contexts of their development and implementation. As general-purpose technology, however, AI innovations need to first jump across its disciplinary boundaries before they can subsequently become useful as applications. To unpack how such jumps are made, we conceptualize cross-boundary AI innovation as an outcome of recombinant search in heterogeneous innovation landscapes that are, in turn, comprised of a set of interconnected epistemic objects. We take a dynamic network view as an analytical perspective and identify two structural attributes: structural embeddedness and junctional embeddedness, which represent its popularity and role as a bridge, respectively. To assess their impact on the likelihood of a jump by an epistemic object, we test our theory using a data set of AI-related journal and conference articles from both Computer Science and Autonomous Vehicle fields in the period between 2009 and 2020. Our results show that junctional embeddedness has a positive impact on an epistemic object's jump particularly in the early periods of time, while the effect of structural embeddedness varies over the periods.

CTO: **A Multilevel Network Perspective of Self-organizing Group Product Innovation in an Online Community**  

Author: **Jialing Liu**, *Dalian U. of Technology, School of Economics and Management*
Author: **Yang Liu**, *Zhejiang U.*

In online communities, members with similar objectives congregate to undertake innovation tasks within self-organizing groups. These groups are nested virtually in group- and community-level networks in the fluid and boundary ambiguous online communities. We examine the impact of a salient feature of online community innovation networks: membership overlap and its effects on online group product innovation performance. Drawing from a multilevel network perspective of online communities, and integrating resource competition theory with the concept of latent network capital inherent in online organizations, we propose that member overlap density negatively affects group product innovation performance, whereas latent bonding positively affects group product innovation performance. Additionally, we investigate how community-level network structures, specifically internal bonding and latent bridging, moderate the impact of both member overlap density and latent bonding on group product innovation performance. Results of a pooled panel data comprising 37,072 self-organizing groups in 463 game product creative workshop communities from Steam support our theory. Our findings contribute to the literature on innovation in the online community by incorporating the multilevel network perspective, resources competition view, and latent network capital.

CTO: **Retrieval-Augmented Generation: A Cutting-Edge AI Technology for Knowledge Sharing in Organizations?** 

Author: **Indra Ponnuswamy**, *Graduate Student - U. of New Haven*
Author: **Maurice Cayer**, *U. of New Haven*

Our conceptual paper explores the potential of retrieval-augmented generative AI (RAG), an advanced AI tool, to enhance knowledge sharing within organizations. The proposed framework illustrates how RAG implementation influences knowledge sharing behaviors through increased knowledge quality and user trust, particularly in the context of cultural openness and leadership support. The hypothesized relationships integrate perspectives from knowledge management, organizational behavior, information systems, and technology adoption research. The paper discusses multiple theoretical contributions, addressing debates on technology's role in enabling versus disrupting existing socio-technical systems. The analysis emphasizes the importance of conscious change management and active participation to foster mutual understanding with intelligent tools over time.

CTO: **Developing HATIT: A Platform and Experimental Paradigm for Evaluating AI in Intelligence Analysis**  

Author: **Susannah B. F. Paletz**, *U. of Maryland*
Author: **Aimee Kane**, *Duquesne U.*
Author: **Madeline Diep**, *Fraunhofer USA Center of Mid-Atlantic*
Author: **Sarah Vahlkamp**, *U. of Maryland College Park*
Author: **Adam Porter**, *U. of Maryland College Park*
Author: **Tammie Nelson**, *U. of Maryland College Park*

Based on interviews with intelligence professionals, we created the Human-Agent Teaming for Intelligence Tasks (HATIT) experimental paradigm for evaluating artificial intelligence (AI) interventions in the context of intelligence shiftwork (i.e., asynchronous teamwork). These handovers and collaborative intelligence analysis suffer from team cognition and information challenges (e.g., volume, velocity), which AIs may be able to address. HATIT includes a web-based software platform, a shift handover task in a fictional world with hundreds of pages and 59 documents, and multifaceted behavioral and perceptual measures. To test the feasibility of HATIT, we designed a simple AI agent called "Illuminate" (branded with a sun icon) that summarizes documents conversationally and provides social media topic models. Before the release of ChatGPT, we conducted a two-phase (training/screening, main task) between-subjects (AI vs no-AI) collaborative analysis shift handover experiment. We found that transactive memory systems were more accurate in the AI condition, but that workload, specifically frustration and temporal demand, were perceived as higher in the AI condition. These findings strongly suggest that HATIT can effectively test different AI interventions.

Digital Innovation: Vendor, Employee, and Firm Perspectives

Session Moderator: **Inmyung Choi**, *Texas Tech U.*

CTO: **Designing the Optimal Distinctiveness of Radical Digital Innovations**     

Author: **Yasser Rahrovani**, *Ivey Business School*

Author: **Robert Austin**, *Ivey Business School*

The factors determining whether radical innovation gains traction in the market are many and complex. This paper focuses on the choices designers face as they seek to balance a new product's distinctiveness, i.e., appealing differentiation from alternatives, with familiarity, i.e., appealing similarity to past alternatives – as they seek optimal distinctiveness (OD). Research on OD has often treated it as a holistic concept. Our approach is more granular in that it examines individual product attributes. We suggest that designers act strategically to present intrinsic and extrinsic product attributes in ways that enhance potential adopters' perceptions of product distinctiveness. In contrast with common assertions that clarity of presentation and ease of use are key to adoption, we propose that the controlled use of confusion and selective masking (camouflaging or concealing) of product attributes can facilitate adoption by preventing cognitive overload. Drawing on information processing theory, we construct a typology of such tactics employed by designers to guide the optimal distinctiveness of a product. Our study provides a novel perspective on crafting radical innovations, identifying digital mechanisms that underlie optimal distinctiveness for such innovations.

CTO: **Appraisals Matter: The Impact of Appraisal Toward AI Awareness on Bootleg Innovation** 

Author: **Jiyu Li**, *East China Normal U.*

Author: **Bao Cheng**, *Southwestern U. of Finance and Economics*

Author: **Zhenyuan Wang**, *East China Normal U.*

What kind of coping strategies employees use to adapt to the digital environment and generate innovative behaviors is a real problem that businesses must address in the digital economy. According to cognitive appraisal theory of stress, we examined how challenge and hindrance appraisal toward AI awareness impact bootleg innovation by employees and the moderating effect of inclusive leadership. Through the analysis of the questionnaire survey of 354 samples in three stages, we found that the challenge appraisal toward AI awareness positively influenced the bootleg innovation through adaptive coping strategies; the hindrance appraisal toward AI awareness negatively influenced the bootleg innovation behavior through maladaptive coping strategies. The relationship between challenge appraisal toward AI awareness and adaptive coping was positively moderated by inclusive leadership, and it was negatively moderated by hindrance appraisal toward AI awareness and maladaptive coping. Further, inclusive leadership moderated the mediating role of adaptive coping and maladaptive coping between appraisal toward AI awareness and bootleg innovation. The findings of this study have important implications for promoting innovative behaviors in the context of the digital economy, as well as how employees evaluate and respond to AI adoption.

CTO: **Achieving Ambidextrous Digital Innovations in Incumbent Organizations**   

Author: **Fabian Hostettler**, *U. of Bern*

Author: **Jens Dibbern**, *U. of Bern*

Organizations face the tension between retaining existing customers and gaining new potential customers when developing digital innovations. The organization's proximity to its main customers facilitates the development of customer-specific solutions, as the long-standing relationships foster collaboration and facilitate access to and exchange of information. However, focusing solely on meeting the existing customers' needs can lead to potentially missing out on broader market opportunities and new customers. Therefore, innovation projects need to balance the development of customer-specific solutions with scalability to address a broader market when designing and developing digital innovations. We conduct an in-depth case study at DefenseCo, a large organization in the defense industry. By examining four digital innovation projects and adopting the notion of ambidexterity, this study aims to understand how innovation projects achieve to address the existing main customer and other potential customers simultaneously with their digital innovation. Our findings reveal that maintaining an ambidextrous customer vision spurs ambidextrous customer engagement, holistic stakeholder engagement, and the project team's ambidextrous awareness, promoting an advancing ambidextrous digital innovation. We propose a resolution model to enable the development of an ambidextrous digital innovation, explaining how the innovation projects can achieve a solution that simultaneously addresses existing and new potential customers' needs. The findings of our study contribute to the literature on digital innovation, customer involvement, and ambidexterity.

Technology, Enhanced Inclusivity, Belonging, and Resilience

Session Moderator: **Aravinda Garimella**, *U. of Illinois at Urbana-Champaign*

CTO: **An Examination of Corporations' Use of Microblogging in Restoring Dignity of a Marginalized Group**  

Author: **Inchan Kim**, *U. of New Hampshire*

In 2016, the United Nations (UN) issued 17 grand challenges. One of them is to reduce inequalities for disadvantaged and marginalized groups. Digital technologies take center stage in today's business and society. The IS community should thus lead corporations in leveraging digital technologies for building more equitable, inclusive business and society. This paper helps to enact such "compassionate IS" for marginalized groups. I examine leading firms' digital DEI practices for the LGBT group on Twitter and emerge microblogging' affordances for promoting diversity, equity, and inclusion in business and society. They include forging solidarity with a marginalized group, empowering the marginalized group, and mobilizing business and society for the marginalized group. This paper has implications for scholarship on compassionate IS, corporation social responsibility, and organizational compassion.

CTO: **Harnessing Mobile Innovation Diffusion to Deter Intimate Partner Violence in Sub-Saharan Africa** 

Author: **Rohit Mattu**, *Doctoral Student, Indian Institute of Management Calcutta*

Author: **DEBASHIS SAHA**, *Indian Institute of Management, Calcutta*

Global statistics indicate a higher prevalence of Intimate Partner Violence (IPV) in Sub-Saharan Africa (SSA), primarily attributed to greater acceptance of IPV among women in the region. This study explores whether the diffusion of mobile phones among women in SSA is triggering a change in their attitudes toward IPV. Drawing on the Institutional Logics Perspective, the Diffusion of Innovations Theory, the Theory of Globalization in general, and the IT Affordances Theory in particular, we posit that mobile phones facilitate the diffusion of socio-cultural innovations promoting gender parity. Exposure to these innovations introduces women to competing logics, thereby shaping their attitudes toward IPV. Through a quasi-experimental research design, we empirically validate the proposed theoretical framework using micro-level nationally representative survey data from six SSA countries and discover supporting evidence for it. Moreover, we observe that women do operationalize these changes in attitudes to reduce IPV occurrences (behaviour) by seeking help from the Police (an external support structure), per the Theory of Planned Behaviour. Additional analysis suggests the presence of spillover effects from neighbouring women's mobile phone adoption in deterring IPV, showcasing their role as institutional entrepreneurs. For apparent reasons, our findings altogether fail to hold for women in localities characterized by high systemic vulnerabilities. With the help of these findings, we propose a process model which explains how ICT adoption results in the restructuring of family logics. Overall, our study underscores the pivotal role of mobile innovations in shaping gender-related beliefs to deter IPV, thus fostering women's empowerment.

CTO: **Quantitative Gender Analysis in IS Research: Sources of Harmful Stereotypes and Mitigating Strategies** 

Author: **Dario Bonaretti**, *Nova Southeastern U.*

Author: **Diana Fischer-Pressler**, *Frankfurt U. of Applied Science*

This research investigates sources of harmful stereotypes stemming from gender analysis in information systems research. Focusing on the gender analysis discourse in MIS, we study how researchers overlooked the indirect harm arising from undertheorized representations of gender in behavioral research. Our analysis points to three catalysts of stigmatization in gender analysis. First, from a theoretical standpoint, researchers often draw on the assumption that gender dimorphism exists, which has been challenged by more recent approaches to gender analysis (i.e., intersectionality) that emphasize within-gender variation. Second, measurement and parameterization of gender ignore the intersectional nature of gender-related phenomena. Third, discussion of gender-related behavioral differences that allude to inherent biological differences among gender groups.

CTO: **How Do Digital Nudges Influence Pro-Environmental Behavior: Insights from a Field Experiment**

Author: **Alysson De Oliveira Silveira**, *U. of South Florida*

Author: **Chewei Liu**, *Indiana U. - Kelley School of Business*

Author: **Ntchanang Mpafe**, *Nue Life Health*

Author: **Sunil Mithas**, *U. of South Florida*

As individuals assume more responsibilities and the volume of tasks that require their attention exceeds their capacities, they tend to focus on high-utility tasks and postpone others, even when the outcomes of this behavior are unfavorable. Although pro-environmental behavior is usually regarded as socially desirable, it often falls into the low perceived utility category. Digital nudges are a viable solution to avoiding procrastination of pro-environmental behaviors. We design three interventions to increase the recycling rate using RFID chips attached to recycling bins and trucks to collect data on the outcome. In our 8-week field experiment involving 5,758 households across two distinct cities, our findings reveal that the effectiveness of digital nudges involving reminders is limited to the intervention period. Surprisingly, diverging from prior literature, we discovered that micro-incentives exhibit prolonged efficacy, persisting beyond the cessation of the incentive program. This study contributes to the Information Systems (IS) and Management and Organizations (M&O) literature by shedding light on the intricate dynamics between digital nudges and the endurance of pro-environmental behavioral effects. We discuss the experiment's findings and implications for the literature.

Understanding Remote and Virtual Work: New Constructs and Measures

Session Moderator: **Mayur Prataprai Joshi**, *Telfer School of Management, U. of Ottawa*

CTO: **Large Scale ML-Based Methods for Studying Individual Responses to Work Using Systems Savvy Measures**  

Author: **Chaitanya Kaligotla**, *Beedie School of Business Simon Fraser U.*

Author: **Terri Griffith**, *Simon Fraser U.*

Author: **Alex MacLeod**, *Beedie School of Business Simon Fraser U.*

Systems savvy is the ability to discern the interplay between technological and socio-organizational systems and to foster synergies between them. We show systems savvy's value in studying individual responses to changes at work by focusing on comments to New York Times articles about working from home at the beginning of the COVID-19 office shutdown. We develop a machine learning (ML) method to measure an individual's systems savvy from public documents and demonstrate using human-artificial intelligence ensembles for fine-tuning ML algorithms for management research. We address convergent and discriminant validity with comparisons to integrative complexity, another construct focused on diverse viewpoints and conceptual connections. Our methodology is open-sourced and is built for scale. We discuss the development of our methodology and the theoretical implications of the system savvy measure. We also make a case for open-source models and analyses.

 CTO: **Bridging the Gap: Revisiting Dynamics of Physical and Perceived Proximity in Multilocal Work** 

Author: **Ward Van Zoonen**, *U. of Jyväskylä*

Author: **Jennifer Gibbs**, *U. of California, Santa Barbara*

Author: **Anu Sivunen**, *U. of Jyväskylä*

The role of objective distance and perceived proximity within the domain of multilocal work has been subject to ambiguity and mixed empirical support. This paper revisits these constructs through the lens of contemporary work practices, in light of the shift towards remote work and technology-mediated communication. Utilizing multi-sourced, longitudinal data, our study provides a nuanced exploration of how distance can be operationalized and what are its consequential effects on communication, work practices, and worker engagement. Specifically, we suggest that the percentage of dispersed colleagues (configuration) and time zone differences may be more meaningful predictors of work experiences and practices than the geographic measure of 'as the crow flies' miles. Our findings also challenge the assumed reciprocal relationship between perceived proximity and communicative behaviors. We posit that perceived proximity is better positioned as a distal outcome than as an antecedent to these dynamics. The paper delineates the implications of distance as a contemporary workplace demand, refining and reconceptualizing it as a challenge rather than a hindrance. Furthermore, the findings underscore the role of engagement and social communication in enhancing perceived proximity. In contrast, task-related communication and supplemental work practices appear to mitigate the perception of proximity to others. This investigation not only updates existing knowledge but also contributes to a more comprehensive understanding of the spatial and temporal demands in multilocal work settings.

 CTO: **Development and Validation of the Team Perceived Virtuality Scale (WITHDRAWN)**

Author: **Lisa Handke**, *Friedrich-Alexander-U. Erlangen-Nürnberg*

Author: **Patricia Costa**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*

Author: **Jennifer Feitosa**, *Claremont McKenna College*

With the strong proliferation of virtual teams across various organizations and contexts, understanding how virtuality affects teamwork has become fundamental to team and organizational effectiveness. However, current conceptualizations of virtuality rely almost exclusively on more or less fixed, structural features, such as the degree of technology reliance. In this paper, we take a socio-constructivist perspective on team virtuality, focusing on individuals' experience of team virtuality, which may vary across teams and time points with similar structural features. More specifically, we develop and validate a scale that captures the construct of Team Perceived Virtuality (Handke et al., 2021). We present the results of five different studies that demonstrate the construct's content, structural, discriminant, and criterion validity with an overall number of 2,294 teams. The final instrument comprises 10 items that measure the two dimensions of Team Perceived Virtuality (collectively-experienced distance and collectively-experienced information deficits) with five items each. This final scale showed a very good fit to a two-dimensional structure both at individual and team levels and adequate psychometric properties including aggregation indices. We further provide evidence for conceptual and empirical distinctiveness of the two TPV dimensions based on related team constructs, and for criterion validity, showing the expected significant relationships with leader-rated interaction quality and team performance. Lastly, we generalize results from student project teams to an organizational team sample.

Blockchain: Power, Participation, Community, and Scapegoating

Session Moderator: **Nir Kshetri**, *U. of North Carolina, Greensboro*

CTO: **The Illusion of Community in Decentralized Autonomous Organizations (DAOs): Why Members Disengage**

Author: **Jessica Reif**, *Fuqua School of Business, Duke U.*
Author: **Haiyang Yang**, *Johns Hopkins Carey Business School*
Author: **Jack Soll**, *Duke U.*

Decentralized autonomous organizations (DAOs) – nonhierarchical, blockchain-enabled organizations – are increasingly prevalent across sectors. To join these managerless organizations, members acquire tokens that afford the right to propose actions the organization can take and vote on the actions proposed by others, with their voting rights typically weighted according to their token holdings. While DAOs offer a participatory decision-making process, early research suggests many DAOs suffer from low member engagement, which limits how efficiently they can organize. We draw on Relational Models Theory to develop a model of member disengagement from DAOs. We propose that the token-weighted voting process – which sometimes generates outcomes that are inconsistent with the choice preferred by a majority of members – may be a source of member dissatisfaction in DAOs. We theorize that exposure to these “majority lose” proposal outcomes contradicts members’ perceptions of the DAO’s relational model and, in turn, leads members to disengage from the organization. We find support for our proposed model in an archival study of a large DAO and two preregistered experiments. This research contributes to the growing literature on new forms of organizing by theorizing and providing evidence for a mechanism that shapes organizational member engagement in nonhierarchical organizations.

CTO: **The Politics of Blockchain: Power Dynamics in Decentralized Systems**

Author: **Barry Varys**, *Bentley U.*
Author: **Roman Beck**, *IT U. of Copenhagen*
Author: **Marco Marabelli**, *Bentley U.*
Author: **Ja-Nae Duane**, *Brown U.*

In this paper, we analyze power dynamics in blockchain governance by examining decision-making processes in public-permissionless blockchains. We build on and extend Clegg’s circuits of power and showcase the relevance of power in blockchain governance. In doing so, we reconceptualize Clegg’s circuits of power in a blockchain context while incorporating the unique forking option and technological backdrop found in decentralized systems. We discuss Ethereum and Bitcoin to illustrate the politics and power dynamics used to develop our theoretical framework. We contribute to governance literature by offering a novel approach to exploring important power dynamics in decentralized systems. These power dynamics can be difficult to detect in decentralized systems while having significant influence on how these systems evolve over time. We offer insights into the evolution process by building two process models and showcasing that instances of centralization may be required for these decentralized systems to evolve. Our paper joins scholarly conversations on governance in decentralized systems and offers unique insights by examining the underlying decision-making processes related to system changes. We highlight the role of power dynamics and instances of centralization in allowing enough flexibility for innovation and changes in decentralized systems.

CTO: **Task Assignment Governance and Platform Participation: Evidence an Ethereum Natural Experiment**

Author: **Wei Yang**, *China Europe International Business School (CEIBS)*

This study examines the influences of task assignment mechanisms on workers’ participation in blockchain organizations. In developing the theory, I highlight the nature of blockchain-based organizations as multisided gig economy platforms, which differ from traditional hierarchical organizations regarding how tasks are assigned among workers. I specifically distinguish two types of task assignment mechanisms in blockchain-based platforms, namely assignments based on workers’ commitment to specific tasks (commitment to tasks), and those based on workers’ pre-existing contribution to the platform (commitment to system). My empirical analysis leverages a natural experiment of the Merge on Ethereum – the change of consensus protocols from Proof-of-Work (PoW) to Proof-of-Stake (PoS), which caused an exogenous shock that switched the assignment mechanism of transaction validation tasks on Ethereum from commitment to tasks to commitment to system. The results based on a difference-in-difference analysis show that, compared with task assignment mechanism of commitment to tasks under PoW, used by the control group of Bitcoin blockchain, commitment to system under PoS incentivizes more active worker participation in transaction validation tasks, thereby increasing the decentralization of tasks among workers on Ethereum. In the discussion section, I elaborate on the implications of the results for blockchain-based organizations and gig economy platforms.

CTO: **New Agents of Innovation: Autonomous Technology and the 3000-Year-Old Ritual of Scapegoating**

Author: **Brendan Gage**, *Beedie School of Business Simon Fraser U.*

Drawing from 15 years of archival data on the 2008 financial crisis and the 2022 blockchain crisis, I extend interaction ritual chain theory to recognize the effect that the Internet of Autonomous Things (IoAT) has on interaction rituals and the conjoined relationships that form between humans and autonomous technologies through these interactions. I find that IoAT changes the way that humans enact the 3000-year-old ritual of scapegoating through the constructs of branching and nesting. When compared to historic rituals, new IoAT scapegoating rituals generate positive emotional energy, and increase trust. I integrate my findings into a novel theoretical framework that captures the effect of IoAT on interaction rituals through the constructs of “branching” and “nesting.” This research contributes to our understanding of the emerging role of IoAT agency, introduces the construct of IoAT interaction rituals and proposes conjoined-agency between IoAT and humans as an emerging construct in organizational and social environments.

Work Family Ideology

Session Moderator: **Jose M. Manuel Alcaraz**, *ESDES, U. Catholique de Lyon*

DEI: Conflicting Work-Family Ideals and Female Resistance in the Global South  

Author: **Jose M. Manuel Alcaraz**, *ESDES, U. Catholique de Lyon*

Author: **Valeria Carrillo**, *UPAEP*

Author: **Linh Chi Vo**, *ESDES, U. Catholique de Lyon*

Author: **Mary C. Lavissière**, *U. of Nantes*

Author: **Alexandre Lavissiere**, *Kedge Business School*

What qualities does “the ideal worker” and “the ideal mother” have? Research has found that widespread ideologies do provide certain norms, values and practices as central to those ideals, which often lead to both work-family conflict (WFC) and female segregation from the workplace. In this paper we examine the narratives of a unique group of fifty female managers and executives based in “developing regions”, working in a male dominated industry. We contribute to the literature on conflicting work-family ideals by introducing a feminist, post-structuralist critical approach, as well as a Global South sensitivity to study those ideals. Our work offers a contextualized examination of the lived experience, patriarchal norms and extended family arrangements of these women, which lead us to uncover a triple juxtaposition of opposing expectations: a) the ideal worker, b) the ideal housewife-(intensive/good) mother, and c) the ideal extended family/community member. Together, these three ideals form what we introduce and elaborate as the patriarchal triad (PT). “Zooming in” aspects of both conformity and challenge, material and discursive tactics, we reveal the micro-political resistance efforts mobilized by these women against gender discrimination and in their search for self-determination.

DEI: The Hidden Cognitive Side of Work-Family Boundary Management 

Author: **Victoria Daniel**, *York U., Toronto*

Author: **Yujie Zhan**, *Wilfrid Laurier U.*

Work-family life is becoming increasingly complex for the modern working parent, making boundaries that define aspects of the interface evermore important yet presenting their own challenges in ongoing work-family management. However, the boundary management literature has emphasized general preferences or tendencies that behaviorally integrate or segment work and family, and predominantly treated these boundary constructs as stable. Consequently, little is known about the essence of doing boundary work as a practice in and of itself. We therefore sought to understand how people construct, control, and change their boundaries by taking an inductive approach to explore the experiences of remote working parents who had to undertake the full-time care of their children during the pandemic. Taking a grounded theory approach to analyze two distinct sources of qualitative data, we uncover the cognitive nature of boundary work that encompasses multiple stages: anticipating boundary needs, boundary planning, regulating boundary implementation, and adaption of boundaries. Altogether, we incorporate existing research with these findings to build new theory of boundary work as a thoughtful and effortful process that unfolds through pre- to post-enactment phases—with these direct and novel explanations for how and why people manage their boundaries having salient theoretical and practical implications.

DEI: The Effects of Paternal Nurturant Imprint (PNI) on Work-Family Functioning

Author: **Min Young Yoon**, *Rider U.*

Men’s reluctance to engage in family duties remains a barrier to women’s workforce participation and career advancement in the U.S. Drawing upon family sociology and imprinting theory, this study introduces the concept of paternal nurturant imprint (PNI)—the extent to which men’s formative family experiences were characterized by receiving nurturance from their own fathers—as an antecedent of their engagement in their families. Building upon family system theory that suggests crossover effects, or “dyadic, inter-individual, interdomain transmission,” within couples, I examined whether a PNI on a male partner predicts their female partner’s work-family functioning among dual earner couples with childcare responsibilities (Stertz et al., 2017, p. 106). First, taking an exploratory approach, I validate the concept via archival data using the General Social Survey (GSS), confirming that male partners’ formative family experiences are correlated to their female partners’ work outcomes. In Study 1, using male full-time workers across multiple organizations, I confirm that PNI are significantly related to coparenting relationship. Lastly, using a sample of dual-earner couples with responsibilities for children under age 15, I found that PNI on the male partner is positively correlated with the female partners’ family-work interface and work outcomes. Through this study, I aim to contribute to the literature on gender inequality, work-family balance, and organizational culture. Theoretical implications, practical implications, and future directions are discussed.

DEI: Sick of Sexism: Ambivalent Sexism, Gender Role Orientation, Work-Family Conflict and Physical Health  

Author: **Anna Katharina Bader**, *U. of York*

Author: **Vesa Peltokorpi**, *Hiroshima U.*

Caused by persisting traditional gender norms, working mothers with young children are at particular risk of experiencing ambivalent sexism at work, i.e., discrimination based on both negative (hostile sexism) and positive (benevolent sexism) attitudes towards women. In this study, we integrate ambivalent sexism and conservation of resources theories to disentangle the negative effects of ambivalent sexism investigating how hostile and benevolent sexism are related differently to work-family and family-work conflicts and link both types of sexism through these conflicts to impaired physical health. Using data from three-wave surveys of 719 working mothers with young children, we find support for our theoretical model pointing to unambiguous detrimental effects of hostile sexism on work-family and family-work conflicts and eventually health which are more severe for mothers with a more egalitarian gender role orientation. Supporting the proposed differential effects of benevolent sexism, the findings corroborate that benevolent sexism increases family-work conflict but reduces work-family conflict and produces interesting opposing mediation effects. Individual gender role orientation only governs the effect on family-work conflict. Based on our theorizing our results uncover important new insights into the paradoxical mechanisms of how ambivalent sexism reproduces gender inequalities and deteriorates victim’s health.

Hiring Culture and Performance

Session Moderator: **Priyam Saraf**, *Stanford Graduate School of Business*

DEI: Structure and Culture in Hiring: Evidence from Stratified, Non-Elite Firms  

Author: **Priyam Saraf**, *Stanford Graduate School of Business*

In organizational hiring, both techno-rational job requirements and cultural factors—comprising shared norms and beliefs about worker ideals—are pivotal. Research often overvalues cultural fit, focusing on elite sectors like consulting, which skews wider applicability. My 16-month ethnography within Bangladeshi garment firms found owners de-emphasize cultural similarity, avoiding local CEOs to prevent reproduction of socio-structural hierarchies within the firm. Instead, they strategically choose 'relative outsiders' from similar cultures for better assimilation. This approach spotlights the interplay between structural and cultural factors in hiring, challenging prevailing beliefs about the primacy of cultural alignment in organizational practices.

DEI: Experiencing the Application, Selection, and Onboarding Process from an Autistic Perspective

Author: **Steven Kilroy**, *Trinity Business School, Trinity College Dublin*

Author: **Alva Francesca Dunne**, *Trinity College Dublin School of Business*

Author: **Na Fu**, *Trinity Business School, Trinity College Dublin*

The current research focuses on investigating the application, selection, and onboarding experiences of autistic individuals in the employment process. Utilizing an inductive qualitative approach, the study conducted semi-structured interviews with eight autistic participants, and thematic analysis was employed for data interpretation. The findings reveal that initiating the application process can be challenging due to difficulties in commitment. Additionally, some participants face social challenges during job interviews, although this is not a universal experience. Onboarding proves to be challenging for many due to the significant adjustments required in starting a new job, coupled with the high social demands. The study also addresses internalized prejudice among autistic individuals and its implications for both individuals and organizations. Furthermore, the importance of clarity throughout the hiring process is emphasized. The research includes a post-hoc analysis involving interviews with five employers to explore their perspectives on hiring neurodivergent employees. Limitations are acknowledged, and directions for future research are proposed.

DEI: The Costs of the Win-at-all-Cost Culture in High Performance Sport    

Author: **Katrina Monton**, *Teachers College, Columbia U.*

Author: **Lawrence Lopez-Menzies**, *Teachers College, Columbia U.*

Author: **Caryn J. Block**, *Teachers College, Columbia U.*

Heightened media scrutiny and growing public awareness, has led to increased research focusing on maltreatment in sport (Willson et al., 2022b). The Masculinity Contest Culture (MCC) framework has been effective in exploring the elite sport context and its connection to athlete health and safety (Monton et al., 2023). This study sought to deepen our understanding of how MCC is enacted in sports contexts, and how it relates to athlete outcomes. We used semi-structured interviews with retired, female, national team athletes (n=30). Results indicated that the MCC norm of show no weakness was enacted by a low tolerance for error, suppression of emotion and concealing of mental health struggles, while the MCC norm of strength and stamina was represented by a pattern of athletes playing through injury and illness. The MCC norm of dog-eat-dog was exemplified through toxic levels of competition, athlete hierarchy and a feeling that athletes were replaceable, whereas the MCC norm of put work first was represented by as a sole focus on sport. In addition to the four MCC norms cited in the literature, a win-at-all-costs justification emerged as an overarching theme across all four norms. MCC was enforced by coaches and athletes through rewards and punishment which had devastating consequences for athletes, including stress, diminished self-esteem, body image and disordered eating, difficulty with interpersonal relationships and burnout.

DEI: Organizational Claims Can Promote the Self-Selection of Inclusive Job Seekers 

Author: **Michael White**, *Columbia Business School*

Author: **Mabel Abraham**, *Columbia Business School*

Author: **Sandra Matz**, *Columbia Business School*

Organizations that facilitate inclusion more effectively attract and retain a diverse workforce; however, finding empirically backed strategies for promoting inclusive behavior has been challenging. Here, we suggest a solution for creating more inclusive organizations: promoting the self-selection of inclusive workers. Specifically, we examine whether organizational claims about diversity, equity, and inclusion (DEI) attract more inclusive job seekers. In two preregistered experiments (N = 1,212), we examined how participants' tendency to behave inclusively (as rated by long-term workgroup members) predicted their interest in (Experiment 1) and decision to work for (Experiment 2) organizations demonstrating varying degrees of commitment to DEI. We find that the most inclusive job seekers self-select into—and the least inclusive self-exclude from—organizations making resource-backed claims that express a deep commitment to DEI. Our findings highlight that organizational claims induce applicant sorting based on their inclusivity and offer a practical tool for promoting inclusivity in organizations.

Navigating HR and DEI Frontiers: Challenges, Transformative Strategies, and Cultural Dynamics

Presenter: **Salome Opoku**, *Arizona State U.*
Discussant: **Beth Ann Livingston**, *U. of Iowa*
Participant: **David A. Waldman**, *Arizona State U.*
Organizer: **Rose Brown**, *Cornell U.*
Participant: **Angela Carter**, *Clemson*
Presenter: **Stephanie Twin Sisco**, *U. of Minnesota*
Presenter: **Rebecca Jean Evan**, *Metropolitan State U.*
Participant: **Patrick Wright**, *U. of South Carolina*
Presenter: **Rose Brown**, *Cornell U.*
Participant: **Crystal Fashant**, *Metropolitan State U.*

In the first paper, Brown investigates the consequences of informal and formal disclosure, including filing workplace complaints in response to workplace mistreatment, emphasizing discrimination, harassment, and retaliation. Her research explores the complex nature of the grievance process outcomes and consequences and their effectiveness in safeguarding employees who choose to report or formally file complaints. Her paper addresses a significant gap in the literature by examining the impact on employees who consider and decide to engage in the grievance process, filling a theoretical and empirical void that spans decades (Klaas, 1989). Her study advances theory by employing grounded theory to study these social and psychological processes. She develops an organizational punishment- industrial discipline nomological network of what employees can expect when engaging in the formal, informal, or even consideration of workplace grievance processes and how this network is moderated by ethnicity and age. Her study extends organizational punishment- industrial discipline theory to include retaliation and revenge, as well as intentional actions such as ostracism in person and virtually, and individual and institutional gaslighting. Findings from 50 qualitative interviews and archival records concerning 160 employees indicate many participants experienced negative professional consequences such as adverse performance reviews, blacklisting, constructive discharge, reduced work contracts, and diminished career opportunities. Additionally, participants reported negative physical, psychological, and emotional impacts, from weight gain to feelings of revictimization, hypervigilance, and imposter syndrome. Despite the potential empowerment felt by a minority, her study underscores the pervasive challenges, including lack of confidentiality, investigation, and due process within grievance procedures. The resulting nomological network provides a nuanced understanding of the multifaceted consequences faced by employees who engage in or consider engaging in formal disclosure processes. The second project by Opoku, Waldman, and Wright posits that companies are increasingly devoting attention to diversity, equity, and inclusion (DEI) in their workforce. However, numerous anecdotes have appeared in the press and social media of how corporations supposedly frame and implement their DEI strategies, with some people interpreting them as excessive, performative, and ineffective. They seek to understand if such characterizations are accurate as viewed by the individuals who oversee DEI strategies. Therefore, their study aims to provide a qualitative examination of how organizations are implementing their DEI strategies and the pushback they may receive from various stakeholders. Through their in-depth interviews with 16 Chief Diversity Officers (CDOs) from Fortune 500 companies, they uncovered seven pivotal themes: (1) Prioritizing D, E, and I; (2) Balancing Equity and Merit; (3) Emphasizing Business vs Social Concerns; (4) Implementing DEI Strategies; (5) Dealing with Resistance; (6) Modeling through Leadership; and (7) Managing DEI across Geographies. Their findings contribute comprehensive insights that suggest a balance approach rather than an “all or nothing” approach. The third study, conducted by Sisco and Carter, posits while individual actions and attitudes contribute to racism, it is crucial to recognize that racism can manifest in broader societal structures and institutions, such as the workplace and our workforce. In this study they explore how Black, Indigenous, and other People of Color (BIPOC) draw upon their Indigenous and cultural knowledge to navigate racially insensitive barriers in the workplace. They also use the theory of racialized organizations to understand how racism in the workplace continues to operate at the organizational level. Their research is guided by two research questions (RQ): 1) What Indigenous and cultural knowledge approaches are practiced by racial minorities in the workplace? and 2) How is racism and/or racialization described in studies that examine Indigenous and cultural knowledge approaches at work? Results from RQ1 provide critical insights about the coping strategies and resilient ideologies adopted by racial minorities at work, which has direct implications on employee well-being and employee empowerment. For RQ2, the application of the racialized organizations theory serves as a valuable perspective for comprehending how workplace racism constrains the agency of BIPOC individuals and hinders their ability to access essential organizational resources and cultural assets necessary for navigating racialized hierarchies. Finally, the empirical study conducted by Sisco, Fashant, Carter, and Evan posits that over the past decade, organizations have become more transparent about their diversity and inclusion challenges, and they have become more openly involved in sociopolitical affairs. This has led to a greater need for diversity management (DM). Given the relatively new focus of DM within profit-seeking organizations, efforts concerning diversity, equity, and inclusion (DEI) have become integral to organizational culture and sustainability. Their study seeks to understand how DEI professionals practice diversity management during this emerging era of racial reform and restorative justice. Another aim of their research is to examine how the racial identity of DEI practitioners influences their work. Their focus was further refined to concentrate on White DEI practitioners who are paid to perform DEI work (e.g., training, data analytics, legal, recruiting, etc.) for their employer. To explore this phenomenon, 10 participants were interviewed about their DEI work experiences, perceptions, and ambitions for DEI. Within the discussion of the findings, they articulate the paradoxes encountered by the participants, particularly concerning limitations to antiracism initiatives in the workplace and their personal affirmations regarding race consciousness.

In recent decades, organizations big and small, public and private, and across numerous industries have made efforts to increase diversity, equity, and inclusion. At the same time, researchers have documented the many ways in which organizations continue to be fundamentally unequal in their treatment of members from historically underrepresented groups, including women and racial and ethnic minorities. There is a growing consensus among researchers that simply increasing the numbers of members from historically underrepresented groups in organizations (achieving “representational diversity”) will ultimately be insufficient to fundamentally improve equity and inclusion within organizations. This symposium brings together leading scholars of organizational inequality who span micro and macro perspectives to interrogate why simply “adding diversity and stirring” will not be enough to address lasting concerns of organizational equity and inclusion. Specifically, the four papers in this symposium utilize multiple complementary methodologies—ranging from natural language processing of historical texts to attitudinal surveys to video experiments—to shed new light on the mechanisms that continue to uphold inequalities even in the face of changing numeric representation of minoritized groups.

Venture Performance

Session Moderator: **Martina Battisti**, *Grenoble Ecole de Management*

ENT: **Sustainability-Oriented Ventures: Resource Mobilization, Innovativeness and Venture Performance**

Author: **Martina Battisti**, *Grenoble Ecole de Management*

Author: **Shuangfa Huang**, -

Author: **Isabella Hatak**, *U. of St. Gallen*

Author: **Haibo Zhou**, *U. of Nottingham, China*

Research on whether sustainability orientation enhances or hinders venture performance is inconclusive. While one stream suggests that embracing sustainability and innovativeness improves performance, the other one posits that resource constraints limit ventures' effectiveness of sustainability orientation. In this study, we argue that resource mobilization is pivotal for sustainability-oriented ventures to achieve superior performance in conjunction with innovativeness. Drawing on a three-stage configurational theorizing approach and fuzzy-set qualitative comparative analysis of a sample of UK ventures, we explore how bricolage and resource-induced coping heuristics interact with innovativeness to explain the performance of sustainability-oriented ventures. Findings provide novel insights into alternative configurations of strategic and resource mobilization approaches for venture performance within the sustainability domain. We disentangle mechanisms of behavioural and cognitive resource mobilization approaches while highlighting their potential synergy or substitution. The findings have implications for entrepreneurs pursuing sustainability without jeopardizing survival.

ENT: **Assortative Networks, Strategic Change and Firm Performance**

Author: **Vincenzo Buttice**, *Politecnico di Milano*

Author: **Francesca Di Pietro**, *U. of Milano Bicocca*

Author: **Francesca Tenca**, *U. del Piemonte Orientale*

In this study, we investigate how the market network topology influences firm strategic decision-making. We argue that assortative networks can foster the emergence of conflicting opinions, affecting the timing of strategic change implementation and its subsequent effects on firm performance. We test our theory in the realm of equity crowdfunding, and we find that firms operating within more assortative networks tend to move more slowly in implementing strategic changes. Such changes may include the introduction of new products, expansion into new markets, or establishing new strategic partnerships. However, once implemented, firms with high assortative networks experience superior performance in comparison to those operating in less assortative networks. The results are robust after controlling for possible ex-ante differences among firms.

ENT: **Decentralized Finance, Crypto Funds, and Value Creation in Tokenized Firms**

Author: **Douglas Cumming**, *Florida Atlantic U.*

Author: **Niclas Dombrowski**, *U. of Hamburg*

Author: **PP Momtaz**, *Bavarian State Institute for Higher Education Research and Planning + TU Munich*

Author: **Wolfgang Drobetz**, *U. of Hamburg*

Crypto funds (CFs) represent a novel investor type in entrepreneurial finance. CFs intermediate Decentralized Finance (DeFi) markets by pooling contributions from crowdfunders and investing in tokenized startups, combining venture- and hedge-style investment strategies. We compile a unique dataset combining token-based crowdfunding (Initial Coin Offering, ICO) data with proprietary performance data of CFs. CF-backed startup ventures obtain higher ICO valuations, outperform their peers in the long run, and benefit from token price appreciation around CF investment disclosure in the secondary market. Moreover, CFs themselves beat the market by roughly 2.5% per month. Outperformance is persistent, indicating that CFs generate returns because of their skills, rather than luck. The performance effects for CFs and CF-backed startups are driven by a fund's investor network centrality.

ENT: **Orchestrating Success: The Impact of Investor Portfolio and Investment Pace on Venture Performance**

Author: **Huaxi Gao**, *Guanghua School of Management, Peking U.*

Author: **Peiyuan Huang**, *Peking U.*

In the dynamic landscape of entrepreneurship, new ventures grapple with the double challenges of resource scarcity and the looming threat of competitive imitation. This paper focuses on how investment-related characteristics throughout the entrepreneurial venture's entire financing process impact the venture's subsequent performance. Specifically, we investigate the opposing impacts of investor diversification and investment irregularity – two primary characteristics of the financing process – on venture's IPO evaluation. We propose that while investor diversification dilutes the resource commitments from VC investors, investment irregularity creates imitation barriers and better enhances the venture valuation. We find supports to our hypotheses with information on the financing process and IPO performance of VC-backed ventures in the U.S. stock markets. Our theory and analysis also indicate that the internal technology capability better enables resource absorption and attenuates imitation threats, therefore moderating the main results in corresponding directions. Our study highlights important roles of investor portfolio and investment pace through the entire financing process, helping direct the attention of interdependence across different rounds and hold a holistic perspective.

Social Identity and Relations

Session Moderator: **Tobias Pret**, *Illinois State U.*

ENT: **Managing Multiple Identities Through Social Entrepreneurship**

Author: **Aviel Cogan**, *Butler U.*
Author: **Tobias Pret**, *Illinois State U.*

Research recognizes the multiplicity of social entrepreneurs' identities. Yet, understanding of how social entrepreneurship enables the management of multiple identities is limited. Through a longitudinal, qualitative study, we find that social entrepreneurial entry, venture design, and practice can facilitate the internal management of multiple identities by operating as identity repairing, strengthening, and aligning work. Accordingly, we develop a model that conceptualizes social entrepreneurship as a form of what we term "mutual verification work," defined as external behaviors that adjust internal inter-identity structures, content, and relationships through mutual verification. This study thus adds nuance to prevailing views of social entrepreneurship as necessitating identity management by illustrating that it can also be utilized as a means of performing identity management. In addition, we extend understanding of identity control theory by suggesting that mutual verification of multiple identities can cause cumulative reciprocal effects on identities, rather than establishing identity stability. Furthermore, this study challenges debates that pit personal, role, and social identities against one another by demonstrating that identities at multiple levels of abstraction may not only be mutually verified, but may also merge and enhance one another when willingly co-activated.

ENT: **Entrepreneurship Jungle: Social Identity & Dark Triad Traits Study**

Author: **Safiya Alshibani**, *Princess Nourah Bint Abdulrahman U.*
Author: **Sukanlaya Sawang**, *Edinburgh Napier U.*
Author: **Poh Yen Ng**, *Robert Gordon U.*

This study explores the complex relationship between a founder's social identity and the Dark Triad traits. It aims to provide a more nuanced understanding of entrepreneurial behaviors and their subsequent impact on enterprise performance and founders' well-being. Drawing inspiration from the animal kingdom, we identify three entrepreneurial archetypes: Lions, Bees, and Chameleons, using Latent Profile Analysis (LPA) of 28,853 active entrepreneurs. Lions, embodying a balanced competitiveness, exhibit a strategic blend of dominance and communal living. As collaborative visionaries, Bees showcases a strong inclination towards teamwork and purpose-driven collaboration. Chameleons, the strategic individualists, reveal adaptability and calculated approaches to competition. The study further explores the impact of these archetypes on well-being and performance outcomes, uncovering the diverse factors influencing entrepreneurial success. The findings presented herein contribute to a comprehensive understanding of the multifaceted nature of entrepreneurial behavior and its implications for individual and business performance.

ENT: **Does Social Undermining Negatively Affect Entrepreneurs' Work Engagement?**

Author: **Xiaotong Meng**, *Shanghai U.*
Author: **Xiaoyu Yu**, *Shanghai U.*

With the rapid development of digital technology, entrepreneurs can better interact with stakeholders, although this may also lead to conflict between them. Drawing on affect-as-information theory, we focus on social undermining, a type of destructive social interaction, and explore whether it affects the behavior of entrepreneurs. We conduct a daily diary study every morning and evening for 14 consecutive days and collect 564 observations from 56 entrepreneurs. The results of the multilevel model show that at the within-person level, daily social undermining positively affects entrepreneurs' daily work engagement by improving their daily sleep quality, and that relaxation activities strengthen the positive relationship between daily social undermining and daily sleep quality. However, at the between-person level, social undermining negatively affects work engagement by reducing sleep quality. Our results provide robust empirical evidence of whether and how social undermining affects entrepreneurs' work engagement, revealing the "bright side" of social undermining.

ENT: **From Believing in Mentees to Promoting Self-Belief: The Impact of Dyadic Social Capital**

Author: **Parisa Haim Faridian**, *San Diego State U., Fowler College of Business*
Author: **Congcong Zheng**, *San Diego State U.*
Author: **Alex F. DeNoble**, *San Diego State U.*

This study examines how forming mentoring relations impacts opportunity exploration and exploitation in aspiring entrepreneurs. Through conducting a longitudinal qualitative analysis, this study examines the evolution of mentoring relations in a sample of 32 dyads of mentors and nascent student entrepreneur mentees. We found that mentors adapt their approach to mentoring in accordance with their mentees' stages of development. In both stages of opportunity exploration and exploitation, mentoring focuses on developing entrepreneurial competencies and establishing structural capital. However, in the opportunity-exploration stage, mentoring has a stronger orientation towards motivating mentees and building relational capital, while in opportunity-exploitation stage mentoring tends to focus on promoting self-efficacy and establishing cognitive capital. Conversely, during the opportunity exploitation stage, promoting self-efficacy requires a multifaceted approach, incorporating relational capital as well as structural and cognitive capital, to provide a holistic and robust support system for mentee development.

Entrepreneurial Learning

Session Moderator: **Kristin Möller**, *CBS*

ENT: **Lessons Learned, But Which Ones? A Typology of Learnings from Entrepreneurial Failure**

Author: **Kristin Möller**, *CBS*
Author: **Mona Ghazi**, *ESCP Business School*
Author: **Christoph Seckler**, *ESCP Business School*

Entrepreneurship scholars are increasingly directing their focus toward the phenomenon of learning from failure. While considerable progress has been made in understanding how this learning process unfolds, much less is known regarding the specific learning outcomes. The purpose of this paper is to explore the learning outcomes from entrepreneurial failure. Using a unique data set comprising 146 post-mortem statements, we construct a typology of perceived learning outcomes. This typology delineates 17 overarching learning outcomes in three domains: cognitive, skill-based, and affective. The study contributes to literature by offering a differentiated empirical description of learnings, as well as a comprehensive typology. The learnings can serve as a valuable resource for nascent entrepreneurs, as well as entrepreneurship educators in educating next generation of entrepreneurs.

ENT: **Unintelligent Adaptation: Animal Spirits and Rainforest Logics in the Era of Generative AI**

Author: **Richard Hunt**, *Virginia Tech*
Author: **Daniel Lerner**, *IE Business School*
Author: **Rasim Serdar Kurdoglu**, *Bilkent U.*

For nearly a century, management theory has sought to incorporate greater realism concerning the influence exerted by cognitive, emotional, and social impacts on decision-making under uncertainty. Despite near-universal recognition of these behavioral influences, the presumption that ecological rationality is adaptive continues to cast a long shadow, and management theory remains anchored to the assumption that marketplaces are populated with intendedly rational participants. This assumption is, at best, an incomplete rendering of both the decisional environment and the motivational drivers impelling business activity. As the widespread and increasingly sophisticated use of artificial intelligence (AI) – particularly generative AI (Gen AI) – continues to expand its role in shaping managerial and organizational decisions and actions, it is important to assess the extent to which variation-generating, irrational, impulsive, and eristically motivated decisions and actions are at risk of extinction. Thus, the purpose of this inquiry is to challenge the notion that accurate, efficient decision-making is invariably adaptive. We do this by exploring the premise that irrationality is not only useful, but often indispensable to the generation of novel, organization-enhancing variation. Our approach widens the conceptual aperture concerning the motivational mechanisms that lead to decisions, actions, and outcomes, particularly in light of the rapidly escalating commitment to algorithmic decision-making.

ENT: **Beyond Books: Exploring the Relationship Between Entrepreneurial Learning and Extra-Role Behavior**

Author: **Azzurra Meoli**, *unibo*
Author: **Davide Hahn**, *U. of Bergamo*
Author: **Giuliano Sansone**, *U. College Dublin*

Entrepreneurial knowledge dissemination within higher education institutions plays a crucial role in shaping societal contributions by endowing university students with entrepreneurial learning (EL). While existing research extensively explores the influence of EL on entrepreneurial ventures among students, the ramifications of such knowledge on wage-paid employment remain relatively uncharted. This study aims to fill this gap by investigating the extent to which and the conditions under which EL influences extra-role behavior (ERB) in working students. ERB represents an employee's proactive contributions that surpass the prescribed job responsibilities. Leveraging a comprehensive international dataset encompassing 5,910 working students, our analysis reveals a positive correlation between EL and ERB. Furthermore, we uncover that this relationship is subject to moderation based on working students' gender, their role within the organization, and the size of the employing company. These nuanced findings contribute to a more comprehensive understanding of how entrepreneurial knowledge disseminated to university students can extend its impact beyond venture creation, influencing societal dynamics through the prism of wage-paid employment.

ENT: **Self-Regulated Entrepreneurial Learning: A Key to Innovation in a Dynamic World**

Author: **Noah Bellwald**, *U. of St. Gallen*

In recent years, unforeseen events such as the COVID-19 pandemic or geopolitical tensions have changed the business environment around the world. In such uncertain times, entrepreneurs need to learn efficiently and adapt even more quickly. This paper focuses therefore on self-regulated entrepreneurial learning (SERL) and how it contributes to increasing innovative work behavior (IWB), a critical factor for entrepreneurial success. Recognizing the lack of research on SREL within the entrepreneurial context, this paper explores the connection between SREL and IWB, particularly under varying conditions of environmental dynamics, competitive intensity, and perceived innovation importance. The findings of this quantitative two-study approach (N=271) reveal a significant positive correlation between SREL and IWB, highlighting that entrepreneurs with robust SREL capabilities are more inclined toward innovation, especially in dynamic and competitive environments. This research not only fills a critical gap in entrepreneurial studies but also offers practical insights for educational strategies and policy decisions aimed at fostering en-trepreneurial growth and adaptability in a rapidly evolving global market.

Digital Entrepreneurship II

Session Moderator: **Kun Liu**, *Kent State U.*

ENT: **Making Soup from a Nail: Bricolage and Engineering in a Digital New Venture Development**

Author: **Nataliya Galan**, *U. West*

Author: **Ann Svensson**, *U. West*

Viewing the entrepreneurship process as an entrepreneurial journey and employing a longitudinal process research design, this study aims to advance the current understanding of the dynamics of interactions between entrepreneurs and stakeholders in the development of a digital new venture (DNV). Drawing parallels to a Scandinavian folk tale about nail soup, which illustrates the concept of creating something substantial from seemingly nothing, we apply two logics of entrepreneurial behavior – bricolage and engineering – to explain entrepreneurs' interactions with key stakeholders while navigating the entrepreneurial journey. Based on the analysis of our rich empirical evidence, collected over six years of following the journey of one DNV's founders, we develop a set of propositions explaining how these two logics are intertwined in the process of DNV development over time, as well as how they are applied for initial and subsequent stakeholder engagement. Keywords: Entrepreneurship process, bricolage, engineering, new digital venture, stakeholder engagement

ENT: **Multilevel Perspectives on Digital Corporate Entrepreneurship: Scalability and Modularity**

Author: **Shuang Liu**, *Georgia State U.*

This conceptual paper proposes a multilevel perspective on Digital Corporate Entrepreneurship (DCE), emphasizing the centrality of scalability and modularity in understanding and advancing DCE initiatives. It argues for a broader conceptualization of DCE, extending beyond mere technological adoption to include the societal, organizational, and individual dimensions that collectively shape digital innovation and entrepreneurship. By synthesizing insights across various levels of analysis, the paper presents a comprehensive framework that addresses the interdependencies and dynamics central to DCE success. The proposed framework not only fills gaps in current literature but also equips practitioners with actionable strategies to navigate the complexities of the digital landscape. Ultimately, this paper aims to spur further theoretical and empirical exploration, while providing a robust foundation for effective DCE practice in the digital economy.

ENT: **A Temporal Perspective of how AI can Impact Entrepreneurial Intentions of Gig Workers**

Author: **Kun Liu**, *Kent State U.*

Author: **Jianhong Chen**, *U. of New Hampshire*

Artificial intelligence (AI) has emerged as an important research topic in management, innovation, and entrepreneurship. However, prior research has not examined some possible side effects of AI on the people designed to be directed by AI. To examine how AI in labor-sharing platforms influences entrepreneurial intentions of gig workers, this study takes a temporal perspective and develops a two-stage conceptual model based on the entrainment theory. In the first stage, we discuss how AI can affect temporal culture, temporal structure, and temporal focus of gig workers. In the second stage, these temporal experiences transformed by AI can impact attitude and perceived behavioral control that drive entrepreneurial intentions of gig workers. Theoretical and empirical implications are then discussed.

ENT: **Digital Transformation and Innovation in Family Firms: Developed and Emerging Economies Perspectives**

Author: **Christian Keen**, *U. Laval*

Author: **Mikel Alayo**, *U. of the Basque Country UPV/EHU*

Author: **Valeriano Sanchez-Famoso**, *U. of the Basque Country UPV/EHU*

Author: **Sara Wong**, *ESPOL Polytechnic U.*

Digital transformation is one of the main and unavoidable challenges companies face in the current globalized economy, and family firms are no exception to this reality. Though digital transformation has been posited as important for firms to achieve higher innovation outputs, the research surrounding this idea is still scarce. With an aim to shed new light on this question, this study analyzes the role and impact of digital transformation as a motor for innovation in two different (developed and emerging) economic contexts, specifically Spain and Ecuador. This study also asks if the generational stage of a family firm shapes the effect of digital transformation on its innovation. Results support the idea that in developed and emerging economic settings, digital transformation positively influences the innovation of family firms. Results also indicate that a more advanced generational stage has positively influenced innovation outputs in Spanish family firms but has not done so significantly in Ecuadorian family firms.

Firms Going Public

Session Moderator: **Majid Rahimi**, *U. of Alabama*

ENT: **Dividend Payout of Publicly Listed Family Firms as a Two-Stage Mixed Gamble: Evidence from Korea**  

Author: **Yoonjeoung Heo**, *Xi'an Jiaotong-Liverpool U.*

Using a two-stage mixed gamble framework that balances financial resource security and legitimacy concerns, we examine the dividend payout policies of public family firms. We found that augmenting controlling families' legitimacy concern, public family firms are more likely than non-family firms to distribute dividend. However, this distribution choice often lowers their payout level than non-family firms by shifting controlling families' focus toward financial resource security. Moreover, we found that public family firms increase their payout levels more than non-family firms following positive feedback but decrease them less after negative feedback. This behavior stems from how feedback sways the controlling families' evaluation frame—strengthening gain frame after positive feedback but altering gain to lose frame after negative feedback. Employing the two-stage approach to navigate conflicting desires, our findings elucidate how controlling families refine their strategic preferences based on initial outcomes. This offers an insight into family firm's long-term strategic balancing of conflicting desires with the series of mixed gamble strategic choices family firm makes. Moreover, our finding on the moderating effect of performance feedback indicates that controlling families interpret the performance feedback differently by prioritizing legitimacy concern over financial concern, leading to divergent dividend payout level choices compared to non-family firms.

ENT: **Beyond the First Day: A Path to Future Initial Public Offering Research Drawn from a Large-Scale** 

Author: **Majid Rahimi**, *U. of Alabama*

Author: **Theresa M. Welbourne**, *U. of Alabama*

The initial public offering (IPO) is a crucial milestone in the growth trajectory of an organization, and this topic has attracted considerable research work from a variety of scholars. However, despite numerous studies, the work done does not appear to be making a positive impact on the survival and longer-term performance of IPOs. To understand the limitations and potential of studying IPOs, we conducted a large-scale bibliometric analysis (co-citation, bibliographic coupling, and co-word) on a sample of 1,473 studies published from 1967 to 2022. Drawing upon the existing literature, we suggest future research address a few key gaps. The first focuses on moving from shorter-term firm performance to addressing longer-term outcomes. Additionally, research that goes beyond the top management team (including board of directors or upper echelons) to encompass the entire employee population and include fields other than finance (e.g., marketing, management, etc.) can move the body of work forward. By taking a more inclusive perspective of the firm overall at the time of the IPO and beyond the first day, future research has potential to help provide insights to lengthen the lives and improve performance of these organizations.

ENT: **Strategic Communication of Newly Public Ventures: A Review and Research Agenda**  

Author: **Juan Carlos Rivera-Prieto**, *U. of Passau*

Author: **Friederike Hawighorst**, *U. of Passau*

Author: **Bárbara Larrañeta**, *Pablo de Olavide U.*

Strategic communication of newly public ventures has garnered substantial scholarly interest in recent years. However, the resulting scholarly insight has been generated across different, often disconnected research streams based on a wide range of theoretical foundations and contexts of the IPO process, which complicates the synthesis of the current knowledge, the identification of theoretical instabilities and open research questions, and the development of a comprehensive research agenda. We address the resulting limitations by identifying and reviewing 79 theoretical and empirical articles published to date in 13 top-tier management and entrepreneurship academic journals. Our systematic literature review analyzes this heterogeneous scholarly oeuvre and develops an integrative framework that highlights the differences between the three distinct contexts—pre-IPO, during IPO, and post-IPO. Specifically, within each of these three contexts, we identify the dominant theoretical perspectives on strategic communication of newly public ventures, the types of information focus, types of information conveyance, target audiences, the types of communication channels, as well as the antecedents and consequences of the strategic communication for the venture. Additionally, we formulate a comprehensive research agenda based on the consolidation of limitations identified in the reviewed articles. Overall, our integrative framework provides a more detailed and nuanced picture of strategic communication in the context of IPOs, highlights the dynamic and complex nature of this communication process, and offers important insights for academics, practitioners, and policymakers.

ENT: **The Impact of Founder Experience on Going Public** 

Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

This paper investigates the relationship between founder experience and a startup's hazard of going public. In our hypotheses, we unpack two distinct aspects of founder experience – entrepreneurial and scientific experience – and posit that they are likely to be related to a startup's hazard of going public in opposite ways. Specifically, we argue and show that founder entrepreneurial experience will positively influence a startup's IPO hazard rate, whereas founder scientific experience will be negatively associated with a firm's hazard of going public. More importantly, we examine the contingent effects of equity market conditions and suggest that favourable market conditions are likely to weaken these effects of founders' entrepreneurial and scientific experience on a startup's hazard of going public. Empirical analysis of IPO hazard rates of 709 venture-backed biotechnology startups using piecewise exponential proportional hazard models provides evidence for our hypothesized relationships.

New Venture Growth I

Session Moderator: **Mirella Schrijvers**, *Technische U. München, TUM School of Management*

ENT: **Realizing Expectations? High-impact and High-Growth Expectations Entrepreneurship Across Countries (WITHDRAWN)** 

Author: **Johannes Kleinhempel**, *Copenhagen Business School - Department of Strategy and Innovation*
Author: **Saul Estrin**, *LSE*

Comparative international entrepreneurship research has often used measures of high-growth expectations entrepreneurship to proxy for the construct of high-impact entrepreneurship. We revisit this practice by assessing the cross-country association between high-growth expectations and realized high-impact entrepreneurship to speak to construct measurement fit. We find that expectations are not a good proxy for realizations; they are associated with different determinants and outcomes, respectively. We go on to introduce the idea of entrepreneurial projection bias to gauge the misfit between expectations and realizations, and we show that conditioning on entrepreneurial projection bias partially restores the association between realized high-impact entrepreneurship and its determinants (or outcomes) when the former is proxied using high-growth expectations. Furthermore, we show that opportunity-motivated entrepreneurship also does not proxy well for high-impact entrepreneurship. Our analysis brings into question current survey-based approaches to measuring high-impact entrepreneurship and existing rankings of countries' entrepreneurial performance, with important implications for entrepreneurship theory and policy.

ENT: **The Impact of Growth: Stakeholder Value Creation by High-Growth Firms** 

Author: **Mirella Schrijvers**, *Technische U. München, TUM School of Management*
Author: **Jan Jacob Vogelaar**, *Utrecht U. School of Economics*

High-growth firms are known to contribute extraordinarily to economic growth, but concerns have been raised about their exclusionary focus on creating shareholder value. This paper adopts a stakeholder capability perspective to investigate social value creation by high-growth firms. Interviews with founders and CEOs of high-growth firms in the Netherlands provide insight into the mechanisms through which these firms create and destroy value for their stakeholders. We find that the rapid growth these firms experience can be a driver of some unique growth-related value creation mechanisms and serves as an amplifier of more general value creation mechanisms. The value creation of high-growth firms is shaped by certain firm attributes. This results in a typology of high-growth firms from a stakeholder value perspective, indicating three types: profit-driven high-growth firms, conscious high-growth firms, and mission-driven high-growth firms. While rapid growth presents firms with unique challenges and trade-offs between stakeholders, we argue that, if directed well, it also creates opportunities to substantially increase their social value creation.

ENT: **Revisiting the Theory of the Growth of the Firm: A Large-Scale Panel Study** 

Author: **Pubuduni Malika Jeewandarage**, *U. of Kelaniya*

Understanding firm growth has long been a key goal within organizational research. The quest to discover how firms grow is a cornerstone of the entrepreneurship field (Coad, 2022; McKelvie & Wiklund, 2010). However, despite decades of research on determinants of how much firms grow, little is known about how firms grow, i.e., drivers of the different modes of firm growth such as organic vs. acquisition-based expansion (Coad, 2022; McKelvie & Wiklund, 2010; Wright & Stiglitz, 2013). This is a serious shortcoming. Theoretically, it is unsatisfactory to lump together modes of growth that are likely to have in part different antecedents and consequences on both firm and economy-wide levels. These two modes of growth are likely to present managers with different challenges, and for policymakers they have different implications for job creation. Therefore, using Penrose's theory of the growth of the firm as the vantage point, this study uses two large-scale datasets that uniquely can distinguish between organic and acquisition-based growth to present empirical evidence that enhances the theoretical understanding of how internal and external factors determine the choice between these two growth modes. Specifically, the paper relates the inter-firm variance in growth mode proportions to firm size, firm age, industry, location, and macroeconomic conditions. Five hypotheses were tested in two separate studies using longitudinal panel datasets. Both studies used two growth calculation approaches (Cumulative and Annual) to improve the generalisability and robustness of the study findings. Keywords: Firm growth; organic growth; acquired growth; contextual factors; the theory of the growth of the firm.

ENT: **An Empirical Examination of Growth Drivers in Platform-Based Start-ups**   

Author: **Noemi Nagy**, *U. of South Florida*
Author: **Richard Blaese**, *ZHAW School of Management and Law*
Author: **Jan Appenzeller**, *ZHAW School of Management and Law*
Author: **Filser Matthias**, *ZHAW School of Management and Law*

Understanding rapid growth in platform-based startups is complex yet crucial. To shed light on the factors that enable rapid growth, we merged the extensive literature on rapid growth with the limited research on platform businesses. This allowed us to derive key prerequisites for the successful and rapid scaling of platform startups. To validate our assumptions, we conducted qualitative interviews with the founders of two-sided platforms. It was found that growth in platform contexts is driven by platform usability, ongoing customer involvement in product development, and the mindset of the founding team. Other crucial factors also include being founded by a team, having an extensive professional network, and creating unique customer value. These insights provide valuable guidance for entrepreneurs and professionals in platform-based businesses. This study adds significantly to the literature on startup growth by highlighting of timing and the recurrence of success factors for platform startups.

Global Perspectives

Session Moderator: **Israr Ahmad**, *School of Management, U. Sains Malaysia*

ENT: **Exploring the Nexus of Strategic Entrepreneurship Framework**

Author: **Israr Ahmad**, *School of Management, U. Sains Malaysia*

After the onset of COVID-19, there was a rapid increase in technological advancements. Small and medium-sized enterprises (SMEs) have been struggling to stay competitive. Strategic Entrepreneurship (SE) is a critical component in balancing the pursuit of opportunities and advantages to gain a competitive edge in a volatile market and competitive environment. The purpose of this study is to investigate the effect of Entrepreneurial Orientation (EO) and Information Technology Capabilities (ITC) on the Firm's Entrepreneurial Performance (FEP) through Strategic Entrepreneurship (SE). It also analyses the impact of SE on the FEP with the mediating effect of Entrepreneurial Agility (EA) and the moderating effect of environmental dynamics. Data were collected from 197 owners and managers from Pakistan's textile, electronic, and IT industries, and the results were analysed using the SmartPLS-SEM 4. The findings reveal that EO and ITC have a significant influence on SE, and SE has a positive effect on FEP. The findings also show that SE significantly mediates the relationship between EO and FEP, while ITC and FEP are negatively mediated. Furthermore, EA has a significant mediated with SE and FEP. Additionally, environmental dynamism strengthens the positive relationship between strategic entrepreneurship and firms' entrepreneurial performance. This study fills the gap by integrating the conceptual framework that elucidates the interrelationship among the EO, IT capabilities, entrepreneurial agility, and environmental dynamics and how these influence each other within the entrepreneurial ventures. This study fills the gap in the field of entrepreneurship and provides empirical evidence that aids firms in balancing opportunity-seeking and advantage-seeking behavior. Contrary to prior research, this novel focuses on SE as a competitive advantage.

ENT: **Cultural Achievement Values**

Author: **Johannes Kleinhempel**, *Copenhagen Business School - Department of Strategy and Innovation*

Author: **Sjoerd Beugelsdijk**, *Darla Moore School of Business, U. of South Carolina*

Author: **Mariko Klasing**, *U. of Groningen, Faculty of Economics and Business*

How does national culture influence entrepreneurship? Three perspectives dominate culture-entrepreneurship research –the internalized cultural values, legitimacy, and social support perspectives– that articulate distinct theoretical mechanisms, yield partially contradictory predictions, and are difficult to disentangle from one another. We offer a fresh approach to culture-entrepreneurship research by drawing on McClelland's seminal work (1961) on country-level cultural and individual-level personal achievement values to decouple the theoretical mechanisms proposed by the internalized cultural values perspective from other cultural perspectives and contextual influences. We use second-generation immigrants who were born and live in a specific country but were raised in families of different ancestries as our empirical context. This empirical design allows us to hold constant the normative and formal institutional mechanisms associated with the legitimacy and social support perspectives, and to focus on the internalized cultural values perspective. We argue that second-generation immigrants are more likely to be entrepreneurs if their country-of-ancestry culture is characterized by high levels of cultural achievement values—and that this relation is mediated by individuals' personal achievement values. Data on 4,380 second-generation immigrants of 32 ancestries support these propositions. This study highlights the relevance of the internalized cultural values perspective, underscores the importance of disentangling the distinct theoretical mechanisms through which culture influences entrepreneurship, and sheds light on how culture matters—for entrepreneurship and beyond.

ENT: **Exploratory Bricolage: How Resource-constrained Entrepreneurs Achieve Stretch Goals**

Author: **Wei Zhang**, *Tsinghua U.*

Author: **Liyan Wang**, *Tsinghua U.*

Author: **Peter Ping Li**, *Copenhagen Business School*

Bricolage is as an approach for entrepreneurs to overcome resource constraints, but the core definition of bricolage is far more exploratory than its extra feature of combination, which is manifest in today's entrepreneurial environment. To resolve this inconsistency, this study adopts the design of a longitudinal single case to investigate if and how resource-constrained entrepreneurs can achieve stretch goals via bricolage. First, we explain a novel type or form of bricolage, exploratory bricolage, especially via a specific mechanism of resource transformation driven by stretch goals, thus contributing primarily to the research on bricolage, and secondarily to the research on stretch goals. Second, we propose an overall process of entrepreneurial resourcing, which consists of three mechanisms at the stage of resource assembly (i.e., getting internal resources at hand, accessing free or cheap resources externally, and acquiring resources externally via resource-seeking) and also three mechanisms at the stage of resource application (i.e., using resources conventionally, combining resource, and transforming resource), thus contributing to the research on resource orchestration or resourcing as well as integrating the three entrepreneurship approaches (i.e., causation, effectuation, and bricolage). Third, we differentiate between short-term (as specific or concrete milestones via cognitive decisions and behavioral actions) and long-term (as abstract or broad directions via affective motivations) stretch goals and thus contributing to the research on stretch goals.

ENT: **Expatriate Entrepreneurship: Unveiling Multifocality's Impact on Taxonomy Determination**

Author: **Jan Wiers**, *IAE Paris - Sorbonne Business School*

Entrepreneurship is increasingly prevalent among expatriates; however, its various facets have remained largely unexplored, including its distinctiveness from more traditional forms of migrant entrepreneurship. This study delves into its unique dynamics and conceptualizes six distinct business profiles of expatriate entrepreneurship based on their frames of embeddedness. The findings underscore the necessity to broaden the established framework of Migrant Entrepreneurship to fully grasp the heterogeneous dynamics of Expatriate Entrepreneurship. This expansion involves scrutinizing dynamics within their immediate expat community in their country of residence and comprehending the precise impact of public support from third-country perspectives. Furthermore, some individuals leverage serial expatriation to establish particularly flexible business models, necessitating more in-depth multi-contextual investigation in the future. Our discoveries regarding the exclusive dynamics of expatriate entrepreneurship challenge the currently established boundaries of migrant entrepreneurship theorization, opening up multiple new avenues for future research.

Migrant Entrepreneurship

Session Moderator: **Jorge Luis Arteaga**, *Oklahoma State U.*

ENT: **Informality for Good: Institutional Entrepreneurship in the Nicaraguan 2018 Social Crisis**

Author: **Jorge Luis Arteaga**, *Oklahoma State U.*

Author: **Duygu Phillips**, *U. of Delaware*

Author: **Matthew W. Rutherford**, *Oklahoma State U.*

In this paper we propose and test a dynamic perspective on informality suggesting that entrepreneurial informality can be a feedback mechanism to oppressive governments. We call this informality for good. We do this through the lens of institutional entrepreneurship (Bylund and McCaffrey, 2017) and following Williamson's (1998, 2000) 4-level institutional framework to suggest that entrepreneurs can take altering and evasive actions to send rebellious feedback to formal institutions. The context to develop our theorizing is the Nicaraguan 2018 insurrection, and we test our hypotheses through a decision-based experiment and a secondary data analysis. We find support for our hypotheses that suggests to us the existence of informality for good.

ENT: **International Migrant Entrepreneurship: Review and Future Directions**

Author: **Victor Cui**, *U. of Waterloo*

Author: **Daomi Lin**, *Sun Yat-Sen U.*

Author: **Juelin Yin**, *Sun Yat-Sen U.*

Despite the extensive attention on entrepreneurial activities by international migrations, different research streams have remained fragmented and lack of dialogues. Moreover, as the fundamental logic underlying globalization has been redefined in recent years, shifting from following the traditional economic order to the security order, the underlying assumptions and logics might have been changed. We reviewed articles regarding international migration and entrepreneurship in ABS 4* journals and integrate the two research streams of immigrant entrepreneurship and returnee entrepreneurship by providing a framework of international migrant entrepreneurship. We also discuss the future research directions considering the new trends in deglobalization.

ENT: **How do Foreign Entrepreneurs' Network Structures Influence Venture Performance?**

Author: **Ali Ahmad Bodla**, *Nijmegen School of Management, Radboud U. Nijmegen*

Author: **Muhammad Sarwar**, *U. of the Punjab*

It is challenging for entrepreneurs to exploit business opportunities and establish business ventures outside their native countries' borders. How do foreign entrepreneurs' business ventures achieve better performance? Social network structure and diversity are critical factors influencing business venture performance. From a social network perspective, we examine how and to what extent foreign entrepreneurs' network structural holes influence their business venture performance. Using survey data from 195 foreign entrepreneurs in China, we find that foreign entrepreneurs' social network structural holes in and outside the host country positively influence business venture performance. We explore a mechanism of opportunity recognition that mediates the relationships between network structural holes and venture performance. This study contributes to international entrepreneurship research and has several implications for business ventures that embark on operating in emerging economies on how to build their network in this context.

ENT: **Founders' Migration Experience and Ventures' EO: The Moderating Role of Acculturation Outcomes (WITHDRAWN)**

Author: **Erika Branca**, *U. Gent*

Author: **Petra Andries**, *Ghent U.*

Although immigrants account for an increasing proportion of entrepreneurs in regions like the United States and the EU, the deeper implications of their migration experiences on entrepreneurship remain underexplored. The current study examines the influence of founders' migration backgrounds on their firms' strategy. Drawing from Strategic Leadership Theory (SLT), we posit that immigrant-founded firms exhibit a heightened Entrepreneurial Orientation (EO); the reason being that immigrants often navigate complex socio-economic terrains, imbuing them with experiences and skills that aid in developing their venture's EO. Yet, we do not expect all immigrant-founded firms to have the same level of EO. Integrating insights from acculturation theory, we propose that sociocultural and psychological adaptation positively moderate the relationship between migration status and EO. Analyses of survey data on a pair-matched sample of 90 Italian start-ups partially confirm our hypotheses. Immigrant-founded ventures have a stronger EO than their native-founded counterparts, and this is particularly the case when immigrant founders score high on sociocultural adaptation. These results have important implications for policymakers who want to fully leverage the inflow of entrepreneurial talent in their country.

Strategy

Session Moderator: **Liang Wang**, *U. of New Brunswick, Canada*

ENT: **Competing on Price or Value? Business Strategy Choices on New Venture Performance**

Author: **Liang Wang**, *U. of New Brunswick, Canada*

A startup typically has to choose between price and value to compete on in a market, but the performance implications of this strategic choice have received scant examination and verification. This study proposes a framework that grounds an asymmetric performance impact of price competition and value competition on the account of customer perception and reactions in market. The framework argues that compared with value, price competitiveness would be more direct and conspicuous in the perception of customers and more effective in inducing their favorable responses. Subsequently, price competition would foster new venture performance to a greater extent than value competition. In addition, the performativity of the two business strategies would also be asymmetrical in the sensitivity to market competition, organizational innovativeness, and developmental stage.

ENT: **Corporate Entrepreneurship in Family Firms: The Roles of Family Commitment and Long-Term Orientation**

Author: **Ying Fu**, *Nanchang U.*

Author: **Emma Su**, *U. of Dayton*

Author: **Junsheng Dou**, *School of management, Zhejiang U.*

Prior research offers conflicting findings regarding the effect of family involvement in a firm on the firm corporate entrepreneurship. Some studies suggest family involvement has a positive effect on corporate entrepreneurship, while others suggest the opposite. This study argues that family commitment—the essence of family influence—plays an instrumental role in corporate entrepreneurship. From the dominant coalition perspective, we theorize that family commitment facilitates corporate entrepreneurship and the effect of family commitment is mediated through the firm's long-term orientation (LTO). An empirical analysis of 956 family firms from China supports our hypotheses. This study provides new insights into the relationship between family influence and corporate entrepreneurship in family firms, as well as highlights the LTO as the underlying mechanism of family influence.

ENT: **Dynamic Capabilities in an Entrepreneurial Theory of the Firm**

Author: **Luan Corrêa Maia Valério**, *UFMG*

Author: **Joao Fernando Rossi Mazzoni**, *Baylor U.*

While the modern literature on strategy and the firm has thoroughly investigated the role of dynamic capabilities in enabling rent generation and appropriation, the origins of such key theoretical concepts within firms have not been satisfactorily explained. Building on important developments of the dynamic capabilities approach, we provide theoretical underpinnings for firm capabilities by framing their origins on an entrepreneurial theory of the firm. Specifically, the judgment-based view of entrepreneurship and the firm is to be seen as a theoretical framework that explains not only the emergence and boundaries of firms but also provides crucial input into the emergence of capabilities by how it conceives the internal organization of firms. Our perspective enriches the understanding of the theory of the firm by focusing on how managers showcase the exercise of judgment and how collective cognition and the delegation of use rights over the firm's resources delineate and mediate the sensing, seizing, and transforming phases of dynamic capabilities.

ENT: **Have We Done Enough? A Meta-Analytic Study of Social Entrepreneurial Intention**

Author: **Bruno Luis Avila Freischlag**, *UNISINOS U. do vale do Rio dos Sinos*

Author: **Jean Carlos De Oliveira Rosa**, *UNISINOS U. do vale do Rio dos Sinos*

Author: **Bruno Anicet Bittencourt**, -

Author: **Juan Fernando Tavera**, *U. de Antioquia*

The field of social entrepreneurial intention (SEI) is of critical importance for understanding what drives individuals to create socially-oriented businesses. However, it is fair to say that such a field is now somewhat stagnated, full of studies presenting contradicting findings that feels like are driving us sideways rather than effective forward our knowledge. The time could be not more appropriate for us to recollect what we know and ponder over were we need to go. To that end, we conducted a meta-analytic study with the goal of analyzing the relevant antecedents that drive social entrepreneurial intention. We first carried out a literature review following the PRISMA protocol in the Scopus and Web of Science. Of 326 articles, 173 were deemed fit for the meta-analysis, originating 2,503 observations that were processed using the Metacore package for R Studio. Our final model is comprised of 33 variables grouped into 5 major groups: (1) Personal traits; (2) Mindset; (3) Past Experiences; (4) Capabilities; and (5) Environmental Analysis that have a direct effect on SEI. This study answers the call for a more comprehensive model of SEI. Future studies should focus on moderation effects and how these constructs influence the behavior itself.

Ecosystems

Session Moderator: **Anne Sophie Sabbatucci**, *Indiana U., Bloomington*

ENT: **Entrepreneurial Ecosystems as Collective Emancipation In Structurally Constrained Environments**

Author: **Anne Sophie Sabbatucci**, *Indiana U., Bloomington*

Although structural constraints, such as political instability, corruption, and conflict, impair the development of entrepreneurial ecosystems, research suggests that individuals involved in entrepreneurship may be capable of overcoming such impediments. This contradiction challenges our understanding of how entrepreneurial ecosystems can develop in contexts facing severe structural constraints, including fragile, violent conflict areas. To address this challenge, I draw on an in-depth qualitative study of Iraq's emergent entrepreneurial ecosystem. I find that Iraq's entrepreneurial ecosystem developed as collective emancipation by enabling individual emancipation through entrepreneurship of young Iraqis from their otherwise predictable future and modeling such process to fit the collective aim. My study details the mechanisms involved in this process of collective entrepreneurial emancipation. By doing so, my work adds to the scholarly understanding of entrepreneurial ecosystems and the emancipatory power of entrepreneurship.

ENT: **Orchestrating Resources and Social Innovation Ecosystems**

Author: **Abel Diaz Gonzalez**, *Maastricht U., School of Business & Economics*

Author: **Maribel Guerrero**, *Global Center for Technology Transfer, Arizona State U.*

The purpose of this research is to explore how social innovation ecosystems utilize resources and which roles are played by universities in contributing to building these ecosystems in the Global South. Resource Orchestration Theory is utilized to identify four critical roles that universities play at the meso-level organizational processes: bridging, configuring, involving, and facilitating. To fulfill these roles, universities use their core functions, collaborate with stakeholders, and work with social entrepreneurs and other participants in the ecosystem. Understanding these roles is especially significant in the Global South context, which faces sustainability challenges due to limited access to diverse resources across ecosystems. It enables universities to promote social innovation while effectively managing resource utilization. However, it's important to note that resource orchestration also comes with implicit responsibilities and risks that universities must navigate in this intricate process.

ENT: **How Interactions Among Peripheral and Central Actors Shape Action in Health Innovation Ecosystems.**

Author: **Ean Tsou**, *Haskayne School of Business, U. of Calgary*

Author: **Jo-Louise Huq**, *U. of Calgary*

We examine how interactions between peripheral and central actors facilitate innovation efforts in innovation ecosystems through an exploratory, qualitative case study of a new type of central leader and its surrounding SMEs in the healthcare context. Our study makes a threefold contribution: we identify and describe an understudied type of ecosystem leader (a facilitatory ecosystem leader); we propose a framework describing the interactions between the central leader and peripheral actors; and we identify the presence and intertwining of emotions that arise from these interactions. We show how interactions between the ecosystem leader and SMEs that have varying levels of fit in the ecosystem can influence innovation ecosystems to better meet the innovation needs of SMEs. Our study extends the current knowledge on peripheral actors in innovation ecosystems and their role in ecosystem change. We draw attention to the potential benefits of retaining ecosystem members with poor fit and identify internal pressures for ecosystem change. Finally, our study identifies opportunities for future research on the impact and management of heterogeneous peripheral actors in innovation ecosystems.

ENT: **Small Cities - Big Dreams: Entrepreneurial Ecosystems in Alpha, Beta and Gamma Cities**

Author: **Maksim Belitski**, *Loyola U. New Orleans*

Author: **Sophia Hess**, *U. of Stuttgart*

Do entrepreneurial ecosystems (EEs) facilitate entrepreneurial activity at every stage of the entrepreneurial lifecycle? The answer to this question is not straightforward. Building new space for EE theory, we examine how the combination of EE quality and city global connectedness (alpha, beta, gamma, and sufficiency cities) shapes nascent, emergent, and extreme growth stages of entrepreneurial activity. We apply fixed effects in the generalized least squares estimation to data on 803 cities globally to examine the direct and indirect effects of city type, EE quality and their interaction on three stages of entrepreneurship. Our findings demonstrate that entrepreneurship activity at every stage benefits from an increased quality of EE elements, while emergent and nascent stages of entrepreneurship are most conducive in globally connected (alpha-type) cities. Different external forces and internal capabilities of entrepreneurs at different stages may or may not result in synergistic effects of EE quality and city global connectedness on entrepreneurial activity.

Changing Times

Session Moderator: **Marie Klein**, *PhD Candidate, U. of St. Gallen*

ENT: **The Unseen Part of Successions: Exploring the Mental Well-Being of Family Business Successors**

Author: **Marie Klein**, *PhD Candidate, U. of St. Gallen*

Succession processes in family businesses are the decisive success factor for the longevity of firms within the family. Yet, there is a dearth of research that examines the implications of these future-setting processes on the well-being of the upcoming generation of family firm entrepreneurs. Consequently, this study delves into the well-being of successors currently navigating or having successfully completed the family firm's ownership and management succession procedure. Based on qualitative data from thirty-six interviews, using inductive analysis, the introspective findings reveal that taking over a family firm differs in what it implies for the well-being of the successors. Building upon the Conservation of Resources Theory our findings highlight that entrepreneurial role identity, a robust social support system, and a healthy work-family balance serve as resources for enhancing the well-being of successors. Conversely, the burden of responsibility, interpersonal challenges, performance pressure, and work-family conflicts exert adverse effects on the well-being of successors, occasionally leading to symptoms of ill-being. Our findings provide new and important insights for future research and practical applications for the more personal, challenging, and in-depth issues of family firm successions.

ENT: **The Effects of School Closures on Female Entrepreneurship During COVID-19: Evidence from Chile**

Author: **Julio A. Pertuze**, *Pontificia U. Católica de Chile*

Author: **Jose Pablo Montegu**, *Sciences Po*

Author: **Ignacio Orueta**, *U. de Chile*

This study investigates the impact of school closures on female entrepreneurship during the COVID-19 pandemic in Chile, an emerging economy that experienced one of the longest periods of school closures worldwide. Building on institutional theories of gender inequalities in entrepreneurship, we argue that schools are an important formal institution affecting the entrepreneurial process. Using administrative data from different public agencies, we show that school closures disproportionately affected women, reducing their probability of starting a business by 38%. The effects were even higher for women with younger children and from lower-income backgrounds. We contribute to the literature on female entrepreneurship by showing how school closures amplify entrenched gender-based disparities in entrepreneurship. We discuss the need for societal changes to reduce the uneven distribution of household responsibilities and cultural expectations regarding childcare, and the need of targeted policies to support female entrepreneurs.

ENT: **To Do or Not To Do: How Ethical Ambiguity Shapes Entrepreneurial Action**

Author: **Marina Vorholzer**, *Lund U.*

Author: **Anna Brattstrom**, *Lund U.*

This paper explores the role of perceived ethicality in entrepreneurial action. We extend the entrepreneurial action framework and propose that well-intended entrepreneurs evaluate a potential opportunity on three dimensions: feasibility ("Can I?"), desirability ("Do I want to?"), and ethicality ("Should I?"). To theorize how ethicality assessment shapes the entrepreneur's belief-forming processes, we advance a novel concept integrating insights from moral philosophy: ethical ambiguity. Assuming that many entrepreneurs want to do "the right thing" yet face ambiguity concerning "what is the right thing to do," we develop a proposition-based model for how ethical ambiguity shapes entrepreneurial action. We posit ethical judgment as a function of attention, cognition, neutralization, and framing and propose individual factors that determine the ability to process ethical ambiguity and how different characteristics of an identified opportunity dominate the entrepreneur's cognitive processing. Our analysis opens a new research agenda connecting entrepreneurship and ethics literature.

ENT: **Understanding Entrepreneurial Exit Decisions**

Author: **Naryoung Yu**, *Ivey Business School*

Author: **Simon Parker**, *Ivey Business School*

Determining the timing of exit is an important but complicated decision for entrepreneurs, which is often predicated on expectations about the uncertain future value of a business. We explore the fundamental question of when entrepreneurs decide to exit declining ventures, employing an incentivized online experiment with 422 participants, including both entrepreneurs and non-entrepreneurs. The findings reveal that participants did not make exit decisions aligned with exit timings predicted by established theories such as expected utility theory, prospect theory, and behavioral theory. Challenging conventional theories, we introduce the Dual Threshold Theory (DTT), developed through an abductive approach to understand observed exit behaviors, which suggests that individuals heuristically base exit decisions on the most recent declining sequence of incomes in relation to two exit thresholds.

Building Bridges, Breaking Barriers: Female Entrepreneurs at the Forefront of Tomorrow

Organizer: **Lani Faith Gacula**, *U. of Massachusetts, Lowell*

Organizer: **Cintya Gajardo-Vejar**, *PhD Candidate at U. of Massachusetts Lowell*

Discussant: **Amanda Brickman Elam**, *Babson College*

The goal of this presenter symposium is to provide a deeper understanding of the ongoing bias and environmental barriers female entrepreneurs continue to face. We see a clear need for change that recognizes the contributions and abilities of female entrepreneurs; and encourages a new and unbiased perspective that supports female entrepreneurship. We seek to understand the current entrepreneurial environment and hope to reveal a path forward by examining the bridges female entrepreneurs have and are building in different areas of entrepreneurship. Only by understanding the importance and impact of the evolving entrepreneurial environmental can we hope to discover how positively changing the entrepreneurial environment can unlock the full potential of female entrepreneurs.

Tackling societal challenges requires collaboration among a variety of stakeholders and the exploration of innovative organizational models. Civic wealth creation (CWC) is an outcome of such collaborations, when communities, enterprises, and supporters coalesce around a shared purpose. Following the “for the people by the people” logic which underlines CWC, community entrepreneurship offers a wide range of organizing forms that favor CWC. Community entrepreneurship is a form of entrepreneurship that addresses a wide range of community needs in line with local culture by engaging citizens in the organizing and innovation processes. Building on the ongoing debates in management and entrepreneurship scholarship to move from a business-centric to a society-centric focus, this panel symposium explores the potential of community entrepreneurship in creating and sustaining civic wealth.

Embracing Change: Strategies for Innovation and Organizational Agility

Session Moderator: **Henry Lopez-Vega**, *Umeå School of Business and Economics, Umeå U.*

HR: **After a Job Change, Are You Bound by the Past or Set Free for the New? Inventors' Use of Prior Work**

Author: **Henry Lopez-Vega**, *Umeå School of Business and Economics, Umeå U.*
Author: **Torben Schubert**, *Lund U. and Fraunhofer ISI*

The importance of previous firm-specific human capital (FSHC) is heightened during technological change as developing new innovations requires varied sources of knowledge (e.g., from other sectors). So far, research has not explained the effect of the intensity and breadth of inventors' previously accumulated knowledge on innovation outputs at the current employer. In this paper, we study how 1144 inventors working with autonomous vehicle technologies in Sweden used their prior work experience at their current employer. Our findings reveal previous work experience increases the use of inventors' intensity and breadth of prior technological knowledge (i.e. backward patent citations) that leads to valuable new technologies (i.e. forward patent citations). This paper provides insights into the indirect effect of inventors' work experience, which results from the intensity of knowledge and not the direct work experience per se. This paper bridges the human capital and innovation literatures by demonstrating the value of employees with prior work experience.

HR: **Identifying Critical Success Factors For Talent Agility In HRM: A Thematic-Fuzzy Dematel Approach**

Author: **Gopal Krushna Gouda**, *XIMU, Bhubaneswar*
Author: **Dr Binita Tiwari**, *IIT Kharagpur*

The ongoing development of digital disruptions (Industry 4.0) demands agile talents for the survival of manufacturing industries in the global market. The study aims to identify the key enabling factors for developing in-house agile talents to respond to digital disruptions. Focus group interviews were conducted with industry 4.0 experts for data collection. This study has been conducted in two phases using a hybrid research methodology (thematic-fuzzy- DEMATEL) approach for data analysis and providing conceptual clarity and empirical evidence in this knowledge area. First, ten key enablers of talent agility in the era of I4.0 are identified using thematic analysis. In phase 2, the above identified enablers are classified into critical cause and effect groups using Fuzzy DEMATEL. This study proposed a conceptual framework on talent agility in the era of I4.0. The identified enablers will play a crucial role in developing in-house agile talents, which can be used as a strategic intervention by the manufacturing industry professionals to respond the current wave of digital disruption. It extends the discussions on the enablers of talent agility and its emerging role in I4.0 adoption, which can be practically shaped into talent development practices. This study integrates talent agility with I4.0 in a single roof which will provide a new direction for future researchers as I4.0 adoption has become a top priority of manufacturing firms. Keywords – talent agility, industry 4.0, manufacturing industry, technological changes, HR 4.0.

HR: **Mechanisms in Shaping Organizational Resilience: A Conceptual Study**

Author: **SAHA IQBAL HOSSAIN**, *Texas A&M International U.*

Organizations dealing with the intricate aspects of sustainability are becoming more aware of the strategic importance of green intellectual capital in shaping their ability to adapt and excel in many areas. This study explores the relationship between green intellectual capital, organizational resilience, and the mediating effects of green ambidexterity. Grounded in theoretical frameworks such as the Resource-Based View (RBV), Dynamic Capabilities Theory, and Social Capital theory, the study explores how the intellectual resources dedicated to sustainability contribute to an organization's capacity to withstand disruptions and simultaneously pursue both green exploration and economic exploitation.

HR: **TMT Human Capital And Industry Dynamism In The Adoption Of Digital Transformation**

Author: **Tushar Ravindra Shah**, *Texas Woman's U.*
Author: **George Benson**, *U. of Texas At Arlington*
Author: **Sridhar Nerur**, *U. of Texas At Arlington*
Author: **Yasar Mahmut**, *U. of Texas At Arlington*

This paper studies the adoption of digital transformation in the S&P 500 from the period 2008-2017. We analyze company annual reports to understand how the depth and breadth of top-management team (TMT) experience lead companies to adopt digital transformation. We find that companies are more likely to adopt digital transformation if they have TMTs with heterogeneous experience. They are less likely if they have too short or too long tenured TMT's. These relationships are moderated by industry dynamism such that that TMT experience and tenure are particularly important in highly dynamic environments. This study deepens our understanding of digital transformation as an emerging phenomenon and contributes to the theory of strategic change by elucidating how the interplay between managerial and environmental forces impedes or facilitates this emerging phenomenon. We review the implications for theory and practice.

This panel symposium is designed to extend our understanding of how people are managed in organizations across the globe – the traditional focus of comparative human resource management (HRM) research – exploring how international and global events and influences have an effect at the country level. Much of the evidence for this discussion has been gathered from the CRANET research network (www.cranet.org), a collaboration of HRM scholars in over 40 countries worldwide. The data collected in each country represent HRM policies and practices at organization level, which, when collated, provide a unique comparative dataset of HRM across much of the globe.

Participant: **Lewis Garippa**, *U. of Dundee*

Whether employees express (i.e., voice) or withhold (i.e., silence) their ideas, questions, opinions, and concerns at work affects individual and collective development and well-being. Employee voice is a precondition for employees to realize their potential, for organizations to deal with current management challenges (e.g., inclusion of forced and voluntary migration, diversification of life-style choices, dynamization of innovation), and it is essential for the functioning of current management strategies (e.g., total quality management, agile teams) that draw upon proactive and empowered workers. If, in turn, employees do not want to or feel that they cannot address critical issues or make suggestions for change, unhealthy, inefficient, unsafe, and toxic work environments endure and management gives away potential in the form of valuable contributions from diverse perspectives. Moreover, as media reports show time and again, such silence enables unethical practices including fraud, abuse, and discrimination to persist over time, harming cohorts of people repeatedly and at times over many years. Notably, cases of silence and their detrimental effects are not only observed in the corporate world or in singular countries, they also happen in sports teams, educational establishments, entertainment, academia, religious institutions, law enforcement agencies, and the military all over the world. Given that silence has been identified as hampering the sustainable development of organizations and societies in a broad variety of countries and contexts, surprisingly little systematic knowledge is available on the role of context as an antecedent of silence, and as a factor that influences the effects of more proximal antecedents of silence. In this symposium, five talks provide integrative and exploratory approaches to advance understanding of the role of context for the emergence and endurance of silence in organizations. In an extended discussion, Elizabeth Morrison – a central researcher on silence in organizations – will reflect on the journey the concepts of voice and silence have taken during the last 25 years and provide an idea of where the field might head to. The discussion will then open and we invite the presenters and audience to elaborate on challenges and opportunities that context provides to advance silence and voice research and intervention.

IM: Do Women Turn to Foreign MNC Subsidiaries as Employers When They Face Wage Discrimination? (WITHDRAWN)

Author: **Ulrich Kaiser**, *U. of Zurich*

Author: **Wolfgang Sofka**, *Copenhagen Business School*

Author: **Christoph Grimpe**, *Copenhagen Business School*

Wage discrimination against women remains a major obstacle to fair economic opportunities for women and a grand challenge constraining economic growth in many countries. Existing research is ambivalent about whether foreign MNC subsidiaries as employers of women offer a solution to this grand challenge. On the one hand, foreign MNC subsidiaries can pay higher wages to women because they are outsiders to the host country and can deviate from social norms that disadvantage women. On the other hand, they suffer from the liabilities of foreignness that limit their attractiveness as employers for women relative to domestic firms. We theorize that the latter factor becomes less important as the level of wage discrimination against women by domestic employers increases, so that foreign MNC subsidiaries become more attractive employers when women change jobs. We isolate two boundary conditions for this effect based on (a) whether women can observe wage premiums at foreign MNC subsidiaries in local labor markets and (b) when foreign MNC subsidiaries deviate from social norms in the labor market by relying more on female top managers than domestic employers. We test and support these hypotheses for 123,343 female professionals/managers who changed jobs in Denmark between 2000 and 2016.

IM: Investigating Impression Management Use in Asynchronous Video Interviews Across 10 Countries (WITHDRAWN)

Author: **Rene Arseneault**, *Business administration faculty, Laval U. (Québec, Canada)*

Author: **Nicolas Roulin**, *Saint Mary's U.*

This cross-cultural study investigates how interviewees from 10 culturally-distinct countries differ in their use of impression management (IM) tactics in asynchronous video interviews (AVIs), and the relationship(s) between those tactics and interview performance. A total of 582 participants from ten countries (India, Canada, South Africa, Poland, Spain, Iran, Germany, Chile, Philippines, China) completed an 8-question AVI for a mock position as a manager in a bank. We drew upon GLOBE's cultural framework to predict and explain observed differences in self-reported IM use and performance. Interviewees from our ten countries differed in their IM use for various tactics, but the observed differences were largely inconsistent with GLOBE-based predictions. Partially-consistent with previous in-person interview research, honest IM tactics (e.g., self promotion) were positively, but deceptive tactics (e.g., image creation) negatively, associated with interview performance. This research is the first to investigate cross-cultural IM differences in AVIs, thus addressing a critical gap in the selection literature at a time when many organizations conduct interviews virtually to save costs, streamline the hiring process, or simply conduct most of their activities remotely.

IM: Multinational Enterprise Evolution: Culture Bias in Management Practice Selection and Retention

Author: **Lena Zander**, *Uppsala U.*

Author: **Udo Zander**, *Professor of Business Administration, esp. International Business*

In this treatise, we put forth that selection and retention of management practices in multinational enterprises (MNEs) are culturally biased, instead of reflecting a geocentric sourcing of the "best" management practices from the large variation of such practices within an MNE. Applying an evolutionary perspective, and drawing on findings from culture studies and longitudinal studies of MNE change processes, we develop empirically testable propositions. Building on concepts such as ethnocentric blind-spots, ethnocentric regression and perceived ethnocentric backlash, these propositions stand to undermine asserted benefits and usefulness of cultural variation in MNEs, as a picture of illusory geocentrism emerges. The notion of the unidirectionality of MNE evolution and the end-state-like character of the transnational solution are both compromised as an oscillation between management orientations takes their place. Although the outcomes of the processes we outline in our propositions are not uniquely defined by culture, culturally-biased preferences as to management practices among top management at headquarters and key decision makers in the subsidiaries act as a major and persistent constraining factor in MNE evolution. We outline boundary conditions for our theorizing and discuss contributions to theory as well as implications for future research and practice.

IM: Investor Response to Workforce Downsizing: The Influence of Cross-Country Institutional Differences

Author: **Matthias F. Brauer**, *U. of Mannheim*

Author: **Martin Zimmermann**, *U. of Mannheim*

Author: **Louis Vandepoele**, *U. of Mannheim*

Research on the antecedents of workforce downsizing suggests that economic and socio-cultural institutional factors influence the incidence and intensity of downsizing. Yet, we lack knowledge on how nation-level, institutional factors affect the relationship between downsizing and investor response. Building on institutional economics, we thus develop a transaction cost argument to predict how economic and socio-cultural institutional differences influence investor response to downsizing. Using a hand-collected, large-scale sample of 807 downsizing announcements from twelve countries, we find that the inverted U-shaped relationship between the extent of workforce downsizing and investor response becomes increasingly pronounced if the economic institutional context is characterized by high union density and labor productivity, and if uncertainty avoidance and future orientation are prevalent norms in the national culture of the downsizing firm.

The Rise of Unicorns in Emerging Markets

Participant: **Lourdes Casanova**, *Cornell SC Johnson College of Business*

Participant: **Juana Garcia**, *U. de los Andes*

Participant: **Ricardo Buitrago**, *EGADE Business School, Tecnológico de Monterrey*

Participant: **Diego Finchelstein**, *U. de San Andres*

The main contribution of this symposium panel is to understand the geographic and regional dynamics in which the unicorns of emerging countries had emerged and their relation to the local entrepreneurial ecosystems. The key characteristics of unicorns from emerging markets (industry, size, international exposure, etc) will be assessed. Additionally, the panel will focus on the key differences between developed country unicorns and emerging markets one. The goal is to identify key features of unicorns from the latter, both in terms of innovation strategies, internationalization, funding, etc).

Sustainability Strategies in Contexts of Geopolitical Tensions

Session Moderator: **Nan Zhou**, *Tongji U.*

IM: ESG Strategy of Foreign Subsidiaries in Response to Interstate Conflict of Others

Author: **Nan Zhou**, *Tongji U.*
Author: **Jingoo Kang**, *New York U. Abu Dhabi*

This study investigates how interstate conflicts between a foreign country and the host country influence environmental, social, and governance (ESG) engagement of MNE subsidiaries from other countries not involved in the interstate conflict. We argue that interstate conflict between a foreign country and the host country (which we label as vicarious interstate conflict) could trigger subsidiaries of MNEs from other foreign countries to engage in ESG activities. We further examine how the following factors affecting the expected benefit of ESG engagement moderate the relationship between vicarious interstate conflict and foreign subsidiary ESG activity: (1) the bilateral political relations between the foreign subsidiary's home country and the host country, (2) the bilateral political relations between the foreign subsidiary's home country and the country in conflict with the host country, and (3) the domestic political uncertainty in the host country. We test our hypotheses on a sample of subsidiaries of large MNEs in China during the period 2009–2020.

IM: ESG as a Nonmarket Strategy to Cope with Interstate Tension

Author: **Jin Hyung Kim**, *George Washington U.*
Author: **Jooyoung Kwak**, *Yonsei U.*
Author: **Hyung-Kun Park**, *Rice U.*

Although more frequent and a growing number of interstate tension is critically affecting multinational enterprises (MNEs), our knowledge on interstate tension and its effects on corporate strategy is surprisingly limited. This study attempts to shed light on this underexplored topic by examining the environmental, social, and governance (ESG) strategies of foreign MNEs in the wake of interstate tension. We argue that media-reported interstate tension plays a critical role in shaping the perception regarding interstate relations within the host country. Thus, as interstate tension increases, subsidiaries of foreign MNEs improve their ESG performance to alleviate potential institutional pressure from the public, thanks to ESG's insurance-like benefits. We further argue and test historical conflict as one potential driving mechanism. The empirical results strongly support our theories even after accounting for various institutional characteristics of home and host countries and alternative mechanisms.

IM: Bilateral Political Tension and MNEs Foreign CSR Reporting at Home

Author: **Du Yongzhi**, *Northwestern Polytechnical U.*
Author: **Ming Jia**, *Northwestern Polytechnical U.*

International Business (IB) scholars have extensively delved into how bilateral political tension between host countries and home countries influences the strategies of Multinational Enterprises (MNEs) in host countries. However, limited attention has been devoted to understanding how MNEs respond to bilateral political tension within their home countries. By integrating the international relations perspective of realism and the legitimacy perspective, this study formulates a theoretical framework to examine how political tension affects MNEs reporting at home on their Corporate Social Responsibility (CSR) initiatives in host countries. Drawing on data spanning from 2009 to 2021 encompassing Chinese-listed MNEs, the findings indicate that firms are less inclined to report at home on their CSR activities in host countries characterized by greater political tensions with their home country. Furthermore, this negative relationship is more pronounced for MNEs with stronger domestic political connections and those operating in more competitive industries. Consequently, this study contributes to the IB literature by extending the research perspective on the influence of political tension and contributes to CSR disclosure literature by introducing fresh research insight on foreign CSR reporting.

IM: Subsidiary CSR Engagement During Bilateral Political Tensions

Author: **Yameng Zhang**, *Xi'an Jiaotong-Liverpool U.*
Author: **Chenjian Zhang**, *U. of Bath*

An increasing body of research focuses on the role of subnational institutions in influencing multinational enterprises (MNEs) and their subsidiaries' local engagement in host countries. Despite valuable insights, these institutions are often perceived as static and independent. Our study investigates the impact of subnational institutional linkages, such as sister city relationships, on subsidiaries' local corporate social responsibility (CSR) engagement. We further explore how detrimental and declining bilateral political relations serve as contingencies that affect the relationship between a subsidiary's sister city origin and its local CSR engagement. Contextualized in China, our study draws on CSR data from foreign subsidiaries between 2010 and 2020, along with information on their home city origin to identify sister city relationships. Our findings indicate that subsidiaries with sister city origins engage more in local CSR, illustrating the role of institutionalized compassion in sister city relationships. While detrimental bilateral relations weaken this relationship, declining bilateral relations strengthen it. Our study contributes to international business literature by illuminating the interplay between subnational institutions and national-level political dynamics in shaping subsidiaries' local CSR engagement. It emphasizes the importance of cultural and diplomatic ties, as well as national politics, in influencing CSR practices.

Managing Supplier Relationships in Global Value Chains

Session Moderator: **Merieke Stevens**, *Rotterdam School of Management, Erasmus U.*

IM: Loyalty and Role Attribution in Global Supply Ecosystems

Author: **Merieke Stevens**, *Rotterdam School of Management, Erasmus U.*

An urgent revision of our global supply chains is needed. A decades-long focus on short-term gains that benefit shareholders and investors has led to alarming environmental and social damage to the local communities where resources are extracted and products produced. I propose that one way to address this urgent challenge is to reintroduce loyalty and role attribution into buyer-supplier relationships. For the theoretical underpinning of this proposal I draw on Hirschman's 1970 seminal book "Exit, voice, and loyalty," the concept of embeddedness, and relational contracting theory. The empirical support I draw from a longitudinal case study of the dismantling of Nissan's keiretsu after its 1999 alliance with Renault. My findings show how bringing back loyalty and acknowledging differential roles in global supply chains is a powerful way to enhance sustainability and hereby address urgent global societal goals—in particular United Nations sustainable development goal 8: Decent work and economic growth.

IM: Goal Deviation Responses in Offshoring

Author: **Carlos Adrian Rodriguez**, *INCAE Business School*

Author: **Luciano Ciravegna**, *INCAE Business School*

Author: **Bent Petersen**, *Copenhagen Business School*

This study analyzes how firms respond to goal deviation in their offshoring operations. Using Performance Feedback theory we argue that deviation from goals triggers feedback mechanisms that shape firms' offshoring strategy. We further argue that firms' strategic response varies with the governance mode of the offshoring project, the type of goals set for the project, and the direction of the goal deviation. Hence, it matters to firms' strategic response whether the project is in-house or outsourced, if the goal is financial or operational, and whether the goal deviation goes in a positive or negative direction. Examining a dataset of 348 offshoring projects, we find that in the case of in-house offshoring, negative deviation from financial performance goals is associated with a higher likelihood of geographic expansion – entering new foreign offshoring locations. In the case of outsourced offshoring projects, positive deviation from financial goals is associated with a higher likelihood of geographic expansion. Irrespective of governance mode, positive deviation from operational goals is associated with a higher likelihood of functional expansion – an extension of the range of activities offshored in a given foreign location.

IM: FDI and GVC Participation of Firms: An Empirical Investigation of Indian Manufacturing Sector

Author: **Priya Rachel David**, *PhD student at Indian Institute of Management, Calcutta*

Author: **Vipin Sreekumar**, *Masters' Union School of Business*

Does inward FDI lead to greater integration of local firms in the international market via participation in Global Value Chains (GVC)? Using a rich firm and industry level panel dataset of the manufacturing sector in India, we try to investigate the nature of the relationship between incoming greenfield FDI and GVC participation of local firms in the host economy. This paper draws from a combination of the extensive literature on FDI and its associated spillovers and the relatively recent GVC literature. We find that at the overall level, there exists a positive impact of incoming FDI on an incumbent local firm's GVC activities. Further, the results point to a differential impact of FDI on the GVC participation of local firms based on the characteristics and technology profile of the industry they belong to. There is greater participation in GVC by firms in technologically advanced, capital and knowledge intensive industries as compared to labour intensive, low technology consumer goods industries. This heterogeneous effect is explained using the dynamics between the FDI firm affiliate present in the host country and the extent and the nature of linkages formed with the local supplier firms. These findings have relevance for policymakers as they provide a finer understanding of the underlying mechanisms in the relationship between FDI and international activity of local firms via GVC participation. These can aid policy decisions that will encourage greater integration of local firms in the international market.

Navigating Geopolitical Tensions: MNEs' Market and Nonmarket Strategies

Organizer: **Gianni De Bruyn**, *Darla Moore School of Business, U. of South Carolina*

Organizer: **Bo Yang**, *The U. of Hong Kong*

Participant: **Joseph Park**, *Sogang U.*

Participant: **Grazia D. Santangelo**, *Copenhagen Business School*

Presenter: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*

Presenter: **Jane Lu**, *City U. of Hong Kong*

Participant: **Zhibo QIU**, *Oxford U., Saïd Business School*

Over the past decade, we have witnessed an increasing trend in deglobalization (Witt, 2019), a reversal of open market policies (Cuervo-Cazurra, Gaur, & Singh, 2019), the emergence of techno-nationalism (Luo & Van Assche, 2023), and the breakdown of bilateral relations between countries (Bureau of Industry and Security, 2023; The White House, 2021). Deteriorations in bilateral relationships often trigger operational challenges for multinational enterprises (MNEs) originating from the associated home country and operating in the respective host country (Li, Arikan, Shenkar, & Arikan, 2020). Specifically, these geopolitical tensions can cause negative externalities increasing the difficulties and costs for foreign firms to operate in the host country, thereby affecting their strategic decision-making processes (Bertrand, Betschinger, & Settles, 2016; Li, Van Assche, Li, & Qian, 2022). Given the escalating significance of geopolitical factors, it becomes critical to study the strategies employed by MNEs in addressing such tensions. The extant literature offers several useful perspectives that shed light on this phenomenon. For example, it has been well established that institutional (including historical, political, and cultural) factors might affect a wide range of MNE strategies such as ownership structure (Makino & Tsang, 2011; Wang & Li, 2019; Lu, Ma, & Xie, 2022), entry mode strategies (Henisz, 2000; Holburn & Zelner, 2010; Wang, Wei, & Zhao, 2022), and divestment decisions (Blake & Moschieri, 2017). However, these “macro” factors are deeply rooted in formal or informal institutions, rendering them relatively stable. As a result, the insights generated by focusing on these factors may not allow us to fully uncover the dynamics under the recent geopolitical tensions, which are more volatile. Recent studies have begun to investigate how the more volatile intercountry relations affect MNE performance and strategies such as acquisition successes (Bilgili et al., 2023). This symposium advances the burgeoning research interest on this topic by presenting a cohesive collection of papers that examine comprehensively the role of geopolitical tensions in a variety of strategies, adopting a multi-level perspective. Specifically, it investigates some of the most important market strategies (i.e., intellectual property protection, portfolio strategy) that are key to firm performance (Papers 1 & 2). Moreover, it explores the understudied nonmarket strategies employed by MNEs to target the home or host country, addressing their exposure to geopolitical tensions (Papers 3 & 4). These firm-level analyses are also complemented by a micro-level study (Paper 5) that adopts a microfoundational approach and explores the cognitive processes in intercountry relations.

Philosophical Approaches in Management Education

Session Moderator: **Anne Fischer**, *ADG Business School an der Steinbeis-Hochschule*

MED: Rethinking Leadership by Understanding Self-Awareness as Selbstbewusstsein

Author: **Anne Fischer**, *ADG Business School an der Steinbeis-Hochschule*

Author: **Matthias Huehn**, *Saint Vincent College*

Author: **Dirk C. Moosmayer**, *Kedge Business School*

Our recent debates engaged with scandals and negative outcomes of management behaviors and asked how we can improve management education to develop more responsible leaders. In this pointed essay, we reflect on the self-awareness concept that has gained importance in recent leadership debates and argue for a more comprehensive concept of Selbstbewusstsein. Knowing oneself has been a foundational topic in philosophy for centuries and German philosopher G.F.W. Hegel in the early 19th century demonstrated the pitfalls arising with the desire for recognition and respect in social relationships. We review and build on his work to show what role the human characteristic of self-awareness plays in psychology-driven concepts. We contrast this with a more comprehensive conception of human self-awareness, Selbstbewusstsein. We problematize self-aware leaders who can control themselves, situations, and others, and we argue that some negative leadership behaviors result from considering the use of power and control as a way to achieve Selbstbewusstsein. Adopting a broad view of Selbstbewusstsein allows building an understanding of leadership that avoids today's negative outcomes. The contribution of this pointed conceptual essay is threefold. First, we make visible the human anthropology of current mainstream leadership theory. Second, we show that the polar human anthropology of recognizing and being recognized has a long tradition in philosophy. Third, we argue that embracing the friction between these two views of humanity might get us one step closer to the 'better' leadership theory and practice for which Sumantra Ghoshal called twenty years ago.

MED: More Room at The Top: Declining Oligopolies in Business School Research

Author: **Ravi Ramani**, *Morgan State U.*

Author: **Huijian Dong**, *New Jersey City U.*

Author: **Tina Yang**, *U. of South Florida*

Author: **Xiaomin Guo**, *U. of South Florida*

Author: **Steven Miller**, *U. of South Florida*

Increasing pressures on and incentives for business school (B-school) researchers to publish in "A-journals" have led to qualms about an oligopoly wherein only a few institutions account for the majority of publications, thereby decreasing the diversity and impact of B-school research. We construct distinct measures to capture two different aspects of the presence and degree to which seven disciplines in the B-school (i.e., Accounting, Finance, Information Systems, Management, Marketing, Operations Management, and Organizational Studies) are oligopolized. We then empirically examine these concerns using 33 years of publication data (i.e., 1990-2022) for 45,340 articles drawn from 24 business A-journals across the seven disciplines. Overall, we find reasons for cautious optimism as our results show that B-school research is progressively becoming less oligopolized, with an average increase of 43% over 33 years across all disciplines. Furthermore, not only are researchers from a larger number of schools publishing in A-journals, but also the ability of researchers from a few B-schools to dominate the scholarly conversation within a discipline is decreasing. We discuss the implications of the declining oligopolies in business school research for researcher careers, doctoral education, and the administration and future of business schools and the field.

MED: Drivers of Student Learning and Development: A Serial Mediation Approach

Author: **Darshna Vaghela Banker**, *Lal Bahadur Shastri Institute of Management, New Delhi, India*

Author: **Akanksha Jaiswal**, *Loyola Institute of Business Administration*

Author: **Deepa R.**, *Loyola Institute of Business Administration*

Purpose: Learning and Development (L&D) is a crucial student outcome, and this study assesses the drivers of the student L&D. We deploy social identity and social exchange theories as critical underpinnings for the present study. Design/methodology/approach: We collected the data from 317 full-time management postgraduate students in India through a structured survey questionnaire and then tested serial mediation using PROCESS macro. Findings: We found Psychological Ownership (PO) to be a significant driver of student L&D. Further, the relationship between PO and L&D was serially mediated by two important variables, i.e., engagement and commitment. Practical implications: Institutions must work towards developing a sense of PO among their students by empowering them to shoulder the responsibilities of institutional and student activities and involving them in designing such programs that enhance their L&D. Originality/value: This is the first study to examine two key mediators (engagement and commitment) in the relationship between student L&D and PO. Our contribution is novel as we deeply study these underlying mechanisms in the Indian higher education setting.

MED: Rethinking Management Education From a Sociomaterial Perspective

Author: **Cecilia Bezerra**, *UFBA/IFBAIANO*

Author: **Clare Rigg**, *Lancaster U. Management School*

Author: **Eduardo Davel**, *U. Federal da Bahia*

Management education (ME) scholarship has begun to recognise the importance of educational innovation, but surprisingly little attention has been paid to the sociomateriality of ME. The sociomaterial approach is important to better explain how and why some material changes have different implications than others. From the sociomaterial approach we can stop bringing lights just over human agencies (professor and students) and finally try to understand the learning environments as arenas fully of other materials agencies too. It is a new look at the 'inter-actions' between living actors and the spaces, architecture, technology, and objects/artifacts in the educational environments, as well as the connections and effects within them. Based on case study data from eight Brazilian Universities, we identify two types of educational atmosphere drivers (comfort and surprise) and three types of effects (connective, sensitive and generative) produced from sociomaterial interactions. Our contribution is to explain how these drivers and effects work and to show their implications for improving ME.

Author: **Mathias Falkenstein**, *LUISS Business School*

Author: **Annie C. Snelson-Powell**, *U. of Bath*

This empirical study delves into the influence of ethics, responsibility, and sustainability (ERS) criteria, introduced by EQUIS Accreditation in 2013, on business schools' strategies and practices. Utilizing a blend of primary and secondary data, we construct case studies of four business schools in Nordic countries implementing ERS criteria. Through qualitative analysis of 96 interviews and 194 documents, conducted across six years (2016 – 2021), we establish the different ways business schools each approached ERS with symbolic more than substantive change, finding three dominant tactics of decoupling: (a) strategic manipulation or 'faking it', (b) partial implementation and (c) narrow interpretation. We make a theoretical contribution to decoupling literature identifying the persistence of decoupled organizational states, such that it is the decoupling in itself - and the systematic evasion of change - that appears to be the taken-for-granted institutionalised behaviour. Finally, we expand the discussion on the diffusion of ERS as expectations intensify; our research points to an emergent complicity between the different actors and unpacks an explanation for limitations noted in the ERS progress to date.

Adapting to Change: Insights from Organizational Transformation

Session Moderator: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*

MOC: **That's Enough? An Inductive Study of Strategic Underperformance at Work**

Author: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*
Author: **Emily Hsu**, *Washington U. in St. Louis, Olin Business School*
Author: **Elizabeth Margaret Campbell**, *U. of Minnesota*
Author: **Kristie Rogers**, *Marquette U.*

Individual strategic underperformance by capable, motivated, and well-resourced employees occurs in myriad daily contexts and is problematic in practice to navigate, largely due to our limited theoretical understanding of this phenomenon. Through a three-phased qualitative study, we developed a model of drivers, intended implications, byproducts, and boundary conditions of strategic underperformance. We found evidence for a two-dimensional continuum of strategic underperformance which encompasses the: (1) fulfillment of task requirements (ranging from sufficiency to mediocrity), and (2) intended visibility (ranging from covert to overt). This reframes current theorizing on underperformance as more than solely poor performance. Our emergent findings across three phases of data collection also illustrated two primary drivers for strategic underperformance: intrapersonal (interpersonal) imbalance leading to an intrapersonal (interpersonal) rebalancing strategy. Further, one's performance capabilities (e.g., being a high performer) and status characteristics (e.g., seniority, gender, race) shaped the latitude with which informants perceived they could strategically underperform. Finally, our analysis surfaced the double-edged nature of strategic underperformance, highlighting patterns of both positive and negative byproducts for the underperformers in the short- and long-term. Taken together, our study has implications for understanding and managing strategic underperformance within and between employees.

MOC: **Inconsistent Performance Feedback and Types of Organizational Change**

Author: **Elizabeth Lim**, *Georgia State U.*

Firm performance is often evaluated by comparing ROA performance with aspirations (i.e., performance feedback) while comparing financial analysts' earnings forecasts with targets (i.e., performance prospects), which could create inconsistencies in signaling weak or strong performance. Two contrasting decision rules—problem-solving vs self-enhancing—have been proposed to explain inconsistent performances. However, the lack of theoretical clarity and equivocal results regarding when each decision rule prevails have limited our understanding of how decision-makers interpret inconsistent performances. We develop a behavioral framework of firms' multiple reference points to explain how inconsistent performances influence types of organizational change. The results show that when underperforming firms shift to positive prospects, problemistic search motivates increasing rates of acquisition and divestiture. Conversely, when outperforming firms shift to negative prospects, self-enhancement leads to decreasing acquisition rates possibly to cover up potential problems although this does not necessarily apply to divestiture activity. Empirical results based on archival data and qualitative evidence from personal interviews with corporate executives contribute fresh insights by highlighting the significance of factoring in the interplay between performance feedback and performance prospects when distinguishing between problem-solving and self-enhancing mechanisms.

MOC: **'Don't Look Back in Anger' – The Impact of Emotional Memories in M&A Organizational Change**

Author: **Sandor Talas**, *U. of Queensland*
Author: **Andre Pekerti**, *U. of Queensland*
Author: **Neal M. Ashkanasy**, *U. of Queensland*
Author: **Alexandra Kriz**, *U. of Queensland*

Emotional memories of personal experiences can influence people's thinking, feelings, and behavior for many years after the actual experience. Mergers and acquisitions are prolonged, intense periods of organizational change characterized by intense emotionality. Employees may experience, amongst others, shock at the announcement, uncertainty at a personal level, loss of identity and trust, acculturative stress, and expressions of unregulated emotions and behavior. The emotions evoked may increase the demand for emotional regulation, influence decision-making, and spread to other members and levels of the organization. The memories may also influence views of the future by constraining goals and influencing expectations of future events. To complicate things, autobiographic memories are transitory dynamic mental constructs that change over time. Despite the potentially detrimental influence of these memories, both practice and academia lack an understanding of how they impact people and what actions can influence their impact on the organization. Orwell's conclusion, "He who controls the past controls the future," is also likely valid in a business context. Management that tries to shape an organization's future should pay attention to influencing the memories of the past. In this paper, we review the characteristics of autobiographical emotional memories. Then, we introduce a micro-level longitudinal process model to explain how they impact people's attitudes and behavior. Finally, we discuss the implications for academia and practice regarding how emotional memories can influence the dynamics of prolonged organizational change processes.

MOC: **How Organizations Change Their Purpose: Purpose Renewal at a Jewish Services Organization**

Author: **Hamza Khan**, *U. of Illinois at Chicago*

This study draws on interviews, observation and archival materials, to explore how a Jewish Services Organization changed its purpose to help Afghan refugees due to external and internal pressures. Past research shows that organizations can change their purpose, but how they do so has not been explicated, and further knowledge of which would help organizations adapt to their changing realities more efficiently. This study explores the mechanisms of purpose change in organizations that operate with a clear and intentional *raison d'être* widely embraced by organizational members. The purpose change process is shown to be (a) co-creative such that multiple stakeholders are involved; (b) conflict-laden such that the change process can lead latent identity splits within organizations to resurface; (c) dynamic such that it leads to continuous changes around the meaning and interpretation of organizational purpose; and (d) most successful when focused on renewal such that it allows organizations to maintain continuity with their past and their identity. This study contributes to our understanding of purpose change in organizations and elaborates on theoretical interlinkages of organizational purpose and organizational identity content and identity complexity, an understanding of which can lead to successful (or unsuccessful) efforts to change an organization's purpose.

Cognitive Dynamics in Managerial Decision-Making

Session Moderator: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*

MOC: **The Effects Of Cognitive Complexity And Temporal Focus On The Likelihood Of Product Recalls**

Author: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*
Author: **Kyung-Ah (Kay) Byun**, *U. of Texas at Tyler*
Author: **Ajith Venugopal**, *Texas A&M International U.*

CEO cognitive complexity presents an intriguing juxtaposition in its effects on firm outcomes, particularly in the context of strategic outcomes such as the likelihood of product recalls. Recent studies contend that while CEOs with higher cognitive complexity can potentially improve firm outcomes (e.g., firm performance) due to their detailed and multifaceted information processing, these tendencies might also present challenges because of the extended time and energy they devote to decision-making, potentially overlooking immediate threats. Thus, recent studies have called for further investigation of particular outcomes that can be either improved or negatively influenced by CEO cognitive complexity. We propose and demonstrate a nuanced relationship between CEO cognitive complexity and product recalls, moderated by the CEO's past temporal focus. Specifically, CEO cognitive complexity decreases the likelihood of product recalls building on the literature on goal-oriented feedback and learning literature. We also build on the temporal focus theory and propose that such effect is more pronounced when CEOs have a higher past temporal focus, drawing from previous experiences and lessons. Post-hoc analyses further verify our findings. Our study underscores the importance of understanding the intricate interplay between a CEO's cognitive style and their historical perspective in predicting firm outcomes, particularly in the realm of product safety and recalls.

MOC: **Navigating Uncertainty: Unravelling Managerial Decision-Making in Dynamic Capability Deployment**

Author: **Atefeh Maghzi**, *Southampton Business School, U. of Southampton*

Recent research on dynamic capabilities has focused on investigating the micro-foundations of dynamic capabilities. Among these micro-foundations are the decision making approaches of managers. In this study, we aim to answer the question of whether heuristic reasoning or analytical, effortful reasoning characterizes the deployment of dynamic capabilities in highly dynamic environments and how the use of either approach affects firm performance by conducting computer-aided text analysis, using data of earnings call transcripts as well as firms' financial data. The results reveal that managers indeed use less analytical, effortful reasoning (implying a greater use of heuristic reasoning) in their deployment of dynamic capabilities when facing high dynamism and that less use of analytical, effortful reasoning has a positive effect on firm performance. The novel approach used in this study helps us shed light on how firms perform and succeed in a dynamic, contemporary business environment. More broadly, we contribute to the growing literature on the micro-foundations of dynamic capabilities and strategy research.

MOC: **Rhythms of Concentration: Managing Organizational Attention in Pursuit of Agility**

Author: **Brian Hilligoss**, *U. of Arizona*
Author: **Elena Maria Wong**, *U. of Arizona*

In the face of extreme volatility, organizations must draw on a vast array of staff to attend to that volatility and manage responses. In short, organizations need to be able to concentrate—to intensely focus and intentionally coordinate their collective attentional resources on a common problem. However, research on organizational attention is insufficient to explain how organizations concentrate. We use a qualitative case study of a US health care organization responding to the COVID-19 pandemic to investigate organizational concentration. We develop a process model of organizational concentration as a rhythmic circuit that oscillates between two phases. During the attentional divergence phase, organizational attention disperses across issues and actors for in-depth, detailed investigation. During the attentional convergence phase, attention coalesces horizontally and vertically across the organization into a relatively unified focus on one or a set of issues. Each phase has differential effects on the quality of attention (i.e., stability, vividness, and coherence). Temporal rhythms of recurring activities, such as meetings, are consequential mechanisms that control oscillations between attentional divergence and attentional convergence, thereby managing organizational concentration and potentially increasing organizational agility. Our study contributes to research on both the attention-based view of the firm and collective mindfulness.

MOC: **The Dynamics of Cognitive Frames: How Emergency Call Takers Handle a Continuous Stream of Inquiries**

Author: **Tiancheng Cao**, *School of Public Policy and management Tsinghua U.*
Author: **Xiaoli Lu**, *School of Public Policy and management Tsinghua U.*

This study delves into the uncharted territory of collective cognitive frame dynamics during the crisis, specifically examining the response of the call takers in an emergency call center to abrupt traffic control changes. This study addresses two critical gaps in the literature of sensemaking theory: first, the lack of comparative analysis of cognitive frames at the collective level, and second, the insufficient exploration of how discursive and material practices influence collective sensemaking. It recognizes cognitive diversity (differences in perspectives, knowledge, and experience among members) and cognitive complexity (the number of concepts in cognitive frames and their interrelations) as pivotal dimensions for examining the dynamics of cognitive frames in a collective setting. Specifically, our research focuses on capturing how the collective discourses and material practices of emergency call takers impact the evolution of cognitive frames in these two dimensions, providing a comprehensive understanding of cognitive frame dynamics in response to crisis situations. Using data from 74 audio interactions and 3,119 call logs, supplemented by participatory observation of the whole process, this study employs a rigorous, multi-phased methodological design integrating computational linguistics and qualitative analysis. This study applied dependency syntactic analysis to extract verb-object structures from call taker discourses, providing a basis for identifying coping strategies and generalizing cognitive frames. Besides, material practices, examined through policing logs, employ the Word2Vec model and cosine similarity metrics, offering a novel perspective on cognitive frame evolution in high-stress environments. Key findings include the paradoxical role of sensegiving ambiguity, which, contrary to being detrimental, fosters group cognitive adaptability and diverse coping strategies. The study also reveals the integral role of both formal and informal leadership in shaping and stabilizing collective cognitive frames. Additionally, it emphasizes the significance of material practices, like policing logs, in developing coherent cognitive frames across the organization. These insights contribute substantially to the understanding of collective sensemaking in crisis situations.

Author: **Patrick Pollok**, RWTH Aachen U.

Supposingly, managers allocate their attention through knowledge structures favouring signals that connect with existing knowledge. However, this top-down attention allocation leaves open how managers detect and pursue opportunities for exploratory innovations which require novel knowledge. Our study aims to measure instances of the opposing attention mode, i.e., bottom-up allocation, and provide evidence for its implications for firm's exploratory innovations. We conduct this analysis in a setting where firms source input bottom-up from alliance portfolios. Our sample comprises of 223 firms from the German cooperative banking sector and 112 board members. We obtain alliance data from an industry survey and extract innovation information from bank's financial statements. We measure manager's bottom-up attention allocation through their attention variety on a professional social media platform. Conducting poisson regressions, our results indicate that bottom-up attention allocation can significantly promote exploratory innovations. This is particularly true for alliances with high knowledge distance and high managerial attention variety. We contribute to the nascent literature on competing managerial attention modes and their implications for firm performance. We show that managers can deliberately influence their attention variety through social media and ultimately increase exploratory innovation returns from a diverse alliance portfolio substantially.

MOC: Who do You Want at the Helm? The Effect of Experience on Individuals' Performance in Crisis

Author: **Derrick P. Bransby**, *Harvard Business School*
Author: **Christopher G. Myers**, *Johns Hopkins Carey Business School*

To reap the rewards of expertise and forego its constraints, scholars suggest we must manage the depth and breadth of our experience. In this study, we draw on forty years (1982-2022) of general aviation accident investigations to examine the effect of domain-specific experience on individuals' performance in crisis – moments of acute need where swift and creative decisions are necessary to thwart catastrophe. Our analyses unfold in two parts. First, we predicted and found evidence of a curvilinear association between a pilot's degree of specialization (i.e., the share of total flight hours spent flying a specific aircraft) and performance in crisis such that the accumulation of domain-specific experience generally reduced the odds of fatal injuries and severe damage, except among pilots with highly concentrated experience. Second, we probed the underlying mechanisms and boundary conditions of specialization's effect on pilots' performance. Contrary to our expectations, we found evidence that the cost of domain-specific experience revealed in part one diminished in dynamic, domain-adjacent conditions (e.g., poor weather conditions) that forced pilots to draw on their knowledge in an unfamiliar or unusual context, challenging prevailing theory about domain-relevant context as a conditioning factor in the performance effects of experience. In doing so, this paper contributes to the literature on expertise and research about crisis leadership, suggesting that organizations could benefit from strategies that manage the depth and breadth of individuals' experiences. It also contributes to broader policy discussions about pilot experience and training requirements.

MOC: The Effects of the Changes in Abuse on Performance and Well-Being via Anger and Relief

Author: **Jaewook Lee**, *Indiana U. - Kelley School of Business*
Author: **Cristiano L O Guarana**, *Indiana U. - Kelley School of Business*

Drawing from a temporal perspective and affective events theory (AET), this study examines how employees' perceived trajectory (changes over time) of abusive supervision toward themselves affects their goal progress and psychological detachment via differential affective reactions of anger and relief. Moreover, in light of the social aspect of abusive supervision, this study examines how the perceived trajectory of abusive supervision toward coworkers moderates the relationships between the trajectory of abusive supervision toward focal employees and differential affective responses. We tested our research model using an experimental vignette study. The results demonstrated that the increase (decrease) in abusive supervision toward focal employees was positively (negatively) related to anger, and the decrease (increase) in abusive supervision was positively (negatively) related to relief. Also, anger and relief mediated the effect of the trajectory of abusive supervision toward focal employees on goal progress and psychological detachment. Further, the trajectory of abusive supervision toward coworkers moderated the effect of the trajectory of abusive supervision toward focal employees on anger and relief and the indirect effects of this trajectory on goal progress and psychological detachment via anger and relief. The findings of this study contribute to the abusive supervision and AET literature by providing a more nuanced understanding of how employees' performance and well-being suffer and recover from temporal changes in abusive supervision via differential affective responses and how the social aspect of abusive supervision affects the relationships between the changes in abuse, affective responses, and performance and well-being.

MOC: Motivation, Hot and Cold: A Dual-Process Perspective of Motivation

Author: **Zaidan Chen**, *Hong Kong U. of Science and Technology*
Author: **Kin Fai Ellick Wong**, *Hong Kong U. of Science and Technology*

Motivation is a complex process that involves both impulsive (hot) and deliberative (cold) aspects. While previous literature has assumed that each component independently provides energetic forces and determines behaviors, conflicting observations challenge this oversimplified model. To address this gap, this paper proposes a dual-component model to examine the motivation process. We first introduce a quickness-appropriateness framework to capture the variation in the effectiveness of motivation. Given the critical role of cognitive activities in the motivational process, we suggest that it consumes limited mental resources to achieve effectiveness. Therefore, the motivation process should maintain a balance between quickness and appropriateness within the budget of mental resources to achieve desired outcomes. Lastly, we apply the dual-process theory to distinguish the automatic and controlled components, whose complementary cooperation is critical in making the motivation process effective. Our proposed theory suggests a nuanced interactive relationship between the automatic and controlled components, with their cooperation essential in maintaining the balance. We discuss the theoretical contributions and future research directions of our model.

MOC: The Interactive Effect of Role Overload and Workplace Impostor Thoughts on Effort and Performance

Author: **Basima Tewfik**, *MIT Sloan School of Management*

Scholars have presented equivocal predictions and findings regarding the relationship between role overload and effort. Building on underdeveloped hints in the challenge-hindrance framework of work stress, I theorize that workplace impostor thoughts—popularly known as the impostor phenomenon—moderates the role overload-effort relationship, with implications for job performance. In two studies (a field study and a pre-registered experiment), I find that when employees have more frequent workplace impostor thoughts, they exert more effort in response to role overload, benefiting performance. Yet, when employees have less frequent workplace impostor thoughts, they exert less effort in reaction to role overload, hurting performance. I do not find that the greater effort for those with more frequent workplace impostor thoughts comes with subsequent well-being costs (e.g., strain, burnout). I close with theoretical and practical implications in view of extant theory and research.

Author: **Jessica Paek**, *Fuqua School of Business, Duke U.*

Author: **Kenneth Tai**, *Singapore Management U.*

Although it is well recognized that performance is dynamic and varies over time, few studies have examined the role of performance changes in promotion decisions. Despite the notion that unsteady performance is common, and sometimes even expected, employees who display unsteady performance may be negatively evaluated by their managers. Drawing on attribution theory, we examine why and when performance steadiness influences promotion decisions. Across three experiments and one field study, we find that employees who display unsteady (versus steady) performance are less likely to be recommended for promotion, even after controlling for performance levels. Our results also show that perceived competence mediates the relationship between unsteady performance and promotability. Furthermore, job routineness moderates the negative indirect effect of unsteady performance on promotability via perceived competence, such that the indirect effect is weaker when job routineness is lower (Study 3). We discuss the theoretical and practical implications of our findings.

Employees across the globe speak up with insights on how to improve their organizations. Managers who receive voice are critical in the voice process—both on the front end in soliciting ideas and the back end in evaluating employee ideas. This symposium features five empirical papers that address (a) how managers communicate in the solicitation process and whether employees or managers engage in faking, and (b) the implications to employees as managers evaluate voice.

Through this symposium, we seek to highlight the expansion of Organizational Memory Studies (OMS) through six presentations. The presentations each link memory to organizational constructs that have not traditionally been examined via relationships with mnemonic factors (i.e., legacy, resilience, technology, stakeholders, preservation and change management) and represent a myriad of methodological approaches (i.e., conceptual, qualitative and quantitative). We have also designed this symposium to feature the work of more junior scholars in the area with the support of more senior ones acting as discussants and co-authors, thus providing a venue in which OMS scholars, who now include two distinct generations, can gain new insights into the future directions of the field.

Organization, Purpose, And Values: Compassionate Care for Reinventing Organizations

Session Chair: **SUNITA SINGH SENGUPTA**, *Professor Faculty of Management Studies U. of Delhi*

Moderator: **Julia Storberg-Walker**, *George Washington U.*

Panelist: **Corne Bekker**, *Regent U. School of Divinity*

Panelist: **Aditya Simha**, *U. of Wisconsin, Whitewater*

Panelist: **Hermella Girmay Tekle**, *George Washington U.*

Panelist: **Akshay Kumar**, *Ph.D. Scholar, Faculty of Management Studies, U. of Delhi*

The modern organization is deeply fragmented, where an invisible wall demarcates people based on gender, caste, creed, and region (Singh Sengupta & Guangpuanang Kahmei (2023). For decades, research has been persistent on the significance of ethics for an organization's success (Lee et al., 2022). Barnard (1938) focused on the complexities of the human element in the organization, on the psychological forces of human behavior, and on developing ways to manage the complexities of human behavior and to cope with its limitations (Gabor, 2000). In 1982 Kenneth E. Goodpaster and John B. Matthews, Jr. wrote an article 'Can a corporation have conscience?' Quoting from the article, the authors write "...a discrepancy between our personal lives and our lives in organizational settings — might be dampened. The principle of moral projection not only helps us to conceptualize the kinds of demands that we might make of corporations and other organizations but also offers the prospect of harmonizing those demands with the demands that we make of ourselves". In 2001, Peter Pruzan asks 'The Question of Organizational Consciousness: Can Organizations Have Values, Virtues and Visions?' The author cites multiple reflections and argues and questions, Under what circumstances is it reasonable to ascribe to an organization the competency to develop shared values, virtues and visions – to develop corporate "consciousness"? The human consciousness is hard to comprehend but is growing and making progress within the human system, through the ages impacting human conduct, and institutional systems that govern human activities (Singh Sengupta & Guangpuanang Kahmei, 2022). In the article "Why Compassion Counts!" Peter J. Frost (1999) demonstrates the urgency of compassion at the workplace by knitting together the two tensions: efficiency and compassion using the anecdote of a young nurse and the patient at the cancer ward. He writes, "the hurt of individual and the organization were better off as a result of the compassionate acts...the act of compassion appeared to help the patient heal. witnessing the act of compassion had an emotional effect on me. I too was lifted, my spirits raised by seeing and then becoming part of this act and the process" (1999, p. 128). Another profound illustration is provided by Frederic Laloux (2014) in his book "Reinventing Organizations: A Guide to Creating Organizations Inspired by the Next Stage in Human Consciousness." In this book, Laloux demonstrates how compassion influences the culture of Buutzorg and touches lives miracle. Founder Jos De Block says the "Buutzorg" business model is a 'New Model of Delivery' that call the members to care 'humanity above bureaucracy.' The success of Buutzorg is unprecedented. These above illustrations have shown us the power of the human touch that surprises everyone. Rynes et. al., (2012) suggest that Care and Compassion emerge in unlikely places and are often not found where most expected. This symposium is about the energies of compassion and its implications that affect an organizational life's daily routine. Compassion operates at two levels- divine compassion, and human compassion. Divine compassion is characterized by justice, mercy, and unconditional love whereas, human compassion can be articulated into five functional aspects of human community- solidarity, acceptance, power, companionship, and engagement. The purpose of this panel symposium is to engage a group of panelists in formal, moderated, interactive discussions on (1) Compassionate communication and relational practice at the workplace, (2) Self-respect and dignity at the workplace, (3) Aesthetics in management, (4) Organizational consciousness and compassionate care (5) Divine compassion for human compassion – the spirit of service with love.

Harassing and Mistreating Others at Work

Session Moderator: **Yuming Wang**, *School of Economics & Management, Tongji U.*

OB: **A Vicarious Moral Cleansing Perspective of Follower Misconduct and Leader Moral Behavior** 

Author: **Yuming Wang**, *School of Economics & Management, Tongji U.*
Author: **Jingxian Yao**, *Singapore U. of Social Sciences*

Business ethics research has widely examined how followers' morally praiseworthy behaviors license leaders to engage in unethical conduct; in contrast, the present research focuses on whether, how, and when follower misconduct motivates leaders to behave more ethically. Building on and extending moral cleansing theory (Zhong et al., 2009), we propose that follower misconduct triggers leaders' feelings of guilt and in turn their ethical leadership and citizenship behavior. In addition, we expect these relationships to be more pronounced among leaders with higher moral ownership. Results from two field studies generally supported our hypotheses. By disentangling a vicarious moral cleansing mechanism, our research challenges the conventional wisdom that moral cleansing can only be triggered by one's own transgression and provides a novel lens for understanding leader response to follower ethical misconduct. Implications for theory and practice are discussed.

OB: **When Workplace Cheating Behavior Backfires: The Intrapersonal and Interpersonal Outcomes**

Author: **Yijiao Ye**, *Shenzhen U.*
Author: **Long-Zeng Wu**, *School of Management, Xiamen U.*
Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*
Author: **Xinyu Liu**, *U. of Hong Kong*

This research delves into the intrapersonal and interpersonal consequences of workplace cheating behavior (WCB) on employees who commit it, drawing on the theoretical underpinnings of ego depletion and social exchange. Leveraging longitudinal data covering 473 employees across 101 teams, we substantiate that WCB exerts dual impacts. It not only erodes employees' job satisfaction through the mechanism of ego depletion but also triggers coworker ostracism of the WCB perpetrators via the avenue of coworker disliking. Moreover, this study also examined the boundary condition of WCB's effects. Employing a moderated path analysis, we reveal that team ethical leadership serves to significantly amplify the direct effects of WCB on ego depletion and coworker disliking, along with the indirect influences of WCB on job satisfaction and coworker ostracism.

OB: **Workplace Mistreatment: A Systematic Review of Interventions**

Author: **Gillian Leake**, *U. of Tasmania*
Author: **Albert Amankwaa**, *U. of Tasmania*
Author: **Irene E. De Pater**, *School of Business and Law, Edith Cowan U.*

In recent decades, the subject of workplace mistreatment has gained increasing attention from scholars, and so has calls for research on interventions to prevent or reduce workplace mistreatment. Considering the growing body of empirical research on workplace mistreatment, a review of interventions is necessary. This study presents a systematic review of the workplace mistreatment interventions literature and adds to the scholarship in two significant ways. First, unlike the existing reviews on interventions which focus mainly on workplace bullying and/or incivility, our review focuses on all the different forms of workplace mistreatment. Second, almost half of the studies included in the current review were published in the last ten years, with a quarter published after 2020. This review thus provides new insights and a comprehensive overview of the current state of workplace mistreatment interventions scholarship. Studies exhibiting methodological rigour are investigated to categorise what is known about the topic and identify potentially successful interventions. In the end, this review identifies gaps and unexplored areas in the current literature to develop potentially fruitful avenues for future research.

OB: **Dominant or Benevolent? How Bystander Intervention Against Gender Harassment Leads to Status**    

Author: **Eugene Yong Jun Tay**, *National U. of Singapore (NUS)*
Author: **Sandy Lim**, *National U. of Singapore*
Author: **Anjier Chen**, *National U. of Singapore (NUS)*
Author: **Goh E-yang**, *National U. of Singapore*

Gender harassment against women in the workplace are common and harmful. Bystanders play an important role in curbing gender harassment. In this work, we investigate the impact of a bystander's level of involvement on other third-party coworkers who are witnesses to a prejudicial attack against women. We argue that higher involvement responses (e.g., confrontation) will elicit greater perceptions of dominance and benevolence in coworkers, which in turn influence the bystander's leadership emergence. We argue that there will be a differential effect based on the bystander's gender, such that male (versus female) bystanders will elicit much stronger reactions in coworkers. In two studies with working adults, one relying on an experiment (Study 1: N = 762) and another using a critical incident recall survey (Study 2: N = 420) provided support for our hypotheses. We discuss the theoretical and practical implications of our work as well as future research opportunities.

Using AI to Boost Organizational Effectiveness

Session Moderator: **Lingjun Zhou**, *Shanghai U. of Finance and Economics*

OB: What Is Below the Surface? Rejected Applicant Reactions Toward AI/HM-Based Hiring

Author: **Lingjun Zhou**, *Shanghai U. of Finance and Economics*

Author: **Jin Song Li**, *Shanghai U. of Finance and Economics*

Author: **Jie Cao**, *Shanghai U. of Finance and Economics*

The increasing use of artificial intelligence (AI) has maintained the high disparity in the applicant-to-hire ratio, elevating rejected applicant reactions to a significant issue. However, little is known about how applicants react to AI-based rejection. Drawing on appraisal theory, we propose that applicants rejected by AI tend to appraise the rejection as other-responsibility, leading to heightened negative emotions and more adverse reactions against the organization. Using a person-centered approach and mix-method design in two studies, we identify four distinct profiles based on the combination of outward-focused negative emotions (OFNE) and inward-focused negative emotions (IFNE). Specially, we argue and test that introducing a human manager to review AI-based rejection can soothe the rejected applicants. Our finding shows that involving human touch can shift applicants from toxic to harmless profiles, leading to better reactions towards the organization. Theoretical and practical implications for applicant reactions in the novel context of AI-based hiring processes are discussed.

OB: An Analysis of How AI Capabilities Might Enhance the Performance of E-Organization

Author: **Gul Rukh**, *Xi'an Jiaotong U. School of Management*

Author: **Yufan Shang**, *Xi'an Jiaotong U.*

Author: **Tabreez Humayun**, *Xi'an Jiaotong U. School of Economics and Finance*

Author: **Rizwan Ali**, *Lahore Business School, The U. of Lahore*

The ability to undergo digital transformation using artificial intelligence is becoming increasingly crucial for e-organizations, since a larger portion of their activities are now being driven by AI. This leads to an exploration of how e-organizations might effectively structure themselves to extract value from AI, as well as the various ways in which this value can be achieved. In light of this context, this study investigates how the capabilities of artificial intelligence can enhance organizational performance by instigating transformation in crucial organizational functions. We conducted a survey-based study to gather data from e-organizations on the indirect impact of AI capabilities on organizational performance. Entirely 345 valid questionnaires were utilized to collect data, which was further analyzed using partial least squares structural equation modeling (PLS-SEM). The results of our research indicate that artificial intelligence (AI) has a beneficial impact on organizational strategy, organizational environment, and fostering organizational structure. Although organizational strategy and organizational environment are enhancing organizational performance, our findings indicate that organizational structure has also a positive significant impact on organizational performance. The results of our research provide evidence of the essential resources that make up an artificial intelligence (AI) skill. Additionally, we demonstrate the impact of nurturing these capabilities on important organizational tasks, which in turn affects overall organizational performance.

OB: The Role of Self-Threat in the Decision to Use Algorithm Hiring Aids

Author: **Mehnaz Rafi**, *Haskayne School of Business, U. of Calgary*

Author: **Justin Weinhardt**, *U. of Calgary*

Given their accuracy, reliability, and efficiency, algorithms are now a fundamental part of many decision-making processes in both personal and professional domains (Castelo et al., 2019; Prah & Swol, 2016). They facilitate consumers' decisions by providing information, suggestions, recommendations, or candidates (Hou & Jung, 2021). However, researchers find that employees are reluctant to use algorithm decision aids, referred to as algorithm aversion (Burton et al., 2020; Dietvorst et al., 2015). The current paper explores the role of self-threat in explaining and overcoming algorithm aversion within a hiring context. We reason that many employees perceive algorithms as threats to their self-concepts because these aids threaten core components of their working selves, such as autonomy, job roles, expertise, status, and job security. As a result, employees respond with a defensive aversion towards these algorithms. Through a randomized experiment, we show that when algorithm decision aids do not pose a threat to the self, employees are more likely to accept these aids and use them. This has implications for the literature on algorithm aversion because we proposed a new way of looking at the underlying cause of this aversion. Our paper also has practical implications as organizations can take steps when introducing algorithm aids to ensure they are not perceived as threats by employees, which can increase their acceptance and usage.

OB: Distance Makes the Heart Grow Fonder: How AI Implementation Influences Human Relationships

Author: **Cazembe Monds**, *Georgia State U., J. Mack Robinson College of Business*

Author: **JJ Po-An Hsieh**, *Georgia State U.*

Author: **Liwei Chen**, *U. of Cincinnati*

As artificial intelligence (AI) systems are being integrated into our social and professional lives, there is a clear need for more research that explores how AI affects human relationships along the service-profit chain through its use for organizational processes. We explore how supervisor and employee interactions, important foundational aspects of the service-profit chain, are impacted with the introduction of AI systems, and how this change in turn influences customer perceptions of trust in service employees. We also examine the moderating effects of employee-perceived service climate and a difference in supervisor and employee education, and how these affect the relationship between supervisor and employee interaction difference and customer trust in employees. Using multiple waves and multiple sources of data, our findings posit that both employee-perceived service climate and supervisor and employee education differences moderate the relationship between supervisor and employee interaction difference and customer trust.

Its Not Easy Being Green (and Prosocial)

Session Moderator: **An-Chih Wang**, *China Europe International Business School (CEIBS)*

OB: Effects of Team Members' Prosocial Motivation Profiles on Team Processes and Performance 

Author: **An-Chih Wang**, *China Europe International Business School (CEIBS)*

Author: **Tae-Yeol Kim**, *China Europe International Business School (CEIBS)*

Author: **Wen Wu**, *Beijing Jiaotong U.*

Author: **Yanyu Chen**, *National Sun Yat-Sen U.*

We integrate a self-determination conceptual lens and the social information processing perspective to examine how team members' prosocial motivation profiles are related to team processes and performance. A latent profile analysis based on 190 leaders and their matched 1,070 team members suggests that, in this sample, 13.25% of the team members and leaders are categorized as inactive helpers (i.e., low in both pleasure- and pressure-based prosocial motivation). Subsequent analyses indicate that the presence of at least one inactive helper within a team has a detrimental effect on effective team processes and then decreases team performance. Our data also support a moderated mediation model, wherein the proposed negative indirect effect is alleviated when the team leader is a dual-role helper (i.e., high in both pleasure- and pressure-based prosocial motivation); moreover, this indirect effect turns positive when the proportion of dual-role teammates within a team is high.

OB: Employee Responses to (In)Congruence of Green Behavior in Team: An Impression Management Perspective

Author: **Liyan Yang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Yuan Jiang**, *China Europe International Business School (CEIBS)*

Author: **Xiaojing Shao**, *School of Economics and Management, Northeast Agricultural U.*

Drawing upon impression management theory, this research expands the current understanding of how and why (in)congruence modes of green behaviors by a focal employee and those by his/her leader or other members in a team shape that employee's subsequent green behaviors from an egoistic perspective. It tests a proposed model with three independent studies: an experiment manipulating both employee and his/her team leader's green behavior (Study 1), an experiment manipulating both employee and other team members' green behavior (Study 2), and a field survey study measuring employees', his/her team leader's and other team members' green behaviors to cross-validate our findings (Study 3). Overall, results reveal that the (in)congruence mode between the focal employee and team leader/other team members in terms of their green behavior influenced the employee's subsequently green-focused impression management behaviors through a serial mediation process, first by the employee's expected image risks/gains of green behavior and then followed by his/her green impression management motivation. Moreover, we also found that green psychological climate moderated the positive relationship between employee green impression management motivation and green impression management behavior. Finally, we discuss the theoretical and practical implications for employee green behavior and impression management.

OB: The Cost of Saying No: Examining The Effects of Help Rejection on Employee Stress and Conduct

Author: **Han Gao**, *Guanghua School of Management, Peking U.*

Author: **Zheng Wang**, *School of management, Zhejiang U.*

Author: **Yating Gao**, *Guanghua School of Management, Peking U.*

Offering a helping hand to coworkers every day at work is a costly activity. Equally important, our study reveals that rejecting to coworkers' help requests can also impose significant burdens on the individual, highlighting that the rejection of help requests from coworkers encompasses complex interpersonal and psychological considerations. This study delves into the consequences of help-request rejections toward coworkers, particularly how they impact employees' counterproductive work behavior through the lens of perceived interpersonal stress. Using a three-wave, multi-source field study and integrating transactional of stress and social exchange theories, we examine the intricate dynamics of help rejecting in the workplace. Our findings indicate that rejecting help requests can result in an increase in interpersonal stress. We also find that leader-member exchange can buffer the positive effect of help-request rejection on the interpersonal stress. We discuss the implications of our findings for both theory and practice.

OB: As Mediators or Moderators? A Meta-Analysis on Motive Attributions in Prosocial Behavior Research

Author: **Miaodi Zhou**, *School of Economics and Management of Wuhan U.*

Author: **Ning Jiang**, *Wuhan U.*

Research on prosocial behavior has recognized the important roles of colleague motive attributions in influencing the benefits of employee prosocial behavior in the workplace. However, a key unsolved question is whether colleague motive attributions act as mediators or moderators in the relationship between employee prosocial behavior and colleague reactions. To address this issue, we conducted a meta-analysis of 37 articles with 43 independent samples and 10533 participants. Results support the mediating hypotheses, which propose that colleague other-oriented and self-oriented attributions transfer the effects of employee prosocial behavior to colleague reactions. Conversely, the results fail to support the moderating hypotheses. In addition, we examined some contextual moderators, such as national cultures, gender, and the types of attributors. The findings show that the relationships between employee prosocial behavior and colleague motive attributions differ in different national cultures. The theoretical and practical implications of these results are discussed.

Leadership and Teams at Work

Session Moderator: **Jian Shi**, *Vrije U. Amsterdam*

OB: **Connecting the Dots for the Team in Remote Workplaces: An Identity Leadership Perspective**   

Author: **Jian Shi**, *Vrije U. Amsterdam*

Accelerated by the COVID-19 pandemic, a shift towards remote and hybrid working practices is currently taking place in organisations worldwide. This transition creates an important challenge for workplace management to ensure that remotely working employees feel connected to their team, and the organisation at large, despite the loss of frequent in-person, face-to-face interactions. We propose that identity leadership behaviours from workplace supervisors are key to ensuring such feelings of connectedness among remotely working employees. We conducted two studies among working adults in the United Kingdom to demonstrate the importance of identity leadership in a remote working context. Our first study showed that, when working remotely (compared to on-site), employees preferred identity leadership behaviours from their supervisors. Results of our second study showed that identity leadership behaviours mitigate against the detrimental consequences of remote working regarding (i) employee's team identification ("lost identities"), (ii) team isolation ("lost connections"), and (iii) subsequent negative work experiences (i.e., work disengagement, job dissatisfaction, work stress and absenteeism). We discuss the theoretical and practical implications of these findings as well as directions for future research.

OB: **Reflecting on Failures: The Dual Impact of Disclosing Failures During Transition Across Teams**

Author: **Yibing Zhou**, *Tsinghua U.*

Author: **Ning Li**, *School of Economics and Management Tsinghua U.*

Author: **Cynthia Lee**, *Northeastern U.*

This study explores the complex nature of failures within organizations, especially in project teams where individuals act as knowledge conduits. Despite the acknowledged importance of failure for organizational learning, a reluctance to share past failures due to social self-image remains prevalent. Grounded in self-disclosure theory, the research examines how disclosing past failures in new teams has dual effects on individuals' perceived evaluation, peer acceptance, and performances. The study also develops a nuanced analysis of different disclosure approaches. Our empirical investigation, conducted through a survey of 364 employees in a dynamic organizational setting characterized by frequent inter-team transitions, sheds light on the dual nature of peer responses to failure disclosures. Findings reveal that such disclosures elicit both positive recognition and negative stigma from peers. The research also identifies the distinct moderating effects of descriptive and evaluative sharing on the benefits and costs of these disclosures. This investigation reveals the complexities of disclosing past failures, underscoring the balance between the benefits and drawbacks of such revelations, and deepening the understanding of failure disclosure dynamics within team-based organizational settings.

OB: **Promoting Ethical Behavior at Workplace: How and When Do Ethical Leaders Play Their Roles?**

Author: **Omer Farooq**, *Zayed U. UAE*

Author: **Mariam Farooq**, *Faculty, College of Business, Al Ain U., United Arab Emirates*

Author: **Muhammad Arshad**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

With social identity and social learning theories as a foundation, this paper delves into the exploration of organizational identification and ethical efficacy as dual mechanisms mediating the relationship between ethical leadership and employee ethical conduct. The research further investigates how these dynamics are influenced by the variance in individual predispositions towards collectivism and individualism. More precisely, it is posited that ethical leadership exerts its influence on the ethical behaviors of collectivist-oriented employees predominantly through the pathway of organizational identification, whereas for employees with an individualist orientation, ethical efficacy serves as the primary conduit of influence. Empirical data, collected from a sample of 549 employees across France, India, and Pakistan, lends robust support to the proposed theoretical framework. The implications of these findings are critically discussed, highlighting their relevance and potential applications in both scholarly research and practical organizational settings.

OB: **Gender Differences in Leadership Structure Schema and Leader Emergence: A Socialization Perspective** 

Author: **Hayley Trainer**, *U. of Georgia*

Author: **Dorothy R. Carter**, *Michigan State U.*

Author: **Gouri Mohan**, *IIESEG School of Management*

In this paper, we leverage research on gender socialization in groups and informal leadership emergence to build understanding on how and why gender differences in leadership schemas affect leadership emergence in collective contexts. We argue that gender-based differences in leadership schemas shape how men and women participate in the social processes of claiming and granting leadership identities that act as the building blocks of leadership emergence. In a series of three studies, we examine the nature of gender-based differences in the perception of leadership relationships and implications for team functioning. In Study 1, we use a mixed-methods approach involving surveys and interviews to examine the fundamental differences in how men and women view leadership structures in their peer groups. In Study 2, using an experimental design, we show that while men and women do not differ in how they observe leadership behaviors in others, women tend to be more generous when granting leadership based on these leadership observations. Finally, in Study 3, using an organizational sample of top and middle managers, we demonstrate that women are more likely to grant leadership to others in their professional networks but receive fewer leadership grants from others, controlling for network dependencies and relational tendencies.

Team Dynamics, Member Attributes, and Team Effectiveness

Session Moderator: **Qingyue Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

OB: **How do Teams Think Like Designers? Development and Validation of a Team Design Thinking Scale**  

Author: **Qingyue Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Jingjiu Chen**, *Shanghai Jiao Tong U.*

Recent research on the meso foundations of design thinking (DT) has highlighted the need for improved measures to evaluate how teams exhibit DT. Through four phases and using data from 1,794 participants, we develop and validate a measure of team DT (TDT), which assesses a stakeholder-centered team mindset that reflects the extent to which the team emphasizes holistic user-centered thinking, experimentalism, abductive thinking, and visual expression; it is conceptualized as a superordinate, multidimensional construct. The results from exploratory factor analyses; two content validity assessments; first- and second-order confirmatory factor analyses; and two sets of structural equation models provide strong evidence of the content, convergent, discriminant, and criterion-related validities of the proposed TDT scale. Relationships are demonstrated between TDT and a variety of other team variables and outcomes, including team reflexivity, team learning climate, team efficacy, team creative process engagement, team task performance, team creativity, team innovation, and team OCB. Implications and future research directions for TDT are discussed.

OB: **Understanding the Trajectory and Influences of State Construal Level Diversity in Teams**   

Author: **Yi Huang**, *Nanyang Business School, NTU Singapore*

Author: **Jing Zhu**, *Nanyang Business School, Nanyang Technological U., Singapore*

Despite the burgeoning number of studies on team diversity, research regarding the temporal changes of team diversity remains sparse. A crucial deep-level diversity closely tied to teamwork and subject to temporal changes is construal level diversity, which refers to the differences in how individuals encode and retrieve information. Integrating team and construal level literature, we proposed competing hypotheses regarding the trajectory of state construal level diversity, one suggesting an enlarged diversity, whereas the other suggested a diminished one over time. Additionally, we proposed that team openness to cognitive diversity as a moderating factor of changes in state construal level diversity and argued that the average of state construal level diversity would be positively associated with team performance via team efficacy. We tested hypotheses with two longitudinal studies. Study 1 included 158 student teams with four-wave surveys over six weeks, and Study 2 included 106 project teams from a Chinese organization with four-wave surveys over four months. Results consistently revealed an increase in state construal level diversity over time, especially for teams with a higher openness to cognitive diversity. Such an increase in state construal level diversity was beneficial as the average of state construal level diversity was positively associated with team performance via team efficacy. We discussed theoretical and practical implications and called more attention to the temporal dynamics of deep-level team diversity.

OB: **Organizing for Customer Satisfaction: Unpacking the Role of a Team's Experience** 

Author: **Pranav Garg**, *Stevens Institute of Technology*

Author: **Sambuddha Deb**, *Strategic Advisor, Indian IT Industry*

Author: **Ramachandran J**, *The Redington Group*

Improving customer satisfaction is an important goal for firms, especially in the service sector. Even though teams are central to service firms, our understanding of the team-level antecedents of customer satisfaction is limited. We first theorize on how different facets of a team's experience—with the customer, in the current firm, and in prior firms—affects customer satisfaction. We use detailed project-level data from an Indian software services firm to test our hypotheses. We find that a team's customer experience has a positive effect on a customer's rating of a project. In contrast, a team's prior experience has a negative effect on customer rating. However, a team's firm-specific experience does not affect customer rating. We then build on the role composition approach in the team design literature to examine how specialized roles in a team impact customer satisfaction. As such, we disaggregate the three experience-based constructs using a typology of production, boundary-spanning, and coordination roles in a team. The results show that production roles drive the positive effect of customer experience while boundary-spanning roles drive the negative effect of prior experience.

OB: **Linking Team Member Attribute Systems to Team Performance Trajectories** 

Author: **Elizabeth Klock**, *Oklahoma State U.*

Author: **Kyle J. Emich**, *U. of Delaware*

Author: **John Mathieu**, *U. of Connecticut*

While there is wide consensus that teams are dynamic multilevel systems, little empirical research has investigated them as such and therefore our theoretical understanding is lacking. Here, we advance an integrative approach leveraging insights from team composition theories that go well beyond considering the amount or distribution of members' individual attributes. Specifically, we focus on how the alignment of members' multiple and simultaneous role tendencies relate to different team performance trajectories. Using a sample of 386 members of 92 teams who competed over time in a business simulation, we differentiate four different performance trajectories indicative of different developmental processes. Our findings reveal that teams composed of generalists typically exhibit moderate to strong performance throughout the two-and-a-half-month task, while teams of specialists experience a slow start due to coordination demands. Nevertheless, teams of diverse specialists can excel after they get their footing. Importantly, our study is the first to advance a theoretical and empirical model of complex systems of team member attributes as related to dynamic team performance. We conclude with directions for future research adopting more nuanced views of team composition and understanding of dynamic criterion relationships.

When Leaders Lead to Bad Outcomes

Session Moderator: **Shanshan Zhang**, *Southwestern U. of Finance and Economics* Email: zhangss@swufe.edu.cn

OB: Profit or Peril: The Double-Edged Sword Effect of Leader's Bottom-Line Mentality on Team Performance 

Author: **Shanshan Zhang**, *Southwestern U. of Finance and Economics* Email: zhangss@swufe.edu.cn

Author: **Xi Yu**, *Rutgers U., School of Management and Labor Relations*

Author: **Xijian Fang**, *Xi'an U. of Architecture and Technology*

Based on the social information processing theory, this paper explores the mechanisms and boundary conditions of the double-edged sword effect of leaders' bottom-line mentality on team performance, constructing and testing a mediated moderation model. Using the multi-time and multi-source data gathered from 598 team members in 130 teams across three Chinese high-tech companies, we found that team performance appraisal is a significant situational variable influencing the relationship between leaders' bottom-line mentality and team performance. Specifically, when teams adopt a developmental performance appraisal approach, a leader's bottom-line mentality fosters a team performance approach goal orientation, thereby enhancing team performance. Conversely, when teams employ an evaluative performance appraisal approach, a leader's bottom-line mentality cultivates a team performance avoidance goal orientation, subsequently impairing team performance. This paper extends the research on leaders' bottom-line mentality to the team level, uncovering the mechanisms through which it exerts a dual impact on team performance. It also examines team-level boundary conditions from a work context perspective. Additionally, this research provides theoretical insights and practical guidance on how organizations can more effectively utilize performance appraisals.

OB: Overqualified Leaders and Team Performance: A Social Exchange Perspective 

Author: **Cangyan Li**, *School of Economics & Management, Tongji U.*

Author: **Yiwen Zhang**, *U. of Hong Kong*

Author: **Wei Wu**, *Renmin U. of China*

Author: **Jun Liu**, *Wuhan U. of Technology*

Overqualification—an employment status in which the qualifications of individuals exceed their job requirements—is an increasingly pervasive phenomenon. The literature has focused predominantly on rank-and-file employees, although leaders are more vulnerable to overqualification. Moreover, scholars have concentrated primarily on the task characteristics of overqualification and its effects on the focal individual. However, overqualification also has social implications, especially for leaders. Overqualified individuals cannot receive performance opportunities commensurate with their qualifications from their organization. Thus, overqualification indicates that the norms of reciprocity are violated in the social exchange between the individual and the organization. As leaders serve as linking pins in organizations, those who are overqualified may be less motivated to reciprocate by fulfilling their primary job responsibilities, such as team development. Furthermore, the unfavorable exchange between leaders and their organizations may affect the relationships between leaders and their teams, as the consequences of an exchange relationship with one party have been shown to influence exchanges with other parties. Thus, drawing from social exchange theory, I develop a theoretical model to examine how overqualified leaders affect team performance through the intervening role of team social exchange. Overqualification may first affect the average level of leader-member exchange that a leader develops with the whole team (LMX mean), as overqualified leaders may distance themselves from the team. At the same time, overqualified leaders may differently treat each team member (LMX differentiation) as the sense of resource loss and status consciousness resulting from overqualification increases their sensitivity to employees' qualifications. Thus, leader overqualification produces decreased LMX mean and increased LMX differentiation. Furthermore, I propose that LMX mean affects task-oriented outcomes (i.e., task performance and creative performance). In contrast, LMX differentiation may have complicated curvilinear effects on relationship-oriented outcomes (i.e., interpersonal organizational citizenship behavior and counterproductive work behavior). Finally, leaders' jobs and tasks are embedded in another important social relationship with their superiors, known as leader-leader exchange (LLX). High-quality LLX is a crucial resource for elevating an individual's social standing. Thus, in this study, LLX is included as an interpersonal factor that alleviates the adverse influences of leader overqualification on team dynamics and outcomes. The proposed team-level moderated mediation model is examined using multi-source and multi-wave surveys. The final sample consists of 72 teams from two organizations in northern China. The results partially support our hypotheses. The theoretical and managerial implications are discussed.

OB: Unraveling the 'Double-Edged Sword' Effect of Temporal Leadership on Followers' Temporal Outcomes

Author: **Jiixin Xue**, *School of Labor and Human Resources, Renmin U. of China*

Author: **Jinghao Zhang**, *Faculty of Economics and Business, U. of Groningen*

Author: **Yuhui Li**, *Renmin U. of China*

Accumulating evidence suggests that temporal leadership has vital implications in optimizing time utilization within organizations. Although it has been recognized as an effective strategy for addressing temporal demands and enhancing work outcomes, how temporal leadership impacts employee time management remains underexplored. By integrating the challenge-hindrance appraisal framework and the social construction of leadership theory, we propose a model with a focus on followers' perspective wherein individuals may interpret temporal leadership either as a benefit or a threat to their personal growth and well-being, contingent upon task predictability. These appraisals, in turn, influence followers' functional or dysfunctional temporal outcomes. Through two multi-wave field studies, results consistently reveal that in unpredictable tasks, temporal leadership aligns with followers' situational expectations, leading them to perceive it as more challenging and, consequently, facilitating time effectiveness. On the contrary, employees dealing with predictable tasks are more likely to evaluate temporal leadership as hindering, subsequently prompting time theft. Our research aims to offer insights into the contingent benefits of temporal leadership and its implications for workplace time management.

OB: **The Curvilinear Effect of Leader Workaholism on Employee Performance and Contingency**

Author: **Tonglin Wu**, *U. of International Business and Economics*

Author: **Xuguang Hao**, *U. of International Business and Economics*

Author: **Jia Si**, *U. of International Business and Economics*

Workaholism typically has detrimental effects on the physical and mental well-being of individuals in organizations. However, limited research has focused on the interpersonal influence of workaholism. In this study, we explored the impact of leader workaholism on employee performance. Drawing upon social learning theory and activation theory, we propose there exists an inverted U-shaped curvilinear relationship between leader workaholism and subordinate performance. More precisely, leader workaholism levels are associated with subordinate workload through social learning processes, and the moderate level of leader workaholism could optimally activate employees, allowing them to effectively utilize cognitive resources and enhancing work performance. Moreover, we further propose that Social-oriented Social Media Use (SoSM) could mitigate the negative effect of leader workaholism by enabling employees to gain resource and rely less on workaholic leaders as social models. Analysis results based on a multi-source survey data collected from 321 leader-subordinate paired samples support for the proposed model. Our study offers new insights to the understanding of the relationship between workaholic leader and employee performance in the information era and sheds light on how SoSM could mitigate undesirable work conditions.

Have You Been Served? Servant Leadership Research

Session Moderator: **Yu-Ping Chen**, *John Molson School of Business, Concordia U.*

OB: What Enables Supervisors to Serve and Enhance Subordinates' Workplace Safety Behaviors? 

Author: **Yu-Ping Chen**, *John Molson School of Business, Concordia U.*

Author: **Yu-Shan Hsu**, *John Molson School of Business, Concordia U.*

Author: **Alexandra Joelle Panaccio**, *John Molson School of Business, Concordia U.*

Author: **Hongli Wang**, *South China U. of Technology*

Drawing on Ability-Motivation-Opportunity (AMO) framework and social learning theory, we hypothesized that supervisors are perceived to demonstrate the highest level of servant leadership by subordinates when their perspective taking, prosocial motivation, and perceived collaborative-based HR configuration are all high. Moreover, servant leadership plays an important channeling role that links the three-way interaction and subordinates' safety behaviors. We tested the hypotheses in two studies. In Study 1, our sample of 167 supervisor-subordinate dyads across industries in Canada. In Study 2, we collected time-lagged data from 142 subordinates nested within 29 supervisors in a Chinese financial service company located in Southern China. Our results corroborated our hypotheses.

OB: Nurturing Workplace Status Through Servant Leadership: A Conditional Process Model   

Author: **Ameer A. Basit**, *U. of Dundee*

Author: **Shabana Naveed**, *U. of Central Punjab*

Author: **Tahira Saudagar**, *Riphah International U., Lahore*

This study, grounded in the Conservation of Resources and Job Demands-Resources theories, delves into the transformative impact of servant leadership on elevating employee workplace status. Through a quantitative analysis employing a moderated mediation model, our time-lagged study harnesses insights from 250 education sector employees navigating the challenges of the COVID-19 pandemic. We unravel the pivotal roles played by psychological availability and career resilience as mediators, further underscored by the influence of psychological climate as a moderator. Our findings show that servant leaders, by fostering psychological availability and career resilience, empower employees to overcome professional hurdles, thereby enhancing their workplace status. Further psychological climate enhances the positive relationship between servant leadership and psychological availability. This study not only addresses a critical gap in existing knowledge but also provides an invaluable perspective on the mechanisms underpinning servant leadership through the resource model.

OB: Fostering Servant Leadership at Work: A Functional Counterfactual Thinking Intervention Approach   

Author: **Ui Young Sun**, *Monash U.*

Author: **Robert C. Liden**, *U. of Illinois Chicago*

Although evidence indicating the positive implications of servant leadership abounds, we currently lack knowledge of how we can promote servant leadership at work. Drawing on the functional theory of counterfactual thinking, we propose that servant leadership can be fostered with the use of counterfactual thinking (CT) interventions (i.e., by inducing leaders to think about how they could have behaved differently toward their followers in order to have better served their needs). We further contend that the positive impacts of CT interventions on leaders' servant leadership transmit to followers' thriving and servant leadership toward others. However, we maintain that such impacts can be stronger for leaders higher on prosocial motives, as their concerns with benefiting others encourage them to practice insights derived from CT interventions. To test the hypotheses, we conducted two field studies, utilizing a pre-post experimental-control group design. The samples were drawn from Prolific and various companies located in South Korea. We obtained support for the positive influences of CT interventions on leaders' engagement in servant leadership and its two key outcomes (i.e., followers' thriving and servant leadership toward others). However, the moderating role of leaders' prosocial motives was not supported. Overall, this research provides evidence that organizations can promote servant leadership and reap its key benefits using CT interventions.

OB: A Critical Review of Servant Leadership Through the Lens of Gender and Race-Ethnicity

Author: **Helen Chung**, *Seattle Pacific U.*

Author: **Donghun Lee**, *Seattle Pacific U.*

To date, social identity and its potentially differential status implications are underexplored in the servant leadership literature. In our critical review, we problematize what we deem as implicit assumptions in the leadership framework, that servant leadership flattens relational hierarchy and renders women a particular advantage. This paper critically reviews 50 journal articles published from 2009 to 2023 that explore servant leadership related to gender and race-ethnicity. Our review is guided by two broad questions: 1) How are gender and race-ethnicity treated in the servant leadership literature? 2) How do servant leaders conceptualize or experience their own gender or race-ethnicity in relationship to their leadership? In our review of the literature, we make sense of the findings relative to gender or race-ethnicity, identify gaps and associated implications, and propose future pathways to advance our understanding of the complex intersection of identity and servant leadership.

Author: **Sabrina El Baroudi**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Maria Tims**, *Vrije U. Amsterdam*

Author: **Wenjing Cai**, *Vrije U. Amsterdam*

This study adopts a multi-level perspective and focuses on investigating proactivity in a team context with one type of leader. Drawing on servant leadership theoretical models and the leader-member-exchange (LMX) theory, we propose that servant leadership fosters 1) team member proactivity by fostering employees' positive affect and 2) team proactivity through creating a positive team emotional climate and that 3) there exists a top-down cross-level mediated relationship among the constructs servant leadership, positive team emotional climate and team member proactivity. In randomized experimental study with an MTurk sample (study 1), we found support for the mediated relationship among the constructs of servant leadership, positive affect and team member proactivity. In another randomized experimental study with a student sample (study 2), we found support for the mediated relationship among the constructs of servant leadership, team emotional climate and team proactivity. In a survey study with a time-lagged research design and a sample of professionals working in teams in several companies in China (study 3), we replicated the findings of study 1 and 2 and found support for the cross-level mediated relationship. Taken together, converging results from the three studies we find support for our hypothesized research model and offer new important theoretical and practical implications for proactivity in teams.

Is There An I in TEAM? Leading Teams

Session Moderator: **Dongdong Wang**, *Nanjing U. of Finance and Economics*

OB: **Leader Developmental Feedback and Team Adaptation: An Integrative Mechanism Perspective**  

Author: **Dongdong Wang**, *Nanjing U. of Finance and Economics*

Author: **Ting Wen**, *Nanjing U. of Finance and Economics*

Author: **Jaime Leigh Williams**, *Tennessee Tech U.*

Research has shown that leaders play an important role in improving team adaptation. However, it is still unclear how leader developmental feedback influences team adaptation. Building on team process theory, this study examines if, why, and when leader developmental feedback influences team adaptation. Results from a multi-stage, multi-source field survey study reveal that leader developmental feedback is positively related to team adaptation. Team knowledge sharing and team harmonious passion mediate the relationship between leader developmental feedback and team adaptation. Moreover, team autonomy moderates the relationships between leader developmental feedback and team information sharing as well as the relationship between leader developmental feedback and team harmonious passion, and this moderating effect is stronger when the level of team autonomy is high rather than low.

OB: **Shared Leadership in Self-Managing Teams: Centering Individual Team Members** 

Author: **Anwesha Choudhury**, *California State U., Los Angeles*

Author: **Cynthia Kay Maupin**, *U. of Mississippi*

A growing body of empirical literature has demonstrated beneficial aspects of shared leadership for self-managing teams. However, the preferences and outcomes for individuals within the teams with shared leadership have largely been neglected. In this paper, we employ job-demands and resources theory to examine the cross-level impact of shared leadership on the stress and work engagement experienced by individuals. Our findings show that, on average, shared leadership is associated with greater engagement in team members. Further, our results also demonstrate that the effect of shared leadership on individual stress and work engagement are contingent on their leadership structure schema. Overall, this paper serves to highlight how the impacts of shared leadership proceed along different lines for different individuals, which has important implications for the research and practice of shared leadership.

OB: **How and When Leaders Remain Silence and Avoidance in Response to Team Promotive Voice**

Author: **PAN FAN**, *Xi'an Jiaotong U. School of Management*

Author: **Jiixin Liu**, *Hong Kong Baptist U.*

Author: **Yan Qiao**, *Xi'an Jiaotong U.*

Author: **Haoyu Wang**, *Xi'an Jiaotong U.*

Although team promotive voice is assumed to improve team effective functioning, the key to realizing its downstream benefits to teams is the role of team leaders. Indeed, team leaders may not always endorse or implement team promotive voice that is aimed at benefiting the team, but rather remain silent and engage in avoidance behavior. Drawing from social identity theory, particularly an identity threat perspective, we propose that team promotive voice can trigger leader silence and avoidance behaviors via enhanced leader identity threat. We further propose that leader team identification functions as a critical first-stage moderator of the proposed mediation relationships. Specifically, leaders with higher (vs. lower) team identification respond to team promotive voice with less identity threat and then less silence and avoidance. Results based on the field data from 46 teams with 279 team members rejected our mediation hypotheses but found that leader team identification functions as a reversing moderator such that team promotive voice increases (vs. decreases) leader identity threat and subsequent leader silence and avoidance when leader team identification is low (vs. high). Theoretical and practical implications are discussed.

 OB: **Virtual Resource Exchanges: Explore Leadership Dynamics in the Virtual Team**

Author: **Yue Zhang**, *Guanghua School of Management, Peking U.*

The vulnerability of virtual leadership consistently arises when few studies could answer “what happened in the virtual team” and “why traditional leadership is less functional”. In line with this research theme, we adopt social exchange theory and offer our fundamental proposition that instrumental and socioemotional resource exchanges in leader-member exchange (LMX) and member-member exchange (MMX) dramatically collapsed. To better depict the exchange processes, we compile exemplifications of currencies in social exchange relationships from past studies in LMX and MMX contexts. Next, we borrow the literature on team geographical composition and two theories regarding social interactions in virtual teams (i.e., social presence theory and media richness theory) to depict the dynamic processes intricately. In conclusion, we point out that there is an asymmetrical filtration on the two forms of resources, adversely impacting LMX, MMX, and leadership functions. Furthermore, catering to the characteristics of a virtual team and two forms of resources, we offer strategies to manage the virtual instrumental and socioemotional resources.

Leading in Complex Environments

Session Moderator: **Sten Delvaux**, *Vrije U. Brussel*

OB: Exploring Adaptive Leader Behavior: A Qualitative Study of Military Officers in the Belgian Defense 

Author: **Sten Delvaux**, *Vrije U. Brussel*

Leadership scholars have advanced adaptability as a core behavioral phenomenon in the context of effective leadership. To lead effectively, leaders are required to respond flexibly to changing circumstances by taking appropriate actions. However, adaptive leadership is surprisingly an undertheorized phenomenon and thus remains poorly understood. Here, our overall aim is to build theory that advances our understanding of why and how leaders engage in adaptive behavior. A qualitative inductive study was conducted to explore adaptive leadership by examining what changes in leadership situations, the impact of these changes on dynamic leader behavior, and the basic mechanisms governing these adaptive dynamics. The study participants consisted of 20 military leaders in the Belgian Defense forces and the qualitative data was collected using in-depth interviews. An interpretative approach to inquiry was adopted, by drawing on key ideas from main psychological and leadership theories. The study findings show that adaptive leadership is a dynamic and complex process that occurs at different levels of analysis. Different forms of adaptive change were identified, and the underlying adjustment mechanisms were integrated into an integrative framework that broadly explains why and how leaders adaptively change what they do. The main implications for both theory and practice are discussed.

OB: Leading on the Edge: An Integrative Review of Leadership in Extreme Contexts 

Author: **Linda Baulecke**, *U. of Zurich*

Author: **Jan B. Schmutz**, *U. of Zurich*

Author: **Sebastian Raetze**, *Johannes Kepler U. Linz*

Leadership in extreme team contexts, such as polar regions, warzones, or high-altitude, is a critical determinant for these teams' success and survival. Yet, research in this field remains fragmented, underscoring the need for an integrated perspective. To address this gap, we conducted an integrative conceptual review to advance theory and research, highlighting the role of transition and action phases in extreme team contexts leadership. Our review encompasses the full body of research on leadership in diverse extreme team contexts (e.g., firefighting, astronauts, healthcare, mining, etc.). From the initial 4,048 studies, we extracted a final sample of 166. We categorized the findings using a framework of team extremeness that differentiates task and environmental extremeness. This approach resulted in a nuanced classification of the extreme team contexts. Based on our findings, we present a dynamic framework of leadership in extreme team contexts, integrating aspects from situational leadership theory into the discussion. Our framework offers guidance for leading teams in extreme contexts that are characterized by intense shifts between recurring transition and action phases and differing contextual variables predicting leadership effectiveness. Finally, we provide recommendations for future research and practical guidance that significantly contribute to the understanding and application of leadership in extreme team contexts.

OB: The Impact of (Mis) Alignment Between External and Internal Vision Communications on Performance 

Author: **Begum Bilgin**, *Erasmus U. Rotterdam*

Author: **Daan Van Knippenberg**, *Rice U.*

Author: **Bart Dietz**, *Erasmus U. Rotterdam*

While corporate communication scholars have emphasized that the articulation of a customer-oriented (CO) corporate vision is absolutely imperative for success, research has also documented that the external communication of corporate visions often does not accurately represent what is communicated within organizations and goes no further than an illusionary marketing tool for organizations. However, research has painted an unclear picture of how a possible (mis)alignment between what is communicated externally and internally (i.e., visionary leadership) about a CO organizational vision relates to employees and organizations' achievement of realizing that CO vision. In this paper, we draw on the theory of behavioral integrity, theorizing and finding that a misalignment between external and internal communication of a CO vision backfires on middle managers' behavioral integrity attributions to top management teams of their organizations. This, in turn, negatively affects CO employee behavior and the organizations' performance in achieving the vision. We test and find support for our predictions in a multisource multimethod – field and archival – study.

OB: The Effects of Complexity Leadership Theory on Organizational Learning in Complex Environments 

Author: **Patrick Sweet**, *Sobey School of Business, Saint Mary's U.*

The world is characterized by significant volatility, uncertainty, complexity and ambiguity. Approaches to organizational leadership that have worked in the past are no longer able to cope with this new reality. Given this, Complexity Leadership Theory has been proposed as an alternative that recognizes and harnesses complexity, helping organizations to adapt to rapidly changing environments. Unfortunately, despite much attention to Complexity Leadership Theory over the last 20 years, the concept remains ambiguous, poorly integrated, and largely prescriptive. This study attempts to address these shortcomings using an agent-based model to simulate organizational learning with varying levels of Complexity Leadership. The study aims to advance research on Complexity Leadership Theory by providing additional clarity and improving our understanding of its effects.

The Work-Family Interface

Session Moderator: **Jingyu Zhang**, *U. of Florida*

OB: The Implications of Work-Family Interpersonal Capitalization on Employee Coworker-Directed Behaviors 

Author: **Jingyu Zhang**, *U. of Florida*
Author: **Trevor Watkins**, *U. of Oklahoma*
Author: **Cristiano L O Guarana**, *Indiana U. - Kelley School of Business*
Author: **Christopher Barnes**, *U. of Washington*

Employees frequently engage in work-family interpersonal capitalization by sharing their positive work experiences with relationship partners. While extant theory on capitalization highlights the benefits for those directly sharing these experiences (i.e., capitalizers), capitalization may influence third-parties—a notion that challenges the existing purview that the processes and benefits of capitalization are constrained to the dyadic relationship. In this work, we integrate theory on capitalization with work-family enrichment theory to develop a model to suggest that a relationship partner's work-family interpersonal capitalization can not only enrich a focal employee's work and family experiences but that this enrichment spurs next-day behaviors directed toward third-party coworkers. We employed a laboratory experiment and a three-week experience sampling field experiment with daily interventions involving 125 employee-partner dyads. Both experiments revealed consistent results showing that work-family interpersonal capitalization prompts positive reflection in the focal employee, leading to workplace interpersonal capitalization, task-related helping, and personal helping behaviors toward coworkers the following day at work. We discuss theoretical implications regarding capitalization as well as practical implications for employees and their organizations.

OB: Breaking The Negative Spiral of Daily Surface Acting via Home Activities 

Author: **YING-SYUAN CIAN**, *National Sun Yat-sen U., Taiwan*
Author: **Nai-Wen Chi**, *National Sun Yat-Sen U.*
Author: **Alicia A. Grandey**, *Pennsylvania State U.*

Service employees can engage in surface acting to exaggerate positive emotions and suppress negative emotions during service interactions. However, surface acting not only depletes employees' resources at work, but also spills over to the home domain. Drawing on the Conservation of Resources theory and the Effort-Recovery model, we investigate whether certain home activities (i.e., household and low-effort activities) can protect or replenish the resources exhausted by daily surface acting and if employees' family identity and family support can facilitate the resource protection/replenishment processes. We employed the experience sampling method to collect twice per day from 212 service employees across 10 working days, yielding 1854 valid daily responses. The results showed that when service employees experience a need for recovery due to their daily surface acting, they reduce next-day surface acting by: (a) avoiding household activities and this indirect effect is stronger for employees with high family identity, and (b) engaging in more low-effort activities when service employees receive high support from their family members. Overall, our findings highlight that service employees can break the negative spiral of surface acting by avoiding household or performing low-effort activities as well as the buffering roles of family identity and support.

OB: A Multilevel Perspective of Antecedents and Outcomes of Talent Management Adoption in Family Firms

Author: **Zainab Anjum**, *Lahore U. of Management Sciences (LUMS)*

Despite an increasing interest in talent management in recent years, there is limited understanding of antecedents and outcomes of talent management in family-owned firms. Drawing on a review of 69 studies and informed by a multilevel perspective, this paper identifies the antecedents and outcomes of talent management in family-owned firms at three interconnected levels. At the macro-level, our review identifies societal factors such as external institutions, industry competitors and weak institutional climate. At the meso-level, our review points towards organizational factors such as firm size, generational stage, accountability systems, communication patterns, familism and attachment to tradition and negative imprinting. At the micro level, the review highlights individual factors such as job benefits, generational survival, performance, control and nepotism. The antecedents at each level are classified as enablers and disablers according to adverse or positive effect on adoption of talent management practices. The findings guide future research by revealing and synthesizing the interconnected multilevel factors and outcomes of talent management in family-owned firms.

OB: Work-Family Dynamics of Nurses: Insights from a Qualitative Diary Study 

Author: **Meghana Jalamangala**, *Department of management studies, Indian Institute of Technology Madras*
Author: **Rupashree Baral**, *Indian Institute of Technology, Madras*

Comprehending the relationship between work and family domains and the effects of their mutual reliance have become increasingly important in the last decade. The purpose of this study is to examine the work-family interface of women in nursing who simultaneously engage in long-term care employment and unpaid, informal caregiving for children (double-duty-child caregivers), older adults (double-duty-elder caregivers), or both children and older adults (triple-duty caregivers). The study employs a qualitative exploratory research design, utilizing daily-diaries for data collection. We draw insights from 10 qualitative diaries filled over a period of 2 weeks, solicited from nurses from private hospitals in India. We found (a) that nurses felt the pressure of performing multiple caregiving responsibilities constantly, round the clock (b) episodic challenges that contribute to work-family conflict, mainly due to a lack of flexibility and negative ruminations (c) episodes causing work-family enrichment attributing to performance at work, work meaningfulness, social support and skills gained. This study adds to the existing body of literature on effective qualitative research by implementing an under-utilized method: qualitative diary studies. This paper fulfills an acknowledged gap in investigating both positive and negative side of work-family interface of women employed in nursing who are double-duty and triple-duty caregivers, especially in emerging economies such as India. The study makes significant contribution to nursing management and healthcare organizational practices through an understanding of how multiple caregiving responsibilities shape nurses' work-family experiences.

Getting The Job Done: Employee Work Performance

Session Moderator: **Joyce Elena Schleu**, *Radboud U. Nijmegen*

OB: The Longitudinal Validity of Performance-Based Promotion in the NBA 

Author: **Joyce Elena Schleu**, *Radboud U. Nijmegen*

Author: **Kai Klasmeier**, *Federal Institute for Occupational Safety and Health (BAuA)*

Author: **Jens Mazei**, *TU Dortmund U.*

Author: **Joachim Hüffmeier**, *TU Dortmund U.*

Most organizations make promotion decisions based on employees' prior performance. Despite the prevalence of this performance-based promotion strategy, its validity remains unclear. We extend past research by testing competing hypotheses on the relationship between employee performance and future leader performance as derived from three theoretical perspectives (i.e., performance requirements perspective, follower-centric perspective, and Theory of Expert Leadership). We examined our hypotheses in the context of the National Basketball Association (NBA) and gathered data on the entire career of all NBA coaches until 2020 (N = 329), including their prior performance as basketball players. We tested our hypotheses using Bayesian structural equation modeling with latent variables. Overall, our analyses indicated a notable, yet weak, relationship between employee (i.e., player) and leader (i.e., coach) performance that remained stable over time. Overall, our results are in line with the performance requirements perspective. Hence, we recommend to reconsider the use of performance-based promotion strategy.

OB: Being Exploited at Work: Why and When Perceived Exploitation Relates to Employee Job Performance 

Author: **Gbemisola Soetan**, *Monash U., Australia*

Author: **Kohyar Kiazad**, *Monash U.*

While research has indicated that negative treatments of employees are reciprocated by the employees with reduced job performance, in reality, we know that this is not always the case. In the present study, we provide two competing explanations for employee reactions to their perceptions of exploitative employee-organization relationship. Drawing from the social exchange view, we theorize that perceived organizational exploitation can reduce employees' felt obligation toward the organization, which in turn can inhibit two key dimensions of their job performance (i.e., in-role and extra-role performance). Conversely, drawing from the motivated information processing theory (MIPT), we suggest that the relationships between perceived organizational exploitation and these two indicators of job performance are more complex. We predict that perceived organizational exploitation heightens employee self-interest, which in turn increases in-role performance but reduces extra-role performance. Furthermore, we examine employee job instrumentality beliefs as a moderator of both mediating pathways (i.e., felt obligation and self-interest pathways). Results from data collected at three points in time from 217 employees in Nigeria support both hypothesized pathways but surprisingly reveal opposite results for the moderating effect of job instrumentality beliefs on the felt-obligation pathway (i.e., the mediating effect of felt-obligation was stronger at higher (rather than low) job instrumentality). Implications for theory and practice are discussed

OB: Leader Laughter Leaks Leniency: Leader Affiliative (Aggressive) Humor and Employee Performance 

Author: **Yan Qi**, *U. of Science and Technology of China*

Author: **Xinxin Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Anastasiia Popelnukha**, *school of management, USTC*

Scholars have consistently assumed that leader affiliative humor benefits employee performance, while leader aggressive humor harms employee performance. Drawing on social information processing theory, we challenge this perspective by highlighting a potential downside of affiliative humor and the positive impact of aggressive humor on employee performance. We propose that leader affiliative humor may hinder workplace performance by fostering perceptions of leader task leniency, whereas leader aggressive humor may enhance employee performance by mitigating perceived leader task leniency. Furthermore, we propose that employees' power distance orientation strengthens the connections between both types of leader humor and perceived leader task leniency. Findings from a multisource, two-wave field study (N = 419) supported our hypotheses. Our research underscores the complexity of the effects of leader affiliative and aggressive humor on employee performance.

OB: Untangling the Recursive Relationship Between Workplace Surveillance Usage and Employee Performance

Author: **Yuting WANG**, *SILC Business School, Shanghai U.*

Author: **Jie Fang**, *U. of Nottingham Ningbo China*

Author: **Mengyao FU**, *Laboratory for AI-Powered Financial Technologies Limited*

Author: **Zhao Cai**, *U. of Nottingham Ningbo China*

Author: **Eric.T.K. Lim**, *UNSW Sydney*

Companies increasingly employ autonomy and control as distinct modes of workplace surveillance to ensure that employees' activities align with corporate objectives and boost their performance. Unlike previous work that has delved into the unidirectional effect of autonomy or control on boundary spanners' performance, we deliver empirical evidence testifying to a recursive relationship between surveillance technology usage and workplace performance, thereby aiding in reconciling controversial findings within extant literature. To further elucidate this relationship, we divide the recursive relationship into asymmetrical and symmetrical categories encompassing four paradigms: positive sustaining, negative sustaining, forward suppressing, and backward suppressing. By scrutinizing collaborative scenarios involving boundary spanners in a workplace environment, we illuminate the existence of a feedback loop from workplace surveillance due to the recursive influence of priori and posterior beliefs. Insights from this study bear implications for both theory and practice by highlighting the recursive impact between surveillance technology usage and workplace performance.

Presenter: **Zhiying Ren**, *The Wharton School, U. of Pennsylvania*

Organizational members increasingly find themselves immersed in debates, frictions, disagreements, and uncertainties. Effective communication skills are thus crucial for individual and organizational success. Despite the importance of difficult conversations, however, effectively managing them remains an enduring challenge, and extant research suggests that people often choose the wrong conversation strategies and harm their own and others' outcomes. This symposium presents novel research highlighting how people can manage difficult conversations. In particular, the papers presented (1) identify negotiation issues that employers should bring up to better motivate employees; explore conversation strategies that (2) facilitate creativity and (3) increase receptivity and open-mindedness; (4) document potential caveats of demonstrating good listening in difficult conversations; and (5) discuss why people use ineffective conversation strategies despite knowing their harmful effects. Taken together, this symposium highlights the fraught nature of interpersonal communication, and demonstrates strategies to improve the effective flow of information and improve both interpersonal and organizational outcomes. These papers underscore the importance of managing difficult conversations and inform practical implications for individuals and teams.

Presenter: **Diane Kang**, *U. of Kentucky*
Presenter: **Colleen Stuart**, *Johns Hopkins U.*
Participant: **Gayoung Kim**, *Carnegie Mellon U.*
Participant: **Brandy Aven**, *Carnegie Mellon U.*

The papers in this symposium examine how gendered expectations impact how organizational actors build professional relationships and the consequences of such relationships. The papers introduce new theory at levels “below” (Brands et al., 2022: 602) the network (e.g., dyadic level; Woehler et al.). They focus on, and in several cases, observe, the mediating mechanisms that drive relationship and network formation (e.g., Zhang et al.; Strassman & Harrison) and the impact of those relationships (e.g., Stuart et al.). They also study contexts underexplored in the gender and networks literature (e.g., Kang). Together, the papers in this symposium expand work on gender and professional relationships by focusing on the mechanisms driving workplace relationships and breaking conventions regarding the units of analysis and contexts typically investigated.

Presenter: **Casher Belinda**, *U. of Notre Dame*
Presenter: **Brittany Solomon**, *U. of Notre Dame*

Self-disclosure and personal communication are abundant in everyday life, including in the workplace. Given that personal communication often blurs the boundary between work and nonwork domains (Clark, 2002) and employees are being increasingly encouraged to 'bring their true selves to work' (Cha et al., 2019), it's important to understand the complexities of human conversations in the workplace. This symposium explores personal communication in the workplace with a unique lens on others' responses. Specifically, this symposium includes four empirical and one conceptual paper, all aimed at elucidating how employees respond to personal communication at work. Specifically, the papers in our symposium investigate (mis)matches between discloser expectations and responder reactions to sharing personal information at work, how coworkers evaluate the reputation of employees who disclose personal information, how leaders and followers react to a leader's disclosure of positive information, how romantic relationships at work affect others, and how employees anticipate compliance to favor-asking. In addition, the papers explore a breadth of relational contexts (e.g., leader-employee relationships, coworker relationships, romantic partnerships) and a variety of methodologies and analytical approaches (e.g., qualitative, experiments, field studies, dyadic analyses). As a set, the papers spark new conversations about workplace communication.

Discussant: **Kathleen Keeler**, *Ohio State U.*

Listening to music while working is ubiquitous in contemporary organizations. While employees report enjoying listening to music and working better with it, the extant literature offers contradictory evidence that music can have positive, negative, or no effects on performance. In other words, the relationship between music and performance is complex and complicated. This symposium seeks to bring clarity to this relationship by introducing four recent scholarly works on the relationship between music and performance. Specifically, this symposium asks one big question: When, why, and how does music affect employee performance? Four presenters seek to bring clarity to this question using various methods (e.g., experimental, ESM, meta-analytical), and considering aspects of the person (e.g., personality, depletion levels), the music (e.g., volume, complexity, familiarity), the task (e.g., simplicity/complexity), and the broader work environment (e.g., person-environment fit). The symposium will conclude with a discussion that highlights opportunities for integration and new directions for future research and seeks to stimulate conversations among the audience.

Presenter: **SungHyoun Hong**, *Georgia State U., J. Mack Robinson College of Business*

Gratitude at work is associated with a number of benefits and recent research has begun to explore the other side of gratitude—feeling appreciated at work (Sheridan & Ambrose, 2022). What is becoming clear is that gratitude and appreciation are key ingredients for developing high quality connections in the workplace. To ensure that management research on gratitude and appreciation is poised to keep up with the complexity and turbulence organizations and leaders face today, researchers must ask new questions and adopt new perspectives. While there are many benefits of gratitude and appreciation for both individuals and employers, there are still unexplored nuances to understanding these emotions at work. This symposium explores the complex nature of gratitude and appreciation at work and how we, as a field, can take research on these social emotions into the future. The studies in this symposium are diverse in methods (e.g., field study, team, time-lagged survey design, experimental design), theory (e.g., optimal distinctiveness theory, social learning theory, person perception, expectancy violations theory, social comparison theory), and focus (e.g., outcomes, antecedents, appreciation meta-accuracy, relational implications), and as such, offer an innovative and complimentary view on gratitude and appreciation at work. Our symposium (1) rethinks the conventional ways of looking at gratitude and appreciation at work, (2) offers novel insights into how to effectively manage and lead organizations, and (3) propels the gratitude and appreciation literature forward into new directions, all with a focus on two simple words: thank you.

Understanding leader and follower identity processes has received considerable attention within the leadership field with a substantial body of work having been accumulated. This presenter symposium intends to showcase different perspectives, research methods and foci to further uncover how followers and leaders interact, influence, impact and develop on an intrapersonal, interpersonal and group level. Specifically, the first presentation aims to investigate how leaders assess the social capital of their groups by examining instrumental versus expressive connections with leaders of other groups. The second presentation aims to understand how employees' unethical pro-supervisor behaviors are influenced by factors like supervisor support and supervisor status loss. Investigating the import role of new leaders' shared goals with their followers in leader development during the transition into new leadership roles is the focus of the third presentation. The aim of the fourth presentation it to understand the role of growth mindsets in processing negative feedback as part of the leader identity development process. Finally, an identity play and identity work measure is introduced in the fifth presentation. The purpose of this symposium is to bring together both leader- and follower-centric perspectives on different aspects of leader and follower identity processes. The presentations in this symposium provide valuable insights on how to and what to consider when developing leaders and the implications of follower-leader interactions and relationships in an organizational context. We hope this symposium sparks future research and highlights the different approaches and components of leader and follower identity processes.

Discussant: **Florence Bernays**, *U. of Zurich*
Discussant: **Mary Hausfeld**, *U. of Zurich*

What's next for charismatic leadership research and leadership science more broadly? To address this question, we present five papers at the cutting edge of research on charismatic signaling. Specifically, Wilms et al. and Hausfeld et al. explore the extent to which characteristics of followers (e.g. personal values), the situation (e.g. gendered context), and the leader (e.g. leader gender) determine the efficacy of a charismatic message. Engelbert et al. and Bernays & Aydogan work to uncover the cognitive and neurophysiological mechanisms underlying charisma, identifying the extent to which charismatic signaling suppresses task-unrelated thoughts or distorts followers' memory. Finally, Kreutschy and Rohner investigate charisma in the political sphere, identifying whether charismatic signaling can predict state-level outcomes by examining the exact topics political leaders address in their speeches. Making use of sophisticated design and analytic techniques such as regression discontinuity design, meta-analysis, biological measures, and behavioral outcomes, the papers included in this symposium represent a selection of research consistent with calls to limit our reliance on survey research (Fischer et al., 2023), to integrate more actual behavior (Banks et al., 2023), and to offer causal explanations (Wulff et al., 2023; Antonakis et al., 2010).

Presenter: **Frank Martela**, *Aalto U.*
Participant: **Evgenia Lysova**, *Vrije U. Amsterdam*

Over the past decades, the concept of meaningfulness has attracted the interest of a large scientific community and has grown in complexity. Given the beneficial effects of meaningful work on individuals, work, and organizational-related outcomes, it is crucial to understand how a deeper perception of meaningful work can be experienced by different segments of the workforce and how it can be influenced by intra- and inter-individual factors. We bring together five innovative projects that explore ways in which individuals in organizations perceive deeper meaningfulness, and the organizational implications arising from these perspectives. Altogether, the research presented here provides state-of-the-art theoretical and methodological advances to enhance and refine our understanding of work meaningfulness, which is a defining feature of organizations' success and a key research topic for our field. As well as filling conceptual gaps in the literatures on work meaningfulness process and how it can be experienced more profoundly, this symposium hopes to inspire future scholarship into work meaningfulness with fresh horizons. Overall, the five presentations included in this symposium shed light on previously underdeveloped aspects of the process of work meaningfulness, the temporal nature of this process, and a deeper sense of work meaningfulness. Drawing from this set of studies that open new perspectives, this presenter symposium will provoke interest and debate amongst attendees of the 2024 Academy of Management conference in Chicago, and generate further research opportunities into work meaningfulness, an enduring reality of organizations and a key research topic for our field.

Decoding CEO Actions: Examining Leadership Enactments and their Organizational Consequences

Session Moderator: **Thomas Maran**, *U. of Liechtenstein*

ODC: **Open to the Unknown: Imaginativeness in Executives and Managers Enables Exploratory Innovation**  

Author: **Thomas Maran**, *U. of Liechtenstein*
Author: **Noah Bellwald**, *U. of St. Gallen*
Author: **Sebastian Peter Gauster**, *U. of Innsbruck School of Management*
Author: **Alexander Paul Fust**, *U. of St. Gallen*
Author: **Kurt Matzler**, *U. of Innsbruck*

Exploratory innovation is vital in rapidly changing environments to maintain a competitive advantage. This study examines the impact of managerial personality traits as a microfoundation of exploratory innovation decisions, specifically focusing on the dimensions and facets of the Big Five Model. Through three distinct studies, we investigated the relationship between managers' Openness and their inclination towards exploratory innovation. In the first study, managers with higher Openness were found to favor more exploratory policies, particularly in less competitive environments, indicating a direct link between Openness and enhanced firm performance (Study 1, N = 203). The second study showed that product managers with higher Openness preferred exploratory over exploitative strategies (Study 2, N = 112). The third study used a multi-armed bandit task to demonstrate that individuals with greater Openness are more likely to make exploratory decisions in uncertain environments (Study 3, N = 494). Overall, these findings highlight the critical role of Openness, especially its facet of imaginativeness, in driving exploratory innovation. They also suggest that focusing on specific facets of personality traits can provide deeper insights into strategic leadership and innovation.

ODC: **From Outsider to Insider: Navigating the CEO Transition Through Strategic Role Management**  

Author: **Ying Zhang**, *School of Economics and Management Tsinghua U.*
Author: **Hao Chen**, *SZTUBS*

Drawing from role theory, we explored the process of how a parachute CEO strategically managed his leadership role and role perceptions among members in the acquired company to become an insider. By adopting an ethnographic approach and using interpretive methods, we developed a theoretical model to explain the mechanism under which the CEO transitions from an outsider to an insider using strategic role management. We have identified three key role management strategies in the transitioning process: role-modeling, role projection, and role resonance. Theoretical and practical implications are discussed.

ODC: **CEO Ability and Strategic Change – The Moderating Effects of Firm Age and Slack**

Author: **Tushar Ravindra Shah**, *Texas Woman's U.*
Author: **Soumendra Banerjee**, *Misericordia U.*
Author: **Ajith Venugopal**, *Texas A&M International U.*

We examine how a CEO's general ability influences strategic change, moderated by firm slack and the firm age. Our data comprised of 4,833 CEO-firm-fiscal year observations with 678 distinct firms covering 1993-2016 period. We estimate our model using fixed effects with robust standard errors and follow it up with robustness checks using correlated random effects models. We find that the positive relationship between CEO general ability and strategic change is moderated by both, firm slack as well as firm age. Whereas firm age negatively affects the relationship, firm slack has a positive effect. We contribute to the upper echelons theory, strategic change literature and the strategic human resource perspective. The knowledge and skills that represent CEO general ability play a crucial role in determining how effective will CEO be in driving strategic change amidst certain extraneous influences.

Multiple Goals and Tasks: Are Two Heads Better than One?

Session Moderator: **Tirza Gapp**, *Cambridge Judge Business School*

OMT: **Like Heads of a Hydra: Emergence and Maintenance of Inter-Organizational Culture**

Author: **Tirza Gapp**, *Cambridge Judge Business School*

Author: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*

We investigate how members of different organizational cultures bring these together to successfully address a shared goal over time. Using extensive observational, interview and archival data collected with TRANSFORM, a joint initiative between Unilever, the UK's FCDO and EY that supports social enterprises in low-income countries, we find that actors from all three organizations gain cultural fluency, the ability to understand, work with and articulate the cultures of the other organizations. We also find that the joint initiative over time accumulates cultural material tailored to the specific tasks of the initiative and the contexts in which it works through a process of culture formation. Finally, we observe how cultural fluency and culture formation jointly allow for the emergence and maintenance over time of an inter-organizational culture that serves to accomplish the distinct work of the joint initiative while maintaining effective connection to the three parental cultures. Based on our findings, we develop the concept of a bounded, incrementally assembled and dynamically updated inter-organizational culture which informs our understanding of organizational action on problems spanning individual organizations. We theorize cultural fluency, through which actors can navigate the occurrence of frictions or slippages when different cultures come together. Finally, we show how culture interacts with multiple, complex social and natural systems and can (and has to) be matched to different local and global 'realities'.

OMT: **Avoiding Adverse Specialization in Multitasking: An Experimental Test of Agency Theory Predictions**

Author: **Manon Desjardins**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*

Many firms simultaneously pursue short-term profitability and long-term objectives such as sustainability. Yet, their employees keep focusing on business-as-usual, neglecting the second objective for a lack of clear appraisal and rewards. This phenomenon - called adverse specialization - has employees concentrate on a strict subset of tasks while the firm would have them address the full set. One solution advanced in agency theory is to implement proper contingent monitoring and clawbacks in order to align the agent's behavior with the principal's objectives. Using an experimental methodology, this study tests and finds evidence for implementing this scheme. Additional findings highlight an effort-performance expectancy when employees face different levels of risk in a multitask problem, all else being equal.

OMT: **Towards a Relational and Constructivist Model of Agency**

Author: **Yally Avrahampour**, *London School of Economics*

Agency theory provides a model of the relationship between principals and agents whose assumptions have been extended to include bounded rationality and bounded self-interest, and to model the agency relationship as one in which a single agent serves multiple principals. Models of agency with multiple principals focus on the conflicting objectives of principals rather than of the principal and agent. Yet we do not understand sufficiently well how, in models of agency with multiple principals, agents both facilitate participation of multiple principals in the organization and allocate value between these principals. I address these questions by synthesizing White's account of agency with Power's account of the audit trail as micro-foundation, to outline a relational account of agency. This relational account extends agency theory by suggesting that agents mediate between two principals with conflicting objectives by allocating value between these principals when accounting standards are permissive. This mediation ceases when standards are rigorous. I outline two mechanisms through which relational agency operates. The first defines the principal as holder of rights of residual control. The second explains the manager as allocating residual income between multiple residual claimants.

OMT: **The Differential Effects of Multiple Goals: Aspirations vs Analyst Earnings Forecasts**

Author: **Elizabeth Lim**, *Georgia State U.*

Research commonly assumes that performance gap relative to return on assets (ROA) aspiration (manifested in the difference between a firm's actual ROA and its prior ROA as a referent) exerts a similar influence on organizational change as the performance gap relative to analyst earnings forecasts (reflected in the difference between a firm's actual earnings and earnings forecasts as a referent). We posit that performance information can emanate internally from agency-driven firms or externally from securities analysts, and these distinct types of referents from different sources are conceptually unique and operate differently, thereby giving rise to dissimilar change behaviors. To facilitate a deeper understanding of these relationships, we investigate how alternate income streams from business unit (BU) performance at a lower level moderate the way corporate managers remedy corporate performance shortfalls at a higher level. Our study contributes to the behavioral theory by examining distinct influences of corporate performance goals derived from internally- vs externally-imposed referents and their interactions with BU performance within the organizational hierarchy on new market entry activities. Empirical evidence from a sample of multiunit firms listed in the information and communication technology (ICT) sector over the period 1998-2016 supported the hypotheses.

Perspectives on Organizational Resilience-Seeking

Organizer: **Russell E. Browder**, *U. of Oklahoma*

Organizer: **Jacqueline Jing You**, *U. of York*

Moderator: **Peter G. Klein**, *Baylor U.*

Panelist: **David Audretsch**, *Indiana U., Bloomington*

Panelist: **Jonathan Nicholas Bundy**, *Arizona State U.*

Panelist: **Martina K. Linnenluecke**, *U. of Technology, Sydney*

Panelist: **David G. Sirmon**, *U. of Washington*

Panelist: **Trenton A. Williams**, *BYU Marriott School of Business*

Organizational resilience has become an increasingly important concept for strategic entrepreneurship scholarship given the growing frequency and impact of exogenous shocks faced by firms today. In addition to facing competitive threats and rapid technological change (Sirmon, Hitt, & Ireland, 2007), new and established firms must learn to navigate adversity driven by crises like the COVID pandemic, geopolitical conflicts, climate events, financial shocks, and cybersecurity threats (You, 2023). Organizational resilience refers to a firm's ability to maintain positive adjustment when faced with adversity, bounce back from disruptions, and potentially emerge stronger and more resourceful than before (Vogus & Sutcliffe, 2007; Williams, Gruber, Sutcliffe, Shepherd, & Zhao, 2017; You & Williams, 2023). Conceptually, organizational resilience relates to several theoretical topics at the intersection of strategic management and entrepreneurship (Ireland, Hitt, & Sirmon, 2003). To adapt effectively, "firms need the agility to design and implement strategic changes effectively, which requires fluidity, speed, and mindsets that encourage innovative thinking and resilience" (Hitt, Arregle, & Holmes Jr., 2021: 263). This relates to dynamic capabilities research on sensing windows of opportunity, seizing opportunities by mobilizing resources, and transforming a firm for continual renewal (Ireland, Withers, Harrison, Boss, & Scoresby, 2023; Teece, 2007). Studying organizational resilience may also involve examining crisis management, stakeholder impact mitigation, adaptation and change, ownership competence, real options to minimize losses and capitalize on changing events, and temporary non-market strategies (Foss, Klein, Lien, Zellweger, & Zenger, 2021; Iqbal, Pfarrer, & Bundy, 2022; Kuratko & Audretsch, 2009; Mellahi, Frynas, Sun, & Siegel, 2016; Trigeorgis & Reuer, 2017). Recent research has introduced resilience-seeking as a potentially distinct category of strategic entrepreneurship undertaken by firms when the nature of adversity suddenly shifts from competition-driven to crisis-driven adversity. Defined as an "adaptive process by which a firm leverages new resource endowments to change action repertoires and transform itself in response to crisis-driven adversity" (Browder, Dwyer, & Koch, 2023: 25), resilience-seeking differs from conventional advantage-seeking and opportunity-seeking behavior focused on value capture and creation absent existential threats to a firm and its stakeholders. Organizational resilience studies emphasize the role of distinct resource endowments (e.g., financial, digital, social) that can equip firms with sensing, seizing, and transforming capabilities for resilience-seeking prior to and during crisis-driven adversity (Audretsch et al., 2024; Browder et al., 2023; Williams et al., 2017). Yet, there remains a dearth of research to guide resource endowment investment, matching, and durability for resilience-seeking across adversity episodes. In light of increasing interest in studying organizational resilience in a variety of organizational contexts (Williams & You, 2021), the purpose of this panel symposium is to engage leading scholars in discussion about resilience-seeking and its conceptual place in strategic entrepreneurship research. Scholarly understanding of resilience has been hampered when applied to organizations partly due to its metaphorical use rooted in individual psychology, ecology, and materials science and engineering in isolation (Linnenluecke, 2017; van der Vegt, Essens, Wahlström, & George, 2015; Williams et al., 2017; You, 2023). While these scholarly works have profoundly enriched our insight into organizational resilience, the literature remains extensively fragmented. For example, organizational resilience has been conceptualized at times as a "capability, capacity, characteristic, outcome, process, behaviour, strategy or approach, type of performance or a mix of these" (Hillmann & Guenther, 2021: 8). Thus, organizational scholars need to continue to clarify its boundary conditions and nomological network. Against this backdrop, we have assembled a panel of experts to explore and debate important perspectives on organizational resilience-seeking. While interest in resilience has received increased scholarly attention across many of the Academy's divisions since the onset of COVID, we aim to cultivate dialogue with a particular focus on strategic entrepreneurship that will resonate with scholars in the ENT, STR, and OMT divisions. As such, the aim of the symposium is to advance both strategic entrepreneurship and organizational resilience research. First, incorporating resilience concepts in strategic entrepreneurship research can help scholars examine how firms maneuver crisis-driven adversity when advantage-seeking and opportunity-seeking priorities yield to other objectives, such as stakeholder safety and reliable operations for public wellbeing (Weick, Sutcliffe, & Obstfeld, 1999). Second, integrating strategic entrepreneurship perspectives in organizational resilience research can help advance a uniquely organizational understanding of resilience by studying how firms convert crises into windows of opportunity and by empirically examining strategic actions as units of analysis before, during, and after crisis (Dushnitsky, Graebner, & Zott, 2020; Simsek, Heavey, & Fox, 2017).

Organizational Hybridity

Session Moderator: **Florian Andresen**, *Helmut Schmidt U.*

OMT: **Sailing in Institutional Storms: The German Navy's Voyage Through Dynamic Hybridization**

Author: **Florian Andresen**, *Helmut Schmidt U.*

Author: **Hans Ulrich Koller**, *Helmut Schmidt U.*

Author: **Benjamin Schulte**, *Helmut Schmidt U.*

This ethnographic study, spanning 28 months within the German Navy's First Flotilla, explores the dynamic interplay between a dominant institutional logic and an emerging, yet essential, minority logic. Focusing on an innovation team operating under an idealized startup logic, we unravel the mechanisms of their interaction with the Bundeswehr's entrenched bureaucratic logic. Our findings reveal a nuanced dance of convergence and divergence, characterized by phases of preparatory alignment, object-based blending, and logic shielding. This continuous oscillation between structural and blended hybrids, termed 'punctuated hybridity', highlights the team's strategic efforts to integrate innovative practices without succumbing to the dominant logic's potential for mission drift. Our study contributes to the discourse on institutional complexity by offering a novel perspective on managing logic contestation within large, stable organizations and enriches the understanding of dynamic hybridization and institutional. This ethnographic study, spanning 28 months within the German Navy's First Flotilla, explores the dynamic interplay between a dominant institutional logic and an emerging, yet essential, minority logic. Focusing on an innovation team operating under an idealized startup logic, we unravel the mechanisms of their interaction with the Bundeswehr's entrenched bureaucratic logic. Our study contributes to the discourse on institutional complexity by offering a novel perspective on managing logic contestation within large, stable organizations and enriches the understanding of dynamic hybridization and institutional.

OMT: **Managing the Degree of Hybridity: The Evolutionary Process of the Embeddedness of Subordinate Logic**

Author: **Suhyon Oh**, *Copenhagen Business School Department of Management, Society and Communication*

Author: **Lisa K. Hehenberger**, *ESADE Business School*

This article explores the complex evolution of balanced hybridization in a state-owned development finance institution with a multifaceted mandate encompassing environmental and social impact, revenue generation, and national policy implementation. Through a single case study of a European national DFI, longitudinal data is analyzed from inception to present to investigate shifts in hybridity and organizational responses. Findings reveal that when a development logic as the subordinate logic gains prominence due to external institutional demands, the initial organizational response leans against the subordinate logic such as compromise or manipulation. However, as the subordinate logic gradually attains acceptance within the organization, the organization shifts towards a positive stance, aiming for a balanced hybridization. The resulting organizational identity reflects this equilibrium, showcasing a dynamic interplay between logics at field and organizational levels. The research offers novel insights into the mechanisms of change within hybrid organizations, particularly those that seek to enhance their positive socio-environmental impact, shedding light on how these entities adapt and thrive in an ever-evolving context.

OMT: **The Impact of Mega-Threats on Employee Values in Social Enterprises**

Author: **Soomin Sophie Cho**, *U. College London*

The fatal shootings of Alton Sterling and Philando Castile in 2016 that propelled the Black Lives Matter (BLM) movement into the spotlight, characterized as a mega-threat, triggered global protests and heightened media attention. This study examines the impact of mega-threats on the values of employees in social enterprises, those whose professional goals are inherently dedicated to fostering social change. Given that social enterprises are uniquely devoted to achieving both financial sustainability and social impact, it is crucial to explore factors that influence their dual commitments. By measuring employee values on for-profit, hybrid social enterprises through a machine learning technique, we show that, in the aftermath of a mega-threat, employees in social enterprises aligned with its mission exhibit an increased salience of social values over financial values. Additionally, we emphasize an important role of public interests in the mega-threat on influencing this relationship. This research contributes not only by enhancing our understanding of how mega-threats influence employees in social enterprises but also by introducing computational methodologies for assessing the hybridity of employee values within social enterprises.

OMT: **Theorizing Hybrid Organizing for Grand Challenges**

Author: **Gorgi Krlev**, *ESCP Business School*

Author: **Maikel Waardenburg**, *Utrecht U. School of Governance*

Grand challenges are evaluative, uncertain, and volatile. Robust action strategies of multivocality, participation, and experimentation have been promoted as effective conceptual and practical responses to address these features. However, robust actions suffer from limitations, for example: when many actors have their say, but some actors assume sovereignty of interpretation and shape goals according to their own needs; when stakeholders participate, but fail to mobilize action; or when, despite distributed experimentation, involved actors deviate from joint progress when they face adversity. We propose theory on hybrid organizing, typically situated in reference to small-scale organizations such as social enterprises, has much to offer to meet these limitations in addressing grand challenges. We first conceptualize a grand challenges grid that helps explain the complexity of grand challenges better. We then develop a theoretical model of hybrid organizing for grand challenges, which proposes six ways in which hybrid organizing can amplify robust actions and thereby meet the complexity of grand challenges more effectively. We combine the two fields of research in new ways and thereby promote theoretical advancements in each of them, and specifically at their intersection.

Inclusion: Being Asked to Dance

Session Moderator: **Parijat Chakrabarti**, *U. of Michigan, Ann Arbor*

OMT: **How 'Inclusion' Scales: From Marginal Effects to Systems Analysis in the Practice of Development**

Author: **Parijat Chakrabarti**, *U. of Michigan, Ann Arbor*

Established development practice seeks to first identify effective interventions and then scale them up. Significant scholarly attention (and not insignificant funding) is devoted to identifying effective interventions; yet comparatively little attention is given to the question of scale. Taking the case of digital market platforms in Nairobi's "Silicon Savannah" and leveraging multiple methods within a full-cycle research design, this article argues that how interventions scale shapes development outcomes at a population level. While impact evaluations suggest that digital platforms can serve as instruments of economic inclusion for individual entrepreneurs, I show how, as such platforms scale, institutional pressures shape platform design in ways that prioritize engagement with large-scale, often male, entrepreneurs and marginalize small-scale, often women, entrepreneurs. Thus, ironically, benefits become distributed in ways that entrench existing gender and organizational inequalities. In attending to this paradox, I develop the theoretical and methodological scaffolding to shift scholarly attention beyond the marginal effects of development interventions towards a system-level analysis of (technology) interventions as they scale over time. This article contributes to studies of economic inclusion, technology and development, and emerging platform economies in the Global South.

OMT: **Trajectories of Inclusion: The Role of Relationality in Shaping Disability Inclusion**

Author: **Eline Jammaers**, *Hasselt U.*

Author: **Thomas B. Lawrence**, *Oxford U., Saïd Business School*

An important issue in the study of inclusion concerns changes that occur in organizations over time: the trajectories of inclusion in organizations. Although most research on inclusion has examined how and why organizations become (or fail to become) more inclusive over time, the opposite trajectory—organizations becoming less inclusive—remains an important but underexamined possibility. In this study, we explore the role that patterns of relationality in organizations play in shaping such trajectories. We examine three organizations chosen because they represented positive exemplars of disability inclusion: in each case the organizations, over a 10-year period, diminished in terms of their efforts at disability inclusion. We identify three types of (downward) trajectories of inclusion: diluting, expelling, and relocating inclusion. Our findings suggest these trajectories are tied to organization-level changes (e.g., a change in mission or governance) that led to shifts in patterns of relationality among organizational actors (in terms of density, hierarchy, and standardization of relationships). These broader changes provided a backdrop in which the disability regimes developed: the disability regimes all suffered from weakened structures of diversity responsibility and networking but had their own shift in the cultural meanings attributed to marginalized employees, in this case people with disabilities. Despite the fragility of inclusion in relational contexts that became more transactional in nature, the lived experiences of trajectories of inclusion demonstrate how local social orders marked by caring leadership and small-scale practical changes like hybrid and activity-based working can soften the blow of a downward trajectory of inclusion.

OMT: **Heading the Bully Pulpit: Immigrant Inequality through Executive Order Anticipatory Compliance**

Author: **Ben Rissing**, *Cornell U.*

Author: **Katie Apker**, *Cornell U.*

Author: **Laura Carver**, *Cornell U.*

We assess how President Trump's 2017 "travel ban" Executive Order (EO) created labor market inequality for immigrants from targeted majority-Muslim countries. Our Executive Deference account suggests government evaluators may defer to Presidential priorities during employment-based visa assessments, denying more applicants from targeted countries. Our Bully Pulpit account suggests applicants from targeted countries may preemptively discontinue employment efforts. By analyzing government administrative records, we find worse labor certification outcomes for immigrants from travel ban countries following the EO, primarily due to voluntary application withdrawal. Findings emphasize how EOs may intensify inequality (and advance policy goals) by influencing applicants from targeted countries, even absent formalized regulation.

Legitimacy and Strategic Discourse: I Do Not Think it Means What You Think it Means

Session Moderator: **Shipeng Yan**, *HKU Business School, The U. of Hong Kong*

OMT: **Bitcoin As Gold? Analogy as a Double-Edged Sword in Nascent Market Legitimation**   

Author: **You Wu**, *Chinese U. of Hong Kong*

Author: **Shipeng Yan**, *HKU Business School, The U. of Hong Kong*

Author: **Ze ZHANG**, *The U. of Hong Kong*

Gaining legitimacy is crucial in the nascent market of cryptocurrencies, often through means such as adopting analogies. For instance, cryptocurrencies are often compared to gold because of their inflation-hedging traits. Studies have demonstrated the benefits that analogies yield in legitimizing a nascent market. However, not all analogies are effective, and it is unclear how different rhetorical appeals influence their efficacies. To examine these issues, we hypothesize that analogical narratives focusing on the similarities between cryptocurrencies and inflation hedge positively influence the popularity of cryptocurrencies, whereas narratives emphasizing the dissimilarities have a negative influence. Furthermore, we examine how different rhetorical appeals influence the effectiveness of similarity-based and dissimilarity-based analogies, and we hypothesize that the former is strengthened by ethos rhetorical appeals and the latter is strengthened by logos rhetorical appeals. To test our hypotheses, we analyze a sample of 678 cryptocurrencies, 4,303 stocks, and 1,417 relevant news articles from January 2020 to August 2022. The empirical results support our hypotheses. Overall, our study contribute to enriching the understanding of analogies in the legitimization of nascent markets by showing that analogies are double-edged swords and elucidating the asymmetric moderation effects of rhetoric on similarity-based versus dissimilarity-based analogies.

OMT: **Incumbents Under Pressure: Frame Inversion as Legitimacy Balancing Act During Issue Salience**

Author: **Hannah Schupfer**, *Kings College London*

Author: **Birthe Soppe**, *U. of Innsbruck School of Management*

The salience of global issues initiates a shift in legitimacy that puts organizational fields and their legacy incumbents under pressure to engage in substantial change efforts. Yet, a multiplicity of expectations prevails that might contrast each other and threaten different dimensions of legitimacy. Through an inductive, longitudinal analysis of field and organizational-level data in the Norwegian oil and gas (O&G) industry (2007 to 2022), we develop a model of frame inversion that illuminates how contested field incumbents can balance contradicting legitimacy dimensions through discursive and substantial business changes. Specifically, we show how O&G incumbents acknowledge the issue of climate change by integrating it into an issue-induced 'low-carbon' frame alongside the established 'profitable growth' frame. Our findings suggest that organizations navigate issue salience by serving both contested and sustainable business areas, legitimated by frame inversion. Frame inversion employs the issue-induced frame to re-legitimate contested lines of business while inversely rewiring the pre-existing frame to sustainable ones. Our findings contribute to a dynamic perspective of framing by highlighting dynamics around symbolic and substantial change efforts and the management of opposing legitimacy dimensions during times of change.

OMT: **Discursive Strategy in 'Self-Celebritizing' Entrepreneurial Firms: Video-Based Analysis of SpaceX**  

Author: **Jingning Ao**, *Morgan State U.*

Discursive strategy involves using words, visuals, and audio to inform stakeholders, shape perceptions, and gain support. However, the use of discursive strategy on social media to self-celebritize entrepreneurial firms is not well understood, despite the potential benefits of increased visibility, reduced uncertainty, and enhanced differentiation. This study explores what and how discursive strategy through social media have been actively performed for self-celebritization, employing an inductive analysis of the top 50 most-viewed SpaceX YouTube videos over the 16 years from 2008 to 2023. The findings suggest that videos are effective tools of discursive strategy for conveying disruptive innovation and inspiring stakeholders toward future-making aspirations. This study contributes to the literature on entrepreneurship, space commercialization, and video as data.

OMT: **'National Interest' Rhetoric in Defensive Institutional Work**  

Author: **Virva SALMIVAARA**, *Audencia Business School*

Author: **Ewald Kibler**, *Aalto U.*

We advance understandings of defensive institutional work by examining how 'national interest' rhetoric is used to defend national institutions in response to organizations' institutional change efforts. To tackle this question, we analyze policy argumentation on 13 institutional change initiatives devised by trade, political, or civil society organizations that have sought to introduce national legislative change in Switzerland between the late 1980s and early 2020s. Our analysis identifies three novel types of defensive institutional work—protection of chosen institutions, reaffirmation of shared institutions, and sustenance of controlled institutions—by which policymaking responds to organizations' change initiatives and portrays their rejection (or acceptance) as being of national interest. Our study contributes to the literature by expanding our knowledge of defensive institutional work on national institutions that have been subjected to 'insider-driven' change efforts. We also add a missing piece to the organizational literature on rhetoric by presenting and dissecting 'national interest' as a powerful rhetorical device mobilized to shape organizations' institutional environment.

Traditions and Custodial Work in Unstable and Turbulent Times

Discussant: **Tina Dacin**, *Queen's U.*
Organizer: **Sonya Sunyoung Pyo**, *New York U.*
Presenter: **Andrew Nelson**, *U. of Oregon*
Presenter: **Lee Charles Jarvis**, *Warwick Business School*
Presenter: **Alison Joubert**, *Adelaide Business School*
Presenter: **Alan Zhang**, *MIT Sloan School of Management*
Presenter: **Daphne Ann Demetry**, *McGill U.*
Presenter: **Gillian Gualtieri**, *Barnard College*

Traditions, and the custodians who maintain and preserve them, are highly valued and recognized as central for many organizational processes such as institutional persistence, organizational identity and legitimacy and strategy. In contemporary organizational settings however, traditions have come under increasing pressures that threaten their continuity. In this symposium, we explore how custodians respond to these various threats and analyze the outcomes of their strategies by focusing on traditions in unstable and turbulent contexts. The studies collectively highlight two themes under-theorized in the literature on traditions and custodial work. The first theme is change—how and to what extent do traditions change to survive a turbulent time? The second theme is custodial work as strategy—how do custodians respond to threats, creatively, collaboratively or defensively, and how do these strategies contribute to the persistence or erosion of the tradition? In connection to the AOM 2024 theme, the goal of this symposium is to generate conversations and insights into the role of custodians in innovating for the future, while preserving the traditions and values that make up the foundation of community and collective identity.

Organizational Fit and MisFit

Session Moderator: **Bryan Kaiser Stroube**, *London Business School*

OMT: **The Misfit Bias**

Author: **Bryan Kaiser Stroube**, *London Business School*

Author: **Keyvan Vakili**, *London Business School*

Author: **Michael A. Bikard**, *INSEAD*

Audiences often penalize products that combine unrelated elements. In this paper, we document the consequences of that penalty for the evaluation of the elements being combined. Building on the idea that audiences cannot fully disentangle the quality of “fit” between elements from the quality of the elements individually, we argue that audiences are likely to misdirect their dislike of a misfit product to the individual elements being combined. Using an archival study of the music industry and an online experiment with photographic galleries, we find that evaluations of individual elements (songs, photographs) are influenced by product-level fit (albums, galleries). Elements of misfit products are evaluated less favorably than they would have been otherwise. We discuss the implications of this “misfit bias” for producers and their recombinations.

OMT: **Best-Selling not Applauded? A Double-edged Sword of Product Typicality on Performance Evaluation**

Author: **Anni Chen**, *Southeast U., Nanjing, China*

This study engages with the enduring discourse in category research pertaining to the relative allure of typical versus atypical products to diverse audiences. While extant literature has extensively addressed audience heterogeneity, a discernible lacuna exists in the examination of how identical audience cohorts variably appraise distinct facets of a product—a phenomenon ubiquitously acknowledged in product markets as the “best-selling not applauded” conundrum. Adopting a framework rooted in reference group selection, this paper contends that audiences deploy discrete reference groups during the evaluation of a product’s market and social performance. Consequently, an augmentation in audience evaluations of a product’s market performance coincides with a concomitant attenuation in assessments of its social performance. Moreover, the articulated mechanism is empirically substantiated by scrutinizing the contingent factors of category density and product competition. A unique dataset on a digital platform in Chinese film industry provided strong support to the hypotheses.

OMT: **The Impact of Misalignment and Plurality on Venture Capital Valuations**

Author: **Arnaud Cudennec**, *Bayes Business School (formerly Cass), City, U. of London*

Author: **Rodolphe Durand**, *HEC Paris*

Ventures face dual pressures toward typicality and atypicality. Drawing upon organizational research on conformity and distinctiveness, we show that prior literature has conflated two dimensions of atypicality: the extent to which a venture differs from the industry prototype’s representative features — misalignment — and the extent to which a venture embraces a multiplicity of features representative of the entire semantic space beyond a specific industry category — plurality. Using unique data on US early-stage venture capital deals from 2000 to 2017 and novel topic modeling approaches on the ventures’ business descriptions (i.e., biterm topic model), we theorize and demonstrate that while investees’ misalignment is associated with a lower investors’ valuation, plurality is associated with a higher valuation. In additional empirical analyses, we found that misalignment reduces the positive effect of plurality on valuation. These findings offer important conceptual and empirical contributions to the research on optimal distinctiveness, strategic categorization and entrepreneurship.

OMT: **Managing Disorganization in Business**

Author: **Dinuka Herath**, *U. of Huddersfield*

In the past five decades, complexity, and disorganization theories have had a significant influence in management debates. Traditionally mess, also known as ‘disorganization’ was considered damaging to firms. However, as firms became more complex, more nuanced understandings of the phenomenon have been developed facilitated by our growing knowledge of the ubiquity of disorganization in firms and the need to manage it. While the need for more advancement in this domain is called for in the corpus, currently very little has been said about the specific mechanisms needed to manage disorganization in businesses. In filling this gap, this paper extends our current understanding of the phenomenon by articulating specific design levers with an accompanying integrated disorganization handling model, outlining how disorganization can be leveraged to improve our organizing processes at a collective/firm level. This paper puts forth a proactive approach to disorganization which focuses on ‘using disorganization for gainful effect’ (leveraging). This paper has 3 main parts, the first positions this work; the second outlines the mechanisms, propositions, and an integrated disorganization handling model. The final part presents a discussion exploring practical and research implications.

Theorizing Work Structures: Virtual, Siloed, Teamwork

Session Moderator: **Svjetlana Pantic Dragisic**, *Linköping U.*

OMT: **Working Betwixt and Between: Virtual Teamwork in Management Consulting** 

Author: **Svjetlana Pantic Dragisic**, *Linköping U.*
Author: **Frida Pemer**, *Stockholm School of Economics*

Covid-19 has disrupted social norms, cultural practices, and established ways of working – from going to work and meeting physically, to working remotely or in hybrid formats. This change has been particularly salient in project-based professional service firms (PSFs), which are based on team collaboration. However, the shift towards hybrid work means that both the teams and their members increasingly find themselves in a state of liminality, working betwixt and between. The current study explores how professionals in project-based PSFs experience and navigate liminality caused by remote teamwork. Based on an interview study with 32 management consultants, we find that the pandemic has forced the consultants into a state in which they have to deal with three liminal states simultaneously. Thus, they experience and must navigate triple liminality: liminality as a process, liminality as a position and liminality as a place. We contribute to the literature on the future of work, particularly in PSFs, and the still scant but growing literature on liminality in professional services.

OMT: **Remote Work and Hiring Requirements: Large-Scale Cross-Country Evidence** 

Author: **Letian Zhang**, *Harvard Business School*
Author: **Shinan Wang**, *Northwestern Kellogg School of Management*
Author: **Zhenyu Liao**, *Northeastern U.*

This paper suggests that remote work increases employers' demand for skills and qualifications. By reducing face-to-face interaction and synchronous communication, remote work increases the difficulty of training employees on the job. At the same time, it expands the labor pool by enabling employers to hire from a wider geographic range. Consequently, remote work elevates skill and qualification requirements in the labor market. We test this proposition by analyzing over 50 million jobs posted in 28 EU countries from 2018 to 2021. Using strict fixed effects on occupation-employer-country-year and an instrumental variable approach based on the COVID pandemic, we find that changing to remote work increases a job's requirement on work experience, education credentials, and number of skills. These findings imply that remote work could potentially exacerbate skill-biased inequality.

OMT: **Opportunistic Change During a Punctuation: How the Frontlines can Drive Bursts of Incremental Change (WITHDRAWN)**  

Author: **Elisabeth Yang**, *Yale School of Management*
Author: **Julia DiBenigno**, *Yale School of Management*

Despite the value of incremental frontline change ideas for organizational performance, punctuated equilibrium theories of organizational change tend to concentrate on top managers' origination and implementation of de-novo radical changes during punctuations. Little theoretical or empirical work has examined frontline-driven, incremental change efforts during these periods of disrupted stasis. We develop a process model to explain how and when those on an organization's frontlines can leverage a punctuation to opportunistically implement long-desired change ideas in ways that promote their retention. We conducted a two-year qualitative field study examining the trajectories of 33 change ideas generated by frontline staff at a hospital during the Covid-19 pandemic. By comparing ideas that persisted to become part of normal operations to those that failed to be selected or retained, we identified practices and conditions that promoted the selection and retention of frontline change ideas. Our study suggests that frontline change advocates can seed the long-term retention of sufficiently "shovel-ready" change ideas—as opposed to de-novo ideas—by rapidly and opportunistically deploying a novel set of practices before closure of the brief window of opportunity created by lessened constraints and increased managerial receptivity. Prior theories of change largely assume frontline-driven change to be slow and continuous, proceeding in a one-off fashion over years; we explain how and when frontline change can instead occur in rapid, opportunistic bursts during punctuations. We make multiple contributions to theories of punctuated equilibrium and bottom-up change in organizations by unearthing an alternative way change can be intentionally accomplished in organizations.

OMT: **Structural Elasticity: How to Facilitate Innovative Knowledge Work Among Multiple Silo Organizations** 

Author: **Hanieh Mohammadi**, *McGill U. - Desautels Faculty of Management*

This three-year ethnographic study introduces 'Structural Elasticity' as a critical mechanism in inter-organizational team innovation, building on the study of Ordinum's (pseudo name of a country) labour market analysis system. Structural Elasticity is characterized by the act of subtly bending existing organizational structures to create a conducive space for innovation, maintaining the integrity of the original structure while allowing for necessary flexibility. This concept is essential in environments where multiple entities with equal power and differing objectives interact. The study reveals three key mechanisms - protocol scaffolds, informal information pipelines, and neutral ownership practices - that teams utilize to achieve this elasticity. My contribution to the literature on team innovation and open innovation lies in elucidating how Structural Elasticity enables self-emerging teams to navigate and innovate within and across different organizational sectors, particularly in complex social contexts where rigid structures are less effective. This research offers insights for both theoretical understanding and practical application in managing dynamic, cross-organizational collaborations for innovation.

Panelist: **Boukje Cnossen**, *Leuphana U. Lüneburg*
Organizer: **Elizabeth Sander**, *Bond Business School, Bond U., Australia*

Organizational spaces have historically played a pivotal role in business and organization research, serving as a shared environment for the workforce and a unifying fabric for work. They bedrock and contextualise key concepts and mechanisms in the realm of work, including identity (Elsbach, 2003), leadership (Crevani, 2018), innovative practices (Furnari, 2014), social interactions (Fayard & Weeks, 2007) and work relationships (Khazanchi et al., 2018). However, the recent mass transition to work from home (WFH) during the COVID-19 pandemic has shaken this historical function of organizational spaces, urging their adaptation to accommodate new working arrangements (Waizenegger et al., 2020). While organizations see opportunities in this shift to reduce costs by downsizing their real estate, decentralization also brings concerns that include maintaining a cohesive company culture, ensuring effective communication and employee engagement, and addressing potential cybersecurity risks. The image of a traditional office also becomes increasingly blurry, raising the question of what it will look like in the future, and why would people want to go there? This symposium seeks to dissect and understand the emerging paradigms in future organizational spaces that continued to evolve post-pandemic. Themes to be explored in the symposium include but not limited to: Workplace adaptations and Activity-Based Workplaces; Accommodating hybrid working; Physical separation and sense of togetherness; Emerging workplace technologies; Interdisciplinary collaboration and new theoretical perspectives.

Diversity, equity, and inclusion (DEI) is a critical research area in management that often entails examining populations that have historically been understudied. Past scholarship has highlighted how studying such populations can be connected with various methodological challenges and complexities. For instance, understudied populations often present difficulties with achieving a large enough sample size. They may also be more challenging to gain access to. However, researchers have also identified ways to attend to, and potentially address, some of these challenges and complexities. Accordingly, we have three goals in this panel. First, we aim to highlight opportunities for researching understudied populations in DEI scholarship. Second, we aim to discuss the methodological challenges associated with such research. Third, we aim to offer researchers strategies for navigating and addressing these challenges. To support these three goals, we have compiled a panel of expert DEI researchers, who will draw on their past experiences to address these three aims and, ultimately, forward audience members' understandings of these topics.

Participant: **Giovanni Battista Dagnino**, *U. of Rome Lumsa*
Discussant: **Pino G. Audia**, *Dartmouth College, Tuck School of Business*

Organized crime groups (OCGs) are important business and institutional actors in several locations around the world. In this symposium, we explore how the presence and activities of OCGs influence emerging societal challenges, threats, and crises. Our investigations use OCGs as a metaphor for pursuit of extreme profit motive and instrumental practices that contribute towards perpetuating social inequalities and exploitation. By digging deeper into the workings of organized crime groups, we develop theoretical and practical implications for what constitutes firms' ethical and socially responsible behavior.

Shareholder Activism and Stakeholder Dynamics in Environmental Governance

Session Moderator: **Mark R. DesJardine**, *Tuck School of Business at Dartmouth*

ONE: **Shareholder Activism from a System's View: How the Media and Regulators can Facilitate the Campaigns**

Author: **Mark R. DesJardine**, *Tuck School of Business at Dartmouth*

Author: **Jinyuan Song**, *George Mason U.*

Author: **Yifan Wei**, *Beedie School of Business Simon Fraser U.*

Amid extensive research on the direct effects of shareholder activist demands on target firms, recent calls have been made to understand the broader system in which activism unfolds, including the actors that facilitate or hinder activists' efforts. In this study, we develop a theoretical framework that positions the outcomes of shareholder activism as contingent on the actions of other third-party stakeholders. The fulcrum of our theory is that activist demands will more effectively motivate organizational change when other stakeholders reinforce the issues raised by shareholder activists. Situated in the context of shareholder proposals, we theorize and find that the potential for proposal-based activism to enact organizational change hinges on the scrutiny of proposed issues raised by the media and regulators, which, respectively, bring coverage and credibility to the issues at hand. This study steps beyond the activist-firm dyad to provide new insights into the role that non-shareholding stakeholders play in shareholder activism, and raises new questions about stakeholder governance.

ONE: **Organizational Responses to Societal Demands and Their Implications for Environmental Performance**

Author: **Gift Garikai Dembetembe**, *PhD Candidate, U. of St. Gallen*

Author: **Miron Avidan**, *Chatham U.*

Author: **Judith Louise Walls**, *HSG U. of St. Gallen*

Institutional theory has overlooked the implications of organizational responses to societal demands. We investigate how three conventional corporate responses to the demand for climate change action, including compromise, avoidance, and manipulation, relate to actual emissions reduction. We also examine the moderating effect of reputational risk on these relationships. Our analysis is founded on panel data regression of 5,431 firm-year observations of S&P500 companies between 2011 and 2021. Our results show that compromising is associated with a reduction in emissions over time. We find marginal evidence that avoiders increase emissions and that, under high reputational risk, organizations manipulate more and consequently increase their emissions. Our study contributes to institutional theory by connecting organizational responses to societal expectations with environmental performance. Our findings vindicate the promise of corporate sustainability strategies in reducing carbon emissions.

ONE: **Unintended Consequences of Shareholder Activism: A Socio-Cognitive Stakeholder Theory View**

Author: **Maria Ruiz Castillo**, *U. of Granada (Spain)*

Author: **Ruth V. Aguilera**, *Northeastern U.*

Author: **Juan-Alberto Aragon-Correa**, *U. of Granada*

Author: **Nuria Hurtado-Torres**, *U. of Granada*

Shareholder activism oriented towards non-financial requests, that is, environmental, social and governance (ESG) issues, has grown exponentially and includes different characteristics and therefore implications than the traditional activism. However, its impact is not well-understood. We develop a conceptual model drawing on stakeholder theory and the socio-cognitive perspective in which we predict that most firms will react to intensive ESG shareholder activism by improving its non-financial performance. However, we argue that firm responses to these stakeholder pressures can be complex and might entail enhancing performance in areas beyond the activists' most prevalent requests in order to sustain the firm's need for social approval and legitimacy. Drawing on a sample of S&P 500 firms spanning from 2006 to 2020, we show that receiving shareholder proposals is in fact effective in improving overall non-financial performance. Interestingly, we also uncover that governance shareholder activism leads to advances in firms' socio-environmental performance, and that the influence of socio-environmental activism is moderated by the presence of foreign institutional investors. Our theorizing and empirical findings reveal the underlying multifaceted dynamics of firms' responses to shareholder activism and complement insights from the traditional stakeholder perspective to better understand the intersection of corporate governance and sustainability.

ONE: **Environmental Controversies and Initiatives: Stakeholder Responses to Conflicting Signals**

Author: **Beatriz Domínguez**, *U. of Zaragoza*

Author: **Jaime Gomez**, *U. de La Rioja*

Author: **Raquel Orcos**, *U. de La Rioja*

Author: **Sergio Palomas**, *U. of Zaragoza*

Stakeholders receive diverse signals regarding a firm's environmental practices, influencing their reactions and subsequently impacting the firm's market value. This study acknowledges these signals as either positive (stemming from the firm's environmental initiatives) or negative (emanating from environmental controversies highlighted by external sources). Our analysis not only scrutinizes the impact of these positive and negative signals on firm market value but also explores their specific characteristics, encompassing volume, persistence, and strength. Additionally, we investigate the interplay between environmental initiatives and controversies on firm market value. The results derived from examining a sample of 346 publicly listed firms spanning from 2006 to 2022 reveal the contrasting effects that positive and negative signals exert on a firm's market value. Moreover, we find an interaction effect between these signals, which emphasizes the necessity of considering signal characteristics for a comprehensive understanding of their implications.

Environmental Performance Metrics and Reporting

Session Moderator: **Lorenz Fenk**, *TUM School of Management, Technical U. of Munich*

ONE: **Environmental Photograph use in Corporate Sustainability Reporting: A Machine-Supported Analysis**

Author: **Lorenz Fenk**, *TUM School of Management, Technical U. of Munich*

Despite the prevalence of photographs in corporate sustainability reporting, their use is not yet sufficiently understood. To the best of our knowledge, this paper is the first large-scale study in the field. Introducing a novel machine-supported approach, we assess environmental photograph utilization based on a sample of 45,228 photographs contained in 1,463 separately disclosed sustainability reports from European firms between 2011 and 2020. We find that against the overall trend of decreasing photograph utilization, the share of environmentally themed photographs has markedly increased. Furthermore, operating in an environmentally sensitive industry is strongly associated with a substantially larger share of photographs depicting environmental subject matter. Lastly, we observe that companies signal their superior environmental performance through a greater utilization of environmental photographs. By introducing a novel machine-supported approach to analyzing photographs, this study makes a methodological contribution to the field of corporate sustainability reporting. Our results also have important practical implications.

ONE: **Emissions for Sustainability: The Ambiguous Role of Closed-Loop Orientation for Eco-Performance**

Author: **Vincent Julius Verweyen**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Author: **Tessa Christina Flatten**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

In the wake of increasing environmental consequences from industrial development, concepts such as circular economy have central importance for consumers, businesses, and policymakers. One firm-level manifestation of these concepts is closed-loop supply chain management, which emphasizes the recovery and reuse of goods. Our study leverages closed-loop supply chain orientation as a suitable strategic orientation, exploring its implications for environmental firm performance. While existing research shows a positive relation between this orientation and firm performance outcomes, we identify and explore potential contradictions within these findings. Guided by the practice-based view, we propose a u-shaped relationship between closed-loop supply chain orientation and environmental firm performance over time. We suggest the existence of a temporary phase, in which producing higher-quality products for circular use leads to a decline in environmental firm performance. We test our hypotheses using secondary, longitudinal data from the S&P500 spanning 2000 to 2022.

ONE: **The Uncertainty of Corporate Sustainability Metrics**

Author: **Kelly Clark**, *UCLA*

Author: **Magali Delmas**, *U. of California, Los Angeles*

Author: **Dylan Minor**, *UCLA Anderson School of Management*

Author: **Tyson Timmer**, *UCLA*

We propose a framework to help assess corporate sustainability metrics in light of the uncertainty associated with sustainability measurement. We argue that researchers and stakeholders must account for the specific dimensions of uncertainty that permeate metrics designed to gauge sustainability processes or outcomes. Without understanding the uncertainty inherent in disclosed metrics, conclusions drawn from them create a false sense of objectivity and validity. We present a framework that explores the dimensions, sources, and manifestations of uncertainty, and we illustrate our framework through the case of carbon offsets. Our framework distinguishes between the uncertainties in process and performance measures that are frequently conflated and clarifies how they differ. Our work enriches our understanding of the uncertainty associated with corporate sustainability disclosures. It can be useful for stakeholders and researchers developing or using sustainability metrics.

ONE: **Automation's Hidden Traps: M&A Performance Commitments, Robot Application, and Greenwashing**

Author: **Zeyong Cao**, *School of Management, Xi'an Jiaotong U.*

Author: **Junrui Zhang**, *Xi'an Jiaotong U. School of Management*

Can manufacturing firms simultaneously pursue automation and environmental sustainability? We investigate this question within the context of merger and acquisition (M&A) performance commitments, exploring how firms navigate their business strategies under external pressures. Our empirical analysis of M&A transactions involving listed manufacturing firms in China from 2015 to 2022 reveals a significant role of M&A performance commitments in promoting greenwashing. The extent of automation is complex: a higher level of robot application exacerbates the greenwashing associated with M&A performance commitments, while a lower level mitigates it. Mechanism analysis shows that both "inflated" and "non-inflated" performance commitments increase the propensity for greenwashing due to performance pressures and agency costs. Moreover, while greenwashing reduces credit market financing constraints for these firms, it adversely affects their market value recognition in the capital market. Firms that more effectively achieve their performance commitments exhibit a reduced propensity for greenwashing. This study offers critical insights for businesses, regulatory authorities, and stakeholders, contributing to the development of more robust regulatory frameworks and corporate governance strategies.

Author: **Catrina Achilles**, *U. of Goettingen*

Author: **Peter Limbach**, *Bielefeld U.*

Author: **Michael Wolff**, *U. of Goettingen*

Author: **Aaron Yoon**, *Northwestern Kellogg School of Management*

Using project level data that firms disclose in the Carbon Disclosure Project, we provide evidence on what firms actually do to reduce greenhouse gas emissions. The majority of initiatives that firms take on require small investments (median \$127,000) and have payback periods of at most three years. These short-term initiatives mostly target energy efficiency in buildings or production and generate more monetary and CO₂e savings. Firms experiencing short-term performance pressure, smaller firms, and those granting themselves less time to achieve their own emissions targets are more likely to implement such initiatives. A greater share of short-term initiatives predicts better environment-related ESG ratings but no superior firm performance, consistent with the small size of investment. Overall, the evidence suggests that firms do not act according to the common view that investments in the environment are, or should be, long-term oriented. Firms tend to mitigate rather than adapt to climate change.

Circular Economy Strategies and Transition Frameworks

Session Moderator: **Daniel Wörner**, *U. of St.Gallen*

ONE: **Unpacking the Transition Toward Circular Business Models: A Holistic Framework of Transition Drivers**

Author: **Daniel Wörner**, *U. of St.Gallen*

Author: **Niklas Letmathe**, *Karlsruhe Institute of Technology*

Author: **Marin Jovanovic**, *Copenhagen Business School*

Author: **Thomas Friedli**, *U. of St.Gallen*

Addressing a critical gap in the circular economy literature, this study explores the dynamic interplay and multilayered nature of internal and external transition drivers shaping the holistic transition of firms toward circular business models (CBMs). Utilizing 33 semi-structured interviews with diverse companies and a geographical focus on central Europe and beyond, the research delves into the roles of external stakeholders, public-private partnerships, ethical leadership, and digital advancement in defining sustainable practices. Through a qualitative data analysis, our study reveals four aggregated dimensions: implicit sustainability aspects, strategic sustainability management, sustainability governance, and intrinsic sustainability elements. These findings offer a nuanced understanding of the transition toward CBMs, highlighting the significance of both internal and external drivers in crafting a holistic framework of transition drivers toward CBMs, their dynamic interplay, and their multilayered nature. We propose specific CBM transition drivers on three different levels of granularity – that is, regulation and market, strategy and governance, and culture and resource level drivers – while also uncovering areas on which managers can focus to alter current business models toward the adoption of CBMs. The study provides valuable insights into the discourse on circular transitions, fostering a deeper comprehension of the multifaceted nature of sustainability drivers and their impact on firm-level practices.

ONE: **Circular Systems Navigator: A Process Tool for Circular Systems Design and Rebound Effect Mitigation**

Author: **Henry Willem Müller**, *HSG U. of St. Gallen*

Author: **Konstantin Remke**, *ESCP Business School*

In this study, we develop a novel tool for designing circular systems - the Circular Systems Navigator. While existing tools and frameworks abound for circular product and business model design, a notable gap exists in addressing the requirements of circular systems design. Systems design is highly relevant because businesses need to simultaneously harmonize product, service, business model, and ecosystem design to avoid adverse rebound effects. We employ design science methodology involving 31 expert interviews, user surveys, and an experimental evaluation to develop and validate a practically useful artifact to holistically design circular systems. We advance theory by championing the concept of Circular Systems Design, providing a process model, and addressing the critical issue of Circular Economy Rebound. This contribution marks a substantive step forward in accelerating the implementation of circular strategies and addressing a fundamental theoretical concern within the broader context of the Circular Economy.

ONE: **Addressing Imperfect Substitution in the Circular Economy**

Author: **Jozef Cossey**, *KU Leuven & UCLouvain*

Author: **Anaïs Périlleux**, *UCLouvain*

Management scholars have studied circular economy value propositions, products and business models as well as how consumers adopt them. However, rebound effects, such as imperfect substitution, can offset the resource savings of such circular economy strategies. This paper extends management scholarship to consider how circular products often fail to substitute for linear products. Concretely, we review three approaches to behavioral change, based on individual intentions, behavioral lock-in, and structural lock-in, before empirically assessing their ability to explain the substitution of linear products by circular products in the context of carsharing. We find support for theoretical explanations based on individual intentions, structural lock-in and the interaction between them as ways to address imperfect substitution. We conclude by discussing how rebound effects complicate sustainability claims at the firm and product-level and theorize the strategies available for managers and policy-makers to address imperfect substitution.

ONE: **Towards a Sustainable and Circular Blue Bioeconomy: A Scoping Review**

Author: **Ashkan Pakseresht**, *Brunel Business School, Brunel U. London*

Author: **Alireza Kermani**, *U. of Tehran*

Author: **Carolyn Decker-Lange**, *Brunel Business School, Brunel U. London*

This study explores biotechnological innovations based on marine resources in the burgeoning blue bioeconomy, aiming to unlock their potential for valorization for new business models. Using a scoping review, we specify four clusters of innovations: bioenergy, feedstock and fertilizers, biomass for food, and industrial applications. These clusters offer promising energy, food, and materials alternatives while aligning with circular economy principles and the UN Sustainable Development Goals. This study thus fills a gap in extant management research by integrating ocean biodiversity into considerations of sustainable entrepreneurship and investigating valorization options within the blue bioeconomy, particularly concerning SDG 14 Life Below Water. The findings pave the way for designing feedstock and regenerative business models that harness the blue bioeconomy's economic, environmental, and social benefits.

Waters of Resilience: Managing Scarcity & Community Systems in Crisis

Session Moderator: **Deborah Carroll**, *U. of Illinois Chicago*

This presentation will share research on the interplay between crisis management and common resource governance, examining how nonprofits navigate collaborative challenges, the impact of diverse stakeholder needs on collective action, the fiscal trends in public water systems, and the facets of resilience in public sector organizations.

PNP: Resource Scarcity and Stakeholder Heterogeneity: Determinants of Collective Action

Author: **Marc Legrand**, *HEC Paris*

Author: **Bertrand V. Quelin**, *HEC Paris*

We examine stakeholder governance of common-pool resources and focus on the heterogeneity of stakeholders in terms of interests vis à vis the resource and time horizon, i.e. either they derive immediate value from the resource or they benefit from the value being protected in the long term. We ask how do communities of diverse stakeholders collectively design institutions to sustainably manage a common pool resource. While research on common-pool resource management has mainly focused on communities of homogenous stakeholders and notably direct users, we propose that the heterogeneity of stakeholders within a community positively impacts participation in the collective action process by increasing the incentives to be represented in the institutional design process and to defend one's specific interest. We further argue that coordination costs act as moderators such that stakeholders may be less likely to join the collective action process when similar stakeholders are present to defend the group's interest and bear their share of the costs. To test our hypotheses, we use a unique empirical setting wherein local agencies representing the interests of different stakeholders are instructed to collectively design institutions to manage groundwater basins in California. Our results show that stakeholder heterogeneity leads to greater institutional membership, moderated by the transaction costs and the distribution of stakeholders. We offer further theoretical and empirical implications.

PNP: Organizational Resilience in Public Sector Organizations  

Author: **Stefanie Popp**, *Technical U. of Applied Sciences Würzburg-Schweinfurt*

Author: **Michael Garkisch**, -

Author: **Charlotte Foerster**, *U. of Technology Chemnitz*

In an era in which public organizations grapple with an increasing number of challenges, the recent global pandemic serves as a poignant illustration, of the need for organizational resilience within such public sector organizations. However, it's important to note that resilience is inherently contextual and contingent upon the specific circumstances and types of organizations. Enhancing resilience within public organizations necessitates a thorough evaluation of existing research in the field. Consequently, we conducted a systematic literature review across three databases and leading journals in public management. From this qualitative content analysis, we developed a comprehensive framework to enhance public organizations' resilience. This framework includes 25 distinct attributes, such as staff training and empowerment. Our findings underscore the importance of management, organizational design, and the judicious allocation of human and non-human resources in ensuring organizational resilience. Our study contributes to a deeper understanding of the current knowledge on public organizational resilience and proposes a research agenda to advance understanding and practice in this area. Join us in uncovering the essential elements necessary for creating resilient public organizations capable of withstanding adversity.

PNP: Collaborative Crisis Management and Nonprofit Governance

Author: **MOHAMMADSADEGH HASHEMI**, *Mount Allison U.*

Author: **Sara-Ann Strong**, *Research Associate, Mount Allison U.*

Author: **Taieb Hafsi**, *HEC Montreal*

Author: **Hamed Motaghi**, *U. of Québec in Outaouais*

This research delves into the crisis management strategies employed by nonprofit organizations (NPOs) within two diverse neighborhoods of Montreal, Canada, in response to the COVID-19 pandemic. Benefiting from the literature on crisis management and nonprofit governance, the study investigates how NPOs navigated the challenges posed by the pandemic, particularly in addressing the health and social impacts on vulnerable communities. Utilizing a Grounded Theory Methodology, the research unfolds the experiences of various community organizations catering to diverse ethnic and cultural groups. The findings illuminate the governance mechanisms and behaviors, including the use of neighborhood round tables, digital communication strategies, and pragmatic leadership, employed by NPOs to effectively manage the crisis and establish trustworthy networks of collaboration with diverse stakeholders. Furthermore, the study underscores the emergence of bottom-up social processes and a shift in power dynamics, signifying a transition from centralized decision-making by governmental authorities to previously marginalized actors gaining influence on the ground. In conclusion, the research offers practical recommendations for NPO managers, policymakers, and funders, aiming to enhance NPO resilience and performance amidst crises.

Author: **Dan Huang**, *U. of Illinois Chicago*

Author: **Kate Albrecht**, *U. of Illinois Chicago*

Author: **Deborah Carroll**, *U. of Illinois Chicago*

Author: **Jun Li**, *U. of Illinois Chicago*

Author: **Laura Medwid**, *U. of Illinois Chicago*

Author: **Jason Michnick**, *U. of Illinois Chicago*

The structure of community water systems (CWS) across the state of Illinois is complex and largely fragmented despite emerging consolidation efforts. Each public water system faces a unique combination of advantages and challenges in keeping up with costs of system operations, debt repayment, and necessary capital improvement projects while striving to ensure water provided to households is high quality and affordable to their customers. The majority of the nearly 50,000 CWS across the United States are primarily funded by user charges (Greer, 2020). User charges are established by local authorities that govern a CWS (Deslatte et al., 2022), and become the primary mechanism for recovering the cost of providing drinking water to the users of a system (Beecher & Shanagan, 1999). Therefore, the costs of the system are the foundation of how user charges are established and what constituents ultimately pay for their drinking water. Drinking water systems are capital intensive and the construction and maintenance of the associated infrastructure is a primary driver of the costs of providing drinking water. Compared to other infrastructure types, drinking water is less subsidized by the national and state governments, meaning that the majority of these capital costs are funded locally (Hansen & Mullins, 2022). Understanding service expenditures of CWS is a critical first step for understanding the financial viability of water systems, and a potential source of variation in water bill levels across the downstate region of Illinois. This information is particularly important as CWS provide an essential service for individual and community health and are facing mounting infrastructure and environmental pressures. However, little is known about the expenditure levels necessary to provide water service on a per-customer basis, particularly in the context of rural water systems. This information also have policy implications as policymakers and water system managers strive to ensure households have long-term access to affordable and safe drinking water. This paper seeks to empirically test the magnitude of association, if any, that a variety of management and community factors have on the cost burdens CWS face in providing water and water services across southern Illinois. This information will fill gaps in knowledge about the unique challenges CWS face in maintaining fiscal health, particularly in a rural context.

Methodological Pluralism in Team Research

Moderator: **Aimee Kane**, *Duquesne U.*
Moderator: **Kyle J. Emich**, *U. of Delaware*
Panelist: **Henrik M. Bresman**, *INSEAD*
Panelist: **Corinne A. Coen**, *Case Western Reserve U.*
Panelist: **Kyle J. Emich**, *U. of Delaware*
Panelist: **Aimee Kane**, *Duquesne U.*
Panelist: **Lyn M. Van Swol**, *U. of Wisconsin-Madison*

Teams are ubiquitous across workplaces and organizations of all kinds. Although our current understanding of team functioning comes from years of pluralistic inquiry, management research has become narrow in its philosophical consideration of what is considered an acceptable team sample. In this panel symposium, we will discuss the importance of maintaining methodological pluralism in the study of work teams by discussing the assumption and values underlying positivism and constructivism. To do this, we have assembled a group of researchers who have conducted team research across these perspectives using quantitative and qualitative techniques as well as agent-based modeling: Henrik Bresman, Corinne Coen, Kyle Emich, Aimee Kane, and Lyn van Swol. In an interactive, structured discussion, our panelists will collectively: (1) Describe the strengths and weaknesses of each perspective, (2) Identify relationships among the perspectives and how they may be integrated; and (3) Discuss how team scholars can address key research questions from each perspective to gain a fuller understanding of team functioning while addressing team member perspectives and characterizing the contexts in which teams operate. Our goal is to give researchers insight into how we, as a field, can integrate perspectives while maintaining our individual research identities.

Navigating Complexities Toward a Greener Future: Green Energy, Green Innovation, Green Regulation

Session Moderator: **Eline Rianne Roomer**, *Trinity Business School, Trinity College Dublin*

SIM: From Green to Red: New Energy Projects and Violent Conflict in Fragile Settings  

Author: **Anne Jamison**, *Copenhagen Business School*

Author: **Witold Jerzy Henisz**, *U. of Pennsylvania*

Author: **Brian Ganson**, *Stellenbosch U.*

Author: **Joseph Bettles**, *Mærsk Mc-Kinney Møller Center for Zero Carbon Shipping*

The number and scale of commercial-scale solar installations in emerging economies continue to grow. Despite the ethical stance of new energy proponents, there are indications that these projects can be drivers of violent socio-political and socio-economic conflict in already fragile places, posing risks both to people and to successful implementation of a green transition. We first survey the pathways by which “green” energy investments can turn “red” through their entanglement in the political economy of conflict. We then investigate the conflict impact of these projects using a geospatial dataset of projects in fragile contexts from 1994-2020. Employing propensity score panel matching in a subnational research design, we show that commercial-scale solar projects, on average, cause an increase in deaths from conflict in the year following the project start in their local project area. Conflict escalation is driven by sentiment towards elites, underlining the propensity of these projects to undermine social cohesion. Given the ethical deficiency of outcomes that further burden the already poor and vulnerable, these results call for greater accountability for conflict risk assessment and mitigation by green financiers, the companies they fund, green energy advocates, and policy makers embedded in a perhaps too-narrow view of the ethical landscape.

SIM: How Do Aspirations Work? Financial Performance Shortfalls and Firms’ Green Innovation

Author: **Jing Zhao**, *Renmin U. of China*

Author: **Jintong GUO**, *School of Business, Renmin U. of China*

Author: **Xiyun CHENG**, *School of Business, Renmin U. of China*

Author: **Manqing Yin**, *School of Business, Renmin U. of China*

Research on the behavioral theory of the firm (BTOF) highlights the role of performance shortfalls in managers’ decision process. However, previous studies tend to ignore the heterogeneity of historical and social aspirations. This paper investigates how firms’ green innovation, a typical environmental behavior, differently responds to financial performance shortfalls relative to historical and social aspirations. Based on the view of problemistic search, we argue and find that financial performance shortfalls derived from historical aspiration impair green innovation; whereas financial performance shortfalls derived from social aspiration first reduce and then promote green innovation, demonstrating a U-shaped relationship. Moreover, we find that the two aspirations may interact to influence green innovation activities. Specifically, the negative effect of performance shortfalls (historical) is more pronounced when the financial performance is below social aspiration. Whereas the U-shaped effect is flattened if the financial performance is at or above historical aspiration. Further, we explore how the effects vary with financial constraints and manager overconfidence to distinguish the underlying mechanisms. Our study extends a nascent understanding of aspiration heterogeneity by revealing firms’ different green innovation strategies in response to different aspirations.

SIM: When Do Mandatory Electronic Waste Laws Crowd Out Voluntary Environmental Initiatives?  

Author: **Arzi Adbi**, *National U. of Singapore (NUS)*

Author: **Gordon Burtch**, *Boston U. Questrom School of Business*

Author: **Suvrat Dhanorkar**, *Pennsylvania State U.*

This study investigates when mandatory electronic waste (e-waste) regulation may unintentionally affect voluntary environmental initiatives in other domains. To study this question, we exploit the staggered passage of e-waste laws in the United States as a quasi-experiment. Using panel data at the city and facility levels, we find that mandatory e-waste laws crowd out voluntary Energy Star building certifications. However, the crowding-out effect is contingent on the payoff uncertainty of certification benefits and the cost savings possible from reducing voluntary certification efforts. These findings advance the growing strategy literature on environmental regulations by deepening our understanding of when the unintended cross-domain consequences of mandatory regulation on voluntary environmental engagement may lead to stronger adverse effects at both the extensive and intensive margins.

Impacts of Political Ideology, Embeddedness, Pressure, and Rhetoric on Business and Society

Session Moderator: **Cristina Neesham**, *Newcastle U.*

SIM: Social Control Agents' Effectiveness in Capital Markets: The Role of Analysts' Political Ideology 

Author: **Mohamad Hasan Sadri Karami**, *Beedie School of Business Simon Fraser U.*

Author: **Ali Mohammadi**, *Copenhagen Business School*

Author: **Pooyan Khashabi**, *ESSEC Business School*

Scholars have highlighted that social control agents (SCAs) can cause significant economic penalties when targeting a firm in capital markets. However, the effectiveness of such actions by SCAs is not always uniform. In this study, we focus on the micro-foundations of this heterogenous effect by studying the role of a key intermediary in capital markets, namely financial analysts. Our paper explores the effect of SCA actions on analysts' recommendations, highlighting that analysts' theoretical ideology plays an important role in effectuating SCA actions in capital markets. Using analysts' recommendations for U.S. defense firms between 1998 and 2017 and a novel hand-collected database of analysts' political ideology, we find that liberal-leaning analysts are more likely to issue sell recommendations for target firms, particularly when the SCAs' criticism is directed to actions which are distant from the core business of the focal firms.

SIM: Political Embeddedness of Global Innovation Networks: Addressing Health Inequalities   

Author: **Ozgu Karakulak**, *U. of Sussex Business School*

Author: **Lea Stadler**, *Grenoble Ecole de Management*

Global innovation networks have become an increasingly influential form of organizing to address the persistent global health inequalities between the Global North and the South. However, surprisingly, previous studies have overlooked the role of politics in shaping the work of these networks. This is crucial, given the strikingly different political contexts of the North and South. In this research, we contribute to addressing this gap by studying how being dually embedded in the North and South affects the work of these networks. To do so, we conducted a qualitative inductive study of Global Innovation Networks delivering new products and services to tackle diseases predominantly affecting the Global South. We found that strict requirements and demands imposed by global health organizations, the broader scientific community, and power imbalances within network ties posed significant challenges for their work. To navigate this dual political embeddedness and effectively carry out their work, these global innovation networks employed "network ambidexterity." This involved leveraging both the breadth and depth of network ties simultaneously, achieved by (i) expanding connections with the South and (ii) strengthening existing ties with the South. Through this research, we contribute to the broader innovation literature addressing social inequalities by highlighting the role of politics and emphasizing the importance of decolonizing global healthcare. Additionally, we contribute to global innovation network research by emphasizing the role of network ambidexterity.

SIM: Unwatched Corporate Social Responsibility: The Impact of Releasing Political Pressure

Author: **Jieyu Zhou**, *School of Management, Xiamen U.*

Author: **Shusen Qi**, *Xiamen U.*

Author: **Yongheng Sun**, *Xiamen U.*

China's Rule 18 in 2013 mandated political officials to resign as independent directors from listed companies. We exploit this quasi-natural experiment to examine the long-term effects of political pressures on corporate social responsibility (CSR). Based on hand-collected data and difference-in-differences models, we find that firms' CSR performance decreases after they are released from political pressures. The results suggest that while political pressures can increase CSR engagement, politically induced CSR is generally not persistent. We further reveal that politically induced CSR could turn into firms' spontaneous behavior only when firms have stronger incentives to conduct CSR, when the strength of political pressures is moderate, and when firms have greater bargaining power against political pressure. Finally, we show that firms are more likely to discontinue CSR that is less lined up with their best self-interest and that CSR activities induced by political pressures are generally economically inefficient. Our research is among the first to provide evidence regarding the persistency of politically induced CSR activities.

SIM: When Nationalistic Political Rhetoric Backfires   

Author: **Murad A. Mithani**, *Rutgers U., Camden*

Author: **Ipek Kocoglu**, *Kean U.*

This study uses history-informed research to understand the role of nationalistic political rhetoric in new venture creation. Building on the boomerang effect that explains how strategic communications can sometimes produce unintended outcomes, we theorize that nationalistic political rhetoric backfires with frequent use. Placing the study in the context of pre-reform India, we found that while nationalistic political rhetoric was positively associated with new venture creation, higher frequency of nationalistic rhetoric led to a decrease in new venture creation. The boomerang effect of nationalistic political rhetoric was mitigated by nationalistic political action, i.e., state-owned enterprises reduced the negative effect of frequent political rhetoric on new venture creation. The study extends the conversation on deglobalization by incorporating informal institutions. It shows that political efforts to insulate an economy through voluntary social compliance yield positive outcomes but only when used in moderation or in combination with political action. High levels of nationalistic political rhetoric boomerangs and damages the local economy.

II. Executive, Board & Leadership Impacts on Corporate Social Responsibility (CSR) & Sustainability

Session Moderator: **Sebastian Cortes-Mejia**, *Pontificia U. Javeriana Bogotá*

SIM: When CEOs Could Save Lives but Don't: A Configurational Analysis of Attacks to Defenders

Author: **Verdiana Morreale**, *IUSS Pavia*

Author: **Elisa Giuliani**, *U. of Pisa*

Author: **Federica Nieri**, *U. of Pisa*

While focusing on corporate decision-makers, the literature on corporate misconduct has generally lost sight of how the victims of abuses influence the outcomes of organizational misconduct. In this paper, we fill this gap by focusing on a specific type of victims, namely human rights or environmental defenders (i.e., defenders), who are individuals who actively protest against corporate misconduct and decisions affecting their communities' rights. We suggest that defenders' behavior might elicit noticeable reactions in corporate CEOs, who are both morally and legally accountable for violations against them and their communities. In this paper we explore the configurations of characteristics concerning the defenders themselves and the CEOs of the involved companies to examine for the first time what kind of configurations are most likely associated with defenders' violation of physical integrity – one of the most egregious forms of human rights violations. We also consider the institutional quality of the country where the violations are perpetrated. By way of a Qualitative Comparative Analysis (QCA) on a sample of 782 violations against human rights defenders, we identified four distinctive configurations: (1) Environmental defender as an easy target; (2) Environmental defender against profit-minded CEO; (3) Workers' defender against profit-minded CEO; (4) Workers' defender against seasoned CEO.

SIM: CEO Social Status and Corporate Social Responsibility

Author: **Jiangtao Xie**, *Cork U. Business School*

Author: **Tanusree Jain**, *Copenhagen Business School*

There has been a growing interest among corporate social responsibility (CSR) scholars to understand how CEO characteristics can affect CSR performance, with an emphasis on characteristics derived from CEOs' core self-evaluations. Specifically, core self-evaluation refers to individuals' sense of self-concept. Examples of such self-evaluations include narcissism, overconfidence, and hubris. While this line of research has been valuable in understanding the role of CEOs in CSR, it has disregarded that others' evaluations of CEOs can also matter to CSR. Meanwhile, prior literature has already suggested that others' evaluations of CEOs can have implications for various firm behaviors, such as mergers and acquisitions or firm performance. Yet, it is still unclear how others' appraisals of CEOs can influence CSR, thereby leading to a partial view of how CEOs can affect CSR. To address this gap, we examine how CEO social status – the extent to which an individual or group is respected or admired by other – affects CSR performance. Drawing on social status literature, we argue that CEOs with higher social status can boost CSR performance because they are more attentive to stakeholder demands towards CSR and are more likely to show higher competencies in firms' CSR strategies. We also theorize that this positive relationship is weakened by CEO tenure and strengthened by board gender diversity. By analyzing CEOs from S&P 1500 firms for the period of 2004 and 2022, we find support for our hypotheses. Our findings highlight the importance of CEO social status, and more broadly, others' evaluations of CEOs, to CSR.

SIM: CEO Religion and Corporate Social Responsibility: A Socio-Behavioral Model

Author: **Isabelle Le Breton-Miller**, *HEC Montreal*

Author: **Danny Miller**, *HEC Montreal*

Author: **Zhenyang Tang**, *Clark U.*

Author: **Xiaowei Xu**, *U. of Rhode Island*

Studies linking religion to CSR have produced conflicting findings due to a failure to draw distinctions among religious influences and different CSR practices. Drawing on social identity theory and the theory of planned behavior, we first argue that religion will influence CSR when ethical values from a CEO's religious social identification resonate with a specific aspect of CSR. Second, CEO attitudes congruent with those values and forms of CSR – interpersonal empathy and proactiveness – will strengthen that relationship. Third, the relationship between religious social identification and CSR also will be strengthened by a CEO's ability to enact CSR policies, a function of personal and firm market power. Our research on 240 CEOs from 217 publicly-traded US firms from 2007 to 2020 supports these relationships.

Organizational Accountability, Social Responsibility, and Justice Implications for Stakeholders

Session Moderator: **Theresia Harrer**, *Hanken School of Economics*

SIM: The Double-Edged Sword of Accountability: How Organizational Accountability Affects Public Trust  

Author: **Theresia Harrer**, *Hanken School of Economics*

A central motivation behind efforts to increase organizational accountability is to build trust with key stakeholders such as the public. Although numerous works suggest that organizational accountability has a positive effect on public trust, others point to potential negative effects of it. Interestingly, neither side actually connects organizational accountability with public trust, overlooking most notably, how organizational demonstrations of accountability affect the public's judgements. The aim of this conceptual paper, thus, is to clarify why and how organizational demonstrations of accountability may (or may not) lead to public trust. First, I synthesize the relevant literature and identify three conceptual differences between accountability and trust that may help explain the above divergent suggestions. Second, building on the critical accounting and trust literature, I develop a set of propositions to capture how organizational accountability demonstrations may actually affect public trust. Third, I explain how societal trust levels can moderate those relationships. My theorizing not only shows that organizational demonstrations of accountability can have both, positive and negative effects on public trust. Importantly, it also suggests that, especially in times of high institutional-based trust, the negative effects of formal accountability demonstrations are likely to be more detrimental regarding public trust than those of informal accountability. My theorizing advances knowledge by highlighting the importance of studying account receivers' judgements with regard to organizational accountability, and by clarifying the relationship between organizational accountability and public trust. It is also important for organizations and policy makers.

SIM: Social Responsibility as a Competitive Edge in Tight Labor Markets  

Author: **Mariana Oseguera**, *U. of Toronto, Rotman School of Management*

This study investigates the interplay between labor market dynamics and the use of social responsibility claims by firms in their recruitment efforts. Previous research has predominantly focused on job seekers' reactions to these claims in job advertisements. This analysis, however, examines if firms modify their use of social responsibility language in response to increasing labor market competition. Using text analysis in millions of job postings from 2010-2021, and after accounting for various factors such as occupation, time trends, and job and firm characteristics, the findings reveal that firms do not significantly alter their use of social responsibility language due to labor market conditions. However, firms that incorporate social responsibility claims in their job postings respond differently to competitive pressures by offering higher wages. This wage premium, approximately four percent higher than their counterparts who do not make such claims, suggests that firms understand the importance of aligning their claims and substantiating them with tangible compensation offers. This alignment appears to be driven by the potential costs of appearing disingenuous as the premium is larger for job seekers who are likely to value social responsibility more and industries with worse social responsibility reputations. The findings provide valuable insights into the methods firms employ to attract talent while cultivating an authentic image of social responsibility in a dynamic labor market setting.

SIM: Virtue Signaling or True Commitment? Understanding Implications of Social Justice Engagement   

Author: **Siddharth Kanakrai Upadhyay**, *Florida International U.*

Author: **Ravi Shanker Gajendran**, *Florida International U.*

Author: **Kisha Shannon Jones**, *Florida International U.*

Organizations have begun taking public stances on politically charged social justice movements as they often relate to societal diversity, equity, and inclusion challenges. This is a recent phenomenon that management scholars have attempted to explore. However, there is a lack of consensus on conceptualizing this phenomenon, its relationship with DEI practices, and the consequent stakeholder reaction. To understand this phenomenon, we propose the concept of social justice engagement intensity (SJEI) as a related but separate construct from DEI. We focus on job applicants to understand stakeholders' reactions to SJEI. Drawing from signaling theory, we propose that a high degree of public engagement in socio-political movements can be perceived as "virtue signaling" by job applicants if the organization's DEI practices are incongruent. In contrast, a congruence between SJEI and DEI practices will be perceived as "commitment signaling." Because SJEI signals implicitly endorse political beliefs, we further propose that a belief inconsistency between the political ideology endorsed by the organization and the political ideology of the applicant will increase the virtue signaling perception. However, a belief consistency will increase the commitment signaling perception. We discuss the consequences of perceived virtue signaling and commitment signaling on job applicants' organizational attractiveness.

SIM: Exploring Organizational Justice in Chilean School Districts: A Multiple Case Study 

Author: **Francisca Alvarez Figueroa**, *Alliance Manchester Business School, U. of Manchester*

Author: **Paula Ascorra**, *Pontificia U. Catolica de Valparaiso*

This paper advances the understanding of organizational justice (OJ) with a contextualized perspective. The changing landscape of work and employment has led to deteriorating working conditions, especially in neoliberal settings. In the midst of these challenges, there is a growing discussion about promoting justice for decent work. Therefore, we examine how workers understand OJ. Through a multiple case study, we develop a grounded analysis in 48 interviews with workers in four organizations (school districts) in Chile. The results discuss three transversal approaches to OJ: a favor-based distribution of resources, a clientelistic approach to procedures, and benevolent interactions. We discuss the need for a situated and contextual understanding of OJ and propose a contingent HRM agenda to address fairness and justice at work.

New Directions in Corporate Social Responsibility (CSR) Reporting & Stakeholder Communications

Session Moderator: **Jae Hwan Lee**, *Rollins College*

SIM: Goldilocks Effect: Finding the ‘Just Right’ Style in Corporate Responsibility 

Author: **Adam William Chalmers**, *U. of Edinburgh*
Author: **Robyn Klingler-Vidra**, *King's Business School*

The 21st century has seen a surge in the number of global corporate responsibility (GCR) frameworks issued by international organisations (IOs) influencing firms' communications about their commitment to corporate social responsibility (CSR). This study examines how firms choose specific GCR frameworks and how this choice enhances our comprehension of firms' CSR communications. A novel approach is taken by blending insights from affordance theory with computational linguistics. Our central argument is that the inherent textual attributes of GCRs, specifically how they are written, play a pivotal role in determining their degree of use by firms. Using natural language processing, the study examines 320 firms' CSR communications (4,025 documents) to discern how they incorporate the text from GCR frameworks. The study finds a “Goldilocks effect”, whereby firms' use of GCR frameworks is greatest when the frameworks are written in language that is neither too simple nor too complex. The implication is that writing in clear language that is neither overly simplistic nor jargon heavy has implications for the ethics of communications and determinants of firms' CSR talk.

SIM: Cover up the Vices? The Relationship Between CSP and Language Manipulation in Emerging Markets 

Author: **Qian LI**, *Shanghai International Studies U.*
Author: **Lingyu Li**, *Shanghai International Studies U.*

CSR report is a critical way for responsible companies to convince their stakeholders. However, previous studies have shown that these reports can be a manipulation tool for companies to cover up their unqualified social performance. By relying on the perspective of impression management theory, we investigate the impacts of social performances on language manipulation in CSR reports. With a sample of A-share listed companies in China from 2011 to 2018, we develop the measurement for language features of modern Chinese in their CSR reports through computer-aided text analysis. The results reveal that the worse a firm's CSR performance is, the more managers manipulate the language features of complexity (both logical and lexical), attribution, and emotions. Moreover, we show that this relationship is much stronger for manipulating emotions when CSR performance crosses a certain threshold.

SIM: Visualization in CSR Reports: The Role of Minority Investors' Online Information Demand 

Author: **Hongfei Ruan**, *Harbin Institute of Technology*
Author: **Yi Xiang**, *Xi'an Jiaotong U.*
Author: **Yinju Nie**, *Northwestern Polytechnical U.*

Corporate social responsibility (CSR) reporting holds significant importance for firms to communicate with stakeholders. Previous studies have primarily emphasized the implications of verbal characteristics present in CSR reports, yet there exists a limited understanding on the distinct features of visual information in these reports. The paper integrates stakeholder salience theory and Elaboration Likelihood Model to examine whether online information demand of minority investors in the unique online interactive platforms can prompt corporate visual expressions in their CSR reports. Additionally, we contend that the relationship between online information demand and visual expressions in CSR reports is accentuated when minority investors play a prominent role in a firm, yet attenuated when a firm provides more comprehensible and transparent information. Employing a hand-collected dataset of 1,998 observations from Chinese publicly listed firms in 2009-2017, our empirical findings strongly support these arguments. Taken together, this research enhances our understandings of how and when firms respond to the increased collective salience of minority investors resulting from their online information demand by disclosing more visually-oriented CSR reports.

SIM: Shifting Political Dependencies and Anticipatory Impression Management in China 

Author: **Ruxi Wang**, *Renmin U. of China*
Author: **Majid Ghorbani**, *China Europe International Business School (CEIBS)*

Using the anti-corruption campaign waged against unscrupulous government officials, we examine how Chinese firms adjust their CSR strategies as an anticipatory impression management tactic to cope with unexpected political changes. From a dynamic political dependence perspective, we theorize and find that under high political uncertainty, firms respond to the unexpected removal of high-ranking local officials by reducing CSR report quality to adapt to the unpredictability in the development agendas of future political leaders with panel dataset. We further find that the reduced quality of CSR reporting is exacerbated when the firms have a larger number of subsidiaries in their headquarter region, when the CEO or Chairperson has political connections, and when the firms are located where the competition for promotion is fiercer among civil servants.

Resilience, Flexibility, and Strategies for Managing Uncertainty

Session Moderator: **Kerstin Fehre**, *Vlerick Business School*

STR: Towards Measuring Strategic Flexibility of Mission-driven Innovation Teams

Author: **Gaurav Dilip Tikas**, *Indian Institute of Management Visakhapatnam*

Strategic flexibility can help innovation teams in navigating through the internal or external uncertainties. However, existing scholarship barely provides a clear definition, a contextual understanding, or a robust calibration mechanism to measure it within organizational settings. To overcome such gaps and problems arising out of it, this research uses dynamic capability theory to underpin the focal construct, develops a measurement mechanism and empirically validates it through a multi-method research design. Strategic flexibility towards mission-driven innovation (SFMI) emerges as a three-dimensional construct that can be reflected through agility, adaptivity, and alignment. The 11-item SFMI scale contributes to the extant literature on flexibility for innovation through its capability-based conceptualization, mission-driven contextualization and team-based measurement. Practitioners can use this framework for diagnostic or developmental purposes along with its additional application as a performance evaluation instrument.

STR: Thriving and Languishing in Uncertainty: A More Nuanced View of Organizational Resilience

Author: **Liv Håland**, *Norwegian U. of Science and Technology*

Author: **Marta Morais-Storz**, *NTNU*

Author: **Alf Steinar Sætre**, *Norwegian U. of Science and Technology*

Previous empirical research on the resilience of organizations has focused on specific, high-profile, events, and how companies have dealt with the aftermath of those events to survive. Resilience in relation to chronic disturbances characteristic of high uncertainty environments lacks empirical foundation, presenting an important research gap as environmental uncertainty reaches higher levels. Furthermore, resilience literature is increasingly focusing on the importance of thriving, suggesting that organizations that thrive build resilience capabilities and perform better in the long term than survival-oriented organizations. Yet, it is not clear how organizations thrive in uncertain conditions and how thriving organizations build resilience capabilities. We seek to bridge this gap and contribute to theory building on the resilience of organizations under uncertainty through a multiple case study of five Norwegian firms to understand how organizations thrive and build future resilience capabilities under conditions of uncertainty. Findings show that the resilience approaches of organizations facing uncertainty are variegated, and that at the two extremes, languishing organizations are characterized by threat orientation that corresponds primarily with defensive approaches and, thriving organizations are characterized by opportunity orientation that corresponds with enactive approaches. Findings also show that together with opportunity orientation, a deliberately emergent strategy, organizational slack, a strong culture of innovation, external collaboration and transformational leadership are factors that work symbiotically to reinforce the capabilities necessary to deploy enactive strategies that are consistent with organizations that thrive in uncertainty.

STR: Creating vs. Exercising Real Options: How CEO Temporal Focus Affects Real Options Intensity

Author: **Bettina De Ruyck**, *Ghent U. and Vlerick Business School*

Author: **Carine Peeters**, *Vlerick Business School*

Author: **Xavier Baeten**, *Vlerick Business School*

Author: **Kerstin Fehre**, *Vlerick Business School*

Recently, scholars have been calling for research on how cognitive differences between Chief Executive Officers (CEOs) affect real options intensity and thus tendency to build strategic flexibility for their firms. At the same, there is limited theorizing on the stages of the real option life cycle – identifying, creating, maintaining, and exercising real options. We contribute to the cognitive perspective and argue that CEO temporal focus – a subjective perception of time – relates to those underlying stages in the real option life cycle and, consequently, affects firm real options intensity. On the one hand, we predict that a higher CEO future focus is beneficial for identifying potential options and creating real options and is therefore positively related to real options intensity. On the other hand, we expect that a higher present focus will lead CEOs to exercise existing real options available to them and therefore negatively relates to firm real options intensity. Further, building on work that considers situational factors which may influence a CEO's ability and motivation to invest in or exercise real options, we include the opportunity environment as a moderator. Specifically, we argue that the relationships between CEO temporal focus and firm real options intensity are stronger in an environment characterized by scarce opportunities. Using a panel dataset of listed European firms, we find support for our theorizing. Our study emphasizes the substantial impact of the CEO's temporal focus in shaping their firm's investment decisions and strategic flexibility.

STR: How Can Family Businesses Balance Dynamic Change and Resilience? The Role of a Learning Organization

Author: **Miriam Simon**, *WHU - Otto Beisheim School of Management*

Author: **Nadine Kammerlander**, *WHU Otto Beisheim School of Management*

Family businesses are beginning to recognize the advantages of agile working methods in an ever-changing market environment. Consequently, many initiate a transformation process towards more agility, especially in the innovation departments. With this transformation process, they find themselves in a paradoxical situation. While their core business is characterized by excellence and zero error tolerance, in their innovation department, they aim to learn from mistakes quickly to become more innovative. Additionally, there often is knowledge imbalance between employees in the operational business and employees in the innovation departments. To comprehend how companies balance excelling in their core business while learning from mistakes to drive explorative innovation, we conducted a multi-case study of seven family businesses. Our findings extend current literature, revealing that operational and innovative business units are subject to different rule-based frameworks within which they can actively operate. These frames allow for performance in various business cultural environments. Our findings reveal that convergence and divergence cannot be considered separately when striving for long-term success. Although our case companies are family-owned, our findings are relevant to all types of companies characterized by a high value-based corporate culture and facing paradoxical strategies.

Cognitive Perspectives on Corporate Strategy

Session Moderator: **Libby Leann Weber**, *U. of California, Irvine*

STR: Psychological Impact of Contract Frames on Specific and Ambiguous Alliance Investments     

Author: **Christopher Bauman**, *U. of California, Irvine*

Author: **Libby Leann Weber**, *U. of California, Irvine*

Author: **Jessica Jeesoo Kim**, *U. of California, Irvine*

Building on Transaction Cost Economics (TCE) research, which has largely focused on contractual safeguards for increasing highly specific investments, our study explores the nuanced effects of contract framing on investment decisions in strategic alliances, particularly considering varying degrees of asset specificity ambiguity. Through three experiments, we demonstrate that prevention contracts, framed to mitigate negative events, boost initial investment in exchanges characterized by both explicit high asset specificity and ambiguous specificity levels. In contrast, promotion contracts, framed to promote positive events, are more effective in supporting ambiguous specific investment, following violations of informal exchange expectations. Together, this study underscores the dynamic nature of contract framing in strategic alliances, contributing to a deeper understanding of how psychological factors intersect with traditional TCE considerations to shape investment behavior.

STR: When Overconfident CEOs Deliver Better Performance: Evidence From Acquisition Waves

Author: **Jun Xu**, *U. of California, Riverside*

Author: **Jerayr M. Halebian**, *U. of California, Riverside*

Author: **Jamie Tong**, *U. of Queensland*

Author: **Guoli Chen**, *INSEAD*

Overconfident CEOs are frequently criticized for making value-destroying corporate acquisitions in which they excessively acquire and overpay. We argue that overconfident CEOs often create value and deliver better performance in the acquisition waves given that the motivation and the requirement for action speed for acquisitions that occur in waves are different from those in other acquisition contexts. Specifically, we hypothesize and find that overconfident CEOs are more likely to capture preemption opportunities by acting earlier in acquisition waves, and such rapid moves enable overconfident CEOs to seize high-quality targets or targets with cospecialized assets with lower costs, leading to better acquisition performance. In addition, we find that in acquisition waves, organizational acquisition experience hampers value-add because it reduces overconfident CEO action speed, and associated returns to acquisitions. Contributions to the CEO overconfidence and acquisitions literatures are discussed.

STR: The Impact of Perceived Homophily and Strategic Homophily on Acquisition Completion     

Author: **Jia Shen**, *U. of Texas at Dallas - Jindal School of Management*

Author: **Jade Lo**, *Drexel U.*

Author: **Li Tong**, *Guanghua School of Management, Peking U.*

The homophily perspective suggests that firms with similar attributes are drawn to one another. Prior research predominantly centers on inherent homophily, which pertains to firms' homophily regarding their intrinsic characteristics or strategies. Nevertheless, there is a restricted comprehension of how perceived homophily, as portrayed by journalists, biases firms' perceptions and influences their decisions. We theorize that following firms' public announcement of their acquisition agreements, journalists may convey the involved firms with semantic fitness that aligns with affective, cognitive, social, and perceptive rhetoric. This semantic fit, in turn, enhances the likelihood of acquisition completion, as firms engaged in due diligence during this phase perceive a sense of homophily based on the journalists' reports. Furthermore, strategic homophily, manifested by merging firms' connections, can substitute the effect of perceived homophily on acquisition completion. We offer empirical evidence from announced acquisitions by U.S. firms to support our theory. This study contributes by introducing perceived homophily as a new mechanism impacting acquisition completion and by elucidating the relationship between the merging firms' perceived homophily and strategic homophily.

STR: The Impact of CEO Optimism on Acquisition Pricing and Completion 

Author: **Sergio Grove**, *U. of Texas at El Paso*

Author: **Mengge Li**, *U. of Texas at El Paso*

Author: **Miguel Ramos**, *U. of Texas at El Paso*

Author: **Jinxin Yang**, *Hong Kong Metropolitan U.*

In mergers and acquisitions, the seller's willingness to sell plays an important role in acquisition pricing and occurrence. This paper examines the impact of the dispositional optimism of the CEO in acquirer and target firms on the pricing and completion of acquisitions. The study of CEO dispositional optimism is important because it influences not only the price offered by the acquirer CEO but also how it influences the target CEO's reaction to the takeover attempt offer jointly determining the final acquisition pricing and completion as different from overconfidence in the target CEO's optimism not being value destructive. Based on a sample of 252 acquisitions between 2012 and 2012 and controlling for acquirer and target CEO overconfidence and narcissism, we find that the target firm CEO's dispositional optimism predicts a positive variation between the initially offered price and the final acquisition price as well as the likelihood of deal completion. We also find that this positive association between target CEO optimism and price variation increases as the level of acquirer CEO optimism decreases and that the positive impact of acquirer CEO optimism on completion is negatively moderated by target CEO optimism. This paper contributes to the literature by showing how dispositional optimism influences the target CEO response and may potentially capture a larger value from acquisitions.

Regulatory Environment and Political Embeddedness of Firm Innovation

Session Moderator: **Salih Zeki Ozdemir**, *UNSW Sydney*

STR: **Beyond Dyads: A Multi-Stakeholder Approach to Corporate Political Connections and Innovation**  

Author: **Qiao (Stella) Wei**, *Nankai U.*
Author: **Weiting Zheng**, *UNSW Sydney*
Author: **Salih Zeki Ozdemir**, *UNSW Sydney*

How do political connections influence firm innovation performance? Existing studies approach this question primarily from the dyadic business-state exchanges, not sufficiently considering how connections to the state may also influence firms' interactions with non-state stakeholders who hold resources critical for firm innovation. Going beyond a dyadic focus, this study engages a multi-stakeholder perspective to understand how political connections may influence firms' acquisition of financial resources from the state on the one hand, and innovation-specialized managerial resources on the other. Analyses of Chinese listed firms during 2008–2016 show that while political connections facilitate acquisition of state-controlled financial resources, such connections hamper firms' acquisition of innovation talents to the top management team. To establish the underlying theoretical mechanisms for the association between political connections and firms' acquisition of innovation talents, we conduct two additional studies. First, a content analysis of firms' annual reports reveals politically connected firms' reduced attention to innovation and in turn, lower likelihood of hiring innovation talents as executives. Second, an experiment on innovation talents ascertains their negative perceptions of firms' political connectedness and lower likelihood of pursuing employment with such firms. These findings advance a multi-stakeholder view of the impact of business–government relationships on firm innovation.

STR: **Political Embeddedness and Environmental Innovation in China** 

Author: **Wenzong Zhang**, *Xi'an Jiaotong U. School of Management*

How and under what conditions do politically embedded firms participate in environmental innovation? This important research question has been consistently overlooked by most previous research. The empirical analysis of a sample consisting of 2,497 Chinese listed firms, covering the period from 2009 to 2017 show that firms operating in transitioning economies participate robustly in environmental innovation when they are politically embedded. Findings further reveal that market liberalization, the pace of institutional change, and industrial competition positively enhance the capacity of politically embedded firms to engage in environmental innovation. This study contributes significantly to the ongoing discourse surrounding the influence of political strategy on firms' environmental behavior.

STR: **When Does Corporate Political Activity Matter for New Product Development?** 

Author: **Juan Carlos Morales**, *West Texas A&M U.*

In this study, we shed light on the differential effects of corporate political activity on the firms' propensity to engage in two types of new product development (i.e., imitative and innovative new product development). Drawing from institutional and resource dependence theories, we examine the contingency effects of political instability in the context of emerging markets. We test our hypotheses using a comprehensive sample of firms in Sub-Saharan African countries. Our results support the notion that corporate political activity has positive effects on the firm's likelihood of introducing imitative new product development. Likewise, we find support for our predictions that corporate political activity has weakening (i.e. negative) effects on the propensity to introduce innovative new product development. We found that these effects are contingent on the institutional context.

STR: **How do Regulatory Constraints Impact on Firm Innovation?** 

Author: **Ji Yan**, *Durham U. Business School*
Author: **Nengzhi Yao**, *School of Business, Nanjing Normal U.*
Author: **Rebecca Yu Li**, *Brunel Business School*
Author: **Kun Tian**, *Kent Business School, U. of Kent*

When facing regulatory constraints, how should a firm employ innovation sourcing strategies to bring better innovation outcome? Our research examines this question by investigating the dynamic interplay between regulatory constraints and firm innovation, examining how the former influences innovation sourcing strategies and, subsequently, innovation performance. Drawing from institutional theory, we argue that firms adapt their sourcing strategies to conform to regulatory pressures to maintain legitimacy, leading to diversification of innovation sourcing (e.g. employing a larger number of different sourcing strategies) that brings a favourable innovation outcome. However, regulatory constraints concurrently result in decreased technical efficiency that impedes innovation outcome, presenting a potential paradox in innovation regulation. Taking both benefits and costs of regulatory constraints into account, we propose an inverted U-shaped relationship between regulatory constraints and innovation performance, suggesting that a moderate level of regulatory constraints brings optimal innovation outcomes. Empirical evidence from a longitudinal analysis of UK firms supports our hypotheses, underscoring the complexity of balancing legitimacy with technical efficiency. Moreover, our findings reveal that working with government mitigates the negative impact of regulatory constraints, guiding firms to strategically assess to what extent sourcing strategies should be diversified. Through these investigations, we aim to offer a more definitive stance on the debate surrounding regulation and innovation and provide insights into the conditions under which regulatory constraints might serve as a boon or a bane for firm innovation.

Climate Change Strategies

Session Moderator: **Arzi Adbi**, *National U. of Singapore (NUS)*

STR: **Hard Truths: The Unintended Consequences of Carbon Tax on Firm Behavior**    

Author: **Arzi Adbi**, *National U. of Singapore (NUS)*
Author: **Xiaoteng WU**, *NUS Business School*

This study examines how firms respond to a carbon tax. We leverage the introduction of a nationwide carbon tax in Canada in 2019 to conduct a difference-in-differences analysis of carbon emissions of major steel plants globally. We find that firms reduce carbon emissions following the carbon tax. However, the emissions reduction is driven mainly by an (unintended) decrease in asset utilization rather than an (intended) decrease in emissions intensity of production. Multinational enterprises achieve greater emissions reduction than do local firms, as the former engage in cross-border institutional arbitrage by increasing the asset utilization of dirty plants located in pollution havens. These findings highlight the unintended consequences of carbon taxes on firm behavior, raising the need to investigate the global impact of local environmental regulations.

STR: **Carbon Neutrality Pressure and Strategic Responses**  

Author: **Adeel Luqman**, *U. of Dundee, UK*

In the evolving landscape of corporate sustainability, we address a significant research gap by examining the intricate nuances of carbon neutrality pressure. Through a comprehensive framework, we unveil two dimensions: CSR cheating and carbon-neutral strategic plans. Employing data from 312 respondents and structural equation modeling, we reveal intriguing dynamics. Carbon neutrality pressure prompts both CSR cheating and carbon-neutral strategic planning. While direct links emerge between the latter and carbon neutrality pledges, a moderating force—resource bricolage—enhances the strategic commitment. Surprisingly, the Threat of Losing Competitiveness (TLC) amplifies the connection between carbon neutrality pressure and CSR cheating, while tempering the indirect link between CSR cheating and a firm's carbon-neutral status. Notably, posthoc analysis unveils an inverted U-shaped pattern—indicating that CSR cheating's short-term gains contrast with long-term sustainability concerns. This study advances understanding of corporate sustainability strategies by addressing the intricate interplay between carbon neutrality pressure, CSR behaviors, and strategic commitments.

STR: **Beyond the Horizon: Carbon Targets and Corporate Emission Reduction** 

Author: **Yannik Gehrke**, *U. of Goettingen*
Author: **Gabriel Koerhuis**, *U. of Goettingen*
Author: **Michael Wolff**, *U. of Goettingen*

Carbon targets are considered a key management control instrument to mitigate corporate emissions. However, due to the unique characteristics of these targets, still relatively little is known about their effectiveness. In this study, we focus on the target horizon of carbon targets, as it uniquely varies across firms and can remarkably extend beyond usual planning horizons. Based on 4,262 target-firm-years of 383 European firms, we find that the target horizon is negatively associated with corporate emission reduction. This suggests that longer targets may motivate firms to postpone emission reduction into the future. Cross-sectional tests further suggest that this postponement can stem from a lower feeling of being responsible by corporate actors and missing carbon pricing. Moreover, the negative association between target horizon and emission reduction is particularly pronounced for difficult targets. This study contributes to a better understanding of carbon targets and how firms translate long-term emission reduction plans into action.

STR: **Values In Action: Implicit Values and the Pursuit of Multiple Goals**

Author: **Angie Otteson Fairchild**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

A core strategy question is how organizations manage performance targets, particularly when they pursue multiple and potentially conflicting goals simultaneously. Although the original behavioral theory of the firm recognized the role of values in resolving this conflict, current literature typically assumes ex-ante value structure and considers only explicit values that guide and motivate action. We argue that explicit values alone do not help resolve goal conflict. Instead, actions embody the tradeoffs that organizations were willing to accept and thus reveal their underlying implicit values. We empirically identify these implicit values in the context of corporate decarbonization initiatives. We leverage a latent class logit discrete choice model to abductively identify four archetypes that represent heterogeneous implicit value configurations. Contrary to expectations, we find that after accounting for selection into the sample, organizations that express greater concern for climate change and set aggressive targets do not systematically select the initiatives with the largest emissions avoided. Instead, those organizations select high-cost initiatives with lower emissions impact. This highlights the role of implicit values-in-action as a separate construct from explicit values. We contribute to the behavioral strategy and decoupling literatures by differentiating explicit and implicit values as the mechanism through which organizations reconcile competing goals.

Alliance Strategies and Portfolios

Session Moderator: **Amir Hassanzadegan**, *U. of Melbourne*

STR: The Behavioral and Positional Drivers of Network Stability: Evidence from High-Growth Software Firms 

Author: **Junghan Lee**, *Seoul National U.*

Literature has provided an understanding of the outcomes of alliance composition, whereas scholars know little about what determines the changes in alliance partners. In particular, although some research has shown the behavioral drivers of partner change, there has been little attention to why organizations decide not to alter their network composition over time. To fill this gap, we draw insights from a behavioral theory and positional embeddedness, thereby examining the antecedents of ego-network stability. Specifically, we investigate the joint effects of innovation performance feedback and network centrality on firm network stability. Analyzing a panel of U.S. high-growth software firms participating in innovation alliances, we find that managerial motivation for network change is discouraged by firm innovation performance above aspiration. Besides, results show that central network positions impose constraints on partner change. Above all, we report that high-growth firms deviate from high network stability when outperformance and high embeddedness are integrated.

STR: Is Repeated Partnership Good or Bad for Innovation? Resource-Based Theory and Institutional Theory    

Author: **Yung-Chang Hsiao**, *National U. of Tainan*

The purpose of this paper is to investigate whether making a repeated strategic alliance is beneficial or detrimental for performance, using resource-based theory and institutional theory to formulate opposing hypotheses and testing them through empirical study. The results show that there is no significant difference in the mean innovation quantity and speed between non-repeated and repeated partnerships in the overall sample. However, the innovation quantity of non-repeated partnerships is significantly higher than that of repeated partnerships in Biotech-Pharm type alliances, while the innovation speed of repeated alliances is faster than that of non-repeated alliances in Biotech-Biotech type alliances and for early stage products.

STR: Interorganizational Strategies for Recession Resilience: An Interdisciplinary Review

Author: **Amir Hassanzadegan**, *U. of Melbourne*

Author: **Franz Wohlgezogen**, *Faculty of Business and Economics, U. of Melbourne*

Recessions represent a major challenge for organizational adaptiveness. They not only require substantial and swift changes to a firm's internal operations but also—due to the high degree of interdependence between firms in the global economy—to a firm's interorganizational relations. Research on how firms manage their exchange relationships through recessions has developed across multiple management disciplines. Using resilience as an umbrella concept, we synthesize this interdisciplinary literature, clarify key concepts, map the evidence available, and identify gaps in the evidence base. Our analysis of 73 empirical papers from six management disciplines yields the following main insights: firms deploy a variety of tactics to eliminate, stabilize, transform, and create interorganizational relations; a combination of tactics (instead of reliance on one type) may yield superior firm outcomes during and after a recession; some tactics may be sequentially interdependent; and the effectiveness of tactics in reaching desirable outcomes (i.e., resiliency) might be contingent on internal and external environments' characteristics. We conclude our review with suggestions for future research.

STR: The Design Perspective of Alliance Portfolio 

Author: **Dana Jongyoun Baek**, *INSEAD*

This paper investigates inter-firm networks as engines of innovation, focusing on the traditional internal combustion engine vehicle manufacturers' alliance portfolios formed around self-driving car technology in the global automotive industry. Building on alliance portfolio literature, this study stresses the importance of considering broader knowledge architecture in alliance portfolio design. The paper introduces the interdependence of knowledge components, termed "knowledge architecture," as a crucial factor in understanding technological innovation, particularly in the context of alliance formations. Knowledge architecture, characterized by the interdependence of knowledge components, illustrates the way in which advancement in one sub-component can have direct or indirect impacts on the progress of other sub-components within a chained system. In this study, I show that firms aligning their alliance networks with this knowledge architecture are likely to derive more innovation from their alliance portfolios. Specifically, the findings show that traditional automotive companies are likely to perform better in the self-driving car industry when their alliances formed around autonomous driving technology mirror the knowledge architecture of technology components.

Crises and Crisis Management

Session Moderator: **Alina Kasinska**, *U. of Passau*

STR: Focused or Integrated? A Configurational Theory of Stakeholder Management for Firm Crisis Performance  

Author: **Qian Gu**, *Georgia State U.*
Author: **Daniel Andrews**, *Georgia State U.*
Author: **Heli Wang**, *Singapore Management U.*
Author: **Victor Zitian Chen**, *Fidelity Investments*

Stakeholder relations are often considered instrumental in explaining firm performance, especially during significant environmental disruptions such as systemic crises. However, existing research findings on how stakeholder relations drive performance during crises are ambiguous. Some scholars emphasize the importance of focusing on one or a limited group of stakeholders to secure critical resources and support, while others advocate for a more integrated engagement of multiple stakeholder groups. We posit that prior studies lack a comprehensive theory accommodating the strategic fit between firms, their stakeholders, and crisis exposure in determining performance. We highlight the interdependence between firms' resource positions, stakeholder management strategies, and crisis exposure. Utilizing fuzzy-set qualitative comparative analysis (fsQCA) and unique data of 2,727 publicly listed U.S. firms during the COVID-19 outbreak, we identify six combinations of conditions linked to high firm performance. We elaborate on our findings to develop a typology of optimal crisis preparedness, advancing firms' stakeholder management and crisis performance literature.

STR: Staging the Tragic in Crises: A Comparative Analysis of Mann Gulch and Nanga Parbat 

Author: **Mary-Lieta Clément**, *FSA ULaval (Laval U.)*
Author: **Christophe Roux-Dufort**, -

This article demonstrates that the tragic character of a crisis is not inherent to its nature, but rather constructed through its representation and staging. By studying two works of fiction dealing with distinct crises - the Mann Gulch fire in Montana (US) and the rescue of climbers Revol and Makeivitz from the Nanga Parbat summit in Pakistan - we highlight a process of crisis tragedy. Our results reveal that this process involves de-heroization of managers and disempowerment, emphasizing that, given the scale of the events, there was nothing more they could do. It is a way of relieving their guilt in the face of crises that are beyond their control, and of mitigating their stigmatization as scapegoats.

STR: Adaptation and Leadership in Sustained Cosmological Crisis: Ukrainian Nature Parks  

Author: **Alina Kasinska**, *U. of Passau*
Author: **Carolin Haeussler**, *U. of Passau*
Author: **Christine Schmitt**, *U. of Passau*

We develop deeply grounded accounts of the responses of leaders and staff members of two Ukrainian nature parks to the Russian invasion since February 24, 2022, to build theory on organizational adaptation and leadership during sustained "cosmological" crises—continued disruptions of actors' fundamental sense of coherence, order, and meaning. Our emerging ideographic-narrative accounts—induced from interviews, meetings, quasi-participatory reflections, and rich secondary data—reveal leaders' and staff members' resilience, especially as they discovered innovative ways to realize their socio-professional callings and identities even while they were unable to access the occupied natural habitat. We contribute to strategic crisis management research which has studied "cosmology episodes"—particularly from behavioral perspectives—but offers little insight into continued extreme crises such as those caused by armed conflict and natural habitat devastation.

STR: Ignorance Isn't Bliss: BP, The Deepwater Horizon Oil Spill, and a Series of Catastrophes

Author: **Martijn Overman**, *Tilburg School of Economics and Management (TiSEM), Tilburg U.*
Author: **Akhil Bhardwaj**, *School of Management, U. of Bath, UK*
Author: **Zi-Lin He**, *Tilburg U.*

British Petroleum, one of the most profitable organizations in the world, nearly went bankrupt after the Deepwater Horizon blowout that occurred in the Gulf of Mexico. This blowout was hardly a rare event for the organization - British Petroleum had experienced a string of (fatal) catastrophes in less than a decade preceding Deepwater Horizon. In this study, we inquire why BP repeatedly experienced catastrophes and how the likelihood of their recurrence can be attenuated. We find that a contributing cause for recurring catastrophes was Strategic Ignorance, that is, the willful neglect of potentially salient information regarding safety. We locate the antecedents of Strategic Ignorance and discover that these are inextricably linked to governance design. In identifying these antecedents, we provide the foundations of a theory of ignorance that can be employed to attenuate the likelihood of industrial catastrophes.

Human Capital Management: Leveraging Core Strengths for Competitive Advantage

Session Moderator: **Timothy Gubler**, *Brigham Young U.*

STR: **Do Financial Markets Care About Human Capital? Evidence from Quarterly Earnings Calls**

Author: **Seung Hoon Lee**, *Indian School of Business*
Author: **Sudhir Voleti**, *Indian School of Business*
Author: **Vidhulaa Vangal**, *Indian School of Business*

Strategic management research has highlighted the importance of human capital to a firm's long-term performance. However, the distinct theoretical question about how financial markets evaluate information disclosures about a firm's human capital remains underexplored. This paper examines whether and to what extent human capital information communicated by top managers bears explanatory and predictive effects on cumulative abnormal stock returns. We address these questions by using quarterly earning calls data of S&P 1500 firms from 2005 to 2019. We use two different empirical approaches to examine our questions: an event study to test the explanatory effect of human capital information disclosures on the stock returns and a portfolio-based calendar time abnormal returns (CTAR) model to test the short-term predictive capacity on monthly portfolio returns.

STR: **When Should Firms (Not) Reallocate Core Human Capital Between Business Units?**

Author: **Dongwook Kim**, *North Dakota State U.*
Author: **Sharon Alvarez**, *U. of Pittsburgh*
Author: **Asli Musaoglu Arikan**, *Kent State U.*

This paper proposes that when firms compete in a context where valuable core human capital (HC) is highly context-specific, they might gain more value by reallocating non-core HC. We suggest that when a firm reallocates HC between business units, a tradeoff occurs at the firm level: the advantage that destination units receive from sharing knowledge and the loss of the colleague-specific value of the HC at the incumbent unit. By analyzing firm-level human capital data from the video game industry, this research shows that when the value of strategically important core HC lies mostly in the socially complex team, rather than in an individual, firms might lose more value by reallocating them. We also suggest that reallocating relatively fungible non-core HC might provide firms with flexibility and, thereby, achieve higher performance. The empirical results show that reallocating core HC might reduce firm performance while reallocating non-core HC can have an inverse U-shaped relationship with firm performance.

STR: **Individual-Level Origins of Firm-Level Human Capital Resources**

Author: **Ryan Cooper**, *U. of Arkansas*
Author: **Timothy Gubler**, *Brigham Young U.*
Author: **David Kryscynski**, *Rutgers U., School of Management and Labor Relations*

Understanding the emergence of firm-level human capital resources from individual-level human capital is crucial to explaining how firms can create and sustain competitive advantage from their people. We theorize that higher similarity among the individual-level components of a firm's founding human capital resource leads to higher subsequent average overlap between individuals and the established firm-level human capital resource, and that this higher overlap improves firm performance. Analysis of individual- and firm-level human capital portfolios constructed using data from 872 real estate brokerages suggests that higher individual-level human capital similarity among agents at founding positively relates to individual-firm human capital overlap in future years, and that higher individual-firm human capital overlap positively relates to future firm sales. These results imply that managers from founding onward must carefully craft and manage individual- and firm-level human capital resources to generate persistent performance advantages.

STR: **Redesigning the Role of the CEO in Stakeholder Governance: The Implicit Contract Game**

Author: **Adam Clark**, *Chapman U.*

This paper presents experiments studying how the role of the manager (i.e., the manager's goals and incentives) affects their ability to attract stakeholder contributions in joint value creation. These experiments employ a novel "implicit contracts" game, where a worker performs tasks ex ante and the manager compensates the worker ex post. When managers are given two objectives (maximize shareholder returns and treat the worker fairly), managers allocate a much higher percentage of earnings to the worker. Workers paired with these managers are significantly more productive than workers paired with managers who are only focused on maximizing shareholder returns, but only when those workers have some degree of bargaining power. The results here are consistent with recent arguments that the role of CEO may need to be reconsidered and redesigned in order to effectively engage in stakeholder governance.

Building Bridges: Developing a Research Agenda for Sustainability and Innovation

Panelist: **Jonathan P. Doh**, *Villanova U.*

Panelist: **Ioannis Ioannou**, *London Business School*

Panelist: **Martina Pasquini**, *IE Business School*

Panelist: **Simon JD Schillebeeckx**, *Singapore Management U.*

Panelist: **Yuliya Snihur**, *IESE Business School*

Panelist: **Murat Tarakci**, *Erasmus U.*

Panelist: **Diane-Laure Arjalies**, *Ivey Business School*

Organizer: **Alireza Mahmoodzadeh**, *ESADE Business School*

Organizer: **Kaushik Bagchi**, *U. Ramon Llull, ESADE Business School*

This panel symposium on building bridges between sustainability and innovation aligns perfectly with this year's theme of "Innovating for the Future - Policy, Purpose, and Organizations". It underscores the imperative for an interdisciplinary approach if we want management research to contribute to building a future that integrates economic growth and technological advancement with environmental responsibility and equitable social development. We bring together a panel of leading scholars who have different perspectives and have all made significant practical and theoretical contributions to research on innovation and sustainability. Topics addressed will include technological innovation for sustainability, the role of diversity and inclusivity in sustainable innovation, building sustainable and innovative business models, and measuring the impact of sustainability on innovation and performance. This panel will be particularly useful for junior scholars seeking to craft a research agenda in this still nascent but increasingly critical research space.

Organizational Wrongdoing and its Deterrence

Discussant: **Jo-Ellen Pozner**, *Santa Clara U.*
Discussant: **Shu Zhang**, *U. of Wisconsin, Madison*
Presenter: **Aharon Cohen Mohliver**, *London Business School*
Presenter: **Alessandro Piazza**, *Rice U.*
Presenter: **Sarah Gordon**, *McGill U. - Desautels Faculty of Management*
Organizer: **Jordan Siegel**, *U. of Michigan, Ross School of Business*
Organizer: **Jin Hyung Kim**, *George Washington U.*

Strategic management research around organizational wrongdoing has made considerable progress in elucidating how these practices spread both within and across organizations. Central to much of this literature is the logic, famously articulated by Becker (1968), that wrongdoing follows from rational calculation weighing the perceived upsides of these actions against perceived downsides. Integrating perspectives from strategic management, management scholars have enriched this perspective, illustrating how wrongdoing fits into firms' broader efforts to enhance performance. Naturally, this work has inspired corresponding research on deterrence, wherein greater attention to the strategic motivations for organizational wrongdoing informs novel theories regarding how it may be preempted or cauterized. This symposium brings together scholars whose work is at the cutting edge of these questions. It showcases work illustrating novel motivations for wrongdoing, as well as novel explanations for how and why certain deterrence strategies may prove especially effective. By doing this, we believe this symposium will enhance our understanding on corporate wrongdoing and how it can be more effectively deterred.

Boards, CEOs, and Managers Affect Digital Transformation

Session Moderator: **Xueqi Zhao**, *School of Economics and Management Tsinghua U.*

TIM: **Digital Transformation in Director Networks: Unveiling its Peer Effect Impact on Firm Productivity**

Author: **Xueqi Zhao**, *School of Economics and Management Tsinghua U.*
Author: **Haonan Zhang**, *Renmin U. of China and City U. of Hong Kong*

Digital transformation in manufacturing enterprises is a key strategy for enhancing total factor productivity. The peer effects of digital transformation within corporate director networks can further assist enterprises in quality improvement and efficiency enhancement, metaphorically allowing them to "climb higher with leverage". This study, based on panel data from 3,215 Chinese manufacturing listed companies from 2012 to 2021, empirically finds that the peer effects of digital transformation in corporate director networks positively contribute to total factor productivity. The mediation mechanism test reveals that innovation incentives, management empowerment, and optimization of human capital structure are the channels through which the corporate director network's peer effects on digital transformation enhance total factor productivity. Therefore, it is recommended that enterprises strengthen the embeddedness of their director networks to fully leverage these peer effects, maximizing the external acquisition of resources, optimizing operations, and strengthening the accumulation of human capital to promote high-quality corporate development.

TIM: **The Distinct Effects of CEO Narcissism and CEO Hubris on Digital Transformation**

Author: **Yihui Xiao**, *School of Business, Renmin U. of China*
Author: **Chunling Zhu**, *School of Business, Renmin U. of China*
Author: **Chenxi Zhang**, *School of Business, Renmin U. of China*

While prior studies show that CEO narcissism and CEO hubris play a key role in corporate strategic decision-making, both CEO characteristics have been mainly conceptualized to lead to similar outcomes. Integrating upper echelons theory and stakeholder theory, this study proposes that CEO narcissism and CEO hubris affect firms' digital transformation in distinct ways and through the channel of corporate social responsibility (CSR). Using a sample of listed manufacturing firms in China from 2011 to 2020, we find that CEO narcissism has a positive effect on digital transformation while CEO hubris has a negative effect on digital transformation. Moreover, we find that high CSR performance plays a differential role in moderating these relationships - it strengthens the former relationship but weakens the latter. By showing the mechanisms through which CEO narcissism and CEO hubris shape digital transformation in different ways and through CSR performance, our study contributes to research on digital transformation and upper echelons theory, and bridging them using stakeholder theory.

TIM: **Smoke and Mirrors: Regulatory Focus and Digital Transformation Decoupling**

Author: **Hongfei Ruan**, *Harbin Institute of Technology*
Author: **Chenjing Wang**, *Guanghua School of Management, Peking U.*
Author: **Ying Zhang**, *Northwestern Polytechnical U.*
Author: **Wenxin Wu**, *Guanghua School of Management, Peking U.*

Research shows that firms increasingly proclaim digital transformation as an important competitive strategy. Less is known about when the policy of digital transformation is decoupled from the implementation of that, i.e., digital transformation decoupling. This decoupling is an unethical practice and allows firms to reap reputational benefits of appearing innovative without earnest commitment to transformation. We expand the literature on digital transformation by examining how TMT regulatory focus influences the occurrence of digital transformation decoupling. We theorize that TMT prevention (promotion) focus will be negatively (positively) associated with digital transformation decoupling. These effects are moderated by firms' perceived economic policy uncertainty and market competition. Our theory and results indicate that TMT's motivational traits are important processes preceding the decision to digital transformation decoupling. Our models receive large support in a study of 26, 088 firm-year observations of Chinese listed firms during 2013-2021.

TIM: **From CEO Optimism to Digital Innovation: Unraveling CEO's Impact on Innovation through NLP Analysis**

Author: **Marika Platz**, *Leibniz U. Hannover*
Author: **Thomas Schäper**, *Westfälische Wilhelms-U. Münster*

In today's dynamic business landscape, digital innovation is crucial for organizational success, given the transformative potential of technology. Navigating this digital frontier by means of digital innovation is not just a strategic choice but a necessity for organizational agility and competitiveness. A key factor in that regard are the decisions of firms' Chief Executive Officers (CEOs), which depend on the CEOs' characteristics. In this study, we argue that CEOs' optimism is critical for digital innovation. Optimism refers to a psychological disposition characterized by a positive outlook and hopeful expectations that has a profound influence on shaping individuals' responses to challenges, fostering resilience, and serving as a catalyst for innovative thinking. Acknowledging that too much optimism can become detrimental for innovation because it may lead to overconfidence, underestimation of risks, and neglect of potential challenges, we propose an inverted-U relationship between CEO optimism and digital innovation outcomes. Further, we explore the influence of market dynamism on this relationship. Drawing from an extensive dataset comprising 3,288 organization-year observations, our analysis widely supports our theorizing. We contribute to the literature by unveiling an inverted U-shape relationship between CEO optimism and digital innovation that diminishes with growing market dynamics, and by providing an NLP-based measure for CEO optimism.

AI and Organizational Capability

Session Moderator: **Anezka Viskova-Robertson**, *Leadership and Organizational Change*

TIM: The AI Effect: Transforming Workplace Well-Being? An Empirical Insight Through Socio-Technical Frame

Author: **Anezka Viskova-Robertson**, *Leadership and Organizational Change*

Through an empirical study, this paper presents a comprehensive analysis of employee reactions to the integration of generative AI in the workplace, drawing on Socio-technical Theory and the Tripartite Model of Attitudes. By contributing to the developing discourse on AI's transformative role across modern workspaces, the study provides organizational scholars, leaders, and HR practitioners key insights on navigating the complex landscape of assimilating these technologies into existing systems. It explores employees' cognitive, behavioral, and emotional reactions, highlighting both the challenges and opportunities presented by AI integration. This study reveals that while AI generally garners positive acceptance and enhances productivity, it also prompts cognitive adjustments and learning for effective use. Behavioral changes include changes in collaboration practice and a reshaping of team dynamics, emotional responses range from initial anxiety to gradual adaptation. The paper underscores the importance of organizational support and guidance policies to manage ethical implications and workload distribution, emphasizing the need for a balanced approach to AI adoption that respects both technical efficiency and work well-being. Moreover, it emphasizes listening to employees' experiences as an effective

TIM: Enabling Individual Ambidexterity: The Impact of AI on Combining Dual Learning Orientations  

Author: **John-Luca Sebastiaan de Vries**, *U. of Amsterdam, Amsterdam Business School*

Author: **Michiel Pieter Tempelaar**, *Amsterdam Business School, U. of Amsterdam*

Author: **Henk W. Volberda**, *Amsterdam Business School, U. of Amsterdam*

How can firms achieve ambidexterity using Artificial Intelligence (AI)? While AI is becoming an increasingly important source of competitive advantage, our understanding of how this domain of technologies can be used to combine exploration and exploitation remains limited. To address this gap, this article develops the concept of AI-assisted individual ambidexterity. Searching for the antecedents of this capability, the article borrows and synthesizes concepts from knowledge-based theory, routine dynamics, problemistic search, paradox theory, and the broader Carnegie tradition. The theory's main claim is that AI can be used to counteract tendencies associated with bounded rationality of individuals in those cases where mitigating factors are present, so that individual learning traps are avoided. However, while stimulating productivity and creativity in individual decision-makers, AI usage can itself also exacerbate learning traps as individuals try to engage in explorative and exploitative learning. This theory is supplemented by five research propositions, which are formalized in an integrated conceptual model for AI-assisted individual ambidexterity, ending the paper with a set of implications for researchers.

TIM: Contextual Limits of Incorporating Artificial Intelligence in an Organization   

Author: **Abayomi Baiyere**, *Smith School of Business, Queen's U.*

Author: **Harri Nieminen**, *Tampere U.*

Artificial intelligence (AI) is being presented as a Holy Grail with the capacity to do things that were considered science fiction some years ago. We argue in this piece that within organizational settings, there are contextual limits to what we can currently expect AI to achieve. Building on a 5-year long ethnographic study of a case company's AI journey, we outline two contextual considerations for incorporating AI in an organization – unique vs. recurring instances and tangential vs. overlapping scopes. With these findings, our study refocuses attention on context as an essential component in theorizing about AI in contemporary organizational settings. The study shifts the narrative about AI to a contextual sensitivity in which the specificity of an AI technology is considered salient within a situated context. We outline implications for future studies in considering the appropriateness of describing AI with a one-size-fits-all all narrative.

TIM: AI Empowered: Re-Defining Leadership for Industry 4.0 

Author: **Tatjana Titareva**, *James Madison U.*

Author: **Tale Skjolsvik**, *OsloMet - Oslo Metropolitan U.*

This paper is a literature review that explores the intersection of Artificial Intelligence (AI) and leadership. Utilizing a systematic literature review methodology, key articles from the EBSCO databases from 2010 to 2023 were analyzed with the main purpose to identify central themes and dimensions related to AI Leadership. Our discussion of findings has several perspectives: viewing AI leadership as scenarios and AI leadership as a process, competence, and a holistic approach. We integrate AI as enhancement or replacement with two dimensions of AI leadership: AI in leadership and leadership of the adoption of AI. This integration results in a matrix categorizing future leadership into four types—Transition, Team, Strategic, and Beyond leadership. Practical Implications for re-defining leadership during Industry 4.0, include skill development and training, AI-enhanced decision-making, redefining leadership roles and tasks, change management, building future-oriented organizational culture, and developing policy and regulatory compliance. This paper promises to contribute to the ongoing development and understanding of leadership in the AI age. It aims to introduce new dimensions to leadership and management research that could be beneficial both to academic scholars and industry practitioners. Keywords: leadership; Industry 4.0; artificial intelligence; AI; ebSCO; literature review

TIM: Team Familiarity, Task Familiarity, and Product Innovation: Evidence from Japanese Sake Brewing

Author: **Sen Zhang**, *Graduate School of Commerce, Waseda U.*

Author: **Hang Yuan**, *Graduate School of Commerce, Waseda U.*

Author: **Mengru Zhao**, *Graduate School of Commerce, Waseda U.*

Author: **Donghoon Kim**, -

Author: **Keisuke Hori**, *Shujitsu U.*

Author: **Yusuke Hoshino**, *Musashino U.*

Author: **Hiroshi Shimizu**, -

This study examines how team familiarity and task familiarity influence the superiority of new product development by using longitudinal data on team members, team formation, and quality competition results in the sake brewing industry in Japan from 1956 to 2018. While the prior research has observed consistent results that team familiarity is positively associated with team performance, the effects of team familiarity on product innovation have not been explored. Data from the national quality competition, which is purely judged by experts based on blind tasting, allow us to avoid reputation effects and to examine how team familiarity influences highly superior product quality in which novelty is required. The empirical results show that the increases in both team and task familiarity are negatively associated with product quality superiority. The U shape of team and task familiarity effects on innovation are observed. However, the decreasing effects of familiarity are weak compared to the increasing effects. The study also uses The Great East Japan Earthquake as an external shock to take into the endogeneity between familiarities and team formation account to estimate the causal relationship between familiarities and new product development performance.

TIM: Keeping R&D Employees Engaged in Failure Contexts: The Role of Managerial Responsibility

Author: **Judith Behrens**, *ULB - Solvay Brussels School of Economics and Management*

Author: **Anne Tryba**, *Technical U. of Munich*

Project failures are common in R&D-intensive organizations, and finding ways to deal effectively with them is a critical managerial task. While we know that experiencing the failure of an own R&D project can decrease the commitment and contentment of the involved employees, we do not know how witnessing the failed projects of others in the same organization might demotivate the R&D employees not involved in those projects. Drawing on job demands-resources theory, we develop and test a model of when and with what consequences a perceived failure context constitutes a job demand that impairs the work engagement of R&D employees. Using data from 437 R&D employees of 49 innovative organizations, we show that managerial responsibility represents a vital job resource that buffers the negative effect of a perceived failure context on work engagement and, via work engagement, on job satisfaction. We discuss implications for practice and the literature on project failure, work engagement, and managerial responsibilities in organizational R&D contexts.

TIM: Autonomous Inventions, Problem Formulation, and Inventive Outcomes 

Author: **Jiho Yang**, *Imperial College Business School*

Author: **Paola Criscuolo**, *Imperial College London*

Author: **Dmitry Sharapov**, *Imperial College Business School*

Extant theory on autonomy and creativity predicts that autonomy in deciding how to solve a given problem improves creativity by fostering intrinsic motivation. In this study, we explore a less-studied type of autonomy, that is, autonomy in selecting problems and how it influences the creative performance of corporate inventors. Drawing on the literature on creative problem solving and research on cognitive overload associated with autonomy, we hypothesize that autonomous inventions (i.e., outcomes of inventive activities that inventors autonomously initiated and set problems for) are associated with lower problem formulation complexity than inventions resulting from formal R&D projects for which problems are more defined ex-ante, and lower problem formulation complexity in turn relates to lower quality of inventions. We also suggest that the negative relationship between autonomous inventions and problem formulation complexity is moderated by inventors' domain expertise and their efforts in searching for previous problems and solutions. Leveraging a unique dataset consisting of the descriptions of problems by corporate inventors of a firm, we found evidence supporting the hypotheses. Contributions to the literature on job design, creativity, and problem formulation are discussed.

TIM: Managing Innovation Paradoxes Through Design Thinking 

Author: **Selina Mayer**, *Hasso Plattner Institute*

Author: **Pietro G. Micheli**, *U. of Warwick*

Author: **Martin Schwemmler**, *The Future Company*

This study investigates how large incumbent organizations navigate paradoxical tensions of innovation. As business environments become increasingly uncertain, firms are required to adopt agile ways of working to promote creativity and provide innovative solutions to customers' evolving needs. However, this often generates considerable tensions with existing processes and practices aimed at ensuring control and efficiency. We use extensive interviews and archival data collected in 20 large, highly regulated companies that recently implemented design thinking to become more user-centered and innovative. We uncover three paradoxes: playfulness vs. pressure to deliver; autonomous decision-making vs. hierarchy and organizational structure; and user needs vs. organizational goals. For each paradox, we identify similar dynamics and four fundamental aspects. This study extends research on paradox theory, innovation, and creativity by showing how the introduction of innovative approaches, such as design thinking, can make paradoxes more salient, and by identifying practices that can help organizations navigate them. Specifically, it highlights the benefits of adopting structured processes comprising of diverging and converging elements, promoting cross-functional collaboration, and using visual artifacts to facilitate interactions among multiple parties. However, it also emphasizes the importance of balancing novel practices with existing ones, adopting a paradoxical frame whereby opposing aspects are nourished.

Mechanisms for Selecting Inventions

Session Moderator: **Elona Marku**, *U. of Cagliari*

TIM: Market Experimentation of Disruptive Innovations Under Network Effects 

Author: **Bulat Sanditov**, *Institut Mines-Telecom Business School, LITEM, U. Paris-Saclay, France*
Author: **Charlotte Krychowski**, *Institut Mines-Telecom Business School, LITEM, U. Paris-Saclay, France*

Because disruptive innovations rely on untested business models, a real market experimentation plays a key role in evaluating their probability of success. However, the design of a real market experimentation is particularly difficult to establish when the business model underpinning the innovation displays strong network effects. On the one hand, minimizing direct costs and sunk costs in case of failure, induces the innovator to keep the experimentation as small as possible. On the other hand, conducting the market test on a too low scale entails the risk that network effects do not fire up, because a critical installed base of users is not reached. This trade-off is an important issue, as network effects are pervasive in today's economy. In this article, we develop an economic model that examines whether the adoption rate on the whole market can be extrapolated from the adoption rate on the market test, depending on the size of the market experiment. We show that below a minimum threshold, the innovator may not properly assess the real market potential of an innovation, and may miss the opportunity of progressively refining the business model underpinning the innovation. This threshold is inversely related to (i) the intensity of network effects and (ii) the fraction of consumers who are sensitive to the network effects of the new product or service. Conversely, we demonstrate that beyond a certain threshold there is no benefit in extending the size of the experiment. We derive from the model managerial implications regarding the management of a market experiment under network effects.

TIM: Does It Make Sense? How Experts Can Unveil the Usefulness of Novel Ideas  

Author: **Olga Gonzalez-Salmeron**, *Rotterdam School of Management, Erasmus U.*
Author: **Dirk Deichmann**, *Rotterdam School of Management, Erasmus U.*

Many firms fail to innovate because of their inability to select and implement novel ideas. Evaluators often turn down novel ideas and therefore act as roadblocks to innovation. But why do evaluators tend to reject novel ideas more often than conventional ideas? Novel ideas are often associated with ambiguity and therefore may create uncertainty in evaluators' minds. Under these circumstances, evaluators have problems perceiving an idea's usefulness which is why they often reject such an idea. In this study, we propose a mechanism to boost evaluators' perception of usefulness. Specifically, we argue that when functionally diverse expert advisors are involved in the evaluation and selection of ideas, a process of sensemaking is activated which will help reduce evaluators' uncertainty about an idea, allowing them to better comprehend an idea and to perceive the usefulness of novel ideas. We find support for our hypotheses by leveraging unique archival data of an idea management system of a multinational insurance company where ideas are assessed in collaboration with expert advisors. Our findings have broad implications for the literature on innovation and idea evaluation as they highlight the importance of sensemaking and collaborating with functionally diverse expert advisors during idea evaluation and selection processes.

TIM: Better Safe Than Sorry: Strategic Nay-Saying in Idea Evaluation

Author: **Johanna Schnier**, *Copenhagen Business School*
Author: **Christina Raasch**, *Kühne Logistics U.*
Author: **Linus Dahlander**, *ESMT European School of Management and Technology*

Since innovative ideas are inherently uncertain in their commercial and technological value, managers often struggle to evaluate them. They cast evaluations that are overly optimistic or pessimistic relative to the ideas' actual performance. How do managers respond to these evaluation errors? We answer this question using panel data from the idea management system of a large firm in the aircraft industry. Employing a difference-in-differences framework, we find that managers reject more ideas following overestimation errors but remain unresponsive to underestimation errors. We explain this finding with strategic nay-saying: Fearing the reputational costs of additional errors, managers preemptively reject ideas because the value of rejected ideas remains unknown. We also consider alternative accounts of manager error responses, including learning from errors and intensified search for information, but find inconsistent evidence. Our study uncovers a new source of managerial conservatism that is rooted in an asymmetry in the observability of under- and overestimation errors.

TIM: Navigating Technology Awareness and Cognitive Biases in Proof-of-Concept Projects 

Author: **Maryia Zaitsava**, *U. of Cagliari*
Author: **Elona Marku**, *U. of Cagliari*
Author: **Maria Chiara Di Guardo**, *U. of Cagliari*

In the rapidly evolving world of technology, the ability to innovate fast and embrace failure is key to long-term success. With this in mind, proof-of-concept (PoC) has become an essential tool in the early stages of innovation, serving the dual purpose of validating new ideas and efficiently discarding those that lack feasibility. Although PoC has been widely used to support proof of concepts and their transformation into viable innovations, a thorough understanding of how PoC effectively navigates the uncertainties associated with new technologies remains underexplored. This study investigates the dynamics of PoC, focusing on technology awareness and the influence of cognitive biases. Central to PoC is technology awareness, which is often based on perceptions of a technology's potential. This perception can lead to biased behaviors within PoC. Our research, conducted through a longitudinal ethnographic study, reveals the impact of cognitive biases on PoC outcomes. We found that biases shape proving behaviors in PoC, namely, proving by assimilating, proving by asserting, and proving by reinforcing. We identified that technology awareness evolves through three stages: borrowed, acquired, and enhanced. We discovered that perceived technology potential follows a U-shaped curve, driven by beliefs in the technology as well as the levels of technology awareness.

Innovating and AI in Service Industries

Session Moderator: **Alessandro Biffi**, *Politecnico di Milano*

TIM: Between Envisioning and Embodiment: Socio-Cultural Changes as Catalysts of Service Innovation   

Author: **Alessandro Biffi**, *Politecnico di Milano*

Author: **Federico Artusi**, *Karlstad U.*

Author: **Emilio Bellini**, *Politecnico di Milano, U. del Sannio*

The increased occurrence of socio-cultural changes is creating a plethora of opportunities for service innovation. Shifts of established paradigms of behaving and thinking provide space for organizations to revise emerging contradictions of institutionalized rules of value co-creation. By drawing on institutional theory we study the broad span of culturally informed shifts to provide a practical account on how organizations can take use of changing institutions to innovate a service. Through an in-depth exploratory case study of service innovation within the Italian food retail sector, we identify three concurrent and complementary sets of actions that extend the ongoing conversation on innovation in service ecosystems: Reconciling institutional tensions, Proactive scaffolding of the Proto-institution, and Aligning service with the Proto-institution. Practically, we provide managers with a toolkit and a mindset to early envision the changing institutions that herald the evolution of society and develop new services accordingly.

TIM: Passive Innovation Resistance in Digital Subscription Services

Author: **Mario Schaarschmidt**, *U. of Duisburg-Essen*

Author: **Sven Heidenreich**, *Saarland U.*

Author: **Matthias Bertram**, *U. of Applied Sciences, Bonn-Rhein-Sieg*

Author: **David Dose**, *U. of Exeter Business School*

Service innovation research has a long tradition in investigating factors that predict the adoption and acceptance of new technology-mediated services. However, adoption only occurs when consumers start evaluating a new product offering. Passive innovation resistance (PIR), in turn, represents a person's disposition to resist rather than embrace innovation, and often prevents product evaluation. So far, innovation resistance research has predominantly focused on tangible products and found detrimental effects on consumer reactions to new products prior actual usage. This research takes a post-adoption perspective and investigates whether PIR might prompt consumers to be loyal to the service provider once the service is adopted even in case superior alternatives are available. Two studies, a predictive field study with two data collection points over a 5-week period (nt1=511, nt2=356) and an experiment (n=190), were conducted to examine the relationship between PIR and continuous usage of digital services with subscription models. The results indicate that in contrast to product innovation settings prior adoption, situational PIR is positively related to continuous service usage and negatively related to switching intentions - even when a change in conditions of the service under usage is announced and would be detrimental to the user. This counterintuitive finding prompts future research on innovation resistance in the context of digital services, applying a post- rather than a pre-adoption perspective.

TIM: Deeper or Broader? How Does Digital Economy Shape the Tourism Industry in China?  

Author: **Jie Yang**, *College of Management and Economics, Tianjin U.*

Author: **Liping Fu**, *College of Management and Economics, Tianjin U.*

Author: **Juan Li**, *College of Management and Economics, Tianjin U.*

Digital economy is an important driver for high-quality development of the tourism industry for emerging economics. With the e-commerce pilot city policy as a quasi-natural experiment, this paper uses the more cutting-edge DMLDID (double/debiased machine learning based on difference-in-differences) approach to explore the effect of digital economy on tourism development from the perspective of e-commerce. The empirical analyses cover a panel data of 280 prefecture-level cities in China from 2003 to 2019. The results show that (i) the e-commerce pilot city policy has a promoting effect on regional tourism. (ii) The e-commerce pilot city significantly promotes domestic tourism, while has no significant effect on foreign tourism. (iii) In southeast-side cities, cities with high Internet scale and cities with high public service level, the e-commerce pilot city policy plays a greater role in promoting regional tourism. This study provides empirical evidence for the promoting effect of digital economy on China's tourism industry, and also provides important policy implications for promoting industrial transformation and upgrading in emerging markets.

TIM: Complementary Innovation Strategies in the Service Sector and Their Relation to Firm Productivity

Author: **Alejandra Parrao**, *Pontificia U. Católica de Chile*

Author: **Julio A. Pertuze**, *Pontificia U. Católica de Chile*

Author: **Tomas Reyes**, *Pontificia U. Católica de Chile*

The literature has long stressed the importance of complementing different types of innovation strategies to increase firm performance. Such studies, however, have been firmly rooted in the manufacturing sector, and there is a debate on whether the service sector should complement innovation strategies, and on which strategies provide more benefits to service firms. In this paper, we analyze the complementarity between product, process, organizational and marketing innovations in the service firms, and its influence on productivity. Based on a dataset of 2,633 firms sourced from five waves of the Chilean national innovation survey, we show that both service and manufacturing firms complement innovation strategies; however, they differ on the type of strategies pursued. The former relies more on the combination of non-technological innovations (i.e., organizational and marketing). The latter relies more on the combination of technological innovations (i.e., product and process). While complementing organizational and marketing innovations is the preferred strategy pursued by services firms, productivity gains are only obtained through the combination of organizational and process innovation strategies. We contribute to the innovation literature by highlighting the unique features of the service sector and how these firms can boost productivity through complementarity.

Author: **Selim Ahmed**, *World U. of Bangladesh*

Author: **Ezaz Ahmed**, *School of Business, Charles Stuart U.*

Author: **Musfiq Mannan Choudhury**, *Department of Management, U. of Dhaka*

Author: **Dewan Mehrab Ashrafi**, *Department of Business Administration, East West U.*

Author: **Rubina Ahmed**, *School of Business, Charles Stuart U.*

Author: **Rafuiddin Ahmed**, *Department of Marketing, U. of Dhaka*

The present study investigates the customers' behavioural intention to use voice-based artificial intelligence (AI) to find the appropriate hotels and resorts in an emerging nation. This study determines the influences of information quality, system quality, privacy, and novelty value on attitude and behavioural intention to use voice-based artificial intelligence to obtain the appropriate information and find the location of the hotels and resorts. This study used a purposive sampling method for collecting data from the respondents, who are customers of the hotels and resorts in Bangladesh. A self-administered survey questionnaire was used to obtain responses from 378 respondents. After collecting the data, the reliability and validity of the constructs and hypotheses were tested via Partial Least Squares Structural Equation Modeling (PLS-SEM). The findings of the study indicate that information quality, system quality, privacy, and novelty value have a positive and significant impact on attitudes and behavioural intentions to use voice-based AI assistant services in an emerging nation. However, system quality does not significantly influence behavioural intention to use voice-based AI assistants, but it has an indirect significant influence on behavioural intention through the mediation effect of attitude. The study's findings provide essential guidelines for practitioners to understand the impacts of information quality, system quality, privacy, and novelty value on attitude and behavioural intention to use voice-based artificial intelligence to find the appropriate hotels and resorts to meet customers' needs and expectations.

Where to Play? Foci for Innovation Choices

Session Moderator: **Shiling Gu**, *Beijing U. of Chemical Technology*

TIM: **To Disrupt in Low-End Market or New Market? Competitive Dynamics Between Entrants and Incumbents**

Author: **Shiling Gu**, *Beijing U. of Chemical Technology*

Author: **Fangcheng Tang**, *Beijing U. of Chemical Technology*

New entrants into a market face trade-off between positioning themselves in the low-end market and the new market for disruptive innovation. This paper investigates how incumbents' different competitive responses lead to heterogeneous position choices. We identify circumstances under which a high isolation cost increases incumbents' willingness to cooperate, leading new entrants to adopt low-end strategies under the pressure from incumbents. When innovations are highly disruptive with a high profit distribution coefficient and NDP cooperation cost, new entrants are more likely to position new-market, regardless of incumbents' responses. If LDP cooperation cost is lower than a critical value, even if incumbents are strongly willing to cooperate, new entrants will refuse their requests and aggressively position new market. These findings offer decision-making tools for new entrants.

TIM: **When and What to Conform to: Product Framing Strategies in the U.S. Small Drone Market**

Author: **Dian Yu**, *Northeastern U., D'Amore-McKim School of Business*

Cultural entrepreneurship research highlights the trade-off between competition and legitimacy when examining the distinctiveness of venture framing strategies. Building on this literature, I bring this down to the product level to investigate how firms navigate regulatory uncertainties in the U.S. consumer drone industry. In particular, to explore two competing conventions that have been largely existing in parallel in the prior literature: framing to regulation vs. framing to market. Using 2,796 repeated observations of 466 small drones listed on the Amazon marketplace from 2013 to 2018, this study explores the impact of product framing strategies on performance in the nascent drone market amidst changes in regulatory standards. The findings suggest that both framing around regulation and market have a positive effect on performance, but these effects are substitutive. Specifically, framing around regulation has a positive effect on market performance after the shift in regulation, while framing around market has a positive effect prior to the shift in regulation. By recognizing the impact of different framing strategies on market performance, entrepreneurs can gain valuable insight as to when to pivot their product framing choices amidst regulatory uncertainty.

TIM: **"Where and How to Play" A Typology of Exploratory Innovation for Large Incumbent Firms**

Author: **Ananya Sheth**, *Cal Poly San Luis Obispo*

Author: **Peter A. Koen**, *Stevens Institute of Technology*

Innovation portfolios of large incumbent firms consist of multiple uncertain explorations. The literature advocates this but tends to bucket them all as one 'exploration'. This has made it challenging to differentiate between explorations. Frameworks that do distinguish between explorations do not explicitly consider the related value creation uncertainty. In this paper, we develop a nuanced view of explorations mapping them along two axes- the firm's technology capability and its business modeling capability. Our capability-oriented perspective helps theorize exploration at varying distances from the core business. We divide the space into four areas based on value creation uncertainty: 1) known commercialization path but less known technology, 2) less known commercialization path but known technology, 3) less known commercialization path and less known technology, and 4) unknown commercialization path and unknown technology. Our findings suggest that large incumbents should developing specialized strategies for different exploration types. The granular view of exploratory innovations developed herein contributes to a more nuanced discussion of innovation strategy for large firms.

TIM: **Agglomeration and Changing Business Models: How Mobile Technology Affected Location Decisions**

Author: **Vijayaraghavan Venkataraman**, *Indian Institute of Management, Bangalore*

Author: **Anna Lamin**, *Northeastern U.*

Author: **Sachidananda Benegal**, *IIM Bangalore*

Emerging technologies have created new business models that some organizations embrace, while others stick with established business models. We examine how this impacts location choice for new entrants. Combining agglomeration and business model research, we show that prior to the introduction of a new technology, new entrants favored locations where firms followed an established business model. However, after the introduction of new technology, this preference diminished, indicating a shift toward new business models. We combine data on the Indian software industry in Bangalore with data on H-1B visas to identify domestic firms using the outsourcing business model. Our empirical results show that locations with a large number of domestic firms using the outsourcing business model attracted entry prior to the introduction of 3G wireless spectrum. However, afterwards, this attraction significantly diminished. Our paper illustrates how business models influence agglomeration and location choice.

Acquiring Technologies for Innovation

Session Moderator: **Yifan Liu**, *School of Economics and Management Tsinghua U.*

TIM: Navigating the Legal Minefield: How PAE Litigation Risks Shape Firm Technological Innovation

Author: **Yifan Liu**, *School of Economics and Management Tsinghua U.*
Author: **Mingtao Xu**, *School of Economics and Management Tsinghua U.*
Author: **Aija Elina Leiponen**, *Cornell U.*
Author: **Zhe Xue**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*

In developing new technologies, firms often weigh the balance between internal development and external technology acquisition. This decision is influenced by the transaction costs associated with intellectual property rights, especially when choosing between inventing (make) or acquiring (buy) technological resources. In this study, we investigate a specific source of transaction cost, the litigation risk posed by patent assertion entities (PAEs), and examine how firms pivot their innovation strategies in response to a reduction in PAE litigation risks. Leveraging the enactment of America Invents Act (AIA) that restricted patent trolling activities, we found that lowered PAE litigation risks prompt firms to favor technology acquisitions over in-house inventions, reduce inventions in exploitative areas, and enhance acquisitions in explorative areas. Further, these effects are more pronounced in firms with high-level technological capabilities, enabling them to better navigate and manage patent litigation risks in the technology landscape. Our study contributes to the technological innovation literature and deepens our understanding of patent litigation from a transaction cost perspective.

TIM: Behavioral Biases in Knowledge Acquisitions

Author: **Deepak Jena**, *Indian School of Business*
Author: **Rohin N Vrajesh**, *Department of Management and Technology, Bocconi U.*
Author: **Siddhartha Vivekanand K**, *Indian School of Business*

Innovations are a salient source of competitive advantage for firms, and they often acquire salient knowledge through external sources in the form of acquisitions. A crucial assumption is that firms often use the knowledge that is acquired, however, growing literature suggests that is not the case. We expand this literature by looking at how behavioral biases in the form of social and historical aspirations impact the use of knowledge post acquisitions. Further, we investigate the moderating effect of CEO overconfidence between aspiration levels and knowledge use. Our results suggest that negative performance feedback against social aspirations increases the bias towards external knowledge and CEO overconfidence attenuates this relationship by downplaying the importance of negative feedback. Poor performance against historical aspirations does not have the same effect suggesting different attention mechanisms for social and historical aspirations.

TIM: Getting a Deal: A Study on Acquisition Transaction Value and Post-Acquisition Innovation

Author: **Joshua Sears**, *U. of North Carolina, Wilmington*

Technology acquisitions have become a vital part of firms' innovation strategies. Much of the literature has either focused on post-acquisition innovation or value creation (i.e., abnormal returns). With technology acquisitions approaching \$1 trillion in annual spending, we study the innovation return on investment and the impact that acquisition valuation has on post-acquisition innovation. Integrating the resource-based view of innovation with organizational identification, we build upon prior work by investigating the impacts of technological overlap and the relative quality of the target and acquirer knowledge workers. We argue that technological overlap will assist in target evaluation and target identification with the acquirer, leading to more collaborative innovations scaled by the price of the acquisition. We also argue that similarity in the quality of the knowledge workers will assist in target evaluation and collaboration. We argue that the target having greater quality workers will negatively influence target evaluation and collaboration. Finally, we submit that the acquisition value will have a moderating role on the impact of technological overlap and the similarity in quality of technological capabilities on post-acquisition collaboration.

TIM: The Family Psychological Foundations Toward the Strategic Decision to Innovate in Automation

Author: **Mariasole Bannò**, *U. of Brescia*
Author: **Giorgia Maria D'Allura**, *U. of Catania*
Author: **Emilia Filippi**, *U. of Brescia*

This study aims to advance our understanding of the strategic decision to innovate in automation (i.e., artificial intelligence, big data, and robotics) in family firms (FFs). To this end, we relied on the psychological foundations approach and the ambivalence in FFs, which gives rise to three archetypes of FFs: enmeshed, balanced, and disengaged. Moreover, we considered the negative and positive consequences of automation in terms of lower firm employment, lower employees' satisfaction and well-being, and higher firm productivity and their impact on three main non-economic goals and priorities pursued by FFs: the relationship between the family and the employees, the pride of creating a strong image and reputation for both the family and the firm, and the feeling to be socially responsible. This study adopts a qualitative approach: we conducted three case studies involving an enmeshed, a balanced, and a disengaged FFs that registered a patent in automation technologies. We conducted semi-structured interviews with the family owner and the R&D manager. We found that enmeshed FFs will limit innovation in automation mainly based on emotional concerns (family level). Balanced FFs will support innovation in automation based on a balanced view between emotional concerns (family level) and economic aspect (firm level). Finally, disengaged FFs will support innovation in automation mainly based on the economic aspect (firm level). Our study makes a relevant contribution to the literature and has important managerial and policy implications.

SMEs and University Collaboration

Session Moderator: **Yufei Zhang**, *School of Business Administration, Hebei U. of Economics and Business*

TIM: TMT Gender Diversity and the Formation of SMEs' University-Industry Alliance Portfolios 

Author: **Yufei Zhang**, *School of Business Administration, Hebei U. of Economics and Business*

Author: **Shuman Zhang**, *School of Business Administration, Zhejiang Gongshang U.*

It has been a common phenomenon for small and medium-sized enterprises (SMEs) in China to construct multiple university-industry (U-I) alliances simultaneously. However, there is little scholarly understanding on the formation of SMEs' U-I alliance portfolios. From the upper echelons theory perspective, we investigate the effect of TMT gender diversity on the formation of SMEs' U-I alliance portfolios. Using the panel dataset of 2306 observations covering 490 listed manufacturing SMEs in China, we theorize and find that TMT gender diversity exerts a negative effect on SMEs' U-I alliance portfolio formation. We further examine two contingent variables including SMEs' innovation capacity and market competition, that moderate the relationship between TMT gender diversity and SMEs' U-I alliance portfolio formation. Results indicate that innovation capacity weakens the negative effect of TMT gender diversity on SMEs' U-I alliance portfolio formation, and that market competition also weakens this negative relationship. This study extends the prior literature on alliance portfolios, U-I alliance portfolios, and TMT diversity, and provides insights for practitioners of SMEs and the government.

TIM: Reflecting Back and Looking Forward: A Systematic Literature Review of SME-University Collaborations 

Author: **Zhe Cao**, *The U. of Queensland*

Author: **Martie-Louise Verreynne**, *U. of Queensland*

Small and medium enterprises (SMEs) contribute to innovation, employment creation, and economic development. To do this, they work with various organizations to extend their internal resources and capabilities and thus scale their efforts. Often missing from these collaborators are university partners. In this paper, we conduct a systematic literature review to present a comprehensive and up-to-date understanding of the extant literature on SME-university collaboration. The review covers 128 peer-reviewed publications from 1981 to 2023, highlighting the diversity of SME-university collaboration research regarding journal outlets, time of publication, methodologies, empirical contexts, theoretical lenses, and themes. We propose an overarching conceptual framework for theorizing SME-university collaborations and organize the field across three paradigmatic logics using the framework: technology transfer, knowledge co-development, and value co-creation. We combine these to articulate theoretical and policy implications and present a future research agenda.

TIM: Impact of University-Industry Collaboration Portfolio Partnership Repeatedness on Radical Innovation  

Author: **Yufei Zhang**, *School of Business Administration, Hebei U. of Economics and Business*

Author: **Bing Liu**, *School of Business Administration, Hebei U. of Economics and Business*

In the dynamic context of emerging economies, it has become a common phenomenon that high-tech small and medium-sized enterprises (SMEs) often construct university-industry collaboration (UIC) portfolios with repeated partners to promptly obtain external knowledge and resources critical to their radical innovation. However, existing research pays little attention to this phenomenon. This study delves into the impact of UIC portfolio partner repeatedness on radical innovation of high-tech SMEs, with a particular focus on China's distinctive informal institutional environment factors, specifically culture diversity and social trust, to explore the contextual boundaries. Leveraging panel data of 237 manufacturing high-tech SMEs listed on Chinese GEM Board, this study posits and substantiates a significant insight that UIC portfolio partner repeatedness exerts a negative effect on radical innovation of high-tech SMEs. Moreover, both cultural diversity and social trust weaken the negative effect of UIC portfolio partner repeatedness on radical innovation of high-tech SMEs. These findings shed more lights on prior research on alliance portfolios, university-industry collaboration and institution theory, and provide managerial implications for both high-tech SMEs and policymakers in emerging economies.

TIM: Boundary Spanning, Funder-Initiated Grants and Research Productivity 

Author: **Stefano Horst Baruffaldi**, *Politecnico di Milano School of Management*

Author: **Cornelia Lawson**, *U. of Manchester*

Author: **Felicia Seitz**, *Kiel U.*

Scientists and innovators can operate by developing and framing their own problem statements and solutions, but they can also become problem solvers to externally or pre-defined problems. Building on insights from open innovation we argue for a match between problem and solution types, such that externally defined problems benefit from boundary-spanning solutions that involve external actors, while internally defined problems do not. Using unique data on more than 2000 research grant applications to the Engineering and Physical Science Research Council (EPSRC), the largest strategic funding agency in the UK, we estimate a regression discontinuity design (RDD) model that compares near-misses with near-wins. Our findings show that scientists on investigator-initiated projects produce the highest impact research and have more funding success if they do not involve non-academic partners, while on the other side scientists on funder-initiated ('targeted') grants stimulate future research if they partner with industry. This suggests complementarity between problem formulation and solution types, such that externally defined problems benefit from boundary-spanning solutions, while internally defined problems have the highest impact when applying local solutions. These findings are of relevance to innovators and funders as they inform on the problem-solution match for impactful research and innovation.

Are We Gaining Ground Through Science and Technology?

Session Moderator: **Beyers Louw**, *U. of Groningen, Faculty of Economics and Business*

TIM: Is Knowledge Diffusion Really Slowing Down? Exploring Determinants of Highly Diffused Innovation

Author: **Beyers Louw**, *U. of Groningen, Faculty of Economics and Business*
Author: **Paul Huenermund**, *Copenhagen Business School*

Measuring the diffusion of innovation presents an important challenge for innovation policy as diffusion facilitates healthy competition between firms. Scholars have recently proposed that a slowdown of knowledge diffusion is the driving force behind the recent decline in business dynamism. This article examines whether the diffusion of innovation has slowed down and explores the determinants of highly diffused innovations over time. Critical for measuring diffusion, we employ a comprehensive firm- and patent-level dataset encompassing nearly the entire universe of firms that applied for patents in Germany between 1998 and 2015. First, we measure the rate and speed at which innovations diffused over time. Second, we explore the determinants of diffusible innovations by estimating which technology-, firm- and patent-level variables correlate with highly diffusible innovations by using an adapted double machine learning model. Our results show that knowledge diffusion has not slowed down on average between 1998 and 2012. Young firms introduced innovations that drive diffusion but have constituted a much smaller share of all firms that introduced breakthrough innovations over time. This emphasizes the importance of a supportive legislative environment for young firms as they introduce innovations that are influential and facilitate healthy competition. Determinants of diffusion are also inconsistent between different periods which is an important element to consider for innovation policy.

TIM: Science as a Catalyst for Technology Diffusion: Perspective in AI Industry

Author: **Daxin Sun**, *Nanjing U.*
Author: **Saixing Zeng**, *Shanghai Jiao Tong U.*

This study examines the effectiveness of diffusing science-based inventions in the context of the AI industry. We argue that although AI is treated as a general-purpose technology, AI firms can be classified into application-focused and basic technology development. The decision to use AI inventions depends not only on the value of the invention itself but also on owners' commitment to application scenarios. The clear roadmap provided by scientific terms in science-based inventions is more attractive for potential actors who are interested in obvious application scenarios of inventions. Our evidence from the Chinese AI industry supports our predictions. We also test boundary conditions in the environment, identifying when others benefit more from the commitment to application scenarios.

TIM: Edison vs. Pasteur vs. Bohr: The Technological and Scientific Impact of Use-Inspired Science

Author: **Paul-Emmanuel Anckaert**, *SKEMA Business School, U. Côte d'Azur, GREDEG*

Use-inspired basic research - research that integrates fundamental understanding with practical applicability - has been argued to provide a bridge between basic research and application. Nonetheless, empirical evidence validating this thesis is limited. This paper identifies the use-inspired nature of basic research at the article level, and examines how its technological impact compares to pure basic and applied research. Simultaneously, I explore the relationship between basic research's use-inspired nature and its scientific impact to determine potential trade-offs. Analyzing a sample of 438,019 journal articles in natural sciences from 2010, I find that use-inspired basic research is significantly more likely to have direct technological impact as compared to pure basic research. Moreover, conditional on having technological impact, (i) the intensity, (ii) speed, and (iii) scope of the technological impact of use-inspired basic research are significantly larger as compared to pure basic and applied research. At the same time, I demonstrate that this does not come at the cost of this research's scientific value. On the contrary, I show that use-inspired basic research articles have a greater scientific impact as compared to both pure basic and applied research articles.

TIM: Socialization of Technology: Exploring the Role of Robot Adoption in Social Innovation

Author: **CHENFANG ZHAO**, *Southwestern U. of Finance and Economics*
Author: **Zhenyu Qiu**, *Shanghai U. of Finance and Economics*

In the digital era, social innovation is challenged by information overload and fragmented resources, necessitating new pathways and strategies for accurately understanding and adapting to evolving societal needs and problems. Robots, with their autonomy, adaptability, and intelligence, are becoming a key driving force in social innovation. This study, grounded in resource orchestration theory and using data from 4,599 social innovation projects on GitHub, investigates the impact of robot adoption on social innovation. The empirical results show that robot adoption fosters social innovation; robot adoption influences social innovation by promoting dynamic adaptive resource orchestration (DARO), with project sustainability enhancing the positive relationship between robot adoption and DARO. This research expands the scope of agents in social innovation from the perspective of robot adoption, challenging traditional assumptions about the agents of social innovation. The involvement of robots in social innovation signifies a transformation of technology from a mere tool to a socially engaged participant, marking a socialization process of technology.

Factory Tour

Organizer: **Anand Nair**, *Northeastern U., D'Amore-McKim School of Business*

In this factory tour we will visit a 22,000-square-foot research factory set up by MxD (an organization that equips U.S. manufacturers with the digital manufacturing tools and expertise) that is used to test and demonstrate new technology; train the workforce on these new systems and tools; and demonstrate the need for cybersecurity in manufacturing. There is no additional cost for this factory tour; however, pre-registration is required. Since the organization has a limit in terms of how many people can be accommodated at a time, this tour will be limited to the first 50 people who will registered. The tour will only take place if there are at least 20 registered people This factory is located at. This factory tour will be planned if there are at least 20 registered participants. If you are interested in this tour, please click the following link and submit your information to register: https://neu.co1.qualtrics.com/jfe/form/SV_868gxKMo8fUOYGG

AOM Fellows 2024 Responsible Research in Management Awards

Organizer: **Brianna Giampia**, *Academy of Management*

This ceremony will announce and celebrate the winners of the 2024 Responsible Research in Management (RRM) Award, sponsored by the AOM Fellows Group. Authors of 7 winning papers and 1 book will reflect on the challenges and rewards of conducting research that is beneficial to society and useful to practitioners. Since its founding in 2018, the RRM Award has assembled a canon of “responsible research” which now contains 83 exemplary articles and 18 books that are academically credible, practically useful, and beneficial to society. Amidst the drumbeat of calls for research that is relevant to practice, RRM is the award that reflects what practicing executives regard as actionable research findings. Please join us to learn about and celebrate management research that can move the world.

SAP Meets Algorithmic Organizing

Host: **Georg Reischauer**, *WU Vienna & JKU Linz*
Speaker: **Stella Pachidi**, *U. of Cambridge*

The Strategizing Activities and Practices (SAP) Interest Group of the Academy of Management and the Communication, Digital Technology, and Organization (CTO) Division share an interesting in examining practices and their impact on organizational life. But much remains to be learned when it comes to the role of algorithms and artificial intelligence organizational and social practices. For this reason, you are cordially invited to join us in fostering a dialogue on this important topic at our upcoming Café event, to be hosted this year at the Intelligentsia Coffee Millennium Park Coffeebar (short walking distance from the Fairmont Chicago - Millennium Park Hotel).

Participant: **Ali Aslan Gümüşay**, *LMU Munich*
Participant: **Alice Comi**, *Tongji U.*
Participant: **Jennifer Whyte**, *U. Of Sydney*
Participant: **Vern Glaser**, *U. of Alberta*
Participant: **Shahzad Ansari**, *U. of Cambridge*

The Strategizing Activities and Practices (SAP) Interest Group continues to foreground futures in its research agenda. Central to our discourse is the recognition that futures are not predetermined by fate; rather, they are shaped by the actions of individuals and organizations, underscoring agency in future-making.

In our ongoing commitment to fostering dialogues on these crucial topics, we invite you to join us for a stimulating Café event. This gathering aims to explore various dimensions of future-making, including the role of desirable futures, diverse ontological understandings of the future, and their profound impact on contemporary organizational landscapes. Topics will range from the application of AI in shaping future scenarios to broader considerations of socio-economic shifts.

We are excited to host this event at the Intelligentsia Coffee Millennium Park Coffeebar, conveniently located just a short walk from the Fairmont Chicago - Millennium Park Hotel.

University of Glasgow Adam Smith Business School Networking Reception

Organizer: **Belgin Okay-Somerville**, *U. of Glasgow*

University of Glasgow Adam Smith Business School is inviting all friends, partners and collaborators for a drinks reception. At the University of Glasgow, we have been changing the world since 1451. Adam Smith laid the foundations of modern economics. James Watt gave power to the industrial revolution. Ian Donald showed us the first ultrasound image of a foetus. Jocelyn Bell Burnell discovered radio pulsars.

Our partners are crucially important to us. We are tremendously proud of our partnerships with sector-leading organisations and networks, world-class universities and research institutes.

Connecting, sharing and collaborating has never been more important in these challenging times. We look forward to meeting old friends and making new one in Chicago!

Case Teaching in Strategy

Organizer: **Frank T. Rothaermel**, *Georgia Tech*

Teaching with Cases is foundational to the Strategy course. In this interactive workshop, we will share best practices on the pedagogy of teaching with cases such as getting student buy-in through establishing a learning contract; selecting (different types of) cases; designing the case discussion; guiding case discussions using questioning, listening, and responding; the role of technology in case discussions; among other topics. All are welcome, no pre-registration required.

Breakout Learning: Using AI to Modernize the Classroom

Presenter: **Steven Walters**, *Co-founder*

At Breakout Learning, we've created a platform for student-led small-group discussions that are moderated and evaluated using AI. Our award-winning technology extracts comments, themes, and insights from student discussions and feeds them to the professor prior to the in-class debrief. Practically speaking, students no longer have to write essays demonstrating completion of reading assignments, and professors no longer have to grade those essays. This eliminates some of the least pleasurable parts of the academic experience, and leaves more room to prepare for the most critical part: the debrief. Breakout is currently being used by hundreds of professors at many of the top business schools. Join Breakout Co-founder Steven Walters and Noah Askin, Assistant Professor of Teaching Organization and Management at UCI Paul Merage School of Business, as they take you on a journey into the future of education. "[My students] enjoyed the experience... The pre-class prep in the Breakout Group really did pay off." - Adam Kleinbaum, Professor of Business Administration, Tuck School of Business at Dartmouth College.

University of Bradford Alumni Event

Organizer: **Michael John Miller**, *U. of Bradford*

Hi there, an academic from my university will be attending the AOM conference from 9-13 August and we are looking to host a small drinks reception for some Chicago-based alumni (10-15 people) while he is in town. Do you have any event space or section of bar we could use? Preference is for weekend daytime event but can be flexible. Many thanks.
