Participant: **Zhiya Guo**, *Utah State U.*

Social hierarchy and inequality is a popular and relevant topic in contemporary discourse. On the one hand, social inequalities of power and status are seen as major sources of individual stress and group conflicts as hierarchies tend to benefit some more than others. Power inequalities are often viewed as a source of social and political corruption, and the appeal of flatter organizational and societal structures is on the rise. Yet, on the other hand, hierarchies are believed to be an essential component of group functioning, and the desire to strive for rank is often viewed as a fundamental human need. In this symposium, we aim to bring together the emerging works of organizational hierarchy scholars to highlight novel approaches to understanding the challenges and functions of social hierarchies for individuals and organizations. Specifically, the collected works in this symposium inform how individuals can achieve greater need satisfaction and well-being, how followers can assuage the corrupting effects of power, and how organizations can execute more effective leadership structures. In doing so, we hope to not only add nuance to our understanding of how hierarchies function but also to inform how individuals and organizations can reshape their cognitions and behaviors to achieve greater success and well-being.

Morality as a System of Rules: Implications for Cognition and Behavior in Organizations

Organizer: **Sarah Milliron**, *Cornell U.*
Organizer: **Kristin Smith-Crowe**, *Boston U.*
Organizer: **Laura Niemi**, *Cornell U.*

This symposium seeks to explore morality within organizational contexts, specifically examining it as a system of rules that impact cognition and behavior. This exploration pivots away from traditional views that associate morality strictly with personal values and identity, instead proposing that morality can be effectively understood through the lens of rule-based systems. Presentations will delve into how these systems influence ethical behavior in organizations and how individuals cognitively process and evaluate the legitimacy of rules. The symposium will cover novel research insights into the legitimacy of rules, the moral underpinnings of rule compliance, and the implications of rule codification on behavior in organizations. It will also investigate the dichotomy between compliance and agency approaches in organizational ethics, and the psychological and organizational outcomes of adding or subtracting moral rules. The findings aim to contribute to a more nuanced understanding of moral psychology in organizations and offer significant implications for leaders and policymakers. The symposium seeks to be a comprehensive overview of morality as a system of rules, from individual psychology to national policy, aiming to stimulate discussion about the organizational benefits and costs of this perspective.

Theorizing Climate Change and Environmentalism: Mercy, Mercy Me!

Session Moderator: **Sunny Mosangzi Xu**, *Copenhagen Business School*

OMT: **Regenerating Imaginaries of An Alternative Future**

Author: **Sunny Mosangzi Xu**, *Copenhagen Business School*
Author: **Miriam Feuls**, *Copenhagen Business School*

In the midst of an ecological crisis, futures are typically imagined either as a doomsday dystopian scenario or an idyllic utopian one. This paper takes a practice perspective and examines how actors navigate the dystopian-utopian tensions in future making in the context of dairy farming. The study empirically examines the ongoing Regenerative Farming Pilot Network (RegenPilot) at Arla, a Danish multinational dairy cooperative, during its first year. The study shows that actors constructed a paradoxical imaginary of the future that was both utopian and dystopian. This imaginary guided the actors in enacting three future-making practices of different temporalities and teleoaffectivities – remembering a proud but doubtful past, performing a potential but limited present, and imagining a promising but unknown future – to make an alternative sustainable dairy future. By enacting the future-making practices, actors created a contested site for future making, where the paradoxical imaginary was maintained and reproduced. The paper contributes to organization studies and future making (i) by proposing three genres of futures – expected futures, imaginative futures and alternative futures, providing conceptual clarification, (ii) by conceptually distinguishing temporal, teleological and affective as three constitutive dimensions of future-making practices, and (iii) by suggesting a paradoxical approach toward working with rather than resolving utopian-dystopian tensions in imaginaries. Finally, the paper offers an organizational explanation for the green transition challenges in the agriculture sector and suggests ways to potentially facilitate a faster transition.

OMT: **It's (Not) Our Problem: How Management's Construction of Climate Risk Affects ESG Ratings**

Author: **Rui Wang**, *George Washington U.*

How do voluntary climate-related disclosures affect third-party ESG ratings? Adopting a social constructivist perspective, we propose that corporate disclosures reveal the extent to which management considers climate risks as inside or outside its control. Building on climate change discourse literature and locus of control theory, we theorize that emphasizing physical risks reveals an external locus of control and leads outside evaluators to rate firms as having fewer environmental strengths, whereas emphasizing energy risks indicates an internal locus of control, resulting in higher environmental strength ratings. Using a novel dataset on climate risk disclosures and employing word embedding models, a recent machine-learning approach, we find support for our predictions: firms with a greater portion of physical risk receive significantly lower environmental ratings, whereas firms with a greater emphasis on energy risk receive significantly higher environmental ratings. We also explore boundary conditions regarding uncontrollable events and potential rewards for addressing climate risks, as well as the effects of disclosure uncertainty. This research enriches our understanding of climate-related disclosures by showing how they provide narrative cues as to a firm's agentic stance, which influences ESG analysts' meaning making and ratings.

OMT: **Oscillating Between Alternate Realities: The Vanishing Island of Ghoramara**

Author: **Arijit Chatterjee**, *ESSEC Business School*
Author: **Anjan Ghosh**, *Nazarbayev U. Graduate School of Business*
Author: **Patricia Helena Hein**, *Ivey Business School*

Climate change is a paramount global challenge with far-reaching implications. How do communities socially construct their lived experiences as they grapple with the loss of habitat driven by climate change? To find an answer to the question we conducted in-depth field-based reflexive research on Ghoramara island located in the Sundarbans delta. We deploy extensive techniques to reach out to and study the entire extant population of Ghoramara as well as a large section of former residents of the island. Our analysis revealed that the embeddedness of humans and nature for generations created symbols, metaphors, folktales, and rituals shaping societal cognitions and actions. Uncertainties caused the inhabitants to adopt metaphors of extreme, alternate realities that oscillated between the generous and the precarious. Such oscillations eventually influenced the reconstruction of lives, actions, and identities to cope with the unavoidable future. We develop a theoretical model of oscillating between alternate realities to cope with environmental disasters for people at the margins.

OMT: **Activists' Strategic Interactions, Collaborative Tactics, and Local Environmental Performance**

Author: **Ye Joon Lee**, *Kellogg School of Management, Northwestern U.*
Author: **Brayden G. King**, *Northwestern U.*
Author: **Laura Nelson**, *U. of British Columbia*

This paper uses social movement theory and strategic interactions perspective to examine social movement organizations' use of a diverse set of tactics in their interactions with local communities, firms, and facilities. Using unique, geocoded data on 527 environmental movement organizations' (EMOs) reported interactions and toxic chemical-based environmental indicator data between 2000 and 2015, we examine the effect of EMOs' strategic activities and collaborative interactions on local environmental performance and the conditions under which these effects are amplified. Extending and complementing existing measures of movement activities, we suggest a new measure using local strategic activities that better captures local activists' influence on the local environment. Our empirical analysis also demonstrates that EMOs' collaborative interactions significantly improve local facilities' environmental performance and that the effect of EMOs' collaborative interactions is stronger in communities with higher level of disruptive protests in previous years, lending support to the radical flank effect hypothesis. Our findings contribute to social movement theory and organizational theory by demonstrating the material impact of movement organizations' strategic interactions on local corporate facilities' environmental actions and by highlighting the manner in which the level of local EMOs' past contentious engagement may moderate the effects of cooperative engagement.

Discourse, Framing and Storytelling in Leadership and Entrepreneurship: Say What You Wanna Say

Session Moderator: **Clarence Bluntz**, *Maastricht U.*

OMT: **Unlocking Social Impact at Scale: The Power of Emotionally Charged Entrepreneurial Framing**

Author: **Clarence Bluntz**, *Maastricht U.*

Author: **Yuliya Snihur**, *IESE Business School*

Author: **Nancy Bocken**, *Maastricht U., School of Business & Economics*

We study how a French social venture helped scale social impact by selling fair-priced milk, reaching half of France's households in less than four years. The social entrepreneur used diagnostic, prognostic, and motivational frames inspiring consumers to collectively take back control of pricing. These frames were emotionally charged through interactions with farmers, journalists, and social media followers, validated in the market by consumers and retailers, and finally normalized in society by politicians and lawmakers. We contribute to research on scaling social impact by offering a model of distributed scaling and showing how social entrepreneurs can mobilize the ecosystem through emotional appeals to collective intelligence and fairness. We also advance entrepreneurial framing research by revealing how emotional charging of framing can fuel scaling of social impact.

OMT: **So Many Stories Left to Tell: A Review of Entrepreneurial Storytelling Literature**

Author: **Jim Whitbeck**, *Oregon State U.*

The entrepreneurship literature has taken an increased interest in the complex mechanisms and outcomes of storytelling in recent years. However, the literature around storytelling and its specific relevance to the context of entrepreneurship remains both fragmented and contains significant theoretical “blind spots,” with a distinct bias towards qualitative methods, internal storytellers, and positive outcomes. We take a narrative practice approach to our review of the relevant literature by linking together a storyteller and their audience (who) as agents in the use of content (what) and mechanisms (how) to generate outcomes (why). This approach allows us to frame our study using a method consistent with our subject to create a foundational conceptual framework of the key mechanisms of entrepreneurial storytelling, the main theoretical contributions and themes which drive it, and its underlying assumptions and boundary conditions. Having outlined these essential elements for the 81 articles included in our analysis, we synthesize the insights and outline several promising directions for future research to build a more holistic understanding of the unique and influential mechanisms of storytelling in entrepreneurship.

OMT: **Miniature Storytelling in Crowdfunding: The Role of Visual Congruence and Verbal Distinctiveness**

Author: **Rui Wang**, *George Washington U.*

Entrepreneurial narratives play a critical role in mobilizing resources, especially for social ventures engaging impact-driven audiences. While increased attention has been paid to entrepreneurial stories shared through online platforms, existing literature has largely overlooked the audience's sequential engagement with these stories and their multimodal composition. Building upon the concept of optimal distinctiveness and theories on communication modes, we theorize how the distinctiveness of visual and textual elements differ in appealing to the audience. Furthermore, we theorize the relative impact of an initial miniature story—the succinct entrepreneurial story usually leveraging visuals along with verbal text to communicate the essence of an entrepreneurial endeavor—compared to a subsequent fuller story. Analyzing borrowing campaigns pitched on Kiva over 16 years, both mini-pitches (in the form of image-text pairs) and fuller descriptions, we find that visual category congruence and verbal category distinctiveness are positively related to funding success, but only verbal category distinctiveness leads to faster funding. Moreover, we find that mini-pitches have a greater impact on accelerating the funding process than fuller stories. Our findings caution against assuming that audiences equally engage in each fuller entrepreneurial story and assuming visual and verbal modes of entrepreneurial narratives have similar impacts on audience support.

OMT: **(No) Laughing Matters: A Multimodal Exploration of Humor in Leader's External Communication**

Author: **Niklas Mueller**, *U. of Passau*

Author: **Steffen Klug**, *U. of Passau*

Author: **Andreas Sebastian Konig**, *U. of Passau*

Author: **Benno Stöcklein**, *U. of Passau*

Author: **Dominik Bong**, *U. of Passau*

Author: **Alexander Kathan**, *U. of Augsburg*

Author: **Lukas Christ**, *U. of Augsburg*

Author: **Shahin Amiriparian**, *U. of Augsburg*

Humor is a central element of leaders' external communication, but scholarly explorations lack a conceptually rigorous, rich data exploration of spontaneous leader humor. We therefore study a unique sample of press conferences held by professional soccer coaches to multimodally examine different types of leader humor—affiliative, self-enhanced, self-defeating, and aggressive—using text, audio, and video data. We present findings in two central areas: first, the challenges of validly capturing leader humor, and second, leaders' use of humor in external communication. In particular, we successfully train a supervised machine learning framework corroborating the validity of our manual human humor annotations. Moreover, we observe that leaders express humor primarily in clusters, either at the beginning or towards the end of press conferences; and only half of the humor instances occur with laughter, which undermines previous approaches of using laughter as a proxy for leader humor. Overall, our research offers unique grounding for the notion that externally-oriented leader humor is deeply embedded in social rituals and practices. We also reiterate the need for an unobtrusive, type-specific, and multimodal exploration of leader humor, and provide guidelines for further research.

DEI, Polarization and Crisis Response: Beyond Our Tribes

Session Moderator: **Ricardo Coelho Da Silva**, *NOVA School of Business and Economics*

OMT: **How Emergent Response Groups Emerge: The Role of Bricolage in Crisis Responses**

Author: **Ricardo Coelho Da Silva**, *NOVA School of Business and Economics*

Author: **Leid Zejnilovic**, *NOVA School of Business and Economics*

Author: **Marco Berti**, *Nova School of Business and Economics, U. Nova de Lisboa*

Author: **Miguel Pina Cunha**, *AMJ-2020-1765*

Author: **Pedro Oliveira**, *Copenhagen Business School*

Our understanding of the formation and development of emergent response groups, informal communities assembled around a social goal, is still limited, despite their importance in times of environmental shocks. To address this gap, we conducted a qualitative study of 13 response groups created in reaction to the Covid-19 pandemic. Our research reveals the centrality of bricolage as the key process in enabling collective work and provides valuable evidence on the nature of organizational bricolage. We generalize our findings to advance three major theoretical contributions: (1) a novel typology of manifestations of bricolage; (2) an articulation of the concept of “at hand” resources in the context of emergent organizations; and (3) a conceptualization of the dynamics enabling the emergence of response group, grounded in the interactions the proposed bricolage types.

OMT: **The Impact of Masculine Culture on Turnover and Performance**

Author: **Soomin Sophie Cho**, *U. College London*

Author: **Sang Won Han**, *INSEAD*

Author: **Yoonjin Choi**, *College of William and Mary*

How does a ‘bro culture’ influence employee turnover and organizational performance? We conceptualize masculinity in an organizational culture as the degree to which an organization emphasizes prototypically masculine attributes as strengths while suppressing prototypically feminine attributes as weaknesses and explore the role of masculine culture in employee turnover and organizational performance. Using employee review data sourced from Glassdoor, we create a novel measure of masculine culture by applying a machine learning technique. Integrating insights from the gender and culture research, we show that masculine culture is likely to affect employee turnover, which we explore with a fine-grained analysis considering variations in gender and seniority levels. In addition, we find that the organizational consequences of a masculine culture extend beyond turnover, adversely influencing performance. We also show an underlying mechanism for the effects of masculine culture on performance. The findings highlight the importance of probing inside the gendered aspects of culture in organizations to understand its implications on organizational outcomes.

OMT: **“The Company Really Swung the Pendulum”: How Issue Polarization about DEI Emerges in Organizations**

Author: **Kathleen Ann Stephenson**, *Vrije U. Amsterdam, School of Business and Economics*

Organizations are increasingly addressing diversity, equity, and inclusion (DEI) issues in their organizations. Although DEI efforts are made to address concrete inequalities in the workplace, the way these interventions are experienced and interpreted can be polarizing in the sense that organization members sometimes start to form bi-polar opposite opinions and beliefs of DEI issues that are difficult to reconcile. In this study, we examine how issue polarization emerges. We do this by studying how individuals make sense of their firm’s commitment to racial injustice while inhabiting a liminal space that was triggered by the critical event of George Floyd’s murder. Our findings describe the various activities that organization members engage in to make sense of such issues, identify additional paradoxes that emerge through these sensemaking processes, and explain how sensemaking activities break down, which can lock individuals into a polarized view on an issue. In doing so, our study offers several contributions. First, we showcase how critical events create ruptures and trigger liminal space-times bringing attention and action to socio-political issues. Second, we extend a constitutive approach to polarization and showcase how engagement with issues that are polarizing can be discussed and reflected on during such liminal space-times. Third, we showcase how employees respond to their firms’ stance on a socio-political issues with outcomes such as issue polarization or belief updating.

Innovation Tensions through Multiple Lenses: Paradox, Ambidexterity and Place

Session Moderator: **PEIWEN HUANG**, *Cheng Shiu U.*

OMT: **Exploring the Mediating Mechanism Between Transformational Leadership and Individual Ambidexterity**    

Author: **PEIWEN HUANG**, *Cheng Shiu U.*

Organizational ambidexterity, the ability to simultaneously explore new opportunities and exploit existing competencies, is essential for competing in dynamic environments. This paper aims to address two primary objectives: firstly, to investigate the impact of transformational leadership on organizational ambidexterity at individual level; and secondly, to explore the potential mediating role of employee work engagement in the relationship between transformational leadership and individual ambidexterity. Utilizing a sample of four hundred and six participants, hypotheses were tested through structural equation modeling. The findings reveal that employee work engagement acts as a mediator between transformational leadership and individual ambidexterity, offering new insights into the mechanisms that underpin organizational agility and adaptability

 OMT: **Organizational Emplacement as a Response to Digital Threat: The Novel Resurgence of Indie Bookstores**  

Author: **Ryan L. Raffaelli**, *Harvard Business School*

Author: **Ryann Noe**, *Harvard Business School*

This study reveals how incumbent actors leverage physical place as an asset for organizational adaptation in response to competitive digital threats. Through a longitudinal, qualitative analysis of the U.S. independent bookselling industry from 1995 to 2019, we outline how dispersed organizational actors responded to the rise of Amazon.com, an online retailer that threatened to displace traditional brick-and-mortar retail. While many analysts predicted that Amazon's emergence would incite a "retail apocalypse," independent bookstores proved to be far more resilient than expected. We introduce organizational emplacement – a process by which actors infuse meaning into physical "spaces," thereby transforming them into valuable "places" – as a novel mechanism of organizational adaptation. Several practices are associated with this mechanism, including architecting the physical environment, anchoring to the local community, and sanctifying the meaning of place. Together, this study offers a counterbalance to narratives of digital ascendancy and shows how physical place can be marshalled for value creation in mature industries.

OMT: **The Dynamics of Imitation, Innovation, Ambidexterity Within & Across Organizations** 

Author: **Manolito Hibanada**, *Dept of Business Studies Uppsala U.*

Author: **Sjanna Westerhof**, *Dept of Business Studies Uppsala U.*

Conceptualizing the Dynamics of Imitation, Innovation, and Ambidexterity Within and Across Organizations: The intrinsic dynamics between the imitation-innovation paradox and ambidexterity has always perplexed management scholars. Extant literature begins to offer explanations on how the imitation-innovation interaction can be facilitated by ambidexterity in an inter-organizational context. However, the same interaction viewed in an intra-organizational context has received less scholarly attention to date. We have a limited understanding on how teams, units, and subsidiaries engage in imitation and innovation efforts within an organization and how ambidexterity plays a role in these dynamic interactions – all these while the organization itself engages in the imitation-innovation efforts amongst external organizations (such as rivals or competitors), that is also facilitated by organizational ambidexterity. We conducted a literature survey to layout the current state of knowledge on the intersection of imitation-innovation paradox with ambidexterity. We then articulated central arguments in which the explorative and exploitative dimensions of ambidexterity are crucial facilitating mechanisms in the imitative and innovative efforts present within an organization. A conceptual model is proffered highlighting two levels of co-evolutions where the imitation-innovation paradox intersecting with ambidexterity occurs simultaneously at the inter-organizational and intra-organizational levels.

OMT: **Conceptualizing Hackathons in Innovation Ecosystems: Design Choices and Paradoxes**   

Author: **Simona Grande**, *U. of Turin, Department of Management*

This study explores the role of hackathons as temporary organizations within innovation ecosystems. Hackathons, known for their intensive, collaborative nature, are increasingly recognized as pivotal in addressing grand challenges through transdisciplinary collaboration. This research, drawing from extensive participatory observation of 70 global hackathons over ten years and iterative qualitative analysis, develops a novel taxonomy of hackathon typologies and identifies 28 key attributes that differentiate different hackathon types. The hackathon typologies are further distinguished by their core purpose and contribution to specific ecosystems—educational, entrepreneurial, or socio-institutional. The study unveils the critical risk of incurring in an "over-optimization paradox," which indicates that attempting to cater to all ecosystems simultaneously may dilute the effectiveness and impact of hackathons and highlights the tension between the depth of impact within a specific ecosystem and the breadth of engagement across multiple ecosystems. The findings demonstrate that while hackathons hold promise as platforms for innovation and learning, their success hinges on clear design choices and understanding how to work through their inherent paradoxes. This study contributes to the literature on hackathons, innovation ecosystems, and paradox theory, offering insights for both academics and practitioners on the design and evaluation of hackathons.

Design Choices: Examining the Interplay of Organizational Structure and Digital Technologies

Organizer: **Adrienne Paige Baer**, *Stanford U.*

Organizer: **Amanda Pratt**, *Stanford U.*

Organizer: **Pedro Monteiro**, *Copenhagen Business School*

Panelist: **Gerald F. Davis**, *U. of Michigan*

Panelist: **Melissa Valentine**, *Stanford U.*

Panelist: **Ileana Stigliani**, *Imperial College Business School*

Panelist: **Elizabeth Gerber**, *Northwestern U.*

This panel symposium aims to revisit our assumptions about organizational structure in light of the ever-increasing digitalization of the world of work and the ways in which design choices underpinning digital technologies inform organizing. Although scholars have continuously updated theories of organizational structure, which first emerged in the context of manufacturing technologies, technological advances have made ordinary what was once exceptional. Digital work technologies enable more fluid, dynamic, or scalable structures; in some work settings, these technologies are synonymous with the organization itself. Thus, it is imperative to examine whether and how interface design heuristics and decisions—imbued with specific values, beliefs, and ideologies—affect organizational structure. Given that the examination of design principles—and actual design—of digital technologies is largely the purview of neighboring fields, the symposium brings together experts in Organization Theory, Technology, and Work with scholars in Design Thinking and Human-Computer Interaction to build connections and generate insights into the impact of digital technologies on the structure of work and organizing.

Global Issues in Operations & Supply Chain Management

Session Moderator: **Imran Ali**, *Central Queensland U.*

OSCM: **How Does Supply Chain Leadership Style Influence Geopolitical Disruption for Logistics Innovation?**

Author: **Imran Ali**, *Central Queensland U.*

Amidst current geopolitical tensions, global supply chain and logistics systems confront heightened vulnerabilities, necessitating innovative business operations. While existing research underscores the pivotal role of organisational leaders in navigating dynamic environments and fostering innovation, a theory-driven empirical model addressing the complex interplay between geopolitical disruptions, logistics innovation, and the influence of leadership styles is yet incipient. This research, leveraging strategic contingency theory (SCT) and surveying 247 manufacturing and distributing firms, fills this knowledge gap. Findings reveal that geopolitical disruptions significantly impede logistics innovation performance. By cross-pollinating logistics management and leadership literature, this unique study uncovers the substantial influence of crises, participative, and transformational leadership styles in alleviating the negative effect of geopolitical disruptions on logistics innovation performance. Interestingly, contrary to our initial expectations, the directive leadership style does not demonstrate a discernible effect in alleviating the adverse consequences of geopolitical disruptions on firms' logistics innovation performance. These findings contribute to a deeper understanding of the intricate dynamics at play, offering valuable insights for organisations seeking to navigate and overcome the challenges posed by geopolitical disruptions in their pursuit of logistics innovation.

OSCM: **National Directive, Corporate Perspective? Domestic Production and Company Performance Through COVID**

Author: **Oliver Von Dzengelevski**, *ETH Zurich*

Author: **John Gray**, *Ohio State U.*

Author: **Torbjørn H. Netland**, *Swiss Federal Institute of Technology Zurich, ETH*

We examine the link between the degree of domestic production of high-cost country headquartered multinational manufacturers and their financial performance, before, during and after the COVID pandemic. We consider domestic production's relationship to companies' profitability (ROA), likelihood of bankruptcy (Altman's Z), and market valuation (Tobin's Q). Domestic production did not relate to ROA before the pandemic or in the New Normal, but during the pandemic, having more domestic production related to reduced profitability. Further, companies with greater domestic production were at greater risk of future bankruptcy before the pandemic, an effect that was exacerbated during the pandemic. Considering market valuation, we find an initially negative link to domestic production which however ceased after the pandemic. Taken together, our overall results indicate optimism of markets to the future value of companies with more domestic manufacturing after the pandemic, relative to before, in spite of the fact that neither their profitability nor their bankruptcy risk have improved. We present subsample analyses for regions as well as for industries within regions which we interpret in the light of the autarky-efficiency dilemma. We argue that for manufacturers in critical industries, such as Health Care, Consumer Staples and Information Technology, different degrees of mismatch between companies' incentives for domestic production and national interest in self-sufficiency exist. As regards policy recommendations, we suggest that this divergence gives rise to a specific type of market failure, justifying the need for government actions to improve the relationship between domestic production and financial performance.

OSCM: **Friendshoring: How Geopolitical Tensions Affect Foreign Supply Bases and Supply Network Structures**

Author: **Remi Charpin**, *HEC Montreal*

Author: **Martin Cousineau**, *HEC Montreal*

Geopolitical tensions can lead to supply disruptions for firms with foreign supply bases. At the origin of these tensions lies disagreement in global affairs between nations that can lead to national animosity and the implementation of discriminatory practices toward foreign firms. In this study, we examine the influence of geopolitical tensions—operationalized as political divergence between governments—on global supply chain reconfiguration. Over the period 2003-2019, we investigate if political divergence affects foreign supply bases for 3,201 US firms sourcing from 108 countries, and how political divergence exposure impacts the supply network structure of 934 US firms. We find that while political divergence leads firms to reduce their supply base in hostile countries, it increases supply base complexity and sub-tier supplier sharing. Our study makes important theoretical and practical contributions to global sourcing and supply chain risk management. First, we highlight that geopolitical risk in global supply chains can originate from political divergence, which recognizes potential interventions from the governments of both the buyer and the supplier. It also captures the uncertainty associated with geopolitical disruptions before their occurrence. Second, we show that while using multi-sourcing as a buffering strategy can mitigate geopolitical disruptions, it also increases supply base complexity and thus expose the firm to other types of disruptions. Last, we uncover an unintended consequence of friendshoring. As firms reduce their supply base in hostile countries, their tier-1 suppliers end up sharing more tier-2 suppliers, amplifying the propagation risk in the focal firm's supply network.

Author: **Samah Shaffakat**, *U. of Liverpool Management School*

The digitalisation/inclusion paradox captures the coexisting benefits and challenges that digital technologies bring to the public sector in cost savings, efficiency, and decreased processing times but also potentially limiting citizens' access to public services. Public service leaders are confronted with the need to balance the needs and expectations of multiple stakeholders in managing digitalisation and inclusion while remaining conscious of the benefits and challenges. We conducted and analysed 31 semi-structured interviews of local council leaders in the UK public sector, using thematic analysis to explore how they process guidelines for digitalisation, their considerations before adopting digitalisation and inclusion initiatives, and any challenges experienced in the process. We found three key tensions that leaders experienced in managing digitalisation and inclusion between leaders and councillors, leaders and employees, and leaders and citizens. We also identified challenges and strategies that council leaders use to manage organisational change, cost, and an overload of communication from governing bodies that influence the progress of digitalisation and inclusion initiatives. Our findings contribute to the literature on digital leadership by delineating the strategies leaders use to navigate the tensions and challenges they face through the stages of digitalisation. Keywords: Digitalisation, Leadership, Public services

PNP: Exploring the Characteristics of an Inclusive Leader in Public Organizations

Author: **Namrta Sharma**, *U. of Texas at Dallas*

Author: **Meghna Sabharwal**, *U. of Texas at Dallas*

Most leadership studies assume that leaders are inclusive, but few explore the factors that contribute to a leader's inclusivity. With demographics becoming increasingly diverse, leaders in the public sector face new challenges in creating a cohesive work environment. Further, the emphasis on participatory governance has focused on the ability of public administrators to create channels for the engagement of myriad stakeholders, particularly marginalized and underrepresented sections in society. A public administrator must recognize and overcome limitations like biases, prejudices, and administrative heuristics that can potentially alienate employees, citizens, and partners. What are the antecedents that motivate a leader to emerge as an inclusive leader who furthers social equity and justice? This paper aims to broaden the extant understanding of the antecedents of an inclusive leader, moving beyond its prevailing dyadic emphasis on manager-employee interactions by holistically examining them in the macro and micro-level context of public service. Keywords: Inclusion, Inclusive Leader, Diversity, and Inclusion, Antecedents of Inclusive Leader

PNP: The Asian American Experience in the Federal Workforce: How Employees Navigate Racialization

Author: **Emma Northcott**, *George Washington U.*

Author: **Sanjay K Pandey**, *George Washington U.*

Author: **Sheela Pandey**, *Pennsylvania State U., Harrisburg*

Author: **Eiko Strader**, *George Washington U.*

The Asian American experience in the federal workforce remains poorly understood. This qualitative study, based on interviews with 41 Asian American federal workers, examines how this heterogeneous minority group experiences racialization in the U.S. federal government. The analysis of interview data revealed five aggregate dimensions that shape the experiences of Asian American federal employees: (1) racial identity formation, (2) instances of racialization at work, (3) aspects of the federal government context such as organizational culture and practices, (4) individual strategies to overcome constraints, and (5) awareness of the political climate and social ties outside the work context. By probing how Asian American employees experience racialization and the strategies they adopt in response, this study contributes to a small but growing literature on inclusion and racialization processes that go beyond the Black-White binary in the U.S. public sector.

PNP: Gender, Race, and Nonprofit Leadership

Author: **Young-joo Lee**, *Indiana U.*

This study examines how nonprofits' organizational characteristics are associated with the CEO's gender and race, focusing on the role of board diversity. Our analysis of 501(c)(3) organizations in a southeastern U.S. state shows positive associations between the proportion of women on the board and having a female CEO and between the proportion of non-White board members and having a CEO of color. The results also indicate that board racial diversity is positively associated with the likelihood of having a female CEO, suggesting a positive link between board racial diversity and the gender diversity of executive leadership. However, no connection exists between board gender diversity and having a CEO of color. The results further reveal that women and people of color are less likely to lead organizations with a bigger budget, implying the pervasiveness of the glass ceiling in larger organizations. Overall, the findings confirm the presence of gender and racial biases in nonprofit leadership and build a case for board diversity.

On the Frontline: Envisioning Street-Level Change Amidst Public Bureaucracy

Session Moderator: **Magnus Emmendoerfer**, *U. Federal de Vicosá*

This presentation will provide an in-depth look at how frontline public service workers navigate the challenges of policy implementation, confront bureaucratic obstacles, and strive for resilience and competence in the evolving landscapes of education and health during and after the COVID-19 pandemic.

PNP: **Coping with, or Recovering from COVID-19 Related Red Tape? Studying the Health-Impairment Process**  

Author: **Rick Borst**, *Utrecht U., School of Governance*

Author: **Eva Knies**, *Utrecht U.*

Due to COVID-19, new rules forced public servants to work remotely, or under strict guidelines at the office. While these rules were necessary from a societal perspective, from a public servant's perspective they also created a compliance burden and sense of limited flexibility to be able to do the work properly. New rules, for example, obliged public servants to develop impersonal remote citizens interactions, but also challenged task and goal clarity due to remote working. Rules that are perceived to entail a high compliance burden and lack of functionality are known as red tape. This is one of the most often studied phenomena in public administration (PA). Although red tape as a job demand is often related to lower public servants' wellbeing and performance, the topic of COVID-19 related red tape and its consequences has not been studied yet. The outbreak of COVID-19 has raised many questions about the negative consequences of new job demands (such as COVID-19 related red tape) for wellbeing and performance and how these can be prevented. Scholars argue that supervisor support might be one of the most important resources for public servants to cope with these demands. Moreover, they also argue that public servants themselves need to find ways to deal with COVID-19 demands. Several scholars therefore call for research focused on how employees can overcome negative consequences of COVID-19 for wellbeing and performance. To answer the call, this study builds on the Job Demands-Resources model which is increasingly used in PA to study the health-impairment process of red tape, through wellbeing on performance. According to JD-R scholars there are two main strategies to overcome health-impairment: through coping by usage of job resources such as supervisor support, and/or through recovering strategies, including work detachment, relaxation, mastery, and control. However, the effects of these strategies to overcome COVID-19 related red tape is unknown. This article will therefore study the effects of these two strategies. Our study will answer the following questions: What is the relationship between public servants' perceived COVID-19 related red tape through wellbeing on their perceived performance? And to what extent do coping strategies (through supervisor support) and recovering strategies (through work detachment, relaxation, mastery, and control) moderate this health-impairment process? Based on structural moderated mediation analyses of data collected from 3,332 Dutch public servants in December 2021 two conclusions can be drawn. First, COVID-19 red tape might be seen as a particular type of red tape that was created to deal with the quickly changing working conditions. Consequently the results show that this type of red tape might actually be fairly helpful in handling change and it might even stimulate public servants to go the extra mile in their work to make up for the inefficiencies of the red tape. Second, recovery strategies are more effective than coping strategies to deal with the negative consequence of perceived COVID-19 red tape.

PNP: **The Effect of Red Tape on Employability Competences of Teachers** 

Author: **Jolien Muylaert**, *Ghent U.*

Author: **Adelien Decramer**, *Ghent U.*

Author: **Beatrice Van Der Heijden**, *Radboud U. Nijmegen*

Author: **Mieke Audenaert**, *Ghent U.*

Red tape forms a major threat to many public organizations around the world. Building on the Job Demands-Resources model, this study explores how and when red tape affects teachers' employability competences (i.e., balance, anticipation and optimization, and personal flexibility). Analyses (N = 908 teachers; 92 school leaders) revealed a negative relationship between red tape, on the one hand, and balance and personal flexibility, on the other hand, through perceived impact on work outcomes. Interestingly, our analyses also revealed that when organizations provide sufficient developmental rewards to their employees, the negative consequences of red tape on perceived impact are buffered, which indirectly also benefits employees' balance and personal flexibility.

PNP: **Implementation of Spontaneous Policies: Grudging Implementers and Long-Term Hopes** 

Author: **Pradeep Kumar Mishra**, *XIM U., Bhubaneswar*

Author: **Mousumi Padhi**, *XIM U., Bhubaneswar*

Governments often initiate policies spontaneously, leaving implementers to execute such policies without sufficient preparations, often with reluctance. This type of grudging implementation, involving multiple organizations with varying objectives, compromises the outcomes and leads to hardships. Extant literature lacks insights into how grudging implementers navigate such situations. This research, based on the case study of demonetization in India, discovered that implementers addressed the lack of preparedness through stop-gap arrangements, emergency protocols, and iterative efforts, while the government persuaded the reluctant implementers through a communication strategy that lauded the sacrifice and short-term hardship for the greater cause of formalizing the economy. The nature of implementation, in spontaneous policy, thus, is a bidirectional phenomenon—while implementation hardship was overcome partially through standard procedures and iterative processes, the implementers were convinced by promises of long-term welfare.

Author: **James Rocha**, *U. Federal de Vicosa*

Author: **Magnus Emmendoerfer**, *U. Federal de Vicosa*

Author: **Josiel Valadares**, *U. Federal de Vicosa*

Entrepreneurship's universal nature has transcended economic boundaries, infiltrating various sectors and permeating the public sphere. This entrepreneurial influence has been pivotal in shaping and enhancing public organizations, significantly impacting policy formation spaces. Shifts in scholarly focus towards street-level bureaucrats (SLBs), frontline workers influencing services through their professional insights, have uncovered their significant role in shaping government-citizen relationships. Despite the traditional emphasis on higher levels of government for policy entrepreneurship due to resource demands and required skill sets, recent studies reveal SLBs as significant contributors to policy design. In this context, this conceptual paper conducts a literature review tracing the evolution from entrepreneurship concepts to street-level policy entrepreneurship, examining case studies on Israeli waste separation. While existing research has made strides in linking SLBs to policy entrepreneurship, areas like street-level managers warrant further exploration, adding contextual elements to entrepreneurial strategies. Future investigations should delve into reasons driving SLBs to engage in policy entrepreneurship, evaluate the outcomes—successes or failures—of their endeavors in creating public value, and elucidate their distinctive role in policy implementation, differentiating them from conventional policy entrepreneurs. Understanding the normative role of street-level policy entrepreneurship remains crucial to unravel, enhancing comprehension of SLBs' navigation from implementation to policy design.

The Vanguard of Giving: Entrepreneurship, Endowments, & Time in Philanthropy

Session Moderator: **Arthur Gautier**, *ESSEC Business School*

This presentation will explore the frontiers of philanthropy through a series of papers examining nonprofit endowments, innovative approaches to entrepreneurial giving, strategic governance within philanthropic organizations, and the pursuit of systemic change by foundation leaders.

PNP: **Entrepreneurial Philanthropy as Temporal Agency**   

Author: **Mairi Maclean**, *U. of Bath*

Author: **Charles Edward Harvey**, *Newcastle U.*

Author: **Diego Coraiola**, *U. of Victoria*

Temporality is integral to entrepreneurial philanthropy, the pursuit by entrepreneurs on a not-for-profit basis of social objectives through the deployment of philanthropic resources in schemes for social betterment. However, this is not fully recognized. This paper explores how time-related theorizing can render entrepreneurial philanthropy more effective in addressing socioeconomic inequalities. It considers how a temporal lens may benefit philanthropists and philanthropy professionals alike, and elucidates the vital yet neglected role played by the latter. We propose a model of temporality in entrepreneurial philanthropy that explicates the time-related processes of repairing, propagating, and endowing, which together support the futureproofing of the philanthropic system. We extend theorizing on generativity, the purposeful pursuit of pro-social goals for future benefit, and show this to be co-constructed. By demonstrating that generativity can be elicited and nurtured, we identify an important means whereby pro-social endeavours may be amplified in time and space to realize intergenerational visions of positive social futures.

PNP: **Organizational Purpose and the Governance of Philanthropic Foundations**

Author: **Valentin Held**, *U. Ramon Llull, ESADE Business School*

Author: **Lisa K. Hehenberger**, *ESADE Business School*

Organizations increasingly adopt purpose that goes beyond shareholder-wealth maximization and addresses a broader common good. At the same time there is growing recognition that purpose can mean different things to different actors. Existing research stresses the importance of governance to effectively deploy purpose. However, our understanding of how organizations accomplish this is limited. We study purpose in philanthropic foundations – a prominent, yet hard-to-access type of purpose-driven organizations –, applying a non-normative, meta-contractual perspective to organizational governance. We conducted a multiple case study drawing on interviews, archival documentation, and workshops from 6 European philanthropic foundations. We show how core dimensions of meta-contractual governance – deliberation, speech acts and functional actions –, shape decision makers' perceptions of purpose. Our primary contribution is to the literature of organizational purpose, by showing how governance practices facilitate or impede good governance from a value-neutral perspective.

PNP: **Probing Philanthropy for Systems Change: An Exploratory Study Among Grantmaking Foundation Leaders**  

Author: **Arthur Gautier**, *ESSEC Business School*

For the past eight years, there has been a rising interest for systems change among social sector practitioners aiming to tackle entrenched social problems. Relatedly, criticism has targeted grantmaking foundations for failing to support “changemakers” engaged in systemic approaches due to inappropriate funding practices. Recommendations for funding systems change and shifting the status quo in philanthropy are surging. However, we know little about foundation executives' representations and practices regarding systems change. In this exploratory study combining in-depth interviews (n=15) and a survey (n=101) with leaders of large French foundations, I reveal important gaps between a marked interest for systems change and current funding practices. I present six key obstacles and discuss the challenges of diffusing systems change philanthropy more widely, in particular among certain foundation types.

Based on the theoretical insights of three seminal books - Administrative Behavior (Simon, 1947), Organizations (March & Simon, 1958), and The Behavioral Theory of the Firm (Cyert & March, 1963) - the Carnegie perspective continues to have a profound influence on the study of organizations (Audia & Greve, 2021; Gavetti et al., 2012). A key feature of this theoretical perspective lies in its orientation toward process-oriented models of the firm. Key concepts and mechanisms such as bounded rationality, search, the dominant coalition, and standard operating procedures all share a concern for “how certain events and experiences set in motion processes of decision making, routine development, or routine selection that change organizational behavior” (Argote & Greve, 2007: 338). Although individuals level processes are prominent in these processes, the individuals who populate organizations are treated in abstract terms. One could argue that the implicit idea behind much of the early theory is that individual level differences do not warrant consideration given their minimal impact on the predictions. The objective of this symposium is to highlight some of the recent work done within the Carnegie perspective that couples a concern for process theorizing with a recognition of the influence of individual differences. The studies featured in this symposium build on an emerging new wave of work that has started to highlight the ways in which individual differences expand in important ways the predictive power of some of the central processes within the Carnegie perspective. Recent examples are: Gaba et al. (2023) who examine how the prior experience of managers influences their decisions in response to low performance; Audia, Rousseau, & Brion (2022) who focus on the influence of CEO power on the choice of social comparisons for the evaluation of performance; and Stumpf-Wollersheim et al. (2023) who study the effect of two emotions, sadness and fear, on routine development. Since individuals generally make organizational decisions in teams, we have included in the symposium also projects regarding how individuals prioritize diverging goals in teams and how they form beliefs that become the foundation for shared knowledge systems. To understand how organizations adapt to their environment, we need to understand how individuals make decisions, how individuals interact with each other in teams, and how individual differences contribute to an understanding of the key building blocks underlying organizational adaptation. This symposium offers a broad array of contributions illustrating diverse approaches to the study of these issues.

How Individual Differences Predict Career Success

Session Moderator: **Malika Richards**, *Pennsylvania State U.*

CAR: **Bouncing Back for Promotability Through Recognition: Does Having Diverse Curiosity Matter?**

Author: **Yunita Sofyan**, *Xi'an Jiaotong U. School of Management*
Author: **Yufan Shang**, *Xi'an Jiaotong U.*
Author: **Malika Richards**, *Pennsylvania State U.*

Are employees with career resilience more likely to get promoted? Building on the conservation of resources theory, we extend career resilience research to propose that resilient employees are more likely to receive recognition from others. This recognition then improves their promotion prospects. We further explore how this relationship is particularly salient in the presence of diverse curiosity—an individual difference in dispositional tendencies to participate in exploration, accompanied by a desire for a novel, interesting, or entertaining stimuli. Using three-wave surveys of 294 employees from private and government organizations in Indonesia, we find that employee resilience positively impacts their promotability, directly and indirectly, through perceived recognition. This relationship is especially prominent when diverse curiosity is high. We conclude that those who can enhance their resilience will also boost their promotability in the workplace. This study offers implications for resilience, prosocial motivation, recognition, and promotability by explaining how and when resilience will help employees achieve professional success and what employee can do to enhance their career and management can do to enhance their succession planning.

CAR: **Managerial Competencies' Interplay on Protean Orient & Career Success: A Moderated Mediation Model**

Author: **Merce Mach**, *U. of Barcelona*
Author: **António Cunha Meneses Abrantes**, *TBS Business School*
Author: **Aristides Isidoro Ferreira**, *ISCTE - Instituto U. de Lisboa*

Framed within the social cognitive career theory, this study investigates how protean career orientation, perceived self-efficacy, and managerial competencies acquired in higher education influence subjective career success. Employing a two waves research design over three consecutive years (2015 to 2017) post-recession, we collected data through two on-line questionnaires. The second questionnaire was administered 9-12 months later. We tested research model via SEM and path modelling techniques, applying AMOS and PROCES macro tool. Findings from 217 management alumni reveal that early career conditions, particularly self-efficacy, and protean career orientation, predict subjective career success. The moderated mediation analysis indicates that a high perception of managerial competencies enhances the effect of self-efficacy on career success through protean career orientation. The study extends prior research by examining formal knowledge from university education as a contributor to future career success. Emphasizing the significance of proactive individuals with a protean orientation and enhanced career self-efficacy, this research contributes to theoretical understanding and practical implications for career success predictors, highlighting the pivotal role of formal education in shaping early career outcomes.

CAR: **What it Takes to Become a University President? Just Do It: Career Capital & Impression Management**

Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*
Author: **Huong Nguyen**, *La Trobe U.*
Author: **Sebastien Point**, *EM Strasbourg Business School*
Author: **Lisa Thomas**, *Kedge Business School*

People start their career with certain ambitions, usually with a combination of professional and managerial targets in mind. While the majority fulfil some of their aims, only a few make it to a major leadership position. What it takes to make it to the top is still an unanswered question. To explore this question in a higher education context, we conducted 48 interviews with academics who became university presidents in the UK, France, and Vietnam. We identified individual factors such as career capital and institutional influences including organizational and cultural factors which together help explain their career success and career sustainability. Our study extends career capital theory beyond the three ways of knowing (know why, how and whom) by introducing the critical role of impression management for career development to the level of university president. Further, we found a lack of generalizability for boundaryless career theory in a non-Anglo-Saxon environment.

CAR: **Exploring How Career Competencies and Psychological Mobility Lead to Career Success**

Author: **Saima Naseer**, *Brock U., Canada*
Author: **Dave Bouckennooghe**, *Brock U.*
Author: **Shadab Qazi**, *International Islamic U., Islamabad, Pakistan*

This study investigates the role of employees' career competencies in enhancing perceived marketability and employability confidence, specifically examining the mediating effects of career aspirations and career optimism, and how these effects are moderated by the level of employees' psychological mobility. Using a multi-wave research design across three-time intervals, we collected data from employees (n=269) working across different organizations in Pakistan's service sector. Our findings support the parallel mediating effects of career aspirations and optimism in the relationship between career competencies and employee outcomes (perceived marketability and employability confidence). Furthermore, these mediation effects are stronger at increased levels of psychological mobility. Our study provides unique insights into the career development and human resource management literature by suggesting two pertinent career-related processes and conditions under which employees' career competencies help them feel more confident and enhance their career marketability.

Menstruation, Maternity, and Menopause: Milestones That Shape Women's Work Experiences and Careers

Organizer: **Anna Carmella Ocampo**, *ESADE Business School*
Organizer: **Rebecca Mitchell**, *Macquarie U.*
Discussant: **Alicia A. Grandey**, *Pennsylvania State U.*

In recent years, organizations and government institutions have made significant strides in closing some gender inequalities at work (e.g., gender pay gaps; International Labour Organization, 2022). Despite its importance in shaping other gender inequalities, women's (reproductive) health is still largely considered a taboo topic in the workplace (Grandey et al., 2020). This is an important oversight considering the significant costs and productivity losses associated with women's (reproductive) health. Many workplace gender inequalities such as pay and promotions widen at key reproductive junctures and roles (e.g., maternity and motherhood). Thus, our symposium sheds light on the role of reproductive transitions in women's lives—namely menstruation, (potential) maternity and motherhood, and menopause in shaping their work experiences and career trajectories.

Participant: **Anastasia Sergeeva**, *U. of Bath*

The interplay between moral capacities and career development represents a vital, yet often overlooked, dimension in organizational research. While existing literature underscores the significance of ethical behavior and moral competencies in organizations, their specific impact on individual career paths remains unclear. Behavioral ethics research has traditionally concentrated on ethical decision-making within organizations, exploring the factors that drive these decisions and their implications for both the organization and its employees. However, this line of inquiry tends to overlook the personal consequences of these ethical behaviors. In contrast, career research primarily focuses on aspects such as human capital, organizational support, and personal attributes, only occasionally intersecting with moral considerations and seldom examining the role of specific moral capacities in career advancement. This symposium aims to address this disconnect by merging insights from behavioral ethics and career research. It delves into the nuanced ways in which individual moral capacities influence career processes. By synthesizing these two fields, the symposium seeks to enhance our understanding of moral capacities in career trajectories, thereby contributing to the broader social mission of fostering meaningful work and careers in an increasingly complex world.

Discussant: **Matthew A. Cronin**, *George Mason U.*

In recent years, research in intragroup conflict has embraced a paradigm shift, advocating for the focus on the microfoundations of intragroup conflict. This symposium aims to spotlight this “new lens” for a deeper understanding of interpersonal conflict in teams. Four multi-method studies delineate the cognitive and affective processes shared among the individuals, and their attitudinal and behavioral patterns during and after conflict situations. Through these diverse works, this symposium aims to open a forum for thought-provoking exchanges that would nourish the microfoundations of interpersonal conflict, and ultimately, of team phenomenon.

Communication, Assumptions, Mindsets, & Overcoming Impasse: Strategies and Tools for Creating Value

Session Moderator: **Xinyu Han**, *Nanyang Technological U.*

CM: **Learning Paradox Mindset Through Tension Experiences with Reflection** 

Author: **Xinyu Han**, *Nanyang Technological U.*
Author: **S.M. Ramya**, *National U. of Singapore*
Author: **Fong T. Keng**, *Nanyang Technological U.*
Author: **Jiarong Wu**, *Nanyang Business School, NTU Singapore*

Workplace tensions encompass competing and conflicting demands, goals, and perspectives, which can yield both favorable and adverse outcomes for employees. Paradox mindset, known as an ability to accept and navigate tensions and conflicts, has been found to be effective in helping individuals leverage these tensions and conflicts constructively. However, the precise mechanisms underlying the development of a paradox mindset remain elusive. Drawing from the foundations of experiential learning theory and existing paradox mindset literature, we propose that experiencing tensions with reflection can also facilitate the development of paradox mindset via enhanced positive emotion and cognitive engagement during reflection. Furthermore, we hypothesize that learning goal orientation moderates this relationship, such that the relationship between tension experiences with reflection and positive emotion/cognitive engagement is stronger (weaker) for individuals with high (low) learning goal orientation. To empirically validate our theoretical framework, we conducted three experiments involving both US/UK employees and undergraduate business students from Singapore. The findings offer robust support for the generalizability and applicability of our model across diverse contexts. We then discuss the theoretical and practical implications of our findings.

CM: **Negotiation on Rugged Landscapes: Explaining the Hidden Complexity That Drives Negotiation Impasses** 

Author: **Nelberto Nicholas Marcos Quinto**, *UCL School of Management*
Author: **Joshua Becker**, *UCL School of Management*
Author: **Hart E. Posen**, *Dartmouth College, Tuck School of Business*
Author: **Cynthia S. Wang**, *Northwestern Kellogg School of Management*
Author: **Jennifer Ann Whitson**, *U. of California, Los Angeles*

Why do negotiations reach an impasse even when all parties benefit from agreements? While traditional explanations point to narrow zones of possible agreement (ZOPAs) or socio-cognitive reasons related to biases and incomplete information, our novel theory suggests another cause: the hidden inherent computational complexity of finding an agreeable solution. Specifically, even with a wide ZOPA and negotiators that are unbiased, rational, and collaborative, impasse can still occur when negotiators encounter proposals that are disproportionately beneficial to several parties but insufficient for collective agreement. We demonstrate our theory by formally modeling negotiations as a group search process within a "rugged landscape", where negotiators risk entrapment in suboptimal proposals despite the existence of agreement-inducing yet undiscovered alternatives. Our simulations reveal that narrow-ZOPA negotiations in rugged landscapes are more likely to lead to impasse than wide-ZOPA ones in smooth landscapes, challenging the traditional view that wider ZOPAs should facilitate easier agreements. They also confirm that increased ruggedness raises impasse rates across various parameter configurations while linking structural features of negotiation problems to ruggedness. Our study advances theory by highlighting the role of structural complexity and cognitive limitations in negotiation impasses and contributes an innovative theoretical framework that future empirical studies can build upon.

CM: **Preferences for Honesty in Medical Communication Across Cultures**

Author: **Zaijia Liu**, *Fudan U.*
Author: **Karen Kim**, *Pennsylvania State U.*

This study addresses the paradoxical phenomenon in Western medicine where physicians, despite the foundational principle of honesty, often convey false hope to patients. Grounded in recent developments in behavioral science, we posit that physicians and surrogates systematically undervalue the extent to which patients desire candid medical communication. Additionally, this study also explores the important role of culture in driving these beliefs. Presenting two medical scenarios to physicians recruited in China and the U.S., and non-doctor adults taking patients or surrogates perspectives, we found that both surrogates and doctors often underestimate patient preferences for honesty, especially in discussions about prognosis, with this trend most pronounced in the case of U.S. doctors predicting the preferences of Chinese American patients. In our cross-cultural comparison, while Chinese patients expressed a greater preference for false hope compared to White American patients, this inclination was not observed in the case of Chinese-American patients, a nuance that doctors failed to grasp. Implications for communication and conflict, healthcare management, as well as cross-cultural psychology were discussed.

 CM: **The Impact of the Good Cop/Bad Cop Role Strategy on Value Creation in Team-on-Team Negotiations** 

Author: **Seunghoo Chung**, *Hong Kong Polytechnic U.*
Author: **Robert B. Lount**, *Ohio State U.*

We examine how a specific type of within-team role differentiation—namely, the “good cop/bad cop” negotiation strategy—impacts value creation in negotiations with integrative potential. We theorize and test that the “good cop/bad cop” role differentiation strategy can influence how value is created in inter-team negotiations. The results of four team-on-team negotiation experiments show that greater value (i.e., greater joint gains) is created when one team uses the “good cop/bad cop” strategy and that the team employing this strategy claims more of the value created than the other team. These findings advance our understanding of how negotiation teams can be structured to affect negotiation processes and outcomes.

Bodies, Performativity and Belonging

Session Moderator: **Laurence Romani**, *Stockholm School of Economics*

CMS: (Re) Doing Traditional Gender Roles for Equality: Men's Support of Gender Equality in India

Author: **Laurence Romani**, *Stockholm School of Economics*

Author: **Taran Patel**, *Grenoble Ecole de Management*

Author: **Chandra Ramasamy**, *U. of West of England*

Can men enacting traditional masculine roles support more gender equality at work? Current research on gender performativity strongly revokes this thesis, instead arguing that disrupting the gender binary is the path to equality. We challenge this field assumption with our claim that the literature has yet to sufficiently differentiate between gender binary and gender hierarchy, and thus conflates masculinity with hegemonic expressions of masculinity. Our in-depth case study of women politicians' work in Tamil Nadu (India) shows how men engage in traditional gender roles to support the emancipatory work of women council leaders. We propose a theoretical distinction between gender binary and gender hierarchy to establish four ideal types of gender performativity. Doing so allows the conceptualisation of currently overlooked gender performativities that are perceived as hegemonic, but are in fact realized in the service of gender equality. Our study also contributes by providing a framework that differentiates two ways of redoing gender: 'redoing gender and hierarchy', when the gender binary is disrupted, but not the implicit gender hierarchy; and 'redoing gender for emancipation', when the gender binary is preserved, but in service of an emancipatory agenda.

CMS: The Kafala System, Patriarchal Connectivity and Migrant Masculinities

Author: **Usman Anwar**, -

Author: **Ghazal Zulfiqar**, *Lahore U. of Management Sciences*

We study the experiences of Pakistani blue-collar men workers in the GCC countries under the kafala system. To attend to the question of who and what matters, we consider the conditions of work in this south-south migration context and how this alters the worker's subjectivities. Further, with a special focus on migrant masculinities, we ask what role does gender play in the context of precarious migration with strong familial ties in the home country. We employ Joseph's (1999) theory of patriarchal connectivity which situates the self nonlinearly in relation to others in collectivist cultures rather than as individuals seeking to enhance their own autonomy. In doing so we restore the worker's humanity by presenting him in the fullest sense possible and show that between exploitative working conditions and the extortionist role of the employer's agent in the host country and strong relational ties in the host country and back home, migrant masculinities are complex and fluid.

CMS: From Citizen Kane to Logan Roy: Hegemonic Masculinity Through Businessmen in TV and Film (1936-2023)

Author: **Martyn Griffin**, *U. of Sheffield*

Author: **Mark Learmonth**, *Nottingham Trent U.*

Author: **David Hollis**, *Sheffield U. Management School*

Author: **Peter Hamilton**, *Durham U.*

This article reflects on portrayals of businessmen in TV and film and considers the ways in which this has significance within society, particularly in relation to competing understandings of masculinity. To show this more concretely we provide a nuanced exploration of exemplars of dominant representations within these fictional accounts ranging from Charles Foster Kane (Citizen Kane [1941]) and Daniel Plainview (There Will be Blood [2007]) to Don Draper (Mad Men [2002]) and Logan Roy (Succession [2018]). In our analysis we pay particular attention to how businessmen in fiction portray evolving and contrasting understandings of hegemonic (and counter hegemonic) masculinity through their on-screen dialogue, actions, and behaviour. To achieve this, we draw on the metaphor of ventriloquism to show how - via on-screen depictions of businessmen - masculinities both 'speak' to audiences (e.g., affecting their sense of self) and are reciprocally made to 'speak' by audiences (e.g., masculinities become reinforced, subverted, or resisted) through their talk and general conduct. The article is offered with the intent of enriching organization studies as a discipline, which rarely explores the wider cultural influences on what we consider to be "the businessman" and how they might see and understand themselves.

CMS: "Those of Us Who Stay": The Cost of "Finding the Right Home" for Gendered and Racialized Academics

Author: **Patricia Tiimah Naya**, *U. of Massachusetts, Boston*

Author: **Jared Mitchell Poole**, *U. of Massachusetts, Boston*

Author: **Alessia Contu**, *U. of Massachusetts, Boston*

This qualitative study explores how employees at Aequitas University, a social justice-oriented institution in the U.S., experience paradoxical tensions between institutionalized inclusion rhetoric and enduring marginalization tied to race and gender. Through critical ethnography with faculty and staff, findings surface an "inclusion-exclusion paradox." Many talents initially felt a sense of homecoming and attraction toward the university's espoused mission of empowering marginalized communities. However, over time, profound doubts emerged given durable representation divides on campus, racialized (mis)trust in authentic systemic commitments, and constraints on advancement and expression that disproportionately impacted minoritized groups, especially Black and Brown women. While both marginalized and privileged voices felt initial resonance, recurring marginalization was most acutely felt at the intersection of race and gender. Findings contribute to paradox theory by demonstrating the intertwined nature of power and enduring systemic tensions. Practical implications suggest the need for critical consciousness and collective action targeting root determinants perpetuating inequities counter to proclaimed social justice ideals.

Violence: Organised, Concealed and Routinized

Session Moderator: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*

CMS: **Extreme Violence in Organizations: Investigating Police Use of Deadly Force**  

Author: **Rafael Alcadipani Da Silveira**, *FGV-EAESP*
Author: **Jana Costas**, *European Uni Viadrina, Frankfurt (Oder)*

Research on violence in organizations has largely focused on the analysis of verbal and symbolic manifestations of it. However, apart from a few studies mainly on mass murder and war, scholars have overlooked extreme violence in organizations. Based on long-term ethnographic research of police detectives investigating the use of lethal force by law enforcement agents, this paper analyzes how organizational extreme violence occurs. The paper contributes by highlighting various factors such as societal pressures, victim portrayal, organizational ambiguities, and reluctance to address extreme violence, which are key contributors to its persistence in organizations. The paper also suggests that the impact of extreme violence extends beyond the organizations directly involved, affecting other entities and contributing to a lack of accountability for those responsible.

CMS: **Organizations and the Development and Diffusion of Normative Violence as a Super-Structure**   

Author: **Roya Derakhshan**, *Bocconi U.*
Author: **Rashedur Chowdhury**, *U. of Essex*

The concept of normative violence is rooted in societal norms, and it has significant implications for organizations. Although organizations are typically seen as a primary recipient of societal norms, organization researchers currently pay limited attention to how organizations modify and adapt such norms to develop and diffuse normative violence. We interviewed 48 undocumented workers and civil society assistants to explore organizations' role in developing and diffusing normative violence. Our findings help to develop a multi-level framework that explores the interplay between cultural schemas and organizational resources. This framework highlights how specific schemas persist through resource access and contribute to the macro-level development of normative violence, while influencing the micro-level schema development. Our framework also centers on the specific interactions between schemas and resources, thereby pinpointing how particular schemas endure through access to organizational resources and manifest elements that collectively contribute to the development of normative violence at the macro level. Thus, we suggest that organizations are key to both stability and change for the entire multi-level structure of the normative violence. From this perspective, we argue that normative violence cannot be limited to something that happens in organizations but is something that is developed and diffused by and within organizations.

CMS: **(Doing) Time is Money: Confinement, Prison Work, and the Reproduction of Carceral Capitalism** 

Author: **Jenna Pandeli**, *UWE Bristol*
Author: **Richard Longman**, *The Open U., United Kingdom*

This article explores prison work and the complex relationship it reveals between money, confinement, and carceral capitalism. Drawing on ethnographic research conducted in a private prison in the UK, we argue that confinement exacerbates prisoners' obsession with money and predatory entrepreneurialism. Using data co-created with prisoners, we demonstrate how this obsession with money reinforces the prison-industrial complex and reflects the broader dynamics of carceral capitalism. Furthermore, we illustrate how prison work perpetuates neoliberal exploitation, surveillance, and control, ultimately hindering rehabilitation and societal reintegration. Our analysis underscores the need for a comprehensive reassessment of the prison-industrial complex. We conclude that rather than viewing prisoners as a captive audience for reproducing carceral capitalism, prisons should be reimagined to prioritise the humanity of those impacted by the criminal justice system and to create alternative models of accountability and social transformation.

 CMS: **Big Quit After COVID-19: The Ambivalences of Liquid Employees Facing a Consumerist Work Relationship**

Author: **Vincent Meyer**, *EM Normandie Business School, Métis Lab, France*
Author: **Jean-Denis Culie**, *EM Normandie Business School, Métis Lab, France*
Author: **Xavier Philippe**, *EM Normandie*
Author: **Jean-François Garcia**, *EM Normandie Business School, Métis Lab, France*
Author: **Thomas Sorreda**, *EM Normandie Business School, Métis Lab, France*
Author: **Luc Tessier**, *EM Normandie Business School, Métis Lab, France*

In early 2021, many workers in OECD countries, especially France, decided to resign, a phenomenon commonly known as 'the Big Quit'. Based on 41 interviews with employees who voluntarily left their jobs in the wake of the Covid-19 health crisis, our research unveils a seemingly mundane but also very intense psychological violence that rules workplace relationships and leads to the emotional exhaustion of individuals. Our findings show that the Covid-19 crisis acted as a catalyst in contemporary organizations, fostering the emergence of a liquid employee for whom resignation represents more a necessity than a choice. They also reveal how the liquid employee is trapped in a consumerist work relationship that considers him or her as a commodity rather than a person, leading to a higher likelihood of changing jobs when faced with difficulties at work.

Author: **Caroline Rodrigues Silva**, *Fundação Getúlio Vargas - EAESP*

This paper, conducted from the perspective of a Black Brazilian woman within the academic sphere, sheds light on the intricate interplay of race, gender, and class in the context of domestic violence. Through a thorough critique of domestic violence, the article posits that conventional research often leaves out the experiences of women, especially Black Brazilian women, as producers of knowledge. By combining personal narratives and interviews with experts, the study identifies *escreviver* as a central mode of reflexivity for Black Brazilian women in a decolonial and intersectional theory. The concept of *escrevivência* introduced by the author confronts and seeks to redefine traditional academic norms, promoting a richer understanding of the lived experiences of plural women and advocating the incorporation of varied perspectives into the field of organizational studies. This research goes beyond an academic contribution to the discourse on domestic violence and is claimed to wake-up call for widespread changes in social and academic paradigms.

Critical Biographies of Labor Intellectuals: The Elusive Goal of Labor Power

Session Chair: **David Jacobs**, *American U., Kogod School of Business*
Presenter: **Charles Thomas Tackney**, *Copenhagen Business School*
Presenter: **Richard Marens**, *California State U. Sacramento*
Discussant: **Fernanda Filgueiras Sauerbronn**, *U. Federal do Rio de Janeiro - UFRJ*

We propose a symposium exploring the debates among “labor intellectuals.” By “labor intellectuals,” we mean activists and policymakers who sought to develop and implement a sustainable model for labor power. US examples include Frances Perkins, FDR’s Secretary of Labor, left wing New Deal critic Mary Van Kleeck, Walter Reuther’s strategist Nat Weinberg, labor lawyer and sociologist Staughton Lynd, among more contemporary figures. Andre Gorz and Ken Coates are European exemplars. In *New Men of Power*, C. Wright Mills (2001) defined the “labor intellectuals” as researchers associated with unions or labor-based organizations. One fundamental axis upon which to compare these thinkers is their perspectives on state capacity to guarantee worker rights (the Wagner Act framework in the US.). While Perkins built on her experience in New York State regulating labor standards and played a leadership role on New Deal labor policy, Mary Van Kleeck opposed the Wagner Act and wrote presciently about the ease with which its support for labor might be undermined. We will employ a “critical biography” template. This approach suggests five emphases for research: the subject’s values and background, considerations of personal identity, important roles, contributions to theory and practice, and the social and historic context. For labor studies questions, one issue is the subject’s expectations of the likely performance of public and private hierarchies. We will investigate the process by which each individual learned to imagine an alternative to unaccountable hierarchies and turned to organizing these alternatives. A prerequisite for assuming the labor advocate role is consciousness of the contingency of organizational hierarchy.

Influencers and Organizations

Session Moderator: **John-Patrick Akinyemi**, *UT Austin*

CTO: **'Friends' with Benefits: Exploring the Relational Tactics of Social Media Influencers**    

Author: **Rune Thorbjørn Clausen**, *VIA U. College*

Author: **Helene Gerber**, *Aarhus BSS, Aarhus U.*

Author: **Kasper Elmholdt**, *Aalborg U.*

We explore the unique challenges faced by social media influencers in maintaining a balance between fostering genuine follower relationships and engaging in brand collaborations. Navigating the tension between being friendly and trustworthy to their followers while “selling” their follower-relationships to brands through collaborations is challenging, as it leaves influencers in a paradoxical nexus which they must balance to uphold their career. Existing literature offers, however, little insights into how influencers manage this inherent paradox in their occupation. Against this backdrop, we conducted a study of how influencers in Denmark work with their follower relationships. We use the concept of relational work to map the tactics influencers use when creating and maintaining follower relationships. Through interviews and observations online, we unfold how influencers perform relational tactics to uphold close ties to their followers while managing economical transactions with brands. The tactics are interrelated and depicts the dynamics of influencers as relational workers. Based on our mapping, we present a model of how influencers combine different components of a relational package. This package illuminates how influencers assert their expertise in making friends with followers while doing business with collaborating brands. We conclude by discussing the implications of our findings to existing literature.

CTO: **Temporal and Social Dimensions of Agency in Organizational Influencer Work** 

Author: **Heini Vanninen**, *LUT U.*

Author: **Ilkka Ojansivu**, *U. of Melbourne*

Organizational actors' relationships and organizational work processes with social media influencers have been largely neglected in organizational research. Social media influencers reside outside the normative social structures of the organizations within temporary liminal positions. The capacity for social media influencers vis-à-vis the organizations employing them temporarily to act or make independent choices (i.e., their agency) is curtailed by their mutual interdependence. We propose the concept of “organizational influencer work” to describe this emerging form of collaborative social media content production. We adopt processual longitudinal research design with go-along ethnography combined with interviews, archival data and social media data of a digital marketing campaign spearheaded by a government ministry aiming to transform the tourism image of a Nordic country. We show how agency between organizations and influencers is shared, contested and ultimately determines the results of the joint work. The resultant shared agency necessitates both parties to sequentially demand and paradoxically also let go of their ability to make sound decisions and control means and ends. Specifically, we find that shared agency has various temporal, situated and social dimensions.

CTO: **Influencers and Online Drug Advertising: Do FDA Enforcement Letters Deter Misleading Pharma Ads?** 

Author: **Jeff Clement**, *Augsburg College*

Author: **Siddharth Bhattacharya**, *George Mason U.*

Author: **Brad Greenwood**, *George Mason U.*

The Internet has provided pharmaceutical companies with powerful tools to engage directly with consumers by digitally targeting them with advertising. Online pharma ad spending has subsequently exploded and is expected to reach \$20b in the US alone by 2024 as it displaces other channels. Such ads are often provocative, suggestive, or riff popular memes in order to create memorable associations with their brands. This is concerning because such ads may not adequately communicate the risks of the drug, or even deliberately mislead consumers, thereby having a deleterious impact on clinical outcomes and healthcare spending. To police such efforts, the Food and Drug Administration (FDA) issues both Untitled Letters and Warning Letters to firms. Yet, the efficacy of such letters in deterring marketing malfeasance on social media is unclear. We evaluate firm reactions to such letters using interrupted time series and synthetic difference-in-differences analyses of a comprehensive database of US pharmaceutical claims. Findings suggest that FDA letters slow future growth in drug utilization, but yield no drop in utilization even though advertising is misleading. This suggests: i) such letters have limited deterrence effects and ii) pharmaceutical providers are able to retain rents accrued through misleading marketing efforts to consumers. We further find no evidence that markets punish firms for receiving FDA letters (i.e., there is no significant decline in stock after issuance) or impact physician payments from pharma firms (i.e., firms do not change their payments to physicians). We conducted an online experiment with consumers to explain why there is no backlash and find that it could be driven largely by a lack of awareness of FDA action and difficulty parsing violative from non-violative messaging; the experiment showed that corrective messaging, however, can impact consumer perceptions but the effect size is limited. Taken in sum, these findings suggest that patients are under-protected from false marketing and policy makers should evaluate alternate options to deter violative social media marketing.

Markets, Competition, and Inter-Organizational Cooperation

Session Moderator: **Kanghyun Cho**, *Fox School of Business, Temple U.*

CTO: **Beyond Automation: Unpacking the Role of Trading Bots in Shaping Online Cryptocurrency Return**   

Author: **Kanghyun Cho**, *Fox School of Business, Temple U.*

Author: **Kihwan Nam**, *Korea U.*

Author: **Jaehwuen Jung**, *Fox School of Business, Temple U.*

Author: **Jason Thatcher**, *U. of Colorado Boulder*

As algorithmic trading becomes standard practice in financial markets, there is a growing interest in comprehending the impact of trading bots on market dynamics, particularly concerning liquidity and investment returns. Despite evidence indicating that trading bots expedite market transactions, there is a dearth of research exploring their influence on human traders and their specific roles in cryptocurrency markets. This study leverages an unforeseen and abrupt IT event that temporarily removed trading bots from specific assets to quantify the value of their presence. Using a unique dataset of cryptocurrency transactions, we draw on investment decision-making theory to investigate how the presence of trading bots influences investment returns for human traders in online cryptocurrency markets. Our findings reveal that, when present, trading bots assume a market-making role, capitalizing on their rapid scaling characteristic. This role enhances human traders' investment performance by introducing stability to the market context. This effect persists consistently, whether considered a main effect or mediated by context instability. Furthermore, in the absence of trading bots, their impact varies based on the financial asset type and the levels of investment performance among traders. This study helps us understand how trading bots influence financial markets and human investment decisions.

CTO: **The Impact of Different Recommendation Algorithms on Merchants Competition** 

Author: **Weiyi Zhang**, *China U. of Geosciences, Beijing*

Author: **Yong Wang**, *Tsinghua U.*

The algorithms used in recommendation mechanisms on e-commerce platforms can be categorized into two types: neutral algorithms and non-neutral algorithms. We explore how these two algorithms affect merchant competition behavior and welfare levels based on a consumer search model. We found that as platform transitions from not providing recommendation algorithms to providing neutral algorithms and then to providing non-neutral algorithms, the price dispersion among merchants on the platform gradually increases, while the intensity of price competition decreases. When the difference in transaction utilities among merchants is small, providing neutral algorithms can enhance platform profits, consumer surplus, and social welfare. However, providing non-neutral algorithms always harms platform profits and social welfare, although the impact on consumer surplus depends on specific parameter values. This study recommends that platforms maintain a balance between neutral and non-neutral algorithms in their development of recommendation systems, where platforms can then guide merchants to focus their efforts and resources on product development and service quality improvement, rather than engaging in price wars and paid promotions.

CTO: **God's Eyes: How Big Data-Enabled Cooperation Capabilities Enhance Inter-Organizational Cooperation?**  

Author: **Tao Zhang**, *School of Management, Northwestern Polytechnical U., Xi'an, Shaanxi, China*

Considering the increasingly important role of big data technology in current business practice, this study investigates how big data technology influences inter-organizational cooperation performance in the supply chain and examines the contingent effects of three inter-organizational governance features on the efficacy of big data technology. Drawing on dynamic capability theory, we first conceptualize two big data-enabled cooperation capabilities: prevention capability and promotion capability. Subsequently, employing multivariate regression analysis with three samples collected from an online survey of manufacturers involved in supply chain management, our results demonstrate that big data-enabled prevention and promotion strategies enhance inter-organizational cooperation performance by preventing or promoting logic. Moreover, this study reveals that power imbalance, relationship stage, and contract stage exert various contingent effects on the significance of these two capabilities. These findings deepen our understanding of the role of big data technology in inter-organizational cooperation, thereby advancing research in inter-organizational cooperation and information systems. The study concludes with a discussion of theoretical and managerial implications.

Managing Relationships Between Platforms and Complementors

Session Moderator: **Hannes Rothe**, *U. of Duisburg-Essen*

 CTO: **Boundary Work in Generative AI Platforms: How Platform Providers Manage Complementors' Changing Role**  

Author: **Anne-Sophie Mayer**, *Vrije U. Amsterdam*
Author: **Angelos Kostis**, *Stanford U.*
Author: **Franz Strich**, *Deakin U.*
Author: **Jonny Holmström**, -

Digital platforms increasingly integrate generative AI to dynamically create, optimize and adapt content with the aim to create novel opportunities for platform's viability. However, the integration of GenAI into digital platforms fundamentally transforms complementors' role as GenAI is able to autonomously generate content which was previously exclusively performed by complementors. To understand how platforms manage the changing role of complementors in response to AI generated content, we draw from an in-depth qualitative study of a digital learning platform. This empirical case allows us to explore which tensions arise between platform complementors and GenAI's agency, and how the platform provider engages in different boundary work to manage the changing role of complementors to ensure the platform's viability. Our study aims to contribute to the literature on GenAI and digital platforms.

CTO: **Ascribing Moral Motives: Examining Complementors' Meaning-Making of Platform Governance Actions** 

Author: **Arvind Karunakaran**, *Stanford U.*
Author: **Joey Van Angeren**, *Vrije U. Amsterdam*

How do platform governance actions affect complementors' responses? We theorize that since complementors (e.g., app developers) in platform ecosystems confront inference uncertainty, they ascribe moral motives to platform governance actions that shape their subsequent responses. Moral motives could be negative or positive, depending on whether the action is interpreted as ad-hoc favoritism (favoring one complementor over another), extractive opportunism (advancing platform providers' rent-seeking at the expense of complementors), or mutual commitment (providers' committing to the platform ecosystem, while also inducing complementors to commit). Evidence for these arguments comes from Salesforce's platform ecosystem. We quantitatively examine complementors' meaning-making of, and responses to, platform governance actions such as selective promotion (ad-hoc favoritism), vertical integration (extractive opportunism), and corporate venture capital investment (mutual commitment). We qualitatively unpack why complementors interpret and view corporate venture capital investment as a middle-ground governance action.

CTO: **The Nexus of Value Creation and Value Capture: Unravelling Tensions in Digital Platform Dynamics**   

Author: **Wenshuo Wang**, *Warwick Business School*
Author: **Jochem T. Hummel**, *Warwick Business School*
Author: **Joe Nandhakumar**, *Warwick Business School*

The development of digital platforms relies on third-party development from complementors. With the assistance of complementors, the focal platform continually provides new features and services for participants in the platform ecosystem, essentially creating new value. However, tensions arise within the platform ecosystem regarding who should capture the newly created value. Complementors seek to maximize their value capture based on their contributions, while the focal platform aims to retain most of the captured value within the platform. As value creation depends on complementors to materialize, the focal platform often loses control over newly created value and misses opportunities to capture value from it. To explore how digital platforms navigate the tensions between value creation and value capture, we conducted an in-depth, embedded case study of Douyin (known as TikTok in the global market), which continuously creates new value across various businesses while simultaneously capturing significant value. We found that complementarity, internalization, algorithmization, and algorithm-enhanced services constitute the core mechanisms for sustaining value creation and value capture. We contribute to the literature on digital platforms by offering a process model to conceptualize how to navigate the tensions between value creation and value capture in digital platforms.

Author: **Tomomi Kito**, *Waseda U.*
Author: **Hiroki Sayama**, *Binghamton U.-State U. of New York*
Author: **Sheng-Bin Wang**, *National Sun Yat-Sen U.*
Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*

Leader emergence in virtual teams has become a pivotal factor in organizational success in today's interconnected business world. Based on expectancy violation theory, this study examines how speaking centrality (the extent of a member's central role in the speaking network) and backchanneling (expressing agreement verbally) influence leader emergence in virtual environments. Diverging from previous research that mainly focused on individual attributes through surveys, our study delves into leader emergence by analyzing verbal communication dynamics within virtual teams. We investigated 51 participants in 12 virtual teams, employing sophisticated machine learning tools to scrutinize group interactions during the idea generation phase of social entrepreneurship projects on Zoom videoconferencing. Additionally, we gathered data on leader votes at a later time using the roster method through surveys. Our results reveal a positive link between speaking centrality and leader emergence. Contrary to expectations, the frequency of a member's backchanneling didn't moderate this relationship. Instead, it was the rate at which a speaker inspired backchanneling in others (i.e., backchanneling inspiration rate) that significantly positively moderated the relationship between speaking centrality and leader emergence. This thorough mixed-method approach sheds new light on group communication dynamics and makes a substantial contribution to understanding leader emergence in virtual contexts.

CTO: **Robot Leadership: The Effects of a Robot's Transformational and Transactional Leadership Behaviors**

Author: **Jakub Edward Cichor**, *TUM School of Management, Technical U. of Munich*
Author: **Sylvia Hubner-Benz**, *Paderborn U.*

As digitalization increasingly generates challenges and opportunities for future leaders, organizations leverage promising technologies to navigate their digital transformation. Social robots represent one such technology, where robots designed for human-like interactions are used in contexts like customer experience, education, or elderly care. Their ability to be in leadership positions and influence human followers, however, is largely unexplored. First evidence suggests that robot leadership can be successful, however, specific leadership styles have not yet been studied in robot leaders. To fill this empirical gap, we implemented three robot leadership styles in the social robot Pepper by SoftBank Robotics behavior (i.e., transformational leadership, transactional leadership, and minimal leadership as control) and investigated how Executive MBA students and university students (N = 218) worked for those robot leaders in a between-participants experiment. We have found that the transformational robot leader increased likability and perceived safety, whereas the transactional robot led to higher negative affect and stress. Additionally, likability and stress indirectly mediated the influence of the robot's leadership style on the participants' task engagement. These results indicate that the effects on human followers after engaging with a robot leader mirror the findings of leadership research on human leaders. Our study is a first step in establishing to what degree evidence based on human leaders applies to robot leaders as well. We discuss its implications for theory and practice.

CTO: **Do You Like Leader's Posting on Social Media? Online Self-Promotion and Leader Effectiveness**

Author: **Xiaoxuan Li**, *School of Economics and Management, Tsinghua U.*
Author: **Tianxing Jin**, *Fudan School of Management, Fudan U.*
Author: **Biya Ren**, *U. of Glasgow*
Author: **Longfei Cui**, *Tongji U.*

The rapid expansion of social media has enabled the shift from traditional face-to-face socializing to online interactions, and it has now become an important communication platform in the workplace. However, previous research on how leaders present themselves on social media and its impact on followers is still quite limited. Drawing on behavioral integrity theory, our study investigates the inconsistencies between a leader's self-promotion on social media and in real work settings, which are likely to elicit perceptions of hypocrisy among subordinates, thereby weakening leader effectiveness. Results from a multi-time survey suggest that leader self-promotion on social media and leader self-promotion in work have an interacting effect on leader effectiveness via perceived leader hypocrisy. Our research not only contributes to the theoretical understanding of self-promotion on social media but also innovatively explores the impact of leaders' online and offline behavioral integrity. Study implications and limitations and future research directions are discussed.

This symposium examines the dynamic landscape of multicultural virtual teams in the post-COVID-19 era, advocating for a re-examination of research on virtual communication in multicultural teams. Established findings, rooted in the contrast between text-based and face-to-face communication, may not generalize to the new normal in which digital communication tools like Zoom, Microsoft Teams Slack, or Basecamp offer media-rich communication channels that make nonverbal behaviors and cultural differences in these behaviors much more salient. Accordingly, the key question that guides this symposium is: How can multicultural virtual teams thrive in a world where technological advances enable rich verbal and nonverbal communication among team members? To answer this question, we bring together four evidence-based papers that explore new frontiers in virtual communication and multicultural teams. Two of the papers explore a new cultural dimension of high/low-context communication and associated nonverbal behaviors in the context of virtual teams and two papers examine team processes and outcomes in global virtual teams. Collectively, the papers provide timely insights into various aspects of nonverbal communication, as well as the social, cultural, cognitive, and metacognitive skills required in media-rich digital and culturally diverse environments. In doing so, this symposium offers a comprehensive understanding of the challenges and opportunities faced by virtual teams, aiming to pave the way for improved teamwork in the future.

LGBTQ+ Workforce and Firm Policies

Session Moderator: **Julian Schönauer**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen U.*

DEI: The Impact of Social Support and Authenticity on LGBTQ+ Employees' Entrepreneurial Orientation

Author: **Julian Schönauer**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen U.*

The LGBTQ+ workplace literature suggests that LGBTQ+ employees continue to face challenges such as heterosexism and stigmatization, which impair their workplace attitudes and behaviors, such as individual entrepreneurial orientation (IEO). This creates a need to identify effective interventions that promote IEO among LGBTQ+ individuals and to understand the underlying psychological mechanisms. To this end, the present study examines LGBTQ+ social support from three different sources as a potential antecedent of each IEO dimension – i.e., innovativeness, proactiveness, and risk-taking – among LGBTQ+ employees while exploring felt authenticity as a potential mediator. Drawing on social exchange theory, the job demands-resources model, and minority stress theory, we analyzed 952 responses from 47 countries collected between April and July 2023. Our results show that LGBTQ+ support from the supervisor, colleagues, and LGBTQ+ employee resource group (ERG) members is positively associated with innovativeness and proactiveness but not risk-taking. Authenticity at work fully mediates the significant relationships. These findings underscore the value of LGBTQ+ support in entrepreneurial value creation and suggest that authenticity is an important psychological antecedent of entrepreneurial behavior.

DEI: “Beyond the Closet” – How Identity Shapes Disclosure and Authenticity among LGBTQ+ Employees

Author: **Julian Schönauer**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen U.*

Author: **Andrea Greven**, *WHU Otto Beisheim School of Management*

“Coming out” at work is important for many lesbian, gay, bisexual, transgender, and queer/questioning (LGBTQ+) individuals to feel authentic. Although both disclosure and authenticity predict various well-being, interpersonal, and work outcomes, little is known about how individual differences predict the experience of authenticity via disclosure and moderate the disclosure-authenticity relationship. Overcoming the erroneous simplification to consider LGBTQ+ employees as a homogeneous group, we illuminate individual differences along the dimensions of LGBTQ+ group identity, gender identity, and sexual orientation. Based on 952 responses from LGBTQ+ employees from 47 countries collected between April and July 2023, we find that disclosure mediates the positive relationships of two LGBTQ+ group identity dimensions – namely, cognitive clarity and behavioral engagement – with authenticity. Cognitive clarity and behavioral engagement also strengthen the disclosure-authenticity relationship. Further, gender identities and sexual orientations play a meaningful role: Female and non-binary employees (relative to men) and bi- and pansexual employees (relative to gays) are less likely to disclose, while non-binary employees also feel less authentic. Herewith, we contribute to the LGBTQ+ organizational literature by delineating the roles of LGBTQ+ group identity, gender identity, and sexual orientation for LGBTQ+ employees' authenticity and disclosure experiences at work, underscoring the need to pay greater attention to individual differences in organizational LGBTQ+ research.

DEI: States' LGBT Supportive Policies and Firms' Likelihood of Entry

Author: **David Weng**, *California State U., Fullerton*

Author: **You-Ta Chuang**, *York U.*

Author: **Shaun Michael Pichler**, *California State U., Fullerton*

How do a state's lesbian, gay, bisexual, and transgendered (LGBT) supportive policies affect a firm's likelihood of entry? Which contextual factors shape this tendency? Drawing on the literature on institutional theory, LGBTs, and diversity, we postulate that a state's LGBT supportive policies can influence firms' likelihood of entry. A state's LGBT supportive policies will make the state more inclusive and accommodating. This can foster more positive work behaviors, thus enhancing a focal firms' productivity. Also, with the introduction of LGBT supportive policies, citizens in a state will be more open-minded while better appreciating individuals of different orientations. We consequently contend that firms are likely to enter a state with LGBT supportive policies than another state without. In addition, we postulate that the effect of state LGBT supportive policies can be moderated by contingencies including, (1) a focal firm's support for LGBTs, (2) LGBT friendly suppliers' actions in a state, and (3) LGBT friendly customers' actions in a state. Results based on a sample of U.S. public firms support our arguments. Our findings contribute to the literature on LGBTs and firm market entry.

DEI: The Paradoxical Role of Social Capital in the Career Advancement of LGBT Workers

Author: **Katia Villafuerte**, *Diversity, Equity and Inclusion*

Author: **Elliott Tyler Kruse**, *EGADE Business School, Tecnologico de Monterrey*

Social capital is a complicated construct whose social valence varies by the cultural context it is in. It is defined by connection to networks of people and has been shown to be useful for career growth, and yet it may not be equally accessible to all people. In particular, the ability to build and maintain these social connections may be challenging for marginalized people. In this paper, we conduct a systematic literature review to understand how social capital may help or hinder the career development of LGBT people. This review reveals the multifaceted nature of social capital, its intersection with culture, and its utility (or danger) to marginalized groups as a tool for career advancement.

Innovative DEI Practices

Session Moderator: **Ryan Scott Teschner**, *Lee Kong Chian School of Business, Singapore Management U.*

DEI: Inclusive Language and Awkwardness: Developing a Scale for Interpersonal Awkwardness

Author: **Ryan Scott Teschner**, *Lee Kong Chian School of Business, Singapore Management U.*

Based on Dahl's (2018) definition of awkwardness—self-consciousness tinged with uncertainty, in moments both trivial and serious—a measure for dimensions of individual, interpersonal, and situational awkwardness, were developed and validated. This is critical to understanding relationships for marginalized individuals in organizations as measures like relational conflict are too severe while measures like affect (positive/negative) are too generalized to adequately describe relations. A total of nine items, three items for each dimension are used. Using four studies, I establish the content adequacy and reliability of the measures. Moreover, I show that the measures are distinct from relational conflict, positive affect, and negative affect. I also demonstrate that awkwardness and its dimensions are predicted by inclusive language use for marginalized individuals. Finally, I show that results may not hold for both variables. Thus, this research provides a comprehensive, validated, multidimensional measure of awkwardness, and offers a unique explanation of relational attitudes for marginalized individuals. Future theoretical, research and practical implications are discussed.

DEI: Understanding Psychosocial Functions as an Innovative Practice for Diversity and Inclusion

Author: **Loliya Kagher**, *U. of Aberdeen*

Author: **Lilian Otaye-Ebede**, *U. of Liverpool Management School*

Author: **James Stewart**, *Liverpool John Moores U.*

This study highlights the relevance of recognising and understanding psychosocial functioning in organisational diversity discourse to advance inclusion and belonging in the workplace. In this study, we focus on gender and ethnic organisational diversity. We draw from interviews with 30 women of African origin living and working in the UK. We identify their psychosocial functioning by examining their involvement in mentoring functions. Likewise, we use a womanism theoretical perspective to understand why women of African Origin value psychosocial functioning. Our contribution shows that psychosocial functioning identified through intentional mentoring and adapted within the work environment is a necessity for addressing present and future work challenges concerning diversity, inclusion and belonging.

DEI: Responsibilization and the Management of EDI-Related Misconduct

Author: **Olivia Tomlinson**, *Manchester Metropolitan U. Business School*

Author: **Adam Nix**, *Birmingham Business School, U. of Birmingham, UK*

Author: **Jennifer TyreeHageman**, *Birmingham Business School, U. of Birmingham, UK*

This paper argues that by placing too much responsibility for interpersonal misconduct on individual actors, organizations fail to address their EDI performance fully. Specifically, while progress has been made on positive EDI issues like workplace diversity, the management of EDI-related misconduct is often transferred to individuals. We use qualitative responses from a large national survey of UK workers to explore how employees experience responsabilization and perceive organizational responses and expectations around EDI-related misconduct. Our findings suggest that, in many organizations, individuals (employees, managers, customers) are placed in a position of responsibility for interpersonal relationships. We connect this to the notion of responsabilization, which sees institutional actors place autonomy and agency for moral issues on individual actors. Our findings contribute by conceptualizing EDI-related misconduct as a failure of responsabilization, whereby routinized inaction and symptom-solving contribute to unsatisfactory outcomes for targets and witnesses.

DEI: Faculty Diversity, Equity and Inclusion: A Systematic Literature Review and Conceptual Framework

Author: **Ashokkumar Manoharan**, *Flinders U.*

Author: **Christina Mary Scott-Young**, *RMIT U.*

Author: **Jawad Syed**, *Lahore U. of Management Sciences*

Author: **Diana Rajendran**, *Swinburne Business School, Swinburne U. of Technology*

Faculty diversity, equity, and inclusion play a vital role in the academic context. Despite the importance of the topic, there is no up-to-date holistic review of the empirical evidence from recent studies. This paper presents the findings of the systematic literature review performed from 2011 to 2023, specifically looking at the empirical findings on the diversity, equity and inclusion of academic and research faculty in the higher education sector. Analysis of the resulting 97 papers reveals the current state of recent research on different dimensions of diversity across multiple academic disciplines. In addition, based on the conceptual trends in faculty diversity research, this paper presents a conceptual framework that integrates the current body of literature. The review also identifies future directions for research on faculty diversity, which includes expanding the range of diversity dimensions studied, exploring the intersectionality of multiple diverse identities, examining diversity climate and management practices, adopting more theory-based approaches, and applying diverse methodologies in different educational and country contexts.

Women Leaders and Effectiveness

Session Moderator: **Karryna Madison**, *Australian National U.*

DEI: **'His Power', Her Consequence: The Moderating Role of Leader Gender on Follower Felt Obligation** 

Author: **Karryna Madison**, *Australian National U.*

Author: **Helen De Cieri**, *Monash U.*

Author: **Zen Goh**, *Monash Business School*

Drawing on social exchange theory, this paper examines the moderating effect of leader gender on the relationship between leader power and leader status. Results from a cross-sectional survey ($n = 155$) and time-lagged survey ($n = 655$) conducted with U.S. employees indicate that the effect of leader power on follower felt obligation is stronger for employees working under men leaders than under women leaders. This effect is mediated by leader status, such that the effect of leader power on perceived status is stronger for men leaders than women leaders, leading to different levels of reciprocation from followers for men and women leaders. The findings make three major contributions: they challenge the traditionally gender-neutral view in leadership studies anchored in social exchange theory, spotlight the significance of gender biases in shaping follower perceptions, and call for refined theoretical frameworks aligned with modern organizational complexities.

DEI: **A Global Leadership Competency Model for Academic Women Leaders: Attaining Leadership Effectiveness**  

Author: **Jiaqi Chen**, *U. of Southampton*

Author: **David Cross**, *Southampton Business School, U. of Southampton*

Author: **Naveena Prakasam**, *Southampton Business School, U. of Southampton*

Author: **Yehuda Baruch**, *Southampton Business School, U. of Southampton*

The increased internationalization in higher education has shifted academic mobility patterns leading to intercultural management challenges. The United Nations and European Union have encouraged the inclusion of social, emotional, and intercultural competencies in the academic context as sub-areas of global leadership competency (GLC). Yet, there has been little research into how the combined effects of these dimensions of global leadership competencies influence academics' perceived leadership effectiveness. Moreover, given the disproportionate number of women leaders, leadership competency development requires additional gender equality interventions. Grounded in global leadership theory, we link GLC and leaders' perceived leadership effectiveness in higher education (HE). We surveyed 255 women academic leaders in the United Kingdom and analyzed the data using structural equation modelling. We found that three dimensions of GLCs incorporating social, emotional, and intercultural aspects are positively related to perceived leadership effectiveness: perception management competency (PM), relationship management competency (RM), and self-management competency (SM). These are positively related to leaders' relations-oriented behaviors, and change-oriented behaviors, thereby contributing to global leadership theory.

DEI: **Personality's Impact on Women Academics' Leadership Effectiveness: The Mediating Role of Motivation**

Author: **Jiaqi Chen**, *U. of Southampton*

Author: **Naveena Prakasam**, *Southampton Business School, U. of Southampton*

A systematic long-term under-representation of women in academic leadership roles is a serious concern for individuals, universities, and wider society. We examined the combined effect of women academics' personality traits, attitudes toward cultural diversity, and perceptions of gender bias on their perceived leadership effectiveness. Anchored from the perspective of trait theory and basic human value theory, we identified the mediating role of motivation to lead on the relationship between women academics' personality traits, attitudes toward cultural diversity, perceptions of gender bias and their perceived leadership effectiveness. Using a non-probability sampling approach we surveyed 255 women academic leaders in the United Kingdom. We found that women academic leaders with higher levels of specific personality traits (relationship interest, interpersonal engagement, emotional sensitivity) and more favorable attitudes toward cultural diversity were more likely to be seen as having higher leadership effectiveness. However, women academic leaders who perceive less gender bias in their career development are more likely to be more motivated to lead and then therefore exhibit lower leadership effectiveness.

 DEI: **Stereotypically Depreciated but Actually Appreciated: Why and When Upper-Level Female Leaders are Perceived as More Charismatic**

Author: **Yue Zhang**, *Guanghua School of Management, Peking U.*

Author: **Xiaofei Teng**, *Guanghua School of Management, Peking U.*

Author: **Liping JIN**, *Peking U.*

Author: **Luyue Zhang**, *Guanghua School of Management, Peking U.*

Debates about the effectiveness of female leadership and whether followers' perceptions of leader charisma are differential between male and female have been continuous and escalating. Catering to the trend, we explore the relationship between leader gender and followers' perceptions of leader charisma with pair data collected from upper-level leaders and their followers. Specifically, according to social role theory and the power shield hypothesis, we hypothesize that female leaders, compared to male leaders, are evaluated as more charismatic. In this process, dialectical leadership behaviors could effectively mediate the effect of gender differences on perceptions of leader charisma, where female leaders are appraised as exhibiting more dialectical leadership behaviors than their male counterparts. Furthermore, we consider followers' perceived leader support as the boundary condition, which could weaken the extent to which gender differences influence perceptions of leader charisma via dialectical leadership behaviors. Data analyses from 156 upper-level leaders and 661 direct followers support our hypotheses. Theoretical and practical implications, as well as future directions of current research are also discussed.

Venture Capital Management

Session Moderator: **Ting Yao**, *U. of Wisconsin, Milwaukee*

ENT: **Principal-to-Principal Conflict Management on Venture Boards**

Author: **Ting Yao**, *U. of Wisconsin, Milwaukee*
Author: **Hugh O'Neill**, *U. of North Carolina, Chapel Hill*

Principal-to-principal conflicts (PPCs) between investors and venture managers are a common reason for venture failure (CB Insights, 2022). The effective management of PPC is a critical issue for venture boards. To date, the dominant theoretical perspectives in venture governance (agency theory and resource dependence theory) primarily focus on the composition of venture boards and offer limited insights into how PPCs are actually managed. Drawing from conflict management and trust literature, we develop a model at the director level to better understand what motivates directors to engage in collaborative behaviors necessary to address PPC. Our theory highlights how directors' trust in the CEO plays a pivotal role in motivating directors to collaborate with the CEO and assist in resolving PPC. The process of building and sustaining trust in the CEO differs between directors who are institutional investors (e.g., venture capitalists) and those who are independent directors. In the case of investor-directors, trust in the CEO is shaped by the complex relationships they maintain both with the CEO individually and between their investment firm and the venture itself. A director's trust in the CEO serves as a catalyst, promoting collaboration, effective negotiation, and mediation, thereby making a significant contribution to PPC management.

ENT: **How Value Capture Rights Evolve in Venture Capital Contracts: Cumulation vs. Protection**

Author: **Cyril Um**, *Louisiana State U.*
Author: **Haemin Dennis Park**, *U. of Texas at Dallas*

Proliferating research on venture capital (VC) has focused on the value-creating effects of VCs, characterizing VCs and startups as principals and agents respectively. However, an important, yet overlooked, aspect of the partnership is the value-capture consideration between the two parties. Drawing on property rights theory, we explore how value capture provisions for the VC evolve over different rounds of financing. We suggest that, as the value of the startup increases, it is economically efficient for the VC to forgo value capture rights. We further posit that VCs forfeit cumulative value capture rights, whereas they maintain protective value capture rights and that this effect is moderated by firm-specific uncertainty and environmental uncertainty. Using 6,627 financing contracts between 2,628 unique startups and 1,055 VCs, we provide supporting evidence of our theory.

ENT: **Oversight Through Insight: How Venture Boards Overcome Knowledge Disparity**

Author: **Max Fidelius Vellguth**, *Technical U. of Denmark*
Author: **Thomas J. Howard**, *The Technical U. of Denmark - DTU Entrepreneurship*
Author: **Carina Lomberg**, *Technical U. of Denmark*
Author: **Fiona Murray**, *Massachusetts Institute of Technology*

We investigate the governance role played by board of directors (BODs) in new ventures and the interplay of both their oversight and insight roles. We illuminate this phenomenon in the context of deeptech ventures and in light of the complementarity in expertise between the BOD and the top management team (TMT). In deeptech ventures, BODs support technical founders with relevant experience in the commercial domain. However, complementarity in expertise also means disparity in knowledge risking potential information asymmetry and translational difficulties as the BOD seeks to provide oversight to the TMT. Using an inductive multiple-case study approach, we triangulate boardroom insights by interviewing governance triads, including the CEO and board members, in eight VC-backed ventures. We identify group processes and illuminate their interaction with board roles. We find that board roles are embedded in a complex interplay of underlying processes resolving techno-economic tensions. We posit an emergent process framework for venture governance, add to discussions around techno-economic human capital, and contribute to venture governance research by integrating and contextualizing dominant corporate governance theories.

ENT: **Love or Collegiality? How Growth Aspirations Influence Relational Capital in Entrepreneurial Teams**

Author: **Pamela Nowell**, *BI Norwegian Business School*
Author: **Miriam Bird**, *TUM School of Management, Technical U. of Munich*
Author: **Rebecca Preller**, *U. of Bayreuth*

Prior research has highlighted the close relationships between co-founders, sometimes even referring to them in spousal or family-like metaphors. Although prior research has shown how entrepreneurial teams form in terms of co-founder characteristics and search process, we still lack a more nuanced understanding how relationships among entrepreneurial team members form and evolve when they start working together. To explore how relationships in entrepreneurial teams form and evolve, we use a qualitative, inductive research design and draw on data from ten newly formed entrepreneurial teams working in a university incubator. Taking a relational capital perspective, we identify two pathways of relationship development (spiraling and steady pathways) that are contingent on teams' initial growth aspirations. Our data reveal that non-family teams can develop spousal-like relationships (i.e., love, intimacy, high relational capital) when they have high growth aspirations, go through emotionally charged team member exits, engage in unfiltered communication, and work intimately as a dyad. Counterintuitively, our study shows that high relational capital develops when teams first prioritize and fully commit to their ventures, rather than to team member relationships. We discuss implications for research on relational capital, emerging entrepreneurial team dynamics and team size. Keywords: Emerging entrepreneurial teams, relational capital, growth aspirations, new venture success, team size

Entrepreneurship and Institutions

Session Moderator: **Daxin Sun**, *Nanjing U.*

ENT: **Asymmetrical Disciplines of institutions: Differentiation, Newness, and Performance**

Author: **Qing Dai**, *Guizhou Normal U.*

Author: **Liang Wang**, *U. of New Brunswick, Canada*

Author: **Haibo Zhou**, *U. of Nottingham, China*

Differentiation is one of the most widely adopted and extensively examined strategies, but its performance impact has been characterized by a fundamental polarization. While many strategy scholars have positioned differentiation as a core source of competitive advantage and superior performance, institutional theorists have argued that striving for distinctiveness may end up hampering performance. This study approaches the performance implications of differentiation by postulating an asymmetry in the institutional disciplines toward differentiation between established incumbents and new ventures. New ventures suffer from less discipline and in turn can derive greater performance benefits from differentiation than do established incumbents. And such asymmetry would be more pronounced in a highly contested market or an immature industry, wherein differentiation engenders fewer benefits to counter institutional disciplines. Empirical evidence generally supports our view on the asymmetry of institutional disciplines toward differentiation. Our study develops a novel approach to reconcile the opposing stands on differentiation and offers practical guidelines on how to maximize the benefits from this competitive strategy.

ENT: **Is Anticorruption Campaign Effective? Evidence from Institutional Trust of Entrepreneurs**

Author: **Daxin Sun**, *Nanjing U.*

Prior studies on entrepreneurship have highlighted the role of the institutional environment in shaping ways of engaging in entrepreneurship. However, whether the incentive structure provided by society generates productive growth through entrepreneurship depends on entrepreneurs' trust in institutions. We examine how political turbulence influences the institutional trust of entrepreneurs and utilize the unique event of anti-corruption investigations since 2012 in China. We interview the same entrepreneurs in China Family Panel Studies surveys before and after the enforcement of anti-corruption investigations and find that exposure to anti-corruption campaigns increases rather than decreases the trust of entrepreneurs in the government. Furthermore, we test two potential mechanisms underlying the focal relationship: prior beliefs bias and political information exposure. We find that those people who had positive beliefs about the government before or had high exposure to political information are likely to trust the government since the anti-corruption. Our findings provide fresh insights into the entrepreneurship literature, corruption literature, and studies on the determinants of institutional trust entrepreneurship by clarifying the heterogeneous response of entrepreneurs facing anti-corruption campaigns.

ENT: **Export-oriented Entrepreneurship: An Institutional Logics Perspective**

Author: **Joan-Lluís Capelleras**, *U. Autònoma de Barcelona*

Author: **Ignacio Contín-Pilart**, *U. of Navarra*

Author: **Martin Larraza-Kintana**, *Public U. of Navarre*

Author: **Victor Martin-Sanchez**, *U. of Southern Denmark*

This study addresses how different institutional logics affect export-oriented entrepreneurship. We first argue that an unfavorable home country institutional framework in the form of state fragility will negatively influence the early-stage entrepreneurs' export activities. We subsequently suggest that the presence of established exporters in the local market will positively moderate such negative relationship. Additionally, we contend that this moderating effect will be more pronounced when there is a high level of generalized trust within the country. We test our hypotheses on a multisource dataset that combines individual- and country-level observations. Our multilevel analysis covers 54 countries over the period 2005-2020. The results provide support for our hypothesized direct and moderating effects. Overall, the study provides novel insights into how institutional factors and trust dynamics shape export-oriented entrepreneurial activity.

ENT: **Institutional Contexts, Entrepreneurial Alertness and Engagement in Social Entrepreneurship**

Author: **Xing Li**, *Utrecht U. School of Economics*

Author: **Niels Bosma**, *Utrecht U.*

Blending the discovery theory of opportunities with institutional theory, we develop a multilevel model that expresses how the combination of micro-level entrepreneurial alertness and country-level institutional contexts affects social entrepreneurship (SE). Concerning institutional contexts, we argue for shifting the debate that was hitherto merely fed from the government (spending) perspective to include social and market conditions. As such we advance the current SE literature by highlighting and exploring the coexistence of the concepts of institutional support and institutional void as conditions that may both spur opportunities for SE. We test the mechanisms suggested by our model using data from the Global Entrepreneurship Monitor 2015, covering 100,110 individuals across 49 countries. Our results reveal previously undocumented coexistence of institutional support (captured by market supporting regulatory quality) and institutional void structures (unmet basic human needs) impacting SE. Furthermore, our results suggest that the effect of entrepreneurial alertness on SE is contingent on the aforementioned institutional context, where entrepreneurial alertness is seen to exhibit a higher effect on SE both in contexts of institutional support and institutional void. Our study advocates a greater consideration of the entrepreneurial nature of SE intention (next to the currently dominant narrative of prosocial motivations) and a deeper understanding of national contexts in predicting SE entry.

Entrepreneurship and Well-Being II

Session Moderator: **Jingjing Qu**, *Shanghai Artificial Intelligence Laboratory*

ENT: **The Dynamics of Workplace Well-Being in the Transition to Entrepreneurship**

Author: **Jingjing Qu**, *Shanghai Artificial Intelligence Laboratory*
Author: **Bo Peng**, *Birkbeck College School of Management*
Author: **Cheng Yan**, *Essex Business School, U. of Essex*
Author: **Vangelis Souitaris**, *Bayes business school and U. of St. Gallen*
Author: **Jun Li**, *Huddersfield Business School, U. of Huddersfield, UK*

This paper investigates the dynamics of workplace well-being during the transition to self-employment, with a focus on the role of job autonomy and household income. Drawing on the Conservation of Resources (COR) theory, we propose a dynamic mediation-moderation model and develop hypotheses regarding the changes in workplace well-being before and after the self-employment transition. We argue that job autonomy plays a crucial role in influencing workplace well-being in self-employment during the transition period, while household income, particularly low-pay status, moderates this relationship. However, post-transition, the inherent demands of self-employment become more pronounced, diminishing the well-being benefits initially derived from job autonomy. By examining these factors, we contribute to the resource literature by identifying the resources fluctuation and interaction during and after the self-employment transition and shed light on the unique challenges faced by self-employed in different income contexts. The paper also highlights the importance of considering the dynamic nature of self-employment in well-being research.

ENT: **Entrepreneurs' Self-Organizing to Construct and Manage Well-Being**

Author: **Raj Krishnan Shankar**, *Great Lakes Institute of Management*

Well-being is critical to entrepreneurs. While research on entrepreneurs' well-being has contributed to our knowledge of a critically important dependent variable, much of the research on entrepreneurs' well-being has relied on a hedonic perspective, which is rather passive and focused on short time horizons. Eudaimonic well-being (EWB) offers a more dynamic, self-organizing perspective. However, other than recognizing that individuals self-select into entrepreneurship, there is little theorizing on self-organizing cognition for constructing EWB. Therefore, this paper asks how entrepreneurs' self-organizing processes impact their EWB. We build on the literature on self-awareness, self-knowledge, and entrepreneurial cognition to offer a self-organizing model of entrepreneurs EWB. In doing so, our theorizing provides insights into the (1) cognitive processes impacting EWB and how EWB impacts these processes as part of a self-organizing system, (2) EWB as a longer-run individual performance construct likely influenced by proactive individuals, and (3) within-individual changes in an entrepreneur's well-being and how this well-being changes feedback to the entrepreneur's cognition (rather than a snap-shot between-individual explanation).

ENT: **The Effect of Entrepreneurial Orientation on Employee Well-Being**

Author: **Coen Rigtering**, *U. Utrecht School of Economics*
Author: **Max Mulhuijzen**, *VU Amsterdam, School of Business and Economics*
Author: **Mathew Hughes**, *U. of Leicester*
Author: **Daniel Cowen**, *Groningen U. (RuG)*

With the advantageous effects of adopting an entrepreneurial orientation (EO) on corporate expansion and financial gains being firmly established, scholars have begun to explore the broader implications of adopting an entrepreneurial strategy. Unfortunately, these implications often still revolve around financial results, leaving the effect of EO on more intangible firm resources unclear. We zero in on human capital and study how EO affects employee well-being. To theorize the relationship between EO and employee well-being, we build on resource exhaustion theory. Resource exhaustion theory allows us to specify the conditions under which EO is beneficial or becomes too explorative and unsustainable for employee well-being. We test our hypotheses using a panel dataset tracking S&P500 firms from 2016 to 2020, which we created by merging data from Indeed.com, letters to shareholders, and Compustat. The data show that EO generally contributes to employee well-being while also allowing for a more nuanced interpretation of this effect. Specifically, we find evidence that the resource endowment of the firms and the dynamics of the industries in which they operate can amplify the effect of EO on employee well-being and, conversely, that EO may not be productive for employee well-being in very stable industry conditions.

ENT: **Envisioning the Future: The Role of Passion in Eudaimonic Well-Being of Entrepreneurs**

Author: **Inna Kozlinska**, *U. of Groningen, Faculty of Economics and Business*
Author: **Silvia Fernandes Costa**, *U. of Groningen*
Author: **Florian Noseleit**, *U. of Groningen*

Building on self-determination theory and on broaden-and-build theory, we theorize and test a model that emphasizes the role of entrepreneurial envisioning in translating the experience of entrepreneurial passion into higher levels of eudaimonic well-being among entrepreneurs. We focus on passion for founding a venture as the domain of entrepreneurial passion that relates to the most critical stage of entrepreneurial process. Additionally, acknowledging the heterogeneity of well-being outcomes in entrepreneurship, we propose that the motive driving the new venture creation (necessity- or opportunity-driven entrepreneurship) moderates the relationship between passion for founding and eudaimonic well-being. We find that entrepreneurial envisioning partially mediates the relationship between passion for founding a venture and eudaimonic well-being. Additionally, the mediation effect of envisioning is stronger for necessity-driven entrepreneurs than for opportunity-driven entrepreneurs. Our study contributes to a more comprehensive understanding of entrepreneurs' eudaimonic well-being by considering its affective, cognitive and motivational determinants.

Tackling Grand Challenges with Blockchain Innovations

Organizer: **Marvin Hanisch**, *U. of Groningen*
Organizer: **Hans Nikolas Rawhouser**, *U. of Nevada Las Vegas*
Organizer: **Wenqian Wang**, *Hong Kong Baptist U.*
Panelist: **Paul Momtaz**, *Technische U. München, TUM School of Management*
Panelist: **Joseph Sarkis**, *Worcester Polytechnic Institute*
Panelist: **Ajai Singh Gaur**, *Rutgers U.*
Panelist: **Simon JD Schillebeeckx**, *Singapore Management U.*
Panelist: **Theodore Waldron**, *Texas Tech U.*

Expanding on two previous successful panel symposia at AOM 2022 and AOM 2023, this symposium assembles a group of scholars with blockchain technology research spanning a wide array of AOM divisional interests related to grand challenges. The panelists will provide insights related to theory and empirical observations to inspire high-quality research on blockchain technology from multiple perspectives. Panelists will help identify: relevant research questions and research ideas in the context of blockchain innovation for grand challenges, theories that could help better understand the application of blockchain to grand challenges, theories that can be better understood by observing blockchain phenomena, blockchain phenomena that seem particularly interesting/surprising for researchers and blockchain data sources (and relevant methods for studying those sources) that have the potential for interesting insights for grand challenges..

Session Moderator: **Jeroen Verbouw**, *Ghent U. and Tilburg U.*

ENT: **Divide and Conquer: Investor Type Diversity in Entrepreneurial Ventures**

Author: **Jeroen Verbouw**, *Ghent U. and Tilburg U.*
Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*
Author: **Sophie Manigart**, *Ghent U. and Vlerick Business School*

Past studies show that dependence on partners for resources also exposes firms to possible problematic partner behavior, against which firms try to defend themselves. We extend our understanding of resource dependence in entrepreneurial ventures by developing and testing a novel framework on how and which ventures can defend themselves in their first interaction with equity investors when established defenses are usually unavailable. We theorize and show that ventures with greater resource stocks (i.e., higher ex-ante cash holdings and prior experience with multiple investor types) defend themselves by pursuing a "divide and conquer"-strategy in which they attract first-round investments from different types of equity investors. This strategy also facilitates follow-on fundraising. Overall, we extend resource dependence theory by focusing on a novel "divide and conquer"-defense strategy, which limits the power of any individual investor type, and by presenting a dynamic view on resource dependence in which entrepreneurs employ defense strategies from a position of strength because they still hold greater resource stocks.

ENT: **Do Hurricane Strikes Encourage Economic Dynamism and Entrepreneurial Opportunity?**

Author: **Jim Fatzinger**, *Vanderbilt U.*

"At any one point in time, 4% of the workforce in the U.S. is involved in the creation of a new firm and nearly 30% of these individuals actually get into business" (Reynolds, as cited in Gartner & Shane, 1995, p. 298). There also continues to be, according to Carland et al. (1984), an "implicit assumption that the entrepreneur contributes disproportionately to the economy...yet little has been done to isolate this individual for further analysis" (p. 354). This study contributes to the literature and understanding of entrepreneurship, demonstrating economic dynamism, as measured by aggregate establishments, in the wake of exogenous hurricane strikes. Specifically, this study, using publicly available data from the U.S. Small Business Administration (SBA) and NOAA's National Hurricane Center North Atlantic Hurricane Database (HURDAT), demonstrates the importance of entrepreneurship, economic dynamism, and Schumpeter's (1942) theory of creative destruction. Entrepreneurs are in fact, agents of creative destruction according to Acs et al. (2014), who introduce change to the economic landscape by constantly undermining and challenging established industry incumbents. Findings in this study are consistent with previous economic research suggesting that while exogenous shocks such as natural disasters destroy some wealth, they also promote economic opportunity (Kerr & Nanda, 2009; Nativad & Rawley, 2016). Instead of limiting analysis to a single case, this study contributes to the literature by initially considering all U.S. Continental hurricane strikes (n=34,446 cases). Our findings have significant implications for economies recovering from an exogenous shock, small businesses, entrepreneurs, and policymakers.

ENT: **Democracy Is Good for Entrepreneurship, But Are Entrepreneurs Good for Democracy?**

Author: **Arjan Frederiks**, *U. of Groningen*
Author: **Florian Noseleit**, *U. of Groningen*
Author: **Michael Wyrwich**, *U. of Groningen*

This paper studies the complex relationship between entrepreneurs and their support for democratic values, considering how democracy, while fostering entrepreneurship, may not always receive reciprocal support from entrepreneurs. We distinguish between successful and vulnerable entrepreneurs, hypothesizing that their experiences within the democratic framework significantly influence their perspective on democracy in comparison with employees. Successful entrepreneurs, who thrive in a democracy, are expected to value it more, while vulnerable entrepreneurs, facing challenges and failures, might perceive the democratic system as less supportive. We propose that economic freedom and institutional trust within a democracy moderate entrepreneurs' support for democracy, irrespective of their individual success, as also vulnerable entrepreneurs are recognizing its broader socio-economic stability and opportunities. Our empirical analysis reveals that successful entrepreneurs value democracy more than employees whereas vulnerable entrepreneurs display weaker democratic support. However, successful entrepreneurs' leading role in supporting democracy disappears under conditions of relatively higher levels of economic freedom or higher levels of trust in institutions. Our findings accentuate the nuanced link between entrepreneurship and democracy, illuminating the microfoundations of entrepreneurs' democratic endorsements. Additionally, our results suggest that a prevalence of vulnerable entrepreneurs may imply an erosion of democracy.

ENT: **Darwinians and Idealists: Effects of Prior Professional and Personal Identities on Founder Identity**

Author: **Tatiana Zabara**, *U. of Antwerp*
Author: **Emmanuelle Fauchart**, *U. of Fribourg, Switzerland*
Author: **Ganqi Tang**, *U. of Fribourg*

Every organization has been at some point launched by an entrepreneur or a founder. Understanding who these individuals are and why they start and manage their ventures the way they do is, perhaps, one of the most fundamental goals in entrepreneurship research. Building on the social identity framework, we (1) contrast entrepreneurs who act out of consideration for others (pro-others) vis-à-vis those whose primary concern is economic self-interest (pro-self) based on their founder identity, and (2) examine the driving forces of social structures and individuals' core personal identities in shaping these identities. We test our hypotheses on a sample of 110 early-stage entrepreneurs founded in Switzerland after 2017 and find general support for our hypotheses suggesting that personal identity and founders' prior professional experience embedded in institutional logics infuse founder identity independently and in an interplay with each other. We discuss the theoretical and practical implications of our results.

Nascent Entrepreneurship

Session Moderator: **Brent Clark**, *U. of Nebraska, Omaha*

ENT: **Stairway to Impact? Tracing the Business Model Design Processes of Nascent Sustainable Ventures**

Author: **Eduard Esau**, *Gottfried Wilhelm Leibniz U.*
Author: **Christina Lara Kannegiesser**, *U. of Hamburg*
Author: **Manuel Reppmann**, *U. of Hamburg*
Author: **Erk Peter Piening**, *Leibniz U. Hannover*

Sustainable entrepreneurs face the challenge of aligning multiple, sometimes conflicting social, environmental, and commercial demands during their venture creation, shaping the business model design process in unique ways. This study explores these processes by conducting a multiple-case theory-building approach examining six nascent sustainable ventures (including 45 interviews) in a longitudinal research setting. We derive a process model depicting the dynamic interplay between a founding team's cognitive configuration and their business model design approach. Specifically, we propose two distinct sustainable business model design process paths which largely depend on the cognitive frame (narrow vs. paradoxical) of a founding team. The insights from our framework contribute to the literature at the intersection of sustainable entrepreneurship, business model design, and entrepreneurial cognition.

ENT: **Silver Entrepreneurs: New Venture Creation in the Golden Years**

Author: **Chris Boudreaux**, *Florida Atlantic U.*
Author: **Hyungseok Yoon**, *U. of Leeds*

Despite recent evidence linking personal motives and outcomes to aging in entrepreneurship, we still know little about the start-up performance of silver entrepreneurs—new business creation by people older than 50 years of age. Drawing on life-span theory, we address the question: do silver entrepreneurs' start-ups outperform others? We predict that start-ups founded by silver entrepreneurs financially underperform but survive longer. Using confidential data from the Kauffman Firm Survey comprising a sample of 2,878 U.S. firms founded in 2004 and followed annually until 2011, our analysis confirms our predictions. Our findings reveal the dual implications of silver entrepreneurship in an era marked by aging populations.

ENT: **The Liability of Ruralness in Entrepreneurship**

Author: **Travis Howell**, *Arizona State U.*
Author: **Justin Kent**, *Appalachian State U.*

While recent research has produced valuable insights regarding underrepresented entrepreneurs, this literature has largely overlooked one key group: entrepreneurs from rural (as opposed to urban) areas. In this paper, we theorize that rural entrepreneurs face a "liability of ruralness," meaning they face unique challenges and biases that urban entrepreneurs do not. We test our theory using a multi-method approach across three complementary studies using large-scale data from Kickstarter, a proprietary dataset of rural vs. urban entrepreneurs in the Eastern United States, and an online experiment with entrepreneurs. We find evidence of the existence of the liability of ruralness across all three studies. We also find, however, that entrepreneurs can overcome the liability of ruralness via role congruity or strategic distinctiveness. As a whole, our findings make fresh contributions to the literatures on underrepresented entrepreneurship, role congruity, and optimal distinctiveness.

ENT: **Decrypting the Code – The Surprising Downside of Market Orientation in ICO Funding Success**

Author: **Sophia Henzler**, *Heinrich-Heine U. of Dusseldorf*

Established academic findings have predominantly shown a positive relationship between a firm's market orientation (MO) and its business performance. However, the applicability of the MO concept within the novel and unique entrepreneurial financing context of initial coin offerings (ICO) has not yet been explored. Therefore, this study examines the impact of MO of early-stage, highly technological blockchain ventures on their funding success. To shine light on this underexplored relationship, we employ a unique and comprehensive data set of 26,351 token sale projects from 2014 to 2023, aggregated from five disparate ICO listing platforms. Contrary to previous MO studies, we find a significantly negative relationship between the degree of MO in an ICOs communication and its funding success, mainly driven by the MO subdimensions long-term focus and profitability. We also find that the degree of risk disclosure (RD) in an ICOs communication positively moderates the aforementioned negative relationship. We interpret these findings utilizing signaling theory, complemented by prior research on the unique attributes of ICOs. By investigating this unexplored area, our study not only advances the academic discourse around MO but also adds to the growing entrepreneurial finance literature stream investigating the determinants of ICO success.

ENT: **Unpacking The Role Of Entrepreneurial Experience in Response to Failures of Varying Severity**

Author: **Jim Whitbeck**, *Oregon State U.*
Author: **Violetta Gerasymenko**, *Oregon State U.*

We combine the attribution theory of motivation and the heuristic-systematic model of information processing to theorize and examine an inverted u-shape relationship between entrepreneurial project failure severity and subsequent project performance. We propose that the u-shape relationship is driven by the interplay of the latent mechanisms of motivation determined by causal attributions for failure and the entrepreneur's confidence gap (and subsequent reliance on heuristic or systematic information-processing). Because entrepreneurial self-efficacy and resilience are shaped by experience, we further probe how potential differences in attribution, heuristics, and systematic processing may differ between portfolio and hybrid entrepreneurs and explain performance differences as driven by failure severity. We conduct our study in the crowdfunding context, leveraging a unique dataset of 721 observations of single-founder entrepreneurial projects launched between 2016 and 2019 that followed projects that failed to achieve full funding on Kickstarter. Supporting our theory, we find an inverted U-shape relationship between failure severity and subsequent project performance and that this relationship is different for portfolio and hybrid entrepreneurs. Our study contributes to a broader literature on motivation and decision making after failure and advances entrepreneurship literature by offering novel insights into the cognitive boundaries of entrepreneurial attention in response to failure severity.

Human Resources

Session Moderator: **Thomas Hermanns**, *U. of Trier*

ENT: **Complementary Wage Jobs as a Coping Mechanism of Self-Employed Individuals During Existential Crises**

Author: **Thomas Hermanns**, *U. of Trier*
Author: **Diemo Urbig**, *Brandenburg U. of Technology Cottbus-Senftenberg*
Author: **Joern Hendrich Block**, *U. of Trier*
Author: **Katrin Susanne Muehlfeld**, *U. of Trier*

Research on combined holding of self- and dependent employment (hybrid entrepreneurship) has mainly focused on individuals who transition from an existing wage job into complementary self-employment. In contrast, there is scant research on individuals who transition from self-employment as their main occupation into an additional wage job. We investigate whether existential crises may trigger such 'reverse transition' and which underlying motivations may prevail. Based on two studies of full-time self-employed individuals, we examine the extent to which these individuals take on additional wage job as a coping strategy to survive a potentially existential crisis. In the first study (N1 = 13,643), we focus on individuals' intentions, while in the second study (N2 = 6,440), conducted one year later, we examine the actions taken. We find that the greater the drop in revenue caused by a crisis, the more likely the individual is to take on a second paid job and to change the business model. Furthermore, the positive effect of changing the business model on the intention to take up a second job increases with the perceived uncertainty of the changes made. Therefore, our results support the under-researched concept of 'reverse transition' in that self-employed individuals may use the combination of both types of work to ensure the survival of their entrepreneurial venture in the case of an exogenous shock.

ENT: **Attracted or Repelled? Investigating Job Seekers' Perceptions of Obsessive Entrepreneurs**

Author: **Mirjam Nicole Streeb**, *U. of Bayreuth*
Author: **Matthias Baum**, *U. of Bayreuth*

This study investigates the impact of entrepreneurs' obsessive passion on potential job seekers, exploring whether it functions as an asset or a liability in startup recruitment. Drawing upon signaling theory and person-environment (PE) fit theory, we develop a contingent model that elucidates job seekers' perceptions of "obsessive passion" as a recruitment signal taking their individual characteristics as boundary conditions for the interpretation of this signal into account. Our hypotheses were tested through a metric conjoint experiment involving 181 job seekers, yielding 2,896 decisions. The results indicate that the impact of an entrepreneur's perceived obsessive passion on a venture's attractiveness as a potential employer is contingent upon the characteristics of the job seeker. Specifically, signaling obsessive passion is only attractive to job seekers with highly proactive personalities and entrepreneurial self-efficacy; those who score low on these factors, as well as those who are risk-averse, tend to be repelled by such signals. These findings contribute to the literature on new venture recruitment by demonstrating how signals of obsessive passion aid in the self-selection of applicants, ultimately attracting employees well-suited for the entrepreneurial environment.

ENT: **When is Startup Employment Attractive to Technical Job Seekers?: Evidence from Online Experiments**

Author: **Mehdi Ibn Brahim**, *SKEMA Business School - U. Côte d'Azur*
Author: **Diego Zunino**, *SKEMA Business School - U. Côte d'Azur*
Author: **Daniel P. Forbes**, *U. of Minnesota Carlson School of Management*

Resource attraction is a critical challenge facing entrepreneurial ventures, and human capital represents an especially important resource. In this paper, we explore how technically-trained job seekers evaluate startups' employment opportunities. We identify role ambiguity as a salient feature of job evaluation and hypothesize that tech-trained job seekers will be less attracted to jobs featuring higher levels of expected role ambiguity. We further propose that this effect will be stronger for startups than for established firms. We test these hypotheses using an online experiment in the context of the online labor market. In our main study – Study 1 – we rely on a pre-registered online framed-field experiment and test the influence of expected role ambiguity on organizational attractiveness for tech-trained job seekers. We conduct two more studies for validation. In Study 2, we ensure that our results are specific to individuals with technical training. In Study 3, we assess the external validity of our findings using a manually-collected dataset of 5,380 job ads from LinkedIn. Our results contribute to the entrepreneurship and strategic human capital literatures by shedding light on the nuanced challenges startups face in online labor markets.

ENT: **How Ex-Entrepreneurs Perceive the Expected Compensation During Job Searches?**

Author: **Li Tian**, *Nankai U.*
Author: **Zeyu Wang**, *Renmin Business School Renmin U. of China*
Author: **Yiran Liu**, *Tianjin U.*

While previous research mainly focuses on the compensation loss of ex-entrepreneurs received from employers, i.e. the demand-side perspective, little attention has been devoted to examining how ex-entrepreneurs perceive expected compensation during job searches. Based on the Backlash Avoidance Model (BAM), from the Supply-side perspective, this paper explores that, as a minor and marginal group in the labor market, ex-entrepreneurs try to avoid social and economic penalties from being cross-border mobilizers and thus tend to lower their expected compensation compared to their nonentrepreneurial counterparts. We further investigate how regional entrepreneurial climate may moderate the relationship between entrepreneurial identity and expected compensation. Taking the resume information crawled by an online resume service provider from 2015 to 2016 in China, the study supports our hypotheses. This study contributes to our understanding of founding penalty from the supply-side, which helps us understand career identity as an important driver of expected compensation. Moreover, this paper generalizes application of BAM model to entrepreneurship and verifies that fear of backlash not only drives behaviors of female leader and ethnicity minorities but also influences other social group such as entrepreneurs. Moreover, we investigate the moderating role of regional entrepreneurial climate which reveals an important boundary condition of the BAM model in an entrepreneurship context. The conclusions of this paper provide practical insights into the management of career mobility of entrepreneurs, and hiring policies in the job market.

Entrepreneurial Finance Signals 1

Session Moderator: **Denis Lambert**, *ESCP Business School*

ENT: **A Process Study of How Entrepreneurs Send Unintentional Signals to Venture Capitalists**

Author: **Denis Lambert**, *ESCP Business School*
Author: **Yi Jiang**, *ESCP Business School*

Drawing on the literature on emotions, this study combines strategies for analyzing video data to examine inductively and theorize the process through which entrepreneurs send unintentional signals to venture capitalists during pitch competitions. The results reveal three patterns that describe how entrepreneurs display emotions. We reveal the roles of temporality and environmental noise, discuss their central roles as effective conditions for variations in emotional reactions, and offer new insights into how and why entrepreneurs send unintentional signals.

ENT: **Gender Bias and Financing of Impact Ventures?: A Cross-Cultural, Gender Role Congruity Perspective**

Author: **Lani Faith Gacula**, *U. of Massachusetts, Lowell*
Author: **Michael W. Obal**, -
Author: **Rangapriya Kannan-Narasimhan**, *Lucas College & Graduate School of Business, San Jose State U.*

In 2022, female led ventures received only 1.9% of venture capital funding; a concerning trend that has been steady for years. Furthermore, only 15% of all technology based ventures have female founders. These disquieting trends leads us to question if female-led impact ventures are likely to receive lesser amounts of equity funding than male-led impact ventures? Is this relationship likely to change if the ventures in question are invention-based, where invention-based ventures have historically and stereotypically been male-dominated? Furthermore, what role does a country's cultural masculinity play in this relationship? This study draws upon Gender Role Congruity Theory to examine whether, how, and why women-led impact ventures experience disparity from their male counterparts in the ability to obtain early-stage equity investment. Analysis of survey data collected from 4,206 for-profit impact ventures from 205 impact-oriented accelerator programs across 121 countries was used to explore these phenomena. Results indicate that female-led impact ventures are disadvantaged compared to male-led impact ventures in obtaining equity investment. Furthermore, female-led impact ventures are less likely to be invention-based than male-led impact ventures. Finally, the ingrained culture of masculinity, as measured at the country-level, exacerbates the disadvantages experienced by female founders in obtaining equity funding. Overall, this study contributes to the literature on global entrepreneurial finance from a gender role perspective and is crucial to understanding the challenges female entrepreneurs encounter in obtaining early-stage equity investment.

ENT: **Interactive Effects of Gender, Quality Signals, and Industry in Early-Stage Venture Capital Funding**

Author: **Jonah Rösemeier**, *Stanford Graduate School of Business*

Combining gender role congruity theory and signaling theory, I investigate the persistent venture capital funding gap between men and women entrepreneurs by addressing recent scholarly calls for examining how signal sender, signal, and signal environment interact to affect early-stage venture capital funding. Based on both theoretical and empirical evidence, I hypothesize a three-way interaction, such that the disadvantage women founders face in acquiring early-stage venture capital funding is augmented when they signal management experience, with this moderation depending on the male-dominance of the industry the startup is situated in. Integrating data from four commonly used databases, I test my hypotheses using a self-collected dataset of 399 early-stage venture capital investments in the U.S. between 2020 and 2023. While I do not find support for my hypotheses, my study offers important theoretical and practical contributions. Limitations are discussed.

ENT: **How Entrepreneurs' Conflict Management Styles Impact Investors' Reinvestment Decisions**

Author: **Alexander Narh Tetteh**, *school of management, USTC*
Author: **Dan K. Hsu**, *North Dakota State U.*
Author: **Qingxiong Derek Weng**, *school of management, USTC*
Author: **LIUDMYLA KLYMCHUK**, *school of management, USTC*
Author: **Magdalene Zeinab Ak Adams**, *school of management, USTC*

Making informed investment decisions is crucial in the dynamic world of entrepreneurship and investment. Grounded in sensemaking theory, this study delves into the dynamics of conflict management styles and their influence on investors' reinvestment decisions when employed by entrepreneurs. Three distinct conflict management styles—cooperative, competitive, and avoidant—were scrutinized alongside two contextual factors: entrepreneur performance and ethical reputation. Drawing on a conjoint experiment with 1408 decisions nested within 88 participants, the findings reveal that a cooperative conflict management style positively impacts investors' intentions to reinvest and is even more expected from entrepreneurs whose performance is low or possesses a robust ethical reputation. Interestingly, a competitive conflict management style, often associated with confrontation, does not significantly deter investors' reinvestment decisions; however, its effect becomes detrimental when investors perceive ethical lapses and subpar entrepreneurial performance. Finally, an avoidant conflict management style negatively affects investors' reinvestment decisions, with its impact lessening in the presence of high entrepreneurial performance but remaining detrimental even in the presence of a high ethical reputation.

Building Relationships

Session Moderator: **Agnieszka Kwapisz**, *Montana State U.*

ENT: **The Gender Pay Gap in Academic Currency: Leveraging Female Leadership in Entrepreneurial Engineering**

Author: **Agnieszka Kwapisz**, *Montana State U.*

This paper delves into the nuanced relationship between entrepreneurial engineering education and gender dynamics. Utilizing a dataset of more than 2000 instructional cards from a prominent entrepreneurial engineering network, our study employs a multi-dimensional analysis approach that includes visual imagery analysis, engagement metrics analysis, and natural language text processing. We discovered that the entrepreneurial engineering scholarly community is becoming more aware of and appreciative of works written by or starring women. Additionally, the presence of gendered language and imagery continues to influence faculty engagement, with male-centric references decreasing the appeal and utility of educational materials. Our study advances Intersectionality theory in entrepreneurial engineering education by empirically demonstrating the relationship between gender dynamics and academic engagement, thereby contributing to a deeper understanding of gender roles in this evolving field. Highlighting the need for more gender-balanced representations in educational content, our work calls for ongoing efforts to promote gender diversity and equity in the engineering and entrepreneurship domains. Significantly, our study reveals entrepreneurial engineering education as an emerging area where gender inclusion is notably improving, marking a positive change in engineering and entrepreneurship fields.

ENT: **The Ask: How Entrepreneurs Enroll Stakeholders Through Relational Capital**

Author: **Tiago Ratinho**, *IESEG School of Management (LEM-CNRS 9221)*

Author: **Saras Sarasvathy**, *U. of Virginia*

Author: **Anusha Ramesh**, *Atkinson Graduate School of Business, Willamette U.*

Author: **Stuart Read**, *Willamette U.*

Despite the centrality of stakeholder enrollment to the entrepreneurial process, surprisingly little is known about the corresponding micro-level mechanisms that drive it, its range of potential outcomes, and the way it influences the trajectories of both ventures and individual entrepreneurs. We build on insights from social psychology as well as recent entrepreneurship research to generate framing questions around “the ask” as the micro-foundational mechanism of stakeholder enrollment. We investigate these questions that link asking to the daily actions of entrepreneurs and how those lead to enrolling stakeholder as they build their venture. Through two studies that include quantitative and qualitative data from two different populations of entrepreneurs, we find that: 1) general entrepreneurs focus mainly on short term transactional needs seldom engaging in efforts to build relational capital; 2) high performance entrepreneurs practice relational asks to enroll stakeholders that may ultimately become customers, suppliers, investors, and partners. We use these findings to sketch several avenues for research.

ENT: **The Effect of Stakeholder Orientation on Entrepreneurial Ventures**

Author: **Myeongho Park**, *Oklahoma State U.*

Author: **Per L. Bylund**, *Oklahoma State U.*

Author: **Eunkwang Seo**, *Oklahoma State U.*

We develop a theoretical framework that examines how stakeholder orientation in entrepreneurial ventures affects performance and how this effect is dependent on stages of ventures. We also theorize how the human capital of the venture board influences the stakeholder management. Examining 1,669 ventures affected by constituency statutes regarding stakeholder orientation, we find a negative relationship between stakeholder orientation and the probability of exit, and this relationship is more pronounced in older ventures. Furthermore, we show that the managerial skills of the venture board mitigate this negative relationship. This research significantly contributes to the literature on stakeholder management in entrepreneurship.

ENT: **The Exit/Persistence Processes of Entrepreneurs Who Suffer From Major Depressive Disorder**

Author: **Sascha Hohen**, *Goethe U.*

This paper explores the exit/persistence processes of entrepreneurs who suffer from major depressive disorder. A case study methodology is utilized that builds on 32 interviews as the primary data source. Results are analyzed by using the threshold theory. My data shows that entrepreneurs' first depressive episodes lower their self-efficacy. Entrepreneurs react to this circumstance by using coping strategies. While these strategies help entrepreneurs cope with their depressive symptoms, they also decrease their firms' economic performance. Moreover, employees' reactions to their bosses' depressive symptoms also reduce the economic performance of their bosses' firms. This study suggests that entrepreneurs who suffer from depression lower their individual economic performance thresholds and exit their firms as soon as alternative income options become available.

Participant: **Michael Pergler**, *The Wharton School, U. of Pennsylvania*

Entrepreneurial firms have long been hailed as the force that stimulates innovations, employment, and economic growth writ large. For these reasons, organization and entrepreneurship scholars have long been interested in the growth of technology firms. Considerable research over the past two decades has drawn scholarly attention to issues relating to how entrepreneurial firms emerge and grow their capabilities through specific organizational structure and processes, which have been found to exert enduring influences on subsequent organizational development. More recently, an emerging body of research has sought to understand the growth and strategy of young firms' organizational capabilities by examining their human capital growth as well as their strategic moves. In recent years, novel, large-scale, longitudinal datasets have emerged that enabled researchers to adequately track firms' historical growth trajectories beyond what small hand-collected samples of entrepreneurial firms can reveal. This symposium intends to gather a group of papers that have leveraged such novel, large-scale data to address unanswered questions in the literature regarding the founding patterns of entrepreneurial firms as well as growth strategies adopted by entrepreneurial firms.

Panelist: **Peter G. Klein**, *Baylor U.*
Panelist: **Todd Zenger**, *U. of Utah, David Eccles School of Business*
Panelist: **Rajshree Agarwal**, *U. of Maryland*

This symposium provokes discussion among leading management scholars regarding a New Take on Entrepreneurial Intent (EI). Previous consideration of EI has focused on traits, preferences, and cognition that influence selection into entrepreneurship. The new conceptualization of EI focuses on how intent affects tangible entrepreneurial decision-making downstream of venture creation. How does EI provide a venture with an overarching purpose that directs resource and capability acquisition, and how does EI provide a framework for evaluating venture success? Consistent with the themes of AoM 2024, scholars in the symposium will discuss how EI might be the glue focusing the diversity of organizations on a purpose, and how EI helps balance the interests of competing stakeholders, including facilitating the matching of stakeholders with a venture in the first place.

Entrepreneurial Experimentation: Processes, Logic, and Future Research

Organizer: **Xueqi Yuan**, *Imperial College Business School*
Organizer: **Erkko Autio**, *Imperial College Business School*
Panelist: **Dimo P. Dimov**, *U. of Bath*
Panelist: **Arnaldo Camuffo**, *Bocconi U.*
Panelist: **Teppo Felin**, *Utah State U.*
Panelist: **Thomas Markus Zellweger**, *U. of St. Gallen*

This panel symposium brings together leading scholars to explore the evolving landscape of entrepreneurial experimentation amid digital transformation and global crises. It aims to deepen understanding of the processes, logics, outcomes and future research agenda of entrepreneurial experimentation, focusing on micro, meso, and macro levels. The panel discussions will highlight different experimentation logics—effectual, causal, scientific, and design—each providing unique insights into opportunity design and discovery, and the related theoretical perspectives. The symposium will address challenges and opportunities in implementing these logics in uncertain contexts, contributing to a richer discourse on navigating through uncertainty with informed experimentation strategies. The panel will also foster discussions on different approaches to entrepreneurial experimentation, the distinct logics guiding these approaches, and the challenges and opportunities they present in uncertain contexts. Our panelists will contribute a deeper understanding and broader discourse on the evolving landscape of entrepreneurial experimentation, its implications for business pivots, and the art of navigating through a fog of uncertainty. The panel discussion will be forward-looking and exploratory, and we intend the panel symposium to result in an outline for future research in this important area

Healthcare Decision Making & Ethical Dilemmas

Session Moderator: **Franklyn Uchenna Echemah**, *Southern New Hampshire U.*

HCM: **The Mediating Role of Risk Perception in the Perception btw COVID-19 Knowledge & Strategic Thinking**    

Author: **Franklyn Uchenna Echemah**, *Southern New Hampshire U.*
Author: **Todd Michael Stodnick**, *U. of Dallas, Satish & Yasmin Gupta College of Business*
Author: **Sue Conger**, *U. of Dallas*

The Covid-19 pandemic has caused significant disruptions across multiple sectors, particularly in healthcare, necessitating the implementation of effective crisis management strategies. This dissertation explores the intricate relationship between Covid-19 knowledge, risk perception, and strategic decision-making among mid-level to executive personnel within healthcare organizations. While existing research has delved into the connection between Covid-19 knowledge and strategic thinking, there is limited understanding of the mediating role of risk perception in the healthcare industry. Employing structural equation modeling (SEM) for data analysis, this study aims to bridge this research gap and offer practical insights for healthcare managers grappling with pandemic challenges. The results affirm the positive influence of Covid-19 knowledge on both strategic thinking and risk perception. Additionally, risk perception is identified as a partial mediator in the relationship between Covid-19 knowledge and strategic thinking. This research enriches the literature by shedding light on the significance of risk perception within the context of Covid-19 knowledge and strategic decision-making within healthcare organizations.

HCM: **Moral and Spiritual Knots of Healthcare Professionals' Prosocial Rule-Breaking**

Author: **Muhammad Ali Asadullah**, *U. of Khorfakkan*
Author: **Jo Ann Ho**, *U. PUTRA MALAYSIA*
Author: **Ifray Fayyaz**, *Air U. Multan Campus*
Author: **Ahmad Nabeel Siddiquei**, *Bond Business School, Bond U., Australia*

Healthcare setting is fraught with ethical dilemmas requiring healthcare professionals to deviate from organizational policies and norms for quality of healthcare services. Healthcare professionals lacking strong moral and spiritual basis may find it difficult to deal with such ethical dilemmas. This study has advanced the existing research on prosocial behaviors by investigating a mediation mechanism to explain how spirituality at work may strengthen the role of healthcare professionals' moral conviction in PSRB in healthcare settings. The data were obtained from 315 professionals serving in healthcare organizations in Pakistan. The statistical results demonstrated clear support for the significant mediating role of spirituality at work between moral conviction and prosocial rule breaking. This study highlighted the importance of spirituality at work as social as well as psychological capital for healthcare professionals to deal with ethical dilemmas.

HCM: **Sex Bias in Pain Management Decisions**    

Author: **Shoham Choshen-Hillel**, *Hebrew U. of Jerusalem*
Author: **Mika Guzikevits**, *Hebrew U. of Jerusalem*
Author: **Anat Perry**, *Hebrew U. of Jerusalem*
Author: **Alex Gileles-Hillel**, *Hadassah Medical center*
Author: **Tom Gordon-Hecker**, *Ben Gurion U. of the Negev*

Adequate pain treatment is critical for patients' physical and mental health. It is therefore essential that healthcare providers extend the appropriate treatment to each and every patient in pain. Here we build on findings showing that due to psychological stereotypes, females' pain tends to be judged as less intense than males' pain. We investigate whether medical decision makers give less pain treatment to female than to male patients. To answer this question, we analyze medical datasets on patients arriving with pain complaints at emergency departments in two countries (N = 21,851). In both countries, we find that physicians are 15-20% less likely to prescribe pain-relief medications to females than to males. This sex disparity remains significant even after adjusting for patients' reported pain score, and for numerous patient, physician and emergency department variables. The disparity is observed among both male and female physicians. It is also reflected in additional pain management measures: nurses are about 10% less likely to record pain scores for female than for male patients, and female patients wait about 30 minutes longer for discharge from the emergency department. A controlled experiment supports the suggested mechanism, demonstrating via a clinical vignette that nurses (N=109) judge females' pain as less intense than that of males. The findings provide converging evidence for a bias against female patients in real-life pain management decisions. We discuss the troubling societal and medical implications of this bias, and call for policy interventions to ensure equal pain treatment.

HCM: **Exploring the Nexus of HPWS and Ethical Leadership on Employees Commitment and OCB in Healthcare** 

Author: **Muhammad Faisal**, *College of Business, Abu Dhabi U., UAE*
Author: **Pauline Stanton**, *RMIT U.*
Author: **Michael Muchiri**, *Alfaisal U.*

This study examines the role of ethical leaders at a supervisory level in implementing high-performance work systems to influence employees' citizenship behaviour by enhancing employee affective commitment. Specifically, the study explores the moderated mediation role of ethical leaders and the mediation role of affective commitment on the relationship between high-performance work systems and organisational citizenship behaviours in two large tertiary public hospitals in Pakistan. Employing a case study approach, survey data were gathered from 266 and 548 front-line doctors and nurses from the two large public tertiary care hospitals. SPSS and AMOS were used for data cleaning and analysis, Structural Equation Modelling was also deployed for hypotheses testing. Our findings suggest that in both hospitals, affective commitment positively mediated the relationship between high-performance work systems and organisational citizenship behaviour. Second, affective commitment positively mediated the relationship between ethical leadership and organisational citizenship behaviour. However, the role of ethical leadership at the supervisory level as a moderated-mediated hypothesis was significant in one hospital and insignificant in the other. These findings are discussed, and we draw conclusions that highlight theoretical, practical and managerial implications for the public healthcare sector in Pakistan.

Workforce Recruitment & Retention

Session Moderator: **Seongwon Choi**, *California State U., Los Angeles*

HCM: **Community Health Centers and Medical Traineeship Patterns: Implications to Health Workforce Shortage**

Author: **Seongwon Choi**, *California State U., Los Angeles*
Author: **Ganisher K. Davlyatov**, *U. of Oklahoma Health Sciences Center*
Author: **Aizhan Karabukayeva**, -
Author: **William Opoku-Agyeman**, *U. of North Carolina, Wilmington*

This study investigates medical training programs in U.S. community health centers (CHCs) and the organizational and environmental factors influencing their training strategies amid a medical professional shortage. Analyzing CHC training patterns, we identified four CHC clusters based on trainee types: High Nurse, High Physician, High Advanced Practitioner, and High Medical Assistant Trainees. These clusters demonstrate variations in CHC trainee composition, suggesting differing training priorities. Factors such as urban location, CHC size, and percentage of other medical trainees significantly correlated with the diversity of medical trainees. These insights are vital for public-private partnerships focusing on delivering quality primary care and maintaining the workforce in resource-limited settings.

HCM: **Unraveling the Chains: Exploring the Impact of Ownership on Administrator Turnover in Nursing Homes**

Author: **Rohit Pradhan**, *Texas State U. San Marcos*
Author: **Akbar Ghiasi**, *U. of the Incarnate Word*
Author: **Gregory N. Orewa**, *U. of Texas At San Antonio*
Author: **Shivani Gupta**, *U. of Houston - Clear Lake*
Author: **Robert J Weech-Maldonado**, *U. of Alabama, Birmingham*

Leadership instability in nursing homes, fueled by persistently high level of nursing home administrator (NHA) turnover, threatens the well-being of vulnerable residents. While numerous factors have been implicated, the impact of the industry's dominant player, for-profit corporate chains (FPCs), remains unexplored. Based upon the tenets from the structure-conduct-performance paradigm, the primary goal of this study is to examine the impact of corporate chain ownership on NHA turnover. Data were derived from different sources including LTCFocus and Care Compare (2021-2022). The dependent variable was NHA turnover. The main independent variable is ownership/chain affiliation, which represents a categorical variable of the four possible interactions of for-profit (FP) status and chain affiliation: FPC, FP independent (FPI), not-for-profit chain (NFPC), and not-for-profit independent (NFPI). An ordinal logistic regression model with year and state level fixed effects and appropriate organizational and market control variables was used. Compared to NFPI (reference group), FPC, FPI, and NFPC nursing homes exhibited approximately 2.3, 1.7, 1.4 times higher odds of NHA turnover, respectively. Corporate chain ownership significantly increases NHA turnover rates with variations among different ownership/chain affiliation combinations. Tailoring management strategies to the specific ownership structure may hold the key to reducing NHA turnover and ensuring consistent resident care.

HCM: **Understanding Turnover in Healthcare and Welfare Sector: A Systematic Meta-Review**

Author: **Herlinde Wynendaele**, *Ghent U.*
Author: **Yannai De Jonghe**, *Ghent U.*
Author: **Ellen Peeters**, *Tias Business School*
Author: **Ann Van Hecke**, *Ghent U.*
Author: **Els Clays**, *Ghent U.*

Aims. This systematic meta-review investigates determinants, measurement methods, and intervention effectiveness in healthcare and welfare sectors, focusing on intention to leave and actual turnover. Methodology. Following PRISMA-P guidelines, we analyzed data from January 2013 to July 2023 across multiple databases, including PubMed, Web of Science, CINAHL, Cochrane Database of Systematic Reviews, and Embase. Two reviewers independently screened titles and abstracts for predefined eligibility criteria. They also collaboratively examined 10% of the full texts to ensure compliance with these criteria. Study quality was evaluated using AMSTAR 2, and a Corrected Covered Area analysis was conducted. Results. The analysis of 37 studies (and a total of 511 primary studies) showed a broad spectrum of determinants influencing both intention to leave and actual turnover, with variations across different contexts. The Dutch 5 A's model was employed to categorize these determinants. Furthermore, our analysis also highlighted the diversity in turnover measurement methodologies and the differing outcomes of various interventions aimed at reducing turnover. Conclusion. The findings show the complexity and context-specific nature of turnover in healthcare and welfare sectors. The inclusion of the 5 A model offers an understanding of job quality factors affecting turnover, emphasizing the importance of a holistic approach to retention strategies.

HCM: **Modeling Uncertainty: Does Executive Turnover Create Unpredictability in Organizational Performance?**

Author: **Ohbet Cheon**, *The David D. Reh School of Business, Clarkson U.*
Author: **Jourdan Davis**, *UNC Charlotte*
Author: **Nathan Favero**, *American U.*

One central challenge public organizations face is coping with uncertainty—something that arises from both internal processes and environmental changes. Despite calls for greater attention to topics of risk and uncertainty, the field has fairly limited theoretical or empirical tools for studying such issues. This study introduces a novel approach to studying uncertainty regarding performance. Drawing on prior studies of organizational change and executive turnover, we argue that replacing an executive is an example of an organizational intervention with the potential to alter not only the expected performance level but also the unpredictability of future performance. Using a panel dataset of approximately 4,000 U.S. hospitals over 10 years, we test how executive turnover is associated with stability versus unexplained variance in organizational performance. To estimate this relationship, we introduce heteroskedastic regression models to the literature, while also drawing on the familiar autoregressive function to explain performance. Our results indicate that executive turnover is associated with decreased stability (and increased unpredictability) in patient satisfaction. For clinical outcomes, the results are more mixed, but we find some indication that executive succession decreases stability while increasing predictability, with outlier performers tending to regress back toward the mean.

Sexual harassment (SH) research has recently gone through a resurgence in practical relevance and scholarly interest. While advances have been made in understanding the nature of sexual harassment and its consequences for victims and organizations, much work is still needed to further understand the phenomenon from various cultural (i.e., countries) and work contexts (i.e., industry and job types). Through a collection of five papers representing data from seven countries, this symposium aims to broaden our understanding of SH by 1) examining contextual factors that facilitate, mitigate, and link SH with work outcomes, 2) uncovering similarities and differences in SH research findings from various cultural and industry contexts, and 3) highlighting actionable future research directions and practical evidence-based resolutions. This symposium also offers insights on current conceptual, methodological, and practical issues related to SH research as conducted in various parts of the world. Collectively, the five papers set the stage for further scholarship on SH to aid in the development of programs and policies to help mitigate its negative impact on individuals, teams, and organizations.

Global Talent Management in the Era of De-Globalization: Consequences for Innovation, Policy, Purpose

Presenter: **Shaista Ehsan Khilji**, *George Washington U.*
Presenter: **Karin A. King**, *London School of Economics*
Presenter: **Ibraiz Tarique**, *Pace U. - Lubin School of Bus*
Presenter: **Vlad Vaiman**, *California Lutheran U.*

Global Talent Management (GTM) continues to be of top concern for organizations and their leadership. Yet, as organizations wrestle with talent requirements for international business priorities, they must also adapt their talent strategies and practices to the current macro trend of slowing globalization, also referred to as de-globalization or "slowbalization" (Ghauri, Strange, & Cooke, 2021). This symposium explores the consequences of the current macro trend of de-globalization to identify directions for future research in GTM and implications for management GTM practice. Presenters will consider the evolving macro-contextual factors that shape GTM outcomes. MTM describes the macro-level talent systems that exist nationally and globally (Khilji, Tarique & Schuler 2015) and provides a valuable lens through which to understand the dynamic nature and consequences of deglobalization on the global management of talent. In keeping with this year's Academy Meeting theme, Innovating for the Future, presenters explore the the dynamic influence of the evolving macro talent context of de-globalization and its consequences and opportunities for global talent management and how these shape and re- shape innovation, policy, and purpose. Compelling questions, insights, and opportunities for future research are presented. This symposium builds on a series of GTM and MTM symposiums presented at the Academy of Management Annual Meeting in recent successive years, supporting scholars of GTM and MTM to continue to develop their work and the fields.

Program Session: **1806** | Submission: **10207** | Sponsor(s): **(HR)**

Scheduled: **Tuesday, Aug 13 2024 8:00AM - 9:30AM CT (UTC-5)** at **Swissotel Chicago** in **Zurich C**

A Dialogue on the Past, Present, and Future of Human Resource Strategy

Session Chair: **Michal Biron**, *U. of Haifa*

Organizer: **Peter Bamberger**, *Tel Aviv U.*

Organizer: **Elaine Farndale**, *Penn State U.*

Session Chair: **Corine Boon**, *U. of Amsterdam*

Panelist: **Sophie Anna De Winne**, *KU Leuven*

Panelist: **Hoa Do**, *U. of Leicester*

Panelist: **Anne Keegan**, *U. College Dublin*

Panelist: **Maria Kraimer**, *U. at Buffalo*

Panelist: **Shad S. Morris**, *Brigham Young U.*

Panelist: **Anthony J. Nyberg**, *U. of South Carolina*

Panelist: **Helen Shipton**, *Human Resource Management*

This symposium provides an opportunity for HR strategy scholars to present their thoughts within the broader themes covered in the 3rd edition of the Human Resource Strategy book, and to engage in dialogue with fellow scholars to further the discussion on the future of HR strategy research. Importantly, in light of the 2024 conference theme 'Innovating for the Future: Policy, Purpose and Organizations', the discussion will feature how research on HR strategy can be adapted to address major societal, technological, and organizational changes. The discussion will focus on developing novel managerial and organizational purposes and practices to address the unprecedented complexity that challenges traditional approaches to governing organizations.

Talent Management and Careers: Navigating Human Capital Challenges

Session Moderator: **Kaili Yu**, *The Chinese U. of Hong Kong*

HR: **A Continuous Time Meta-Analyses of Reciprocal Relationships Between Personality Traits and Income**

Author: **Kaili Yu**, *The Chinese U. of Hong Kong*
Author: **Wendong Li**, *Chinese U. of Hong Kong*
Author: **Zhen Zhang**, *Southern Methodist U.*
Author: **Weiwang Yang**, *Department of Management, Business School, The Chinese U. of Hong Kong, HK*
Author: **Xin Zhang**, *College of Business, Shanghai U. of Finance and Economics*
Author: **Christian Dormann**, *Johannes Gutenberg-U. Mainz*
Author: **Huanxi Zhang**, *The Chinese U. of Hong Kong*
Author: **Yanglei Zheng**, *The Chinese U. of Hong Kong*

Whereas personality psychologists come to recognize that personality traits are both relatively stable and also open to adapt to life experiences (i.e., the socialization effect), organizational personality research has still been dominated by the dispositional trait perspective with a major focus on the selection effect of personality traits. Moreover, previous research has yet to reveal reliable and solid sources of personality change attributed to work experiences. We conducted a continuous time meta-analysis of longitudinal studies with large representative samples ($K=11$, $N = 134,515$) to investigate how extrinsic career success (i.e., income) modifies employee Big Five personality development at the within-person level. Furthermore, we investigated the selection effect of personality traits on subsequent income changes. We found significant and positive socialization effects of income changes on subsequent changes of conscientiousness and emotional stability, and such an effect on change of extraversion and agreeableness were negative. The selection effect of conscientiousness and emotional stability on subsequent income were positive, and such an effect for extraversion was negative. Our research contributes to the organizational personality and personality development literature by highlighting the reciprocal relationships between personality traits and extrinsic career success and the critical role of time in such relationships.

HR: **Employee Overqualification and Followership Behaviors: Mediating Role of Coping Strategies**

Author: **Sijia Zhao**, *Tongji U.*
Author: **Chao Ma**, *Australian National U.*
Author: **Xue Zhang**, *Shanghai Normal U.*

Drawing from regulatory focus theory, this research strives to investigate why and how overqualified employees engage in different types of followership behaviors using different coping strategies. Specifically, we develop a two-pathway model to propose that while employees with objective overqualification tend to adopt prevention-focused coping strategy, which positively predicts their impression management action; those with perceived overqualification are likely to adopt promotion-focused coping strategy and engage in proactive followership behavior. Meanwhile, we hypothesize that leader-member exchange serves as a key boundary condition, weakening the positive relationship between objective overqualification and prevention-focused coping strategy while strengthening the positive relationship between perceived overqualification and promotion-focused coping strategy. We test our conceptual model using two multi-wave surveys. Findings of Study 1 ($N = 240$) support our proposed overqualification – coping strategy relationships and leader-member exchange as a key moderator. Results of Study 2 ($N = 525$) replicate the findings of Study 1 and test the full model. Both theoretical and practical implications are discussed.

HR: **Innovating Work Engagement - Unleashing AI-Enabled HR Chatbots**

Author: **Surabhi Singh**, *Indian Institute of Management Indore*
Author: **Amitabh Deo Kodwani**, *Professor Indian Institute of Management Indore*

The current study examines AI integration in HRM, uncovering opportunities and challenges. It focuses on AI-enabled HR chatbots, a form of conversational AI that supports employees in various ways. While AI's potential in HRM is recognized, its complexity still needs to be fully understood. Our research employs a mixed methods approach, exploring AI's effect on work engagement dynamics. The study examines the integration of HR chatbots in organizations to amplify work engagement, subsequently influencing employees' intention to stay. In Phase 1, we collect data from end-users (85) of HR chatbots, and in Phase 2, we interview HR practitioners (8) from AI-adopting organizations. The findings reveal the benefits of chatbot integration, including communication enhancement and feedback efficiency. A key implication for practice is highlighted as tailoring AI adoption for diverse employee preferences is essential. Our study contributes to empirical investigations into AI adoption in HRM, shedding light on its potential for engagement and enriching scholarly discourse. It touches diverse perspectives on the practical use of HR chatbots, emphasizing the importance of balancing technological efficiency with the human touch in HR functions. Further, it informs HR practitioners on using AI to boost engagement and retention.

HR: **HR Systems and Human Capital Resource Emergence**

Author: **Minjong Jun**, *Binghamton U.-State U. of New York*
Author: **Rory Eckardt**, *Binghamton U.-State U. of New York*
Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*
Author: **Shelley D Dionne**, *Binghamton U.-State U. of New York*

Resource complementarity/synergy, which is defined as conditions where the return of one resource increases in the presence of the other resource(s), is frequently suggested to play a critical role in the development of sustained competitive advantage. However, given that complementarities/synergies emerge through interrelationships between multiple elements of a system and their fit with contextual factors, there are an array of complex factors involved that make them inherently challenging to measure. It is thus no surprise that researchers often face challenges in representing complementarities/synergies associated with resources in empirical studies. In general, there is a lack of understanding of approaches to empirically capture and represent complementarities and the broader notion of synergy. To make progress on this issue, this essay will conduct a systematic review of the empirical studies published in organizational sciences that use the notion of complementarities/synergies and also include an exploratory interdisciplinary aspect by having discussions with researchers in a variety of other disciplines about how they measure or otherwise empirically capture the notion of synergy and complementarities.

The Changing Nature of Work: Understanding Modern HR Challenges

Session Moderator: **Marijke Verbruggen**, *KU Leuven*

HR: **Switching Back and Forth: Daily Technology-Facilitated Work-Home Transitions and Work-Home Conflicts**

Author: **Joni Delanoëje**, *KU Leuven*

Author: **Maral Darouei**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Marijke Verbruggen**, *KU Leuven*

Facilitated by information and communication technologies (ICT), employees increasingly make switches between their work and home boundaries. These technology-facilitated boundary role transitions (TFT) can either occur at work—for instance, using your phone at work for private concerns—or at home—for instance, engaging in ICT use in the evening for work purposes. We examine whether TFT at work and at home reinforce each other via home-to-home conflict and work-to-work conflict. Drawing on boundary role theory, we hypothesize that TFT at work is positively related to home-to-work conflict, which in turn triggers TFT at home, resulting in increased work-to-home conflict that day and increased TFT at work the next day. We test our model at within- and between-person level using a sample of 241 Belgian employees who completed two daily surveys (i.e., a morning and an afternoon survey) during five consecutive working days (Ndatapoints = 756). Multilevel path analysis showed that employees who engaged more in TFT at work, experienced on average higher home-to-work conflict, which was related to more TFT at home and, consequentially, with higher work-to-home conflict in the evening. This points to a loss spiral of TFT and work-home conflict on a between-person level. On a within-person level, we found that TFT at work was related with more home-to-work conflict and TFT at home with more work-to-home conflict that day. Yet, contrary to our hypotheses, daily home-to-work conflict did not predict daily TFT at home and neither daily nor between-person work-to-home conflict predicted TFT at work the next day. Our findings are the first to show reinforcing but no time-lagged effects of TFT and work-home conflicts and show the risk of the use of ICT at work for private purposes for work-home conflicts. These results nuance the usefulness of TFT as an effective boundary work strategy.

HR: **A Meta-Analysis of Team Training that Accounts for Characteristics Indicative of Modern Teams**

Author: **Nathanael Keiser**, *U.S. Army Research Institute for the Behavioral and Social Sciences*

Author: **Louis Boemerman**, *U.S. Army Research Institute for the Behavioral and Social Sciences*

The primary contention in this study is that evidence in support of team training is conflated with a traditional understanding of teams that is increasingly irrelevant in modern organizations. We reevaluated the primary studies included in Salas et al.'s (2008) seminal meta-analysis of team training, accounting for the potential impact of seven team and two task characteristics indicative of modern teams. Based on a bare-bones meta-analysis of 33 primary studies (45 ks, 1,974 teams), we found that the overall effectiveness of team training is consistent with existing meta-analyses of the topic ($d = 0.68$). However, this estimate is primarily based on teams that are stable in their composition and leadership, perform in a complex but independent environment, and are characterized by single team membership. An empirical test of the associated team and task characteristics indicates that team training is more effective for teams that are higher in virtuality but less effective for interdependent teams. Overall, the findings suggest that team training is neither robust to nor deficient at addressing the complexities faced by modern teams. This study provides the impetus for expanding team training to address changes to the fundamental nature of teams.

HR: **From Office Spaces to Project Spaces: Leadership Departures and Their Effects on Employee Turnover**

Author: **Asya Karabayeva**, *IE U. - IE Business School Madrid, Spain*

Author: **Monika D. Hamori**, *IE U. - IE Business School Madrid, Spain*

This paper explores the relationship between leadership departures and employee voluntary turnover within the context of project-based work environments. Drawing from theories of relational embeddedness, the study investigates how the departure of different types of leaders influences the relational dynamics and subsequent voluntary turnover behavior of junior employees. We argue that the nature of project-based work provides employees with opportunities to develop high-quality relationships between the leaders and the subordinates. The loss of high-quality relationships with leaders may encompass relational disruption for junior employees, who would have a higher propensity to leave the organization. Using six years of personnel data of technology consulting company in Europe, we show the turnover rate among the leaders in projects emerged as a critical factor contributing to junior voluntary turnover, while the turnover rate among the leaders co-located in the same office space but not on common projects with the junior employees held limited significance.

HR: **When Occupational Stigma Triggers Withdrawal Behaviors: The Buffering Role of Task Crafting**

Author: **Jiaqi Le**, *Shanghai U. of Finance and Economics*

Author: **Ziwei Yang**, *Henan U. of Economics and Law*

Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*

Research has used identity-based mediating mechanisms to explain the positive role of perceived occupational stigma in employees' intentions to leave and withdrawal behavior. Complementing this perspective, we identify a new pathway to explain how employees' perceptions of occupational stigma are associated with their intentions to leave and social loafing behavior via job tension, drawing on the conservation of resources theory. In addition, we propose that task crafting buffers the impact of occupational stigma on job tension and its indirect effects on intentions to leave and social loafing behavior via job tension. Our results, based on data collected from frontline employees in China over three waves, support all our proposed hypotheses. Our study provides valuable insights for the literature on occupational stigma, task crafting, social loafing, and turnover.

Leadership in Focus: Identifying and Developing High-Potential Talent

Session Moderator: **Tun Chin Huang**, *National Changhua U. of Education*

HR: **When and How Self-Promotion and Knows-the-Company-Inside-Out IM Tactics Affect Interview Evaluations**   

Author: **Tun Chin Huang**, *National Changhua U. of Education*
Author: **Bo-Han Chen**, *National Changhua U. of Education*

Through two experimental studies and an online survey, we attempted to investigate the mediating mechanisms and boundary conditions of two impression management tactics: the well-known self-promotion tactics and a relatively less explored "Knows-the-Company-Inside-Out" (KCIO) tactics, which involves demonstrating a thorough understanding of the recruiting company. Specifically, we examined the mediating effect of interviewers' person-job fit perceptions on the relationship between self-promotion and interview evaluation, as well as the moderating effect of appropriateness of promotion content (whether the content of self-promotion fits the needs of the job) on this mediating effect (Study 1 & 3). We also examined the mediating effect of perceived interview preparation on the relationship between KCIO and interview evaluation, as well as the moderating effects of interviewers' need for cognition (Study 2) and interview structure (Study 3). In Study 1 (n = 141) and 2 (n = 110), interviewers from Taiwan participated in randomized experiments watching mock interviews and then provided their evaluations of the applicant. In Study 3, British and American interviewers (n = 211) participated in an online survey. Results generally confirmed our proposed mediating effects (Study 1, 2, & 3). In addition, the indirect effect of self-promotion on interview evaluation was moderated by appropriateness of promotion content (Study 1 & 3). Nevertheless, the indirect effect of KCIO on interview evaluation was not moderated by interviewers' need for cognition (Study 2), nor by interview structure (Study 3).

HR: **A Multilevel Perspective to Understanding Star Performer and Creativity**  

Author: **Ahsan Ali**, *School of Economics and Management, Zhejiang Sci-Tech U.*

We conceptualized a multilevel framework to examine star performers in team settings. Drawing on team motivation theory, this study developed a model that featured leader - star exchange and team inclusive climate as ambient inputs that influence and interact to shape team level and individual level promotion focus that eventually promotes star performer creativity and team creativity. Results of a field study provide support for hypothesized relationships. Empirical findings reveal support for direct and moderation hypothesis proposed in the model. Theoretical contributions and guidelines for practice are discussed in later sections.

HR: **Mapping Talent Management Research: Theorizing Across Clusters to Generate New Knowledge** 

Author: **Denise Holland**, *U. of Galway*
Author: **Thomas Garavan**, *U. College Cork*
Author: **Alma M. McCarthy**, *U. of Galway*
Author: **Katerina Bohle Carbonell**, *National U. of Ireland*

There is emerging consensus that the talent management (TM) literature has become segmented and siloed with distinct clusters of research which, in the long term, hampers the development of the field. This review proposes that for TM research to evolve to the next level, it must bridge these silos and investigate crosscutting research questions. We utilize both histographic analysis and bibliographic coupling to analyze 474 articles published between 2004 and 2023 to identify research clusters. The histographic analysis revealed five clusters and the bibliographic coupling revealed two clusters. Utilizing these findings, we identify four tensions across the research clusters and we propose four crossing strategies (sequential, parallel, bridging and interplay) to provide a roadmap for future TM research.

HR: **Early Achiever or Late Bloomer? Investigating Life Story Narratives of Star Scientists** 

Author: **Nada Basir**, *U. of Waterloo*
Author: **Janet Boekhorst**, *U. of Waterloo*
Author: **Shavin Malhotra**, *U. of Waterloo*

Star performers play a vital role in organizations and knowledge creation. However, existing research has primarily focused on the impact star performers have on organizations with limited understanding of the stars themselves. As important as stars are in organizational life, we know very little about how they became stars and how they identify (or not) as a star. By examining the life stories of top-performing biomedical scientists, this study provides nuanced insights into how stars narrate their life stories and attribute their success, shedding light on the complex interplay between personal and situational factors that shape star emergence and identity and the implications of this on star performer behaviour. In doing so we highlight the importance of recognizing the diversity of stars and their path to stardom. Our findings have important implications for how stars are identified, supported and motivated in organizations.

Participant: **David E. Guest**, *King's College London*
Discussant: **Kaifeng Jiang**, *Peking U.*

HR process research was established to explain the 'black box' in the relationship between HR practices and organizational performance. Bowen and Ostroff's (2004) framework on HRM system strength, along with Nishii, Lepak, and Schneider's (2008) model of HR attributions, have served as foundational pillars that initiated a stream of HR process research. The five papers presented in this symposium conceptually build upon but challenge the core ideas of these two frameworks. They also methodologically advance HR process research by demonstrating its predictive validity, enhancing research designs and analyses, and enriching research contexts. By revisiting these foundational frameworks, the papers in the symposium encourage to apply of novel concepts and rigorous methods to unveil new horizons in HR process research. The symposium will conclude with Prof. Kaifeng Jiang providing insightful feedback on each paper and discussing how these papers contribute to the advancement of HR process research.

Participant: **Claudia Manca**, *U. of Bologna*
Presenter: **Angela R. Grotto**, *Montclair State U.*
Participant: **Corinne Donovan**, *St. Joseph's U.*

There is currently limited understanding of how the shift to hybrid work impacts line managers. This symposium addresses this gap and presents emerging research that explores the roles and experiences of line managers in the hybrid work environment, the challenges they face and the effects of managing in hybrid work environments on their attitudes, behaviors, and well-being. The papers in this symposium examine line managers experiences with both quantitative and qualitative methods with data from different countries. The insights they provide are not only critical for advancing hybrid work research, but also have important practical implications to organizations in training, coaching, and supporting line managers in the hybrid workplace.

The field of international management is evolving as the environment for business is changing due to technological, economic and political changes. This creates new opportunities and challenges for internationally operating businesses, and hence for international management scholarship. The award-winning panelists will discuss how international management scholars can best engage with these new realities from the perspectives of research, teaching and service.

Fostering Innovation: Leveraging Management Consulting Methodologies

Session Moderator: **Ziyuan TANG**, -

This session explores innovative methodologies in management consulting. Topics include academic engagement in consulting practices, the hybridization of traditional management approaches, and the application of agile methods in project environments.

MC: **Hybridization of Lean Management Case of a Management Consulting Intervention Research in China**  

Author: **Ziyuan TANG**, -

Author: **Marc Bonnet**, ISEOR, Magellan, IAE Lyon, U. Jean Moulin

This article focuses on the hybridization of LEAN Management in the Chinese context, with the objective of analyzing the difficulties of adopting LEAN Management in companies and experimenting with practices that allow for a successful hybridization between the cultural specificities of companies and a standardized management method of Japanese origin. This work is based on an intervention-research case in a Chinese industrial company located in Tianjin. It aims to better understand how Chinese cultural specificities impact the company's performance in the implementation of LEAN Management in order to experiment a virtuous process of hybridization and enable an improvement of the overall and sustainable performance.

MC: **Consulting Innovations in Agile: An Empirical Exploration of Agile Coaching Characteristics**    

Author: **Fangyuan Shen**, Manchester Metropolitan U. Business School

Agile coaching is an innovative service offered by management consulting firms to support the implementation of agile methodologies in product development and project management. Despite the pronounced advantages associated with agile coaching, challenges in realizing these benefits have been acknowledged, particularly concerning organizational factors such as culture, support from top management, and operational efficiency deficits. A significant portion of agile teams either remain in the planning stage for adopting agile practices, or those that have initiated the adoption process do not effectively implement these practices. This paper aims to enhance organizational performance by providing stakeholders with a deeper comprehension of the intricacies and interrelationships inherent in agile coaching. By adopting questionnaire and focus group methods, this paper adapted Bensaou's (1999) model to analyze agile coaching practitioners' conceptions and found that agile coaching involves a strategic relationship between coach and team, a versatile combination of leveraging existing technology and incorporating innovative approaches, adapting to specific contexts. It is not characterized by significant capital requirements. Over the past five years, the market for agile coaching in the UK and Europe has experienced growth, marked by fluctuating demands and frequent changes in key players.

MC: **European Perspectives on Academic Engagement and Non-Academic Impact in Management Academia**  

Author: **Oskar Kosch**, Krakow U. of Economics

Author: **Marek Szarucki**, Krakow U. of Economics

Author: **Gianpaolo Abatecola**, U. of Rome Tor Vergata

Author: **Florence Allard-Poesi**, UPEC, IRG

Author: **Bill Lee**, None

Author: **Michael Philipp Schlaile**, U. of Hohenheim

Author: **Davide Secchi**, U. of Southern Denmark

Author: **Huiping Xian**, U. of Sheffield

The relationship between academic engagement and the perceived impact of academic activities is a critical area of research with implications for scholarly impact and broader societal and economic outcomes. This paper presents results from a multi-country study that examines the correlation between academic engagement and the perceived non-academic impact of academic activities at both individual and community levels, identifies specific activities that are consistently perceived as engaging and impactful. The study draws from the perspectives of management academics from six different countries: Denmark, France, Germany, Italy, Poland, and the United Kingdom, with 360 completed responses forming the research sample. We found a significant but weak positive correlation between the perception of an activity as engaging and its perceived non-academic impact at both individual and community levels. Additionally, the study reveals a continuum in the perceptions of various academic activities, with some activities being considered engaging, impactful, or both. Three specific activities were identified as being perceived as both engaging and impactful by respondents: 1) the creation of patents through industry collaboration, 2) non-academic publication and broadcasting, and 3) providing evidence, consultancy, or advice to policy-making bodies. These activities demonstrate the capacity to influence multiple external actors simultaneously. This study provides valuable insights into the nuanced perception of academic engagement activities, contributing to the ongoing discourse on research impact beyond academia.

MC: **Coercive Implementation of Agile Methods in Project Environment**  

Author: **Angélica Frederico**, U. Nove de Julho - UNINOVE - São Paulo

Author: **Fernando A R Serra**, U. Nove de Julho - UNINOVE - São Paulo

Author: **Luciano Ferreira Da Silva**, U. Nove de Julho - UNINOVE - São Paulo

Author: **Tânia Marques**, Polytechnic Institute of Leiria, Portugal

Author: **Isabel Cristina Scafuto**, U. Nove de Julho - UNINOVE - São Paulo

Author: **Priscila Costa**, Nove de Julho U.

This article explores the use of coercive practices to implement agile methods in project environments and the barriers that prevent this implementation due to the lack of cultural adaptation, or Cultural Fit, due to the urgency that companies have to carry out the agile transformation and obtain increasingly expressive results. The main objective is to understand the adaptation of coercive practices and organizational culture in implementing agile methods in the project management environment. The method used in this article was exploratory and descriptive research based on interviews and documental research. For this, a project-oriented company that implements coercively agile methods ("top down") and 9 interviews with managers in the areas of information technology and business were selected. This study has the potential result of responding to the gap presented in a generic way, in the project management environment, in the case of imposing agile practices in project management, by exploring a single case. This work helps researchers interested in studies on cultural compatibility related to processes, coercive practices, and the adoption of agile methods in project environments, presenting the references.

Empowering Innovation: Leveraging Digital Transformation for Growth

Session Moderator: **Pauline Weritz**, *U. of Twente*

Centered on digital transformation, this session discusses strategies for leveraging digital empowerment in firms of all sizes, factors influencing digital adoption in public administration, and the role of consulting in navigating the digital landscape.

MC: **How Consulting Firms Leverage Dynamic Capabilities to Create Business Value in the Metaverse**

Author: **Matteo Contarino**, *Accenture*
Author: **Pauline Weritz**, *U. of Twente*
Author: **Igors Skute**, *U. of Twente*

The Metaverse, as a digital universe, enables users to interact with each other in real-time environments and offers new business opportunities. As this virtual space allows organizations to redefine their business value, firms need implications for responding to these challenges and opportunities. However, academia and practice require clarity on the specific dynamic capabilities needed for successful Metaverse adoption and whether sensing, seizing, or transforming holds greater importance. To address this phenomenon, this study investigates how consulting firms and freelancers leverage dynamic capabilities to create business value in the Metaverse. Through 18 semi-structured interviews with IT and strategy consulting professionals actively involved in Metaverse applications, the study highlights the importance of seizing, transforming, and both internal and external acquisition for successful Metaverse adoption. The contribution to literature distinguishes between organizations of varying sizes and expertise levels. Finally, this paper offers a practical roadmap for consultancies to develop dynamic capabilities toward Metaverse adoption.

MC: **Digital Empowerment and Functional Heterogeneity of TMT: Strategies in Large Firms and SMEs**

Author: **Endrit Kromidha**, *U. of Birmingham*
Author: **Sascha Kraus**, *Free U. of Bozen-Bolzano*

Digitalization and the digital transformation of firms demand motivated and knowledgeable employees that feel empowered to cope with changes. However, such changes, adaptations and developments of new digital solutions can hardly be implemented without the involvement of top management teams. Our qualitative study identifies six digital empowerment strategies: digital upskilling, building a digital culture by involvement, self-identification with digital agenda and values, encouragement by autonomy and shared responsibility, digital leadership, and perceived personal impact as change booster. The review and assessment of the effectiveness of these strategies point towards supporting and inhibiting influences related to functional heterogeneity in top management teams. Practical implications on leadership expertise for digital empowerment strategies distinguish between SMEs and large firm.

MC: **Digital Transformation in Public Administration: Factors of Appropriation by Managers and Agents**

Author: **Lamya BENAMAR**, *Morphose Group*
Author: **Pierre El Haddad**, *INSEEC Grande Ecole*
Author: **Fadi El Gemayel**, *Morphose Consultants, Paris, France*

In a context where the French government is prioritizing digital transformation, the issues related to its appropriation by the actors of the public administration represent an important challenge. This research investigated the appropriation and the factors that influence this process by conducting an actor-centered study in a departmental administration. Drawing on the literature on the adoption and appropriation of technology (DeSanctis & Pool, 1994), and sensemaking theory (Weick, 1993, 1995), we propose a comparative perspective to investigate how managers and agents engage differently in the appropriation process. The methodology used is one of an – ongoing - longitudinal intervention research. Results from qualitative investigation indicate that appropriation of digital transformation in the public administration is shaped by the meanings created by the actors during their interactions with “the new reality” induced by this transformation, and is influenced by many structural, organizational, and individual factors.

MC: **Securitization Strategies: Navigating Information Asymmetry and Enhancing Operational Efficiency**

Author: **Arpit Kumar Parija**, *XLRI Xavier School of Management, Delhi-NCR*

In the ever-evolving landscape of financial intermediation, our research delves into the transformative impact of securitization on dynamic contractual arrangements. While traditional intermediary models have historically aimed at mitigating information asymmetry costs and optimizing borrower screening incentives, the paradigm shift towards loan sales and securitization necessitates a reevaluation of these conventions. This study intricately analyzes securitization contracts, juxtaposing them against conventional debt contracts. Our findings underscore that securitization contracts exhibit superior efficiency in addressing information asymmetry challenges, thereby mitigating inefficiency costs. This unique characteristic not only provides a nuanced understanding of the mechanisms at play but also offers a compelling rationale for the surging popularity and widespread adoption of securitization in contemporary financial markets. Our research contributes valuable insights for management professionals navigating the intricacies of financial intermediation, shedding light on optimal contractual structures to enhance operational efficiency and strategic decision-making."

Global Management Education

Session Moderator: **Wendy Farrell**, *Management Center Innsbruck*

MED: Generative Artificial Intelligence (GAI) in Global Virtual Teams    

Author: **Wendy Farrell**, *Management Center Innsbruck*
Author: **Jennifer Leigh**, *Nazareth U.*
Author: **Dhruv Pratap SINGH**, *NEOMA Business School*
Author: **Rob Warmenhoven**, *HAN U. of Applied Sciences, The Netherlands*
Author: **Vas Taras**, *U. of North Carolina, Greensboro*

This study addresses the debate in popular and academic circles about the role of generative artificial intelligence (GAI), “the new kid on the block,” popularized by platforms like ChatGPT in educational settings. The present study utilizes the technology acceptance model to explore the factors influencing students’ behavioral intention to use GAI in academic settings and the effects of using GAI on the performance of student project teams. The study is based on a sample of 830 global virtual teams that worked on an international business consulting project and comprised 3,411 students from 86 countries, thereby addressing calls for reliance on larger, more diverse samples and longitudinal research design. The findings reveal that for a project team to benefit from GAI, there is no need for all team members to be versed in this technology; it is usually sufficient that only one member is proficient with GAI. Moreover, both users and non-users of GAI agree that GAI can be employed ethically in academic settings. The study highlights that educators and institutional policymakers should consider not only the acceptance and proficiency in using GAI, but also attitudes toward the ethics of using GAI in this context.

MED: The Place Makes the Perspective! The Context of Unitary HRM Education in Austrian Universities

Author: **Julia Brandl**, *U. of Innsbruck*
Author: **Michael Schiffinger**, *WU Vienna*
Author: **Sabine Boesl**, *Sabine Boesl*

Despite concerns with unitarism in HRM education, the adoption of a unitarist tendencies in HRM education remains little understood. We use a Bourdieusian perspective to explore the adoption of unitary HRM courses in Austria, a context where unitarism has been less pronounced in the past. The analysis of 452 course descriptions and related teacher profiles from 27 universities shows that HRM courses with a unitary perspective are strongly associated with the particular university and only weakly associated with course formats or disciplinary backgrounds. In universities where unitary courses are more likely found, full professors are most likely to offer non-unitary courses. Based on these results, we suggest that the rise of unitary education may be better understood as a consequence of the unique positioning of universities in the education field than a result of teaching methods or HRM scholars’ disciplines.

MED: Reflecting on the MBA Degree: Waving a Magic Wand and/or Grasping the Nettle?  

Author: **Ankit Agarwal**, *U. of Adelaide*
Author: **Leonie Hallo**, *U. of Adelaide*

There is a need for management education to address a variety of intricate issues, focusing on the main theme of innovation to serve organizational needs with purpose in the future. This paper critically examines diverse aspects of the discourse. This paper aims to critically examine Higher Education and its challenges, within which we keep the Master of Business Administration degree at the forefront. The paper discusses possible modifications that might better align the MBA program with the evolving needs of practicing managers in today’s rapidly changing business environment. Despite the continued popularity of MBA degrees among employers and students worldwide, they have attracted substantial criticism over the years due to perceived shortcomings in their content and the lack of practical skills and knowledge they are expected to possess upon graduation. A notable criticism relates to the training and understanding of ethical principles. The paper discusses the relationship between MBAs and higher education, professional licenses and certifications, continuing professional development, and the optimal balance between technical and soft skills in MBA programs. In light of the dynamic and intricate nature of the business environment, the paper explores the unique challenges MBA graduates face that necessitate enhanced preparation. Business school corporatization and a profit-centric worldview are also discussed concerning the implications for MBA graduates. Considering these concerns, we propose a holistic approach to executive education that incorporates experiential teaching methods and self-reflection to foster the adaptability MBA graduates need to navigate an increasingly digitized and rapidly changing workplace.

MED: Grading and Simultaneously Providing High-Information Feedback: The Harmonized Appraisal Assessment    

Author: **Colin Idzert Sarkies Lee**, *Erasmus U. Rotterdam*
Author: **Daan Peeters**, *Rotterdam School of Management, Erasmus U.*
Author: **Judith Auer**, *Department of Organisation and Personnel Management, Rotterdam School of Management*
Author: **Bas Giesbers**, -
Author: **Moritz Appels**, *Rotterdam School of Management, Erasmus U.*

Feedback is important, but writing high-information feedback for students can be unrewarding for educators, given the limited time and resources that they have. To address this issue, we propose a new student assessment methodology for unstructured and semi-structured assignments, such as essays and presentations, that aims to provide an efficient and effective approach to the creation of high-information feedback and fair assessment so as to optimize the positive impact of assessment on students’ learning and development. The approach, which we termed Harmonized Appraisal (HAPP), uses the grader’s input on a relatively detailed grading form to compute the student’s scores on a conventional rubric and to aggregate a high- information feedback message by leveraging a comment bank. We test the key tenants of the approach in two undergraduate courses in Business Administration, and find that students consider feedback from HAPP to be of higher quality and fairer than feedback drawn from a conventional rubric, but we did not find a relationship with self-reported student learning. Looking at the effects for graders we find that HAPP provides greater consistency, while the time required to grade is comparable to grading with a rubric. Finally, we discuss how open questions can be addressed and how this study could inform future research on assessment.

Author: **David Scott Baker**, *U. of Louisiana at Lafayette*

Author: **Zandra Balbinot**, *U. du Québec à Montréal (UQAM)*

In a technologically interconnected world, managers face the pressing need to train individuals for effective collaboration within global virtual teams (GVTs). Despite the importance of fostering knowledge acquisition for top-tier management in these diverse settings, there is a notable gap in understanding the best pedagogical approaches. This study highlights the significance of Intercultural Absorptive Capacity (iACAP) in fostering successful collaboration in newly established GVTs conducted in a matched real-world consulting project in an educational setting. In our study, we refine and validate an instrument to assess iACAP within virtual team settings. We explore the shifts in iACAP before and after projects in global virtual teams. We identify two key factors that influence iACAP's advancement in educational environments. The role of peer feedback as a mediating self-improvement mechanism and the course/training context, focusing on motivation, clarity, and team collaboration enjoyment in predicting the ultimate iACAP. Using covariance-based structural equation modelling, we validate this tool and test our hypotheses with data from 345 participants within GVTs. The research contributions are twofold: a) the introduction of a tailored tool to gauge adaptive intercultural absorptive capacity in global virtual teams, and b) insights into team management based on a comprehensive multinational analysis.

Governance and Strategic Decision-Making: Insights from History

Session Moderator: **Bradley Gerald Bowden**, *Journal of Management History*

This session focuses on examining the historical dimensions of governance and strategic decision-making, aiming to uncover the factors that shape organizational behavior and performance over time.

MH: **Markets and Managers in a Dynamic Economy: An Australian Farming Enterprise's Experiences**

Author: **Kaylee Boccalatte**, -

Author: **Bradley Gerald Bowden**, *Journal of Management History*

This paper explores the relationship between management and markets through an examination of the experiences of an Australian family-owned sugar farm in Queensland's Burdekin region; an area of delta-river lands akin to the Mississippi delta of Louisiana. In considering what causes businesses like BT Farms to "make or buy," that is, to vertically integrate or outsource to the market, this paper draws on the "transaction cost economics" pioneered by Oliver Williamson and subsequently exploited by Alfred Chandler. It also, however, draws on the pioneering work of John F. Mee, who searched for the source of a "dynamic economy" in the relationship between "the cumulative forces in the environment" and "the nature of management philosophy applied to business and industrial enterprises."

MH: **Deconstructing Corporate Purpose: A Conceptual Framework in an Evolutionary Perspective**

Author: **Salvatore Esposito De Falco**, *Sapienza U. of Rome*

Author: **Raffaella Montera**, *Pegaso U.*

Author: **Nicola Cucari**, *Sapienza U. of Rome*

This paper introduces a novel multi-dimensional co-evolutionary framework for understanding and analysing corporate purpose, addressing its under-conceptualized nature and diverse interpretations in contemporary business studies. Grounded in the principles of coevolution and integrating Esposito De Falco's (2012) framework on the genesis and evolution of firms, our work advances a unique theoretical typology of corporate purpose. This typology elucidates the evolutionary pathway of corporate purpose through the "3S" dimensions (structural, systemic, and strategic), offering organizations a guide to align their strategies with both their identity and public image. By examining corporate purpose through these dimensions, we highlight the interconnectedness of an organization's intrinsic identity (structural), its engagement within its ecosystem (systemic), and the alignment of purpose with actionable strategies (strategic). This multi-dimensional approach reveals how corporate purpose guides firms through a transformative journey from their genesis to their interactions with stakeholders and broader market dynamics. To do this, the paper delineates four distinct typologies of corporate purpose: purpose washing, formal purpose, promising purpose, and deep purpose. These typologies are systematically organized within a synthesis matrix, providing a nuanced and detailed understanding of how corporate purpose manifests and evolves within different organizational contexts. Central to the study are two key propositions. The first proposition positions corporate purpose as the "metabolism of firms", drawing a parallel with biological metabolism to underscore its crucial role in ensuring business survival, prosperity, and evolutionary adaptation. The second proposition emphasizes the importance of a sequential progression across the genetic, relational, and phenotypic stages of corporate purpose, which is critical for the design of genuinely purposeful organizations. By moving beyond a purely definitional approach, this paper contributes significantly to the ontological understanding of corporate purpose. It sheds light on the dynamics of purpose in organizations, highlighting its strategic importance and the need for alignment between a firm's identity and actions. Our paper provides a valuable resource for academics and practitioners alike, seeking to navigate the complexities of corporate purpose in a dynamic business landscape. Keywords: Corporate purpose; evolutionary perspective; genotype; relational dimension; phenotype; corporate purpose typologies

MH: **Residential Sorting & Organizational Rigidity at The Eastman Kodak Company (1945-2005)**

Author: **Jonathan Palmer**, *Harvard Business School*

This paper seeks to identify structural antecedents that contributed to The Eastman Kodak Company's rigid response to the digital imaging revolution -- a revolution that began inside Kodak itself! This paper examines the interplay between both Kodak (specifically, its business model and organizational structure) and its home city of Rochester (specifically, its geographic development and social structure) from 1945-2005. Using newly digitized historical records, as well as computer vision techniques, this paper tracks how residential sorting along Kodak's departmental lines segregated Kodak's digital pioneers from the executives controlling the company. This paper adds another angle to the reevaluation of the history of one of America's most iconic companies.

MH: **The Evolutionary Dimension of Pandemic Management: An Italian Historical Case**

Author: **Christian Rainero**, *U. of Turin*

Author: **Renato Civitillo**, *U. Federico II Napoli*

Author: **Stefano Amelio**, *U. of Insubria, Varese*

Author: **Giuseppe Modarelli**, *U. of Turin*

The authors, considering accounting practice as a technology rather than a technique, attribute to accounting an interpretative paradigm focused on the variables of the theory of technology-acceptance, highlighting how this can generate strategic-responses. The case-study of the Naples plague in 1656 is studied at both synchronic and diachronic levels, analysing at documental level primary and secondary sources, in order to identify the breaking points of institutional social practice, as represented by the adverse reaction to the imposition of lazzarettos accounting, which, due to urgent needs, was requested by law but was not implemented in practice. These conditions allowed the organisational dimension to prevail over the accounting one, although the latter was already widespread at the mercantile level. The main character of the rituals in burial activities related to the accounting of the dead appears (1656) to have transformed transiently from a numerical dimension into physical accounting (bones in mass graves).

Author: **Pasi Nevalainen**, *U. of Jyväskylä*

This paper analyzes the rise and decline of the state-owned electronics company Valco (1976–1980), which produced components (CRT-tubes) for the television manufacturing industry. The company's scandalous failure has been identified as one of the largest investment errors in Finland's economic history. Instead of the company becoming the new state-run flagship of the electronics industry, it faced numerous startup problems, caused political scandals, and eventually drifted into insolvency. The company's humiliating failure had immediate economic and human consequences in the local context, but in retrospect, it became a symbol of failed industrial politics that marked the entire state-owned enterprise sector for decades. As a consequence of Valco's failure, the Finnish state largely abandoned the use of state ownership as a tool of industrial policy, opening up better opportunities for the rise of the private electronics industry, such as Nokia, as a national flagship in electronics. The Valco case demonstrates not only a) concrete weaknesses associated with state ownership when it is attempted to be used as a tool for creating a new industrial sector but also b) serves as an example of a single historical event that has greater significance in the turn of economic policy.

Negotiating Meaning and Individuality in the Workplace

Session Moderator: **Hengchen Dai**, *UCLA Anderson School of Management*

MOC: **Is Transparency Enough? The Effect of Historical Pay Information on Negotiations and Pay Inequality**    

Author: **Hengchen Dai**, *UCLA Anderson School of Management*

Author: **Xiaoyang Long**, *U. of Wisconsin at Madison*

Author: **Dennis Zhang**, *Washington U. in St. Louis*

A commonly cited cure for pay inequality is pay transparency, because access to peer pay is believed to prompt underpaid individuals to negotiate. We study how historical peer pay information influences pay negotiations and investigate the implications for pay inequality. Across three experiments on different online labor platforms, we find that workers become more likely to negotiate not only when they learn that they are offered a lower pay than others, but also when they learn that they are offered the same pay as others. We conjecture that the latter finding—which contradicts the predictions of the prior literature—occurs because at least some workers believe they should be paid more than the average due to positive self-assessments. Additional analyses of our experiments and two complementary surveys show evidence consistent with this conjecture. Based on our empirical findings, we build a reference-dependent model to describe worker behavior and use it to derive the long-term implications of pay transparency for pay inequality. Our model and the subsequent numerical study suggest that pay transparency may surprisingly amplify pay inequality by prompting workers who are already highly paid to ask for more. Our work highlights that pay transparency may not be a panacea for pay inequality, and discusses additional measures that governments and organizations may consider along with pay transparency to combat pay inequality.

MOC: **Advancing a Dynamic Framework of Idiosyncratic Deals**   

Author: **Sargam Garg**, *California State U. Sacramento*

Past research on idiosyncratic deals (i-deals or individualized employment arrangements between some employees and their employers) provides evidence that these arrangements are beneficial for individuals who secure them (“i-dealers”) and the employers that grant them. While this body of work has been instrumental in showcasing the value of i-deals to organizations, I contend that it provides a simplistic picture. Most research has focused on the outcomes of i-deals for the parties involved but has not deliberated on if, why, and how the i-dealer and employer perceptions of i-deals (and resultant outcomes) may change over time as the i-deal unfolds. I argue that one cannot assume that once granted, an i-deal will hold the initial value it had at the time of negotiation for the i-dealer and/or the employer. In this work I develop a processual explanation of how over time, it is the mechanism of i-deal value assessment by the i-dealer and the employer that drives i-deals into different pathways or trajectories. In doing so, this work presents a theoretically grounded framework that chisels out drivers at different levels that can alter the value of i-deals for the i-dealer and the employer. Due to change in value, the two parties will reappraise the arrangement which will impact the trajectory of the i-deal (depending on the changes (or no change) in its value for the i-dealer and/or the employer). I discuss i-deal maintenance and other possible i-deal trajectories that may emerge e.g., i-deal transformation into we-deal or a Human Resource (HR) practice, i-deal renegotiation/new i-deal for the i-dealer as well as ultimate i-deal termination. I also deliberate on the practical and research implications of this work.

MOC: **Let’s Make a Deal! A Dynamic Model of Pursuing Meaningful Work Through Meaningfulness Deals**

Author: **Elaf Basri**, *U. of Edinburgh business school*

Scholars have alluded to the dynamic and often transient nature of meaningfulness, exhibiting perplexing features such as variations across the course of one day or fluctuations across the tenure of a seemingly enriched and meaningful job (Bailey & Madden, 2017a; Lepisto & Pratt, 2017). However, theorizing has lagged in providing a nuanced account of this temporal nature and how it impacts individuals and organizations, underscoring the need for a holistic understanding of the ebb and flow of meaningfulness in the workplace context. Our paper aims to bridge this gap by advancing theorizing around the dynamic processes of what makes and sustains meaningfulness at work. In our theorizing of meaningful work, we draw inspiration from the emerging understanding that meaningfulness is not a static experience but rather characterized by paradoxes and a dynamic negotiation process. We develop a theoretical model that illuminates the dynamics of meaningful work by detailing the three phases of aspiring, enacting, and regaining meaningfulness that is driven by the foundational meanings people derive from work and their ability to pursue such meanings through the employee-employer exchange relations and their interlinking mechanisms. We offer a set of propositions and delineate methodological recommendations that open new avenues for fruitful research in meaningful work and its dynamic processes.

MOC: **Toward the Mass Individualization of Learning: Exploring Learning Idiosyncrasies**

Author: **Jerome P. Flynn**, *Rutgers Business School*

Author: **Kevin Carlson**, *Virginia Tech*

Advances in artificial intelligence (AI) will make mass customization (individualization) of learning increasingly cost effective for many learning settings. However, taking full advantage of AI will require that we bridge several critical gaps in how individuals learn. Much of what we know about effective learning has been developed through the lenses of course-level pedagogy, instructors’ perspectives, and aggregated learner outcomes (Snow, 1991). The idiosyncrasies of individual learners often fall in the error term of our scholarship. But it may be these idiosyncrasies that can unlock how best to leverage AI to mass customize learning. In this study we examine the behavior of individual learners as they face a new and unfamiliar, online game environment. We capture highly detailed records of individual behavior across game trials revealing the idiosyncratic behavioral paths of individual learners. Following an abductive approach, we examine these behaviors to identify patterns and idiosyncrasies against which the potential of AI might be leveraged.

Ethics and Leadership: Navigating Moral Dilemmas

Session Moderator: **Shike Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

MOC: **Employee Moral Evaluation of Supervisor Leniency: The Role of Attributed Motives**

Author: **Shike Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Bin Ma**, *IE Business School, IE U.*
Author: **Ivana Radivojevic**, *IE Business School*

Supervisors regularly make disciplinary decisions in organizations, and some of them may choose to act leniently by reducing or removing prescribed punishments for employees who have committed misconduct. Drawing on theories of motive attribution and the moral psychology literature, we explore how third-party employees attribute different motives to supervisor leniency towards a coworker and develop moral evaluations of such leniency, which further influence their downstream reactions to the supervisor. Study 1 applies content analysis to micro-narratives collected from U.S. working professionals and identifies altruistic and instrumental motives as the two main motives employees attribute to their supervisor's leniency towards a coworker. Study 2 employs an experimental design and demonstrates the effects of attributed motives on supervisor-directed behavioral reactions (i.e., organizational citizenship behavior and gossip) through employees' moral evaluation of supervisor leniency. Additionally, based on gender role congruity theory, we further propose that third-party employees' reactions to supervisor leniency are contingent on supervisor gender in actual leniency events at work. Using event-contingent survey data, Study 3 provides large support for this prediction, along with further evidence for our full research model. Our findings enhance the understanding of workplace leniency and offer practical insights for managers when making disciplinary decisions.

MOC: **When And Why Breaking The Rules For A Good Cause Doesn't Pay Off**

Author: **Long Wang**, *City U. of Hong Kong*
Author: **Peter H. Kim**, *U. of Southern California*

Although prosocial rule-breaking (PSRB) is motivated by honorable intentions to help rather than harm the organization or its stakeholders, relatively little is known about how people interpret and judge the prosocial rule-breaker's behavior. We propose that PSRB poses a trust dilemma for other organizational members because it pits different values, especially integrity and benevolence, against each other. In four complementary studies, we investigated how observers perceived the tradeoff between integrity and benevolence when they decided whether to trust the prosocial rule-breaker. Studies 1 and 2 experimentally revealed that although observers appreciated the prosocial rule-breaker's benevolent intentions, their concerns about the person's integrity dominated their judgments, leading to reduced trust in the rule-breaker. Study 3 extended the first two studies by investigating the effect of PSRB on trust in a unique organizational context where PSRB significantly benefitted the organization and/or the participant. Study 4 replicated the experimental results in a field study, suggesting that coworkers trusted prosocial rule-breakers less in the workplace because they were concerned about the rule-breakers' integrity. We discuss theoretical and practical implications for prosocial behavior, trust, and rule compliance in organizations.

MOC: **Benevolence Repaid with Malevolence: How can Ethical Leaders Sustain Moral Motivation?**

Author: **Sophia Chou**, *National Taiwan Normal U.*

In the realm of ethical leadership, good deeds can paradoxically lead to adverse outcomes, presenting psychological challenges that may erode moral motivation, a phenomenon underpinned by cognitive dissonance theory and schema theory. This dilemma has been noted in various philosophical traditions but remains insufficiently explored in social science. Addressing this gap, this research employed an inductive multiple-case approach, interviewing 23 ethical leaders to explore psychological strategies for sustaining moral motivation amidst such challenges. It identified three primary methods for upholding ethical volition under such circumstances: (1) schema assimilation: reinterpreting negative experiences; (2) schema shift: refocusing on core values; (3) schema transcendence: going beyond schema-reality conflicts. These findings not only enrich the ethical leadership literature but also offer practical strategies for ethical leadership development.

MOC: **The Personality and Social Psychology of Honesty: Justifying Honest and Dishonest Behaviors**

Author: **Gabriela Cuconato**, *Case Western Reserve U.*

Most research on honesty adopts a dichotomous view that honesty is a crucial moral, socially beneficial value, while dishonesty is seen as unfavorable to others, egotistically yielding personal gain to the dishonest individual. In this theoretical paper, following recent research development, I propose that individuals might have different justifications for honest and dishonest behaviors in close relationships that do not follow this dichotomous view. Drawing from personality and social psychology, I suggest that individuals can justify honesty and dishonesty behaviors based on differing (1) expectations loci, indicating where the expectations towards these behaviors arise from (e.g., self, relational others, and social environment); (2) motives that drive desire or willingness towards honesty and dishonesty; and (3) enacting mechanisms, showing how these behavioral outcomes are enacted (e.g., traits, cognition, and affect). Thus, this paper presents a theoretical model of honesty and dishonesty justifications, proposing that individuals can justify these behaviors beyond what is commonly represented in research, which has implications for our understanding of close relationships.

Presenter: **Mathew Laurence Sheep**, *Florida Gulf Coast U.*

Identity work—or the processes by which people form, repair, maintain, strengthen, or revise their sense of self at work—indicates, at least implicitly, agency or intentionality on the part of the individual engaged in these processes. This stream of research implies individuals to be identity-makers, who play an active role in determining their identities, and in prioritizing identities at work. Yet, research has also shown that external entities such as interaction partners, organizational or occupational norms, or even implicit or subconscious processes can influence or even force individuals to adopt or enact certain identities, suggesting that individuals are also identity-takers in the identity construction process. To systematically examine individuals as identity makers and takers, our symposium brings together four papers that explicate these questions: (1) What are the constraints upon agency in identity work processes and how do they operate? (2) Is agency in identity construction always desired? (3) Is agency in identity construction always individual- or self-focused? To encourage meaningful discussions on the topic between presenters and the audience, our symposium will adopt a roundtable format rather than feature a discussant, after the paper presentations.

Algorithms and Bounded Rationality

Organizer: **Luke Rhee**, *U. of California, Irvine*
Panelist: **Felipe Csaszar**, *U. of Michigan*
Panelist: **John Joseph**, *U. of California, Irvine*
Panelist: **Paul Leonardi**, *UC Santa Barbara*
Panelist: **PuayKhoon Toh**, *U. of Texas at Austin*
Panelist: **Tony Tong**, *U. of Colorado, Boulder*

Bounded rationality, a concept pioneered by Herbert A. Simon, has prompted the adoption of technologies within organizations to mitigate limitations in human rationality and improve outcomes. However, organizations still exhibit inefficiencies and biases despite the use of relevance technologies. Algorithms have thus garnered significant scholarly interest for their potential impact on bounded rationality. Recent studies reveal the benefits of algorithms in improving individual-level performance, creativity and learning. Yet, many organizational domains shaped by the inherent features of bounded rationality remain theoretically unformulated and empirically untested regarding their interaction with algorithms. This panel symposium aims to explore this gap. Our distinguished group of panelists will present their research program, share insights into the interplay between algorithms and bounded rationality, and suggest directions for future studies in this emerging field.

Fostering Employee Well-being, Engagement, and Resilience in Challenging Work Environments

Session Moderator: **Ayatakshee Sarkar**, *XLRI Xavier School of Management*

This session explores various factors influencing employee well-being, engagement, and resilience in the face of workplace challenges, such as incivility, career transitions, and paradoxical demands.

MSR: Exploring Influential Factors Shaping Passive Resistance Responses to Address Workplace Incivility

Author: **Ayatakshee Sarkar**, *XLRI Xavier School of Management*

Rooted in the philosophy of nonviolence, Passive Resistance Responses represent a constructive and effective mechanism seeking to humanize the perpetrator. This study endeavours to delve into various individual factors influencing Passive Resistance Responses among working professionals in India. This qualitative study aimed to comprehend the experiences of mid- and senior-level managers aged 35-45, representing diverse industries in India. Through 18 in-depth interviews, equal gender representation was ensured. These managers encountered workplace misconduct and disrespect, responding with nonviolent strategies to uphold organizational objectives. Our contribution to the field of cognitive appraisal and response mechanisms transcends the conventional 'fight or flight' reactions to workplace misconduct. This study specifically explores influencing factors that lead to passive resistance responses, ultimately breaking the cycle of misconduct and incivility (Cortina et al, 2021). Adopting such response strategies can facilitate psychological recovery and a return to normal functioning. This research unveils a distinctive investigation into passive resistance responses to workplace misconduct, focusing specifically on working professionals in India. Shedding light on a relatively unexplored research domain, the study adopts a comprehensive approach by scrutinizing various individual factors. This offers a nuanced understanding of the complexities associated with passive resistance responses, contributing to both organizational objectives and the restoration of human dignity within the Indian context.

MSR: Embracing The New Frontier: Rethinking The Wellbeing Of Military Veterans Under Career Transition

This paper explores the intricate dynamics of financial transitions experienced by military veterans as they move from the armed forces to civilian life and corporate careers. Drawing on a qualitative research approach guided by the 4-S Transition Model, the study delves into the subjective experiences of veterans, addressing the gaps in the existing literature that predominantly focuses on objective facets of Financial Well-Being. First, the research uncovers that financial motives are the primary driver for these transitions. Second, it uncovers the challenges, such as income structure transformation and the shift in financial roles. Third, it highlights veterans' coping strategies, including financial literacy, peer socialization, and seeking support. The study extends the 4-S Transition Model by highlighting nonlinearity. Then, it enriches Financial Well-Being models by emphasizing objective and subjective dimensions. Finally, practical implications are outlined for policymakers, support organizations,

MSR: Development of Paradox Mindset, Ambidexterity and Well-Being by the Development of Consciousness

Author: **Vikram Gulati**, *Maharishi International U.*

Leaders in organizations need to have a both-and mindset and be able to execute creative and process-oriented tasks while maintaining a sense of well-being at work. The rapidly changing and increasingly complex business environment makes the need for a paradoxical mindset, individual ambidexterity, and well-being at work imperative and challenging. This study adopts a sequential-explanatory mixed-method approach and suggests that higher states of consciousness are instrumental in creating a higher paradox mindset, individual ambidexterity, and workplace well-being. The relationship between these variables is established with the help of a structured equation model, analyzing data collected from 208 project managers working for nine global information technology services companies. In addition, qualitative analysis of interviews with 20 project managers revealed that the development of higher states of consciousness and interconnectedness with the help of self-development practices provides business professionals a path to have a paradoxical mindset, be ambidextrous, and enhance their well-being at work. Further, the study demonstrates the unique value of Transcendental Meditation as a meditative practice.

MSR: How and When Voice Climate Relates to Employee Work Engagement

Author: **Yasir Mansoor Kundi**, *Institute of Business Administration, Karachi*
Author: **Fawad Ahmad**, *Institute of Business Administration, Karachi*
Author: **Usman Nazir**, *Assistant professor institute of Business Administration, Karachi Pakistan*

Little is known about how voice climate fosters employee work engagement. Moreover, we know little about the boundary conditions that affect voice climate and engagement linkage. To address this gap, this study examines how and when voice climate influences employee work engagement. Using the data from employees working in Pakistani organizations, our findings revealed that voice climate positively relates to employee work engagement via intention to engage in counterproductive work behavior. Moreover, ethical leadership and religiosity moderated the aforementioned relationship.

Management research on humility and humble leadership has greatly increased over the past decade (Kelemen et al., 2023). Research has shown that humility has a variety of beneficial effects on individuals, teams, organizations, and even individuals themselves. This growing research on humility in the workplace has sparked additional research questions and study ideas. Acknowledging this backdrop, this symposium looks at humility from a range of areas including CEOs, entrepreneurs, leaders, and followers/employees. Examining humility from multiple perspective and levels of analysis can help scholars gain a better overall picture of the current state of the humility literature and help move this important area of research forward.

Who Am I? Identity and Identification Processes

Session Moderator: **Hau Thi Kim Do**, *Free U. of Bozen-Bolzano*

OB: **Identification in Global and Virtual Teams: A Systematic Literature Review**

Author: **Hau Thi Kim Do**, *Free U. of Bozen-Bolzano*

Author: **Marjaana Gunkel**, *Free U. of Bozen-Bolzano*

Research on team identification has highlighted its importance for effective teamwork, particularly in global and virtual teams. However, the fragmented nature of the existing body of research, with studies conducted in diverse contexts, hinders a holistic understanding of the phenomenon. Moreover, the complexities of identification in global and virtual teams demand further investigation, as the unique challenges of these settings may modify the impact of identification compared to traditional teams. To address this gap, this study employs a systematic literature review approach. We collected and analyzed a total of 45 articles, which led to the classification of three categories: (1) monocultural teams with virtual meeting environments; (2) multicultural teams with non-virtual meeting environments; and (3) multicultural teams with virtual meeting environments. These categories are comprehensively explored to understand the development and impacts of identification on global and virtual teams before these categories are conceptualized into a cohesive framework explaining identification's role within global and virtual teams. The developed framework highlights the fragmented yet progressive nature of research and suggests promising avenues for further investigation.

OB: **Strive or Thrive in a Job Loss? Paradoxical Outcomes of Job Loss Grief**

Author: **Koustab Ghosh**, *Associate Professor Indian Institute of Management Rohtak*

Author: **Dheeraj Sharma**, *Indian Institute of Management, Rohtak*

Author: **Eram Fatima Siddiqui**, *Indian Institute of Management, Rohtak*

We undertake a mixed-method approach to explore the impact of job loss on employees caused due to recent layoffs. Employees impacted by these layoffs have taken social media by storm to present their farewell posts. However, there is little evidence about the thematic contents that are covered in such farewell posts. Therefore, we conducted two studies to advance our understanding of this phenomenon. Study 1 utilized structural topic modeling to analyze the major topics underlying such farewell posts. In study 2, we tested and supported the hypothesis by examining the paradoxical mechanism of job loss. Underpinning our argument in attachment and social identity theory. We propose that employees, due to job loss grief, experience an increase in organizational nostalgia and felt neglect, resulting in organizational identification and psychological contract violation, respectively. Undertaking attachment theory, we further hypothesized that online social network connectedness moderates the paradoxical effects of job loss grief. Our hypothesized model was supported by data collected from laid-off employees. We further elaborate upon theoretical and practical implications followed by future research direction.

OB: **"We are Like Little Elves who Never get Their Own Name"- Identity in Food Delivery Platform Work**

Author: **Hanh Thi Duc Doan**, *Aalto U. School of Business*

Author: **Marjo-Riitta Diehl**, *Aalto U. School of Business*

This paper seeks to advance understanding of how workers identify themselves in the context of platform work in which employment status is debatable and how such identity perceptions intertwine with their experiences, their attitudes, their behaviors and wellbeing at work. Through a study of food delivery platform workers in Finland, we uncover the complexity of identity perceptions in platform work. Specifically, we find that platform workers identify themselves along the statutory identity spectrum (concerning employment status) in three different ways that we named as the Donkeys (employees), the Entrepreneurs (self-employed), and the Elves (a liminal state between employee and self-employed). Workers in these identity groups experience platform work differently and their wellbeing, behaviors and attitudes differ too. With these findings, we add more insights to the literature on work identity in the context of platform work that has so far predominantly focused on online labour market where skilled workers take on simultaneously multiple roles. Furthermore, we fill in the gap of knowledge in platform work literature at psychological level. By zooming into identity perceptions, our study examines underlying reasons for the dynamic of platform labour and highlights the liminal state experienced by some of the platform workers. In so doing, our study contributes also to the literature on liminal identity. Finally, our study advances the understanding of low-status platform work, thereby complementing the existing knowledge on skilled gig workers who usually enjoy a higher status on the online labour market.

OB: **Unpacking the Paradox of Diversity: Being Identified While Feeling Different**

Author: **Alberto Monti**, *Department of Economics - U. of Genoa*

The importance of diversity for the performance of teams and organizations has been acknowledged, as well as the benefits derived from being identified with both workgroups and organizations. However, if we take a social identity perspective, this evidence underlines a paradox: while organizations and society at large foster diversity in terms of personality and skills, individuals seek to raise (to some extent) their sense of similarity and belongingness to various social groups. In this paper, we address this paradox, looking at the drivers able to foster the sense of belongingness of members who feel themselves "diverse" from other fellow members in terms of personal attitudes and skills. Our results suggest that feeling different has a negative impact on an individual's organizational identification. This effect is amplified when an individual is uncertain about the organization's identity. On the contrary, individual diversity can have a positive effect to the extent that being "diverse" is recognized and valued by the organization. Finally, members' prototypicality - being recognized by fellow employees as a typical representative of the organization - has a positive direct effect on an individual's identification and a negative relationship between diversity and identification.

OB: **Strategies in Navigating Psychological Tensions: An Integrative Review**

Author: **Jingtao Zhu**, Rotterdam School of Management, Erasmus U.

Employees around the globe are facing an increasing amount of psychological tension – the experience of conflict as a result of having competing desires that cannot be easily reconciled. Despite its acknowledged importance in management theory, research in this area has been disjointed and uncoordinated. Our comprehensive analysis synthesizes existing studies to establish a typology of strategies for navigating psychological tension. We delineate four principal strategies: avoidance, compartmentalization, integration, and acceptance. This typology is contextualized across three pivotal research domains where psychological tension is most prevalent: the work-nonwork interface, moral decision-making, and identity conflicts. By mapping these strategies onto the respective domains, we offer a nuanced understanding of how psychological tension manifests and is addressed in different contexts. The review culminates in a discussion of the theoretical and practical implications of these findings, setting a foundation for future research and organizational applications in managing psychological tension.

Advances in OB Innovation Research

Session Moderator: **Saleh Samimi Dehkordi**, *U. of Trieste, Italy*

OB: **Unveiling Sustainable Innovative Work Behavior: Scale Development & Microfoundations Investigation**

Author: **Saleh Samimi Dehkordi**, *U. of Trieste, Italy*
Author: **Ivan Radevic**, *U. of Montenegro, Faculty of Economics Podgorica*
Author: **Guido Bortoluzzi**, *U. of Trieste, Italy*

Sustainable innovation is today essential to firms to respond to global challenges like climate change, desertification, and resource depletion. The theme of sustainable innovation strategies is increasingly debated while less attention is devoted to what happens at the individual level, and in particular at the attitudinal and behavior level of individuals who conceive new sustainable products, apply new sustainable processes, and organize sustainable routines inside firms. This research comprises two parts. In study 1 we develop the concept of "Sustainable innovative work behavior" (SIWB), validate a scale, and test it for reliability. To this end, we first collected data from experts to develop the scale items and then collected responses from 299 employees to test it. In study 2 we empirically examine the interplay between SIWB and its antecedents. In particular, we collected data from 791 respondents to investigate the relationship between creative behavior and SIWB and the moderating effect exerted by sustainable leadership, organizational sustainable innovation, and digital technology readiness in such a relationship. Results supported the existence of a relationship between creative behavior and SIWB, along with the moderating effect of sustainable leadership. Furthermore, a three-way interaction among creative behavior, organizational sustainable innovation, and digital technology readiness at the team on SIWB was also empirically supported. This research advances our understanding of how the creative behavior of individuals, team's digital technology readiness, and sustainable initiatives within organizations together shape individual SIWB.

OB: **The Role of Personal Resources on Managers' Innovative Work Behavior**

Author: **Rezon Lajçi**, *TU Ilmenau*
Author: **Norbert Bach**, *Ilmenau U. of Technology*
Author: **Gentrit Berisha**, *U. of Prishtina*

Consensus among researchers and practitioners indicates that employees' innovative work behavior (IWB) has become imperative for organizational success. However, not all employees show IWB, raising the question which factors enable them to be innovative in the workplace. Adopting a positive organizational behavior perspective, this study investigates the role of personal resources on managers' IWB. We use the broaden-and-build theory to explain how positive psychological resources such as hope, self-efficacy, resilience, optimism, and organization-based self-esteem (OBSE) influence different types of IWB activities: idea generation, idea promotion, and idea realization. Additionally, we examine the moderating impact of intrapreneurial orientation (IO) on the personal resources-IWB relationship. Our hypotheses are tested using a sample of 233 managers employed in various sectors and company sizes in Kosovo. The results indicate that hope, self-efficacy, and OBSE positively influence idea generation; self-efficacy and resilience positively influence idea promotion; and self-efficacy, resilience, and OBSE positively influence idea realization. As a secondary finding, we report a moderating effect for IO regarding the resilience-idea realization nexus. Our findings suggest that personal resources are paramount for IWB, but the impact differs depending on IWB activity. Furthermore, we found no moderating effects for IO, except for the impact of resilience on idea realization. This study is among the first attempts to investigate how personal resources influence different types of IWB activity, highlighting the importance of personal resources per IWB activity.

OB: **Differentiating the Exceptional: Distinctions Between Excellence and the Extraordinary**

Author: **Kiko Thiel**, *Weatherhead School of Management, Case Western Reserve U.*

As interest in academic circles increase in examining outliers, or the exceptional, there is an increased need for precision of terms for creating a typology, and for clarifying distinctions amongst types of outliers and types of exceptionalism. Extensive literature review reveals that most academic and practitioner articles focus on excellence – doing what everybody else does, but doing it better. I argue that there is a spectrum of exceptionalism, from excellence to incremental innovation to radical innovation. And at the far end, on the outer reaches of radical innovation, lies the extraordinary: the creation of new paradigms, which challenges our notion of what is possible, or even of what is real. This article clarifies the distinction between excellence and the extraordinary, explains why it matters both for organizational scholarship, but also for policy and practice in areas as varied as management, leadership, education and parenting.

OB: **Workplace Belongingness and Management Support as Prerequisites for Innovative Work Behavior**

Author: **Gentrit Berisha**, *U. of Prishtina*
Author: **Drin Govori**, *Independent Researcher*
Author: **Rezon Lajçi**, *TU Ilmenau*

The manager is to innovation what innovation is to organizations. Driven by this axiom, researchers and practitioners have turned their attention to the drivers of innovative work behavior of managers. In this study, we investigate whether organizational-based job attitudes (workplace belongingness and management support) are related to the innovative work behavior of managers directly or through the underlying mechanism of intrapreneurial intention. We nested our hypotheses on the theory of planned behavior, place attachment theory, and perceived organizational support theory. Data were gathered from 233 managers working in various industries in Kosovo. We tested the hypothesized relationships using structural equation modeling. The results show that workplace belongingness relates to innovative work behavior, and management support relates to intrapreneurial intention. We find full mediation of intrapreneurial intention in the management support-innovative work behavior relationship. Our other mediation hypothesis is not supported. Our study sheds light on the attitude-intention-behavior chain and provides insights for fostering innovative work behavior among managers.

Motivation in a Brave New World of Work

Session Moderator: **Anjana Karumathil**, *Indian Institute of Management Kozhikode*

OB: 'Cyber' Related? The Role of Twitter in Motivating Skilled Gig Workers   

Author: **Anjana Karumathil**, *Indian Institute of Management Kozhikode*
Author: **Ritu Tripathi**, *Northwestern U.*

Drawing upon theories of self-determination and Uses & Gratifications, we explore the psychological determinants of online relatedness among skilled gig workers. Using two methodologically distinct studies, we examine whether skilled gig workers on Upwork (Upworkers) who browse or tweet on Upwork's Twitter handle experience relatedness at work. We use web-scraping techniques in study 1 to demonstrate that Upworkers generate online relatedness using words of positive sentiment tonality. In study 2, survey analysis indicates that Twitter does not behave as a coping mechanism to satiate relatedness deficit. Contrary to expectation, we find that relatedness deficit does not prompt Twitter usage among Upworkers; although usage creates a sense of community, it decreases work-specific relatedness. Our findings highlight the potential of increased isolation among Upworkers who use Twitter to satiate relatedness deficit. We offer suggestions on being strategic with social networking.

OB: Job Insecurity, Family Motivation, and Approach Job Crafting from A Self-Regulation Perspective

Author: **Dandan Li**, *Shanghai International Studies U.*
Author: **Liang Meng**, *Shanghai International Studies U.*

Employees who desire to work to benefit their families care much about their job stability. However, little is known about the responses of employees with high family motivation when they experience job insecurity. Adopting the perspective of self-regulation, we contend that job insecurity would inhibit approach job crafting, in that employees concerned about job continuity and stability possess insufficient resources for such demanding proactive behaviors, further become less embedded in their jobs. However, as an individual difference factor, family motivation could mitigate the negative effect of job insecurity on approach job crafting, since it could provide employees with more energy and spur their motivation to put effort into self-regulatory approach job crafting, ultimately undermining the downstream effect on job embeddedness. In Study 1, the findings from a two-wave survey supported our full hypotheses. In Study 2, the results of a scenario experiment further supported that high job insecurity would lead to less approach job crafting, which only works among employees with low family motivation. Theoretical implications for job insecurity, family motivation, and approach job crafting research, as well as managerial implications, are discussed.

OB: Motivation in Virtual Teams: A Dynamic Exploration of Trajectories and Contextual Associations   

Author: **Tobias Blay**, *U. of Goettingen*
Author: **Fabian Jintae Froese**, *U. of Goettingen*
Author: **Vas Taras**, *U. of North Carolina, Greensboro*
Author: **Bradford S. Bell**, *Cornell U.*
Author: **Bradley L. Kirkman**, *North Carolina State U.*

Engaging effectively in a virtual team demands a high level of motivation from team members. Yet, little is known about how the motivation of individuals in virtual teams changes over time, particularly in connection to various facets of team context. Employing a problematization approach and social motivation theory, this research adopts a sequential mixed-methods design to delve into the trajectories of motivation of individuals working in virtual teams and their associations with the team context – distinguished between team characteristics and team dynamics. First, a latent class growth analysis on 3,428 individuals nested in 639 virtual teams revealed three distinct trajectories of individual motivation - consistently high, decreasing, and increasing motivation patterns. Whereas varying team dynamics were significantly linked to the diverse motivational trajectories, team characteristics displayed no association with the distinct patterns of individual motivation. Second, findings from a subsequent qualitative study uncovered underlying rationales for these quantitative results. Findings suggest that team characteristics were less consequential for the motivation of virtual team members due to their diminished salience during task-oriented activities. The evolution of team dynamics and concurrent motivation was contingent on the perceived proximity between individuals and their virtual team. We discuss implications for both theory and practice.

OB: An Innovative Organizational Approach: Motivation by Values through Organizational Valubility   

Author: **Joanna Ewa Bernacka**, *Poznan U. of Economics and Business*

This conceptual paper explores the feasibility of adapting the Management by Values (MBV) strategy to harness motivation through an Organization's Valubility. The study aims to identify and delineate specific categories of values that can align with both the core values of the organization and those of its individuals. A combination of secondary data sources, such as literature reviews, and primary data sources, including the inductive method, were employed in this investigation. The study utilized inductive reasoning and reduction methods to accomplish its objectives. The findings underscore the significance of aligning the organization's values with individual values to effectively employ the Management By Values (MBV) strategy for motivating employees through an organization's Valubility. Organizational culture thrives on shared values, and achieving motivation through the Organization's Valubility hinges on the congruence between the organization's core values and those held by its members. This paper introduces a novel concept that can be applied by individuals, organizational leaders, shareholders, and HR professionals. It offers practical guidance on leveraging an Organization's Valubility as a foundation for motivational strategies. It outlines the process of aligning organizational and individual growth trajectories and identifies common developmental objectives. This approach facilitates the practical application of Management by Values (MBV), resulting in a motivated and contented workforce. Furthermore, this paper contributes to the conceptual research on motivation within organizations, broadening the understanding of organizational growth and development objectives and their synergy with individual goals when rooted in shared core values.

Together Everyone Achieves More: Building Teams for Success

Session Moderator: **Lisa Handke**, *Friedrich-Alexander-U. Erlangen-Nürnberg*

OB: **When Norms Align with Leadership: Functional Diversity, Reflection, and Team Performance** 

Author: **Yi-Ting Lin**, *Department of Business Administration, National Chung Hsing U., Taiwan*
Author: **Jo-Tieh Chang**, *Department of Business Administration, National Chung Hsing U., Taiwan*
Author: **Yung-Tien Kao**, *Department of Business Administration, National Chung Hsing U., Taiwan*
Author: **Nienchi Liu**, *Department of Business Administration, National Taiwan U., Taiwan*

Built upon the behavioral integrity perspective, the present study delved into the three-way interactive effect among functional diversity, cooperative norms, and leader inclusiveness on team reflection within the context of research and development (R&D) teams. Moreover, the potential mediating role of team reflection between functional diversity and team performance was examined, considering the joint team contingencies of cooperative norms and leader inclusiveness. Multi-wave and multi-source data collected from R&D teams, encompassing 66 team managers and 239 team members, unveiled the presence of this three-way interactive effect in predicting team reflection. Specifically, functional diversity was found to foster greater team reflection when cooperative norms and leader inclusiveness were high. Additionally, team reflection emerged as a mediator in the relationship between functional diversity and team performance, particularly when both cooperative norms and leader inclusiveness were elevated. Finally, we discussed the valuable findings along with the theoretical and managerial implications of the study.

OB: **Leadership Claiming-Granting Alignment and Team Effectiveness in Context of Crisis**   

Author: **Chu-Ding Ling**, *Renmin U. of China*
Author: **Jie Xiao**, *Renmin U. of China*
Author: **Jinlong Zhu**, *Renmin U. of China*
Author: **Meng Zhang**, *Renmin U. of China*

Leadership claiming has long been seen as a key to promoting self-managing teams' effectiveness. Yet, there is growing evidence that its applicability may falter in situations characterized by a lack of leadership granting. Drawing on a new attribute alignment approach and information processing theory, we build consensus by exploring whether, how, and when leadership claiming-granting alignment—an organic team leadership structure in which team members who claim leadership the most are also granted leadership by others the most—plays a critical role in influencing team effectiveness. Across a multi-wave field study where student teams engaged in a business simulation that unfolded over a 4-week duration, we find that leadership claiming-granting alignment can better improve team effectiveness via team knowledge utilization. In addition, this positive indirect relationship is stronger when team crisis is higher. Overall, our results offer novel insights into identifying an effective team leadership structure while maximizing the potential advantages of informal leadership emergence in team management.

OB: **A Typology and Analysis of Collaborative Hybrid Work for Post-Pandemic Teams** 

Author: **Lisa Handke**, *Friedrich-Alexander-U. Erlangen-Nürnberg*
Author: **Patricia Costa**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*
Author: **Maria Ximena Hincapie**, *School of Management, U. de los Andes*
Author: **Michael Johnson**, *U. of Washington*

Despite the substantial proliferation of hybrid work, little has been done to reconcile extant individual- and team-level perspectives. This is problematic because it does not acknowledge how individuals' hybrid work practices constrain team-level interactions and subsequent outcomes. Specifically, the extant literature does not yet capture the complex configurations that result from team members alternating between co-located and remote forms of collaboration and how these may provoke the formation of subgroups within the team. In this conceptual paper, we thus present co-location imbalance as a way of capturing geographic configuration in hybrid teams and illustrate its meaning and impact on subgroup formation using exemplary hybrid teamwork archetypes. We then map out a nomological network surrounding co-location imbalance and derive testable propositions on its temporal dynamics and multilevel antecedents. Our paper concludes with a discussion of our research's theoretical and practical contributions and directions to advance future research on hybrid teamwork.

OB: **Team Formation Strategy and Entrepreneurial Effectiveness: A Dynamic Ambidexterity Perspective**  

Author: **Limei Chen**, *U. of Hong Kong*
Author: **Chu-Ding Ling**, *Renmin U. of China*
Author: **Melody J. Zhang**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*
Author: **Nan Wang**, *Lingnan U.*

The formation strategy of entrepreneurial teams significantly impacts their ability to navigate venture challenges. Existing research suggests that both an interpersonal-attraction strategy (relying on relationships with similar others in a close network) and a resource-complementary strategy (instrumental emphasis on complementary expertise and resources) can enhance entrepreneurial performance. However, our understanding of interplay and the jointly implications of these two strategies remains quite limited. Taking a dynamic ambidexterity perspective, this study examines the influence of dual formation strategy on entrepreneurial team's effectiveness through the development trajectory of team ambidexterity. Based on a longitudinal study involving a sample of 912 members from 228 teams who participated a business simulation game contest, we found that entrepreneurial teams that adopt a dual formation strategy can exhibit a more positive team ambidexterity trajectory, leading to higher team effectiveness compared to teams using only interpersonal attraction or resource complementarity strategy. These findings provide several theoretical and practical implications and also suggest some directions for future research.

It Gets Better: Striving to Improve Oneself and The Firm

Session Moderator: **Elizabeth Jiang, UCLA**

OB: Messenger-Message Discordance: Who Speaks Up (and How) Matters in Advocating for Workplace Equality   

Author: **Elizabeth Jiang, UCLA**

Author: **Sherry Jueyu Wu, -**

Voicing up on the state of workplace disparities is an important strategy for raising awareness and expressing advocacy, but doing so effectively depends on who speaks up and how they do it. Across two pre-registered experiments (N=1,921), we examined how messenger identities and message content affect perceptions of the messenger's self-interest and other-interest—two primary motives for voicing up about workplace disparities. We show evidence of a messenger-message discordance effect and that a simple advocacy-injection intervention mitigates the negative effects of discordance. Specifically, compared to non-dominant messengers (who have demographic concordance with the disadvantaged groups), White men (who have demographic discordance with the disadvantaged groups) are penalized in other-interest perceptions when sharing statistics on workplace disparities (Studies 1 & 2), but this penalty is attenuated when they inject explicit personal advocacy into the statistical message (Study 2). Our findings contribute to the theoretically complex study of voicing up against workplace inequality and suggest that sharing explicit personal advocacy should be encouraged in organizational practices.

OB: Working on an Empty Stomach? A Model of Food Insecurity's Impact on Performance Via Self-Regulation  

Author: **Francisco Moreno, Louisiana State U.**

Author: **Michael Addison Johnson, Louisiana State U.**

Author: **Bailey A. Bigelow, U. of Utah**

Food insecurity is a public health issue for much of the world's population, and yet management scholars have not addressed how this phenomenon might affect employees while on the job. In the current paper, we introduce the topic of food insecurity into the management literature and explore how this prevalent "out-of-work" experience affects employee performance at work. We use a self-regulation lens to propose that food insecurity is a strain on employees, leading to a decreased capacity to focus on their performance. Specifically, we propose that experiencing food insecurity evokes emotional, physiological, and cognitive strains, which in turn reduce job performance. Additionally, we explore whether there are accessible resources that individuals might draw upon to buffer these negative effects by examining mindfulness, social support, and emotional stability as moderators of the indirect effect of food insecurity on job performance. We utilize archival data to establish the importance of food insecurity in the workplace context (Study 1) and an ESM sample of customer service employees sampled over five weeks (Study 2) to test our hypotheses. We find robust support that food insecurity negatively impacts job performance through increased cognitive strain, but that mindfulness, social support, and emotional stability weaken this relationship. Theoretical and practical implications are discussed.

OB: Supervisor-Subordinate Directional Age Difference, Empowerment Behavior, and Employee Creativity

Author: **Xinyue Li, U. of International Business and Economics**

Author: **Mingpeng Huang, U. of International Business and Economics**

Author: **Jialin Liu, U. of International Business and Economics**

Author: **Min Cui, U. of International Business and Economics**

Author: **Guangdi Tian, U. of International Business and Economics**

In recent decades, the accelerating global aging population and the emergence of a large number of talented young subordinates in the workplace, who have risen to leadership positions, are leading to a significant transformation in the traditional model of older supervisors managing younger subordinates. This study delves into the increasingly prevalent phenomenon of younger supervisors supervising older subordinates and its further implications for both supervisors and subordinates. Drawing on the rational action theory, we propose that supervisor-subordinate directional age difference is positively related to employee creativity via leader empowerment behavior. Concurrently, we introduce the concept of subordinates' power distance as a moderating factor. Employee power distance moderates the relationship between leader empowerment behavior and employee creativity. We conducted a field study to test the hypotheses. Our research, from the perspective of leadership behavior, enriches the positive impact of the combination of young supervisors and older subordinates, providing practical insights for young supervisors to effectively manage older subordinates.

OB: Integrating Genomic Insights with Vocational Interests: A Gene-Occupation Fit Approach

Author: **Yimo Zhu, National U. of Singapore**

Author: **Zhaoli Song, National U. of Singapore**

Author: **Qiao Fan, Duke-NUS Medical School Singapore**

This study delves into the intricate relationship between genetic predispositions, vocational interests, and career outcomes. Utilizing the Genome-Wide Association Study (GWAS) and Polygenic Scores (PGS), we investigated the heritability of vocational interests and their predictive power on occupational choices and income. The research introduces a novel 'gene-occupation fit' index, assessing the alignment between genetic predictions and actual occupations. Our findings, derived from the UK Biobank and Wisconsin Longitudinal Study samples, demonstrate a significant correlation between vocational interests and individual income. Specifically, the study reveals that gene-occupation fit notably predicts income, even after controlling for various occupational variables. Additionally, we explore the moderation effects of occupation classification on this relationship, finding significant positive interactions between gene-occupation fit and occupation types in determining income. These insights offer a nuanced understanding of the interplay between genetic factors, personal interests, and environmental influences in shaping career success.

OB: **Mindsets Matter: How Growth Mindsets Shape Job Attitudes** 

Author: **Jennifer Wieland**, *TUM School of Management, Technical U. of Munich*

Author: **Lauren A. Keating**, *EMLYON Business School*

Author: **Alwine Mohnen**, *TUM School of Management, Technische U. München*

Research and popular business press claim that a growth mindset – the belief that personal attributes are malleable – fosters employee engagement and job satisfaction, and thus provides organizations with a competitive advantage. Despite this enthusiasm, little is actually known about the impact of mindsets on job attitudes. Across two studies, we explore this relationship between mindsets and job attitudes. In Study 1 (n=381), we survey a representative sample of employees in Germany and observe that chronic growth mindsets are associated with higher levels of job engagement, organizational commitment, and openness to change, though not job satisfaction. In Study 2 (n=271), we conduct an experiment wherein a growth mindset intervention enhances job attitudes of employees, though observe this effect only for those who did not hold a chronic growth mindset before the intervention. Taken together, these studies illustrate both when and how mindsets are beneficial for job attitudes.

OB: **Teamwork in the Age of Generative AI: Examining the Effect on Job Satisfaction** 

Author: **Michael Guffler**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Author: **Theresa Mentzel**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Author: **Corinna Vera Hedwig Schmidt**, *Chair for Technology & Management, TU Dortmund U.*

Increasingly, organizations implement generative artificial intelligence (GenAI) as a team member in traditionally human-only teams. This shift is possible through the significant advancement of GenAI, that can generate creative human-like outputs and can act as autonomous agents either in the role of a coworker or manager. However, the impact of such human-AI teamwork on employees' personal outcomes remains largely unexplored. In this research, we adopt a multilevel perspective on human-AI teamwork to investigate the mechanisms for employee job satisfaction when collaborating with GenAI. We examine the impact of integrating GenAI into a human-AI team in two experiments that distinguish between GenAI acting as a coworker or as a manager, drawing on job characteristics theory (JCT) and social exchange theory as theoretical frameworks. Our empirical findings suggest a negative relationship between collaborating with GenAI agents and job satisfaction, irrespective of the role of GenAI in the team (coworker or manager) or feedback received (reject or approval). We propose psychological ownership and perceived fairness as two separate mediating variables that account for this relationship and show the moderating role of knowledge about AI. With that, we extend the JCT to the novel context of human-AI teamwork on creative tasks. Although we reveal unintended consequences for job satisfaction, we also offer recommendations on how to mitigate these effects and still achieve positive outcomes for employees and organizations.

OB: **A Dual-Pathway Model Linking Algorithmic Management to Employee Work Engagement** 

Author: **Hui Deng**, *Beijing Forestry U.*

Author: **Wenqian Guo**, *School of Economics and Management, Beijing Jiaotong U., China*

Author: **Yirui Sheng**, *Beijing Forestry U.*

Author: **Wenjia Zhang**, *Beijing Jiaotong U.*

The development of artificial intelligence brings profound changes to management practices and employee work designs. Recent research on algorithmic management has drawn greater attention to the influences of algorithms on employee outcomes (e.g., work engagement) with fragmented arguments, lacking consistent empirical evidence. To address these contradictory arguments, our study, drawing on the job demands-resources model, developed a dual-pathway model to explain both the positive and negative effects of algorithmic management on employee work engagement. Conducting a three-wave field survey involving a sample of 327 employees in an information technology service company, we tested the proposed model. Results demonstrated that algorithmic management enhanced employee work engagement via the job clarity pathway, but impeded employee work engagement via the job autonomy pathway. Furthermore, job complexity moderated the mixed effects of algorithmic management on job clarity as well as job autonomy and the indirect effects of algorithmic management on employee work engagement. Our study provides an integrative explanation of how and when algorithmic management affects employee work engagement and offers new insights into the applications of the algorithmic management system in human resource management practices.

OB: **Leaders' Pathways to Followers' Empowerment: A Meta-Analysis**  

Author: **Dagmar Mareike Heyn**, *U. of Vienna*

Author: **Gernot Pruschak**, *Bern U. of Applied Sciences*

Empowering followers to take decisions on their own constitutes an important competitive advantage in today's dynamic organizational environments. Prior research has already demonstrated that leaders, especially those embracing transformational leadership, play a crucial role in eliciting the psychological empowerment of their followers. However, much less attention was given to structural empowerment despite its high relevance as a first enabler of empowerment. This is especially of high relevance when comparing the effects of transformational and transactional leadership as leaders embracing transformational leadership tend to change the organizational structure whereas transactional leaders simply accept it as a given fact and operate within its boundaries. We therefore conduct a meta-analysis exploring the relationships between transformational and transactional leadership and psychological and structural empowerment. Our findings comprising results from 45 studies indicate that transactional and transformational leadership moderately positively relate to psychological empowerment whereas there exists a strong positive association between transformational leadership and structural empowerment. Sub-group analyses highlight regional variations, with transformational leadership exhibiting a stronger association with structural empowerment in Western Europe and Northern America compared to Asia. Our findings underscore the role of transformational leadership in eliciting structural empowerment, urging leaders to consider organizational restructuring for fostering employee empowerment. We also highlight the need for future research to delve deeper into the interplay between leadership styles and structural empowerment, presenting an unexplored avenue for enhancing competitive advantage.

OB: The Crossover and Spillover Effects of Work-Family Spousal Support on Employee Creativity (WITHDRAWN)

Author: **Siqi Wang**, *Aston Business School*
Author: **Yasin Rofcanin**, *School of Management, U. of Bath*
Author: **Mireya Las Heras**, *IESE Business School*
Author: **Zeynep Yesim Yalabik**, *U. of Bath*

In an era where home and work domains have become inseparable, it is surprising to see that extant research has placed less emphasis on examining the boundary conditions and mechanisms to understand the home-to-work crossover and spillover process. Building on the work-home resources theory and the crossover-spillover perspective, we test a resource-based crossover-spillover model of how the work-family spousal support provision by one partner relates to the other partner's creativity at work. We propose that "phubbing" at home, which refers to the behavior which an individual focuses too much on their smartphone and snubs others at home, affects the crossover process of resource exchange between partners. Regarding the spillover from home to work, we propose that job crafting mediate the association between work-family spousal support and employee creativity. Daily diary data were collected from 65 dual-earner couples, over 15 working days in the USA. Results from the multilevel actor-partner interdependence model, which considers the nonindependence of dyadic data, showed that work-family support receipt enhances employee creativity by prompting the employee's relational job crafting and cognitive job crafting at work. Moreover, our results revealed that the high level of phubbing at home weakens the work-family support crossover between partners. We contribute to the literature by adding evidence regarding the mechanisms that enable social support at home to turn into employee creativity at work.

OB: I Am an Intelligent Leader! How and Why Leader Humor Impacts Leader's Subsequent Behaviors

Author: **Yujing Wang**, *Nanjing U. of Science and Technology*
Author: **Kong Zhou**, *Nanjing U. of Science and Technology*
Author: **Yuchuan Liu**, *Nanjing U.*
Author: **Xiaofei Hu**, *Hong Kong Polytechnic U.*
Author: **Huan Zhao**, *Nanjing U. of Science and Technology*
Author: **Xuan Zhou**, *Nanjing U. of Science and Technology*

Leader humor has been found to be associated with many positive follower outcomes. However, our knowledge about its influences on leaders themselves is very limited. Based on the process model of self-conscious emotions, we theorize a leader-centered model by proposing that daily leader humor is positively related to leader authentic pride, which indirectly enhances leaders' subsequent initiating structure behavior and consideration behavior. Moreover, we also theorize that leaders' ideal leadership self-concept for intelligence can augment the benefits of leader humor to leaders. By conducting an experience sampling investigation of 99 leaders (984 day-level observations) who completed two surveys per day for ten workdays, we found that leader humor was positively related to leader pride, which enhanced their subsequent initiating structure behavior and consideration behavior. Moreover, leaders with a high ideal leadership self-concept for intelligence tended to experience more pride after they expressed humor at work than leaders with a low ideal leadership self-concept for intelligence.

OB: Goal Orientation, Time Pressure, and Job Crafting Profiles

Author: **Xinxin Lu**, *Hunan U.*
Author: **Donald H. Kluemper**, *Texas Tech U.*
Author: **Yidong Tu**, *School of Economics and Management of Wuhan U.*
Author: **Haiming Zhou**, *Shandong U. of Science and Technology, Tai'an Campus*

Despite the emerging person-centered approach to job crafting, we have limited knowledge of the antecedents of job crafting profiles. Integrating the job demands-resources model and approach-avoidance perspective, the present research investigates how individual trait goal orientation and daily time pressure influence day-level job crafting profiles. Using two experience sampling method samples (Sample 1: N = 92, four times per day across 10 days; Sample 2: N = 46, four times per day across 10 consecutive workdays), we found that performance-prove oriented employees and those who experience daily time pressure engage in a proactive job crafting profile, simultaneously high in resource seeking, challenge seeking, and demand reducing. Moreover, job crafting profiles were found to significantly differentiate employee work engagement, task performance, and work-family conflict, such that the proactive job crafters are highest in work engagement, task performance, and role- and strain-based work-family conflicts. Theoretical and practical implications are discussed in detail.

OB: When is Leading with Play Wise? Implications of Leader-Follower Congruence in Playful Work Design

Author: **Yuri S. Scharp**, *Human Resource Studies, Tilburg U.*

While research on the integration of play with work is growing, little is known about the implications of leaders adopting playful practices. When and why should leaders initiate play during work activities, i.e., playful work design? Drawing on social information processing theories and the wise proactivity framework, we developed and tested a theoretical framework that delineates when and why playful work design is wise and when it is not. This study focused on leader-follower dyads to examine (in)congruence effects of leader and follower playful work design on leader work engagement (leaders' self-evaluations) and leader in-role job performance (followers' evaluations). Results from 61 leader-follower dyads (n = 351 weeks) indicated that playful work design by leaders yields the most favorable outcomes in the weeks when their behavior aligns with that of followers. In the weeks when leaders' playful work design exceeded that of followers, their in-role job performance was especially low. In contrast, when followers exceeded that of leaders, their work engagement suffered the most. Our research contributes to research on how leaders can manage their wellbeing, advances the social perspective of playful work design, and answers call for the potential dark side of play. This research offers a theoretical framework to explain when and why organizations should adopt or avoid playful practices.

OB: Employee-Supervisor Proactive Personality Incongruence and Employee Voice Behavior

Author: **Wu Wei**, *Wuhan U.*

Author: **Ming Jin**, *Economics and Management School, Wuhan U.*

Studies have shown that voice behavior, beneficial to an organization, can be triggered by employee and supervisor factors. Nevertheless, these studies may have overlooked the significant impact of employee-supervisor traits on employees' voice behavior. Incorporating complementary theory and role theory with voice literature, we examine whether and how the (in)congruence of employee and supervisor proactive personalities influences employee voice behavior. A multiphase, multisource field study was conducted to test our hypotheses. Based on data from 173 supervisor-employee dyads in China, we conducted polynomial regression analyses and discovered that employees experienced higher levels of voice role conceptualization when employee and supervisor were incongruent with proactive personalities. The results further revealed asymmetric incongruence effects: employees experienced the highest levels of voice role conceptualization when their own proactive personality was higher than their supervisor's. In addition, we found that voice role conceptualization mediated the impacts of employee-supervisor (in)congruence in proactive personality on employee voice behavior.

OB: Who is an Ideal Follower in Chinese Leadership Paradigms?

Author: **Aaron McCune Stein**, *Ipsos*

Author: **Aybike Mergen**, *Ozyegin U.*

Author: **Chris Bell**, *York U./Hunan Normal U.*

Who is an Ideal Follower in Chinese Leadership Paradigms? Extracting Social Types of Implicit Chinese Subordinate While Chinese leadership research has uncovered many invaluable insights, it has predominantly examined leadership from the leader's vantage point. This paper helps address this imbalance by delineating the "implicit Chinese subordinate" (ICS) - the assumed follower role and behaviors underlying major Chinese leadership theories. We conduct a narrative review of Chinese leadership research to synthesize key cultural assumptions regarding how Chinese followers are expected to think, feel, and act. Our analysis reveals seven major aspects of the ICS such as unconditional deference towards leaders, welcoming leader involvement in personal life, and unlimited obligation to reciprocate leader benevolence. Articulating the ICS allows us to advance leadership research in three significant ways: 1) providing a conceptual foundation to empirically investigate long-held cultural ideals about Chinese followership; 2) critiquing whether these implied aspects match the actual thoughts and behavior of Chinese subordinates; and 3) offering guidance for incorporating follower and contextual perspectives into existing leadership theories. Overall, our study demonstrates the value of bringing the follower's vantage point to the forefront to gain a more complete understanding of leadership processes in China.

OB: When Justice Conflicts with Care: Navigating Leaders' Moral Dilemma in the Face of Employees' UPB

Author: **Yating Gao**, *Guanghua School of Management, Peking U.*

Author: **Yue Zhang**, *Guanghua School of Management, Peking U.*

Author: **Dili Zhao**, *State Grid Corporation of China*

Research on unethical pro-organizational behavior (UPB) has predominantly focused on its consequences for the employees engaged while overlooking how observing such behavior might affect their leaders' psychological experiences and downstream responding behaviors. Integrating moral heuristics theory and social exchange theory, we argue that leader moral identity and relationship quality with the UPB conductor (i.e., LMX) may interact with the leader's perception of employee UPB, leading to leader moral dissonance and influencing their subsequent helping and undermining behavior toward the UPB conductor. We examined the hypothesized relationships with two studies. The first study was a three-wave, multisource field study consisting of 684 employees across a total of 150 work teams and their 150 direct supervisors from a prominent pharmaceutical company located in northwestern China. The second study was an experimental study on an English platform, Prolific, recruiting 240 full-time employees from the United States, United Kingdom, and Canada. The results of both studies provide support for our predictions. Our research offers insights into moral literature and the consequences of UPB in organizations.

OB: Leader Learning Goal Orientation on Follower Adaptive Performance Moderated by Follower Narcissism

Author: **Sharmeen Merchant**, *U. of Cincinnati*

Author: **Peng Wang**, *Miami U. Ohio*

Author: **Xiang Yao**, *Peking U.*

Adaptive performance is an ideal follower behavior in today's work environment. However, prior research suggests that leaders might struggle to influence followers in ways that facilitate this approach to work. Along those lines, drawing from social learning theory, we investigate leaders' learning goal orientation. More specifically, we hypothesize a trickle-down model whereby leader learning goal orientation is associated with follower learning goal orientation, which in turn is associated with follower adaptive performance. Additionally, we investigate whether a dark-side personality characteristic—follower narcissism—has the potential to disrupt the leader-to-follower learning goal orientation social learning process. Our findings support our hypotheses such that follower learning goal orientation mediates the effect of leader learning goal orientation on follower adaptive performance, and that follower narcissism diminishes the indirect effect of leader learning goal orientation on follower adaptive performance via follower learning goal orientation. Theoretical and practical implications specific to the leader-follower social learning processes and adaptive performance are discussed.

Do the Differences Make a Difference? Insights From Diversity Research

Session Moderator: **Yongkang Yang**, *Rotterdam School of Management, Erasmus U.*

OB: **Team Cross-Culture and Within-Culture Information Elaboration: The Role of Learning Orientation**  

Author: **Yongkang Yang**, *Rotterdam School of Management, Erasmus U.*

Author: **Daan Van Knippenberg**, *Rice U.*

Author: **Jia Li**, *Vlerick Business School*

Author: **Anne Nederveen Pieterse**, *Erasmus U. Rotterdam*

Modern work teams are increasingly characterized by diverse cultural backgrounds. Research has established that cultural diversity holds the potential to enhance team performance through information elaboration—the exchange, discussion, and integration of task-relevant information. Recognizing that existing studies have studied information elaboration as an undifferentiated process, disregarding potential within-team differences in elaboration, we argue that differentiating between cross-culture information elaboration (elaboration between culturally dissimilar members) and within-culture information elaboration (elaboration between culturally homogenous members) within teams adds theoretical precision to our understanding of the role of information elaboration in culturally diverse teams. We propose that cross-culture elaboration is more strongly related to team performance than within-culture elaboration as well as that team member learning orientation stimulates cross-culture elaboration more than within-culture elaboration. In a survey of 104 teams, we found the predicted stronger influence of cross-culture information elaboration and the stronger indirect effect of team member learning orientation on team performance via team cross-culture information elaboration.

OB: **How Does Organizational Emotion Resources Enhance Person-Job Fit?** 

Author: **Xiaoman Zhou**, *Chongqing Normal U.*

Author: **Shuo(sure) Wang**, *Chongqing Normal U.*

Author: **Shuaijun Zhang**, *UTRGV*

Author: **Xinyuan(Roy) Zhao**, *Macau University of Science and Technology*

In the post-epidemic era, how to improve the career adaptability of Gen Z, who currently make up the main workforce in the hospitality industry has taken on added significance. According to broaden-and-build theory of positive emotion, this study aims to explore the relationships among career adaptability, organizational emotional capability, diversity management and person-job fit of Gen Z hotel employees. Data were collected from 391 Gen Z employees from 16 hotels in 14 cities of China. The results of structural equation modeling revealed that organizational emotional capability, as a positive organizational resource, enhances career adaptability, and effectively helps Gen Z adapt to workplace and lead to higher person-job fit. Moreover, diversity management moderates the relationship between career adaptability and person-job fit. This study enriches the antecedents of career adaptability and provides valuable insights for hotel human resource management practices of the Gen Z.

OB: **A Structuration Theory Perspective of Religious Minority Employees' Agency at Work**

Author: **Mehr Farhan**, *Lahore U. of Management Sciences (LUMS)*

Author: **Jawad Syed**, *Lahore U. of Management Sciences*

Using a structuration theory perspective, this study investigates how religious minority employees use their agency through identity work and resilience to cope with structural challenges in the workplace. This topic has received less focus in diversity literature where emphasis has been solely placed on the challenges faced by religious minorities in the workplace. Drawing on 21 in-depth interviews of Ahmadis, a religious minority group residing in Pakistan, this research explores the interplay between structures and their influence on the agency of religious minority individuals. Structural challenges included a stigmatized religious identity of Ahmadis, discriminatory laws and a social exclusion of the group. In spite of these difficulties, these individuals use their agency, manifesting through identity work (particularly identity regulation and identity management) and resilience to cope with challenges through a myriad of strategies such as a preparatory talk with parents, focus on professional achievement, reliance on private prayer, and perseverance against adversity. This study advances literature on religious diversity management through a structuration perspective by highlighting the role of religious minorities as agentic actors who are not merely passive recipients of structural challenges. It also offers practical suggestions to organizations to devise effective diversity policies which can accommodate contextual challenges of religious minority groups.

OB: **Promoting Mutual Learning and Technology Exploration of Age-Diverse Coworkers - A Field Experiment**

Author: **Patrick Vestner**, *U. of Cologne*

Author: **Kilian Hampel**, *U. of Konstanz*

Increasing age diversity and digitalization present challenges and opportunities for individual and collaborative learning and development in organizations. Age-diverse coworkers can benefit from each other's complementary experiences, knowledge, and skills by fostering intentional and self-directed learning and development. We argue that, through a training intervention, organizations can enable age-diverse coworker dyads to maximize the use of a rich portfolio of age-based digital competences. Specifically, the training intervention reframes their perception of the opportunities inherent in age diversity and technology, thereby increasing their personal readiness to adopt informal learning behavior. Applying an informal workplace learning lens, we developed a dual pathway model to investigate the effect of the training intervention on technology exploration via planned technology use, and on mutual learning via perceived value of age diversity. We further examined the moderating effects of peer attitudes towards technology. We tested the effectiveness of the training intervention using a randomized controlled field experiment with 173 age-diverse coworker dyads ($n = 347$ employees). Our results showed that the training intervention increased both technology exploration via planned technology use and mutual learning via perceived of age diversity, but only if the dyad partner had positive attitudes towards technology. Our research advances the literature at the intersection of age diversity and digitalization as well as the age diversity training and informal workplace learning literature. Further, the findings promote the advancement of evidence-based management of age diversity in organizations

The Ties That Bind: Employee-Employer Relationships

Session Moderator: **Aditya Agrawal**, *FLAME U.*

OB: Development of a Valid and Reliable Scale for the Construct of Organizational Healing 

Author: **Aditya Agrawal**, *FLAME U.*

Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

Author: **Stacie Chappell**, *Vancouver Island U.*

The aim of this paper is to propose and test a psychometrically valid scale for enablers of Organizational Healing. Design/ Methodology/ Approach: Inputs were drawn from three sources – extant literature and two previous studies conducted by the authors. From these sources, individual items were developed and then the face validity was established with the subject experts, following which the remaining items were examined through a process of Exploratory and Confirmatory Factor Analysis. The proposed scale fulfills an existing gap as at present there is no psychometrically operationalized construct that could ascertain healing efficacy in varied organizational situations. This scale can help organizations evaluate their readiness for disruptive changes by assessing the levels of various healing enablers identified in this study.

OB: The Effect of Intergroup Contact on Political Views: Evidence from the COVID-19 Stay-at-Home Orders  

Author: **Thomas John Fewer**, *Rutgers U., Camden*

Research on the intergroup contact hypothesis has demonstrated that interactions across social groups affect individuals' attitudes toward outgroups, and more recently their stance on outgroup-related policies. We investigate whether these interactions have an even more foundational effect of shaping individuals' overall political ideology—deeply rooted belief systems guiding individual behavior. Our theory proposes that intergroup contact challenges the normative fit underlying in- and out-group differences, thereby influencing a core dimension of political ideology. Evidence from COVID-19 stay-at-home mandates (Study 1) and NASA's spaceflights from 1961 to 2019 (Study 2) show that intergroup contact increases voting and donating to liberal candidates and campaigns, and this effect is stronger for minorities. Establishing this link informs organizational and political scholars about the role of social interactions in shaping political views.

OB: Beyond Financial Outcomes: Assessing the Influence of ESG Tilt and Momentum on Employee Satisfaction in S&P 500 Corporations

Author: **Malte Susen**, *King's College London*

Author: **Michael Andreas Etter**, *King's College London*

Employees are a crucial resource for most companies, and they increasingly care about ESG (Environmental, Social, and Governance)- related aspects within their firms. Accordingly, studies have highlighted employee satisfaction as a crucial link between ESG and financial performance. However, how ESG impacts employee satisfaction remains only partially explored. Next to a static view of perceived ESG performance levels, acknowledging changes in ESG performance is important as expectations, interpretations, and attitudinal consequences may be impacted by how sustainability develops within organisations. We hence explore the following question: What is the effect of ESG performance and its change over time on employee satisfaction? In this paper, we draw on organisational justice theory as well as expectancy theory to theorise different impacts that ESG performance level (i.e., ESG Tilt) and changes in ESG performance (i.e., ESG Momentum) have on employee satisfaction, based on different mechanisms connected to Tilt and Momentum. We utilise a dataset from Glassdoor.com, comprising S&P 500 employee reviews from 2009 to 2017, a comprehensive ESG dataset, and automated text analysis (NLP) to test our hypotheses. Our findings confirm that a higher level of ESG performance (i.e., Tilt) increases employee satisfaction mediated by employee perceptions of organisational justice. A relationship between the changes in ESG performance (i.e., Momentum) and employee satisfaction, mediated by the expectancy of future rewards, is partly confirmed. As a key stakeholder group, our paper contributes to a more refined perspective on the relationship between ESG and employees, advancing knowledge of mediating factors in these relationships. Furthermore, we provide a novel operationalisation of organisational justice perceptions and employee expectancy through the analysis of employee reviews using natural language processing.

OB: Perception of Sustainable Change Strategy and Resistance to Change: A Moderated Mediation Model 

Author: **Meng-Hsiu Lee**, *Tamkang U.*

Author: **Yi-Sin Wu**, *Tamkang U.*

To actively respond to the global sustainable development action and the national goal of net zero emissions, Taiwanese government proposed the "Sustainable Development Roadmap for Listed Overseas Companies" in 2022 to promote all listed overseas companies in stages by 2027. Therefore, employees' perception of sustainable organizational change is imperative for enterprises. This study investigates the relationship among perception of sustainable change strategy, leader-member exchange, and resistance to change. A moderated-mediation model is proposed and tested based on the conservation of resources theory and broaden-and-build theory. This study proposes positive psychological capital as the moderator and leader-member exchange as the mediator. A sample of 362 multinational corporations (MNCs) employees in Taiwan were selected. We adopt questionnaires to collect data. Regression and the PROCESS were used for hypothesis testing. The results found that there is significant mediating effect of leader-member exchange on the relationship between perception of sustainable change strategy and resistance to change. Furthermore, positive psychological capital acts as a significant moderated-mediator, where a high value of positive psychological capital decreases the negative relationship among perception of sustainable change strategy, leader-member exchange and resistance to change. When MNCs implement sustainable change strategies, they must pay attention to and resolve the occurrence of employees' resistance to change.

Author: **Dinuka Herath**, *U. of Huddersfield*

Author: **Fred Ingram**, *Huddersfield Business School, U. of Huddersfield, UK*

Organizations in volatile, uncertain, complex, and ambiguous (VUCA) environments need strategies to survive and thrive. This paper introduces an agent-based model investigating the effects of alternating normal and abnormal conditions on organizational fitness. The model simulates a project-oriented organization with individuals interacting, completing tasks, and developing skills. Different environmental settings affect work pace, individual effectiveness, and project progress. The model illustrates how organizations exposed to periodic VUCA episodes can recover and maintain average performance. During favourable periods overall performance improved, but subsequent return to normal conditions normally led to a temporary dip. However, repeated exposure to alternating environments appears to improve long-term performance and resilience, suggesting that organizations can 'learn' from both normal and abnormal situations. Further research is needed to refine the model, investigate outliers, and explore additional agent attributes such as self-efficacy and personal resilience. This research contributes to understanding how organizations adapt and thrive in dynamic environments, offering insights for managers navigating VUCA challenges.

OB: Does Employee Perceived Invasion of Information Privacy Link to Turnover Intention?

Author: **Meng Xi**, *Tianjin U.*

Author: **Yueyue Liu**, *Hohai U.*

In the digital era, organizations increasingly collect various types of employee information data to implement digital management practices and build digital workplaces. However, this process may inadvertently infringe upon employee information privacy, potentially leading to negative consequences on their attitudes and behaviors. This study aims to investigate whether and how employees' perceived invasion of information privacy is linked to increased job insecurity and turnover intention. Drawing from psychological contract theory and employing a three-wave longitudinal study involving 355 employees, this research reveals that perceived invasion of information privacy positively predicts employee turnover intention. Furthermore, this positive relationship is mediated by employees' heightened job insecurity. Additionally, perceived supervisor support is found to moderate the positive relationship between perceived invasion of information privacy and employee job insecurity. It also moderates the indirect effect of perceived invasion of information privacy on turnover intention through job insecurity. These findings advance our understanding of the adverse consequences of perceived invasion of information privacy and offer valuable insights for organizations and managers in developing effective strategies for information privacy protection.

OB: Do More With Less: How Enactment Regulates the Work Impact of Quiet Quitters

Author: **Ilias Kapoutsis**, *Athens U. of Economics and Business*

Author: **Antonia Lampaki**, *American College of Greece*

Author: **Wayne Hochwarter**, *Florida State U.*

"Quiet quitting", a situation where an employee meets minimal effort and performance standards without exceeding expectations, has increased dramatically in recent years. Due to tight labor availability, organizations must submit to this approach in current job environments. We argue that quiet quitting is an intentional approach to managing work and non-work realities. However, outcomes are not consistent across individuals opting for this strategy. Instead, we maintain that individuals initiate quiet quitting and experience favorable results when the potential for reprimand is low. Specifically, we hypothesize that quiet quitting, in the form of self-estrangement, will lead to adverse outcomes only for individuals who failed to enact a work environment that promotes predictability and favorable coping. Using a sample of workers across various occupations and work settings, we found that enactment moderated the relationship between self-estrangement and multiple outcomes (e.g., job satisfaction, work effort, depressed work mood, citizenship, and job performance). Specifically, high estrangement workers who reported low enactment experience harmful consequences across all outcomes. Conversely, high estrangement - high enactment workers reported no ill effects for depressed mood and job satisfaction and improvements in effort, citizenship, and job performance. We provide implications of these results for science and practice, limitations, and research avenues from this study.

OB: Job Crafting in Competitive Contexts: Influence of Inter-Team Competition and Leadership Orientation

Author: **Yanbo Song**, *INSEAD*

Author: **Winnie Jiang**, *INSEAD*

This paper examines the impact of inter-team competition within an organization on employees' job crafting. Drawing on social comparison theory and self-determination theory, we hypothesized an inverted U-shape relationship between inter-team competition and team members' job crafting, moderated by the leadership orientations of team leaders. Our empirical analysis is based on a dataset comprising 722 individuals nested in 133 teams within a prominent restaurant chain in China. As expected, our findings reveal that inter-team competition had an inverted U-shaped relationship with team members' task, relational, and cognitive crafting. Intriguingly, we discovered that task-oriented leadership tends to mitigate the effects of inter-team competition on team members' task crafting and relational crafting. In contrast, relationship-oriented leadership exacerbates these effects. However, we noted that employees' cognitive crafting was not significantly affected by the interplay of inter-group competition and leadership orientation. These insights contribute to the literature on job crafting and leadership, highlighting the critical role of relational dynamics within an organization. Our study not only enhances the understanding of how an optimal level of competitive environments can boost job crafting but also underscores the pivotal role of leadership in moderating these effects, particularly in scenarios where the internal competition deviates from this optimal level.

OB: Speaking-up Fast or Slow: The Differential Impacts of Deliberate and Intuitive Voice

Author: **Mengyi Zhang**, *School of Economics and Management Tsinghua U.*

Author: **Shuye Lu**, *Tsinghua U.*

Author: **Jiawei Zheng**, *Harrisburg U. of Science and Technology*

Drawing insights from the dual-processing theory, employee voice entails both deliberate processes and intuitive ones. While traditional voice literature has mostly viewed employee voice as a rational, cost-benefit analysis, the role of intuition in voice behaviors is largely underexplored. To bridge this gap, our theory proposes that deliberate voice, due to its well-thought-out and organized nature, positively impacts individual creativity through obtaining supervisory responsiveness, whereas intuitive voice may provide more rapid but less refined suggestions, often leading to less individual creativity due to less supervisory responsiveness. However, this negative association can be mitigated by occupying voice network centrality, enhancing the voice credibility and visibility. Although intuitive voice might be less effective at the individual level, we further propose that its benefits accrue more at the team level, especially when team improvisation is high. In other words, when the team requires swift coordination, team members' collective intuitive voice is positively related to team adaptive performance. Through a pilot study, a survey involving 711 individual employees, and another survey involving 294 teams in the restaurant industry in China, our results largely support our predictions at both the individual and team levels. Theoretical and practical implications are discussed.

OB: Workplace Uncertainty Predicted Remote Withdrawal: The Moderate Role of Employability and TMX

Author: **Yingni Cai**, *The Chinese U. of Hong Kong, Shenzhen*

Author: **Wenjing LUO**, -

Author: **WANG Siqi**, -

Author: **WENFEI ZHANG**, *The Chinese U. of Hong Kong, Shenzhen*

Workplace uncertainty arises when employees perceive a general lack of information on various components of their workplace. However, the role of daily workplace uncertainty has been underexplored among full-time remote employees. Based on affective events theory, we hypothesize that workplace uncertainty in remote settings functions as a daily event capable of eliciting emotional ambivalence, consequently leading to disengagement, such as remote withdrawal at a daily level and turnover intention at an individual level. In addition, we examine the moderating effects of individual differences (i.e. external employability) as well as contextual factors (i.e., team-member exchange) on the above relationships. Results of a multi-source diary study among 120 full-time remote employees over 10 days (N = 1,099) showed that daily increasing workplace uncertainty is linked to higher remote withdrawal through heightened emotional ambivalence. Furthermore, external employability strengthens the relationship between increasing workplace uncertainty and emotional ambivalence. Team-member exchange mitigates the relationship between emotional ambivalence and remote withdrawal. Our study also assessed participants' turnover intentions after six months, revealing a positive relationship between daily remote withdrawal and turnover intention. Theoretical and practical implications are also discussed.

OB: Investigating How Side Hustles Buffer the Negative Impact of Full-Time Job Insecurity on Rumination

Author: **Linwei Gan**, *Chinese U. of Hong Kong*

Author: **Guohua Huang**, *Hong Kong Baptist U.*

Author: **Kenneth S Law**, *Chinese U. of Hong Kong*

Author: **Xueqi Chen**, *Chinese U. of Hong Kong*

Employees engaging in side hustles have become increasingly prevalent, yet our understanding of how side hustles impact full-time jobs remains limited. Such limited understanding hinders managers from developing effective organizational measures to manage employees' side hustles. Based on the goal perspective and the cognitive theory of rumination, we propose that while insecure full-time employees may ruminate about unattained security goal and thus encounter depression, those with satisfying side hustle may experience reduced negative effects. Data from 261 full-time employees with side hustles support our theorization, showing that satisfying side hustle weakened the association between job insecurity and negative rumination through stop-ruminations mechanisms, which finally leads to employees' less depression in full-time jobs. We elaborate on how these findings contribute to both theoretical understanding and practical applications.

OB: Reactions to Electronic Communication After Work: The Roles of Family Supportive Supervisor Behavior

Author: **Xin Chen**, *School of Business, Renmin U. of China*

Author: **Wei Si**, *School of Business Administration, Zhejiang Gongshang U.*

Author: **Wenliangzhu Sun**, *School of Business, Renmin U. of China*

The use of information and communication technologies (ICTs) causes more prevailing electronic communication after work, or contacts from supervisors using ICTs for work-related issues after work hours. The current study aimed to advance the understanding of the potential counterproductive outcomes of electronic communication after work. Drawing on the appraisal theory of emotion, we proposed a dual-path model linking it with two performance-related behaviors (i.e., work effort and spending time on nonwork tasks at work [STNT]) through the mediating role of employees' annoyance, respectively. We further explored the moderating role of family supportive supervisor behavior (FSSB) in the after-work context at the dimension-level. We tested our research model with a multi-source experience sampling method study. The results showed that electronic communication after work was positively related to STNT the next day via annoyance during nonwork time. In addition, two dimensions of FSSB – instrumental support and creative work-family management – exhibited opposite moderating effects on the effect of electronic communication after work. Our work deepens the understanding of electronic communication after work, FSSB, and the roles of discrete emotions in the workplace.

OB: Customer Appreciation in Side Jobs and Gig Workers' Customer Behaviors in Full-Time Jobs  

Author: **Xin Zhang**, *College of Business, Shanghai U. of Finance and Economics*

Author: **Yao Yao**, *Telfer School of Management, U. of Ottawa*

Author: **Jing Hu**, *UNSW Business School, Australia*

Author: **Hong Zhang**, *Lingnan U.*

Author: **Hailing Lu**, *Sun Yat-Sen U.*

Gig workers have been primarily characterized in previous research as independent workers who are experiencing social isolation and depersonalization, with customers being portrayed as sources of monitoring and control over their behaviors. However, it is important to recognize that gig workers also have meaningful interactions with customers (i.e., customer appreciation). This research adopts a customer interaction perspective to examine how gig workers' interaction with customers in their side jobs (i.e., receiving customer appreciation) can influence their behaviors towards customers in their full-time jobs. Drawing from theories of status, we propose that gig workers who receive high levels of customer appreciation in their side jobs may lead them to engage in both proactive and unethical pro-organizational behaviors towards customers in their full-time jobs. A four-wave and an eight-wave weekly studies revealed that customer appreciation in side jobs was positively related to proactive behaviors in full time jobs through perceived status and status motivation, but also related to unethical pro-organizational behaviors in full time jobs through perceived status and entitlement feelings. In addition, we found that when gig workers' perceived status in full-time jobs was low, the negative effect of customer appreciation on unethical behaviors was eliminated. This research contributes to a deeper understanding of the meaningful customer interactions experienced by gig workers and sheds light on the complex dynamics between side jobs and full-time jobs in the gig economy.

Author: **Teresa Hill**, *Brock U.*

Author: **Dawn Trussell**, *Brock U.*

The purpose of this study is to explore and synthesize the ways job design influences and is influenced by the power dynamics of social spaces within volunteer boards of directors. Specially, we adopted Lefebvre's spatial theory to address how power (re)produces board room spaces and how a shift in the structure of space can influence power dynamics on volunteer boards. Using ethnographic research, we observed six board of directors in nonprofit sport organizations over the course of one year with tenets of job design and spatial theory as guiding principles in data collection and analysis. The findings outline three overarching themes, 1) the construction of power through perceived formal and informal boardroom spaces, 2) disruptions of lived space shifts positional power in job design, and 3) disruptions of lived space elevates the voices of those often unheard. The findings are discussed to demonstrate consistency with and development from job design theory by recognizing the relevance of spatial theory in this conversation. In particular, the study contributes to theoretical understanding of the original conceptualization of job design by incorporating elements of Lefebvre's (1991) spatial theory to recognize and define power within volunteer boardroom spaces. Implications for research and managers are presented.

Motivation and Work Outcomes

Session Moderator: **Yuge Dong**, *School of Management, Huazhong U. of Science and Technology*

OB: **The “Double-Edged Sword” Effects of Proactive Personality on Newcomer Adjustment**

Author: **Yuge Dong**, *School of Management, Huazhong U. of Science and Technology*
Author: **Lu Zheng**, *Huazhong U. of Science and Technology*

Building on self-determination theory and research on newcomer socialization, this study examines how newcomers' need satisfaction unfolds over time and how proactive personality influences newcomer socialization outcomes via affecting the trajectory in need satisfaction. Using latent growth modeling and data collected at four points in time from newcomers (N = 168), we found that newcomers' need satisfaction declined within the first 3 to 12 months of employment. Moreover, those with a higher level of proactive personality had a higher level of need satisfaction at the beginning (3 months after entry), but underwent a steeper decline over time. Importantly, we found the “double-edged sword” effects of proactive personality: (1) proactive personality is positively related to good newcomer socialization outcomes (i.e., higher affective organizational commitment and lower turnover intention) via the initial level of need satisfaction; (2) proactive personality is negatively related to good newcomer socialization outcomes via the change (i.e., the decline) of need satisfaction over time. We discuss how these findings inform our understanding of newcomers' need satisfaction and proactive personality's influence on newcomer adjustment.

OB: **The Inverted U-shaped Effects of Algorithmic Control on the Performance of Crowdsourced Workers**

Author: **Chen Lin**, *Beijing U. of Posts and Telecommunications*
Author: **Chen Zhao**, *Beijing U. of Posts and Telecommunications*
Author: **Zhonghua Gao**, *Institute of Industrial Economics, CASS*
Author: **Jinlai Zhou**, *School of Economics and Management, Beijing U. of Posts and Telecommunic*

Algorithmic control has a profound impact and is the subject of extensive debate in academia. Drawing on the Job Demands-Resources theory, this study focuses on crowdsource food delivery riders in two surveys to explore the influence of algorithmic control on the performance of gig workers. The findings are as follows: Firstly, algorithmic control exhibits an inverted U-shaped relationship with job engagement, indicating that both excessive and insufficient algorithmic control are detrimental to job engagement. Secondly, the impact of algorithmic control on job engagement is moderated by algorithm familiarity, suggesting that higher algorithm familiarity strengthens the inverted U-shaped relationship. Thirdly, job engagement plays a mediating role in the process through which algorithmic control affects job performance, and algorithm familiarity acts as a moderator in the mediating effect. This study contribute to a comprehensive understanding of the mechanisms underlying algorithmic control and provide guidance for algorithm developers to formulate effective algorithmic strategies.

OB: **Evasive Hiding but not Playing Dumb: Employee Relative Overqualification and Knowledge Hiding**

Author: **Yanghao Zhu**, *Huazhong U. of Science and Technology*
Author: **Zejie Huang**, *Huazhong U. of Science and Technology*
Author: **Shiyinzi Huang**, *Huazhong U. of Science and Technology*
Author: **Yannan Zhang**, *Southwestern U. of Finance and Economics*

The purpose of this study is to investigate the effect of perceived relative overqualification on three dimensions of knowledge hiding behavior, and examine the mediating role of status maintenance motivation and the moderating role of zero-sum mindset. We collected survey data from 276 employee-coworker pairs in China at three-time points. The results show that perceived relative overqualification has a negative effect on employee playing dumb via status maintenance motivation, and has a positive effect on employee evasive hiding via status maintenance motivation. However, perceived relative overqualification has a non-significant effect on employee rationalized hiding via status maintenance motivation. In addition, we find that employee zero-sum mindset moderates the indirect effects of perceived relative overqualification on employee playing dumb and evasive hiding through status maintenance motivation. By breaking down the dimensions of knowledge hiding, this study attempts to reconcile the conflicting conclusions about the relationship between overqualification and knowledge hiding behavior, and also reveal the mechanism and boundary conditions.

OB: **Too Happy to be Engaged: How Does High-Activated Positive Emotion Lead to Procrastination**

Author: **Weili Zheng**, *Shanghai U. of Finance and Economics*
Author: **Huan Cheng**, *Huazhong U. of Science and Technology*
Author: **Changhong Lyu**, *Shanghai U. of Finance and Economics*

Can high-activated positive emotions lead to procrastination? Exploring this question, our research integrated the literature on mind wandering and self-regulation theory to construct and test a theoretical model of high-activated positive emotions increase workplace procrastination through mind wandering, and examine the moderating role of emotion regulation ability and intrinsic motivation. Results of an experience-sampling study involving 116 full-time employees show that high-activated positive emotions are significantly and positively correlated with mind wandering and further increase employees' procrastination behavior. Emotion regulation ability and intrinsic motivation play moderating roles between high-activated positive emotions and mind wandering. That is, for employees with higher (lower) emotion regulation ability or when employees reported higher (lower) intrinsic motivation for their work tasks, high-activated positive emotion has a weaker (stronger) positive effect on mind wandering. Our research sheds light on the potential costs of positive emotion and helps us better understand workplace procrastination.

Discussant: **Sim B. Sitkin**, *Duke U.*

To explore the diverse mechanisms of how power influences trust, this symposium includes studies that introduce diverse perspectives using diverse methodological methods. The research questions answered in these studies consider how the power and trust of a buyer-supplier dyad influence each other, if and why power influences trust after third-party trust violations, how power influences self-disclosure which then influences trust, and when people are more trusting of those with power and those with more power are more trusting of others. These studies examine questions in various contexts including interpersonal relationships, buyer-supplier relationships, supervisor and subordinate relationships, and third-party relationships. They also utilize diverse research designs and statistical methods including lab experiments, field surveys, meta-analysis, and Actor-Partner Interdependence Model. Following the study presentations, Dr. Sim Sitkin will serve as the symposium's discussant. Renowned for his seminal contributions to the field including numerous influential journal articles and books on the topic of trust and control, Dr. Sitkin will comment on the four presentations and offer an analysis on trust and power in organizational contexts. His insights promise to deepen the discourse of this symposium and enrich our understanding of the interplay between power and trust.

The papers in this symposium explore the complex interplay between work experiences and employees' post-work recuperation. Together, this set of research illuminates the intricacies of recovery processes pivotal in the wellbeing of employees and examines the practices and strategies people employ to enable smooth work and non-work experiences. The first paper probes the 'recovery paradox,' spotlighting the significance of psychological detachment in high-stress work scenarios. The second paper proposes after-work rituals as a valuable practice, substantiated by field experiments and surveys. The third paper delves into the often-neglected aspect of reattaching to work, tying it to fundamental psychological needs and work-related outcomes. Lastly, the fourth paper scrutinizes proactive pushbacks against the prevailing 'always-on' work culture, evaluating its work and non-work implications for employees. Together, these papers present novel theoretical insights and empirical evidence, shedding light on the dynamics between work, recovery, and employee well-being. The symposium offers new directions on recovery research and the importance of fostering a more robust and healthier relationship with work.

This symposium aims to advance understanding of presenteeism through innovative discussions and research. It includes papers using person-centered approaches to analyze decision-making and attendance behavior patterns, alongside studies on gender, health, and the impact of organizational practices during COVID-19 on presenteeism. Additionally, it explores the consequences of presenteeism, using a blend of quantitative and qualitative methods to examine individual experiences within organizations.

Unravelling the Relational Impacts of Work Digitization

Organizer: **Hodar Lam**, *Lingnan U.*
Organizer: **Sut I Wong**, *BI Norwegian Business School*
Presenter: **Alejandro Hermida Carrillo**, *LMU Munich School of Management*
Presenter: **Birke Laubinger**, *LMU Munich*
Discussant: **Meir Shemla**, *Erasmus U. Rotterdam*
Presenter: **Jestine Philip**, *U. of New Haven*

The increasing work digitization (exacerbated by the COVID-19 pandemic) may have boosted some task-oriented work outcomes, but because work relationships become more instrumental, there may be some unintended yet unexplored relational impacts on employees (e.g., inability to psychologically detach, loneliness). In the current symposium, we bring together scholars across the globe to explore when, why and how work digitization has relational consequences for employees as well as to critically reflect on and discuss current issues in research on workplace relationships in digital work contexts. Drawing upon a variety of methodologies (e.g., experiments, longitudinal dyadic survey, theory piece, and systematic review) and different levels of organizational analysis, our presenters shed light on (a) how expressing solitude (i.e., enjoying working alone) in remote work is evaluated by colleagues, (b) the spillover of always-on culture on partner violence at home, (c) relational crafting in human-AI teaming, and (d) the role of hierarchy and its differentiation in virtual work. We conclude with an integrative summary that showcases key insights from the presentations and important research questions to address moving forward. Finally, we aim to provide practical insights into what both employees and organizations can do to mitigate the unintended relational impacts in today's digitalized workplaces.

Impressions and Expressions of Creativity: Expanding our Understanding of Creativity

Organizer: **Lynne Catherine Vincent**, *Syracuse U.*
Organizer: **Joel B. Carnevale**, *Syracuse U.*
Discussant: **Jack Anthony Goncalo**, *U. of Illinois at Urbana-Champaign*

In their 2023 introduction to a special issue on novel research on creativity published in *Organizational Behavior and Human Decision Processes*, “Escaping irony: Making research on creativity in organizations more creative,” Berg and colleagues argued that “Like most literatures as they mature, the creativity literature has become—ironically—less creative.” They maintain that while novelty exists in creativity research, there is a shift to incrementalism. Lua, Liu, and Shalley (2023) echoed Berg and colleagues’ call for new directions in creativity research and highlighted underdeveloped areas in creativity research in their review and synthesis of creativity research. Consistent with this theme and to answer recent calls for novelty and more radical approaches to creativity research, our symposium brings together five papers that push the field forward by looking at underexamined and newer forms of creativity such as creative reputation and unexpected precursors to creativity such as genetics. Utilizing various methodologies (e.g., experimental, survey-based, longitudinal), the studies included in this symposium explore a diverse set of contexts and conditions that examine creativity in new ways, thus demonstrating the novelty and significant advancements in creativity research.

Although much research exists on the antecedents and consequences of voice aimed at improving organizational efficiency, we know relatively less about antecedents of ethical voice. Ethical voice likely has a unique set of antecedents and consequences, due to its focus on societal ethical principles or super organizational interests that may conflict with organizations' bottom-line goals. The purpose of this symposium is to advance our understanding of antecedents of ethical voice (and silence) and the underlying mechanisms by highlighting limitations of existing research and providing new insights.

This symposium presents an in-depth exploration of the transformative impact of Artificial Intelligence (AI) on business and organizational operations. This symposium brings together a diverse range of research that delves into the multifaceted relationship between AI and various business aspects, including corporate social responsibility, human resource management (HRM) practices, and employee psychological experiences. Li, Zhu, and Yang's presentation initiates the symposium with an investigation into the U-shaped relationship between AI adoption growth rate and Corporate Social Responsibility (CSR) in Chinese firms. Utilizing the resource-based view and data from the China Stock Market and Accounting Research (CSMAR) database, this study reveals the nuanced evolution of AI integration and its implications for CSR. Ge, Song, Zhang, Zhong, and Tian follow with an examination of generative AI, particularly ChatGPT, in HRM practices focusing on age-diverse workforces. This study compares ChatGPT's responses in HR decision-making scenarios with those of human professionals, highlighting the potential of AI in enhancing HRM efficiency and reducing age-based biases. Klonek and Hirschi's presentation shifts the focus to AI's rapid integration into workplaces and its impact on work design and employee outcomes. Analyzing a vast dataset of tweets related to ChatGPT and work experiences, this research quantifies key work design experiences and employee attitudes, revealing both positive and negative effects of AI on job design and employee wellbeing. Lastly, Wu, Liu, Ruan, and Chen's presentation investigates the augmentation effect of generative AI collaboration on human task performance and its psychological impacts. Through an experimental design involving tasks with and without ChatGPT assistance, this study uncovers the nuanced psychological effects of AI-human collaboration, highlighting the importance of balancing AI benefits with human psychological wellbeing. Overall, the symposium underscores the necessity of understanding the complex dynamics between AI and business to effectively navigate the evolving landscape of AI in the business world. It offers valuable insights for policymakers, corporate leaders, and stakeholders in harnessing AI's potential while addressing its challenges and ethical considerations.

Extracting Wisdom from Experience: Lessons for Change Management

Session Moderator: **Bertrand Audrin**, *EHL Hospitality Business School, HES-SO*

ODC: **Making Sense of Emotions in Massive Layoffs: The Case of #techlayoffs**

Author: **Bertrand Audrin**, *EHL Hospitality Business School, HES-SO*

The purpose of this study is to investigate how victims, survivors and external actors make sense of massive layoffs, and on the role of emotions in their sensemaking and sensegiving process. Public posts on LinkedIn were collected and a discourse analysis was conducted to identify which categories of emotions were displayed and how they might impact organizational actors' sensemaking and sensegiving of massive layoffs. Results show that the sensemaking and sensegiving process that surrounds layoffs differs depending on the category of actors and centers on emotions and people. For some groups of actors, it also includes considerations of time and rational analyses. This study provides novel insights on layoffs' sensemaking by investigating how several groups of actors deal with major turmoil in an industry. The focus on emotions makes different phenomena visible for each group of actors.

ODC: **Sensemaking Responses to Power Issues Among Entrepreneurial Co-Founders**

Author: **John-Erik Hassel**, *Karlstad U.*

Author: **Hans Björkman**, *Karlstad U.*

Author: **Christina Öberg**, *Linnaeus U.*

This paper addresses co-founder responses to power issues in new firm creation processes. Issues deriving from distributed ownership and lack of process control, may lead to co-founders responding in a variety of ways, such as by terminating a vesting schedule mistimed, by using the experience as a learning opportunity, by embracing the opportunity as a traditional job situation, or by acting as lead founders in full control. We traced co-founder responses to power issues in new venture creation processes through an exploratory, longitudinal study, collecting data from forty interviews with sixteen co-founders in a venture builder context. The analysis was conducted using a sensemaking lens. Venture builders are privately owned organizations dedicated to repeatedly engaging in new venture creation in collaboration with individual entrepreneurs, or co-founders. Although most nascent entrepreneurs seek independence as motive for starting a new firm, the level of independence is challenged by factors of distribution of ownership and control risking to create dissonance. The contribution of this paper has implications for entrepreneurship theory in how the individual sensemaking process may influence entrepreneurial persistence in situations with limited or reduced ownership and process control. For practitioners in the venture builder community, these findings are of importance as to how to pursue a career as an entrepreneur in such context. The paper therefore adds to the understanding of distribution of control among co-founders in new ventures.

ODC: **How Co-Evolving Sensemaking and Trust Formation Shape Multi-Change Realisation**

Author: **Maria Bak Skov**, *N/A*

Author: **Toke Bjerregaard**, *Nottingham Business School, NTU*

Author: **Jesper Rosenberg Hansen**, *Aarhus BSS, Aarhus U.*

This paper investigates the evolution and mediating effects of trust as change recipients make sense of multiple, premeditated changes. It advances understanding of trust as a mechanism through which interactions between multiple, concurrent changes generate organisational outcomes. We draw on case-study findings to develop a conceptual model of the dynamics and effects of trust formation in realising multiple changes. Our study reveals how recipients' practices of making and sharing sense about multiple changes co-evolve with change agent-recipient trust formation processes, thereby shaping change realisation. These practices include sensemaking of (1) concurrent changes as an overall change effort, (2) interactions between concurrent changes, and (3) individual changes through concurrent changes. We further elaborate and complexify these explicit links from interactional dynamics between changes via trust to change outcomes by explaining how distrust is generated and causes resistance even to non-divergent changes. The article contributes an empirically grounded model explaining seemingly unanticipated processes and outcomes in multi-change processes. The model accounts for practice-based dynamics that explain how and why resistance to even non-divergent change occurs. We conclude with practical implications for dealing with multiple changes.

ODC: **How Innovation Failure Affects Organizational Strategy? The Role of System Thinking and Risk Perception**

Author: **Rui Zhao**, *liaoning technical U.*

Author: **Lixia Niu**, *liaoning technical U.*

Author: **Shiquan Wang**, *Northeastern U. China*

Innovation failure is common and of unique value, but few studies have examined how innovation failure affects enterprises' future organizational strategy. Based on the performance feedback theory, this study constructs a "Failure Feedback - System Thinking - Strategy Response" modeling framework to explore the mechanism by which innovation failure affects organizational strategy. We examined this by considering system thinking as a mediator and risk perception as an essential contingency variable. The results of 364 survey data collected from high-tech small and medium-sized enterprises (SMEs) in China indicate that system thinking mediates the effect of innovation failure on organizational strategy. The contingency analyses also revealed that the positive impact of system thinking on imitation strategy is stronger at high levels of risk perception. However, the relationship between system thinking and innovation strategy is weaker when the risk perception is high. The implications of the findings are discussed.

Tailored Solutions: Customizing Change Interventions for Different Contexts

Session Moderator: **Roman Terekhin**, *George Washington U.*

ODC: **How Peer Coaching Groups Benefit Development and Wellbeing and Why They Differ from Work Teams**   

Author: **Roman Terekhin**, *George Washington U.*

Peer coaching groups (PCGs) are widely implemented in the workplace. However, few empirical studies have explored the purported antecedents and outcomes from case studies and qualitative research. Additionally, extant studies on PCGs give little regard to controls or comparative groups when assessing the efficacies of PCGs. This study is the first to investigate the effects of antecedent group characteristics on outcomes in PCGs compared to Administrative Groups (ADMGs). Results indicate PCG members experience a greater sense of belonging and quality of relations than do members in ADMGs. The continuity of relationships beyond regular meetings is more important in PCGs, positively influencing the quality of relationships (QR) and sense of belonging in the groups. QR also mediates the effect on the sense of well-being in PCGs. Additionally, for both PCGs and ADMGs, Group Emotional Intelligence (GEI) boosted participants' quality of relations, sense of belonging, and individual development, with the effect being stronger in PCGs for the latter. At the same time, a sense of belonging in ADMGs mediated GEI's impact on engagement at work. The findings show that adding PCGs to an organization's array of developmental activities can enhance many factors affecting employee engagement, motivation, and well-being.

ODC: **Appreciative Inquiry: A systematic review and future research agenda**  

Author: **Abhipsa Dash Bhatt**, *Doctoral Student at Indian Institute of Management Lucknow*

Since its birth, Appreciative Inquiry (AI) has carved a niche in the organizational development domain. Despite the widespread application, a gap exists in our understanding of the theoretical anchors of AI and its subsequent practical applications. Relying on the two relational bibliometric techniques of co-citation analysis and bibliographic coupling, we identify influential works and recent trends for research published between 1991 and 2023 (N= 68). We add to the scholarly dialogue by interpreting emerging trends in AI literature, such as implementing it in conjunction with multiple theoretical lenses, applying it as an evaluating instrument and creating a perception of safe cognitive and emotional space for vulnerable participants. The findings reveal a lack of holistic application of AI, limiting it to a few contexts. As an important contribution, the systematic approach to synthesizing earlier research enables us to identify the prevailing practice, thereby presenting opportunities to add to the scholarly conversation by outlining future research potential.

ODC: **How to Create a Mindful Community of Practice: Social Functions of Group Mindfulness During COVID-19** 

Author: **Jutta Tobias**, *City U. London*

This qualitative study was conducted to explore the experiences of individuals who have been participating in online mindfulness sessions since the beginning of Covid-19. In particular, its aim was to understand the social functions of regularly practicing mindfulness in this online community of practice. Analyses from semi-structured interviews revealed that the group-based setting and actively sharing thoughts and feelings during the mindfulness sessions helped improve participants' Mind-Body awareness and helped foster a unique sense of social connection. These findings are discussed through the lens of interdependence theory, resulting in several testable propositions on how to create a mindful community of practice. The study concludes with recommendations for follow-up research as well as for mindfulness practitioners intent on creating a sustainable mindful community in their workplace, educational setting, or neighborhood.

ODC: **A Learning Journey: Unveiling the Dynamics of Post-Acquisition Integration Experiences**

Author: **Jana Sophie Herbig**, *Toulouse School of Management*

Author: **Carlos Alfredo PLATA**, *TSM-Research, U. of Toulouse Capitole*

This paper delves into the critical phase of post-acquisition integration, exploring the experiences and learning dynamics of the post-acquisition integration processes. Studying a specific acquisition, involving an entrepreneurial firm and a multinational enterprise, through an in-depth, longitudinal, qualitative case, we shed light on the complex interplay between autonomy, integration, and communication in the post-acquisition integration. We emphasize the challenge of different identities, leveraging the resources of the acquiring and acquired entity, while also creating a delicate balance that fosters innovation and operational efficiency. The findings highlight key learning outcomes, ranging from cultural and operational integration to market expansion, technology acquisition, and employee mindset. Importantly, our research contributes to the field by offering a qualitative perspective that transcends the limitations of prior studies relying on secondary data and quantitative methods. This paper not only provides valuable insights into learning from acquisition experience but also underscores the strategic importance of effective communication and expectation management during post-acquisition integration.

The “How” to “Why?": How Org. Purpose Drives Clarity, Confidence & Commitment for Innovation

Participant: **Patty Ann Lindstrom**, *Benedictine U.*

Participant: **Frank J. Barrett**, *Case Western Reserve U.*

Participant: **Richard E. Boyatzis**, *Case Western Reserve U.*

Participant: **Margaret D. Gorman**, *A23Advisors*

Participant: **Ed Williams**, *CEO, Sionic Energy*

The focus of this symposium is to introduce new empirical data and a model supporting how organizational purpose is transformed into the culture, strategic directives, practices and functional areas of organizations leading to value creation for employees, the organization, and society while advancing environments of change and innovation. The empirical data and accompanying model from recent research focus on shifting from “why” a company should have a purpose to “how” the purpose is implemented in environments of innovation and change. This focus is rare and only now seems to be getting the attention deserved. Building on recent empirical research, this symposium will explore the key themes which activate and accelerate the human impact of the implementation of organizational purpose on environments of change and innovation. The members of the panel have academic, as well as practitioner backgrounds, and represent supporting research initiatives.

Culture as the Gatekeeper To Success: Realize, Reorganize, Run With It

Panelist: **Jennifer Seyler**, *Benedictine U.*

Discussant: **Ram Tenkasi**, *Benedictine U.*

Panelist: **Adekemi A. Akindutire**, *Benedictine U.*

Panelist: **David Anderson**, *Benedictine U.*

Panelist: **Robert Cooke**, *U. of Illinois at Chicago*

Culture can be seen as a gatekeeper to driving success in organizations of various types and demographic profiles. Organizational conditions shape members' understanding of the expected ways to behave at work, thus creating the overall culture. The resulting shared expected behaviors govern effectiveness criteria, such as creating fruitful policy, formulating purpose, and overall effectiveness, including innovation. The challenge for change agents and managers is discovering how to uncover and manage the change process, given members' different identities, values, and ethnic backgrounds. To address this challenge, panelists will discuss their experience with various organizational environments, specifically a not-for-profit in the process of succession planning, a police department under pressure to rebuild trust in the community, an organization expanding globally, and organizational culture measurement and application, specifically the Organizational Culture Inventory® (OCI®). The panelists will take part in a formal, moderated, interactive discussion of (1) the importance of culture in driving outcomes within organizations; (2) the panelists' personal research experience that demonstrates culture being a barrier or potential enabler to action; (3) the relationship between culture and the mission; and (4) how each variable is interconnected with the others, particularly in how organizational factors contribute to a desirable organizational culture. They will do this by discussing how they became aware that culture needed to be addressed (Realize), how they accepted the realities and determined interventions (Reorganize), and the actions that took place (Run With It).

(Re) Crafting Professional Identities

Session Moderator: **Dongil Jang**, *U. of Minnesota*

OMT: **Ability, Visibility, or Credibility? Occupational Category Spanning with Profile-Based Matching**  

Author: **Dongil Jang**, *U. of Minnesota*

Author: **Alan M. Benson**, *U. of Minnesota*

Author: **Ming De Leung**, *U. of California, Irvine*

The use of online profiles generates new matching opportunities by making worker information public. Workers use occupational labels to signal their expertise concisely. Under this context, workers may attempt to increase their employability by affiliating with multiple occupational categories. While the signaling strategy can be successful by extending the pool of potential recruiters, it may also cause negative reactions due to its lack of focus. The study approaches the dilemma by applying categorization theory from economic sociology. We hypothesize that claiming multiple categories may increase the attention workers receive but decrease their credibility. To test the mechanisms, the study exploits an exogenous change of category visibility in a South Korean job-matching platform. The platform suddenly deleted occupational categories from the user list without prior announcements. The results show that category spanners received greater profile views but fewer interview offers when the occupational affiliations were visible. The decoupling of attention and legitimacy challenges the traditional idea that inattention to category spanners drives the social penalty. The study concludes with implications for the online labor market, platform design, and boundaryless career literature.

OMT: **Early-Career Scholars in Pursuit of Impactful Careers: Navigating the Science-Activism Paradox**    

Author: **Katrin Heucher**, *Faculty of Economics and Business, U. of Groningen*

Author: **Suwen Chen**, *U. Of Sydney*

Author: **Marleen Wierenga**, *Nijmegen School of Management*

Author: **Sylvia Grewatsch**, *Brock U.*

The evolving role of management scholars in business schools is becoming increasingly focused on research impact, particularly in addressing society's grand challenges. However, scholars pursuing impactful careers face seemingly contradictory demands in balancing science and activism. This study aims to understand how management scholars pursuing impactful careers navigate the paradox of science and activism. By examining the experiences of 22 early-career management scholars pursuing impactful careers, the study identifies presenting dilemmas, three phases of experiencing the paradox (i.e., inquiring, immersing, and introspecting), and zooms into the transition points between phases. Thereby, it contributes to the literature on paradox by revealing the interplay between the salience and intensity of experiencing paradox. It also contributes to the discussion on research impact and provides an empirically grounded perspective. Finally, we draw implications by applying paradox theory to foster a constructive debate on how scholars can excel in both scientific and activist roles in the face of grand challenges.

 OMT: **Crafting Identities in Platform Work: Interactions and (Dis) Identification Among Food Delivery Riders**  

Author: **Stella Kyrtzi**, *U. of Edinburgh*

Author: **Corentin Curchod**, *U. of Edinburgh*

Author: **Michelle O'Toole**, *U. of Edinburgh business school*

Workplace interactions are significant for shaping individual self-formation and organizational identification. With the emergence of the platform economy, traditional workplace dynamics have shifted towards more impersonal and transient interactions, raising questions about how platform workers establish coherent identities while navigating such interactions. This study investigates the impact of these interactions on self-identity formation among UK food delivery platform workers. Through qualitative interviews with 47 food delivery riders and an immersive 35-weeks long ethnography, our research reveals an unexpected trend. Contrary to heavily relying on external interactions for identity formation, workers tend to simply disidentify from external stakeholders involved in their work processes after experiencing feelings of not fitting in with them. Instead, they find strong internal connections among themselves based on shared social traits and focus on the inner dimensions of peripheral job elements to reconstruct their shaken identities. This approach allows them to cultivate a sense of pride and resilience. This paper contributes to the literature by challenging conventional anchors of occupational identity like organizational and customer identification. It further connects occupational identity research with the emerging platform literature and highlights the influence of minority status on platform work identity.

 OMT: **New Professionals and Experiences of Extreme Values Violations: A Study of Novice Physicians in Kenya**  

Author: **Stephanie Nzekwu**, *Warwick Business School*

Author: **April L. Wright**, *Warwick Business School*

Author: **Gerry McGivern**, *King's College London*

Author: **Jacinta Nzinga**, *KEMRI WELLCOME TRUST*

Author: **Mike English**, *U. of Oxford*

We explore how novice professionals experience and respond to violations of professional values that are severe and recurring when working at the organizational frontline in highly resource-constrained contexts. We investigate this important question through a qualitative study of novice physicians undergoing internship training in public hospitals in Kenya as new entrants into the medical profession. Our findings show that lived experiences of extreme values violations are variously interpreted in relation to selfhood, shared professional identity, and fatalism. For individual professionals, these triggers activate cycles of moral emotions and practical actions leading to systemic outcomes along three different pathways: traumatized departure, peer-supported survival and pragmatic acceptance. Our study makes three contributions to the literature on professions and values. We develop a new concept of 'extreme values violations' as institutionally embedded in resource-constrained contexts. We cast fresh light on theories of professional socialisation and identity construction through a dynamic process model of how novice professionals cognitively, emotionally and practically navigate extreme values violations in frontline work. Finally, we offer insight into the grand challenge of healthcare in Africa and open up the boundary conditions of Western explanations of how professional values shape frontline work.

Presenter: **Eero Vaara**, *U. of Oxford*
Presenter: **Amna Chaudhry**, *U. of Edinburgh business school*
Presenter: **John Matthew Amis**, *U. of Edinburgh*

This symposium delves into the dynamics of migration and forced displacement, emphasizing challenges and opportunities in the inclusion of refugees and migrants in organizations, society, and the labor market. As migration reaches historic highs, with 108 million forcibly displaced, and a surge in global migration, achieving the UN Sustainable Development Goal #16 for inclusive societies is critical. Despite benefits, challenges persist, such as discrimination and inequality, revealing an ambivalent and paradoxical inclusion experience. The symposium, spanning diverse contexts, migration states, and inclusion needs, explores belonging, integration struggles, and challenges in agency, representation, and labor market discrimination. The goal of the symposium is to provide insights on the benefits and challenges of inclusion, and to connect these findings with wider discussions and future research opportunities in organization and management theory.

Strategic Decision Making: The Dance Floor and the Balcony

Session Moderator: **Muhammad Aftab Alam**, *School of Business and Law, Edith Cowan U.*

OMT: **Taking, Giving, or Matching Resources? How Theories of the Firm Inform Open Innovation Activities**

Author: **Muhammad Aftab Alam**, *School of Business and Law, Edith Cowan U.*

Resource-taking, resource-giving, and resource-matching are the three main open innovation activities between firms seeking competitive advantage. Based on the resource-based view, open innovation scholars argue for resource-taking and protection strategies because resource-giving can dilute competitiveness. In contrast, the relational view researchers promote resource-giving because it expands the social network and elevates a firm's position to gain preferential access to unique resources in the ecosystem. The middle lane between resource-based and relational views upholds resource-matching strategies to perpetuate tit-for-tat reciprocity. A common notion across these approaches to competitive advantage is the positive role of inter-firm trust. To integrate these different perspectives in an open innovation context, we develop and empirically test a model of three-way interaction among a firm's strategic orientation, open innovation activities, and trust and analyze their impact on innovation performance. Preliminary interviews with 44 managers followed by a survey of 390 innovating firms in Australia reveal that the innovation performance of TAKERS, GIVERS, or MATCHERS (firms named according to dominant open innovation activity) varies across levels of trust. The GIVERS, owing to a higher level of trust, experienced the highest impact of strategic orientation on competitive advantage followed by TAKERS and MATCHERS (lowest). Our integrative framework allows comparing, contrasting, and integrating various perspectives at the firm level. The implications for research and practice are discussed.

OMT: **A Relational Perspective on CEOs' Use of Powerless Language**

Author: **Radina R. Blagoeva**, *U. of Georgia*

Author: **Abhijith Acharya**, *Wilfrid Laurier U.*

Author: **Scott Graffin**, *U. of Georgia*

Author: **Joanna Reddick**, *U. of Georgia*

We provide a relational perspective on CEO communications by studying the antecedents and consequences of CEO powerless language during conference calls. Building on politeness theory, we theorize that CEOs' perceived image threat relative to that of analysts guides CEOs' powerless language usage during public interactions. The more threatening the interaction for the CEO image, as suggested when analysts and directors have longer tenure than CEOs, the less powerless language CEOs use to appear as competent leaders. The more salient the threat to the analysts' image, as suggested when CEOs have prior public director or CFO experience, the more powerless language CEOs use to protect the analysts' image. We further theorize and find that directors react negatively and participating financial analysts positively to CEO powerless language.

OMT: **Decoupling Digital Actions and Narratives: The Role of Firm Status**

Author: **Jiuyu Dong**, *Dalian U. of Technology*

Author: **Elena Golovko**, *Tilburg School of Economics and Management (TISEM), Tilburg U.*

In this study, we explore the factors that drive the decoupling behavior of firms, using digitalization as a context. We posit that digital decoupling is shaped by a firm's position within its market. Drawing on neo-institutional theory and the status literature, we propose that firms with middle status are most likely to engage in decoupling behavior, emphasizing digital reporting to align with stakeholders, while missing on substantive digital actions. We then examine how institutional and industry factors affect might influence the choice for decoupling among firms with different status. Our analysis uses data from Chinese listed companies between 2011 and 2021, with results generally supporting our hypotheses.

OMT: **How Important is Organizational Vision? A Meta-Analysis**

Author: **Jisun Kim**, *U. of Mississippi*

Author: **He Gao**, *U. of Delaware*

Author: **Hyun-Soo Woo**, *U. of Mississippi*

Author: **Albert Cannella**, *Texas A&M U., College Station*

What are the implications of an organization's statement of its desirable future? Organizational vision is often communicated by CEO and top executives to deliver an important message to both internal and external stakeholders—that is, what the organization aims to become in the future. Although management scholars acknowledge the positive influence of a vision on organizations, including motivating employees, facilitating innovations, and improving organizational performance, there is limited consensus regarding the benefits of organizational vision for organizational outcomes. In particular, it remains unclear whether vision matters, and if so, when it matters more or less. A meta-analysis on organizational vision can contribute value to the fields of management, spanning strategic management, leadership, and entrepreneurship studies, by synthesizing theories and statistically aggregating empirical findings to test the relationship between vision and four key organizational outcomes: employee attitudes, employee behavior, innovation, and corporate financial performance. We also examine two significant contingencies in the importance of organizational vision—types of vision and organizational size. Our findings, based on 60 empirical studies and 245 relevant effect sizes, provide a critical foundation for future research to further advance this field and explore more complex mechanisms behind these relationships.

Theorizing Stigma: Lessons from Luna Lovegood

Session Moderator: **Carine Farias**, *IESEG School of Management, France*

OMT: **Stigmatized Artefacts: Towards a Relational Process of Artefact Stigmatization and Sanitization**

Author: **Carine Farias**, *IESEG School of Management, France*
Author: **Lee Charles Jarvis**, *Warwick Business School*
Author: **Tapiwa Winston Seremani**, *IESEG School of Management, France*

If the literature on organizational stigma has boomed in recent years, little attention had been paid on stigmatizing processes originating from the artefacts that target organizations produce. Artefacts are symbolically connected to the organizations that has produced them, opening the risk of stigma-transfer. Yet, once an artefact is released to the public, it becomes physically independent and amenable to appropriation by users, including potential stigmatizing groups. By operating material and socio-symbolic alterations on products after their public release, the growing “custom” market opens the possibility of inscribing stigma onto artefacts. Based on a qualitative study of the release of the “Satan Shoes,” an unauthorized customization of Nike shoes by MSCHF and Lil Nas X, we investigate how the stigmatization of an existing artefact operates and how the target organization manages the risk of artefact-based stigma transfer. Our findings reveal that the stigmatization of an artefact is a relational process between uncoordinated actors. First, stigmatizing organizations appropriate and transform the material qualities and socio-symbolic meanings of the artefact. Then, stigmatizing organizations and artefacts’ overt sanctioners amplify the stigma around the artefact, pushing the target organization to engage in stigma management. This leads to an escalation that could be both damaging for the stigmatizing organizations and their target. Both parties then de-escalate by sanitizing the artefact and settling the conflict, which facilitate the growth of artefacts’ overt supporters.

OMT: **Neighborhood Stigma and Romani Entrepreneurship: Evidence from an Audit Study in the Czech Republic**

Author: **Grady Wallace Raines**, *Cornell SC Johnson College of Business*
Author: **Peter Polhill**, *ILR at Cornell*
Author: **Wesley Sine**, *Cornell U.*

We study the impact of neighborhood stigma on entrepreneurship. Through an audit study conducted in the Czech Republic, we sent over 700 emails to bank branches, inquiring about business loans while manipulating the perceived location and race of the entrepreneur (Romani vs. Czech). The results reveal a compounded disadvantage for entrepreneurs perceived as racial minorities and those based in stigmatized neighborhoods, particularly when these factors coincide. The study contributes to existing literature by demonstrating how neighborhood stigma, distinct from other forms of discrimination, may also explain some of the bias faced by disadvantaged entrepreneurs. It also extends the discourse on the impact of stigma on entrepreneurship, by showing how overlapping identities compound challenges. and focusing on its geographic dimension.

OMT: **How Organizations Enable the Disclosure of Individuals’ Concealable Stigmas**

Author: **Jan Stephen Lodge**, *Rotterdam School of Management, Erasmus U.*
Author: **Wesley Helms**, *Brock U.*

In this paper we theorize how organizations shape the disclosure experiences of individuals with concealable stigmas. To do so, we undertake an inductive study across different organizations that employ formerly incarcerated individuals with diverse disclosure preferences concerning their stigma. Through examining organization’ efforts to shape the disclosure of individuals at work and the consequences these efforts have for individuals, we find that individuals felt most supported and enabled in their disclosure when organizations were able to create contexts in which individuals felt in control over their disclosure. Our investigation counterintuitively revealed that many formerly incarcerated employees felt their disclosure and their control over it most disrupted when confronted with well-intended but highly public support activities by organizations, as they were perceived to cued stigma in the eyes of many. Taken together, we conclude with a model of organizational disclosure control, highlighting the different organizational efforts and consequences for stigmatized employees in the workplace.

Navigating Complexity and Pluralism

Session Moderator: **Chris Moos**, *U. of Oxford*

OMT: **Configurations of Institutional Pluralism: MBA Candidates' Assessments of Business Schools' Responses to Plural Institutional Expectations**

Author: **Chris Moos**, *U. of Oxford*

Author: **Michael Smets**, *U. of Oxford*

How do prospective students assess MBA programs according to their conformity with plural institutional expectations? We address this question using a Fuzzy Set Qualitative Comparative Analysis of MBA candidates' GMAT test submissions to MBA programs to develop a configurational approach to institutional pluralism. Our configurational approach advances our understanding of business schools and institutional pluralism in three ways: First, our concept of configurational relationality transcends the dominant dichotomy of logics being universally conflicting or compatible and reflects how their relationality depends on the configuration in which they coexist. Accordingly, in the business school field, there is plurality in pluralism. Second, our concept of pluralistic assessors challenges the prevailing notion that MBA candidates represent a single normative order. We show how MBA candidates holistically assess organizational responses to multiple norms, and demonstrate how conformity with additional institutional expectations may be detrimental: Sometimes, less is more. Third, the concept of comparative evaluation of conformity shows the different ways in which business schools can accomplish social approval. Rather than the predominant view of business schools having to follow one path to gain approval from stakeholders, this provides evidence of the multitude of ways in which business schools can combine conforming, and not conforming with plural institutional expectations. These contributions are significant as configurations of multiple expectations and their holistic evaluation by pluralist assessors are of growing empirical in the business school field and beyond, i.e., in the context of ESG or the "triple bottom line".

OMT: **Navigating Complexity: The Role of Motivated Denial in Policy Decisions**

Author: **Adrienne Mishel Kafka**, *Fuqua School of Business, Duke U.*

In a world that's changing faster than ever anticipated, due to factors such as technology, globalization, and climate change, decision-makers are consistently faced with ambiguity, complexity, and the unknown. In this paper, we theorize a dual pathway model of cognitive and social factors that contribute to the motivated denial of complex stimuli in policy-related decisions, both political and organizational, and potential implications. As the foundation of our model, we provide a working, contextual definition for complexity, explore the optimal balance of complexity and simplicity in decision-making, and discuss how individual differences impact the processing of complexity. We also review potential interventions that may improve decision-making in complex decision environments. Altogether, our paper advances research on complexity in decision-making and yields practical insights that can help leaders and managers approach today's nuanced policy challenges.

OMT: **Authoritarian Leadership and Democratic Administration as Responses to Institutional Complexity**

Author: **Roman Gibel**, *U. of Zurich*

Author: **Florian Ueberbacher**, *Montpellier Business School*

Author: **Andreas Georg Scherer**, *U. of Zurich*

Ongoing scholarly attention is directed to organizational responses to institutional complexity. However how heterogeneous institutional demands are processed by organizations is only marginally analyzed. We build on the concept of organizational decision-making as political processes to investigate how organizations internally and politically process heterogeneous demands, what kind of decision-making they apply and what effects thereof are. We build on the case of FIFA, the international football organization, and show, how the administration and the political leadership of FIFA have different modes of decision-making, whereas democratic administrative decision-making is often overruled or ignored by authoritarian leadership. This political drift, as we call it, explains, how organizations deal politically with institutional complexity and are thus able to address inconsistent, heterogeneous demands.

OMT: **Commerce and Care: Moral Complexity in Technology Adoption Among Bangladeshi Garment Firms**

Author: **Priyam Saraf**, *Stanford Graduate School of Business*

This study examines the moral complexities that shape technology adoption within Bangladesh's competitive garment sector. Through 16 months of ethnographic research with in-depth interviews and archival research, the paper presents a qualitative comparative analysis of two firms, Globalwear and Commuknit, using a matched case study design. Globalwear's strategy is motivated by commercial imperatives, reflecting a classic neoliberal interpretation of 'success', resulting in rapid implementation of a new auto-cutter technology. Commuknit, on the other hand, grapples with moral considerations, associating 'success' with the welfare of workers who it considers 'family' and who stand to be displaced by automation. As a result, Commuknit buys but delays the implementation of the auto-cutter. These divergent interpretations of 'success' that manifest when firms are confronted by a labor-substituting auto-cutter technology stem from the companies' foundational conditions and are sustained by the environmental diversity in Bangladesh which permits multiple justifications for legitimacy. The findings reveal a novel dimension of organizational behavior—the interpretive heterogeneity of the value of 'success'—highlighting the role of cultural cognition and moral values in strategic decision-making within complex economic landscapes.

Categories and Categorization

Session Moderator: **MATILDE Dorothée Catarina GUILHON**, *ESCP Business School*

OMT: **Friends or Foes: Incumbents' Parallel Claims and Category Creation in Retail Banking**

Author: **MATILDE Dorothée Catarina GUILHON**, *ESCP Business School*

Category creation enables incumbents to rejuvenate and rearrange existing market categories, while preserving the social structuration of markets. Previous research has highlighted the importance of consensus building and the claiming of a collective identity among the actors promoting category formation. However, incumbents engage in category creation to reposition themselves in the market hierarchy and to further their strategic interests. As a result, they face conflicting pressures between seeking consensus with their historical rivals, who also engage in category creation, and claiming their distinctiveness to gain a competitive advantage. Through a qualitative study of the creation of the 'beyond banking' category in Europe by incumbent banks, we examine the claiming practices used by competing incumbents to simultaneously promote category creation and shape the nascent categories around their strategic interests. We synthesize our findings into an integrated theoretical framework that contributes to research category formation and categorization discourse.

OMT: **Hybrid Category Positioning: The Positioning of Plant-Based Meat Alternatives (WITHDRAWN)**

Author: **Cristian Arlex Trejos Taborda**, *EMLYON Business School*

Research on category formation has examined the double-edged sword of oppositional category positioning. In this study, I explore how hybrid category positioning, the intersection between oppositional and aligned positioning, may shield against risks of pure oppositionality. Using archival data from the market for Plant-Based Meat Alternatives in the US between 2011 and 2020, I developed a theory on the strategic opportunities of oppositional positioning to problematize moral components of established categories while simultaneously building moral distance from it. However, this strategy is strengthened with aligned positioning to conform to the established category's prototypicality. To illustrate this, based on empirical cases, I propose four mechanisms enabling the positioning of Plant-Based Meat. First, the problematization of the established meat category in terms of its detrimental effects related to carbon footprint and climate change. Second, the differentiation of the alternatives as a new product category with excellent moral value, emphasizing animal welfare, climate change, and human health. Third, the imitation of the prototypical attributes of the established meat category, focusing on texture, taste, and prototypes. Fourth, the contestation of the alternatives by questioning their processed nature and attempting to ban the category's label. This case allows us to investigate the benefits of hybrid category positioning.

OMT: **Escaping Conformity Pressures: How Categorical Coherence Drives Category Exits**

Author: **Karl Taescher**, *U. of Manchester*

Author: **Eric Y.-F. Zhao**, *U. of Oxford*

Research has long emphasized that categories play a central role in audiences' evaluation of organizations and offerings, but scholarship only recently started to explore organizations' strategic categorization efforts. In this paper, we delve into the influence of a category's coherence on the likelihood of its members' category exits—the deliberate decision to disaffiliate from the category. We integrate elements from category research, which posits that heightened category coherence offers evaluative benefits to its members but also subjects them to more restrictive audience expectations, with insights from research on strategic responses to conformity pressures. Using the Airbnb marketplace as our empirical context, we posit category exits as a strategic action that decision-makers deploy to sidestep a category's restrictive conformity pressures and outline two contrasting mechanisms by which category coherence can simultaneously increase and reduce the likelihood of category exits. Our longitudinal study of a panel of 110,069 Airbnb listings reveals that the relationship between category coherence and category exits follows an inverted U-shape, where Airbnb hosts are significantly more inclined to exit a category that has moderate coherence compared to one with very low or very high coherence.

OMT: **What's in a Name? Regulatory Labels in the Emergent Category of Cell-Cultivated Meat**

Author: **Magdalena Winkler**, *WU Vienna U. of Economics and Business*

Author: **Mia Raynard**, *U. of British Columbia*

This study examines how proponents and opponents of an emergent market category vie to shape the development of regulatory labels of new products. While an extensive amount of organizational research has examined how market category labels are constructed and adopted, less attention has been paid to processes of regulatory labelling. This is surprising, as studies have acknowledged that market and regulatory labels serve different purposes and are governed by different sets of rules and objectives. Whereas market labels are designed to influence consumer choice and signal competitive positioning, regulatory labels are designed to ensure transparency, consumer safety, and product compliance. In this study, we explore the process by which a regulatory label was negotiated in the nascent market category of cell-cultivated meat (i.e., meat produced by cultivating animal cells in bioreactors). Drawing on archival documents, interviews, and ethnographic observations, we unpack the different strategies employed by proponents and opponents—showing how these strategies influenced regulatory labels and, thus, how the product was classified under the law and the regulatory agencies responsible. Building on our findings, we theorize how regulators manage competing interests by striking a balance in linguistic distancing, conceptualized as the optimal association and dissociation from an existing category that facilitates category emergence, while preserving the stability of existing institutional frameworks. The study contributes to research on strategic categorization and the dynamics of creating and using labels to shape category emergence.

The Psychedelic-Assisted Therapy Ecosystem: Charting New Scholarship in Value Creation & Distribution

Organizer: **Adelaide Wilcox King**, *U. of Virginia*
Participant: **Micki Eisenman**, *Hebrew U. of Jerusalem*
Participant: **Allison Elias**, *U. of Virginia Darden School*
Participant: **Kisha Lashley**, *U. of Virginia*
Participant: **Bennet Zelner**, *U. of Maryland R.H. Smith School of Business*

Building on the success of the 2023 inaugural symposium, “Psychedelic Assisted Therapy as a Catalyst for Refreshing Dominant Assumptions of What’s Possible Through and In Organizations,” this panel symposium delves into the transformative impact of Psychedelic Assisted Therapy (PAT) on organizational assumptions and possibilities. Aligning with the AOM 2024 theme, “Innovating for the Future,” we focus on possibilities to generate insights into value creation and distribution by studying an industry that is attracting billions of dollars in investments. This industry is particularly interesting because it is mired in challenges associated with the multistakeholder, scientific, economic, and political realities inherent to establishing safe and effective delivery of legalized psychedelics. Utilizing multiple theoretical lenses across differing levels of analysis, the panelists share their research on organizations and organization members at the forefront of exploring the potential of psychedelics to alleviate suffering, promote well-being, and open new pathways for addressing societal challenges. We investigate individual, organizational, and systemic possibilities of value creation and distribution while wrestling with associated complexities of harm and risks. Thus, we propose a phenomenon-driven symposium with the intent of further building the theoretical lenses through which we can better understand foundational topics of organization scholarship.

Technological Disruption and Strategic Thinking in Environmental Performance

Session Moderator: **Nathan Sorin**, *SKEMA Business School*

ONE: **AI-Driven Leverage Points for the Natural Environment**

Author: **Nathan Sorin**, *SKEMA Business School*

Author: **Margherita Pagani**, *SKEMA Business School - U. Côte d'Azur*

While there is anecdotal evidence that artificial intelligence (AI) orientation may influence environmental performance, this phenomenon is undertheorized. Thus, we ask: “What is the relationship between AI orientation and environmental performance and what are the contingencies?”. We tackle our research question by adopting an exploratory mixed methods approach (we sequentially run qualitative and quantitative studies). Rooted in systems theory and relying on a taxonomy of increasingly deep leverage points, we locate a shallow AI-driven leverage point for positive change in the natural environment related to parameters: flows of material by-products due to production and operations. We provide more granular insights depending on a firm’s category of economic activity. Finally, we show unrealized potential to use AI to green the value proposition of entire value chains, providing inspiration for managers on how to create deep AI-driven leverage points.

ONE: **Robust Disruption: Responding to Technology Forcing in the Launch of Electric Vehicles**

Author: **Jan M. W. N. Lepoutre**, *ESSEC Business School*

This paper studies how collaboration and competition between incumbents and new entrants co-evolves with technology forcing policies and influences disruptive innovation in an established industry. The empirical context for our study of disruptive innovation is the emergence of electric vehicle markets in the automotive industry. I find that the industrial lifecycle phase in which the automotive industry found itself at the end of the 20th century had triggered a strategy of “robust action” with carmakers: actively working towards keeping options open to respond to unknown futures. This robust action resulted in very active horizontal and vertical collaboration on the one hand, and constant experimentation with new technologies. The sudden success of specific carmakers in this process, had as unintended consequences that policy makers and other carmakers started realizing the very disruptive innovation for which these robust action strategies were trying to prepare. This finding shows that disruptive innovation is not always an agentic process that can be traced back to either incumbents or new entrants, but is rather a distributed phenomenon in which various actors play catalytic roles, often even without their intention.

ONE: **Words That Mean Change: Paradoxical Thinking and Eco-Efficiency in the Automotive**

Author: **Frank Figge**, *ESCP Business School*

Author: **Mauricio Marrone**, *Macquarie Business School, Macquarie U.*

This study investigates the link between the presence of paradoxical thinking language in corporate sustainability reports and variations in companies' eco-efficiency, focusing specifically on the automotive industry. Based on the hypothesis that there is a relationship between paradoxical thinking and eco-efficiency, we aimed to identify which words are most likely to impact these emissions. We solicited the aid of ChatGPT to generate a potential list of impactful words and we tested this word list using sustainability reports from the automotive industry and the eco-efficiencies of these firms, spanning the years 2005 to 2023. Our analysis reveals a significant association between the usage of paradoxical thinking language in these reports and variations in eco-efficiency, showing that paradoxical thinking matters. Furthermore, our research links paradoxical thinking to two different strategies of dealing with the paradoxical tension between economic output on the one hand and lowering environmental resource use on the other hand. This research underscores the potential role of paradoxical thinking in corporate sustainability practices and suggests that specific language patterns in sustainability reports may influence practical environmental outcomes.

Circular Economy Transitions: Strategies, Capabilities, and Market Impacts

Session Moderator: **Agnes Toth-Peter**, *Queensland U. of Technology*

ONE: **An Industry 4.0-Enabled Circular Economy Transition Framework**

Author: **Agnes Toth-Peter**, *Queensland U. of Technology*
Author: **Rui Torres de Oliveira**, *Queensland U. of Technology*
Author: **Shane Mathews**, *Queensland U. of Technology*
Author: **Leonie Barner**, *Queensland U. of Technology*

The world faces a severe planetary crisis marked by increasing pollution, depleting resources, and declining biodiversity, exceeding the Earth's sustainable limits. The circular economy emerges as an alternative, aiming to reduce waste through a closed-loop system, incorporating regenerative solutions, and leveraging Industry 4.0 technologies. However, integrating these concepts disrupts the business landscape, challenging the shift to digitally enabled circular business models. With this paper, based on a multiple case analysis of European and Australian companies, we advance a comprehensive theoretical transition framework encompassing three stages: transition, implementation, and optimization. Key triggers, mechanisms, circular economy strategies, and Industry 4.0 technologies along the circular economy path are uncovered. We also underscored the role of institutions in developed economies, suggesting a dynamic co-development of institutional and cost-based approaches. We also emphasize the agnostic role of Industry 4.0 technologies as enablers instead of drivers. The framework serves as a strategic tool for practitioners and policymakers, outlining the implications of circular strategies across diverse companies, sectors, and contexts.

ONE: **Green or Greed? How Closed-Loop Orientation Relates to Company Value in Innovation-Driven Economies**

Author: **Vincent Julius Verweyen**, *Chair of Technology Management / TIE Institute, TU Dortmund U.*

Climate crisis, resource shortages, and supply chain disruptions increasingly favor the adoption of circular economy concepts like closed-loop supply chain management. Prior studies investigate closed-loop supply chain orientation (CLSCO) as suitable orientation and its relation to fragments of environmental and operational firm performance merely in efficiency-driven economies. However, its aggregate effect on the level of company market value, particularly in the context of varying competitive intensities, as well as its significance in innovation-driven economies so far remain surprisingly underexplored. Addressing this gap, our study leverages the practice-based view (PBV) to assess the influence of CLSCO on company market value in innovation-driven economies. Our analysis of an extensive, longitudinal dataset, consisting of 3,696 observations from S&P500 companies spanning over 23 years (2000 – 2022), reveals a positive relationship between CLSCO and company market value. For environments with low competitive intensity, the positive association of CLSCO on company market value is further amplified.

ONE: **Unpacking Circular Economy Capabilities: What We can Learn from Family Businesses**

Author: **Nicola Blum**, *Bern U. of Applied Sciences*
Author: **Rahel Meili**, *Bern U. of Applied Sciences*
Author: **Sabrina Schell**, *Bern U. of Applied Sciences*
Author: **Tobias Stucki**, *Bern U. of Applied Sciences*

To accelerate the transition from linear to circular businesses in the future, it is important to understand in more detail what specific capabilities companies need to successfully master this transition. In this article, we take a closer look at the characteristics of family businesses, as there are hints in the literature that these companies are particularly well equipped for the circular economy transition. Specifically, in a first step, we will use unique quantitative company data from more than 1,200 Swiss companies to show that family ownership effectively promotes the transition to circular economy. In a second step, we will then use qualitative data from 7 case studies of Swiss family businesses to examine what capabilities characterize family businesses in this transition and what traditional businesses can learn from family businesses accordingly. We contribute to the scientific debate by showing that family businesses have characteristics that are particularly well suited for the transition to a circular economy, such as employee loyalty, long-term orientation and cross-organizational collaboration built on trust.

ONE: **Circular Economy in Fashion: Inter-Organizational Learning by Firms and Civil Society Organizations**

Author: **Raphalela M. Fritz**, *Witten/Herdecke U.*
Author: **Leona Henry**, *Nijmegen School of Management, Radboud U. Nijmegen*
Author: **Guido Moellering**, *Witten/Herdecke U.*

This study explores how firms and civil society organizations (CSOs) engage in inter-organizational learning to achieve the transition towards the Circular Economy (CE). Based on qualitative data from the fashion industry, this study develops an empirically grounded model of inter-organizational learning for the CE, which captures three practices of inter-organizational learning that firms and CSOs develop to realize the CE transition: 1) creating a safe learning space, 2) visualizing CE processes and outcomes and, 3) involving additional expertise. Our model also shows two collaborative pathways resulting from learning that enable actors to transition to the CE. In doing so, this study advances our understanding of inter-organizational learning by carving out learning practices specific for highly complex environments such as the CE. In addition, we advance our understanding of collaboration in the context of the CE by unfolding the dynamics of horizontal CE collaborations.

Author: **Hannah Altenburg**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Author: **Lauren Anne Mackintosh**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

Author: **Kai-Ingo Voigt**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

In this research, we explore how resource-intensive industries implement circular innovation (CI) in their business activities. In a cross-industry, we examine how the automotive, construction, high-tech, food, and textile industries report on CI activities. Our qualitative analysis of 150 corporate sustainability (CS) reports from the 30 largest companies in each industry reveals five major building blocks of CI: circular production process innovations, circular new product and material development, circular value recovery and waste management, investments and collaborations for circularity, and organizational evolution towards circularity. Our results show that all industries have started to implement CI. There are however, significant differences between industries. While production process innovations represent the largest building block of CI in the automotive industry, the construction and food companies primarily disclose on new product and material developments. In the food industry, such practices are however, largely related to packaging and incremental innovations. Companies from high tech and textile industries practice CI mostly by investing in and collaborating with smaller players. Our findings further provide an overview for practitioners seeking to understand CI implementation in industries that face the problem of high resource use.

ESG Dynamics and Strategic Communication in CSR

Session Moderator: **Majid Ghorbani**, *China Europe International Business School (CEIBS)*

ONE: **Hush-Hush Figures: The Strategic Whisper of ESG Discrepancy in CSR Disclosures**

Author: **Xin Pan**, *Southwestern U. of Finance and Economics*

Author: **Xuanjin Chen**, *School of Economics and Management Southwest Jiaotong U.*

Author: **Majid Ghorbani**, *China Europe International Business School (CEIBS)*

This study delves into the puzzling question of why companies remain reticent about their social contributions. Drawing from the status inconsistency theory, which posits that conflicting identities can lead to ambiguity and diminish stakeholder support, we propose that companies deliberately engage in strategic silence. This is manifested through a sparse use of numerical data in their Corporate Social Responsibility (CSR) reports as a tactic to manage inconsistencies in Environmental, Social, and Governance (ESG) performance. The presence of numerical data typically serves as a clear and efficient way of stakeholder communication; therefore, its omission in CSR reports can obstruct access to detailed internal information, fostering perceptions of the firm that are both inconsistent and ambiguous. Evidence from Chinese companies over the period of 2006 to 2009 proves that the impact of ESG inconsistency on stakeholder perception is moderated by the firm's overall ESG performance. This research contributes to the body of ESG literature by elucidating the strategic use of silence by firms as a mechanism to navigate through the complexities of various performance dimensions.

ONE: **Robbing Peter to Pay Paul: The ESG Inconsistency Paradox in Corporate Practices**

Author: **Yawen Li**, *Beijing U. of Posts and Telecommunications*

Author: **Mengyu Zhuang**, *Beijing U. of Posts and Telecommunications*

Author: **Jingwen Liang**, *Beijing U. of Posts and Telecommunications*

Author: **Wei Chi**, *Tsinghua U.*

Author: **Jinyi Zhou**, *U. of Science and Technology Beijing*

Although existing studies have addressed the inconsistency between symbolic and substantive ESG (Environmental, Social, and Governance) practices in firms, such as verbal greenwashing, limited research has examined the trade-offs between different dimensions of ESG in corporate practices. This study introduces the concept of ESG inconsistency, which generally refers to the strategical adoption of an ESG strategy that disproportionately emphasizes on one dimension. Furthermore, drawing on the attention-based view of the firm, we suggest that some environmental policies can result in ESG inconsistency, as it compels firms to prioritize the performance of the environmental dimension at the expense of others. Furthermore, the allocation of a firm's attention, whether driven by internal or external attentional situations, can further exacerbate ESG inconsistency. Regarding the outcomes, ESG inconsistency may generate positive public opinion for firms. To test our hypotheses, we construct an unbalanced panel dataset comprising 3,354 listed companies in China from 2014 to 2021 and employ the directional and non-directional difference (DNDD) framework, along with polynomial regression and response surface analysis to test the model. Theoretical and practical implications are also discussed.

ONE: **Walk the Talk? Investigating the Performative Effect of Corporate Sustainability Communication**

Author: **Manuel Reppmann**, *U. of Hamburg*

Author: **Frederik Maibaum**, *Leibniz U. Hannover*

Author: **Laura Marie Edinger-Schons**, *U. of Hamburg*

Author: **J. Nils Foege**, *Leibniz U. Hannover*

Many companies communicate about their corporate sustainability (CS) activities to demonstrate conformity with their stakeholders' expectations. This communication is known as CS talk. Challenging the common notion of CS talk as a backward-looking description of completed CS activities, studies increasingly take a formative perspective on CS talk that acknowledges its potential to trigger CS-related organizational change (i.e., CS walk). Based on this view, we introduce a nuanced theoretical framework linking CS talk and walk, suggesting that, although CS talk evokes future CS walk, companies can also talk too much, causing an adverse effect that inhibits them from walking their talk. Furthermore, we argue that the performative effect of CS talk gradually unfolds within companies, initiating symbolic CS walk before translating into substantive CS walk. To test our theorizing, we created a text-based measure for CS talk and matched it with secondary data, assembling a sample of 820 US companies listed in the S&P 1500 over 15 years. The analysis supports our theorizing and contributes to research at the intersection of CS-related communication and organizational change, providing novel insights into the shape of the performative effect of CS talk and the organizational change process it initiates.

ONE: **CSR Language and the Divergence of ESG Ratings**

Author: **Wenzhuo Guo**, *Northwestern Polytechnical U.*

The divergence of environmental, social, and governance (ESG) ratings has garnered significant attention, with ESG information disclosure being a primary focus in previous research. However, the lack of consensus on ESG ratings may be attributed to the oversight of readability and tone of corporate social responsibility (CSR) information disclosure in previous studies. To fill this research gap, our study investigates the influence of CSR report readability and tone on ESG rating divergence. We propose that CSR report readability and tone are negatively correlated with the ESG ratings divergence. This proposition was empirically validated by analyzing A-share companies' CSR reports from 2016 to 2021. Furthermore, we examine the moderating impact of information disclosure violation and media coverage and find that information disclosure violation weakens the relationship, whereas media coverage strengthens it. Overall, our findings highlight the crucial role of CSR report readability and tone in effectively mitigating the ESG rating divergence.

Managing Disruptions - I

Session Moderator: **Nils-Ole Hohenstein**, *Cooperative State U. Mannheim*

OSCM: **The Power of Learning and Agility for Strengthening Supply Chain Resilience**

Author: **Nils-Ole Hohenstein**, *Cooperative State U. Mannheim*

The COVID-19 crisis has profoundly impacted firms' operational and financial performance. It has highlighted the vulnerability of interconnected global supply chains (SCs) to widespread disruption. In this paper we examine how the antecedents of organizational learning (OL) and organizational agility (OA) have influenced supply chain resilience (SCR) during the competitive dynamics associated with the COVID-19 crisis. Our study extends the understanding of SCR practices by exploring the effects of OL and OA on SCR reconfiguration in a post-pandemic world. We draw on the resource-based view and combine a literature review with a methodological multiple case study comprising fifteen interviews with seven firms operating globally in different industries. Our findings provide empirical evidence that OL and OA as a strategic, intangible resource have a strong positive influence on an organization's SCR, thereby enhancing competitiveness in times of crisis. Our study highlights that OL (e.g., through learning programs, employee engagement) has a direct impact on SCR by facilitating more robust response to SC disruptions, while OA (e.g., through communication, collaboration, digital transformation) enhances firms' capacity to respond to disruptions more swiftly. Hence, this paper provides valuable insights on how a firm's strategic resources can foster SCR in crisis conditions.

OSCM: **Changing Standards and Drug Shortages in the Pharmaceutical Industry**

Author: **Ivan Lugovoi**, *Kuehne Logistics U.*

Author: **Enno Siemsen**, *U. of Wisconsin, Madison*

Drug shortages can pose significant health risks; the failure of the market to fulfill the demand for life-saving drug treatments can endanger the health of patients. Using a proprietary dataset, we examine the relationship between changes in the quality standards of drugs and drug shortages through the lens of competition. We encode US-Pharmacopeia monograph changes to document changing quality standards in drug markets. Our analysis establishes that relaxing standards leads to an increase in the level of competition; however, tightening those standards does not lead to a similar decrease in competition. Further, we find a non-linearity in the relationship between the number of competitors and the risk of drug shortages. When that number is low, any new entrant will significantly decrease margins while not adding sufficient slack in the market capacity to absorb the failure of any incumbent to supply, leading to an increased drug shortage risk. However, as the number of competitors increases, the impact on profit margins is reduced; market shares of individual manufacturers decrease; and the reserve capacity in the market can more readily absorb the impact of a shortage by any individual competitor, decreasing the shortage risk again.

OSCM: **Firm Security Focus: The Promise and Peril of Balancing Security-Growth Challenges**

Author: **Joseph Simpson**, *Virginia Tech*

Headline-grabbing ransomware attacks, organized retail theft, and pandemic-related supply chain impacts have heightened the salience of security issues facing firms. However, these threats are simply the most recent profile of the security management challenges that large firms face when seeking opportunities for improved performance, while simultaneously forestalling attacks upon their physical assets, intellectual property, supply chains, resources, employees, customers, and other stakeholders. Alternatively, the strategic levers that are often instrumental to firm performance – alliances, open innovation, emerging markets, cloud-based big data solutions, and others – are also drivers of heightened security threats. Thus, security management issues have taken center stage in efforts to discern and implement a balanced approach to corporate strategy and operations. Yet, scholars have few theory-based tools to employ in conducting an integrated assessment of security management. Cognizant of this gap, we develop and test a novel construct – “Firm Security Focus” – to assess firms' ability and willingness to navigate performance -threat challenges.

OSCM: **Dependence Management Strategies for SME Resilience Under Demand Disruption**

Author: **Liu Hao**, *Sun Yat-Sen U. Business School*

Author: **Xin Zheng**, *Business School, Sun Yat-Sen U.*

Author: **Wang ZhiQiang**, *South China U. of Technology*

Author: **Chen Yun**, *School of Applied Economics, Renmin U. of China*

Unforeseen risk events often trigger severe demand disruptions. We explore effective dependence management strategies and their impact on SMEs' resilience. Building on resource dependence theory, we propose that amid demand disruptions, customer switching and production change-over can rebalance resource dependence by strengthening the power of suppliers, thereby promoting the resilience recovery of small and medium-sized enterprises. Further, under different boundary conditions, the role of dependence management strategies on SMEs' resilience varies. Our analysis of 239 SMEs that encountered disruptions reveals that the alternative of customers and production change-over promote SMEs' resilience. This positive effect is stronger when the magnitude of demand disruption increases. Further, when industrial technology commercialization becomes more difficult, the alternative of customers becomes more beneficial, while production change-over becomes less conducive for resilience under a high degree of demand disruption magnitude. Our findings provide a nuanced perspective on 'switching or development' strategies and enrich the demand disruption literature.

Technology-Enabled Operations & Supply Chain Management - I

Session Moderator: **Eva Niesten**, *SKEMA Business School - U. Côte d'Azur*

OSCM: **The Comparative Efficiency of Blockchain Governance – Empirical Evidence on the Fashion Supply Chain**

Author: **Eva Niesten**, *SKEMA Business School - U. Côte d'Azur*
Author: **Albert Jolink**, *SKEMA Business School - U. Côte d'Azur*
Author: **Engin Iyidogan**, *SKEMA Business School - U. Côte d'Azur*

Our research examines how transactions can best be governed by blockchain. We extend transaction cost economics from the analysis of markets, hybrids, and hierarchies to include a discriminating alignment of different types of blockchain governance. We model and visualize the comparative efficiency of public, consortium, and private blockchains. Public blockchains economize on mundane transaction costs, consortium blockchains on transaction costs driven by lawful opportunism, and private blockchains on transaction costs driven by blatant opportunism. We illustrate our model in the empirical context of the use of blockchain in fashion supply chains with the purpose of mitigating hazards from unsustainable practices and counterfeits. Our paper responds to recent calls for more research on blockchains as governance structures.

OSCM: **The Value of Digital Traceability for Managing Greenhouse Gas Emissions in Complex Supply Chains**

Author: **Sukrit Vinayavekhin**, *Thammasat Business School*
Author: **Aneesh Banerjee**, *City U. London*
Author: **Feng Li**, *Bayes Business School (formerly Cass), City, U. of London*

Due to the accelerating global climate crisis, supply chains are now under pressure to transform towards sustainability, necessitating precise tracing, monitoring, and reporting of greenhouse gas (GHG) emissions. The emergence of digital technologies such as IoT (Internet of Things), barcodes, RFIDs, and blockchains has made supply chain traceability easier, faster, more accurate, and more cost-effective. This research investigates the adoption of digital traceability systems for managing greenhouse gas (GHG) emissions in supply chains. Building on technology adoption and supply chain complexity literature, we categorise influencing factors into technology characteristics and supply chain complexity, exploring their impact through a choice-based conjoint experimental (CBC) design involving managers in the manufacturing sector. Results reveal that firms consider implementation when technology costs are lower, implementation time is shorter, and the full scope of implementation includes all Scope 1, 2, and 3 emissions. Detail-numerosness and detail-variety in both internal operations and the upstream supply chain positively influence adoption, whereas the impact of the dynamic dimension is nuanced. Detail-numerosness emerges as the most critical factor for internal operations, while detail-variety takes precedence for the upstream supply chain. This emphasises the multifaceted nature of supply chain complexity. The findings contribute to technology adoption and supply chain complexity literature, offering practical insights for stakeholders in sustainable supply chain management.

OSCM: **Artificial Intelligence in Spend Classification: An Information Processing Theory Perspective**

Author: **Michela Guida**, *Politecnico di Milano School of Management*
Author: **Federico Caniato**, *Politecnico di Milano*
Author: **Antonella Moretto**, *Politecnico di Milano*

The aim of this paper is investigating the impact of artificial intelligence on the spend classification performed by a buyer firm. The information processing theory is the overarching structure of the study, identifying the information processing needs and capabilities underlying the use of artificial intelligence for spend classification. The case study methodology involves the IT providers currently offering AI-based spend classification solutions as privileged respondents. The unit of analysis is the AI-based spend classification solution offered by the IT provider and the relationship that is triggered between the IT provider delivering the solution and the buyer firm implementing it. Information processing needs in spend classification are high for buyer firms. Often, they are not supported by internal information processing capabilities. AI-based solutions offered by IT providers for spend classification compensate for the lacking capabilities of the buyer, enabling the fit between information processing needs and capabilities. The study of the information processing theory to the specific case of artificial intelligence in spend classification is novel, extending the application of the theory to a new context. This research contributes through the structuring of a phenomenon that is still not very common in firms and not widely studied scientifically.

OSCM: **A Supplier Portfolio Management System to Align Decisions and Actions at Different Time Horizons**

Author: **Pamela Danese**, *Dep. of Management and engineering, U. degli Studi di Padova*
Author: **Marco Formentini**, *OSCM*
Author: **Pietro Romano**, *Polytechnic Department of Engineering and Architecture, U. of Udine*
Author: **Marco Boem**, *Novalia*

Researchers and practitioners are aware of the relevance of supplier portfolio management to achieve a company's strategic goals. Yet, there is a scarcity of procurement tools able to support purchasing managers at a strategic, tactical and operational level able to guarantee consistency of decisions and actions at different time horizons. Decision support systems (DSSs) mainly focus on the supplier selection phase, while in general purchasing portfolio models focus on the analysis and segmentation of suppliers at a specific moment in time. This paper presents a DSS for supplier portfolio management, which aligns decisions and actions at different levels and time horizons through a three-steps procedure: 1) Tracing a route, which aims to trace future directions and strategic decisions of portfolio management in a long-term perspective; 2) Control, which aims to understand if the current portfolio is consistent with the route traced in the long-term and to support decision makers in the identification of a 'Roadmap of change' to build a supplier portfolio which reflects the route traced; 3) Taking actions, which aims to identify and implement a consistent 'Purchasing action plan'. This research follows a design science paradigm: the proposed DSS has been conceptualized and implemented based on precise design objectives, while ex-ante and ex-post evaluations in both artificial and naturalistic settings were applied to demonstrate the novelty, relevance and utility of this artifact.

Author: **Enno Siemsen**, *U. of Wisconsin, Madison*

Author: **Alexandra Wuttke**, *U. Würzburg*

Drawing on the conservation of resources theory, this study delves into the influence of digital versus traditional resources on employee stress during the execution of novel tasks. In a controlled field experiment involving frontline employees from a German manufacturing firm, we examine the impact of resource gain (providing either traditional or digital resources) and resource loss (withdrawing both types of resources) on stress levels. Results indicate that digital resource gains, with their ability to reduce cognitive load, outperform traditional resource gains in stress reduction. They are what we want in production. However, both digital and traditional resource losses lead to increased stress levels. More importantly, the magnitude of stress increase linked to the loss of digital resources exceeds that associated with the loss of traditional resources. These findings point toward the importance of leveraging available resources to develop the knowledge, skills, and abilities necessary for novel task performance. In this context, digital resources reflect what we want in production, but not necessarily what we need. This research expands our understanding of how different resources contribute to work-related stress, emphasizing the need to distinguish between their immediate and enduring effects.

Managing Relationships in Operations & Supply Chains

Session Moderator: **Hamid Moradlou**, *U. of Warwick*

OSCM: **The Role of Not-for-Profit Innovation Centres in Facilitating the Reshoring of Manufacturing**

Author: **Hamid Moradlou**, *U. of Warwick*
Author: **Lydia Bals**, *Mainz U. of Applied Sciences*
Author: **Steffen Kinkel**, *Hochschule Karlsruhe*
Author: **Samuel Roscoe**, *U. of Sussex Business School*

This study explores the role of High Value Manufacturing Catapult (HVMC) centres in supporting reshoring initiatives in the UK. The HVMC network is geared to provide businesses with specialist technical expertise and skills across sectors to OEMs, SMEs and supply chains, access to high value specialist facilities and infrastructure, technology and sector leadership, and long-term investment in technology platforms or demonstrators. Data was collected using semi-structured interviews with 35 individuals in the HVMC network. Dunning's eclectic paradigm was adopted to understand how HVMC influence location attractiveness leading to supply chain configuration decisions. Results show that HVMCs support pre-reshoring/during-reshoring decisions by enhancing market-seeking and strategic asset-seeking advantages and during-reshoring/post-reshoring decisions by enhancing resource-seeking and efficiency-seeking advantages.

OSCM: **Decoding SME Financing Screens: Evidence from Big Tech Lending**

Author: **Xinge Ding**, *School of Business, Renmin U. of China*
Author: **Siqi Han**, *U. of International Business and Economics*
Author: **Hua Song**, *School of Business, Renmin U. of China*

This study explores how financial institutions evaluate and discern small and medium-sized enterprises (SMEs) amidst information asymmetries in the realm of digital supply chain finance. Drawing on screening theory, we identify operational behavior as an effective screen and propose a "screening augmentation" framework. Using proprietary data from a leading Chinese big tech lender, our work reveals that operational behavior (i.e., brand procurement) serves as an effective screen, yet its effectiveness is contingent on contextual traits derived from digital footprints, encompassing individual, relational, and environmental dimensions. We identify three distinct screening augmentation mechanisms - propagation, enhancement, and activation. Results show that SMEs with more brand procurement obtain more credit supply from the big tech lender, particularly with lower entrepreneur ownership vulnerability, higher supply chain relationship strength, and operating in financially developed regions. Furthermore, SMEs obtaining more credit supply experience higher sales performance in the near future. By proposing a contextualized screening augmentation framework, this research enriches screening theory and advance our understanding of digital supply chain finance.

OSCM: **Competition and Cooperation in Humanitarian Operations**

Author: **Ujjwal Kumar**, *Doctoral Student at Indian Institute of Technology, Delhi*
Author: **Iana Shaheen**, *U. of Arkansas*
Author: **Zach G. Zacharia**, *Lehigh U.*
Author: **Ravi Shankar**, *Department of management studies, Indian Institute of Technology Delhi*

Leveraging the relational view to provide a theoretical framework, this paper explores the intricate dynamics of competition and cooperation in humanitarian operations, a critical yet understudied area in humanitarian studies. Our methodology is grounded in theory elaboration case study, providing a nuanced and in-depth analysis. This study collected data through 32 interviews, encompassing a diverse range of individuals actively engaged in humanitarian efforts for 14 different NGOs in India. Our findings reveal that the strategies of cooperation and competition among NGOs are significantly influenced by the degree of interdependency between these organizations. Interestingly, we observe that 'coopetition' - a blend of cooperation and competition - manifests in two distinct forms: voluntary, initiated by NGOs themselves either to enhance their media image or to acquire complementary skills from other organizations, and involuntary, often mandated by higher-level NGOs or government authorities. This paper contributes to the field by offering a novel understanding of how inter-organizational dynamics in humanitarian settings are shaped and shedding light on the strategic decisions that guide these relationships. This research provides theoretical insights and has practical implications for policymakers and practitioners in the humanitarian sector, promoting more effective and efficient responses to crises.

OSCM: **Unlocking the Secret to Why Women are an Advantage in Supply Chain Collaboration**

Author: **Siqi Ma**, *U. of Akron*
Author: **Iana Shaheen**, *U. of Arkansas*
Author: **John Aloysius**, *U. of Arkansas Sam M. Walton College of Business*

Prior literature has extensively documented gender differences in risk attitudes, competitiveness, and some social preferences. However, little is known about the psychological mechanism underlying how the gender of supply chain agents making decisions on behalf of firms in the supply chain affects collaborative behavior. Individuals are known to behave differently based on their personality inferences about other people. We disentangle precisely why gender affects supply chain collaboration. A behavioral experiment using professional supply chain managers manipulates gender pairings of retailers making decisions partnered with suppliers. Both genders are more collaborative with female partners because they trust their female partners more and perceive greater interpersonal justice. However, males are more collaborative with male partners because of greater trustworthiness in ability. We are the first to try to understand the rationale for why individuals exhibit different collaborative behaviors toward women and men in a supply chain context. The results inform practitioners that seek to expand their pool of available talent by targeting people that may have been previously underrepresented. The insights help by providing guidance on assigning the right person to the right supply chain role. Assigning more women in the supply chain does not just satisfy diversity requirements, it also benefits firms in the supply chain.

Sector Fusion: Unraveling Dynamics at the Nonprofit-Business Intersection

Session Moderator: **Meng Ye**, *Georgia State U.*

This presentation will examine the complex interactions between nonprofit and for-profit entities, delving into the identity tensions of corporate volunteering, mandatory cross-sectoral CSR initiatives, collaborative approaches to providing social goods, and the effects of government support on social entrepreneurship outcomes.

PNP: **Investigation of Government Support and Social Entrepreneurship Performance** →

Author: **Jinyoung Kang**, *Mary Baldwin U.*

Author: **Nara Yoon**, *James Madison U.*

Author: **Chong Kyoong Lee**, *James Madison U.*

Since the government has acknowledged social entrepreneurship's potential to address social and environmental issues, the government provides various supports including financial and non-financial resources to fostering social entrepreneurship. However, previous research lags behind in illuminating the effects of government support for social entrepreneurship on the performance of social entrepreneurship. Using an integrated theoretical approach from resource-based view (RBV) and resource dependence theory (RDT), we argue that a social enterprise's financial performance depends on the availability of financial capital derived from government support and the tenure of social entrepreneurship. We test our hypotheses on a sample of 258 observations from 80 social enterprises in South Korea. This study aims to contribute to the growing body of literature that examines the role of government on the performance of social entrepreneurship by providing a more nuanced account of the resource arrangement of social entrepreneurship. This study also can have a practical contribution especially for policy makers who aim to foster social entrepreneurship.

PNP: **Joint Private Provision of Social Good: A Mixed-Method Study of Nonprofit-Business Collaboration** 📄

Author: **Meng Ye**, *Georgia State U.*

This study investigates the motivations behind cross-sector collaboration between the nonprofit and business sectors to provide social good jointly. We chose the empirical setting of Chinese charitable trusts, which emerged as a novel nonprofit avenue following the enactment of China's first Charity Law in 2016. The law designated charities and for-profit trust companies as eligible trustees, creating the potential for collaboration. Drawing resource dependency, transaction cost, and institutional theories, we employed a mixed-method design to analyze both quantitative data from 1,227 charitable trust filing documents and qualitative data from 31 semi-structured interviews conducted with key stakeholders of charitable trust likelihood of forming formal collaborations increases with growing trust asset size, term, and a positive temporal trend. The thematic analysis of the qualitative data provides richer explanations for the motivations behind cross-sector collaboration between nonprofits and for-profit trust companies. While the findings deepen our understanding of the regression results, new themes emerged, such as cases of cost-ineffective collaboration due to innovation and policy advocacy considerations within the evolving institutional environment. These findings contribute to the literature on cross-sector collaboration, offering insights into the specific factors that drive joint private provision of public goods in a non-Western context.

PNP: **Strange Bedfellows: Cross-Sectoral Interactions in a Mandatory CSR Regime** 📄

Author: **Dhirendra Mani Shukla**, *Indian Institute of Management Lucknow*

Author: **Israr Qureshi**, *Australian National U.*

Author: **Babita Bhatt**, *IE U.*

This study examines how a mandatory corporate social responsibility (CSR) regime, implemented since 2014 in India, has triggered changes in the interorganizational field and has affected the interaction between corporations and non-profit organizations (NPOs). Taking a qualitative research approach, this study identified four approaches that corporations take to meet their CSR mandate: i) direct social project delivery; ii) engaged through CSR department (headed by internal executives); iii) engaged through CSR department (headed by ex-NPO executive); and, iv) engaged through foundations. These approaches have varied implications for firms' cross-sectoral interactions with NPOs. Further, our findings reveal how these four approaches affect intra- and inter-organizational tensions, project implementation time, and social impact. We found that partnership, co-optation, and mutual learning are the key processes through which corporations could minimize inter- and intra-organizational tensions and enhance social impact. Our findings aim to contribute to the interorganizational field and organizational tension literature by enhancing the understanding of the implications of mandatory CSR regime on cross-sectoral interactions and how such interaction affect inter- and intra-organizational tension.

PNP: **Building Bridges Between the Non-Profit and For-Profit World? Identity Tension of Intermediaries**

Author: **Theresa Fricke**, *U. of Mannheim, Business School*

Corporate volunteering (CV) programs are supposed to create win-win situations for companies and non-profit-organizations (NPOs). However, current research reveals that wide gaps exist between what NPOs need and what companies provide. Intermediary organizations can positively affect the outcome of the CV program through building bridges between the for-profit and non-profit world. Connecting these two worlds in turn enhances the mutual understanding and initiates processes that promote civil society and ultimately democracy. While research and practice so far assumed that all intermediaries achieve equally positive outcomes, this study finds that intermediaries categorize into three different identities. They differ in whether they truly serve the interests of both sides and establish long-term cooperations. Three factors are discussed that support intermediaries in achieving balanced win-win outcomes.

From Charisma to Trust: Local Government Leadership in a Transparent Era

Session Moderator: **Yan Yu**, *School of Information, Renmin U. of China*

This presentation will delve into the dynamics of local leadership as we explore the ripple effects of governor charisma, the effectiveness of experienced leaders in crisis management, the complex relationship between political corruption and public trust, and the evolving concept of government accountability in our increasingly digital society.

PNP: Leader Career Experience and Crisis Management Performance: A Cross- nation Longitudinal Examination →

Author: **Yan Yu**, *School of Information, Renmin U. of China*

Author: **Lin Jiang**, *U. of South Florida*

Author: **Dong Liu**, *Georgia Institute of Technology*

Does a public leader's career experience matter for tackling public crises? Building on the Ability-Motivation-Opportunity (AMO) framework, we adopt a refined temporal view of career experiences to delve into specific facets of past and current career experiences, which may be related to public leaders' crisis management performance. Specifically, we theorize how two unique aspects of public leaders' past career experience (career advancement velocity and prior crisis experience) can foster public leaders' ability for handling a crisis, thereby enhancing crisis management performance. We also propose that two aspects of public leaders' current career experience (social approval and tenure) can hinder their motivation to respond to a crisis, thereby hurting crisis management performance. Finally, we highlight the contingent impacts of public leaders' managerial discretion, which can grant opportunities to alter the effects of public leaders' past and current career experiences. We tested these hypotheses using longitudinal datasets of U.S. state governors and Chinese prefecture mayors. Our findings provide valuable insights into how public leaders' career experience can influence their crisis management performance within different institutional and cultural settings.

PNP: Political Corruption, Political Responsiveness and Public Trust →

Author: **Wisapunpong Potapiroon**, *Prince of Songkla U.*

Previous research has associated citizens' support for corrupt authorities with information deficiencies. This research offers an alternative perspective, suggesting that even well-informed citizens may support corrupt political figures who are seen as responsive to the constituency. Drawing upon the implicit exchange hypothesis, this study aims to examine the interactive effect of political corruption and political responsiveness on public trust. Survey data were collected from 590 small local business owners in two town municipalities in Thailand. Results showed that political corruption had a negative effect on public trust, whereas political responsiveness had a positive effect. Moreover, political responsiveness was found to neutralize the trust-eroding effect of political corruption, after controlling for the (interactive) effects of politicians' perceived competence and local governance performance. These results paint a rather somber view, suggesting that, in the presence of political responsiveness, citizens may condone political corruption, allowing local politicians to maintain public trust even if they are seen as corrupt.

PNP: The Impact of Governor Charisma on State-Level Outcomes

Author: **Tiffany Kreutschy**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Author: **John Antonakis**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Author: **Dominic Rohner**, *Ecole Des HEC-U. of Lausanne*

Does governor charisma increase GDP? Leadership is a crucial factor in shaping the outcomes of a state or country. Charisma has been linked to various outcomes. However, there is a dearth of evidence showing the causal impact of leader charisma in real-world consequential settings. We therefore use a highly controlled setting to isolate the causal impact of leader charisma on outcomes, where we can construct a proper counterfactual. We collected 788 governor speeches across U.S. states between 1970 and 2018 from n=788 close-call elections (within 5%) and computed charisma signaling scores of the winner and runner up. We use a regression discontinuity with implementation at the threshold design. This design leverages closely contested elections to exploit quasi-random variations, enabling the isolation of various confounding factors and the assessment of charisma's causal effect on state GDP. The results show a strong effect of governor charismatic signaling on state outcomes. An increase of one standard deviation in charisma leads to a 24% increase in GDP, and this effect amplifies over the course of a governor's mandate; in addition, one standard deviation increase in charisma results in a 113% average increase in health expenditures over the typical four-year mandate period. These findings underscore the significant role of governor charisma signaling in shaping state outcomes. Given that charismatic communication is a learnable skill, our research suggests that leveraging charisma as a tool for political leaders can be instrumental in addressing key challenges faced by countries worldwide.

PNP: Reimagining Felt Accountability in Digital Societies

Author: **André Carlos Busanelli De Aquino**, *U. of Sao Paulo*

Author: **Fernando Deodato Domingos**, *FGV-EAESP*

Author: **Diana Lima**, *UnB*

While existing research has extensively explored felt accountability concerning legally enacted actors and sanctioned evaluation processes, this study embraces the complexities of contemporary digital societies. It is now the norm to have multiple, often undefined, audiences holding sway over public figures. Through a unique empirical setting in the context of a national crisis involving Brazilian local legislators, this paper employs a survey-experiment coupled with semi-structured interviews. The experiment design aims to understand how different forms of forum visibility and technology (in-person parliamentary sessions, livestreaming, and recorded sessions) influence legislators' perceptions of felt accountability. Findings indicate that contested issues drive public personas to focus their attention on broader audiences beyond legally enforced accountability structures. Contributing to both theory and practice, this research expands the understanding of felt accountability in contemporary digital societies. The study suggests that scrutiny and accountability consequences are multifaceted, extending beyond legal repercussions to encompass reputational and career-related concerns, as well as relational capital with specific interest groups. Moreover, it underlines the potential unforeseen effects of transparency, suggesting that the legitimacy and voice granted to specific interest groups within these forums might deviate deliberation from the pursuit of public interest.

Exploring Opportunities & Challenges in Qualitative Meta-Studies

Organizer: **Miriam Feuls**, *Copenhagen Business School*
Organizer: **Stefanie Habersang**, *Leuphana U. Lüneburg*
Panelist: **Hans Berends**, *Vrije U. Amsterdam*
Panelist: **Nicholas Berente**, *U. of Notre Dame*
Panelist: **Christina Hoon**, *Bielefeld U.*
Panelist: **Ann Langley**, *HEC Montreal*
Panelist: **Markus Reihlen**, *Leuphana U. Lüneburg*

In this panel symposium, we will discuss how management scholars can benefit from the ever-expanding body of qualitative evidence available in our field. Despite the growing interest in this area, there have been limited opportunities for dialogue on various issues to qualitative meta-studies and for exchanging insights across different divisions. We intend to bring together experts on qualitative knowledge syntheses, qualitative meta-studies, and qualitative research more generally. These experts will offer insights into both the most promising and contentious issues around qualitative knowledge synthesis in general, and more specifically, qualitative meta-studies. They will provide their perspective on several unresolved issues critical for advancing different types of qualitative meta-studies, including (1) onto-epistemological considerations in synthesizing qualitative evidence, (2) theory-building from qualitative meta-studies, and (3) quality criteria for evaluating qualitative meta-studies.

Creative Practices

Session Moderator: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

SAP: **Creative Micro-Processes in Business Model Innovation: Balancing Reflective and Prospective Inquiry** 

Author: **Nico Klenner**, *Australian National U.*
Author: **Gerda Gemser**, *Faculty of Business and Economics, U. of Melbourne*
Author: **Ingo Karpen**, *Karlstad U.*

Based on a longitudinal, ethnographic study of an innovative organization, we unpack creative micro-processes facilitating business model innovation (BMI). Our results suggest reflective inquiry (drawing on past and present) and prospective inquiry (to create the future) to facilitate the emergence and implementation of business models that are novel and useful. Furthermore, four ambidextrous interactions help to balance opposing process demands to ensure effective BMI. In addition to enhancing microfoundational understanding of creativity in BMI, this study offers a dynamic perspective on BMI and proposes interaction to complement the conventional BMI pillars of cognition and action.

SAP: **Grounded Creativity and Novel Strategic Initiatives: A Study of Discovery-Oriented Adaptation**  

Author: **Laura Poppo**, *U. of Nebraska, Lincoln*
Author: **Hilary Schloemer**, *Arkansas State U.*
Author: **Yan Huang**, *Iowa State U.*

Strategists tasked with discovery-oriented adaptation cannot always foresee the value-creating potential of a novel strategy. In this setting, often characterized by unprecedented challenges, we suggest that Strategists initiate discovery through Discovery Paths, with the intent of having Creative Teams composed of relevant specialists in the organization generate novel strategic initiatives. We propose and examine that when Creative Teams follow a Grounded Creative Problem-Solving Process, a sequential process of Strategic Problem Engagement followed by Ideation, their solutions are judged as more creative. Our conceptual model also examines two well-theorized perspectives: (1) team identification, which overcomes the motivational challenges of teams, positively impacting the Grounded Creative Problem-Solving Process, and (2) diverse knowledge, which directly impacts creative solutions through knowledge recombination but more effectively impacts creative solutions through the Grounded Creative Problem-Solving Process. We test new constructs and measures in a field study of 13 problem-solving teams tasked with generation novel solutions. We then find support for the Grounded Creative Problem-Solving Process through an organizational field study of members of 50 planning teams employed by a service organization tasked with developing creative solutions to a given Discovery Path.

SAP: **A Multimodal Investigation: Epistemological Implications from Video Art**   

Author: **Sunyu Chai**, *U. of Southampton*

In the field of organization studies, there has been a growing interest in utilizing visual artefacts as research constructs. This paper not only builds upon this research context but also critically examines the underlying assumptions regarding how empirical materials have been operationalized in our research practices, taking into account the associated methodological and epistemological issues that shape our approach to materiality. For this investigation, the paper poses a thought-provoking question: Can auditory elements, such as sound and music, be integrated as alternative representational modality, akin to the way visual artefacts play their roles in scholarly research? To further explore this question, this paper examines specific attributes of video art that utilize television as a medium, with a particular focus on the concept of “musicalizing” visual representation, manifesting “dynamic modality,” prompting further exploration of its epistemological aspects, beyond examining conventional modes of visuals and sounds.

Open Strategy

Session Moderator: **Julia Hautz**, *U. of Innsbruck*

SAP: **A Motivation Perspective to Participation in Strategy Work in Organizations: A Field Experiment on the Effect of Framing**

Author: **Saeedeh Ahmadi**, *Amsterdam Business School, U. of Amsterdam*

The democratization of work marks a significant shift toward more inclusive strategy-making in organizations. This paper investigates the underexplored aspect of employee motivation in strategy crowdsourcing. Focusing on framing as a key communication technique to influence perception, we examine how both radical and moderate framing in relation to the organization's status quo influence employee participation in strategy crowdsourcing. Utilizing Self-Determination Theory (SDT), we develop a conceptual model and conduct a controlled field experiment with 1,795 employees in a Fortune 500 company. In this experiment, we manipulate the framing of invitations and the nature of rewards offered to employees. Our findings reveal that framing aligns with employees' psychological needs, varies by tenure and hierarchy, and significantly influences their participation. These insights contribute to developing nuanced framing strategies that cater to the diverse psychological needs of employees at different organizational levels, enhancing our understanding of effective employee mobilization in strategy crowdsourcing.

SAP: **Ups and Downs in an Open Strategy Initiative: Exploring an Incumbents' Struggles to Embrace Openness**

Author: **Christian Bruck**, *WU Vienna U. of Economics and Business*

Author: **Melanie Wiener**, *WU Vienna U. of Economics and Business*

In response to the dynamic and complex corporate environments characterized by intensified competition and evolving consumer demands, the call to open up the strategy process is on the rise. Organizations increasingly realize that the potential for valuable ideas can also originate externally, beyond the confines of the organization itself or from internals that are usually not involved in the strategy process. Yet, openness is not universally applicable due to inherent challenges in finding the right levels of transparency, inclusion, or participation among others. In tackling the puzzle of why and how companies embrace openness in strategy-making, this research identifies a number motivational and inhibiting factors during the transition from a closed to open strategy and develops propositions to inspire future research. We address this prevailing issue by conducting an in-depth longitudinal single case study centered around an incumbent from the European energy industry. Our approach involves case interviews and the special format of open strategy workshops with 13 industry partners to identify why incumbents really struggle to implement an open strategy initiative. In addition, ways how to leverage barriers and inhibiting factors to develop a fruitful open strategy process are presented. We conclude with promising hints for senior strategists of incumbents supportive for their transition towards open strategizing.

SAP: **Finding the Balance: Practices to Leverage Open Strategy in Restructuring Under Financial Distress**

Author: **Kristina Stoiber**, *U. of Innsbruck*

Author: **Daniel Degischer**, *MCI - The Entrepreneurial U.*

Openness in strategy-making highlights the inclusion of additional actors and the enhancement of transparency, whereby strategizing under 'regular' conditions often occurs within contexts where stakeholder power and interests are relatively balanced. This, however, differs when circumstances change, as in the context of organizational restructuring during financial distress. Drawing on data from 56 semi-structured interviews with various stakeholders involved in restructuring, we gain a comprehensive understanding of individual perspectives and provide insights into how organizations can balance divergent stakeholder interests. Specifically, our findings highlight competing demands that require mechanisms for alignment to control information sharing, direct stakeholder involvement, and moderate decision-making. These three balancing practices are characterized by a recursive relationship that call for intermediaries to dynamically adapt to stakeholders' continuously changing claims and interests during times of distress. By this, our research not only underscores the transition towards more balanced and recursive practices in restructuring but also enriches the understanding of open strategy in challenging financial contexts, offering valuable insights into its benefits and complexities.

SAP: **Managing Complexity in Stakeholder Engagement and Open Strategy Processes Through Facilitation**

Author: **David Montens**, *IESEG School of Management (LEM-CNRS 9221)*

With more openness, more practices, and more stakeholders involved, open organizing has become more complex to manage. This article explores open strategy and its closely related concept of stakeholder engagement by further exploring the dynamics of openness in open strategy initiatives through a qualitative meta-synthesis of 25 peer-reviewed journal articles. First, the theory on open strategy is consolidated by developing a reading of open strategy processes and what complexities arise from them. Second, open strategy constructs are extended by exploring more deeply how organizations can manage the complexities, thereby bringing forward five constructs (Encouraging procedural openness, organizing group dynamics, developing process guidance, facilitating accessibility, and building legitimacy and buy-in). Finally, the notions of structure, neutrality, and purpose are proposed as an answer to why organizations struggle with openness and, thus, extend theorization on open strategy whilst bridging these findings with stakeholder engagement literature. Further, the role of facilitators and facilitation is discussed as being a means to manage the identified complexities.

I. Organizational Wrongdoing Spotlight: Executive Misconduct, Fraud, and Adverse Event Contexts

Session Moderator: **Andrew Spicer**, *U. of South Carolina*

SIM: Turnover of Bystander Firms' Outside Directors in Light of Executive Misconduct at a Peer Firm

Author: **Srikanth Paruchuri**, *Texas A&M U.*

Author: **Erik Hoempler**, *Texas A&M U., Mays Business School*

Author: **Albert Cannella**, *Texas A&M U., College Station*

Boards of directors are ostensibly put in place to monitor executives, yet recent research found that directors trust executives and do not consider monitoring as a critical aspect of their duties. We posit that monitoring and the vulnerability to manipulation become more salient to outside directors when a peer firm's managerial opportunism becomes widely and publicly discussed as organizational misconduct, such as that observed at Theranos. Integrating research on organizational categories and corporate governance, we develop a novel theoretical framework to better understand how a public breach of trust between outside directors and executives at a perpetrator firm can spillover to other firms in the same industry (i.e., bystander directors), harming the trust between outside directors and executives, generating feelings of vulnerability among outside directors, and prompting outside director exit. We further propose that the salience of vulnerability will be less effective in prompting action for some outside directors than for others. Support for our theory in empirical examination on a matched sample of outside directors has implications for research on corporate governance, organizational misconduct, and director turnover.

SIM: An In-Depth Look into the Impact of Industry Competitiveness on Occupational Fraud

Author: **Demond Daniels**, *Metropolitan State U.*

Author: **Jun Li**, *Metropolitan State U.*

This research examines how industry competitiveness impacts both the occurrence of occupational fraud and the severity of financial loss experienced by a company due to occupational fraud. Recent fraud research has alluded to a relationship between industry competitiveness and fraud. The purpose of this study is to further examine this phenomenon by looking into the relationship between industry competitiveness and occupational fraud from two dimensions. The first dimension examines the effect of the level of competitiveness within an industry on the occurrence of occupational fraud. The second dimension examines the effect of the level of competitiveness on the severity of financial loss by a company due to occupational fraud. Several of the hypotheses in the second dimension also explore the moderating role of industry competitiveness. Regression results show statistically significant relationships between competitive industries and the occurrence of occupational fraud in both dimensions.

SIM: Does Performance Relative to Aspiration Level Affect a Firm's Response Strategy Post-Crisis?

Author: **Niken Putri**, *U. of North Texas*

Recent studies on crisis management propose that strategic framing plays a crucial role in determining a firm's response to crisis, ranging from accommodativeness to defensiveness. While substantial research on organizational responsiveness and social evaluation has examined this relationship, the antecedents of a crisis response strategy remain to be explored. Addressing this research gap, this paper employs the behavioral theory of the firm to investigate why firms vary in their responses to crisis. We theorize that a firm's response strategy following a crisis is influenced by its performance relative to its aspiration level. Moreover, we expand on social evaluation research by examining the moderating effects of multiple reputations, such as character and capability reputations, on the relationship between a firm's performance relative to its aspiration level and its response strategy. We test this theory using 400 US public companies from the S&P 500 and the S&P midcap indices with a history of various adverse events from 1995 to 2008. Our theory and results suggest a new path in understanding a firm's crisis response management strategy. Keywords: firm performance, behavioral theory of the firm, impression management, scandals, misconduct, and wrongdoing.

Leverage Points for Responsible Future Making

Session Moderator: **Jarrold Ormiston**, *U. of Technology, Sydney*

SIM: Using Imaginaries to Prefigure Social Change: The Case of Kenyan Complementary Currency  

Author: **George Kuk**, *Nottingham Trent U.*

Author: **Stephanie Giamporcaro**, *Nottingham Trent U.*

While much research on prefiguration has focused on creating counter-alternatives in the present, projecting counter-alternatives from the present into the future is often overlooked. Drawing from the case of a grassroots organisation that confronted the shortcomings of the Kenyan banking system in serving the poor, we develop a framework of prefigurative imaginaries. This framework captures how the proponents use imaginaries to prefigure an alternative community currency system through two purposive actions – enacting social change in the present and foreshadowing future undesirable outcomes. However, when attempting to expand the alternative currency system on a larger scale, these actions fell out of sync, resulting in cracks within the imaginaries and eventually leading to the abandonment of the system. Our study unveils how grassroots organisations prefigure social change in marginalised contexts. Importantly, it underscores the significant influence of imaginaries on experiences and practices, ultimately shaping the acceptance or rejection of grassroots initiatives by the communities they aim to serve.

SIM: Performing Utopias: Values Practices in Blockchain-Enabled Commons Based Peer Production 

Author: **Claire Shaw**, *Aalto U. School of Business*

Author: **Ville Eloranta**, *Aalto U. School of Business*

Author: **Esko Hakanen**, *Aalto U.*

Since its inception, blockchain has been linked to ideals of distributed cooperation, freedom from social and economic hierarchies, and a rejection of government oversight. These value-laden concepts are not inherent in the technology, but rather are imbued by its designers and users, often through open-source communities: online networks collaborating through peer production to build their own blockchain. In this paper, we argue that values practices bring the utopian process to reality in the form of commons based peer production and the development of a blockchain. Blockchain technology has a particular role this process as the community values are encoded to software code, and thereby they more directly affect the journey toward the utopia. We this taking place in three stages: beginning with a desire for something new, engaging in the utopian process through values process, and encoding utopianism into infrastructure. Using an ethnographic study of an online community building a blockchain, we identify three values practices unique to this context and their connection to the utopian process.

SIM: Shared Imaginaries of Sustainable Development: The SDGs, Materiality and Interconnectedness

Author: **Dorota Dobija**, *Kozminski U.*

Author: **Charles H. Cho**, *Schulich School of Business, York U.*

Author: **Joanna Krasodomska**, *Cracow U. of Economics*

Author: **Ewelina Zarzycka**, *U. of Lodz*

Author: **Chaoyuan She**, *U. of Essex*

The world is undergoing dramatic transformations, and there is an urgent need to address emerging societal and environmental problems of significant scale and impact. Explicit, shared visions of the future are necessary to motivate and guide these grand challenges. Thus, we conceptualize the Sustainable Development Goals (SDGs) as dialogic zones where stories of efforts to address grand challenges are discussed—and we explore the possible creation of a shared vision of sustainable development and the role of dialogic accounting tools in this process. Through a single case study, we analyze Nestlé's sustainability report to explore such imaginaries of sustainable development. To establish the imaginaries of stakeholders we use Twitter/X data. We employ a materiality matrix and map interconnectedness across different SDGs to compare individual visions of this company and its stakeholders. Our findings reveal a lack of collective imaginary for addressing grand challenges, as the visions of sustainable development within this company and among its stakeholders do not fully converge. Moreover, the stakeholders diverge in their visions of sustainable development. The creation of a collective imaginary for addressing grand challenges therefore requires a more collaborative approach and the consideration of the multiple voices of all relevant actors. Hence, the SDGs comprise a useful dialogic space where dialogic accounting tools can serve as a stimulus for discussion.

SIM: Impact Assessment as Future-Making: Predictive, Explorative and Normative Futuring Techniques    

Author: **Kiia Strömmer**, *Maastricht U.*

Author: **Jarrold Ormiston**, *U. of Technology, Sydney*

Research on future-making has tended to treat the future in an undifferentiated way. Prior studies have neglected to consider the plurality of possible futures and the variety of futuring techniques through which organisational actors identify, create and disseminate images of the future. This study aims to understand the future in a more nuanced way by offering an understanding of the multifaceted practices of future-making and futuring techniques. Impact assessment in impact investing provides an exciting research site for investigating futuring techniques, as impact investors use prospective impact assessment to explore and enact potential futures. Based on 40 interviews with European impact investors, we highlight the nuanced ways in which impact investors enact the future by unpacking three broad categories of futuring techniques: predictive, explorative, and normative. We also unpacked the role of informal futuring such as ideation or intuition of the future as a core element of future-oriented decision-making. Our analysis revealed how organisations use a combination of these formal and informal futuring techniques in their efforts to anticipate and respond to different potential futures. Our study contributes to the literature on future-making in organisation studies by highlighting the complex and multifaceted nature of future-making, and suggests the need for a more nuanced understanding of the combinations of formal and informal futuring techniques organisations use to navigate and shape the future.

Author: **Haiying Lin**, Hainan U./Arizona State U.

This study extends lines of enquiry into the intersection of entrepreneurship and inequality, and explores how “heroic” elites materialize imagination to mobilize collective action in pursuing a desired future. Building on an intensive case study of Yuan village in northwest of China, the study inductively develops a future making process with an embedded cat-teasing mechanism that connects cognition (imagination), discourse and collective action. The identified mechanism and tactics (e.g. imagination, deliberation, discourse, demonstration, and institution) enrich current perspectives on the organization for the future.

New Horizons in Global Poverty Research

Session Moderator: **Nancy B. Kurland**, *Franklin & Marshall College*

SIM: 75 Years of Poverty Research: How to Chart Future Research at the Macro, Meso and Micro Levels?

Author: **Roberto Nolan Galang**, *Ateneo de Manila U., Philippines*
Author: **Alfred Presbitero**, *Deakin Business School Melbourne Australia*
Author: **Mendiola Teng-Calleja**, *Ateneo de Manila U., Philippines*
Author: **John Luis Lagdameo**, *SOMBA*
Author: **Dianna Carla Yap**, *Ateneo de Manila U., Philippines*

While the world has made significant strides in the last few decades in reducing extreme poverty, even the most affluent societies have not eradicated poverty fully. In response to the first United Nations Sustainable Development Goal, this paper conducts a systematic literature review to capture and synthesize poverty studies among the top management and social science journals over the last 75 years. The research tracks the evolution of poverty research, from a simplistic conceptualization on income deprivation and towards a multi-dimensional understanding of its antecedents and outcomes. The review breaks down the main findings in poverty research across its micro-, meso- and macro-dimensions, and provides a roadmap for management scholars to combine these dimensions for more innovative and impactful scholarship in support of novel research on the role of firms in alleviating poverty.

SIM: Reconceptualizing the Nano-Enterprise: A Transaction Cost View of the Smallest Business Enterprise

Author: **Roberto Nolan Galang**, *Ateneo de Manila U., Philippines*
Author: **Mariel Vincent Rapisura**, *Ateneo de Manila U., Philippines*

This exploratory study characterizes the nano-enterprise -- or the single-person enterprise -- as a distinct category of firms that constitutes a significant pillar for economic activity and poverty alleviation in many parts of the world, especially in emerging markets. Because of their founders' resource constraints, nano-enterprises focus less on increasing profitability and growing the business, but more on ensuring their own survival. Using the lens of transaction cost economics, this paper theorizes the genesis of nano-enterprises with a focus on the impact of institutional and technological change on firm survival. We apply a mixed-methods procedure leveraging on global survey data and a case study from the Philippines collected at the height of the Covid-19 pandemic to further theorize on the main characteristics that support nano-enterprise survival during times of crisis.

SIM: How Can SMEs Achieve the Win-Win Situation in Chinese Poverty Reduction?

Author: **Guangming Xiang**, *U. of Electronic Science and Technology of China*
Author: **Zheng He**, *U. of Electronic Science and Technology of China*
Author: **Wanyue Wei**, *Chengdu U.*

There is increasing evidence that the government and large enterprises can effectively promote poverty reduction through their extensive resources. However, we still lack an understanding of how small- and medium-sized enterprises (SMEs) can contribute. To fill this gap, we selected a typical SME (Helet) for a rigorous case study to explore the motivations and decision-making processes of SMEs when engaging in poverty reduction. This paper aims to identify the role of SMEs in poverty reduction and how they innovate to satisfy different stakeholders. Our findings indicate that poverty reduction activities that incorporate social and economic values are necessary to motivate the involvement of SMEs. They can bridge the information and resource gaps among stakeholders in rural areas by occupying structural holes and innovating business models. This approach enables SMEs to promote poverty reduction while simultaneously achieving corporate responsible competitiveness. Our study contributes to organizational ambidexterity by demonstrating how social and economic values can be mutually reinforcing. Additionally, this paper proposes the formation path of corporate responsible competitiveness to enrich poverty reduction research. Furthermore, by regarding networks as tools, and understanding the role and formation of the organization occupying structural holes, we enrich the research of network governance and structural holes. Practically, our research suggests that SMEs should prioritize multiple stakeholders and integrate social value into their decision-making processes.

Models for Understanding and Advancing Social Value Creation

Session Moderator: **Punit Arora**, *City U. of New York*

SIM: Investigating the Paradox of Embedded Agency in Social Intrapreneurship

Author: **Christina Lara Kannegiesser**, *U. of Hamburg*

How can individuals in organizations become agents of divergent change if they are constrained by the very institutions they seek to change? Previous work has touted experimental spaces as potential remedy to this 'paradox of embedded agency'. Yet, it remains a puzzle how such experimental spaces enable or constrain the change efforts of employees in the context of social innovation in for-profit firms where such change efforts challenge the dominant market logic. To shed light on this question, we conduct a multiple case study (including 40 interviews) examining four social intrapreneurship programs as dedicated spaces for social innovation. We derive a theoretical model depicting the 'social innovation sandbox' in which employees get to play with their social innovation ideas at the organizational periphery, while the protective boundaries of the experimental space impede these ideas from diffusing to the organizational core. Our findings contribute to research on social innovation and intrapreneurship, experimental spaces, and hybrid organizing.

SIM: The Role of Cultural Variation and Economic Inequality in the Prevalence of Social Entrepreneurship

Author: **Nara Jeong**, *San Francisco State U.*

Author: **Geoffrey Desa**, *San Francisco State U.*

Author: **Ian M. Dunham**, *San Francisco State U.*

Author: **Denise Kleinrichert**, *San Francisco State U.*

Research Summary Under which socio-economic conditions does social entrepreneurship flourish? We apply institutional anomie theory to explain levels of social entrepreneurship across a variety of countries, cultures, and economic conditions. Through a multilevel analysis involving 83,089 individuals in 22 countries, we empirically examine and test our theory. We find that social entrepreneurship can manifest as a creative, yet deviant response to anomic conditions. This study validates institutional anomie theory as an explanatory framework for understanding individual involvement in social entrepreneurship. It underscores the importance of social entrepreneurship as a societal stress-relieving mechanism to adapt to changing institutional conditions and cultural values. Managerial Summary This study explores how interplay between cultures and economic inequality impacts individuals' involvement in social entrepreneurship. Our findings indicate that conditions of resource constraint weaken normative behaviors while promoting deviant actions. Consequently, social entrepreneurship declines within cultures that traditionally prioritize humane and future-oriented values (which typically tend to exhibit higher rates of social entrepreneurship), while it increases in cultures that traditionally emphasize performance and institutional collectivism (which typically tend to exhibit lower rates of social entrepreneurship). Our study highlights specific configurations of national cultures and social stratification that shape social entrepreneurial activities.

SIM: Using Social Media for Opportunity Exploration in Social Entrepreneurial Ventures

Author: **Jihye Kim**, *U. of Dundee*

Author: **Dhruba Jyoti Borah**, *U. of Liverpool*

Author: **Nicolas Li**, *Manchester Metropolitan U.*

We use an exploratory research design involving multiple case studies in South Korea to explain how the use of social media facilitate opportunity exploration and exploitation in social entrepreneurial ventures. This study advances research on social media by proposing a novel categorisation of social media use in social entrepreneurial ventures for exchanging resources with external stakeholders. Specifically, we found that social media is used by social entrepreneurial ventures for the inbound transfer of resources through scanning, sourcing and acquiring as well as the outbound transfer of resources through revealing, signalling, selling and disseminating. Lastly, our findings also unveil some challenges for SEVs to use SM, understanding of which offer significant practical implications.

SIM: Building Trust to Develop a Sustainable Sharing Economy Model: A Case Study of a Social Enterprise

Author: **Urmi Mehta**, *LM Thapar School of Management, Thapar Institute of Engg. and Technology, India*

Author: **Pradeep Kumar Hota**, *Indian Institute of Management, Udaipur*

Author: **Padmakumar Nair**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*

Social enterprises face multiple challenges while trying to establish sustainable and scalable sharing economy models at the Base of the Pyramid (BoP). Extant literature has acknowledged these challenges as well as the need to have such models. However, we are yet to fully understand how social enterprises navigate these challenges to develop a sustainable sharing economy model. We address this gap through an inductive case study of a social enterprise operating in a slum area in India which dealt with issues of trust deficit in the ecosystem as it tried to build a resilient and scalable sharing economy model. We found a four-step approach to trust building (assess, repair, build and maintain) that was embedded in the microprocesses adopted by the enterprise. Further, we identified that collective decision making and a value-based approach in these microprocesses helped the model to be sustainable and scalable. We clearly identify these values as transparency, adaptability, fairness, care, and quality-consciousness. Our study has important implications for social entrepreneurship as well as sharing economy at the BoP literature.

Author: **Ghita Lkhoyaali**, *HEC Montreal*

The concept of stakeholder engagement has developed around the premise that organizations that involve multiple stakeholders in organizational activities yield better outcomes than those that do not. Considering the importance of stakeholder engagement for addressing grand challenges in a sound and sustainable way, this paper explores how does stakeholder engagement unfold in unconventional form of organizing (UFO) dedicated to creating social value? For doing so, this article studies the stakeholder's engagement mechanisms of AquaHacking; an initiative that has developed in the field of water conservation in Canada by adopting the organizing form of hackathons. Our analysis shows that in UFOs three mechanisms support the social value creation process: (1) harnessing fluidity, (2) maintaining attractiveness, and (3) ensuring commitment. Our findings also consider the challenges inherent to organizing in unconventional forms and the conditions for the viability of a UFO dedicated to social value creation.

Stakeholder Orientation, Identity, and Complexity: Who Cares -- Why and How Much? -- About What?

Session Moderator: **Jo-Ellen Pozner**, *Santa Clara U.*

SIM: The Effect of a Stakeholder Orientation on Stakeholder Cooperation: An Empirical Test 

Author: **Paul Simonis**, *U. of Amsterdam / Zuyd U. of Applied Sciences*

Author: **Jan-Willem Stoelhorst**, *U. of Amsterdam*

We develop and test theory related to the central proposition of instrumental stakeholder theory (IST): that stakeholder-oriented firms will outperform profit-oriented firms. While IST has always been clear that this proposition hinges on favorable behavioral reactions towards stakeholder-oriented firms, it has never developed a causal model detailing its central proposition. We address this gap in three steps. First, we build on extant literature to propose unambiguous definitions and operationalizations of IST's independent variable (IV) and dependent variable (DV). For the IV we develop vignettes describing a 'stakeholder-oriented firm' and a 'profit-oriented firm,' and for the DV a vignette describing a situation requiring cooperation in a collective action situation. Second, we hypothesize that stakeholders of stakeholder-oriented firms are more likely to cooperate than stakeholders of profit-oriented firms because the former are more likely to trust the firm and to enter a relational as opposed to a transactional psychological contract with it. Finally, we test these hypotheses in a preregistered experimental vignette study and find support for a model in which the effect of the firm's stakeholder-orientation on stakeholder cooperation is sequentially mediated by trust and a relational contract. We discuss how our work contributes to research in behavioral stakeholder theory.

SIM: Social Movement Dynamics in Corporate Takeovers and the Battle for Employees' Wealth in Target Firms 

Author: **Rajiv Krishnan Kozhikode**, *Simon Fraser U.*

Previous research on corporate takeovers has shown that an important source of financial gains from a takeover is the expropriation of the wellbeing of the target's stakeholders. Per economic theory of property rights employees do not have secure property rights over their claims following a takeover, making their claims susceptible to post takeover expropriation. But social movement scholars contend that property rights are established based on continuous contestation between interest bearing groups. Drawing on this notion we theorize about social movement process inside firms and the ability of employees to prevent expropriation. We construe employment contracts as the primary opportunity structures available to employees that allow them to pose voice and exit type threats to the new managers when faced with expropriation concerns. But these contractual opportunity structures might be more potent following a takeover when employees have at their disposal other means inside and outside their firm to make their voices loud and their exits costly.

SIM: A Domino Effect of Firm CSR Across Multi-Stakeholders: Evidence from China's Resource Tax Reform

Author: **Yijia Dai**, *Sichuan Normal U.*

Author: **Xiuli Sun**, *The Southwestern U. of Finance and Economics (SWUFE)*

Author: **Jing Xu**, *The Southwestern U. of Finance and Economics (SWUFE)*

To address the most pressing social and ecological challenges, governments are reclaiming control over certain arena that was previously self-regulated by business firms. Yet, how firm corporate social responsibility (CSR) responds to this shift in governance remains ambiguous. In this study, we develop a domino-transmission model incorporating multiple stakeholders to investigate firms' reactions to more stringent hard law by shrinking their CSR. We test our model using a sample of Chinese listed mining firms during the period 2010 – 2019 when a national resource tax reform took place. Our results indicate that firms responded negatively to the reform by the rundown of CSR performance, especially in the environmental aspect. Moreover, their response varied by relative values of stakeholders and firm attributes. Mining firms cut CSR most in supplier-buyer dimension, modestly in society groups and employees, and least in shareholder engagements. Additionally, firm slack in terms of profitability, size, and resource independence could buffer the negative effect of the resource tax reform on CSR. Our study contributes to the CSR literature by uncovering the hidden impact of rise of government authority in certain CSR domains, and advances research on stakeholder complexity by identifying firms' differentiated responses.

SIM: Do Owners Care About Stakeholders? Owner Identities and Stakeholder Orientation 

Author: **Sebastian Sigg**, *U. of St. Gallen*

This study investigates owner identity as important determinant of stakeholder orientation. We develop hypotheses based on the owners' relationship with the firm and their access to information. Examining individual owners, including families, founders, and lone entrepreneurs, alongside institutional investors categorized based on their investment time horizon, we identify distinct degrees of stakeholder orientation. Institutional investors demonstrate a heightened stakeholder orientation, driven by their responsiveness to external demands for transparency. In contrast, individual owners, who benefit from private information and maintain informal stakeholder ties, exhibit a lower level of stakeholder orientation. Empirical testing validates these findings and reveals nuanced variations in stakeholder orientation within specific owner sub-classes, such as high turnover and low turnover institutional investors, as well as distinctions between families and other individual owners. This research contributes to the existing literature on stakeholder orientation, advances the new stakeholder theory, and expands upon the literature on owner heterogeneity.

Author: **Saptarshi Purkayastha**, *Indian Institute of Management, Calcutta*

Author: **Kannan Ramaswamy**, *Thunderbird School of Global Management at ASU*

Drawing upon the concept of social identity and the critical role of organizational stakeholder alignment, we argue that a board's social identity diversity (SI-diversity), shaped by the religious and caste identities of its members, will have a significant and systematic bearing on the outcomes associated with its CSR investment decisions. Results from a longitudinal empirical study set in India, show that SI-diversity (a) positively moderates the relationship between CSR initiatives and performance, (b) has a stronger positive impact on the social CSR-performance link than it does on the environmental CSR-performance relationship, and (c) the proportion of board members who reflect lower caste social identities positively moderates the performance outcomes associated with social CSR. In managerial parlance, the findings underscore the powerful role that caste and religious diversity can play, even at fairly low levels, in impacting the performance outcomes of CSR initiatives.

Corporate and CEO Activism and Ideology

Session Moderator: **Tyler Nicole Abayon Fezzey**, *U. of Alabama*

STR: **Damned If You Do & Damned If You Don't: Examining the Conditionality of CEO Activism Decisions**   

Author: **Tyler Nicole Abayon Fezzey**, *U. of Alabama*

Author: **Paul L. Drnevich**, *U. of Alabama*

The phenomenon of a firm's chief executive officer (CEO) engaging in sociopolitical activism has increasingly emerged in recent years as a significant subject of interest and controversy in both mainstream media and scholarly investigation. Such engagement, while frequently expected by stakeholders, is often fraught with risks for the firm and its leader. Through this article, we seek to advance stakeholder alignment theory, departing from traditional trait-based perspectives to focus on executives' decision-making processes in sociopolitical contexts. This shift offers a nuanced exploration of executive actions, going beyond individual differences and providing a comprehensive understanding of the impact activism decisions have on different stakeholders. By offering practical guidance to executives facing this dynamic decision-making environment, our framework contributes to a deeper understanding of how CEOs translate their ideological stances into concrete actions, navigating complexities and trade-offs. We propose that the best stance for an executive to take is a highly conditional one, dependent on the alignment of the company's mission and values and those of its most relevant stakeholders. We aim to contribute to a deeper understanding of the evolving role of CEOs in the sociopolitical landscape and provide a foundation for future research and practical guidance.

STR: **From Covert Action to Overt Activism: The Evolution of Corporate Sociopolitical Involvement**

Author: **Anna Eileen McKean**, *U. of Utah, David Eccles School of Business*

In recent years we have seen an increase in firms taking overt and intentional sociopolitical actions. However, with its rise brings questions around whether this form of corporate action is new and where it fits within nonmarket strategy literature. This paper examines the overall emergence and growth of corporate sociopolitical involvement (CSPI), exploring the variance in its manifestations and how these actions differ from other forms of nonmarket strategy. Using a database of news articles on CSPI related to controversial issues over a 25-year period (1996-2020), I analyze the ways in which corporations are publicly involved and active in sociopolitical issues. Findings illuminate how firms' relationship to sociopolitical issues has shifted over time from business-centric to moralistic. Additionally, findings provide greater understanding on the ways in which corporations exercise their power in relation to politics and to society at large.

STR: **Contradictory Corporate Sociopolitical Activism and Stakeholders' Evaluations of Legitimacy**   

Author: **Yu Li**, *U. of South Carolina*

A mainstream of stakeholder theory focuses on how firms address interest conflict among multiple stakeholders. This paper call attention to a new strategy of firms, especially multinational enterprises (MNEs), to reconcile political ideologies conflicts among stakeholders—contradictory corporate sociopolitical activism (CSA). Contradictory CSA occurs when a firm takes contradictory stances on controversial sociopolitical issues. We argue that firms take divergent stances to appeal various stakeholder groups with different political ideologies by leveraging the fact that these stakeholder groups are usually isolated by time and space. We submit that firms leverage stakeholder isolation and conduct three types of CSA contradictions, i.e., temporal, spatial, and spatiotemporal. However, with the development of social media, along which information retentivity and information connectivity was largely enhanced, formerly isolated stakeholder groups are more easily to detect and react to firms' CSA contradictions. Implementing a formal modeling approach, this paper theorizes on how CSA contradictions influence stakeholders' evaluations of firms' sociopolitical legitimacy by proposing that the effect depends on characteristics of stakeholder groups (power, information connectivity, political polarization) and characteristics of CSA contradictions (information retentivity, extent of contradiction). This research contributes to the literatures on corporate activism, stakeholder management, and legitimacy.

STR: **CEO Political Ideology and Firm-Level Outcomes: A Systematic Literature Review and Research Agenda**  

Author: **Lea Raemy**, *U. of Bern*

Author: **Philipp Sieger**, *U. of Bern*

Upper echelons scholars have shown that the political ideology of CEOs influences strategic decisions as well as subsequent firm performance. A recent increase in research interest in this area has led to a widely fragmented literature, with a multitude of outcomes and related moderators and mediators of CEO political ideology being investigated. This paper therefore asks: How does CEO political ideology actually influence the respective firm? We conduct a systematic literature review of 38 papers published in leading academic journals between 2013 and 2023 that is guided by three specific research questions: (a) How is CEO political ideology operationalized and measured? (b) What outcomes, moderators, and mediators of CEO political ideology have been investigated? (c) What theories have been used to explain the relationships that are found? Based on the corresponding findings, we develop a conceptual framework of the different mechanisms through which CEO political ideology influences firm-level outcomes and present a comprehensive future research agenda. Overall, our study provides deep insights into the nature of CEO political ideology as well as its implications in the organizational context.

Investment and Innovation in Technology Ventures

Session Moderator: **Florence E M Honore**, *U. of Wisconsin, Madison*

STR: **Championing the Flawed Gems: In Search of Contrarian Opportunities Through Minority Ruling**    

Author: **Jose Pablo Arrieta**, *U. of Amsterdam*
Author: **Chengwei Liu**, *Imperial College London*

Effective decision-making structures like majority voting reduce noise, but they can also result in organizations competing for the same high-quality targets, diluting profits. We examine minority ruling, which champions the minority's choices and denies the majority's, as an unconventional approach to finding overlooked opportunities. Inspired by a venture capital firm that used minority ruling to identify nanotechnology startups, we computationally demonstrate its ability to maximize noise impact and identify signals for contrarian opportunities. The wisdom of minority ruling lies in how it monopolizes the "flawed gems" hidden from competition-neglecting rivals. Our findings contribute to the literature on decision structures by incorporating competition dynamics and illuminate a behavioral strategy that underdogs can use to profit from incumbents' blind spots.

STR: **Can Academic Startups be Broad? How Problem Formulation Shapes Market Breadth Among Startups in AI**  

Author: **Shinjinee Chattopadhyay**, *U. of Illinois*
Author: **Florence E M Honore**, *U. of Wisconsin, Madison*
Author: **Shinjae Won**, *U. of Illinois at Urbana-Champaign*

Founding teams rely on their prior experiences to identify the breadth of market segments their startups can pursue. Contrasting founding teams with and without academic founders, we use an abductive approach on a sample of 988 startups in the Artificial Intelligence field, to investigate the difference in the breadth of markets segments between the two groups. Upon finding a positive association between academic startups and the number of market segments, we discover that academics formulate and solve general problems. Our results indicate that teams with academic founders produce more general publications and patents than others, which drives the association with more market segments. Our findings complement prior literature by highlighting the role of problem-formulation in new ventures and that of academic startups within AI.

STR: **On Resource Complementarity Between Startups and Seed Investors**

Author: **Simone Santamaria**, *National U. of Singapore*
Author: **Stefano Breschi**, *Bocconi U.*

We propose a theoretical framework and provide empirical evidence on how resource complementarity or substitutability between entrepreneurs and seed investors drives selection and value creation in the context of high-tech startups. Specifically, we argue that seed investors specialized in training programs, like startup accelerators, are the ideal match for entrepreneurial teams equipped with strong technological competencies but lacking business knowledge. Conversely, entrepreneurial teams with good technological and business knowledge should prioritize raising funds from primarily financial investors like business angels or venture capitalists to speed up the go-to-market process. Combining information from Crunchbase and LinkedIn, we provide consistent empirical evidence from the assortative matching of start-ups and investors as well as the ex-post analysis of joint value creation.

STR: **Knowledge Contribution and Equity Split Dynamics Among China's Technology Ventures**   

Author: **Jiang Bian**, *HKU Business School, The U. of Hong Kong*

Equity split is one of the most important decisions that entrepreneurial ventures have to make in order to align individual efforts with contributions among the cofounders. While the prior literature has examined the impact of equity division on individual cofounder's effort to contribute ex post, we know little about how the initial sources of contribution shape equity division decision ex ante. Yet, it is well documented that knowledge contribution through ideas, technologies, and information is critical for the creation and growth of high-tech ventures. At the same time, knowledge is hard to evaluate and contracts involving the evaluation of knowledge is subject to the hazard of renegotiation. Drawing insights from the behavioral theory of entrepreneurship, I argue that knowledge contribution, relative to other (generally more tangible) forms of contribution such as financial capital, real estate, and machinery, is associated with both a higher level of initial equity share and a higher level of equity dilution over the course of venture development. I further investigate the moderating role of venture capital (VC) investors in equity split adjustment and find evidence that VCs featured with different institutional logics (i.e., state affiliated VCs vs. private VCs) vary in their role of facilitating this adjustment. A hand-collected dataset from China that uniquely helps identify initial knowledge contribution among cofounders provides supportive evidence to my hypotheses.

STR: **Role of Venture Organization Affiliation on Startup Innovation** 

Author: **Supradeep Dutta**, *Rutgers U., Camden*
Author: **Siva Ramakrishna Devarakonda**, *Tilburg U.*

This study unpacks the distinct endowments of venture organization that influences the novel innovation prospects of entrepreneurial firms. Drawing on the Penrosean perspective and advancing a framework that conceptualizes the venture organization as an important 'managerial' resource for the entrepreneurial firm, we focus on the two endowments – (a) network embeddedness, and (b) experience diversity. We ascertain how the combined effect of these distinct and cardinal endowments provide a superadditive learning advantage to influence entrepreneurial firms' novel innovation. Furthermore, we propose that the superadditive learning from these endowments hinges on organizational and market conditions surrounding the entrepreneurial firm. Focusing on VC-backed biotechnology startups, we find that novel innovation in startups benefit from the superadditive effect of venture organizations' network embeddedness and experience diversity. These benefits are contingent on founders' technological capability and market uncertainty.

Emerging Perspectives on Corporate Governance

Session Moderator: **Kuo-I Chang**, *Dong Hwa U., Taiwan*

STR: Coevolution of Board Interlocks and Digital Transformation: Learning About Business Model Innovation 

Author: **Jingtao Yi**, *Renmin U. of China*
Author: **Fangyi Liu**, *School of Business, Renmin U. of China*
Author: **Liang Chen**, *Singapore Management U.*

In the process of corporate digital transformation, business model innovation represents a key challenge. In this study, we delve into the strategic choices made by focal firms in selecting interlocking partners based on their digital business model innovation (DBMI) levels and the subsequent influence of these connections on the focal firms' own DBMI. Employing a stochastic actor-oriented model (SAOM), our research explores the coevolution of board interlock networks and firms' DBMI levels. We analyze data from 345 A-share listed firms in China over the 2016-2020 period. Our findings uncover a compelling pattern: as conduits for organizational learning, board interlocks tie formation process demonstrate that focal firms show a propensity to form ties (outgoing ties) with firms that exhibit higher levels of DBMI. However, our study challenges the conventional wisdom by revealing that the DBMI levels of alter firms, connected via outgoing ties, do not significantly impact the enhancement of focal firms' DBMI. Instead, a substantial positive correlation emerges between the number of incoming ties received by a firm and the enhancement of its DBMI.

STR: Strategic Uniqueness and Firm Value  

Author: **Marina Lugova**, *U. of Burgundy*
Author: **Kannan Srikanth**, *The Ohio State U. Fisher College of Business*
Author: **Jaideep Anand**, *Ohio State U.*

There is a fundamental conundrum in our theories of firm competitive advantage. Although both the positioning and resource based theories argue that firm's unique strategies should lead to superior performance, empirically we find that unique strategies reduce firm financial performance. Scholars have suggested this 'uniqueness paradox' arises because the information, cognitive, and incentive limitations of equity analysts lead capital markets undervalue unique strategies. We contribute to this literature by examining how the uniqueness of strategic change influences firm financial performance. We argue that the theorized informational and cognitive limitations should reduce with greater persistence of strategic change, and that this effect is even more consequential when the strategic change is both unique and complex. We test and find support for our hypotheses using longitudinal data from the global pharmaceutical industry from 1995 to 2020. We used a novel text based machine learning technique based on topic modeling to create measures of uniqueness, persistence, and complexity of strategic change. This technique is superior to typical accounting based measures used in prior work since it allows us to capture more broadly changes across firms' value chain. These findings enrich our understanding of the contingencies under which unique strategies improve firm financial performance.

STR: How Data Factor Property Rights Legislation Attempts Increase Firm Value

Author: **Lanzhu SUN**, *Tsinghua U.*
Author: **Donghong Li**, *School of Economics and Management Tsinghua U.*

In order to promote the development of the digital economy, Chinese provinces have introduced local regulations on clarifying the property rights of data factor to strengthen the property rights protection of data. Relevant literature has explored the role of data factors for firms, but there is a lack of research on the changes in the data property rights system. Based on the property rights theory, this paper breaks the assumption that the existing property rights system is advanced and stable. We argue that the property rights legislation attempts are able to promote firm value. State-owned enterprises are less positively affected by the property rights legislation attempts because they are more involved in basic economic data. Firms with more experience in data operations are more protected by the property rights legislation attempts. We contribute to the study of property rights theory by leveraging the specificity of the property rights of data and the event of the optimization of the data property rights system.

STR: The Effect of Family Control on Executive Compensation and Compensation-Performance Relationship 

Author: **Chien-Nan Chen**, *National Dong Hwa U.*
Author: **Nguyen Thi Thu Trang**, *National Dong Hwa U.*
Author: **Kuo-I Chang**, *Dong Hwa U., Taiwan*

Executive compensation serves as a crucial tool for motivating executives to align with shareholders' interests. This study investigates the differences in compensation levels of executives between family-owned and non-family-owned firms, as well as the impact of family control on executive compensation. Utilizing publicly listed companies in Taiwan as the sample, the study finds that there is no significant difference in the total compensation of top executives between family-owned and non-family-owned firms. However, family-owned firms are more inclined to offer top executives higher fixed salaries and fewer incentive bonuses. In family firms, the extent of family control positively influences top executives' fixed salaries while having a negative impact on their variable incentive cash bonuses. Moreover, the presence of family directors weakens the positive correlation between family ownership and top executives' fixed compensation, as well as the negative relationship between family ownership and cash bonuses. In terms of performance, incentivized bonuses show a positive and significant impact on firm financial performance, while fixed salary does not demonstrate a direct association with firm performance. This study extends our understanding of executive compensation in family firms, it sheds light on how family influence compensation structure and ultimately affect firm performance.

Perspectives on “Woke Capitalism”

Organizer: **Krishnan Nair**, *U. of Illinois Urbana-Champaign*

Organizer: **Alina Georgiana Andrei**, *Rotterdam School of Management, Erasmus U.*

Organizer: **Eric Y. Lee**, *The Pennsylvania State U.*

Organizer: **William Ocasio**, *U. of Illinois at Urbana-Champaign*

Moderator: **Krishnan Nair**, *U. of Illinois Urbana-Champaign*

Panelist: **David A. Waldman**, *Arizona State U.*

Panelist: **Danielle E. Warren**, *Rutgers U.*

Panelist: **Patrick Wright**, *U. of South Carolina*

Panelist: **William Ocasio**, *U. of Illinois at Urbana-Champaign*

Panelist: **Witold Jerzy Henisz**, *U. of Pennsylvania*

Business practitioners, politicians, and academics have increasingly noted the phenomenon of large corporations and their leaders embracing socially progressive public stances, organizational practices, and symbolism, referred to by some as “Woke Capitalism.” This phenomenon has been hotly contested in both the business and political realms. The proposed panel symposium will bring together scholars from diverse backgrounds and perspectives to discuss and potentially debate different aspects of “Woke Capitalism.”

Psychological Design of Organizations

Discussant: **Daniel Levinthal**, *U. of Pennsylvania*
Panelist: **Markus Reitzig**, *U. of Vienna*
Panelist: **John Joseph**, *U. of California, Irvine*
Panelist: **Libby Leann Weber**, *U. of California, Irvine*
Panelist: **Dongil Daniel Keum**, *Columbia Business School*
Organizer: **Saerom Lee**, *The Wharton School, U. of Pennsylvania*

Psychology research on decision-making highlights the challenge of repairing the “hardwired errors of individual cognition” (Powell et al., 2011:1378) and suggests structural interventions to improve the decision environment. This panel symposium brings together two eminent streams of organizational research that explore the psychological design of organizations: organizational design research and transaction cost economics (TCE) research. Among others, we explore how hierarchy can create, exacerbate, and solve cognitive biases. While the symposium offers a brief review of the related body of work from different perspectives, it will focus on providing a perspective on promising future research directions.

Funding and Founding: Academic Entrepreneurship

Session Moderator: **XiaoYu Tan**, *U. of Science and Technology of China*

TIM: **How Academic Entrepreneurs Affect Firm Innovation Performance via Strategic Innovation Orientation?**

Author: **XiaoYu Tan**, *U. of Science and Technology of China*

Author: **Runyong Liao**, *Gf Securities Co., Ltd*

Author: **Feng Feng**, *School of Management, U. of Science and Technology of China*

In response to the call of innovation literature and strategy literature, that is, to enrich the research on the mechanism of the impact of academic entrepreneurs (AEs) on firm performance and the heterogeneity of innovation strategy at the firm level, this study focuses on the mediating mechanism of strategic innovation orientation (IO) between AEs and firm innovation performance. Based on the theoretical framework of IO proposed in prior research, we explore the role of IO from three perspectives: innovation culture, innovation behavior, and innovation environment. Our findings indicate that AEs enhance firm innovation performance, including both innovation quantity and quality, by fostering innovative culture characterized by strategic long-term thinking and innovation incentives, engaging in innovative behaviors including distant search and university-industry collaboration (UIC), and managing dynamic environments. This study contributes to the existing literature and provides insights for the formulation of innovation policies and firm innovation management.

TIM: **Do Funded Research Projects Deviate from Grant Proposals, and Does it Matter?**

Author: **Andres Madariaga Espinoza**, *KU Leuven*

Author: **Stijn Kelchtermans**, *KU Leuven*

Author: **Cindy Lopes-Bento**, *Maastricht U., School of Business & Economics*

Author: **Arvids A. Ziedonis**, *Boston U.*

Despite the substantial resources devoted to the review process, it is unclear whether publicly funded research closely adheres to the original grant proposal. Using natural language processing techniques on 449 research grants awarded to about 900 scientists from a large European research university in 2000-2018, we document the deviations between pairs of grants and publications that acknowledge the grant. We analyze the antecedents of these deviations, focusing on the role of new team members, i.e., those co-authoring papers with the grant holders but who were not co-applicants of the grant. In addition, we examine whether there are differences in scientific impact between publications exhibiting larger deviations when compared to those closely aligned with the original proposal. Our findings reveal that publications with co-authors joining the team from outside the grant holders' university ("external scientists") tend to deviate more from the grant proposal. Conversely, first-time collaborations with junior external scientists align more closely with the original research plan. We theorize that these results are consistent with a trade-off between new team members fostering the knowledge recombination process within the team and the "liability of newness" that they face. Finally, we find a positive association between deviations and scientific impact, which informs the debate on the added value of a detailed ex ante review of grant proposals and the mechanisms to allocate science funding.

TIM: **Get Rid of Dependency: Impact of Elite Research Fund on the Career Path of Young Scientists**

Author: **Xiangru Zhou**, *Peking U.*

Early career researchers (ECRs) in university organizations play an important role in any science and technology innovation system, yet are generally assumed to be intensively government resource dependent. Developing the resource dependency theory (RDT), we argue that this assumption fails when organizational mergers or political actions occur, for neglecting the resource-power relationship dynamics of ECRs and their funding agencies. We find empirical evidence in the Excellent Young Scientists Fund Policy, which is a competitive elite research funding policy established by the Chinese central government. Previous research has shown that more public research funding leads to more research outcomes for ECRs. However, our study clarifies the fact that public financial adequacy is not the primary cause, since the increase in publications occurred 1 year prior to the policy implementation and 3 years lagged behind the award year. Employing the difference-in-discontinuity model, we conclude that the academic bureaucrat title, the spinoff of the government research grant, triggers young scientists' decentralized fundraising strategy including expanding social network ties and activating the industrial sponsorship, which are the joint mechanisms of scientific productivity boosts.

TIM: **What Makes Academic Ventures Successful? The Role of Academic Prominence and Early Employees**

Author: **Wolf-Hendrik Uhlbach**, *Tilburg U.*

Author: **Markus Perkmann**, *Imperial College London*

Prior research emphasized the role of academic founders' human capital as a key factor informing the success of their ventures. Yet the mechanisms by which technically focused academic knowledge and expertise translate into venture success remain underspecified. Here we explore a hitherto unexplored mechanism: academically prominent founders can attract superior early employees who then contribute to venture performance. We probe this conjecture using matched employer-employee panel data for the full population of Danish academic ventures founded between 2008 and 2016. Our findings suggest that prominent academic founding teams attract employees that command higher salaries. In turn, ventures attracting higher paid employees achieve higher employment growth and greater success in attracting venture capital. We contribute to the literature on the antecedents of academic venture performance by going beyond considering the characteristics of the founding team and highlighting the role of early employees.

AI Effects on Firm Performance

Session Moderator: **Bruno Cirillo**, *SKEMA Business School*

TIM: Organized Complexity of A.I. and Retail Firm Performance: A Business Process Perspective

Author: **Lanlan Cao**, *NEOMA Business School*
Author: **Jiachen Yang**, *NEOMA Business School*

This study explores the strategic configurations of artificial intelligence (AI) applications within retail business functions, with the goal of optimizing overall firm performance. The investigation systematically categorizes AI-enabled business processes at task-, business function-, and firm-levels, subjecting them to a meticulous examination for their intricate interactions within organizations. Utilizing grounded theory, we analyze AI applications from 37 retailers, identifying 28 tasks distributed to five functions: customer service, store, supply chain & logistics, marketing, and cybersecurity & risk management. From these tasks, a robust measurement tool for AI-enabled business functions is constructed, facilitating a deeper understanding of their impact. Fuzzy-set qualitative comparative analysis, based on data collected from 140 retail executives, unveils three key findings concerning AI implementation configurations in the identified functions, each contributing uniquely to the enhancement of firm performance. First, individual AI-enabled business functions exhibit limited impact on firm performance. However, AI-enabled customer service, particularly in promoting high innovation, emerges as a pivotal factor. Second, the inclusion of AI-enabled cybersecurity and risk management proves crucial for the effectiveness of firm-level AI applications. Third, emergent configurations often display an isomorphic structure, concurrently fostering both high efficiency and innovation. These findings not only contribute insights for further AI research in organizations but also provide guidance for retail managers in strategically implementing AI for enhanced efficiency and innovation.

TIM: Artificial Intelligence and Firm Performance: A Systematic Literature Review and Future Research

Author: **Qiong Yuan**, *Middlesex U., Business School, London, UK*
Author: **Zhongqi Jin**, *Middlesex U.*
Author: **Dongmei Zha**, *Brunel Business School*
Author: **Charles Dennis**, *Middlesex U.*

This article presents a comprehensive systematic literature review examining the intricate relationship between artificial intelligence (AI) and firm performance. The objective is to deepen our understanding of the role of AI in driving firm performance and to identify avenues for further research. Drawing from a meticulous analysis of 101 articles spanning 47 years, this study identifies key drivers in developing AI capabilities and unveils how AI facilitates firm performance. Additionally, the study explores the moderating role of contextual factors on the relationship between AI capabilities and firm performance. Building upon the insights garnered from this investigation, a future research agenda is proposed, along with strategic implications for managers in developing AI-enabled advantage strategies.

TIM: The Contribution of Individual Specific and Generic Experience to Improving AI's Predictive Accuracy

Author: **Artyom Yepremyan**, *SKEMA Business School*
Author: **Francesco Castellaneta**, *SKEMA Business School, U. Côte d'Azur (GREDEG)*
Author: **Bruno Cirillo**, *SKEMA Business School*

The growing integration of Artificial Intelligence (AI) in strategic management has sparked interest in understanding its interplay with individual experience in predicting firms' performance. This study delves into the relationship between AI-generated firm performance predictions and individual predictions, especially focusing on the roles of domain-specific and general experience. Our research underscores the nuanced role that individual experience plays in influencing AI's predictive capabilities, particularly under the condition of environmental uncertainty. Notably, we highlight the advantages of leveraging individual experience in AI predictions while showing the contingencies upon which the blending of machine learning and individual knowledge results in better or worse outcomes

TIM: The Performance Implications of Attention to and Action on Artificial Intelligence

Author: **Tung-Min Hung**, *National Taiwan U. of Science and Technology*
Author: **Muhammad Fatah Wibiseno**, *National Taiwan U. of Science and Technology*

We adopt the theory of attention-based view (ABV) to explore the cognitive driver of artificial intelligence (AI) adoption and its impact on firm performance. In general, we propose an attention-action-performance model from the theoretical lens of ABV. Based on our model, we examine how a firm's attention to AI affects its action on AI and also investigate the performance implications of a firm's attention and action. In particular, we argue that an increase in a focal firm's attention to AI drives the firm's action on AI patenting, and the action on AI patenting enhances the firm's accounting-based performance. Moreover, the positive impact of a firm's attention to AI on firm performance is mediated by its subsequent action on AI patenting. Testing 150 companies indexed by the S&P 500 from 2012 to 2022, we find our premises supported.

Digital Capability and Performance

Session Moderator: **Yuqing Shen**, *Tongji U., School of Economics and Management*

TIM: Can Process Digitization Improve Firm's Innovation Performance?

Author: **Yuqing Shen**, *Tongji U., School of Economics and Management*
Author: **Yize Qin**, *School of Economics and Management, Tongji U.*

Process digitization has garnered increasing attention from scholars and firms as a means to enhance innovation performance. Following Job demands-resources model, we argue that process digitization serves as job resources and job demands simultaneously, both of which are related to innovation performance. Process digitization offers additional job resources that contribute to enhanced work engagement and fostered innovation performance at lower level, while increasing job demands that result in exhaustion and hindered innovation performance at higher level. Therefore, we propose firms with moderate level of process digitization are more likely to have higher innovation performance. We further propose that training and payment can buffer against the negative impact of process digitization on innovation performance. Training serves as an ex ante measure, which enables knowledge-based employees to effectively respond to job demands without culminating in exhaustion. Conversely, payment serves as an ex post measure, which compensates for the depletion of resources caused by excessive job demands, thereby alleviating the adverse effect of exhaustion on innovation performance. Using data from 3823 Chinese firms, our empirical results strongly support these predictions.

TIM: Multidimensional Driving Mechanisms of Digital Capability on Radical and Incremental Innovation

Author: **Ao Zan**, *Changsha U. of Science & Technology*
Author: **Yanhong Yao**, *Hunan U.*
Author: **Xueting Zhang**, *Anhui U. of Finance and Economics*

Digital capability is pivotal for enterprises to resolve the paradox of digital productivity and overcome the challenges in digital transformation. This study, employing scenario separation and cross-sectional approaches to collect data from a sample of 304 enterprises, utilizes the TOE (Technology-Organization-Environment) theoretical framework. Employing the fsQCA (fuzzy-set Qualitative Comparative Analysis) method, it deconstructs the interactive effects among multiple factors driving radical and incremental innovations in enterprises through digitization. The research reveals distinct configurational pathways for radical and incremental innovations. Specifically, six configurations drive radical innovation, presenting four patterns: Technology dominant (T), Technology-Organization co-dominant (T-O), Technology-Environment co-dominant (T-E), and Technology-Organization-Environment multidominant (T-O-E). On the other hand, five configurations drive incremental innovation, delineating into two patterns: Technology-Environment co-dominant (T-E) and Technology-Organization-Environment multidominant (T-O-E). The study's findings offer empirical evidence in uncovering the concurrent mechanisms and complex configurational relationships of digital innovation within enterprises. This understanding contributes to facilitating enterprises in achieving transitions in digital capability and optimizing paths for innovation.

TIM: Digital Transformation and Breakthrough Innovation in Chinese Manufacturing Firms

Author: **Yufei Zhang**, *School of Business Administration, Hebei U. of Economics and Business*
Author: **Long Xu**, *School of Business Administration, Hebei U. of Economics and Business*

This paper examines the influence of digital transformation on breakthrough innovation by adopting the "Ability-Motivation-Opportunity (AMO)" framework of human capital. Using data from A-share listed companies in China's manufacturing industry from 2012 to 2021, we found that digital transformation has a significant positive impact on breakthrough innovation among manufacturing enterprises, and that digital transformation has a "reverse" effect, driving abilities upgrading, motivation activating and opportunities enhancing of human capital, ultimately driving breakthrough innovation. Moreover, the effects of digital transformation on breakthrough innovation among state-owned and high-tech enterprises are especially pronounced, and enterprises located in the eastern region of China experiences stronger promotion effects than those in central and western regions. Significances and implications are discussed.

TIM: Digitalization Scope and Firm Performance

Author: **Ching T. Liao**, *CUNEF*
Author: **Kremena Slavova**, *CUNEF*
Author: **Metin Onal Vural**, *CUNEFU*
Author: **Paola Zanella**, *CUNEFU*

The effect of the adoption of different digital technologies on firm performance is not clear yet. We investigate the relationship between digitalization scope and firm performance using the Flash Eurobarometer 486 survey, conducted in 2020 on behalf of the European Commission. First, we find that digitalization scope has an inverted U-shaped relationship with firm performance. Second, our results show that the negative effect of adopting too many distinct types of digital technologies can be moderated when firms have the necessary skills to engage in digitalization. We comment these findings for literature on digital transformation, the use of digital technologies and digital capabilities, and managerial and organizational skills.

Inclusive Innovation Processes

Session Moderator: **Joelena S. Leader**, *Edwards School of Business, U. of Saskatchewan*

TIM: Decolonized Participatory Design: Sustainable Tech Adoption in Northern and Indigenous Communities    

Author: **Joelena S. Leader**, *Edwards School of Business, U. of Saskatchewan*

This paper critically examines the interplay of innovation, policy, and purpose in the context of northern and remote Indigenous communities in Canada and explores the intersection of technology adoption and decolonized participatory design (DPD). By focusing on technology adoption, specifically drawing on highlights from a community-based study on telehealth adoption in Northern Canada, the paper seeks to challenge conventional approaches to leading, managing, and organizing technology projects. As these communities face unique challenges, innovation must be redefined to prioritize inclusivity, community collaboration, and sustainable socio-economic development. The study reveals early challenges in telehealth implementation, underscoring the importance of considering community needs, local resources, and capacity and emphasizing the broader socio-cultural and technical factors in technology design, adoption, and assessment. The study highlights a mismatch between technologies designed for southern contexts and their relevance in the north, emphasizing the importance of community-driven approaches and a DPD framework informed by Science and Technology Studies and Indigenous perspectives. It underscores the potential of DPD to reshape decision-making for technology solutions aligned with community needs. The paper contributes to community-engaged innovation management research by emphasizing equitable resource distribution, responsible innovation, and Indigenous knowledge for sustainable innovation in community contexts.

TIM: The Determinants of New Product Innovation and its Effect on the Success of Female Entrepreneurship 

Author: **Tahir Iqbal**, *College of Business Administration, ImamAbdulRahman Bin Faisal U.*

Author: **Hoda AboAlsamh**, *Hoda AboAlsamh. College of Business Administration. IAU. KSA*

Author: **Kamran Ahmed Siddiqui**, *College of Business Administration, ImamAbdulRahman Bin Faisal U.*

Author: **Faisal Aftab**, *College of Business Administration, ImamAbdulRahman Bin Faisal U.*

The study aims to evaluate the determinants of new product innovation and their effect on the success of female entrepreneurship in the Kingdom of Saudi Arabia. The research follows a quantitative design, and the researchers collected primary data through a survey questionnaire from 256 female entrepreneurs from five major cities using a snowball sampling technique. Further, the research follows Structure Equation Modeling (SEM) as a major tool by using SmartPLS software. The analysis inferred that the overall effect of new product innovation impacts both female entrepreneurial perseverance and female entrepreneurial success. Additionally, the moderating role of risk-taking behavior and the mediating role of perseverance are also found to be statistically significant in the relationship between product innovation and female entrepreneurial success. The practical implication of the study suggests that to benefit from the potential of innovation and entrepreneurship in developing the economy, the Saudi government and society should offer increased financial, regulatory, and moral support to women entrepreneurs. However, the research is limited to the geographical bounds of Saudi Arabia; therefore, future research directions have also been provided.

TIM: Challenges for UN SDGs: Will Open Innovation with Design Thinking Integration Provide Solutions?   

Author: **Deepika R. Gupta**, *Indian Institute of Management Visakhapatnam*

The article is an initial attempt to ideate on the integration of open innovation model with design thinking process with a view to meet the UN SDGs targets by 2030. For this, the article explores the basic premise of both these concepts of being human-centric and the aim of knowledge creation and sharing along with the thinking (both divergent and convergent) process. The complexity of the concept is deepened when the integration connects to co-creation of values and skills that further connects with absorptive capacity for the nations that signify that the 'learning' nation has the ability to learn and implement the knowledge and information inculcated within them in the network ecosystems. The countries should make continuous efforts to meet the dynamic market environment and also the non-market relationships involving authority, trust, and social capacity. This novel thought should help develop the set of opportunities required to spur the timelines for SDGs achievement. Such an approach needs to be cognizant of circumstances and hence can also be tailored to meet the needs of any particular nation because learning is dynamic in nature. The global ecosystem should sustain and strive to implement conditions that help it develop local knowledge, capture the incoming knowledge, and improvise on it to spur design led open innovation-based growth to achieve the SDGs within the time schedules.

Customer and Competitor Dynamics in Platform-based Markets

Session Moderator: **Wookyoung Kim**, *Sookmyung Women's U.*

TIM: **Why Some Pay More in an Emerging Art Platform?**

Author: **Wookyoung Kim**, *Sookmyung Women's U.*

Author: **Dong-Il Jung**, *Sookmyung Women's U.*

The emergence of platforms as promising economic activity venues has catalyzed extensive research on the mechanisms of price determination in these platforms. However, our understanding of how high uncertainty in these nascent markets shapes participants' pricing behaviors remains limited. This paper draws upon market entry timing, experiential learning, and signaling theories to investigate how participants in an emerging NFT art platform, underpinned by recent technological innovations such as blockchain, employ macro- and micro-level information to mitigate uncertainty in pricing decisions. Empirical analysis of 51,295 transactions reveals that both early adopters and experienced buyers tend to pay higher prices; however, their patterns of information utilization in pricing decisions significantly differ. Early adopters are receptive to market-wide signals indicative of an upswing and to transaction-specific signals affirming the value of the NFTs in consideration for purchase. In contrast, experienced buyers, having accumulated substantial hands-on knowledge from previous success, exhibit a negligible or negative response to these signals. Further analysis of the interplay between adoption timing and success experience suggests that early adopters establish a positive-feedback loop from success experiences more rapidly than late adopters. Implications for the attention shift during market participation and its impact on sustained market hype are discussed.

TIM: **Platform Owners' Entry and Complementors' Innovation: the Impact of Platform Evolution**

Author: **Xi Wang**, *Jones Graduate School of Business, Rice U.*

Author: **Prashant Kale**, *Rice U.*

Author: **Haiyang Li**, *Rice U.*

The platform literature has shown conflicting findings regarding how a platform owner's entry into its complementors' market affects the complementors' innovation. To reconcile these mixed findings, we bring a dynamic perspective by examining the role of platform evolution within and across technology generations. We argue that in the early stage of a platform's technology generation, the platform owner's entry (i.e., developing first-party products) offers complementors vicarious learning opportunities to understand the new technology infrastructure and customer demand, which, in turn, helps reduce technology and demand uncertainties that complementors face and encourage their product innovation. However, in the late stage of the technology generation, where technology and demand uncertainties become low, the platform owner's entry into the complementors' space increases competitive pressure on complementors. This pressure reduces their perceived opportunities to capture value from the platform, discouraging their innovation. We further explore how technology gaps between two successive technology generations and the nature of complementors' product portfolios moderate these relationships. We find strong support for our arguments by using data from nine game consoles and 5,784 third-party developers in the video game console industry from 2000 to 2020.

TIM: **Planned Obsolescence in Digital Platforms: An Empirical Investigation of Desktop Operating Systems**

Author: **Ramnath Chellappa**, *Emory U., Goizueta Business School*

Author: **Jonathan Gomez Martinez**, *Emory U., Goizueta Business School*

Author: **Anand Swaminathan**, *Emory U.*

Staying relevant in the digital landscape necessitates regular updates for digital goods, often achieved through planned obsolescence strategies to prompt repeat sales. However, the execution of such strategies faces challenges in the context of digital platforms, particularly due to their reliance on network effects. This paper explores the case of Microsoft's Windows operating system, employing a semi-structural approach to unravel the factors hindering the platform's planned obsolescence strategy. We develop a robust and generalizable framework that recommends strategically utilizing first-party products and market signaling, particularly when users and complementors may not find the platform's current offerings immediately enticing.

TIM: **The Impact of Online Platform IP Protection on New Product Sales: Evidence from the Alibaba**

Author: **Yanfeng Zheng**, *Hong Kong U. of Science and Technology*

Author: **Can Huang**, *Zhejiang U.*

Author: **Guoqiao Liu**, *Zhejiang U.*

Author: **Yao Fu**, *Xi'an Jiaotong-Liverpool U.*

The rising digital economy and popularity of digital technologies present novel challenges to the IP regime but also provide novel chances to tackle it. This study examines a novel and unique IP protection initiative—Original Design Protection Program (ODPP) launched by Alibaba in 2018. ODPP employs cutting-edge artificial intelligence algorithms to issue digital certificates to those original products and enforce them within the platform. Leveraging this unique IP initiative, we examine the effectiveness of this IP protection regime initiated by the platform company and elucidate the precise impact of IP protection on product-level performance. Our analyses show that this platform-wide IP protection can significantly increase new product sales by at least 30%. This benefit is more pronounced for large sellers but not for those products with a high level of innovativeness. Further analyses reveal that the sales boost is partially due to restricting imitative entries, rather than displaying the digital certificates publicly. Our study provides granular level evidence on how IP protection impacts product sales in an online setting and these findings offer valuable insights for firms to manage their IPs in the digital era and for policymakers to consider IP regime reforms.

AI and Humans

Session Moderator: **Steven Siu-Yun Lui**, *U. of New South Wales*

TIM: **New AI Technology for Selection Interviews**

Author: **Steven Siu-Yun Lui**, *U. of New South Wales*

Author: **John H.w. Lai**, -

Author: **Zhijing Zhu**, *U. of Nottingham, China*

Author: **Carolyn Yesse Ngowi**, *U. of New South Wales*

This study aims to examine the roles of trust in artificial intelligence (AI) and augmentation in moderating the effect of fairness on applicant satisfaction in a novel selection context of AI selection interview. Field survey data were collected at two time points separated by three to five weeks from a sample of 125 university applicants who were assessed by AI selection interviews for their industry internships. Moderated regressions were conducted to test the hypotheses. Results in the new technology setting reaffirm the positive relationship between fairness and applicant satisfaction on AI interviews, but not the compensatory effect between fairness and outcome favorability. Results also reveal that procedural fairness is most effective when trust is low and augmentation present. By contrast, interactional fairness is most effective either when trust is high and augmentation absent, or when trust is low and augmentation present. This study extends the research on fairness to the novel context of AI technology. Drawing on uncertainty management theory of fairness and findings from a field survey, this study sheds light on how procedural and interactional fairness are bounded by applicants' trust in AI and augmentation, rather than interview outcomes with the new AI technology.

TIM: **Automation or Augmentation? Task Characteristics, Managers' Objectives, and AI Adoption**

Author: **Maximilian Koehler**, *ESMT Berlin*

Author: **Henry Sauermann**, *ESMT European School of Management and Technology*

Artificial intelligence (AI) is diffusing rapidly throughout the economy, raising questions regarding its impact on human workers. Current theories predict that the degree to which humans are replaced (automation) or supported (augmentation) will depend on characteristics of the task such as its degree of routinization and manual vs. cognitive nature. Yet, existing empirical evidence tends to come from aggregate occupation data or individual case studies, with limited research using larger samples of projects or tasks. Moreover, whether and how AI is implemented may not only depend on task characteristics but also on managers' objectives, which may go beyond narrow efficiency to include benefits resulting from human employment itself ("employment goals"). We provide novel empirical evidence using data from more than 1,200 research projects that involve crowd members in different tasks such as data collection, data analysis, or creative problem solving. We confirm that the use of AI is associated with task characteristics, although the patterns are more nuanced than those shown in work on prior automation technologies such as computers and robots. Moreover, we find that managers pursuing employment goals are less likely to use AI for automation, while they are just as likely as others to use AI to augment the work of human workers. We contribute to the literature on AI adoption in organizations by providing rare evidence from project-level data, and by highlighting that the path towards "good AI" or "bad AI" is, partly, a matter of human choice.

TIM: **AI's Creative Promise: For Better or For Worse?**

Author: **Yingyue Luan**, *Cambridge Judge Business School*

Author: **YeunJoon Kim**, *U. of Cambridge*

Author: **Jing Zhou**, *Rice U.*

The advent of large language models like GPT signifies a transformative breakthrough in AI capabilities. The emergence of human-AI collaboration prompts a crucial question: does such collaboration result in improvements in joint creativity over time? In two studies, we explore how joint creativity of human-AI collaboration changed over multiple rounds of creativity tasks. Study 1 involved two rounds of image generation tasks with Midjourney, and Study 2 encompassed three rounds of problem-solving tasks with ChatGPT. Study 1 revealed no significant change in joint creativity, whereas Study 2 demonstrated declining joint creativity over the rounds. Both studies unveiled an intriguing pattern: less creative individuals experienced declining joint creativity when collaborating with AI, while creative individuals maintained their joint creativity. To understand the underlying mechanisms, we conducted qualitative analyses of participants' interactions with ChatGPT, followed by quantitative testing. Results indicate that less creative individuals primarily acted as idea generators instead of transitioning into supervisory roles, explaining the decline in their joint creativity.

TIM: **Digital Coordination Between Organizations: Will Tech Replace Trust in Supply Chains?**

Author: **Jaime Caballero**, *Rotterdam School of Management, Erasmus U.*

Author: **Merieke Stevens**, *Rotterdam School of Management, Erasmus U.*

The transparency of economic conduct that Artificial Intelligence can potentially create has resulted in unsurpassed investments in this new technology. Supply chains are one key area that holds seemingly endless promise of improvement based on analytics. The performance of supply chains crucially depends on information exchange, which has long been supported by IT-enabled tools. While such tools have formalized part of the historically interpersonal interaction in supply chains, human boundary spanners—such as key account holders, machine operators, and IT specialists—continue to occupy a role as gatekeeper for IT-based information exchange. A key mechanism for the coordination of interorganizational information sharing is trust—a topic that is widely discussed in the interorganizational information systems literature. Recent digital-enabled tools, however, do not require human control. This begs the question whether such tools, by making humans obsolete, will substitute trust? We conducted a dyadic, longitudinal case study of supplier machine sensorization by a Fortune Global 500 automotive supplier, and found that a longitudinal relationship of complementarity and substitution exists between trust and digital-enabled monitoring. We shed light on this finding by combining insights from the Technology Management literature and the theory of Embeddedness.

Agile and Open Innovation: Opportunities and Hazards

Session Moderator: **Seh-Hyun Yoo**, *KAIST College of Business*

TIM: When R&D Becomes a Firm's Liability: The External Shocks and Adoption of Digital Innovation Solution

Author: **Xincheng Wang**, *Tongji U.*

Author: **Tianyu Gong**, *School of Economics & Management, Tongji U.*

Author: **Longwei Tian**, *Tongji U., Shanghai, PR. China*

This research builds upon the problemistic search theory to explain why and when external shocks may lead to firm first-time digital innovation, a novel and risky solution. Our theory explains why external shocks such as COVID-19 bring novel or radical problems to firms, and thus trigger firms' problemistic search scope for solutions in the searching process, increasing firms' willingness to delve into first-time digital innovation. We further suggest that in the evaluation process, the evaluation depends on the firm's own experience (i.e., R&D) and the experiences of others (i.e., social networks). The cognitive entrenchment embedded in the firm's prior R&D may, however, pose a barrier to the evaluation of first-time digital innovation. A firm's interlock ties with digital firms can potentially alleviate such cognitive barriers. Using a difference-in-difference design based on data from Chinese published firms, we find support for our theoretical predictions. This research deepens our understanding of firms' digital transformation, problemistic search theory, and R&D.

TIM: How Salieri Beats Mozart: Socio-Political Process of Bridging Creativity and Innovation

Author: **Yunsung Lee**, *KAIST College of Business*

Author: **Seh-Hyun Yoo**, *KAIST College of Business*

Ideas successfully generated within firms do not always result in implementation. Drawing upon a rich body of research on creativity and innovation, this study delves into the socio-political process of intrafirm innovation to propose how ideas evolve into innovation. We argue that idea creators can leverage their social ties with top management team (TMT) members to efficiently capture managerial attention, garner political support, and streamline the decision-making process. Thus, even when possessing comparable attributes to other ideas, the ideas of creators who have close social connections with politically powerful TMT members are more likely to be selected and implemented within their firms. Moreover, we highlight that the uncertainty regarding the potential returns of ideas is a boundary condition of the socio-political process of intrafirm innovation. Specifically, we argue that the socio-political process becomes more pronounced when implementing exploratory ideas with uncertain returns. In contrast, it is less evident when creators build their ideas upon star creators to mitigate the associated uncertainty. We find supportive evidence from the intrafirm collaboration network for patenting activities. This study provides valuable insights into why some creative ideas get stuck while others are implemented.

TIM: Striking a Balance: Exploring the Coexistence of Agile and Conventional NPD

Author: **Leonie Mueller**, *U. of Kassel*

Author: **Patrick Spieth**, *U. of Kassel*

Organizations increasingly integrate agile processes into their conventional managed NPD portfolios to address growing complexity, dynamics, and turbulences in new product development (NPD). Besides organizational-wide agile transformations and hybrid approaches, most organizations use agile and conventional processes in co-existence depending on the specific characteristics of an NPD project within an NPD portfolio. As identified in previous literature, this leads to an emerging interface of conventional and agile NPD. However, there is a need for further investigation since the contradicting elements of conventional and agile approaches and associated tensions challenge existing knowledge and processes in NPD. In response, we explore the following research questions: How can the interface of conventional and agile NPD be characterized? How can organizations manage the interface between the requirements of conventional and agile NPD? We conducted multiple case study research. Preliminary results draw on a rich sample of archival data (more than 1,200 pages) and 63 interviews from two cases. By applying a paradox perspective on agility, our preliminary insights show how the co-existence of agile and conventional NPD processes reinforce paradoxical tensions that, in turn, challenge NPD. These insights extend our understanding of the conventional-agile interface and enable us to derive behaviors to benefit from the contradicting elements by leveraging synergies from both approaches. Furthermore, we refine paradox theory by contrasting previous findings on paradoxical tensions in the context of conventional-agile NPD. Finally, we develop rich practical implications through an in-depth investigation of the emerging interface.

TIM: How and When Would Organizational Size Influence Open Innovation? A Meta-Analysis

Author: **ZHUOYUE PANG**, *McGill U. - Desautels Faculty of Management*

Extant research has demonstrated mixed findings (positive and negative relationships) between organizational size and open innovation. These inconsistent results could be due to prior studies focusing on the static relationship between open innovation and financial outcomes. Such models are insufficient in explaining the dynamic effect of different types of organizational size on the changeable processes of open innovation. To reconcile the inconsistent findings, I propose that different theoretical frameworks may affect the relationship between organizational size and different types of open innovation. I compare the authors' theoretical framework, the resource-based view, and resource dependence theory, and my study also incorporates additional factors, including two types of open innovation and organizational age. Because past studies have found positive and negative relationships between organizational size and open innovation, I conducted a meta-analysis of 95 samples and 389, 926 organizations. My results found that the overall relationship between organizational size and open innovation was positive. From a dynamic perspective, I examined three moderating effects (different types of open innovation, theoretical frameworks, and organizational age) that accounted for this inconsistent relationship in prior studies. My study contributes to developing a new theoretical framework by using two resource-related theoretical frameworks (internal and external resources) that clarify the mixed relationship between organizational size and open innovation and reconcile inconclusive results in the existing literature.

Technology: Democratizing Access or Exacerbating Inequality

Organizer: **Ying Li**, *Hong Kong U. of Science and Technology*

Organizer: **Manav Raj**, *The Wharton School, U. of Pennsylvania*

Discussant: **Abhishek Nagaraj**, *UC Berkeley & NBER*

Presenter: **Ying Li**, *Hong Kong U. of Science and Technology*

Presenter: **Audra Wormald**, *Kenan-Flagler Business School, U. of North Carolina at Chapel Hill*

Presenter: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*

Presenter: **Melody Chang**, *USC Marshall School of Business*

Participant: **Nicole Kreisberg**, -

Participant: **Laura E. Dupin**, *Amsterdam Business School, U. of Amsterdam*

The goal of this symposium is to bring together scholars studying the distributional effects of technology to address three questions: (1) For whom can technology democratize access? (2) Can technology exacerbate inequalities? (3) What can managers and policymakers do to facilitate the equitable distribution of technology-enabled opportunities? To this purpose, the symposium consists of four unique papers that study questions around equity and equality related to the diffusion and adoption of various technologies (i.e., sound synchronization technology in movies, mobile money, AI, and crowdfunding platforms). With diverse theoretical perspectives (i.e., organizational technology adoption, industry emergence, labor employment, and social exchange), different levels of analysis (i.e., individual, organizational, market, and country levels) and various methods (i.e., historical and archival, abductive, survey experiments, and matching in large samples), these four studies together represent a thoughtful inquiry into the issue of technology and inequality and shed light on when and under what conditions technology may be more or less likely to foster (in)equity.

Hype: How We Promise, Expect, and Evaluate a Future

Moderator: **Nelson Phillips**, *U. of California, Santa Barbara*
Panelist: **Matthew Grimes**, *Cambridge Judge Business School*
Panelist: **Stine Grodal**, *Northeastern U.*
Panelist: **Rebecca Karp**, *Harvard Business School*
Panelist: **Andrew Nelson**, *U. of Oregon*
Organizer: **Aaron Pagel**, *U. of Oregon*

Hype has been researched across many scholarly domains, including an increasing interest within management scholarship. While it is generally understood that hype involves rapidly increasing expectations of perceived value that could lead to overvaluation, there is a lack of cohesion around the best approach to theorize and research the phenomenon. The most direct hype theorizing in management literature recommends that hype should be theorized as a structural resource, yet research in legitimacy and entrepreneurial resource mobilization literatures suggest that hype could be a strategic resource as well as generated through a strategic or structural process. Additionally, extant research tends to view technology as a subject of hype rather than an input. And while expectation dynamics included in process models plot expectations over time, the temporal relationship of hype may be undertheorized. This panel of distinguished scholars aims to discuss these tensions and gaps in order to begin laying the theoretical foundation needed to explore this phenomenon as management scholars.

Facilitating Innovation Within Genomic Research and New Drug Development

Participant: **Arvids A. Ziedonis**, *Boston U.*
Participant: **Michael Roach**, *U. of Illinois at Urbana-Champaign*
Participant: **Sina Khoshokhan**, *U. of Colorado, Boulder*
Participant: **Samantha Zyontz**, *Boston U. Questrom School of Business*
Participant: **Elisabeth Hofmeister**, *Max Planck Institute for Innovation and Competition*

Research and drug development within the life sciences has increasingly relied on advances in genomics to generate new outcomes and treatments. New technologies such as CRISPR offer tremendous opportunities for new therapeutics and treatments. Not surprisingly, new institutions, policy changes towards intellectual property protection, and firm strategies have arisen to facilitate and govern innovative activity within this emerging sphere. This presenter symposium assembles three studies that provide new and complementary vantage points on the emergence of institutions, policies, and firm strategies for the development and commercialization of genomics-based therapeutics.

New Knowledge About How to Make Careers More Sustainable

Session Moderator: **Bilal Ahmad**, *Superior U. Lahore - Pakistan*

CAR: **Knowledge of AI as a Future Work Skill for Career Sustainability: The Role of Person Job Fit**

Author: **Bilal Ahmad**, *Superior U. Lahore - Pakistan*

Author: **Saba Bilal**, *U. of the Punjab*

In response to the pervasive influence of AI across various professional domains, we investigate how the acquisition of AI knowledge as a future work skill can foster career sustainability. Our exploration delves into the role of this knowledge in aligning individual skills with job demands, enhancing what we term as person-job fit. Moreover, we present a moderated-mediation model to examine the interactive influence of career confidence between person-job fit and career sustainability. Data were collected in three waves from part-time students pursuing professional courses, concurrently employed in diverse industrial sectors. Hypotheses were tested using covariance-based structural equation modeling (CB-SEM) on a final dataset (n=318). Our findings reveal that AI knowledge as a future work skill significantly contributes to workers' career sustainability, both directly and through person-job fit. Additionally, higher career confidence significantly strengthens the interplay between person-job fit and career sustainability. Theoretical contributions and practical implications of the study are discussed, along with potential avenues for future research in this domain.

CAR: **Leadership or Self-Based Strengths for Sustainable Careers? The Compensatory Effect via Adaptability**

Author: **Xiaolin Ge**, *Beijing Normal U.*

Author: **Qing Zhang**, *School of Government, Beijing Normal U.*

Author: **Rui Xiong**, *Faculty of Education, Beijing Normal U.*

Author: **Siyuan Liu**, *School of Government, Beijing Normal U.*

Author: **Haibo Yu**, *Beijing Normal U.*

In the current changing career landscape, the importance of career sustainability is becoming increasingly important. However, few studies have focused on the antecedents of leadership, especially from the strength-based approach. Both the strengths that are brought by the leader or by the individual themselves (e.g., protean career orientation) are key factors for the individual career development process. Based on strengths-based inclusive work theory, we argue that strengths-based leadership promotes career sustainability by bringing such strengths as career adaptability to the individual, especially when protean career orientation is lacking. We tested our moderated mediation model through a three-wave survey. Results show that strengths-based leadership is positively related to career adaptability, then further leads to career sustainability. Especially when protean career orientation is low, the relationship between strengths-based leadership and career sustainability will be amplified through the mediating role of career adaptability. We conclude that strengths-based leadership infuses individuals with more adaptability resources in situations where their strengths are insufficient, thereby promoting sustainable careers. Meaningful insights are provided for the domain of career development and leadership.

CAR: **TO SELL OR NOT TO SELL: Towards a Moderated Mediation model of Career Sustainability for Salespeople**

Author: **Uday Bhaskar**, *Institute of Management Technology Ghaziabad, India*

Author: **Shreya Homechaudhuri**, *Institute of Management Technology Ghaziabad, India*

The study examines the linkage between readiness to adopt digital selling by salespeople and their effectiveness, which in turn promotes their career sustainability. We draw on the change readiness literature and career sustainability literatures to formulate our research hypotheses. Using data from a two-wave survey among salespeople who are engaged in digital selling, we found considerable support for our research model assuming a mediating role of salesperson's effectiveness in the relationship between digital selling readiness and career sustainability. Our study offers counter-intuitive finding on the role of spousal support which negatively impacts the strength of the relationship between salesperson's effectiveness and career sustainability. This study contributes to the embryonic literature on career sustainability in the sales sector, by identifying the underlying mechanisms that shape salespeople's career sustainability. Moreover, this scholarly work extends the career sustainability literature by examining the role of spouse in salespeople's careers. In the discussion, we go into theoretical and practical implications and recommendations for future research.

CAR: **Financial Stress and Sustainable Start to Graduate Careers During the COVID-19 Pandemic**

Author: **Belgin Okay-Somerville**, *U. of Glasgow*

Author: **Dora Scholarios**, *U. of Strathclyde, Scotland, UK*

Author: **Daria Luchinskaya**, *Strathclyde Business School, U. of Strathclyde, UK*

Author: **Pauline Anderson**, *Strathclyde Business School, U. of Strathclyde, UK*

Author: **Scott Hurrell**, *Adam Smith Business School, U. of Glasgow*

This paper examines the efficacy of career resources for sustainable career outcomes for university leavers who experienced high financial stress during the COVID-19 pandemic. Theoretically the study brings together concepts from sustainable careers theory and psychological framework of scarcity to understand the impact of financial stress in early graduate careers. The study is informed by two-wave survey data (at the time of graduation and one and a half years after graduation) from the 2020-cohort of graduates in the UK. Findings show that career resources do predict sustainable career outcomes, and this effect is explained through person-career fit. However, the effect of career resources at graduation on sustainable career outcomes one and a half years after graduation was only significant for those who experienced high financial stress at the time of graduation. These findings have implications for sustainable career theory and broadening the scope of education-to-work transitions research.

Understanding Career Success and Related Decisions

Session Moderator: **Courtney Buchanan**, *Wayne State U.*

CAR: **Promotions are Too Much Work: An Employee-Centric Approach to Promotion Decisions**

Author: **Courtney Buchanan**, *Wayne State U.*

Although job promotions are generally regarded positively, recent findings from both research and popular press suggest some employees may find career advancement opportunities undesirable. This paper seeks to provide a theoretical understanding for why employees turn down job promotions by drawing on the job embeddedness framework comprising of fit (compatibility with the role), links (social connections associated with the role), and sacrifice (costs incurred from leaving the role; Mitchell et al., 2001). Furthermore, we incorporate both on-the-job (i.e., work) and off-the-job (i.e., nonwork) perspectives to account for the complex constellation of factors that contribute to employees “staying” in their jobs and declining advancement opportunities. Together, we suggest that employees evaluate the fit, links, and sacrifice of their current job, along with anticipated future levels of fit, links, and sacrifice associated with a promotional role, to “weigh their options” and arrive at career mobility decisions. We outline anticipated contributions and future research directions associated with our proposed framework.

CAR: **Thanks to My Last Team: How Statuses of Recent Prior Affiliations Impact Employees' Future Salaries**

Author: **Di Shao**, *U. of Virginia, Sociology Department*

Extensive labor market research has uncovered employer biases based on ascribed individual features of employees such as their race, gender, and class. However, there is limited research dedicated to understanding how employees' recent prior employers may impact their attainment from their subsequent affiliations. While organizational status is crucial in organizational studies, it remains unclear if the status of prospective employees' prior affiliations can shape bias and preferences from their succeeding employers at the hiring stage, and further impact their individual attainment. To address this question, utilizing a novel dataset that combines NBA players' non-entry-level contracts, salaries, performances, and NBA team data from 1990 to 2022, this study explores the impact of the status of players' recent prior teams on their logged seasonal average salaries after signing subsequent contracts with new teams. The results of linear panel models with individual-, time-, and team-fixed effects provide evidence to such preference. Additionally, this employer preference driven by organizational status does not wane over time, suggesting that it is likely rooted in some status-related beliefs held by employers. Uncovering a new source of employer preference, this study enhances the theoretical understanding of employees' unequal organizational attainment in an era of declining internal labor market and growing interorganizational mobility.

CAR: **Protean Careers and Career Success Among Self-Initiated Expatriates in Overseas Work**

Author: **Yi-chun Lin**, *National Taiwan Normal U.*

Numerous empirical studies have examined work- or career-related outcomes in cross-cultural work settings, leading to an emerging research stream in the current literature. Building upon self-determination theory, this study aimed to examine whether protean career attitude is positively associated with subjective career success. We further explored the mediating role of overseas work adjustment and the three-way moderation of cultural intelligence and learning-goal orientation to strengthen this indirect relationship. The data from two studies, encompassing non-Asian (n = 289) and Asian (n = 192) participants, provide convergent support. Statistic procedures, such as hierarchical regression and bootstrapping analysis based on Hayes' PROCESS on SPSS 28, were conducted to test the hypotheses. The result showed the indirect effect of protean career attitudes on subjective career success through overseas work adjustment. Moreover, this indirect effect is strengthened when self-initiated expatriates only possess higher levels of cultural intelligence and learning goal orientation. Our study contributes significantly to the existing literature by shedding light on the factors influencing subjective career success among self-initiated expatriates in diverse work environments. Our findings also hold practical implications for individuals seeking to pursue protean careers in overseas settings.

CAR: **Navigating New Career Realities: Increasing Influence of Career Boundarylessness on Career Success** →

Author: **SEMI OH**, *Korea Employment Information Services*

Author: **Myungwon Choi**, *Ajou U.*

The purpose of this study is to examine the evolving dynamics of career boundarylessness during the early career. This study particularly focuses on voluntary turnover, a major boundary-crossing behavior, and assesses its effects on indicators of career success. Relying on the career literature illustrating emerging career patterns, this study empirically examines whether the impact of voluntary turnover on objective and subjective indicators of career success—measured in terms of wage and job satisfaction, respectively—has been increasing. For this purpose, this study utilizes data from the Graduate Occupational Mobility Survey (GOMS) provided by Korea Employment Information Service, collected from 2007 to 2019. The findings reveal a significant shift over time in the impact of voluntary turnover on wage levels. A notable positive correlation between voluntary turnover and wage growth that has emerged in recent years suggests increasing importance of voluntary turnover in enhancing objective career success. In addition, the analysis of those who experienced voluntary turnover revealed that job satisfaction in new positions was consistently higher than in previous positions, even after controlling for various factors; and, this trend also has been becoming more pronounced. While satisfaction levels in first jobs showed no significant change with time progression, a progressively stronger positive association exists between voluntary turnover and job satisfaction particularly in recent years, reflecting the dynamic shifts in the career landscape over time. The study highlights the increasing need for individuals to engage in boundary-crossing behaviors in order to achieve objective career success, but also points to the need for a more nuanced approach to understanding the relationship between these behaviors and subjective career success. Based on the findings, theoretical and practical implications are proposed.

Participant: **Marcus Butts**, *Southern Methodist U.*

Participant: **Kathryn Ostermeier**, *Bryant U.*

Participant: **Michele Medina Craven**, *Mississippi State U.*

Participant: **DC De La Haye**, *Florida State U.*

Participant: **Meagan Eleanor Baskin**, *Florida Gulf Coast U.*

Participant: **Angela R. Grotto**, *Montclair State U.*

Participant: **Maura Mills**, *U. of Alabama*

This symposium encompasses a series of studies exploring the intricate dynamics of work and home life, particularly focusing on gender-related aspects and the impact of significant societal changes such as the COVID-19 pandemic. The first presentation utilizes experience sampling methodology to investigate how daily household labor influences the work experiences of mothers and fathers. The second paper emphasizes the need to consider diverse relationship statuses of working parents beyond traditional categories, addressing gender disparities in career outcomes. The third study examines the repercussions of the pandemic on remote work settings, specifically for working parents, uncovering gender and parental status effects on supervisor evaluations. The symposium concludes with a paper exploring the pandemic's influence on nonwork boundary flexibility and its long-term impact on career satisfaction, with a focus on gender differences. Collectively, these presentations contribute valuable insights into the nuanced intersections of gender, family dynamics, and evolving work structures, shedding light on the challenges and opportunities for fostering diversity, equity, and inclusion in the contemporary workplace.

Dealing With Bullying, Incivility, and Grievances in the Workplace

Session Moderator: **Rohan Crawley**, *Purdue U.*

CM: **Workplace Incivility: Underestimated or Overblown?**

Author: **Rohan Crawley**, *Purdue U.*

Historically, observed workplace incivility has strongly and positively related to detrimental outcomes like instigated incivility and turnover intent. Prior research is based on the underlying assumptions that uncivil behavior is always ambiguous, harmful, and deviates from some universal convention of norms for respect. The presumed harm of observed incivility supposedly causes instigated incivility and turnover intent. Despite these assumptions, research rarely addresses targets' feelings toward uncivil behavior or how these perceptions influence outcomes. Incorporating endorsed incivility—individual attitudes towards uncivil behavior—offers a more nuanced understanding of incivility's nomological network. As hypothesized, endorsed incivility moderates the relationship between descriptive incivility norms and instigated incivility; for those reporting lower endorsed incivility, this relationship is attenuated to non-significance. In further contrast to the literature, descriptive incivility norms show no significant relationship to turnover intentions when endorsed incivility is higher. Theoretical and practical implications are discussed with directions for future research.

CM: **What Was That? Exploring Incivility in the Workplace**

Author: **Heath Gregg**, *U. of Miami*

Experiencing incivility in the workplace is common and unpleasant. It is also subjective, what individuals see as rude or harmful differs from person to person. Despite the fascination and the considerable interest shown in investigating incivility, there are some criticisms regarding how the construct is defined and measured. There are concerns that one of the most common measurement instruments used to assess workplace incivility (the WIS-R, Cortina et al., 2013) may not be identifying uncivil behaviors (in particular), but rather employee appraisals of various forms of interpersonal mistreatment. This study aims to aid the understanding of workplace incivility by exploring individual perceptions, experiences, and affective reactions to experiencing uncivil behaviors using Critical Incident Technique. Data were collected from 115 respondents who provided accounts of incidents involving incivility they had experienced in their workplace. Content analysis of the incivility incidents revealed a number of antecedents to experiences of incivility in the form of sources (e.g., coworkers, manager, customers) and discrete emotional reactions (e.g., anger, contempt, embarrassment, disgust). This qualitative analysis of incivility incidents in the workplace enhances our understanding of various types of behaviors that may be perceived as uncivil and provides insight into the different affective reactions that experiencing incivility provokes. As such, it can provide a baseline for future innovative research into this type of workplace mistreatment and its measurement.

CM: **Development and Validation of a Workplace Bullying Bystander Response Scale**

Author: **Kara Ng**, *Alliance Manchester Business School, U. of Manchester*

Author: **Karen Rochelle Niven**, *U. of Manchester*

Despite wide recognition of workplace bullying's harmful individual, team, and organisational effects, previous work has traditionally conceptualised it as a dyadic problem between the perpetrator and dyad. In past years, researchers have begun to examine bullying as a social phenomenon in which third parties, known as bystanders, are also involved. However, there has been to date no validated scale to measure workplace bullying bystanders despite the growing number of studies that suggest that bystanders can engage in a multitude of behaviours with different effects. To address this, we draw on existing frameworks of workplace bullying bystanders and propose four bystander responses categorised along two dimensions Constructive to Destructive and Active to Passive, resulting in four bystander 'types': Active Constructive, Active Destructive, Passive Constructive, and Passive Destructive, for which we develop clear definitions. Drawing from subject matter experts and past academic research, we developed and finalised the Bystander Typology Scale (BTW), consisting of 34 items that capture the four bystander response groups. Across five samples, we test the BTS' psychometric properties and its content, discriminant, and nomological validity. Specifically, in Study 2, we test various individual differences that may predict bystander responses, and, in Study 3, we show that the BTS can be used to predict target-reported outcomes of experiencing workplace bullying. We believe that the BTS is a reliable measure that can be used by academics and practitioners to help understand the role and effect of bystanders in workplace bullying, thereby helping to reduce and prevent its occurrence.

CM: **Justice Comes at a Cost: The Impact and Effects of Filing a Workplace-Related Grievance**

Author: **Rose Brown**, *Cornell U.*

Recognizing the potential cost, this study investigates the consequences of informal and formal disclosure or complaints in response to workplace mistreatment, particularly discrimination, harassment, and retaliation, addressing a significant theoretical and empirical gap that spans decades. Employing grounded theory to study these social and psychological processes, the study develops an organizational punishment-industrial discipline nomological network of what employees can expect when engaging in the formal, informal, or even consideration of workplace grievance processes and how this network is moderated by ethnicity and age. This study expands organizational punishment-industrial discipline theory to include intentional actions such as ostracism in person and virtually, and individual and institutional gaslighting. Findings from 50 qualitative interviews and archival records concerning 160 employees indicate many participants experienced negative professional consequences such as adverse performance reviews, blacklisting, constructive discharge, reduced work contracts, and diminished career opportunities. Additionally, participants reported negative physical, psychological, and emotional impacts, from weight gain to feelings of revictimization, hypervigilance, and imposter syndrome. Despite the potential empowerment felt by a minority, the study underscores the pervasive challenges, including lack of confidentiality, investigation, and due process within grievance procedures. The resulting nomological network provides a nuanced understanding of the multifaceted consequences faced by employees who engage in or consider engaging in formal disclosure processes.

Evaluating Competence in Uncertain Environments

Session Chair: **Craig Brimhall**, *UCLA Anderson School of Management*
Session Chair: **Joel Levin**, *Rady School of Management, U. of California San Diego*
Presenter: **Charles Adam Dorison**, -
Presenter: **WENZHUO XU**, -
Participant: **Xiawei Dong**, *Hong Kong U. of Science and Technology*
Presenter: **David M. Munguia Gomez**, *Yale School of Management*
Presenter: **Shilaan Alzahawi**, *Stanford Graduate School of Business*

In this symposium, we bring together leading and emerging scholars to explore how decision makers assess competence in uncertainty environments. Specifically, the papers explore (1) how people develop beliefs about skill in environments that are either devoid of skill signals or in which signals of skill are noisy, (2) the decisions people make based on their attributions of skill, and (3) how managers are perceived when they communicate uncertainty in their decisions. Together, the papers in this symposium offer important empirical insights into the difficulty managers face in accurately assessing skill in uncertain environments. Practically, the collection of papers offers guidance to decision makers tasked with interpersonal decisions like whom to hire, fire, promote, and demote or which leaders to follow or to ignore.

New Developments in Unethical Leadership: What it is, its Antecedents and Consequences

Organizer: **Gabriela Rivera**, *Penn State Smeal College of Business*
Organizer: **Linda K Trevino**, *Pennsylvania State U.*
Organizer: **Marie S. Mitchell**, *U. of North Carolina, Chapel Hill*
Presenter: **Shubha Sharma**, *The U. of Tulsa*
Presenter: **Celia Moore**, *Imperial College Business School*
Presenter: **Wei Wang**, *U. of Manitoba*
Presenter: **Grace Ching Chi Ho**, *Arizona State U.*

Significant efforts have been devoted to understanding negative types of leadership, including unethical supervisory behaviors. Despite these efforts, much of the research in this area is focused on harmful interpersonal behaviors (e.g., abusive supervision). Yet, unethical leadership entails much more, such as breaking or contravening rules and employing unethical means to influence employees. This symposium aims to present new insights and perspectives from recent empirical research that advances our understanding of unethical leadership and how and why it occurs.

Seeing pariahs or prospects? Why leaders behave unethically (or not) toward poor performers.

Defining, Designing And Deploying Indigenous Research Methodologies In Management Research

Organizer: **Theadora Carter**, *Alberta School of Business*
Organizer: **Jordyn Hrenyk**, *Beedie School of Business Simon Fraser U.*
Organizer: **Mary E. Doucette**, *Cape Breton U.*
Organizer: **Emily Salmon**, *Beedie School of Business Simon Fraser U.*
Organizer: **Katelynn Carter-Rogers**, *Saint Mary's U., Canada*
Organizer: **Mick Elliott**, *Haskayne School of Business, U. of Calgary*

Over the past two decades, there has been substantial growth in Indigenous-focused research within the field of Management and Organization Studies (MOS). This symposium aims to address the imperative for rigorous and community-connected MOS research with Indigenous Peoples. The symposium highlights the shift from viewing Indigenous Peoples merely as subjects of research to involving them as research partners. Emphasizing ethical considerations and acknowledging historical disenfranchisement, this session underscores the increasing demand from Indigenous communities for researchers to demonstrate competency in Indigenous Research Methodologies. This symposium invites Academy of Management members to explore and learn from emerging experts about designing and deploying Indigenous Research Methodologies in management research. Organizers will provide an overview of the state of Indigenous Research Methodologies in the MOS field, introduce their own methodologies, and engage in a moderated panel discussion.

Work, Connectivity and Belonging

Session Moderator: **Sebastien Stenger, ISG**

CMS: **[Audit vs. Consulting, Which Route to Choose? The Role of Self-Elimination in the Social Exclusion](#)** 

Author: **Sebastien Stenger, ISG**

This article shows that social exclusion among elite professional services firms (PSFs) varies depending on the profession and moreover is more heavily pronounced by the effect of self-exclusion of students from more modest backgrounds. For this purpose, we analysed the recruitment of two classes of students enrolled at a top-tier business school by their social and geographic origins and conducted a qualitative study of 18 students from this school in order to determine their aspirations. Our study indicates that, for the same level of qualification, auditing within a Big Four firm is mainly chosen by students from secondary schools in regions and from a lower socio-professional category than their fellow students, whereas strategy consulting firms mainly recruit from the higher social strata coming from the capital city. We also demonstrate that for this population, auditing is perceived as less socially discriminating than strategy consulting, a field from which these students exclude themselves.

CMS: **[Emplacing a Craft Village in the Global Marketplace](#)**

Author: **Shalini Gupta, Indian Institute of Management, Calcutta**

Author: **Devi Vijay, Indian Institute of Management, Calcutta**

This study explores how a place of craft is emplaced in global circuits of capital. Drawing on fieldwork at Ajrakhpur (Gujarat, India), we examine how some artisans of the Muslim Khatri community relocated from their village following a devastating earthquake in 2001 and constructed a new craft village connected to global commerce. We distill three socio-spatial processes through which the artisan community engaged in place-making: situating community capital, staging the craft, and producing multi-scalar trade networks. We illustrate incommensurable worlds that arise in our context as inconceivable iconography and invisible border-making. We make the following contributions to organizational studies of craft. First, we deepen conversations on the relations between craft and place by surfacing what happens to place as the craft is produced for global marketplaces. Second, we foreground the socio-spatial inequalities integral to constructing a distinct place for global marketplaces. Finally, we offer a corrective to the Global North-centric understanding of craft.

CMS: **[Navigating the Labyrinth of Precarity: The Case of Women Domestic Workers in India](#)**     

Author: **Aiman Nida, Indian Institute of Management, Calcutta**

Author: **Randhir Kumar, Indian Institute of Management, Calcutta**

Existing research predominantly adopts a monolithic view of the domestic work segment, rendering the differential distribution of precarity invisible within academic discourse. This hinders a nuanced understanding of the precarity endemic to their lifeworlds. In challenging this paradigm, our article critically examines the differential experiences of precarity among women domestic workers in India during the COVID-19 pandemic. Using the lens of social positionality, our study reveals how the axes of gender, caste, religion, and migration status interact in complex ways to forge a spectrum of experiences, ranging from acute vulnerability to strategic resilience. These intersections lead to differential access to network and skill resources, shaping the varied capacities of the workers to navigate the precarious landscapes of their lives. We posit a novel network-skill typology to elucidate how differential access to these resources before the pandemic led to differential experiences of precarity during the pandemic. This research disrupts the monolithic portrayal of the domestic work segment, illuminating the nuanced ways in which structural inequalities are both reproduced and reinforced. It contributes to critical management studies by articulating a more dynamic understanding of the discourse on precarity, one that recognizes domestic workers as active agents in shaping and responding to the conditions of their labour. This research not only enriches our understanding of the precarious lives of domestic workers but also offers critical insights for policy interventions aimed at mitigating precarity in times of crisis.

CMS: **[Participation, Power and Relationality: Navigating Researcher-Patient Relationship](#)** 

Author: **Tero Montonen, U. of Eastern Finland**

Author: **Pasi Hirvonen, U. of Eastern Finland**

Author: **Paivi Eriksson, U. of Eastern Finland**

Author: **Eeva Aromaa, U. of Eastern Finland**

This article joins the discussion on knowledge production in research by focusing on an overlooked way of knowing together that connects academic researchers with citizens. Building on the literature about research involvement and power, we worked towards a post-paternalistic approach to explore how academic researchers navigate 'patient and public involvement' – a practice that involves specifically laypeople's contribution to academic research. We analysed the narratives mentioned in personal interviews with health and social science researchers, and the analysis details three storylines of relationships between academic researchers and citizens (i.e. patients, caregivers and the wider public). Drawing from the conceptual ideas of Mary Parker Follett, we provide a nuanced discussion on participation, power and relationality in these storylines and the prospects and possibilities of producing collaborative knowledge in health research in broad sense. Keywords: participation; research collaboration; power with; patient; narrative

Organizational Effects of New Technology Implementation

Session Moderator: **Giuseppe Modarelli**, *U. of Turin*

CTO: **Implementing Conversational AI: Institutional Logic, Responses, and Constraint Absorption**      

Author: **Kevin Schmitt**, *U. of St. Gallen, Institute of Information Systems and Digital Business*

Author: **Ivo Blohm**, *U. of St. Gallen*

Over the last few years, Conversational AI has become increasingly prevalent in service-oriented industries. This case study delves into the antecedents of why service-oriented industries implement Conversational AI in their customer service operations. Second, it elucidates the interplay of institutional logic and organizational responses in addressing resource constraints encountered during the technology's implementation. We collaborated with six Swiss retail banks and insurance companies over a year to analyze their Conversational AI implementation practices. Our research identifies three organizational responses to absorb constraints: development of AI Business Unit Capabilities, formation of specialized AI Teams, and establishment of AI Value Streams. Furthermore, our research identified that a company's institutional logic — from opportunistic and cautious to pragmatic AI utilization and innovative customer-centric — significantly molds its organizational response to accessing external resources needed during Conversational AI implementations. Additionally, these organizational responses exhibit varying degrees of external resource-accessing capabilities (i.e., full, partial, or minimal).

CTO: **Effects of IT-based Changes on the Complexity of an Organizational Routine**

Author: **Sandro Franzoi**, *U. of Münster*

Author: **Sophie Hartl**, *U. of Liechtenstein*

Author: **Thomas Grisold**, *HSG U. of St. Gallen*

Author: **Jan Vom Brocke**, *U. of Münster*

Information technologies are expected to improve organizational routines in a number of ways, yet their implementations often lead to unexpected, unintended, and even undesired effects. In this research, we investigate how IT-based changes affect the complexity of an organizational routine over time, that is, the number of ways through which the routine can be performed. We present the findings of a computationally-intensive research study of a customer onboarding routine at a financial institution in Central Europe. To this end, we investigate how IT-based changes in the associated low-code platform affect the dynamics of how the routine is performed over the course of 2 years. We explain the effects of IT-based change on the routine's complexity along four core dimensions—the type of change, the strength of the effect, and the temporal unfolding of the effect and the permanence of effect—, where each dimension is characterized by different change patterns. We further distinguish between two types of IT-based effects: intended and unintended effects.

CTO: **A Process Model for Implementing Weakly Structured Systems in Manufacturing** 

Author: **TC Eley**, *Weatherhead School of Management, Case Western Reserve U.*

Author: **Kalle Lyytinen**, *Case Western Reserve U.*

The fourth industrial revolution (4IR) has yet to lead to a growth in productivity similar to the previous industrial revolutions. Current implementation of the underlying technologies follows the logic of the previous industrial revolutions in manufacturing despite the change in the nature of some of the technologies, especially the Industrial Internet of Things (IIoT). We conduct an exploratory case study in a medium-sized manufacturing company implementing IIoT system to highlight the importance of the embedding of organizational rules during the use of the information technology (IT) systems. The case allows us to unpack the patterns of practices, rules, and IT system uses and show that unlike previous manufacturing IT systems, IIoT implementation and assimilation moves from individual practices to organizational rules embedded in the IT and surrounding its use. Based on the analysis of practices, rules, and IT artifact interactions, we formulate an implementation process model for IIoT implementation.

Understanding Politeness, Civility, and Aggression Online

Session Moderator: **Mary Beth Watson-Manheim**, *U. of Illinois at Chicago*

CTO: **A Redundant Pattern or a Social Lubricant? Smiley Emoji Usage in Virtual Request Communication**

Author: **Jiayi Du**, *Fudan School of Management, Fudan U.*

Author: **XuHong Li**, *Fudan U.*

Author: **Zhiying Shi**, *School of Management, Fudan U.*

People actively use emojis as an equivalent tool for the absence of nonverbal cues in online communication. Prior studies showed that emojis or emoticons may not merely influence receivers' emotions but also the formation of impression. However, how emoji usage influences receivers' behavior in the organization is still unknown. Drawing on politeness theory, the present study proposes that the usage of smiley emojis in the help request context may positively influence receivers' helping behaviors via pleasure; trait cynicism of receivers which influences the interpretation of message is likely to moderate such the indirect effect. By adopting a mixed research design with an interview (N = 11), an experiment (N = 120), and a field survey (N = 214), we found that when receivers' trait cynicism is lower, the indirect effect of smiley emoji usage on receivers' helping behaviors via pleasure is stronger. Our study suggests smiley emoji usage as a social lubricant in organizational communication.

CTO: **Incivility in Online Communities: A Configurational Approach**

Author: **Marie Madeleine Meurer**, *Jönköping International Business School, Incoming Rotterdam School of Management*

Author: **Eliane Bucher**, *BI Norwegian Business School*

Author: **Suzanne Van Gils**, *BI Norwegian Business School*

This study explores the emergence of incivility in online communities, challenging the traditional perspective that attributes incivility to individual characteristics of actors and digital platforms. We argue that this narrow focus fails to recognize the complex interactions between these elements, leading to a rudimentary understanding of how incivility originates and evolves. To address this gap, our research employs a fuzzy set Qualitative Comparative Analysis (fsQCA) to examine a comprehensive dataset comprising approximately 4.3 million posts from 100 diverse online communities on Reddit. Through this analysis, we uncovered five distinct paths that converged into two primary community configurations: close-knit and scattered communities. Each configuration exhibits unique affordances contributing to incivility, shedding light on its nuanced and multifaceted nature. Therefore, this study highlights the dynamic interactions within sociotechnical systems and emphasizes the critical role of community-specific characteristics. We demonstrate that within the same digital platform, different social systems can impact user behaviors, including incivility.

CTO: **Two "Faces" of Players: The Relationship Between fWHR and Aggressive Behavior in Digital World**

Author: **Zhengda Xu**, *Beijing Technology and Business U.*

Author: **Song Lin**, *Central U. of Finance and Economics*

Author: **Heqi Jia**, *Central U. of Finance and Economics*

Author: **Yafang Zhang**, *Beijing Technology and Business U.*

The growing literature has emphasized the role of facial structures in affecting human behavioral tendencies, especially the debate on whether a person's facial width-to-height ratio (fWHR) will influence his aggressive behavior. The development of the digital economy and e-sports provide a new research context. E-sports players use virtual characters as representatives rather than engaging in physical fighting. We aimed to explore the role of fWHR of players and virtual characters regarding the indicators of aggressive behavior. Using the data of 954 professional players of League of Legend from 2017 to 2022, we present evidence that e-sports players' fWHR is not significantly associated with their aggressive behavior in the virtual world. We further proved that when the player's real face is more similar to his virtual character's face, he will perform more aggressively. Our studies extend the boundary of fWHR and aggressive behavior research in the digital era.

Teams: Understanding Formation, Structure, and Dynamics

Session Moderator: **Aimee Kane**, *Duquesne U.*

CTO: Assigning or Recommending You a Team? The Algorithmic Effects on Team Formation and Performance

Author: **Diego Gomez-Zara**, *U. of Notre Dame*

This study explores the impact of recommendation systems' algorithms on individuals' teammate choices when assembling teams. I posit that different algorithmic designs will lead individuals to choose one team member over another, thereby shaping their final teams' composition, dynamics, and performance. To investigate this, I conducted a between-subject laboratory experiment (N=332 participants) using four team formation algorithms, each manipulating participants' agency and the inclusion of diversity criteria. The findings show that the algorithms directed participants toward different team combinations, resulting in varied communication patterns and team viability levels. Notably, algorithms that implemented either diversity criteria or agency did not result in high team performance. While allowing personal agency without any diversity criteria led to homogenous teams with low performance, incorporating diversity criteria alone resulted in teams with low communication frequency and viability. In contrast, the team formation algorithm that combined personal agency with diversity criteria facilitated the assembly of effective diverse teams. I conclude by discussing the findings and the implications of algorithmic designs on organizational capabilities.

CTO: The Effects of Decision-Making Structure on Performance and Satisfaction in Temporary Teams

Author: **Lena Rudat**, *U. of Mannheim*

Author: **Nils Schweikard**, *U. of Mannheim*

Author: **Himani Singh**, *U. of Mannheim*

Temporary teams are frequently formed on-demand in organizations for short-term engagements involving tightly coupled and complex tasks. We examine how the distribution of decision-making authority among team members affects the effectiveness of such teams. Specifically, we shed light on how decision-making (de)centralization (i.e., whether decision-making authority is concentrated in a formal leader or shared among team members) impacts temporary teams' task performance and satisfaction. Empirically, we conduct a field experiment, involving 113 temporary distributed teams and a unique field setting, i.e., an online escape game. Our findings reveal that while decentralized structures enhance task performance, they also lead to lower team task satisfaction compared to centralized structures. Further, causal mediation analysis reveals that the main effect of centralized versus decentralized structure on team task satisfaction can be explained by differences in teams' collective perceptions of social loafing. Our findings contribute to existing research on temporary team effectiveness and the role of decision-making structures in such teams.

CTO: (A) I Sit Back - Unraveling the Dynamics of Social Loafing in Human-AI Collaboration

Author: **Edona Elshan**, *KIN Research, VU Amsterdam*

Author: **Dominik Siemon**, *LUT U.*

Author: **Triparna De Vreede**, -

Author: **Gert-Jan De Vreede**, *Muma College of Business, U. of South Florida*

Author: **Philipp Ebel**, *U. of St.Gallen*

This study investigates the phenomenon of social loafing within the context of human-AI collaboration. Focusing on team dynamics and individual contributions in human-AI teams, the research explores how the presence of AI affects human effort and the propensity for social loafing. The findings provide novel insights into the changing nature of teamwork in the era of AI and highlight critical considerations for managing human-AI interactions in professional environments. This study not only contributes to the existing body of knowledge on team dynamics and AI integration but also offers practical implications for optimizing team performance in an increasingly AI-driven world.

CTO: The Impact of Proximity and Hierarchy on Network Dynamics: A Quasi-Experimental Field Study

Author: **Jessica Reif**, *Fuqua School of Business, Duke U.*

Author: **Ramon Lecuona Torras**, *Duke U.*

Author: **Jonathon N. Cummings**, *Duke U.*

Prior literature on intra-organizational network dynamics has noted the role of contextual factors in changing workplace ties. For example, while physical proximity in the office is a well-known contextual factor for creating opportunities for tie strength, tie persistence, and tie formation in organizations, much less is known about how the formal structure influences these opportunities. In this paper, we focus on tie changes among 108 employees who moved from an office where desk locations were based on functional areas to a new office in which seating was quasi-randomly assigned. As a result of the office move, some employees now sat much further away from their bosses. Using surveys of face-to-face communication and logs of email communication before and after the move, we show that employees located closer to their bosses in the new office exhibited less tie strength, less tie persistence, and less tie formation with other employees. We also show that this negative effect of being proximate to the boss in the new office is exacerbated when the employee and boss had more face-to-face communication in the old office, which suggests that strong hierarchical relationships can further constrain communication opportunities presented by being physically close to other employees. These new findings at the intersection of proximity and hierarchy extend our understanding of contextual factors that shape network dynamics in organizations.

The Promise and Peril of AI Assistance in Coding, Writing, Literature Reviews

Session Moderator: **Shaila Miranda**, *U. of Arkansas, Fayetteville*

CTO: **Towards a Guide for Conventional and Gen AI-Assisted Literature Reviews**

Author: **Fabian Tingelhoff**, *U. of St. Gallen, Institute of Information Systems and Digital Business*

Author: **Micha Brugger**, *U. of St. Gallen, Institute of Information Management*

Author: **Jan Marco Leimeister**, *U. of St. Gallen and U. of Kassel*

Generative artificial intelligence (Gen.AI) is poised to significantly impact how literature reviews (LRs) are conducted, raising essential questions regarding methodology, quality, and ethical implications. Previous research predominantly focused on the capabilities and limitations of Gen.AI to establish guidelines for research practices. However, the rapid evolution of Gen.AI often outpaces the publication of methodological papers. In response, our study adopts a criteria-centric approach, scrutinizing the scientific quality standards that Gen.AI must meet. Our study shall inform researchers, irrespective of their intent to employ Gen.AI in LRs, as we first analyze the established state-of-the-art processes and associated quality standards in conventional LRs. This culminates in the synthesis of a unified process and criterion set, not only underpinning a comprehensive understanding of the extant LR methodologies but also serving as the foundational framework for integrating Gen.AI. Second, we delineate the specific scenarios conducive to incorporating Gen.AI into this fundamental framework, as well as situations where its integration may not be suitable. Our contribution is further solidified by providing a detailed, step-by-step guide — akin to a “cooking recipe” — to effectively integrate Gen.AI in LRs, ensuring adherence to established quality criteria.

CTO: **The Promise of Evaluative Algorithmic Advice: A Field Experiment on Writing Improvement**

Author: **Anuschka Schmitt**, *U. of St. Gallen, Institute of Information Management*

Author: **Thiemo Wambsganss**, *Bern U. of Applied Sciences*

Author: **Andreas Janson**, *U. of St. Gallen*

Author: **Krzysztof Gajos**, *Harvard U., School of Engineering and Applied Sciences*

The design and impact of algorithmic advice has become more important than ever with generative artificial intelligence's (AI) diffusion in organizational and private realms. Unfortunately, challenges associated with the computational nature of AI-based systems and human sensemaking can hinder augmentation of human work. Prevalent forms of algorithmic advice commonly provide a user with ‘one best’ solution that can induce the user to fixate on the advice and neglect own critical reasoning. To overcome such interaction challenges, we explore the potential of evaluative algorithmic advice that provides users with more open-ended and engaging feedback. As part of two controlled experiments, we find that humans prefer evaluative over contrastive advice for writing feedback. We then conducted a field experiment in the context of an educational business pitch writing task with two conditions: (i) contrastive algorithmic advice improving users' writing without any further feedback; and (ii) evaluative algorithmic advice providing feedback in form of open-ended questions and pro and contra arguments. Users' writing could be improved regardless of the type of algorithmic advice, yet we show that users exposed to evaluative advice engaged significantly more with the task and the advice. Our study explores how algorithmic advice may serve as a critical stimulator rather than attenuating human agency in AI augmentation.

CTO: **Decoding Coding Advice: How Credible are Programming Solutions Produced by Generative AI?**

Author: **Ziyi Zhao**, *Fox School of Business, Temple U.*

Author: **Kanghyun Cho**, *Fox School of Business, Temple U.*

Author: **Aleksi Aaltonen**, *Fox School of Business, Temple U.*

Author: **Detmar Straub**, -

The sudden availability of generative artificial intelligence tools has given rise to concerns about individuals' capacity to correctly evaluate and adopt outputs from generative AI. This is particularly important in the context of programming work that involves complex problem-solving and deep expertise that have been traditionally difficult to automatize. Generative AI technology can provide complete solutions to programming problems that previously required programmers to seek answers from their colleagues or online question-and-answer forums dedicated to programming. By contrast, tools based on generative AI offer programming solutions in real-time as they become integrated into professional workflows. Yet, AI-based tools are also known to occasionally produce 'hallucinations', that is, plausible-looking yet misleading or incorrect outputs. This raises a question of how programmers assess and perceive the quality of solutions produced by generative AI as opposed to human-generated solutions, and whether this results in algorithm appreciation and aversion. Understanding this dilemma is critical to programmers and their managers trying to decide how to make the best use of rapidly developing tools based on generative AI. We draw from the elaboration likelihood model and cognitive load theory to study how the source of a programming solution affects the quality of the solution and the decisions to adopt solutions produced by generative AI.

Minds and Machines: Expertise in an Age of Intelligent Machines

Organizer: **Sienna Helena S. Parker**, *U. of California, Santa Barbara*
Organizer: **Brandon Lepine**, *U. of California, Santa Barbara*
Discussant: **Melissa Valentine**, *Stanford U.*
Presenter: **Callen Anthony**, *New York U.*
Presenter: **Sarah Lebovitz**, *U. of Virginia*
Participant: **Emmanouil Gkeredakis**, *IESE Business School*
Presenter: **Kevin Woojin Lee**, *U. of British Columbia*
Presenter: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*
Presenter: **Matt Beane**, *U. of California, Santa Barbara*

Intelligent machines are transforming the nature of knowledge, skills, and expertise, challenging many of our assumptions about work and organizing. Researchers have long emphasized the impact of emerging technologies on reshaping interactions within organizations and occupational communities. From paper mill operators with software systems (Zuboff, 1988), radiologists with computerized CT scanners (Barley, 1986), librarians with internet search (Nelson & Irwin, 2014), and NASA scientists with open-source innovation (Lifshitz- Assaf, 2018) scholars have found that the introduction of digital technologies can occasion changes to occupational identities and trouble the boundaries of domain knowledge within and between organizations. However, our understanding of expertise in the era of machine learning, algorithms, and AI is still nascent. Unlike previous digital technologies, intelligent machine applications can handle complex decision-making tasks and analysis of large amounts of structured and unstructured data, disintermediating the tasks of managers and workers (Kellogg et al., 2020; Murray et al., 2021; Faraj et al., 2018). As such, recent calls for research emphasize the need for more theorizing on expertise and more empirical studies on how workers, occupational communities, and organizations can adapt to and cultivate the skills needed in this new world of work (Heimstädt et al., 2023; Nicolini et al., 2022). Therefore, this symposium provides new perspectives and insights at the nexus of intelligent machines and the evolving nature of knowledge, skills, and expertise. It will consist of two conceptual and three empirical papers that grapple with differing forms of intelligent technologies and their impacts. In concert, these presentations foreground and question the assumptions and heuristics that scholars of work, management, and organizing have traditionally held preceding the proliferation of intelligent machines. This symposium is designed to encourage discussion and integrate diverse theoretical and methodological approaches to the evolving landscape of work and technology.

Women's Career Progression

Session Moderator: **Marlee Eden Mercer**, *York U.*

DEI: A Conceptual Exploration of Endometriosis Disclosure and its Impact of on Women's Career Progression

Author: **Marlee Eden Mercer**, *York U.*

Author: **Tina Sharifi**, *York U., Toronto*

Endometriosis is a debilitating disease that affects approximately ten percent of reproductive-aged women. However, its specific ramifications on women's professional development and career trajectory remains inadequately understood. This conceptual paper explores the challenges women who disclose their endometriosis condition face in the workplace, examining the impact of disclosure on career progression. Drawing from stigma management theory and intersectionality theory, we explore how supervisors' stereotypes and limited understanding of endometriosis contribute to negative perceptions, hindering women's career progression. We also introduce downplaying behavior, whereby women may engage in behaviors that de-emphasize the symptoms to reduce the negative perceptions. Though this behavior may make women suffer in silence, it is proposed to circumvent challenges surrounding career progression. Our research advances discussions on gender, health, and workplace dynamics in the hopes of contributing to developing more inclusive and supportive work environments for women facing health-related challenges like endometriosis. A discussion and implications are outlined.

DEI: The Cost of Me-Time: Social Media as a Window Into the Gendered Career Outcomes

Author: **Jiyoan Park**, *Rutgers U., School of Management and Labor Relations*

Author: **Maria Kraimer**, *U. at Buffalo*

Author: **Pat Downes**, *U. of Kansas*

Author: **Jerry Liu**, *Rutgers U., School of Management and Labor Relations*

While there has been escalating interest in the impact of social media on employee outcomes, research on the role of supervisors in this context is limited. To address this gap, we conducted two studies exploring how employees' social media posts affect their promotability ratings through supervisors' perceptions of their work-life conflict. Utilizing a survey experiment with Facebook post mockups of a fictitious employee, we examined how respondents, assuming the role of supervisors, evaluated the employee's work-life conflict and promotability. These evaluations were based on the employee's presentation of hobbies, parental status, and gender on Facebook. In the first study, findings from 306 respondents indicated that posts depicting hobbies as resource-depleting, as opposed to energizing, negatively impacted promotability ratings. This effect was, unexpectedly, particularly strong for female employees without children. The second study, with 241 respondents, further examined this unexpected finding, underscoring that perceived work-life conflict is a mediating mechanism explaining why resource depleting hobby posts led to the lowest promotability ratings for females without children. Alternative potential mediators were also explored but were not found to be significant.

DEI: Observing Upward Social Class Transition, Voice Solicitation, and Promotion Intention

Author: **Yi Huang**, *Nanyang Business School, NTU Singapore*

Author: **Xinyu Han**, *Nanyang Technological U.*

Author: **Jiajin Sophie Tong**, *School of Psychological and Cognitive Sciences*

Many employees work in order to gain financial and social status for moving upward on the social ladder, but extant research provides limited insights regarding the interpersonal experience of how social class transition is perceived by others in the workplace. Drawing from the literature on inspiration, we suggest that coworkers will have a more positive impression of employees who have demonstrated an upward transition in life. We argue that perceived upward transition is positively related to observers' inspiration, especially for the observers with a higher contextualism mindset. This will in turn predict observers' knowledge solicitation and intention to promote employees who have moved upward. Our hypotheses were consistently supported using both lab ($n = 268$) and field ($n = 285$) data. Overall, this research illustrates how and why upward transition has an effect on observers. We discuss the implications and limitations and call for more research attention on interpersonal mechanisms related to upward transition in the workplace.

DEI: This is Not a Calling: I'm selling My Expertise. Navigating Through Late-Career in Nursing

Author: **Sirpa Koponen**, *Jyväskylän yliopiston kauppa korkeakoulu/Executive Education*

Author: **Monika Von Bonsdorff**, *U. of Jyväskylä School of Business and Economics*

Author: **Iiris Aaltio**, -

We explored nurses' intentions to continue working as they approach retirement. Specifically, we were interested in micro and meso-level factors that underlie the intentions of continuing to work or transitioning to retirement. We applied the life course perspective and career construction theory as a lens for understanding the role of lived lives and the gendered nature of the nursing profession as aging nurses navigate and negotiate their late careers. We conducted a Q-methodological study in 2010 among 16 registered nurses in the federation of municipalities of a Finnish Care District. Respondents were employed as registered nurses aged 45 years and older. Nurses were asked to rank-order 60 statements (Q-set) regarding the factors influencing their desire to continue working in nursing. Individual Q-sorts were analysed using PQMethod 2.11. Three distinct views were extracted in which different aspects were considered important: 1) nurses who placed the highest value on the nature of care work, 2) nurses who prioritized a supportive workplace environment, and 3) nurses who valued fair and transparent leadership above all else. Interestingly, we found a need to reconcile the professional calling, which manifested in an intrinsic desire towards the work and to help others, and an instrumental role of the work. We discuss our contributions to the retirement, late-career, and career construction literature and practical implications. Keywords: late career, nursing, retirement, gender, Q-methodology

Participant: **Brenda To Dromgoole**, *Activision Blizzard*

Participant: **Amanda Reid**, *Ford Automotive*

Participant: **Tunji Oki**, *Google*

Participant: **Andrea Brown**, *Whataburger*

Employee Resource Groups (ERGs) are great assets to organizations, but little is known about them, their direct impact on employees, and how they can further company goals. The current panel sought to bring ERG experts from various industries together to discuss the role ERGs play within their respective organizations, how to best support ERGs in the workplace, what organizational utility is afforded through ERG investment, provide direction on how to establish ERGs, and to address sensitive questions, such as perceptions of inclusivity in ERGs. The panel creators are also available to discuss their research pertaining to the creation of an ERG taxonomy based on Fortune 100 companies.

Gendered Selection and Allyship

Session Moderator: **Jingyi Wei**, *U. of Macau*

DEI: **Interpersonal Consequences of Perceived Allyship by Women: Helping and Knowledge Sharing Toward Ally (WITHDRAWN)**

Author: **Jingyi Wei**, *U. of Macau*

Allyship literature has centered on the ally while paid less attention to the perceptions of the allied. The present study draws on the social exchange theory to unfold the interpersonal consequences of allyship from the perspective of the allied. Three-wave data from 173 full-time working women in the United States across various industries showed that women's perceived allyship increased their trust toward their ally(ies), which inclined them to engage in ally-directed helping behavior and ally-directed knowledge sharing. Yet, these indirect effects emerged only for women who perceive organization as obstructing. The findings introduced a motive for ally's engagement in allyship through a relational lens, as they can derive work-related reciprocity as a response to their engagement in allyship. The theoretical and practical implications are both discussed.

DEI: **What Dandelions Teach Us about Daisies: A Framework for Hiring and Socialization Supporting Neurodiv**

Author: **Nikki Drader**, *U. of North Texas*

Author: **Virginie Lopez Kidwell**, *U. of North Texas*

Author: **Rhonda K. Reger**, *U. of North Texas*

Author: **Timothy J. Vogus**, *Vanderbilt U.*

Organizations are starting to actively invest in hiring initiatives aimed at recruiting neurodivergent talent. Yet, our understanding of the best ways to recruit and support these individuals as job applicants and employees remains limited. Using a combination of participant observer ethnographic case study and in-depth structured interviews of a targeted hiring initiative, we detail the importance of tailored recruiting service providers (TRSP) to identify, hire, and onboard neurodivergent talent. Specifically, we present a holistic perspective of how all stakeholders experience the hiring initiative (e.g., neurodivergent jobseeker, hiring manager, and TRSP coach) of a multinational TRSP and its client organization. From these data we develop a model for hiring neurodivergent talent grounded in alternative screening methods for selection and institutionalized tactics for socialization. We then discuss implications, limitations, and future research directions for human resource management related to recruitment, selection, and socialization of a neurodivergent workforce.

DEI: **The Surrendered Self: Stories of Mothering Neurodiverse Children (WITHDRAWN)**

Author: **Angela Owens-Schill**, *Utah Valley U.*

Author: **Amanda Peticca-Harris**, *Grenoble Ecole de Management*

Author: **Sara R. S. T. A. Elias**, *U. of Victoria*

Author: **Nadia C. DeGama**, *AFG College with the U. of Aberdeen*

Our qualitative study delves into the life history of a mother-worker caring for two neurodiverse children, surfacing how the burdensome mental load of balancing domestic and professional responsibilities permeates and shapes her identity. Employing narrative analysis and photovoice methods, we investigate how she navigates the logistical and emotional complexities in both roles across three distinct storytelling events: storying (mis)diagnoses, storying care needs and work negotiations, and storying coping. Our primary contribution lies in introducing the concept of the surrendered self, signalling the amplified and prolonged embodiment of one's provisional identity (mother) based on socio-cultural expectations of who she thinks she ought to be, leading to the eclipse of other possible identities (woman, wife, worker).

DEI: **Promotion During Peril: Status & Uncertainty Explain Gendered Selection During Org. Decline**

Author: **Nathan Barrymore**, *McCombs School of Business, U. of Texas at Austin*

Author: **Jamie Strassman**, *U. of Texas at Austin*

How are women's career prospects impacted by organizational decline? A sizeable body of work suggests that organizations appoint women to leadership positions as a turnaround strategy during periods of organizational decline, a phenomenon known as the glass cliff. However, evidence for this phenomenon and its underlying mechanisms are mixed. We explain this mixed evidence by juxtaposing the glass cliff literature with research on status and uncertainty. Relying on this research, we predict that on average, women are less likely to be appointed to leadership positions during organizational decline. However, firms mostly led by women should exhibit a glass cliff effect. Using 1.6 million senior-level job placements within U.S. public companies from 2014 to 2023, we find that while performance declines are correlated with increased placement of women into leadership positions, this relationship is accounted for by the job categories firms fill while underperforming. After accounting for job categories, organizational decline predicts a lower likelihood of selecting external women for leadership positions, and contrary to the mechanisms proposed by the glass cliff literature, men-dominated firms are responsible for this effect. Our research provides a novel, theoretically driven account of how, why, and where organizational performance declines affect the advancement of women.

Participant: **Laurent Lapierre**, *Telfer School of Management, U. of Ottawa*

Mental illness is a common health impairment, and in a given year, 1 in 5 North Americans will experience a mental-health-related concern. Although prevalent, stigma surrounding mental health remains a pervasive workplace challenge which negatively impacts employment for those facing mental-health challenges, such as mental illness. In addition, a lack of mental-health related support in the workplace contributes to lost productivity which can be costly to organizations. Given the pervasiveness and costs associated with mental health, there is a need to better understand employees' mental health experiences in the workplace context. The papers in our symposium contribute to the prominent body on mental health in the workplace, emphasizing employees' experience of mental health at work and the implications on job attitudes and performance. Each paper provides a unique perspective, including how experiencing mental-health-related stigma can affect leader emergence, how mental health can affect leadership pursuit, why managers' responses to poor mental health are essential to enhance employees' well-being, and what organizations can do to cultivate a supportive mental health environment. The symposium will conclude with a discussion on what organizational leaders can do to promote good mental health and prevent poor mental health, providing valuable insight for practitioners and researchers.

Firm Culture and CEOs

Session Moderator: **Moritz Johannes Volk**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*

DEI: **The Influence of TMT Faultlines on the Culture of the Firm and the Moderating Effect of the CEO**

Author: **Moritz Johannes Volk**, *Innovation and Entrepreneurship Group (WIN) – RWTH Aachen U.*

While corporate culture (CC) plays a key role for firm-level success, research on managerial antecedents of CC is scarce. Drawing on subgroup and CC perspectives, we theorize that TMT identity-based faultlines (gender & age) are negatively related to the culture of a firm. However, the presence of a female CEO and the functional background diversity of a CEO weaken this relationship. We test our predictions in a sample of 5,591 firm-year observations from 527 different S&P 500 companies between 2005 to 2020 and find support for our predictions. We contribute by highlighting the role of faultlines as inhibitors of strong CCs and by exploring which factors attenuate this relationship.

DEI: **Breaking Traditional Bonds: How Divorce Enhances Earnings for Female Executives**

Author: **Ipek Kocoglu**, *Kean U.*

This study challenges the traditional narrative that divorce adversely affects women's earnings, particularly focusing on female CEOs. We propose that, for women who effectively navigate social constraints, divorce can actually lead to increased earnings. Grounded in evolutionary psychology, our research suggests that the absence of a mate prompts women, unlike men, to intensify their resource acquisition efforts. This is particularly evident in divorced female CEOs, who, free from certain marital constraints, are able to allocate more cognitive resources to their professional roles, resulting in a 'divorce premium' in earnings compared to their married counterparts. Our analysis, utilizing a matched sample of female and male CEOs, reveals this divorce premium is exclusive to female CEOs. Notably, the premium escalates with the duration of being divorced, although it diminishes in the presence of children or if the CEOs remarry. These findings illuminate the intricate ways in which gender differences in earnings are influenced, highlighting that while social constraints tend to reduce women's earnings post-divorce, evolutionary adaptations appear to limit their earnings during marriage. The absence of a similar pattern among male CEOs underscores a gender-specific impact of marital status on professional preferences and financial outcomes.

DEI: **Minority Status as a Burden? Demographic Minority CEOs, External Pressures, and Diversity Policy**

Author: **Zhaoyi Yan**, *IE Business School*

This study attempts to investigate the extent to which external pressures can help moderate concerns that constrain demographic minority CEOs' (women and racial/ethnic minorities) preferences for diversity policy promotion. Drawing upon status-related theory and institutional theory, I propose external pressures significantly moderate the relationship between CEO gender and race/ethnicity and diversity policy promotion. I focus on the providence of transgender-inclusive benefits - which is arguably one of the most contested diversity policies at the workplace - across Fortune 500 firms from 2011 to 2020. Results suggest that female CEOs and racial/ethnic minority CEOs are susceptible to different types of external pressures. The likelihood of a firm's transgender-inclusive policy adoption is increased for female CEOs rather than males when the location a firm headquartered is dominated by politically left preferences, has strong anti-discrimination laws protecting sexual minorities, and has larger number of benchmarking firms. However, female CEOs are less likely than males to advance such policy when a firm headquartered in politically right-leaning states. Furthermore, firms led by racial/ethnic minority CEOs (particular for Hispanic and Asian CEOs) are more likely than those led by white CEOs to advance transgender-inclusive benefits when there are more benchmarking firms within the same industry.

DEI: **Heterogenous Returns to Performance-Based CEO Dismissal: Does CEO Gender Matter?**

Author: **Gurdeep Singh Raina**, *The U. of Texas, Permian Basin*

Author: **Anup Menon Nandialath**, *U. of Wisconsin, La Crosse*

While there has been extensive research on understanding the relationship between CEO appointments and stock returns, little is known about the impact on the stock returns after the CEO is dismissed. Furthermore, even less is known about when female CEOs are dismissed due to reasons of performance. Integrating the insights of the "resource-based view," "role congruity theory," and "investor sentiment perspective," we build on the premise that female CEOs are unique resources and hence, the dismissal of female CEOs will be perceived as substantial loss to the organization giving rise to particularly negative market reaction, leading to a lower cumulative abnormal return on the day of the dismissal announcement for female CEOs compared with male CEOs. However, the dismissal of female CEOs, who are dismissed for performance related reasons, will incite a positive market reaction, leading to a higher cumulative abnormal return on the day of the dismissal announcement for female CEOs compared with male CEOs. Using data from 909 CEO dismissals from 1992–2020, we find that the investors' behavior toward female CEOs' dismissal is different when they are dismissed due to performance. We contribute to the literature we draw from as well as to the upper-echelon literature uniquely.

Experience

Session Moderator: **Nitish Singh**, *Chaifetz School of Business, Saint Louis U.*

ENT: **Emotion Lexicon and Entrepreneurs' Anxiety**

Author: **Nitish Singh**, *Chaifetz School of Business, Saint Louis U.*

Author: **Jintong Tang**, *Saint Louis U.*

Author: **Wenping Ye**, *school of management, Jinan U.*

Entrepreneurs' anxiety unveils a spectrum of negative emotions arising from the new venture creation process marked by acute levels of uncertainty. We offer a novel theoretical account of why entrepreneurs experience anxiety and how entrepreneurs cope with anxiety. Integrating linguistic and entrepreneurship research, we examine the constitutive role of language's emotion lexicon in augmenting entrepreneurs' prospective and inhibitory anxiety. We further explore individual-level (bilingualism) and national-level (cultural tightness) coping mechanisms that may diminish this relationship. We administered an international survey of 1,251 entrepreneurs speaking 14 native languages and conducted in-depth interviews to triangulate our quantitative findings and gain further insights.

ENT: **Emancipation Through Entrepreneurship: A Structuration Perspective**

Author: **Benson Kinney**, *Louisiana Tech U.*

Author: **Arielle M. Newman**, *Syracuse U. Whitman School of Management*

Author: **Garry D. Bruton**, *Texas Christian U.*

Entrepreneurship has been suggested as a means for producing emancipation for marginalized individuals. However, these claims have been debated within the literature, raising concerns over whether entrepreneurship facilitates emancipation. In this review, we examine entrepreneurship as emancipation literature through a structuration lens to critically evaluate both the enabling and constraining environmental factors such entrepreneurs face. Through this review we: 1) examine whether emancipation occurs through entrepreneurship, 2) consider the contextual impacts of structures on entrepreneurs' ability to find emancipation, and 3) propose that codependence of individuals and structures is a barrier to emancipation for marginalized individuals. We argue that research studying emancipation motives for entrepreneurship should consider environmental and agentic factors.

ENT: **Effectual Entrepreneurship: A Review and Bibliometric Analysis**

Author: **Banu Goktan**, *U. of North Texas at Dallas*

Author: **Elizabeth J. Muniz**, *U. of North Texas*

This bibliometric analysis explores effectuation research, unveiling its trajectory, impact, and interdisciplinary appeal. Despite varying opinions on the novelty of effectuation theory, our examination of publications indicates a growing interest across influential journals in various business fields. Drawing on author expertise and employing VOSviewer for bibliometric analysis, we explore thematic clusters, discuss landmark articles forming the foundation of the theory, review applications of effectuation theory in innovation and international research, and investigate emerging topics. The findings of this study contribute to a deeper understanding of the growth and impact of effectuation theory, simultaneously guiding future research directions and aiding practitioners in making more informed and effective decisions within the entrepreneurial context.

ENT: **Encroachment or Entitlement? Negotiating Public Space for Business Sustainance**

Author: **Athi Karthick V**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Author: **Arun Sreekumar**, *Assistant Professor Indian Institute of Management Ahmedabad*

Research in marketing has paid scant attention to public resources, especially those that are contested for access and control by multiple social actors. In this multisited qualitative study, we explore the ways in which poor retailers negotiate access to a particular public resource, public space. We explore how public space can be contested as both a private and a collective good simultaneously, where different negotiation strategies enable access without claiming any ownership. Specifically, we document four main ways of negotiation that result from the interaction, both conflict and shared interest, of consumers, the public, the government, and the retailers. We demonstrate how the common nature of space stimulates contestations among various social actors and fuels forms of agency and hardships for informal retailers.

Sustainability

Session Moderator: **Maik Bonn**, *Maastricht U., School of Business & Economics*

ENT: **From DNA to Professionalization: Family Firms' Path in Environmental Sustainability**

Author: **Maik Bonn**, *Maastricht U., School of Business & Economics*
Author: **Anita Van Gils**, *Maastricht U., School of Business & Economics*
Author: **Juliette Koning**, *Maastricht U., School of Business & Economics*
Author: **Jolien Huybrechts**, *Maastricht U.*

Many scholars have long assumed family firms to be naturally sustainable entities, yet recent studies suggest they may underperform their non-family counterparts. While such mixed results highlight a lack of unanimity, most studies also fail to address the heterogeneity among family firms in the context of sustainability. What is more, they largely neglect to understand why family businesses adopt sustainability practices in the first place and how they approach the rapidly changing sustainability arena. Hence, our study aims to shed light on why family firms adopt sustainability practices and how they navigate and respond to the changing sustainability landscape. For this purpose, we conducted semi-structured interviews among C-level managers and sustainability representatives of 21 family firms from the German Mittelstand and analyzed our data using a thematic approach. Our findings illustrate that family firms currently transition from an invisible to a more visible sustainability identity through a professionalization process triggered by internal and external catalysts for change. We contribute to the entrepreneurship and family business literature by extending the ongoing discourse on professionalization to the realm of sustainability practices, offering support for socioemotional wealth theory and stewardship perspective, and providing insights into the presumed heterogeneity among family businesses.

ENT: **When Values Aren't Enough. The Role of External Enablement in Sustainable Industry Creation**

Author: **Sarfraz Ali Kyani**, *Queensland U. of Technology*
Author: **Per Davidsson**, *Jönköping International Business School*
Author: **Dietmar W. Hutmacher**, *Queensland U. of Technology*
Author: **Martin Obschonka**, *U. of Amsterdam*

Research on sustainability entrepreneurship and industry creation often highlights how value-driven agents individually and collectively create significant and lasting change. We attempt to complement these agent-focused approaches by addressing the underlying business-environmental conditions that make participation in industry creation attractive and potentially successful. Accordingly, we emphasize the significance of external factors in fostering sustainability industry creation by applying the external enabler framework. We address how sociocultural, technological and regulatory changes to the business environment, as external enablers, can contribute to creating a sustainability-oriented industry, the empirical example being the potential creation of a viable automotive plastic recycling industry in Australia. We find that while all three types of enablers have important, interacting roles, their direct influence on shaping entrepreneurial action in this domain varies. While the value-based sociocultural pressure toward sustainability may have a fundamental role in driving technology development and regulations toward sustainability, the micro-level agents concerned are variously driven by such concerns and stress much more the need for regulatory measures to make sustainability investments commercially attractive. Further, we find that it is imperative that external enablement is sufficient across all significant roles in the emerging industry. To capture the latter, we introduce the concept of stakeholder comprehensiveness (of external enablement) as an important structural complement to the well-established, agent-focused notion of collective action as crucial in processes of industry creation. In all, our study contributes new insights to research on external enablement, sustainability entrepreneurship, and industry creation.

ENT: **Sustainable Entrepreneurship: Taking Stock and Moving Forward**

Author: **Antonio Giuliani**, *Department of management, Bologna U.*
Author: **Tiago Ratinho**, *IESEG School of Management (LEM-CNRS 9221)*
Author: **Ghassan Yacoub**, *IESEG School of Management*

Sustainable Entrepreneurship (SE) encompasses a burgeoning wealth of academic scholarship that has seen a sharp rise in recent years. Driven by a dramatic increase in the attention paid to sustainability related themes, both in the academic discourse and in the wider public and society, this field has ballooned to a size and spread that merits further investigation. Using contemporary bibliometric techniques, we quantitatively survey the extant literature on SE to better structure it, take stock of the current academic debates, and provide an itinerary for future researchers to develop this important field.

ENT: **Entrepreneurial Navigation in Dynamic Landscapes: The Path to Creating a Sustainable Venture**

Author: **Seham Ghalwash**, *The Technical U. of Denmark - DTU Entrepreneurship*
Author: **Rachida Justo**, *IE Business School*
Author: **Ismail Ayman**, *American U. in Cairo*

While rising, Sustainable Entrepreneurship (SE) prefers developed countries and ignores the specific challenges of developing countries with dynamic and unpredictable circumstances. To fill this gap, our research investigates how entrepreneurs create and develop sustainable enterprises in such settings. We employ an in-depth qualitative study of KarmSolar, an enterprise emerging from the Egyptian Revolution. We identify four navigating phases of the venture creation and development: Revolution Inspired Entrepreneurial Venture Creation, Foundational Resilience Strategies, Strategic Entrepreneurial Adaptation and Growth, and Sustainable Institutional Legacy. This study combines the subjective emphasis of discovery theories with the objective function of external enablers and the dynamic nature of Effectuation. Our multilevel model shows how external enablers, venture development, and entrepreneurial actions interact, giving SE literature a new perspective in changing contexts. Our research emphasizes transitioning from a company to a sustainable institution, adding a forward-thinking, sustainable perspective to Sustainable Entrepreneurship literature.

Family Firms IV

Session Moderator: **Marco Mismetti**, *Stockholm School of Economics*

ENT: Family Control, Country Progress and Sustainable Development Goals: A Mixed Gamble Perspective  

Author: **Marco Mismetti**, *Stockholm School of Economics*

Author: **Ivan Miroshnychenko**, *IMD*

Author: **Alfredo De Massis**, *Free U. of Bolzano, IMD Business School and Lancaster U.*

Building on the mixed gamble perspective, we analyze the progress of family versus non-family firms towards SDG 7 (affordable and clean energy). Our framework explains how the mixed gamble and goals of family firm ownership and management, as well as the national context (i.e., country progress toward SDG 7), affect firm behavior in the pursuit of affordable and clean energy. Using a novel and unique sample of listed firms from 39 countries over 14 years, our study provides insights into why firms calculate the mixed gamble of SDG 7 progress differently, depending on their ownership and management configurations, in countries with different levels of SDG 7 progress. Our study is an important step toward a better understanding of the sustainable development goals of family firms.

ENT: SME Familiness and the Use of External Consultants: Role of CPA as Advisor

Author: **Timothy Kiessling**, *Sabancı U.*

Author: **Nufer Yasin Ates**, *Sabancı U.*

Author: **Kagan Sirdar**, *Sabancı U.*

Most SMEs are run by small families and due to this have characteristics unlike those are not. One of the “familiness” characteristics focuses on the use of external consultants. Drawing on the knowledge-based view of the firm, this paper studies the advising role of external accountants in SMEs. We investigate when SMEs utilize their external accountants as advisors and how this utilization enables the SMEs to attain higher performance. Our results indicate that family SMEs adopt external accountants as advisors more than non-family SMEs, and this utilization leads to higher organizational performance. The use of internal resources for basic accounting tasks enhances the use of external accountants as advisors in family SMEs. These findings offer several theoretical contributions for family business and SME literature as well as practical implications for external accountants and family SMEs.

ENT: Family Ownership and Innovation Output: Integrating Resource Allocation and Resource Conversion  

Author: **Tao Han**, *EMLYON Business School*

Author: **Xuedan Tao**, *Nottingham U. Business School China*

Author: **Hongbin Tan**, *School of Economics and Management, Tongji U.*

There has been intense debate on the role of family firms in the innovation process and their impact on innovation output. Empirical work to date presents mixed results, showing that family ownership could have both positive and negative influences. To address this puzzle, we shift the focus from the “family versus non-family” comparison to the variational heterogeneity in family ownership. Importantly, we examine two distinct yet essential mechanisms through which family ownership affects innovation output: its detrimental effect on resource allocation (i.e., R&D investment) and its governance advantages in resource conversion (i.e., transforming R&D input to innovation output). Based on a multiplicative combination of these two underlying channels, we propose an inverted U-shaped relationship between family ownership and innovation output, suggesting that a moderate level of family ownership may enable firms to maximize their innovation output. Using a panel dataset of Chinese listed firms from 2007 to 2020, our analyses confirm this inverted U-shaped relationship and validate the two underlying mechanisms. Our integrated theoretical framework and empirical findings help reconcile the conflicting findings in the literature, providing a more complete account of the relationship between family ownership and innovation output.

Entrepreneurship and Well-Being III

Session Moderator: **Yekaterina Pak**, *U. of Vaasa*

ENT: **Narrating the Experience of Entrepreneurial Stress**

Author: **Yekaterina Pak**, *U. of Vaasa*
Author: **Jukka Pekka Partanen**, *U. of Vaasa*

In this paper, we aim to unveil the complexity and dynamics of entrepreneurial stress by analysing accounts made by entrepreneurs who have experienced severe stress. We recognize stress as a complex multiyear phenomenon, the intricacies of which cannot be adequately captured through quantitative analysis of the relationships between individual variables. To this end, we apply narrative analysis to gain a deeper insight into the phenomenon of entrepreneurial stress. Our findings reveal the complex nature of stress and illuminate how entrepreneurs' beliefs and characteristics, such as optimism and self-efficacy can expose entrepreneurs to increased stress. The results of the paper contribute to the literature on entrepreneurial stress and well-being.

ENT: **Overwork and Subjective Well-Being: The Moderating Effect of Self-Perceived Socio-Economic Status**

Author: **Sanggeun Lee**, *Syracuse U.*

In this paper, the dynamics of how overwork influences entrepreneurs' subjective well-being (SWB) are thoroughly investigated. Building upon existing literature, it is posited that the relationship between overwork and SWB is negatively associated, yet the underlying reasons are distinctively characterized by the entrepreneurs' context. It is argued that overwork symbolizes high ambition and aspiration among entrepreneurs, leading to increased stress and pressure. Additionally, the extensive dedication to work inhibits entrepreneurs from engaging in leisure and stress-relieving activities, culminating in a decrease in SWB. A novel aspect of this research is the assertion that self-perceived socio-economic status (SPSES) serves as a positive moderator in the relationship between overwork and SWB. High SPSES is indicative of an entrepreneur's satisfaction with their achievements relative to their peers, signifying that their diligent efforts have been fruitful. Consequently, for those perceiving their work as rewarding, the negative impact of overworking is proposed to be mitigated. This hypothesis and its implications are empirically tested using data from 2,797 entrepreneurs in the Korean Labor Income Panel Study (KLIPS). The findings reveal that overworked entrepreneurs generally report negative SWB, yet this relationship is positively moderated by SPSES. Furthermore, it is noted that these outcomes are not mirrored in the general population, underscoring the unique entrepreneurial context. This study contributes to the nuanced understanding of the interplay between work intensity, personal perceptions, and well-being in the entrepreneurial landscape.

ENT: **Navigating Clan Influences: The Impact of Informal Institutions on Rural Entrepreneurs' Well-Being**

Author: **Chenjian Zhang**, *U. of Bath*
Author: **Yuanyuan Lan**, *Qingdao U.*
Author: **Bin Li**, *Shanghai Normal U.*
Author: **Xiaotong Liu**, *School of Business, Qingdao U.*
Author: **Yuhuan Xia**, *Shandong U.*

Entrepreneurship plays a pivotal role in alleviating poverty and fostering economic and societal growth. Entrepreneurs with higher levels of subjective well-being (SWB) often exhibit resilience and increased productivity in their endeavors. While previous studies have mainly focused on Western contexts with an emphasis on economic outcomes, our study aligns with the emerging interest in everyday entrepreneurship in non-Western settings. This research explores how clan culture, a prevalent informal institution in non-Western contexts, affects the SWB of rural entrepreneurs and examines the influence of contingencies within the clan on this relationship. Situated within the context of China, our qualitative findings offer detailed insights into the activities and personal experiences of rural entrepreneurs. Our quantitative analysis further reveals a negative relationship between clan culture and SWB. This negative association is pronounced among entrepreneurs with high in-clan status and in areas with a dense entrepreneurial landscape. However, this negative association is mitigated when the rural community develops adaptive conventions. This study contributes to literature by shedding light on the role of informal institutions in shaping the entrepreneurial journey and entrepreneurs' well-being. It underscores the complex interplay between entrepreneurship and communal obligations, interwoven with individuals' social status, the dynamics of communal entrepreneurship, and community conventions.

ENT: **Entrepreneurs' Well-Being: The Role of Personality and Background Heterogeneity between Co-Founders**

Author: **Daniela Kremer**, *WIN Lehrstuhl RWTH Aachen*
Author: **Sebastian Kruse**, *Innovation and Entrepreneurship Group - RWTH Aachen U.*

In recent decades scholars have paid rising attention to entrepreneurs' well-being as an essential individual outcome of entrepreneurship and a vital prerequisite for sustained venture success. However, there are still significant gaps in understanding the pathway from entrepreneurship to mental well-being, especially considering an entrepreneur's social environment and, more precisely, the co-founder. To address this gap, we build on person-environment fit theory and create a model highlighting the perceived heterogeneity of entrepreneurs and their co-founders as an important antecedent of well-being. Specifically, we investigate the relationship between (a) perceived personality heterogeneity and hedonic well-being, and (b) perceived background heterogeneity and eudaimonic well-being, considering firm age and firm performance as moderators. We test our model with data from 304 German entrepreneurs in two waves in 2023. Results suggest that perceived personality heterogeneity negatively relates to an entrepreneur's hedonic well-being. Firm age positively moderates this relationship. In contrast, perceived background heterogeneity positively relates to an entrepreneur's eudaimonic well-being and firm performance negatively moderates this relationship. We contribute by highlighting the critical role of co-founders and their characteristics for entrepreneurs' both hedonic and eudaimonic well-being, and by highlighting the importance of firm-level factors in buffering potential mismatches.

We are at a critical juncture in the study of entrepreneurial teams, as much work has emerged in the last few years. While scholars have defined what an entrepreneurial team is, the field lacks a standard definition of what it means to be a founder, an integrative theory of how cofounders come together, and an understanding of the implications of different approaches to forming and adapting a founding team. With these gaps in mind, we have convened scholars doing important research addressing these key topics to present their cutting-edge work.

Art & Technology

Session Moderator: **Yiru Cai**, *School of Business and Management, Jilin U.*

ENT: **The Role of Entrepreneurs' Skills on Opportunity Evaluation: Discovery, Creation, and Ambidexterity**

Author: **Yiru Cai**, *School of Business and Management, Jilin U.*
Author: **Li Cai**, *School of Management, Jilin U.*

The present study reconciles the tension between the discovery view and the creation view by introducing a holistic view of entrepreneurial opportunity which divides opportunity into three categories - discovery, creation, and ambidexterity. Employing this classification, we examine how entrepreneurs' skills (cognitive, social, technical, and management) influence opportunity evaluation (OE) in general and, more specifically, its three sub-dimensions (i.e., discovery, creation, and ambidexterity). Drawing on surveys from Chinese and the U.S. entrepreneurs, the study identifies cognitive, technical, and management skills as universally significant in OE, while social skills hold particular relevance in China. In sub-dimensioned opportunity contexts: irrespective of national context, management skills are critical for discovery, while technical skills are key for creation. For ambidexterity, Chinese entrepreneurs prefer balanced skills, while US entrepreneurs prioritize technical skills. Implications and future research discussed.

ENT: **The Effect of Business, Music and Digital Competencies on Musician's Entrepreneurial Performance**

Author: **Richard Aristeo Rodriguez**, *U. of Texas Rio Grande Valley*
Author: **Sibin Wu**, *U. of Texas Rio Grande Valley*

As a result of the digital disruption of the music industry, many musicians have the option of using digital platforms such as Spotify to act as entrepreneurs where they can market their music and be profitable at the same time. However, why do some musicians emerge as entrepreneurial and others do not? Basing on Jack-of-all-Trades Theory, we argue and test that musician entrepreneurs need three sets of competencies (business, music, digital) to achieve financial, operational, non-financial and product performance. We found that business competencies (organizing and personal strength) positively influence financial and operational performance while music competencies (movement and musicianship) lead to positive non-financial and product performance. Further, while digital competencies are negatively related to financial performance, they exert positive influence on non-financial and product performance. Lastly, digital competencies strengthen the relationship of personal strength and movement with performance. We discuss and draw conclusions from our findings.

ENT: **The Role of Art Collecting in Entrepreneurial Families**

Author: **Jennie Fahlström**, *Stockholm School of Economics*
Author: **Camille Korschun**, *Stockholm School of Economics*
Author: **Mattias Nordqvist**, *Stockholm School of Economics*

Entrepreneurial families are important art collectors, yet little is known about how and why they engage with the practice. Through an exploratory study with an inductive empirical research design, we interview multiple members of intergenerational entrepreneurial families actively involved in art collecting. We find that art collecting could be a practice with strong implications for both the business and the family over time. We explore the motivations behind why entrepreneurial families engage in art collecting and how this develops individually and collectively into a practice of collecting across generations. We contribute to the entrepreneurship and family business literature and to research on the role of art in business and management.

ENT: **The Impact of Digital Technology on Entrepreneurial Ecosystems: Case of UK Digital Gaming Industry**

Author: **Zimu Xu**, *Cranfield School of Management*
Author: **Gideon Maas**, *Coventry U., International Centre for Transformational Entrepreneurship*
Author: **Paul Jones**, *Swansea U.*

This study examines how digital technology and its capabilities impact the entrepreneurial process and the development of entrepreneurial ecosystems (EEs). Based on 70 interviews with key stakeholders in the UK's digital gaming industry, a framework is proposed that represents EE activities across local, national, and global scales. The findings show that digital capabilities allow a local EE to expand its reach to national and global levels. Additionally, it underscores the necessity of thoroughly assessing EEs at multiple scales, and recognizing their potential advantages and challenges.

Accelerators 1

Session Moderator: **Jing Zhang**, *Old Dominion U.*

ENT: **External Funding and Social Impact Accelerators: Gender in Different Institutional Contexts**    

Author: **Jing Zhang**, *Old Dominion U.*
Author: **Fatemeh Askarzadeh**, *U. of Houston Downtown*
Author: **Matthew Farrell**, *Austin Peay State U.*
Author: **Veronika Ciarleglio**, *the U. of tampa*

Recent attempts to narrow the gap between genders have made positive impacts, however, they created some unexpected backlash effects that might inadvertently hurt women entrepreneurs. Integrating signaling theory and institutional theory, we contend that social impact accelerators (SIAs) can counteract some individual merits of women when they apply to accelerator programs. Thus, we propose that while men-led ventures with external funding have a higher chance of acceptance to SIAs, it does not influence women-led ventures despite greater barriers to gaining it. However, this effect depends on the institutional context. That is, when operating in a country with low gender inequality or high national equity funding availability, external funding matters for both genders. An analysis of survey data of 10,217 startups in 143 countries over 2016-2018 supports most of our predictions. We find while acquiring external funding increases the likelihood of SIA acceptance for men in any nation, in contexts with low equity funding availability, SIAs are more likely to become oblivious to the existing external funding for women, despite the greater challenge in obtaining this signal. Our study challenges the general assumption of signaling theory that signals more difficult to gain will create more value for the sender, informs theories of heterogeneity in resource acquisition in different institutional contexts, and highlights potentially unintended consequences of supporting women.

ENT: **Exploring the Emergence of a University-Based Accelerator**

Author: **Monica Masucci**, *U. of Sussex*
Author: **Roberto Camerani**, *SPRU U. of Sussex UK*
Author: **Nicoletta Corrocher**, *Bocconi U.*
Author: **Mariarosa Scarlata**, *U. of Bergamo*

This paper explores the creation and development process of an accelerator by an Italian business university, investigating the factors that led the university to found its own accelerator and that guided its set up process in terms of choice of focal activities and governance structure, as well as the mechanisms through which it creates value for its internal and external ecosystem. Relying on an in-depth case study approach, we conducted several interviews with members of the accelerator, key university stakeholders and external partners. Our empirical evidence points to the existence of both internal and external drivers that led to the emergence of the university accelerator and suggests that its operating and governance structures were strategically designed to leverage the university's internal strengths and resources. It also underscores the key roles played by the top management of the university and by the internal champion in aligning views, building consensus, and negotiating solutions in this process. Finally, it reveals how by strategically orchestrating the relationships with internal and external stakeholders a university accelerator can successfully balance the need of creating value for both the university and the broader ecosystem in which it operates.

ENT: **Staging Knowledge Amongst Experts: How an Accelerator Works to Develop an Ecosystem**

Author: **Alana Pierce**, *HEC Montreal*

Accelerators play a key role in entrepreneurial ecosystems, however, extant research is limited in knowledge and theory about how accelerators work to develop entrepreneurial ecosystems. Accelerators are the means by which ventures seek to gain knowledge to build high-growth ventures, but accelerators are also posited to contribute meaningfully to ecosystems in other ways. I employ field theory to conceptualize an entrepreneurial ecosystem as a field and accelerator events as field-configuring events. I engage in a two-year ethnographic study of a series of accelerator events to explore how an accelerator works to achieve ecosystem-level outcomes using events. I find that the accelerator engages in stage production practices to produce a knowledge refinement process amongst field-level experts. Contrary to existing research on entrepreneurial ecosystems, the accelerator engages beyond a simple facilitative role in knowledge transfer to purposeful engagement in a process of knowledge refinement. This paper contributes to research on accelerators in entrepreneurial ecosystems, as well as field theory by positing the accelerator as not only a host to field-configuring events but also an active influencer to the ecosystem field as a field-configuring organization.

 ENT: **Home Country Institutions and Accelerator Outcomes**  

Author: **Dibyendu Sharma**, *Indian Institute of Management, Ahmedabad*
Author: **Divyanshu Jain**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Accelerators are gaining popularity in the entrepreneurship ecosystem for accelerating new ventures by providing benefits such as learning, sorting, and signaling. However, existing empirical evidence on the accelerator outcomes does not consider the role of boundary conditions, such as institutional environments in which they operate. In this paper, we argue and test institutions' importance and empirically examine accelerators' impact on new venture performance using a generalized difference-in-differences technique on a worldwide accelerator database. At the baseline, the findings are consistent with previous literature, which shows a positive impact of accelerators on the revenues and equity funding of new ventures. However, we find that the positive impact is higher in countries with stronger institutions. This paper demonstrates that institutions are a crucial boundary condition for assessing the impact of accelerators on new ventures. These findings contribute to emerging empirical research that assesses the impact of business accelerators on new venture performance.

Harnessing Diversity

Session Moderator: **Bao Wu**, *zhejiang U. of technology*

ENT: The International Network Activity of Entrepreneurial Firms in Multi-Layered Networks

Author: **Eve-Michelle Basu**, *Stockholm School of Economics*
Author: **Angelika Lindstrand**, *Stockholm School of Economics*
Author: **Joakim Fichtel**, *KTH Royal Institute of Technology*

This study investigates the dynamics of international network activity of entrepreneurial firms within multi-layered interorganizational networks. Interorganizational relationships enable entrepreneurial firms to tap into external resources, identify new business opportunities and are pivotal for their innovativeness and growth. Firm-level network activity, however, is embedded in complex, multi-layered interorganizational networks. This research explores variations in international network activity across different network layers, with a focus on cross-border relationships. Drawing from social structuration theory, we take a dynamic perspective and analyze how network structure and activity in one period affect international network activity in subsequent periods. We analyze a unique dataset covering the network activity of Swedish dedicated biotech firms from 2004–2013, using social network and statistical analyses. The research reported in this paper finds that international network activity differs between the R&D, financial and marketing layers of an interorganizational network and offers critical insights into the nuanced nature of international network activity within multi-layered networks.

ENT: The Influence of Intergenerational Differences on Portfolio Entrepreneurship in Family Businesses

Author: **Bao Wu**, *zhejiang U. of technology*
Author: **Yuxin Zhang**, *zhejiang U. of technology*
Author: **Esra Memili**, *U. of North Carolina, Greensboro*

We argue that knowledge differences between the first- and second-generation family members induce intergenerational feedback, and their cognitive differences trigger intergenerational conflict, which both lead to portfolio entrepreneurship in family businesses. Using a sample of Chinese family firms for the period 2008 to 2021, we confirm that knowledge differences and cognitive differences promote portfolio entrepreneurship in family firms. Our findings further suggest that maternal involvement strengthens the positive relationship between knowledge differences and portfolio entrepreneurship, and weakens the positive relationship between cognitive differences and portfolio entrepreneurship in family businesses. The participation of multiple offspring of the founder enhances the positive impact of cognitive differences, but does not moderate the relationship between knowledge differences and portfolio entrepreneurship. Our study provides a nuanced picture of how intergenerational differences propel portfolio entrepreneurship via distinct interaction mechanisms. We expand the research on family dynamics by identifying antecedents of portfolio entrepreneurship in family businesses.

ENT: The Impact of Transdisciplinary Academic Entrepreneurship upon Entrepreneurial Ecosystems

Author: **Mauricio Guerra**, *U. de Santiago de Chile*
Author: **Simon Mosey**, *U. of Nottingham*
Author: **Chris James Carter**, *U. of Nottingham*

Scholars are paying increased attention to entrepreneurial ecosystems in universities, with calls to investigate and explain contemporary changes, consider different stakeholders, and evaluate the social impact of entrepreneurial activities. At the same time, universities have been urged to collaborate with non-academic actors to address societal and environmental issues, recognizing that such complex social challenges cannot be addressed by the academy alone. Instead, it requires a paradigm shift, coalescing within the literature as transdisciplinarity. This paper explores the potential impact of a transdisciplinary entrepreneurship program where leading UK universities, corporates, and public and third-sector organizations invite a regional community to explore entrepreneurial solutions to the societal challenges of poverty and infrastructure. Using a qualitative multiple-case study research design, 13 cases are investigated longitudinally, representing a variety of industrial sectors, disciplinary perspectives, and founders of entrepreneurial projects such as students, alumni and community members in addition to faculty. We contribute to theory by developing a framework showing how a transdisciplinarity intervention can impact positively upon the institutional, interpersonal, and intrapersonal aspects of the university entrepreneurial ecosystem. We highlight where key barriers remain and conclude with recommendations for more inclusive academic entrepreneurship, educational practice, and policy.

ENT: The More Different the Better? Venture Heterogeneity and Survival in Entrepreneurship Support

Author: **Kevin Reuther**, *Leipzig U.*
Author: **Carolin Schmidt**, *Leipzig U.*
Author: **Yngve Dahle**, *U. of South Eastern Norway*
Author: **Franziska Schösser**, *Leipzig U.*
Author: **Elisa Villani**, *Department of management, Bologna U.*

Entrepreneurship support (ES) plays a pivotal role in entrepreneurial ecosystems, helping individual ventures to thrive and contributing to broader economic growth. The extant literature investigates and substantiates the significance of ES, highlighting how different types and sources of support impact new venture performance. Beyond this body of research, there is an academic debate on the impact of team composition and diversity on venture outcomes, under-scoring the human factor in entrepreneurial success. While these dynamics are rather well understood on the entrepreneurial team level, a gap remains in understanding the impact of heterogeneous versus homogeneous venture composition during ES programs (ESPs) and its impact on venture survival. Thus, our research transcends focussing on the dynamics within individual entrepreneurial teams by investigating heterogeneity across multiple ventures jointly participating in ESPs. We utilize fuzzy-set Qualitative Comparative Analysis (fsQCA) to investigate conditions of venture heterogeneity along the constructs of separation, variety, and disparity for the survival of 497 Norwegian ventures. Our analysis results in eight conditions and two robust configurations. Interestingly, both configurations show the same results for disparity and separation, but opposite results for the conditions of variety. Our study adds to the existing literature on team diversity in the context of ES, provides valuable insights for the design of ESPs and represents a novel approach to studies in this research field.

Global Female Entrepreneurship: Practical Applications of the 5M Framework in Four Diverse Countries

Presenter: **Marleth Judith Morales Marengo**, *U. of Alabama, Tuscaloosa*

Presenter: **Jiani Fan**, *U. of Alabama, Tuscaloosa*

Presenter: **Athina Skiadopoulou**, *U. of Alabama*

Presenter: **Tyler Nicole Abayon Fezzey**, *U. of Alabama*

Presenter: **Shijian Wei**, *U. of Alabama*

This symposium aims to bridge the gap in applying the 5M framework— comprising Money, Market, Management, Motherhood, and Meso/Macro Environment—to individual cases of female entrepreneurs. Historically, the significant contributions of female entrepreneurs have been underrepresented in the literature despite their crucial role in shaping new business landscapes. This symposium addresses this by exploring the entrepreneurial journeys of four female entrepreneurs from Greece, China, Colombia, and the USA. It will examine how the 5M framework, which extends the traditional "3M" model by adding dimensions of "Motherhood" and "Meso/Macro Environment," can illuminate the factors contributing to the creation and sustainability of female-owned and managed firms. By doing so, the symposium will not only contribute to the existing literature but also open new avenues for understanding and supporting female entrepreneurship globally.

HCM: **The Work of Rules: How Organizations Negotiate Rules to Address Disruptions**  

Author: **Karla Sayegh**, *U. of Cambridge*

Author: **Xian Zhu**, *McGill U. - Desautels Faculty of Management*

While existing research has examined challenges associated with formulating and enacting rules in organizations, less is known about how newly introduced rules evolve and become stabilized in organizations that depend on them. To address this question, we conducted a 2-year ethnographic study that documented the relocation of an emergency department (ED) at a leading University-affiliated hospital in Canada to a new state-of-the-art facility. The relocation changed the patient population, disrupting patient flow practices. To address these disruptions, the ED introduced and negotiated new rules. We traced five rule trajectories, we label emerging, optimizing, reviving, eroding, and materializing, which reflect ED members' skillful efforts to coordinate and manage overwhelming demands for its services. Our findings suggest that while the deployment of rules improved patient flow, it also unintentionally reconfigured the role relationships among professionals both within and between various units over time. Our study contributes to the literature on organizational rules by providing a processual account of how newly introduced rules evolve and stabilize over time. Contrary to existing coordination research which maintains that rules can either constrain emergent practices or clarify ways of working, our research suggests that rule deployment can yield both productive and counterproductive consequences for coordination practices as rules evolve.

HCM: **How Primary Care Intensive Management Supports Coordinated Care for High-Risk Patients** 

Author: **Karleen F. Giannitrapani**, *Stanford U. /VA Palo Alto*

Author: **Jesse Holliday**, *Center for Innovation to Implementation (Ci2i), VA Palo Alto Health Care System*

Author: **Natalie Connell**, *Stanford U. /VA Palo Alto*

Author: **Tana Luger**, *Center for the Study of Healthcare Innovation, Implementation and Policy, Greater*

Author: **Donna Zulman**, *Center for Innovation to Implementation (Ci2i), VA Palo Alto Health Care System*

Author: **Susan Stockdale**, *VA Greater Los Angeles Healthcare System*

Author: **Lisa Rubenstein**, *RAND Corporation*

Author: **Evelyn Chang**, *Center for the Study of Healthcare Innovation, Implementation and Policy, Greater*

Patients at high risk for hospitalization require care coordination across their multiple conditions. Few studies have assessed performance of specific activities that together comprise care coordination for these patients. We evaluated whether and how five geographically diverse intensive primary care teams delivered care coordination to high-risk patients based on the nine types of activities identified in an established care coordination framework. Specifically, we used secondary qualitative content analysis of semi-structured interviews to identify care coordination activities based on the Agency for Healthcare Research and Quality (AHRQ) framework. Interviews were from the PACT Intensive Management (PIM) national Veterans Health Administration (VHA) demonstration project and evaluated PIM interprofessional team activities without directly addressing care coordination. Participants included 29 PIM team members and 51 PIM patients from five demonstration sites in five different states. Qualitative data validated the importance of all nine AHRQ domains as critical components of the care PIM delivered, with six of the nine AHRQ domains garnering mention by interviewees at each of the five sites. PIM teams showed that the AHRQ framework successfully identifies and classifies the key activities that intensive management teams and their patients considered to be critical advantages of intensive primary care management of high-risk patients.

HCM: **Sustainability in Healthcare: Unraveling the Mechanism of Diversity's Impact in Pharmaceutical Sector**

Author: **Su Ruixin**, *School of Accountancy, Wuxi Taihu U.*

Author: **Du Jianguo**, *School of Management, Jiangsu U., China*

Author: **Si Li**, *U. of Bath, UK*

Amidst the burgeoning corpus of scholarly works dedicated to sustainability within the healthcare domain, a critical gap exists regarding how to drive pharmaceutical companies, a pivotal stakeholder, to contribute more significantly to healthcare net-zero goals. This study proposes that breadth of directors' experiences, stemming from their diverse educational, industrial, and organizational backgrounds, serves as a catalyst for pharmaceutical firms to prioritize environmental strategies. Employing a sample of publicly listed Chinese pharmaceutical firms from 2007 to 2019, we substantiate the affirmative influence of board experiential diversity on corporate environmental strategy. Our findings also indicate that CEO power, which encompasses CEOs' environmental expertise, amplifies the focus and commitment of pharmaceutical firms in crafting and executing environmental strategies. Additionally, the boards of non-state-owned enterprises located in economically developed regions have greater power and higher participation in the environmental decision-making process. Embracing environmental strategies proactively can bring long-term economic benefits to pharmaceutical firms.

Author: **Margo Janssens**, *Tilburg School of Social and Behavioral Sciences*

Author: **Samantha Van Der Bruggen**, *Department of Oncology, st Elisabeth Hospital Tilburg, The Netherlands*

Author: **Nicoleta Meslec**, -

Author: **Laurens Beerepoot**, *Department of Oncology, st Elisabeth Hospital Tilburg, The Netherlands*

Author: **Roger Leenders**, *Tilburg U.*

Workflow interruptions are skyrocketing in the contemporary workplace, especially in collaborative team environments. The reliance on (communication) technologies and accessibility through e-mail and phone creates increasing avenues for frequent teamwork interruptions. Importantly, interruptions not only affect team members individually, but spill over and affect team functioning as a whole. In this study, we investigate in fourteen multidisciplinary team meetings in hybrid healthcare settings (1) which workflow interruptions naturally emerge and (2) how these interruptions influence the communication valence as well as communication clarification. We find evidence for a highly interruptive meeting environment, characterized by videoconferencing issues, disruptive beepers/phones that go off, and people leaving and entering the meeting room during patient discussions. Contrary to what was expected, team members initially respond to the interruption with positive statements (i.e., humor) as a coping mechanism, which decreases significantly in the minutes after the interruptive event. After the interruptive episode, significantly more negative statements, as well as conversational repetitiveness occurs. This research contributes to understanding naturally occurring workflow interruptions in actual organizational healthcare teams, by providing objective and fine-grained empirical insights into how workflow interruptions affect changes in the teams' communication.

Healthcare Provider Outcomes

Session Moderator: **Pejmon Noghrehchi**, *The Ohio State U. College of Public Health*

HCM: **Toward an Understanding of Healthcare Professionals' Burnout in Telehealth Two Literature Reviews and an Organizing Framework**

Author: **Dana Yagil**, *U. of Haifa*
Author: **Michal Biron**, *U. of Haifa*
Author: **Jennifer Slawotsky**, *U. of Haifa*

As telehealth becomes an increasingly prevalent mode of healthcare, it is becoming crucial to understand the occupational challenges that healthcare professionals (HCPs) face in telehealth environments. A particularly salient concern is burnout, an occupational hazard characterized by the loss of emotional, mental, and physical energy due to continued exposure to chronic stress at work. HCPs, particularly physicians and nurses, are among the most burned-out occupational groups worldwide. Though numerous studies have identified personal and work-related antecedents of burnout in HCPs, most of these studies focused on traditional, in-person medical contexts. It remains unclear whether these antecedents also manifest in the telehealth context, and what other contributing factors, unique to the latter, should be considered. To address this scarcity of knowledge, the current research seeks to extrapolate known antecedents of burnout from the in-person context to the telehealth context. To this end, we first review and summarize research on antecedents of burnout among HCPs providing in-person care. We then review and summarize research on HCPs' experiences working in a telehealth context, to identify characteristics of telehealth that might affect burnout. Next, we synthesize the reviews to come up with common themes and potential variations, and put forward an organizing framework that connects antecedents of burnout with key technological, professional and psychological aspects of telehealth. We conclude with directions for future investigation.

HCM: **Guardians of Care: Decoding Workplace Violence Through Qualitative Insights**

Author: **Gregory N. Orewa**, *U. of Texas At San Antonio*
Author: **Ifeyimika Ajaiyeoba**, *U. of Wisconsin - Parkside*
Author: **Nero Edevbie**, *dillard U.*
Author: **Marla White**, *Virginia Tech*

Workplace violence (WPV) directed toward nurses is increasingly becoming a problem within the healthcare industry. WPV can lead to negative individual and organizational outcomes such as increased stress, burnout, and employee turnover. Scholars studying nurses' WPV experiences have employed various qualitative methods, leading to many studies on the phenomenon. We adopt an interdisciplinary approach to this topic by conducting a Qualitative Interpretive Meta-Synthesis (QIMS). This QIMS aims to provide a more comprehensive and synergistic review of nurses' experiences with WPV (N = 401) from different sources (e.g., patients, co-workers, supervisors), geographical locations, and functional healthcare facilities. The QIMS resulted in four overarching new themes related to nurses' WPV experiences: 1) it comes with the job - patient and family violence are normal, 2) a vulnerability in nurse safety, 3) sexual harassment, and 4) poor treatment within the organization. We conclude by discussing implications for patient safety and nurses' well-being and offer suggestions for future research.

HCM: **Enablers and Consequences of Exploitative Working Relationship in Healthcare Sector**

Author: **Sandra Pereira Costa**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*
Author: **Jacqueline A-M. Coyle-Shapiro**, *CSUSB & LSE*
Author: **Sofia Oliveira**, *Instituto U. de Lisboa (ISCTE-IUL) Business Research Unit (BRU-IUL)*

Exploitation in the workplace, despite advancements in labor protection may be more prevalent than one would anticipate. Employee exploitation can occur when organizations make decisions that promote serving their own interests at the expense of employees' welfare. Essential workers such as those that work in healthcare may be susceptible to exploitative employer practices given the caring orientation of their jobs yet at the same time, their exposure to high demands and risks with low pay. This paper sheds light on the nature of exploitation amongst healthcare workers. An interpretative grounded theory study was conducted using 32 in-depth interviews with healthcare professionals including physicians, nurses, and technicians. The study revealed that these workers feel exploited by their organization. Enabling factors such as a sense of calling, dedication to their job and a desire to make a contribution to society facilitate employees' susceptibility to being taken advantage of by their organization. Our findings also reveal that workers experience different types of exploitation: relational and structural. The former originates in the relationship with the organization and the latter is associated with exploitative human resource practices. Finally, the results also show that an exploitative employee-organization relationship carries emotional, behavioral and health-related consequences. This study contributes to understanding the experience of exploitative work relationships in the healthcare sector, which is a critical issue in our society and a matter of public concern.

Callousness—the display of impersonal, insensitive, and cynical behavior towards others—is increasing among healthcare professionals, yet there is little theoretical or empirical investigation of callousness. In this work, we distinguish callousness from related interpersonal factors and develop theory-derived hypotheses about organizational conditions associated with healthcare professionals becoming more or less callous, and the consequences of these professionals' increasing their callousness for themselves and for the quality of care that their workgroups provide to patients. We tested our hypotheses with survey and performance data collected at two times for professionals in 20 intensive care units (N=557 and N=153). We find that work-life balance and psychological safety are negatively associated with callousness and that the strength of their mitigating effect varies by the type of work (providing mixed versus specialized care). Additionally, callousness is negatively associated with intent to stay in one's job and proactive behavior, a persistent effect across time for the former but not the latter. We find no effect of unit-level callousness on patient mortality rates. We discuss these results and suggest the need for continuing research on callousness and addressing it in healthcare organizations through at least improving work-life balance and psychological safety to maintain the workforce.

Optimizing Organizational Outcomes: Strategies to Reduce Turnover and Enhance Commitment

Session Moderator: **Jarrold Haar**, *Massey U. Business School*

HR: Indigenous Perspectives of High-Performance Work Systems: Challenging the Universality

Author: **Jarrold Haar**, *Massey U. Business School*

Author: **David Brougham**, *Massey U. Palmerston North*

Author: **Urs S. Daellenbach**, *Te Herenga Waka - Victoria U. of Wellington*

While the links between High Performance Work Systems (HPWS) and organizational performance are established, this study extends the literature by providing insights into Aotearoa (New Zealand) firms, including firms with Maori ownership (the indigenous people of Aotearoa). We test whether indigenous businesses extract greater benefit from HPWS compared to their non-Maori competitors using social exchange theory. In study 1 (606 firms including n=85 Maori Firms) we find HPWS are positively related to firm performance benefits, with workforce retention (including top talent) playing a mediating role. Significant moderation and moderated mediation effects show that Maori firms are better able to leverage HPWS towards greater firm performance. To better understand these findings and examine whether distinct Maori cultural values play a role we conduct two further studies. In study 2 we undertook 12 case studies (six Maori firms) and found Maori cultural values shaped HR practices and that these can also be included in non-Maori firms. Finally, study 3 (n=127 Maori employees) tested the effects of Maori centric HPWS on time-lagged turnover intentions and direct effects were support. We also found these were more important for earlier career than late career Maori employees. This study challenges the universal nature of HPWS and suggests while they might be generally important across indigenous workforces, a more culturally specific approach might provide greater insights and accuracy.

HR: Examining the Effects of High Commitment Human Resource Practices in the Gig Economy

Author: **Michael Maffie**, *Cornell SC Johnson College of Business*

Author: **Tashlin Lakhani**, *Cornell SC Johnson College of Business*

This article challenges the conventional wisdom that high commitment human resource practices cannot yield a competitive advantage when applied to a workforce comprised of contract workers. We situate this study in an emerging form of non-standard work, the online gig economy. Drawing on the multi-sided markets literature and theory in strategic human resource management, this article explores how platform companies' economic model enables novel ways that high commitment HR practices can lead to valuable worker behaviors. Specifically, we focus on one important behavior: workers' simultaneous use of a rival platform, a practice known as multi-homing. Drawing on original qualitative and quantitative data from the ride-hail industry, we examine whether the introduction of high commitment HR practices reduces gig workers' tendency to multi-home. The article concludes by discussing the possibility of a "high road" gig economy.

HR: Impact of Perceived AMO Bundles on Affective Commitment: A Mediating Role of Employee Wellbeing

Author: **Harleen Kaur**, *Indian Institute of Management Sirmaur, Sirmaur, Himachal Pradesh, India*

Author: **Parul Malik**, *Indian Institute of Management Sirmaur, Sirmaur, Himachal Pradesh, India*

The impact of AMO bundles on the employees, as well as the organizations, has been investigated from both the "dark side" and "bright side". However, this research explores the "bright side" of AMO practices on employee well-being and affective commitment. Moreover, employee well-being is hypothesized to mediate the AMO-commitment relationship. Data was collected from 405 Gen Y and Gen Z employees working in the Indian IT sector. The research findings reflect a significant positive relationship of AMO bundles with employee wellbeing. Further, it indicates that motivation and opportunity bundles are significantly and positively associated with affective commitment except ability bundles. This study provides implications to the managers that motivation practices should be implemented more for the employees as it demonstrated the major role in strengthening employee well-being which are followed by opportunity and ability bundles respectively. Results also suggest that employees look for ability, motivation, and opportunity-enhancing practices that grow their potential, improve their well-being, and make them more committed to the organization. Thus, the current study is novel linking AMO bundles with affective commitment via a mediating role of eudaimonic wellbeing of Gen Y and Gen Z employees. Keywords Affective commitment; AMO bundles; employee wellbeing; eudaimonic; Gen Y; Gen Z employees; HR practices

HR: Navigating Entrepreneurial Survival: The Essential Role of HR Practices and Legitimacy from Within

Author: **Kyoung Yong Kim**, *Villanova U.*

While entrepreneurial firms invest significant effort in establishing legitimacy with external stakeholders to enhance survival, a considerable proportion of them still experience failure. This study delves into this conundrum, proposing that securing legitimacy from employees, a crucial internal stakeholder, is paramount for entrepreneurial survival. This can be achieved through the implementation of human resource (HR) practices. To test the survival effect of HR practices, I introduce the concept of stabilizing work practices (SWP), which are designed to stabilize employees in the entrepreneurial firm environment, characterized by numerous risks and uncertainties. Based on a sample of 11,203 firm-years, I found that SWP is negatively associated with entrepreneurial firm failure. I also found that while individual HR practices within SWP are independently significant in predicting entrepreneurial firm failure, the survival effect of SWP is more pronounced than that of individual HR practices. Theoretical and practical contributions of these findings are discussed.

A Human Capital Perspective on Employee Turnover

Session Moderator: **Tsutomu Doiguchi**, *U. of Arkansas, Fayetteville*

HR: **Boomerang Trajectories: Exploring Time-Varying Impacts in Comparison with New Hires**

Author: **Tsutomu Doiguchi**, *U. of Arkansas, Fayetteville*

Author: **John E. Delery**, *U. of Arkansas*

Author: **Dorothea Roumpi**, *Pennsylvania State U.*

Author: **Samantha A. Conroy**, *Colorado State U.*

In the context of the boundaryless labor market, companies are increasingly considering the recruitment of former employees (“boomerangs”) as an alternative to traditional external new hires. Yet, research on the comparisons between boomerangs and new hires remains scant and yields inconsistent findings. Addressing these limitations and incongruencies, we comprehensively incorporate “time” into our theory-building process and propose that the impacts of boomerang status on four key behavioral outcomes (i.e., job performance, voluntary turnover, involuntary turnover, and turnback) unfold over time. Investigating 11,676 truck drivers in a large trucking company, we find that any initial boomerang advantages associated with job performance and involuntary turnover diminish over time. We also find that boomerangs are more likely to voluntarily leave and return for another employment term. Furthermore, our longitudinal employment data reveal that boomerangs who have returned multiple times (“serial boomerangs”) exhibit distinct behaviors compared to those who have returned only once. Finally, this research introduces two novel methodological approaches—the Fine-Gray subdistribution hazard model and the time-dependent moderation effect—to advance our understanding of survival analysis in the broad management literature.

HR: **Training Investment and Voluntary Turnover: Testing the Commitment and Human Capital Perspectives**

Author: **Sangsuk Oh**, *National Cancer Center Korea*

Author: **Daejeong Choi**, *U. of Melbourne*

Author: **Chiho Ok**, *Kangwon National U.*

Author: **Owwon Park**, *The Catholic U. of Korea*

In order to understand whether and why training helps firms retain talent, we develop and test a research model that integrates the two perspectives: the commitment and human capital perspectives. Specifically, we propose that the firm-level relationship between training investment and voluntary turnover is negative (i.e., decrease voluntary turnover) because training enhances employee commitment that subsequently decreases voluntary turnover (the commitment perspective). We suggest that the firm-level relationship between training investment and voluntary turnover is also positive (i.e., increases voluntary turnover) because enhanced employee competence by training increases employees’ ease of movement and external marketability (the human capital perspective). Our findings support the commitment perspective, showing that the indirect relationship between training investment and voluntary turnover is negative through employee commitment. On the other hand, the indirect relationship between training investment and voluntary turnover through employee competence is not significantly different from zero. Our findings highlight the benefits of training to talent retention. In this vein, we discuss theoretical and practical implications of our findings and provide future research agenda.

HR: **Holding on Too Tightly? Evaluating Subordinate Responses to Employee Guarding**

Author: **Timothy P. Munyon**, *U. of Tennessee, Knoxville*

Author: **Jiaju Yan**, *Baylor U.*

Author: **Timothy M. Gardner**, *Utah State U.*

Author: **Peter Hom**, *Arizona State U.*

Managers use employee guarding to maintain access to valued employees over whom they feel a sense of psychological ownership. Although research suggests that the practice is widely used, questions remain regarding the efficacy of these downward influence tactics, most notably including how subordinates respond to these influence attempts. In this investigation, we directly test how employee guarding affects turnover intentions, job embeddedness, performance, and voluntary turnover. In Study 1, a self-report subordinate perspective, we find that the persuasion form of guarding is positively related to turnover intentions, positively related to job embeddedness, and marginally and negatively related to job performance. The nurturing form of guarding is positively related to job embeddedness, negatively related to quit intentions, but was not significantly related to job performance. In Study 2, a global dyadic study of managers and randomly selected subordinates, persuasion and nurturing were positively related to subordinate performance, nurturing was negatively related to subordinate job embeddedness, positively related to quit intentions, and both persuasion and nurturing increased voluntary turnover risks. These results broadly offer caution against the use of employee guarding as a retention tactic, and we discuss theoretical and practical contributions.

HR: **Navigating Educational Disparity in the Industry 4.0 Era: A Three-way Moderated Mediation Model**

Author: **Yuhan Zuo**, *Central U. of Finance and Economics*

Workplace equality has become prominent in human resource management during the Industry 4.0 era, characterized by integrating artificial intelligence (AI) robotics in manufacturing organizations. This study investigates how organizations’ use of AI robotics makes the educational disparity in workplaces more consequential and how managerial practices can counterbalance such an effect. Drawing from a multisource survey of 1142 employees from 76 manufacturing organizations, we found a significantly positive relationship between employees’ educational level and affective commitment when organizations introduce AI robotics. Nonetheless, this consequence of educational disparity is attenuated when chief executive officers emphasize strategic human resource management, suggesting that managerial practices can counterbalance inequalities caused by AI robotics. Furthermore, employees’ affective commitment is negatively related to their turnover intentions. Our study contributes to a better understanding of employees’ attitudinal reactions in the AI-integrated workplace. We provide theoretical and practical implications for humanizing workplaces in the digital times.

Combating Counterproductive Behaviors and Stress: Strategies for Managing Turnover and Withdrawal

Session Moderator: **David Jinwoo Chung**, *ILR at Cornell*

HR: **The Impact of Techno-Complexity on Employees' Cheating at Work**

Author: **Rui Yan**, *Harbin Institute of Technology*
Author: **Yang Yang**, *Harbin Institute of Technology*
Author: **Yan Meng**, -

The increasingly complex digital technologies in the workplace are exacerbating the technological paradox faced by organizations, where tools intended to reduce or manage complexity are actually increasing complexity for employees. Premised on transactional stress theory, we examined the negative impact of techno-complexity on employees' cheating at work. We also examined task visibility as a boundary condition. Through three waves data collection involving 332 employees working from home, our results suggest that employees engaged in cheating as a way to cope with techno-complexity, significantly predicted cheating. Low task visibility amplified the relationship between techno-complexity and employees' cheating. Implications of our study for research and practice are discussed.

HR: **Call for Fairness: Do CEO Pay Cuts Improve Post-Layoff Performance?**

Author: **David Jinwoo Chung**, *ILR at Cornell*

Amidst the recent layoffs in the United States, some chief executive officers (CEOs) of laid-off firms took pay cuts. Allegedly, the pay cuts were made to address employee unrest and achieve better organizational performance, specifically financial outcomes. The phenomenon begs the question of whether CEO pay cuts indeed help enhance layoffs' performance consequences. However, existing academic literature lacks understanding regarding the effectiveness of CEO pay cuts in improving organizational performance (i.e., financial outcomes) in relation to layoffs. Focusing on employees' judgment of layoff unfairness, I hypothesize that the effect of layoffs on organizational performance is relatively more positive when CEO pay cuts are implemented, as well as that the conditional effect of layoffs on organizational performance is negative when the pay cuts are not implemented and non-negative (i.e., null or positive) when they are implemented. The suggested hypotheses were tested using a sample of publicly traded companies in the United States observed from 2001 to 2020. Overall, the findings imply that reducing CEO pay leads to more positive performance outcomes during layoffs by shaping their relational pattern in the way that was proposed.

HR: **Dual-Pathway of Employer Branding's Influence on Talent Retention**

Author: **Jin Feng Uen**, *National Yang Ming Chiao Tung U.*
Author: **ChunShan Tai**, *National Yang Ming Chiao Tung U.*

We examined the effect of employer branding on talent retention from the perspective of employer brand, focusing on the roles of internal and external marketing. Research shows that employer branding positively affects talent retention through two channels: organizational reputation in an organization and relational psychological contract at the individual level. Studies support both paths. We believe organizational attractiveness positively affects not only potential employees but also the cohesion of current employees. Data was collected from 253 employees in 51 high-tech companies. This study used signaling theory and social identity theory as conceptual frameworks. In this study found that a good organizational prestige conveys messages about value, stability, and success to current employees. And relational psychological contract connects with the organization, and the attractiveness of the internal brand motivates employees. The attractiveness strengthens employees' identification with the organization and aligns them with its values, which are also influenced by organizational prestige. The value of organizational reputation is a key factor in talent careers.

HR: **Fostering Advantage: Third-Party Employer Branding on Turnover and Firm Performance in Public Firms**

Author: **Miao-Ju Wang**, *Feng Chia U.*

Employer branding, a strategy aimed at cultivating an employer's reputation as the premier choice for talent, relies on differentiation to shape perceptions. While considerable efforts have been dedicated to shaping and enhancing these brand perceptions, empirical evidence demonstrating its impact remains sparse. Leveraging the resource-based view, this study employs third-party certifications as indicators of employer branding, utilizing longitudinal panel data from Taiwan's publicly listed companies to examine the connections between employer branding certifications, employee turnover rates, and firm performance. Findings indicate a positive correlation between employer branding and firm performance, mediated by employee turnover. This study emphasizes the substantial advantages of employer branding in terms of employee retention and firm performance and provides valuable insights for organizations seeking to enhance their human resource strategies and ultimately thrive in a competitive business landscape.

Strategic Analytics: Empowering HR Decisions through Qualitative Analysis

Session Moderator: **Adelle Bish**, *North Carolina A&T State U.*

HR: **Failing to Serve the Frontlines: Nurses' Perceptions of HRM in the Midst of a Crisis**

Author: **Adelle Bish**, *North Carolina A&T State U.*

Author: **Frances Jorgensen**, *Royal Roads U.*

In this paper, we investigate nurses' perceptions of the role of HRM in addressing their needs as frontline employees, and how those perceptions changed during the height of the COVID-19 pandemic. By integrating literature from the areas of frontline service employee management, HRM, and crisis management into our longitudinal, qualitative study, we identify three primary roles of HRM that the nurses felt were critical to supporting their wellbeing and sustained delivery of quality patient care during the crisis, but were lacking from HRM in their hospitals, namely communication, planning and addressing emotional demands. Importantly, our findings also emphasize the dynamic nature of employee perceptions of HRM, particularly as a crisis compounds existing job demands on the frontlines, necessitating a more responsive form of HRM. Ultimately, we propose the need for a more reflexive, differentiated approach to HRM, built to meet the unique needs of frontline service employees during a crisis.

HR: **HR is Not on Mute: Assisting Organizations During Exogenous Shocks**

Author: **Abhoy Kumar Ojha**, *Indian Institute of Management, Bangalore*

Author: **Rajashik Roy Choudhury**, *Doctoral Student at Indian Institute of Management Bangalore*

Although Human Resources (HR), as a function, is no longer treated as just administrative and transactional, the literature is yet to explore HR's pivotal role in guiding organizations through tumultuous times. Despite acknowledgement of HR's strategic contributions in the times of crises, there is a dearth of discussion demonstrating how HR practices steer organizations toward adaptability and resilience. In this paper we explore the evolving strategic role of HR during crises or exogenous shock. We argue that HR professionals are instrumental in formulating and implementing rapid crisis response strategies, facilitating business recovery, and ensuring organizational resilience. Simultaneously, HR takes a leadership role during an exogenous shock in transitioning organizations towards more agile operating models, managing heightened complexity, and balancing compassion for employees with the imperative of ensuring managerial efficiency. Using analysis of newspaper articles on Covid-19, we found 9 broad HR enablers that bailed out organizations during the event as well as kept them relevant in the post-pandemic era. We also validated the themes, that emerged from the literature, by interviewing senior HR professionals across the world. The findings show that HR acted as a crucial change agent during an exogenous shock, driving bottom-line results as a business partner while fostering trust and empathy among employees.

HR: **Emerging Paths for Developing Competencies for Sustainability in Higher Education Institutions**

Author: **Caroline Krüger**, *U. de São Paulo*

Author: **Adriana Fiorani Pennabel**, *School of Economics, Management and Accounting of Ribeirao Preto, USP*

Author: **Marcelo Borges De Oliveira**, *PhD candidate at School of Economics, Business and Accounting at USP/BRAZIL*

Author: **Fábio Henrique Corrêa Bogado Guimarães**, *Instituto Federal de Santa Catarina*

Author: **Adriana Cristina Ferreira Caldana**, *U. of Sao Paulo (FEA-RP/USP)*

In a time of environmental calamities, pandemics, and social inequality, the development of people to deal with complex situations and solve threats to the planet's sustainability becomes relevant. In this context, Higher Education Institutions (HEIs) play an important role, as they are instruments for developing competencies for sustainability (DCS). However, how to move forward to this purpose remains a gap in the literature. To address this issue, the present research aims to develop and validate a model for DCS to HEIs. A systematic literature review gathered 271 articles on DCS and HEIs, which were systematized, categorized, and analyzed. The analysis resulted in the Model "Development of Competencies for Sustainability in Higher Education Institutions" (DCS-IES) validated through interviews with 30 experts. The proposed model represents the first model for creating an integrated program focused on the institutionalization and development of CS at universities besides incorporating different audiences of HR from HEIs, such as professors and staff. Another research contribution focuses on the model's potential to promote programs and institutional politics at HEIs and to favor government planning and the design of public policies and practices.

HR: **Tensions in Algorithmic HRM: Examining the Reactions of App-Workers**

Author: **James Duggan**, *Cork U. Business School*

Author: **Anthony McDonnell**, *U. College Cork*

Author: **Ronan Carbery**, *Cork U. Business School*

Author: **Ultan Sherman**, *Cork U. Business School*

The use of algorithms to manage human resources represents one of the most significant recent developments in HRM research and practice. While harboring the potential to facilitate more efficient and accurate HR processes, the emergence of algorithmic HRM also raises concerns for workers operating under advanced data-driven systems. Currently, algorithmic HRM is most prevalent in labor markets in the gig economy, and particularly in localized, app-based forms of gig work. In this paper, we adopt a qualitative research design to examine how gig workers in both the food-delivery and rideshare sectors react to the dynamic features of algorithmic HRM practice. In doing so, we explore how these reactions positively and/or negatively impact on the work arrangement and reveal the key concerns and issues encountered by workers operating under algorithmic HRM systems. We find that gig workers grow frustrated and disillusioned as they navigate the constraints of algorithmic HRM, and that workers may adopt informal and individual efforts to reclaim aspects of their autonomy. Where these efforts failed, workers exhibited disruptive behaviours and resistance to the pervasive and heavily prescriptive algorithmic HRM features encountered. The role that other non-organizational actors can play in this is notable.

Leveraging Advanced Methodologies to Transform HR Practices

Session Moderator: **Zhe Zhang**, *Xi'an Jiaotong U.*

HR: **Kick Robots away with Heart and Head: How and When AI Interviews Undermine Organizational Attraction**

Author: **Zhe Zhang**, *Xi'an Jiaotong U.*

Author: **Xuebing Wang**, *Xi'an Jiaotong U. School of Management*

Artificial intelligence (AI) interviews have been penetrating hiring practices and producing valid arguments about its application. This research sheds light on the dark side of AI interviews from the unsophisticated perspective of organizational behavior. Combining social information processing (SIP) theory with the dual-process model, we investigate how and when AI interviews restrain organizational attraction. We examine our model by conducting a laboratory experiment using FaceReader 8.0 and a scenario experiment. The results indicate that AI interviews will inhibit organizational attraction via job seekers' emotional pathway (i.e., negative emotion) and cognitive pathway (i.e., organizational trust). In addition, our results show that job seekers' prior AI experience can buffer the effects of AI interviews on their negative emotion and organizational trust. Furthermore, their experience can weaken the indirect effect of AI interview on organizational attraction through the emotional pathway. Our findings provide theoretical and practical implications for scholars and managers in HRM.

HR: **Usage of Algorithms in Personnel Selection: A Systematic Review and Computational Analysis**

Author: **Marcel Herold**, *TH Wildau (U. of Applied Sciences)*

Author: **Marc Roedenbeck**, *TH Wildau (U. of Applied Sciences)*

Objective This paper aims to structure the research addressing the application of artificial intelligence (AI) in human resource management (HRM), with a specific focus on the recruitment process. The goal is to identify which steps in the recruitment process have been in the focus of AI, and to assess in which stages specific algorithms are used. To achieve this, we utilised a taxonomy of AI research. Design / Methodology / Approach The analysis combines a systematic literature review, based on a qualitative content analysis, and computational analysis, using natural language processing. The initial 4,579 studies were sourced from three databases and narrowed down to a total of 502 in a qualitative and iterative process. The computational analysis was performed in a Python environment by applying part-of-speech tagging and the implementation of bidirectional encoder representations from transformers. Findings While AI was introduced relatively late in HRM research, since 2009, most studies have been categorised under the stages "assessment & selection" and "processing incoming applications" in the recruitment process. They mainly focus on ranking candidates and analysing resumes / CVs. The predominately used algorithms were found in the field of natural language processing and machine learning, with bidirectional encoder representations from transformers serving as a bridge between both categories. The computational analysis highlighted the importance of ethics in AI research, thereby contributing to the expansion of the general AI taxonomy used. Practical implications This paper contributes to expanding the general AI taxonomy by incorporating an ethical perspective. Additionally, it highlights which algorithms are predominately represented in research. Consequently, companies should prioritise implementing these algorithms, while research should aim to explore and test alternative options. Originality / Value This study is unique in its approach, being, to our knowledge, the first to comprehensively analyse the use of algorithms used in the recruitment process.

HR: **An Attributional Perspective on HRM Implementation and University Faculty Members' Well-Being**

Author: **Natthapong Pakieranum**, *U. of Liverpool*

Author: **Huadong Yang**, *U. of Liverpool*

Author: **Mariella Miraglia**, *U. of Liverpool*

Although it is acknowledged that the intended HRM differs from the implemented HRM, past studies on employee attributions of HRM have mainly focused on the intended HRM by organizations. Little is known about how employees attribute the implemented HRM by line managers. Drawing on Kelley's (1973) covariation model of attribution theory and Schwartz's (2012) framework of personal values, this study investigates how information patterns of HRM implementation influence employees' attributions and how employees' personal values modify the relationships between perceived information patterns and employees' attributions of HRM implementation. In addition, it also explores the effects of employees' attributions of HRM implementation on their well-being. Using vignettes as experimental stimuli, we conducted a one-factor (with three levels) between-subject design with personal values as covariates among 200 academic staff in a Thai university. The results largely support the moderated mediation models, showing that personal values moderated the relationships between information patterns perceived by employees and their attributions of HRM implementation, which in turn influenced employees' well-being. Theoretical and practical implications of these findings are further discussed.

HR: **Signaling the Adoption of Responsible AI Principles: A Study of AI Job Advertisements**

Author: **Aizhan Tursunbayeva**, *Parthenope U. of Naples*

Author: **Shilpi Jain**, *FORE School of Management*

Author: **Sriparna NA Basu**, *Dean Research*

Author: **Luigi Moschera**, *Parthenope U. of Naples*

Little is currently known about the extent to which Responsible Artificial Intelligence (AI) principles are implemented in organizations and the organizational processes through which these principles unfold. This theoretically informed and empirically grounded paper sought to bridge this crucial knowledge gap. It draws upon unique job advertisement data for AI-related positions from the USA, the UK, and India to investigate whether and how organizations signal their commitment to Responsible AI (RAI) principles during the recruitment process. The Natural Language Processing analysis indicates a limited presence of RAI signals across and within circa 9,000 job advertisements analyzed. Where these were present, the analysis suggests variations of RAI signals, especially across different employment statuses, and seniority levels. The findings hint that organizations predominantly consider RAI principles relevant to full-time positions for entry and mid-senior-level AI jobs. The consistency of signals varied in terms of the actual RAI keywords and their combinations. The correlation analysis provides insights into the interconnectedness of some of the RAI keywords, emphasizing the multifaceted nature of addressing ethical, legal, and quality considerations in AI development and deployment within the RAI context. We also noted the disparity between the RAI keywords used in job advertisements, and those the most frequently used in existing RAI and/or Ethical guidelines. Finally, the findings demonstrate that translation of RAI principles into practices might be challenging even for the companies recognized as the most ethical. The study has important implications for theory and practice, as well as builds an agenda for future research.

Wellness in the Digital Era: Advanced Strategies for Promoting Employee Health

Session Moderator: **Mike Halinski**, *Ted Rogers School of Management, Toronto Metropolitan U.*

HR: **Good News for You is Good News for Me: The Effect of Coworker Disclosure on Employee Vitality**

Author: **Janet Boekhorst**, *U. of Waterloo*

Author: **Mike Halinski**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Author: **Jessica Good**, *York U.*

Research shows that coworkers can play a critical role in shaping employee vitality, but we have little insight into specific actionable behaviors that coworkers can take to affect the vitality of other employees. We draw insights from social information processing theory to argue that coworker positive work event disclosure has a positive indirect effect on employee vitality through the mediating role of employee career ambition. Drawing insights from role congruity theory, we further propose that this indirect effect is stronger for men compared to women. To test these arguments, we use a time-separated field dataset ($n = 175$), which provides support for these hypotheses. We conclude by discussing the theoretical contributions with respect to the important role of coworkers in sharing positive work stories with others as these stories elicit employee cognitions (career ambition) that foster employee vitality. In addition, we provide interesting gender-focused insights that suggest these coworker stories are particularly impactful for men. Practical insights for HR professionals, leaders, and employees are provided to meaningfully improve employee vitality in organizations.

HR: **Not Aware or Don't Dare! The Use and Awareness of Employer-Sponsored Mental Wellbeing Programs**

Author: **Miguel Mejicano Quinta**, *Sprott School of Business, Carleton U.*

Author: **Linda Duxbury**, *Sprott School of Business, Carleton U.*

While academics and practitioners seek reliable information on how best to support employee mental health, there is no consensus in the literature in terms of the use and awareness of Stress Management Interventions (SMIs). Our research objectives address these issues by identifying key factors predicting employee awareness of five SMIs on offer in their organization; and identifying key factors predicting employee use/not use of each of these five SMIs for those employees who know the benefit is available. Our partner in this research was the Canadian Armed Forces (CAF), a male-dominated hierarchical organization which recognizes and rewards those who adhere to "ideal worker" norms. All SMIs included in our study were available to all workers surveyed ($n = 1627$). We make two key contributions to the literature. First by identifying the factors predicting awareness and use of different SMIs, we provide information which should help key stakeholders develop strategies to address the above issues. Second, our ability to study benefit awareness and use in an extreme case environment allows us to explore the impact of workplace context and organizational culture on these topics.

HR: **The Overnight Stress Carryover in Leaders: A Conservation of Resources Perspective**

Author: **Stefan Razinskas**, *Freie U. Berlin*

Author: **Julia Backmann**, *U. of Münster*

Author: **K. Praveen Parboteeah**, *U. of Wisconsin, Whitewater*

Although leading others is undeniably stressful, scholarly work in leadership contexts thus far focuses more on the consequences of leaders' stress for their subordinates or employees in general. Surprisingly scant research on stress carryover in leaders yet exists. Drawing on conservation of resources theory, we nurture this perspective by studying how the work-related stress of leaders affects their off-the-job stress, thereby turning to the mediating role of insomnia. We further consider how segmentation supplies and telework alter the overnight stress carryover in leaders. Based on multilevel analysis of 637 observations from 115 leaders, we find evidence that the stress experienced by leaders during work leads to heightened off-the-job stress. Although we do not find work stress to result in increased off-the-job stress through insomnia, we identify this indirect effect to be jointly shaped by segmentation supplies and telework. Notably, we show that receiving stronger segmentation supplies help leaders mitigate their stress carryover via insomnia on days when they telework but not when they work from the office. Our findings contribute to a deeper understanding of work stress creeping into the private domain of leaders. We discuss implications for future research, acknowledge limitations, and offer recommendations for human resource professionals.

HR: **CSR Leadership in a Hybrid Work Environment**

Author: **Kelsy Hejjas**, *Edinburgh Napier U.*

Author: **Andrew Bratton**, *Edinburgh Napier U.*

Author: **Magdalena Gilek**, *Edinburgh Napier U.*

Social exchange theory is used to understand the relationship between leadership and employee corporate social responsibility (CSR) engagement in a hybrid work environment. Using interview data from managers (5), CSR champions (6), and employees (17), we find that the influence of managerial level leadership can be hindered by hybrid work environments, where there are barriers to communication and relationship-building, including fewer informal leader-follower exchanges, which negatively impact levels of trust. Results also show that by expanding the scope of CSR leadership to include alternative sources of leadership, including organisational leadership and peer-leadership, alternative means to generate employee CSR engagement emerge, offsetting the limitations of hybrid work environments. Given the theoretical and managerial interest in understanding the processes of effectively leading CSR internally, our study makes an important contribution in that it adds to knowledge about the boundary conditions influencing when and how employees engage in CSR. In doing so, additional means by which to engage employees outside of the traditional work environment, and beyond formal top-down leadership, are identified. Organisations can subsequently use this information to better support CSR leadership and employee CSR engagement.

Diverse Talent, Fair Practices: DEI and Modern HR Practices

Session Moderator: **Dylan Nelson**, *U. of Illinois at Urbana-Champaign (UIUC)*

HR: **Racial Inequality and Bureaucracy in US Manufacturing**

Author: **Dylan Nelson**, *U. of Illinois at Urbana-Champaign (UIUC)*

Author: **Nathan Wilmers**, *Massachusetts Institute of Technology*

Amid persistent racial inequality, bureaucratic work organization promises fairness: rules and oversight limit racial prejudice. Yet research showing apparent positive effects of bureaucracy for Black workers does not adjust for worker selection. In this project, we compare Black-White earnings inequality in workplaces with two types of bureaucratic organization: structured management practices or unionization. We do so by matching a large survey of US manufacturing workplaces to employer-employee linked earnings data. Both types of bureaucratic workplaces pay relatively more to Black workers than do non-bureaucratic workplaces. This holds even within narrow industries and labor markets and among firms of a similar size and productivity level. However, bureaucracy's disproportionate pay advantages for Black workers stem largely from bureaucratic workplaces more positively selecting Black workers. For structured management practice workplaces, this is due mainly to the disproportionately lower ability of exiting Black workers, rather than to differences in hiring. This project shows how apparent inequality effects of employer practices can be driven by worker selection.

HR: **A Person-centric Latent Profile Approach to Generational Cohorts in Organizations**

Author: **Jiaxin Liu**, *Hong Kong Baptist U.*

Author: **Fuli Li**, *Xi'an Jiaotong U.*

A young cohort of Millennials born in and after 1990, named "post-90s" in China, is becoming the major workforce. Mass media and empirical studies have reported greater challenges of managing younger employees than managing older generation employees. However, research has inconsistent findings regarding the differences across generations, and we know little about whether the differences can help explain the generational differences in job performance. To address this void, this research proposes a three-dimensional framework of generational cohorts to focus on the configurations of key indicators with each other, including (1) personalities of who they are (i.e., self-efficacy, psychological entitlement, and openness), (2) work values of what they think (i.e., leisure, intrinsic, extrinsic, altruistic, and social values), and (3) work motivations of why they motivate (i.e., career aspiration, work-life balance, and work flexibility). Specifically, we adopt the person-centric latent profile approach to portray the constellation of post-90s Millennials and before-90s older generations. Based on the data of 954 post-90s Millennial employees and 899 before-90s employees collected in a Chinese dairy company, results show four similar profiles (i.e., harmonist, workaholic, modest, and laissez-faire) in both two generations. Using the company's archival performance records, we further compare the differences in performance across four profiles and identify the harmonist profile as the high-performing profile for both post-90s and before-90s generations. Accordingly, we show a more comprehensive picture of generational cohorts and shed light on the idea that there are more similarities than differences in configurations and performance between post-90s cohorts and older generations.

HR: **AI-Human Sequential Evaluation: Enhancing Performance Assessments through AI-Human Collaboration**

Author: **Sima Sajjadiani**, *Sauder School of Business, U. of British Columbia*

Author: **Danielle Van Jaarsveld**, *Sauder School of Business, U. of British Columbia*

Author: **David Douglas Walker**, *U. of British Columbia*

Author: **Gabrielle Voiseux**, *Sauder School of Business, U. of British Columbia*

Organizations are increasingly incorporating AI alongside human evaluators to address biases and inconsistencies that can contaminate performance evaluations. We use information processing theories to develop the AI-Human Sequential Evaluation model and explain how AI and humans with differential access to data and distinct information processing capabilities collaborate to evaluate performance. We empirically test our model using machine learning techniques to analyze text and audio data from 94,776 call center interactions and conduct a field experiment. We found that when humans independently evaluate performance, they exhibit more bias against demographic minorities with perceived accents compared to AI. However, this bias diminishes in the AI-Human Sequential Evaluation model, where human evaluators use AI scores as a reference point, often aligning with AI decisions when they lack performance-related reasons to dispute them. Conversely, human evaluators diverge from AI evaluations if they identify performance-relevant signals in data, highlighting the continuing necessity of human expertise even in the age of intelligent machines. Taken together, our findings demonstrate that human evaluators can exhibit 'selective' trust in AI, and underscore the potential of our model to foster more fair and valid performance evaluations, contributing to the AI-Human collaboration and performance management literatures.

HR: **Unraveling DEIA Dynamics: Unconscious Biases and the Emergence of Destructive Leadership**

Author: **Larry Small**, *Senior Advisor for Management & Budget, National Nuclear Security Administration*

In this theoretical study, we explore the manner in which unconscious biases influence the emergence of destructive leadership, thereby impacting critical dimensions of organizational diversity, equity, inclusion, and accessibility (DEIA). Applying the Attraction-Selection-Attrition (ASA) model of strategic human resource management and drawing upon theories of social identity and transformational leadership, we develop a conceptual framework that addresses persistent gaps in management scholarship concerning the formidable impediments to achieving DEIA. While extant research has painstakingly documented both the nature and impact of successful and unsuccessful DEIA programs, there continues to be relatively little understanding about the mechanisms that cause impediments to DEIA, particularly those arising from unconscious biases and destructive leadership. Our multi-disciplinary study takes important steps to deepen the theorization of DEIA-related mechanisms by developing an explanatory model and testable propositions that offer an important and exciting agenda for future research as well as potent implications for scholars, practitioners, and policy makers. Keywords: Unconscious biases, destructive leadership, DEIA, ASA model, organizational behavior

How do Home Countries and Standards Influence Sustainability Practices Abroad?

Session Moderator: **Jingwen Sha**, *Ivey Business School*

IM: Managing Home Country Uncertainty: Impacts on the Sustainability Performance of Multinationals → 📄

Author: **Cristina Leone**, *U. of Palermo*

Author: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

We analyze how home country uncertainty affects multinationals' sustainability performance. Building on institutional economics, we argue that home country uncertainty harms multinationals' sustainability performance because it creates financing constraints, inducing multinationals to allocate resources and attention to compensate for low-quality institutions and restricting their focus on sustainability. However, we also propose that investing in host countries that provide fiscal arbitrage (i.e., tax havens) weakens this relationship because leveraging fiscal activities frees up resources that help multinationals reduce financing constraints, improving their sustainability performance. Finally, we propose that the availability of financial resources in firms alters these relationships because they lessen the contextual financing constraints on sustainability. Analyses of a sample of 865 European multinationals and their subsidiaries worldwide support the hypotheses.

IM: The Power of Standards: Sustainability Disclosure Standards Adoption and MNC Foreign Investment → 📄

Author: **Juan Bu**, *Indiana U., Bloomington*

Author: **Aurora Genin**, *Indiana U. - Kelley School of Business*

Author: **Liu Yang**, *Wichita State U.*

This study examines the impact of sustainability disclosure standards adoption on multinational enterprises' (MNEs) foreign investment. Extant research depicts the "pollution havens" effect, where MNEs target host countries with weak regulatory governance on environmental issues to evade pollution abatement. We argue that standard adoption enacts market governance as a substitutive mechanism to curb MNE investment into pollution havens: standard adoption ensures the transparency and consistency of information disclosed, thus enabling market participants to evaluate and compare (un)sustainable actions across firms. Using a sample of 51,038 firm-country-year observations of 245 U.S. firms between 2010 and 2020, we find that MNEs tend to reduce their foreign investment in pollution havens after adopting the disclosure standards developed by the Sustainability Accounting Standards Board. Consistent with our proposed mechanism, we find MNEs subject to greater sustainability-focused market governance forces—namely, those with higher shares of sustainability-focused institutional ownership—to drive the overall effect. These findings shed new light on pollution haven literature, sustainability disclosure research, and global strategy research.

IM: Global Sustainability Disclosure Standards and MNE's Strategic Response 🌐 → 📄

Author: **Lifang Zhang**, *Queen's U.*

Author: **Anthony Goerzen**, *Queen's U.*

When pursuing the global sustainability strategy, multinational enterprises (MNEs) are embedded in the sustainability-specific organizational field where global sustainability standards create strong institutional forces to shape MNEs' sustainability behaviors. The purpose of our paper is to elaborate on the conditions under which MNEs are more likely to resort to decoupling as the strategic response to institutional complexity in the organizational field of global sustainability reporting. By conceptualizing the coexistence of multiple sustainability reporting standards from the lens of institutional complexity, our paper theorizes how field-level attributes – fragmentation, formalization, and centralization – shape MNEs' strategic response. We argue that the current fragmented and informalized disclosure standards are more likely to trigger policy-practice and means-ends decoupling, in the form of either symbolic adoption or symbolic implementation. The recent harmonization efforts, such as the emergence of the International Sustainability Standards Board (ISSB) and its publication of International Financial Reporting Standards (IFRS) S1&S2, could enhance the centralization of global sustainability reporting and provide hope to achieve higher levels of compliance in reporting. Overall, with the collective efforts of all actors in the organizational field of global sustainability reporting, a positive feedback loop could be formed to achieve an alignment of transparency policy, consistent reporting practice, and the intended objective of sustainable development.

IM: The Relationship Between CSR Contracting and Corporate Social Performance: A Comparative Approach → 🗨️ 📄

Author: **Valentina Marano**, *Northeastern U.*

Author: **Steve Sauerwald**, *U. of Houston*

Author: **Pete Tashman**, *UMass Lowell*

We integrate stakeholder agency and institutional theory to assess how home-country institutions shape the effectiveness of CSR contracting, which links executive pay to achieving certain CSR targets. Based on 22,588 observations representing 3,799 public firms and 26 countries from 2007 to 2019, our multilevel analysis shows that both pro-shareholder and pro-stakeholder institutions weaken the impact of CSR contracting on Corporate Social Performance (CSP). This suggests that strong institutions, regardless of their orientation, can act as substitutes for CSR contracting and alter executive discretion in prioritizing CSR commitments. These insights deepen our understanding of CSR contracting within diverse institutional frameworks.

IM: Cultural Identity and Bridging Skills of Highly Qualified Migrants

Author: **Cristina Popescu**, *U. of Tuebingen*

Author: **Markus Pudelko**, *U. of Tuebingen*

This inductive study explores on the basis of 134 semi-structured interviews the impact of cultural identity on highly qualified migrants' cultural and language bridging skills. We find that cultural identity impacts migrants' cultural and language bridging skills, prompting differences not only between generations but also within them. On this basis, we establish two sub-groups of first generation migrants: those with a separated identity (heritage culture is dominant) and those with an ambiguous identity (cultural choice decided by context); similarly, we find two sub-groups of second generation migrants: those with an integrated identity (combined and balanced cultures) and those with an assimilated identity (mainstream culture is dominant). We further ascertain that migrants with an integrated identity, encompassing a balanced identity of both heritage and mainstream cultures, possess the highest degree of cultural and language bridging skills. Our study provides a more nuanced understanding of migrants' cultural identity formation and their impact on skilled migrants' cultural and language bridging skills.

IM: High-Magnitude Role Transition in the Multinational Enterprise: A Subsidiary Actor Perspective

Author: **Kieran Michael Conroy**, *Queen's U. Belfast*

Author: **David Collings**, *Trinity College Dublin*

Role transition is increasingly common in multinational enterprises (MNEs) and presents a significant challenge for individual actors. Studies to date have presented a static understanding of key actors' roles in the MNE, particularly those in subsidiaries that are confined to a local geographical context. Combining insights from role transition with subsidiary management literature, our qualitative study explores the lived transitional experiences of actors who exit their subsidiaries and progress to assume a corporate role. We find that subsidiary actors entering and enacting corporate roles confront a high-magnitude transition with significant contrast and discontinuity. Specifically, our findings show that individuals make the transition by easing psychological, relational, and socio-political tensions within local, global, and corporate exchanges. This involves detaching from a subsidiary role that had clearly defined boundaries, limited scope and discretion, and low complexity, and transitioning to a corporate role that is ambiguous, expansive, and extremely challenging. In contrast with conventional practice, this transition did not involve a physical relocation to corporate headquarters (CHQ), but corporate roles were enacted remotely in the local subsidiary, which intensified transitional tensions. In this context, a seamless transition may not always be the most effective approach, and holding on to some core features of the exited role may serve as a 'transitional bridge' to enacting the new role. Our findings expand the reach of studies on role transition by disentangling how a high-magnitude transition compels a subsidiary actor to refashion their identity, network, and behaviour.

IM: The Unexpected Upside of High Language Diversity

Author: **Mai Al-Naemi**, *College of Business and Economics, Qatar U.*

Author: **Hyun-Jung Lee**, *London School of Economics*

Author: **Carol Wasbauer Reade**, *San Jose State U.*

Evidence suggests that language diversity and the asymmetric fluency of corporate lingua franca among employees negatively affect social integration, knowledge sharing and performance in the workplace. We explore the boundary conditions that might mitigate such negative consequences. Our research context is a multilingual firm where English is mandated as the corporate lingua franca and employee English fluency is generally low. Utilizing a mixed-methods approach and longitudinal design across three studies, we discover an informal network, Language Advice Network (LAN), in which individuals with varying levels of English fluency seek and share language-related knowledge. Contrary to extant research findings, our analysis shows that individuals actively seek language advice from fluent speakers, forming ties between fluent and less-fluent English speakers across different language clusters in the organization. It is the low English fluency of the majority of employees and the strict English language mandate that drives connection between individuals who may otherwise segregate. We also find that language-advice giving is positively associated with the advisors' annual performance rating, indicating that management recognition and rewards play an important role in sustaining the informal language advice network. Our findings provide fresh theoretical insight on the relationship between corporate lingua franca, social integration and knowledge sharing, and management implications for fostering social integration, particularly in contexts of high first-language diversity.

IM: Offshoring and the Mental Health of Onshore Employees

Author: **Robin John Clerckx**, *Hasselt U.*

Author: **Bart Leten**, *KU Leuven*

Author: **Christoph Grimpe**, *Copenhagen Business School*

Author: **Mark Vancauteran**, *Hasselt U.*

We study the impact of offshoring on the mental health of onshore employees. Using the job demands-resources framework, we argue that increased job complexity and heightened job insecurity due to offshoring has a negative effect on the mental health of onshore employees. In addition, we hypothesize that this effect is heterogeneous among firms and depends on the mode of offshoring (internal versus external ownership), offshoring destination (intra versus extra-regional), type of offshored activity (support versus primary activities), and whether jobs are lost at the onshore location. Estimating two-way fixed effect difference-in-difference models with panel data (2011-2018) for 1.1 million employees working at 2500 firms in the Netherlands, we find a negative and long-lasting effect of offshoring on the mental health of onshore employees. The effect is stronger in the case of internal ownership, extra-regional offshoring, offshoring of support (ICT) activities, and when offshoring results in layoffs.

Managing Global and Virtual Teams

Session Moderator: **Julianne Sellin**, *Fox School of Business, Temple U.*

IM: **Assessing the Impact of Brexit on UK-based Inventor Teams' Connectivity**

Author: **Julianne Sellin**, *Fox School of Business, Temple U.*
Author: **Vaibhav Mishra**, *Fox School of Business, Temple U.*

Contemporary events have challenged the idea of an inevitable rise in connectivity. Economic, geopolitical, or again, regulatory disruptions have led scholars and practitioners to consider the potential implications of a loss of global mobility and connectedness on the potential for knowledge creation. Although key to this process, the notion of connectivity has seldom been studied along with disruptions. To fill in this gap, this paper intends to investigate the impact of an unprecedented regulatory shock - the 2016 United Kingdom European Union (EU) membership referendum - on UK-based inventor teams' knowledge connectivity. There is considerable literature documenting a negative relationship between the uncertainty generated by disruptions and innovation. We add a complementary and potentially ameliorating effect whereby disruptions increase knowledge connectivity. We review the evidence for the former and discuss potential mechanisms behind the latter. Relying on patent application data from 2009 to 2022, we observe an overall increase in connectivity for teams with at least one inventor based out of the UK after the referendum. Our analysis also suggests an internationalization of UK teams taking precedence over what may have been a more regional focus. We discuss the immediate, and potential long-term implications of this dynamic for UK innovation.

IM: **Impact of the Timing of Entry and Team Diversity on Global Virtual Team Members' Contributions**

Author: **Justin Kraemer**, *Mae Fah Luang U.*
Author: **Daria Panina**, *TAMU, Mays Business School*
Author: **Theresa Bernhard**, *FAU Erlangen-Nürnberg*

Teams are of increasing importance to accomplish complex work in organizations. Research on entering organizations and the teams within them seems to assume a false newcomer-incumbent dichotomy whereby entry is either advantageous or disadvantageous. We challenge these assumptions and conceptualize outcomes of entry timing as a matter of degree. We focus on global virtual teams (GVTs) because they are becoming more prevalent in work organizations and because GVTs diversity is often portrayed as offering a unique set of advantages. Our research studies the association between the team members' timing of entry and their team contributions. To predict this association we integrate insight from literature on newcomer entry and socialization and role theory. This integration predicts a U-shaped association. Specifically, we hypothesized that the earliest of entrants contribute the most while the latest of entrants contribute more than those entering in between. We also suggest that team diversity alters this association. In applying random coefficient modeling to 304 GVTs of 1913 individuals, we find support for our hypotheses. We conclude by discussing implications for both scholars and practitioners as well as limitations of our work.

IM: **Work from Home in Multinational Firms: The Stimulating Influence of Technological Innovation**

Author: **Diego Morris**, *The U. of Birmingham*

We build on the knowledge based view (KBV) of the firm and use data on 22,900 firms to assess the nexus between innovation and work-from-home (WFH) in multinational enterprises (MNEs). To the best of our knowledge, this study is the broadest cross-country analysis at the firm level to assess this issue, allowing us to examine how economic development influences the implementation and effectiveness of WFH. We find that innovative firms and MNEs are more likely to engage in WFH but innovative MNEs are not. Notwithstanding, MNEs that engage in WFH, do so more intensively than other firms.

IM: **The Impact of Language Barriers on Familiarity in Multilingual Teams**

Author: **Helene Tenzer**, *LMU Munich School of Management*
Author: **Markus Pudelko**, *U. of Tuebingen*

Based on 90 semi-structured interviews within 15 multilingual teams (MLTs), this study explores how language barriers influence the formation of familiarity among members of MLTs. We discover that communication in the professional and in the personal domain mediates this relationship. Our study uncovers specific impediments language barriers cause within each communication domain and demonstrates how they limit the formation of professional and personal familiarity among MLT members. We also reveal feedback effects where constrained familiarity further reduces communication, thus forming a vicious cycle in MLTs. Furthermore, we indicate measures to prevent or break such vicious cycles. Our study contributes to research on language barriers in MLTs by demonstrating their impact on the formation of familiarity among MLT members and by highlighting overlooked linguistic challenges in personal communication, thus expanding our understanding of the communicative bases of MLT functioning. Within the area of organizational behavior, our study contributes to familiarity research by exploring the processes through which team members gain (or fail to gain) mutual familiarity. Indicating that familiarity does not automatically grow amidst communication impediments, we highlight factors that inhibit and measures that enhance familiarity in MLTs.

Local Firms Competing and Collaborating With MNEs

Session Moderator: **Aurora Genin**, *Indiana U. - Kelley School of Business*

IM: Understanding the Influence of Supranational Institutions on Entrepreneurial Opportunities

Author: **Elizabeth Marie Moore**, *Northeastern U.*
Author: **Kristin Brandl**, *Gustavson School of Business, U. of Victoria*
Author: **Luis Alfonso Dau**, *Northeastern U.*

Intergovernmental organizations (IGOs) promote stability, development, and security for member states and their citizens via supranational institutional influences. However, their impact on individuals has been questioned due to political, social, and economic uncertainties. We study how IGOs influence entrepreneurial decision-making. Using a robust sample of 68 countries, their entrepreneurial environment, and their connection to IGOs, we find that IGOs cultivate a positive environment for entrepreneurship. Moreover, IGOs encourage different strategic decisions - encouraging formal entrepreneurship while discouraging informal entrepreneurship. We combine insights from international relations, institutional theory, and strategic entrepreneurship to highlight how institutions at different levels influence entrepreneurial decision-making.

IM: The Influence of Geopolitical Tension on Indigenous Firms' Political Capital Building

Author: **Chenjing Wang**, *Guanghua School of Management, Peking U.*
Author: **Li Tong**, *Guanghua School of Management, Peking U.*
Author: **Xiacong Tian**, *School of Management, Shandong U.*
Author: **Changqi Wu**, *Shandong U.*

Research suggests that geopolitical tension can influence MNE operations in host countries, but it remains an open question how geopolitical tension shapes indigenous firms' strategy. Drawing upon geopolitical jockeying and resource dependence perspectives, we postulate that geopolitical tension may motivate indigenous firms to build political capital. We further propose that intents of building political capital are contingent upon resource dependence relationships, consisting of resource competition and resource exchange. Our findings indicate that resource competition with the foreign (market presence of foreign investments) strengthens the effect of geopolitical tension, whereas resource exchange with the foreign (trade openness with foreign firms) weakens this effect.

IM: Motivation in New Ventures for FDI Spillovers Absorption: The Role of Performance Feedback

Author: **Haobang Chen**, *School of Economics and Management Tsinghua U.*
Author: **Zhenzhen Xie**, *School of Economics and Management Tsinghua U.*

Prior literature on foreign direct investment (FDI) spillovers mainly pays attention to local firms' horizontal competitive motivation to absorb spillovers. Drawing upon the behavior theory of the firm (BTOF), we argue that local firms' motivation to learn is not just determined by their competition with foreign firms, but influenced by their performance compared with their past, and their competitors or peers, in a broader sense. We discuss how performance feedback influences new ventures' motivation to learn from foreign firms in the emergent market through the employee turnover mechanism, i.e., recruiting employees with experience in foreign firms. Then we investigate the role of performance feedback in the overall FDI spillover effect by integrating all four major mechanisms. Based on empirical estimations over new ventures in China, we find that above-aspiration performance positively moderates the influence of FDI on new ventures' employment demand while below-aspiration performance has the opposite influence. Generally, the influence of the presence of FOE on ventures' productivity is positively moderated by performances above aspirations. This paper contributes to FDI research by extending firms' motivation to absorb FDI spillovers through the lens of organizational learning and joining the discussion over "passive recipients", which are those with above- or near-aspiration performance in our paper.

IM: Influences to the Motivation of Recipient Organizations in International Capability Transfers

Author: **Olof Lindahl**, *Uppsala U.*
Author: **Muhammad Akash Bin Nasir**, *Institute of Information Systems, U. of Bern*
Author: **Henrik Dellestrand**, *Dept of Business Studies Uppsala U.*

Research on international capability transfers has since its start highlighted the motivation of the recipient as an important influence to successful transfers. However, while another key driver of transfer success, i.e., absorptive capacity, has attracted enough attention from research to become a sub-field of its own, motivation has repeatedly been seen as a simple and straight-forward construct. So, while motivation has over again been identified as a main influence of transfer success, how it becomes such an important driver has received little attention. Consequently, we know little about what actually influences the motivation of recipients in transfers. Utilizing an inductive multiple-case study, we explore how the motivation of recipient organizations in capability transfers are influenced by various aspects of the transfer process. We contribute to the transfer literature by identifying how different aspects of the transfer process drive recipient motivation at different stages. The findings suggest that recipient motivation in transfers is not so much a static as a dynamic process, with important implications for theory and future research.

Managing Change in the Host Country

Session Moderator: **Jing Zhao**, *Renmin U. of China*

IM: International Echoes in Local Arenas: How Free Trade Zones Reshape the Global Composition of TMT

Author: **Jing Zhao**, *Renmin U. of China*
Author: **Keyu Fu**, *Renmin U. of China*

Winning the battle for global talent have become key arenas of competition among governments and businesses worldwide. This study aims to explore how China's Free Trade Zone (FTZ) policy influences the degree of internationalization within corporate top management teams. Through an analysis of companies listed on China's A-share market, we found that the FTZ policy significantly increases the proportion of corporate executives with international experience. Heterogeneity tests revealed that the impact of the FTZ policy is particularly pronounced in private enterprises, in the eastern region, and within the high-tech industry. Our analysis of the underlying mechanisms and impacts suggests that the FTZ policy facilitates corporate internationalization by expanding firms' overseas operations and enhancing executive compensation. This, in turn, leads to increased transparency in the corporate information environment. The findings suggest that emerging market governments should leverage free trade policies, along with other strategies, to attract international talent and enhance the global competitiveness of their businesses.

IM: Co-Evolution in Institutional Environments: A Mixed Methods Study on Corporate Political Activities

Author: **Evelyn Reithofer**, *WirtschaftsU. Wien*

This paper compares the corporate political strategies employed by multinational enterprises, MNEs (accept existing institutional boundaries), with those of emerging economy multinational enterprises (change institutional environments, i.e., co-evolution), EMNEs. Based on a mixed methods study, the paper combines quantitative data from 1,128 market authorizations in the US food industry with qualitative data from 31 interviews. Thereby, the paper illustrates that the engagement with institutional environments of EMNEs is vastly different from MNEs; EMNEs engage in co-evolution resulting in different conditions (first mover advantage, authority relation) and application of corporate political strategies. This study adds to existing International Business research on co-evolution.

IM: The Benefits of Being a Cultural Outsider: The Journey of MNEs Becoming Less Hierarchical in France

Author: **Nishani Bourmault**, *NEOMA Business School*

It is well-established in the literature that foreign MNEs face a liability of foreignness, or disadvantage, compared to local counterparts. They face the additional challenges of learning the unwritten rules of local cultural norms and successfully adapting their organizational practices to these norms. However, we have limited understanding as to how being a cultural outsider can sometimes be a benefit to foreign MNEs, particularly when using organizational practices that are not aligned with local cultural norms. Based on 50 in-depth interviews with managers and employees working in French and foreign MNEs located in France, a country with a strong hierarchical culture, I unpack how being less embedded in the French culture becomes an asset for foreign MNEs. This study explores how foreign MNEs in France – who implement similar non-hierarchical practices as their local counterparts – are more successfully able to change hierarchical tendencies (compared to French MNEs). Namely, the informal norms (symbols & language, distinction between rank and education, and social protocols) in foreign MNEs' French subsidiaries - shaped by their home country cultures - help them benefit from their formal non-hierarchical practices. On the other hand, the informal norms in French MNEs remain very hierarchical, causing incoherence with their formal practices.

IM: The Exposure of Emerging Market MNCs to Patent Litigation Abroad

Author: **Wolfgang Sofka**, *Copenhagen Business School*
Author: **Nikolaos Papageorgiadis**, *U. of Liverpool*
Author: **Sreevas Sahasranamam**, *U. of Glasgow*
Author: **Mukundhan K.V.**, *Indian Institute of Management, Tiruchirappalli*

Threats from patent litigations are a major roadblock for the internationalization strategies of MNCs from emerging markets (EMNCs). While extant theory focuses on weak patent systems in emerging economies as an obstacle for multinational corporations from developed economies, we conceptualize them as experiential learning contexts, shaping patent enforcement routines of local firms. We reason that superstitious learning from patent enforcement experiences as defendants in weak, domestic patent systems are counterproductive for EMNCs. Overconfidence in underdeveloped patent enforcement competences expose them to costly patent litigation abroad. We find empirical support analyzing 2273 Indian firms between 2007 and 2017. Vicarious learning from operating in many countries with strong patent systems and experience with patent filings abroad create boundary conditions.

Managing the MNE in the Digital Age

Session Moderator: **Sali Li**, *U. of South Carolina*

IM: The Dark Side of Digitalization: Divergence Between Formal and Informal Institutions   

Author: **Noman Ahmed Shaheer Siddiqui**, *U. of Sydney Business School*
Author: **Wei qiang Tang**, *Griffith U.*
Author: **Jing Yu Yang**, *U. Of Sydney*

We revisit the role of formal and informal institutional environments in deterring ethically questionable activities conducted through digital channels. While stronger regulations seek to curb ethically questionable digital activities, we suggest that informal institutions in certain countries may diverge from formal regulations, creating attractive demand-side opportunities that compel businesses to surpass regulatory constraints and engage in ethically questionable digital activities. We further suggest that such divergence between formal and informal institutions is more prominent in countries with higher digital usage. By analyzing a large dataset on ethically questionable digital activities carried across 82 countries, we find empirical support for our theoretical contentions.

IM: The Complementary Impact of Cross-Border E-Commerce and Traditional Entry Modes on Firm Performance

Author: **Yanan Xu**, *Shanghai Jiaotong U.*
Author: **Chengcheng Xia**, *Shanghai Jiao Tong U.*
Author: **Jingyu Li**, *0723*
Author: **Xufei Ma**, *Chinese U. of Hong Kong*

This study draws upon the complementary asset perspective to investigate the effects of cross-border e-commerce (CBEC) on firm performance in international business (IB), the complementarity between CBEC and traditional entry modes (TEMs), and the moderating effect of CEO tenure. Using a unique dataset involving multiple CBEC platforms, this study finds that CBEC adoption positively affects firm IB performance and the combination of CBEC and TEMs can facilitate firms' online-offline complementation, thereby enhancing firm IB performance. Further, CEOs with long-term tenure naturally accumulate more experience, which can in turn strengthen the complementary effect of CBEC-TEM interaction in improving their firms' IB performance. This study enriches the complementary asset literature and extends IB entry mode research.

IM: Resilience Development with Modular Logic for the Internationalization of Platform MNCs 

Author: **Yong Lin**, *U. of Birmingham*
Author: **Yi Sun**, *U. of Cambridge Department of Engineering*
Author: **Jing Luo**, *U. of Greenwich*

In the contemporary digital landscape, platform-based business models have experienced meteoric rise in global prominence. However, the international ascendancy of Platform Multinational Corporations (PMNCs) is contingent upon their ability to adeptly navigate a multitude of challenges. Within this dynamic, resilience emerges as a crucial attribute, with modularity serving as a vital mechanism to foster such resilience. This resilience enables PMNCs to adapt flexibly and efficiently to diverse global markets. This research advances a conceptual framework predicated on the structure-conduct-performance (SCP) paradigm, underscoring the interplay between structural and behavioural resilience and their collective impact on the internationalization performance of the PMNCs. It posits that the synergy between the technical architecture, organization structure, and market structure underpins structural resilience. Concurrently, cultivating the alignment between structural and behavioural resilience is instrumental in harmonizing adaptability and transformability, which are essential for the sustained internationalization success of PMNCs.

IM: Think Global & Be Global: How Global Mindset and TMT Internationalization Affect Digital Innovation  

Author: **Ricarda B. Bouncken**, *U. of Bayreuth*
Author: **Till Marius Gantert**, *U. of Bayreuth*

Digital technology can support innovation because it provides instantaneous connectivity to distant points in geographic space, such as between dispersed innovation team members. However, digital technology bears strong limitations when innovation demands transporting tacit, sticky, and contextualized knowledge. This double edge sword becomes even more severe for digital innovation, because it is strongly dynamic and based on repeated knowledge transfers among participants who are working in dispersed geographical locations and operating upon sticky and contextualized knowledge. We assume that greater internationalization of the top management team and their more global mindsets in the firm can help to cope with problems of combining sticky and contextualized knowledge from diverse and dispersed locations. Our study finds that both greater internationalization of top management teams and global mindsets support digital innovation. Interestingly, a stronger firm level of global mindset supports innovation largely regardless of the TMT internationalization level. Surprisingly, a group-wise comparison shows that greater internationalization and mindsets are more relevant for innovation of non-MNEs than of MNEs.

Non-Market Strategies at Local Context: Roles and Importance of Local Stakeholders and Environments

Session Chair: **Chang Hoon Oh**, *U. of Kansas*

Panelist: **Nan Jia**, *U. of Southern California*

Panelist: **Jon Jungbien Moon**, *Korea U.*

Panelist: **Charles Edward Stevens**, *Rutgers U.*

Panelist: **Pei Sun**, *Alliance Manchester Business School, U. of Manchester*

Panelist: **Tazeeb Rajwani**, *U. of Surrey*

Panelist: **Natalia Yakovleva**, *Kedge Business School*

The primary objective of this panel symposium is to delve into how theories and methodologies within international strategic management can enhance research on the non-market strategies of multinational enterprises (MNEs). Traditionally, such strategies have been examined primarily at the corporate level. The symposium aims to push the boundaries of existing research paradigms, seeking to improve the understanding and analysis of non-market strategies at the local level. The core focus of the discussion centers on pinpointing critical future research questions within non-market strategy at the local level. These questions are designed to illuminate the challenges and opportunities encountered by MNEs operating in diverse local socio-political environments. By scrutinizing the intricacies of non-market strategies at the local level, the discussion aims to identify key areas that warrant further investigation, contributing to a nuanced understanding of MNEs' interactions within specific socio-political contexts. Serving as a platform for management scholars with diverse research contexts across the globe, the panel will facilitate the sharing of knowledge and the exploration of new research questions within the topic.

Understanding and Managing AI-Induced Quiet Quitting: A Multifaceted Approach

Organizer: **MaQueba Massey**, *Iowa State U.*
Presenter: **Liza Lybolt**, *Texas A&M International U.*
Participant: **Olga Chapa**, *U. of Houston, Victoria*
Presenter: **Raghida Abdallah Yassine**, *Adelphi U.*
Participant: **Gagan Pradhan**, *Adelphi U.*
Presenter: **Pearl Malhotra**, *Indian Institute of Management, Bangalore*
Presenter: **Lu Yu**, *Missouri State U.*
Participant: **Hong Ren**, *U. of Wisconsin, Milwaukee*
Participant: **Xiaoxia Zhu**, *U. of Wisconsin-milwaukee*

In the ever-evolving landscape of organizations, the introduction of artificial intelligence (AI) has brought forth a dynamic interplay of opportunities and challenges. A pressing challenge in this context is the phenomenon of "Quiet Quitting" (QQ), where employees silently disengage while technically remaining employed. AI plays a pivotal role in QQ, capable of both exacerbating and alleviating this disengagement trend. Thoughtfully employed, AI-powered solutions can enhance worker satisfaction and engagement by enabling more equitable performance assessments, delivering real-time feedback, and offering tailored learning and development opportunities. Furthermore, addressing algorithmic biases in AI systems can promote fairness and inclusivity in the workplace, thus mitigating the factors contributing to QQ. Ethical and effective integration of AI is paramount for organizations in the current HRM landscape. Building trust and assuaging employee concerns about job security and skill obsolescence through transparent communication and active involvement are essential steps. This proposal seeks to comprehensively explore how AI influences QQ, providing valuable insights and novel management strategies relevant to HRM professionals, addressing the multifaceted impact of AI on QQ and its significance in optimizing HR practices and consulting strategies in the AI-driven workplace.

Participant: **Megha Yadav**, *U. of Wisconsin, Milwaukee*
Participant: **Maria Mouratidou**, *U. of Cumbria, UK*
Participant: **Rylan Simpson**, *Simon Fraser U.*
Participant: **Rich Johnston**, *Barrie Police Service*

This symposium examines and promotes positive organizational change within law enforcement agencies. Its main goal is to advance the understanding and application of Positive Organizational Scholarship (POS) principles in the complex landscape of policing by bringing together various perspectives, experiences, and research findings. Since its inception, Positive Organizational Scholarship (POS) has emphasized the importance of building strengths, fostering positive relationships, and initiating substantial changes in organizations. Based on this philosophy, the symposium adopts a POS approach, acknowledging that organizations thrive when they prioritize what works. This perspective offers a valuable lens to explore novel strategies and interventions that cultivate positivity, resilience, and flourishing in the face of work challenges within the law enforcement context. Ultimately, the symposium highlights innovative strategies, interventions, and approaches that facilitate positive transformations, improve relationships, and tackle challenges within law enforcement organizations. Through an in-depth examination of various initiatives, including procedural justice training, implicit bias training, and the restructuring of specialized units, as well as the negotiation of collective bargaining agreements, this symposium aims to contribute meaningful insights and promote positive change practices in law enforcement.

Paradox in Management Education

Session Moderator: **Bunshiro Ochiai**, *Kyoto U.*

MED: Learning About Paradoxes is Paradoxical: How Managers Improve Paradox Mindset Through Training

Author: **Bunshiro Ochiai**, *Kyoto U.*
Author: **Tomoki Sekiguchi**, *Kyoto U.*
Author: **Norihiko Takeuchi**, *Waseda U.*
Author: **Miyako Imamura**, -
Author: **Shunsuke Nakamura**, *Kyoto U.*

While management research has recognized the importance of a paradox mindset for leaders to manage tensions effectively, little focus has been given to its potential for learning, especially through training interventions. This study explores whether and how managers can improve a paradox mindset through training interventions. The training involved 26 managers across diverse industries, blending lectures, business case examples, and ethnographic exercises over five three-hour sessions. Participants' paradox mindset generally increased after the training intervention, and inductive analysis and subsequent qualitative comparative analysis (QCA) revealed that improving a paradox mindset is achieved through the simultaneous pursuit of seemingly contradictory processes of simplification with complexification, suggesting that learning about paradoxes is paradoxical. Based on these findings, we develop a model of the learning processes and mechanisms that underlie the simultaneous pursuit in which improving a paradox mindset is realized through multiple pathways with diverse and intertwined learning mechanisms, including cognitive, experiential, and transformative learning. Our findings contribute to both management learning and education and paradox literature by offering a theoretical understanding of improving a paradox mindset and its practical applications for the design of effective training interventions.

MED: Too Fast to Live: Management Learning from the Icarus Paradox of Rapid Organizational Growth

Author: **Runtian Jing**, *Shanghai Jiao Tong U.*
Author: **Juhui Geng**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Drawing inspiration from the Greek myth, the Icarus paradox suggests that rapid growth can lead to future failures in the business context. While the prevalence and significance of this paradox are well acknowledged, the underlying mechanisms and essential abilities crucial for navigating this paradox have hitherto received scant empirical attention. In the present study, we investigate when and why past rapid growth will amplify subjective biases in the future decision-making process. Using a real estate business competition simulation with a sample size of 367 students, we found that the presence of rank growth could increase the psychological momentum of participants, ultimately resulting in an escalation of commitment and the illusion of control. We also found that cognitive complexity mitigated these relationships and made the decision-making processes more prudent. Our findings make a novel contribution for students to understand the psychological mechanisms behind the Icarus Paradox and the critical capability that can be leveraged to navigate this paradox. We also contribute to management education literature by developing an experiential learning platform for promoting active engagement and improving management capabilities.

MED: Integrated Paradox Mindset Development: A Design Science Approach

Author: **Anne Marie Halton**, *Queensland U. of Technology*
Author: **Anna Wiewiora**, *Queensland U. of Technology*
Author: **Kevin Clyde Desouza**, *Queensland U. of Technology*

Leaders today must navigate competing demands and contradictory pressures. A paradox mindset involves accepting paradoxes and learning to see them as opportunities rather than as threats. Leaders who have a paradox mindset have been shown to be effective in transcending traditional binary responses and embracing novel solutions that improve performance and foster innovation. Developing a paradox mindset is not a simple exercise as it requires a shift in how leaders think about and approach paradoxes. Research to date that offers a pedagogy for teaching paradox has as yet failed to offer a holistic approach. Using a design science approach, this study develops and evaluates an integrated paradox mindset learning intervention. Key elements include transformative learning experiences, Socratic questioning, individual reflective practice, group work and practical activities. The study uses a lens of transformational learning theory to develop an integrated learning intervention by which leaders can develop paradox mindset. A contribution is also made to the paradox literature by operationalizing an approach for developing a paradox mindset. Study outcomes offer a ready-to-use toolkit that leaders can apply in their workplace, hence bridging the research-practice gap.

MED: Heuristics for Problem Framing: Collaborative Scaffolding in Design Thinking Education

Author: **Stefan Meisiek**, *U. of Sydney Business School*
Author: **Anjana Dattani**, *U. of Toronto*
Author: **Angele Beausoleil**, *Sauder School of Business, U. of British Columbia*

To help DT learners in management education through the process, educators employ instructional scaffolds, i.e. facilitation, guidelines and interventions intended to enable DT learners to reach the zone between what they can do unsupported and what they cannot do even with support. However, faced with an unfamiliar task and process, group members themselves might assume scaffolding responsibilities to help others in the group reach further than they could without it. To examine the relationship between instructional and collaborative scaffolds in management education, we conducted a qualitative empirical study of MBA and Executive MBA courses in Design Thinking at a North American business school. We found that instructional scaffolds were enacted, enriched and reinterpreted in the collaborative scaffolding in the learner groups, with significant consequences for achieving the intended learning outcomes. The paper contributes to the literature on learning and teaching in management education, and more specifically to scaffolding in design thinking and other problem-based educational approaches.

The Different Experiences of X-Culture: Which is Yours?

Organizer: **Wendy Farrell**, *Management Center Innsbruck*

Organizer: **Justin Kraemer**, *Mae Fah Luang U.*

Panelist: **Ernesto Tavoletti**, *U. of Macerata*

Panelist: **Daria Panina**, *TAMU, Mays Business School*

Panelist: **Marjaana Gunkel**, *Free U. of Bozen-Bolzano*

Panelist: **Dhruv Pratap SINGH**, *NEOMA Business School*

Panelist: **Xavier Ordeñana**, *Tecnologico de Monterrey & ESPOL*

Panelist: **Alfredo Jimenez**, *Kedge Business School*

This panel symposium will briefly describe the diverse aspects of X- Culture, which began as an experiential learning initiative over a decade ago. Over time, it has adapted to many changes in online and onsite environments. This symposium will outline the changes X-Culture has faced over the years and how it has innovated to maintain the benefits it provides to dozens of instructors and thousands of students each semester. For example, the symposium will describe administrative changes, how hosting and participating in its Global Symposium has evolved, how its coaching program has adapted, and how its data/research efforts have matured. Seasoned members of the X- Culture community will make brief presentations on each of these "experiences." Audience members will then self-select into tables to further discuss the topics of interest. Which experience best fits your goals? Come and find out!

Tracing Organizational Histories: Narratives, Memory, and Legacy

Session Moderator: **Ziyun Fan**, *U. of York*

This session delves into the historical dimensions of organizational narratives, memory construction, and the enduring legacies that shape organizational identities.

MH: Legacy as Atmospheric Space

Author: **Yihan Liu**, *U. of Liverpool Management School*
Author: **Ziyun Fan**, *U. of York*

How can we understand legacy as space? We address this question through a non-representational approach to space by conceptualizing legacy as and through atmospheric space. We argue that the atmospheric spatialization of legacy is a tensional yet regulative mechanism that both structures and disrupts an inherited reality being re-lived in the present, generating multiple and contesting realities. We show how such tensional organizing of legacy is formed by and forms competing interactions between a staged past and a living present. Drawing on a historical case study with two rounds of archival data collection and 47 semi-structured interviews on a historically prestigious Victorian building, we bring forward three interconnected forms of such competing interaction, including atmospheric alignment with hope, misalignment as a catalyst for change, and (re)alignment with entrapment. The contribution is twofold. First, we extend the limited understanding of space in the study of legacy, which is largely one-dimensional considering space as a physical and static container. We show how the interactions between atmospheric space and legacy partake in the contesting actualization of legacy. Second, this study partakes in the broader conversations on the 'atmospheric turn' in management and organization studies, foregrounding the tensional in-betweenness of atmospheric space, in turn unveiling the danger of contagiousness of legacy.

MH: Marking History and Making History: Temporal Narratives and Strategic Internal Communication

Author: **Joe Chick**, *Newcastle Business School, Northumbria U.*
Author: **Michael Heller**, *Brunel Business School, Brunel U. London*
Author: **Michael Rowlinson**, *U. of Exeter*

This article explores the strategic use of historical narratives in organizational communication, introducing the concept of 'temporal narratives'. These narratives, focusing on historical events and milestones, employ nuanced language and varying temporal perspectives (past, present, future) to shape organizational identity and influence perceptions among employees. The temporal narratives matrix presented in the paper exemplifies the ways in which the choice of temporal focus and theme in a narrative contributes to specific strategic goals. The model illustrates how some organizational narratives are tailored to focus on the past by marking historical time or on the present for making historical change. The narratives also vary between themes of tradition and ones of innovation. Organizations can use these two variables in shaping their narratives to serve goals of instilling trust, demonstrating relevance, or creating a sense of continuity of either strategy or values. The study engages with the historical turn in organizational studies, turning attention towards the use of rhetorical history in the past rather than the present day. It uses the concept of 'past presents', in which historical events are viewed from an earlier era's perspective. The temporal narratives matrix provides a framework for understanding how organizations and their employees align past events with present activities to influence the perceptions of others. The study reinforces the importance of audiences in shaping narratives, with examples of rhetorical history not only coming from employers but also employees.

MH: Unravelling the Relational Processes Involved in the Co-construction of Organisational Memory

Author: **Ian Jones**, *U. of York*
Author: **Nicholas Wong**, *Newcastle Business School, Northumbria U.*
Author: **Andrew D A Smith**, *Birmingham Business School, U. of Birmingham, UK*

Research in organisational memory studies has illuminated the ways that organisations shape, and are shaped by, remembering and forgetting (Foroughi et al., 2020). However, recent work by Coraiola et al. (2023) has called for research that focuses on the multiple mnemonic communities with organisations. This paper responds to this call by analysing and deconstructing the processes through which memory is constructed. The research context is a large UK-based multinational bank that reconstructed the firm's organizational memory during a period of crisis that damaged its legitimacy. To examine this phenomenon, we conducted 21 semi-structured interviews that revealed the collaborative and relational process that the corporate archivists and the senior management team engaged in order to resolve the bank's organizational crisis. In doing this, we theorised how different mnemonic communities collaborated to co-construct organisational memory in the form of a historical narratives. This study contributes to organisational memory studies theory by showing the importance of taking both an interpretive and functionalist perspective when researching memory; and contributes empirically by producing a process model that shows the memory construction in practice, and by highlighting the organisational power relations that can affect how this process unfolds.

Diversity and Discrimination in the Workplace

Session Moderator: **Jackson Lu**, *MIT Sloan School of Management*

MOC: **The Bamboo Ceiling: A Creativity Stereotype View on East Asians' Underrepresentation in Leadership (WITHDRAWN)**     

Author: **Jackson Lu**, *MIT Sloan School of Management*

Despite the economic achievements of East Asians (e.g., ethnic Chinese) in the US, they are disproportionately underrepresented in leadership. To elucidate this “Bamboo Ceiling,” we propose a novel explanation: East Asians are under-selected for leadership positions partially because they are stereotyped as lacking creativity, a prized leadership attribute in US culture. We first tested our proposition in two field studies: Across 33 class sections of 2,304 students in a US MBA program, East Asians were perceived by their classmates as less creative than other ethnicities (e.g., South Asian, White) at the beginning of the program—when the students had limited interactions and were likely influenced by creativity stereotypes. Lower perceived creativity mediated why East Asians were less likely than other ethnicities to be nominated (Study 1) and elected (Study 2) as class-section leaders by their classmates. These findings were replicated in two preregistered vignette experiments of non-Asian Americans (Studies 3 and 4, N=1,775): Compared to candidates of other ethnicities, East Asian candidates with an identical profile were viewed as less leader-like due to lower perceived creativity. Although East Asians are commonly stereotyped as competent, they are also stereotyped as lacking creativity, which can hinder their leadership emergence in US organizations.

MOC: **Fake but Fit: The Effect of Presented Calling Orientation on Recruiter Perceptions** 

Author: **Kelly Nault**, *IE Business School*
Author: **Winnie Jiang**, *INSEAD*

There is increasing emphasis on following one's professional calling, work that provides meaning via personal fulfillment and the opportunity for societal contributions. This contrasts a “job orientation” whereby people find meaning in work that provides material support. We argue that recruiters evaluate candidates presenting themselves as possessing a calling orientation more favorably, albeit as less authentic, than those presenting a job orientation. Across five experiments (total N = 1,613), calling- (vs. job-) oriented candidates were perceived to be less authentic but have greater self-monitoring abilities, indirectly eliciting higher performance expectations and hiring intentions. Candidates presenting a calling orientation are seen as fake yet fit. We additionally tested two interventions to increase the favorability of both job and calling-oriented candidates. Calling-oriented candidates who conveyed signals supporting the credibility of their calling orientation increased perceptions of their authenticity. Job-oriented candidates indicating they liked their work increased perceptions of their self-monitoring abilities.

 MOC: **When Loss Bleeds into Work Life: How Women Manage Grief After Miscarriage** 

Author: **Elizabeth Sheprow**, *Harvard Business School*
Author: **Alexandra Feldberg**, *Harvard Business School*

In this study, we explore how women incorporate their experiences of disenfranchised grief into their work lives and with what consequences for their professional selves. To examine this question, we draw on 64 interviews with working women who have experienced a miscarriage within the past year. We find that in the absence of clear organizational policies and scripts for how to deal with their grief, women assess the supportiveness of their work relationships, which informs their emotion regulation processes. We induce two pathways by which women incorporate grief into their work lives. The first is a pathway through which women independently cope with their grief—they engage in solo emotion regulation strategies that enable them to tend to their grief while safeguarding their professional reputations. In so doing, they keep their grieving and professional selves compartmentalized. The second is a pathway through which women relationally claim space for their grief. They engage in social emotion regulation strategies that jointly serve as attempts to safeguard their professional reputations and make bids for psychological recognition. When recognition is attained, these women integrate their grieving and professional selves. We discuss the implications of these findings for our understanding of humanizing the self at work, disenfranchised grief and work, and working women's experiences of miscarriage.

MOC: **A Theory of Time-Based Discrimination in Evaluation**   

Author: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*
Author: **Curtis Kwinyen Chan**, *Boston College*
Author: **Erin Marie Reid**, *McMaster U.*

Career inequality across demographic groups remains pervasive in professional and managerial roles. Given the importance of long work hours to professional and managerial culture, we posit that biased evaluations of individuals' time spent working may importantly shape these inequalities. Synthesizing scholarship on inequality with theory on subjective time, we theorize a process of time-based discrimination in evaluation. We suggest that demographic tokens—numerical minorities in a given context—may experience discriminatory evaluation of their work time. We posit that key aspects of the temporal context in professional and managerial jobs amplify evaluators' emphasis on work time in evaluations. When assessing tokens, evaluators' time-based stereotypes about the token group's characteristics may be activated. Some tokens may be stereotyped as “shirkers,” experience scrutiny of their work hours, and get interpreted as being misfits with the dominant culture on the basis of low hours worked. Other tokens may be stereotyped as “overworkers,” experience scrutiny of their natural ability, and get interpreted as being misfits on the basis of low talent. Together, these processes may negatively affect performance assessments and evaluations of leadership potential for tokens. We delineate contributions and new lines of research for scholarship on career inequality and subjective time.

Presenter: **Gerry M. McNamara**, *Michigan State U.*
Participant: **Zixuan Gu**, *Michigan State U.*
Participant: **Kalin D. Kolev**, *Marquette U.*

The Behavioral Theory of the Firm (BTOF) explains the processes with which firms set aspirations, evaluate firm performance relative to those aspirations, and change their strategies in response to attainment discrepancies. While foundational work acknowledged the important role of firms' executives, few papers have theorized and studied when and how they matter. This is remarkable, considering that the BTOF's processes require cognitive efforts, including retrieving external information and interpreting feedback, in which executives will likely differ. At the same time, scholars have raised their concerns on contrasting findings reported by prior research. Extending and testing theory on the role of executives through consideration of their individual attributes and biases may help bring reconciliation. This symposium showcases four studies, aiming to facilitate knowledge sharing and discussions on the role of executives in the BTOF. This symposium aspires to appeal to behavioral strategy researchers and other scholars interested in understanding how cognition shapes strategic decision-making.

Innovative Approaches to Collaboration, Mentoring, and Remote Work

Session Moderator: **Hayoung Park**, *U. Paris-Panthéon-Assas*

This session explores innovative collaboration, mentoring, and remote work approaches, focusing on the psychological, social, and value-based factors that shape these experiences.

MSR: **The Impact of the Mentor's Values on the Mentee: Fusion Adhesion Rejection**

Author: **Hayoung Park**, *U. Paris-Panthéon-Assas*
Author: **Catherine Voynnet Fourboul**, *U. Paris Pantheon Assas*
Author: **Eric Gautier Laurent**, *IRG, U. Gustave Eiffel, U. Paris-Est Créteil, F-77454 Marne-la-Vallée*

Mentoring is a support tool that takes place in a relational universe marked by learning, transmission, and deep authentic exchanges between the people involved (Megginson, 2006). Internal factors play an important role in the relational and managerial spheres, particularly values, which have a determining impact on individuals' decisions, both personal and professional, and which can influence mentoring. However, research on mentoring focuses on extrinsic elements for the creation of dyads and for the outcome of this relationship, which risks neglecting one of the important dimensions. Thus, the aim of this research is to identify the impact of the mentor's values on the relationship with their mentee. A qualitative study of 18 dyads revealed that the interaction of values between mentor and mentee leads to fusion, adhesion, or rejection effects in the latter, enabling us to sketch out a model of the mentoring relationship based on the role of values. Subsequently, the analysis of values using Barrett's model (1998) made it possible to examine the impact of values according to levels of consciousness and to categorize 4 types of dyads. Finally, criteria for integrating values into the creation of dyads are suggested to improve the quality of relationships at managerial level.

MSR: **Investigating the Psychological Capital and its Antecedents in Remote Work: A Qualitative Inquiry**

Author: **Vineet Arora**, *Indian Institute of Technology Kanpur India & La Trobe Business School Australia*
Author: **Jasvir Kaur Nachatar Singh**, *La Trobe Business School*
Author: **Amit Shukla**, *Indian Institute of Technology Kanpur*

With the rapid acceleration in technology development and the push by the COVID-19 pandemic, remote work (such as working from home or anywhere) has gained considerable adoption in organizations. However, there is a paucity of research that explores the composition of remote workers' psychological capital (PsyCap) that can enable them to deal with the challenges of remote work and aid their performance. We used a constructivist grounded theory approach and foundations of positive organizational behavior (POB) literature to identify the psychological resources that can form the PsyCap of remote workers and understand the mechanisms through which these resources can be developed. The semi-structured interviews with 42 remote workers suggest new dimensions to the components of PsyCap and additional psychological capacities that hold potential for inclusion in the PsyCap theory in remote work. The findings also highlight the role of meaningful work and mindfulness practices in augmenting the PsyCap of remote workers. The study contributes to the body of knowledge on remote work and positive organizational behavior and enriches the workplace spirituality literature by extending it in the context of remote work. Theoretical and practical implications are discussed.

MSR: **Collaborative Social Innovation in Shared Spaces**

Author: **Eirik Aadland Tappel**, *VID Specialized U.*
Author: **Beate Jelstad Lovaas**, *VID Specialized U.*
Author: **Thomas Hoholm**, *BI Norwegian Business School*

This study investigates collaborative social innovation from a civic sector perspective. More specifically, we aim to explore how religious organizations collaborate across boundaries for social innovation. Two research questions guide this study: What are the conditions for the emergence of multiactor collaboration? What are the impacts of collaborative social innovation? The empirical data in this qualitative study stem from the Norwegian Church Abroad, a religious organization with extensive experience in multiactor collaboration around the world that contributes to social innovation in local communities. Three different cases in two different European countries were strategically selected as they represent collaboration with other religious organizations in the civic sector, collaboration with public actors, and collaboration with a business organization. The study is based on 29 qualitative, in-depth, individual interviews and 7 qualitative group interviews with paid staff (employees), volunteers, and external cooperation partners, as well as 43 hours of observation and an examination of official documents from the organizations. Systematic coding and thematic analyses were conducted. Shared spaces played central yet different roles in the emergence of multiactor collaborations. The impacts of collaborative social innovation were analyzed by applying the framework of collaborative innovation in terms of learning, synergy, and commitment, and by indicating the impacts on the individual, organizational, and local community levels. The article also reflects on the role of volunteers in multiactor collaborations.

Author: **Charles Thomas Tackney**, *Copenhagen Business School*

This theology of the workplace investigation uses a criterion-predictor approach to assess current U.S. Roman Catholic “employment-at-will” (EAW) legal practice against Roman Catholic Social Teachings (RCST) for justice in the workplace. The first step “problematizes” EAW precedent using recent labor law historical scholarship indicating, domestically, U.S. case law precedent reflects a very deliberate post-Civil War effort by corporation law scholars to restrict employment opportunities of recently freed U.S. citizen and thus all other U.S. private sector workers as industrialization proceeded. The comparative post-World War II Japanese receipt of functionally identical labor legislation and subsequent path dependent divergence from EAW for social justice offers exogenous alternatives. Roman Catholic Social Teachings then clarify and focus the point of data analysis where employment practice is assessed against criteria RCST. The data section summarizes findings from an ongoing 2014 – 2023 longitudinal population study of publicly available employment data from all 160 diocesan and 34 archdiocesan websites of the U.S. Roman Catholic church. Comparative employment policies of other nations and national Roman Catholic conferences, particularly that of Australia, join with Japanese history to indicate viable conformity to RCST norms for social justice in employment that include: a continuing employment relationship, just cause dismissal protections, labor union support, and employee participation in managerial prerogative. The discussion includes a practical sample text for implementation of RCST in the U.S. workplace, incorporating RCST and Japanese norms for RCST evangelization of culture and the restitution of employment in justice for all private sector U.S. citizens.

“Innovating for the future” is implicit as scholars seek to find alternative ways of being that challenge the current dualistic approach to organising. This symposium thus offers a unique lens based upon a wholism that characterises diverse spiritual traditions to counter this separation, while also extending our understanding of the importance of alternative ontologies. Humans are embedded in an interconnected dynamic universe where the human and the more-than-human co-exist in an entangled web of relationships. Thus, how may life-sustaining meshed webs of relations include the health and well-being of humans, animals, mountains, rivers, the sky, carbon and indeed the larger cosmological whole? (Ehrnström-Fuentes, 2022). How can engagement with a supreme being – that could be nature itself (Navarro et al., 2020) – unfold and how could this relationship contribute to working in harmony with the earth? This symposium assists in reconciling the nature-economy dualism through relational ontologies, recognising the earth as a living system in which humans and the economy are but a part. As Banerjee and Arjaliès (2021, p. 16) note, a relational perspective is “fundamentally animated and spiritual, immersed in a life force that transcends time, human and non-humans.” Thus, this symposium challenges how we may innovate for the future, with a fresh perspective from relational ontologies that challenge and question the status quo to reimagine organising among diverse but interconnected perspectives that include the more-than-human.

Affect Dynamics for Management

Coordinator: **Pietro Cipresso**, *U. degli Studi di Torino*
Organizer: **Francesca Borghesi**, *U. degli Studi di Torino*

In the fast-paced and ever-evolving landscape of contemporary organizational environments, the role of affect dynamics in management has become increasingly crucial. This symposium aims to explore the intricate interplay between emotions, attitudes, and workplace dynamics, shedding light on their profound impact on organizational success and employee well-being. The proposed symposium will bring together experts from diverse fields such as organizational psychology, management studies, and neuroscience to delve into the multifaceted dimensions of affect dynamics. Through a series of engaging presentations and discussions, our symposium seeks to address key questions related to the influence of emotions on decision-making processes, team collaboration, and overall organizational performance.

Leader and Team Motivation

Session Moderator: **Tingko Lee**, *Graduate School of Resource Management and Decision Science, National Defense U.*

OB: How and When Servant Leadership Activates Subordinates' Approach- and Avoidance-Oriented Voices

Author: **Tingko Lee**, *Graduate School of Resource Management and Decision Science, National Defense U.*

Author: **Kuoching Cavin Yen**, *Graduate School of Resource Management and Decision Science, National Defense U.*

Author: **Chieh Chao**, *Graduate School of Resource Management and Decision Science, National Defense U.*

Author: **Yi-yui Chan**, *Navy of Republic of China*

Existing studies have shown that supervisors with a servant leadership approach enhance subordinates' promotion focus. However, whether servant leadership increases the promotion focus and prevention focus simultaneously, in turn triggering voice behavior, remains unexplored. Drawing on the regulatory focus theory, this study investigates whether subordinates' perception of supervisors' servant leadership triggers their regulatory focuses (promotion focus and prevention focus), thereby enhancing voice behavior. In particular, in a high level of leader-member exchange (LMX), it whether strengthens the mediating effects of the relationship between servant leadership and voice behavior. Data were collected using subordinate-supervisor pairs in the workplace and a time-lag method with three stages. Research model testing was conducted by using Mplus 8.3. It was found that (1) subordinates' promotion focus has a positive mediating effect on the relationship between servant leadership and promotive voice behavior; (2) subordinates' prevention focus has a positive mediating effect on the relationship between servant leadership and prohibitive voice behavior; and (3) when subordinates perceive high LMX, the mediating effect of promotion focus on the relationship between servant leadership and promotive voice behavior is enhanced and, similarly, the mediating effect of prevention focus motivation on the relationship between servant leadership and prohibitive voice behavior is also enhanced.

OB: Pursuing a Future Leader Self: A Multi-Study Investigation 

Author: **Richard Morgan**, *Durham U. Business School*

Developing as a leader is widely recognized as a challenging endeavor that takes time. However, little research has been done to explain the process through which future representations of oneself as a leader relate to current leader identity and how future and current leader selves motivate action. Integrating possible selves theory with identity-based motivation theory, we test a serial mediation model in which a salient future leader self sequentially relates to leader identity, affective motivation to lead, and proactive leadership behavior. Study 1 (n = 186) was conducted at two time points over a year apart with employees from a manufacturing company. Study 2 (n = 265) included repeated measurement at three time points, each a month apart, with employees from different industries. Through cross-lagged analysis and time-lagged analysis, we found support for our hypothesized process model. The theoretical implications for leadership and leader identity theory are discussed along with the practical implications for prospective leaders and their development in organizations.

OB: The Influence of Team Reflexivity on Employee's Feedback-Seeking Behavior: A Multi-level Perspective

Author: **MengLi Liu**, *Shandong U.*

Author: **QiHui Sun**, *Shandong U.*

Author: **Tianyu Du**, *Shandong U.*

The uncertainty of the work environment increasingly emphasize the importance of employee's feedback-seeking behavior. Based on transactive memory system theory, the current study explores the multi-level effect of team reflexivity on employee's feedback-seeking behavior. Survey data collected from 197 participants in 56 teams in China showed that team reflexivity had a positive indirect effect on employee's feedback-seeking behavior, and team transactive memory system mediated such effect. Besides, results also indicated that team shared mental models moderated the effect of team reflexivity on team transactive memory system. These findings provided theoretical and practical implications for team management and employees' behavior management.

OB: Testing the (in) Congruence Effects of Visionary Leadership and Team OFTP on Team Proactive Behavior

Author: **Pei Liu**, *Sun Yat-Sen U.*

Author: **Yuting Mu**, *Sun Yat-Sen U.*

Author: **Xin Li**, *Jinan U. Management School*

Author: **Yanhua Ye**, -

Considerable research has focused on the effects of visionary leadership and argued that visionary leadership is beneficial for organizations, teams, and subordinates. Drawing upon uncertainty management theory, we aim to investigate the complex effects of visionary leadership on team proactive behavior. We propose that incongruence in visionary leadership and team occupational future time perspective (team OFTP) leads to a reduced team psychological safety climate, whereas the congruence can result in a higher team psychological safety climate. Regarding the congruence effects, team psychological safety climate is higher when visionary leadership and team OFTP are aligned at the higher level than they are aligned at the lower level. Regarding the incongruence effects, team psychological safety climate is lower when visionary leadership is higher than team OFTP as opposed to when visionary leadership is lower than team OFTP. Team psychological safety climate, in turn, mobilizes team proactive behavior. Moreover, we propose that team members' perceived environmental uncertainty exacerbates the detrimental effects of incongruence in visionary leadership and team OFTP on team psychological safety climate. Results of (moderated) polynomial regressions on 159 teams and 764 nurses supported all our hypotheses. These findings highlight the complex effects of visionary leadership and challenge the prevailing view on the benefits of visionary leadership.

Completing the Puzzle: Advances in Fit Research

Session Moderator: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*

OB: Task Allocation Preferences Assemble! A Mixed Methods Extension of Person-Task Fit to the Team Level

Author: **Christopher Winchester**, *U. of Minnesota Carlson School of Management*

Author: **Amy Bartels**, *U. of Nebraska, Lincoln*

Teams in the workplace are often tasked with completing big projects which can be allocated in incremental pieces, given to the team in their entirety, or some mixture of the two. Yet, the question remains: Which type of task allocation will help the team perform best? We suggest the answer lies in the examination of fit between the type of task allocation (TA) and the team's task allocation preference (TAP). Given the nascency of research on team-level fit, we adopt a multi-method approach to shift individual-level person-task fit theory to the team level (i.e., team-task fit). First, we investigate the process through which team-level TA-TAP fit unfolds utilizing a qualitative study of visual effects (VFX) artists working on Marvel Studios projects (Study 1). The findings offer a deeper understanding of TA-TAP fit as a team-level phenomenon and highlight shared leadership as a key team-level mechanism connecting TA-TAP fit and team performance. We then deductively test these relationships in a natural project study (Study 2) and an experiment (Study 3), finding that TA-TAP fit, regardless of the type of TA, leads to higher levels of shared leadership and team performance. Our contributions highlight robust findings across research settings and extend fit theory to the team level.

OB: Reciprocal Relationships Among Fit, Satisfaction, and Performance: Analysis of Three-Wave Data

Author: **Nozomi Matsui**, *Graduate School of Commerce, Waseda U.*

Author: **Yuka Shizuru**, *Panasonic Operational Excellence Co., Ltd*

Author: **Yoshio Yanadori**, *Waseda U.*

Most research on person-environment fit (PE fit) takes a static approach and examines the effect of fit measured at one point in time on employee attitudes and behaviors measured at a later point in time. Recognizing the potential reverse causality (i.e., employee attitudes, behavior, and performance influence perceived fit), this study proposes a model that involves the reciprocal relationships; that is, (1) fit influences job satisfaction and job performance and (2) job satisfaction and job performance influence fit. Drawing on data collected from new hires three times over five months, we analyzed the reciprocal relationships among person-job fit (PJ fit), job satisfaction, and job performance using cross-lagged panel modeling. Our analysis supported the positive, reciprocal relationship between PJ fit and job satisfaction. Our study highlights the importance of the dynamic perspective to understand the antecedents and consequences of fit.

OB: Does Dynamic Person-Job Fit or Misfit Increase Job Crafting? It Depends on The Change Patterns

Author: **Xinxin Lu**, *Hunan U.*

Author: **Donald H. Klumper**, *Texas Tech U.*

Employees engage in job crafting to achieve an optimal fit with their jobs. However, it is unknown how and when person-job fit (PJ fit) influences job crafting. Integrating need satisfaction theory, conservation of resource theory, and temporal theory, the current research seeks to explore the effect of change patterns of PJ fit on three dimensions of job crafting, resource seeking, challenge seeking, and demand reducing, and the resulting task performance. In a diary study with experience sampling method among 93 employees across 12 consecutive days, we test the hypotheses using polynomial regression and response surface analysis. The results show that stable and high (vs. stable and low) person-job fit is positively associated with task performance via resource seeking, challenge seeking, and hindrance reducing, fluctuating (vs. stable) PJ fit is negatively related to task performance via resource seeking and hindrance reducing, and decrease (vs. increase) in PJ fit is negatively related to task performance via resource seeking, challenge seeking, and hindrance reducing. Our study contributes to research on the dynamics of PJ fit and highlights the role change pattern in the effect of PJ fit on employee performance.

OB: Polychronicity Fit (Misfit) and Daily Turnover Intentions: The Mediating Roles of Work Overload and Underload

Author: **Syed Shah**, *Macquarie U.*

Author: **Lu Xing**, *U. of Auckland*

Author: **Denise Mary Jepsen**, *Macquarie Business School, Macquarie U.*

Person environment (P-E) fit researchers have typically treated the experience of P-E fit as a static phenomenon. In this study, we challenged the conventional view by focusing on the fit (misfit) of polychronicity, an individual's preference for performing multiple tasks simultaneously. We use a mixed-methods approach in Pakistan information technology firms to explore the impacts of P-E polychronicity fit (misfit) on employees. Based on our interview findings, we propose that polychronicity fit (misfit) can evoke feelings of work overload and underload, which further shape individuals' turnover intentions on an everyday basis. Data collected from 101 IT project employees over five workdays generally supported the hypotheses. Our theoretical contributions include the importance of (a) studying person-environment fit (misfit) as variable and dynamic phenomena that an individual can experience every day (b) acknowledging the role of work overload and underload, and (c) understanding the influence of polychronicity fit on individual's daily turnover intentions. Practical contributions include effectively managing P-E polychronicity fit (misfit) to reduce employee turnover in organisations.

Author: **Xinxin Lu**, *Hunan U.*

Author: **Shuisheng Shi**, *Hunan U.*

Author: **Haiming Zhou**, *Shandong U. of Science and Technology, Tai'an Campus*

Integrating person-environment fit theory and collective-oriented leadership theory, the current research seeks to investigate how person-team congruence in agreeableness and conscientiousness affects abusive supervision and servant leadership, and the consequent task performance. In a sample of 707 employees from 102 teams across three waves, we conducted polynomial regression and response surface analysis to test the hypotheses. The results showed that both person-team congruence in agreeableness and person-team congruence in conscientiousness are positively related to servant leadership, person-team congruence in agreeableness is negatively related to abusive supervision, and person-team incongruence in agreeableness is positively related to abusive supervision whereas person-team incongruence in conscientiousness is negatively related to servant leadership. The current research deepens our understanding of how individual and team personality congruence influences how members are treated by their leaders and enriches our knowledge of which employees are more likely to be the targets of abusive supervision and servant leadership.

Diverse Perspectives on Work Motivation

Session Moderator: **QIAN CHEN**, *Shanghai Jiaotong U.*

OB: For the Sake of Which Aspect of the Family? Revisiting the Concept of Family Motivation

Author: **QIAN CHEN**, *Shanghai Jiaotong U.*

Author: **Yi Li**, *Shanghai Jiaotong U.*

Author: **Xin-an Zhang**, *Shanghai Jiao Tong U.*

Drawing upon the theory of regulatory focus, we extend the concept of family motivation, i.e., the desire to benefit one's family, by distinguishing it into a promotive component and a preventive component. While promotive family motivation referred to the desire to benefit one's family through aspirations and accomplishments so that the family's glory is promoted, preventive family motivation referred to the pressure to benefit one's family through responsibility and safety so that the risk to the family is prevented. We then developed an 11-item scale for them and further demonstrated each of the two dimensions of family motivation was able to explain unique variance in important workplace criteria, including silence, career satisfaction, and career planning behavior.

OB: Toward Antiracism in Organizations: A Multilevel Examination of Motivation and Behavior

Author: **Narda Quigley**, *Villanova U.*

Author: **Kristin Broussard**, *Villanova U.*

Author: **Seth Matthew Fishman**, *Villanova U.*

Author: **Amanda Grannas**, *Villanova U.*

Author: **Teresa Nance**, *Villanova U.*

Author: **Teresa Boyer**, *Villanova U.*

Author: **Noelle Comolli**, *Villanova U.*

Author: **Elizabeth Svenson**, *Villanova U.*

Author: **Adam Smith**, *Villanova U.*

Author: **Noah Lanouette**, *Villanova U.*

Many organizations are expanding equity, diversity, and inclusion (EDI) strategies to include antiracism initiatives and enhance their social justice impact. However, scholarship on individual motivation to engage in antiracism, defined as actively opposing racism (e.g., Kendi, 2019), is in its infancy. This paper integrates existing research on allyship and antiracism with classic work on motivation (social cognitive and goal-setting theories) to develop a model that builds our understanding of why and how individuals may initiate and sustain antiracist behavior at the individual level. We aim to illuminate the pathways that motivate individuals toward antiracist behavior on a micro (i.e., day-to-day) level. Further, we highlight the ways in which individual-level antiracism efficacy may spiral up through levels in organizations and provide an important bottom-up catalyst for movement toward antiracism at the collective, systemic level. We posit that a better understanding of this process will help guide future empirical work on antiracism at the individual level, in addition to having important practical implications for antiracist training and initiatives in organizations.

OB: Towards a New Understanding: Validating a Multidimensional Political Will Measure

Author: **Lida P. Ponce**, *George Mason U.*

Author: **Mina Son**, *George Mason U.*

Author: **Nicholas Aaron Moon**, *California State U., San Bernardino*

Author: **Seth A. Kaplan**, *George Mason U.*

Author: **Philseok Lee**, *George Mason U.*

Research indicates political behavior affects individuals' outcomes not only through political skills but also through motivation - the political will - to use such skill. The purpose of this research was to develop and validate a multidimensional measure of political will. In three studies (n = 1,592), we wrote items and conducted content validation, exploratory factor analyses and confirmatory factor analyses. In phase one, we reviewed the literature on political will, determined the number of dimensions, and constructed items corresponding to each dimension. Additionally, we conducted a content validation study where participants completed an item-sorting task. In phase two, we collected data from working students in order to examine the dimensionality and factor structure of political will. Finally, in phase three, we collected data from working adults on Prolific to further confirm the factor structure of political will, as well as to examine convergent and discriminant validity with related constructs. The five dimensions of political will were only modestly correlated with each other and exhibited largely dissimilar relationships with other related constructs.

OB: What Sparks the Fire in the Belly? The Role of Adverse Childhood Experiences

Author: **Danielle Tussing**, *SUNY-Buffalo*

Author: **Shefali Patil**, *U. of Texas at Austin*

Much research has demonstrated the link between achievement/power orientations and career success. Yet, because such orientations are typically conceptualized as dispositional traits, we have little knowledge about what triggers them in people, insights into which can help inform organizations that are focused on talent development. To this end, we shed light on a heavily understudied area of research in management: the role of childhood experiences. Although research suggests that adverse childhood experiences generally result in negative outcomes in adulthood, we challenge this assumption by drawing on motivated information processing theory. We argue that adverse childhood experiences—conceptualized as the broad categories of unpredictability, neglect, and threat—can actually enhance career success in adulthood when people have strong self-reliance values and a high propensity to ruminate about past injustices. A belief in self-reliance provides people who face adverse childhood experiences with a goal (to exert self-sufficiency and independence) and rumination provides the reason (to rectify injustices). Thus, both trigger the need to overcome adverse situations and gain control, which is manifested in high achievement and power orientations—or an intense self-enhancement drive. We conducted a preliminary test of our hypotheses in a pre-registered, nationally representative sample of 1,432 U.S.-based adults recruited via Prolific. We found support for our model using socioeconomic standing (income, class, and subjective evaluations) as a measure of extrinsic career success—and controlling for prosocial motivation and trait and demographic variables typically associated with overcoming adversity and adulthood socioeconomic standing. By bringing research on childhood experiences to management, we provide novel theoretical and practical insights into how interested organizations can identify and develop those who have the “fire in the belly.”

Humans and the Machine: Innovating Through AI

Session Moderator: **Xueqi Chen**, *Chinese U. of Hong Kong*

OB: **Investigating the Benefit of Collaborating with Conversational AI from a Self-Expansion Perspective** 

Author: **Xueqi Chen**, *Chinese U. of Hong Kong*

Author: **Melody J. Zhang**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

Author: **Kenneth S Law**, *Chinese U. of Hong Kong*

Author: **Fuli Li**, *Xi'an Jiaotong U.*

Author: **Linwei Gan**, *Chinese U. of Hong Kong*

Human-AI collaboration is becoming increasingly prevalent at work. The present study aims to explore how collaborating with conversational AI could augment employee's capabilities under the new human-AI relational pattern. Drawing on the self-expansion theory, we propose that inclusion-of-AI-in-the-self is a crucial process augmenting employees' capabilities and release their potential. We analyze the factors affecting inclusion-of-AI-in-the-self from both cognitive and affective paths, as well as the outcomes after employees incorporate conversational AI into their self-concept. Specifically, task variety and enjoyment in collaborating with conversational AI positively influence the level of inclusion-of-AI-in-the-self, adopting conversational AI's knowledge, resources, and characteristics as their own. This integration enhances employee's workplace thriving and creativity, as well as their relational commitment to the conversational AI. Findings from a multi-wave study and a vignette-based experiment provide support for these hypotheses. Theoretical and practical implications for human-AI collaboration are discussed.

OB: **Social Perceptions of Generative Artificial Intelligence: The Role of Perceived Intelligence** 

Author: **Chao Liu**, *Capital U. of Economics and Business*

Author: **Yiwei Yuan**, *Beijing U. of Posts and Telecommunication*

Author: **Li Zhu**, *Peking U.*

Author: **Qiao Li**, *Beijing Wuzi U.*

Author: **Jun Liu**, *Wuhan U. of Technology*

The application of generative artificial intelligence (AI) has attracted great attention since OpenAI launched the ChatGPT prototype, unveiling substantial potential to significantly change Human-AI interactions. However, little is known about how perceptions of human-like characteristics of generative AI impact or shape individuals' psychological and behavioral responses. This study seeks to address the research question: "How do perceived AI intelligence and morality impact focal employees' ethical voice when using generative AI?" Drawing upon the "computer are social actors" (CASA) paradigm and research on social perceptions, we propose that individuals, when perceiving high levels of AI intelligence and AI morality, are more likely to establish a goal commitment to developing cooperative human-AI relationship. We tested our research model in a three-wave survey involving 535 employees. The results demonstrated that perceived AI intelligence was positively related to employees' Human-AI cooperation goal commitment, motivating their subsequent ethical voice for the responsible use of generative AI. Besides, perceived AI morality can interact with AI intelligence to increase employees' commitment to human-AI cooperation goal, leading to more ethical voice towards the responsible use of AI. These findings have implications for both theoretical understanding and practice applications concerning employees' responses to generative AI in the workplace.

OB: **Moral AI, Moral Individuals?** 

Author: **Chao Liu**, *Capital U. of Economics and Business*

Author: **Qiao Li**, *Beijing Wuzi U.*

Author: **Yiwei Yuan**, *Beijing U. of Posts and Telecommunication*

Author: **Shouqiang Wu**, *Beijing International Studies U.*

Author: **Zhipeng Zhang**, *China U. of Labor Relations*

Author: **Runna Wang**, *Beijing Institute of Fashion Technology*

Author: **Chunhua Chen**, *National School of Development at Peking U.*

Generative artificial intelligence (AI) has gained popularity for its ability to revolution work, business, and significantly improve the efficiency of human-AI interaction. Characterized as possessing human-like abilities and minds, generative AI has drawn much attention among scholars and practitioners. This article explores the following research question: "how perceived mind (i.e., perceived AI morality) and perceived substitutive role (i.e., AI awareness) of generative AI impact the employees' unethical behavior using generative AI?" Drawing upon the literature of anthropomorphism and social schemas, we propose when individuals perceive high levels of morality of generative AI, they are more willing to pursuit a responsible use of it. We tested our research model in a three-wave survey of 641 employees. The results demonstrated that perceived AI morality decreased employees' propensity to make moral disengagement, leading to the decline of their unethical behavior using generative AI. Besides, individuals with low level of AI awareness or did not regard the generative AI as a substitutive role are less inclined to make moral disengagement and then engage less in unethical behavior using generative AI. These findings have implications for theory and practice concerning employees' responsible use of generative AI.

Author: **Xiaoman Li**, *Capital U. of Economics and Business, China*

Author: **Li Chen**, *Xiamen U., China*

Author: **Di Liu**, *U. of Manchester*

Artificial Intelligence (AI) has not completely replaced employees at the job level but is substituting for certain roles in cognitive labor, leading to the emergence of human-AI interaction in organizations. Drawing on cognitive appraisal theory, this paper explores the impact of AI-human differentiated interaction types on work innovation behavior. The analysis is based on data collected from 178 employees in a smart power plant in China at multiple time points. The results indicate that AI-human augmentation interaction positively influences work innovation behavior, while AI-human hindrance interaction negatively inhibits it. Additionally, technological substitution perception mediates the relationship between AI-human differentiated interaction and work innovation behavior. Moreover, collaborative fluency in AI-human positively moderates the effects of AI-human augmentation interaction and AI-human hindrance interaction on the perception of technological substitution. In essence, in a more fluent augmentation interaction team where collaboration with AI is smoother, employees perceive lower technological substitution. Conversely, in less smooth hindrance interaction, employees perceive higher technological substitution. These findings provide empirical evidence and managerial insights for implementing effective strategies in intelligent manufacturing transformation, overcoming organizational change resistance, and fostering collaborative work innovation with technology.

Participant: **Jeffrey Yip**, *Simon Fraser U.*

Across four unique empirical papers from different parts of the world, we will explore empirical research on others' perceptions of a focal individual's work-family (WF) experiences. Scholars have used others' perceptions of WF 1) as a methodological tool to enhance the rigor of model testing, and 2) more theoretically, as a means to understand the quality and outcomes of relationships between people at work and at home. Because others' WF-related perceptions is now a burgeoning research area, we propose this symposium as a way of 1) naming this heretofore rather segmented area of scholarship under the same topical umbrella, and 2) beginning to take stock of findings from this sub-area of work and family research en route to building new research agendas.

Team Climates and Cultures

Session Moderator: **Jeremy M. Beus**, *Washington State U.*

OB: **Exploring the Nature and Effects of Organizational Climate Profiles** 

Author: **Jeremy M. Beus**, *Washington State U.*

Author: **Yimin He**, *U. of Georgia*

Organizational climates are typically studied pertaining to a specific organizational goal (e.g., safety, customer service). Yet the fact that organizations have multiple goals, reflecting varied strategic values, suggests that this approach is deficient. The likelihood that organizations maintain multiple climates derived from base strategic values implies that organizations are multi-climate systems. Consequently, using the competing values framework (CVF) as a conceptual foundation, we articulate theoretically pertinent climate configurations, or profiles, reflecting complementary versus competitive values combinations and use organizational identity and social information processing (SIP) theories to propose identity clarity and collective commitment as dual mechanisms by which these profiles may relate to organizational effectiveness. Using latent profile analysis to identify climate profiles in a large sample of organizations, we detected five distinctive climate profiles with most profiles characterized by competitive values pairings. Results fail to support the organizational identity perspective, but do support the SIP perspective, revealing that organizations with competitive climate profiles with multiple highly prioritized CVF climates yield stronger connections to effectiveness indicators either directly or indirectly via collective commitment than organizations with other profiles. This study outlines both conceptual and empirical approaches for studying climate profiles and underscores the value of studying organizations as multi-climate systems.

OB: **Time Is Not Enough: How Team Practices Can Shape Team Psychological Safety**

Author: **Bård Fyhn**, *NHH Norwegian School of Economics*

Author: **Therese Egeland**, *NHH Norwegian School of Economics*

Author: **Vidar Schei**, *NHH Norwegian School of Economics*

Research finds team psychological safety to be an important ingredient for high-performing teams. However, there is scarce research on how team psychological safety emerges and develops over time. Drawing on the literature from climate emergence and team development, we designed two mixed method studies in two different contexts and studied the temporal dynamics of team psychological safety in both short- and long-term project teams. Interestingly, most teams started out at somewhat similar levels of team psychological safety. However, from there, team psychological safety appears to be a perishable good that can decrease as well as increase over time. These dynamics appear to be explained by connecting, clarifying, supporting, and performing team practices. Thus, we found team psychological safety to be a result of active choices rather than a passive consequence of simply spending time together. In fact, time itself is neither sufficient nor necessarily positive for team psychological safety—it is how this time is spent that matters. We discuss the theoretical and practical implications of our findings and suggest directions for future research.

OB: **Extraversion Diversity, Helping Behavior and Performance: The Moderating Role of Hierarchy Culture** 

Author: **Yannick Loeppke**, *Trier U.*

Author: **Thorsten Semrau**, *U. of Trier*

Author: **Hendrik Wilhelm**, *U. of Witten/Herdecke*

The present study identifies organizational hierarchy culture as a crucial moderator for the consequences of team extraversion diversity. To develop our theoretical reasoning, we integrate ideas from the literature on team personality, organizational culture, and team helping behavior. We test our hypotheses based on data from 64 teams nested in two organizations that operate in the same industry but differ significantly with respect to their organizational culture. In line with our theoretical arguments, our results reveal an indirect effect of team extraversion diversity on team performance via team helping behavior that is contingent upon hierarchy culture. We discuss the implications of our study for research on team personality composition, organizational culture, and team helping behavior.

OB: **Rethinking Climates for Innovation: Development and Validation of a Failing Forward Climate Scale**  

Author: **Sophia Kohlenberg**, *WHU - Otto Beisheim School of Management*

Author: **Miriam Muethel**, *WHU Otto Beisheim School of Management*

Innovation remains a pivotal factor for staying competitive as an organization. In that regard, organizational climates have advanced our understanding of the social context nurturing innovation. Whereas established climate frameworks have been useful in the past, they reach their limits when operating under volatile, uncertain, complex and ambiguous (VUCA) conditions. VUCA environments increase the risk of failure and organizations must fundamentally rethink their approach on how innovation can be facilitated. Although failure is a natural by-product of innovation in general, its powerful role in fueling innovation itself is often underestimated. Failure is often regarded as inherently negative or mixed up with related concepts such as errors or mistakes. Therefore, we introduce the concept of Failing Forward Climate (FFC) by drawing on the theory of planned behavior. We define and operationalize FFC as a multidimensional scale and establish its content validity, internal consistency, its higher-order nature and construct validity across five studies. Further, we find evidence for predictive and incremental validity by linking FFC to relevant work outcomes such as innovative work behavior, entrepreneurial work behavior, work-role job performance, job satisfaction and turnover intention. Therefore, our study transcends conventional ways of approaching innovation and contributes to the understanding of failure as a catalyst for innovation.

New Insights into the Decisions Creators and Evaluators Make During the Creative Process

Organizer: **Wayne Johnson**, *U. of Utah Eccles*
Discussant: **Jing Zhou**, *Rice U.*

The goal of the proposed symposium is to provide new insights into the decisions that creators and evaluators make during the creative process: Decisions about which ideas are more and less creative, decisions about whether to withdraw (vs. engage) in creative work, and decisions about which creative process behaviors to enact. Taken together, these four papers- two empirical and two conceptual- broaden areas of research for the growing literatures on creativity evaluation and decision-making. Ultimately, this symposium promotes innovation for the future and society by examining the decisions creators and evaluators make to advance (or not) creative ideas.

The Ying and Yang of Creativity

Session Moderator: **Elisabeth Kristin Gilbert**, *Washington and Lee U.*

OB: Thinking Big: Employee Construal Level, Motivation, and Creative Ideation at Work

Author: **Elisabeth Kristin Gilbert**, *Washington and Lee U.*
Author: **Tony Sanor**, *Ohio State U.*
Author: **Joyce Bono**, *U. of Florida*
Author: **Amir Erez**, *U. of Florida*
Author: **Chengquan Huang**, *U. of Florida*

Organizations are increasingly attuned to the value of employee-driven innovation, but creating conditions that facilitate the development of creative ideas for organizational improvement can be a challenge. Building on construal level theory, we suggest that employees' mental representations of their organizations influence motivation, thereby promoting creativity. We conducted a two-week within-person field experiment in a Fortune 100 company, in which we manipulated construal level and coded employees' suggestions for organizational improvement. High construal level was associated with enhanced creative idea generation (greater novelty and promotion orientation of suggestions), mediated by increased organizational identification and autonomous motivation. However, these effects were disrupted for employees who were experiencing high perceived uncertainty around organizational change. We discuss theoretical and practical implications for employee cognition and creativity in organizations.

OB: The Paradox of Leader Creative Deviance: A Catalyst for Innovation Yet a Breeder of Deviance

Author: **Pengcheng Zhang**, *School of Management, Huazhong U. of Science and Technology*
Author: **Huili YE**, *Huazhong U. of Science and Technology*
Author: **Xuhong Zhao**, *Huazhong U. of Science and Technology*

Creative deviance, the act of employees implementing ideas despite being rejected by their managers, is a common phenomenon in organizations. Extant research focuses only on employees' practice of creative deviance, ignoring the fact that leaders may also be behavioral agents of creative deviance. In this paper, we integrate social information processing theory and social learning theory to shed light on the effects of leader creative deviance on follower deviance behavior as well as innovation behavior. We use an exploratory, mixed-method approach (i.e., a qualitative study and a field survey) to test our theoretical model. In Study 1, we conducted an in-depth interview of 44 followers and 20 leaders from 20 R&D teams to identify (1) follower's deviant behaviors and innovative behaviors are the most important behavioral consequences of leader creative deviance. And (2) Perceived work moralization and perceived innovation importance are the two most frequently mentioned psychological reactions, which may be the potential explanation mechanism of deviant and innovative behavior of followers. Combining the two primary mechanisms and one key boundary condition identified in Study 1, we collected data from 254 employees and their leader with a three-wave survey in Study 2, which revealed that, on the one hand, leader creative deviance led to follower deviance behavior by decrease follower's perceived work moralization; on the other hand, leader creative deviance increase follower innovation behavior by stimulating follower's perceived innovation importance. Our findings also show that follower's identification with the leader will strengthen the above effects. These findings demonstrate the double-edged role of leader creative deviance, as well as extend the social learning process for followers from their leader.

OB: Past Focus as a Key Boundary Condition for the Implications of Counterfactual Thinking at Work

Author: **Ui Young Sun**, *Monash U.*
Author: **Dong Ik Sun**, *Korea National Defense U.*
Author: **Jihye Han**, *U. of Illinois Chicago*
Author: **Seung Yeon Son**, *Korea National Defense U.*

In the workplace, employees are often driven to think about how they could have behaved differently to have obtained better performance. The functional theory of counterfactual thinking (FTCT) suggests that this type of thinking (i.e., counterfactual thinking or CT) can be functional and help enhance individuals' sense of efficacy. In the context of work settings, CT may contribute to employees' job self-efficacy, which in turn positively impacts their job performance. However, another line of research demonstrates that counterfactual thoughts, which are referenced to one's past behaviors and better outcomes, can make individuals distressed and experience depression, the states that function as negative information for individuals' self-efficacy evaluation. Thus, whether and how CT would impact employees' job self-efficacy and job performance remains ambiguous. We address this ambiguity by considering the moderating role of employees' past focus in the relationship between CT and employees' job self-efficacy. Utilizing the sample of 209 independent employee-supervisor dyads in the military units, we demonstrate that CT is negatively associated with job self-efficacy when past focus is higher but positively related to it when past focus is lower. We also show that this moderating effect is transmitted to job performance. Overall, our research showcases the importance of considering the performance implications of CT in work settings.

OB: Taking in to Thinking Creatively: Neutralizing Negative Effects of Expertise Dependence Through LMX

Author: **Shuxin Zhang**, *Xian Jiaotong U.*
Author: **Yun Bai**, *Huazhong U. of Science and Technology*

In the workplace, employees often rely on support to carry out creative tasks. However, research on the relationship between dependence and creativity performance has yielded inconsistent results. Expertise dependence on supervisors, defined as the extent to which employees rely on their leaders' superior knowledge, skills, or abilities, presents an opportunity to clarify this issue from the cognitive perspective of creativity. Our study investigates the individual-level process of information elaboration, examining the moderating effects of leader-member exchange (LMX) and the mediating effect of elaboration of supervisory information on the relationship between expertise dependence on leaders and creativity. Drawing on two field studies, we find that employees with low LMX who depend on leaders' expertise knowledge engage in less elaborate supervisory information processing than employees with high LMX, which, in turn, decreases creativity. However, the negative effect is buffered when LMX is high. Our findings contribute to the literature by offering a nuanced understanding of how and when expertise dependence on supervisors impacts employees' creative performance through information elaboration and also provide practical implications for managers to help minimize possible detrimental effects on creativity when subordinates relying on them.

Decades of research have emphasized the critical role of effective communication between leaders and their teams in shaping the leader-follower relationship and team performance (Riggio, Riggio, Salinas, & Cole, 2003). What leaders communicate and how they do so are often crucial to how their followers evaluate and perceive them differently (Kim, David, Chen, & Liang, 2023). Various forms of verbal and non-verbal expressions by leaders have also been observed to manifest as distinct leadership styles (Choudhury, Starr, & Agarwal, 2020), which in turn affect how members of the team may feel and behave (Antonakis, d'Adda, Weber, & Zehnder, 2022; Erez, Misangyi, Johnson, LePine, & Halverson, 2008). Given the multifaceted nature of leader-team communication and the evolving expressions of leadership, there is a continuous need to examine the consequences of how and what leaders communicate to their followers. This symposium brings together scholars to examine the effects of leaders' expressions across various units of analyses, from individual-level perceptions of leadership effectiveness and individual career outcomes to team-level outcomes of peer-monitoring and performance.

Bibliometric Methods in Organizational Research: The Good, Bad, and the Ugly

Session Chair: **Daniel Smith**, *Claremont Graduate U.*
Presenter: **Kristine Powers**, *Claremont Graduate U.*
Presenter: **Jeffery D. Houghton**, *West Virginia U.*
Presenter: **Luke DeCoste**, *Claremont Graduate U.*
Discussant: **Rebecca J. Reichard**, *Claremont Graduate U.*

Although bibliometric methods have recently become popular in organizational behavior literature, not all are created equally. This symposium highlights best practices in applying bibliometric methods across three research fields: work motivation, self-leadership, and emotions in entrepreneurship. The first study, analyzing 28,498 documents on work motivation, uses historiography to reveal 20 distinct literature clusters and emergent themes. The second study traces the evolution of self-leadership, employing historiography and bibliographic coupling to uncover areas for advancing the topic. The third study delves into emotions in entrepreneurship, scrutinizing over 2,000 articles to outline the field's development and pinpoint trends like emotional intelligence and mindfulness. These studies exemplify how bibliometric methods provide deep insights into organizational behavior, offering symposium attendees a comprehensive understanding of these techniques for navigating and interpreting extensive research landscapes.

Leading to Employee and Team Creativity

Session Moderator: **XiuFeng Li**, *Business School of Shandong Normal U.*

OB: How and When Shared Leadership Boosts Team Creativity in the Context of Collectivistic-HRM

Author: **XiuFeng Li**, *Business School of Shandong Normal U.*

Author: **Congcong Lin**, *Shandong U.*

Author: **Kui Yin**, *U. of Science and Technology Beijing*

Shared leadership, as an informal, collective leadership style, has been found to improve team creativity through team cognitive processes. Beyond such mechanisms, we propose a moderated dual-path model based on the social model of creativity combined with the cognitive-affective processing system framework. In this model, we first simultaneously examine the cognitive and affective mechanisms linking shared leadership with team creativity. Second, we introduce collectivistic-HRM as a formal contextual condition, and explore its joint effect with shared leadership. Results of two studies (Study one: 387 MBA students in 81 teams; Study two: 253 employees in 65 teams) revealed that shared leadership not only promoted team information sharing, but also enhanced team relational energy, both of which ultimately enhanced team creativity. Moreover, the presence of high collectivistic-HRM buffered the indirect effect of shared leadership on team creativity via team information sharing, whereas strengthened the indirect effect via team relational energy.

OB: The Relationship Between Leadership and Team Creativity: A Meta-Analysis 

Author: **Yahua Lu**, *Shanghai Jiao Tong U.*

Author: **Ming Kong**, *Shanghai Jiao Tong U.*

To clarify the relationship between different types of leadership and team creativity, and to explore the effects of team type, national development level, and national culture on the relationship between leadership and team creativity, this study conducted a meta-analysis of 232 papers containing 246 independent samples, 282 effect sizes, and 98,769 participants. The results showed that: (1) Positive leadership styles were significantly positively correlated with team creativity, while negative leadership styles were significantly negatively correlated with team creativity, with the strongest relationship between strategic leadership and team creativity. (2) The correlations between transformational, transactional, and charismatic leadership and team creativity were stronger in the context of research teams in universities and research institutes than in enterprise R&D teams. (3) The correlations between inclusive leadership, transformational leadership and team creativity were stronger in developing countries than in developed countries. (4) Human orientation, power distance, in-group collectivism, performance orientation, future orientation, assertiveness, and uncertainty avoidance moderated the relationship between leadership and team creativity. The research results help to further understand the mechanism underlying the influence of leadership on team creativity.

OB: The Role of Paradoxical Leadership in Stimulating Employees Radical Creativity

Author: **Wei Zhang**, *Wuhan Polytechnic U.*

Author: **Liling Chen**, *Wuhan U. of Technology*

Author: **Li Yajuan**, *Central China Normal U.*

Author: **Jianqiao Liao**, *Huazhong U. of Science and Technology*

This study examines how paradoxical leadership use of sensemaking and sensegiving influences employees' radical creativity. Informed by sensemaking theory, through the empirical analysis on the two-stage paired sample data of 84 team leaders and 419 team members in Mainland China, the study explores whether and how paradoxical leadership behavior affects employees' radical creativity. The results show that paradoxical leadership can stimulate employees' radical creativity. Paradoxical leadership enhances employees' radical creativity by improving their creative role identity and creative work engagement. Perceived organizational valuing of creativity is the boundary condition for paradoxical leadership to affect employees' radical creativity. This study enriches the research of paradoxical leadership effect and the boundary conditions of paradoxical leadership effectiveness in the enterprise management.

OB: Exploring the Effect of Emotion Leadership on Individual and Team Level Outcomes 

Author: **Eun Jin Park**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*

Author: **Joo Hun Han**, *KAIST College of Business*

Author: **Myeong-gu Seo**, *U. of Maryland*

Author: **Sirkwo Jin**, *Merrimack College*

The role of team leaders in shaping group affect has gained increased attention in modern organizations. Nonetheless, we are still missing integrative studies on leadership behaviors that aim to influence team members' affective processes in service of collective goals. In Study 1, building on previous research on group affect, leaders' emotional intelligence, and emotional labor, we propose a conceptualization of emotion leadership. We then develop and validate a measure of emotion leadership. Integrating the concept of emotion leadership and the conservation of resource (COR) theory, we advance a theoretical model that links emotion leadership to individual and team-level outcomes mediated by team affective processes. The model is tested in Study 2, where we found support for the indirect effects of emotion leadership on employees taking charge and turnover intention through employee burnout. Team creativity and team viability are indirectly affected by emotion leadership through team psychological capital. Furthermore, we examined the moderating effect of team functional diversity and found that the impact of emotion leadership was stronger in teams with greater functional diversity.

Interventions to Enhance Work Effectiveness

Session Moderator: **Andrew Hafenbrack**, *U. of Washington*

OB: **On-The-Spot Mindfulness Improves Workplace Performance and Civility Through Locus of Control**   

Author: **Andrew Hafenbrack**, *U. of Washington*

Author: **Wen Wu**, *Beijing Jiaotong U.*

Author: **Eric (Shaoxue) Wu**, *Beijing Jiaotong U.*

Management scholars have predicted for over a decade that mindfulness could enhance work performance, yet supporting evidence has been elusive. However, mindfulness was initially theorized as a functional response to stress. Reconnecting mindfulness to stress may help better explain when and why mindfulness could improve performance. We are the first to test the idea of on-the-spot mindfulness – meditating in specific situations in which people are highly stressed for 8-15 minutes to change their psychological state, approximately twice per week. We build a theory of on-the-spot mindfulness and how it can improve employees' performance (work performance and customer service quality) and civility (helping behaviors and less counterproductive work behaviors). We expected it to do so by cuing an internal locus of control. We tested our hypotheses in an 8-week field experiment among 466 employee-supervisor dyads using multiple meditation conditions, control conditions, well-being manipulation checks, and supervisor-rated measures of the dependent variables. Our hypotheses were mostly supported (i.e., in 81%-94% of the contrasts of interest between treatment and control conditions). We discuss the relevance of on-the-spot mindfulness for the management and psychology literatures, as well as for management practitioners.

OB: **Don't Hesitate to Ask: Help-Seekers Ask for Help Later Than Givers Would Like** 

Author: **Valentino Chai**, *Stanford Graduate School of Business*

Author: **Frank Flynn**, *Stanford U.*

We posit that when help-seekers ask for assistance, they may not ask as quickly as helpers would like. We first demonstrate this discrepancy in two field studies (Studies 1 and 2) involving manager-subordinate and teaching assistant-student relationships. Then, in a tightly controlled experiment (Study 3), we replicate the effect and identify two parallel mechanisms: help-seekers focus more on feeling less discomfort (thus wanting to ask later), whereas helpers focus more on feeling more useful (thus wanting to be asked sooner). Lastly, we developed and tested an intervention based on reducing help-seekers' underestimates of how useful helpers want to feel (Study 4). Although the intervention did not reduce the discrepancy between when help-seekers ask for help and when helpers want to be asked for help, moderated mediation analysis provided causal support for the mechanism—reducing help-seekers' underestimates of how useful helpers want to feel indirectly reduced the discrepancy in when they asked for help vs. when helpers wanted to be asked for help.

OB: **Improving Human Sustainability at Work by Reducing Cognitive Load of Task Performance**

Author: **Kayla Stajkovic**, *U. of California, Davis*

Author: **Alexander Stajkovic**, *U. of Wisconsin, Madison*

Mounting information processing demands in contemporary organizations spotlight the need to better understand how to mitigate employee cognitive load. Research in organizational behavior suggests that primed goals provide performance benefits similar to assigned goals with little cost to attention. Yet, some research in social psychology suggests that any form of goal setting, including primed goals, usurps attention. We reconcile these viewpoints by examining the relationships among goals, performance, and cognitive load across three experiments. Experiment 1 (n = 233) revealed that when a primed goal is aligned with an assigned goal, performance improves without increasing demands on attention. In contrast, Experiment 2 (n = 515) demonstrated that when a primed goal is misaligned with an assigned goal, performance worsens and cognitive load increases. Experiment 3, an online quasi-field experiment with 315 working professionals, added internal and external validity to Experiments 1 and 2. We tested task complexity as a boundary condition of these effects and found that for novel tasks (Experiment 1 and 2), when perceptions of complex increase, the positive effect of an aligned primed goal diminish. However, for well-practiced work tasks (Experiment 3), increased perceptions of task complexity do not diminish the positive effect of aligned goals.

OB: **Substitutes or Complements? A Firm-Level RCT on the Interplay of Technology and Leadership Contact**   

Author: **Leonhard Grabe**, *U. of Cologne*

Author: **Dirk Sliwka**, *U. of Cologne*

Organizations can leverage leadership and technology to facilitate employee training; however, it is not clear whether leader contact and the use of online learning platforms are substitutes or complements. In a longitudinal firm-level field experiment with 3246 mobile service technicians and 187 supervisors, we tested the effectiveness of two interventions that either substituted or enhanced leader contact in the development process against a control group: In the contact support intervention supervisors receive a new feature that enhances leadership contact through reminders and dashboards, while in the scheduling support intervention, supervisors receive a new feature that makes it easier for them to schedule trainings without consulting their employees. We found that the contact support intervention had significant effects on employee training, job satisfaction and job performance. As a result, the firm rolled out the intervention to all employees permanently. The estimated ROI of the intervention was 807%. Contrary to our pre-registered hypotheses, we did not observe any impact from the scheduling support intervention. If anything, employees with below-median pre-intervention job knowledge received less training than the control group and had lower knowledge at the end of the treatment period. Our study underlines the value of leader contact in the employee development process. We contribute to the literature on employee learning and development with a special consideration for the role of leaders and technology in blue-collar and mostly remote work environments.

OB: Transforming into a Weapon: Relationship Between Negative Work Reflection and Cyberslacking

Author: **Zhidan Tan**, *School of Economics & Management, Tongji U.*

Author: **Shumin Yan**, *School of Economics & Management, Tongji U.*

Author: **Yujie Sun**, *School of Economics and Management, Tongji U.*

The utilization of social media for non-work-related activities during working hours has emerged as a prevalent phenomenon within the contemporary workplace landscape, yielding adverse outcomes for organizations. How to effectively address and manage this behavior has emerged as a pivotal concern for organizations. Drawing on the conservation of resources (COR) theory, we explored the daily relationship between negative work reflection, motivation to learn, and cyberslacking, we looked at whether the personality trait of extraversion acts as a cross-level moderator. To capture within-individual variation, we adopted a five-day experience sampling method. We collected 434 daily observations from 96 full-time employees. Multilevel modeling showed that motivation to learn positively predicted employee cyberslacking via motivation to learn. Further, extraversion significantly moderated the association between negative work reflection and cyberslacking. Specifically, higher extraversion broadened the positive effects of negative work reflection on motivation to learn. The present research makes a dual contribution to theoretical development and practical insights to effectively navigate cyberslacking behavior by guiding employees in flexibly reshaping their reflective awareness. Simultaneously, it can also make practical contributions for organizations to face the management challenge of cyberslacking behavior, ensuring sustained productivity and organizational performance.

OB: How and When Supervisor Job Demands Impact Downward Bullying: an Affective Events Theory Perspective

Author: **Muhammad Usman**, *School of Management, Xiamen U.*

Author: **Jin Cheng**, *Xiamen U.*

Author: **Usman Ghani**, *Iqra U. karaci, Pakistan*

Author: **Nasib Dar**, *Khyber Pakhtunkhwa Education Monitoring Authority Peshawar, Pakistan*

This study investigates the supervisor-level antecedents of downward bullying in a workplace setting. Drawing on Affective Events Theory, we propose that supervisor job demands (a work-specific event) lead to workplace frustration. This strong negative emotional response, in turn, may instigate supervisors to engage in downward bullying. We also postulate that a supervisor's personality trait, i.e., neuroticism, and the subordinate's values, i.e., power distance orientation, might moderate these proposed relationships along the mediational path. We further suggest and test a moderated mediation model. By using multi-time, multi-organization, and multi-source data (n=338 dyads) from Chinese employees, we found broad support for our hypotheses. Theoretical and practical implications, as well as future research opportunities, are also discussed.

OB: Examining the Influence of Perceived Organizational Politics on Knowledge Sabotage

Author: **John Rhee**, *U. of Minnesota Twin Cities*

While considerable research has delved into the detrimental effects of perceived organizational politics (POP) on employees, the influence of POP on knowledge-related behaviors remains underexplored. This study addresses this gap by investigating the relationship between POP and less-studied phenomenon of knowledge sabotage, a counterproductive behavior aimed at harming others through the dissemination of false knowledge or withholding crucial information. Given the significant repercussions of POP within organizations, understanding its consequences and potential mitigating factors becomes imperative. Grounded in social cognitive theory, this paper examines the relationship between employees' POP and their engagement in knowledge sabotage. Furthermore, the study delves into the moderating role of trait gratitude in attenuating the relationship between POP and knowledge sabotage. Empirical support for these relationships is derived from data collected from 170 U.S. workers. The paper concludes with a thorough discussion of both theoretical and practical implications, shedding light on avenues for further research and offering actionable insights for organizational management and intervention strategies.

OB: Sense of Power and Job Search Incivility: The Countervailing Effects of Workload and Moral Identity 

Author: **Xiujuan Wang**, *school of management, USTC*

Author: **Lixin Chen**, *U. of Science and Technology of China*

Incivility in job search context have negative effects on both organizational attractiveness and job seekers' search behavior. However, there is comparatively less work unfolding the antecedent of incivility that occurs in the job search process (i.e., prior to entering the organization). Grounded in the social distance theory of power, this study developed a social context model that examines the relationship between recruiters' sense of power and their incivility instigation toward job seekers. Further, we also explored how workload and moral identity provoke or constrain the relationship. The results of a two-wave time-lagged study involving 338 recruiters revealed a positive relationship between recruiters' sense of power and their incivility instigation toward job seekers. This positive relationship was found to be strengthened by workload. Moreover, the moderated moderation analyses suggested that moral identity acts as a weakening factor, reducing the intensified effect of workload on the link between sense of power and incivility instigation. This study provides new insights into the boundary conditions that can help mitigate incivility in job search process.

Feelings! Whoa, Whoa, Whoa Feelings! Emotions in Work Organizations

Session Moderator: **Yangxin Wang**, *business school of Central South U.*

OB: **My Job Characteristics Make Me Procrastinate or Not: A Perspective from Emotion**

Author: **Yangxin Wang**, *business school of Central South U.*

Author: **Hong Zhang**, *Lingnan U.*

Author: **Zhen Wang**, *Renmin U. of China*

Workplace procrastination is a prevalent phenomenon in organizations, which may bring great influence on employees' productivity and organizations' competitiveness. Relying on cognitive-motivational-relational theory and broaden-and-build theory of emotion, this study uses an emotional perspective to investigate how and when job characteristics (i.e., hindrance job demands, challenge job demands, and job resources) may similarly or differently impact employees' workplace procrastination. We suggest that because both hindrance and challenge demands may lead to fear of tasks, of which action tendency is escape and avoidance, they have positive indirect effects on procrastination. Because job resources may lead to joy about tasks, of which action tendency is free activation, they have negative indirect effects on procrastination. We also examine the two-sided effect of challenge demands, such that challenge demands simultaneously enhance interest in tasks (with an action tendency of exploration) and thus negatively and indirectly influence procrastination. We further discuss how psychological capital, which largely shapes how employees appraise their job characteristics, may alter the above relationships. Results from a field study on 257 employees supported most of our hypotheses. Theoretical and practical implications are discussed.

OB: **Do You Care (More Than I Do)? Occupational Stress and Relative Conscientiousness**

Author: **Hendrik Wilhelm**, *U. of Witten/Herdecke*

Author: **Michael Wittland**, *Bielefeld U.*

Author: **Thorsten Semrau**, *U. of Trier*

Author: **Dirk Stippel**, *U. of Cologne*

Author: **Guido Michels**, *Hospital of the Barmherzige Brüder, Trier*

Author: **Christoph Baltin**, *U. of Cologne*

Previous research on occupational stress has been largely silent on the influence of person-coworker fit on employee strain, despite the fact that collaboration is often required in today's organizations. This shortcoming may result from an incomplete theory that overlooks both the direction of trait dissimilarity and task-complexity-induced dependence in dyads. To address this shortcoming, we develop and test a theory of when and how relative conscientiousness—a key predictor of organizational behavior—between coworkers influences individual strain as a function of task complexity. We test our theory using a unique dataset of matched physiological, survey, and archival data from surgeon dyads. Analyses of 157 surgical segments provide partial support for our theory. Post hoc analyses reveal unexpected patterns that extend our theory. Our study contributes to the literatures on occupational stress, deep-level dissimilarity, and collaborative work.

OB: **It Takes Two: Interaction Effects of Platform and Employer Justice on Workers' Service Performance**

Author: **Yuntao Dong**, *Peking U.*

Author: **Xin Wei**, *Renmin U. of China*

Author: **Li Guo**, *U. of International Business and Economics*

Author: **Mingyue Tang**, *Guanghua School of Management, Peking U.*

Author: **Tian Cao**, *Renmin U. of China*

Author: **Xinyue Li**, *U. of International Business and Economics*

Drawing upon affective events theory, this research investigates that in a dual-entity management system, how platform workers' perceptions of justice from both a digital platform and a partnered employer company influence their emotional and behavioral responses, ultimately affecting their service performance. We conducted a scenario experiment of 269 participants with work experience on online platforms and a multi-wave multi-source field study of 349 food delivery riders to test our theory. Findings reveal that workers' perceptions of dual justice from both managing entities (i.e., the digital platform and the employer company) fostered their feelings of hope and subsequent learning behaviors, leading to enhanced service performance. Our results contribute to justice literature and algorithmic management literature by highlighting the importance of justice in both algorithmic and human management systems within the platform economy.

OB: **An Affective Events Perspective on the Consequences of Observing Resilience**

Author: **Braydon Shanklin**, *U. of Georgia*

Author: **Tyler Sabey**, *Arizona State U.*

The literature on resilience has focused predominantly on the consequences of resilience for the resilient individuals themselves. Yet, current theorizing on workplace events suggests that the disruptive and critical nature of demonstrating resilience is likely to draw the attention of other employees. We explore these interpersonal dynamics surrounding resilience by developing and testing a model that delves into the consequences of employees observing their coworkers' resilience. Our model is rooted in Affective Events Theory, proposing that the multiplex nature of resilience drives both positive (inspiration) and negative (anxiety) emotional repercussions for observers, and that these emotions have downstream consequences for the observer's attitudes (stress mindset) and behavior (adaptive performance). Using a combination of lab and field studies, we find that observing resilience elicits feelings of inspiration, but that it can also draw out feelings of anxiety when the observer perceives themselves as being dissimilar to the resilient individual. In turn, these feelings of inspiration and anxiety were associated with the observer having a more, or less, positive attitude toward stress, respectively, which ultimately influenced their adaptive performance in the workplace. We discuss how our research provides a rich avenue for future research on the social dynamics surrounding employee resilience.

Big Brother: Monitoring Employees at Work

Session Moderator: **Rui Yan**, *Harbin Institute of Technology*

OB: **From External to Internal: The Role of Interactional Monitoring on Workplace Cheating Behavior**

Author: **Rui Yan**, *Harbin Institute of Technology*
Author: **Yang Yang**, *Harbin Institute of Technology*
Author: **Yan Meng**, -

For a long time, organizations have been attempting to reduce workplace cheating behavior by enhancing monitoring, especially in remote work where the visibility of employees becomes challenging. However, recent evidence suggests that the effectiveness of existing monitoring ways in curbing such behavior is limited. To address this critical tension, we introduce a novel way - interactional monitoring - and draw on self-determination theory to explore effective monitoring ways that reduce cheating behavior. Our study suggests that interactional monitoring creates conditions for employees to proactively reduce cheating behavior from the internal initiative, rather than relying on external controls, by increasing their sense of job control. Furthermore, our study argues that interactional monitoring may have a greater effect in low task visibility, as it is less influenced by changes in the workplace. Through three waves of data collection and analysis of 332 work-from-home employees, our findings indicate that interactional monitoring effectively reduces cheating behavior by enhancing employees' sense of job control, particularly in low task visibility. This study provides significant theoretical and practical insights into how to effectively utilize monitoring ways to mitigate employees' cheating behavior in remote work.

OB: **Does Monitoring Stifle Creativity? When and How Electronic Monitoring Influences Employee Creativity**

Author: **Wang Juan**, *Northwestern Polytechnical U.*
Author: **Junjiang Li**, *Northwestern Polytechnical U.*
Author: **Zhe Zhang**, *Xi'an Jiaotong U.*
Author: **Yaping Gong**, *The Hong Kong U. of Science and Technology*

Although existing studies show that electronic monitoring (EM) practices positively influence employees' behaviors in the work domain, it remains unclear when and how EM practices influence employee radical and incremental creativity. Drawing on the self-determination theory, we examine when and how EM practices help or hinder employee radical and incremental creativity. We conduct a multi-phase and multi-source field study with data from 100 leaders and their 240 subordinates. We find that EM enhances employee autonomous motivation when their developmental attribution of EM is high, but decreases it when it is low. EM enhances employee controlled motivation when their deterrent attribution of EM is high, but decreases it when it is low. Furthermore, employee developmental attribution of EM strengthens the indirect effect of autonomous motivation between EM and two kinds of creativity (radical and incremental creativity). Finally, employee deterrent attribution of EM weakens the indirect effect of controlled motivation between EM and two kinds of creativity. We extend research on EM by showing both the upside and downside in employee creativity and when each may occur.

OB: **Error Management Culture's Impact on Workplace Cheating Under Performance Pressure**

Author: **Yan Peng**, *Xiamen U.*
Author: **Jiexuan Zhang**, *Central U. of Finance and Economics*
Author: **Jian Tian**, *Southwestern U. of Finance and Economics*

Error management culture is widely regarded as beneficial, positively influencing various workplace outcomes, including employee performance and work efficiency. Such a culture nurtures employees' psychological safety, typically yielding favorable results. However, under different levels of performance pressure in the workplace, the impact of psychological safety fostered by an error management culture can be unexpectedly varied. Drawing on social information processing theory, our theoretical framework suggests that while error management culture typically fosters psychological safety and positive outcomes, under high performance pressure, this very safety can paradoxically lead to increased workplace cheating behaviors. Our hypotheses were supported by data collected from 295 employees in China. Our research offers significant theoretical and practical implications, particularly in understanding and managing the dark side of error management culture in high-pressure environments.

OB: **How to Suppress Destructive Voice in Workplace: The Impact of Leader Humility**

Author: **Jie Li**, *School of Management, Xi'an Jiaotong U.*
Author: **Youhu Hu**, *Xianjiaotong U., School of Management*
Author: **Yifan Li**, *School of Management, Xi'an Jiaotong U.*

As a kind of negative information dissemination behavior, the contagion of fastidious emotions and blaming atmosphere induced by employees' destructive voice will cause potential harm to workplace. However, how does destructive voice occur and how to suppress it remains largely unexplored. In this research, we propose that leader humility may serve as an effective suppressor on employee's destructive voice from Confucian culture perspective. Based on the resources mechanism and motivation attribution mechanism, we further propose that employee's personal sense of power and relational energy can mediate the above relationship. However, the significance of these indirect effects depend on how the employee explain leader's humble behavior. When leader's expressed humility is attributed as impression management motives, the inhibition effect of leader humility on destructive voice via personal sense of power and relational energy no longer operative. Multi-level regression analysis using data from 94 leaders and 345 employees supported the majority of hypotheses. This research provides a new perspective to understand the generation of destructive behavior in workplace and the intervention mechanism of leader humility.

Session Moderator: **Yingyue Luan**, *Cambridge Judge Business School*

 **OB: Is Helping My Job? The Bright and Dark Sides of Helping-Inclusive HR Practice for Employee Helping**     

Author: **Yingyue Luan**, *Cambridge Judge Business School*
Author: **YeunJoon Kim**, *U. of Cambridge*

Research has revealed that employees hold varying perceptions regarding whether helping is a part of their job, and those with stronger perceptions tend to help others more. Based on this insight, both researchers and practitioners have emphasized the necessity of a human resources (HR) practice that formalizes helping, despite some criticisms. We introduce a comprehensive and balanced theoretical model to examine the pros and cons of a helping-inclusive HR practice, which formally integrates helping into employees' job descriptions and performance appraisals, on two critical aspects of employee helping: quality and frequency. Drawing from motivation and impression management theories, our model sheds light on the motivational mechanisms that underlie the positive and negative effects of this HR practice on helping. In a preliminary online experiment involving 133 participants and a one-year quasi-field experiment with 667 employees across 149 teams, we discovered that the helping-inclusive HR practice increased self-promoting motivation for helping but decreased intrinsic motivation for helping. These effects combined to decrease the quality of helping while increasing its frequency. Furthermore, our research revealed that supervisors heavily relied on the frequency of helping when assessing employees' annual performance, whereas the quality of helping was not factored into their assessments.

 **OB: Voice Heeded While Voicers Hurt: The Effectiveness and Drawbacks of Coalitional Voice** 

Author: **Ying Wang**, *U. of International Business and Economics*
Author: **Wenqi Liu**, *U. of International Business and Economics*
Author: **Xuemei Liu**, *Zhongnan U. of Economics and Law*
Author: **Zhengqiao Chen**, *U. of International Business and Economics*

Employees' voice plays a crucial role in the effective functioning of organizations and their units. However, there are many instances where employees' voices are not given proper attention or even ignored. In response, employees are forming voice coalitions with an attempt to amplify the impact of their voice as well as disperse personal risks. Integrating theory of power-dependence and rules of responsibility dispersion, we propose that while voicing in coalition may improve the likelihood of voice endorsement, voicers in the coalition may, not evenly, incur managerial retaliation. We demonstrate these effects in a randomized field experiment using the critical incident method. Results showed that with an increase in the number of voicers in the coalition, on the one hand, leaders perceived greater importance of the voice and subsequently more likely endorsed the voice; on the other hand, leaders perceived stronger threat and subsequently imposed more managerial retaliation against the voicers, especially the voicers with lower power. Our findings highlight the effectiveness as well as backlash of voicing in coalitions (i.e., increasing the number of voicers when expressing voice) and the decoupling consequences of voicing (i.e., voice being heeded while voicers being hurt).

OB: The Upward Influence of Voice: How and When Employee Voice Behavior Impacts Leader Empowerment

Author: **Sihong Huang**, *Hong Kong Baptist U.*
Author: **Hu Li**, *Nanjing U.*

Although voice researchers have proposed a functional approach that considers voice as an influence tactic to achieve desired reactions from others, little research explicitly examines whether employee voice can exert an upward influence that shapes leaders' perceptions and behaviors. Drawing from social influence theory, this study intends to investigate how and when employees' voice behavior influences managers' attitudinal and behavioral responses toward employees. Specifically, we hypothesize that employee voice will promote empowering leader behavior by increasing leader trust in the focal employee, and we further examine leader Machiavellianism as the moderator. Using multi-source and multi-stage data from 949 subordinates working in 224 teams, we found support for our predictions that: employees who voiced received more empowerment from leaders than those who did not, and this effect was mediated by leader trust. Moreover, leader Machiavellianism weakened the positive effects of employee voice on leader trust as well as on leader empowerment via trust. Our findings suggest voice as an effective upward influence tactic that employees can utilize to acquire empowerment in the team.

OB: What Happens When You Least Expect It 

Author: **Diana Annabell Lee**, *PhD Candidate, Drexel U.*
Author: **Snehal Hora**, *Drexel U.*

Increasing globalization continues to change the racial landscape of the modern workplace. This has prompted academic interest in exploring dynamics between people of different races. Social Identity Model (Social Identity Theory and Social-Categorization Theory) has laid the groundwork for how racial dissimilarity may result in poor communication, lack of social integration, and increased conflict. However, this body of research has relied on the assumption that racially dissimilar individuals are not likely to share the same values as compared to racially similar ones. Using Expectancy Violation Theory, we explore the nuances of the assumptions related to the interaction between value (in)congruence and racial (dis)similarity. Specifically, we focus on the violations of expectations when racially similar people do not align in their values, and racially dissimilar ones do. Furthermore, we explore how these violations impact employees' likelihood to speak up at work. We propose a sequence of affective and cognitive mechanisms that drive this effect. To test my hypotheses, we employed an experimental design with 720 participants across different races recruited through Prolific. We discuss the implications of my findings for the Social Identity Model, Expectancy Violations Theory, and broader diversity literature. In addition, we highlight the practical implications of these findings.

Unpacking the Dynamics of Performance, Status, and Assessed Potential Among Exceptional Employees

Moderator: **Rebecca Rheinhardt Kehoe**, *Cornell U.*
Panelist: **Frederick Scott Bentley**, *U. of Delaware*
Panelist: **Elizabeth Margaret Campbell**, *U. of Minnesota*
Panelist: **David Collings**, *Trinity College Dublin*
Panelist: **Pat Downes**, *U. of Kansas*
Panelist: **Matteo Prato**, *ESADE Business School*

Amidst increased awareness of human capital as an important source of competitive advantage, many scholars have recognized that not all employees contribute equally in organizations. This has led researchers to devote increased attention to a few subsets of employees – including stars, high performers, high status individuals, and high potentials – whose contributions tend to attract disproportionate attention and investment in their employing organizations. The resulting lines of inquiry have produced research examining the work-related experiences and outcomes of these exceptional individuals, as well as the favorable and unfavorable influences they exert on their peers. At the heart of many findings on these issues is the operation of cumulative advantage, a phenomenon wherein individuals who attain an early performance- or status-based advantage advance along a path paved with greater opportunities, increased access to resources, and favorable evaluation biases that set the stage for subsequent advantages in attaining continued high performance and recognition. The purpose of this symposium is to unpack the taken-for-granted dynamics of performance, status, and assessed potential (and/or evaluations of performance) among these exceptional employees, with a focus on the distinct influences of each as they relate both to how these individuals come to arrive where they are and how they influence those around them. In turn, the discussion will involve a consideration of how these individuals, their peers, and their broader work environments are most effectively managed to enhance the benefits and minimize the costs associated with the operation of cumulative advantage.

Workplace gossip, defined as the evaluative talk initiated by one employee (gossiper) to another (recipient) about an absent colleague, is widespread. Research indicates that over 90% of employees engage in gossip. Despite recent advancements in research on workplace gossip, two key challenges persist, hindering a comprehensive understanding of its harms and benefits. First, recent work tends to focus on the impacts on gossipers, with less known on how and why gossip may affect other stakeholders including gossip targets, gossip recipients, work groups, or the organization. Second, while there is an acknowledgment of the importance of differentiating gossip based on valence (positive vs. negative gossip), content (work vs. non-work-related gossip), and target (gossip about the supervisor vs. coworkers), it remains a theoretical and empirical challenge to encompass all these dimensions in a single study. This symposium aims to address these two critical issues by presenting four papers that contribute to a more holistic understanding of the harms and benefits of workplace gossip. These papers not only expand our insights into the consequences for gossipers but also delve into the impact on gossip recipients, work groups, and the organization. Moreover, the four papers employ novel theoretical perspectives and empirical methods to allow the simultaneous examination of multiple dimensions of gossip and their integrative impacts.

The trust literature is at a mature stage of development, which can largely be attributed to the presence of clear conceptual models (e.g., Mayer, Davis, & Schoorman, 1995) that have received strong empirical support (Colquitt, Scott, & LePine, 2007). Although a strong conceptual consensus brings many benefits, an unintentional side effect is that scholars can become hesitant to look outside that paradigm. In recent years, trust scholars have increasingly observed that current models are silent on many critical trust dynamics at work and in society more generally (Baer & Colquitt, 2018; Dirks & de Jong, 2022; van der Werff, Legood, Buckley, Weibel, & de Cremer, 2019). Given these trends, a clear understanding of the causes and consequences of trust is more important than ever – not solely for academics, but also for practitioners and society as a whole (Dirks & de Jong, 2022). This symposium will highlight research on individual differences in trustors that affect their perceptions of trustworthiness, the potential benefits of distrust, the mechanisms of trust velocity for new hires, and the effects of gender on trust and trustworthiness. The purpose of our symposium is to extend established trust theory with new perspectives that use a variety of methodologies, hopefully inspiring scholars to take trust research into new directions.

Navigating Social Networks: Network Evolution and Inequality Shaped Over Time

Organizer: **Francesca Nannetti**, *NEOMA Business School*
Organizer: **Teodora Tomova Shakur**, *Texas Christian U.*

The networks we build have immediate effects on our professional well-being. Individuals with fruitful networks tend to get more job offers, higher salaries, and better post-hiring outcomes such as fit, socialization, and mentorship opportunities (e.g., Bartus, 2001; Castilla, 2005; Fernandez et al., 2000; Granovetter, 1973). However, there are multiple socio-cultural and demographic factors that affect people's intentions to network, the networking strategies they employ, and the way they utilize their networks for professional advancement. For instance, prior studies indicate that high-power individuals tend to express greater comfort with networking, whereas low-power individuals may view it as unacceptable behavior (Casciaro et al., 2014). People with high socioeconomic status also tend to rely on their networks during job searches, while others prefer to avoid mobilizing their social capital and secure a job on their own (Cao & Smith, 2021). Considering gender as a categorizing characteristic, past research shows that men tend to mobilize their networks during job search or broker successfully, while women can get penalized for agentically utilizing contacts (Brands & Kilduff, 2013). Although the right strides have been made to identify key demographic characteristics such as socio-economic status and gender and the role they play in social networks and networking, a lot remains misunderstood. Namely, do individuals' perceptions of their own prestige affect how they create, maintain, and utilize their networks during job search? Do the motives that observers hold towards individuals who network and their intentions to help such individuals professionally impact social networking? The factors shaping individuals' experiences in forming, sustaining, and utilizing social networks continue to be elusive, with scientists grappling to comprehend the underlying reasons and devise interventions to mitigate differences that may arise from these different approaches to networks. This symposium takes a process perspective and explores the journey the ego and alters undergo during the social network evolution. Our session delves into the mechanisms that elucidate the diverse utilization of network ties, leading to distinct network evolutions. Moreover, we explore how these mechanisms vary across social or demographic characteristics to understand sources of inequality shaped in social networks and their evolution over time. The papers included explore how social comparisons at work affect job search intentions; how third-party attributions to why people network affect collaboration patterns, leadership perceptions, and likelihood to help; how third-party attributions to the merit of people who utilize their networks for job advancement determine third party's subsequent behavior towards them at work, and finally, what social interventions can organizations perform to design the networks of their employees such that it enhances their search process and promotes inclusivity. In all, this symposium looks at the effects of various socio-cultural factors such as gender, motives, social standing, and prestige to commence to discern the complex patterns of networking and network evolution in the workplace.

Unraveling the Subtle Processes of Change

Session Moderator: **Kätlin Pulk**, *Estonian Business School*

ODC: **Combining Being Realism and Becoming Realism for a Better Understanding of Organizational Change**

Author: **Kätlin Pulk**, *Estonian Business School*

There are two fundamentally different approaches to organizational transformation – being realism and becoming realism grounded in different ontologies, seen from the perspective of dualism and ascribing different importance to managerial agency. Instead of emphasizing the ontological distinctions between and practical incompatibility of the two approaches, I propose to combine assumptions introduced by being and becoming realism on organizational transformation. In this paper, I argue that combining ideas of being realism associated with a deliberate organizational change and becoming realism associated with a naturally occurring change or becoming and seeing the interplay between these two phenomena could enhance our understanding of organizational transformation and the role of managerial agency. However, while change and becoming are mutually constitutive, it is essential to clearly distinguish between organizational change and organizational becoming, as these concepts are often treated as synonyms in the literature. Moreover, I argue that to enhance the explanatory power and, by that, both the theoretical and practical relevance of processually oriented organization theories, it is vital to recognize that in and for social systems, including organizations, there are at least two different but interacting modes of becoming – the immediate temporal experience of an action-oriented becoming and becoming as a temporal trajectory formed by the past folding into the present and the undetermined flow of the past and present towards the future

ODC: **Legitimizing Change and Changing Legitimacy: An Analysis of the Intersection**

Author: **Cristian Ziliberg**, *Aalborg U. Business School*

Author: **Nikhilesh Dholakia**, *U. of Rhode Island*

Author: **Romeo Turcan**, *Aalborg U. Business School*

Both change and legitimation are central phenomena in organizational theory. There is, however, no systemic study analyzing the interaction of legitimacy and change and how different interpretations of change and legitimacy fit together, if at all. Thus, we ask: in what ways is the interaction of change and legitimacy addressed in organizational theory? To answer this question, we investigated articles that dealt with both phenomena published in top organizational journals and analyzed them in terms of the definitions of legitimacy and change they employ and the interaction mechanisms they present. We found that the literature on change and legitimacy uses the entire spectrum of legitimacy conceptualizations but only the Parmenidean (i.e., stasis-oriented) versions of change conceptualizations. In a temporal frame, the following interactions were observed: (1) Change precedes legitimacy, with the following mechanisms: change is legitimated, the idea of change legitimates, and the state of change legitimates; (2) Legitimation triggers change, with the following mechanisms: legitimation leads to change, delegitimizing triggers change, the legitimation struggle could lead to change; (3) Change and legitimation loop, with the following mechanisms: change-legitimation-change, or legitimation-change-legitimation; (4) Legitimacy and legitimation are themselves changing. After presenting a literature-based systemic study analyzing the interactions between change and legitimation, it looks at the interactions from both Heraclitan (flux-oriented) and Parmenidean (stasis-oriented) perspectives. The paper concludes by proposing a reconceptualization of legitimation, as well as change, closer to the Heraclitan approach, which could breathe new life into legitimation studies. It also claims that innovation for the future is linked with the move from the Parmenidean to the Heraclitan perspectives.

ODC: **“We Have to Equip Them to Sell It”: How External Activists Help Internal Agents Implement Change**

Author: **Adrienne Paige Baer**, *Stanford U.*

Author: **Melissa Valentine**, *Stanford U.*

To enact social movement goals and create social change, external activists often wish to bring about change within target organizations. Yet, research demonstrates that organizational change is difficult. Even if there are internal advocates who are motivated to enact the desired social change, these internal change agents often face barriers to mobilizing support. In this paper, we ask: How do external activists enable internal change agents in target organizations to implement desired social changes? Using a 15-month ethnography of an organization attempting to spread caregiver support benefits by influencing target organizations through insider allies, this paper develops theory about social movements and organizational change. Specifically, we identify practices through which external activists help internal agents overcome positional barriers to implementing change. Our findings demonstrate how the external activists strategically developed catalyzing resources, which we define as resources deployed by an external actor to facilitate internal agents' implementation of organizational change. Further, the external activists equipped internal change agents to mobilize these catalyzing resources to overcome their limited power and authority in implementing change – including selling the change to executives and employees, and measuring impact to sustain devoted resources. We thus illustrate how the barriers faced by internal agents created opportunities for external activists to help those agents and in doing so, strategically influence change implementation.

ODC: **Communitizing: A Case Study on Internal Open Source Reforms in a Large Technology Company**

Author: **Jesse Zhou**, *U. Of Chicago*

This longitudinal study investigates the transformative initiatives at RENITECHO, a large multinational technology company, aimed at establishing an internal ecosystem that mimics the dynamics of an open-source community—a process I have termed “Communitizing.” In contrast to the conventional, centralized corporate structure, open source communities operate on a decentralized model fueled by voluntary participation. 15 months of ethnographic research revealed the dynamics between entrenched corporate workflows, hierarchical power structures, and the prevailing culture, examining how these factors either obstruct or promote the development of an internal community. The analysis highlights that effectively integrating such a community within a corporate framework necessitates not only a strategic softening of traditional governance but also an alignment of divisional interests with collaborative innovation goals.

Navigating Change: Exploring Organizational Resilience

Session Moderator: **Lucrezia Nava**, *City U. of New York, Baruch College*

ODC: Turning Tides: The Role of Compassion in Organizational Growth Following Extreme Events

Author: **Lucrezia Nava**, *City U. of New York, Baruch College*

Author: **Kenichi Matsuno**, *Babson College*

Author: **Daniel Beunza Ibanez**, *Bayes Business School*

Extreme events are becoming more frequent, causing significant distress for organizations while also catalyzing the emergence of organizational compassion. While the literature focuses on how organizational compassion leads to the creation of new ventures, our study broadens the scope to examine how organizational compassion activation can transform existing organizations and lead to long-term organizational growth, continuing beyond the recovery phase. By integrating insights from both organizational compassion and resilience, and employing a mixed-method approach, we surveyed 575 Japanese organizations impacted by the 2011 Tohoku earthquake and tsunami and examined archival data. Our findings reveal that organizations more severely affected by the extreme event demonstrated accelerated growth from 2009 to 2019 compared to less affected organizations. Significantly, this growth trajectory was prominent in organizations that markedly activated organizational compassion towards the affected community. We delve deeper into these dynamics with two case studies from our sample, illustrating how the activation of organizational compassion can underpin resilience and growth by generating a unifying purpose and strengthening stakeholder relationships. This research contributes to the discourse on extreme contexts and positive organizational scholarship by elucidating the crucial role of organizational compassion in catalyzing the resilience process and fostering long-term organizational growth.

ODC: Resilience-Building Recruiting and Retention Strategies for Small Business

Author: **Yvonne Wilkerson**, *Doctoral Candidate*

Author: **Curt Jarrell**, *Doctoral Student*

Author: **Susan M. Haynes**, *Reviewer*

Author: **Nannette P. Napier**, *Georgia State U.*

This is a case study that explores how small businesses adapted their recruitment and retention practices in response to the extreme business shocks triggered by the COVID-19 pandemic. The dynamic and competitive marketplace requires small businesses to retain key employees and recruit new employees to compete and grow. Combining Job Embeddedness Theory and Organizational Resilience Theory creates a lens to assess how small businesses adapted their practices and whether these adaptations increase their resilience. We conducted six semi-structured interviews, transcribed the data, and applied analytical coding using theoretical categories to understand their situational perception, contextual framing, and adaptations. Current research lacks data on how small businesses respond to business shocks. These findings contribute to understanding how these businesses adapted, which adaptations built competitive resilience, and which were ineffective.

ODC: Interorganizational Networks in the Face of Disruption: Building Resilience for Grand Challenges

Author: **Alina Praun**, *TU Dresden*

Author: **Martina Pieperhoff**, *TU Dresden*

Author: **Fiona Rumpel**, *TU Dresden*

In an increasingly volatile and complex global landscape, grand challenges lead to disruptions that have become pervasive, requiring a reassessment of the resilience of collaboration between organizations. In literature, collaboration is discussed as important for enhancing resilience. Nonetheless, little attention has been paid to understanding the resilience of inter-organizational collaboration. Furthermore, the unclear definition of the term "disruption" and the complex interplay between resilience and disruption in the context of interorganizational networks represents a notable research gap. Our study addresses this gap by combining a systematic literature review with the Gioia method for qualitative analysis. Thereby, we aim to construct a coherent conceptual framework that illuminates the relationship between disruption and the capacity for resilience within networks of organizations. In doing so, we shed light on the multifaceted nature of disruption, the mechanisms underlying resilience between organizations, and how collaborative networks overcome and respond to major challenges. This research has significant implications for both academia and practice, as it provides a theoretical basis for improving understanding and developing strategies to strengthen inter-organizational resilience against disruptive forces in the midst of the great challenges.

ODC: Understanding the Relationship Between Organizational Resilience and Innovation: A Meta-Analysis

Author: **Xiang Jin**, *Merit Research Institute*

In a business environment characterized by rapid change and uncertainty, the relationship between organizational resilience and innovation emerges as a key area of study. This research, employing a meta-analysis approach, scrutinizes this link through 219 independent samples gathered from 80 scholarly articles (N=21,033). A heterogeneity test found it more appropriate to employ the random effects model, whereas a main effects test identified a significant relationship between organizational resilience and innovation. The moderating effects test discovered that the type of organizational resilience, innovation measurement method, and cultural context influenced the relationship between organizational resilience and motivation. It was observed that the relationship is more robust when organizational resilience is considered as an intrinsic attribute of the organization, and when innovation is evaluated as a process. A notable finding is the stronger manifestation of this relationship in Eastern cultural contexts, underscoring the influence of cultural factors. These insights reveal the multifaceted and dynamic nature of the interaction between organizational resilience and innovation, highlighting its significance in organizational strategy and performance. The study not only advances the academic understanding of these concepts but also offers practical implications for organizations aiming to foster resilience and drive innovation in a global and ever-evolving business landscape.

Cultivating Innovation From Within: Internal Consultancy's Pivotal Role in Organizational Futures

Organizer: **Tova Sanders**, *Western Michigan U.*
Panelist: **Elizabeth Aikman**, *Hult International Business School - Ashridge*
Panelist: **Pierre El Haddad**, *INSEEC Grande Ecole*
Panelist: **Margaret D. Gorman**, *A23 Advisors*
Organizer: **David B. Szabla**, *Western Michigan U.*
Panelist: **Kyle Small**, *Calvin U.*
Panelist: **Julie Smendzuik-O'Brien**, *Metropolitan State U.*
Panelist: **Shavon Thurmond**, *Doctoral Student Benedictine U.*
Panelist: **Gokhan Turgut**, *U. du Québec à Montréal (UQAM)*
Panelist: **Sondes Turki**, *École des sciences de la gestion (ESG UQAM)*
Panelist: **Unique Brathwaite**, *Fielding Graduate U.*
Panelist: **Sharon Jeanetta Darno**, *Doctoral Student Benedictine U.*

Throughout the annals of organizational history, the role of internal consultants has quietly steered the course of success in organizations, often playing pivotal roles in shaping strategy, solving complex challenges, and fostering change. Today, as the ever-evolving landscape of work and technology reshapes the organizational paradigm, the future of internal consultancy shines with unparalleled promise. This confluence of human expertise and emerging trends opens new frontiers, offering internal consultants an unprecedented opportunity to embrace dynamic roles enriched by cutting-edge technologies and innovative methodologies. "Internal consultants: The driving force behind organizational innovation and success," a new addition to David Szabla's Research in Management Consulting book series, will be published in the fall of 2024. The chapters in this volume delve into the timeless wisdom of internal consultancy and its seamless integration with future trends exploring the accelerating strategic importance of internal consulting capabilities in fostering innovation, adaptability and transformation competencies vital to navigating uncertainty and complexity. This timely panel symposium affords the opportunity for contributing authors to situate their work and thoughts within the broader themes of the book and interact with fellow thought leaders- scholars and practitioners- to further the discussion of the power, possibilities, and challenges of internal consultants. As the landscape of technology and work evolves, panelists will highlight how an array of pivotal roles across functions are integrating consultative mindsets marked by systems thinking, cross-boundary collaboration, and change leadership expertise. Further, panelists will discuss their chapter contributions and innovative frameworks for how diverse intrapreneurial perspectives can intersect with emerging trends such as public sector reforms, talent pathway cultivation, and equity culture shifts to drive enterprise resilience and progress.

Repair and Institutional Healing

Organizer: **Brett Crawford**, *Grand Valley State U.*
Organizer: **Madeline Toubiana**, *Telfer School of Management, U. of Ottawa*
Discussant: **Tina Dacin**, *Queen's U.*
Presenter: **Mia Raynard**, *U. of British Columbia*
Presenter: **Vitaliano Barberio**, *USI (Lugano)*
Presenter: **Magdalena Winkler**, *WU Vienna U. of Economics and Business*
Presenter: **Maggie Cascadden**, *U. of Alberta*
Presenter: **Emily S. Block**, *U. of Alberta*
Presenter: **Jeannette Anastasia Colyvas**, *Northwestern U.*
Presenter: **Hokyu Hwang**, *UNSW Sydney*

This symposium explores repair and institutional healing, marked by longer-term change efforts that blend emotions, multimodality, and broader societal impact. Institutional repair work aims to preserve valued aspects of institutions while modifying other aspects that are unwanted or unsustainable. Collectively, the presentations in this symposium explore how repair work represents one approach to reclaiming an institution's integrity by rebuilding, renewing, or healing it, leading to positive societal outcomes.

Identity Work in Stigmatized and Challenging Contexts: Can the World Change its Heart?

Session Moderator: **Marie Hasbi**, *Vrije U. Amsterdam*

OMT: **Who Am I at the Office? Employees' Identity Work in a Placeless Workspace**  

Author: **Marie Hasbi**, *Vrije U. Amsterdam*

Author: **Alfons Van Marrewijk**, *BI Norwegian Business School*

Academic interests in the concept of placelessness, the weakening of significance in places, has grown as post-COVID-19 workplaces are becoming more mobile and are increasingly situated in multiple places. Despite calls from scholars, little is known about how employees use organisational space and sense of place as resources for identity work. This study addresses this gap by investigating employees' identity work in a French banking organisation that transformed into a placeless workspace. Findings reveal that the placeless workspace threatened employee's self-esteem and distinctiveness. In response to these identity-threats employees engaged in three forms of identity work: place-making, creating a place to dwell, and re-embedding. This enabled them to initially protect aspects of themselves and eliminate the threats, and begin a process of restructuring these aspects that includes the development of an open sense of place. In so doing, the paper reconsiders the relationship between placelessness and place, seeing it as a dynamic one that can be managed through identity work.

OMT: **Changes in Hiring Discrimination Against Stay-at-Home Fathers during the COVID-19 Pandemic**

Author: **Julia Lee Melin**, *Dartmouth College, Tuck School of Business*

Author: **Jennifer M. Merluzzi**, *George Washington U.*

Prior to the Covid-19 pandemic, stay-at-home fathers attempting to re-enter the paid workforce faced greater social and economic penalties from employers than their mother counterparts. How did Covid-19 affect employers' perceptions of stay-at-home fathers? The unprecedented childcare challenges posed by the pandemic and the resulting dramatic increase in stay-at-home parents of both genders received substantial media attention. Consequently, employers' normative beliefs about the appropriate roles of women (as caregivers) and men (as breadwinners) may have shifted throughout this period. We leverage unique data from an online survey experiment capturing employers' evaluations of stay-at-home mother and father applicants in 2019 (before the pandemic) and again in 2021 (during the height of the pandemic). Results show that approximately one year from pandemic onset, penalties against longtime stay-at-home fathers relative to equally qualified stay-at-home mothers diminished to the point where they were no longer statistically significant. Even more surprising, employers now expressed a greater preference for hiring fathers who demonstrated the most need for help re-entering the workforce compared to those mothers and fathers who demonstrated the least. These findings shed light on how the pandemic altered gendered norms around work and family, and raise questions about the durability of widely shared, hegemonic cultural beliefs about gender.

OMT: **Identity Threat, Identity Work, and Identity Construction: A Study of Physicians in Public Hospitals**   

Author: **Farooq Ahmad**, *Siena College*

Author: **Rashedur Chowdhury**, *U. of Essex*

We examine how established professionals manage threats to their identity when they encounter structural reforms that represent changes to their roles and routine practices. In 2015, the local government of Khyber Pakhtunkhwa (KP) province in Peshawar, Pakistan, passed a reform bill to modernize state healthcare. The reform demanded that physicians abandon certain established practices and adopt new ones that appeared to conflict with their social and professional identities. Drawing on 59 interviews focusing on three state-run teaching hospitals, this study contributes to a better understanding of struggles experienced by healthcare professionals when they are pressured to abandon their old identities. We find that three threats to physicians' professional identity—conflict with core professional values, added professional accountability, and curtailment of professional autonomy—all relate to the fragmentation of work and competing professional values. Our study further reveals that the physicians engaged in identity work through two distinctive responses: identity distinctiveness and identity enrichment. Based on these findings, we develop a theoretical model that highlights the multiple forms of identity work that these professionals simultaneously engage in and through which they encounter changes in roles and practices which, ultimately, affect their existing identities. We contribute to identity theory by showing how professionals customize their identities to make them congruent with changing professional and organizational requirements.

OMT: **Juggling Racial Ethnic Identities: How Entrepreneurs Handle Discrimination in Changing Environments**   

Author: **Maria Paola Ometto**, *California State U., San Marcos*

Author: **Carly Offidani-Bertrand**, *California State U., San Marcos*

While we know that social identities impact entrepreneurship, we know less about that relationship for individuals with marginalized identities. We specially do not have an in-depth understanding of how changes in the environment regarding these marginalized identities impact entrepreneurship. In this paper we aim to understand how entrepreneurs develop and employ sophisticated strategies to manage persistent and dynamic discrimination related to their social identities. We conducted a grounded theory study based on interviews, observations, and archival data. Our findings show that those entrepreneurs of color who narrate persistence and growth were constantly juggling their identities and had the ability to invisibilize, camouflage, and leverage their race in adaptive response to the socio-ecological context within which opportunities arise. We further show the characteristics of the entrepreneurs that enable them to be able to comfortably shift their identities as needed. We contribute to the literature by showing the importance of taking into consideration the environment and its changes in how discrimination happens for entrepreneurs, and the importance of multi-level studies to understand how entrepreneurs adapt their identities in their trajectories.

Strategic Leadership: Would You Rather be Feared or Loved?

Session Moderator: **Quy Nguyen Huy**, *INSEAD*

OMT: **How CEO Affective Grooming Helps Develop Top Management Team Behavioral Integration**  

Author: **Quy Nguyen Huy**, *INSEAD*

Author: **Ganqi Tang**, *U. of Fribourg*

Author: **Daniel Z. Mack**, *Singapore Management U.*

Author: **Weiru Chen**, *China Europe International Business School (CEIBS)*

Top management team (TMT) behavioral integration is crucial for firms to adapt to environmental shifts. Prior research has tended to focus on relatively distal, static, or overly generic determinants of behavioral integration and generated equivocal implications. Our knowledge of how to foster behavioral integration in top teams remains limited as the relational dynamics underpinning this interaction-based collective competence have been underexplored. We conducted a longitudinal inductive field study to understand how behavioral integration was fostered at three local firms in China's fast-growing market. Our study reveals how the CEO's affective grooming, in parallel to cognitive-behavioral teaching, helps develop behavioral integration by fostering affective accountability, diffused affective gratitude, and context-specific knowledge acquisition among top executives. Affective grooming refers to a pattern of emotion management actions to initiate, sustain, and give feedback on executives' learning process. Our study contributes to upper echelons theory by highlighting the affective-relational dynamic of grooming. In uncovering the emotions and emotion management mechanisms that foster behavioral integration, our study illuminates the relational black box of upper echelons research.

OMT: **A Double-Edged Sword: Restructuring as Impression Management and the Risk of Early CEO Departure**

Author: **Jiwook Jung**, *U. of Illinois at Urbana-Champaign*

Author: **Suyeon Kang**, *U. of Illinois at Urbana-Champaign*

Author: **Yin Lee**, *Ajou U.*

Projecting an impression of competent leadership is crucial for newly appointed CEOs. Hence, they have a strong incentive to impress boards and other stakeholders with bold and visible strategic decisions, such as divestiture and downsizing, early on. But how will those decisions affect their career later? Combining insights from the behavioral theory of the firm and the literature on impression management, we propose that new CEOs' proactive impression management—their effort to boost expectations for future performance outcomes—can have an unintended consequence by shifting boards' attention toward different performance aspirations. Using a large sample that includes most listed U.S. firms between 2003 and 2018, our analysis shows that new CEOs' proactive adoption of restructuring shifts boards' attention toward the CEOs' performance records but away from the past performance of their predecessors. In this way, while proactive impression management may help new CEOs reduce the risk of unfavorable comparisons with their predecessors, it can further increase their risk of early departure when they underperform compared to their recent performance levels. We discuss how our findings can contribute to the ongoing research on the dynamic relationship between restructuring and executive turnover, impression management, and the multiplicity of performance aspirations.

OMT: **Microfoundations of International Business Strategy**   

Author: **Suyash Garg**, *U. of Texas at Dallas*

Drawing upon imprinting and categorical social cognition perspectives, we theorize how CEOs' early-life exposure to intergroup ethnic violence shapes their firms' FDI strategy in countries wherein outgroup members form the preponderant demography. Our analyses of Indian firms' FDI reveal that Hindu CEOs' early-life exposure to Hindu-Muslim ethnic violence reduces their firms' likelihood of a) FDI in Muslim-majority countries and b) engaging in partnering-mode in these countries. Further, imprinted CEOs' working experience with Muslim directors through board interlocks weakens the negative effect on likelihood of FDI, but not on partnering modes in Muslim-majority countries. We contribute to a better understanding of the heterogeneous nature of imprinting decay, sources and consequences of executives' stereotyped beliefs regarding demographic groups, and subjective nature of FDI location choices.

Misconduct, Harm and Injustice: The Only Thing Necessary for the Triumph of Evil

Session Moderator: **Chenhao Hu**, *school of business, shandong U.*

OMT: **Identity Divergence and Convergence: Organization Hybridity and Corporate Misconduct in Chinese SOEs**

Author: **Chenhao Hu**, *school of business, shandong U.*

In state-owned enterprises (SOEs) with a mix-ownership structure, non-state ownership shareholders may experience an identity crisis regarding their role within the firm, leading to an ambiguous interpretation of the impact of organizational hybridity on corporate misconduct. Adopting an identity work perspective, this work proposes two identity interaction effects between majority state shareholders and minority non-state shareholders in SOEs—identity divergence leading to a positive association between non-state ownership and corporate misconduct, and identity convergence resulting in a negative relationship. The juxtaposition of these two opposing effects implies an inverted-U relationship between non-state ownership and corporate misconduct in SOEs. Further, this effect is moderated by three contingencies—media coverage, regional inspection and participation of non-state shareholders in governance. We empirically examine and provide empirical support for our arguments using a 12-year panel dataset of Chinese publicly listed SOEs. This work contributes to the organization hybridity and corporate misconduct literature.

OMT: **The Slave Trade and Firm Corruption in Africa: Historical Legacies of Injustice**

Author: **Jianan Li**, *Towson U.*

Author: **Eric WK Tsang**, *U. of Texas at Dallas*

Firm corruption has become an institutionalized practice in Africa. We show that this phenomenon can be partly explained by the slave trade history, which was corrupt in its own right. Combining historical data of the slave trade with contemporary firm-level survey data on firm corruption, we find a robust, positive relationship between the number of slaves exported from a country and current firm corruption intensity and depth. In areas that suffered high historical levels of slave extraction, modern-day firms pay more bribes. To explore the persistence of structural corruption, we draw on Rawls's theory of justice and Jean-Paul Sartre's account of bad faith to argue that injustice is one of the specific features that characterize extractive institutions conducive to corruption. By employing the World Values Survey (WVS), we examine the injustice of formal institutions and informal norms as potential channels to explain the historical slave trade's impact on present-day firm corruption. Our study contributes to the institutional theory and firm corruption literature by showing that the taken-for-granted business practice of firm corruption in Africa has roots of injustice that run deeply into the slave trade history.

OMT: **From Paralysis to Publicization: How Victims Confront Organizational Harm**

Author: **Grace Augustine**, *School of Management, U. of Bath*

Author: **Jan Stephen Lodge**, *Rotterdam School of Management, Erasmus U.*

Author: **Mislav Radic**, *Bocconi U.*

Organizations frequently inflict harm on individuals, and yet it remains unclear why that harm often takes years to come to light, and sometimes never becomes public knowledge. While prior researchers have looked extensively at the role of external audiences in the process of the publicization of organizational harm and wrongdoing, a key actor that has been overlooked is the victims themselves. Using extensive historical archival data and interviews with victims, we examine how victims experience and confront harm through the case of the UK Post Office Horizon Scandal. In this case, over 700 post office branch managers, called sub-postmasters, were accused of stealing and false accounting. This scandal took years to come to light, and the accusations and convictions persisted for over 14 years. Our findings reveal four cycles of paralysis that discouraged victims from speaking out about this case and go on to show how they were able to break their silence and overcome their paralysis. Overall, our paper provides valuable insights into the role victims can play in publicizing organizational harm, but also, importantly, what barriers they face in doing so and therefore extends the literature by providing an explanation of why instances of organizational harm and wrongdoing may take years to surface.

OMT: **Keeping the Fight Alive in Violent Online Contexts: Moral Energy Replenishment to Debunk Fake News**

Author: **Marie Joachim**, *ESSCA School of Management*

Author: **Lydia Milly Certa**, *Surrey Business School, U. of Surrey*

Author: **Itziar Castelló**, *Bayes Business School (formerly Cass), City, U. of London*

How to deal with extreme online violence? Despite emotional energy has been described as fundamental for coping with disruptive work we still know little about how to refuel it under conditions of extreme emotional violence and institutional fragility. Through the case of Big Pragma, the association grouping the most active anti-vaxxers fake news fighters in France, we explain how actors refuel their energy to enact collective action. We introduce the term moral energy replenishment which outlines that energy replenishment happens in the interaction between the moral duty, emotion work, and the construction of the collective sense of institution. We detail the mechanism by which actors dealing with fake news replenish their emotional energy emphasizing the role of the reinforcement of the moral duty, the construction of a sense of belonging to a collective, and the creation of protective agency. We contribute to the theorization of emotional energy replenishment by showing the importance of moral duty and the intersection of emotions and the construction of institutions.

Theorizing Commitments

Session Moderator: **Hyejun Kim**, *HEC Paris*

OMT: **User Before Entrepreneur: User Motives as a Signal of Commitment**

Author: **Hyejun Kim**, *HEC Paris*
Author: **Jaekyung Ha**, *EMLYON Business School*

Entrepreneurial pitches often include stories describing that a firm's offerings are motivated by its founder's experience as a frustrated user, which we term "user motive." This paper investigates whether and when the adoption of user motives generates a strategic value. Drawing on the concept of "economic disinterestedness," we theorize that adopting a user motive may increase the product's appeal because it signals the entrepreneur's commitment. Building on real-world examples on Kickstarter and through controlled experiments, we show that product pitches with a user motive generate higher selection by audiences. We further validate two boundary conditions of our theory: the strategic value disappears (a) when product pitches lack sufficient quality signals and (b) when the audience evaluates the same set of pitches as an investment decision.

OMT: **Bound to Change: Curating Emotion to Configure Commitment**

Author: **Matthew James Hurst**, *Warwick Business School*
Author: **Davide Nicolini**, *U. of Warwick*
Author: **Rene Wiedner**, *Warwick Business School*

Drawing from an ethnographic study of a management consultancy specializing in strategic change, this paper examines how emotions can be engaged and mobilized to induce commitment to change (C2C) across large organizations and how C2C is related to other forms of workplace commitment. We find that C2C is brought about and configured through the curation of managers' emotions before strategic change goals are created. We identify four emotion curation activities used to produce C2C: targeting emotional outcomes; triggering emotional reactions of managers; exhibiting emotional reactions; and codifying emotional outcomes into strategic change goals. The four activities, and associated processes, combine to create an "emotion work system" (Hochschild, 1979) that generates a desire for, and social obligation to deliver, change. As a result, C2C becomes a pre-requisite to organizational commitment, given that the process disrupts the prior basis for identification with, and attachment to, the organization. The process intentionally produces a majority of managers strengthened, and a minority weakened, in their commitment towards change and the organization. Theorizing from our findings we develop a model that explains how emotion curation occurs and the underlying processes affecting C2C and organizational commitment.

OMT: **To the Moon: Hype Cycles and Commitment in a Silicon Valley Start Up**

Author: **Patrick Sheehan**, *Stanford MS&E*

Uncertainty is a defining feature of organizational life in the contemporary economy. How do organizations generate commitments from employees in a context of heightened uncertainty? I pursue this question through an ethnographic analysis of a Silicon Valley tech "start-up." Tech start-ups exact intensive commitments from employees—long unbounded hours and social and emotional investments in the firm—despite the well-known fact that most of these firms will fail entirely within in a few years. Drawing on participant observation as an employee at a seed-stage software start-up, I find that managers use a repeated sequence of three techniques to generate commitment from the workforce. First, they hype up the workplace, using energized rituals and transcendent discourse to create a sense of moral purpose and collective excitement. Second, managers reward bait—they introduce an imagined set of rewards that workers can earn through commitment and insist that those rewards are immanent, legitimating urgency and overwork. And third, managers systematically purge the firm of workers who become disillusioned when such rewards don't arrive, replacing them with eager new hires more amenable to the first two modes of motivation. The result is a repeatable cycle of management that sustains collective commitments from the workforce even as individual commitments falter. These findings challenge an overly rigid view of control in a given firm as relying on a single "mode" or "system" of management. Instead, it shows how managers address uncertainty by deploying multi-vocal forms of management, and how they draw on different techniques in response to different moments in a firm's trajectory.

OMT: **From Fleeting Enchantment to Embodied Commitment: How Bottom-up Momentum can Emerge and Persist**

Author: **Anna Stöber**, *Institute of management and Organization, Leuphana U. of Lüneburg*

Accounts of momentum in organization studies suggest that the success and sustainability of change efforts depend on the extent to which such efforts gain the commitment of actors to pursuing a new path. Research has revealed that the emergence and attainment of sustainable momentum involves a dynamic and complex process of social interactions and communication patterns. Yet, prior conceptualizations have focused mainly on empirically mapping momentum in the context of planned, top-down driven change. In this paper I mobilize a communicative constitutive view of organization to elaborate a concept of momentum from the bottom up and beyond strategic intervention. Grounded in a qualitative study of a medical technology company, I show how new modes of organizing introduced by the case firm's management initially induced short-term momentum that subsequently plateaued and gave way to ambiguity and critical evaluation concerning the initiative. Momentum only recurred as certain actors started attaching their own meanings to the idea and began developing an embodied sense of commitment to the new modes of organizing. My analysis contributes to the theorization of momentum in organization studies by highlighting the role of embodied commitment in perpetuating momentum, especially from the bottom up. The study emphasizes the role of new meanings emerging from individual interpretations that can shift momentum away from an intended path.

Work: Opportunities and Threats

Session Moderator: **Nawon Oh**, *U. of Leeds*

OMT: **The “Dark-Side” of Customer-Oriented Efficiency: Injuries and Illnesses in Order Fulfillment Services**  

Author: **Nawon Oh**, *U. of Leeds*

Author: **Vilmos F. Misangyi**, *Pennsylvania State U.*

Although the workplace safety literature has primarily focused on internal factors of a firm that may influence organizational safety outcomes, recent studies have pointed to the need for a better understanding of how broader cultural and external environmental forces can affect workplace safety. Our study extends this research by examining whether a firm's relentless pursuit of efficiency aimed at customer satisfaction and order fulfillment—which we refer to as a customer-oriented efficiency logic (COE logic)—adversely affects workplace safety in the fulfillment center industries. We argue that the COE logic serves as a rationalizing mechanism that allows managers, employees, and even customers to accept, or even be complicit in, high numbers of workplace injuries and illnesses in these industries. We hypothesize that firms with a stronger COE logic have higher numbers of worker injuries and illnesses than do their counterparts with a weaker COE logic. We also further investigate whether the political ideology of firms' CEOs, and of the regions where their fulfillment centers are located, moderates the effect of the COE logic on worker injuries and illnesses. Based on the literature on political ideology and individual beliefs, we argue that the COE logic has a stronger effect on those guided by a liberal ideology as the "siren song" of a COE logic has more of an opportunity to affect liberals as compared to conservatives, given that the latter already tend to rationalize incidents of injuries and illnesses among the workers. Our hypotheses are widely supported by analyses using establishment-level (i.e., fulfillment center) data on nonfatal occupational injuries from 2016 to 2020, obtained from the Occupational Safety and Health Administration (OSHA) database. Our theorization and findings also pave the way for understanding the normalization of injuries and illnesses.

OMT: **Escaping the Purpose Trap: How Organizations Manage the Double-Edged Sword of Meaningful Work** 

Author: **Jonas Spengler**, *U. of Cambridge*

Author: **Thomas J. Roulet**, *U. of Cambridge*

Author: **Jennifer Howard-Grenville**, *Cambridge Judge Business School*

Meaningful work is a double-edged sword: While it often proves beneficial to – and is hence pursued by – workers and their organizations, it can also have negative consequences for those engaging in it. Hence, a key challenge is understanding how organizations can enable their members to do meaningful work while limiting negative implications. The present study addresses this puzzle through a multi-case ethnographic study of volunteer NGOs in the 'Jungle of Calais' refugee camps. We identify and compare two organizational approaches to managing meaningful work – a bottom-up and a top-down approach – showing how, in the bottom-up case, workers maneuver themselves into a purpose trap and ultimately burn out, while, in the top-down case, they manage to avoid such outcomes. We theorize that, when an organization adopts a broad organizational purpose, workers personalize their roles to maximize meaningfulness. This, however, prevents disengagement from said roles, eliciting the conditions for burnout. On the other hand, when an organization adopts a focused purpose, it can guide workers to enact roles in ways that support disengagement, facilitating more adaptive strain regulation, which mitigates burnout. By building a model of how organizations guide the pursuit of meaningful work we contribute to research on meaningfulness, organizational purpose, and burnout.

 OMT: **Between War and Peace: How Boredom Shapes the Enactment of Idealized Futures at Work**

Author: **Madeleine Stefanie Rauch**, *Cambridge Judge Business School*

While prior research has pointed to the breadth of tools for conjecturing about the future, much less is known about how workers enact an idealized future in extreme contexts. To shed light on this process, we analyze 63 unsolicited personal diaries of UN peacekeeping officers, as well as interviews, documents, and observational data associated with peacekeeping missions in extreme contexts. We describe how peacekeeping officers navigate living in limbo between their idealized future aspirations to achieve peace and the everyday mundane aspects of their work in the field, and how boredom at work plays a vital role in these tensions. Peacekeepers resolve these tensions by either (a) embracing boredom as part of their work, thereby reframing their moral values and adjusting the meaning and the temporal orientation of the idealized future (utilitarian idealized future), or (b) renouncing boredom on moral grounds, thereby upholding the misalignment between the idealized future and their work, often leading to frustration and discontent (absolute idealized future). Our findings have theoretical implications for the literatures on futures, boredom, and extreme contexts by showing how boredom affects the enactment of the idealized future and their implications in day-to-day work.

OMT: **Bottom-up Organizing of Risk Through Riskwork by Repairers in a Mobile Phone Repair Cluster in India**      

Author: **Shikha Dagar**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Author: **K V Gopakumar**, *Indian Institute of Management, Ahmedabad*

Author: **George M. Kandathil**, *Indian Institute of Management, Ahmedabad*

Author: **Pradyumana Khokle**, *Indian Institute of Management, Ahmedabad*

In this study, we examine the process of organizing risk by unconventional actors in an informal setting. As the organizing of risk is embedded in the practices of the actors and the particularities of their context. Thus, we employ the bottom-up, and work-centered concept of risk work to study the organizing process. To study the organizing of risk through risk work, we draw on the empirical setting of a mobile phone repair cluster in India and the work carried out by the mobile phone repairers there. We adopt a qualitative, ethnographic methodology given our work-based approach to studying the process of organizing risk. Through systematic inductive data analysis, we develop a framework comprising of five stages, reflecting the chronological processes through which repair workers organize risk while carrying out repair. As a result, in our knowledge, we undertake the first study to examine all three modes of organizing risk as they together unfold in an empirical setting.

Strategies of Sociopolitical Activism Inside the Firm

Discussant: **Mary-Hunter McDonnell**, *The Wharton School, U. of Pennsylvania*
Organizer: **Raquel Renee Kessinger**, *Boston College*
Organizer: **Genevive Gregorich**, *Columbia Business School*
Presenter: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*
Presenter: **Olga Hawn**, *U. of North Carolina, Chapel Hill*

This symposium seeks to understand the strategies related to sociopolitical activism inside of firms as well as the consequences of that activism. In recent years, organizational leaders have publicly expressed positions on social and political matters not directly related to the firm's primary business activities (Chatterji & Toffel, 2019), while employees have raised social, political, and moral concerns at work and protested a myriad of their organization's practices and policies (e.g., Briscoe & Gupta, 2021; Davis & Kim, 2021). For this symposium, we curated four papers that contribute to a deeper understanding of the phenomenon of sociopolitical activism inside firms. These papers provide new insights into how employee activists use contentious activism to target their own firms and how they react to leadership responses to this activism, how organizational leaders frame public stances on sociopolitical topics, and stakeholder reactions to such activism. The papers selected for this symposium shed new light on the complexity of how employees protest their own firms as well as the tradeoffs firm leaders experience when deciding how to express positions on sociopolitical matters.

Images and Imagination: Promising Pathways for Multimodal Research on the Future

Organizer: **Markus A. Höllerer**, *UNSW Sydney & WU Vienna*

Organizer: **Ines Kuric**, *WU Vienna*

Organizer: **Luigi Mosca**, *Imperial College London*

Panelist: **Diane-Laure Arjalies**, *Ivey Business School*

Panelist: **Alice Comi**, *Tongji U.*

Panelist: **Santi Furnari**, *City, U. of London*

Panelist: **Renate Elisabeth Meyer**, *WU Vienna & Copenhagen Business School*

Panelist: **Silviya Svejnova**, *Copenhagen Business School*

Panelist: **Jennifer Whyte**, *U. Of Sydney*

In an increasingly complex world, coping with an uncertain future is becoming one of the key challenges facing scholarship and practitioners alike. From future-making to vision rhetoric, literature has introduced and reinvigorated a plethora of concepts to explain how imagined futures come about and how they become performative for organizational strategies, policy intervention, or environmental and social movements. It has also amassed a wealth of different non-verbal and multimodal means through which imagined futures are both envisioned and enabled: from sketches, charts, and timelines to AI-generated images or materialized prototypes. Despite growing interest in the use of visual, material, or spatial modes—as well as their combinations as multimodal means—emerging insights into their role for research on the future remain fragmented. This panel symposium aims to identify and spur conversations among different approaches, and sketch promising ways for non-verbal and multimodal research on the future going forward. By engaging an expert group of panelists, it seeks to initiate a debate among different approaches about what kinds of different non-verbal and multimodal approaches are out there, what qualities they each offer, and how their consideration can advance our conceptual understanding of imagining and championing action for imagined futures.

Sustainability Communication and Perception

Session Moderator: **Frederik Maibaum**, *Leibniz U. Hannover*

ONE: Back to the Future? Navigating Temporal Tensions in Corporate Sustainability Communication

Author: **Frederik Maibaum**, *Leibniz U. Hannover*
Author: **Ghita Dragsdahl Lauritzen**, *U. of Copenhagen*
Author: **J. Nils Foege**, *Leibniz U. Hannover*

This study delves into the paradoxical nature of corporate sustainability communication. Based on a multiple case study of nine large European firms, we uncover a general paradox of communicating that explains how organizations must both widen the gap between present actions and future aspirations to inspire change and narrow this gap to maintain legitimacy. Moreover, we introduce a typology of five firm responses to this paradox: silent laggard, afraid controversial, separator, integrator, and reframer. Our typology shows how firm responses to the paradox are determined by contextual factors like ownership structure, corporate culture, regulation, and stakeholder pressure. These findings contribute to research on sustainability and paradox in three main ways. First, by introducing the paradox of communicating we provide a novel perspective on temporality that integrates the interdependencies of future and past. Second, we advance paradox theory by proposing a framework that reflects and explains the role of context in navigating paradoxes. Finally, we provide a typology of firm responses to the paradox of communicating arising from conflicting sustainability demands. Thereby, our work also offers important insights for managerial practice of advancing corporate sustainability.

ONE: Out of Sight, Out of Mind - How Visibility Dynamics Influence the MSI Legitimacy Formation

Author: **Johanna Jarvela**, *IESEG School of Management*
Author: **Marjo Elisa Silttaoja**, *U. of Jyväskylä*

This paper delves into the intricate dynamics of visibility and legitimacy within multi-stakeholder initiatives (MSIs), emphasizing their role as symbols of corporate transparency and governance. While existing literature highlights the successful development and institutionalization of standards within MSIs, the paper addresses a critical gap by examining why certain standards fail to achieve legitimacy. Through a longitudinal case study of an MSI in the Finnish mining industry, the paper scrutinizes the invisibility dynamics in MSI legitimacy-seeking behavior. By analyzing interviews, media materials, and progress reports, the study reveals how choices regarding visibility within the MSI led to its eventual downfall. The findings underscore the significance of MSI organization's control and competing regulatory efforts shaping MSI legitimacy outcomes. In contributing to discussions on private-public regulatory efforts, the paper highlights the intricate relationship between organizational choices in visibility and legitimacy outcomes within the context of MSIs.

ONE: Towards the Natural Environment Agency Theory (NEAT)

Author: **Amama Shaukat**, *Brunel U. London*
Author: **Rajesh Tharyan**, *Newcastle Business School, Northumbria U.*
Author: **Grzegorz Trojanowski**, *U. of Exeter*

Drawing on insights from theories in management, economics, finance, and accounting, we develop the natural environment agency theory (NEAT) to study the agency relation between business and society in the context of natural environment. Based on public property rights to clean air, water, and land, we argue that a business (agent) has an implicit contract with society (principal). Under this contract, it agrees not to impose on society natural environmental agency costs (NEACs) of pollution, depletion, and degradation while producing and selling goods/services in return for its license to operate. Drawing on stakeholder and agency related concepts, we propose and test the effectiveness of NEAC-reducing mechanisms, including monitoring, bonding, and incentives. We find support for NEAT predictions. Our findings open novel directions for future research and inform policy and practice.

ONE: Attention Matters: Time and Environmental Orientation in the Implementation of Sustainable Practices

Author: **Chukwuka Igboanua**, *LUT U., LUT Business School*
Author: **Henri Hakala**, *LUT Business School*
Author: **Sanna Heinänen**, *LUT U., School of Business and Management*

The urgency of sustainability transition is widely acknowledged, yet scholarly discourse has largely neglected the temporal dimensions affecting the adoption of sustainable business practices. Drawing on the attention-based view of the firm, we investigate organisations' subjective experience of time and the role of organisational attention in environmentally sustainable practices. Utilising data from 250 manufacturing firms, we find that two attentional perspectives, environmental and long-term orientations, are positively related to the implementation of sustainable practices, including sustainable design, procurement, and distribution. Additionally, a temporal governance channel, temporal leadership, negatively moderates the relationship between environmental orientation and the implementation of sustainable practices. This implies that managers should not only cultivate a long-term orientation and strong environmental orientation but also carefully navigate the attentional dynamics within their organisation, especially under the influence of temporal leadership, for the successful implementation of sustainable practices. By explaining how organisations' subjective experiences of time facilitate and hinder the implementation of sustainable practices we introduce a time-informed perspective to our understanding of environmental management and business sustainability among manufacturing firms.

Organizing with Nature: Unfolding the Temporal, Spatial, and Material Complexities

Organizer: **Sunny Mosangzi Xu**, *Copenhagen Business School*

Organizer: **Miriam Feuls**, *Copenhagen Business School*

Panelist: **Brooke A. Lahnenman**, *Montana State U.*

Panelist: **Juliane Reinecke**, *Oxford U., Saïd Business School*

Panelist: **Innan Sasaki**, *Warwick Business School*

Panelist: **Natalie Slawinski**, *U. of Victoria*

Discussant: **Raghu Garud**, *Pennsylvania State U.*

Over the last decades, nature and the ecological environment have been primarily considered externalities, often viewed as external resources for organizations to control, manage, utilize, and manipulate. However, the pressing ecological crisis requires a shift in how organizations manage and organize their relations with nature. Organizations are challenged to transform their way of organizing and understanding themselves as part of the social-ecological systems. They need to start to organize with nature rather than remain against it. Responding to the Academy of Management Annual Meeting's theme "Innovating for the Future," which invites "rethinking conventional ways of leading, managing, and organizing," this panel symposium aims to shed light on the complexities of organizing with nature from diverse scholarly fields and perspectives. With a joint conversation and discussion among the panelists and audience, the symposium intends to challenge management scholars to reflect and rethink how we could further develop management and organization theories to manage and organize with nature, both theoretically and practically. The symposium will unfold some of the complexities associated with organizing with nature, focusing on three dimensions: temporal complexities, spatial complexities, and material complexities. Situating the Academy of Management amid ecological crises that organizations find themselves in, the symposium will engage the panelists with a reflective, provocative, and prospective discussion.

Managing Disruptions - II

Session Moderator: **Ilias Vlachos**, *Excelsia Business School*

OSCM: **Inside-Out Outside-In Supply Chain Resilience: Theory, Model, and Empirical Evidence from Wuhan**  

Author: **Ilias Vlachos**, *Excelsia Business School*

This study develops a unique Inside-Out (IO) Outside-In (OI) model of supply chain resilience based on Structural Contingency Theory (SCT) and Resource Dependence Theory. The Inside-Out Outside-In view of supplier chain resilience is investigated via a single case study of a global company with three sites: a manufacturing factory in Wuhan and two retail stores in Hong Kong and Shenzhen. Chronological and thematic analysis from 17 respondents, internal and external reports examine inside-out and outside-in responses during the early pandemic times. Findings demonstrate four supply chain practices to relax resource dependencies (environment alteration, contingency enactment, powerful relationships, and contingency handling capability) which can be designed, practised, and applied during disruptions. Practices to help companies developing external power over resource dependencies include: supplier diversification, digital technologies, leading market position, and hiring local talent. Internally, companies can prioritise process security, foster corporate culture, plan process recovery, and decentralise processes. These IO-OI practices can be integrated together by designing, practicing, and enacting control internal and external mechanisms. The study finds that business units of the case company applied different IO-OI practices which led them to different resilient outcomes.

OSCM: **The Non-Negotiable Antecedents of Supply Chain Resilience**   

Author: **Ethan Nikookar**, *U. of Wollongong, Australia*

Author: **Imran Ali**, *Central Queensland U.*

Author: **Sajjad Shokouhyar**, *Australian Institute of Business*

Author: **Mark Stevenson**, *Lancaster U. Management School*

Recent research in supply chain resilience has predominantly focused on identifying a range of antecedents that are sufficient for its development. However, there remains a significant gap in understanding which of these antecedents are not merely contributory but fundamentally necessary for establishing supply chain resilience. This distinction is crucial: while altering sufficient antecedents might impact resilience, their absence does not preclude it due to potential compensatory effects of other factors. In contrast, necessary antecedents, though not guaranteeing resilience, are indispensable; their absence unequivocally prevents the realization of resilience, a scenario that cannot be rectified by modifying other variables. Grounded in dynamic capabilities theory, we hypothesized that supply chain visibility, responsiveness, flexibility, and collaboration are necessary prerequisites for fostering supply chain resilience. To empirically test these hypotheses, we applied the 'Necessary Condition Analysis' (NCA) methodology (Dul, 2016a) survey data collected from manufacturing firms in Australia. The results indicate that, among the hypothesized factors, supply chain responsiveness and collaboration emerge as indispensable antecedents. Their absence invariably undermines the development of resilience within the supply chain, underscoring their critical role. This study not only contributes to the theoretical understanding of supply chain resilience but also provides practical guidance for managers in prioritizing efforts to enhance resilience in their operations. By identifying and focusing on these non-negotiable elements, firms can more effectively allocate resources and strategies to enhance their supply chain robustness against disruptions.

OSCM: **Early Risk Detection and Management Through Tier N Supply Chain Visibility: A Practical Lens**  

Author: **Hendrik Sebastian Birkel**, *Friedrich-Alexander U. of Erlangen-Nürnberg*

This paper addresses the issue of lacking Tier N supply chain visibility (TNSV) to enable early risk detection and management. A holistic framework, including the dualistic perspective of current literature and practice on the extent of TNSV, TNSV approaches and strategies, measures, the effort-to-impact ratio, and the utilization within supply chain risk management, is elaborated. A multiple case study is conducted with in-depth interviews with 22 experts from nine end manufacturers in the automotive, mechanical, plant engineering, and medical technology industries. The study results show a carefully balanced picture between the necessity of increasing the visibility of a growing number of critical parts and a restrictive consideration of the need for visibility beyond Tier 1 suppliers. Particularly significant is the analysis of the contrasting approaches in data acquisition to create visibility, such as collaborative and confrontational direct supplier involvement. This is based on different levels of quantity, timeliness, and accuracy of data, as well as company-specific enhancing factors. The study thus creates practical and theoretical value-added by, for example, questioning responsibility and control within supply networks. Therefore, it allows for developing or refining a TNSV strategy addressing company-specific requirements while enabling benchmarking with peers.

OSCM: **How Inter-Firm Coopetition Influences Supply Chain Disruptions**   

Author: **Yemisi Oke**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*

Inter-firm coopetition is of high relevance for both research and practice because firms that engage in alliances with their competitors have the potential to enhance their performance. However, we still lack a nuanced understanding of coopetition, and how it drives outcomes. In light of the increasing complexity of global supply chains and the rising number of supply chain disruptions, we propose coopetition as a way to enhance supply chains resilience. The purpose of this study is to contribute to the coopetition literature by investigating the influence of coopetition on supply chain disruptions. For a more nuanced understanding of coopetition, we measure coopetition as product market overlap – which reflects competitive intensity – in alliances. We test our hypotheses with a dataset of 241 firm-year observations from 2005 to 2017 of publicly listed U.S. firms. Our empirical analyses indicate that (1) product market overlap is negatively related to supply chain disruption occurrence and frequency, and that (2) environmental supply chain selection negatively moderates these relationships.

Presenter: **Giorgio Locatelli**, *Politecnico di Milano School of Management*
Presenter: **Nathalie Drouin**, *UQAM U. of Quebec in Montreal, Canada*
Discussant: **Jennifer Whyte**, *U. Of Sydney*
Discussant: **Martina Huemann**, *WU Vienna*

How can organizing for projects contribute to organizing for grand challenges? This is the question at the core of this presenter symposium which invites project scholars and management scholars to contribute to tackling grand challenges with projects. The symposium is proposed as a forum or “stage setter” to open up new areas of management inquiry on the topic of organizing projects to tackle grand challenges. It is preceded and followed by special issues in different journals including International Journal of Project Management and Journal of Operations Management, respectively.

Technology-Enabled Operations & Supply Chain Management - II

Session Moderator: **Xin Qi**, *Ocean U. of china*

OSCM: **Factors Influencing Young Adults' Organic Food Purchase Intention on Fresh Food E-Commerce Platform**

Author: **Xin Qi**, *Ocean U. of china*
Author: **Xinlei Lv**, *Ocean U. of china*
Author: **Zhigang Li**, *Ocean U. of china*
Author: **Angelika Ploeger**, *U. of Kassel*

The knowledge of young adults' organic food purchasing behaviour and its antecedents on fresh food e-commerce platforms (FFEP) is critical in consolidating the Chinese environmental product market. This study establishes a theoretical model to examine the influence of young adult consumers' purchasing organic food intent on FFEP in the Chinese context. Data from 535 respondents collected via an online survey were analyzed applying a dual-stage structural equation model (SEM) and artificial neural network (ANN) approach. The findings of this study reveal that platform characteristics (system quality and evaluation system) and product information characteristics (organic label, ingredient information, and traceability information) significantly affect young consumers' perceived utilitarian value and perceived hedonic value. The service quality of FFEP has the strong effect on young consumers' perceptions of hedonic value, while the delivery system strongly influences the utilitarian value. Moreover, perceived value plays a crucial mediating role in influencing platform and product information characteristics on young consumers' organic food purchase intentions. Young consumers' perception of utilitarian value exerts a more noteworthy influence on their purchase intention than hedonic value. Theoretical implications are discussed, together with managerial implications useful for effectively stimulating organic food consumption among young adults in online shopping environments.

OSCM: **Digital Product Differentiation and Firm Performance: Evidence from the Mobile App Market**

Author: **Hai Guo**, *Renmin U. of China*
Author: **Qinyue Chen**, *School of Business, Renmin U. of China*

Taking a category-spanning perspective, we theorize two types of digital product differentiation strategies: variety-enhancing and atypicality-enhancing. Drawing on a panel dataset of 784 observations of listed companies in the Chinese mobile internet sector from 2014 to 2021, this study reveals a positive relationship between variety-enhancing digital product differentiation and firm performance, while also identifies an inverted-U shaped effect of atypicality-enhancing digital product differentiation on firm performance. Further, variety-enhancing differentiation weakens the inverted-U shaped effect of atypicality-enhancing differentiation on firm performance, implying a substitution effect between the two product strategies. In addition, the firm's overall product ranking weakens this substitution effect. These findings provide fresh insights into the literature on product differentiation strategy and category spanning

OSCM: **Does Machine Learning Help Flights Depart on Time?**

Author: **Rang Gong**, *The Ohio State U. Fisher College of Business*
Author: **Xiang Wan**, *The Ohio State U. Fisher College of Business*

Problem definition: We investigate the impact of AI-driven machine learning (ML) decision-making support tools on airlines' operational performance. While ML techniques may improve predictions and resource management, the improvement of operational performance still depends on how the operations group utilizes the results generated by ML. This study quantifies the influence of such ML tools and unravels the mechanisms driving performance changes. Methodology/results: Our research focuses on the first AI-driven ML platform in the airline industry, which was launched by Delta Air Lines in January 2020. This Platform is designed to apply ML methods to historical data to support operational decision-making. Through the Difference-in-Differences (DID) approach, we discover that the adoption of this ML technology significantly decreased departure delays by 19.587%. Notably, the influence of ML tools is moderated by operational conditions, such as hub-to-hub flights and extreme weather events. Moreover, the analyses explore the dynamic changes in the operational performance of ML tools over time. Managerial implications: The evidence of ML's overall impact on enhancing on-time performance and the discernment of the prediction-improvement and misapplication effects associated with ML provides a nuanced understanding of the implementation of ML tools. Our findings provide managerial suggestions for the adoption and refinement of ML for decision-making processes.

OSCM: **Digital Technology's (Including AI) Role in Operation Management Practices' Development Within PSFs**

Author: **Ian Rodgers**, *Oxford U., Saïd Business School*

This paper explores the development of operations management practices in professional service firms despite their work's extensive customization for clients, and digital technology's role in this progression. The study is grounded in two case studies set in UK large law firms that included interviews with 65 individuals, comprising 33 legal operations practitioners and 32 others, including fee-earning lawyers and those working in technology and other business services. It reveals that legal operations practitioners engage a suite of developing operations management practices – such as process mapping, matter modelling, project planning, and performance evaluation – associated with digital technology, leveraging them to enhance firm efficiency and effectiveness, although not always successfully. From the findings, a process model is inductively derived such that digital technology's implications for legal operations practices occur amid technologically-induced environmental uncertainty, with practitioners shaping and adapting to organizational environments, hybridizing incommensurable expertise and logics, and navigating informally credentialed boundaries. By focusing on an understudied yet significant domain – professional service operations – this research extends the literature by uncovering practitioners' operations management practices and contributes a conclusion that the guiding, nudging, and persuading once seen as substitutes for standard operations management approaches should instead be viewed as complements to developing practices within a technologically progressing professional service firm setting.

Author: **Yasmine Medhat Elhenawy**, *U. of Mannheim, Business School*

Author: **Mona Ali**, *The German U. in Cairo*

Author: **Raghda El-Ebrashi**, *German U. in Cairo*

In the era of digital transformation, supply chain finance (SCF) solutions could be the future of supply chain financing. Recently, businesses worldwide have begun to adopt supply chain finance solutions in order to capitalize on the strengths of supply chain links and maximize working capital. Despite extensive investments in these digital financing services, many firms still experience significant complications during SCF adoption. Previous literature has been addressing the introduction and adoption decisions of different supply chain actors as well as the barriers, enablers, requirements and outcomes of SCF adoption. Yet, there is a dearth of research examining the readiness of firms to adopt SCF. In an effort to fill this gap, this thesis aims to develop a framework to assess the organizational, technological and financial readiness of firms to adopt SCF.

Discourse Dynamics: Engaging Public Sector Stakeholders Amidst Global Uncertainty

Session Moderator: **Chengwei Wang**, *Renmin U. of China*

This presentation will share research on how stakeholder engagement strategies evolved during COVID-19, analyze government communication to moderate financial uncertainty, examine resilience within small island developing states, and explore global responses to international rankings and feedback.

PNP: Feedback or Domination: How do Countries Respond to Global Rankings?

Author: **Chengwei Wang**, *Renmin U. of China*
Author: **Ma Liang**, *Renmin U. of China*

Country rankings, produced by international organizations, have become commonplace in the global community. An intriguing and unexplored question arises: (a) Do governments perceive rankings as feedback on their performance and utilize it to enhance policy-making? Or (b) Are governments excessively influenced by rankings, merely aiming to secure superficially favorable positions? Drawing on the performance feedback theory and institutional theory, two competing hypotheses were proposed to elucidate the impact of performance feedback on managerial decisions. This study leverages a cross-national panel dataset of the Ease of Doing Business reports from the World Bank, encompassing 190 countries from 2007 to 2020. The empirical findings reveal that country rankings reinforce the performance of already high-performing nations while exacerbating the performance of those who fare poorly, suggesting a pronounced polarization effect. These results shed light on how national governments respond to performance rankings and offer valuable insights into the dynamics of international benchmarking.

PNP: Power Relations and Resilience: The Implications of Calls for Justice Among the (Un) Resilient

Author: **Nina Zachlod**, *U. of St. Gallen*
Author: **Michael David Hudecheck**, *U. of St. Gallen*

This paper examines the implications of asymmetric power relations on resilience. Organizations located in developing regions are affected by the unequal distribution of resources. In extreme cases, such as for those located in small island developing states (SIDS), where the conflux of resource import dependencies and climate change pose existential threats, organizations rely on the ability of their host governments to negotiate favorable policies and resource redistribution outcomes in order to resolve distributive injustices and guarantee their long-term survival. This paper uses a multiple streams approach to examine how SIDS leverage narratives at the United Nations (UN) to combat asymmetric power relations, realize positive policy outcomes, and obtain climate financing. We first analyze argumentation across all dimensions of the discourse with a focus on obtaining resources to reduce their vulnerability and associated distributive injustices. We then explore the validity of our discourse analysis through a quantitative analysis of 2,922 UN General Assembly resolutions from 1975 to 2022. We find that SIDS narratives insufficiently realize positive resource redistribution outcomes, that many SIDS members situationally defect from cohesive voting actions, and that power asymmetries were not remediated. We extend organizational theory by exploring the relationship between extreme asymmetric power disparities and resilience.

PNP: Moderating Uncertainty with Sentiment: The Case of the Federal Reserve Chair Communication

Author: **Emmanuel Kypraios**, *National U. of Ireland, Maynooth*
Author: **Juan Arismendi-Zambrano**, *U. College Dublin, Smurfit*
Author: **Alessia Paccagnini**, *U. College Dublin*

Can a single personal communication have a significant effect on the uncertainty of the monetary policy process? We estimate the personal communication risk profile of the U.S. Federal Reserve (Fed) Chair by using a new dataset of the sentiment revealed by their public statements during their tenure. We develop a new identification method using the implicit probability of the change of the federal fund rate, which is used to construct a new measure of entropic uncertainty of the monetary policy (MPEU) and analyze the impact of the Fed communication's sentiment risk profile on the market price discovery process of interest rates, in the aftermath of the release of the Fed Chair public statements. To measure the sentiment risk we use a machine learning method (Naïve Bayes) on the statements of the Fed Chair. After controlling for the evolving state of the economy surrounding the meetings, we find that, based on the heterogeneity across Chairs and their personal traits, there is a significant statistical and economic difference in the communications' sentiment, which is likely to affect the market's reaction to monetary policy announcements. Specifically, the sentiment in the Chairs' communications plays an important role in moderating the potential surprises in the Fed announcements, and it can be effectively used as a tool for controlling and measuring monetary policy shocks

PNP: Understanding Stakeholder Engagement in HE During the Early Months of COVID-19 Using CATA

Author: **Antigoni Papadimitriou**, *College of Business Lehigh U.*
Author: **Kevin Taylor**, *Stetson U.*
Author: **Sarah Schiffecker**, *Texas Tech U.*

Given the widespread occurrence of organizational communication during a crisis and the vital role of communicative messages in stakeholder engagement, it is essential to understand organizations' communicative messages and how organizations change their messages posted on social media to engage their stakeholders in a participatory process through retweets and likes. This understanding is needed, especially in a long-lasting crisis like the COVID-19 pandemic. It is essential for organizations and their communication executives (spokespersons) who deal with social media. The present study examines organizational communication in the higher education industry during the early months of the COVID-19 pandemic. This investigation pursues a nuanced understanding of how organizations engaged their stakeholders through the type of information communicated and the language used in messages over four months (January 11 – May 10, 2020), divided into "emerging-crisis" and "during-pandemic" periods. The empirical analysis focuses on a data set of more than 35,000 tweets posted by 50 universities over four months. It employed computer-aided text analysis (CATA) with the Linguistic Inquiry and Word Count (LIWC) software and K-means cluster analysis to reveal content themes and language styles and understand how these changed in communications to university stakeholders via social media.

Benevolence or Bias: Examining the Allocation of Philanthropy & Donations

Session Moderator: **Chao Guo**, *U. of Pennsylvania*

This presentation will navigate the landscape of philanthropy, exploring the inequalities in American giving, the influence of religion on nonprofit dynamics, the coordination of philanthropic efforts in regions facing historical stigma, and competition in donation markets.

PNP: Orchestrating Philanthropic Ecosystems in Historically Stigmatized Territories  

Author: **Saouré Kouamé**, *MTN Mobile Money Payment Service Bank Limited, Nigeria*
Author: **Anaïs Del Bono**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*
Author: **Amina Wazoumi Ignanoné**, *U. de Sherbrooke*

Ecosystem orchestration has become a centre of scholarly attention due to its value creation potential. While most of this emerging literature focuses primarily on business ecosystems from a structural perspective (i.e. the structural alignment between actors), we focus in this study on philanthropic ecosystems from a relational perspective (i.e. the interactional dynamics between actors). We inductively studied the case of an philanthropic ecosystem project in the Global South. We developed a process model that reveals the importance of “territorial stigma” and “stigma strategy” as being central to the ability to orchestrate these types of ecosystems. We show that stigma strategy driven by “impression management” to overcome stigma created a reverse effect by accentuating orchestration challenges. Ecosystem orchestrators were able to address the challenge by reorienting their stigma strategy toward “establishing ownership.” Our findings contribute to advancing the literature on ecosystem, stigma, and societal challenges.

PNP: The Matthew Effect in American Generosity? Inequality in Philanthropy and Government Support  

Author: **Viviana Chiu-Sik Wu**, *Assistant Professor at UMass Amherst*
Author: **Chao Guo**, *U. of Pennsylvania*
Author: **Ji Ma**, *UT Austin*

Nonprofit organizations’ access to philanthropic resources, or their philanthropic capacity, varies across communities, yet little is known about how community-level disadvantages affect the disparities in philanthropic capacity. This study investigates how community-level disadvantages affect the philanthropic capacity of nonprofit organizations across American communities. We analyze a unique panel dataset detailing private donations to the human service nonprofit sector at the county level from 2000 to 2019. Our findings indicate that communities that are impoverished, minority prominent, or rural tend to have a lower philanthropic capacity. While government support mitigates the impact of economic disadvantage, it does not significantly alter the effects of minority disadvantage and paradoxically worsens the impact of rural disadvantage. This study underscores the interplay between community disadvantage, government support, and philanthropic capacity, offering insights into the challenges and opportunities facing nonprofits in various community settings.

PNP: Strategies in High-Complexity Market Competition with Two Levels of Similarity

Author: **Gil Peleg**, *LeBow College of Business, Drexel U.*
Author: **Merav Weiss-Sidi**, *Ruppin Academic Center*
Author: **Oded Lowengart**, *Ben Gurion U. School of Management*

Competition for customers has different forms. This might take the form of competing with others for customers with similar offerings (i.e., brand level) or with less similar alternatives (i.e., category level). By extending the customer-oriented perspective, we analyze a two-level competitive fundraising market. Specifically, we analyze it through customers’ perceptions and preferences to identify differences in their decision process. The diagnostic information obtained in such analysis can lead to a more effective strategy. Namely, customers utilize different characteristics of the offering in their decision process at different levels of competition to distinguish between alternative offerings. In addition, the competitive analysis provides insight into customers’ loyalty in these environments – more organizational loyalty at the category than at the brand level. At the brand level, where customers switch suppliers (i.e., variety-seeking behavior), a viable strategy might be collaborating with other organizations with similar offerings to persuade customers to switch categories.

PNP: The Role of Religion on the Population Dynamics of Non-Religious Nonprofits in the US 1995-2020 

Author: **John Park**, *Koç U.*

Apart from the tax-exempt status of religious congregations and several historic nonprofit organizations having religious roots, the relationship between religion and other nonprofits can be rather complicated and understudied. Religious institutions often support other types of nonprofits by providing gathering space, social network, and volunteers but at the same time may compete with non-religious nonprofits by providing similar functions and services. Further, while higher religiosity has been shown to promote larger amount of giving, most of the giving is religiously directed. In this study we use a longitudinal dataset of nonprofits in the US counties from 1995 to 2020 to empirically analyze the dynamic relationship between religious and non-religious nonprofit organizations. After controlling for other socio-economic environmental and organizational factors, results show that higher levels of religiosity in a community tends to lower the founding rate of other nonprofit organizations. Furthermore, religious pluralism increases the mortality rate of human service nonprofit organizations. Thus, rather than supporting nonreligious nonprofit organizations in a community by providing greater social, human capital and financial support, religion seems to be more detrimental for the growth of the nonprofit sector.

Building an Inference Engine Using AI and The World's Largest Meta-Analysis: Lesson Learned

Moderator: **Piers Steel**, *U. of Calgary*

Panelist: **Jason Colquitt**, *U. of Notre Dame*

Panelist: **Hadi Fariborzi**, *Mount Royal U.*

Panelist: **Burak Cem Konduk**, *Metropolitan State U.*

Panelist: **David Montgomery Long**, *William & Mary*

Panelist: **Stephen Reid**, *U. of Iowa*

Panelist: **Isabel Villamor**, *IESE Business School*

This symposium describes the lessons learned during the creation of the world's largest meta-analysis, that is over 2,500 studies assessing over 160 constructs from the field of Organizational Justice. By combining cloud based meta-analytic databases, online statistical engines, curated selection of academic articles and the new LLMs, we have elevated this into an effective inference engine. Using the LLM, questions are translated into variables and specific search terms. Based on these variables, the relevant empirical results are drawn from the cloud based meta-analytic database and analyzed by an online statistical engine. Interpretation of results are enhanced by a core base of review articles as well as relevant articles drawn using the search terms from the meta-analysis database, whereupon the LLM provides custom, empirically sourced answers (with appropriate citations) back to the user in seconds. For more sophisticated queries, the LLM can create the specific R code to analyze the database, which is then executed by the statistical engine. As we will demonstrate, inference engines based on meta-analytic databases appear to be the ideal vehicle for interacting with scientific knowledge.

Practices of Transparency and Accountability

Session Moderator: **Kristina Stoiber**, *U. of Innsbruck*

SAP: Sitting in a Glasshouse? Employees' Social Experiences of Organizational Transparency

Author: **Christoph Brielmaier**, *Otto-Friedrich U. Bamberg*
Author: **Thomas Ortner**, *U. of Innsbruck School of Management*
Author: **Martin Friesl**, *Otto-Friedrich U. Bamberg*
Author: **Julia Hautz**, *U. of Innsbruck*

Transparency has developed into an important societal narrative and also became a central theme of management and organization research. Previous research in this domain has placed organizations at the focal point of their investigation, while our understanding of employees' lived experience of transparency practices has remained scarce. Within transparent organizations, employees gain information about others and their work, triggering them to engage in social comparisons. In order to explore such experiences of social comparison, we draw on extensive qualitative data of a group with five subsidiaries that has fostered extensive organizational transparency. We find that greater transparency led to highly diverse experiences of social comparisons in the five subsidiaries. These experiences had severe implications for the strategic development of the group, for instance affecting employees' belongingness or commitment towards its strategy. Our paper makes three contributions to the literature on organizational transparency and Open Strategy. We add theoretical nuance to the understanding of transparency as a social process, by theorizing it as social projection surface. We challenge the normative underpinnings of transparency in the Open Strategy literature, by theorizing how transparency may have negative effects for a firm's strategic development. And, finally, we illuminate how and why managed transparency in organizations becomes unmanageable.

SAP: Accounts, Accountability and Remedial Work in Error Cascades

Author: **Saheli Nath**, *U. of Central Oklahoma*

This research examines the assignment of accountability and blame in multilevel error cascades by utilizing Scott and Lyman's concept of "accounts" and Goffman's notion of "remedial work". Preventing and learning from error cascades are key challenges in high-risk industries where firms strive to achieve greater reliability and resilience. Using oral and written testimony, archival records, media releases and employee reviews, this paper delves into the Boeing 737 MAX case to investigate the ways in which actors at multiple levels communicated their preferred meaning about the MAX accidents and the purported failure of Boeing's novel MCAS technology. The findings from this study indicate that errors in the Boeing MAX case were the result of miscalculation of risks at different levels of the system at various points in time that can be traced back to several years before the actual accidents. These results speak to how organizational culture and executive decisions at Boeing resulted in multiple "misses" of opportunities to rectify their flawed technology and engage in comprehensive communication with other external stakeholders about the MCAS system.

SAP: Managing the Dilemma of Disclosure in Corporate Political Activity (WITHDRAWN)

Author: **Andrew Barron**, *TBS Education*

Through a longitudinal study of the macro-level formulation and organizational-level implementation of EU-level lobbying regulation. I explore what happens when lobbyists – accustomed to working in policymaking and organizational settings where covert political practices historically prevail – face new, institutional pressures to exhibit greater transparency in their work. I contribute to open-strategy literature by identifying multi-level, multi-faceted practices enacted to manage the dilemma of disclosure in the context of CPA. I also reveal societal implications and 'dark sides' of open strategy. At a purely organizational-level, lobbyists could be viewed positively as carriers of broad normative pressures, with potential to open up CPA to closer external scrutiny. Considered more critically, lobbyists' efforts at promoting transparent practices at a higher macro-level appear to be driven by self-serving, instrumental benefits – such as improved occupational reputation, and political access – rather than pro-social motivations.

SAP: Trustee Board Accountability and Accounting for Costs: A Practice Perspective

Author: **Anna Tilba**, *Durham U. Business School*

The literature on governance generally focuses on corporate board accountability and effective oversight at the expense of looking at boards of other types of entities. By investigating how pension fund trustee boards oversee their investments and particularly account for investment costs, the purpose of this paper is to show that effective investment oversight in the context of pension fund trustee boards is more assumed than demonstrated. This paper uses insights from 22 in-depth interviews of pension fund trustees and pensions experts, applying theoretical and methodological toolkit of practice theorizing, which is capable of capturing both organisational inner-workings as well as system-wide, interconnected and complex world of organisations. We reveal that pension fund investment oversight has been 'ritualised' in embedded and self-perpetuating practices. Specifically, the process of pension fund investment is dominated by a variety of contextual and internal constraints that often lead to a loss of value within pension fund investments, which is not in the long-term best interests of pension fund savers. Theoretically, this study raises important questions about the appearance rather than substance of governance and the principal role of pension fund trustees as non-executives in this process. While current policy focuses on producing the 'right answer' for trustee governance, this research highlights the conflicting intersections around trustees as socially legitimate, trustworthy and accountable social actors and at the same time frequently failing at effective oversight. Our study indicates an expectations gap on the part of pension fund members and regulators who may not consider the practical realities in which trustee boards operate.

Innovation Practices

Session Moderator: **Fleur Deken**, *Vrije U. Amsterdam*

SAP: **Aesthetic Innovation in Culinary Space and Time: Dialogisms in Haute Cuisine**   

Author: **Usha C.V. Haley**, *Wichita State U.*

Author: **David M. Boje**, *Emeritus*

Author: **Marc B. Stierand**, *EHL Hospitality Business School//HES-SO U. of Applied Sciences & Arts*

We apply Bakhtin's architectonic and stylistic dialogism, Goffman's theaters of staging, sociomateriality and discourse to explain aesthetic innovations' multilevel creation and influence in haute-cuisine across space and time. Haute cuisine emphasizes and stages meticulous food preparation and presentation of quality ingredients to command high prices for moderate portions. Our research includes 14 Michelin star chefs in Europe and 111 high-net-worth diners in the United States. Chefs' first-order sensemaking surrounding first-order innovations and their articulations in haute cuisine appear to influence significantly diners' second-order sensemaking manifested as consumption. We provide empirically-based insights into the limits that end users face in sensemaking aesthetic innovations. Our findings contribute to theories on innovation and dialogics in other creative industries including the arts, technology and communication.

SAP: **How to Break the Mold: Cultivating Collaborations for Implementing Innovations**  

Author: **Damla Diriker**, *Vrije U. Amsterdam*

Author: **Amanda Porter**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Philipp Tuertscher**, *Vrije U. Amsterdam*

Author: **Mark Boons**, *Vrije U. Amsterdam*

This paper examines how innovations are reshaped collaboratively as they are implemented and adopted with the involvement of different local actors who seek to fit the innovation to their specific needs and interests. Drawing on an in-depth field study of the implementation of an education innovation, we contribute to understanding the role of collaborations in the implementation process. We identify distinct mechanisms that facilitate collaborations among local actors during implementation in a setting where local actors resist the innovation that threatens their existing routines and do not have any incentives to participate in the implementation process. Developing a model of collaborative implementation, we theorize the process through which innovations are implemented in the local pockets of the implementation setting and how local actors progressively adopt the innovation and eventually contemplate their existing practices to accommodate better the innovation they once resisted. These observations allow us to contribute to extant theory by explaining the micro-dynamics of collaborative implementation over time.

SAP: **Breaking Organizational Paths for Strategic Renewal: Managing Self-Reinforcement (WITHDRAWN)**

Author: **Catherine Archambault**, *IESEG School of Management*

Author: **Joerg Sydow**, *Freie U. Berlin*

Although path dependence and path breaking are often mentioned in research on strategic renewal, we know little on how firms escape such locked-in organizational paths in such processes. Path breaking, a sub-stream to path-dependence research, unpacks the process of how organizations escape path dependence by stopping or modifying self-reinforcing mechanisms. Yet, it remains unclear how this process unfolds in established firms. In this paper, we focus on coordination, complementary, learning and adaptive expectation effects to explore how firms manage stability and change in such processes. With the help of an in-depth study of an established firm, we illuminate how a path-dependence/-breaking lens is salient to provide a more realistic view of the management of strategic renewal processes – in which stability and change constantly cohabitate.

II. Organizational Wrongdoing Spotlight: Life-Threatening Harm, Whistleblowing, and Cartel Contexts

Session Moderator: **Timothy Michael Devinney**, *Alliance Manchester Business School, U. of Manchester*

SIM: Contextualizing Life-Threatening Organizational Environmental Wrongdoing: A Workers Perspective  

Author: **Elisa Giuliani**, *U. of Pisa*
Author: **Andrew Spicer**, *U. of South Carolina*

How can organizational wrongdoing that produces life-threatening levels of environmental harm to local communities nonetheless persist and even grow over time? In this paper, we address this question through an extensive field study of worker attitudes at the Italian steel company, ILVA. The workers in our study describe two long-term processes by which environmental wrongdoing seeps through the boundaries of the firm to corrode the ecological and institutional environment in which they live. As ecological harm intensifies to reach life-threatening levels, the workers begin to prioritize short-term concern for increasingly at-risk and sick family members over longer-term imperatives. And as organizational wrongdoing is repeated without consequence, they also begin to distrust the social control agents and community leaders that they believe should have stopped its progression far earlier. These ecological and institutional processes have the unintended effects of leading workers to support their wrongdoing employers in order to protect their jobs despite the harm they suffer as a result. Life-threatening environmental harm therefore has the ironic effect of protecting the very firm that created the problem from the counter-mobilization of one set of its primary victims, its own workers.

 **SIM: Institutional Impact on Corporate Discourse Decoupling and Institutional Void on Tailing Dam Failure** 

Author: **Jaison Caetano Da Silva**, *Fundação Getúlio Vargas/EBAPE*
Author: **Carmen Migueles**, *Adjunct professor, Getulio Vargas Foundation*
Author: **Cinara Gambirage**, *U. of Groningen*
Author: **Marco Zanini**, *Brazilian School of Public and Business Administration*

Despite mining industry and government claims that the former is ostensibly working towards achieving social and environmental responsibilities in businesses, continued tailings dam disasters suggest critical aspects are being disregarded and there are significant gaps that need filling. In this study, we investigate how corporate discourse decoupling and institutional voids affect tailings dam failures and the surrounding communities. Considering the context of a traditional and key mining producer globally, we examined the two largest tailings dam failures in the history of the Brazilian mining industry and their impact on a community located near where the two spills occurred, which is now facing the imminent risk of two further tailings dam failures upstream of the village. We adopted a triangulated approach and performed an extensive document analysis of dam failures and, 209 interviews, over two years, with subgroups of local people and related actors.

SIM: The Paradox of Trust and Governance in Corrupt Cartels: A Case Study of the Construction Industry

Author: **Armando Castro**, *UCL*
Author: **Tristano Sainati**, *BI Norwegian Business School*

In this paper, we examine a cartel of construction companies' suppliers of the oil and gas multinational company Petrobras in Brazil. We use an empirical dataset including verifiable court decisions and plea agreements of business executives and companies. This case study offers an account of these corrupt practices in megaprojects and explains how the corrupt cartel, despite being illegal, relied on the self-motivated and mobilized actors that trusted each other. This trust was essential to institutionalize corrupt practices and developing governance rules that were used for over a decade.

SIM: Beyond Rationale, Towards Emotions: Emotion-Cognition Interaction in Public Whistleblower Accounts

Author: **Aditi Mittal**, *Indian Institute of Technology, Delhi*
Author: **Kanika Tandon Bhal**, *Indian Institute of Technology, Delhi*

Drawing from the dual-process theory on the joint role of emotions and cognition in decision-making, this qualitative study aims to examine the role of emotions at the different cognitive stages (Rest, 1986) of the whistleblowing decision-making process. First-hand accounts and secondary data, available in the public domain, obtained for 11 real-life public whistleblowers, who pursued external channels after failed internal reporting attempts, has been analyzed using Grounded theory. Findings reveal a unique set of emotions salient at the different cognitive stages of the process: disappointment and anger from shock at the awareness stage; hope at the judgment stage; fear, empathy and regret at the intention stage; and contentment at the behavior stage. Further, the study highlights that cognition and emotions, when in tandem, enable the transition from one cognitive stage to the other, both intertwined and significant for a fuller understanding of whistleblowing. Theoretical and practical implications of the findings are discussed.

Addressing Global Poverty: Scholarship for Vulnerable and Marginalized Populations

Session Moderator: **PJ Dillon**, *Duquesne U.*

SIM: Conceptualizing the Role of Ideational Bricolage in Social Value Creation for the Marginalized

Author: **Deepesh Paudel**, *Faculty of Business Administration, Memorial U., Canada*

This paper devotes attention to three key entities: social enterprise, bricolage, and the marginalized. First, it reviews the extant literature on the intersections of social enterprise and marginalization and argues for a holistic social entrepreneurial system that accommodates and represents marginalization on all fronts. As a response, the 'by, of, and for' vantage point is established. Second, it recognizes that, while the use of bricolage is becoming increasingly popular in social enterprises, there is a void in the exploration and theorization of ideational bricolage, a type of bricolage that considers as inputs the cultural, normative, and symbolic elements. Third, it brings together the concept of ideational bricolage and the newly developed vantage point to build the by, of, and for model of ideational bricolage. Finally, based on the freshly produced conceptual model, it lays out a few research propositions and discusses potential paths for future research on ideational bricolage and social enterprises. Keywords: social enterprise, marginalization, ideational bricolage, social value creation

SIM: Efficient but Poor: Analyzing Dual Crop Interdependency and Poverty Among Smallholders Farmers

Author: **Rachad Bani Samari**, *American U. of Cairo*
Author: **Sherwat Elwan Ibrahim**, *American U. in Cairo*

In production systems, operational decisions to overcome constraints and achieve optimal efficiency often follow a one-way sequential rationale which may be efficient in the short term but could generate unintended iterations throughout the system in the long term. This study analyzes farmers' granular decisions in agriculture operations management; and applies a system thinking causal loop diagram to situate how operational decisions are detrimental to farmers' livelihoods in the case of Kambara in Northern Benin. Regional reports on cotton yield had shown an increase of 265% while poverty rates also increased, thereby challenging the general literature on positive correlations between agriculture operations efficiency, high yield, and poverty reduction. This empirical study investigates why poverty remained high among smallholders despite the higher aggregate cotton yields. The research revealed supply chain finance issues among cash-strapped smallholder farmers leading to the adoption of a cash-efficient 'dual-cropping' interdependent practice between cotton and corn to overcome system constraints. Although farmers demonstrated technical and input allocation efficiency, the practice represents a one-way sequential thinking that generates unintended system iterations like selling crops at below market rate, lower yield per crop, and further farmer indebtedness, thereby creating a systemic feedback loop trapping the smallholder farmers into poverty.

SIM: From Cents to Satisfaction: Understanding the Power of Financial Literacy in an Unequal World

Author: **Malvika Nandlal Chhatwani**, *XLRI Xavier School of Management, Delhi-NCR*

In our research, we explore the association between financial literacy and income satisfaction through the framework of relative deprivation, focusing on four distinct groups characterized by gender (men versus women), race (whites versus blacks), employment status (working versus retired), and disability (non-disabled versus disabled). Utilizing extensive survey data from over six thousand participants collected over six months, our ordered logistic regression analysis reveals that, even after accounting for personality traits and other demographic factors, the connection between financial literacy and income satisfaction is notably weaker among the relatively deprived segments of women, blacks, and disabled individuals which could be attributed to disparities in earning opportunities. Conversely, this relationship is more pronounced among retired individuals. Our study represents one of the pioneering efforts to apply the lens of relative deprivation theory within the context of financial literacy and its correlation with income satisfaction. Doing so broadens the scope of relative deprivation theory, highlighting its relevance to well-being measures such as income satisfaction and underscores the disproportionate impact that differences in financial literacy can have on various groups due to their respective experiences of relative deprivation.

SIM: The Suicidal Ideation of Helpless Street Vendors: A Conservation of Resources Perspective

Author: **Sanjay Kumar Singh**, *U. of Dundee, UK*
Author: **Surendra Sia**, *Department of Psychology, U. of Delhi*
Author: **K. Praveen Parboteeah**, *U. of Wisconsin, Whitewater*

Street vending has a significant economic impact in the developing nations. Nevertheless, the COVID-19 pandemic has put street vendors in a terrible financial situation, which has led to mental health problems like suicidal ideation and self-harm. Drawing on conservation of resources theory, we examine the causes and consequences of suicidal ideation among street vendors. We found that learned helplessness and suicide ideation are positively impacted by pandemic stress. Additionally, the results of the study show that religious coping helps as it moderates the relationship between pandemic stress and learned helplessness. Furthermore, we discovered that the relationship between pandemic stress and learned helplessness is not mediated by creative self-efficacy. The study findings have implications for theory and policy, which are thoroughly examined.

Minding Consumers: Ethical Decision Making (EDM), Sustainable Consumption, and Trust

Session Moderator: **Tobey Scharding**, *Rutgers U.*

SIM: Does Social Value Mean Customer Value? The Perceptual Conflict Underlying Customers' Decisions

Author: **Gal Gutman**, *Haifa U.*

Author: **Oded Lowengart**, *Ben Gurion U. School of Management*

As businesses increasingly incorporate social elements into their core strategy, it is vital to determine whether this integration truly adds value for customers. Using the lens of Goal Systems Theory, we explore customers' perceptions and decisions, focusing on three models integrating social and business benefits: corporate social responsibility, fair-trade, and work integration social enterprises. In three studies, we examine how this integration affects customers' perceived value, the importance customers attribute to social benefits in their decision-making, and whether they are willing to compromise on business benefits in favor of social benefits. Our findings suggest that organizations integrating multiple social and business benefits, are perceived as delivering higher customer value and are preferred over pure businesses. However, social and business values are often perceived as distinct, and the effective creation of social benefits can diminish the perceived business value. This detrimental impact, resulting in the dilution effect, becomes especially evident when customers must choose between different alternatives. In these cases, quality, representing a business benefit, emerged as the most dominant benefit, and other benefits could not compensate for its absence. Specifically, while customers were willing to pay a premium for products from businesses that integrated social benefits, they were unwilling to compromise on the product's quality. The findings suggest a perceptual conflict, where acquiring social benefits may necessitate perceived compromise on specific business-related benefits. The findings also indicate a distinction between customers' preferences and choice processes in ethical decisions.

SIM: Bridging the Intention-Behavior Gap in Sustainable Consumption (WITHDRAWN)

Author: **Chia Yi Liu**, *Tunghai U.*

The disparity between support intentions and actual consumption behavior in sustainable food poses a significant challenge to sustainability promotion. This study addresses the gap by considering macro-mechanisms, including certification, sales channels, and information matching, as crucial social support elements integrated as an exogenous context into the Technology Acceptance Model (TAM). Drawing from an empirical analysis of 1,160 Taiwanese consumers, the study reveals that instrumental and emotional supports arising from certification and sales channels enhance consumers' perceived ease of use and perceived usefulness of organic food, consequently increasing support intentions and actual consumption behavior for sustainable food. Additionally, informational support operates through the "perceived value-support intention-consumption behavior" pathway for sustainability. The study suggests marketing policies for sustainable consumption, emphasizing strategic certification disclosure aligned with sales channels, considering public attributes like promotion-focus and prevention-focus. This approach bridges the gap between support intentions and behaviors, linking macro and micro marketing perspectives.

SIM: CSR Perceptions and/or CSR Attributions: How, When, and What Drive Consumers' Behaviors?

Author: **Omer Farooq**, *Zayed U. UAE*

Author: **Mariam Farooq**, *Faculty, College of Business, Al Ain U., United Arab Emirates*

In this research, we aim to develop a nuanced understanding of the impacts of corporate social responsibility on consumer loyalty by exploring the multiple mediating pathways and the specific boundary conditions that apply to each of these mechanisms. We suggest that the relationship between CSR and consumer loyalty is mediated by two pivotal mechanisms: consumer-company identification and consumer trust. Additionally, we propose that how consumers perceive CSR initiatives—either as value-driven or strategically motivated—influences these mediating factors. Our hypothesis is that consumers with high value attribution and low strategic attribution to CSR are likely to develop loyalty primarily through increased trust. Conversely, those who perceive CSR as strategically motivated are more inclined to build loyalty based on their identification with the company. This hypothesis finds support in data collected from 309 consumers in India, validating our proposed theoretical framework. The implications of these findings are then explored for both academic research and practical application.

Exploring Influences on Environmental, Social, and Governance (ESG) Ratings and Performance

Session Moderator: **James F Weber**, *Duquesne U.*

SIM: Talk or Walk? Responsible Innovation Actions and ESG Performance

Author: **Min Huang**, *Renmin U. of China*

Author: **Mengyao Li**, *Harbin Institute of Technology, Shenzhen*

Author: **Jun Xia**, *U. of Texas at Dallas*

This study examines the effect of responsible innovation (RI) on digital firms' ESG performance, through the lenses of institutional and signaling theory. We posit that RI talk has an inverted U-shaped relationship with digital firm ESG performance, and walking RI has a positive relationship with digital firm ESG performance. We find support for our ideas with a sample of digital firms. The result also reveals that the incongruence between talking and walking RI actions negatively affects digital firm ESG performance. Furthermore, we find that digital firms with more walking RI than talking RI achieve more detrimental consequences on ESG performance than those with more talking RI than walking RI. This study extends the previous tests of the influence of RI on corporate sustainability performances and provides theoretical insights that go beyond the single RI practice dimension.

SIM: Family Priority or Business Priority? Impact of Family Involvement on ESG Performance

Author: **Xuefeng Liu**, *School of Management, Xiamen U.*

Author: **Ting Cao**, *Xiamen U.*

Author: **AO ZHANG**, *School of Management, Xiamen U.*

Author: **Jing Cai**, *U. of Aberdeen*

Environmental, Social, and Governance (ESG) considerations have gained significant prominence within the sphere of corporate decision-making. This prominence is primarily attributable to their substantial impact on firms' brand reputation, their alignment with stakeholder expectations, and their pivotal role in ensuring the long-term sustainability of businesses. Leveraging insights from socioemotional wealth theory and sustainable family business theory, our research delves into the ESG performance of family firms in the Chinese context. Our analysis encompasses a sample of 1159 family firms listed on the Shanghai and Shenzhen A-share stock exchanges, spanning the years from 2012 to 2020. Our findings reveal a positive correlation between the level of family involvement in the management of these businesses and their ESG performance. Notably, when discerning between family-founded and family-acquired firms, this positive influence becomes even more pronounced in the former category. Furthermore, our study discerns that this influence wanes when family firms experience periods of suboptimal performance. Conversely, it gains strength when family firms are significantly influenced by traditional cultural elements, particularly those of the clan or Confucian nature. Our research presents a nuanced perspective on the dynamics of ESG performance within family firms. We extend the applicability of socioemotional wealth theory and sustainable family business theory to the realm of ESG research, thereby contributing to a more comprehensive understanding of the multifaceted landscape of ESG considerations within family firms.

SIM: We Are a Family, Not a Business: Can't Family Business Be Sustainable "Across" Generations?

Author: **Rebecca Chunghee Kim**, *Nagoya U. of Commerce and Business*

Author: **Desiree Wieser**, *assistant professor*

Author: **Yoshiki Shinohara**, *Ritsumeikan Asia Pacific U.*

Author: **Anita Zehrer**, *MCI Family Business Center*

Many family firms (FFs) collapse after one or two generations. In order to contribute to scholarly endeavor to tackle this gap, we address a key theoretical issue in the literature of family firms—Can family firms be sustainable “across” generations? This study employs the Generation Theory (Pendergast, 2009) and the concepts of Implicit and Explicit CSR (Matten & Moon, 2008; 2020) in order to explore the incremental process of approach towards sustainability of FFs across generations. We explain a wide range of perceptions and practices of sustainability in the key angles of dynamics, values, and strategies of FFs between THEN and NOW generations. Our work detects how a sustainability approach of FFs between generations are reinvented and improved: (a) from implicit (THEN) to explicitization CSR dynamics (NOW), (b) from socio-emotional (THEN) to socio-economic values (NOW), and (c) from a long-term focus strategy (THEN) to tangible-outcome focus (NOW). Finally, we advance theoretical nuances by suggesting a framework of ‘Dynamics of sustainability of family firms across generations: Then and Now.’

SIM: Judicial Waves, Ethical Shifts: Bankruptcy Courts and Corporate ESG Performance

Author: **Xinyu Zhou**, *Guanghua School of Management, Peking U.*

Author: **Zixun Zhou**, *Guanghua School of Management, Peking U.*

Leveraging the staggered introduction of specialized bankruptcy courts across China as an exogenous shock, this paper examines the impact of specialized bankruptcy courts on corporate ESG performance. Using listed firms in China from 2015 to 2021, we find that the introduction of specialized bankruptcy courts leads to an increase in corporate ESG performance. Our main results remain after considering endogeneity concerns and TWFE bias. The underlying channel is the increased access to bank loans for firms. Moreover, this effect is more pronounced in firms facing limited access to bank financing and in cities with stronger legal environment. The introduction of bankruptcy courts mainly contributes to the enhancement of governance and social components within the ESG spectrum. Collectively, our study contributes a novel perspective to the discourse in law and finance, and underscores the broader implications of judicial reforms on corporate ethical behavior.

Author: **Ryan Federo**, *U. of the Balearic Islands - Palma de Mallorca*

Author: **Roberto Nolan Galang**, *Ateneo de Manila U., Philippines*

Author: **Regina Lizares**, *U. of the Philippines - Diliman*

Many firms establish political ties by appointing politically connected directors to operate effectively in emerging markets. However, the extant corporate socio-political engagement literature offers inconclusive findings regarding the link between political ties and firm outcomes. Our study posits that in emerging markets with weak state capacities, politically connected directors can be construed as signals to generate legitimacy and positive stakeholder reputation. Drawing on signaling theory, we argue that political connection on the board is associated with higher firm value and ESG ratings. We also claim that these relationships are contingent on firm ownership structures, which enhance the politically connected directors' signaling effect on firm outcomes. Our analyses on Philippine publicly listed corporations show that the presence of politically connected directors is positively associated with enterprise value and ESG scores. Moreover, we find that the positive association between political connection on the board and enterprise value is stronger in firms affiliated with business groups than non-affiliated ones, whereas the positive link of politically connected directors to ESG score is more pronounced in firms with dispersed than concentrated ownership. We discuss our study's implication on management research and practice.

“Institutions in Crisis!”: What it Means and How Social Evaluation Scholars Can Address It

Organizer: **Theresia Harrer**, *Hanken School of Economics*
Organizer: **Moritz Gruban**, *Royal Holloway, U. of London*
Panelist: **Nicole Gillespie**, *U. of Queensland*
Panelist: **Thomas J. Roulet**, *U. of Cambridge*
Panelist: **Roy R. Suddaby**, *U. of Victoria*
Panelist: **Anastasiya Zavyalova**, *Rice U.*

We are currently facing numerous societal crises, such as the institutional trust crisis. Social evaluation scholars – who study the production, maintenance, and repair of key social evaluation concepts such as legitimacy, reputation, trust, status, celebrity, and stigma – are, in principle, uniquely positioned to address these crises. However, their expertise seems to be sought less often than that of economists and public policy scholars. We suggest that this lack of inclusion is due to a lack of conceptual clarity in social evaluation research. The confounding of key concepts leads to a fragmentation of research, inconsistencies in the definition and measurements of concepts, and ultimately limits the guidance that social evaluation scholars provide to policymakers and practitioners. Our goal in this symposium is, therefore, to bring together social evaluation scholars and discuss how we can work together to contribute more effectively to addressing societal crises, such as the current institutional trust crisis. Four distinguished social evaluation scholars will introduce a key concept in the social evaluation literature (i.e., trust, stigma, authenticity, legitimacy, and reputation) and reflect on its strengths and limitations in explaining societal crises such as the institutional trust crisis. We then use these introductions to facilitate a discussion on how social evaluation scholars can improve conceptual clarity and build bridges between the concepts. In doing so, we aim not only to develop a future research agenda for social evaluation scholars, but also to create a starting point for a discussion forum for impactful social evaluation research.

Global Strategies and Practices of Corporate Social Responsibility (CSR) and Sustainability

Session Moderator: **Richard E. Wokutch**, *Virginia Tech*

SIM: Corporate Social Responsibility Understanding and Practice in Non-Western Contexts →

Author: **Petya Koleva**, *Heriot-Watt Dubai*

Author: **Georges Samara**, *American U. of Beirut*

Author: **Lee Quinn**, *Centre for Business in Society*

This study investigates how institutional entrepreneurs operating in non-Western contexts shape the understanding and practice of CSR, focusing on three Middle Eastern countries. Drawing on qualitative data and employing an exploratory research design within a range of public and private sector organisations, we explore how CSR understanding and practice is designed by institutional entrepreneurs, whose CSR agenda is in turn shaped by their neighbouring institutional environment. The findings evidence a set of distinct set of patchwork institutions that have a main impact on governments, who are the most salient institutional entrepreneurs that shapes the CSR understanding and practice of companies. The identified forms of CSR practiced by companies reveal governmental attempts to adapt to a patchwork of institutional dynamics, mainly focusing on societal welfare and establishing social order. Therefore, our work provides important contributions to the institutionalization of CSR debate by outlining how a patchwork of institutional forces influence governmental CSR priorities, which in turn shape the understanding and practice of CSR.

SIM: Sustainability Strategies in Africa

Author: **Ayman Er.Rahimi**, *Africa Business School, Mohammed VI Polytechnic U.*

Author: **Dirk Boehe**, *Africa Business School*

Business models for sustainability (BMfS) aim at driving social and environmental impact while simultaneously ensuring the firm's financial performance. We draw on and contribute to the nascent literature on multiple organizational goals by showing how and why environmental, social, governance and financial firm-level goals can become complementary. For this purpose, we develop and implement a framework to identify and describe pertinent mechanisms that enable firms to achieve complementary sustainability goals. We use case-based research and causal loop diagramming to unveil how the strategic choices and their consequences of young African firms interconnect in achieving multiple sustainability goals in a synergistic manner. Moreover, we zoom into the feedback loops that help reinforce their business models. We find sustainable practices in their supply chains management, fair supplier payment and employment practices, sustainable sourcing, and technical assistance for suppliers and customers aiming at enhancing their sustainable practices. Collective action and partnerships also emerge as successful drivers of environmental, social impact combined with financial sustainability.

SIM: Values Above the Shareholder-Stakeholder Twist: Why do Asian Top Business Leaders Speak Differently? →

Author: **Rebecca Chunghee Kim**, *Nagoya U. of Commerce and Business*

Author: **Hiroo Takahashi**, *Japan Society for Business Ethics*

Author: **Mohan V. Avvari**, -

Author: **Yoshiki Shinohara**, *Ritsumeikan Asia Pacific U.*

Author: **Yong Hee Yang**, *Dasomi Foundation*

Based on a 4-year qualitative study involving 21 in-depth interviews with founders, chief executive officers and top leaders of Asian companies, we aim to present a dynamic perspective on how the Western great debate of contemporary market capitalism—the so-called shareholder–stakeholder debate—is differently situated and shaped in emerging Asian markets. We draw on the Asian values literature and postulate that Western shareholder–stakeholder debates are not very welcome in Asian markets. We find that Asian executives emphasize a streetwise approach to stakeholders based on leadership philosophy for creating an inclusive environment instead of decoupling into shareholder vs. stakeholder. More substantively, we demystify the following four Asian values closely associated with Asian business leadership as impediments and stimuli to tackle the shareholder–stakeholder legitimacy discussion: 1) long-term value in leadership philosophy; 2) harmony with the community; 3) people–employee care; and 4) integrity in business ideology, performance, and identity. Our findings advance the understanding of the link between values and management by challenging Western the shareholder–stakeholder debate, which is the dominant logic in the global market.

SIM: Cross-Country Difference and CSR Implementation in MNE Subsidiaries

Author: **Zhenzhen Li**, *Fudan U.*

Author: **Qinqin Zheng**, *Fudan U.*

Author: **Yahan Hu**, *Fudan U. School of Management*

Although multinational enterprises (MNEs) are expected to behave consistently in corporate social responsibility (CSR) across countries, their implementation levels vary among subsidiaries. In this paper, we develop the notion of “cross-country difference” which captures distance with direction between home country and host country to explore the varying levels of CSR implementation among subsidiaries from the legitimacy judgment perspective. Subsidiaries obtain cues from cross-country difference to make validity and propriety judgement of CSR practice. Specifically, they will perceive CSR with less validity and propriety and decrease implementation with a larger economic difference, but increase implementation when the institutional difference is greater. In addition, subsidiaries behave differently in local and global CSR, and will adjust their legitimacy judgment further based on internal governance. By advancing our understanding of cross-country difference and legitimacy judgment, our study enriches explanation of CSR implementation across MNE subsidiaries.

Strategic Adaptations and Relational Dynamics in Evolving Organizational Contexts

Session Moderator: **Jennifer Rhymer**, *UCL School of Management*

STR: A Strategic Perspective on Which Firms Adopt Remote Hiring 

Author: **Cristiano Bellavitis**, *Syracuse U. Whitman School of Management*

Author: **Benjamin L. Hallen**, *U. of Washington, Seattle*

Author: **Jennifer Rhymer**, *UCL School of Management*

To date much of the research on remote work has focused on its effects on jobs, productivity, and employees. Less clear is which firms are likely to adopt this novel, though contentious, organizational practice. We take a strategic perspective and argue that remote work may be viewed as a complex compensating differential, offering benefits to employees but at the expense of heightened organizational complexity. We argue that firms in competitively weaker labor market positions are more likely to offer remote friendly jobs to attract employees who might otherwise not be interested or not affordable. We examine this using proprietary data from a leading hiring platform for technology startups. Supporting our arguments, we find that startups that have raised fewer rounds of funding and have fewer employees are more likely to pursue employees working remotely. We also find that the salary ranges for remote friendly positions are on average lower. Overall, we contribute a more strategic perspective to the growing literature on remote work, while also highlighting how startups and other disadvantaged firms may use such complex compensating differentials as a strategic tool.

STR: Strategic Rhythms: Non-Entrainment for Competitive Advantage

Author: **Richard L. Priem**, *Texas Christian U.*

Author: **Sali Li**, *U. of South Carolina*

Author: **Pengxiang Zhang**, *Guanghua School of Management, Peking U.*

Strategy scholarship on temporal rhythms focuses on the benefits of entraining (i.e., synchronizing) a focal firm's rhythms with a dominant rhythm in its industry. The logic is that shared temporal rhythms help firms organize activities, whereas not entraining causes inefficiencies that limit competitive advantage. We offer a counterpoint to this logic by explicating how types of intentional non-entrainment (i.e., asynchrony) can produce sustainable competitive advantages. We explore this elemental conformity-versus-distinctiveness temporal contrast by developing a typology that integrates fundamental rhythm constructs—frequency and scope—with industry velocity and managers' temporal cognitions. The result is a series of propositions relating different types of strategic non-entrainment (i.e., temporal uncoupling) to a focal firm's competitive advantage. The underlying mechanisms, which flow from Durkheim's ideas on modern societies' needs for interpersonal differentiation and temporal complementarity, are the non-entrained rhythms themselves. Specifically, managerially initiated strategic rhythms activate firm-level competitive advantages—especially, differentiation and focus—in novel ways. We contribute to strategic rhythms literature by showing how deviations from a dominant industry rhythm's frequency or scope can provide top managers with a wider array of strategic options than does entrainment

STR: A Relational View of Intra-Industry Relationships in the Finnish Mobile Gaming Industry

Author: **Jukka Luoma**, *Aalto U.*

Author: **Kastor Brunila**, *Aalto U.*

Author: **Joseph Porac**, *New York U.*

This study advances a relational view of intra-industry relationships. Existing theories mainly use concepts such as competition and cooperation, occurring at the firm-level, to characterize intra-industry relationships. We elaborate how intra-industry relationships can be understood as a multi-level and multi-domain phenomenon. Industry relationships can be formed at different levels of analysis ranging from the individual to the organizational level while the types of relevant relationships can range from rivalries and formal alliances to friendships and shared hobbies. Our conceptualization is a solution to an empirical puzzle we encountered when studying the Finnish mobile gaming industry. The global mobile gaming industry is highly competitive due the scarcity of talent and availability of global app stores that facilitate market entry. And yet, in the Finnish context, helping, networking, and other forms of cooperation are common, and managers mostly do not see other firms as their competitors. While industry participants recognize that, on a general level, competition is intense, they characterize their relationships to other Finnish organizations and to individuals in those organizations in relationship terms such as collaboration, friendship, and shared passions. Overall, our findings highlight the need to de-center competition as a relationship construct to understand industry dynamics and examine social embeddedness of inter-organizational competition and cooperation in much more granular terms.

STR: Strategies of For-Profit Firms in Social Services: Insights From Brazilian Higher Education    

Author: **Carlos Inoue**, *U. of Illinois at Urbana-Champaign*

Author: **Deepak Somaya**, *U. of Illinois at Urbana-Champaign*

Author: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*

This paper takes a question-driven approach to examine the distinctive strategic choices of for-profit firms in markets for social services, and their connection to long-term firm outcomes. We exploit a legislation that allowed for-profit firms to operate in Brazilian higher education, a market previously reserved for non-profit firms. Combining quantitative analysis and qualitative interviews, we find that the entry-stage strategies of for-profit firms differ from those of non-profits, involving distinctive choices about firm scale and scope, product-market mix, and resource management. These strategic choices and being for-profit are positively associated with firm survival and size. Our research highlights how for-profit firms are different from non-profits in the needs they serve and productive efficiencies they access, and how they contribute to expanding access to social services.

Talk or Walk? CSR and R&D Decoupling

Session Moderator: **Alex Junyi Fang**, *School of Economics & Management, Tongji U.*

STR: **Fooled by Noise? Information Processing, Performance Feedback, and Firm Responses**

Author: **Pascal Flurin Meier**, *U. of Zurich*

Author: **Raphael Flepp**, *U. of Zurich*

Author: **Egon Franck**, *U. of Zurich*

Author: **Thomas Keil**, *U. of Zurich*

One of the central ideas of Performance Feedback Theory is that organizations regulate their behavior with the help of performance feedback. One implicit assumption underlying this idea is that performance feedback received by the organization is a diagnostic signal of the true underlying performance of their actions. However, in many situations, performance feedback regarding organizational actions is noisy due to contemporaneous uncertainty. In this paper we argue that noise in performance feedback may give rise to inappropriate reinforcement of organizational actions, especially in situations where the information environment is relatively unfamiliar and when the information processing demands for the organization are high. Exploiting stock market returns surrounding acquisitions, which allow us to separate and quantify noise from the performance feedback signal, we find supporting evidence for our theoretical conjectures. Taken together, our results highlight the important role of noise in processing of performance feedback and paint a picture of organizational decision-making that is informationally less sophisticated than prior research in M&A would assume.

STR: **Talk or Walk? The Effect of Social Performance Feedback on Green Innovation and CSR Reporting**

Author: **Jiaojiao Qin**, *Xi'an Jiaotong U. School of Management*

Despite the importance of corporate social responsibility (CSR) performance, very little is known about how firms make strategic responses to social performance feedback. To address this void, this study integrates the insights from performance feedback research and CSR literature to explore the effect of social performance feedback on firms' CSR strategies: substantive CSR (i.e., green innovation) and symbolic CSR (i.e., CSR reporting). Since issue salience will influence how firms interpret social performance feedback and make responses, we also examine the moderating effect of media coverage. Using all listed Chinese industrial companies from 2010 to 2019, we find that when firms' social performance is below aspiration, they will increase green innovation, but reduce CSR reporting. However, when firms' social performance is above aspiration, they will increase CSR reporting, but reduce green innovation. These relationships are also found to be moderated by media coverage. Our findings provide important implications for firms' CSR strategies.

STR: **Talk the Walk or Walk the Talk? A Configurational Perspective on the Determinants of CSR Decoupling**

Author: **Jialing Wu**, *Central U. of Finance and Economics, Beijing, China*

Author: **Daojuan Wang**, *Aalborg U. Business School*

Author: **Yuxiu Chen**, *School of Business and Management, Jilin U.*

Author: **Helen Cai**, *Middlesex U.*

Research shows that firms increasingly use corporate social responsibility (CSR) decoupling as a buffering strategy. Yet, less is known about why and how CSR decoupling occurs for developing countries. This study proposes a multilevel framework of CSR decoupling, consisting of institutional factors (formal and informal institutional environment), organizational factors (firm characteristics and capabilities) and individual factors (CEO demographic and psychological characteristics). In a study of Chinese listed firms involving 5147 firm-year observations for the period 2010-2020, we first identify 10 key drivers of CSR decoupling from 17 potential determinants by applying least absolute shrinkage and selection operator (LASSO) machine learning method. More importantly, we undertake a fuzz-set qualitative comparative analysis (fsQCA) on a subsample of 613 firms in 2020 and discover six (four) configurations for high (not-high) levels of CSR decoupling. These configurations indicate that high/not-high levels of CSR decoupling can be achieved through different configurations. Finally, we summarize various categories of CSR decoupling and coupling in Chinese context and put forward three propositions. Our study enriches the literature on the antecedents of CSR decoupling and offers policy implications for governing CSR decoupling.

STR: **Talk That Talk: Performance Shortfall and R&D Decoupling – Evidence from Chinese High-Tech Firm**

Author: **Huahua LI**, *School of Economics & Management, Tongji U.*

Author: **Alex Junyi Fang**, *School of Economics & Management, Tongji U.*

Author: **Fangju Long**, *School of Economics and Management, Tongji U.*

Based on the behavioral theory of the firms (BTOF), the behavioral view of R&D predicts that performance below the aspirational level trigger problematic search that leads to intensified level of R&D investments. Despite the significant insights, the stream of literature suffers from two shortcomings – conflation of risk-taking and change and under-socialization of the searching processes. Focusing on high-tech Chinese firms, the study complements this stream by revealing a more nuanced relationship between performance shortfall and R&D-related activities. We found that facing profitability shortfall, high-tech Chinese firms are caught in the tension between resource conservation and the need to respond legitimately to retain supports from stakeholders. The tension leads to what we refer to as “R&D decoupling” – simultaneous reduction of actual R&D intensity to stop resource outflow and intensification of rhetorical disclosure of innovation in the discussion parts of annual reports to manage impression of stakeholders. The relationship is strengthened with financial constraint while both of R&D intensity and rhetorical disclosure rhetorical disclosure with technological certification issued by state. The study contributes to the literature of performance feedback by showing how R&D decoupling is adopted as a solution set to simultaneously address challenges from profitability in both product market and factor market space.

STR: When Does Real Options Reasoning Benefit Firm Survival? Boundary Condition of Imitation Propensity  

Author: **Stephen Xu Zhang**, *U. of Adelaide*
Author: **Renfei Gao**, *U. of Manchester*

While real options theory posits the advantage of real options reasoning (ROR) in preserving flexibility ex ante to manage uncertainty, whether ROR benefits firm performance remains a critical debate in the literature. Our study identifies firm imitation propensity (vis-à-vis innovation) as a firm-level boundary condition to illuminate for which firms ROR benefits business survival or not. Using unique multiple-wave data that track the survival of 259 Iranian small and medium-sized enterprises over five years, our results show that the relationship between ROR and firm survival is in general positive, but becomes weaker and could turn negative for firms with higher imitation propensity. Integrating insights from ROR and imitation research, our study helps towards resolving the debate on the performance implications of ROR by identifying a firm-level boundary condition to further our scholarly understanding of ROR as an uncertainty management approach.

STR: The Dual Role of CVC Investments in Venture Acquisition  

Author: **Zhuo Chen**, *China Europe International Business School (CEIBS)*
Author: **Tieying Yu**, *Boston College*

Mainly focusing on the real-options value of CVC investments, existing research in strategy and entrepreneurship has underscored the role of CVC investments as an essential mechanism through which corporate investors can engage in early-stage technology experimentation. Extending this line of research, we propose that CVC investments can also attract attention toward the invested ventures, thereby increasing the likelihood of these ventures being noticed and eventually acquired by external entities. Moreover, we elucidate that this effect is not universal but contingent upon the tie strength between the corporate investor and the venture. The stronger the tie strength, the less likely the venture will be acquired by external entities. Our empirical analysis employs a comprehensive dataset tracking 221,204 triads of acquirers, CVCs, and ventures within the high-tech industries from 1980 to 2016. The findings substantiate our hypotheses, shedding light on the interplay between CVC investments and acquisitions, and the intricate dynamics of corporate strategy.

STR: Firms' Camouflage: How Do Firms Deter Potential Rivals? 

Author: **XUAN LI**, *Chinese U. of Hong Kong*
Author: **William P. Wan**, *Chinese U. of Hong Kong*
Author: **Daphne W. Yiu**, *Singapore Management U.*
Author: **Chaowen Deng**, *Chinese U. of Hong Kong*

This study presents evidence that firms can employ accounting techniques as a camouflage to deter market entry. We theorize that incumbent firms have the incentives to use accounting techniques to influence how potential rivals assess and evaluate the profitability of the market space of the incumbent firms. Using a panel data of publicly traded firms, our findings provide strong support for our theory.

STR: Optimism, Market Entry and Competitive Deterrence 

Author: **Laurent Vilanova**, *U. Lyon 2 (Coactis)*

I study a sequential entry game in a "winner-take-all" market where success depends on relative ability and some (but not all) entrepreneurs overestimate their own ability. For a potential early entrant, overestimating one's ability (i.e., individual optimism) can have both negative and positive consequences: it fosters her incentive to enter, which can lead to excess entry but can also limit under-entry (in markets where realistic entrepreneurs stay out); it can also help deter rivals. I show that the net gain of individual optimism (i) depends on market potential (the market's capacity to provide positive payoffs for one or two firms) and group-level optimism (the fraction of optimists vs. realists among entrepreneurs), (ii) is in general positive in low-potential markets where optimism helps deterring stronger rivals, and (iii) decreases with group-level optimism in high-potential markets and is maximized at moderate levels of group-level optimism in low-potential markets. Finally, I show that overoptimistic beliefs are often persistent, particularly in low-potential markets, and optimism (in comparison with realism) can facilitate learning.

Corporate Governance

Session Moderator: **Elaine Couto Silveira**, *FGVEBAPE*

STR: **Beyond Implementation: The Role of Chinese Board Secretaries in ESG Strategy Escalation**

Author: **Qiuyang Tu**, *Central China Normal U.*
Author: **Zhao Duan**, *Central China Normal U.*
Author: **Bingjie Li**, *Central China Normal U.*
Author: **John Humphreys**, *Texas A&M U., Commerce*

Studies of corporations' environmental, social, and governance (ESG) sustainability efforts typically focus on the central responsibilities of CEOs and boards of directors in strategic decision-making. However, given the unique secretarial political culture in China, we argue that corporate (i.e., board) secretaries also play an important role in ESG strategic decision-making that goes beyond merely the implementation and communication of firms' strategic decisions. Specifically, we posit that when firms face positive market performance, they are more likely to escalate their ESG strategic response (i.e., adopting Global Reporting Initiative standards) based on previously disclosed ESG information. In addition, we postulate that overconfidence, diversified perspectives, and diligence of board secretaries will distort the secretary's understanding of positive market value performance information and ESG decision-making, which in turn will affect the firm's ESG response decision. Accordingly, we examined personal attributes of Chinese A-share listed firms' board secretaries and their role in market capitalization performance feedback and ESG strategic response decisions. We found empirical evidence consistent with our premise that decision implementers can also play an important role in the performance feedback decision-making process. Our study yields important implications for understanding the role of board secretaries in ESG decision-making processes.

STR: **Corporate Governance and Innovation: A Predictive Modeling Approach with Machine Learning**

Author: **Leonardo Henrique Lima De Pilla**, *Fundação Getúlio Vargas/EBAPE*
Author: **Elaine Couto Silveira**, *FGVEBAPE*
Author: **Fábio Caldieraro**, *Fundação Getúlio Vargas/EBAPE*
Author: **Alketa Peci**, *EBAPE/FGV*
Author: **Ishani Aggarwal**, *Brazilian School of Public and Business Administration*

The study of the associations between internal corporate governance (CG) mechanisms and innovation is hampered by non-linear patterns and complex interactions. As a result, the literature rarely converges on the directions or strengths of these relationships. Moreover, existing research has almost exclusively used explanatory modeling (i.e., the application of statistical models to data for testing correlational or causal hypotheses about theoretical constructs) to investigate the CG-innovation association. Consequently, it is not clear whether internal CG mechanisms, when taken jointly as a broad set of interconnected variables, provide relevant information to accurately predict innovation. To address this gap, we use predictive modeling (i.e., the application of statistical models or data mining algorithms to data for predicting new observations) with supervised machine learning (ML) methods to analyze a dataset of R&D projects from the Brazilian electricity sector. We show that a broad set of variables reflecting the internal CG mechanisms significantly increases the power of ML algorithms to predict innovation. We also demonstrate that ML can shed light on non-linear and non-monotonic patterns in the CG-innovation association. Our contribution to the literature is threefold: bringing a novel predictive modeling approach to the debate on the role of CG for innovation achievement through R&D activities, that can complement and enrich existing explanatory research; exploring non-linearities and interactions in innovation prediction; and corroborating a burgeoning strand of literature that considers supervised ML as a useful tool available for management researchers.

STR: **Does Cooptation Truly Impair? Co-Opted Boards and Strategy Uniqueness**

Author: **Wenxin Wu**, *Guanghua School of Management, Peking U.*
Author: **Jia Shen**, *U. of Texas at Dallas - Jindal School of Management*

The extant literature investigates the resolutions to strategy uniqueness paradox from the market efficiency perspective, our study incorporates socio-political perspective into discussion and particularly examines the dual role of board co-optation on firms' engagement in strategy uniqueness. Specifically, we argue that board co-optation attenuates the heterogeneity of information environment, thereby insulating CEOs from unique and diverse foresights to adopt distinctive strategies. Concurrently, co-optation engenders norms of reciprocity, fostering loyalty and security for CEOs, which in turn promotes the pursuit of novel strategies over common ones. Based on this trade-off, we posit an inverted U-shaped relationship between board co-optation and strategic distinctiveness. Furthermore, we contend that CEO conservatism amplifies this inverted U-shaped pattern. Our investigation contributes a nuanced perspective on the potential advantages of co-optation in board composition and underscores the necessity for firms to contemplate the broader ramifications of board independence.

STR: **No Good Deed Goes Unpunished: Reshoring, Tax Avoidance, and Internal Inverse Spillovers**

Author: **Eric Y. Lee**, *The Pennsylvania State U.*

Strategic management research has established that the effects of a firm's negative event can spill over to other firms in the same industry in the form of negative media coverage. We extend understanding of this phenomenon by suggesting that spillovers can also occur within the same firm and that positive events can also lead to negative coverage. We explore this internal inverse spillover in the context of reshoring, which is the movement of offshored operations back to the firm's home country. We theorize that despite the many potential merits of reshoring, reshoring firms will receive more negative media coverage because reshoring is associated with tax breaks, something the media and public are increasingly scrutinizing as a form of corporate tax avoidance. We also suggest that firms can reduce negative media coverage by paying more in taxes before reshoring. Our findings support our theorizing, thereby contributing to research at the intersection of firm events and the media. We also contribute to management practice by showing how firms can manage internal inverse spillover effects (e.g., from tax breaks) in order to pursue value-creating actions (e.g., reshoring).

Balancing Resource Allocation: Strategic Approaches in Complex Organizational Environments

Session Moderator: **Siddharth Natarajan**, *Nanyang Business School, NTU Singapore*

STR: **Resource Allocation within Multi-unit firms: The Role of Distributed Power in MNCs**  

Author: **Siddharth Natarajan**, *Nanyang Business School, NTU Singapore*

While it is commonly accepted that power plays an important role in resource allocation, relatively less is known about the consequences of distributed power across the units of a multi-unit organization. This study argues that the distribution of power within a multinational corporation (MNC) affects the allocation of resources in its units. Higher power concentration within an MNC will reduce capex spending by its units navigating a technology shift. This constraining effect of power concentration will vary across units: stronger for newly acquired units of an MNC compared to its existing units, but weaker for units with higher market share in the previous technology. These hypotheses are tested in the context of the global telecommunications industry, which is capital-intensive and underwent a shift from 2G to 3G mobile networks. Analysis of a rich sample of 219 mobile operators of 57 MNCs across 118 countries from 2004 to 2019, supplemented by tests for alternative explanations, provides strong support. These findings are reinforced by analysis exploring plausible sudden changes in the power structure following MNC deglobalization. Overall, the study contributes valuable insights into the role of power in resource allocation, illuminating an important link between MNC organization and strategy.

STR: **Strategic Openness as Weapon in “Standards Wars”**  

Author: **Bastian Wolff**, *U. of Cologne*

Author: **Daniel Schlagwein**, *U. Of Sydney*

Author: **Detlef Schoder**, *U. of Cologne*

While many organizations keep their proprietary resources – such as source code or intellectual property – close to themselves, organizations increasingly open resources to achieve anticipated competitive effects. In particular, this “strategic openness” can be applied by organizations in transforming industries – where certain hardware or software standards have not been established yet – to strive for dominance against their competitors by enforcing their technologies to the market. Research lacks insights about the competitive dynamics of strategic openness in such “standards wars”, leading to the question of when and how strategic openness can be used as a weapon in standards wars. Based on primary and secondary data, our grounded case study about Tesla and the automotive industry points out that in standards wars, the appropriate timing of strategic openness is closely connected with the prospect of setting industry standards and the dynamic competitive value of a resource. We derive two dynamic variables that determine whether it is sensible for organizations to open a proprietary resource as a weapon in a standards war: Closed Competitive Differentiation (CCD) (representing the competitive value of a resource when being closed) and Open Competitive Differentiation (OCD) (representing the competitive value of a resource when being opened). While market developments and actions of competitors can influence both values over time, our propositions suggest that using openness as a weapon in standards wars provides competitive advantages when OCD exceeds CCD.

STR: **Unpacking the Organizational Factors Shaping Firm Value in Multi-Business Firms**

Author: **SONALI KAUR BHATIA**, *IE U. - IE Business School Madrid, Spain*

This study presents initial empirical findings that highlight the contingency of the corporate advantage of reallocating resources on specific organizational factors. Focusing on vertical and horizontal organizational configurations, such as the number of organizational layers and product proliferation, I examine their impact on the relationship between inducements and corporate value. Leveraging a unique dataset from the U.S. Medical and Healthcare Marketplace Guide, this study offers comprehensive insights into the U.S. pharmaceutical industry from 1983 to 1992. My findings support existing research, demonstrating that heightened industry-level volatility enhances firm value through increased option value associated with resource reallocation. Theoretically, I contribute by introducing two novel boundary conditions, showing that the positive relationship between industry-level volatility and firm value diminishes as the number of organizational layers increases. I argue that having more intermediate layers reduces top-level oversight, increasing the likelihood of resource misallocation. A higher number of intermediate layers can delay reallocating resources, hindering timely exits from underperforming businesses. Additionally, when multi-business firms pursue an across-niche product proliferation strategy, the positive relationship between industry-level volatility and firm value diminishes due to increased coordination demands and potential cognitive biases.

STR: **Temporal Focus Balance in Multi-Business Firms: A Strength with Inefficient Consequences** 

Author: **Dongge Zhou**, *Lally School of Management, Rensselaer Polytechnic Institute*

This research delves into the interplay between multi-business firms' inter-temporal resource arrangement and temporal focus balance. Using S&P 1500 firms as sample and measure temporal focus balance from their earnings call transcripts, we examined the extent to which multi-business entities possess a balanced temporal focus compared to their single-business counterparts driven by their inter-temporal resource arrangement potential. Furthermore, we also studied the implications of such a balance on the firms' resource flexibility and efficiency. Empirical findings indicate a significant presence of temporal focus balance among multi-business firms, this feature leads to a higher level of resource flexibility but in an in-efficient way. In summary, this study reveals the paradox that multi-business firms face. While a balanced temporal focus can be a strategic strength in resource flexibility, it may inadvertently lead to inefficiencies in resource allocation.

Sustainability and Regulation

Session Moderator: **Nahyun Kim**, *Tilburg U.*

STR: **Addressing Risk by Doing Good: Business Response to Government Policy Initiative**

Author: **Shengqiao Lin**, *Harvard U.*

Why do some firms in authoritarian regimes respond actively to government policy initiatives while others resist? This article highlights firm-level political risk as the primary motivator of responses, allowing firms to defend their property rights in weak institutional environments. Supporting evidence derives from the responses of listed firms to the Targeted Poverty Alleviation campaign launched by China in 2015. Empirically, firm-level political risk is measured with a text-as-data approach involving 418,480 Q&As in the meetings between institutional investors and listed companies, not only capturing within-firm variations but also providing a substantial understanding of the political risk firms face. Difference-in-differences models show that political risks increase firms' expenditure on poverty-reduction programs, especially for those without preexisting political connections. Evidence of regulation decisions suggests that firms actively responding to poverty-alleviation initiatives received preferential treatment in terms of the size of fines and the likelihood of punishment for violation of regulations.

STR: **The Unintended Consequences of Mandatory CSR Regulations**

Author: **Lingling Xie**, *Singapore Management U.*

Author: **Heli Wang**, *Singapore Management U.*

This study investigates how mandatory corporate social responsibility (CSR) regulations, designed to enhance CSR practices, might simultaneously influence the propensity of firms to engage in irresponsible actions, also known as Corporate Social Irresponsibility (CSI). We explore this question using an abductive approach by leveraging the distinct context of India, where the Companies Act of 2013 (CA2013) mandates specific firms to allocate funds for CSR expenditure. Through a difference-in-differences methodology, we find that regulated firms experienced a significant reduction in irresponsible actions following the implementation of CA2013. This finding highlights the potential positive spillover effects of mandatory CSR regulation in mitigating CSI. Meanwhile, it provides endogeneity-addressed empirical evidence on the controversial relationship between CSR and CSI, and aligns with a more predominant role of moral consistency over moral licensing effect. We further explore the underlying mechanisms driving the observed moral consistency effect and found that the reduction in CSI is more pronounced among firms with an inherent strong moral identity, as opposed to those facing intense external stakeholder pressures. The results suggest that firms exhibit moral consistency in social behavior primarily due to their internal moral motivations, rather than the pressures from external stakeholders.

STR: **The Elusive Nexus: Sustainable Finance and Zombie Lending—Evidence from China's Green Credit Policy**

Author: **Nahyun Kim**, *Tilburg U.*

Author: **Junxiu Sun**, *Shanghai U. of Finance and Economics*

Author: **Xuecheng Yin**, *Shanghai U. of Finance and Economics*

In this study, we examine whether and how the top-down government policy of sustainable finance curbs zombie lending and transforms zombie firms into healthy firms. To study this relationship, we exploit the enactment and the implementation of green credit policy in China, which mandates all banks to factor corporate environmental performance into their loan decisions. Using a synthetic control method and a difference-in-differences method, we find that the top-down government policy of sustainable finance significantly mitigates zombie lending. We further show evidence that following the policy, banks decrease their credit subsidies and increase costs of borrowing to zombie firms and local governments reduce subsidies to zombie firms but continue to grant subsidies to zombie firms that eventually revive and improve environmental performance. Finally, zombie firms become healthy firms by restructuring their financing and elevating productivity.

STR: **On the Paradox of Green Regulation for Pioneers: Does it Really Nurture Green First-Mover Advantages**

Author: **Lucas Lopez-Manuel**, *U. of Vigo*

Author: **Juan Pablo Maicas-Lopez**, *CUNEFU*

Author: **Xose H Vázquez**, *U. of Vigo, Spain*

Author: **Lucio Fuentelsaz**, *U. of Zaragoza*

This article proposes a novel concept, Green First-Mover Advantages, and explores how different aspects of environmental regulation – market, non-market, influenced or not by dominant firms – act as boundary conditions. The results, based on a sample of 30,393 observations, spanning 5,223 firms headquartered in 65 countries over the period of 2006-2021, support our theorizing, showing not only the contrasting impacts that command-and-control and market-based environmental regulations can exert on the manifestation of GFMA, but also highlighting the significant influence of non-neutral regulatory practices on the intricate connection between each regulatory type and the market share of pioneering firms.

Decision Making and Organizational Adaptation

Session Moderator: **Sebastian Niederberger**, *ETH Zurich*

STR: **Evaluating the Effects of Organizational Culture on Post-Merger Integration**

Author: **John Rose**, *Pepperdine Graziadio Business School*
Author: **Ann E. Feyerherm**, *Pepperdine Graziadio Business School*

This research project examines the impact of organizational culture on post-merger integration in the travel and travel services industry for acquisitions valued under \$5B. The study uses a mixed-method research approach to determine whether culture is critical in the success or failure of M&A deals. The research focuses on 50 M&A transactions between three and five years ago at the time of the study. Participants from both sides of the transactions completed an integration outcomes survey, reporting on financial, cultural, and overall success. In addition, each side had five participants who completed the Organizational Cultural Assessment Instrument (OCAI), and six individuals (three from each side) were interviewed regarding the three most successful and three least successful transactions. The study's findings shed light on key factors impacting the integration process. The OCAI results revealed that, on average, acquired companies exhibited a more clan-like culture, while acquiring companies tended to be hierarchies. In addition, cultural similarities between merging companies did not significantly influence their success. The interviews emphasized the importance of addressing cultural differences between merging institutions, involving founders in the integration process, engaging employees, and understanding the acquired company's business. These findings have practical implications for executives involved in M&A activities, guiding how to facilitate successful integration. Organizations can increase the likelihood of a successful merger or acquisition by identifying potential cultural conflicts early on and taking appropriate steps to mitigate their impact.

STR: **Individual and Collective Effects of Voting and Averaging in Organizational Decision-Making**

Author: **Sebastian Niederberger**, *ETH Zurich*
Author: **Nikolaos Kaliorakis**, *ETH Zurich*

In order to make informed decisions, organizations often rely on aggregating the diverse views, expertise, and opinions of multiple individuals, such as in committees or boards. In this context, the choice of an aggregation structure becomes crucial; it not only significantly impacts the decision outcome but also shapes how individuals perceive and process information during decision-making. Our research closely examines two commonly employed aggregation structures: averaging and voting. Averaging enables the pooling of diverse opinions, providing a holistic viewpoint, but its rigorous approach and cognitive demands may lead to overlooked opportunities. Voting relies on individual expertise and simplifies decision-making, but its binary nature can induce information loss and increased acceptance of less promising opportunities. We analyze the behavioral, cognitive, and statistical elements these structures induce at the individual and organizational levels, focusing on their impact when evaluating uncertain opportunities. Our findings reveal that averaging had slightly lower accuracy at the individual level but higher accuracy at the collective level than voting. Voting led to more investment opportunities and false positives, while averaging resulted in more false negatives. We highlight the trade-offs between voting and averaging when combining multiple individual inputs to extract information signals for quality and to reach organizational outcomes. Our study contributes to understanding information aggregation in organizations and the relationship between artificial and collective intelligence.

STR: **Reducing the Impact of Misalignment: Decentralized Decision-Making Structures**

Author: **Magnus Van Haaren**, *Rotterdam School of Management, Erasmus U.*

Decision-making structures in organizations can address the challenge of misalignment between individual preferences and organizational outcomes. We theorize that delegated and intensity-based decision-making models can mitigate the negative impact of this misalignment on participation. Utilizing a comprehensive dataset from Snapshot, a decentralized autonomous organization (DAO) governance platform, we examine the impact of misalignment on participation. Findings reveal that sustained misalignment notably reduces member participation. However, implementing delegated decision-making structures, where decision authority is transferred to representatives, significantly alleviates this negative impact. Similarly, intensity-based decision-making structures, which considers the varying importance of individual preferences, also mitigate the adverse effects of misalignment. The study advances our understanding of organizational behavior in decentralized organizations, shedding light on the pivotal role of decision-making structures in harmonizing individual preferences and organizational objectives.

STR: **How Organizational Mindfulness Promotes Green Co-Creation from Legitimacy Lens**

Author: **Wenrui Cao**, *School of Economics and Management, Beijing Jiaotong U., China*

In the face of global environmental challenges such as climate change, resource depletion, and pollution, there is an urgent need for comprehensive and collaborative efforts to address these issues. Green co-creation receives increasing attention to generate environmentally sustainable and socially responsible value. However, there is scarce empirical evidence on how to facilitate green co-creation and its mechanism. This study investigates the association between organizational mindfulness and green co-creation and explores the mediating role of legitimacy and the moderating role of green image. Based on panel data from annual reports and CSR reports of 289 manufacturing firms (1,890 observations) in China from 2010 to 2020, this study found that organizational mindfulness is positively associated with green co-creation, and the relationship is mediated by both strategic legitimacy and regulatory legitimacy. Additionally, higher green image strengthens the relationships between both strategic legitimacy and regulatory legitimacy and green co-creation. The study contributes to the understanding of organizational mindfulness and legitimacy and assists practitioners in developing green co-creation strategies for organizations and relevant party.

Guiding and Governing Firm Innovation

Session Moderator: **Parthiban David**, *American U.*

STR: Fostering and Realizing Value from R&D Investments: The Governance Role of Transparency

Author: **Parthiban David**, *American U.*

Author: **Palash Deb**, *North Carolina A&T State U.*

Author: **Augustine Duru**, *American U.*

Author: **Akshay Narayanan**, *Masters Union*

Author: **Vipin Sreekumar**, *Masters' Union School of Business*

Research and development (R&D) investments are critical for organizations to innovate and sustain competitive advantage. But R&D investments also present governance challenges as they must be nurtured within the firm to yield value; the payoffs can take time and are subject to considerable uncertainty and risk. Governance of R&D requires both contractual mechanisms and information to facilitate managerial accountability through better decision-making and forbearance, and support experimentation and failure. Prior research has emphasized the role of contractual governance mechanisms such as ownership structure, board composition, incentive compensation, and takeover defenses. Here we study the role of transparency of a firm's information environment in the governance of R&D. Transparency can help mitigate the risks associated with R&D by providing better information for managerial accountability and forbearance. We find that transparency is associated both with higher R&D and higher returns to R&D in the form of patenting and firm value creation. Interestingly, we also find that transparency increases R&D spending and returns to a greater extent when proprietary costs, measured as R&D outward spillovers, are high. Our evidence suggests that for the focal firm, the benefits of learning from the external information environment dominate the drawbacks of information leakage.

STR: Searching in the Fog of Dependence Uncertainty: Customer CEO Turnover and Firms' Search Behavior

Author: **Xueyao Du**, *College of Management and Economics, Tianjin U.*

Author: **Junying Liu**, -

Author: **Matthew Mount**, *Adelaide Business School*

Author: **Wan Jiang**, *Tianjin U.*

Author: **Linlin Wang**, *Business School at Nankai U.*

Although resource dependence theory (RDT) acknowledges that managing dependence relations with external organizations creates a dilemma for dependent firms who must decide between strengthening existing or exploring new resource domains, our understanding of when firms prioritize one action over the other is limited. Building on RDT's premise that dependence relationships are initiated by executives, we argue that chief executive officer (CEO) turnovers within customers represent a critical uncertainty that increases dependent firms' exploration of new domains (i.e., search breadth) and decreases exploitation of existing domains (i.e., search depth). Further, we argue that relationship length and CEO succession, as factors influencing dependence stability, moderate the effect of CEO turnover on these actions. We find support for our theorizing in a sample of firms with major customers.

STR: The Power of Organizational Mindfulness

Author: **Bilian Ni Sullivan**, *Hong Kong U. of Science and Technology*

Author: **Jingxuan Lu**, *Hong Kong U. of Science and Technology*

The balance between exploitative and exploratory innovations is crucial to a firm's technological innovation, but achieving this balance is challenging. This study aims to enhance our understanding of how to balance exploitation and exploration in technological innovation by examining the impact of organizational mindfulness indicating the quality of organizational attention. We argue that organizational mindfulness can lead to more balanced activities between exploitation and exploration by decreasing a firm's exploitation activities and increasing exploration activities. Furthermore, this effect can be strengthened by industry concentration and innovation capabilities. Using a sample of over 800 publicly listed US high-tech firms, our hypotheses are strongly supported. This study highlights the importance of attention quality in the strategic management of ambidexterity in the process of technological innovation. Moreover, it is the first study to empirically examine the impact of organizational mindfulness on ambidexterity with a novel measure of organizational mindfulness, making significant theoretical and empirical contributions to the literature on organizational attention, ambidexterity, and technological innovation.

STR: Mechanical Movie Making: Organizational Search in the Streaming Era

Author: **Todd Hall**, *U. of Kansas*

Organizational search always involves some level of uncertainty. However, organizations are using new access to large quantities of data (i.e., "big data") to attempt to reduce the uncertainty of their search. For example, organizations can use data on past product performance to predict the performance of similar potential future products, or they can also use data on customer preferences to create better matches between products and customers. Using big data to reduce the uncertainty of organizational search could result in more local or distant search. I use data on the movie industry to study how the novelty, collaboration, and performance of movies changed after the introduction of streaming services and the subsequent increase in data available to studios.

Upper Echelons and Firm Innovation

Session Moderator: **Sam Garg**, *HKUST Business School*

STR: **Business Scholars on Boards and Innovation**   

Author: **Na Zou**, *Goethe U.*

Author: **Cornelia Storz**, *Goethe U. Frankfurt, Germany*

Author: **Sam Garg**, *HKUST Business School*

Author: **Egbert Amoncio**, *Goethe U. Frankfurt, Germany*

Author: **Xiaolan Fu**, *U. of Oxford*

Author: **Daniel Erian Armanios**, *Oxford U., Saïd Business School*

Why do academics from business schools sit on board and how do they affect firm innovation? We argue that business scholars' pro-innovation mindset and their broad, holistic views may be more helpful when multi-disciplinary knowledge is needed. Based on a panel dataset of publicly listed Chinese firms between 2008 and 2018, our results show that firms with business scholars serving as independent directors have more innovation, both in terms of innovation quantity and its market potential. We further show that business scholars with internal support from a technology director and who obtained social validation have a stronger impact on firm innovation. Our study contributes to the growing literature on board and innovation.

STR: **Women Leaders and Organization Innovation: A Meta-Analytic Review**    

Author: **Xiangming Tao**, *U. of Sussex, SPRU*

Author: **Yezi Kang**, *Faculty of Economics and Business, U. of Groningen*

Author: **Li Yin**, *U. of Nottingham Ningbo China*

Author: **Liangying Ma**, *Peking U.*

Author: **Haifan Xiao**, *Department of Sociology, U. of Oklahoma*

The promotion of women's representation in strategic leadership roles, such as chief executive officers (CEOs), top management team (TMT) members, and board of directors (BODs), has been widely advocated to foster organizational innovation. However, empirical findings have, thus far, remained inconsistent, and at times contradictory. To better understand this inconclusive relationship between women leaders and organizational innovation, we conducted a meta-analysis based on 106 independent studies and 230 effect sizes. Our results suggest women's leadership may affect organizational innovation in general and innovation output. Particularly, the presence of female BODs is more likely to be positively related to organizational innovation output. A nuanced examination of contextual moderators reveals that national gender equality will strengthen the positive effect of BOD gender diversity. Women CEOs in non-male-dominated industries had a positive effect on innovation input. In contrast, women BODs were positively related to innovation output, but TMT gender diversity does not show any advantages. Finally, methodological contingency factors such as the roles of gender and innovation employed (as control variable or not), and publication status were also assessed. Overall, this meta-analytical research is among the first to extensively review the empirical studies of women leaders and organizational innovation. It consolidates and widens our understanding of the role of women leaders in organizational innovation input and output. By doing this, our research highlights the need for future research to take a more contingency-based approach, considering this relationship's complex and multifaceted nature.

STR: **CEO Gender and Innovation: Female CEOs' Responsiveness to Evaluators and Its Impact on Innovation** 

Author: **Junghyun Mah**, *Hong Kong Polytechnic U.*

Gender studies within the Upper Echelon literature highlight biases and discrimination faced by female CEOs. Building on this, I argue that these experiences make female CEOs more receptive to guidance and evaluations, due to the increased scrutiny and skepticism they face. This heightened responsiveness can significantly influence their firms' strategic actions, especially in terms of innovation. In this study, I delve into how internal and external evaluators - including board members, analysts, and journalists - affect the risk propensity, temporal depth, and stakeholder orientation of female CEOs, and the subsequent impact on innovation. The findings suggest that female CEOs are more likely to adjust these attributes, leading to more significant innovation changes in female-led firms. This research enhances our understanding of gender's role in a firm's strategic actions, the link between CEO gender and innovation, and corporate governance institutions' impact on executive behavior and innovative outcomes.

STR: **R&D Subsidies, TMT Diversity and Innovation** 

Author: **Marlene Herz**, *Goethe U. Frankfurt, Germany*

Author: **Cornelia Storz**, *Goethe U. Frankfurt, Germany*

How can we explain why some firms become more innovative when having received R&D subsidies whereas others gain less? The economic literature on programmes subsidizing research and development (R&D) has relied on policy- and firm-characteristics to explain how subsidies support more innovation. However, strategy research since long has stressed the impact of managerial characteristics on innovation. We study the impact of a key managerial characteristic, namely, top management team (TMT) diversity. Using a unique matched difference-in-difference design based on a panel dataset of publicly listed Chinese firms between 2008 and 2017, we find supportive evidence that TMT's international and functional diversity increases the firms' likelihood of becoming more innovative when having received R&D subsidies. Our results contribute to studies at the nexus between industrial policy and strategic management by flagging out the role of TMT diversity to impactful industrial policies.

Solving Societal Grand Challenges: A Debate and Future Directions

Panelist: **Paul S. Adler**, *U. of Southern California*
Panelist: **Ruth V. Aguilera**, *Northeastern U.*
Panelist: **Rodolphe Durand**, *HEC Paris*
Panelist: **Gerard George**, *Georgetown U., McDonough School of Business*
Panelist: **Olga Hawn**, *U. of North Carolina, Chapel Hill*
Organizer: **Dovev Lavie**, *Bocconi U.*
Panelist: **Anita McGahan**, *U. of Toronto*
Organizer: **Kerstin Neumann**, *U. of Innsbruck*
Facilitator: **Sergio Giovanetti Lazzarini**, *Western U.*

Despite increasing attention of management scholars to the study of societal grand challenges and the progress made with promoting sustainability programs in the private sector, societal challenges such as economic inequality, public health hazards, climate change, and social divide, have worsened. The purpose of this symposium is to bring together leading scholars to engage in a debate and discuss their views and research concerning established and emerging approaches in management research for solving societal grand challenges. The panelists will identify advantages, limitations and contingencies of focused change interventions and broad system changes as well as debate the private versus public responsibilities for solving societal grand challenges, while considering new forms of economic systems and organizational governance. Thus, the panelists will share diverse views on the topic and deliberate with the audience about emerging perspectives, practices, and promising avenues for future research on solutions to societal challenges.

Presenter: **Sarah Wolfolds**, *Cornell U.-The Charles H. Dyson School of Applied Economics and Management*
Presenter: **John Eklund**, *U. of Southern California*
Presenter: **Helge JD Klapper**, *Purdue U.*

Organization design is concerned with understanding and improving how organizations work through their crucial elements of structure, sorting of actors (into/out of the system), and collective sensemaking. However, observing such constituents of organization design at scale is often challenging. Archival data sets that capture these elements in a granular and reliable manner across firms and over time do not readily exist, and surveying firms about their organization design choice at scale and repeatedly is not only financially taxing but often challenging due to low response rates. This symposium showcases recent empirical efforts to overcome such limitations. These include manual data collection through large-sample surveys and online archives, the use of third-party commercial digital big data comprising firms' job postings and employee social profiles, the access to granular country-level census data, and the collection of internal data for novel forms of organizing such as open-source and decentralized autonomous organizations (DAOs). These data sets and empirical approaches push the frontier of empirical organization design research and allow us to re-examine old questions as well as tackle new ones through a granular view across large numbers of firms and industries over time. With this symposium, we aim to share these empirical advances, through presentations and active interactions between the speakers and audience, with other members of the academic community interested in organization design within strategic management, technology and innovation management, entrepreneurship, as well as broader organizational and management areas.

Trust in AI

Session Moderator: **Reda Hassan**, *Nord U. Business School*

TIM: Performance and Biases of Large Language Models in Public Opinion Simulation  

Author: **Yao Qu**, *Nanyang Technological U.*
Author: **Jue Wang**, *Nanyang Technological U.*

The rise of Large Language Models (LLMs) like ChatGPT marks a pivotal advancement in artificial intelligence, reshaping the landscape of data analysis and processing. By simulating public opinion, ChatGPT shows promise in facilitating public policy development. However, challenges persist regarding its worldwide applicability and bias across demographics and themes. Our research employs socio-demographic data from the World Value Survey to evaluate ChatGPT's performance in diverse contexts. Findings indicate significant performance disparities, especially when comparing countries. Models perform better in Western, English-speaking, and developed nations, notably the United States, in comparison to others. Disparities also manifest across demographic groups, showing biases related to gender, ethnicity, age, education, and social class. The study further uncovers thematic biases in political and environmental simulations. These results highlight the need to enhance LLMs' representativeness and address biases, ensuring their equitable and effective integration into public opinion research alongside conventional methodologies.

TIM: Negative Internalities and Risks of Artificial Intelligence 

Author: **Peter Thomas Bryant**, *IE Business School*

Responding to recent advances in artificial intelligence (AI), experts warn of exponential and potentially catastrophic, existential risks. But there is intense debate about the likelihood and severity of such risks, partly because current theories do not adequately describe or explain such phenomena. My paper addresses this problem and contributes to theory by exposing new types of AI risk. To begin with, like others, I argue the complexity, opacity and non-explainability of advanced AI for human agents obscures significant costs and benefits which users incur. Stated formally, AI produces internalities defined as costs and benefits which agents themselves incur from their own choices, but do not account for. This contrasts externalities which agents impose on third parties but do not account for. I further theorize that the rapid diffusion of advanced AI within ecosystems leads to major internalities at this level, negative forms of which may pose exponential and potentially existential risks. Next, I argue that when negative internalities owing to AI compound negative externalities, they increase the likelihood of catastrophic outcomes. Major implications follow for the governance of AI in digital ecosystems and platforms, and for the mitigation of exponential and existential risks.

TIM: Trust in Artificial Intelligence: A Critical Systematic Review 

Author: **Steve Lockey**, *U. of Queensland*
Author: **Nicole Gillespie**, *U. of Queensland*
Author: **Jake Morrill**, *The U. of Queensland*
Author: **Javad Pool**, *U. of Queensland*

While Artificial Intelligence (AI) offers many benefits for organizations, work, and society, it is also creates risks and vulnerabilities that challenge trust in its use, with recent global surveys demonstrating low levels of trust in AI. This timely, systematic review takes stock of the rapidly expanding literature on trust in AI, revealing that 63% of the research has been published since 2020. We synthesize research insights around five key trust challenges that are unique to, or exacerbated by AI: (1) transparency and explainability, (2) accuracy and reliability, (3) data extraction, privacy, and personalization, (4) automation, human autonomy, and agency, and (5) anthropomorphism and embodiment. For each trust challenge, we identify key findings and boundary conditions, and identify inherent tensions and paradoxes in addressing them. In so doing, we identify and challenge an implicit assumption in the literature: that increasing trust in AI is inherently a good thing. We argue that responsible AI use requires well-calibrated trust and examine the literature for insights that inform appropriate levels of trust to promote a critical, human-centered approach to AI. We conclude with future research directions and recommendations to address methodological limitations in the literature.

TIM: Bridging Principles and Practices: The Emergence of Responsible AI   

Author: **Reda Hassan**, *Nord U. Business School*
Author: **Sujith Nair**, *BI Norwegian Business School*

This research examines the responsible development of artificial intelligence (AI) amidst rising concerns about its societal impact. We highlight the co-evolutionary nature of Responsible AI (RAI), demonstrating its emergence through ongoing interactions among diverse ecosystem actors. Our study emphasizes the crucial role of these interactions in guiding AI towards positive societal outcomes. Our findings indicate varied organizational approaches to implementing RAI, encompassing bottom-up, top-down, and collaborative strategies. The process exhibits complexity and diverse perspectives on timing and methodology, including some treating RAI as an afterthought, others as a forethought, and some adopting a co-evolving approach. Using an ecosystem approach, we analyse the actions, interactions, influences, values, tensions and dilemmas of diverse actors to understand how they collectively contribute to the emergence of RAI. Within this ecosystem, governments, politicians, industry representatives, and academia play critical roles in shaping the trajectory of RAI.

University Commercialization Strategies

Session Moderator: **Xizhao Wang**, *Northwestern Kellogg School of Management*

TIM: Innovation Commercialization and Patent Disclosure

Author: **Xizhao Wang**, *Northwestern Kellogg School of Management*

This paper studies how the commercialization of innovation affects patent disclosure. I measure the innovation disclosure by using textual analysis methods to construct the readability scores of each patent's detailed description, background, and summary texts. To identify the causal impact of innovation commercialization on innovation disclosure, this paper uses the difference-in-difference approach. First, this paper uses the 1980 Bayh-Dole Act, which gave universities potential realization of the economic benefits of the inventions as an exogenous shock and leverages the readability change of university patents and non-university patents. Second, this paper considers the technology transfer offices (TTOs) establishment as another exogenous shock of innovation commercialization to patent inventors. This paper finds a decrease in readability in patent detailed description by inventors affiliated with universities after the 1980 Bayh-Dole Act and the TTO's establishment. Such decrease in readability did not apply to patent background and summary text. This paper points out a possible strategic innovation disclosure behavior, a finding that when inventors foresee innovation commercialization, they would strategically decrease the readability of patent detailed descriptions and lower openness in sharing how to make and use the invention.

TIM: Addressing Grand Challenges Through the Entrepreneurial Capabilities of Commercialization Postdocs

Author: **Varkey Jon Thomas**, *U. of the Fraser Valley*

Author: **Finlay MacNab**, *Simon Fraser U.*

Author: **Bruna Guarino-Moraes**, *Queens U.*

Author: **Tom Goldsmith**, *Mitacs*

Author: **James McLellan**, *Queen's U.*

Author: **Sarah Lubik**, *Beedie School of Business Simon Fraser U.*

Author: **Elicia Maine**, *Simon Fraser U.*

Drawing on the triple helix model, which views the entrepreneurial university as the leading actor in a knowledge-based society, this study uncovers micro-level aspects of the knowledge transfer process linking academic science to industry through the mechanism of commercialization postdoctoral fellowships. We provide primary and secondary evidence from six commercialization-focussed STEM postdoctoral training programs across the US, Canada, and the UK, and analyze these case studies to reveal five key themes. Further interviews (50 in total) and a research workshop elucidate salient features of commercialization-focussed STEM postdoctoral training and funding to address grand challenges from the commercialization of university research. All the commercialization postdoctoral programs examined focused on a venture-founder path, and some program components hindered the development of solutions to grand challenges. Beyond the venture path, we provide evidence on the value of two alternative pathways for science commercialization, both of which greatly enhance academic engagement. An industry champions' pathway, which guides postdoctoral fellows to rapidly translate academic inventions through roles in established firms and provides science innovation "receptor capacity" in industry. Additionally, a longer-term translational scientists' pathway shapes the perspective of academic scientists in universities who can co-found multiple science-based ventures through their academic labs across their career.

TIM: Investigating High-Tech University Spinoff Development Using fsQCA

Author: **Igors Skute**, *U. of Twente*

Author: **Remco Siebelink**, *U. of Twente*

There is increasing recognition of university spin-offs (USOs) as crucial contributors to the creation of technological, economic and societal impact. Yet, despite favourable institutional arrangements aiming to foster academic entrepreneurship, the majority of research commercialisation projects fail to scale and achieve their objectives. Recognising the fragmented nature of existing scholarly literature and existing methodological challenges, we reason that there is a strong need to examine the interplay of early-stage success factors in relation to available support mechanisms. To generate novel insights, we use a unique dataset of 108 early-stage USO grant proposals and employ a configurational view to investigate the interplay of nascent USO characteristics. Our findings contribute to a better understanding of early-stage USO development and provide several configurations for impactful research commercialisation. Moreover, we highlight the importance of team motivation and entrepreneurial commitment, USO development speed, and degree of academic orientation across the configurations. Our findings add to the scholarly discussion on USO development whilst presenting specific success recipes for academic entrepreneurs and supporting policy makers in designing target-oriented funding instruments for academic entrepreneurship.

TIM: Proximity or Prosperity? Evidence from the Cross-Regional Cooperation of Chinese Academy of Sciences

Author: **Ningning Zhang**, *Institutes of Science and Development, Chinese Academy of Sciences*

Author: **Ke Wen**, *Institutes of Science and Development, Chinese Academy of Sciences*

Author: **Jingjing Guo**, *Institutes of Science and Development, Chinese Academy of Sciences*

Author: **Dingyi You**, *Institutes of Science and Development, Chinese Academy of Sciences*

Author: **Le Tang**, *Department of Economics, Suffolk U.*

Previous research has highlighted the significant impact of geographical proximity in stimulating collaboration networks. Nevertheless, this view is challenged by the tremendous growth of cross-regional academia-industry collaborations in China. In this paper, we analyzed the cross-regional collaboration network established between the research institutes affiliated to the Chinese Academy of Sciences (CAS) and firms, and examined the impact of geographical proximity and economic proximity on the network by using the Exponential Random Graph models. Given that the different level of regional economic development, the study indicated that geographical proximity has a negative impact on cross-regional academia-industry collaboration with a decreasing trend. By contrast, economic proximity has varying impacts on the collaboration network. In specific, for research institutes in developed regions, economic proximity has a positive effect on the collaboration network, while less-developed regions experience negative effects. This suggests that the knowledge spillovers from research institutions tend to flow to firms in developed regions. This study holds significant policy implications, indicating the necessity for governments to develop distinct regional innovation policies to encourage cooperation between industries and academia. Furthermore, the central government should grant autonomous decision-making power to advanced regions while also offering greater subsidies to less-developed regions, thereby fostering cross-regional academia-industry collaboration.

Digital Transformation: Barriers and Enablers

Session Moderator: **Placide Poba-Nzaou**, *UQAM U. of Quebec in Montreal, Canada*

TIM: Barriers and AI-based Technologies Adoption: A Configurational View from a European-Wide Survey 

Author: **Placide Poba-Nzaou**, *UQAM U. of Quebec in Montreal, Canada*
Author: **Anicet Sylvere Tchibozo**, -
Author: **Erwin Halim**, *School of Information Systems, Bina Nusantara U.*
Author: **Ali Etkkali**, *UQAM U. of Quebec in Montreal, Canada*
Author: **Kissangou Jean Philémon**, *CACSUP*

Artificial intelligence (AI) is one of the most important, ground-breaking, and debated technologies of our age that has gained in popularity thanks to the availability of huge amount of data (Big Data), the advances made in algorithmics, and the improvement witnessed in both computing power and storage capability of machines. Although there is a consensus on the disruptive nature of AI, some firms have already adopted this technology while others are still lagging. Conventional wisdom in innovation management posits that perceived barriers prevent organizations from adopting an innovation such as AI-based technologies. However, previous research has yielded mixed results with respect to the relationship between perceived barriers to the adoption of an innovation and its actual adoption. Analyzing data obtained from the European Commission on 7549 firms with a configurational approach based on a combination of hierarchical and non-hierarchical cluster analysis followed by post-hoc analysis, this exploratory study seeks to expand our understanding of AI-based technologies perceived barriers-adoption link. Using 15 variables to measure perceived barriers to the adoption of AI-based technologies, we highlight the complex nature of this relationship that echoes the inconsistent findings of previous studies. We identify three clusters of firms that face different configurations of perceived barriers while exhibiting orthogonality on all 15 perceived barriers to AI-based technologies adoption (cluster I – High Level perceived barriers, n=2249, 32.4%; Cluster II- Low Level perceived barriers, n=1879, 24.9%; Cluster III -Moderate Level barriers, n=3221, 42.7%). Among the three configurational solutions, two exhibit asymmetrical relationships between the causal conditions (configuration of perceived barriers) and the outcome (AI-based technologies adoption intensity).

TIM: From Constraint to Relief: Managing Paradoxical Tensions in Digital Workplaces 

Author: **Olga Kokshagina**, *EDHEC Business School*
Author: **Sabrina Schneider**, *Management Center Innsbruck*

This study emphasizes effective coping with paradox tensions in increasingly digital, white-collar workplaces. Building on qualitative interviews and focus group data collected before and after the COVID-19 pandemic, we focus on the individual perspective within a particular organizational context to explore how individuals cope with the transformational effect of digital technologies. Prior research identifies a rising number of tensions in digital work as paradoxes, implying that effective coping requires a constant balancing of interdependent alternatives. Our findings show that while paradoxes rise in quantity and variety with increasing exposure to digital technologies, individuals' perceptions of the tensions depend on organizational responses in combination with their individual readiness to engage with paradoxes. This leads to two implications for management theory and practice: (1) We point out to different natures of paradox tensions in digital workplaces and emphasise the role of structure and guidance to enable effective static and dynamic coping mechanisms, and (2) we highlight the importance of fit between one's level of agency to cope with paradox tensions and the individual's readiness to deal with the tensions in the first place. This research expands our knowledge on the mechanisms that help organizational members deal with paradox tensions in digital workplaces.

TIM: Managing Paradoxical Tensions in Digital Transformation: The Role of Cognitive Frames 

Author: **Jiuyu Dong**, *Dalian U. of Technology*
Author: **Yang Liu**, *Zhejiang U.*

Despite increasing scholarly attention to digital transformation, there is only limited understanding of why firms choose different approaches to this process. This study provides micro-level insights into the question how cognitive frames affect the digital transformation of manufacturing firms. There are some paradoxes in the process of digitalization such as the tensions between the need to maintain strength in conventional operations and the need to digitalize. Borrowing from the paradox literature, we categorize responses to these tensions as either/or, both/and, and more/than approaches. We link these approaches to the cognitive frames of top managers, articulated along two dimensions: frame contents and frame structures. Our findings contribute to the digital transformation literature by laying out the underlying micro-cognitive processes of digital transformation. Moreover, we show how cognitive frames influence firm strategy in the context of digital transformation.

TIM: Identity, Structure and Strategy: A Longitudinal Study of Ericsson's Ongoing Digital Transformation  

Author: **Saeed Khanagha**, *Vrije U. Amsterdam*
Author: **Krsto Pandza**, *U. of Leeds*
Author: **Raghu Garud**, *Pennsylvania State U.*

Organizational identity is recognized as a critical factor shaping technological responses. For most part, organizational identity has been conceptualized as a homogeneous firm level construct. In this paper, we utilize internal strategy documents from Ericsson (2009-2021) supplemented with interviews and field observations to uncover how distinct unit-level identities lead to diverse organizational responses to digital technologies and the role that CEO's play in shaping and balancing these responses. We introduce a process model that illustrates how identity claims by the CEO, in conjunction with reorganization efforts, can elevate, dismantle, or remove unit-level identities, leading to a changing pattern of technological responses within the organization over time.

Geography of Innovation

Session Moderator: **Jose-luis Hervas-oliver**, *U. Politecnica de Valencia*

TIM: Revisiting the Geography of Discontinuities in Clusters or You Can Eat the Cake and Have it Too 

Author: **Jose-luis Hervas-oliver**, *U. Politecnica de Valencia*

Considering that discontinuities in clusters and industrial districts are only competence destroying and the local value system is usually dismantled constrain the perspective on the phenomenon and impede advancing it. Cross-fertilizing the geography of innovation and technology change literature, I argue that discontinuities can: i) impact and destroy only specific capabilities without changing the entire value system, ii) drive simultaneously both competence-destroying and competence-enhancing and, iii) stimulate different responses by local incumbents, i.e. heterogeneity. Inducting from a case study by using mixed methods, I point out new insights on geographically bounded networks, leading firms, and discontinuities. Results suggest that discontinuities can destroy local capabilities (competence-destroying) while preserving others in the value system (competence-enhancing). Socially thick networks as specialized complementary assets protect leading incumbents that show heterogeneously different responses, manipulate local networks, and drive them in different directions. Collating different constructs (the local value system, local leading incumbents' responses, and the value of networks) radical changes in clusters/IDs can be better re-elaborated and understood.

TIM: Why do High-Tech Firms Relocate out of Clusters? 

Author: **Jing Deng**, *McDonough School of Business Georgetown U.*

Author: **Janet E.L. Bercovitz**, *U. of Colorado, Boulder*

This study explores why high-tech firms relocate to and out of high-tech clusters using the restricted-use U.S. Census microdata. I posit that industry localization generates both positive externalities (including pooling of skilled labor, knowledge spillovers, and pooling of specialized suppliers and buyers) and negative externalities (including heightened competition for talent and higher factor costs); while firms that use higher quality human capital, are more innovative, or have greater market success can benefit more from the positive externalities and are thus more likely to relocate to clusters, firms that use moderately high quality human capital suffer disproportionately from the heightened competition for talent (a negative externality) and are thus more likely to relocate out of clusters. Analyzing a sample of high-tech firms in the U.S. during 2003-2014 using detailed U.S. Census microdata, I find evidence supporting these arguments. Additionally, contrary to popular belief, I find little evidence suggesting that firms' relocation out of clusters are likely driven by state-level tax differences or high factor costs in clusters.

TIM: Knowledge in Multi-Clustered Firms: Exploration, Internal Exploitation, and Integration     

Author: **Yifan Tian**, *U. commerciale Luigi Bocconi*

Author: **Stefano Breschi**, *Bocconi U.*

This study investigates the impact of geographical dispersion on explorative patents within firms, using data from public companies headquartered in the US from 1990 to 2015. Our results indicate a positive association between dispersion and the quantity of explorative patents. Although the average patent quality remains unaltered, the variance of quality increases. Also, dispersion positively affects the diffusion and exploitation of these patents. Unexpectedly, co-patenting connections exhibit a negative influence on knowledge diffusion. This research contributes to the understanding of knowledge exploration in geographically dispersed teams, emphasizing the internal circulation of knowledge and its role in enhancing innovation efficiency.

TIM: Regional Innovation Ecosystem in China: Concept, Structure and Evolution 

Author: **Jingwen Yi**, *School of Economics & Management, Tongji U.*

Author: **Yuchen Zhang**, *Yuchen zhang Tongji*

Author: **Kaicheng Liao**, *Institute of Economics, Tsinghua U.*

Since reform and opening up of China, its second-mover advantage has contributed to its economic development and helped it evolve unique regional innovation ecosystems. In this paper, we propose the concept of regional innovation ecosystems by integrating the operational characteristics of both natural and social ecosystems. Then, we discuss the internal structure and dynamic operation mechanism of the proposed method from the perspective of coupling theory. Additionally, we use the SpVAR model to empirically investigate the dynamic operation mechanism and spatial effects of the internal structure of China's regional innovation ecosystems from 2007 to 2019. The results indicate that an embedded coupling mechanism exists within China's regional innovation ecosystems and that the operation mechanism has strong spatial interaction effects.

Geographic Influences on Innovation

Session Moderator: **Yuan Zhou**, *Tsinghua U.***TIM: Well Begun is Half Done? First Job Imprinting Effect on Novelty Performance in Emerging Industries**  Author: **Yuan Zhou**, *Tsinghua U.*Author: **Zidi Wang**, *Tsinghua U.*Author: **Qiang Feng**, *UIBE*Author: **Fang Dong**, *Tsinghua U.*

This paper, drawing on job imprinting theory, investigates the relationship between policy entrepreneurs' initial job attributes and the performance of regional emerging industry development during official mobilization. We examine how this relationship is influenced by regional innovation levels and individual educational qualifications before and after an official's tenure. Our study utilizes a unique dataset from statistics on the mobility of principal officials at the prefecture-level city level in China (2000-2020). The analysis introduces an explanatory mechanism for the influence of official characteristics on regional innovation performance, considering endogenous factors: "officials' first work experience - officials' mobility - innovation policy choices - emerging industry development performance." Results demonstrate that an official's first job experience creates a lasting imprint affecting individual policy preferences and innovation sensitivity, influencing decision-making in future roles. Specifically, officials with a research-oriented first job exhibit a distinctive job imprint, making them more attentive to cutting-edge innovative technologies and knowledge, impacting the novelty performance of the region's emerging industries. Furthermore, this research-based job imprint is more favorable when the city's innovation level is higher both before and after the official's transfer, particularly when the official holds a postgraduate degree or higher.

TIM: Culture Matters with Bad News! A Large-Scale Study of Media Coverage after Startup Failure  Author: **Oliver Mork**, *Hamburg U. of Technology*Author: **Christoph Ihl**, *Hamburg U. of Technology*

Given that mass media can confer organizational legitimacy and act as an information intermediary between startups and relevant stakeholders, we examine the process of establishing legitimacy and the response to failure across different cultural settings. Employing state-of-the-art natural language processing models, we extract sentiments from a sample of 2,041,607 sentences covering 67,306 startups from the United States, the United Kingdom, and Germany. Utilizing robust econometric methods, we reveal pronounced cultural differences in the character of media coverage for both operating and closed startups. Specifically, German media tends to portray domestic startups less positively, while the United States exhibits the most positive coverage, with the United Kingdom falling in between. Notably, our findings include a positive in-group bias solely for operating startups in the United States, while Germany displays a negative in-group bias for both operating and closed startups. Our study underscores the role of national culture, the importance of comparative entrepreneurship research, and the heterogeneous nature of entrepreneurial phenomena among different cultures.

TIM: Exploring the Mechanism of Firms Innovation Responses to Technology-Forcing Policy Changes  Author: **Qi He**, *Central South U.*Author: **Chang Wang**, *Central South U.*

Technology-forcing policy is a crucial tool for emerging countries to achieve technological catch-up, and the effectiveness of this policy relies on the innovation response of firms. This study combines the attention-based view and capability theory to develop a mechanism model that examines why firms respond differently to technology-forcing policy changes (TFPC) in China's lithium-ion battery industry. The results highlight the significance of top management team's attention to TFPC in influencing the choice between on-trajectory innovation and off-trajectory innovation. Furthermore, our findings reveal the moderating effect of technical capability and relational capability. Technical capability facilitates attention to innovation action by providing a knowledge foundation and enhancing knowledge learning efficiency. Relational capability strengthens the relationship between attention to TFPC incentives and on-trajectory innovation but weakens the relationship between attention to TFPC pressure and on-trajectory innovation. Overall, this research provides valuable insights into understanding the heterogeneous response of firms to policy changes.

TIM: The Influences of High-Tech FDIs on Chinese Domestic Innovation Author: **Sophie Ying Wang**, *U. of International Business and Economics*Author: **Zhenning Yang**, *U. of International Business and Economics*Author: **Jiahui Guo**, *U. of International Business and Economics*

Though it is widely believed that inward FDIs are great opportunities for emerging countries to acquire advanced technologies from abroad, the FDIs that these countries receive are more often labor-intensive and not so technological. Conceivably, the overall influences of FDIs on emerging countries' domestic innovation that existing studies have revealed are largely attributable to non-high-tech FDIs, whereas the unique influences of high-tech FDIs—FDIs equipped with advanced production lines to produce high-value products—remain unspecified. Compared with non-high-tech FDIs, high-tech FDIs are superior sources of knowledge spillover but also greater threats to local market competition. Drawing from spillover theories along with competition-innovation theories, we investigate the spillover effect, Schumpeterian effect, and escape-competition effect of high-tech FDIs on emerging country domestic innovation, respectively. Empirically, we build concordance between firm products (HS codes) and patents (search queries) to map high-tech FDIs and domestic firms' patents both to the level of product markets and analyze their relationships in China from 2003 to 2014. We find strong, positive overall influences of high-tech FDIs on the quantity and quality of Chinese domestic innovation. The influences of total FDIs are mixed and less robust. The mechanism analyses justify the presence of all three effects.

Open Innovation and Innovation Success

Session Moderator: **Xu Li**, *London School of Economics and Political Science*

TIM: **The Hidden Cost of R&D Alliances**

Author: **Xu Li**, *London School of Economics and Political Science*
Author: **Stefan Wagner**, *ESMT Berlin*

How does firms' participation in R&D alliances impact their subsequent innovation performance? Studying this question, most prior research argues for a positive effect while explicitly or implicitly assuming that the predominant motive for firms to enter R&D alliances is knowledge acquisition. Contrary to this view, we point out that in many instances, firms may form R&D alliances for the purpose of knowledge accession, which allows them to leverage knowledge complementarities with partners and realize synergistic efficiencies in R&D without the intention to integrate knowledge. The reliance on alliances aimed at knowledge accession and the associated reduced learning during R&D (compared to solo R&D) hinders firms' ability to innovate post-alliances in comparison to conducting R&D independently. Tracing over a decade of drug development histories of all firms in the Chinese pharmaceutical industry in the 1990s, we provide robust empirical support for our hypotheses.

TIM: **Impact of Open Innovation on Startup Success in Developing Countries**

Author: **Muhammad Usman**, *Bahria U., Islamabad Pakistan*
Author: **Nadine Roijackers**, *Professor of Open Innovation, Open U. of the Netherlands*
Author: **Wim Vanhaverbeke**, *U. of Antwerp*

This paper investigates the impact of open innovation (OI) in startups and explores how OI processes and frameworks can be better understood when applied in developing countries. Specifically, we analyze how Vietnamese startups organize and manage OI practices, and how OI can help them overcome their unique business challenges. Our study is exploratory and based on four in-depth case studies. We collected primary data through detailed interviews, which illustrate how OI practices implemented by Vietnamese startups are improving their innovation performance. We also examined the factors contributing to the success of strategic collaborations between startups and their partners, highlighting the crucial role of entrepreneurs in managing OI activities. Our findings indicate that startups in Vietnam show a preference for inbound OI, and we discuss the reasons for this preference and its mechanisms. Using a cross-case analysis methodology, we identify commonalities and differences across the cases to strengthen our findings. The analysis focuses on the OI practices, reasons, challenges, and benefits for these startups. Finally, we conclude with theoretical and practical implications.

TIM: **Structural Influence on Interorganizational Collaboration: Evidence from Biotechnology R&D Projects**

Author: **Chaewon Park**, *Yonsei U.*
Author: **Sung Joo Bae**, *Yonsei U.*

This study explores how structural decentralization and diversity influence innovation performance through external knowledge sourcing in biotechnology firms' collaborative projects. While previous research has emphasized centralized structures in R&D collaboration for their efficiency, we argue that decentralization, supplemented by external knowledge, significantly enhances innovation performance. Additionally, collaboration based on complementarity among diverse types of organizations—spanning from large firms to universities—produces greater benefits for firms than collaboration among homogeneous organizations. However, high-diversity structures may experience diminishing returns on performance amid excessive external knowledge. Drawing on empirical data from 12,562 biotechnology R&D projects, our results support our theoretical frameworks. These insights also highlight the need for firms to strategically select diverse partners and focus on depth rather than breadth in collaboration. For policy-makers, the encouragement of decentralized R&D structures and the promotion of diverse collaborations emerge as strategic imperatives that spur technological innovation.

TIM: **The Temporal Dynamics of External Knowledge Sourcing: The Influence on Innovation Performance**

Author: **Panagiotis N/A Ganotakis**, *U. of Liverpool*
Author: **Sofia Angelidou**, *Agricultural U. of Athens*
Author: **Matthew Matthew Yeung**, *Lee Shau Kee School of Business and Administration*
Author: **Palitha Konara**, *U. of Sussex Business School*
Author: **Charalampos Saridakis**, *Athens U. of Economics and Business*

Prior research on open innovation has taken a static view by focusing on stable patterns of external knowledge sourcing. Such a static view ignores the fact that a firm's portfolio of external knowledge sources evolves over time. Our study attempts to address this gap by clarifying how temporal variations in a firm's knowledge sourcing activities (i.e., changes in external search breadth and external search depth) affect its innovative performance (i.e., radical innovative performance). We conceptualize temporal variations as encompassing simple change events (i.e., single transformative events captured through increases and/or decreases in breadth and depth) and multiple change events (i.e., repeated changes captured through increases and/or decreases in breadth and depth); and then developing theoretical arguments that draw on the organization learning theory. We find that asymmetries emerge when comparing both simple and multiple change events in breadth and depth. Our findings contribute to the research on open innovation by providing insights into the temporal dynamics and evolution of knowledge sourcing activities.

Platform Governance

Session Moderator: **Christina Kyprianou**, *IE Business School*

TIM: A Cultural View of Platform Governance

Author: **Christina Kyprianou**, *IE Business School*
Author: **Chad Navis**, *Clemson U.*

The platform governance literature has implicitly recognized the role platform actor coordination and monitoring plays in shaping platform culture (i.e., the cultural values, norms and practices espoused by platform actors). But the lack of explicit scholarly attention to platform culture has left many unanswered questions about how, why, and when platform governance may foster different platform cultures. We begin to address these questions by first developing a conceptual governance framework based on two generalizable culture-shaping levers: the nature of incentives and rewards emphasized by platform owners (transactional vs. socioemotional), and the way in which platform owners make them available to platform actors (generalized vs. targeted). The interactions of these levers inform our theorizing of four distinct platform cultures: commercial autonomy, commercial discipline, communal affiliation, and communal kinship. We also identify key conditions that exist ab initio that either reduce, or increase risk in actors' value exchange, and ultimately motivate the diffusion of different cultural values, norms, and practices on platforms. Our work proposes a parsimonious model as a springboard for many theoretical and methodological extensions, which we also discuss. We conclude with our contributions to the research on platform governance and platform design.

TIM: Sounds Familiar? Unveiling the Impact of Transparency on Platform Innovation in the Music Industry

Author: **Alexander Staub**, *HEC Lausanne*
Author: **Alessio Delpero**, *WU Vienna*

This research explores the impact of increased transparency on product portfolio innovation in platform markets. By analyzing the music industry, we focus on how transparency enforced by information regimes influences platform owners' strategic product portfolio decisions. The study investigates Billboard's role in the music industry, analyzing how a policy change implemented in January 2002 affected the number, diversity, and variety of songs released by record labels. It reveals that, while the number of products and their average diversity remains consistent when increased transparency is imposed, there is a notable shift towards marketing incremental innovation at the expense of radically new products. This finding highlights the complex interplay between market transparency, strategic decision-making, and innovation dynamics in platform-based industries. Specifically, we emphasize how, due to this complex interplay, information asymmetry remedying initiatives such as increasing market transparency may have negative impacts on the commercialization of radical innovations. In conclusion, this study underscores the necessity for nuanced and careful policy implementation in multi-sided markets, advocating for a balanced approach that considers the intricate interplay between transparency, innovation, and market dynamics to avoid unintended consequences on the evolution of product portfolios.

TIM: The Overt and Covert Governance of Platform Ecosystems

Author: **Yang Liu**, *U. of Southampton*

Platform governance is critical for platform ecosystems. In this conceptual paper, I distinguish overt and covert governance of digital platforms which often co-exist, and explore how platforms can manage the relationship between the two. I develop a process model showing that platforms can reveal the rules they use for governance, but at a certain point a bottleneck can be created, preventing the revealing of the rules. Platforms can then adopt three approaches, the decoupling approach, the coupling approach, and the hybrid approach. I analyze how the three approaches can unfold and how platforms can choose among or switch between these approaches. This paper contributes to the platform governance literature by studying covert governance that has not received much attention despite its importance. It shows how platforms, while often adopting overt and covert governance simultaneously, can manage the two differently.

TIM: The Evolution of Government-Business Collaboration and Telecommunication Standards Development

Author: **Sanbao Zhang**, *School of Economics and Management of Wuhan U.*
Author: **Chen Chen**, *Wuhan U.*
Author: **Zhixue Zhang**, *Peking U.*

China's telecommunication standards evolve from a follower in 3G, a fellow in 4G, to a co-leader in 5G. In order to reveal why and how China can, most studies just focus on a solo participant at one or two generations of telecommunication standards, which lacks of panoramic grasp of the real process. Instead, taking the perspective of a life cycle model of the standard, this paper focuses on the dynamic role of government-business relationship including multi-participants such as government, industrial alliance and enterprise across three generations' standards, and provide detailed suggestions for late-developing countries developing standards. We get finding as follow: (a) China's government-business relationship evolves from "government-led in 3G", "co-led by both government and business in 4G", to "business-led in 5G". (b) The best practice for emerging economy developing technology standards is that "enterprise dominates the technological innovation, government leads institutional innovation, and industry alliance orients organizational innovation". (c) It is key for late-developing countries building and maintaining ideal government-business relationships by playing the expected role of each participant at each life cycle stage in developing standards.

Studying the Designers Behind Technologies of Coordination and Control

Panelist: **Georg Rilinger**, *MIT Sloan School of Management*
Panelist: **Greetje Frankje Corporaal**, *Rotterdam School of Management*
Panelist: **Arvind Karunakaran**, *Stanford U.*
Panelist: **Ingrid Erickson**, *Syracuse U. School of Information*
Moderator: **Gerald F. Davis**, *U. of Michigan*
Panelist: **Pinar Ozcan**, *Oxford U., Saïd Business School*

The panel brings together scholars of technology, innovation, and organization to discuss the emergent research agenda on the design processes behind technologies of coordination and control, such as digital platforms, big data analytics, and AI. Following recent calls by Bailey, Barley, Orlikowski, and others, five panelists will discuss why a focus on agendas, ideologies, and power-relations of designers as well as the organizational structure of design processes is critical to understand the impact of these technologies on organizations, markets, and work more generally. Drawing on empirical case studies of technology design, the panelists will discuss on how to think about the interplay between design and use of coordination and control technologies, how to solve data and access problems, and what are the salient theoretical issues for research on technology, work, and organizations.

Discussant: **Hyejin Youn**, *Northwestern Kellogg School of Management*
Discussant: **Julien Jourdan**, *HEC Paris*

Organizations crucially rely on knowledge and innovation. It represents the commercial potential of firms' research and development (R&D) activities (Katila and Shane 2005) and is thus a source of competitive advantage and profits (Utterback 1994). Further, scientific methods can be applied to processes of creative search within organizations to create new business opportunities (Li et al. 2013; Rosenberg and Nelson 1994). Innovative products may open new markets and drive long-run economic growth (Hasan and Tucci 2010), and novel research may open new paradigms and fields and lead to scientific breakthroughs (Kuhn 1962). Breakthrough inventions create "Schumpeterian rents" (Schumpeter 1939), on which the entry, growth and survival of firms hinge. Yet, innovation is invariably unpredictable (Katila and Chen 2008). Novel products, processes and theories are developed through an inherently complex and ambiguous process. The path to an innovation is a tortuous one, ripe with dead-ends and pitfalls, and the scientific, technical, and commercial promise of an innovation is rarely understood in advance. At the heart of these search paths lies a tension: knowledge is built cumulatively (Merton 1973) and the search for innovation inherently relies on this wealth, yet innovative knowledge breaks with prior work (Hargadon and Sutton 1997; Uzzi et al. 2013a). What is the cartography of those search paths? Does divergence from mainstream knowledge implies low reliance on prior work? How can external audiences evaluating innovation influence these search paths, at times in biased ways? How can innovators find breakthroughs in well-defined but understudied technological spaces? These questions are important to craft strategy processes for managers and resources allocation for policymakers. To answer them, we turn to science (and scientists) as one of the prime search spaces for innovation and breakthroughs. This presenter symposium will assemble four papers on search, innovation, and breakthroughs to further our understanding of these topics.

Participant: **Marcin Kacperczyk**, *Imperial College London*

Innovation has been a significant and widely studied topic in strategy and management research for decades, yet certain crucial phenomena and related theoretical questions remain unexamined, creating opportunities to explore new frontiers in innovation studies. This symposium brings together a unique set of papers that explore new perspectives on understanding various aspects of innovation, providing implications for both future research and practice. Specifically, the first paper differentiates between research and development to discern the distinct impacts of organizational structure on R&D: centralization of development is related to reduced duplication of development effort; however, the likelihood that a given invention being commercialized is lower in centralized development compared to decentralized development. The second paper proposes managerial prosocial preferences, specifically the inclination to avoid harming employees, as a negative antecedent to firm investment in automation and AI innovation. The third paper studies the fast-growing call for firms' environmental innovations and delves into a paradox concerning the effect of institutional pressures—normative institutional pressures incentivize firms to innovate, but they also motivate them to shift focus toward short-term “brown” innovations, rather than long-term “green” innovations. The last study moves beyond the conventional binary choice between trade secret and patent protection, investigating vagueness as a novel patenting strategy in response to the desire to withhold technological information. As a set, these papers offer fresh insights into understanding the creation, adoption, commercialization, and protection of innovation, shedding new light on expanding the frontier of innovation research.

Work-Nonwork Issues in Career Development

Session Moderator: **Thomas Ptashnik**, *Providence College*

CAR: **Linking Family Supportive Supervisor Behaviors to Supervisor Work and Family Performance**

Author: **Yuhui Jiang**, *Xi'an Jiaotong U. School of Management*
Author: **Yan Pan**, *Xi'an Jiaotong U. School of Management*
Author: **Yufan Shang**, *Xi'an Jiaotong U.*

Although there has been a considerable body of research on the benefits of family-supportive supervisor behaviors (FSSB), this research has primarily focused on recipients of such actions. Yet scholars know little about how it affects the actors themselves. Drawing on self-determination theory and spillover theory, we develop a framework to illustrate how FSSB benefits for actor's job performance and family role performance. We propose that supervisor's perspective-taking helps to realize the benefits of FSSB by enhancing the within-individual effect of FSSB on perceived prosocial impact. We adopt a weekly experience sampling method to evaluate our framework. Our findings show the benefits of engaging FSSB for supervisors. Specifically, FSSB results in perceived prosocial impact, which then works through organization-based self-esteem to increase supervisor's job performance; and through work-family enrichment to increase supervisor's family role performance. In addition, the supervisor's perspective-taking strengthens the positive relationship between FSSB and supervisor's perceived prosocial impact. Our findings contribute to the FSSB literature by illuminating its effect on the actors themselves.

Author: **Tammy D. Allen**, *U. of South Florida*

Working parents represent a significant portion of the labor force. However, invalid assumptions regarding how parental role engagement affects working parents, and in particular, working mothers, has led to stigma and workplace discrimination against them. In order to eradicate such stigma and combat discrimination, we draw upon self-construal theory to theorize that, compared with non-parents, working parents are more likely to view their work as a means to communicate their professional ethics and principles to their family and serve as role models, which we termed "the symbolic meaning of work." We further posited that sex interacted with parental status to affect employees' perceived symbolic meaning of work, with the positive association between parental status and perceived symbolic meaning of work being stronger for females than males. Third, we argued that the symbolic meaning of work is positively related to employees' demonstration of exemplary behaviors at work, such as increased work effort and ethical voice behavior. Lastly, we proposed that the indirect effects of parental status on work effort and ethical voice behavior via the symbolic meaning of work are stronger for females than males. We tested our hypotheses using a sample of 283 Chinese employees and found support for each of the hypotheses. The theoretical and practical implications of our study, as well as limitations and future research directions, are discussed below.

CAR: **Homefront Fuel for Career Growth: The Role of Career Crafting and Work-Life Balance**

Author: **Lei Gao**, *School of Government, Beijing Normal U.*
Author: **Rui Xiong**, *Faculty of Education, Beijing Normal U.*
Author: **Xiaokun Liu**, *School of Government, Beijing Normal U.*

Purpose – Family plays a vital role in shaping and influencing an individual's career. Although some studies focus on the negative aspects of the family-career domain, how to explore the potential positive relationship between employees' family motivation and career growth deserves attention. In our study, drawing upon the wise proactivity perspective, we focus on making hypotheses about how family motivation influences career crafting and thus affects career growth. As a contextual factor, work-family balance plays a moderating role between family motivation and career crafting. Design/methodology/approach – To test this moderated mediation model, we conducted a set of in-depth interviews and time-lagged design. In the pre-test, we used a semi-structured method to interview a sample with work experience (N=21). In the formal study, we used a three-wave online survey and collect data from 244 employee in China. We test the proposed hypotheses by SPSS 26.0 and Mplus 8.3. Findings – Preliminary interview data demonstrated that family motivation is one of the reasons for self-initiative adjustment and change in the career path, and will affect subsequent career growth. In the formal study, the results show that individual family motivation positively affects career growth through the mediating role of career crafting. The effects of this pathway are amplified with high levels of work-family balance. Originality/value – Our study clarifies the mediating mechanism from family motivation to career growth from the wise proactivity perspective and expand the literature on career crafting. We extend the wise proactivity perspective into the family and career domain, which enriches the research on the antecedents of career growth. Moreover, we use the work-family perspective to supplement the person-context fit.

CAR: **Unpacking Military Spouse Identities and Careers: A Qualitative Study**

Author: **Jenna-Lyn Rounsaville Roman**, *Kennesaw State U.*
Author: **Elizabeth Minei**, *Baruch College*

This study explores the experiences of military spouses who are pursuing career paths alongside the active duty military career of their husband or wife. Forty-eight semi-structured interviews focusing on career experiences were conducted with civilian spouses of active duty United States service members who at the time of the interviews were living in geographically dispersed locations throughout the U.S., Europe, and Asia. Our research question was: 'What are the identity work challenges and opportunities that impact career trajectories for active duty military spouses?' A modified version of constant comparison was used to analyze the data. Our study identifies two types of themes that have employment and career success implications for the civilian counterpart of a military, dual-earner couple. Negative themes emerged in the form of career barriers (i.e., relocation, need for flexibility, laws and policies, vocational stigma) and a positive theme (i.e., military affiliation opportunity) also emerged. This study offers qualitative insight on the experiences of military spouses pursuing careers and has important implications for service member retention. Practical implications for practice and future research directions are explored.

New Insights About Career Adaptability and Proactivity

Session Moderator: **Muhammad Imran Rasheed**, *Surrey International Institute, U. of Surrey, Guildford UK*

CAR: Within-Person Career Adaptability and Employee Outcomes: Role of Perceived Career Opportunities

Author: **Muhammad Imran Rasheed**, *Surrey International Institute, U. of Surrey, Guildford UK*

Author: **Meng Xi**, *Nanjing U.*

Previous research on career adaptability is equivocal whether it is an inherent trait or is a flexible competency skill. Drawing on the career construction theory, we explore this question investigating within-person variations in career adaptability and its impact on employee daily work outcomes, such as turnover intention and job performance. Utilizing the data collected from 179 respondents (53 supervisors and their 126 subordinates) across seven days, we found that the daily orientation to happiness mediates the relationship between daily career adaptability and daily job performance. Further, there is a negative association between daily career adaptability and daily turnover intention. Moreover, the perceived career opportunities (PCO) moderate these relationships, such that the mediated relationships are weak for lower levels of PCO. Theoretical and managerial implications are discussed.

CAR: Proactive Personality and Mental Wellbeing Among the Working Population: Testing Time-Lagged Model

Author: **I. M. Jawahar**, *U. of New Mexico*

Author: **Mahsa Abedini**, *Alma Mater Studiorum U. di Bologna*

An increasingly large segment of the working population is experiencing mental health issues, negatively affecting employees' quality of life and employers' bottom line. Consequently, ensuring wellbeing in the workplace has become a high priority for many organizations. In this study, drawing on basic psychological needs theory, we proposed that proactive personality will be related to mental wellbeing through satisfaction of basic psychological needs. In addition, drawing on the trait-by-trait interactions perspective, we expected this mediated relationship to be moderated by conscientiousness. We tested our research model using data collected from 185 employees using a three-wave time-lagged design. As hypothesized, proactive personality related to mental wellbeing indirectly, via psychological need satisfaction, and this indirect relationship was stronger at higher levels of conscientiousness. We discuss theoretical implications and offer practical suggestions based on study results.

CAR: Double-Edged Indirect Relationships Between Career Adaptability and Career Satisfaction

Author: **Zijun Cai**, *Beijing Normal U.*

Author: **Wei Si**, *School of Business Administration, Zhejiang Gongshang U.*

Author: **Yutong SUN**, *Department of Management & Marketing, Faculty of Business, Hong Kong Polytechnic*

Author: **Qiong Wang**, *Renmin U. of China*

While career adaptability has been regarded as one critical contributing factor for career satisfaction, existing studies got mixed findings about their relationship. As a result, scholars urged a more nuanced view by taking both positive and negative effects into consideration. Building on career construction theory, we proposed that career adaptability would be positively related to career satisfaction via proactive career behavior and person-job fit perceptions in sequence, and at the same time negatively related to career satisfaction via psychological entitlement and person-job fit perceptions in sequence. We examined our hypotheses using a sample of 291 employees collected with a three-wave research design. Results showed that the hypothesized parallel sequential mediation model held for needs-supplies fit, but not demands-abilities fit. The research provides a novel perspective about why career adaptability might not benefit career satisfaction, reveals that different kinds of fit may not play the same roles in career construction, and deepens our understanding of the influence of psychological entitlement in career development.

CAR: How to Reduce Learned Helplessness: Unraveling the Predictive Role of Career Crafting

Author: **Lei Gao**, *School of Government, Beijing Normal U.*

A mobile and boundaryless career generates learned helplessness especially when employees faced with frequent failures in their career. However, the notion of career crafting proposed by recent scholars provides a way to alleviate this negative state. Based on conservation of resources theory, we aim to explore when and how career crafting reduces learned helplessness. We conducted a two-wave study and collected data from 306 employees in China. The results indicate that career crafting is negatively related to learned helplessness. In addition, resilience plays a mediating role in this process. As a boundary condition, gender moderates the impact of career crafting on resilience, and female respondents are more able to improve their resilience through career crafting. We expanded the literature on career crafting and resilience to interact with the career literature based on conservation of resources theory. Our study thus highlights the importance of career crafting and its implications for reducing learned helplessness, especially for women.

Participant: **Brian Uzzi**, *Northwestern U.*

Gender differences in career trajectories and representation in top-tier positions persist today, despite broader progress toward achieving equality in society. A robust body of evidence points to a combination of supply-side (i.e., differences in preferences) and demand-side (i.e., biases and unfair barriers) processes perpetuating gender gaps in career advancement. To develop a comprehensive understanding of these processes, it is crucial to take a multi-level perspective and consider the interplay between men and women and their firms, networks, and occupational contexts. This symposium contributes to this growing area of work by bringing together quantitative and qualitative work that builds and tests theory for how gendered organizational, occupational, and network contexts impact various aspects of men's and women's performance, experiences, and choices in the workplace.

Resolving Conflict via Conversations: How Beliefs, Motives, and Expressions Shape Conflict Dynamics

Presenter: **Michael Yeomans**, *Imperial College Business School*
 Presenter: **Eva Yiyu Chen**, *U. of Chicago Booth School of business*
 Presenter: **F Katelynn Boland**, *Columbia Business School*
 Presenter: **Sophia Li**, *Haas School of Business, UC Berkeley*

 Organizer: **Shereen J. Chaudhry**, *U. of Chicago Booth School of business*
 Organizer: **Eva Yiyu Chen**, *U. of Chicago Booth School of business*

To truly bring a conflict to an end, it is important for disputants to reconcile through conversations, yet navigating the discussion of conflict is not a trivial pursuit. This symposium brings together four presentations exploring how beliefs, motives, and the way people communicate about conflicts impact conflict resolution. In the first presentation, Yeomans and colleagues offer an important advance in methods for detecting linguistic features of conflict expression. Using real conflict conversations, they show the precision of their coding manual and Natural Language Processing model in forecasting conflict dynamics and provide empirical support for conflict expression theory. In the second presentation, Chen and Chaudhry examine a novel psychological motive in conflict conversations: establishing a shared reality over relative blame. They demonstrate that whether disputants agree with the counterpart's relative blame perception impacts how disputants respond after being blamed (i.e., apologizing or blaming). In the third presentation, Li, Batista, and Schroeder investigate how different perceptions of responsibility division arise in miscommunication. They test whether people hold speakers as more responsible than listeners, and whether people consider their counterparts to be more responsible than themselves. In the final presentation, Boland and Davidai explore how specific beliefs can lead people to avoid potentially conflictual conversations and find that people who hold zero-sum beliefs about politics are more likely to avoid political conversations. Taken together, this symposium highlights how conflict dynamics are affected by what people believe, what they want, and what they say in conversations, providing insights into actionable recommendations for conflict resolution.

Resistance, Restoration and Belonging

Session Moderator: **Amon Barros**, *FGVEAESP Sao Paulo School of Business Administration*

CMS: Resistance by Analogy: How Dramaturgs Resist McCarthyism with Distancing Analogy

Author: **Xiaoran MA**, *U. of Melbourne*

Author: **Vanessa Pouthier**, *U. of Melbourne*

Author: **Franz Wohlgezogen**, *Faculty of Business and Economics, U. of Melbourne*

To deepen the understanding of institutional work of resistance calls for expanding the cases of human oppression. Our study focuses on institutional actors' work in resisting state-organized hegemonic totalism (Tourish & Willmott, 2022) – whereby the state dictates people into ideological conformity through violence and intimidation of violence of defining, detecting, and purging those who dare to be different – that few studies have attended to. Sensitized by the concept of analogy whose potential to disrupt institutionalization and resist oppression has been rarely discussed, we aim to answer the question: How do actors mobilize analogy to perform institutional work of resisting state's hegemonic totalism? We empirically examine a group of theatre/film writers' work countering McCarthyism through writing scripts for stage/screen. Our findings show five themes, namely fear genesis, fear effects, inquisition, execution, and resistance, whereby artists drew analogies between dramaturgical events and McCarthyite realities, thereby mirroring onstage/screen the atrocities and the absurdities that audiences were living offstage/screen and activating audiences' awareness and comprehension of the political actualities they were witnessing and enduring. Our contributions are trifold. First, we expand analogy literature dominated by cognitive explanations treating it as only a naturalizing tool for institutionalization by unpacking analogy's affect-mediated self-distancing effects on disrupting institutionalization process and resisting hegemonic totalism. Second, echoing Martí & Fernández's (2013) account of writing as a powerful artistic work of resistance, we further illustrate the anti-oppressive potential of dramatization that dramaturgs relied on to awaken audiences from the hypnotizing state propaganda. Last, we highlight hegemonic totalism as a distinctive, subtle, yet consequential form of organizational violence persecuting ideological heresy while pursuing ideological purity, which deserves more attention from organizational scholarship. Keywords: institutional work, resistance/oppression, analogy, affect, denaturalizing/distancing, dramatization, theatre/film

CMS: From Rage to Repair: Affects and Solidarity Work in the Aftermath of the Beirut Explosion

Author: **Chaïma BENZEKRI**, *EMLYON Business School*

Most studies about disasters and crisis focus on immediate relief, theorizing post-disaster organizing mainly as the emergency response of physical reconstruction. Few is said about affective recovery which often inscribe itself in a longer timeline. In this study I investigate the long-term and affective recovery of devastated communities in the aftermath of the Beirut port explosion in 2020. I build on an ethnographic work run between February 2021 to September 2023 to explore post-disaster organizing efforts in Lebanon and unveil the role of affective solidarity in the journey of people affected by the blast. This study aims to understand how solidarity contributes to the redirection and processing of negative affects arising from the explosion and the overall political and economic situation, gradually fostering a transformative energy that facilitates the establishment of a new social arrangement based on solidarity and a return to affective rest.

CMS: Theorizing Effective Remedy: Exploring the Root Cause Dimensions

Author: **Alysha Kate Shivji**, *EGADE Business School, Tecnológico de Monterrey*

This conceptual paper theorizes remedy for business-related human rights abuses from a critical philosophical perspective. Focusing on non-state remedy, this paper recognizes its crucial role in the overall remedial system and the discrepancies in how scholars and practitioners approach the concept. This research reflects on the purpose of remedy in Business and Human Rights and argues that effective remedy aims to address the multiple root causes of abuses to prevent future occurrences rather than focusing on surface issues and singular cases. In order to develop a theoretical framework to conceptualize remedy that addresses multiple root causes, this research draws on Fraser's radical democratic conception of justice, participatory parity. According to the principle, the means to achieving justice involves social arrangements that enable all actors to engage with one another as peers. To conceptualize effective remedy as participatory parity, the paper examines three dimensions - cultural, economic, and political - where injustices or root causes must be addressed to realize participatory parity. Remedy in the proposed framework aims to address the multiple root causes of business-related human rights abuses and empower rightsholders to engage meaningfully in remedial processes. Through an illustrative case study of the Fair Food Program, the paper presents how this democratic three-dimensional framework for remedy can address root causes of human rights abuses while enabling meaningful participation within remedial systems.

Leaders, Leading and Being Led

Session Moderator: **Khang Hoàng Lê**, *MIT U. Vietnam*

CMS: Leadership in Neoliberal Organizations: Theory and Empirical Illustrations

Author: **Khang Hoàng Lê**, *MIT U. Vietnam*

Neoliberalism has established itself as intertwined with the overarching structure of capitalism, exerting its influence across multifaceted dimensions of our society. This study combines conceptual and empirical methodologies to critically examine the mechanisms through which leadership is enacted within organizations driven by neoliberal principles. Based on extant literature, we develop a theoretical framework comprising interconnected components: neoliberal organizations, neoliberal principles in organizations, leadership power, and leadership subjectivity. Furthermore, we employ interpretive phenomenology analysis to conduct empirical illustrations to offer tangible examples of how leadership in neoliberal organizations is operationalized and how instances of resistance are formed. This study, situated at the intersection of critical leadership and management studies, enhances our understanding of how neoliberal rationalities influence leadership practices within contemporary organizations.

CMS: Responsible Organizational Change & the Death Drive: A Freudian Analysis of a Leadership Dismissal

Author: **John Cullen**, *Maynooth U.*

Despite calls for businesses to adopt environmental, social and economically sustainable business models, little research exists on the challenges that leaders face when attempting to implement responsible organisational change. This paper aims to address this by exploring the case of Emmanuel Faber's removal as CEO in Danone in March 2021. Faber, a celebrated leader in the corporate sustainability movement, had successfully instigated high-level change in the governance structure of the organisation, but within one year, Danone's Board of Directors removed Faber from his role of CEO with a rapidity that surprised many within both the financial sector and corporate social responsibility movements. This article applies Freud's theory of 'drives' to understanding how re-orienting an established business model in a company which had a longstanding reputation for social responsibility, can lead to the unearthing of more 'primal' destructive capitalist influences which can de-stabilize responsible organizational change projects. The paper aims to open up psychoanalytically informed avenues of research on sustainable organisational leadership and create new learnings on how responsible leadership practices can lead to embedding social and environmental sustainability within business models.

CMS: Navigating the Tides of Time: A Critical Analysis of Temporality and Rhetorical History

Author: **Anna Beatriz Niteroi**, *FGV-EAESP: Fundação Getúlio Vargas's Sao Paulo School of Business Administration*

Analyzing discourse at Expert XP, a finance event in Brazil, this study illuminates the strategic use of temporality and rhetorical history, providing insights into how the past is used to craft meaning. Expert diverse participants offer a unique context for understanding the deliberate reinforcement of prevailing ideas. The research highlights the prevalence of a chronological perspective of time and the dominant use of the Aristotelian logos, showcasing how historical references are strategically employed to build persuasive narratives within organizational discourse. Overall, the study contributes practical insights into the nuanced interplay of temporality and history in shaping convincing communication.

CMS: Embodied Oppression or Fleshy Resistance: Saudi Female Leaders' Body as a Space for Resistance

Author: **Elham Moonesirust**, *U. of Aberdeen*

Author: **Tahani H. Alqahtani**, *Imam Mohammad Ibn Saud Islamic U. (IMSUI)*

Author: **Jing Cai**, *U. of Aberdeen*

This paper sets to provide an embodied theorisation of the resistance of female leaders in Higher Education in the Kingdom of Saudi Arabia (KSA) to the system of male dominion. Based on a multiple case study of female leaders in Saudi academia, our research makes three contributions. First, we analyse how bodies are socialised to be subjugated to the masculine norms that shape the entire socio-cultural structure of the society and the setting of academia in the KSA. Second, we examine different strategies through which women use their bodies to undermine regimes of gender inequality while simultaneously trying to safeguard their claim to virtue and piety. Finally, we argue that the analyses of resistance to the regime of masculine domination that is shaped within religious teachings necessitate taking into account the aspects of religiosity of the female body and its attempt to shape an ethical and virtuous subject.

Frontiers of Design Work: Physicality, Organizing, and the Individual

Session Moderator: **Sarah Lebovitz**, *U. of Virginia*

CTO: **Collaboration Technologies for Emergent Groups Engaged in Physical Work: A Theoretical Model**  

Author: **Ehsan Nouri**, *Simon Fraser U.*

Author: **Nilesh Saraf**, *Simon Fraser U.*

Author: **Terri Griffith**, *Simon Fraser U.*

Emergent groups form without any preexisting structure to address urgent goals in situations like disaster response. Prior research underscores technology's role in supporting online collaboration and facilitating knowledge exchange among group members, given the lack of structure and established task routines. Yet, physical work can constitute a central aspect of many of these groups' activities, which strains existing models of virtual collaboration. We draw inspiration from the literature on cyber-physical systems and organizational theory to unbox the challenge of physicality. First, we conceptualize cyber-physical collaboration capabilities as a novel construct distinct from the well-established digital capabilities deployed for online collaborative work. Then, we describe the relationship of digital and cyber-physical capabilities with a group mental model composed of transactive memory systems (TMS) augmented by a collective awareness of tasks and resources, which dynamically adapts to the environment. The resulting augmented transactive memory system (ATMS) enables self-organization in physical group work by facilitating synergy between the physical and cyber realms of group interaction. Finally, we consider how the physical interdependencies between task components moderate ATMS formation and group self-organization. Several theory-grounded propositions provide a rich future research program on cyber-physical collaboration.

CTO: **Where Digital Innovation Meets the Human Body: A Theory of Somatic IS Artefacts and Entanglements**  

Author: **Johanna Lorenz**, *U. of Hamburg*

Author: **Jan Recker**, *U. of Hamburg*

In gaming, wellness, healthcare and other industries, we are witnessing the rise of an "Internet of Bodies", catalyzed by the proliferation of what we call somatic IS artefacts: digital sensing devices (e.g., fitness trackers, human digital twins, or smart implants) that are connected to the human body, rely on bodily data as input, and serve bodily rather than cognitive-affective goals. Because of their immediate connection to the human body, the use of somatic IS artefacts generates new forms of entanglements between digital technologies and the human body that have profound functional, behavioural, ethical, and even bodily implications. We develop a framework that provides structure and vocabulary to theorize about types of somatic IS artefacts, the complexities of somatic IS entanglements, and their implications. Our typological theorizing is intended to inspire and guide future research on overlooked and potentially harmful aspects of the design, implementation, use, and impact of somatic IS artefacts.

CTO: **Modeling Cognitive Search with Generalized Additive Model**

Author: **Jia Lin Cheoh**, *Purdue U.*

Design is a multi-phased search process in which designers iterate their designs in form and functionality. During that process, they must choose when and how much they want to invest in the risky exploration of new design versions. This paper examines a theoretical hiccup in the literature on exploration: On one hand, studies in decision-making and search would argue that exploration happens early, followed by phases of the incremental (exploitative) search and then exploration again if it is a highly complex task. Design theory further argues that form follows function, suggesting that exploration happens first in functionality and then in form. In contrast, Gestalt theory emphasizes holism, where our mind tends to look at an object as a whole and can only understand what the individual parts (functionalities) mean when we look at them concerning the whole (form). We examine this hiccup by building a computational model of a designer's mutual search process across two mutually dependent design spaces: A functional one (source code functions) and a visual one (form). We design a field experiment in which 108 designers iterate their designs through 5 phases and use computer vision and computer graphics methods to measure exploration, which is the similarity between two consecutive stages. Using the Generalized Additive Model (GAM), we examine the trajectory of the mutual search across the functional and visual design space. We find that the search patterns differ in the degree of exploration: Designers tend to first engage in visual space exploration, followed by functional space exploration. This finding suggests that exploration in co-dependent spaces may happen later in another space, and there are more than two search spaces in digital artifacts. In addition, our research challenges the notion of form follows function by showing that function follows forms rather than form follows function. Our findings contribute to the design cognition literature by examining designers' perceptions of the visualization processes using computer graphics.

Challenges in Regulating Information Technology

Session Moderator: **Anuschka Schmitt**, *U. of St. Gallen, Institute of Information Management*

CTO: **Do Big Tech Responsibility Narratives Reflect Wilful Blindness or Path Dependence?**

Author: **Susanne Klausng**, *London School of Economics and Political Science*
Author: **Susan Scott**, *Imperial College Business School*
Author: **Saonee Sarker**, *Virginia Tech*

A key challenge for enacting digital responsibility is that it entails orchestrating, creating, and distributing duties and obligations among diverse and loosely connected stakeholders of different stature. One of the criticisms leveled at Big Tech is that they are adept at reframing their duties and obligations, either through wilful blindness or in ways that reinforce their platform status, reproducing path dependencies. In this study, we attempt to understand the above by using a processual approach, wherein we analyse a longitudinal qualitative dataset gathered from thirty-eight earnings conference calls. We focus our grounded analysis on a major Big Tech company, Meta, examining how respondents position the firm's responsibilities in relation to key developments, such as the launch of regulatory regimes, advances in privacy preserving technologies, and salient major events like litigation, elections and the pandemic. We consider whether Meta's framing and reframing of their narrative about privacy provides insight into digital responsibilities. We conclude by asking whether Meta is setting up a path dependency by embedding AI as a 'technical solution' to regulatory pressure or offering enterprising opportunities for data responsibility through path creation, in other words will this be privacy taking or privacy making?

CTO: **How to Enforce Platforms' Liability?**

Author: **Adam Feher**, *Trier U.*

New regulations are emerging to address the increase of illegal content on online platforms, highlighted by initiatives like the Digital Services Act. This paper presents a theoretical model examining how such regulations shift the economic incentives for social media platforms to moderate user-generated content. The model focuses on a strictly liable platform with heterogeneous users who may breach the rules set by a regulator. The larger the audience of the user, the higher the benefit she brings to the platform, but also the larger the societal harm if she violates the rules. The paper argues that oversimplified regulations may worsen the problem of cherry-picking, where platforms penalize only low type users and not high type ones for violations. To combat cherry-picking, one option for the regulator is to stop monitoring content that the platform has already removed, but this could lead to overmoderation. Another strategy involves the regulator enhancing its technology to monitor more content and adjusting fines based on the ex post observable size of the audience of users. Intriguingly, under this approach, the optimal fine might be reduced when more users commit violations.

CTO: **It's Not What You Say, It's How You Say It: Investigating GDPR Enforcement Variation in the EU**

Author: **John Patrick Lalor**, *U. of Notre Dame, Mendoza College of Business*
Author: **Sriram Somanchi**, *U. of Notre Dame*
Author: **Frederick Nwanganga**, *U. of Notre Dame, Mendoza College of Business*
Author: **John D'Arcy**, *U. of Delaware*
Author: **Corey Michael Angst**, *U. of Notre Dame*

The EU took a significant step in its decades-long effort to protect citizens' data privacy in May 2018 when it enacted the General Data Protection Regulation (GDPR). GDPR regulates how both EU and non-EU companies collect, process, and use EU citizens' personal information. Notably, GDPR enforcement is carried out by each member nation through their data protection agencies (DPAs). Accumulating evidence of GDPR fines and their explanations show high variation among EU countries, both in quantity and magnitude. While the impact of GDPR on data privacy is still emergent, there is a growing body of GDPR enforcement cases that can be investigated. In this integrative modeling research, we apply natural language processing (NLP) and machine learning techniques to explain and predict the amount of an imposed fine, based on several country-level characteristics. We calculate a divergence metric to examine how the detailed description of the fine (the fine narrative), as written by the country's DPA and then summarized (the fine summary) by a neutral third party, diverges from the GDPR legal articles it cites as a basis for enforcement. We further take a predictive modeling approach to identify key variables that may help explain variation in fine amounts. Our results indicate that the DPAs are taking an interpretive perspective concerning GDPR enforcement and not simply following the letter of the law. Collectively, our results demonstrate that the GDPR bloc-level legislation is not being applied consistently, and our predictions suggest this will continue, which is antithetical to its original intent.

CTO: **The Regulation of Generative AI: Lessons Learned from ChatGPT's Suspension in Italy**

Author: **Antonio Cordella**, *London School of Economics*
Author: **Francesco Gualdi**, *London School of Economics and Political Science*

Existing literature has predominantly concentrated on the legal and ethical aspects of government initiatives to regulate AI, often relegating the technological dimension to the periphery. However, the emergence and widespread use of generative AI models present new challenges for public regulators. Generative AI operates on distinctive technological properties which require a comprehensive understanding by regulators prior to the enactment of pertinent legislation. This paper focuses on the recent case of the Italian suspension of ChatGPT to illustrate the public regulators' failure in acknowledging the unique characteristics intrinsic to generative AI, culminating in a flawed regulatory endeavour. By drawing on the findings of an exploratory case study, this paper contributes to the theoretical understanding of AI regulation, highlighting the discordance between the dynamism and fluidity of generative AI and the rigidity of regulatory frameworks. The paper contends that until this tension is effectively addressed, public regulatory interventions are likely to underachieve their intended objectives.

The Transformation of Education: AI, Chatbots, and Blockchain

Session Moderator: **Franziska Kaiser**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

CTO: **Metaverse in Higher Education Institutions: Drivers and Effects**     

Author: **Nir Kshetri**, *U. of North Carolina, Greensboro*

Higher education institutions (HEIs) are becoming “metaversities” and taking their physical campuses into a virtual online world. This article provides a detailed analysis and description of higher education institutions’ adoption of key underlying metaverse technologies such as virtual meeting space, virtual reality, augmented reality, mixed reality and digital twins. We analyze multiple case studies of ten HEIs that have incorporated metaverse in their teaching, learning and extra-curricular activities. We have developed seven propositions, which describe some driving forces that potentially exert pressures on higher education institutions to adopt the metaverse and the effects of the metaverse on student engagement and academic performance.

CTO: **Threats or Opportunities? Enhancing Business Performance in the Era of Generative AI**    

Author: **Victor Lee**, *W. P. Carey School of Business, Arizona State U.*

Author: **Julian Lehmann**, *Arizona State U.*

Author: **Heewon Chae**, *Arizona State U.*

Author: **Donghyuk Shin**, *KAIST College of Business*

Author: **Seigyoung Auh**, *Thunderbird School of Global Management at ASU*

Author: **Sang-Pil Han**, *Arizona State U.*

Despite Generative AI’s emerging prominence in the business community, its nascent nature presents uncertainties that impede its broader adoption as a disruptive technology. This paper investigates two pertinent conundrums with theoretical and managerial implications. The first pertains to the potential tension surrounding the adoption of Generative AI: is it financially viable for organizations to adopt Generative AI? Organizations might be reluctant to invest without clear financial benefits. The second concerns the role of complementary assets in amplifying the financial benefits brought about by Generative AI. In response to these concerns, we conducted a randomized field experiment with a global online tutoring and learning platform. The study yielded three primary findings. First, we not only find a positive spillover effect of Generative AI on existing services, dampening the concern that Generative AI may supplant a firm’s existing services but also support the presence of complementary assets such as an idiosyncratic proprietary database amplifying the beneficial impact of Generative AI. Second, Generative AI increases advertising impression revenues, an effect that is further magnified when used in conjunction with the unique proprietary database. Third, our analysis shows that these effects are enduring, which implies that the proprietary database is an integral, socially complex, and causally ambiguous resource, instrumental in fostering a sustainable competitive edge. We conclude by affirming that our findings align with and contribute to the resource-based view of the firm and the dynamic capabilities perspective.

CTO: **The Price of Progress: Micro-Credentialing Systems Powered by Blockchain Technology**   

Author: **Lyubov Stafeyeva**, *MCI Management Center Innsbruck*

Author: **Yevgen Bogodistov**, *MCI Management Center Innsbruck*

Author: **Guido Perscheid**, *Otto-Friedrich U. Bamberg*

Micro-credentials, as records of brief learning experiences, foster lifelong education and mark a progressive learning strategy in higher education institutions (HEIs), reflecting the digital evolution in the educational sector. Their implementation, however, introduces challenges like standardisation and high costs, with blockchain technology posited as a viable solution to streamline credentialing processes. This study investigates the indirect costs of implementing blockchain-powered micro-credentials in HEIs. Through a discrete choice experiment (DCE) framed by Prospect theory, it uncovers that human resources, transaction fees, and payment adjustments are significant deterrents for HEIs considering blockchain adoption. The decision-making process in HEIs is influenced by a combination of various cost factors, and the framing of these costs significantly alters institutional willingness to bear them. The findings emphasise the complexity of decision-making in adopting blockchain technology, suggesting the need for a nuanced understanding of these costs to develop more effective implementation strategies. The study advocates for further research to explore the collective impact of these costs on HEI decision-making and promote broader adoption of blockchain in education.

CTO: **Not all AI Chatbots are Created Equal: The Case of a Soft Skills Coaching Bot in Education**  

Author: **Francesco Laviola**, *Sapienza U. of Rome*

Author: **Biagio Palese**, *Northern Illinois U.*

Author: **Sun Tae Kim**, *Lehigh U.*

Author: **Nicola Cucari**, *Sapienza U. of Rome*

Chatbots are becoming a daily companion of human life. With the recent advances in generative AI, it is easier than ever to design and develop chatbots. However, we argue that not all AI chatbots are created equal. Thus, in this, one of a kind, empirical study we investigate the factors that impact users’ intention to use three versions of a soft skill chatbot. We also offer a comparison of them to understand if the generative AI enabled chatbots lead to more intention to use than traditional AI chatbots. To address our research questions, we extended the Unified Theory of Acceptance and Use of Technology model, by incorporating Perceived Risk and Perceived Trust and by adding the generative AI-enabled chatbots as treatments in the model. Our findings reveal noteworthy disparities between the three versions of chatbot, offering both theoretical and practical contributions. Among the theoretical contributions we found that Effort Expectancy has negative impact on intention to use for generative AI chatbots, which is challenging extant literature. Moreover, we identified key mediators (e.g., Perceived Trust, Performance Expectancy and Effort Expectancy), shedding light on critical factors influencing users’ intention to engage with these technological tools. Among the practical contributions we offer actionable insights for educators and practitioners seeking to integrate AI chatbots into educational settings.

Human-AI Teamwork: Collaboration, Creativity, and Trust

Session Moderator: **Katherine Chudoba**, *Utah State U., Emerita*

CTO: **Collaborating with Generative Artificial Intelligence: Creative Problem-Solving in Groups**

Author: **Daniel Zaglmann**, *U. of Passau*Author: **Stefan Faltermaier**, *U. of Passau*Author: **Susanne Grabl**, *U. of Passau*Author: **Marina Fiedler**, *U. of Passau*

Generative Artificial Intelligence (GAI) is becoming more prevalent in creative group problem-solving. However, research on collaboration between GAI and humans in groups is limited. This qualitative diary study investigates human collaboration with GAI in creative group problem-solving. Our findings disclose two distinct forms of collaboration and breaking points where the groups transition between them. In an uncritical GAI collaboration form groups perceive the GAI as a reliable and trustworthy expert, while in a critical GAI collaboration form groups perceive GAI as a mere tool, an assistant, or a fallible group member. The transition between these forms of collaboration usually happens during specific phases in the creative group problem-solving process. Various factors can influence such transition, e.g., emotional reactions toward GAI, technical barriers, changes in trust toward GAI, or deviations from capability expectations. Our study contributes to the ongoing discussions on GAI in creative group problem-solving and Human-AI collaboration.

CTO: **Fostering Team Creativity via AI Support: The Interplay of AI Advancement and Work Methods Autonomy**

Author: **Jie Xiao**, *Renmin U. of China*Author: **Meng Zhang**, *Renmin U. of China*Author: **Qin He**, *Capital U. of Economics and Business*

Despite the growing interest in artificial intelligence (AI) within organizations, there is a lack of clarity regarding how and when teams can effectively leverage its benefits. Drawing on the task-technology fit theory and literature on human-AI collaboration, we propose that the interplay of AI advancement (a form of technology characteristics) and work methods autonomy (a form of task characteristics) can promote team creativity via team AI support. Specifically, teams with high work methods autonomy effectively leverage the attributes of AI advancement, thereby supporting teamwork and fostering creativity. Though a multi-source field study, our results support the task-technology fit perspective of AI in the team context. By doing so, we provide critical theoretical and practical insights into how to implement AI in the team context to achieve "AI-augmented" creativity.

CTO: **Teamwork in the Age of AI: Expert Opinions on AI Teammate Characteristics**

Author: **Anna-Sophie Ulfert**, *Eindhoven U. of Technology*Author: **Eleni Georganta**, *U. of Amsterdam*

This paper explores the integration of Artificial Intelligence (AI) as a teammate in human-AI teams (HAT) within organizational settings. It investigates the characteristics that make an AI an ideal team member and how these characteristics can enhance team functioning, according to AI experts. Building on individual and team characteristics of human teams, like personality, composition, and team roles, these concepts are extended to HATs. Utilizing a qualitative methodology, interviews with AI experts from various disciplines were conducted to gather diverse perspectives on the design of and interaction with AI in team settings. Preliminary findings indicate three key factors shaping an ideal AI teammate: AI agent features (e.g., medium of communication), AI agent capabilities (e.g., making suggestions), and team characteristics (e.g., trust). The study highlights the unique aspects of AI in teams, such as emotion perception and moral values, and suggests that AI teammate characteristics should be further explored in various contexts. This paper contributes to the understanding of AI integration in teams, emphasizing the need for tailored AI teammate characteristics to enhance team collaboration and effectiveness in organizational contexts.

CTO: **Sartre Meets Silicon: Trust and the Quest for Authenticity in Human-AI Teams**

Author: **Jakub Edward Cichor**, *TUM School of Management, Technical U. of Munich*Author: **Sylvia Hubner-Benz**, *Paderborn U.*Author: **Claudia Peus**, *Technical U. of Munich*

This paper introduces the Convergent Authenticity Model, a novel framework for understanding and enhancing Human-AI collaboration in organizational settings. Drawing from existentialist philosophies of Jean-Paul Sartre and Martin Heidegger, we explore the concept of authenticity as it applies to both humans and artificial intelligence (AI). The paper delves into how the authenticity in human team members, characterized by emotions and ethical judgment, synergizes with the operational authenticity of AI, defined by reliability and algorithmic precision. This constructive collaboration is crucial in addressing challenges posed by the Uncanny Valley and anthropocentric biases, which significantly impact perceptions and interactions in Human-AI teams. The model emphasizes the importance of balancing human emotional depth with AI's analytical capabilities, fostering a collaborative environment where both entities contribute uniquely to team dynamics. By integrating existential perspectives with practical organizational behavior, the Convergent Authenticity Model offers a framework for optimizing team effectiveness and navigating the ethical implications of AI integration in the workforce.

Participant: **Vindhya Singh**, *Max Planck Institute for Intelligent Systems*

Participant: **Stefano Di Lauro**, *U. Mercatorum*

While the literature on gig work is expanding rapidly, many are the issues that need to be answered in order to fully understand the lived experiences of gig workers and illuminate the dynamics of gig work. Despite it is widely recognized that gig workers constitute a heterogeneous workforce, for instance, seminal works have focused on finding similarities among gig workers across platforms, while the mechanisms behind different gig workers' behaviors and perceptions are still widely obscure. Moreover, most of the literature focuses on what gig workers do individually on platforms, but not – or only cursorily – on how these workers manage the interplay between their online and offline activities. Specifically, comprehending how the online dimensions of work blur or integrate with offline aspects of gig workers' lives – such as family condition or family needs, the presence of alternative, offline jobs, the cultural context of the community and country of origin – is of significant importance. This symposium addresses these issues by examining what happens behind and beyond platforms, and by presenting four papers looking at different gig workers' experiences and different forms of interplay between online and offline aspects of gig work.

Measuring Discrimination and Tokenism

Session Moderator: **Yuan-Yuan Chan**, *U. of Massachusetts, Boston*

DEI: **Work Social Support from Private Domain: Scale Development and Validation**

Author: **Farzana Ashraf**, *Macquarie Business School, Macquarie U.*
Author: **Denise Mary Jepsen**, *Macquarie Business School, Macquarie U.*
Author: **Raymond Trau**, *Macquarie U.*

Work social support (WSS) impacts women's careers both in Western and non-Western contexts. In patriarchal societies, women's careers are more susceptible to the influence of WSS when compared to those in Western societies. Women in patriarchal societies are expected to perform multiple domestic roles as daughters, daughters-in-law, wives and mothers, necessitating support from their families and workplaces to effectively navigate these roles. In this research, we review 21 social support measures and identify the absence of a measure that entirely focuses on and accurately captures the work-related support that women receive from their non-work or private domain. To fill this gap in the social support literature, we propose a new WSS measure that is contextually separate from the available social support measures. Following established scale development guidelines, this new WSS measure has been developed and validated with three studies involving three independent sample groups from the patriarchal context of Bangladesh. In addition, we provide evidence of the psychometric properties of the newly developed measure across multiple studies. This new WSS measure is specific to women's private domain and considers the societal aspects of a patriarchal context. Thus, the measure can be used to investigate the impact of WSS from private domain on women's careers in a patriarchal context, beyond the Western contexts that have been historically explored in the literature.

DEI: **Development and Validation of a Measurement Scale for the Queen Bee Syndrome**

Author: **Yuan-Yuan Chan**, *U. of Massachusetts, Boston*
Author: **Jin Feng Uen**, *National Yang Ming Chiao Tung U.*

This study developed the Woman Subordinates Perceived Woman Supervisors' Queen Bee Syndrome Scale (SPQBS) to measure woman supervisors' queen bee syndrome (QBS). First, we used an inductive procedure to generate the primary items through in-depth interviews with woman subordinates who work with woman supervisors. Second, we conducted a survey to identify possible dimensions of QBS through EFA (N=205). Finally, we conducted a two-wave survey to validate the measure using CFA (N=309) and criterion-related validity (N=204). We concluded that the scale includes five dimensions: alienated relationship, constrained communication, constrained reliance, ineffective mentoring, and constrained development. Each dimension includes three items; thus, the construct comprises 15 items in total. To date, the mainstream quantitative studies on QBS have used indirect measures, such as woman supervisor's masculine self-description and career commitment, labeling women with these features as queen bees without a solid theoretical or phenomenal foundation. The development of the SPQBS provides a new way to measure QBS more directly than previous studies by examining woman subordinates' perspectives. Thus, this measure has the potential to enrich research on leadership and diversity, equity, and inclusion. Keywords: queen bee syndrome; women leadership; scale development; SPQBS

DEI: **Measuring Tokenism: Development and Evaluation of a Token Consciousness Scale**

Author: **Jason R. Lambert**, *Texas Woman's U.*
Author: **Gabrielle Smith**, *Texas Woman's U.*
Author: **Paul Yeatts**, *Texas Woman's U.*
Author: **Adam Kuentzel**, *Texas Woman's U.*
Author: **Micah Gillman**, *Texas Woman's U.*

Although token responses have been studied greatly, there is a lack of a valid and reliable instrument that measures how token employees perceive and cope with the effects of being a token. The current study addresses a research gap by developing and validating a scale for token consciousness, conceptualized as the dispositional mindset used to navigate a token environment and mitigate its negative outcomes. Exploring the nomological network of related constructs, and using a multi-step, multi-stage methodology, the token consciousness scale (TCS) was verified using two different samples of women. The analyses resulted in a nine-item original scale with strong psychometric properties, confirmatory factor analyses supported the a priori structure, evidence for the validity of the TCS was found, and the scale exhibited good model fit. The development of the TCS has important implications for the field, as it may contribute to future research for comprehending token experiences in the workplace by serving as a validated instrument to assess the awareness and perspective of token employees.

DEI: **What Does It Take to Confront Discrimination at Work? A Scale-Development Study**

Author: **Joy Bredehorst**, *U. of Cologne*
Author: **Christian Hänsele**, *U. of Cologne*

Discrimination in the workplace is a widespread issue with far-reaching consequences for employees and organizations. An important strategy for addressing current and preventing future discrimination is confronting (i.e., the verbal challenge directed at the person or persons who commit a blatant or subtle act of discrimination), either by targets themselves or observers. Despite well-meaning intentions, confrontation of discrimination is rare, especially in the workplace. We argue that one barrier to confronting in the workplace is that the requirements for confrontation of discrimination are not yet well understood, partly because we lack a psychometrically sound and comprehensive scale to capture and differentiate the requirements. In a series of five studies (Ntotal = 1,112) across different cultural contexts and populations, we overcome the gaps of existing research in three ways. First, we suggest a comprehensive model of Requirements to Confront Discrimination (RCD) at the workplace encompassing four critical dimensions (i.e., Identifying Discrimination, Personal Necessity to Confront, Confrontation Skills, Confrontation Evaluation). Second, we develop and validate a reliable 12-items scale to measure RCD. Third, we empirically demonstrate the importance of RCD in contemporary workplaces, showing its predictive validity for affective and motivational organizational outcomes. Overall, our work thus sets the foundations to understand what is needed to confront discrimination, and why it is important for organizations to equip their employees with these requirements.

Ethics, Leaders and Policies

Session Moderator: **Trang Pham**, *Telfer School of Management, U. of Ottawa*

DEI: The Interconnectedness and Intersectionalities of Care Ethics and Social Time During the Pandemic (WITHDRAWN)    

Author: **Lakshmi Balachandran Nair**, *Luiss Guido Carli U.*

Business ethics researchers and practitioners are interested in understanding the temporal mechanisms of various managerial activities, processes, and policies. In this direction, we borrow notions of time from Virginia Woolf's Mrs. Dalloway to examine how social time intersperses with the paid and (unpaid) care work of female employees during the pandemic. We explore how discussions of social time in connection to care work appear in newspaper discourses of "shecession", i.e. the large-scale job/income losses experienced by women during the COVID-19 pandemic. Since shecession is a byproduct of the pandemic times, exploring the role of time in it is crucial. In fact, our findings show that the macro social time of the pandemic affects working women with care responsibilities who are situated at the intersection of multiple vulnerable social categories by simultaneously being a penalizer and a lost opportunity. Similarly, we also find that the micro social times of working women embed, stratify, and synchronize differently during the pandemic when compared to normal times. Working women with care responsibilities are thus adversely affected by both micro and macro social time changes. Our findings therefore could be instrumental in developing and implementing inclusive policies and processes in business organizations and labor markets. In so doing, this study also indicates how a consideration of social time enriches the application of care ethics in work contexts. Ultimately, this article is also about developing caring organizations, societies, and families which care for the caregivers (working women), since receiving care is a precondition of giving care.

DEI: Age Difference in Life Satisfaction During the COVID-19: The Moderating Effect of Government Policy   

Author: **Trang Pham**, *Telfer School of Management, U. of Ottawa*
Author: **Vu Chu Tuan**, *School of Management, U. of Ottawa*

A handful of studies document the U-shaped relationship between age and life satisfaction. We aimed to re-evaluate this relationship in adverse conditions during the COVID-19. We also made attempts to study the underlying mediators and how macro interventions might have any effect on this curvilinear relationship. The paper found that the middle-aged group was the most affected in terms of economic outcomes (job loss, work hours, money loss), leading to their lower well-being than the youth group and the elderly group. Public health policies flatten the curve but surprisingly, economic supports widen the gap in well-being. The findings support the U-shape relationship between age and well-being in difficult times. Thus, this paper calls for uniquely developed plans to support different age groups during adversity.

DEI: Exploring Intersectional Influences on Leadership: The Role of Gender and Race  

Author: **Victor Elijah Blocker**, *Michigan State U.*
Author: **John R. Hollenbeck**, *Michigan State U.*
Author: **Quinetta M. Roberson**, *Michigan State U.*

This paper examines the intersectional influences of gender and race on leadership emergence and effectiveness within self-managing teams. We explore how these factors shape leadership perceptions and emergence in autonomous organizational structures. Utilizing Leadership Categorization Theory and Social Dominance Theory, the study investigates biases and stereotypes affecting marginalized individuals in leadership roles, revealing that Black women may emerge as leaders more frequently than Black men. The research highlights the importance of recognizing intersectionality in leadership dynamics and suggests the need for tailored strategies to mitigate social dominance biases. The findings challenge traditional paradigms of leadership, urging a reevaluation of leadership development and selection practices in modern organizations.

DEI: Social Class Origin and Its Enduring Effects on Securing Idiosyncratic Deals at Work

Author: **Youjeong Huh**, *Stonehill College*
Author: **Michael Thomas Ford**, *U. of Alabama*

Research has shown that employees' social class origins may contribute to the reproduction of class inequality in white-collar organizations. However, the literature lacks an investigation of how social class backgrounds affect employees' likelihood of acquiring i-deals, which are customized career opportunities that have been linked to positive individual outcomes in both work and family life spheres. Research suggests that individuals from lower-social class backgrounds may be at disadvantage in receiving such special career opportunities. To investigate the influence of employees' social class background on the receipt of i-deals, I conducted two studies: a two-factor factorial experiment and a two-wave study with a one-week interval. Study 1 unpacked the potential mechanism through which lower-social class backgrounds affect how employees view themselves in white-collar organizations. These self-perceptions could affect their chance of negotiating and acquiring i-deals, which in turn may influence their individual outcomes, such as pay raise, managerial aspiration, and satisfaction with work-family balance. Study 2 shifts the focus to managers' stereotypes about social class and investigates whether managers are more inclined to offer i-deals to hypothetical employees from upper-social class backgrounds. In Study 1, social class background positively predicted the receipt of development i-deals, but not via the hypothesized mechanisms. In Study 2, social class background of a fictional employee predicted the manager's willingness to approve i-deals requested by the employee, as well as their willingness to voluntarily offer i-deals. Findings across these two studies suggest that social class background may affect one's chance of receiving special career opportunities.

Despite widespread recognition of its importance, numerous organizations still grapple with effectively implementing genuine diversity and inclusion (McKinsey, 2020). This discrepancy between aspiration and reality poses a pivotal challenge: How can organizations innovatively address contemporary challenges to enhance representation? Our sessions aim to dissect both the challenges and potential solutions for cultivating more representative environments at various stages of the organizational pipeline. Specifically, we will demonstrate diverse methods by which organizations can boost representation, ranging from harnessing feedback mechanisms to modifying organizational communication, identifying gaps in the pipeline stages, and understanding mentorship dynamics among individuals from working-class backgrounds. Additionally, our symposium features a diverse group of researchers, offering insights into how representation can permeate through the research process itself.

Women CEOs and Compensation

Session Moderator: **Farah Mejri**, *U. of Lausanne, HEC Lausanne*

DEI: **Do Female CEOs Improve Female Executive Compensation? The Moderating Role of Firms' Orientation**

Author: **Chenxi Zhang**, *School of Business, Renmin U. of China*
Author: **Wanwan Huo**, *School of Business, Renmin U. of China*
Author: **Ruxi Wang**, *Renmin U. of China*

Prior research has concentrated on the negative influence of female CEOs on female executive compensation. Despite that social identity theory support a possible positive relationship, research fails to give empirical evidence. From the perspective of social identity theory, we propose a framework in which female CEOs have social identification toward female executives and thus lead to higher compensation outcomes. We further propose two firms' orientation variables that may change female CEOs' identification toward female executives. We argue that corporate social responsibility (CSR) strengthens the positive effect of female CEOs on female executive compensation. We further predict that firms' negative aspiration performance gap (APG) has a weakening effect on the focal relationship. Using panel data on 700 Chinese listed firms from 2006 to 2021, we find support for all the hypotheses. Our study contributes to executive pay equality literature and female leadership literature.

Author: **Farah Mejri**, *U. of Lausanne, HEC Lausanne*
Author: **Tony Davila**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

The low representation of women in CEO positions remains a puzzling phenomenon in the research community as well as in practice. This study investigates the career path of top managers to the CEO position using a sample of 15,719 executives from U.S. publicly traded companies spanning from 2011 to 2021. Its aim is to identify elements that contribute to the gender disparity observed in CEO positions. We replicate the existence of a glass ceiling where women are less likely to be promoted, *ceteris paribus*. However, we find that the glass ceiling explains just part of the drop in women's presence as CEOs; another important explanation is related to women having a larger presence in top management jobs that are less likely to be promoted, regardless of gender. We refer to this explanation as the "glass maze." In line with social identity and role incongruity theories, women are more prevalent in human resources, sustainability, and legal positions, as opposed to the traditional CEO feeder jobs in finance (CFOs) and operating positions (COOs). These results provide additional insights on women's career paths to reach CEO positions.

DEI: **Communion then Agency: Women's Ascension to the Hospital CEO Role** 📄 🙌

Author: **Ryan Miller**, *Ivey Business School*
Author: **Martha L. Maznevski**, *Ivey Business School*
Author: **Alison M. Konrad**, *Western U.*

Women continue to remain greatly underrepresented in senior leadership roles, perhaps most obviously within the CEO position. However, the Ontario hospital system is a notable counterexample: 52% of Ontario hospital CEOs identify as women. This begs the question: how did these women ascend to the hospital CEO position? In attempts to explain this anomaly, we leverage existing theory on women in leadership to generate three plausible explanations. Using data from 22 semi-structured interviews with women Ontario hospital CEOs, we employ abductive thematic analysis to empirically evaluate our three explanations. Findings show that communal behaviors positively contribute to women's upward career mobility, and that the hospital CEO job role strongly entails communal leadership behaviors. Further, throughout their careers, many participants subtly exuded the essence of agency without engaging in traditional agentic behavior. Collectively, overt communal behaviors and subtle agentic behaviors positively contributed to participant's emergence as CEOs. Ultimately, findings depict a new way in which these women leaders navigated a shifting double-bind.

DEI: **The Appointment and Tenure of Women CEOs**

Author: **Farah Mejri**, *U. of Lausanne, HEC Lausanne*

The increasing number of females in leadership positions raises research questions about their selection and what happens once they break through the glass ceiling. The primary motivation of this paper is to explore the characteristics of firms that appoint women CEOs and to analyze their trajectory after their promotion beyond the glass ceiling. We focus on whether having females on board increases the likelihood of appointing a female CEO. We further investigate the impact of the CEO's gender on the likelihood of turnover. Consistent with critical mass theory, our findings indicate that companies with a proportion of 10% to 30% of women on the board are more likely to appoint a woman CEO. This likelihood increases as the proportion of women on board increases, but the effect plateaus once it reaches 30%. However, there is no need for a critical mass for female in top management team to have an impact on female CEOs appointment. Furthermore, we find that women CEOs have a 27% lower probability of leaving their firms compared to their male counterparts, indicating that once they surpass the glass ceiling barrier, they tend to remain longer in their positions.

In today's increasingly diverse and inclusive world, the examination of LGBT (Lesbian, Gay, Bisexual, Transgender) issues within organizations has gained profound significance. This endeavor transcends mere compliance with legal mandates; it represents a journey towards understanding, empathy, and equity. With a commitment to fostering theory-driven scholarship, this symposium aims to present compelling works that apply a variety of theoretical perspectives to understand the workplace experiences of LGBT workers and leaders, with a special focus on transgender and nonbinary populations. We present four papers that employ strong theoretical perspectives, enriching our understanding of LGBT issues. These studies also feature a diverse range of research designs and methodological approaches (e.g., qualitative, longitudinal/time-lagged, systematic/integrative review). Collectively, these four papers lay the foundation for further theory-driven scholarship, contributing to building a stronger body of research on LGBT work-related issues.

ENT: **Entrepreneur Ambition and Business Performance: The Role of Proactive Behaviour and Family Support**

Author: **Ting Ting Niu**, *U. of Science and Technology of China*
Author: **Lincoln Jisuvei Sungu**, *school of management, USTC*

Ambition is generally considered a crucial characteristic of successful entrepreneurs. However, whether, how, and when this ambition translates into favourable business performance remains to be explored. To shed light on these issues, this study develops a model linking entrepreneur ambition and business performance that focuses on the mediating role of proactive behaviour and the moderating role of family-to-business support. Drawing on trait activation theory and three-month time-lagged survey data collected from 315 Chinese owner-managers/entrepreneurs, we found that for a high level of emotional family-to-business support, entrepreneur ambition is positively related to proactive behaviour, which ultimately contributes to business performance. Interestingly, when instrumental family-to-business support is high, entrepreneur ambition does not translate into proactive behaviour and has no indirect effect on business performance. Hence, this research highlights the critical role of emotional family-to-business support in activating trait ambition to manifest as proactive behaviour and drive the related positive outcomes. We also discuss the theoretical and practical implications of our findings.

ENT: **Entrepreneurial Greed, Explorative Behavior, and the Role of Situational Strength**

Author: **Friedrich Tacke**, *TUM School of Management, Technische U. München*
Author: **Holger Patzelt**, *TUM School of Management, Technische U. München*
Author: **Anne Tryba**, *Technical U. of Munich*

Greed is a trait that causes people to be dissatisfied with what they currently have and to always want more. Entrepreneurs are often portrayed as greedy people who try to satisfy their desires through their venturing activities. In this paper, we examine whether greed relates to explorative behavior. Explorative behavior is about searching for new opportunities and holds the chance for major improvements. We further investigate when entrepreneurs high in greed show greedy behavior. Based on a sample of 234 entrepreneurs from 112 teams, we show that the impact of entrepreneurial greed on explorative behavior depends on the current situation, precisely the situational strength. Entrepreneurial greed positively impacts explorative behavior only in weak situations – situations with low certainty for the individual and low psychological pressure to behave in a certain way.

ENT: **Entrepreneurial Action is Rational Action: Toward a Unified Model of Entrepreneurial Rationality**

Author: **Joel Adams**, *Washington and Lee U.*
Author: **Jeffery S. McMullen**, *Indiana*

Ongoing conversations about non-deliberative action and the limitations and misconceptions inherent in extant entrepreneurial action theory are rooted in confusion about the scope and objects of rationality and a conflated view of entrepreneurial decision-making. Once exploded from its black box, the decision-making process unfolds to reveal the role of intuition as a precursor to most rational decision-making and the role of inhibitions in the selection of analytical processes. We propose a model of entrepreneurial rationality that correctly locates the challenges posed by research on non-deliberative action within the inhibition function of the rationality model, and we preserve, clarify, and elaborate on our understanding of related processes within the scope of entrepreneurial action theory.

ENT: **Entrepreneurial Hype Among Early Employees: A Theory-Based Approach to Hype**

Author: **Esin Bozdog**, *PhD Student*
Author: **Trey Lewis**, *Virginia Tech*
Author: **Cynthia E. Devers**, *Virginia Tech*
Author: **Ashley Yerves Roccapiore**, *Auburn U.*

Stakeholders play a pivotal role in supporting new ventures by providing essential financial resources, distribution channels, and human capital. Entrepreneurial hype, one of the fastest-growing research phenomena in literature, defined as a collective vision and promise of future potential, is routinely leveraged in new ventures for stakeholder enrollment. While existing research extensively explored the impact of hype on external stakeholders like investors and customers, a vital stakeholder group, early employees remained relatively understudied. In this study, we posit that hype possesses a unique appeal to early employees, distinct from other stakeholders. Early employees may be attracted to the new ventures through the hype created around leadership, culture, product and career utility. However, they may subsequently experience a gap between the perceived hype and the actual reality. To address this, our study employs psychological contract breach (PCB) theory to investigate the impact of unrealized hype on early employees' job satisfaction, organizational commitment and turnover intentions. Furthermore, we differentiate the effects of unrealized hype between two distinct groups of early employees: those who wish to (1) become future founders, and (2) joiners, those individuals who prefer working at startups but possess no future intention to become a founder. Our study contributes to the literatures of hype and entrepreneurship by explaining the role of hype among early employees and by applying PCB theory to early employees to examine the effects of unfulfilled expectations.

ENT: **Academic-Industry Engagement: The Role of Machine Learning in Predicting Contract Research Outcomes**

Author: **David Johnson**, *Durham U. Business School*
Author: **Jingning Ao**, *Morgan State U.*
Author: **Adam J. Bock**, *U. of Wisconsin, Madison*
Author: **Viktor Schlegel**, *ASUS Intelligent Cloud Services*

Academic-industry engagement, such as contract research, facilitates the development of university-centered entrepreneurial ecosystems (UCEEs). Research implies that the language utilized within contract research proposals is critical in determining whether an academic chooses to engage with an industrial partner or not. However, we know very little about the role of contract research proposal narratives in facilitating successful academic-industry engagement outcomes. Accordingly, adopting an explorative study, we apply machine learning (ML) techniques to predict successful academic-industry contract research outcomes and reveal key linguistic features associated with successful contract research proposals. Our predictive and exploratory ML techniques achieve an 83% accuracy in predicting successful academic-industry contract research outcomes and reveal that the use of concise and field-specific vocabulary repetitively is associated with successful contract research proposals. Our findings develop research and policy relating to academic-industry engagement. At the same time, our ML techniques provide a useful foundation for scholars to further develop theory, practice, and policy within the academic entrepreneurship and entrepreneurial ecosystem fields.

ENT: **Pursuing Certainty Among Uncertainty: A Mixed-Method Study of Interdependent Ventures**

Author: **Yiming Gao**, *U. of Electronic Science and Technology of China*
Author: **Ziwei Wang**, *U. of Electronic Science and Technology of China*
Author: **Yifei Du**, *U. of Electronic Science and Technology of China*

Interdependence emergence has long been taken as an established process in management research, as partnering with others for collective actions is common to be seen. Conceptualizing this process as interdependent ventures, our research explores this essential yet inadequately understood perspective by unveiling the essence of interdependence emergence as pursuing certainty among uncertainty, thereby complementing management research on innovation ecosystems. Employing a full research cycle approach, including pattern matching and regression analysis, we analyzed data from discrete manufacturing small and medium-sized firms to uncover crucial factors that influence the involvement of partners in the context of uncertainty. Our findings reveal that awareness of interdependence significantly affects partner involvement, which is mediated predominantly and equally by exploration and exploitation tendencies. Contrary to prior patterns and our observation, risk perception in fact plays a minor mediating role. We therefore discover a third path in understanding interdependent ventures among uncertainty as obscuration of exogenous and endogenous factors, distinct from the existing two paths but aligned with observed realities. Our theorizing paves the way for exploring the underlying mechanism of interdependence emergence, providing an analytical basis for the emergence of innovation ecosystems.

ENT: **Endogeneity be Gone: A Toolkit for Entrepreneurship Scholars**

Author: **Ahmad Al Asady**, *North Dakota State U.*
Author: **Christopher Groening**, *Kent State U.*

This manuscript provides a comprehensive methodological guide aimed at addressing the prevalent issue of endogeneity in entrepreneurship research. Focusing on four advanced statistical techniques—Instrumental Variable Technique, Control Function Approach, Gaussian Copula, and Heckman Correction—the guide serves as a specialized resource for researchers. By using the entrepreneurial intention-action nexus as an illustrative context, the guide demonstrates the real-world applicability of these methodologies. Furthermore, we delve into existing empirical studies, elucidating the reasoning behind authors' methodological choices. The study aims to enhance the methodological rigor in the field of entrepreneurship, offering researchers a toolkit for making more informed methodological decisions.

ENT: **Entrepreneurial Growth Intention and Firm Performance: A Meta-Analysis on the Role of Institutions**

Author: **Daria Hakola**, *Jyväskylä U. School of Business and Economics, Jyväskylä, Finland*
Author: **Imran Muhammad Ilyas**, *Jönköping International Business School, Jönköping U., Sweden*

Academics, policy-makers, and practitioners view firm growth as a positive hallmark of entrepreneurship and venture performance. Yet, some scholars warn against blindly pursuing growth and stress the importance of prioritizing profitability. While entrepreneurship scholars mostly agree on the positive effect of growth intention on firm growth, its effect on profitability is unclear. To address this issue, we conduct a meta-analysis of 66 independent samples from 23 countries to examine the effect of entrepreneur's growth intention on firm growth and profitability, and the moderating effect of formal and informal institutional factors. Our results show that growth intention has a positive significant effect on firm growth but is not significant for profitability. Furthermore, entrepreneurship education and performance orientation support while financial market development and assertiveness in culture hinder the positive influence of growth intention on firm performance.

ENT: **Drivers of Heterogeneity in Green Innovation Activities in Family Firms – A Multiple-Case Study (WITHDRAWN)**

Author: **Ramona Waldau**, *Philipps-U. Marburg*
Author: **Melina Roser**, *Philipps-U. Marburg*
Author: **Torsten Wulf**, *Philipps-U. Marburg*
Author: **Marc Steffen Rapp**, *Philipps-U. Marburg*

Green innovation is a new innovation phenomenon that attracts increasing research attention in the family firm field. Thus far, however, the research focus has been on comparing family and non-family firms, and the findings are mixed. Drivers of the heterogeneity in green innovation activities in family firms, in contrast, have hardly received any research attention. In this paper, we use a multiple-case study research design involving 13 German family firms to identify drivers that affect family firms' ability and willingness to pursue green innovation. Our findings suggest that family firms significantly differ in their green innovation activities. Specifically, we theorize that family firms generally have a positive attitude towards green innovation, but differ in their financial willingness – their green investment orientation – as well as their ability to develop green networks and capabilities. We further reason that family firms' progress on their overarching green transformation path depends on how they overcome this ability and willingness challenge. Our paper contributes to research on family firm heterogeneity regarding innovation and to green innovation research.

ENT: **The Impact of Entrepreneurs' Environmental Awareness on Green Entrepreneurial Performance**

Author: **Jing Ning**, *Ocean U. of china*
Author: **Weixin Wu**, *Management College of China Ocean U.*
Author: **Qiwei Zhou**, *Ocean U. of china*
Author: **Junmei Luo**, *Ocean U. of china*

As governments propose sustainable development as a means to reconcile economic development and environmental protection, it is imperative to delve into the impact of entrepreneurs' environmental awareness on green entrepreneurial performance for investigating the driving force behind green entrepreneurial practices in the field of entrepreneurship. Following the "Belief-Action-Outcome" framework, we developed a theoretical model that indicates the relationship between entrepreneurs' environmental awareness and green entrepreneurial performance, with internal and external green knowledge sharing serving as mediating variables and relational embeddedness acting as a moderating variable. Prior to conducting our formal study involving entrepreneurs through questionnaire surveys in 408 startups and in-depth interviews with three entrepreneurial firms, we conducted a pre-survey to refine our research questions and measurement tools. Through both the quantitative and qualitative studies, the following main conclusions are derived: (1) Entrepreneurs' environmental awareness has a positive impact on green entrepreneurial performance. (2) Both external and internal green knowledge sharing act as mediators in the relationship between entrepreneurs' environmental awareness and green entrepreneurial performance. (3) Relational embeddedness exhibits an inverted U-shaped moderating effect on the relationship between external green knowledge sharing and green entrepreneurial performance. And relational embeddedness plays a positive moderating role in the relationship between internal green knowledge sharing and green entrepreneurial performance. This study contributes to the existing research on green entrepreneurial practices by exploring the role of entrepreneurs' green awareness and knowledge sharing. It also provides valuable insights for promoting sustainable development through environment-friendly practices in entrepreneurship.

ENT: **Entrepreneurial Support Organization Outcomes Towards Ecosystem Sustainable Development**

Author: **Aveline Cloitre**, *Toulouse School of Management, SIRIUS Chair*

Although the literature on entrepreneurial ecosystems has raised an increasing conceptual interest in studying entrepreneurial support organizations, the outcomes they provide for the involved organizations and territories remain understudied. The primary objective of this study is to deepen the research dealing with entrepreneurial support organization outcomes vis-à-vis the increasing institutional pressure they undergo towards entrepreneurial ecosystem sustainable development. To do so, we rely on an abductive qualitative study based on 45 semi-structured interviews, that we analyze by employing a systematic analysis conducted through the NVivo software. Our results show that the motivations of both policy makers and entrepreneurial support organization sponsors cause strategic misalignments among entrepreneurial support organizations, leading to a slowdown in entrepreneurial ecosystem sustainable development. From a theoretical perspective, we contribute to the entrepreneurial ecosystem literature by highlighting the crucial role of entrepreneurial support organizations in entrepreneurial ecosystem sustainable development. More precisely, we show that entrepreneurial support organizations face a double institutional pressure on their outcomes which generates unachievable outcomes towards entrepreneurial ecosystem development. From an empirical perspective, this implies that it would be relevant for entrepreneurial support organizations and their sponsors to set strategic development programs according to the type of their competitive scopes to avoid inefficient efforts towards entrepreneurial ecosystem sustainable development.

ENT: **Navigating the Green Transition: A Mixed-Method Study of Pro-NetZero Actions in UK SMEs**

Author: **Zimu Xu**, *Cranfield School of Management*
Author: **Richard Adams**, *Cranfield School of Management*

In times of climate emergency, a number of countries including US, UK, France, etc are marching towards Net zero emissions target. The UK is committed to achieving the NetZero target by 2050 (Gov.UK, 2021). It is widely recognised that this will require significant carbon emissions reductions from SMEs as they account for approximately half of total emissions from UK businesses (British Business Bank, 2022). However, limited action is taken among SMEs with regard to achieving NetZero emissions. Therefore, it calls for researchers' action to explore the underlying reasons that contribute to pro-NetZero actions among SMEs. This research investigates the underlying factors that enable entrepreneurs to take pro-NetZero actions in UK SMEs through a mixed method approach. We first interviewed 25 owner-managers of UK SMEs. We further tested our conceptual model through survey (548 respondents) using structural equation modelling. Our results show that attitude (personal drive) and perceived behaviour control (business reasons) have direct influence on owner-managers' intention, while subjective norm (wider societal and stakeholder influence) showed an indirect influence through attitude and perceived behaviour control.

ENT: **Employee Ownership in Startup Governance: Preserving Agility in Participatory Decision-Making**

Author: **Mehmet Ali Yetim**, *U. of Scranton*
Author: **Furkan Amil Gur**, *Northern Illinois U.*
Author: **Kubilay Cirik**, *Louisiana State U.*

Startups, driven by entrepreneurs' ambitions of achieving their ideas, have significant ownership transitions when they obtain external funds, triggering issues with their decision-making and control. The involvement of external funders, driven by high financial return expectations, exerts pressure on decision-making and often leads to planning fallacy. This dynamic, coupled with the absence of formal control mechanisms found in publicly held firms, presents unique challenges for startup governance. Our study investigates the potential of employee ownership as a mechanism to address these challenges. Through in-depth interviews with 32 executives of employee-owned startups, we investigate employee ownership's role in startup governance to resolve planning fallacy in decision-making and issues with control mechanisms. While findings reveal benefits that come from participative decision-making and representative governance, they also highlight potential drawbacks, including slower decision-making that may conflict with the agile nature of startups. We discuss our findings under three dimensions: reorganizing startups for accountability and control, confronting unanticipated experiences with shared ownership and decision-making, and maintaining the nimbleness of decision-making.

ENT: **Entrepreneurial Self-Efficacy and Team Processes: Unraveling the Dynamics in Early-Stage Ventures**

Author: **Juliane Friedrichs**, *U. of Kassel*
Author: **Sandra Ohly**, *U. of Kassel*

Recent advancements in entrepreneurial research emphasize the significance of team processes in achieving business success. However, the intricacies of how individual factors, such as entrepreneurial self-efficacy (ESE), interact with and influence the team remain underexplored, hindering the scholarly discussion from building a comprehensive understanding of entrepreneurial team functioning. This study aims to bridge this gap by examining shared dynamics between ESE and team action processes (TAPs) within entrepreneurial teams. Integrating Social Cognitive Theory with team literature, we first explore the nature of ESE, proposing that it is malleable. This understanding is crucial to establish before addressing the central research aim in the next step. In our longitudinal study, N = 106 entrepreneurial team members completed monthly questionnaires for four months. Findings from latent change score models show that ESE remains stable over time, contradicting assumptions about its malleable nature during early venture stages. While ESE does not dynamically interact with TAPs, it significantly influences changes in TAPs. These results contribute to understanding the role of ESE in team settings, challenging existing beliefs about its malleability and underscoring its impact on team processes. This research provides a basis for further exploration of complex interrelationships in entrepreneurial teams.

ENT: **On Startups and Joiners: A Systematic Review of Employment Relationships in Startups**

Author: **Bettina Elsner Von Arnim**, *U. of Amsterdam*
Author: **Lien De Cuyper**, *Amsterdam Business School, U. of Amsterdam*
Author: **Yuval Engel**, *U. of Amsterdam*

This article presents a systematic review and organizing framework addressing employment relationships in startups, particularly focusing on the role of 'joiners'—non-founder employees—and their relationship with these firms. Despite the burgeoning literature in this domain over the past few years, research still suffers from conceptual ambiguities and lacks a unified framework. This study seeks to bridge this gap by synthesizing current knowledge, offering a comprehensive perspective on startup employment that examines both their antecedents and outcomes. Overall, our work does not only advance a holistic understanding of the complex nature of employment in startups, but also offers intriguing questions for future research.

ENT: **Sticking Together to Remain Unique: Institutional Work Practices for Cooperation Resilience**

Author: **Felipe Zarpelon**, *UFRGS - Federal U. of Rio Grande do Sul - BRAZIL*
Author: **Kadigia Faccin**, *FDC - Fundacao Dom Cabral*
Author: **Olivier Coussi**, *U. of Poitiers*
Author: **Anass MAWADIA**, *IAE-CEREGE, U. de Poitiers*

Cooperation allows strategic gains in access to resources and risk sharing, especially in technological development efforts. However, market pressures, such as the search for differentiation, can mitigate the decision to engage in cooperative activities. This article describes and explains how alliances and partnerships are sustained in an environment that pushes for value creation through differentiation. As environments where multiple organizational actors meet geographically to share and compete for resources, innovation ecosystems form a relevant object of study to answer this question. This article applies the theoretical lens of institutional work to analyze two innovation ecosystems located in different socio-economic contexts: Sophia Antipolis in France and Tecnosinos in Brazil. The results indicate that the institutional work of social structuring, normative systems and cognitive coherence can support cooperation as a strategic option for technological development in innovation ecosystems. The article provides three contributions: it informs the literature on cooperation strategies with 10 practices that support cooperative action; it portrays narratives of a set of actors that could promote practices aimed at institutionalizing cooperation; it proposes a model for cooperation resilience in innovation ecosystems.

Session Moderator: **Galina Shirokova**, *National Research U. Higher School of Economics, St. Petersburg*

ENT: **Proactive SMEs? Empirical Evidence from Russia**

Author: **Galina Shirokova**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Polina Artamoshina**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Emilia Karpinskaia**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Tatiana S. Manolova**, *Bentley U.*

Proactiveness is one of the most important constructs in entrepreneurship research, linked to value creation at both the individual and the firm level. While intensively studied, little attention has been paid to how proactiveness is understood and manifested across different institutional and cultural contexts. In this study, we unpack the meaning and manifestations of proactiveness in the context of Russian small and medium sized enterprises (SMEs). Through the qualitative analysis of data from 18 Russian SMEs, we highlight new dimensions of proactiveness at three levels – the executive, the employee, and the firm level. The findings of the study are discussed through the lens of the country's historic, economic, institutional, and socio-cultural contexts.

ENT: **How Storytelling Shapes Social Entrepreneurs' Funding Outcomes: Evidence from Sri Lanka**

Author: **Viraji Jayaweera**, *U. of Melbourne*
Author: **Niharika Garud**, *U. of Melbourne*
Author: **Rakesh Kumar Pati**, *Deakin U.*

This research focuses on understanding the effects of storytelling on the funding success of social entrepreneurial ventures. Drawing from linguistic theories, we argue that the structure of a story (in an entrepreneurial pitch) aids in creating an integrated mental representation of the venture for potential investors. This results in convincing investors to commit their funds to social ventures. In this study, we also examine the boundary conditions (i.e. venture development stage and pitch duration) that shape this relationship. We analyzed 206 social entrepreneurial pitches, to test the hypothesized relationships. Our findings demonstrate that the structure of a social entrepreneurial pitch is significantly positively associated with the valuation of the venture. We also found that the venture development stage moderates this relationship whereas the pitch duration shows no significant moderation effect. This study extends the existing literature on storytelling in entrepreneurship by highlighting how entrepreneurial pitches facilitate funding success and the boundary conditions of this relationship. We also contribute back to the field of linguistics by extending the application of linguistic theories into the new context of entrepreneurship.

ENT: **Ethnic Entrepreneurship in Sub-Saharan Africa**

Author: **Mahdi Tajeddin**, *Sobey School of Business, Saint Mary's U.*
Author: **Amon Simba**, *Nottingham Business School, Nottingham Trent U.*
Author: **Sorin Krammer**, *Surrey Business School*
Author: **Kaveh Moghaddam**, *U. of Houston, Victoria*

This study investigates the performance of ethnic entrepreneurs in sub-Saharan Africa, focusing on labor productivity and export intensity. It challenges the prevailing notion that businesses established by ethnic entrepreneurs (from developed and developing economies) underperform due to limited resources, suggesting instead that such entities may surpass local firms by leveraging their 'assets of foreignness' and dual-context social embeddedness. Our analysis of 8,691 firms across 41 African countries shows ethnic entrepreneurs, notably from developed economies, outperform local firms. The findings contribute to the ethnic entrepreneurship literature by elucidating the competitive advantage derived from foreignness and its role in enhancing export performance. This study offers a fresh perspective on entrepreneurial success in the heterogeneous and dynamic sub-Saharan African market.

ENT: **Surviving Communist Revolutions: Entrepreneurial Culture Across Generations**

Author: **Na Zou**, *Goethe U.*

Prior studies have highlighted the importance of national or regional cultural imprints that are consequential for entrepreneurship. Yet, substantial variations exist even among individuals who were born and raised in the same place without a family history of migration. In this paper, we use the Chinese communist revolutions which nullified family influences concerning the transfer of wealth and managerial skills to explore the impact of family cultural imprints on individual-level entrepreneurship. Using China Family Panel Studies (2010-2020), we show that the offspring of pre-revolution ENT families are more likely to be entrepreneurs nowadays. This outcome is unlikely driven by necessity, but because of entrepreneurial culture transmission. We find risk tolerance, strong work ethics, and favorable learning attitudes are transmitted over two generations despite shocks and disruptions. We further underscore the social conditions – co-living with parents and assortative matching in marriage – that facilitate cultural transmission within the family. Overall, our study highlights the importance of family cultural imprints on entrepreneurship.

CEOs And Their Traits

Session Moderator: **Chandra Bhushan Dubey**, *Oklahoma State U.*

ENT: **The Dangers of Deliberation: A Dual-Process Perspective on Grandiose and Vulnerable CEO Narcissism**

Author: **Katie Brownell**, *Virginia Tech*

Though narcissistic CEOs can be reckless, selfish, and unethical, extant research continues to yield inconsistent findings concerning the impact on firm performance, which may stem from an underestimation of critical differences between the subdimensions of narcissism. I draw on dual process theories of cognition and moral disengagement theory to present an integrative conceptual model outlining how grandiose and vulnerable CEO narcissism relate differently to firm performance, as explained by trait-relevant cognitive processes. Given that new firm creation is particularly attractive to narcissists due to the unique opportunity to satisfy narcissistic needs and expectations, I focus on founding CEOs, who have an outside impact on financial performance in nascent firms. Across four studies – a time-lagged field study (N = 407), a survey (N = 358), and two randomized experiments (N = 208, 141) – I show that founding CEOs with grandiose narcissism positively relate to firm performance via intuitive thinking, which upholds moral choices. But founding CEOs with vulnerable narcissism are negatively associated with firm performance through deliberative thinking, which activates moral disengagement. Theoretical contributions, practical implications, and promising avenues of future research are discussed.

ENT: **CEO's Dark Triad Personality Traits and Their Effect on Ambidexterity in SMEs**

Author: **Javad Esmaeili Nooshabadi**, *Maynooth U.*

Author: **Audra I. Mockaitis**, *Maynooth U., Ireland*

Author: **Richa Chugh**, *Te Herenga Waka - Victoria U. of Wellington*

Bridging entrepreneurship and organizational behavior, we hypothesize that involvement in ambidextrous activities within small or medium-sized enterprises (SMEs) is influenced by the dark triad personality traits (narcissism, psychopathy, and Machiavellianism) of the respective chief executive officers (CEOs). The existing body of research has indeed overlooked the influence of the CEO's psychological characteristics. Using a sample of 385 SMEs from the United Kingdom, the United States, Ireland, Canada, New Zealand, and Australia, our research findings reveal CEO narcissism has positive influence on ambidexterity. In contrast to our hypotheses, our findings fail to establish a significant correlation between CEO Machiavellianism and ambidexterity, as well as CEO psychopathy and ambidexterity. The findings of this research hold important implications for our understanding of how CEOs' personality traits influence ambidexterity within SMEs.

ENT: **Charting the Course: How do CEOs' Passion and Flexibility Influence Disruption?**

Author: **Ataullah Kiani**, *Wenzhou-Kean U.*

Author: **Dan Wang**, *Xihua U.*

While research consistently provides evidence of the relationship between CEOs' passion and firm innovation, limited knowledge exists regarding the organizational contingencies and mechanisms through which CEOs' passion can boost disruptive innovation. In this study, we address this gap by examining data from 257 Chinese manufacturing SMEs. By building upon and extending the upper echelons theory, our findings reveal that strategic flexibility, defined as the ability to adapt quickly to environmental changes, plays a significant role as a strategic capability that mediates the positive relationship between CEOs' passion and disruptive innovation. Besides, it provides evidence of the moderating role of organizational size, whose effect on flexibility and innovation performance has long been debated. Consequently, our study contributes to the existing knowledge of upper echelons theory by highlighting the relevance of executives' individual characteristics in the development of disruptive innovation. Additionally, we contribute to the innovation literature by studying the interactions among CEO passion, strategic flexibility, and firm's size in fostering disruptive innovation. Ultimately, we discuss the implications of our study in the context of the upper echelons theory and provide guidance for CEOs on how to effectively channel their passion for innovation.

ENT: **Founder CEOs' Traditional Value Imprint and Green Innovation in Family Firms**

Author: **Feifei Lu**, *Shanghai U.*

Author: **Xiao Ma**, *Nottingham Business School*

Author: **Ruonan Lyu**, *Dalian U.*

Author: **Hao Gao**, *Tsinghua U.*

Drawing on imprinting theory and socio-emotional wealth (SEW) perspective, this paper investigates the influence of founder CEO's traditionality on firm's green innovation performance and examines the moderating effects of child-successor's willingness and capability. Using 4,642 firm-year observations from Chinese firms between 2007 and 2020, along with survey data from 178 founder-successor dyads, we find that a traditional mindset of founder CEOs negatively affect firm's green innovation performance. However, this negative influence can be mitigated if the successor is willing to take over the family business. Moreover, the negative impact of founder CEO's traditionality imprints on green innovation is found to be weakest when the successor is both willing and capable. This study underscores the importance of using cross-generational framework to understand the dynamic process of founder's traditional value imprints changing in family business. It encourages the incorporation of the founder CEO's traditional value and the successor's traits to understand the heterogeneity of SEW and the variances among different family firms' green innovation performance.

Presenter: **Valeria Dammicco**, *CRG Ecole Polytechnique*

Discussant: **Ludmila Striukova**, *SKEMA Business School*

Discussant: **Riccardo Fini**, *U. of Bologna*

This presenter symposium explores the role of Makerspaces in fostering entrepreneurial innovation, particularly focusing on how these shared environments, where individuals can experiment and quickly learn to innovate, may act as catalysts for entrepreneurial activities. The presenter symposium addresses a gap in examining the prospective societal impact of these habitats, how they are evolving, and how their inhabitants behave in the early stages of entrepreneurial action. Key contributions of the symposium include the exploration of how Makerspaces function as entrepreneurship support organizations, the analysis of the Makerspaces population in the US, the role of Makerspaces in fostering inclusivity and diversity, the impact of Makerspaces on the identity evolution of venture founders and the details the stage-processes which transform innovators in nascent entrepreneurs. Overall, the symposium sets out to theorize and provide empirical evidence on how increased participation in Makerspaces can lead to more individuals engaging in early stages of entrepreneurship and how this could have positive societal impacts, aligning with the broader theme of 'Innovating for the Future'.

ENT: **The Strength and Scope of Chinese Guanxi in the UK: Exploring the Role of Contextual Embeddedness**

Author: **Xiaojue An**, *Assistant Professor in Strategy at Coventry U. UK*
Author: **Esin Yoruk**, *Research Centre for Business in Society, Coventry U.*
Author: **Maureen Meadows**, *Coventry U.*

This paper investigates the relationship of Chinese entrepreneurs' characteristics and the strength and scope of their organisational guanxi in the UK, with the perspective of multi-layered embeddedness in entrepreneurship contextualisation. Despite literature's continuous interests in guanxi, guanxi research in Western context is still limited. Facing the increasing complexity and internationalisation in entrepreneurship businesses, guanxi research calls for important updates. Seventeen semi-structured interviews were conducted with Chinese entrepreneurs across a variety of industries in London and the Midlands. The research is based on a two-phase mixed method design. First, the guanxi strength and scope were quantified; a guanxi strength and scope matrix was developed and entrepreneurs were classified. Then, a qualitative interpretive approach was adopted to understand the intricacies in how contextual embeddedness in the UK shaped the strength and scope of guanxi. Findings reveal that trust and business interests are the two critical prerequisites for strong guanxi with wide scope. Entrepreneur's social background, length of guanxi, personalities and career experience of their guanxi counterparts are its key contributing factors. Whilst temporal, social and spatial embeddedness had positive influence on the strength and scope of guanxi, industry and market embeddedness weakened the guanxi. Ownership and governance dimension of contextual embeddedness was found to have ambiguous effects.

ENT: **The Role of Institutional Ownership on Family Firm Tax Haven Internationalization**

Author: **Taewoo Kim**, *U. of Louisiana Monroe*
Author: **Ke Gong**, *U. of Southern Mississippi*
Author: **Dustin Odom**, *U. of Southern Mississippi*

Tax havens have been one of the prevalent tax-saving tools/strategies across developed and developing contexts. Despite recent scholarly attention toward tax havens, the extant literature on what leads firms to utilize them remains largely limited, especially within the context of family firms. Thus, this study aims to deepen our understanding of the factors influencing family firms' tax haven utilization. In particular, drawing upon the agency theory, we theorized a positive impact of institutional ownership on family firms' adoption of a tax haven strategy. Furthermore, to elucidate the boundary conditions influencing the impact of institutional ownership, we delve into the moderating role of a family CEO. A large longitudinal dataset of publicly listed Chinese family firms from 2012 – 2021 is employed to test our hypotheses. Overall, we find support for the hypotheses.

ENT: **The Process of Returnee Entrepreneurship: From Firm Creation to Contribution**

Author: **Semsang Dolma Bomzon**, *M.S. Ramaiah Institute of Management*
Author: **Subhadip Mukherjee**, *Indian Institute of Management, Shillong*
Author: **Ashutosh B Murti**, *Indian Institute of Management, Shillong*

Although returnee entrepreneurs have been instrumental in facilitating economic development in their home regions, the extant literature does not explain how they contribute to the development process. The purpose of this study is to construct a holistic process framework of returnee entrepreneurship that explains how returnee entrepreneurs facilitate the development of their home region. We critically review and synthesise findings from 120 peer-reviewed research papers to construct the process of returnee entrepreneurship and examine how returnee entrepreneurs contribute to the development of their home regions. We find that returnee entrepreneurs have been studied in three separate phases of their entrepreneurial journey which we name 'Creation', 'Survival' and 'Prime'. The phases occur in sequence and the returnee entrepreneur is affected by enablers and deterrents at the individual and institutional level in each phase. These enablers and deterrents dictate whether the returnee and their firm develop enough to contribute to their home region's development. We construct a holistic process framework of returnee entrepreneurship that explains how REs contribute to regional development in their home regions. We identify the phases and factors that affect the RE and the ability of their firms to contribute to regional development. We create linkages between and within phases and show how interaction between the home environment and the personal traits of the RE influence the decision to move ahead.

ENT: **The Paradox of Equivocality: Entrepreneurs' Usage of Figurative Language and Financing Performance**

Author: **Zhijian Yang**, *School of management, Zhejiang U.*
Author: **Yuxuan Dai**, *Zhejiang U., School of Management*
Author: **Rui Shen**, *School of management, Zhejiang U.*
Author: **Qingyun Lu**, *School of management, Zhejiang U.*

Highly regarded as an essential communication strategy, figurative language empowers entrepreneurs to convey their novel ideas to the audience vividly and legitimate distinctiveness with familiar examples. This study offers a micro-underpinned lens to examine entrepreneurs' figurative language usage and the likelihood of receiving investment in an entrepreneurial pitch context. Building on Construal Level Theory, we revisit the cognitive effectiveness of figurative language and its influence on the investor's evaluation through two approaches: startups' feasibility and desirability. Drawing on 177 entrepreneurial pitches from a reality pitch program named "WE ARE THE HERO" in China, we find an inverted U-shaped relationship between the usage of figurative language and investors' willingness to invest. Moreover, we argue that the relationship is contingent on startups' track records and investors' investment focus. Our findings add granularity and micro-foundation to the cultural entrepreneurship literature by revealing whether and how figurative language or linguistic frames matter to investors. It also adds insights into CLT literature by highlighting the complicated implications of perceived psychological distance in early-stage investment decisions.

Pragmatist Foundations of Research on Entrepreneurial Strategy

Organizer: **Anastasia Sergeeva**, *U. of Bath*
Organizer: **David K. Reetz**, *Technical U. of Munich*
Panelist: **Dimo P. Dimov**, *U. of Bath*
Panelist: **Alfonso Gambardella**, *Bocconi U.*
Panelist: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*
Panelist: **Saku Mantere**, *McGill U.*
Panelist: **Violina Rindova**, *U. of California-Irvine*
Participant: **Todd Zenger**, *U. of Utah, David Eccles School of Business*

American pragmatism provides a rich intellectual foundation that accommodates diverse practices in service of “usefulness” and as such is well-suited to examine formation of entrepreneurial strategies that aim at changing the status quo, while facing fundamental uncertainty associated with such attempts. Research on entrepreneurial strategy drawing on pragmatism is burgeoning but remains dispersed across research communities. For example, one branch of such research focuses on how entrepreneurs adapt and evolve their ideas using scientific reasoning to test beliefs about (future) states of the world, while another branch focuses on the generative power of entrepreneurial agency employing abductive reasoning for creative world-making. There is, however, substantial potential for cross-pollination between such branches. This symposium will bring together a diverse group of leading scholars from these areas of research, to create a common ground of key pragmatist assumptions, raise open questions for future studies examining the phenomenon of entrepreneurial strategy formation, and chart opportunities for a fruitful (joint) research program.

The Importance of Teamwork in Healthcare

Session Moderator: **S. Amy Sommer**, *DeGroot School of Business, McMaster U.*

HCM: **Relationship Quality with a Leader During an Organizational Crisis: Team Dynamics and Outcomes**

Author: **S. Amy Sommer**, *DeGroot School of Business, McMaster U.*

Author: **Jessica A. Maxwell**, *McMaster U., Social Psychology*

During an organizational crisis, we investigate the nature of team members' relationship with their leader, team dynamics, and outcomes for individuals and teams. We studied an organizational crisis unfolding at three public hospitals facing a bed shortage crisis. Leaders (n = 24) and their team members (n = 150) completed surveys that were matched. Leaders rated themselves and each team member individually; and team members independently rated themselves and their leader. The survey data was analyzed to differentiate the effects of between-team versus within-team variance using multilevel models. Overall, our results speak to the positive associations of leader-member exchange (LMX). When individuals felt higher on LMX than their team average, they were rated as performing better, had lower turnover intentions and higher team potency. Further, teams that were higher on LMX reported fewer turnover intentions, and were more creative. Core self-evaluations (CSE) were also linked to positive outcomes. Particularly in contexts of weak leaders (i.e., when their team rated them low in LMX and low in expertise), positive core self-evaluations were associated with better leader-rated performance. Moreover, teams with higher CSE had higher team potency. Implications for this research and future research directions are provided.

HCM: **Multidisciplinary Teams In Healthcare: A Systematic Review And Research Agenda**

Author: **RAMI ALZHRANI**, *U. of Newcastle, Australia*

With the increased employment of the MDHT model by health systems, its implementation of the MDHT model has played a significant role in enhancing its effectiveness in delivering health services. In light of the discourse surrounding the efficacy of MDHT, this thesis focuses on the effectiveness of MDHT's relevant challenges and aims to systematically review and synthesize empirical and conceptual research focusing on the needs of MDHT for transitioning from conventional models to a multidisciplinary care approach. The analysis uncovers several under-research domains, research gaps, and avenues for future research in the following dominant categories: team development, team performance and effectiveness, organizational capabilities, and leadership. The findings affirm that organizations must develop knowledge transfer and collaboration processes in advance for hospitals transitioning from the conventional care model to the multidisciplinary care approach. Findings reveal that team structures can provide new insights into developing functional MDHT structures and align the new systems with existing organizational structures. In addition, it is found that it is essential for transitioning hospitals to examine their organizational capabilities and facilities to determine if they can ensure improved patient care and sustainability of MDHTs.

HCM: **Expertise or Expert Teams: Team Familiarity, Expertise, and Performance in the Emergency Department**

Author: **Alexandra Bray**, *The Wharton School, U. of Pennsylvania*

Health care delivery often relies on the coordination of fluid teams with members spanning different roles and specialties. Work on familiarity and expertise in health care has found that both team familiarity and expertise individually improve performance, but less work has investigated how the two interact to affect performance. This paper seeks to answer how familiarity and expertise influence performance in concert with one another using patient and provider data from a large hospital system's emergency department. We look at the effects of familiarity and performance on two aspects of ED performance: time to disposition decision and 72-hour returns. Overall, we replicate the literature's existing findings that both team familiarity and expertise have positive effects on performance individually. In addition, we find that the two interact as substitutes, with team familiarity having a stronger effect on performance when teams contain non-expert members. Finally, we find that for efficiency outcomes, the familiarity of residents is relatively more important to a team's performance than attendings' or nurses' familiarity. However, for quality measures, the opposite is true, and the relative familiarity of attendings and nurses is more important to performance than that of residents.

HCM: **Work Environment & Burnout Association in Nursing Home Staff: A Cross-sectional Multicenter Study**

Author: **Yannai DeJonghe**, *Ghent U.*

Author: **Herlinde Wynendaele**, *Ghent U.*

Author: **Els Clays**, *Ghent U.*

Author: **Jeroen Trybou**, *Ghent U.*

Aims: The primary aim was to assess the nursing home (NH) work environment, the risk of burnout in NH care workers, and to explore their association. The secondary aim was to provide insight on the role of professional category in this association. Methods: This is a cross-sectional, multicenter study, using survey data retrieved from 54 NHs. Several multilevel generalized linear mixed models were developed to examine the association between NH work environment and risk of burnout in nursing home care workers. An additional analysis explored the role of professional category in regard to this association. Results: A substantial proportion of registered nurses and care assistants reported positive collegial relationships, the presence of foundations for quality care, and insufficient staffing and resources to provide quality care. This study found several significant results regarding work environment factors associated with the risk of burnout, and regarding the role professional category as a moderator in this association. Conclusion: This study underlines the importance of improving the work environment in NHs. Implementing interventions to enhance these elements could contribute to reducing the risk of burnout among NH care workers. Key words: Nursing Home, Work Environment, Burnout, Quality of Care, Health Care Professionals, Cross-sectional Study

Influences On & From Healthcare Systems

Session Moderator: **Hyesung Oh**, *Brown U. School of Public Health*

HCM: The Impact of Hospital Acquisitions on Access to Care and Health Outcomes for Medicaid Beneficiaries

Author: **Hyesung Oh**, *Brown U. School of Public Health*

This paper investigates the short-term effects of hospital acquisitions on care access, care processes, and health outcomes for Medicaid beneficiaries. With ongoing hospital consolidation widening the gap between private health insurance (PHI) and Medicaid prices in the US, a critical question arises: do hospitals potentially neglect Medicaid beneficiaries in favor of the more lucrative PHI patients? My study finds that, in the short term, hospital acquisitions do not significantly impact Medicaid beneficiaries in terms of care access, care processes, or health outcomes. These findings imply that while hospital acquisitions may alter market dynamics and PHI prices, they do not detrimentally affect care for Medicaid patients immediately following a hospital acquisition. Policymakers should consider these results when evaluating the broader implications of hospital consolidations, especially regarding healthcare equity and the equitable distribution of healthcare resources.

HCM: Post-Acute Transitions for Traditional Medicare Beneficiaries with Serious Mental Illness

Author: **Taylor Iris Bucy**, *U. of Kansas Medical Center*
Author: **Dori Amelie Cross**, *U. of Minnesota*

Evolving payment structures have encouraged hospitals to consider the care trajectory of patients requiring post-acute care (PAC), however, investments in transitional care practices have largely been concentrated among exclusive networks of high-volume, “preferred” skilled nursing facility (SNF) partners. Patients with complex social and behavioral health conditions, including those with serious mental illness (SMI), represent a growing proportion of SNF patients. Although care transitions are especially risky for patients with SMI, they may not benefit equally from the improved relational coordination that comes from hospital-SNF preferred provider networks. Using a 100% sample of Medicare claims data, we assessed the role of preferred provider networks on patient choice of SNF using a discrete choice model. Compared to patients without SMI, those with SMI had a significantly lower probability of discharging to their closest preferred SNF. However, this effect was reversed when patients with SMI also had a co-occurring condition targeted by value-based payment programs. Although hospitals will likely continue to invest in relationships that lower their financial risk, the evolving PAC landscape requires more widespread administrative and clinical collaborative efforts that benefit the broader network of consumers by accounting for behavioral and psychosocial needs.

HCM: Do Healthcare Incentives Motivate Effort or Free-Riding? Evidence from Accountable Care Organizations

Author: **Onyi Nwafor**, *U. of North Carolina at Greensboro*
Author: **Norman Johnson**, *U. of Houston*

Accountable care organizations (ACOs) are a relatively new healthcare delivery model in which various provider organizations assume joint responsibility for the care of a defined patient population. A primary purpose of ACOs is to curb the growth in healthcare costs through an incentive structure that jointly assesses performance and disburses rewards. We argue in this study that a fuller understanding of the impact of ACOs on cost performance requires examination of theories that can predict the relationship between the ACO incentive structure and performance. To this end, we examined two competing hypotheses that have contradictory predictions on the relationship between participation in ACOs and cost performance. We also investigated how the size of ACOs and Medicare intensity, or the proportion of Medicare patients served by hospitals, matter in the relationships examined. We used a panel dataset of U.S. hospitals and relied on a doubly robust estimator that consisted of propensity score-weights and the difference-in-difference estimator to identify the effects of hospital participation in ACOs on cost performance and on the moderating roles of ACO size and Medicare intensity in the relationship. Our results show that hospital participation in ACOs is associated with worsened cost performance. Free riding is identified as a key factor that affects this relationship. The results of supplemental analysis also show that whereas the negative effects of free riding on cost performance are worse for hospitals participating in larger ACOs, it is attenuated for hospitals serving higher proportions of Medicare patients (i.e., hospitals with higher Medicare intensity)

HCM: Revisiting Community Orientation in US Hospitals: A Publicness & Social Capital Perspective

Author: **Gregory N. Orewa**, *U. of Texas At San Antonio*
Author: **Reena Joseph Kelly**, *U. of New Haven*
Author: **Philip Cendoma**, *U. of Alabama at Birmingham*
Author: **Neeraj Puro**, *Florida Atlantic U.*

The increasing need for improving population health has called for hospitals and other healthcare organizations to expand efforts to partner with other entities in the community and develop a community orientation. Although community orientation of hospitals has been explored in the past two decades, newer efforts have focused on the type and extent of multisector collaborations and partnerships between hospitals and other local organizations. Drawing on publicness theory and social capital theory, the purpose of this paper was to determine the organizational and community-level factors associated with hospitals' community orientation. Using data from the American Hospital Association's 2022 Annual Survey and social capital index from Harvard Dataverse, the study analyzes 1,647 acute care hospitals. Our results show that community-level social capital and several organizational factors including hospital ownership, teaching status, and equity orientation were positively associated with a higher community orientation. These findings shed light on the pivotal role that organizational factors play in hospitals establishing a deeper community orientation, which can, in turn, improve population health outcomes. Keywords: Community orientation, Social capital, Hospitals, Partnerships, Public value

Navigating Leadership Challenges: Strategies for Effective Change Management

Session Moderator: **Leon Barton**, *U. of St. Gallen*

HR: **A Paradox Perspective on Ambidextrous Leadership: Towards Inspiring-Multimodal Leadership**

Author: **Leon Barton**, *U. of St. Gallen*

Author: **Heike Bruch**, *U. of St. Gallen*

To address the challenges of today's competitive business environment, employees and leaders must balance the paradox of exploration and exploitation to achieve ambidexterity. One often discussed but also criticized leadership style aiming to foster ambidexterity is ambidextrous leadership. This study introduces "Inspiring-Multimodal Leadership" (IML), which reconceptualizes ambidextrous leadership from a paradox perspective, applying the dynamic equilibrium of paradoxes. IML combines dynamic opening and closing leadership behaviors in exploration and exploitation modes with consistent inspirational behaviors. Over two studies with more than 19,000 employees from 160 German SMEs, we developed and validated an IML measure and investigated its organizational impact. The first study confirmed IML's unique structure and psychometric strength at the individual level. The second study conceptualized IML as a leadership climate at the organizational level, finding it significantly predicts firm performance, employee ambidexterity, organizational energy, and identification, surpassing traditional leadership models. Furthermore, organizational decentralization and formalization, moderated by CEO visionary leadership, were identified as critical antecedents of IML climate. This research presents a theoretical expansion of ambidextrous leadership, overcoming its limitations and demonstrating IML's effectiveness in maximizing the potential of the ambidexterity paradox.

HR: **The Effect of Leader Positive Affective Presence on Hospitality Employee Voice Quality**

Author: **Yuan Yuan**, *Xiamen U.*

Author: **Jing Jiang**, *Beijing U. of Posts and Telecommunications*

Author: **Yu Qin**, -

A high-quality voice is important for hospitality employees to enhance service quality, customer satisfaction, and competitiveness. This study explored the impact of a leader's affective trait on hospitality employee voice quality from the perspective of feelings-as-information theory. The data from 212 pairs of leader-employee dyadic questionnaires in China revealed that leader positive affective presence positively affects hospitality employees' voice efficacy and their voice quality through voice efficacy. In addition, a definite relationship was identified between affective organizational commitment and voice efficacy when positively influencing hospitality employee voice quality. Furthermore, a substitution relationship was found between affective organizational commitment and voice efficacy in positively influencing hospitality employee voice quality; that is, the higher the level of employees' affective organizational commitment, the lower the positive effect of voice efficacy in enhancing hospitality employee voice quality.

HR: **Fostering Psychological Safety in Teams: Evidence from an RCT**

Author: **Silvia Castro**, *LMU Munich*

Author: **Florian Englmaier**, *LMU Munich*

Author: **Maria Guadalupe**, *INSEAD*

Psychological safety (PsyS) is an important driver of teams' performance and organizations are keen to foster it. However, there is little causal evidence on what drives it and how to increase it. This paper implements a randomized control trial with over 1000 teams (over 7000 employees) in a global healthcare company to evaluate the impact of individualized attention of the manager to each team member team by encouraging managers to hold frequent 1-to-1 meetings and to focus them on mechanisms expected to increase PsyS. We exogenously vary the content of those meetings: focusing on employees' needs and aspirations as individuals, or on allowing employees' to better execute tasks and remove blockers that may hinder their best work. We find that, despite this very non-invasive intervention, the behavior of managers changed as they increased the number of meetings. PsyS also increased as did the relationship to and perceptions of the manager, particularly in the treatment arm that focused on the employees' individual needs.

HR: **Innovative Behaviors in SMEs: Impact of Leadership Style and Employee Emotional Intelligence**

Author: **Marjan Latifi**, *Independent Researcher/UPM*

Author: **Ismi Arif Ismail**, *U. PUTRA MALAYSIA*

Author: **Sedigheh Shakib Kotamjani**, *Central Asian U.*

Author: **Sherzodbek Murodilla Ugli Dadaboyev**, *Central Asian U.*

Author: **Mehrnaz Fahimirad**, -

Author: **Shoirakhon Odilova**, *Central Asian U.*

Globalization has obliged developing countries' SMEs to foreign competition to survive and become competitive in local and global markets; innovation is a critical factor for SMEs, which plays a key role in the economy of countries worldwide. After reviewing previous Iranian studies' literature, most scholars unanimously agreed that "the lack of innovation" was the main reason for making Iranian SMEs uncompetitive in both the local and the international markets. Therefore, to foster a high rate of innovation within the organization, employees should be encouraged to adopt innovative work behavior (IWB). Since the most important cause of business failure in the Iranian context is mismanagement; this study aims to investigate the influence of perceived leadership style and emotional intelligence of employees on their innovative work behavior and its dimensions (idea generation, idea promotion, and idea realization). The sample data were collected from one hundred ninety-five employees of five SMEs manufacturing office equipments in Tehran, Iran. The correlation and stepwise regression analyses were employed to examine the predictors of IWB. The findings have indicated that the relationship between transformational leadership style and employees' innovative work behavior was significantly positive. In contrast, the transactional leadership style was weakly related to work behavior. Notably, the idea generation was significantly related to the laissez-faire leadership style. The results have shown that emotional intelligence is related to and positively impacts innovative work behavior and its three subscales. This study offers some important insights into providing a set of data, which currently exists for SMEs, mainly Iranian SMEs. The findings shed light on leadership styles (i.e., transformational, transactional, and laissez-faire) and emotional intelligence and their relationship with innovative work behavior. The results contribute to the research on the predictors of IWB. Keywords Leadership styles, Emotional intelligence, Innovative work behavior (IWB), Iranian SMEs

Our five presentations aim to address issues to do with AI research in the field of HR by providing evidence from varied but rigorous approaches into studying the subject matter. In so doing, this symposium will help to set the course for future research on AI in HR by highlighting overlooked phenomena and presenting evidence from novel contexts. Specifically, the symposium reveals the significant potential for future researchers to advance the field by building theories grounded in novel and relevant HR-specific phenomena, coupled with methodological innovations in design and measurement approaches tailored to the study of such phenomena.

How Can Host Countries Influence Social and Environmental Performance of Foreign MNEs?

Session Moderator: **Sorin Kramer**, *Surrey Business School*

IM: **Environmental Transparency, Internationality, and Eco-Innovation of Firms in Emerging Markets**

Author: **Sorin Kramer**, *Surrey Business School*

Author: **Alvaro Cuervo-Cazurra**, *Northeastern U.*

Author: **Lichao Wu**, *Xiamen U.*

Author: **Lan Lin**, *School of Management, Xiamen U.*

Transparency has been heralded as a solution to economic policies, security issues, and human rights. Combining elements from institutional and signaling theories, we develop a theoretical framework which suggests that institutional changes regarding pollution transparency incentivize firms in emerging markets to go beyond first-order responses to this problem (i.e., green washing, reduce pollution temporary, or mask it via outsourcing) and take a more proactive stance by developing eco-innovations, i.e., new technologies targeting energy saving, emissions reduction, or other long-term environmental benefits. Moreover, we posit that the effects of these institutional changes will be more pronounced for internationally oriented firms (i.e., foreign-owned and exporting firms) given the learning and exploitation benefits associated with these activities. We test these hypotheses using a quasi-experimental design that takes advantage of a change in pollution transparency regulations in China in 2008 across 113 cities. Employing a large sample of Chinese manufacturing firms during the period of 2002-2013 across 338 cities we find support for our conjectures: pollution transparency increases both the incidence and intensity of firms' eco-innovations in transparent jurisdictions, and that these effects are more pronounced for internationally oriented firms. These findings advance our understanding of the impact of institutional transparency and provide some concrete policy avenues for reduction of pollution.

IM: **Global CSR Standards Meet Local Culture: Case Studies of MNC Subsidiaries in Confucian China**

Author: **Jianliang Li**, *U. of Nottingham Ningbo China*

Author: **Cong Cao**, *U. of Nottingham Ningbo China*

This study examines the global-local corporate social responsibility (CSR) interface in the context of Confucian culture by analyzing four multinational corporation (MNC) subsidiaries in China. We collect both primary data via 18 in-depth interviews and secondary data. Our findings suggest that, driven by the need for internal and external legitimacy, these China-based MNC subsidiaries simultaneously implement global and local CSR practices while adhering to the overarching global CSR strategy formulated by headquarters. Confucianism impacts the social dimensions of CSR practices during local implementation. It also acts as a catalyst for accelerating global CSR efforts and tailoring specific local CSR practices, leading to "glocalization" via a "reconciliation" mechanism, while hindering global CSR initiatives through an "interference" mechanism. Our research carries valuable implications for CSR practitioners operating within the MNC framework.

IM: **Invited Dirty Guests: The Role of Industry Legitimacy on Environmental Performance of Foreign Firms**

Author: **Yingbo Xu**, *School of Business, Sun Yat-sen U.*

Author: **Junjie Liu**, *School of Management, Qilu U. of Technology*

As a major recipient of foreign direct investment in the world, it is important for the Chinese government to regulate the environmental behavior of foreign firms. Compared to previous studies that focused on macro-institutional environment characteristics, we examine the impact of institutional environment on the environmental performance of foreign firms from the perspective of industry legitimacy. Our finding reveals that foreign firm in industry with the Chinese government encouraged discharge more environmental pollution. Because the central government grants industry legitimacy to these firms, making it challenging for local governments to strictly regulate their environmental behavior. We also find the relationship above is weaker for firms with a deep institutional embeddedness and competitive industry. Drawing on panel data of foreign firms in Chinese manufacturing industries between year 2002 and 2008, we find strong support for these arguments.

IM: **Foreign and Domestic Firms' Responses to Environment Regulation in Emerging Markets**

Author: **Jingwen Sha**, *Ivey Business School*

The debate regarding the environmental behavior of foreign firms in emerging markets continues. Both positive and negative views of MNEs are prevalent. In this paper, I argue that despite that foreign firms, on average, exhibit superior environmental performance relative to domestic peers, they also have the intention to behave opportunistically and exploit local institutional voids when they have the opportunity to do so. To examine my argument, I compared the responses of domestic and foreign firms to the environment regulation during the 11th Five-year Plan period in China. I find that while foreign firms that experience substantial liability of foreignness behave significantly better than domestic firms, those that are exposed to less liability of foreignness are no better or worse than domestic peers. This indicates that when foreign firms develop the ability to perceive the informal elements embedded in local regulatory institutions, they are likely to take advantage of the informal elements to seek evasion opportunities.

IM: Environmental Self-regulation and Multinational Enterprises' Home and Foreign Carbon Footprints   

Author: **Jingyuan Li**, *cuhksz*

Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

Multinational enterprises (MNEs) employ environmental self-regulation to establish legitimacy in international markets. We investigate a phenomenon wherein MNEs make commitments to self-regulate their environmental practices across global operations but implement these commitments to varying degrees between home and foreign countries. Drawing on institutional theory research, we argue that MNEs are more inclined to undertake substantive rather than symbolic actions, when implementing their environmental pledges in their home countries compared to abroad. Specifically, we examine this issue in the context of MNEs' adoption of carbon emission reduction targets. We posit that adoption of carbon emission targets are more effective in containing emissions within MNEs' home countries compared to host countries. Furthermore, such disparity in target effectiveness between home and host countries is more pronounced for MNEs from developed economies and is mitigated when foreign markets hold greater significance for an MNE. To test our hypotheses, we analyze a sample of MNEs reporting to the Carbon Disclosure Project in 2009–2020. The findings provide support for our theoretical framework and shed light on how MNEs implement their pledges in different nations beyond the mere act of making such pledges in their environmental self-regulation.

IM: Race from the Bottom: Environmental Pollution and Multinationals' Foreign Investment   

Author: **Juan Bu**, *Indiana U., Bloomington*

Author: **Aurora Genin**, *Indiana U. - Kelley School of Business*

This study examines how host countries' environmental pollution influences multinational enterprises' (MNE) foreign investment. Prior research highlights a “race to the bottom”, or the “pollution haven” effect, where MNEs are drawn to countries with lax environmental policies to evade pollution abatement. We argue that environmental degradation in a host country can inflict pollution costs—namely, elevated operational and reputational costs—to dissuade MNE foreign investment, leading to a race from the bottom instead. We find empirical evidence for this proposition in a panel of 1,317 U.S. MNEs and their foreign investments across 101 countries from 2006 to 2019. We find a negative relationship between a host country's environmental pollution and an MNE's foreign investment in this country. Moreover, MNEs' inclination to reduce investment in pollution havens depends on two strategic assets that moderate firm sensitivity to pollution costs: green innovation leaders are less likely to retreat since they can leverage environmental technologies to offset pollution-induced operational costs, whereas environmental performance leaders often sustain high reputational damages from pollution haven investment and are thus more likely to race from the bottom. Our findings contribute to the literature on pollution haven and MNE foreign investment research.

IM: Impact of Climate Risk on MNEs' OFDI Location Decisions & the Moderating Role of Network Effects   

Author: **Soni K. Jha**, *Purdue U. Fort Wayne*

Author: **Snehal Awate**, *Indian Institute of Technology, Bombay*

In this study, we examine how increasing climate risk in potential host locations impacts MNEs' location choice for foreign direct investments (FDIs) and consider how the network contingencies, the connectedness of MNEs in the industrywide collocation network and the connectedness of MNEs' country of origin (COO) in the global outward FDI network, moderate this relationship. Using a novel dataset from the global automobile industry between 2003 and 2019 we argue and demonstrate that the negative externalities of climate risk reduce the likelihood and magnitude of MNEs locating their FDI in high-climate-risk locations. Further, we find that increasing COO connectedness increases the MNEs' informational advantages and amplifies the negative impact of increasing climate risk in host locations on MNEs' FDI location choices. Thus, MNEs from more connected COOs are less likely to locate their FDI in high-climate-risk locations. However, the increasing MNE connectedness increases isomorphic pressures and imitative tendencies among collocated MNEs. This attenuates the negative impact of increasing climate risk in host locations on MNEs' FDI location choices. Thus, MNEs more embedded in FDI collocation networks are more likely to locate their FDI in high-risk locations. This study demonstrates the effect of increasing climate risk on the FDI location decisions of MNEs and highlights the contingencies faced by MNEs when making these decisions.

IM: What Drives Multinationals' Climate Innovation?   

Author: **Aurora Genin**, *Indiana U. - Kelley School of Business*

Author: **Juan Bu**, *Indiana U., Bloomington*

Climate change imposes substantive global challenges on multinational enterprises (MNEs). One crucial approach to addressing these challenges hinges on the development of new technologies that can mitigate climate change or adapt to its adverse effects. However, it remains unclear what factors can effectively motivate MNEs' development of climate innovation. Building on the resource dependence theory, we argue that MNEs' strategic behaviors are shaped by their dependence on ecology and government. When exposed to elevated climate risks and/or stringent climate policies, MNEs may engage in climate innovation as a strategic response to assuage the uncertainty associated with their ecological dependence and political dependence. While ecological dependence instills a fundamental incentive for climate innovation, MNEs may adopt alternative strategies to avoid or manipulate political dependence, which can divert resources from climate innovation. We thus expect an MNE's exposure to global climate risks and climate policies to drive its climate innovation, but the effect of climate risk exposure on innovation is stronger (weaker) when the MNE faces more lenient (stringent) climate policies. We find evidence for our hypotheses in a panel of MNEs listed in the United States from 1995 to 2017. Our findings contribute to research on resource dependence theory, climate risk and policy, and technological innovation in a global context.

Capabilities and Personalities for International Careers

Session Moderator: **Yunyue Yang**, *Yokohama National U.*

IM: **CQ and English Language Proficiency as Necessary Conditions for Expatriation Willingness**

Author: **Yunyue Yang**, *Yokohama National U.*

Given the reluctance of employees to work abroad after the COVID-19 pandemic, it has become increasingly important to investigate which factors motivate employees to accept expatriate work. Although there have been numerous studies on this aspect, the previous studies mainly explored linear, correlation-based causality and did not consider the necessary conditional logic (Dul, 2016) regarding employees' willingness to expatriate, which is an urgently needed research method. To fill this gap, we investigated whether two important intercultural competencies, CQ and English proficiency, are necessary conditions for employees' expatriation willingness. Through NCA analysis, we found that motivational CQ and behavioral CQ are necessary conditions, while metacognitive CQ, cognitive CQ, and English proficiency are not necessary conditions. The current research provides a more accurate understanding of how these two intercultural competencies affect international management. It also provides valuable practical insights that can be applied in practice.

IM: **Skill Expectation for Managers**

Author: **Shinan Wang**, *Northwestern Kellogg School of Management*

This study shows that organizations vary in their skill expectations for managers due to different levels of social trust. When employers have weaker trust in the local population, they expect managers to possess a higher level of technical skills, so that they could closely guide and supervise workers. But when the trust is strong, organizations place a greater emphasis on managers' social skills, as they are expected to collaborate with and coordinate among workers who are given more discretion. To test this proposition, we analyze employers' skill expectations using 40 thousand managerial jobs posted by multi-national firms in the digital sectors of 21 European Union countries. Our strictest analytical models rely on bilateral trust measures to predict skill expectations for managers, including fixed effects on country, firm, and occupation. This study demonstrates the role of social trust in shaping expected managerial roles.

IM: **Exploring the Predictors and Mechanism of Protean Career Orientation in the Eastern Context**

Author: **Zhuo ZHANG**, *Ritsumeikan U.*

Author: **Jie Li**, *Xi'an Jiaotong-Liverpool U.*

Author: **Tomoki Sekiguchi**, *Kyoto U.*

Despite the benefits of protean career orientation to individuals and organizations in the changing and uncertain working environment, the antecedents of protean career orientation still need to be explored, especially in the non-Western context. In this study, we proposed a moderated mediation model to investigate the predicting factors, including an Eastern value closely related to Easterners' preference for changing and the future, namely Yin-Yang values, and the protean career orientation development mechanism. Based on a sample of 433 full-time employees from mainland China and Japan, the results showed that Yin-Yang values predict protean career orientation directly and indirectly via career adaptability. Meanwhile, the mediating effect was stronger for individuals with low traditional gender role beliefs and stronger in China rather than Japan. Our findings imply that Eastern values towards change and gender roles may impact the formation mechanism of protean career orientation, suggesting a further discussion and examination from an indigenous perspective.

IM: **Unpacking Nested Identity Theory: The Case of Global Social Identity**

Author: **Anna Katherine Ward**, *Virginia Tech*

Author: **Nancy Buchan**, *Darla Moore School of Business, U. of South Carolina*

Author: **Nasima Mohamed Hoosen Carrim**, *GDO*

Author: **Isis Olimpia Gutierrez Martinez**, *U. de las Américas Puebla*

Author: **I-Heng Wu**, *U. of South Alabama*

Author: **Sophia Soyung Jeong**, *New York U. Abu Dhabi*

Author: **Chang-Ya Hu**, *National Chengchi U.*

Author: **Sofia A. Johan**, *Florida Atlantic U. College of Business*

We are more likely to cooperate with individuals we see as similar to ourselves, yet it is now common for employees to work with stakeholders who come from outside their nation's borders. Some research suggests that holding a global social identity – or identification with the world as a whole – leads to cooperation even with global strangers. However, various widely-studied identification theories suggest that global social identity should be rare due to a lack of commonality or proximity among ingroup members and a lack of comparison outgroup for distinctiveness and esteem-building. Thus, we sought to create consensus around both the existence and meaning of global social identity. Interviews with 107 employees working in either Mexico, South Africa, or the United States revealed that global social identity does exist – yet it does so outside the boundaries of existing theory. More specifically, we found that local, national, and global identities exist as distinct, unrelated identities, rather than in nested layers (as previously theorized). Further, we found that the foundational bases of identification change as the level of the identity's abstraction increased. Our findings have various implications for theory and practice, particularly regarding the encouragement of cooperation among globally dispersed organizational stakeholders.

Experience as Driver of Internationalization

Session Moderator: **Fei Qin**, *School of Management, U. of Bath*

IM: Learning From the Past: Experiential Learning, Added Geographic Distance, and Foreign Commitment

Author: **Carmen Friedinger**, *WU Vienna, U. for Economy and Business'*

Author: **Vera Kunczer**, *Luiss U.*

This study enhances our understanding of the interplay between experiential learning theories, added geographic distance, and firms' resource commitment in new foreign markets. Using panel data of 2,410 foreign market entries of Austrian firms between 1990 and 2019, we test our hypotheses to explain the mechanisms underlying firm's foreign resource commitment. We find that greater added geographic distance lowers a firm's willingness to commit resources abroad due to limited opportunities for exploiting and recombining prior experiences in new host environments. This negative relationship is contingent upon specific knowledge characteristics, namely the concentration and value of knowledge sourced in the most proximate host country a firm already operates in. Our results indicate that differences in knowledge characteristics influence firms' learning process, consequently shaping their commitment behavior. This study contributes to existing literature by shedding light on the underlying foreign resource commitment – as opposed to commitment outcomes like performance – and by adding to the understanding of the link between organizational learning including knowledge recombination theories and the added distance concept.

IM: Role of Experiential Knowledge in Internationalisation Activities of SMEs

Author: **Aileen Kennedy**, *Technological U. Dublin*

Author: **Colm O'Gorman**, *Dublin City U.*

This study seeks to understand the role and influence of experiential knowledge in the operation of international sales activities and practices within SMEs. Focusing on the individual as the unit of analysis, our qualitative case study data collection and analysis draws from 23 in-depth face-to-face interviews conducted within six Irish SMEs. Findings deliver novel insights into how the source of experiential internationalisation knowledge informs, shapes, and influences international sales practices within case firms. While explicating the crucial role of the individual within the small firm, we broaden this perspective to integrate the psychological construct of confidence and explore its role as an enabling condition of individual agency. Our findings illustrate how the dimensions of experiential knowledge and confidence interact to frame the level of resource commitments to international sales activities. This study contributes to small firm internationalisation research and theorising by exploring the role of experiential knowledge; within the novel context of the internal organisation of the firm specifically its international sales activities; at the micro level with the individual as the unit of analysis; and by integrating confidence as an explanatory dimension of individual agency and associated firm behaviour.

IM: Post-Entry Changes: Unraveling Home Base Diversity and Learning Effects on Commitment Increases →

Author: **Carmen Friedinger**, *WU Vienna, U. for Economy and Business'*

Author: **Michael Herbert Wolfesberger**, *WU Vienna*

Research on post-entry change has gained traction lately and we argue that the diversity of a firm's home base and the underlying learning mechanism have a positive effect on commitment increases. Specifically, we expect that when a firm enters a new host country, its international experiences become more diverse and thus it can leverage a broader knowledge base to learn from and subsequently increase extant foreign commitments (i.e., assets). We further examine the moderating effects of parent firm industry diversity as well as knowledge intensity of the newly added foreign activity and expect both factors to negatively influence the diversity-commitment relation. In our dataset of 13,069 Austrian companies investing abroad between 1989 and 2019, we find support for the main effect and the negative knowledge intensity moderator, and – opposite to our hypothesis – a significant positive effect for the industry diversity moderator.

IM: Global Markets: The Moderating Impact of Entry Mode Experience on SME Innovation in Foreign Sales →

Author: **Clara Zähe**, *Heinrich-Heine U. of Dusseldorf*

How do a firm's explorative and exploitative innovation levels affect its foreign sales share? And are there certain entry modes that strengthen or even weaken this relationship? We approach these questions by arguing that firms engaging in explorative and exploitative innovation benefit from several mechanisms that allow them to maximise their foreign sales share. Beyond this, we argue that firms with experience in equity entry modes, more specifically subsidiaries, can even further benefit from their explorative and exploitative innovations when looking to increase their foreign sales share. We test our arguments empirically by analysing longitudinal data on 156 German SMEs from two surveys in 2019 and 2022. Our findings indicate that both explorative and exploitative innovation has a positive effect on the foreign sales share, with the former effect being stronger despite the comparatively short-time frame. Furthermore, we show that this effect is positively moderated if the firm has subsidiary experience and negatively moderated if the firm has experience with exports or contractual agreements. In doing so, we direct researchers' attention to the strengthening effect equity entry modes can have on firm innovation abroad. Our findings go against existing literature in that resource-limited SMEs are unlikely to be able to simultaneously pursue high risk and commitment innovation and internationalisation strategies, but instead show that these strategies can complement each other.

Cross-Border Acquisitions by Emerging Economy Firms

Session Moderator: **Yiyi Su**, *Tongji U.*

IM: The Double-Edged Sword of Regional Attachment in Intra-Regional Cross-Border Acquisitions

Author: **Yiyi Su**, *Tongji U.*
Author: **Xiaoming He**, *East China U. of Science and Technology*
Author: **Jingyi Lei**, *Tongji U.*
Author: **Di Fan**, *School of Management, RMIT U.*

Recent international business research highlights the benefits of multinational enterprises operating intra-regionally rather than globally. In the context of intra-regional cross-border acquisitions (CBAs), our study draws on institutional theory and social categorization theory to propose that the likelihood of completing intra-regional CBAs varies based on the acquirers' regional attachment to their home country, influenced by bonding and stereotyping effects. Using a sample of 1788 acquisitions within the European Union from 2013 to 2017, we observe a U-shaped relationship between acquirers' home-country regional attachment and the likelihood of completing intra-regional CBAs, with a substitutive interaction with membership length difference and a complementary interaction with national cultural distance. Our research contributes to the exploration of informal institutions by introducing regional attachment as a novel informal and supranational institution from environmental psychology into the realm of IB at a regional level. Furthermore, our study sheds light on the interplay between supranational institutions and national institutions in achieving the objective of completing intra-regional CBAs.

IM: Limitations of Managerial Attention and Role of Advisors: CBAs by Emerging Economy Firms

Author: **Manish Popli**, *Indian Institute of Management, Indore*
Author: **Faisal Mohammad Ahsan**, *XLRI Xavier School of Management*

In this study, we aim to better understand the springboard perspective by examining how emerging market firms manage the process of 'recursive' cross-border acquisitions. Based on the attention-based view of the firm and resource dependence theory, we propose that 'recursive' CBAs augment activity load, limiting decision-makers' information processing capacity. As a result, acquiring firms depend on external resources in the form of more professional advisors. This relationship strengthens when the target firm has a greater degree of product diversity but weakens when the acquiring firm has context-specific experience. From 2000 to 2022, we used a multi-country sample of 2,621 CBAs from Brazil, Russia, India, China, and South Africa and found support for our hypotheses.

IM: Does Celebrity Status of Acquirers Matter in Post-Acquisition International Performance?

Author: **ALEXANDRE BOHAS ESSCA AIX**, *ESSCA School of Management*
Author: **Pierre-Xavier Meschi**, *Aix-Marseille U. and Skema Business School*

This paper seeks to identify the impact of celebrity status in post-acquisition international performance. We adopt a relational-sociology perspective to consider the strength of socioemotional relationships existing among celebrities, their newly-acquired unrelated company acquisitions and their international audiences. Based on the empirical analysis of the post-acquisition export performance of 341 French wineries acquired by foreign investors (including business and showbusiness celebrities) during the 2004-2020 period, we examine whether these celebrity-acquired companies deliver superior post-acquisition international performance and what enables or inhibits this superior performance. This paper emphasizes the relational determinants of post-acquisition performance, shows the intangible assets facilitating entries into distant foreign markets and overcoming liability of foreignness that celebrity ownership constitutes for acquired companies, and provides additional insights into the family business literature's core notion of socioemotional wealth.

IM: Cross-Border M&As, Complements or Substitutes for Chinese Multinationals' Innovation Performance?

Author: **Xiaoting Hu**, *Beijing Information Science and Technology U.*
Author: **Wenjing Lyu**, *Zhejiang U.; Massachusetts Institute of Technology*
Author: **Chujing Zhang**, *beijing language and culture U.*

Previous literature suggests that emerging economy multinational enterprises (EMNEs) use cross-border mergers and acquisitions (M&As) to compensate for their technological capability voids. However, inconsistent conclusions about the relationship between cross-border M&As and EMNE innovation performance exist and it could be due to EMNEs' complementarity or substitution decisions. That is, some EMNEs use cross-border M&As as complements for their innovation improvement, while others acquire the needed innovations through cross-border M&As and use M&As as substitutes for their innovation activities. The factors influencing these decisions remain unexplored. Drawing on resource dependence theory, this study argues that the level of interdependence between EMNEs and the government and domestic customers matters. The higher the dependence on the government and the domestic market, the higher the likelihood that EMNEs make the complementarity decision to increase the dependence of the government and the domestic market on EMNEs and reduce their power over EMNEs. This study uses propensity score matching with difference-in-differences analysis on Chinese listed manufacturing firms between 2008 and 2017 to evaluate these arguments. The results support our arguments. However, these effects are attenuated by alternative strategies (i.e., political connections and cost-leading strategies) to manage external interdependence.

What Drives MNEs to Divest Foreign Subsidiaries?

Session Moderator: **Yi Li**, *U. of Sydney Business School*

IM: **Social Movement and Global R&D: Evidence from the Arab Spring**

Author: **Mustapha Belkhouja**, *Grenoble Ecole de Management*
Author: **Hyungseok Yoon**, *U. of Leeds*
Author: **Jie Hong**, *U. of Sheffield*

We study how MNEs respond to social movements in host countries by examining the impact of the Arab Spring on MNEs' R&D activities in the Middle East and North Africa (MENA). Integrating the global R&D literature with the sense-making theory, we show that the Arab Spring destabilizes host country institutions and consequently reduces MNEs' incentive to engage in innovation activities. We also find that the negative effect of the Arab Spring on MNEs' innovation activities is weakened in the Arab Spring-affected countries with higher levels of democracy, yet strengthened in the affected countries with stringent religion policies. Our findings contribute to understanding the dynamic relationship between social movements and institutions, which span political and religious pillars of institutions, and their strategic implications on MNEs' global R&D activities.

IM: **Source Heterogeneity of Perceived Environmental Uncertainty and Divestment: Using Machine Learning**

Author: **Lin Peng**, *U. of Sydney Business School*
Author: **Yi Li**, *U. of Sydney Business School*
Author: **Chinmay Pattnaik**, *U. Of Sydney*

This study advances the conceptualization of perceived environmental uncertainty (PEU) and examines the impact of source heterogeneity of PEU on the subsidiary-level divestments of emerging markets multinational enterprises (EMNEs). In Part I, we justify why the existing conceptual and empirical understanding of PEU is incomplete and advance the PEU conceptualization by employing a novel machine learning technique and propose the dynamic dimensionality framework of PEU using textual data from the annual reports regarding the future and uncertainty the firm is perceiving directly. The PEU model focuses on the collective perception of members within an organization on their environment, since PEU is a function of both the perceiver and the environment. Drawing from the PEU model while integrating and upper echelon theory, we apply the dynamic dimensionality framework of PEU in Part II. We argue that when source heterogeneity of PEU is low, the parent EMNE is more likely to undertake foreign subsidiary divestment actions, and a decrease in the source heterogeneity of PEU will lead to an associated increase in the extent of foreign subsidiary divestment actions. Furthermore, as a boundary condition, when the CEO has a technology background, the impact of source heterogeneity of PEU on foreign subsidiary divestment actions will be weakened, for both likelihood and degree. Our final sample include 1,602 firm-year observations of public listed Chinese firms over eleven years (2005-2016), supporting all hypotheses.

IM: **A Role of Foreign Divestments for Early Internationalizing Firms**

Author: **Hirokazu Kano**, *Oita U.*
Author: **Toshimitsu Ueta**, *Copenhagen Business School*

Scholars in the field of international entrepreneurship (IE) have recently directed their attention toward the post-entry processes of early internationalizing firms. Existing studies have extensively examined expansionary moves and have found that early foreign entry is likely to facilitate subsequent expansion. However, the role of contracting moves such as foreign divestment has received less attention. Drawing on the Penrosean perspective, we investigate how foreign divestment affects the subsequent expansions of early internationalizing firms. We propose that, while expansion into culturally distant markets hinders subsequent expansions, foreign divestment can mitigate this Penrose effect by releasing and redeploying managerial resources. We also hypothesize that given the imperfect fungibility of managerial resources across locations, the mitigation of Penrose effects by divestments is pronounced for early internationalizing firms that have divested their subsidiaries in culturally distant markets. Our 18-year longitudinal study of 132 Japanese early internationalizing firms supports our hypotheses.

IM: **CEO Emerging Market Experience and De-Internationalization**

Author: **Hami Usta**, *Florida International U.*
Author: **Orhun Guldiken**, *Florida International U.*

Despite the growing importance of geopolitical crises for multinational enterprises (MNEs), we have yet to gain sufficient insights into mechanisms that connect top managers' decision-making with organizational responses regarding such crises. In this study, we explore a specific component of CEO international experience, experience in an emerging market, on MNE de-internationalization from Russia since the onset of Russia/Ukraine war. Using insights from Upper Echelons theory, we claim that CEO international experience in an emerging country influences the CEO's ability and motivation in managing uncertainties and will play a substantial role in explaining MNE de-internationalization as a result of the uncertainty brought up by Russia/Ukraine war. Using a sample of US MNEs, we found support that CEO international experience in an emerging market has a negative impact on a firm's degree of de-internationalization, while CEO age and CEO military background attenuates this relationship.

Participant: **Roisin Donnelly**, *Tilburg U.*

In recent years, we have seen increasing interest in deglobalization in the global economy, accompanying major disruptions such as the COVID-19 pandemic and the U.S.-China trade conflict. Yet much less scholarly effort has been spent on understanding this grand shift from globalization toward de-globalization. In particular, what factors triggered governments and companies to switch from benefiting from international expansion toward being concerned about the drawback and potential cost of international expansion? This symposium fosters the development of an important research agenda that helps us understand the incentives behind the shift from globalization toward deglobalization. It also reminds us of whether we are missing opportunities for going globalization. We believe the theoretical insights and empirical findings of this set of coherent research studies by leading scholars will not only have broader implications for firms' strategic responses, management, and adaptation to both the globalization and deglobalization process in the future but also open up new exciting avenues of research.

Creativity and Innovation in Management Education II

Session Moderator: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*

MED: Innovating Business Ethics Pedagogy for the Future   

Author: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*

Author: **Richard Jackson Major**, *Institut de Gestion Sociale Paris*

Author: **Neha Shivhare**, *Simon Fraser U.*

With spectacular corporate scandals, business ethics issues have been well-documented and the Association to Advance Collegiate Schools in Business (AACSB) recognizes in their criteria Ethics education as a critical topic. Nevertheless, a review of business ethics decision-making theories, psychology, and neuroscience research, indicates ethics pedagogy relies mainly on rationality, ignoring the importance of emotions (DeTienne, et al., 2019). Frederick (2008) contends that business education has failed to engage students into considering the morality of their decisions, due to exclusive rationalist pedagogy. Robertson and colleagues (2017) agree that both reason and emotion should be addressed in business ethics education. This research provides a qualitative analysis of business students' experiences in an innovative business ethics course based on virtue ethics. Virtue ethics calls for development of character through experiential learning and contemplative practices, leading to enhanced self-awareness and self-regulation. Innovation comes from taking an entirely novel approach to instilling ethical conduct, not through exclusive rational reasoning but by enabling students to better understand themselves, their values and become more aware of their emotions. Students engage in meditation, journaling, and other practices to develop awareness of self and of others and discernment in decision-making. Interview data of 29 students participating in a third-year business ethics class is analyzed to gain in-sights on their perceptions of these experiences. Students' reflections are interpreted through the lens of their Character and Emotional Intelligence development. Findings indicate that students obtain insights into themselves and others, suggesting enhanced self-awareness, regulation of emotions and improved relationships, as well as developing ethical judgment and behavior. This paper's contribution is to understand the impact of such practices on business students' experiences and on their ethical development.

MED: Trifold Architecture: A Pedagogical Framework for Impactful Management Education (WITHDRAWN)

Author: **Sharna Lee Wiblen**, *Sydney Business School, U. of Wollongong*

Author: **Laura Rook**, *U. of Wollongong*

In this paper, we integrate the discussion of teaching pedagogies and Work-integrated Learning (WIL) to encourage academics to avoid establishing arbitrary boundaries between WIL and non-WIL components of teaching and learning. We introduce the Trifold Architecture as a pedagogical framework and advocate for the intentional consideration of the rhetoric, research and reality, of a prescribed topic, subject or phenomena. Our model is a tool for teachers to adapt current teaching in a way that enables the co-evolution of a non-placement WIL approach with their already established learning objectives or into broader degree programs. Our approach ensures that lecture, subject and degree content is research-led, connections between theory and practice are established and that opportunities are provided for the systematic organisation and analysis of content while recognising and balancing many of the paradoxes inherently embedded in workplaces and careers. In so doing, we encourage teachers, from all disciplinary domains and degrees, to frame WIL as a process to deliver relevant and impactful learning.

MED: Future-Forward Education: A Multi-Stakeholder Approach to Gen Z Learning   

Author: **Jayashree Mahesh**, *Birla Institute of Technology & Science, Pilani*

Author: **Komal Rathore**, *Birla Institute of Technology & Science, Pilani*

Author: **Anil Kumar Bhat**, *Birla Institute of Technology & Science, Pilani*

This paper explores the evolving landscape of higher education in response to the unique characteristics and expectations of Generation Z students. The authors emphasize the need for a comprehensive framework that aligns teaching methods with the preferences of Gen Z, addressing challenges in pedagogy and learning. The futuristic learning framework adopted in the study proposes a multi-stakeholder systems approach, considering input from students, faculty, and administrators. This study provides an integrative literature review, drawing insights from 185 papers categorized into 13 key areas. It reviews the influence of societal shifts on educational approaches to generate new insights for the educational framework and covers diverse aspects including managing student expectations, addressing faculty needs, delivering subject matter, developing evaluation methods, and understanding industry requirements among others. It delves into transformational learning methods tailored for Gen Z, including content delivery, pedagogical techniques, and innovative e-learning technologies. The framework also highlights the importance of aligning educational outcomes with industry and other regulatory requirements, fostering an entrepreneurial mindset, and integrating contributions to society. The paper concludes by highlighting the need to introduce experiential pedagogy, specifically Service Learning to enrich Gen Z's learning experience, preparing them for leadership roles and societal responsibilities thereby helping them to self-actualize. Keywords: Generation Z, Futuristic Education, Service Learning

MED: Closing the Loop: Leader Development Through Active Experimentation   

Author: **Anthony Pescosolido**, *U. of New Hampshire*

Author: **Paul Harvey**, *U. of New Hampshire*

Kolb's (1971) experiential learning model describes four separate stages as part of the learning cycle, with each stage making a unique contribution to overall learning. While management educators have focused on designing "experiential" learning programs to better facilitate learning, it is often outside the educator's ability to require the fourth stage ("Active Experimentation") as a part of the learning experience. This study describes a natural experiment with working professionals, transitioning into a managerial role, in a cohort-based development program. After several cohorts completed the program, an additional component was introduced, a series of active "behavioral experiments". Participants in the revised program, with the Active Experimentation component, experienced significantly greater improvement in post-program ratings of leadership behavior and performance than did their peers in the initial cohorts of the program. These results suggest that active behavioral experiments, coupled with accountability for the implementation of those experiments, lead to both greater learning and greater opportunity for leadership development and behavioral change than more traditional leadership development approaches.

Innovations in Experiential Learning: Preparing Students for a Dynamic Work Environment

Panelist: **Elizabeth Clayton**, *Indiana U. Kokomo*

Panelist: **Andrew A. Hanna**, *U. of Nebraska, Lincoln*

Panelist: **Adam Robert Smith**, *Indiana U. Kokomo*

Panelist: **Melissa R. Medaugh**, *Francis Marion U.*

Moderator: **Leann Caudill**, *Coastal Carolina U.*

This panel symposium focuses on innovative experiential learning activities (ELA) that prepare management, entrepreneurship, and strategy students for a dynamic, complex, and global work environment. Panel members highlight ELA they employ—in and out of the classroom—that foster students' ability to approach complex organizational issues creatively and prepare students to take creative approaches to address complex issues in organizations. The purpose of this symposium is to provide educators an array of ELA demonstrated to be successful in enhancing student self-awareness and promoting self-development, offer guidance in aligning learning outcomes with ELA, and engage the audience in a rich discussion regarding designing and implementing innovative ELA.

History, Memory and Ethics

Organizer: **William Foster**, *U. of Alberta*
Organizer: **Diego Coraiola**, *U. of Victoria*
Panelist: **Francois Bastien**, *U. of Victoria*
Panelist: **Andrew Crane**, *U. of Bath*
Panelist: **Mollie Painter-Morland**, *Nottingham Trent U.*
Panelist: **Daniel Wadhvani**, *U. of Southern California*
Panelist: **Mike Zundel**, *U. of Liverpool Management School*
Discussant: **Christine Quinn Trank**, *Vanderbilt U.*

Despite the increasing interest in multitemporality, or how the past intersects with the present and the future to affect the way people enact social reality, the relationship between the past and (un)ethical behaviors has been typically overlooked in current debates. There is a lack of understanding of how history, memory and the past inform ethics, and a decided absence of normative direction about how managers should engage with the past. This symposium is intended to address our lack of understanding of how ethics shapes history and memory and how the past can inform our normative understanding of ethical behavior within and around organizations.

CEO Strategies and Organizational Innovation

Session Moderator: **Jim Hazy**, *Adelphi U.*

MOC: How Organizations Build Long Term Social Capital Value: The Mechanism of Social Capital Appreciation   

Author: **Jim Hazy**, *Adelphi U.*

Author: **Jim Gibbons**, *Forward Impact Enterprises, LLC*

The term social capital is an often used in organizations, but it is rarely described in detail or quantified as a component of an organization's value creation potential. In this conceptual paper we address this practical and research gap by proposing initiatives along two complementary dimensions: First, we propose an initial step on the road to clarifying and quantifying the behavioral drivers that constitute social capital and describe how the value of social capital increases, or appreciates, over time. We do this by identifying twelve specific behaviors from the literature, collectively called the APPRECIATOR Algorithm, that individual team members can enact individually and also reinforce in others as they contribute individually and in collaboration. Second, we introduce a design for an AI-enabled work-team engineering platform that supports the gathering, analysis, and use of previously hidden human interaction data to quantify and increase the value creating potential of human and social capital. The platform supports individual professional development by delivering context-specific, personalized smart-coaching insights and opportunities for virtual human mentoring on the user's smartphone. Importantly, each user owns and controls its data. Privacy is secure and protected because each user's data can only be accessed and used by that particular user.

MOC: Do External Founder CEOs Put a Strategic Emphasis on Innovation? An Imprinting Perspective

Author: **Lennart David Osses**, *Heinrich Heine U. Düsseldorf*

Existing research has compared the influence of two distinct types of CEOs on a firm's innovation strategy: Internal Founder CEOs, who are the founders of the venture they lead, and Professional CEOs, who are external managers. We introduce a "third breed", External Founder CEOs, who have founded other ventures before becoming CEO. Drawing on upper echelon and imprinting theory, we propose that founding a venture leaves an enduring founding imprint, priming External Founder CEOs to prioritize innovation strategies. However, as they transition to the corporate world, this imprint gradually gives way to a corporate imprint that reduces the focus on innovation, especially compared to an Internal CEO's approach. Further heterogeneity among External Founder CEOs can be explained by additional imprints from funding or exit events. We present empirical evidence for this by assessing innovation-related speech in investor communication and patent applications of 2,252 CEOs in 900 S&P 500 firms from 2000 to 2019. More broadly, by examining the interaction of founding and corporate imprints, our study offers new theoretical perspectives on the factors influencing the manifestation and decay of individual behavioral imprints over time.

MOC: Top Managers' Decision Dynamics in Business Model Innovation: A Temporal Perspective 

Author: **Elena Freisinger**, *Ilmenau U. of Technology*

Author: **Matthias Unfried**, *Nuremberg Institute for Market Decisions*

Author: **Simon Oertel**, *U. of Salzburg*

Author: **Michael Zuern**, *Nuremberg Institute for Market Decisions*

Business Model Innovations (BMI) are central decisions of the top management team and crucial for companies aspiring to establish enduring competitive advantages. However, there has been limited research focused on elucidating the factors influencing on top managers' decision-making processes regarding BMI. Our study adopts a cognitive perspective, delving into the dynamics between the prevailing contextual dynamics (opportunities and threats) that influence the decision to innovate a business model, prior BMI experiences (failures and successes), and a manager's temporal orientation. Empirically, we conducted a behavioral experiment involving 400 C-level and C-1-level executives from Forbes 2000 companies. Our findings show that both current threats and past failures inhibit BMI. Additionally, a temporal focus on the past and present increases the likelihood of deciding against a BMI. However, when combined with negative prior experiences with BMI, a focus on the past intensifies this effect, whereas a future-oriented temporal focus mitigates this negative impact. Our findings contribute to research on BMI and top management decision-making in this context. Moreover, we also add to the behavioral theory of the firm, offering insights into the cognitive and temporal dimensions that influence strategic decision-making in the realm of BMI.

MOC: Silent Minority: Racial Minority CEOs and Corporate Activism  

Author: **Yishu CAI**, *Department of Management, Business School, The Chinese U. of Hong Kong, HK*

Considering the significant impact of companies engaging in contentious sociopolitical matters, existing research has provided valuable insights into the antecedents of corporate activism. However, our understanding of CEOs' role in this process remains limited. This study examines the responses of racial minority CEOs to the Black Lives Matter (BLM) social movement. Drawing on attribution theory, we propose that minority CEOs may potentially attribute the causality of Blacks' disadvantages to insufficient personal efforts rather than an unequal external social system, making them less likely to respond to the BLM movement. Achieving high status despite racial discrimination leads them to believe that opportunities for self-improvement are accessible to Black individuals, who can capitalize on such opportunities to ascend the social ladder as they have. Consequently, they tend to underestimate the disadvantages caused by racism and are less inclined to advocate for their firms' engagement in radical social activism against racial discrimination. In line with attribution theory, we also hypothesize that this attributional bias will be amplified when racial discrimination is perceived as controllable and the disadvantaged situation as unstable. Our study identifies a novel and crucial antecedent of corporate activism while shedding light on the perpetuation of racial discrimination and inequality.

Exploring Behavioral Paradoxes in the Workplace

Session Moderator: **Neus Vila-Brunet**, *IESE Business School*

MOC: **What it Means to be Present at Work and Why it Matters? Two Instruments to Measure Presence at Work**

Author: **Neus Vila-Brunet**, *IESE Business School*
Author: **David del Rosario-Gilabert**, *Instituto de Neurociencia Avanzada de Barcelona (INAB)*
Author: **Gloria González-Morales**, *Claremont Graduate U.*
Author: **Silvia Recoder**, *U. Internacional de Catalunya*

We all have faced some situations in which we are interacting with someone, and we notice that this person is 'not fully here'. This creates a disconnect between parties and the outcome of such interaction is far from optimal. Now, with more hybrid work, we notice the lack of presence more frequently. Given the new work organizational trends and the value of 'being present at work' for better individual, team, and organizational outcomes, we investigate what it means to be present at work. As of today, there is no generic presence at work scale applicable to all industries. We develop and validate two presence at work scales. The Intra Presence at Work Scale (IAPWS) for activities and tasks performed solo, and the Inter Presence at Work Scale (IRPWS) for activities and tasks performed with other people. By developing and validating these two scales we provide a conceptual framework for the concept of Presence at Work that can be used in all kinds of work settings and fields. Data from seven working samples (overall $n=2,321$) provide support that (a) the proposed dimensions for the IAPWS and IRPWS exhibit good internal consistency and test-retest reliability; (b) they demonstrate convergent validity for motivation, personality traits and work outcomes; (c) content analysis of the qualitative data supports the identified dimensions. Overall, findings suggest that the IAPWS and the IRPWS have good psychometric properties and that differentiation between Intra and Inter relational situations provides novel insights into the role of Presence for work outcomes.

MOC: **Being Enabled? When and Why Help has Negative Consequences**

Author: **Jessica Paek**, *Fuqua School of Business, Duke U.*
Author: **Grainne Fitzsimons**, *Duke U.*

Little is known about how acting on behalf of a task pursuer can affect the task pursuer's motivation to attempt a task again in the future. In what we find to be a very common type of help, we find that individuals whose close other completes a task on their behalf report greater motivation to avoid the task in the future and greater reliance on others in the face of a similar task in the future. We also demonstrate that reduced self-efficacy mediates this effect. Across a variety of goal domains (e.g., domestic task, work-related task, and online speech task) and types of help-providers (e.g., romantic partner, professional mentor, and task partner), findings from recall experiments (Studies 1a and 1b), vignette experiments (Studies 2a, 2b, and 3), cross-sectional study (Study 4), and real-time interaction laboratory experiments (Studies 5a and 5b) support these hypotheses. These results demonstrate that help can have negative consequences for motivation.

MOC: **Job Wallowing: When Employees Enjoy Looking Back on Past Work Success**

Author: **Julian Decius**, *U. of Bremen*

Affective Events Theory makes assumptions about how a work success can trigger an immediate affective reaction in the employee. What has so far been neglected in organizational research is that an affective reaction from the past can spontaneously lead to a positive affect again after a certain time-lag. I introduce the construct of job wallowing to close this theoretical gap. Job wallowing refers to a psychological state associated with experiencing positive affect that occurs during autotelic (i.e., intrinsically rewarded, not purposeful) retrospection of past work success. Job wallowing occurs primarily during working hours, is event-related, and is not intentional. It therefore differs from related constructs such as off-job work-related thoughts, mind wandering, positive rumination, positive reflection, or problem-solving pondering. I conceptualize job wallowing based on Affective Events Theory and the results of a thematic analysis interview study (Study 1). Subsequently, I present a 4-item scale to operationalize job wallowing that does not overlap with relevant orbiting constructs (Study 2). I also examine convergent and discriminant validity of the scale with regard to the preliminary nomological network of job wallowing (Study 3) and discuss theoretical and practical implications of the construct.

MOC: **Kicking Yourself: Going Against Your Inclinations Increases Feelings of Control and Culpability**

Author: **Kaitlin Woolley**, *Cornell SC Johnson College of Business*
Author: **Sunita Sah**, *Sunita Sah*

Despite knowing better, people often follow the opinion of others when making decisions. Although people predict feeling less culpable if things go wrong after following someone else's suggestion (Study 2; $n=199$), our research shows that the opposite is true (Studies 1, 3-5; $n=3,000$). In studies involving real monetary consequences, we find that people actually feel more culpable when they go against their better judgment. This counterintuitive effect occurs because going against one's better judgment increases thoughts about alternative, better decisions that could have been made, which in turn paradoxically increases feelings of control over the situation. This effect occurs regardless of whether input is solicited (Study 1) or unsolicited (Studies 3-5) and is specific to situations where people go against their better judgment. It does not occur if they reject poor suggestions (Study 4) or follow input that aligns with their judgment (Study 5).

Participant: **Renske Erin Van Geffen**, *Amsterdam U. of Applied Sciences*
Discussant: **Gretchen Marie Spreitzer**, *U. of Michigan*

Supporting employee growth is increasingly critical for organizations in the new world of work. Employees who experience growth are not only less likely to leave, but are also more likely to perform at their best (DeCarbo, 2023). Yet, a fragmented literature on growth at work limits our understanding of how employee growth is achieved and its impact on employees and organizations. This symposium brings together outstanding junior and senior academics who will present novel research insights on employee growth. Specifically, the set of papers included in the symposium explore how employees achieve growth from a number of perspectives, considering the mindsets, behaviors, and sensemaking that positively contribute to growth. Moreover, these papers, and the planned discussion, explore how each of these perspectives may learn and contribute to each other to form a more coherent perspective on growth and how it is achieved in organizations.

Presenter: **Amy Wrzesniewski**, *The Wharton School, U. of Pennsylvania*

The maintenance of meaningful work is challenging and riddled with setbacks and struggles. However, as scholars acknowledge the challenges inherent in the pursuit of meaningful work, it is also notable that many forces also have the ability to promote, or enhance, work meaningfulness, potentially resulting in myriad tradeoffs. As forces at various analytical levels both foster and impede meaningful work, it is vital to understand these influential forces as well as how to navigate them. The presentations in this symposium address this important topic by discussing the many enablers and inhibitors for meaningful work and exploring how, despite a number of challenges, we can build more bridges toward meaningful work.

Ethical Foundations, Cultures, and Practices in Organizations

Session Moderator: **Henri Slob**, *Erasmus U. Rotterdam*

This session focuses on the ethical foundations, cultures, and practices that shape organizational behavior and outcomes. By bringing together these research streams, this session aims to deepen our understanding of the ethical dimensions of organizational life, highlighting the importance of compassion, culture, and socially responsible practices in driving positive organizational outcomes and creating value for stakeholders.

MSR: Religiosity and Corporate Environmental Responsiveness: Mediated Moderation Model

Author: **Farida Saleem**, *Prince Sultan U., Saudi Arab*
Author: **Yingying Zhang**, *International U. of Japan*

Drawing from value-belief-norm theory, dual process theory, and religiosity literature, we examine how the religiosity of top managers is linked with the environmental responsiveness of a firm through their personal values and environmental attitudes. Further, we introduced corporate identity as a boundary condition in the environmental attitudes and environmental responsiveness relationship. Two-wave data were gathered from 182 top managers working in small and medium-sized firms. We found differing impacts of intrinsic and extrinsic religiosity on personal values, environmental attitudes, and corporate environmental responsiveness. Secondly, we found that intrinsic religiosity indirectly impacts corporate environmental responsiveness through personal values and environmental attitudes, identifying the importance of conscious and unconscious processes. Results also support corporate identity as an important boundary condition.

MSR: Compassionate Love as an Ethical Foundation for the Stewardship Theory of Management

Author: **Henri Slob**, *Erasmus U. Rotterdam*
Author: **Anke Teeuw**, *Erasmus U. Rotterdam*
Author: **Harry Commandeur**, *Erasmus School of Economics, Rotterdam*

Research on organizational governance is often built on (assumptions from) the principal-agent dilemma. Central tenets of this theory are self-centered motives and opportunism in the situation of information asymmetry. This leads to the need for control and monitoring to prevent damage to the organization. An alternative approach is the stewardship theory of management. Stewards are assumed to act collectivistic always. Stewardship theory is built on the assumption of interest alignment between the principal and the steward. In the past decade, calls for more realism and a better understanding of stewardship theory have been published by leading scholars. We address these calls by adding compassionate love (Gr.: agape, Lat.: caritas) as an ethical foundation of the stewardship approach. Though stewardship theory and principal-agent theory have been argued to be complementary, these theories are built on entirely different models of man, thus their foundational constructs cannot be mixed. We build our theorizing on a relational view of man. Compassionate love as a core motive behind human behavior helps understand the relationship-oriented behavior of stewards. Moreover, we have a strong intellectual heritage providing insights into love as a fundamental mechanism, underpinning cognitions, behaviors and feelings. The human need for belonging, or relatedness, and their bounded willpower, bounded morality and bounded rationality, point to compassionate love as a cornerstone for an advanced understanding of the stewardship theory of management.

MSR: Enhancing the Ethical Culture of Organizations: A Longitudinal Study

Author: **Juliana Toro-Arias**, *U. Nacional de Colombia*
Author: **María Del Pilar Rodríguez-Córdoba**, *U. Nacional de Colombia*
Author: **PABLO RUIZ-PALOMINO**, *U. de Castilla-La Mancha*
Author: **JORGE LINUESA-LANGREO**, *U. de Castilla-La Mancha*

A supportive ethical culture (EC) can encourage moral behavior among employees and help them avoid wrongdoing. One option for fostering EC is ethics training but its longer-term effectiveness has rarely been examined, especially in countries lacking strong regulatory environments. Accordingly, we used the comprehensive, theory driven approach of Warren, Gaspar and Laufer (2014) to train the upper echelons (18 males, 16 females) from two organizations in Colombia. In turn, they agreed to use their influence in a manner that would cascade through the hierarchy. EC perceptions of 275 staff across the companies (n1 = 193, n2 = 82; total = 275) were assessed 1-2 months and 9-10 months post-training. Relative to pre-training levels, both overall EC and its subdimensions (Kaptein, 2008) significantly increased 1-2 months out, but these gains were not sustained 9-10 months later. Qualitative findings suggested that ensuring the effective transfer of training from the upper echelons was a challenge.

MSR: Relationship Between Firm Value, Engagements in CSiR and CSR

Author: **Anita Mendiratta**, *Keshav Mahavidyalaya, U. of Delhi*
Author: **Shveta Singh**, *Indian Institute of Technology, Delhi*
Author: **Surendra Singh Yadav**, *Indian Institute of Technology, Delhi*
Author: **Arvind Mahajan**, *Texas A&M U., Mays Business School*

Unlike previous studies hitherto limited to examining one or two bi-directionality in corporate social irresponsibility (CSiR), corporate social responsibility (CSR), and firm value, we investigate all three bi-directional relationships. Therefore, we investigate the bi-directional relationship between -1) environment, social, and governance (ESG) controversies and firm value; 2) corporate social performance (CSP) and firm value; and 3) CSP and ESG controversies, utilizing a panel data set for Indian companies from 2008 to 2018. We check the optimal lag order, cross-dependence (CD), and stationarity of our variables of interest. Next, we employ a panel vector autoregressive (panel VAR) model with a system generalized method of moments (system GMM) estimation. Our results indicate three imperative findings. First, it reveals a uni-directionality of CSR engagements and value supporting good management. Second, it approves bi-directionality of CSiR engagements - value, suggesting reverse paths presence through virtuous circle. That is, a decrease in prior ESG controversies surges value, and this rise lessens ESG controversies further. Finally, our outcomes confirm bi-directionality of ESG controversies - CSP, indicating that capitalizing in earlier CSR cuts following CSiR engagements. This reduction reduces CSR engagements further.

Taking a Pause: Exploring Contemplative Practices for the Work of Diversity, Equity, and Inclusion

Organizer: **Renee Bradford**, *Antioch U. Graduate School of Leadership and Change*

Organizer: **Christina M. Walker**, *Lenoir-Rhyne U.*

Panelist: **Ranjeeta Basu**, *California State U., San Marcos*

Panelist: **Andre Leidenheimer Ruiz Soler**, *Microsoft Corporation*

Panelist: **Emmanuel Small**, *Stockton U.*

This panel symposium seeks to explore research and models of contemplative practice that support the work of Diversity, Equity, and Inclusion (DEI) organizationally and individually. Far from serving as a way to evade the world's problems, contemplative practices center a person, transforming the practitioner's vision of the world to effect positive change. Theoretically, we hope to engage the research streams of the panelists to uncover common themes in their investigations and in the models that have developed. Practically, we hope this symposium conversation will also provide beneficial applications and principles for addressing issues of social justice in organizations. To this end, the structure of the symposium includes time for the audience to join the conversation by engaging in a moderated, interactive discussion.

It's All About Motivation!

Session Moderator: **Bard Kuvaas**, *BI Norwegian Business School*

OB: Incentive Effects of Perceived Pay for Performance: Controlling and Informational Effects of Pay 

Author: **Bard Kuvaas**, *BI Norwegian Business School*

Author: **Haien Ding**, *BI Norwegian Business School*

Pay for performance (PFP) is widely adopted to incentivize and reinforce employee behavior towards organizational goals, but employees vary concerning how they perceive and react to PFP. Based on self-determination theory, we develop a model where the effects of perceived individual PFP on intrinsic motivation, job-related anxiety, and turnover intention are mediated by two distinct proximal motivational states: controlling and informational effects of pay. We also draw on social exchange theory to argue that the effects of perceived individual PFP on controlling and informational effects of pay are moderated by employees' social and economic exchange relationships with their organization. A three-wave study of 903 employees largely supports our mediation hypotheses that perceived individual PFP can have both favorable and unfavorable effects on important employee outcomes. In addition, a social exchange relationship weakened the positive association between perceived individual PFP and a controlling effect of pay. Since we controlled for perceptions of both procedural and distributive justice of pay, several pay characteristics, the feeling of being trusted and close monitoring by the immediate supervisor, and individual differences in desire for money, our findings provide novel and robust insight into the complex nature of the effects of employee perceptions of PFP. This insight carries practical implications for organizations seeking to intrinsically motivate employees without increasing their ill-being and intention to leave the organization.

OB: Motivation to Restore: Scale Development and Validation

Author: **Baniyelme D. Zoogah**, *DeGroot School of Business, McMaster U.*

Defining motivation to restore (MTR) as the degree to which an actor is aroused to initiate and persist in restorative activities with the goal of achieving relational value, I develop and validate in 6 major studies a scale of MTR as a behavioral set comprising activation (exertion of effort), determination (persistence in the endeavor), relevance (meaning or value of the endeavor), and anxiety (apprehension about potential consequence) to restore a situation, event, or act of a relationship. The 18-item MTR Scale is internally consistent and reflects the theorized components. The relationships of the MTR Scale to other measures demonstrate concurrent and discriminant validity. Furthermore, MTR is responsive to restorative situations as evidenced by data gathered through cross-sectional designs. It offers a brief, internally consistent, and valid self-report measure that will be useful to OB researchers and applied professionals.

OB: You Can't Make Bricks Without Straw: How and When Proactive Teams Are More Creative 

Author: **Hongyan Wang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Youwei Zhu**, *Wilmar International Limited*

Author: **Jingqiu Chen**, *Shanghai Jiao Tong U.*

Author: **Wee-Liang Tan**, *Singapore Management U.*

In the ever-evolving business landscape, scholarly attention has been predominantly directed toward understanding how proactive behaviors enhance individual task performance. However, the extrapolation of these findings to team dynamics remains ambiguous, especially in terms of the mechanisms and boundary conditions involved. Grounded in the person-situation interaction perspective, we propose a conceptual model indicating that team proactive personality indirectly affects team creativity via team improvisation, with environmental munificence and team task variety—external and internal team contextual factors, respectively—separately and jointly enlarging the aforementioned indirect relationship. Employing multisource, multiwave data, we find that team proactive personality can boost team creativity through team improvisation. This effect is amplified in teams operating in munificent external environments. Furthermore, environmental munificence and team task variety jointly strengthened the indirect effect. Our research enriches understanding by elucidating the synergistic effects of personality traits and external/internal team contextual factors on creativity.

OB: Facilitating Individual Scanning Behavior: The Impact of Goal Orientation and Contextual Antecedents

Author: **Sebastian Woelke**, *Johannes Gutenberg-U. Mainz*

Author: **Andranik Tumasjan**, *Johannes Gutenberg U. Mainz*

Engaging employees throughout the organization in scanning the environment for new information about trends, technologies, and customer needs is relevant for firms to timely identify potential opportunities and threats. However, little is known about the individual characteristics and contextual factors that facilitate this valuable employee behavior. Our study investigates how individuals' goal orientation (i.e., dispositional motivations that shape individuals' approach to challenging situations) influences their engagement in environmental scanning behavior. Specifically, we hypothesize that individuals with higher learning goal orientation (i.e., motivated by the desire for self-improvement) and higher performance-prove goal orientation (i.e., motivated by the desire to prove their competence to others) engage more in environmental scanning. We further test how an individual's routine use of social information systems (i.e., social and collaboration technologies) mediates these relationships and how extrinsic rewards (i.e., formal and informal rewards) function as contextual boundary conditions. The results of a multiple administration survey with $N = 457$ employees across different hierarchical levels indicate that learning goal orientation and performance-prove goal orientation strengthen employees' engagement in environmental scanning, and that social information systems use mediates these relationships. While extrinsic rewards amplify the effect of performance-prove goal orientation on environmental scanning, we find only informal rewards amplifying the effect of learning goal orientation. Our study offers implications for research on environmental scanning, by offering insights into the role of individual dispositions and extrinsic rewards in facilitating employees' environmental scanning behavior.

Advances in Motivation Research

Session Moderator: **Marina Astakhova**, *U. of Richmond*

OB: **A Quintet of Work Motivations Through the Lens of Latent Profile Analysis: A Cross-Cultural Study**   

Author: **Marina Astakhova**, *U. of Richmond*

Author: **Violet Ho**, *U. of Richmond*

Author: **Alexander S. McKay**, *Virginia Commonwealth U.*

Recent work motivation research has focused on identity-based work motivation, such as work passion, calling, and grit. However, despite their conceptual overlap, to date, such motivations have been studied in isolation, spawning the criticism of conceptual haziness and a failure to account for the inherent complexity in individuals' motivational arsenal. To address the above, we adopt a person-centered approach to develop a Quintet-of-Work-Motivations typology that describes meaningful subgroups of individuals whose motivational profiles at work comprise different combinations of five work motivations: harmonious and obsessive passion, calling, consistency of interest, and perseverance of effort. In Study 1, using a sample of U.S. workers, we establish four motivational profiles, Gritty Interest, Average Joes/Janes, Living the Dream, and Fleeting Obsessives, four of which we replicate in Study 2 and demonstrate how they are uniquely related to job satisfaction and emotional exhaustion. In Study 3, we use data from Chinese workers to test the generalizability of our model and find that only the Average Joes/Janes and Fleeting Obsessives profiles were replicated. However, a new profile, Fleeting Dreamers, emerged in China. Our results emphasize the equifinality of work motivation where there is no one-size-fits-all configuration of optimal motivation; instead, person- and context-specific motivational profiles uniquely combine to make up the motivational quintet.

OB: **Managing Your Images Under Workplace Gossip: A Regulatory Focus Perspective** 

Author: **Yuming Wang**, *School of Economics & Management, Tongji U.*

Author: **Jinlian Luo**, *Tongji U.*

Author: **Wenan Hu**, *Shandong U.*

Author: **Xianglu Wang**, *Tongji U.*

Author: **Jing Zhong**, *Tongji U.*

Informed by regulatory focus theory and the literature on impression management, this research seeks to disentangle the implications of receiving workplace gossip from coworkers. We construct a comprehensive model that elucidates the contexts and mechanisms through which two distinct types of workplace gossip give rise to unique impression management motives and, consequently, paradoxical behaviors in recipients. On the one hand, we propose that positive gossip will activate recipients' image enhancement motives, which prompt them to bolster their images by engaging in organizational citizenship behavior and ingratiation. On the other hand, negative gossip will elevate image preservation motives, which inhibit their deviant behavior. In addition, we expect that the strengths of these two motivational pathways may vary depending on a contextual characteristic: moral intensity. Results from a three-wave multi-source survey lend support for the hypotheses. Implications for theory and practice are discussed.

OB: **Audience and Goal Setting**

Author: **Qinglin Zhao**, *Texas A&M U.*

This paper explores the impact of sharing goals with an audience on individuals' initial goal setting. While previous research focused on the positive effects on performance, little attention has been given to how the goal audience influences the setting of initial goals. The paper proposes that the presence of a goal audience may lead individuals to set either higher or lower goals compared to private settings. Moderators such as individuals' approach and avoidance temperament, previous performance, and affect are suggested to influence this relationship. The research contributes to current research by providing insights into the nuanced dynamics of goal audience influence on goal setting.

 OB: **Goal Orientation and Discontinuous Growth in Psychological Capital** 

Author: **An-Chih Wang**, *China Europe International Business School (CEIBS)*

Author: **Jean SK Lee**, *China Europe International Business School (CEIBS)*

Author: **Chou-Yu Tsai**, *Binghamton U.-State U. of New York*

To understand the association between goal orientation and psychological capital (PsyCap) growth over time, we conduct a longitudinal, event-based study with 250 executive MBA students who participated in a Gobi Desert trek. We tracked their PsyCap at four time points (i.e., one month before, one day before, one day after, and one month after the trek event). Leveraging a sensemaking perspective, we propose an event-based model aimed at elucidating the discontinuous growth of PsyCap, contingent on different types of goal orientation. Specifically, we predict that performance-prove goal orientation enhances the strength of emotional experiences that need to be made sense of, thus contributing to a short-term enhancement of PsyCap during the event. In addition, learning goal orientation initiates long-term sensemaking, thereby facilitating after-event PsyCap growth. The results for a discontinuous growth modeling support our hypotheses and further indicate that individuals high in both performance-prove and learning goal orientations achieve the most significant event-based PsyCap growth.

Collective Benevolence: Doing Good in Teams

Session Moderator: **Roman Angel Gallardo**, *U. of Chicago Booth School of business*

OB: **Rarity Boosts In-Group Love: When and Why** 

Author: **Roman Angel Gallardo**, *U. of Chicago Booth School of business*

Author: **Austin Smith**, *U. of Chicago Booth School of business*

Author: **Uri Zak**, *The Hebrew U. of Jerusalem*

Author: **Darinel Lopez**, *U. of Puerto Rico*

Author: **Alex Koch**, *U. of Chicago Booth School of business*

Sharing membership in a group increases appreciation of, and prosociality towards, one another. We conjectured that this in-group love is stronger among relatively small (i.e., rare) groups. We substantially developed the literature on this effect through seven studies. Studies 1-3 showed that rarity boosted in-group love across various groups in real-life interactions. Studies 4-6 showed the robustness of the effect by generalizing it to artificial, random, and fleeting in-groups and established boundary conditions. The effect required the in-group to be a minority no larger than 33%, and the effect vanished for in-groups with hundreds of members (i.e., absolute group size matters). Study 7 tested possible mediators and suggested that rarity boosts in-group love because the rare (vs. common) in-group better satisfies its members' fundamental needs for standing out, blending in, and cooperating reliably, consistent with Optimal Distinctiveness Theory and other theoretical accounts. In sum, our research established the ecological validity, boundary conditions, and explanations of the robust effect that rarity boosts in-group love.

OB: **Team Level Consequences of Leader Punishment on Unethical Pro-Team Behavior** 

Author: **Han Li**, *Peking U.*

Author: **Shimin Zhang**, *Hong Kong Polytechnic U.*

Author: **Wenqing Yu**, *Zhejiang U.*

Author: **Yi Su**, *Zhejiang U.*

Author: **Shenjiang Mo**, *Zhejiang U.*

Leaders exert punishment to uphold team goals and norms at work. But what effects do leader punishment on unethical behaviors intended to benefit the team (unethical pro-team behavior, UPB) have on team outcomes? Integrating the motivated information processing in group model and the paradoxical nature of UPB, we investigate how and when leader UPB punishment triggers team systematic information processing (i.e., team reflexivity) and subsequent team outcomes. Using a multi-source, time-lagged field study with 93 team leaders and 414 team members, we found that team reflexivity mediates the positive effects of leader UPB punishment on team performance and team creativity. Moreover, team performance pressure moderates the indirect relationships. Specifically, higher team performance pressure amplifies the positive effect of leader UPB punishment on team performance and creativity via team reflexivity. These findings highlight the important role of leader UPB punishment in teams.

OB: **Bestowing Roses, Lingering Fragrance: How Mentor Autonomy Support Influences Their Own Thriving** 

Author: **Jian Zhang**, *U. of Science and Technology Beijing*

Author: **Shuai Peng**, *U. of Science and Technology Beijing*

Author: **Jingjing Li**, *College of Economics and Management, Beijing U. of Technology*

Author: **Na Zhang**, *Beijing Information Science and Technology U.*

Most of the existing studies on the mentoring relationship involve protégés, and the benefits that mentors can obtain from them have not been systematically investigated. By integrating relationships motivation theory and self-expansion theory, we propose a moderated mediation model to explore how and when the mentor's autonomy support impacts the mentor's thriving at work. Through the statistical analysis of the three-wave data of 240 pairs of mentor-protégé, the results show that: (1) mentor autonomy support is positively related to the mentor's thriving at work; (2) mentor's relatedness satisfaction mediates the positive relationship between mentor autonomy support and the mentor's thriving at work; (3) mentor autonomy support can have a positive impact on mentor's thriving at work through two chains mediating effect of (a) mentor's relatedness and competence satisfaction, (b) mentor's relatedness and autonomy satisfaction; (4) protégé's task performance positively moderates the relationship between mentor autonomy support and mentor's relatedness satisfaction. The higher the protégé's task performance, the stronger the positive correlation between mentor autonomy support and the mentor's relatedness satisfaction. This research has opened up a new path for exploring the influence of the mentoring relationship on mentors and determining the independence and synergy among the three basic psychological needs satisfaction.

OB: **The Impact of Leader Relational Affect on Organizational Psychological Safety and Performance**  

Author: **Hendrik Wilhelm**, *U. of Witten/Herdecke*

Author: **Ludwig Kuntz**, *U. of Cologne*

Author: **Michael Wittland**, *Bielefeld U.*

Psychological safety is crucial for learning in organizations, ultimately benefiting organizational performance. While the importance of leaders in fostering organizational psychological safety is recognized in previous research, there is a lack of theory and evidence on the leader-specific factors that promote or hinder it. In this study, we develop and test theory on how leader relational affect—the emotions leaders elicit in each other when working together—shapes organizational psychological safety and performance. Using unique matched data from 66 leader dyads in neonatal intensive care units (NICUs) in Germany, survey data from 1,500 subordinates, and objective performance data over three years, our results largely support our theory. We discuss theoretical implications for the literatures on psychological safety and relational affect, as well as implications for managers.

Session Moderator: **Aisha Aliyu**, Brock U., Canada

OB: **Navigating the Workplace Cyberbully Maze: Climate, Dark Triad Personality, and Victim's Reactions**  

Author: **Aisha Aliyu**, Brock U., Canada
Author: **Saima Naseer**, Brock U., Canada
Author: **Dave Bouckennooghe**, Brock U.

Building upon the foundations of Stress as Offence to Self (SOS) theory, this study delves into the intricate three-way interaction of workplace cyberbullying (WCB), caring climate (CC), and dark triad personality (DTP) in relation to employees' knowledge sabotage behaviors and psychological strain. Through a three-wave data collection effort, we garnered responses from 257 employees spanning various sections in the USA and Canada. Our analysis indicates that WCB significantly exacerbates tendencies for knowledge sabotage and induces psychological strain among employees. This effect is particularly pronounced when the organization's caring climate is robust and when the individual exhibits high Dark Triad Personality traits. Notably, the link between cyberbullying and knowledge sabotage is the most potent when both caring climate and DTP are elevated. By unmasking the moderating effects of both a situational factor (caring climate) and a dispositional trait (DTP), our research augments the understanding of dark OB literature, elucidating the specific contexts and conditions that amplify the negative ramifications of WCB for its victims.

OB: **The Joint Effects of Honesty-Humility, Ethical Climate, and Ethical Leadership on Workplace Deviance** 

Author: **Kubilay Gok**, Winona State U.
Author: **Chandrashekhhar Lakshman**, Mount Marty U.
Author: **Linh Chi Vo**, ESDES, U. Catholique de Lyon
Author: **Stijn Decoster**, Zayed U.

Despite the significant accumulation of knowledge, the workplace deviance literature has not adequately examined ethical climate, ethical leadership, and honesty-humility, especially in a cross-cultural context. Using a social cognitive theory perspective of person-situation interaction, we contribute by examining the direct and interacting effects of these constructs in countries where these issues have not been examined. As hypothesized, we find support for an interaction between ethical climate and ethical leadership and a three-way interaction with honesty-humility on deviance. We also find similarities (cross-cultural generalizability) and differences (divergence) across the four cultures. Our results explain how personal and situational factors influence supervisor- and organizational deviance and how these vary across cultures. Our model and findings highlight the importance of ethical climate and its interactive effects as it influences deviance, thereby making a novel contribution. We discuss findings, limitations, and future research directions.

OB: **How do Third Parties React to Customer Mistreatment?**

Author: **Yitong Fu**, Harbin Institute of Technology
Author: **Iris D. Zhang**, Harbin Institute of Technology
Author: **Mo Chen**, School of Management, Harbin Institute of Technology

Customer mistreatment is an inevitable part of service sectors. Although we have accumulated certain knowledge about how employees respond to experienced customer mistreatment, less is known about how third parties react to customer mistreatment. Based on deontic justice theory, we propose that observed customer mistreatment increases observers' sympathy for coworkers and anger at customers, subsequently enhancing their adaptive behaviors in the workplace, namely, coworker-directed helping and customer-directed cheating. We further suggest that such effects will be influenced by observers' team identification and prosocial identity. Specifically, observers with higher (vs. lower) team identification will be more inclined to experience sympathy for coworkers and anger at customers, and those with higher (vs. lower) prosocial identity will be more inclined to engage in coworker-directed helping and less inclined to customer-directed cheating. We tested our hypotheses using a multi-wave and multisource field study. The results support our hypotheses. Implications to theory, research, and practice are discussed.

OB: **Misaligned Theory and Operationalization: A Scoping Review on Social Dynamics of Unethical Behaviors** 

Author: **Erdem Ozan Meral**, Department of Psychology, U. of Amsterdam
Author: **Hannah Leah Moore**, Amsterdam Business School, U. of Amsterdam

The increasing reliance on teams in organizations creates ample opportunities for employees to collaborate with, observe, or intervene when other employees engage in unethical conduct. To understand the social dynamics in these interactions, scholars have called for studying the interpersonal dynamics of unethical behavior. Yet, studying the dynamics of group processes is a notoriously challenging endeavor: one that many publications fall short of in some way. To examine the state of the literature, we conducted a multidisciplinary scoping review of empirical work on unethical behaviors, where the influence of more than one individual is considered. Assisted by a machine learning algorithm, we scanned 25k publications found across multiple databases and identified 487 relevant articles. We critically analyzed the included work with a focus on methodological characteristics. The results revealed a misalignment between theory and operationalization in terms of conceptual and methodological levels of analysis and temporal focus. Overall, we synthesized multidisciplinary knowledge on "how" the social dynamics of unethical behaviors are studied and identified its limits and gaps, as well as its strengths. We finalized with a discussion of methodological recommendations for realigning theory and operationalization, providing the unethical behavior scholar in management, psychology, and beyond with crucial resources.

Moving Up: Power and Status Dynamics

Session Moderator: **Anne Burmeister**, *U. of Cologne*

 **OB: Reframing Networking as Benefiting the Other Person (vs. Oneself) Encourages Advice Seeking**  

Author: **Anne Burmeister**, *U. of Cologne*

Author: **Daniel Z. Levin**, *Rutgers U.*

Networking is an effective way to facilitate personal development and career success and is especially relevant during the job search process. However, its potential benefits are often not realized because people are reluctant to reach out to would-be advice givers. To overcome this reluctance, prior research has emphasized self-oriented benefits of reaching out—such as receiving valuable advice and job leads—to motivate people to initiate more informational interviews and other networking behavior. We challenge this self-oriented perspective on networking, suggesting that one obstacle to networking is that people are often anxious about being a burden on others. Thus, we designed an intervention to reframe networking in a way that is other-oriented, emphasizing how it can benefit the advice givers, such as making them feel helpful or important or giving them a fresh perspective. We hypothesized that an other-oriented (compared to a self-oriented) networking intervention would increase networking intentions (Study 1) and networking behavior (Study 2) by advice seekers and that this effect would be mediated by a reduction in burden anxiety (Study 3). We find consistent support for our hypotheses in three studies of job seekers: an online experiment, a field experiment, and a longitudinal field experiment.

OB: Tipping the Scale: Follower Relational Power 

Author: **William Phillips**, *Emporia State U.*

Author: **Vickie Coleman Gallagher**, *Department of Management, Cleveland State U.*

Author: **Pakanat Kiratikosolrak**, *Virginia Tech*

Organizational structures continue to evolve to empower employees and allow for more autonomy, creativity, and the like. However, the notion of empowerment clearly indicates that “power” is pushed down to the followers. To our surprise, the measurement of follower power is lacking. This research utilizes a two-study methodology to test a multidimensional measure of follower self-perceived power, analyzing the data with EFA, CFA, convergent, discriminant, and predictive validity tests. Strengths, limitations, and future research are discussed.

OB: Sizing Up Status Signal: An Integrative Framework

Author: **Zachariah Brown**, *HKUST Business School*

Status signals are essential for an inferring and communicating hierarchical rank. There is disagreement across literatures on how status signals are defined and understood. Which signals are most similar to one another? What are the costs and benefits of signally status depending on its category and context? To answer these questions, we present an updated definition of status signals that is relevant across the social sciences and offer a two dimensional framework that differentiates status signals into four categories. Our model highlights how signals within each of the four resulting categories share similarities in the costs, the benefits, and the assumptions of audience knowledge. Our status signals framework also offers dynamic predictions that capture how different signals are more versus less beneficial as one advances up a hierarchy. This framework not only pushes theoretical models of social hierarchy forward but it also offers practical guidelines for effectively signally one's actual and desired status

 **OB: Unrequited Workplace Relationships and the Emergence of Negative Ties in Organisational Networks** 

Author: **Vojkan Nedkovski**, *Non-affiliated*

Author: **Marco Guerci**, *U. degli Studi di Milano*

Author: **Dennis Holding Jacobsen**, *Yale School of Management*

Author: **Diego Stea**, *Copenhagen Business School*

Workplace relationships are inherently dynamic, wherein previously positive or neutral interpersonal ties can shift toward negativity. Emergent theoretical and empirical evidence suggests that negative ties are particularly detrimental in organisational contexts. Yet, little has been done for understanding why workplace relationships can pursue a declining trajectory and eventually, transition into negative ties. Drawing upon social exchange and self-regulation theories, this study aims to shed light on this transition process. We posit that unrequited relationships, where one party invests more than the other in a workplace relationship, increase the likelihood of transitioning into negative ties over time. Furthermore, we argue that narcissistic personality traits amplify these effects, while empathic concern serves as a buffer, counteracting the influence of unrequited relationships. We find empirical evidence for these arguments in a longitudinal study conducted among the employees in an Italian architectural firm. The trajectory of workplace relationships declines due to unharmonised social exchanges between dyad members, with these effects moderated by individual differences in narcissism and empathy.

Cracking The Glass Ceiling: Reducing Demographic Disparities at Work

Session Moderator: **Chloe Kovacheff**, *U. of Toronto*

OB: **Disconnected Disclosures: Employee-Manager Asymmetries in Navigating Invisible Disabilities** 

Author: **Chloe Kovacheff**, *U. of Toronto*

Despite the ubiquity of invisible disabilities (IDs), workplace discrimination towards employees who have them remains pervasive. Consequently, the act of disclosing these stigmatized disabilities is often fraught with professional risk. This research investigates the disclosure strategies that employees with IDs tend to adopt and whether they actually mitigate bias and maximize managerial support. Drawing from stigma theory and signaling theory, I propose two dimensions of invisible disability disclosure strategies: transparency (the amount of information provided); and activeness (the extent of accommodations requested). I theorize a critical disconnect between the disclosure strategies that employees tend to use and those which foster positive managerial reactions. Six studies employing correlational and experimental designs with diverse online and field samples investigate this asymmetry between employees and managers, and its critical implications for employees with IDs. The results demonstrate that to avoid stigma, employees tend not to provide details nor to request accommodations, when in fact strategies that are both transparent and actively request accommodations counteract stereotypes and enhance managerial support. Counterintuitively, by 'owning' their stigmatized identities and requesting clear solutions, employees with IDs can increase managerial perceptions of ability and the likelihood of receiving accommodations following disclosure.

OB: **Out of Fashion: The Stigmatization of Gendered Conversation Topics at Work**

Author: **Ren Li**, *Hong Kong Polytechnic U.*

Author: **Jill Perry-Smith**, *Emory U.*

This paper explores the stigmatization of gendered conversation topics in workplace settings, focusing on the impact of female-gendered topics on perceptions of competency and engagement at work. Utilizing a mixed-method approach, the study first employs qualitative interviews with full-time employees to examine attitudes towards fashion—a prototypical female-gendered topic. Findings reveal that individuals interested in fashion, regardless of gender, anticipate negative evaluations and social sanctions, leading to self-regulation and environmental scanning before engaging in conversations about fashion at work. The paper then presents an experimental study to quantitatively assess the impact of discussing fashion versus sports (a male-gendered topic) on perceptions of agentic and communal characteristics, as well as work engagement. Results indicate that individuals engaging in fashion conversations are perceived as less agentic and less engaged in work compared to those discussing sports, highlighting a stigmatization associated with female-gendered conversation topics. This study contributes to the understanding of gendered workplace communication, its effects on professional dynamics, and offers insights into fostering more inclusive and equitable workplace conversations.

OB: **Timing for Women: Evidence and Effectiveness of Women's Late Application for Promotion**

Author: **Wenqi Liu**, *U. of International Business and Economics*

Author: **Yuelong Wang**, *Jiangxi U. of Finance and Economics*

Author: **Carol Ying Wang**, *International Business and Economics*

Author: **Zhengqiao Chen**, *U. of International Business and Economics*

Women are known to be underrepresented in leadership positions than their male counterparts, but the underlying mechanism for this disparity remains contested. Drawing upon the social role theory, we propose that the gap originates from the difference in the timing of promotion applications. Using archival record of employees' application for promotion in a private bank in China between 2016 and 2022, we revealed that female employees applied for a promotion to middle-level management later than their male counterparts (i.e., the women employees had a longer job tenure than men at the time of promotion application). Follow-up analyses revealed that female employees applying for promotion at a later timing seem to have a greater success rate of promotion, while male employees applying for a promotion at an earlier timing seem to have a greater success rate of promotion, suggesting that female employees' later application for promotion may be not a reflection of low career aspiration among themselves, but a strategic choice encountering the evaluators' bias against women's early promotion application. Our findings may provide insights in understanding the reasons accounting for gender difference in managerial roles representation from both the applicants' and the evaluators' perspectives.

OB: **Breaking the Glass Ceiling: Leveraging Signals for Female Career Advancement in Creative Occupations**

Author: **Hang Liu**, *Tsinghua U.*

Author: **Shuye Lu**, *Tsinghua U.*

Author: **Ying Liu**, *Renmin U. of China School of Public Administration and Policy*

Author: **Qiushi Xie**, *School of Economics and Management Tsinghua U.*

Author: **Yanglinfeng Zheng**, *School of Economics and Management Tsinghua U.*

Despite research suggesting equal levels of creativity between genders, women frequently find themselves at lower career echelons compared to their male peers in creative occupations. Drawing on the signaling theory and gender stereotyping perspective, our research proposes a dual-process judgment model, positing that career progression is influenced by perceptions of general competence and creative potential within organizational management. We assert that by employing a combination of competence-related and creativity-related signals, female creative professionals can effectively counter prevailing negative stereotypes and bolster their career prospects. Through conducting an extensive survey of 14,467 creative professionals across China, we found that signals of competence, such as full-time employment and high visibility of domain-specific skills, along with creativity signals like association with culturally rich ethnic minorities and accolades for creative achievements, collectively mitigate the detrimental association between female gender and career success. These insights contribute significantly to the discourse on gender, creativity, and career advancement, offering actionable recommendations for individuals and organizations in the creative sectors to enhance perceptions and improve the career trajectories of women, thereby promoting a more equitable and diverse professional environment.

Leading or Preventing Employees to do Good

Session Moderator: **Ming Lou**, Harbin Engineering U.

OB: Opportunity or Burden? A Dual-path Model Linking Leader Feedback-Seeking Behavior to Employee Voice 

Author: **Ming Lou**, Harbin Engineering U.
Author: **Eryue Teng**, Harbin Engineering U.
Author: **Yi SU**, Harbin Engineering U.

Drawing on social information processing theory and workplace anxiety theory, we develop and test a dual-path model to unpack the cognitive and affective mechanisms, captured by organizational-based self-esteem and workplace anxiety, through which leader feedback-seeking behavior affects employee voice. We further propose that the apparent sincerity of leader and employees' perceived overqualification act as important boundary conditions of these indirect effects. Using three-wave, multisource data from 508 employees and 68 leaders, we find that leader feedback-seeking behavior has a positive indirect effect on employee voice via organizational-based self-esteem and an inverted U-shaped indirect relationship on employee voice via workplace anxiety. Additionally, apparent sincerity of leader enhances both the positive and inverted U-shaped indirect effects of leader feedback-seeking behavior on employee voice. Employees' perceived overqualification enhances the positive indirect effects of leader feedback-seeking behavior on employee voice via organizational-based self-esteem, whereas mitigates the inverted U-shaped indirect relationship via workplace anxiety. Overall, our research contributes to a fine-grained understanding of both the linear and curvilinear effects of leader feedback-seeking behavior on employee voice and sheds light on when and how leader feedback-seeking behavior can promote employee voice.

OB: Keeping a Healthy Distance: Leader's Close Monitoring and Followers' Voice - Silence Behavior

Author: **MINJU OH**, Seoul National U.
Author: **Sunghyuck Mah**, Seoul National U.
Author: **Jihye Lee**, DGIST
Author: **Minjun Yoo**, Seoul National U.

This study expands the close monitoring literature by unraveling how and when the leader's close monitoring makes their followers freeze and keeps them from speaking (i.e., voice and silence behavior). Specifically, we propose that this negative influence of close monitoring can be weakened in follower telework situations. To test our model, we conduct a field study for the MBA sample (Study 1) and a general sample survey (Study 2). In study 1, we found that psychological safety stood as a key mechanism linking close monitoring and voice behavior. Further follower telework intensity weakened the negative effects of close monitoring on psychological safety, and in turn, voice behavior. In Study 2, we revealed that the reduction of job autonomy and increasing workplace anxiety are critical in linking close monitoring and psychological safety. We also found that telework weakened the negative indirect effect of close monitoring on psychological safety via job autonomy and workplace anxiety ultimately resulting in follower silence. Our research highlights the importance of close monitoring, which many leaders and followers believe in necessary, may actually undermine followers' proactive behaviors, thus, hampering organizational functioning.

OB: Do Bad Apples Inspire Good Soldiers? The Effects of Leader UPB on Followers' Citizenship Behavior 

Author: **Yahua Cai**, Shanghai U. of Finance and Economics
Author: **Weili Zheng**, Shanghai U. of Finance and Economics
Author: **Sebastian C. Schuh**, China Europe International Business School (CEIBS)
Author: **Xin Lucy Liu**, Columbia Business School

Building on construal-level and social exchange theories, we develop and test a dual-level model that explains how and why observing leader unethical pro-organizational behavior can trigger or hinder followers' citizenship behavior. We tested our model in two studies, including a multi-wave, multi-source field study (Study 1), a time-lagged interval-based experience sampling methodology and two follow-up between-person survey (Study 2). Consistent with our hypotheses, we found that followers' response to leader unethical pro-organizational behavior is fluid and subject to the level of conceptualization at which it is considered. Specifically, the result shown that, at between-person level, when employees witnessed their leader engaging in unethical pro-organizational behavior, they experienced heightened organizational obligation and, subsequently showed more citizenship behaviors. However, at the within-person level, observing leaders' unethical pro-organizational behavior was negatively related to followers' organizational obligation, which reduced their citizenship behaviors. Moreover, these effects depended on leaders' organizational embodiment. Specifically, as leaders' organizational embodiment increased, the impact of leader unethical pro-organizational behavior on organizational obligation (including its between-person effect and within-person effect) was strengthened. We discuss the theoretical and practical implications of this new, comprehensive perspective on the path from leader unethical pro-organizational behavior to follower citizenship behaviors both from within-person and between-person perspectives.

OB: Getting What You Want or Backfiring? Green Transformational Leadership and Employee Green Behavior

Author: **Puwen Shang**, School of Business, Sun Yat-sen U.
Author: **Xinyi Hua**, Sun Yat-Sen U.

More and more organizations are initiating commitments to support environmental sustainability, and employees are the critical actors in the practice of corporate environmental policies, there has been a surge of interest in how organizations can inspire green behaviors among their employees, and several scholars have affirmed the critical significance of leaders influencing the green behaviors of their employees. In this paper, we examined how green transformational leadership (GTL), a type of transformational leadership focused on environmental sustainability, will relate to employees' green behaviors. Based on the job demand-resource (JDR) model, we developed and tested a dual-path model to explore the double-edged effects of GTL on employee proactive green behavior (PGB) and task green behavior (TGB). Analyzing a sample of 1,501 employees from 21 factories in southern China, we found that GTL is indirectly related to employee green behavior through employee role overload and employee environmental commitment. Furthermore, man-nature orientation moderated the negative relationship between GTL through employee role overload and employee green behavior while collectivism moderated the positive relationship between GTL through employee environmental commitment and employee green behavior.

OB: Growth Leadership Theories: A New Scale and How it Affects Employee Voice and Commitment 

Author: **Ziyi Zhang**, *UC Riverside*

Author: **Michael Haselhuhn**, *U. of California, Riverside*

Despite the proliferation of research emphasizing the importance of growth mindsets in a wide range of domains, researchers have not examined these mindsets in the context of leadership. In the current paper, we expand implicit theories to the leadership discipline and explore how beliefs about the fixedness or malleability of leadership characteristics (termed Growth Leadership Theories; GLTs) affect employee voice and commitment. Through four studies, our findings suggest that holding a malleable GLT can help employees engage in more voice behaviors in the workplace, which is mediated by the perceived efficacy of voice. Study 1 establishes and validates a scale designed to capture individuals' GLTs. Study 2 examines the relationship between GLTs and employees' voice behaviors in the workplace. Study 3 replicates the results of Study 2, and examines how perceived efficacy of voice mediates the relationship between GLTs and employee voice. Study 4 examines the long-term effects of GLTs through a multi-wave study, finding evidence that GLTs affect employee commitment over time through their effects on workplace voice.

OB: How Does Responsible Leadership Affect Job Performance and Taking Charge in the Chinese Context?

Author: **Yiqi Wu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Qinxuan Gu**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Yinxuan ZHANG**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Chinese Confucian philosophy provides some different insights into responsible leadership from the literature in the Western context. Utilizing two studies anchored in the Chinese context, we explore and enrich the connotation of responsible leadership and investigate its impact on employee job performance and taking charge from a dual motivational perspective. In Study 1, we adopt both qualitative and quantitative approaches to revise and validate a measure of responsible leadership using four separate samples. In Study 2, integrating social information processing theory and social learning theory, we examine the external and internal motivational mechanism that respectively links responsible leadership to job performance and taking charge. With a field survey sample of 223 team leaders and 715 members, we find that responsible leadership positively impacts job performance through perceived work requirements (woke-based external motivation) and positively impacts taking charge through felt obligation (obligation-based internal motivation). Findings advance theoretical and managerial understanding of responsible leadership, particularly within Eastern countries like China.

OB: A Unifying Framework for Understanding Adaptive Leadership at Multiple Levels of Analysis 

Author: **Sten Delvaux**, *Vrije U. Brussel*

Adaptive leadership refers to the notion of leaders effectively responding to change. Many leadership scholars have called attention to – either implicitly or explicitly – the importance of adaptive behavior for understanding leadership effectiveness. Yet, a cohesive and cumulative body of knowledge regarding adaptive leadership is surprisingly lacking. The present work aims to demystify the elusive phenomenon of adaptive leadership by developing a model that aims to comprehensively depict why and how leaders change their leadership behavior. The general proposition offered is that adaptive leadership can be decomposed into a process component (leading-level of analysis) and a dispositional component (leader-level of analysis), and that these components meaningfully interact to shape adaptive leadership. Theoretically, momentary change is explained via action control while change at longer timescales is proposed to be driven by learning. Our goal is to do justice to the complexity of adaptive leadership – a real-world and core behavioral phenomenon – by adopting a multilevel, developmental, and inherently contextualized perspective.

OB: Turning Crisis into Opportunity: Negative Emotion and Leader Interpersonal Emotion Management

Author: **Yijie Zhang**, *School of Economics and Management Tsinghua U.*

Author: **Zijing Wang**, *Huazhong U. of Science and Technology*

In times of crisis, employees commonly face a surge of negative emotions including anxiety, panic, and distress. These intense feelings, sparked by the crisis, often constrain cognitive abilities, exacerbating the crisis's negative impact. However, these negative emotions can also alert people to shortfalls and motivate them to improve matters, seizing opportunities within the crisis. We propose that the crux of turning a crisis into an opportunity lies in the effective management of these powerful negative emotions. Drawing from interpersonal emotion management and proactivity theories, we developed a model to illustrate the crucial role of a leader's interpersonal emotional management strategies in navigating this complex emotional terrain. Data from 369 employees in 81 teams found that leaders' use of cognitive change strategies could turn the energy from negative emotions into proactive behaviors, while situational modification strategies might suppress the emergence of proactive behaviors. Our theorizing and findings provide an emotional perspective on how leaders can guide employees to turn crisis into opportunity, contributing to the literature on crisis leadership and proactivity.

Experimental Research on Emotional and Cognitive Processes

Session Moderator: **Neha Bellamkonda**, *IIM Bangalore*

OB: **When Service Smiles Fade: Ego Depletion and Displaced Aggression Post-Customer Mistreatment Episode**  

Author: **Neha Bellamkonda**, *IIM Bangalore*

Author: **Rahul Chandra Sheel**, *XLRI-Xavier School of Management*

Research on customer mistreatment has predominantly adopted an episodic approach, characterizing each service interaction as isolated and independent from others. This study expands this perspective by investigating the consequences of customer mistreatment faced by service employees, particularly how it affects their behavior toward the next focal customer. Central to our exploration is the concept of ego depletion as a key mechanism that potentially triggers displaced aggression towards subsequent customers following an instance of mistreatment. In Study 1, we conducted a laboratory experiment in the context of a restaurant to understand the underlying causal mechanism (N=84) in which we examined video recordings to capture displaced aggression. In Study 2, we used the Critical Incident Technique to replicate the results using a sample of five-star hotel employees (N = 314). Additionally, we explored various boundary conditions such as commitment to display norms, perspective-taking, and self-monitoring. We found that customer mistreatment faced by an employee leads to displaced aggression towards the next focal customer through ego depletion. Additionally, perspective-taking was found to moderate the first stage of this mediated relationship, and commitment to display norms resulted in a significant second-stage moderator, diminishing the effects of ego depletion on displaced aggression. This study contributes to a more nuanced understanding of the dynamics between customers and service employees following mistreatment episodes.

OB: **The Direction of Problemistic Search: Opening the Black Box with Virtual Reality** 

Author: **Albert Jolink**, *SKEMA Business School - U. Côte d'Azur*

Author: **Eva Niesten**, *SKEMA Business School - U. Côte d'Azur*

In this study we will open the black box of problemistic search by documenting a variety of narrow and broad search strategies individual decisionmakers undertake in a process of a firm's goal attainment. Several commentators have argued that the notions of narrow vs broad search are underspecified and dependent on the ambiguity of the goal and the of environment. This study joins these studies that argue that ambiguities between outcomes, aspirations and decisions will affect the search strategies. In this study we will focus on the question whether ambiguity in goals and outcomes leads to diversity in directions of search strategies. We will explore our contributions with a purpose-built virtual reality (VR) experiment, a research method that opens the possibility to study individual internal sub-processes of problemistic search under conditions which are difficult to control in a non-experimental setting and allows us the development of the data collection for individual problemistic search. Our study responds to the call for research in decision-making in behavioral organizational theory, culminating in a research agenda that further develops VR research for organizations. We will conclude that this study contributes to the behavioral theories of organizations by enriching our understanding of search processes.

OB: **The Lingering Effect of Perceived Negative Workplace Gossip on Employees' Rumination and Emotions**

Author: **Tingya He**, *School of Psychological and Cognitive Sciences*

Perceived negative workplace gossip has been traditionally considered a detrimental workplace occurrence affecting employees. This study advances a broader and sustained perspective: negative workplace gossip encompasses both positive and negative impacts, which exert a prolonged influence into the future. We introduce an innovative angle on goal-failure derived from the cognitive theory of rumination, exploring varied employee responses to perceived negative workplace gossip. Utilizing experimental methods in Study 1, we illustrated how employees engage in problem-solving rumination and affect-focused rumination following exposure to negative workplace gossip. In Study 2, our empirical sampling method corroborated the hypothesis: employees experiencing negative workplace gossip displayed strong emotion the following day, negatively associated with work alienation through problem-solving rumination at night; and experienced distressed emotion the next day, positively correlated with work alienation when engaging in affect-focused rumination at night.

 OB: **Don't Sweat the Small Stuff: The Tolerance Spillover Effect in Ethical Decision Making** 

Author: **Jeffrey Bednar**, *Brigham Young U.*

Author: **Ryan Sommerfeldt**, *Washington State U.*

Author: **Aaron Zimbelman**, *U. of South Carolina, Darla Moore School of Business*

Author: **Mark Zimbelman**, *Brigham Young U.*

We argue that working with a tolerance standard (e.g., a margin for error) socializes workers to view small errors as inconsequential. This creates a "tolerance mindset" that spills over and facilitates moral disengagement when making ethical decisions. We provide triangulating evidence of a tolerance spillover effect across three experiments. Our first two studies involved lab experiments where participants took on the role of quality-control workers and we manipulated whether they worked with (vs. without) a tolerance standard. Across both experiments, we observed evidence of increased moral disengagement and unethical behavior when participants worked with a tolerance standard. Our third study focused on professional auditors who work regularly with a tolerance standard. We found that auditors were less honest when their work identity was primed versus not. We also observed that other professional accountants, who do not work with a tolerance standard, did not significantly differ in their honesty when their work identity was primed versus not. These findings have important implications for understanding moral disengagement and the spillover of mindsets from one's work into the moral domain.

Dirty Work: When Employees and Leaders Behave Badly

Session Moderator: **Sarah Wittman**, *George Mason U.*

OB: Exploitative Leadership and Employee Adaptive Performance: A Moderated Mediation Model

Author: **Xiaoyu Li**, *Renmin U. of China*

Author: **Zhichao Qian**, *China U. of Labor Relations*

As an essential concept in the study of destructive leadership, research on exploitative leadership is still in its infancy, particularly within the context of China where empirical studies remain relatively limited. This study, grounded in the conservation of resources theory, investigates the detrimental effects of exploitative leadership on employees' adaptive performance. Analyzing data from a two-stage survey of 297 employees, this research finds that exploitative leadership diminishes employees' adaptive performance. Moreover, thriving at work partially mediates the relationship between exploitative leadership and employees' adaptive performance. Additionally, coworker support effectively moderates the negative impact of exploitative leadership on thriving at work. In the context of high coworker support, the adverse mediating effect of work thriving on the relationship between exploitative leadership and adaptive performance is weaker. This study contributes to a deeper understanding of the role and mechanisms of exploitative leadership on employees' adaptive performance from the conservation of resources theory perspective. Additionally, it underscores the significance of coworker support in alleviating the adverse effects of exploitative leadership, providing valuable insights for organizational management and leadership practices.

OB: Examining Past Satisfying Leisure Experiences as Predictors for Present Time Theft Behaviors at Work

Author: **Wangxi Xu**, *U. of Melbourne*

Author: **Andrew Yu**, *U. of Melbourne*

Author: **Sarah Wittman**, *George Mason U.*

Employee time theft is pervasive and costly, but inadequately understood. Deploying a cognitive continuity perspective on the transition between non-work and work roles, we show time theft to be a psychological and behavioral continuance of past leisure at present work and propose that it results from leisure-to-work transition challenges. Results from two time-lagged studies revealed that employees with satisfying leisure experiences were more likely to find the transition back to work that they considered demanding and/or aversive more threatening and difficult to achieve. As a default response, they used retrospective mental time travel to continue in the past, engaging in emotional mind wandering about past leisure even after physically and temporally resuming work. These employees were further found to translate the wandering leisure cognitions into leisure-like and work-deviant time theft behaviors. Combined, our work yields theoretical and practical insights into employee work deviance from a transition perspective.

OB: I Feel My Work Dirty, What Should I Do?: The Consequences of Experienced Work Dirtiness 

Author: **Iris D. Zhang**, *Harbin Institute of Technology*

Author: **Long Wai Lam**, *U. of Macau*

Author: **Mo Chen**, *School of Management, Harbin Institute of Technology*

Although it has long been recognized that employees in virtually all occupations may occasionally experience indignity at work, only until recently did researchers begin to investigate employees' experience of work dirtiness outside the typically stigmatized occupations. In the current study, we propose that dirty work experience may elicit identity threat, which results in both maladaptive (i.e., affective rumination) and adaptive (i.e., problem-solving pondering) cognitive responses. Whereas affective rumination leads to deviant behavior, problem-solving pondering encourages job crafting. We also propose that dispositional optimism and pessimism determine the extent to which one exhibits these distinct responses. We tested our model with two independent studies of a mixed research design. Study 1 used an experiment to investigate whether work dirtiness causes identity threat, and Study 2 tested the full model using the experience sampling method among 100 car salespeople. Results supported the theorized process in which identity threat and affective rumination sequentially mediated the positive relationship between work dirtiness and deviant behavior. The serial mediation process through problem-solving pondering and job crafting, however, was observed only among employees high on optimism.

OB: Unraveling the Temporal Enigma: An Examination of the Impact of Temporal Unpredictability 

Author: **Wanting Dai**, *Chongqing U.*

Author: **Cuilian Zhang**, *Chongqing U.*

Author: **Yue Jing**, *Chongqing U.*

Author: **Wei Yan**, *Chongqing U.*

Based on the self-regulatory resource theory, we examine the relationship between temporal unpredictability, employee ego depletion, and organizational deviance, as well as the moderating effect of leader perfectionism. Through an experimental study and a multi-wave questionnaire survey, we find that temporal unpredictability increases employees' ego depletion, which in turn leads to organizational deviance. Moreover, higher leader perfectionism strengthens the impact of temporal unpredictability on employees' ego depletion, thereby increasing the indirect effect of temporal unpredictability on organizational deviance through ego depletion. This study contributes to the academic discussion on temporal unpredictability and provides new insights for management practice.

Get Well Now: Well-Being Research

Session Moderator: **Jake T. Harrison**, *U. of Iowa*

OB: **Does Mindfulness Shape Perceived Distributive Justice? A Fine-Grained Analysis**

Author: **Yanina Rashkova**, *U. degli Studi di Cagliari*
Author: **Mathieu Beal**, *EMLYON Business School*
Author: **Isabella Sulis**, *U. degli Studi di Cagliari*
Author: **Francesca Cabiddu**, *U. of Cagliari*

The recognition of unfairness in distributing societal resources is an important step in developing responsible organizational behavior. Drawing on the Mindfulness Capability for Social Justice theory and on the egalitarian beliefs of social justice, this study examines how and when mindfulness impacts the managers' perception of distributive justice (individuals' judgment of the fairness of the distribution of rights and societal resources). Based on three field studies including European managers, the current research makes three core contributions. First, by performing a fine-grained analysis of mindfulness dimensions, we demonstrate that only mindfulness's ability to describe occurring events with words increases the perception of the currently unfair distribution of societal rights and resources. By doing so, we contribute to the mindfulness research providing a more nuanced understanding of mindfulness mechanisms, which can help to overcome recent critics of the current application of mindfulness in organizations. Second, we introduce social justice awareness as a key mechanism that explains the relationship between mindfulness's ability to describe occurring events and the perception of distributive justice. Third, we further account for the organizational climate (reflected through ostracism and organizational justice) and suggest that the impact of mindfulness on perceived distributive justice, through social justice awareness, depends on whether employees are ostracized and perceived justice in their organization. Precisely, our results show that the mindfulness effect appears weaker for employees experiencing ostracism at work. However, we inform organizations that they can tackle the detrimental effects of ostracism by implementing and promoting organizational justice. It underscores the importance of alignment between desired mindfulness outcomes and organizational processes and structures and sets the stage for future exploration and managerial practices focused on responsible actions.

OB: **Is Job Crafting a Zero-Sum Game? Comparing The Well-Being Outcomes of Leader-Crafters and Followers**

Author: **Jake T. Harrison**, *U. of Iowa*
Author: **Beth Ann Livingston**, *U. of Iowa*

While organizational leaders may engage in job crafting to fulfill their own work-related needs, the leadership role fundamentally involves fulfilling the needs of team members. As such, this study investigates whether and how a leader's job crafting behavior provides self-directed well-being benefits while simultaneously enhancing or harming the well-being of team members. Drawing upon a sample of 92 university supervisors and 172 of their direct reports, we find that while leaders' job crafting behaviors have an impact on their own well-being, they have little to no influence on followers' well-being. Further, we find no association between leader job crafting behavior and followers' perceptions of task and relational leadership. We conclude by discussing the implications of these findings for theory and practice.

OB: **The Impact of Exploitative Leadership on Employee Vitality and Well-Being: A Moderation & Mediation**

Author: **Kubilay Gok**, *Winona State U.*
Author: **Chandrashekhar Lakshman**, *Mount Marty U.*
Author: **Sangeetha Lakshman**, *Independent Consultant*

The emerging literature on exploitative leadership definitively establishes that exploitative leadership addresses a natural phenomenon, is distinct (albeit complementary) from other destructive leadership constructs, explains more variance in specific critical outcomes, and does so in a way that may involve distinct mechanisms. Yet, there is no clear understanding of why and how exploitative leadership affects essential outcomes. Additionally, this literature has not adequately addressed follower traits/characteristics that may affect how subordinates appraise, process, and overcome the detrimental effects. We contribute by leveraging Transactional Stress Theory to address an important mediating mechanism (perceived threat at work) and an important moderator (psychological capital) in a model leading to psychological well-being. Based on a sample of 282 workers, we obtain support for this model and highlight how our findings contribute to advancing this literature, provide critical managerial implications, and identify limitations and future research directions.

OB: **How Transformational Leadership Reduce Job Burnout Through Job Insecurity in Uncertain Environments**

Author: **Aihua Chen**, *Chongqing U.*
Author: **Yixiao Zhou**, *Chongqing U.*
Author: **Linchun Wu**, *Chongqing U.*

The VUCA environment, characterized by volatility, uncertainty, complexity and ambiguity has become the new normal faced by enterprises. In the face of external uncertainty, employee job burnout caused by anxiety and depression has always been an important issue of theoretical and practical concern. Based on the conservation of resources theory, this paper explores the impact of transformational leadership on employee job burnout and its transmission mechanism in the uncertain context of the post-epidemic era. The study finds that transformational leadership has a significant negative impact on job burnout, and job insecurity is an important mechanism. In addition, we also find that when employees perceive higher external employability and organizational growth, the more significant the impact of job insecurity on employee job burnout is. This paper provides theoretical support and practical reference for enterprises to cultivate transformational leadership, reduce employee job insecurity, and alleviate job burnout.

Eureka! Creativity and Innovation Research

Session Moderator: **Qing Zhang**, *School of Government, Beijing Normal U.*

OB: **Can Pursuing Perfection Ignite Sparks of Creativity? How and When?**  

Author: **Qing Zhang**, *School of Government, Beijing Normal U.*

Author: **Haibo Yu**, *Beijing Normal U.*

Author: **Wendi Jiang**, *Beijing Normal U.*

Although perfectionism has received sufficient attention from organizational scholars, there has been limited research on how perfectionism increases employee creativity. Drawing on the work design perspective and job demand-resource theory, we investigated how employees' self-oriented perfectionism affects creativity (including radical creativity and incremental creativity) via the mediating role of job crafting. Meanwhile, we added the moderating role of work stress and constructed a moderated mediation model. Data were collected from a multisource and multitime survey in several Chinese organizations. The results indicated that employees' self-oriented perfectionism has a positive and indirect effect on radical and incremental creativity. As a boundary condition, work stress can moderate this mediated relationship. Specifically, when work stress is higher, this positive mediated relationship will be stronger. Theoretical and practical implications are also discussed in the article.

OB: **The Within-Team Relationships Among Group Affective Tone, Team Regulator Focus and Team Creativity** 

Author: **Yan-Ru LIN**, *National Sun Yat-Sen U.*

Author: **Nai-Wen Chi**, *Institute of Human Resource Management, National Sun Yat-sen U.*

Drawing on the dynamic perspective and regulatory focus theory, we posited that fluctuations of group affective tone (GAT) can influence changes in team creativity via distinct team regulatory focus over time. Additionally, we theorized that team-level person-group fit (P-G fit) moderates the dynamic relationships between GAT, team regulatory focus, and team creativity. To test the dynamic relationship, we utilized experience sampling method (ESM) and collected weekly data from 64 team across four weeks, resulting in 192 within-team responses. The results of multilevel path-analysis indicated that: (a) within-team variation in PGAT is positively related to team promotion focus, which in turn increases changes in subsequent team creativity; (b) within-team variation in NGAT is positively related to team prevention focus, which in turn reduces changes in subsequent team creativity; and (c) P-G fit positively moderates the negative indirect effect of within-team NGAT on changes in team creativity through team prevention focus. Importantly, our study also simultaneously tested the reverse causal relationship between team creativity and GAT and ruled out these effects, thereby providing a more rigorous test of the proposed model.

OB: **Investigating the Double-Edged Sword Effect of Digital Connectivity on Employee Creativity**  

Author: **Yunqing Zou**, *School of Business, Renmin U. of China*

Author: **Xin Chen**, *School of Business, Renmin U. of China*

Author: **Chu-Ding Ling**, *Renmin U. of China*

This study investigates the complex effects of digital connectivity after work on employee creativity. We argue that digital connectivity is a double-edged sword which both facilitates resource gain while simultaneously leads to resource loss. Based on Conversation of Resource theory, we hypothesize that digital connectivity is positively related to employee creativity through structural empowerment acquisition. However, digital connectivity also causes resources loss and lead to depletion which is associated with lower levels of creativity. We further identify individual work-life separation preference as an important moderator. For employees with a high preference for work-life separation, the positive indirect relationship between digital connectivity and creativity would be weakened and the negative indirect relationship would be stronger. We find support for our hypotheses in a sample of 298 employees from a media company in Eastern China. These findings contribute to a more nuanced understanding of the role of digital connectivity in the workplace, particularly in relation to employee creativity.

OB: **Empowering Middle Managers for Innovation and Performance**  

Author: **Junyu Zhou**, *Bangor Business School*

Author: **Boyka Simeonova**, *U. of Leicester*

Author: **Mathew Hughes**, *U. of Leicester*

While individual ambidexterity has been identified as an essential innovative behavior for organization management, this paper explores the process of empowering middle managers to boost their ability of balancing exploration and exploitation (ambidexterity) and improve their performance. We introduce and complete an empowerment theory that explains how structural and psychological paths of dynamic power-receiving process affect individual ambidexterity and therefore benefit their performance, and how this effect is moderated by psychological factors and team-level knowledge sharing. We test our theory with data from 218 middle managers in 22 firms. The findings show that both structural and psychological empowerment strengthen the link between structural empowerment and ambidexterity, while transactive memory systems enhance the impact of psychological but not structural empowerment on ambidexterity. Originating from power dynamics, our study advances the empowerment theory by identifying the mechanisms and contingencies of empowerment on performance. It also enriches the literature on individual ambidexterity by examining its antecedents, outcomes, and moderators at the middle management level.

AI Technology and Employee Engagement: Multidisciplinary Analysis of Employee Management

Organizer: **Emma Rui Lu**, *KTH Royal Institute of Technology*
Moderator: **Mats Magnusson**, *KTH Royal Institute of Technology*
Panelist: **Yekaterina Bezrukova**, *U. at Buffalo, The State U. of New York*
Panelist: **E. Erin Powell**, *North Carolina State U.*
Panelist: **Katharina Hoelzle**, *U. of Stuttgart*
Panelist: **Mats Engwall**, *KTH Royal Institute of Technology*

This Panel Symposium seeks to present a multidisciplinary analysis of how incorporating AI technology for employee management can be used to create employee engagement. It gathers experts from a diverse set of scholarly backgrounds to engage in a discussion on the use of different forms of AI technology, particularly algorithmic technology, in organizational strategy. Algorithmic technology refers to an example of AI technology where learning algorithms use new technologies, such as mobile apps and sensory devices, to assist the management in data analysis and in coordinating and organizing work. For this panel, we aim to explore (1) how should organizations approach the use of algorithmic technology, (2) how does the use of such technology affect management's role in employee management, and (3) how can we use algorithmic technology to foster employee engagement to shape employee decision making and behavior? The proposed symposium recognizes that the management of algorithmic technology is a multidisciplinary issue and seeks to explore this issue by drawing on scholarly expertise from various disciplines. The panel discussion will advance scholarly understanding of the role of worker motivation and technology implementation in innovation and growth in a variety of fields, such as technology and innovation management, entrepreneurship, and organizational behavior.

Presenter: **Federico Magni**, *ETH Zürich*
Discussant: **Yuri S. Scharp**, *Human Resource Studies, Tilburg U.*

As a response to the Covid-19 pandemic, many organizations rushed to support their employees' well-being. However, despite good intentions, few have taken a strategic approach, resulting in stress levels rocketing to an all-time high and a gap in perceived well-being efforts between employers and employees. The four papers in this symposium aim to offer employees, managers, and organizations theoretically informed and practically useful tools to address the challenges of the modern workplace with the goal of enhancing employee well-being and, in turn, individual and organizational performance. The first paper explores the impact of COVID-19 on knowledge workers, proposing coworking interventions that improve job satisfaction and reduce stress. The second paper compares the effectiveness of expressive and gratitude writing interventions on psychological well-being, challenging the universal benefits of expressive writing and emphasizing caution in its application. The third paper investigates factors influencing individuals' preference for algorithm-based artificial intelligence, revealing that reflective thinkers are more likely to appreciate algorithmic advisors, providing insights for organizations relying on AI-based technologies. The fourth paper explores the modification of the uncertainty mindset (UM) to enhance well-being and performance at work, revealing that fostering beliefs about uncertainty as an opportunity positively influences directed exploration. Led by Yuri Scharp, the discussion will assess implications for theory and practice, providing valuable feedback for researchers and practical insights for the audience.

Toward a General Theory of the Organization: From Cells to Societies

Organizer: **Jisung Yoon**, *KDI School of Public Policy and Management*
Organizer: **Hyejin Yoon**, *Northwestern Kellogg School of Management*
Organizer: **Seoul Lee**, *Northwestern Kellogg School of Management*
Organizer: **Vicky Chuqiao Yang**, *Massachusetts Institute of Technology*
Presenter: **Chris Kempes**, *Santa Fe Institute*
Presenter: **Haochi Zhang**, *Bayes Business School (formerly Cass), City, U. of London*
Moderator: **James Evans**, *U. Of Chicago*

A central theme of organization studies is to understand how organizations composed of multiple actors each with different perspectives and motivations achieve coordination (March & Simon, 1958; Thompson, 1967; Mintzberg, 1980; Puranam, 2018). Whether it's the structured hierarchies within bureaucratic organizations (Weber, 1978; Monteiro & Adler, 2022) or self-managing entities without direct managerial control (Ashby, 1947; Lee & Edmondson, 2017), coordination is an essential, albeit additional, function beyond the primary operations of any organization. While organizational scholars have accumulated a substantial body of knowledge about coordination functions within human organizations, our symposium seeks to broaden the discussion to encompass a wider array of systems requiring coordination, where organizational scholars can derive novel insights. For instance, bee colonies, a remarkable super-organism that might seem to operate seamlessly, need coordination beyond genetic programming to adapt to the environment. Similarly, in bacteria, regulatory genes function akin to managers, orchestrating the activities within the cell. These examples from nature underscore the universality and importance of studying coordination processes beyond human society. Therefore, we brought presenters from a variety of fields to this symposium, each of whom highlights the systems and definition of coordination functions in organizations across diverse systems including firms, self-organizing system, biological systems, and federal agencies. While each system faces a different set of tasks or problems to be resolved, our symposium centers on developing a unified science of coordination functions and its associated structure to answer the following questions: What are the driving factors behind the cost of the coordination? Can we predict the amount of regulatory costs an organism or organization needs based on its size, function, and complexity? Building on the theme of coordination across diverse systems, our symposium invites cross-disciplinary experts to mark a notable departure from the traditional themes at Academy of Management's (AOM). This multidisciplinary dialogue integrates biological paradigms with organizational theory. We believe that this fresh perspective enriches AOM's discourse, challenging its members to expand their analytical scope. This expansion is designed to deepen our collective grasp of organizational practices, which is aligned with the AOM's dedication to the advancement of management sciences. Finally, our symposium is poised to cultivate an intellectual community that embraces and explores these innovative intersections.

Presenter: **Sangah Bae**, *Cornell U.*
Presenter: **Valentina Sara Schneider**, *London Business School*

This symposium aims to explore how different pillars of emotional intelligence – including awareness, motivation, emotion displays and adaptive behaviors based on emotions – can elevate or diminish relevant organizational outcomes. We emphasize the importance of understanding and managing one's own and others' emotions in using social prompts to enhance personal and social effectiveness. Four presentations look at how emotional intelligence shapes organizational outcomes, including leaders responding to followers' negative emotions, employees deciding to stay or leave, and subtle cues affecting people perceptions. Using diverse methods and perspectives, these studies collectively provide a valuable perspective on how organizations can foster an emotionally intelligent culture to adapt and thrive in the face of future challenges.

Participant: **Jasmin Joecks**, *Eberhard Karls U. Tübingen*

The past few years have highlighted the necessity for management researchers to consider how bodily processes, specifically bodily processes unique to women, affect workers and workplaces (e.g., Bergman et al., 2023; Gabriel et al., 2022; Grandey, Gabriel & King, 2020). This presenter symposium on menstruation at work invites the Academy of Management community to think differently about people and their capabilities in organizations by focusing on an underrepresented but prevalent topic for organizational theory and practice. The menstruation (i.e., menstrual bleeding) and the menstrual cycle (i.e., 28-day recurrent cycle of sex hormones) is a topic fraught with shame and stigma, but it is embedded in organizational reality as a part of “experiences where work and nonwork blend (...) and [that] are brought directly into work” (Grandey et al., 2020, p. 22). Although menstruating people often try to mask their symptoms, passing as non-menstruating while they are at work (Sang, Remnant, Calvard & Myhill, 2021), those with menstrual problems cannot prevent negative aspects from entering the work domain (Motro, Ellis & Gabriel, 2019). The Academy of Management Annual Meeting 2024 theme “Innovating for the Future” invites members to examine the interplay of innovation, policy, and purpose as a lens for rethinking conventional ways of leading, managing, and organizing. For organizations to be dynamic and innovative, they are dependent on cognitive resources provided by employees. These individual resources are also naturally consumed by non-work-related tasks such as taking care of menstrual needs. In addition, cognitive resources and abilities fluctuate over the course of a woman's cycle. As such menstruation can consume resources to varying degrees by time and person (Motro et al., 2019). Following recent menstruation research (e.g., Grandey et al., 2020; Sang et al., 2021; Werner, Punzi & Tukenburg, 2023), we recognize menstruation as a distinctive issue inclusive of physical symptoms, stigma, shame, and social interactions, including those in the workplace. With this presenter symposium we aim to create insight about the connection between biological processes and specific problems regarding menstruation (e.g. endometriosis; Presentation 3) and behavior at work (e.g. motivation to lead and risk-taking behavior; Presentation 1 and 2). Building on this, we shed light on the contribution that organizations can make to establish better working conditions that take the female cycle into account (e.g. menstrual leave policies; Presentation 4). This symposium raises some of the challenges menstruating people experience at work, what would help them feel more empowered in the workplace and what organizations can do to design and implement appropriate and effective measures that make a supportive workplace. Together with discussant, Dr. Mirjam Werner, this symposium aims to identify and review gaps in theory, policy, guidelines and practice that provide starting points for creating humane, powerful and innovative organizations and further research on the topic of menstruation and work.

The Workaholism Chronicles: Unveiling Workaholism's Influence Across Diverse Organizational Contexts

Organizer: **Jenell Lynn-Senter Wittmer**, *U. of Toledo*
Discussant: **Lieke Laura Ten Brummelhuis**, *Simon Fraser U.*
Discussant: **Malissa Amy Clark**, *U. of Georgia*

Attention to workaholism has grown significantly in both research and the popular press. Workaholism has been linked to negative individual, organizational, and interpersonal outcomes. Recent research has sought to refine the conceptualization and measurement of workaholism. To further our understanding, the current symposium presents workaholism in multiple different organizational contexts: family businesses, leader – subordinate relationships, and within teams. Expert discussants will share practical and research implications as well as future research directions.

Challenging Assumptions in Affect-Related Research

Session Chair: **Nathan Philip Podsakoff**, *U. of Arizona*

Session Chair: **Brent Scott**, *Michigan State U.*

As research on affect has gained popularity in organizational behavior over the past several decades, several challenges have emerged. This symposium is designed to address several of these in four presentations that represent advances to the affective literature. More specifically, the presenters will discuss research designed to challenge assumptions related to: (a) the elicitation of discrete emotions in experiments, (b) the nature and effects of emotional contagion on individuals observing the emotions of others, and (c) the conceptualization and operationalization of deep acting as a form of emotional labor and its effects on employee affect. The symposium contains a variety of different approaches including state-of-the-method review, experiments, and cross-sectional and longitudinal field studies to examine these phenomena. Taken together, these presentations challenge several assumptions in affect-related literatures and have potential implications for management scholars and/or practitioners.

Participant: **Rellie Derfler-Rozin**, *U. of Maryland R.H. Smith School of Business*

Participant: **Alexandra Noel Figueroa**, *U. of Utah, David Eccles School of Business*

Moralization is a crucial and growing topic in psychology and related disciplines such as political science, anthropology, neuroscience, and sociology. Yet, research on the implications of moralization for organizations remains sparse. Indeed, although the literature on the implications of moralization for organizations is growing, significant questions remain. For instance, can efficiency—the ratio of process output to resource use—be moralized by managers and what might its consequences be for managerial practice? And can we capture the moralization of organizational actions by members of the public through their discourse and can we use this to predict their willingness to buy products from the organization? This symposium brings together scholars who answer such questions by placing moralization within the organizational context and addressing its implications for workplace efficiency, motivation, inclusion, and misconduct. Taken together, the four talks that are part of this symposium highlight where research on moralization within organizations is going and the practical implications it provides for managerial practice.

Building Consensus: Strategies for Engaging Stakeholders and Securing Buy-In during Transformation

Session Moderator: **Christopher Williams**, *ESSCA School of Management*

ODC: **Managing Loss of Empowerment in Fast Growing SMEs: Communication and the Chinese Context** 

Author: **Christopher Williams**, *ESSCA School of Management*
Author: **Juana Du**, *Royal Roads U.*

Managers in fast growing SMEs face the developmental challenge of how to control increasing numbers of employees. We examine this by focusing on how the growth rate of small-medium sized enterprises (SMEs) influences employee empowerment within the context of China. We argue that faster growing Chinese SMEs are reluctant to empower their staff compared to slower growing ones. Drawing on the communication literature, we also hypothesize the indirect impact of different types of communication channels (face-to-face vs. computer-mediated) on the relationship between rate of employee growth and employee empowerment. The empirical findings are based on a survey of 114 SMEs in China and confirm a negative impact of growth rate on employee empowerment. The results also provide partial support for technology-mediated communication channels and strong support for face-to-face communication channels as providing boundary conditions to this relationship. The study contributes to the literatures on employee empowerment in changing organizational contexts by highlighting the role of communication channels as change takes place. Practical implications for how we understand organizational challenges faced by SME managers as their ventures grow are discussed.

ODC: **Fostering Creative Support for Change: Insights from Temporal Shifts in Employee Benefit Appraisals**  

Author: **Rouven Kanitz**, *Rotterdam School of Management, Erasmus U.*
Author: **Leander De Schutter**, *Vrije U. of Amsterdam*
Author: **Julia Backmann**, *U. of Münster*
Author: **Tina Kiefer**, *Warwick Business School*
Author: **Mel Fugate**, *Mississippi State U.*
Author: **Martin Hoegl**, *LMU Munich*

Creative support for change—the extent to which employees actively bring in ideas to solve problems to facilitate change initiatives—can greatly contribute to the effectiveness of organizational change efforts. Despite organizational change being an inherently dynamic phenomenon, the study of employee change support has taken a largely static view with little attention to the role of temporal development in responses to change. Integrating appraisal theory and social judgment theory, we provide a unique perspective and theorize the varied impact of shifts (increase vs. decrease) and stability (consistently high vs. low) in work-related benefits appraisals on creative support for change. We use two-wave employee survey data from two data collections within one technology firm working on a cultural change initiative. In Study 1 (n = 267), we use cross-level polynomial regression and find that shifts compared to stability in appraisals of work-related benefits of change over time (Time 1 to 2) matter for later creative support for change. In Study 2 (n = 145), we replicate a similar pattern of shifting appraisals impacting creative support. Moreover, we leverage a quasi-experimental design and find that participating in a peer-exchange intervention (compared to not) is associated with increasing benefit appraisals over time—showing that such interventions can facilitate positive shifts in change appraisals. Our work highlights the important role of temporal shifts in appraisals for creative change support and provides insights into what organizations can do to foster it.

ODC: **Value Co-Creation Through Skills-Based Volunteering**    

Author: **Ratna Devi Pillai**, *James Cook U.*
Author: **Pengji Wang**, *James Cook U.*
Author: **Adrian T. H. Kuah**, *James Cook U. Australia*

Though scholars and practitioners generally believe skills-based volunteering (SBV) offers a win-win-win solution to serve companies, employees, and NPOs, some complexities exist its implementation because of different stakeholders' expectations and needs. To fill this gap, this study adopts a multi-stakeholder approach. We rely on HR co-creation theory and conduct interviews with three groups of stakeholders, i.e., company managers, employees and non-profits, to understand how a successful SBV can be co-created to achieve a triple win outcome. The results reveal a value co-creation model via SBV that allows triple wins of all the stakeholders. Such a model suggests the importance of ensuring a match between the two sides in terms of types of skills, scope of projects, time commitment needed, pre-training to calibrate the use of skills. We also attribute the conditions of successful SBVs to three main factors: facilitating information symmetry across stakeholders, building an SBV-inductive organizational culture and leveraging partners to tackle resource constraints.

ODC: **Beyond the Blueprint? (Re) Constituting Professional Identities in Architecture**

Author: **Jonathan Robberts**, *Monash U.*
Author: **Julie Wolfram Cox**, *Monash U.*

This paper explores the dynamics of professional identity work and negotiation in the profession of architecture, drawing on preliminary findings from a twelve-month study of an Australian architecture studio committed to enacting change in the wider profession. Adopting a posthumanist practice perspective grounded in relational ontology and performative epistemology, we challenge traditional discursive methodologies by highlighting the role of sociomaterial practices in shaping identities within architectural studios. The emergent and qualitative methodology includes longitudinal observations of design projects and in-depth interviews with key stakeholders, offering insights into the changing practices of professional identity work and processes of how identity tensions may be negotiated. This paper sheds light on the interplay of multiple, sometimes conflicting, identities and how individuals and the architecture studio as a collective seek to navigate these tensions. Contributing to the discourse on identity and practice theory, the findings provide a nuanced understanding of identity work in architecture, underscoring its significance in managing professional change and highlighting practice theories' relevance in examining professional identity change in creative and cultural professions.

Author: **Marcus Robert Astley**, *Bloomsbury Institute London*

Dynamic capabilities (DCs) have long held strategic promise as a source of competitive advantage. Yet there remains a lack of consensus regarding their conceptual nature, how they can be developed, or how they are deployed within the organisation. The current paper begins with a selective review of related conceptual literature to track the evolving depiction of the nature of DCs. The subsequent selective review of the empirical literature turns the focus toward how DCs have been operationalised, namely as action-based capabilities, whether used for the purpose of sensing, seizing or reconfiguration of existing capabilities. The paper identifies the growing importance to organisations of effectively harnessing the value of its different stakeholders, notably those beyond the organisation's traditional boundaries, across its wider ecosystem, in what is termed orchestrated stakeholder dialogue (OSD) (Astley, 2015). OSD is the way in which the insight and capabilities of stakeholders across the organisation's eco-system are harnessed to create new or more effective solutions or services. The paper goes on to explore the concept of OSD, considering whether it has wider applicability, and may offer particular value in enabling organisations to develop dynamic capabilities that unlock sustainable strategies for the future.

Managing Organizational Tensions in Times of Transition

Session Moderator: **Boniface Michael**, *California State U. Sacramento*

ODC: **Sensibility Modes: Working Through Value Contradictions with Value Statement as Practice**   

Author: **Boniface Michael**, *California State U. Sacramento*

Author: **Rashmi Michael**, *R&B Management Consulting Services and Managing Editor JIEB*

Shared and enacted values are a salient notion of an organization's values. However, organizations are also characterized by value contradictions and espoused values that have differentiated social cognitive effects. This study focuses on this less explored aspect of contradictions in managers' and employees' value conceptions, official value statements as espoused value practices and genres of employees' dynamic commitments and identity work. In this study, we examined managers' and employees' experiences at two multinational US corporations with a known history of founders' value statements. We find three sensibility modes tradeoff, coexist and transcend configure contradictions between managers' preferences and employees' desires within the context of value statements to reveal unique social with cognitive effects. The findings of this study has implications for research on value contradictions, sensibility modes and value statements as value practices in complex organizations.

ODC: **Intentions, Temporality and Tensions: How Structural Ambidexterity Develops Over Time**   

Author: **Johanna E. Pregmark**, *Chalmers U. of Technology*

Author: **Justin Harlan**, *NHH Norwegian School of Economics*

Author: **Tobias Fredberg**, *Chalmers U. of Technology*

Author: **Inger G. Stensaker**, *NHH Norwegian School of Economics*

In contemporary business, established enterprises continuously explore strategies for renewal. Structural ambidexterity, which entails developing separate organizational units for innovation and operational efficiency, has become a key strategy for this purpose. Previous research has primarily focused on structural design. This paper builds on, and extends the merging process perspective. We analyze the evolution of strategic structural ambidexterity in three firms, adopting a longitudinal perspective. This approach reveals unique trajectories. We delve into their variations in intentions, temporality, and tensions. By doing so, our research enriches the understanding of ambidexterity as a dynamic process, offering a deeper insight into the varied paths structural ambidexterity can take and its implications for business strategy.

ODC: **Triangulating Approaches to Study Ecosystem Change**

Author: **Zhe Cao**, *The U. of Queensland*

Ecosystem research presents multiple perspectives on ecosystem change about the intentionality of change and endogenous or exogenous drivers. In this paper, we conduct a thematic literature review and develop a typology framework to combine five approaches for studying ecosystem change that emerged through the review. We argue that these five approaches are complementary instead of opposing, as each provides a partial understanding and, if combined, can offer a richer and more holistic understanding of ecosystem change. To guide future research, we suggest that ecosystem change can be better understood by triangulating these pluralistic and paradoxical insights.

ODC: **Understanding the Tensions of Conflicting Stakeholder Interests in Sustainability**

Author: **Kim Strunk**, *U. of Passau*

Author: **Susanne Grabl**, *U. of Passau*

Author: **Kaisa Henttonen**, *U. of Eastern Finland*

Author: **Ville-Veikko Piispanen**, *U. of Eastern Finland*

Author: **Hanna P. Lehtimäki**, *U. of Eastern Finland*

Sustainability poses an increasingly pressing issue of our time, yet the transformation of organizations, despite commitments and extensive attentions, appears limited. Our qualitative study analyses the arising tensions when pursuing sustainability. Building on 65 interviews with established and incumbent organizations, we adapt a stakeholder perspective to identify and contrast five central tensions challenging effective sustainability engagement. While our findings reveal how the tensions favor incremental changes and inhibit large scale yet impactful projects, we nevertheless provide insights into the management of sustainability. First, we contribute a stakeholder perspective to sustainability tensions research. Second, our tensions shed light on the seemingly paradoxical demands in strategic sustainability management by revealing the essential underlying stakeholder tensions and reducing the complexity to a manageable level. Third, we reveal how both types of organizations struggle and theorize how a societal level transition is inhibited if organizations neither effective green from within, nor sustainable incumbents successfully scale their activities in the market.

ODC: **Unpacking Ambidexterity - A Framework for Understanding Organisational Ambidexterity in Practice** 

Author: **Gent Ahmetaj**, *U. of Warwick Business School*

Author: **Jacky Swan**, *U. of Warwick*

Author: **Sue Newell**, *Warwick Business School*

Ambidextrous learning – the ability of organisations to explore and exploit simultaneously – is a fundamental driver for organisational renewal and long-term survival. Yet, ambidexterity as a construct remains unclear, with research to date focusing on what organisations should do in the pursuit of ambidexterity and less so examining the concept itself. Based on the analysis of 564 organisations and their learning strategy outcomes in the past 12 months, we address this gap by proposing a framework that accounts for varying degrees of organisational ambidexterity in practice. We show how this framework allows scholars to extend their analysis of ambidexterity, revisit important questions related to learning mechanisms and outcomes, and explore new challenges in organisational learning.

Corporate Governance, Agency and Power

Session Moderator: **Longwang Fu**, *City U. of Hong Kong*

OMT: **Rubber Stamp versus Gatekeeper? Short-Selling Deregulation and Independent Directors' Dissensions**

Author: **Longwang Fu**, *City U. of Hong Kong*
Author: **Heng Zhan**, *Zhejiang U.*

While agency theory contends that independent directors (IDs) play a major role in mitigating agency issues, prior research deeply doubts their monitoring effectiveness. To examine when IDs would properly perform their monitoring duty, we turn to the change in the external capital market and particularly investigate the role of short-selling deregulation in shaping IDs' concrete voting behaviors within boardrooms. We argue that short-selling pressure improves information availability and transparency to enhance IDs' monitoring ability as well as strengthens their monitoring incentive by inducing IDs' perceived reputational concerns. Using a quasi-natural experiment in the context of China, we corroborate our hypothesis that after short-selling deregulation, IDs in treatment (versus control) firms significantly increase the likelihood and the number of their issued dissenting opinions on board proposals. Our mechanism tests confirm a surge of treatment (versus control) firms' disclosed information quality and exposed reputational risk, as well as a reduced board meeting absence. Our further analysis indicates that through the IDs' enhanced monitoring, short-selling deregulation ameliorates corporate governance by suppressing subsequent corporate fraud. Our study contributes to corporate governance research on IDs' effectiveness and the interactive dynamics among different governance entities.

OMT: **Storing Power: How Managers Use Big Bath Accounting to Convert between Different Sources of Power**

Author: **Marc Woonadi**, *Freie U. Berlin*
Author: **Max Braun**, *LMU Munich*

Power is a tool for managers to influence their organizations and a vital resource to stay in charge. While having a general understanding of CEOs' inclination to increase their power, we know little about why and how they work on their power base. We adopt a political capital perspective on power and develop a model on a CEO's portfolio of political capital. We suggest that managers optimize their portfolio structure and diversify between different power sources. We predict that CEOs convert episodic, short-term available forms of political capital into more enduring forms to increase the durability of their portfolio. The analysis of a hand-collected sample of 245 German firms from 2010 to 2018 supports our prediction that CEOs exploit succession events and favorable shareholder voting for big bath accounting. Big bath accounting provides a highly durable form of economic capital as it brings earnings reserves under the control of the CEO, who can flexibly boost firm profits. Our study contributes a portfolio model of CEO power integrating accumulation and diversification aspects of political capital. We document how managers convert between different forms of political capital, increase their portfolio's durability, and store their power. In the German two-tier board system, we leverage separate discharge voting results for managers and non-executive directors and reveal that merely symbolic governance mechanisms provide a substantial and dynamic source of power on the board.

OMT: **Family Control, Ownership Dispersion, and Family Firm Performance**

Author: **Chien-Nan Chen**, *National Dong Hwa U.*
Author: **Kuo-I Chang**, *Dong Hwa U., Taiwan*
Author: **Nguyen Thi Thu Trang**, *National Dong Hwa U.*

Family ownership forms a crucial foundation for control and management in family businesses, and family involvement constitutes a significant source of heterogeneity within family firms. This study focuses on examining the relationship between the characteristics of family involvement and the performance of family firms. Empirically, the study analyzes listed family firms in Taiwan over the period from 2006 to 2019. Through investigating samples of family firms defined by various thresholds of family ownership, the findings reveal several key insights: family ownership has a significant positive impact on firm performance; the proportion of family directors on the board significantly improves firm performance; and family ownership dispersion significantly strengthens the positive effect of family ownership on firm performance. These results contribute to a deeper understanding of how family involvement affects the performance of family firms.

OMT: **Churn in the Corner Office: Evidence from an Emerging Economy**

Author: **Suyash Garg**, *U. of Texas at Dallas*

Prior research in developed institutional contexts has predominantly examined board dynamics using directors' demographic identities. We know little about board ideological dynamics, especially how ideological tension may represent a tussle between change and continuity during institutional transitions. By developing an institution-based faultline perspective, we study how board-level divergence between achieved and ascribed statuses of directors on Indian firms' boards may split them into subgroups exhibiting opposing ideological pushes. This precipitates conflicts, behavioral disintegration, constrains CEOs' functioning, and may even lead to their departure. Our analyses on 7,548 firm-year observations between 2010 and 2018 show that board divergence does lead to CEO dismissal and that this effect is subject to both internal (family ownership) and external (environmental complexity) contingencies. Our findings have important implications for corporate governance in emerging economies with social complexities.

Industry (De) Stigmatization: Breaking Bad or Bad Breaking?

Session Moderator: **Laura E. Dupin**, *Amsterdam Business School, U. of Amsterdam*

OMT: **Blazing a Trail: Amsterdam Coffeeshops and Competitive Firm Responses to Social Control**  

Author: **Laura E. Dupin**, *Amsterdam Business School, U. of Amsterdam*
Author: **Alessandro Piazza**, *Rice U.*

In our study, we explore the dynamics of strategic deviance and social control among Amsterdam's cannabis coffeeshops from 2009 to 2018, a context marked by legal ambiguities and complex social norms. Through an empirical analysis of coffeeshop menu data and enforcement actions, we examine the competitive behaviors of these businesses in response to social control measures. Counter to assumptions that the scrutiny associated with social control may suppress competition, we propose that violators escalate competitive behavior to signal resilience while avoiding stirring intragroup tensions. We also argue that non-deviant actors will sanction violators through competitive behavior to contain opportunism, and that violators will encroach on rival offerings and lower pricing after interventions, targeting only non-deviant shops to recoup losses. Overall, our study sheds light on the heretofore unexamined competitive consequences of social control, highlighting the tenuous tradeoffs that exist at the nexus of deviant behavior, its social control, and market competition.

OMT: **From a Game of Chance to a Game of Skill: A Study of the Destigmatization of the Pinball Industry** 

Author: **Etienne Capron**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*
Author: **Albéric Tellier**, *U. Paris-Dauphine, PSL Research U., DRM*

The phenomena of organizational stigmatization have received increasing attention in the literature, highlighting various strategies aimed at coping with, even reducing and eliminating stigmatization. However, while actions that enable an organization or profession to reduce stigma have been studied, there is much less knowledge at the industry level. The study analyzes the pinball industry, which was prohibited in major US cities and states for nearly 30 years. It uncovers the complementary roles of technological and material innovation, as well as demonstrations, in destigmatizing the industry, along with other forms of collective action. From a theoretical point of view, this article contributes to locating where, when, and how the process of destigmatizing an industry occurs.

OMT: **When the Hero Becomes the Villain: The Stigmatization of Blockchain Voting in the U.S. Elections**

Author: **Gianlorenzo Meggio**, *U. of California, Berkeley & Aarhus U.*
Author: **Agnieszka Radziwon**, *U. of California, Berkeley & Aarhus U.*

Our study longitudinally examines the adoption of blockchain voting systems in the U.S. elections to show how the local cybersecurity community stigmatized this emerging industry. Drawing on interviews, archival documents, media articles, social media posts and other secondary sources, we identify four distinctive phases that led to the stigmatization of blockchain voting in the U.S. elections: stigma conceptualization, stigma individuation, stigma attachment and stigma transfer. These findings contribute to a better understanding of the stigmatization process by 1) illustrating the role of individuation in the stigma emergence phase 2) adopting a relational perspective to explain how the combination of certain stigma characteristics, sources, and management strategies lead to stigma attachment and 3) showing how stigma transfers once the underlying logics of the emerging industry are undermined.

OMT: **Local Identity and the Role of Audiences in Stigmatized Markets: Catalonia's Independence Conflict**

Author: **Blanca Moriyon**, *IE U. - IE Business School Madrid, Spain*
Author: **Alicia Barroso**, *U. Carlos III de Madrid*
Author: **Samira Reis**, *U. Carlos III de Madrid*

Previous literature finds that organizations with salient local identities perform better than its competitors in the market. However, no previous study considers what will happen when the regions with whom these organizations identify become stigmatized. How will organizations react then? What is the role that different audiences play in organizations' decisions on whether to stay or disengage from the stigmatized region? This study investigates the impact of regional stigmatization on organizations with a salient local identity. It proposes that when organizations with salient local identities operate in local markets, there are less changes they disengage from the stigmatized market. Instead, if they expand their boundaries and operate in markets with non-local audiences, they will be more prone to symbolically disengage from the stigmatized region. We test this intuition in the context of the independence conflict in Catalonia by looking at the firms that stayed and the ones that moved their social headquarters from Catalonia to other regions in Spain as a symbolic response of disengagement from the source of the stigma. We contribute to the literatures on organizational identities, local communities and categorical stigma as one of the first studies that suggests that choosing a salient local identity may not always be a positive tool for organizations and that they may suffer directly negative consequences if the region with whom they identify becomes stigmatized.

Theories of Advantages and Control: Networks, Social Mechanism and Socio-Materiality

Session Moderator: **Veronica Casarin**, *ESSEC Business School*

OMT: **Hybrid Logics and Mediating Devices: Accounting Calculations in the Organisation of Pharma R&D**

Author: **Veronica Casarin**, *ESSEC Business School*

Author: **Keith Robson**, *HEC Paris*

This paper investigates the effects of accounting and management control devices in mediating hybrid relations in complex organizations. We focus on organizational complexity and institutional hybridity in pharmaceutical and biotech R&D, a site where macro concerns for the productivity of drug discovery and development pipelines are often riddled with tensions between commercial, corporate, and science logics. We propose a theoretical approach based on socio-materiality studies, the science and technology studies literature and concepts of technological mediation. Within this approach, human actions and choices are mediated by technologies and material calculations. We look at the accounting mediation of institutional logics as instantiated in budgetary and performance measurement technologies. Whereas past literature has focused on the work of segmenting and combining logics as performed by human actors, we find that hybridity can be a property of relations between institutional logics where material accounting devices provide the calculative conditions for mediating such logics. We, thus, contribute to the literature on institutional logics by identifying and characterizing the key logics of practice at play within complex sites. We also contribute to the literature on hybridity by spelling out the mechanisms of mediation between commercial and science logics: balancing, prioritising, legitimating, regulating and blending. By doing so we show how the management of hybrid relations in scientific discovery in pharma commonly rests upon material calculative devices that can span multiple logics.

OMT: **Locked in Tradition? Clan Culture and Interorganizational Network Forms: Evidence from China**

Author: **Nan Zhang**, *Fudan U.*

Author: **Zhefei Li**, *Fudan U. School of Management*

This study investigates how informal institutions may have a crucial impact on the social processes of network formation and consequently the interorganizational network structure. We test our hypotheses by exploring how clan culture influences firms' alliance network structure. Using data from Chinese A-share listed firms from 2010 to 2021, our findings indicate that the focal firm's local clan culture in the region increases its alliance network closure. Furthermore, we further examine the moderating role played by the executive characteristics in the TMTs and discover that the number of female executives in the TMTs reduces the impact of clan culture on the alliance network closure, whereas executives' oversea experiences only have a marginal moderating effect. These findings deepen our understanding of the connections between informal institutions and interorganizational network structure. Moreover, by discovering the female executives' distinct effect on firms deriving from their perceptions of patriarchal culture, we also contribute to female leadership research.

OMT: **Fields Influencing Network Advantage**

Author: **Balazs Fazekas**, *Kyoto Tachibana U.*

This theoretical paper investigates how fields influence network advantage. While network theorists conceptualise network advantage as originating in network structure, the paper calls attention to the issue of field forces acting on network nodes. As defined by Fligstein and McAdam (2012), fields have stakes requiring certain kinds of resources and information. Stakes induce forces that act on those who belong to the field. The paper's main claim is that network advantage is influenced by how fields align with each other. Bridging ties might connect to fields irrelevant to the stake of the broker's main field, in which case no brokerage advantage can be realised from the tie that bridges the two fields. Likewise, ties within a tight cluster might go across structurally invisible field boundaries, rendering cohesion benefits ineffectual. In other words, the paper calls attention to the fact that not all structural holes are created equal, that boundaries can be present between two nodes even when a tie exists between them, and that not all bridging and closure ties will be advantageous to the same degree. The paper proposes a field-network framework that helps define where brokerage and closure ties are effectual, ineffectual, or detrimental to network advantage.

OMT: **Social Mechanisms of Regional Advantage: United States and Sweden**

Author: **Victor Nee**, *Cornell U.*

Author: **Sirui Wang**, *Cornell U.*

Author: **Michael W. Macy**, *Cornell U.*

Knowledge spillover and network rewiring are interconnected social mechanisms enabling and motivating regional economic growth. In a comparative analysis of knowledge economies in the United States and Sweden, we examine the intertwined social dynamics that they involve. At the micro-level, we explore patterns of entrepreneurial action to identify informal and formal institutional elements at play in enabling and guiding the growth of startup tech firms. At the meso-level, we examine the behavioral patterns of knowledge flow and network rewiring in knowledge economies of the United States (Los Angeles, New York City and Silicon Valley) and Sweden (Stockholm and Lund/Malmo). As predicted by theory and derived hypotheses, the more expansive the knowledge spillover and network rewiring, the greater the breadth of innovation and diversity of technology firms. At the country level, our finding is consistent with varieties of capitalism theory on liberal and coordinated market economies. We find a broader range of economic institutions and a higher volume of startup technology firms in the liberal market economy. In coordinated market economy contexts, nonmarket coordinating institutions constrain the extent of knowledge spillover and innovation outside of established big technology firms; notwithstanding, ongoing institutional change has led to diffusion of liberal market institutions.

Power Dynamics: With Great Power Comes Great Responsibility

Session Moderator: **Doris Do Kyung Kwon**, *The Wharton School, U. of Pennsylvania*

OMT: **Jurisdictional Competition and Task Disparity in Occupations**

Author: **Doris Do Kyung Kwon**, *The Wharton School, U. of Pennsylvania*

In this project, I examine whether competition over task domains, or jurisdictional competition, affects high- and low-educated occupations differently. Specifically, I investigate how task similarity between occupations affects the significance of certain tasks within an occupation, and whether this leads to differential task structures in high- and low-educated occupations. Using data from O*NET and the American Community Survey, I show that when faced with competition, occupations tend to secure their core, more significant tasks. However, high-educated occupations are better able to hived-off peripheral tasks, including routine or administrative tasks, than are low-educated occupations. This leads to high-educated occupations becoming increasingly specialized relative to low-educated occupations. I suggest that this process contributes to occupational disparity by generating higher earnings for high-educated occupations and creating barriers to mobility.

OMT: **Contesting State Predation: Political Capital, Power Dependence, and Cross-Listing**

Author: **Xiang Liao**, *Darla Moore School of Business, U. of South Carolina*

The literature on business-state relations in developing countries traditionally posits a harmonious dynamic, emphasizing benefits such as access to low-cost capital and improved information for firms. This study departs from this consensus, introducing a nuanced perspective by distinguishing political capital into two types: political connections and political embeddedness. Extending resource dependence theory, this research examines when political capital becomes a liability, specifically predicting unilateral power restructuring operations in cases of power imbalances. Focusing on Chinese listed firms, the study investigates their U.S. ADR listing behaviors against the backdrop of the Chinese government's efforts since 2012 to fortify the power of the China Communist Party and temper the influence of market forces. The core question centers on whether firms, when faced with a power-advantageous government, strategically opt for U.S. ADR listing. Empirical findings reveal that firms with substantial political capital are inclined to choose U.S. ADR listing when the government holds a power advantage. However, as this power imbalance intensifies, firms with political connections may deviate from this trend. This study sheds light on the strategic responses to power imbalances, showing how they safeguard their interests by incorporating third-party. The implications contribute to a broader understanding of firms navigating intricate relationships with governments and external markets.

OMT: **Dualization of Intra-Firm Power Relations: Lifetime Employment and CEO Succession in Japanese Firms**

Author: **Jiwook Jung**, *U. of Illinois at Urbana-Champaign*

Author: **Eunmi Mun**, *U. of Illinois at Urbana-Champaign*

Author: **Hiroshi Ono**, *Hitotsubashi U.*

We investigate mechanisms of institutional stability amidst profound environmental changes, using the case of corporate control in Japan. Over the last three decades, Japanese firms underwent a turbulent period with a series of crises. Throughout these crises, corporate leadership continued to be dominated by lifetime employees, despite the steady erosion of lifetime employment. Building on the concept of dualization from the comparative institutions literature, we theorize how dualized power relations at the top help sustain insider control—through the institutionalization of insider power and the circulation of different groups of outsiders. Our analysis, using data on all executive board members of TSE-listed firms from 1992 to 2016, demonstrates that executives who are lifetime employees at their companies continue to enjoy significant advantages in the contest for CEO succession. Lifetime executives maintain their dominance by promoting other lifetime employees while undermining the chance for others. In contrast, outsider executives, who joined the company as executive members and lacked durable intra-firm power bases, remain vulnerable to external changes. Our findings suggest that resistance by organizational insiders, combined with selective cooptation of outsiders, can help maintain institutional stability in a rapidly changing external environment. Lifetime commitment remains a valuable credential for CEO selection in Japan.

OMT: **Systemic Paralysis and Systemic Deterrence as Power Mechanisms of Change Failure**

Author: **Mhamed Biygautane**, *U. of Melbourne*

Author: **Sean Buchanan**, *U. of Manitoba*

Author: **Stewart R. Clegg**, *U. of Technology, Sydney*

The organizational fields' literature has predominantly focused on cases of successful change, but paid much less attention to how change failure unfolds. Extrapolating from the failure of introducing public-private partnerships in Kuwait, we suggest the concept of institutional power work that explains how actors mobilize power to affect change within fields. We present three power strategies of manipulating, stalling and attacking that circumvent change to protect interests, and further delineate how these strategies produce two enduring mechanisms of institutional control: systemic paralysis and systemic deterrence that can lead to change failure. We contribute to organization theory by identifying the power strategies and mechanisms underpinning the interplay between interests and change failure.

Panelist: **Madeline Toubiana**, *Telfer School of Management, U. of Ottawa*

Panelist: **Antonino Vaccaro**, *IESE Business School*

There are flourishing streams of research on emotions and on values in institutions. Yet most often, these forces are considered separately, focusing on emotions or values in institutional processes. This siloed approach misses the critical, complex and dynamic link between emotions and values. On one hand, emotions fuel engagement with or resistance towards institutionalized values; on the other hand, values shape and regulate emotional bonds. When we talk about admirable and admiration, shameful and shame, disgusting and disgust, the emotional experience and evaluative properties are inherently tied together. Emotions have important moral relevance and values have deep emotional implications. At times, what we experience as emotions and values align, creating an exponentially powerful force well beyond the scale of each of the two factors alone; at other times, emotions and values clash and move us in unexpected directions, driving institutional change and transformation. In this Symposium, we bring together a panel of experts in institutional theory to discuss the critical relationship between emotions and values, considering what they bring to our lived experience, and how, together, they are so much more than the sum of their parts.

Organizer: **Mara Cable**, *Boston College*
Organizer: **Valerio Iannucci**, *Boston U. Questrom School of Business*

Ethnography has long been recognized as a prominent methodological and analytical approach to studying work and organizations (Van Maanen, 1988). In the last decades, rapidly changing workplaces have led researchers to draw increasingly on in-depth fieldwork to develop thick descriptions and generate novel understandings of organizations (e.g., Frost et al., 1991; Geertz, 1973: 310). As management scholars embrace this “ethnographic turn” in the study of organizations (Rouleau, de Rond, & Musca, 2014), we suggest taking a step back to reflect on the lived experience, merits and challenges associated with ethnography. Specifically, the panel will share their experiences with resistance, risks and rewards inherent to ethnography and reflect on what they and others can learn from these experiences.

Doing impactful research has become the new currency in the field of organization and management scholarship. Impactful research is generally understood as the development of actionable insights in relation to important phenomena. This recent trend has already had a variety of positive outcomes, from channeling the attention of the academic community towards important topics to providing actionable insights. However, some scholars are urging to push this agenda further, stressing the limitations of the theories, perspectives and methods employed, and challenging the very notion of impactful research. To critically reflect, discuss, and accumulate knowledge about conducting impactful research, our symposium assembles a panel of five distinguished scholars from diverse disciplines, all committed to doing impactful research. In their work, they have highlighted the limitations of the main concepts, theories, and methods that their disciplines have to offer when conducting impactful research. Importantly, they offer alternatives to go beyond the current scope of impactful research and harness its full potential. As such, the symposium aims at developing a generative research agenda on how to conduct impactful research. The feasibility of this agenda in the current academic system, particularly for early career scholars, will be discussed.

Participant: **Laura Maria Giurge**, *The London School of Economics and Political Science (LSE)*

The symposium's goal is to bring together and showcase new research on how novel ideas, most prominently within entrepreneurship, are evaluated. This research informs which new individuals, ventures, and ideas are allocated resources and how inequality is produced in the opportunity to participate in innovation. We combine theoretical perspectives on how evaluators assess an idea's quality under uncertainty and the mechanisms that inform evaluative outcomes, including work on structural conditions of an evaluation process.

Presenter: **Samira Reis**, *U. Carlos III de Madrid*

This symposium aims to shed light on how creative industries are conducive to some advanced developments in Organization Theories. On the one hand, it aims to understand how actors achieve several outcomes related to innovation, performances related to success, and strategy development. On the other hand, this symposium explores how wrongdoings reshape the labor market in the context of creative industries. The symposium will present a unique opportunity to better understand different and complex dynamics within creative industries that lead to the development and implementation of strategies, and their effect on different outcomes such as innovation, individual success, and performance. This symposium also explores how mitigation actions to wrongdoings and innocent practices affect their labor market in creative industries. Overall, the symposium aims to explore complex and idiosyncratic mechanisms that profoundly impact performances and careers in such industries, advancing the field of organizational theory. The four papers in our symposium address these issues with a complementary set of methods and across a wealth of insightful contexts.

Navigating Risks and Opportunities in Sustainable Investment and Management

Session Moderator: **Jongsoo Kim**, *Hong Kong Baptist U.*

ONE: The Impact of the Top Management Team's Gender Diversity on Target Choice Regarding CSP  

Author: **Y. Anthony Kim**, *U. of North Carolina-Greensboro*

Author: **Jongsoo Kim**, *Hong Kong Baptist U.*

Author: **Liqun Wei**, *hkbu*

Author: **Gaoguang Zhou**, -

Enhancing CSR performance is vital in attempts to gain a competitive edge. As a result of these advantages, firms strive to acquire CSR resources by merging with targets that have a proven track records regarding CSR. Acquiring a high-CSR target offers numerous benefits, including the preservation of stakeholder relationships, the transfer of resources from the target to the acquiring firm, and the enhancement of corporate value. However, there is limited literature investigating the specific types of companies (i.e., in terms of their antecedents and boundary conditions) that adopt this strategy and the potential consequences of such actions. In this paper, we delve into the antecedents of this acquisition strategy. Primarily, we propose that firms with more gender-diverse top management teams (TMTs) are more likely to acquire targets with strong CSR performance. Nonetheless, we also hypothesize that this relationship is influenced by CEO gender and ownership status. Finally, we argue that acquiring high-CSR targets could alleviate stakeholder concerns, leading to reduced shareholder dissent. To test these arguments, we collected data on all acquisition deals involving S&P 500 firms and discovered empirical support for our hypotheses.

ONE: Do Sustainable Private Investors Get What They ask For?   

Author: **Julia Eckert**, *U. of Kassel*

Author: **Thomas Cauthorn**, *U. of Kassel*

Author: **Anne Kellers**, *U. of Groningen*

Author: **Bernhard Zwegel**, *U. of Kassel*

Author: **Christian Klein**, *U. of Kassel*

To understand if investment advisors are responsive to private investors' sustainability preferences, we send trained mystery shoppers to 414 investment consultations. Our findings show that although investment advisors are legally required to inquire private investors' sustainability preferences, in 22 percent of the cases investment advisors commit misconduct by not inquiring about these preferences. On average, only 47 percent of recommended products match expressed preferences. Furthermore, we find a strong divergence in the retail banking landscape and demonstrate that the query of sustainability preferences and the suitability of investment advisors' product recommendations differ significantly between public, commercial and cooperative banks.

ONE: The Link Between Climate Change Risk Perception, Strategy, and Performance: A Risk-Based Approach 

Author: **Martin Nerlinger**, *HSG U. of St. Gallen*

Author: **Sarah Stephen**, *U. of Liverpool Management School*

Author: **Sebastian Utz**, *U. Augsburg*

Author: **Judith Louise Walls**, *HSG U. of St. Gallen*

While many companies engage in both climate mitigation and adaptation strategies, a clear understanding of how risk perceptions shape these strategies and their ultimate effectiveness is lacking. Our research proposes a novel risk-based model of corporate climate change strategy, arguing that companies' perceptions of climate risk determine the type of strategy they pursue, ultimately affecting environmental and financial performance. We theorize three risk-based climate strategies (risk-avoiding, risk-reducing, and risk-transferring) and hypothesize that they mediate the relationship between risk and performance. We use a rich dataset of large panel data and causal mediation analysis to test our hypotheses. We find that more stringent climate strategies mediate the climate change risk-environmental performance relationship more strongly than less stringent strategies. Further, stringent strategies improve short-term financial performance and external carbon exposure evaluations influence long-term financial performance. Our new conceptualization is based on risk and task environment, and integrated with climate mitigation and adaptation.

ONE: Choosing Battles You can win: How PE Fund Managers Address Tensions When Integrating ESG

Author: **Tjarda Molenaar**, *Vrije U. Amsterdam, School of Business and Economics*

While financial value creation in private equity (PE) portfolio companies has been studied extensively, the integration of environmental, social and governance (ESG) factors into investment decision-making remains poorly understood. In this inductive study, we examine how PE fund managers deal with tensions between financial and ESG-related goals that are inherent to ESG integration in day-to-day investment practices. With a focus on the engagement tactics that PE fund managers in the Netherlands use to help portfolio companies integrate ESG factors, our findings show how PE fund managers interact with company management to address tensions related to goals, management priorities and resources that appear in consecutive stages of the investment process. We find that during the investment selection and value creation planning phases, they overcome misalignment by excluding tensions that cannot be managed while seeking to integrate manageable ones. During the realization of the value creation plan, they continuously manage tensions to ensure progress on financial and ESG dimensions over time. We consolidate these insights in a conceptual model that explains ESG integration in the PE context. In doing so, we specify prior research on the role of tensions in business sustainability and contribute to the literature on value creation in PE.

Digitalization and Sustainability in Market Evolution and Innovation

Session Moderator: **Yuxuan Xie**, *School of Economics and Management, Tsinghua U.*

ONE: **Context-Driven Innovation Ecosystem: The Environmentally Sustainable Innovation of Power Battery**

Author: **Yuxuan Xie**, *School of Economics and Management, Tsinghua U.*

Author: **Liyan Wang**, *Tsinghua U.*

Author: **Lingxiao Qian**, *School of Economics and Management, Tsinghua U.*

Developing and promoting environmentally sustainable innovation requires efforts of more than a single firm, but collaborative arrangements of multiple firms. The innovation ecosystem is one such arrangement. However, prior studies overly emphasize innovation ecosystems targeting a specific core value proposition, while ignoring the potential of multi-purpose technologies in applying to more than one use context. To close this gap, we conducted a longitudinal single case study on the strategic actions of Contemporary Amperex Technology Corporation (CATL) and the evolution of its power battery innovation ecosystem. Based on prior research and our analysis, we proposed the conceptualization of use contexts and a two-dimensional matrix of typology of use contexts. We also found that, in the birth, expansion, and leadership phases of innovation ecosystem evolution, the focal firm engages different types of collaborators, builds different types of use contexts, and gradually forms a multi-context innovation ecosystem. By blending the use context concept and the innovation ecosystem theory, our study contributes to the understanding of collaborative arrangements in the development of environmentally sustainable innovation.

ONE: **Making Markets Machine-Readable: Digital Transformations of Social-Ecological Systems in East Africa**

Author: **Parijat Chakrabarti**, *U. of Michigan, Ann Arbor*

Sociological studies typically analyze how the use of data produces the social order. Often overlooked is how social (and ecological) systems are ordered so as to be “seen” and governed with data. Drawing on 24 months of fieldwork in Kenya’s “Silicon Savannah,” multi-sited ethnographic case studies, 112 interviews, and full-cycle research methodology, this study documents digital transformations in fresh produce value chains to analyze how platforms remake social-ecological systems in the service of data-driven governance. I make two specific contributions. First, I show how the social organization of markets characterized by extensive relational work limits capacities for datafication. Second, I show how platforms overcome these limits by first constraining possibilities for interaction and then recruiting, shaping, and selecting market actors optimized to these constraints. In the case analyzed, we see how this unfolding, iterative process reconstitutes both the network structure and network composition of actors along the produce value chain, often displacing small farmers and traders with large-scale corporate actors. Implications for inequality, inclusion, and human-environment interaction in data-driven markets are discussed.

ONE: **Navigating Towards the Promised Land of Digitalization and Sustainability Convergence (WITHDRAWN)**

Author: **Jesus Valero**, *U. of Zaragoza*

Author: **Inés Suárez**, *U. of Zaragoza*

Author: **Concepcion Garces-Ayerbe**, *U. of Zaragoza*

Author: **Pilar Rivera-Torres**, *U. of Zaragoza*

In recent years, companies have had to update their strategic goals, adding the goal of digitalization to the already commonly accepted goal of sustainability. The convergence between these two strategic goals, D-S convergence, is understood as the complete and parallel realization of both strategic goals. In this paper, we analyze the path toward D-S convergence, i.e., the implementation models of sustainable and digital measures in companies. In doing so, we categorized the firm's strategies from less to more D-S convergence, analyzing the factors that promote the full realization of both strategic goals, with special emphasis on those factors that enhance the mentioned convergence. The results obtained with 6 hierarchical ordered probit models show that companies that devote more effort to innovation, business growth, exports and perceive the environment as favorable are more likely to achieve full D-S convergence.

ONE: **Sustainability Amidst Crisis: Harnessing Climate Disasters as Drivers of Renewable Energy Innovation**

Author: **Hiva Rastegar Moghadam Moadab**, *Massey U. Albany*

Author: **Aymen Sajjad**, *Massey U. New Zealand*

Author: **R Gabriel Eweje**, *School of Business and Law, Edith Cowan U., Joondalup WA 6027, Australia*

Author: **Kazunori Kobayashi**, *Massey U. Albany*

This study explores the impact of climate change-induced disasters on firms' deployment of renewable energy (RE) innovation. Drawing on the Behavioral Theory of the Firm (BTOF) and the threat rigidity model, this study investigates strategic decision-making in firms facing environmental crises. Analyzing the U.S. firms from 2013 to 2018 using a Difference-in-Differences (DiD) approach and Meta-analysis, the study uncovers a significant increase in RE innovation post-climatological disasters, with an effect size of 0.74. Firms above their aspiration level experience a lesser impact from these disasters on RE innovation, reducing the effect by an average of 0.273 units. Moreover, firms with a history of frequent climatological disasters exhibit a decrease in RE innovation, evidenced by an effect size of -0.349. Overall, this study contributes to green innovation research, particularly in RE innovation amid climate change-induced disasters, offering a nuanced firm-level analysis. It extends the BTOF to uncertain contexts shaped by climate disasters, contributing to a deeper understanding of firm behavior in such environments. The study also innovatively applies the threat rigidity model to explore organizational adaptation strategies and introduces a novel moderator: a firm's history of natural disasters, combining firm age with the frequency and severity of climatological events. These contributions provide valuable insights for policymakers and businesses, enhancing strategic decision-making in the face of climate change.

Corporate Strategies and Governance in Environmental Sustainability

Session Moderator: **John-Patrick Akinyemi**, *UT Austin*

ONE: Organizational Intent to Learn: Harnessing Framing for the Inflation Reduction Act

Author: **John-Patrick Akinyemi**, *UT Austin*

Author: **Meenal Banga**, *U. of Texas at Austin*

Author: **Yunxiang Bai**, *McCombs School of Business, U. of Texas at Austin*

Author: **Tianyu Zhou**, -

Author: **Junyeon Rhee**, *U. of Texas at Austin*

Author: **Daniel Nielson**, *UT Austin*

This study examined the effect of loss framing and social proof on small firms' learning intent about the U.S. Inflation Reduction Act (IRA), focusing on green-technology tax incentives. A 2x2 factorial field experiment involving 46,843 emails to 17,083 companies showed no significant effect of these strategies on learning intent. However, insights from 14 interviews with firm representatives identified four key conceptual themes related to learning intent, barriers, and outcomes in this context. Notably, many firms were more influenced by perceived indirect benefits of the IRA, like partnerships, than by direct incentives – underscoring the limited impact of traditional framing in the climate-change context. Practically, our study serves as an information resource by providing firms with a concise 8-page IRA Executive Summary. Our results strongly indicate to climate policymakers that traditional communication strategies may fall short in invoking intent to learn. Furthermore, the study's contributions include testing green nudges and framing in real settings and expanding organizational learning literature by investigating learning intent at the firm level. Future research will focus on the role of probabilistic and possibilistic thinking in IRA-related firm-level communications.

ONE: An Investigation of the Interplay Between Financial Leverage and GHG Emissions

Author: **Martina Barbaglia**, *Politecnico di Milano School of Management*

Author: **Giancarlo Giudici**, *Politecnico di Milano School of Management*

Author: **David Hillier**, *U. of Strathclyde*

Author: **Jonathan Tagliatalata**, *Politecnico di Milano School of Management*

While traditional corporate finance literature has been concerned with how sustainable performance impacts a company's value, this paper investigates whether firms' capital structure is bonded to their commitment to the achievement of net-zero targets. In order to assess a firm's effort for climate protection, we examine the relationship between its leverage ratio and level of CO2 emissions. Our research findings document a growth of carbon emissions following an increase in the level of indebtedness, thus revealing the detrimental influence of a higher portion of debt on a firm's environmental pledge. In addition, our study offers the first empirical evidence linking the amount of revenues from green products and services to carbon emissions reduction. Overall, these results hold valuable insights for both managers and policymakers who aim to accelerate the shift toward a low-carbon economy.

ONE: Across the Boards: Corporate Governance and Access to Climate Finance

Author: **Tetsekela Anyiam-Osigwe**, *Princeton U.*

Author: **Sherwat Elwan Ibrahim**, *American U. in Cairo*

Can corporate boards give firms preferential access to climate finance? Redefining what makes a good board of directors, we introduce the concept of climate conscious boards. These are boards that have climate advocates serving as members, are linked to an internal or external climate-related committee and have set net zero targets. Focusing on the financial opportunities linked to climate change, we argue that climate conscious boards of directors can influence their firm's access to climate finance. Using data on thirteen publicly-listed African firms in the NetZero database and the eleven private sector-led projects funded by the Climate Investment Funds and the African Development Bank, we examine the potential role and impact of corporate boards on Africa's private sector engagement with the green bond market and multilateral climate funds. Our study has implications for how firms might look towards transforming corporate governance practices in an era where climate change has risen to the top of the strategic agenda.

ONE: Sequences of Resource Allocation in Corporate Sustainability

Author: **Johannes Meuer**, *KLU Hamburg*

Author: **Julija Belec Gergek**, *ETH Zürich*

This study proposes a dynamic, process-oriented perspective on resource allocation decisions in the context of corporate sustainability. While previous research has predominantly focused on measurable financial aspects, we resource allocation decisions within Swiss food retailers from 2000 to 2019. Drawing on a comprehensive dataset, including media reports, corporate documentation, and expert interviews, and using a sequence-analytical framework, we identify four overarching decision sequences—simple, transformative, divestment, and bundling—that shed light on distinct structural and temporal dynamics. We emphasize discontinuity in resource allocation as a competitive strategy and elucidate strategic and institutional factors influencing temporal dynamics. Notably, the bundling of sustainability initiatives emerges as a pivotal strategic capability development moment. We contribute to the evolving discourse on resource allocation, urging a shift from a static to a dynamic perspective, particularly in the realm of corporate sustainability.

Governance, Risk, and Sustainability: Shaping Corporate Environmental Strategies

Session Moderator: **Himanshu Shekhar**, *Doctoral Student at Indian Institute of Management Bangalore*

ONE: Custom Governance: How Do Owners and Board Together Facilitate Voluntary Environmental Disclosures?

Author: **Himanshu Shekhar**, *Doctoral Student at Indian Institute of Management Bangalore*

Corporate governance is essential to ensure transparency between the organization and its stakeholders. Boards and ownership are two mechanisms complementing and substituting each other for effective corporate governance of the firms. This paper builds a theoretical understanding around the two mechanisms and proposes three levers of ownership governance through which owners work with the boards. We demonstrate these levers on institutional investors, the largest equity ownership class for the world's firms, and their relationship with independent directors. Further, we exploit the differences among the institutional investors to show how the ability and incentive to monitor the management varies with the investment orientation and horizon of these investors. These variations lead the investors to select specific governance levers or use the same lever for differentiated objectives with the investee firms. These choices suggest that owners have three governance levers, and owners' obligations may influence the choice of these levers and their usage as substitutes. We use the context of voluntary environmental disclosures for S&P 500 firms over ten years to support our findings.

ONE: Combine Top-Down and Bottom-Up: Multilevel Water Governance for Sustainability Transitions

Author: **Yali Yi**, *Shanghai Jiao Tong U.*

Author: **Pelin Demirel**, *Imperial College London*

As multilevel governance becomes essential in sustainability transitions, this study takes the China's River Chief System (RCS) as a quasi-natural experiment and uses the difference-in-differences-in-difference (DDD) method to explore whether multilevel water governance promotes eco-innovations. The results show that the RCS significantly promotes eco-innovation quantity and quality which shed light on the effectiveness of multilevel water governance. Also, the heterogeneity analysis demonstrates that multilevel water governance depends on province- city- and firm- level characteristics. Furthermore, the impact of multilevel water governance on eco- innovations strengthens with environmental subsidy, which adds new insight and provides potential policy-mix perspective on natural resources protection.

ONE: Institutional Voids Effects on Risk Management: Mining Companies Managing Tailings Dam Failures Risks

Author: **Cinara Gambirage**, *U. of Groningen*

Author: **Carmen Migueles**, *Adjunct professor, Getulio Vargas Foundation*

Author: **Jaison Caetano Da Silva**, *Fundação Getúlio Vargas/EBAPE*

Author: **Marco Zanini**, *Brazilian School of Public and Business Administration*

Although scholars have dedicated their efforts to analyzing technical risks in the extractive industry and a body of research has generated impressive insights into these risks, the underlying institutional forces that affect the risk management of tailings dam failures in the mining industry have been underestimated and under-theorized and our understanding is still limited with regard to this puzzle. In this study we attempt to progress our understanding of how institutional voids affect mining firms' management of the risk of a tailings dam failure. We examined the two worst tailings dam disasters (Mariana, 2015; Brumadinho, 2019) in Brazil as a backdrop to the study while its field was a neighboring community near the areas where these two largest tailings spills occurred and which now faces the imminent risk of the collapse of two tailings dams upstream of the village. Brazil is a traditional and key mining producer globally and the sequence of serious disasters with tailings dams that have occurred in recent years and the number of dams at imminent risk of failure have meant that the mining industry and institutional framework have been questioned. We performed a large document analysis and conducted 209 online and in-person interviews with local people and related actors. The study results suggest that deficiencies in regulatory institutions are affecting risk management in the mining industry. The study contributes to the literature by extending discussion of the effects of institutional voids on risk management in extractive firms.

ONE: Business, Bioeconomy and Biodiversity — An Extended Framework for Managing Biodiversity Impacts

Author: **Julius Wenzig**, *Witten/Herdecke U.*

Author: **Charlott Hübel**, *Witten/Herdecke U.*

Author: **Verena Timmer**, *Witten/Herdecke U.*

If companies want to contribute to transforming a bioeconomy, their engagement in preserving biodiversity is key. Comprehensive measures for managing biodiversity are needed, encompassing setting goals, measuring impacts, and monitoring progress as well as embedding biodiversity in the organizational structure and culture. Measures are especially needed with regard to the main drivers of biodiversity loss, which are identified as (1) land and sea use change, (2) resource exploitation, (3) climate change, (4) pollution and (5) invasive non-native species. However, current biodiversity management frameworks fall short in guiding companies to embed different drivers of biodiversity loss or address comprehensive management systems which include organizational structures and culture. This paper addresses the gap in research by developing a processual biodiversity management framework that incorporates the drivers of biodiversity loss as well as comprehensive systems of management control, including the organizational setting. In doing so, it combines prominent intergovernmental frameworks on drivers of biodiversity loss with academic literature on biodiversity management and management control. Practical and theoretical implications of the new framework are presented and discussed. On the one hand, it may effectively contribute to the growth and upkeep of the bioeconomy by guiding companies to protect and promote biodiversity. On the other hand, it makes crucial contributions to bioeconomy, biodiversity management and management control research.

Organizational Considerations in Operations & Supply Chain Management - I

Session Moderator: **Matthias Klumpp**, *Politecnico di Milano*

OSCM: **Driving Performance? Task and Customer Specialization and Variety in Last-Mile Delivery Services**

Author: **Dominic Loske**, *Technical U. of Darmstadt*
Author: **Margaretha Gansterer**, *Alpen-Adria U. Klagenfurt, Austria*
Author: **Matthias Klumpp**, *Politecnico di Milano*

This study explores the conditions under which task-related specialization and exposure to variety, as well as concurrent exposure to customer variety in temporary two-member teams impacts performance in last-mile delivery services. In our context, dispatchers represent a decision-making entity responsible for planning delivery routes and assigning drivers to customers, while drivers fill the decision-executing role when servicing customers. On the team level, we propose that teams' task-related exposure to variety and concurrent exposure to customer variety when performing a focal task is positively associated with performance. For the team member level, we propose that decision-executing team members' concurrent customer specialization has a negative effect on service performance. Our explanation is that increasing customer specialization intensifies social customer interactions, leading to longer verbal communication, which increases the time to service a customer and, therefore, negatively impacts service performance. One additional argument supporting our social customer interaction aspect is that a decision-makers' concurrent customer specialization has no significant effect on service performance. Our results highlight the need for organizations to view specialization and variety through the lens of customers rather than treating them as mutually exclusive. Overall, our study identifies new ways to improve service performance in last-mile delivery services through a different and effective allocation of work.

OSCM: **How to Configure the Supply Chain to Stimulate Firm Innovation Performance?**

Author: **Liangliang Zhang**, *Shanghai U. of International Business and Economics*
Author: **Peter Teirlinck**, *KU Leuven*
Author: **Taoyong Su**, *School of Economics & Management, Tongji U.*
Author: **Yuzhu Yu**, *School of Economics & Management, Tongji U.*

Supply chain characteristics are an important driving force for innovation at the focal firm. Previous research has separately examined the impact of spatial, relational, and innovation capability dimensions of the supply chain on firm innovation. This study explores configurations of distance, concentration, and innovation of the upstream supplier-base and the downstream customer-base on firm innovation. Necessary causality analysis and fuzzy-set qualitative comparative analysis (fsQCA) are relied upon. Based on a dataset of 123 Chinese listed companies in high-tech manufacturing sectors, we provide novel insights on the antecedent configurations of the supply chain characteristics for firm innovation. We find that no individual condition is necessary for achieving high firm innovation performance. We identify three primary configurations - namely, innovation-driven, customer-dominated, and relationship-driven - that consistently lead to superior firm innovation performance.

OSCM: **Supply Chain Integration and Culture: A Systematic Literature Review and Future Research Agenda**

Author: **Amol Dhaigude**, *S P Jain Institute of Management and Research (SPJIMR) Mumbai India*
Author: **Debmallya Chatterjee**, *S P Jain Institute of Management and Research (SPJIMR) Mumbai India*
Author: **Soma Amol Dhaigude**, *National Institute of Technology Karnataka Surathkal, India*

Culture plays a pivotal role in shaping the success of supply chain integration (SCI). As noted by Christopher, organizational culture influences the extent to which collaborative relationships are fostered across supply chain partners. Unfortunately, scholars have not studied the interplay of culture and SCI systematically. This structured literature review investigates the intricate relationship between SCI and culture. As an essential facet of operations management, the study explores how the level of integration across supply chain functions interacts with the prevailing culture. Drawing insights from top-tier academic journals (A and A* level), the paper synthesizes existing knowledge using the SPAR-4 SLR to unveil the impact of cultural factors on successful SCI. The review highlights key themes, methodologies, and gaps in current research, shedding light on the interplay between cultural dimensions and integration strategies. With implications for practitioners and scholars alike, this paper contributes to a nuanced understanding of the complex dynamics between SCI and culture, offering a foundation for future empirical investigations and strategic management in the field.

OSCM: **Unveiling the Veil of Secrecy: The Impact of Clan Culture on Supply Chain Transparency**

Author: **Hanqing Zhao**, *Business School, Sun Yat-Sen U.*
Author: **Heng Liu**, *Sun Yat-Sen U.*
Author: **Huiyang Li**, *Lingnan College*
Author: **Yawen Li**, *Jinan U.*

This study investigates the influence of clan culture on supply chain information transparency in Chinese private enterprises, a topic scarcely explored in existing literature. Traditionally, research in this domain has been dominated by proprietary cost theory and institutional theory, focusing on the costs and regulatory factors affecting corporate disclosure practices. However, these perspectives often overlook the cultural dimensions, particularly in regions with similar institutional environments. Our research bridges this gap by examining the impact of clan culture, a deeply ingrained aspect of the social and economic landscape in China, on supply chain transparency. Utilizing data from Chinese private listed companies from 2008-2021, the study reveals a significant negative correlation between the prevalence of clan culture in a region and the level of supply chain information transparency among its enterprises. This finding persists even after extensive endogeneity and robustness tests, suggesting a robust influence of clan culture on corporate disclosure behaviors. The paper extends the existing literature on supply chain transparency by integrating the often-neglected cultural perspective, specifically the role of clan culture. It also adopts a dual approach, considering both customer and supplier sides of the supply chain, thereby providing a more holistic understanding of the factors influencing transparency in corporate supply chains. This research not only enriches academic discourse but also offers practical insights for businesses operating in culturally diverse environments.

Sustainability Issues in Operations & Supply Chains

Session Moderator: **Shuhan Wang**, *The Hong Kong Polytechnic U.*

OSCM: **Mitigating Shareholder Concerns About Ambitious Corporate Carbon Neutrality Goal Setting**

Author: **Shuhan Wang**, *The Hong Kong Polytechnic U.*

Author: **Di Fan**, *The Hong Kong Polytechnic U.*

Author: **Chris K. Y. Lo**, -

Author: **Andy C. L. Yeung**, *Faculty of Business, The Hong Kong Polytechnic U.*

Firms are under government and consumer pressure to set up corporate carbon neutrality goals. Some firms are setting ambitious goals to demonstrate their strong commitment to addressing climate change. Attaining these ambitious goals requires tremendous effort to neutralize a significant number of current emissions within a short period of time. However, the literature on operations management provides limited understanding of the immediate impacts of corporate carbon neutrality goal setting. Based on an event study of U.S.-listed manufacturing firms, this paper finds that corporate carbon neutrality goal setting can trigger shareholder concerns and reduce firm value. This negative effect is more salient when the goal is ambitious; however, the tension between ambitious carbon neutrality goal setting and shareholder concern was mitigated when the firms had better operating efficiency, flexibility regarding carbon neutrality, and greater momentum in reducing emissions. This study contributes to the sustainable operations literature and provides insights for theory, management, and policy.

OSCM: **Sustainability-Performance Dilemma: The Role of Quality Management Diligence**

Author: **Matin Mohaghegh**, *Stockholm School of Economics*

Author: **Sina Behzadifard**, *Stockholm School of Economics*

Author: **Pär Åhlström**, *Stockholm School of Economics*

Motivated by inconclusive findings on the sustainability-performance relationship, this study focuses on the question of whether sustainability should be viewed as a financial burden or a firm performance catalyst. More specifically, this study aims to explore the crucial yet under-examined role of quality management in the sustainability-performance relationship. However, unlike previous studies that narrow their focus to only a subset of quality management practices subsumed under one banner, such as TQM or lean, this research advocates for the integration of multiple quality management practices to cultivate “quality management diligence”, namely, a rigorous and disciplined mindset to ensure that quality is integrated into every facet of a firm. Drawing on a panel of 1876 European firms with 16,901 firm-year observations over the period of 2003-2023, panel data regression is employed to empirically examine the effect of quality management diligence on sustainability and their subsequent impacts on firm performance. The empirical findings indicate a positive relationship between quality management diligence and the adoption of environmental/social sustainability practices and between the adoption of environmental/social sustainability practices and firm performance. Our results also confirm the mediating role of sustainability in the relationship between quality management diligence and firm performance.

OSCM: **Buying Between a Rock and a Hard Place: Expectancies of Social and Environmental Sustainability**

Author: **Ruth Schültken**, *U. of Mannheim*

Author: **John R. Macdonald**, *Colorado State U.*

Author: **Christoph Bode**, *U. of Mannheim*

Buying companies focus on aspects of social and environmental sustainability in their supply chains with differing levels of importance, and similarly react differently to social and environmental violations in their supply chains. Drawing on expectancy violation theory (Burgoon, 1993), this study investigates the differences between social and environmental sustainability related to the buying companies' sustainability expectancies. Using a sequential multi-method approach, 15 interviews among procurement practitioners were conducted to identify the antecedents of the expectancies and 195 procurement practitioners participated in a scenario-based experiment that examined their reactions to expectancy violations. Results indicate that companies tend to focus their expectancies more on either the social or the environmental sustainability dimension rather than on both equally. The focus is determined based on the existence of dimension-specific antecedents. Further, companies react more strongly to violations of their social expectancies than to violations of their environmental expectancies: The likelihood of terminating the relationship with the supplier and of claiming penalties is higher for social violations. This research contributes to a more nuanced understanding of the differences between the sustainability dimensions in the buyer-supplier context, which impacts sustainability in the entirety of upstream supply chains.

OSCM: **Customer-Enforced Sustainability as Outsourced Corporate Responsibility and Contemporary Colonialism**

Author: **Iqra Sadaf Khan**, *Aalto U.*

Author: **Minna Halme**, *Aalto U. School of Business*

Global corporations have for over two decades sought to manage environmental and social sustainability in their supply chains extending to the Global South by setting codes of conduct and sustainability standards for their suppliers. Yet problems persist. Our data from Global South textile (Pakistani) supplies to global fashion brands offers a seldom perspective. We identify how global brands outsource corporate responsibility and its costs to their suppliers, with contextually ill-fitting demands and mostly with inadequate support, and compensation. We introduce the term as customer-enforced sustainability management for this approach and show how it perpetuates a vicious cycle, where brands ignore the local realities of the suppliers, who resort to short-term compliant solutions which are sometimes reached through mocked setups and cheating behaviors. Auditors, who are local, tend to ignore non-compliant behaviors. The cycle closes if and when brands close their eyes, suggesting common knowledge about cheating behavior between all the parties. We theorize that customer-enforced sustainability and outsourcing of corporate responsibility are not isolated activities, but rather a part of larger underpinning notion, contemporary colonialism partially enables by local factors. Finally, we offer suggestions for contextually appropriate means for integrating sustainability into the activities of suppliers in the Global South.

Author: **Axel Zehendner**, *LUT Business School*

Author: **Michele Pereira**, *U. Federal de Viçosa*

Author: **Anni-Kaisa Kahkonen**, *LUT Business School*

Global agri-food supply chains (SCs) are under public scrutiny to ensure the sustainable production of agricultural commodities. However, many producers of these commodities face difficulties in meeting the sustainability requirements of global markets due to challenges arising from their local operating contexts. The purpose of this study is to provide insights into how the community in agri-food SCs manages to work towards social frameworks that contribute to the adoption of sustainable production practices at the farm level. To better understand this phenomenon, our research utilized the concept of institutional work in combination with the notion of the SC field. A case study focusing on the context of global agri-food SC was conducted, combining empirical data from the cocoa and coffee industries into a single case. The research presents different forms of institutional work, classified as either boundary work or practice work. Departing from traditional institutional studies in sustainable supply chain management, our study adopts a novel perspective to explain how the purposive actions of individual and collective actors contribute to the institutionalization of sustainable practices in global SCs.

Managing Supply Networks

Session Moderator: **Iryna Malacina**, *LUT U., LUT Business School*

OSCM: **Strategic Purchasing Integration as an Antecedent of Public Value**

Author: **Iryna Malacina**, *LUT U., LUT Business School*
Author: **Jad El Bizri**, *LUT U., LUT Business School*
Author: **Frederik G. S. Vos**, *Portland State U.*
Author: **Elina Maritta Karttunen**, *Lappeenranta-Lahti U. of Technology LUT*
Author: **Aki Jääskeläinen**, *Tampere U. of Technology*

This study empirically examines how strategic purchasing integration contributes to developing social capital within supply networks and how this social capital affects operational, innovative, and environmental value creation. We analyzed survey data from 173 public procurement experts in Finland, employing structural equation modeling. Our results indicate that strategic purchasing integration enhances the creation of relational, cognitive, and structural capital within supply networks, with the relational aspect being the most impacted. This social capital had in turn crucial impact on value, exhibiting diverse effects. Operational value is achieved through a combination of cognitive and structural capital, while environmental value primarily develops through structural capital. Innovative value creation requires all three types of social capital. Uniquely, our study reveals that different types of value necessitate different combinations of social capital. Furthermore, our findings underscore the vital role of aligning internally and externally, as strategic purchasing integration helps in building social capital with external supply networks, thereby fostering superior public value creation for the buying organization. This research complements and extends similar findings in the private sector and shows that both integration and social capital are relevant also for public and social organizations that do not have financial value as a key value driver.

OSCM: **Supply Networks, Mergers and Acquisitions, and Operational Performance**

Author: **Wenjin Hu**, *U. of Bristol*
Author: **Yuqi Peng**, *Salisbury U.*
Author: **Yongyi Shou**, *Zhejiang U.*
Author: **Stephan M. Wagner**, *ETH Zurich*

Practitioners have begun to emphasize the crucial role of supply chains in thriving through mergers and acquisitions (M&As). Yet, extant research has mainly focused on internal post-M&A integration, i.e., integration between the merging firms, and largely overlooked the adaptation and coordination of their supply chains. This study examines how a firm's position in the supply chain network, i.e., betweenness centrality and structural holes, mitigates complexity and risks in post-M&A integration and ultimately buffers up its operational performance. We find that the firm's betweenness centrality in the supply chain network has a significant risk-buffering effect on the negative relationship between M&As and operational performance whereas the firm's structural hole position does not. As such, our study reveals that the control and mobilization of suppliers are the key to external coordination for post-M&A integration. By contrast, the information advantage from structural holes is difficult to implement and could not convert to effective supplier mobilization and coordination.

OSCM: **How Does Supply Chain Transparency Affect Firms' Knowledge Network Embeddedness?**

Author: **Ji Yan**, *Durham U. Business School*
Author: **Zihao Yu**, *Durham U. Business School*
Author: **Kun Tian**, *Kent Business School, U. of Kent*
Author: **Kiran Fernandes**, *Durham U.*

Supply chain transparency is increasingly important for complex supply chain operations and collaborations. This study examines the relationship between firms' supply chain transparency (SCT) in their supply chain network and their knowledge network embeddedness in the knowledge network; and considers the moderating roles of two contextual factors, supply chain network density and marketization. Using supply chain information disclosure data and patent application information from 869 Chinese listed firms between 2011 and 2020, this study evidenced that firms' SCT has a positive effect on their knowledge network embeddedness, and this relationship is positively moderated by supply chain network density, and negatively moderated by marketization. This study contributes to SCT literature by examining the role of SCT in a cross-network setting (i.e., supply chain network and knowledge network). It answers the call to investigate the role of SCT in facilitating knowledge and information sharing. It also sheds new light on the investment of information disclosure strategies that contribute to effective, trust-based interorganizational collaborations.

OSCM: **Does Transparency Moderate the Relationship Between Supply Network Embeddedness and Firm Innovation?**

Author: **Xiaomei Li**, *College of Management and Economics, Tianjin U.*
Author: **Yicong Geng**, *Tianjin U.*
Author: **Xinyi Yang**, *Tianjin U.*

With the development of technology, rather than being separated single chain, the supply chain gradually shows characteristics of networking. The competition and cooperation of firms within the supply network is interwoven and supply chain members become even closer, which marks firms are embedded in supply chain network deeper than before. This embeddedness may have an impact on firms' decisions including innovation activities. At the same time, the complex network also requires a more transparent environment to eliminate information asymmetry that some firms suffered from. Therefore, more and more enterprises call for a more transparent supply network. Considering relational and structural factors at the same time, this paper explores the influence that supply chain structure and relationship embeddedness on innovation under the context of supply chain transparency. This paper tends to explore what changes will a transparent supply chain environment bring to the supply chain and ask does transparency facilitate or inhibit the relationship of supply chain embeddedness and innovation. Datas are collected from CSMAR and Bloomberg database. It's finally found that there is a negative relationship between network embeddedness and innovation, and transparency negatively moderates this relationship. Our research enriches literature on supply chain transparency and provides management recommendations for companies' information disclosure behavior.

Parallel Paths: Comparing the Efficiency & Sustainability of Business & Nonprofit Organizations

Session Moderator: **Ferdinand Gosch**, *Leibniz U. Hannover*

This presentation will compare business and nonprofit organizations on the basis of gender diversity and efficiency, their ability to attract talent, and their differences in perceptions of sustainability.

PNP: On the Path to Long Term Sustainability: How NPOs Perception of Sustainability Shape Their Strategies

Author: **Ferdinand Gosch**, *Leibniz U. Hannover*

In this paper, we contrast the perceptions of sustainability of for-profit and non-profit organizations (NPOs) to show a difference in perception and understanding. A two-study design helps us to decisively examine the existing differences. Using a content analysis based on textual publications of both types of companies, we identify relevant topics related to sustainability, which we assign to the triple bottom line dimensions (social, environmental, and economical) as well as to the Sustainable Development Goals. Accordingly, NPOs focus primarily on environmental issues, while for-profit issues often report on social issues. To substantiate this difference, we conducted interviews with decision makers from the NPO environment. Analysis of the interviews reveals a divergent picture. Based on the results of both studies, we derive a model that depicts the process of NPOs to develop sustainability strategies and their influence on long-term sustainability on an organizational and global level. Our research highlights the important role of NPOs in the context of facing grand challenges and contributes to the research on sustainable business development, sustainability reporting and sustainable finance.

PNP: Competing for Talent: Employee Incentives for Nonprofits to Gain an Advantage in Human Capital

Author: **Zhefan Huang**, *U. of Florida*

Author: **Yixuan Li**, *U. of Florida*

Author: **Aaron Hill**, *U. of Florida*

Author: **Mo Wang**, *U. of Florida*

Author: **Danielle Van Jaarsveld**, *Sauder School of Business, U. of British Columbia*

Vital to our society, the success of nonprofit organizations (NPOs) often hinges on the effective management of human capital. Yet, while a significant body of research exists on human capital management in nonprofits, there lack studies adopting a comparative perspective and exploring management practices that can afford nonprofits an advantage in motivating and retaining human capital over for-profit organizations (FPOs), with which NPOs are increasingly competing for employees, particularly considering that FPOs are more frequently venturing into areas traditionally dominated by NPOs. In this study, we investigate the types of employee incentives that can differentially impact voluntary turnover in NPOs and FPOs, thereby potentially providing NPOs an advantage in motivating and retaining human capital. Specifically, adopting a firm-specific incentive perspective, we propose that employee incentives that demonstrate people orientation (i.e., employee benefits, employee participation, and employee training) can more effectively curb voluntary turnover in NPOs compared to their for-profit counterparts. Using a multi-level and longitudinal dataset from Statistics Canada (N = 11,555 organization-year observations from 2,867 organizations), we found support for our hypotheses. Our research sheds light on potential avenues for NPOs to achieve competitive advantage over NPOs with respect to retaining employees by aligning management practices with their organization contexts and employee values.

PNP: Board Gender Diversity and Technical Efficiency of Microfinance Organizations

Author: **Luis Fernando Escobar**, *U. of Lethbridge*

Author: **Mahinda Wijesiri**, *Independent Scholar*

Author: **Lucia Dalla Pellegrina**, *U. of Milano Bicocca*

As a result of numerous corporate scandals as a result of weak governance mechanisms, gender diversity has become the most intensely debated and scrutinized corporate governance aspect. This study examined the impact of board gender diversity on the technical efficiency of microfinance organizations. Using a sample of microfinance organizations, we found presence of female directors on boards had a negative effect on technical efficiency. We also deal with the question of whether this relationship varies by the profit status of microfinance organizations. Our results show that the board gender diversity has a significantly negative impact only on the technical efficiency of non-profit microfinance organizations.

PNP: No Strings Attached: An Examination of Board Designated Endowments in Nonprofit Organizations

Author: **Andrew Finley**, *Claremont McKenna College*

Author: **Curtis Hall**, *Drexel U.*

Author: **Teresa D. Harrison**, *Drexel U.*

We examine whether board-designated endowments (“BDEs”) alleviate agency problems associated with a nonprofit organization’s (“NPOs”) unrestricted net assets and whether these endowments are associated with different spending outcomes than donor-restricted endowments. Our results provide little evidence that BDEs ameliorate agency conflicts. Specifically, NPOs with a BDE exhibit the same negative (positive) relation between unrestricted net assets and program spending (CEO compensation) as comparable NPOs without a BDE. Further, the size of a BDE exhibits a stronger association with CEO compensation than the size of the donor-restricted endowment. In additional analysis, we find no evidence that having a BDE stabilizes an NPO’s program spending in the face of revenue declines, suggesting these resources fail to achieve one of the primary objectives of an endowment. Overall, our results suggest BDEs are not particularly effective in serving the mission of NPOs and raise questions as to the efficacy of boards in their oversight of this asset base.

Partnership Paradigms: Creating Value in Public-Private Alliances

Session Moderator: **Sandro Cabral**, *Inspere Institute of Education and Research*

This presentation will dissect the intricacies of public and private sector convergence, exploring how partnerships drive value creation, the interplay between profit and defense, the politicization of federal contracting, and collaborative efforts to mitigate educational disparities.

PNP: **Hybridity and Decoupling: Insights from the Australian Defence Industry (WITHDRAWN)** 

Author: **Shruti Sardeshmukh**, *Shiv Nadar Institution of Eminence*

Author: **Mandar Oak**, *Shiv Nadar Institution of Eminence*

Author: **Will Mackay**, *U. of South Australia*

The Australian Industry Capability (AIC) Program presents an example of hybridity where national security interests are served through a complex partnership between the Department of Defence, global prime contractors, and smaller Australian companies. Through a qualitative interview study of stakeholders in the defence industry and triangulating findings from publicly available defence industry documents, this paper aims to identify the evidence of decoupling associated with the AIC program. We find that complexity and opacity as a result of hybridity create decoupling in the implementation of the AIC program. We also find that a lack of accountability and monitoring contributes to decoupling. We advance the literature on hybridity into the context of multi-organizational arrangements in a unique industry and identify how decoupling can impede the achievement of policy objectives in the context of complex hybrid arrangements.

PNP: **Beyond Efficiency and Public Benefits: Federal Contracting as a Partisan Project, 1979–2018**    

Author: **Elisabeth Clemens**, *U. Of Chicago*

Author: **Yuhao Zhuang**, *EMLYON Business School*

Government contracting reconstitutes boundaries of the public sector through ever-deepening engagement of the contemporary state with business firms and nonprofit organizations. This outsourcing of public functions is frequently characterized as a move to maximize cost efficiency or advance public welfare. Nevertheless, government contracting also expresses ideological commitments and institutional opportunities for harnessing government revenues to partisan objectives. Analyses of the U.S. federal contract data across both granting administrative agencies and grantee states from 1979 to 2018 demonstrate that a federal government's pro-market standing does not directly translate into public procurement. Instead, we demonstrate that the institutional structure of the government constitutes opportunities for asymmetrical deployment of partisan ideologies, as a conservative federal government uses contracting as a market-based solution to both administrative and political challenges. Specifically, under Republican administrations, compared to their Democratic counterparts, noncompetitive contracting is more heavily used in response to budget uncertainty while competitive contracting turns out to buffer the federal government from electoral uncertainty.

PNP: **Poverty Mafia? Contributions of Government-Nonprofit Collaborations to Reduce Educational Inequality**  

Author: **Aline Santos**, *Fundação Getúlio Vargas/EBAPE*

Author: **Layla Mendes**, *FGVEPGE*

Author: **Julia Haddad**, *FGVEPGE*

Despite a rhetoric of improving opportunities for poor children, critics argue that government-nonprofit collaborations tend to strengthen existing systems of inequality and create adverse outcomes. Although economic theories often depict government-nonprofit collaborations as either an unexpected consequence or, at their worst, a noteworthy and unfortunate deviation, this governance model has witnessed considerable global expansion. In the Global South, central governments often exhibit shortcomings in administrative capabilities and resource allocation for delivering public services, while simultaneously contending with corruption allegations. Nonprofits operating in the Global South emerge as a solution to reduce educational inequality. Our central hypothesis posits that government funding leverages nonprofit effectiveness at reducing educational inequality. Additionally, we theorize how the allocation of government funding on nonprofits is moderated by political ideology, thus exerting a discernible impact on the allocation of parliamentary amendments to these organizations and subsequently influencing their performance within the public educational network. We use panel data to explore the influence of government funding on the ranking 'Brazilian Index of Development of Basic Education'. Our research provides strong evidence of enhanced quality in the public educational network, suggesting a promising trend toward reducing educational inequality. The findings carry significant implications for educational policy and equity considerations, aligning with the demand for more extensive panel data analyses.

PNP: **The Drivers of Public Value Creation Through Public-Private Partnerships**  

Author: **Claudio José Oliveira Dos Reis**, *U. Federal do Oeste da Bahia (UFOP)*

Author: **Sandro Cabral**, *Inspere Institute of Education and Research*

Author: **Ricardo Correa Gomes**, *FGV - EAESP*

Despite the dissemination of PPPs around the world, existing results are controversial or mixed, giving rise to the need to examine under what conditions PPPs are public value-enhancing. Departing from the literature on PPPs and strategic management, we investigate how configurations involving governance features, such as information sharing schemes and risk governance, and managerial traits, like capabilities and stakeholder orientation, enable public value creation through PPPs. Empirically, we apply fuzzy-set Qualitative Comparative Analysis (fsQCA), using a multiple-case comparative study of 24 Brazilian PPP projects. Our findings reveal that information sharing is a necessary central condition and can enable public value creation with the support of public capabilities and other contributing conditions. In the absence of public capabilities, information sharing schemes and private capabilities can be supported by risk governance or stakeholder orientation. By highlighting the importance of unique and value-creating combinations of governance and managerial traits, this study contributes to the ongoing dialogues between public and nonprofit management and strategic management theories.

New Horizons in Data Sourcing and Measurement for Management Studies

Session Moderator: **Joseph Simpson**, *Virginia Tech*

RM: **Sentiment Analysis in Management Research: Manual Coding, Dictionary Analysis or Machine Learning?** 

Author: **Fabian Mändli**, *U. of Berne*
Author: **Estefania Amer**, *U. of Lausanne, HEC Lausanne*
Author: **Jean-Philippe Bonardi**, *U. of Lausanne, HEC Lausanne*

Automated approaches for sentiment analysis are gaining increasing popularity in management research, as they allow to save time and resources. While some have praised these techniques as reaching human level accuracy, they have also been criticized for their poor performance and lack of agreement among them. We examine the performance of dictionary and machine learning approaches for sentiment analysis used most frequently in management research by applying them to a large hand-coded quality dataset of news articles on companies' environmental issues. We find that dictionary approaches yield very different results than the hand-coding baseline, mostly because they are unable to account for the complexity of news articles. Although traditional supervised machine learning approaches performed better than dictionary approaches at the task, their results still differ substantially from hand-coding ones. We also show that novel approaches using large language models are able to outperform all other automated approaches. We thus propose an integrated approach of manual and automated coding for sentiment analysis: Human coding remains pivotal for selection, training, and validation of automated approaches in order to leverage their benefits in terms of time and cost savings. Moreover, manual coding allows researchers to grasp an understanding of their data.

RM: **N-Grams in Research: Measuring What Matters** 

Author: **Joseph Simpson**, *Virginia Tech*
Author: **Pankaj Kumar**, *Virginia Tech*

Recent findings indicate a significant divergence in how corporate executives and academic researchers assess and discuss corporate performance. In this study, we build upon and expand the research conducted by Certo, Jeon, Raney, & Lee in 2022, focusing on how companies evaluate their performance as reported in their annual filings. By analyzing 10-K filings using n-gram techniques, we illustrate the utility of n-grams and identify various performance metrics that could be beneficial for future research. The study reveals that while single-word (unigram) metrics for assessing firm performance can be useful, the use of n-grams offers a more effective solution. This method not only enhances the text analysis process but also contributes to the advancement of management as a field, with potential applications in other areas as well.

RM: **Methodology for Measuring Political Distance Using Dynamic Factor Analysis and Cluster Analysis** 

Author: **Tatiana Lukoianova**, *Center on Democratic Performance at Binghamton U. - State U. of New York*
Author: **James Agarwal**, *Haskayne School of Business, U. of Calgary*

Past research suggests that cross-country political differences have implications for strategies, activities and performance of companies operating internationally. Since firms are more familiar with navigating political environment that is similar to their home countries, knowledge about sources of political change in host countries becomes important for firm success. Political changes generate greater political uncertainty and associated losses for foreign firms in host states that manage their domestic and foreign political affairs differently from the firms' home states. Thus, we conceptualize political distance between two countries as a difference in the organization, management, and regulation of their domestic and foreign affairs. The more states differ in the organization, management, and regulation of their domestic and foreign affairs, the more politically distant they are. To operationalize this political distance concept, we propose to use dynamic factor analysis (DFA) in combination with cluster analysis that jointly can account for temporal and cross-sectional dependencies of multiple dimensions of a country's political profile; and provide a novel way to measure cross-country political distances over time using weighted Euclidian metric. Empirically, we demonstrate this approach by using international country risk guide (ICRG) monthly data for 20 countries in the Middle East and North Africa (MENA) in 1990-2020.

RM: **Satellite Data as an Emerging Method for Organizational Research: A Detailed Overview and Use Case** 

Author: **Nina Zachlod**, *U. of St. Gallen*
Author: **Michael David Hudecheck**, *U. of St. Gallen*
Author: **Charlotta Agneta Siren**, *U. of St. Gallen*
Author: **Gerard George**, *Georgetown U., McDonough School of Business*

We introduce satellite data as a new data source for organizational research. Organizational theory is increasingly used to explain large scale ecological and environmental challenges. However, organizational researchers lack the appropriate data sources and methods to properly investigate grand societal challenges at scale. Satellite data is accurate, offers near-real-time availability, resolves information asymmetries, and is increasingly cost effective and user friendly, making it a lucrative source of information. We delve into the strengths and limitations of this new type of data, discuss various data sources, types, and associated methods, and highlight its potential through an illustrative use case, which explores the effects of sustainability certification implementation among Malaysian palm oil plantations. Through our use case, we find that sustainability certifications may encourage inefficient land use, which runs counter to existing findings in organizational and management research. In doing so, we hope to stimulate interest in the adoption of this method among organizational and management research.

Author: **Robin Schimmelpfennig**, *Faculty of Business and Economics (HEC Lausanne), U. of Lausanne*

Author: **Christian Elbaek**, *Aarhus BSS, Aarhus U.*

Author: **Anisha Singh**, *London School of Economics and Political Science*

Author: **Panagiotis Mitkidis**, -

Sampling data from organizations and humans associated with those organizations is an essential part of organizational research. Much of what we know about organizations and their stakeholders is based on such empirical work. However, there is reason to believe that the empirical foundation is compromised. As studies often sample data from relatively similar, narrow contexts, a lack of sample diversity accumulates in the discipline. To conceptualize this lack of sample diversity and examine its prevalence in the body of organizational research publications, we systematically review articles from 2018-2022 in six top management journals. We assess sample diversity across three dimensions: geographical, organizational, and personnel contexts. Our results show a lack of sample diversity, for instance a strong bias towards 'WEIRD' country samples and an underrepresentation of SMEs in organizational research. Based on the findings and past work we introduce a conceptual framework for sample diversity, offering a structured perspective for future research. Additionally, we propose guidelines to enhance sample diversity for authors, reviewers, and editors. Overall, this article seeks to enhance the robustness and relevance of organizational research to prevent misinformed policies and practices in organizational settings but also in wider societal contexts.

Frontiers of Theory Development in Management Research

Session Moderator: **Kevin Carlson**, *Virginia Tech*

RM: **Building Stronger Theory**

Author: **Kevin Carlson**, *Virginia Tech*

Author: **Jerome P. Flynn**, *Rutgers Business School*

Contributing to theory is considered the quintessential act of organizational scholarship. In response scholars propose novel additions of new theory and extensions of existing theories. Now, after several decades of these types of contributions, there exists a need to make this extensive body of novel additions to theory stronger. Sutton and Staw (1995) offer guidelines for distinguishing theory from non-theory, but less attention is given to distinguishing better theory from that which is simply good. Logical consistency of explanations, falsifiability, generalizability, parsimony, and accuracy have been offered as evaluative criteria. Making this theory stronger requires new perspectives on the nature of theoretical contributions. The most central of these is moving away from interpretations of simply whether a theory predicts to how well it predicts outcomes. Arguments for placing greater emphasis on meaningful measures of predictive accuracy as a means of keeping score are proposed and implications for evaluating theoretical contributions and research progress are discussed.

RM: **Dynamic Theorizing: Qualitative Research with Archival Data**

Author: **Stine Grodal**, *Northeastern U.*

Author: **Anders Dahl Krabbe**, *King's Business School*

Author: **Micah Rajunov**, *Boston U. Questrom School of Business*

Archival data are linguistic texts, visuals, and artifacts that actors create in and around organization. Archival data have historically been used to supplement other types of qualitative data. However, the use of archival data in qualitative analysis has dramatically increased due to digitalization. Archival data raises new methodological opportunities and challenges that qualitative field methods do not address; in particular, the abundance and heterogeneity of archival data. These features prompt us to rethink how we both sample and theorize using this data. This paper proposes a framework we call "dynamic theorizing," which emphasizes the need to iterate between sampling and theoretical simplification. Our framework brings iterative sampling front and center as part of generating and simplifying theoretical insights. Our framework enables novel research which expands beyond qualitative research's traditional boundaries

RM: **Applying Paradox Theory to Organizational Research Methods**

Author: **Stephanie Schrage**, *U. of Kiel, Germany*

Author: **Konstantinos Andriopoulos**, *Bayes Business School*

Author: **Marianne W. Lewis**, *U. of Cincinnati*

Author: **Wendy K. Smith**, *U. of Delaware*

Research is a paradoxical process. Convergence and divergence pressures advance knowledge, yet pose conflicting methodological demands for scholars. Convergence sharpens research focus, testing and deepening knowledge around a solidifying core, while divergence encourages innovation through exploration of alternative assumptions, techniques and explanations. Paradox theory embraces such tensions, its exemplars harnessing their creative friction to foster more novel and useful, rigorous and relevant research. Leveraging this lens, we contribute a paradox approach to address methods in organization studies broadly. First, we explicate methodological tensions experienced at key decision points in organizational scholarship: research scope, construct definition, underlying assumptions, data collection, data analysis and interpretation. Second, we draw on paradox theory to identify practices for navigating the tensions, using paradox studies to illustrate practices of surfacing, diverging, converging, and aligning. In conclusion, we offer insights to advance methodological approaches for organizational researchers, reviewers, and scholarly communities broadly.

RM: **Demystifying Meta-Synthesis: A Critical Review and Integrated Approach**

Author: **Jin Lee**, *The Catholic U. of Korea*

This article aims to introduce meta-synthesis as a methodology for synthesizing qualitative research findings in the field of management. Unlike quantitative research syntheses such as meta-analysis or systematic review, which rely on positivism, meta-synthesis is grounded in an interpretive paradigm, necessitating a unique understanding of its system and approach. Despite the increasing prevalence of qualitative research in management, particularly in areas such as HR and organizational studies, there has been a noticeable lack of in-depth discussion and sufficient guidance on the application of this methodology among management researchers. Further, existing meta-synthesis approaches have been primarily discussed outside the management field, resulting in variations in procedures and approaches among researchers and creating a barrier for those interested in adopting this methodology. To address these gaps, I conducted a detailed review of each step of the methodology through a critical review of existing approaches, with the goal of presenting a comprehensive guideline for conducting meta-synthesis research.

Leadership Questionnaires in the Age of AI: From Traditional Roots, to AI & Data Science

Session Chair: **Bryan Acton**, *Binghamton U.-State U. of New York*
Speaker: **Mengying Li**, *Binghamton U.-State U. of New York*
Speaker: **Emily Elizabeth Forgo**, *U. of Maryland, College Park*
Speaker: **Depeng Xu**, *U. of North Carolina, Charlotte*
Speaker: **Yasmine Elfeki**, *Virginia Tech*
Discussant: **Tiffany Keller Hansbrough**, *Fairleigh Dickinson U.*
Discussant: **Rosalie Joan Hall**, *Durham U.*

This symposium presents a focused exploration of advancements in leadership measurement, transitioning from traditional questionnaire-based methods to the application of AI and machine learning. Recognizing the foundational value of classical psychometrics, the symposium represents its use in the development of leadership items and scales, as well as works on the use of AI for these important topics. This symposium particularly explores the multifaceted nature of leadership and addresses issues of construct redundancy and bias. The event features a series of presentations that collectively highlight a transformative approach to leadership measurement. These include an in-depth analysis of followership measurement, the application of AI for developing refined leadership scales, an exploration of the interrelations among various leadership constructs, and a discussion on identifying and mitigating biases in these new methodologies. Concluding with insights from two experts in the field of leadership measurement, the symposium aims to integrate traditional insights with modern technological advancements, setting a direction for future research that promises a more comprehensive and nuanced understanding of leadership.

Precision in Data Preparation: Navigating Methodologies & Statistical Practices for Robust Analysis

Moderator: **Amber Olson**, *U. of Alabama, Tuscaloosa*
Panelist: **Justin A. DeSimone**, *U. of Alabama*
Panelist: **Ryan Gottfredson**, *California State U., Fullerton*
Panelist: **Mikko Rönkkö**, *U. of Jyväskylä School of Business*
Panelist: **Marcia Simmering**, *Louisiana Tech U.*
Panelist: **Bo Zhang**, *U. of Illinois at Urbana-Champaign*

The symposium focuses on key topics related to data preparation, such as data screening, outlier management, data transformation, careless responding, addressing common method variance, and dealing with data falsification. Each subject matter expert will shed light on the significance and nuances of these areas, delving into best practices, prevalent errors, and the pros and cons of different approaches. They will also offer actionable insights for practitioners and scholars in the field. The session will culminate with an interactive Q&A segment, inviting the audience to have their questions addressed by these experts.

Narrative Practices

Session Moderator: **Anniina Rantakari**, *U. of Oulu*

SAP: **How Stories Make Strategy: Top Management and Middle Managers' Storytelling Performances**  

Author: **Etieno S. Enang**, *U. of Liverpool*

Author: **Ying Zhang**, *Strathclyde Business School, U. of Strathclyde, UK*

Author: **Harry Sminia**, *U. of Strathclyde Business School*

Whose stories generate strategy within organizations? This question is answered by examining archival and interview data from CementCo over a period of 5 years. The data revealed that strategic change is performed through the interplay between alignment and accordance of top management persuasive and middle managers' self-persuasive storytelling. The study unravels temporal structuring practices used to conjure up strategic change as plausible, necessary, inescapable, and desirable. This advances our understanding of how storytelling may perform strategic change. Our findings help managers to understand how strategic change takes place, not only through top-down storytelling practices by top management, but also attempts at self-persuasion by middle managers who are instrumental to implementing strategic change. These self-persuasion practices performed by middle managers are not linear, straightforward processes, but occur through struggles, tensions, and attempts to justify change. This paper addresses the assumed power asymmetry that top management can realize change by simply providing stories that are persuasive.

SAP: **Narratives from Commercial, Business-Focused, Industrial Reports and Articles on Quantum Technology**  

Author: **Charles Ma**, *U. of St. Gallen (HSG)*

Author: **Miriam Meckel**, *U. of St. Gallen*

Author: **Léa Steinacker**, -

Author: **Gina Pöhlmann**, *U. of St. Gallen*

Quantum technology is a rapidly developing field with potential impacts on several industries. While the discourse on the business and commercial aspects of quantum technology can profoundly affect its development, this domain remains insufficiently examined. Our study uses BERTopic, a new topic modeling method based on transformers that captures word relationships and contexts, to extract and analyze topics from a large corpus of industry reports and papers written in English on the business and commercial aspects of quantum technology. We supplement topic modeling with sentiment and emotion analysis also using transformer-based models for greater insights on the discourse. The analysis shows narratives dominated by a sense of urgency and competition, with terms like "quantum advantage" and "quantum supremacy" being frequently used, and a generally neutral or optimistic tone in sentiment and emotion analysis. While we observe a current lack of effective metaphors and critical perspectives on quantum technology, there are some emerging topics, such as "Quantum Ethics" and "Sustainability Climate Change", that reflect the evolution of the discourse. Our work demonstrates the potential of transformer-based models for content analysis and can inform managers and stakeholders of relevant narratives to make informed, responsible decisions about quantum technology.

SAP: **Strategic-Organizational Evolution of Organizations: Extending a Narrative Network Perspective**  

Author: **Paul C. Van Fenema**, *Netherlands Defence Academy*

Author: **Yasin Sahhar**, *U. of Twente*

Organizations engage in strategic and internal processes as two interrelated modes of ordering. With an emphasis on flat organizations, this paper introduces a narrative network perspective that builds on organizational routines. Since this perspective lacks a strategic dimension, the purpose of this paper is to expand the narrative network perspective to include value, capability, and social narratives. In the face of new strategic challenges such as alliance formation, our framework undergirds analysis of cross-narrative coherence. We illustrate this empirically by exploring a high-tech firm intending an organizational servitization while simultaneously forming a service alliance with a public customer. The findings concentrate on the three types of narratives, providing insight into the interplay of intra- and interorganizational narrative networks, which provide insight into both forces that influence alliance formation and intra-organizational dynamics. The discussion explores implications for research on narrative networks and strategic organization, such as tension processing and narrative construction.

SAP: **Understanding the Interplay Between Purpose, Policy, and Organizing: A Narrative Approach** 

Author: **Jeannie Holstein**, *Loughborough U.*

Author: **Anniina Rantakari**, *U. of Oulu*

In this paper we explore how the Narrative Policy Framework (NPF) might help us to better understand the interplay between purpose, policy, and organizing. We start by noting the positive contribution of NPF to our understanding of the role of narrative in the policy process. At the same time, using insight from broader narratology studies, including of policy and the policy process, we argue how the prescribed focus of NPF is a potential impediment to its wider and broader use. This is a vital if we are to examine how purpose driven (in) policy, such as the climate emergency or other important grand challenges, can better support 'organizing in practice'. We argue that focussing on how policy narrative inter-subjectively creates a sense of acceptance or congruence which we propose is a momentary stable point that has structure and content, which might persuade and provide acceptance or not, would allow NPF to better account for the narrative interplay between political actors, political institutions (including the media) and the public, and organizing. This would widen its appeal, to better inform policy and policymaking, especially relevant in policy that is designed to shape a sense of purpose.

Unpacking Corporate Sustainability Via Organizational Identity, Materiality & Strategic Orientation

Session Moderator: **Irene Henriques**, *York U.*

SIM: Organizational Identity And Corporate Sustainability: A Systematic Literature Review

Author: **Carolina Jimenez Pena**, *Telfer School of Management, U. of Ottawa*

Author: **Daina Mazutis**, *Telfer School of Management, U. of Ottawa*

Organizational identity is one of the most widely used theoretical perspectives in organization and management studies with general consensus that it likely plays a significant role in guiding organizational actions such as corporate sustainability practices. However, to date, no systematic assessment of the empirical relationship between organizational identity and corporate sustainability has been conducted, and hence, the status of the empirical support for this theory is unknown. In response, we conduct a systematic literature review, analyzing a final sample of 60 empirical papers to find that organizational identity not only influences the adoption of corporate sustainability practices, but also that corporate sustainability can be a valuable tool in building organizational identity. It is therefore suggested that management scholars consider this reciprocal connection as central to the field and future research revisits important questions of directional causality.

SIM: Business Cases for Corporate Sustainability: A Materiality Perspective

Author: **Kees Krul**, *Rotterdam School of Management, Erasmus U.*

Author: **Taemin Jung**, *Hanyang U.*

The business case for corporate sustainability has been increasingly recognized as multifaceted and context-dependent. We advance this notion by incorporating the concept of materiality on the assumption that business cases for sustainability only work if it is material to both business and society. Reconciling instrumental and normative stakeholder theories, this paper offers an integrative framework that maps sustainability issues into four materiality categories: Mutual, Operational, Normative, and Peripheral. An empirical application of the framework in South Korea shows that materiality is shaped by the nature of the sustainability issue, as well as certain firm characteristics including size and capital expenditures. These findings challenge the universal applicability of the business case for sustainability. Instead, we argue that many sustainability issues do not have a business case because of material misalignments or a general lack of materiality. The adaptability of our framework suggests its broader applicability, paving the way for future research into the role of materiality as a contingency factor for business cases for sustainability.

SIM: Holistic Value Creation and Contesting Business Goals: A Strategic Orientation Perspective

Author: **Theresa Doppstadt**, *Ludwig Maximilian U. of Munich (LMU)*

Author: **Marcelo De La Cruz**, *Ludwig-Maximilians-U. München Munich School of Management*

Author: **Jelena Spanjol**, *Ludwig Maximilian U. of Munich (LMU)*

The focal role of market orientation as a driver of firm performance is challenged by rising institutional pressures to contribute positively to society and the environment. Previous research has not investigated trade-offs between financial-value- and sustainability-related strategic orientations and the effect on firm outcomes that enable holistic value creation. This study addresses this knowledge gap by drawing on a sample of 43 firms in the food industry for the period 2016-2021 (199 firm-years and 36,728 product introductions). We found a concave relationship between financial-value- and sustainability-related strategic orientation and a positive relationship between sustainability-related strategic orientation and social value creation and financial value creation. Our findings contribute to the marketing strategy literature by empirically demonstrating the enabling role of sustainability-related SO in responding to competing logics, and to the innovation management literature by highlighting the role of innovation portfolios in balancing contesting business goals.

Innovating for Diversity, Equity, and Inclusion (DEI) in the Workplace, Sharing Economy, and Society

Session Moderator: **Mariana Oseguera**, *U. of Toronto, Rotman School of Management*

SIM: From Marginalization to Inclusion: The Journey of Ingroup Allies in Empowering PWDs in Labor Market

Author: **Chi Zhang**, *Tongji U.*
Author: **Shuo Zhang**, *China U. of Mining and Technology*
Author: **Haimiao Yu**, *China U. of Mining and Technology*

Ingroup allies, as relatively advantaged individuals within marginalized communities, can support other marginalized members within their group. They play a crucial role in promoting social inclusion for people with disabilities (PWDs). This study aims to explore the development and actions of disabled ingroup allies to support the employment of other PWDs. We conducted a two-year longitudinal qualitative study within the Chinese disability community, employing a grounded theory approach. The findings reveal that disabled ingroup allies undergo similar experiences of marginalization, leading to empathetic, mission-driven allyship motivation. The capacity and opportunity for allyship facilitate the transition from intention to action. Disabled ingroup allies engage in key actions of supporting their targets and mobilizing potential allies, demonstrating the behavioral traits associated with their ally identity. Furthermore, the study highlights the short-term, process, and long-term effects of ingroup allies' support, which contribute to a more comprehensive and profound social inclusion of PWDs. This research contributes to the allyship and disability employment literature by highlighting the unique characteristics and strengths of disabled ingroup allies. Policymakers and organization managers should recognize the value of exceptional PWDs, who possess a better understanding and professional expertise in promoting inclusion and employment opportunities.

SIM: Stigmatized Employees' (Dis) Engagement with Organizational Destigmatization Initiatives

Author: **Lucas Amaral Lauriano**, *IESEG School of Management, LEM-CNRS 9221*
Author: **Michael Andreas Etter**, *King's College London*
Author: **Jan Stephen Lodge**, *Rotterdam School of Management, Erasmus U.*

This study delves into the dynamics of stigma management within organizational settings, particularly focusing on the engagement of LGBTQIA+ employees in diversity, equity, and inclusion (DEI) initiatives at Brazilcar, the Brazilian subsidiary of a multinational automaker. Over a six-year period, using ethnographic methods, interviews, and secondary sources, we explore the nuanced ways in which stigmatized employees navigate destigmatization efforts. Our findings contribute to stigma literature by identifying four distinct engagement trajectories: continuous engagement, later disengagement, continuous disengagement, and later engagement, each reflecting varied responses to organizational DEI initiatives and internal and external stigmatization episodes. Theoretically, this research challenges the prevailing assumption in stigma literature that identity management preferences are the sole determinants of stigmatized employees' participation in DEI efforts over time. Instead, we propose that their engagement is dynamically influenced by the unfolding of initiatives and the reaction of various audiences. Additionally, we uncover the unintended consequence of participant homogenization in DEI initiatives, a phenomenon that risks marginalizing the most stigmatized members and narrows the focus of these initiatives. By situating our investigation within the context of LGBTQIA+ employees in a Brazilian multinational corporation, the study adds to the underrepresented discourse on sexual orientation-based stigma in workplace settings.

SIM: Social Movement on Organization: How "Black Lives Matter" Movement Influences Airbnb Performance

Author: **Tong Xu**, *City U. of Hong Kong*
Author: **Angela Lu**, -
Author: **Abhay Mishra**, *Iowa State U.*

"Black Lives Matter" (BLM) movement is one of the largest social movements highlighting race-related issues. Although the movement's discourse emphasizes systematic racism and police brutality related to societal and policy aspects, the movement is equally about economic issues and prospects for minorities, which are insufficiently examined in the literature. We study how the BLM movement affects participants on sharing economy platforms on which racial bias has been extensively documented. Using a theoretical perspective from the social movement and organizations literature, we investigate the dynamic impact of the BLM movement on Airbnb listing performance in the United States between October 2014 and December 2019. We leverage a difference-in-differences design and find that BLM positively impacts Airbnb listing performance, with an average increase of 1.8% in occupancy rate and 5.52% in revenue in the six months afterward. Particularly germane to this study, we examine the moderation effects of neighborhood police brutality cases and Airbnb host race. We find that the occurrence of police brutality in a neighborhood negatively moderates the BLM effect while African American hosts, as detected by a deep learning algorithm on host profiles from Airbnb listing pages, benefit more from BLM events. Theoretical and practical implications are discussed in light of the findings.

SIM: The Role of Institutional Context in Corporate Diplomacy: SDG 16 Solutions for Refugee Integration

Author: **Catherine Erica Alexina McDonald**, *U. of St. Gallen*
Author: **Michelle Karen Westermann-Behaylo**, *U. of Amsterdam*

Multinational enterprises (MNEs) play a critical role in addressing Grand Challenges (GCs), such as those embodied by the United Nations Sustainable Development Goals (SDGs). How MNEs engage in developing solutions to the SDGs, however, may depend on both their home and host institutional contexts, particularly in the case of SDG 16 on peace, justice and strong institutions and for practices such as corporate diplomacy. This study explores the impact of different institutional settings on how MNEs engage in corporate diplomacy to develop solutions to SDG 16, by exploring the issue of refugee integration. First, we examine the extant literature on corporate diplomacy, drawing from both IB as well as more normative perspectives, to suggest that a firm's corporate diplomacy activity on SDG 16 may be influenced by its institutional context. Second, we develop propositions about the ways in which home and host country institutions impact how MNEs engage in corporate diplomacy to advance solutions to SDG 16 and support our arguments using contextualized explanations of firm engagement on the issue of refugee integration. Third, we propose future research questions and pathways to enrich the growing body of corporate diplomacy literature.

SIM: **Do Domestic Stock Markets Continue to Influence Immigrants' Mental Health When They Move Abroad?** ✈️

Author: **Ruben Ruf**, *Trinity Business School, Trinity College Dublin*

Author: **Jenny Berrill**, *Trinity Business School, Trinity College Dublin*

Author: **Damien Cassells**, *Technological U. Dublin*

Author: **Martha O'Hagan-Luff**, *Trinity Business School, Trinity College Dublin*

Despite the fact that immigrants make up a considerable proportion of the population in many countries, little is known about how their mental health is affected by stock markets in their home countries. We use panel data from the Understanding Society dataset to conduct a longitudinal study investigating this relationship for foreign-born residents in the UK, during the period 2010 to 2021. We provide novel evidence that immigrants' subjective mental health is negatively impacted by stock market volatility in their home countries. This effect weakens as immigrants assimilate into the host country and increases with the immigrants' age when they first arrive in the UK. We also find that diagnosed clinical depression as an objective measure of mental health is not affected. We recommend that immigrants be provided with both psychoeducation and financial education upon arrival in the host country to alleviate mental health issues.

Ethical Decision Making (EDM) and Artificial Intelligence (AI): Promises and Pitfalls

Session Moderator: **Gal Gutman**, *Haifa U.*

SIM: Artificial Cognitive Moral Development: Toward A Theory of Ethical Decision-Making for Autonomous-AI

Author: **Tobey Scharding**, *Rutgers U.*

In distinguishing between “augmenting” and “autonomous” artificial intelligence (AI), recent organizational scholarship suggests a problem for ethical decision-making (EDM) involving AI. Whereas existing normative theories can guide EDM about AI-augmented (but human made) decisions, we argue that they cannot guide EDM about autonomous-AI because the AI makes the final decision. What is needed is a model for EDM that explains which aspects of organizational EDM autonomous-AI can undertake and which, if any, should be reserved for humans. The stepwise models of EDM based in cognitive moral development (CMD) appear promising in this regard. We offer a CMD-based model of EDM for AI. This model shows a lacuna in the prevailing interpretation of CDM-based EDM, which we contribute novel theory, concerning the role of deliberation in EDM, to address. Finally, we theorize how AI-EDM can be conducted in collaboration with human deliberation to promote ethical outcomes in organizations.

SIM: Harmonized Organizational Principles for Ethics in Artificial Intelligence: A Conceptual Framework

Author: **Amando Cope**, *George Washington U.*
Author: **Herman Aguinis**, *George Washington U.*

We introduce Harmonized Organizational Principles for Ethics in Artificial Intelligence (HOPE AI), a novel conceptual framework designed to guide ethical AI integration in organizations. As AI reshapes various sectors, it presents societal challenges like job displacement, skill erosion, and changes in the nature and authenticity of work. Within an AI context specifically, we critically review traditional ethical philosophies (utilitarianism, deontology, relativism, virtue ethics), proposing new ethical considerations specific to AI's organizational impact. HOPE AI addresses the ethical implications of AI's organizational impact, focusing on a holistic approach to well-being, anticipatory governance, stakeholder inclusivity, and harmonization. We use a vignette to illustrate HOPE AI's potential, highlighting challenges in role redefinition, loss of human touch, and ethical dilemmas. This new conceptual framework aims to ethically integrate AI advancements with human values, suggesting that its implementation can enhance stakeholder satisfaction and reduce ethical risks. Given cultural variability and rapid AI evolution, we suggest future HOPE AI research regarding its cross-cultural applicability, role in ethical leadership, integration into organizational ethics programs, and potential to offer a structured approach for ethically navigating AI in contemporary organizations.

SIM: Nudges and Motivated Moral Reasoning: Algorithms, Humans, and Information Processing

Author: **Ryan Cook**, *PhD Student at U. of Notre Dame, Mendoza College of Business*
Author: **Nicholas Berente**, *U. of Notre Dame*

The motivated moral reasoning framework contends that the positive feelings supervisors hold towards high performers prevent them from rendering the punitive judgment necessary to discourage cheating in reporting situations. Moral nudges have shown to be effective in encouraging rational and prosocial responses in these types of moral decision-making scenarios by providing small reminders about the ethicality of actions. Additionally, the increased agency of automated systems has furthered their ability to provide these types of instructions and reminders to human agents when integrated into moral decision-making environments. We replicated the moderating effect of performance on punitive judgment using an online experiment and sought ways to reduce this effect via moral nudging. However, we found that moral nudges only successfully increased punitive judgment for subgroups of participants with low affinity for cognition, showing an interaction with information processing in moral decisions. Additionally, we found no effect for whether the moral nudge was delivered by a human or algorithm, which calls to question distinctions made in the existing literature for the role of algorithms in moral decision-making.

SIM: Efficiency Versus Fairness Tradeoffs in Algorithm-Based Personnel Selection

Author: **Serhiy Kandul**, *U. of Zurich*
Author: **Ulrich Leicht-Deobald**, *Trinity College Dublin*

Organizations increasingly rely on algorithms to increase the efficiency of their personnel selection practices. However, such algorithms can have an adverse impact on demographic subgroups (such as different genders, age groups, or ethnicities); yet, equalizing differences in test scores between these subgroups comes at the expense of sacrificing some efficiency of the algorithm for its group fairness. Drawing upon Folger and Cropanzano's fairness theory, we test a conceptual model of antecedents of efficiency versus fairness choices in the context of algorithm-based personnel selection in a gender-based fairness scenario using a series of four experiments (Experiment 1: 283 MTurkers; Experiment 2: 276 MTurkers; Experiment 3: 277 MTurkers; Experiment 4: 239 managers and 247 graduate students). We find that the (a) extent of fairness violations, (b) individual differences in fairness perceptions, and (c) the baseline-efficiency of the algorithm affect the choice between a more efficient or a fairer algorithm, whereas (d) the stakeholder perspective receives mixed support and (e) the fairness concept applied (i.e., statistical parity versus equal opportunity) does not have an effect. Our research contributes to the literature on algorithm ethics.

Stakeholder Response to Environmental, Social, and Governance (ESG) Controversy and Shortcomings

Session Moderator: **Sarah Stephen**, *U. of Liverpool Management School*

SIM: Is the Devil in the Details? Examining the Impact of ESG Controversy Materiality on Firm Performance

Author: **ANGELA KARR**, *Seoul National U.*

Author: **Jangwoon Kim**, *Seoul National U.*

This study explores the distinct consequences of material and immaterial environmental, social, and governance (ESG) controversies on a firm's financial performance, as well as potential contextual factors that may exacerbate or mitigate this relationship. Using a large sample of 7,136 internationally distributed, listed firms from 2014 to 2022, we find that the market imposes penalties on firms for material ESG controversies, but not for immaterial ones. More specifically, investors choose to overlook a firm's immaterial ESG controversies, suggesting a potential ESG-washing mechanism at play on the investor side. Our study also finds that the regulatory quality in a firm's home country intensifies the adverse effects of material ESG controversies on firm performance. We present findings and interpret them within existing theoretical frameworks, particularly through the lenses of expectancy violations theory, stakeholder theory, and institutional theory. While prior literature has presented mixed findings regarding the impact of ESG controversies on firm performance, our study outlines potentially important drivers behind these conflicting outcomes and provides new insights to the nonmarket strategy field through our consideration of the nature of ESG controversies and key country-level influences.

SIM: Market Reaction Following Corporate Crisis: The Role of ESG Performance and Crisis Response Speed

Author: **Hankyeol Hana Kwon**, *Seoul National U.*

Author: **Theresa Cho**, *Seoul National U.*

This study explores market reactions following corporate crises, focusing on the role of Environmental, Social, and Governance (ESG) performance and crisis response speed in mitigating market penalties and firm-specific risk, using Stakeholder Theory. Analyzing 1,036 Class I high-risk product recalls from 2012 to 2022, as classified by the U.S. Food and Drug Administration (FDA), the study employs Ordinary Least Squares (OLS) regression analysis in a dual-timeframe approach to assess the effects of firms' crisis management strategies at two critical junctures: pre-crisis ESG performance as a preemptive tactic and crisis response speed as a reactive measure. The findings demonstrate that strong pre-crisis ESG performance significantly reduces market penalties and subsequent firm-specific risk, acting as a buffer during crises. This protective effect exhibits a temporal decline, highlighting the diminishing nature of ESG's shielding advantage over time. Furthermore, crisis response speed is found to serve as a moderating factor, impacting the efficacy of ESG performance as a defense mechanism. Swift crisis responses amplify the risk-mitigation benefits of high ESG performance, while delayed responses diminish these benefits and elevate risks. By demonstrating the time-sensitive nature of ESG benefits in crisis scenarios, this study provides novel understanding into the criticality of rapid responses to maximize ESG's protective capabilities, offering strategic insights for optimizing crisis management.

SIM: Institutional Investors and ESG Disclosure: Between Substitutive and Complementary Effects of Count

Author: **Maria Aluchna**, *Warsaw School of Economics*

Author: **Maria Roszkowska-Menkes**, *Tilburg School of Economics and Management (TISEM), Tilburg U.*

Drawing upon legitimacy and institutional theory we hypothesize that companies engage in environmental, social and governance (ESG) reporting to meet the expectations of institutional investors. While companies are driven to ESG disclosure in seeking legitimacy amongst different constituencies, this effect may be complementary or substitutive to country-level governance. We test our hypotheses using a sample of 4,252 firm-year observations from the United Kingdom and the five largest EU countries. Our results show that while strong national institutions attract investment by institutional investors, ESG disclosure does not have such an effect. We also reveal a positive relationship between ownership by institutional investors and ESG reporting in countries characterized by a weaker institutional environment, indicating the substitutive effect between ESG disclosure and country-level governance.

SIM: Divided Attention: The Attention-Grabbing Effects of ESG Performance on Problemistic Search

Author: **Tae Young Park**, *Doctoral Student at Yonsei U.*

Author: **Yong-Suhk Pak**, *Yonsei U.*

This study attempts to explore the effects of ESG performance on problemistic search. Traditionally, performance feedback and behavioral theory of the firm literature has posited that firms engage in problemistic search as they experience performance shortfalls. This study contemplates how the attention of organizations' may be divided between two types of performances: financial and ESG. As the behavioral theory of the firm stresses that organizations are coalitions of different subunits with different attention foci, this paper explores how different types of performance outcomes may affect organizational search following financial underperformance. An analysis of 457 publicly traded firms from 27 different countries show that ESG performance actually curtails problemistic search resulting from financial underperformance. Results and future research directions are discussed at the end of the manuscript.

SIM: Does Imbalance in ESG Dimensions Affect Firm Innovation? A Selective Stakeholder Management Approach

Author: **Hongbiao Du**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Xueji Liang**, *Xi'an Jiaotong-Liverpool U.*

Author: **Kefu Lyu**, *School of Management, Xiamen U.*

Author: **Cindy Xuelin Wang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Ziling Liang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

This study investigates the impact of Environmental, Social, and Governance (ESG) dimensional imbalance on firm innovation. Drawing upon stakeholder theory, we introduce the concept of “selective stakeholder management” to underscore the strategic prioritization of stakeholder relationships. We argue that firms focus on certain stakeholders based on three criteria: internal resources and attention constraints, the alignment between stakeholder demands and firm strategy, and the diversity of stakeholder-held resources. Our analysis encompasses 33,315 firm-year observations from 2009 to 2021. The results provide strong empirical support for our hypothesis that ESG dimensional imbalance increases the number of firm patent applications, indicating an increase in innovation. We further explore the moderating effect of firm nature on the main effect. Results show that the positive effect of ESG dimensional imbalance on firm innovation is weakened in the State-Owned Enterprise (SOE) state and strengthened in the High-Tech Enterprise (HTE) state. These insights contribute to our understanding of how effective stakeholder management can stimulate innovation, thereby bridging the gap in the literature on ESG and innovation.

Research Horizons for Corporate Social Responsibility (CSR)

Session Moderator: **Robyn Klingler-Vidra**, *King's Business School*

SIM: When Closeness Backfires: The Inverted U-Shaped Influence of Proximity to Major Cities on CSR

Author: **Teng Wang**, *Hohai U.*
Author: **Jichuan Sheng**, *Hohai U.*
Author: **Xiaotong Li**, *U. of Alabama in Huntsville*

In recent research on the geography of strategic management, the influence of major cities on corporate social responsibility (CSR) has sparked widespread debate. This study challenges the common belief that proximity to major cities is predominantly advantageous, arguing instead that excessive proximity might inhibit CSR activities. Utilizing a dataset of Chinese listed firms from 2010 to 2021, our results robustly demonstrate that: (1) Proximity to major cities has an inverted U-shaped relationship with CSR engagement; (2) State ownership negatively moderates this relationship, resulting in a less pronounced inverted U-curve for state-owned enterprises (SOEs) compared to non-SOEs; (3) In firms within highly competitive industries, the curve's turning point shifts rightward, indicating that negative effects on CSR engagement occur at greater distances from major cities. These findings hold across various estimation techniques and alternative measures. Our research contributes to a deeper understanding of the intricate relationship between geography and organizational strategy.

SIM: Why Break Rules When You Can Avoid Them?: Conceptualizing Corporate Social Avoidance

Author: **Matthew Thomas Caulfield**, *Fordham U.*
Author: **Junghoon Park**, *Loyola Marymount U.*
Author: **Guilherme Siqueira De Carvalho**, *U. of Pennsylvania*

Firms do not only comply with or break rules; they also avoid them. Taking stock of several of the orienting concepts of the business and society field—corporate social responsibility, corporate social irresponsibility, and corporate political activity—we argue we currently lack a concept to sufficiently build theory around why and when firms may avoid rules, and how the design of rules will encourage compliance, noncompliance, or avoidance. We introduce the construct of Corporate Social Avoidance (CSA), justifying it as encapsulating several kinds of behavior that existing theory does not recognize or integrate. We show how incentives for CSA provide reasons to doubt recent proposals to strengthen rules against and sanctions for firm unethical behavior, and also clarify distinctive barriers to pollution control and the enforcement of employment rights. We also predict the conditions under which CSA will most often represent a preferred tactic.

SIM: Excavating the Corporate Social Responsibility Pyramid

Author: **Sophia Maria Kusyik**, *Tyndale U.*
Author: **Mark Schwartz**, *York U.*
Author: **Josep M. Lozano**, *ESADE Business School*

Abstract: Over the past several decades, the corporate social responsibility (CSR) 'pyramid' (Carroll, 1991) has established itself as a landmark in the landscape of CSR theories, definitions, approaches, and frameworks. A growing body of international research is however now posing a serious empirical challenge to the hierarchy, scope, number, and importance of the CSR pyramid's responsibilities. To gain a better understanding of this influential model in the business and society academic field, a systematic CSR pyramid (CSRPy) literature review is conducted in terms of: (1) the influencers of the CSRPy; (2) the CSRPy's four social responsibility dimensions (i.e., economic, legal, ethical, and philanthropic); and (3) the consequences of the CSRPy's dimensions. Several features of the CSRPy are discovered including context-dependent CSRPy hierarchies, trade-off tensions between the economic responsibility dimension and the other three CSRPy dimensions, and its highly contested narrow responsibility definitions. The paper concludes with its implications for future CSR research.

SIM: Beyond the Bottom Line: Investigating the Impact of Business Group Affiliation on CSR Activities

Author: **Apalak Khatua**, *XLRI-Xavier School of Management*
Author: **Sumit Kumar Maji**, *XLRI-Xavier School of Management, Jamshedpur, India*

Business groups (BGs), networks of legally independent affiliates controlled by a central agency, have been a focal point of attention for management scholars for the past few decades. This study explores the relatively underexplored domain of the societal impact of BGs, investigating whether they contribute positively to society or engage in rent-seeking activities through the utilization of market power and political connections. Specifically, we examine the influence of BG affiliation on Corporate Social Responsibility (CSR) activities within a prominent emerging market economy. Stressing the significance of BG legitimacy and reputational concerns, our findings indicate that affiliated firms exhibit higher CSR engagement. Empirical results underscore that large and diversified BGs, leveraging their considerable size and reach, are well-positioned to effectively address societal issues in emerging markets. This study contributes to the literature on BGs and CSR by illuminating the relationship between group affiliation and CSR activities in the context of an emerging market economy.

SIM: Small Business Social Responsibility: Collaboration and Support as Key Levers to Strategic CSR

Author: **Lasma Rabaud**, *Montpellier Research in Management*
Author: **Jean Marie Courrent**, *Professor (Strategy and Entrepreneurship)*
Author: **Anne-Sophie Fernandez**, *U. of Montpellier*

Despite the growing need to understand how SMEs deal with Corporate Social Responsibility (CSR), its adoption process and organizing remain underexplored to date. Therefore, we propose to take a closer look at how SMEs decide to voluntarily collaborate on CSR as one possible path to finding innovative solutions to adopting strategic CSR. To date, we have little knowledge on how SMEs use the time and resources that is dedicated to engaging in networking with their peers and partners on CSR. We also have little knowledge on how SMEs use business support and training on CSR. Our results broaden the existing literature on strategic SME CSR by exposing the links and modalities of SME participation in collective work on strategic CSR. SMEs that strive to develop their CSR strategy are integrated into local networks to gain knowledge, skills, and create business links based on shared values. Their continuous involvement helps them stay atop of newest trends and regulations and fight their feelings of isolation in the face of uncertainty and mounting pressure on CSR.

Corruption in the Global Economy at a Tipping Point: How to Identify and Mitigate Corrupt Practices

Organizer: **Jim Hazy**, *Adelphi U.*

Panelist: **Armando Castro**, *UCL*

Panelist: **Stefan Schembera**, *Radboud U., Netherlands*

Panelist: **Benyamin Lichtenstein**, *U. of Massachusetts, Boston*

Panelist: **Suzana Braga Rodrigues**, *Rotterdam School of Management, Erasmus U.*

More than \$1,000,000,000,000 (one trillion dollars) is paid in bribes each year. Further, “Corruption reduces global GDP by more than 5%.” - Corporate Corruption: A Review and Research Agenda. (Castro et al. 2020, pg.935; Academy of Management Annals) “So far as our institution is concerned, there is nothing more important than the issue of corruption . . . At the core of the incidence of poverty is the issue of equity, and at the core of the issues of equity is the issue of corruption.” - James D. Wolfensohn, President, World Bank October 1999 (From Renoe, 2002) The aim of this Symposium is to propose a research agenda on how to mitigate and fight corruption as a worldwide economic threat. Our approach is based on an emerging common definition and description of corruption drawn from the Panelists. We start from the assumption that corruption is a system problem – whether in a small company, a large corporation, or a governmental agency. Thus, instead of focusing on the moral failings of individuals, a systems approach would incorporate the broader dynamics in the system as a whole and especially on the potential sources of corruption (Castro et al., 2020). The Panelists will describe recent research in the area, including ways that new technology and governance platforms can help managers and regulators identify and mitigate risk conditions, early signals of “corruption risk” (Hazy et al., 2023). By theorizing corruption as a system, we offer a model with specific approaches for reducing corruption that will be especially useful for managers and leaders who face corruption risk including in developing economies. After exploring these topics, the Panel will initiate a discussion with attendees, to explore the ways that their organizations, and the Academy of Management, can and should pursue a more systemic understanding of corruption. Our aim is to facilitate a conversation about what is currently being done to mitigate corruption and suggest potential projects that explore how a systemic view and the use of new technology, can be put to better use.

Institutional Environment of Intellectual Property

Session Moderator: **Xibao Li**, *Tsinghua U.*

STR: **Patent Novelty and the Dual-Application Strategy of the Firm**

Author: **Junhan Wang**, *Tsinghua U.*

Author: **Xibao Li**, *Tsinghua U.*

Extensive research has investigated the firm's strategic behavior during patent application to mitigate hazards and gain a competitive advantage. In this paper, we explore the patent dual-application strategy in China to explain how firms exploit institutional peculiarities to engage in "institution-seeking" behavior. By introducing a new perspective of the minimum spanning tree into the measurement of patent novelty, we find that the purpose for firms to adopt the dual-application strategy is mainly to reduce the risk of filing a patent. That is, the patent novelty in invention negatively affects the likelihood of choosing the dual-application strategy. This strategic response is more pronounced for technology where field litigiousness or technological dynamism is high, and the firm whose persistent innovation performance below aspirations is high and patent stocks is low. We also further examine the choices faced by firms in the second stage after choosing the dual-application strategy and the impact of this strategy on firm innovation and the risk of stock price crashes. We find support for our theory in Chinese invention patents from 2010 to 2018. Our study is the first to examine the firm's strategic behavior by choosing different patent protection institutions to implement a firm's patent strategy at the patent level. It provides a broader view of a firm's strategic behavior during patent application and institution-seeking behavior.

STR: **On Your Marks! Trademark Races and Their Impact on Product Introductions** 

Author: **Carsten Fink**, *World Intellectual Property Organization (WIPO)*

Author: **Christian Helmers**, *Santa Clara U.*

Author: **Julian Kolev**, *United States Patent and Trademark Office*

Author: **Andrew Toole**, *USPTO*

The limited supply of competitively-effective trademarks has received significant attention in the legal community; however, there is little evidence on the magnitude of its impact on intellectual property and product market outcomes. This paper seeks to fill this gap by exploring the phenomenon of trademark suspensions, where multiple pending applications seek to register highly-similar marks. We focus on the subset of "close-race" suspensions, where filing dates were sufficiently close so that all applicants are unlikely to be aware of each other's interest in the contested mark. This allows us to treat the priority of applications as if it were random, and forms the foundation for estimating the impact of trademark suspensions on applications and firms. We find that suspensions are more likely to occur for competitively effective trademarks and in more congested trademark classes. Relative to their earlier-filed, "race winner" counterparts, later-filed applications experience an average of 1.5 years of additional examination pendency, and are 50% less likely to eventually obtain trademark registration. Tracking subsequent applications from the same firm, we also find that "race losers" exhibit a 20-30% lower hazard rate for the next product introduction in the same product class as the original application. Our findings highlight the trade-offs faced by firms and policy-makers active in congested product markets.

STR: **National Intellectual Property Rights Regimes: Implications for Market Entry on the Global Stage**   

Author: **Martin Hetu**, *U. Carlos III de Madrid*

This study investigates the effect of a weakening of a country's intellectual property rights institutions on market entry by foreign firms. We examine market entry in the form of pharmaceutical firms' first clinical trial in a medical condition market before and after the invalidation of gene patents by the 2013 United States Supreme Court Myriad decision. We use a difference-in-differences design, with the European Union, where gene patents remained valid, as the control group. In aggregate, market entry by foreign firms increased following Myriad. However, we found that new entrants were mainly responsible for this increase. Furthermore, we distinguished between entrant startups and entrant diversifiers and found no difference, suggesting that existing capabilities did not provide a competitive advantage.

STR: **Hitting the Ground Inventing: Timing and Productivity Insights from Inventors' Employment Data** 

Author: **Keith Pennington**, *U. of Connecticut*

Author: **Anthony Gibbs**, *Purdue U., West Lafayette*

Innovation researchers have long used patents as a proxy for inventive activity and ideas. However, patent applications – the closest event in time widely known to the inventive activity date – always occur after the inventive activity, thus introducing an inherent time lag in the measurement. Uncertainty around this lag can prevent researchers from developing new insights about inventors, invention, and strategic HR. We estimate the likely lag distribution between activity and application by combining a large dataset of employer-employee relationships with assignee organization-inventor relationships, generating a uniquely large sample of 99,254 inventors with detailed, monthly career histories. By exploiting the common "assignment clause" of employment, we infer when the inventive steps of a patent likely took place from the employment dates of the inventors. We fit a multi-parametric model of expected lags around the start of employment as an assignee organization to estimate the lag and note that there is no apparent onboarding lag. Exploring the data further, we find limited heterogeneity in the sample between fields but observe patterns consistent with a short onboarding lag in firms that self-cite the most. The average lag is about 11 months, and we provide practical recommendations for researchers to improve estimates of the time of inventive activity.

Government Influence on Strategic Outcomes in Science and Industry

Session Moderator: **Christina Angie Nguyen**, *MIT Sloan School of Management*

STR: **Do Externally-Hired Managers Increase Innovation? Evidence from the U.S. Government**  

Author: **Christina Angie Nguyen**, *MIT Sloan School of Management*

Although the U.S. government spends nearly \$40 billion on intramural research and development, little is known about its own scientists' innovative output and the managers who are responsible for their performance. Using individual-level data from 2000 to 2013, I investigate the impact of externally-hired federal managers on the innovation output of employees in science, technology, engineering, math, health, and social science occupations. By leveraging the variation in agencies' hiring of external managers, I find positive effects on scientists' number of publications, citations, and outside collaborations following an agency's shift to external management for treated scientists compared to matched controls. In addition, the impact varies for scientists in different occupational fields and is particularly large and positive for citations of shorter-tenured scientists and for outside collaborations of longer-tenured scientists. All together, these findings could inform strategies for hiring public managers and their potential influences on the scientific and technological progress of their organizations.

 STR: **Deglobalization and Entrepreneurial Investment: The Natural Experiment of BREXIT** 

Author: **Elisa Alvarez-Garrido**, *U. of South Carolina*

Author: **Juan Alcacer**, *Harvard U.*

We seek to gain insight into the consequences of deglobalization on entrepreneurial investment by analyzing an instance of economic disintegration: the United Kingdom's exit from the European Union. Brexit is not only a unique empirical opportunity, a natural experiment, but it is economically important, since the UK was the heart of entrepreneurial investment in Europe. The theory of international trade, at a macroeconomic level, and the theories of economic agglomeration and entrepreneurial location, at a firm level, all predict that economic disintegration would lead to a lose-lose scenario for both the UK and the EU, with the UK losing more. However, since these theories were developed in a period of slow increasing globalization, we lack knowledge on the specific mechanisms by which these losses occur. We argue that one such mechanism is the different institutions that move or stay as a result of the economic disintegration—institutions that support industries in different ways and therefore exacerbate or mitigate the effect of economic disintegration on entrepreneurial investment. Difference-in-difference analyses of the entrepreneurial investment received by ~43,500 startups, and of the portfolio choices by ~27,000 investors and ~106,000 investor-quarters, in the UK, EU, and US (a counterfactual not affected by Brexit) show that the effects are highly heterogeneous by industry, with larger-magnitude effects on industries that are heavily regulated. Qualitative analysis from 45 interviews (conducted as Brexit's process was unfolding) suggests that the institutions that support these industries, differently affected by Brexit, explain such variation.

STR: **Moving Away for Growth or from Uncertainty?** 

Author: **Mircea Epure**, *U. Pompeu Fabra*

Author: **Feng Zhou**, *Toulouse Business School, TBS Education*

We examine the antecedents and effects of corporate headquarters' relocations over good economic times and the Covid-19 crisis. Using Bank of Spain microdata, we first show that movers are usually older, larger, more leveraged and less capital intensive firms. When facing the unexpected shock of the pandemic, movers accessed less government funding, performed substantially worse by exiting more, and exhibited higher decreases in sales and performance. To enhance our identification, we exploit relocations triggered by the political uncertainty around the October 2017 "referendum" for Catalan independence. We find that results for the general population of firms hint to a more non-market behavior, while Catalan movers display a market-like adaptation. Catalan movers were also larger, more leveraged and less capital intensive firms, but they were younger and held higher liquidity. They performed better during the pandemic, relying even less on public funding, exiting substantially less than all other firms, and exhibiting lower decreases in sales to assets. Exploiting the heterogeneity behind the results, we highlight that key findings are stronger in low concentration industries.

STR: **How Does the Government Select the Scientific Elites? Based on the Co-Options of CAE From 2017-2021** 

Author: **Teng Si**, *School of Public Policy and management Tsinghua U.*

Author: **Chen Luyi**, *Shanghai Research Center for Reform and Development of SOEs*

Author: **Jingyi Huang**, *soe*

How does the Chinese government select scientific elites both meeting national needs and satisfying the scientific community? This paper attempts to answer this question by quantitatively and empirically demonstrating the twice review mechanism in the co-options of Chinese academicians using a dataset of candidates for the Chinese Academy of Engineering from 2017 to 2021. By comparing the party identities, personal academic histories, and candidacy information of 742 candidates, we find that the selection of academicians is not a so-called exclusively relationship-driven (guanxi) process, but rather the result of interaction and negotiation between the central government and the scientific community. First, the results of first review are weak universalism, candidates with higher publications have a higher probability of passing, especially in the eastern region, which is at the centre of China's science and technology strategy. Second, the regression results suggest that scientific contributions merely act in the first review; only party affiliation and recommendation method have an effect on the outcome in the second review, and political loyalty become more significant. In addition, in subgroup regressions, we also find that female CCP candidates are more likely to pass the first review, and that non-CCP candidates with a domestic doctoral degree and younger age have an advantage in being selected as academicians.

Making Sense of CSR

Session Moderator: **Francesca Collevocchio**, *SDA Bocconi and Bocconi U.*

STR: How Do Leaders Make Sense of Their Role in CSR? Insights from a CSR Community of Practice  

Author: **Sabrina Courtois**, *LouRIM, UCLouvain*
Author: **Valérie Swaen**, *U. Catholique de Louvain*

Research on leaders' role in corporate social responsibility (CSR) has revealed the critical influence of Chief Executive Officers (CEOs) and Board members on CSR engagement. In this study, we explore how leaders' participation to a CSR community of practice affects how they make sense of CSR engagement. We draw findings from 31 interviews with CEOs and Board members from a community of practice dedicated to CSR and sustainability issues, triangulated with three years of ethnographic data. Our findings contribute to leadership and CSR literature in three ways. First, we open the black box of leaders' influence by exploring the role(s) of social learning on leaders' mindsets, knowledge and CSR engagement. Second, we develop a typology, mapping leaders' sensemaking processes of their participation to the community and the consequent impact on CSR engagement. Third, we expand current knowledge on the types of CSR engagement leaders take responsibility for, and the resources they seek and mobilize in this regard. Accordingly, we provide insights on how social learning contexts such as communities of practice equip leaders with invaluable resources, thereby shaping how they make sense of their influence on CSR engagement.

STR: Signaling Corporate Responsibility: An Event Study of Chief Sustainability Officer Appointments

Author: **Saam Benjamin Mahmoodian**, *Vienna U. of Economics and Business*

This paper investigates stock price reactions to chief sustainability officer (CSO) appointments, aiming to uncover the signaling value inherent in these strategic decisions. Drawing from signaling theory, I argue that CSO appointments reflect a company's commitment to corporate social responsibility (CSR), thereby positively impacting stock prices. However, this prediction is not without tension as CSO appointments may be perceived negatively if they are regarded as false signaling – that is, companies appointing CSOs to merely portray a socially responsible public image, without substantive initiatives to improve CSR performance. Using event study methodology on a sample of 133 appointments, the findings reveal a significantly positive mean cumulative abnormal return. Moreover, the reaction is positively associated with CSO structural power and role clarity in the announcement, suggesting that these factors alleviate false signaling concerns and enhance the credibility of appointments. This study contributes to the literature on CSR initiatives as market signals and credibility of corporate disclosures. It sheds light on the signaling dynamics of CSO appointments, enabling companies to shape market perceptions through strategic sustainability leadership.

STR: The Effect of Board Sustainability Experience on ESG Performance: The Moderating Role of Board Age   

Author: **Francesca Collevocchio**, *SDA Bocconi and Bocconi U.*
Author: **Valerio Temperini**, *U. Politecnica delle Marche*
Author: **Virginia Barba-Sánchez**, *U. of Castilla-La Mancha (UCLM)*
Author: **Angel Meseguer-Martinez**, *U. de Castilla-La Mancha*

In an era where sustainability is becoming increasingly critical in the corporate sector, this study aims to shed light on the role of corporate governance in enhancing firm sustainability. Moving beyond the traditional focus on visible characteristics of boards, our research delves into the more nuanced aspect of board sustainability experience, examining how it influences the sustainability performance of firms. This study also uniquely investigates how the age of the board members may moderate this relationship. Through propensity score matching and panel regression techniques applied to data from 510 European listed companies analyzed from 2014 to 2020, we uncover that the effectiveness of board sustainability experience on firm sustainability is significantly dependent on the age of the board. Our findings reveal a striking contrast: while younger boards enhance the positive impact of the sustainability experience, this effect turns negative in the context of older boards. By shedding light on the interconnected impacts of board sustainability experience and board age, this research also offers practical insights for companies in their director recruitment strategies and provides guidance for developing effective regulatory policies.

STR: The Unintended Consequences of Stakeholder Scrutiny on Corporate Social Responsibility

Author: **Shubham Singh**, *ESSEC Business School*

How does stakeholder scrutiny influence firms' actions on environmental and social issues? Prior studies take an issue-centric approach whereby they focus on changes in firms' actions on the specific social issue on which firms were scrutinized. In this paper, I move beyond this issue-centric approach and highlight that scrutiny on a specific social issue may lead to improvement in firms' behavior on unrelated social issues. Firms may improve their performance on unrelated social issues to rebuild reputation and deflect the attention of wider stakeholders away from the issue on which firms were initially scrutinized. To find support for the above arguments, I exploit exogenous shocks (i.e., the leak of the Panama and Bahamas Papers in 2016) that increased stakeholder scrutiny of firms in relation to the use of offshore tax havens. Using the difference-in-differences methodology, I analyze panel data on 1205 firms from 2012-2020 and find that firms exposed to these shocks increased their performance on unrelated social issues.

CEO Effects on Strategy

Session Moderator: **Domenico Cambrea Rocco**, *U. commerciale Luigi Bocconi*

STR: **The Impact of Managerial Ability on Firm Optimal Distinctiveness The Moderating Effect of CEO Tenure** 

Author: **Marwan Ahmad Alshammari**, *U. of Texas at Tyler*

Author: **Soumendra Nath Banerjee**, -

Author: **Lee Warren Brown**, *Texas Woman's U.*

Optimal distinctiveness within a single policy has been rarely examined in both the market and non-market strategy literature. Both agency theory and Upper Echelons theory suggest that CEOs play a significant role in shaping firm's strategic behavior. Given the growing importance of managerial talent in today's complex, dynamic business environment, as well as an increasing focus on firms' CSR policies, this study investigates the relationship among managerial ability, CEO tenure, and firms' optimal distinctiveness in CSR practices. We specifically examine the effect of managerial ability (talent) on CSR emphasis differentiation and scope conformity. Using a sample of 28,593 firm-year observations from 1992-2013, we find that managerial ability is negatively related to CSR scope conformity and positively related to CSR emphasis differentiation. We also find that CEO tenure moderates the relationship between managerial ability and CSR conformity, such that as CEO tenure increases the negative relationship between managerial ability and CSR conformity decreases. Our results contribute to the growing literature on the role of upper echelon characteristics in shaping firms' strategic behavior and how more able managers deal with pressure for legitimacy and pressure for competitive advantage in their CSR practices. We provide implications for scholars and practitioners seeking to understand how managerial ability and CEO tenure impact firms' CSR strategies.

STR: **Exploring the Impact of CEO Succession on ESG Performance in European Listed Firms** 

Author: **Domenico Cambrea Rocco**, *U. commerciale Luigi Bocconi*

Author: **Fabio Quarato**, *Bocconi U.*

Author: **Giorgia Maria D'Allura**, *U. of Catania*

Author: **Francesco Paolone**, *U. Mercatorum*

This paper aims to investigate the influence of CEO succession on Environmental, Social, and Governance (ESG) performance within European listed companies, delving into the moderating roles played by the gender and age of the incoming CEO. Analyzing a comprehensive sample spanning from 2010 to 2021, the study employs a robust empirical methodology, utilizing difference-in-difference and fixed-effects regressions as its primary tools. To ensure the reliability of the findings, alternative econometric approaches are also considered. The empirical results reveal a positive correlation between CEO succession and ESG performance, with the impact being significantly influenced by the characteristics of the incoming CEO. Specifically, the study finds that the positive effect is heightened when the incoming CEO is female, whereas it is tempered by the age of the CEO. This novel exploration opens a discourse on an underexplored subject at the European level, shedding light on the consequences of CEO succession for corporate ESG performance. The study contributes to the existing body of knowledge by utilizing a unique sample of European listed firms, presenting findings not previously addressed in empirical literature.

STR: **Attract and Repel - How CEO Similarity Directs Strategic Imitation Following Underperformance** 

Author: **Alejandro Hermida Carrillo**, *LMU Munich School of Management*

Author: **Steffen Burkert**, *LMU Munich School of Management*

How do CEOs select imitation targets after underperformance? Motivated by recent scholarship highlighting the role of CEOs on problemistic search (Hu et al., 2023), we draw on balance theory to examine whether the selection of targets of strategic imitation is affected by similarity in visible (e.g., gender, age) and psychological (i.e., personality) attributes among the CEOs of focal and peer firms. Using a sample of 115,131 firm dyad-year of 719 publicly traded U.S. manufacturing firms (2000-2020), we find evidence for aspiration-idiosyncratic heuristic use. When firms underperform relative to their past – historically – CEOs differentiate their firms' strategies from those of firms led by individuals similar to themselves in visual attributes, i.e., they use a similarity-push heuristic. When underperformance is relative to the industry – social –, we unveil a pattern in which CEOs actively align their firm's strategy to that used by visually and psychologically dissimilar CEOs, i.e., a dissimilarity-pull heuristic. An investigation of two heuristic-enabling circumstances – high heterogeneity in the strategies of the peer group and low CEO power – bolsters our interpretation of heuristic target selection. Our research has strong implications for balance theory and the literature on problemistic search.

STR: **Learning from Mergers and Acquisitions Experience: The Role of CEO Ambivalent Cognition**

Author: **Philipp Benedikt Becker**, *WU Vienna U. of Economics and Business*

Author: **Patricia Klärner**, *WU Vienna U. of Economics and Business*

While previous studies have primarily spotlighted the negative consequences of CEO experience accumulation in mergers and acquisitions (M&A) such as overconfidence and narcissism, cognitive characteristics that allow CEOs to benefit from their growing M&A experience are unknown. We draw from behavioral strategy and cognitive psychology research to introduce CEO ambivalent cognition as such an enabling factor. Ambivalent cognition refers to a thinking style that favors positive and negative evaluations (valences) simultaneously. We hypothesize that CEO ambivalent cognition moderates the relationship between CEO M&A experience and M&A performance. CEOs exhibiting ambivalent cognition are more likely to identify strengths and weaknesses in prior acquisitions, which improves learning from M&A experience. A novel and transparent machine-learning-based approach enables us to measure CEO valences in a dataset of 2.6 million sentences. We find robust support for our hypothesis based on an analysis of 6,172 transactions of S&P 500 firms. Our study contributes to behavioral strategy research by advancing the cognitive perspective on how CEOs learn from the causally ambiguous performance feedback of acquisitions.

CEO Gender, Compensation, and Firm Outcomes

Session Moderator: **Laura Fritsch**, *U. of Oxford*

STR: **It's About Time! Gender Differences in the Timing of CEO Payments**   

Author: **Ahmet Sezer**, *Bocconi U.*

Despite its prevalence within a variety of contexts, findings on gender differences in pay among CEOs are inconclusive. I contend that the existing analyses may not comprehensively capture the multifaceted nature of CEO payments. By concentrating solely on scrutinizing differences in the monetary value of pay, there is a risk of overlooking variations in other dimensions of CEO compensation. In this paper, I adopt a novel approach to investigate the gender pay gap among CEOs. Specifically, I explore gender differences in the timing of CEO payments at S&P 1200 U.S. public firms from 2006 to 2022. Following matching techniques, I find that female CEOs have significantly shorter pay durations - the average time before an individual can reap the benefits from their compensation package, compared to male CEOs, reflecting the firm's reduced tendency to retain female CEOs over male counterparts. Further, I find that female CEOs are evaluated in significantly shorter performance periods - the timeframe during which an individual's eligibility for performance-based pay is assessed, relative to male CEOs, in accordance with the prejudicial expectations of female CEO performance and the firm's intention to identify suspected underperformance expeditiously. Moreover, to eliminate the possibility that female CEOs might have a preference for shorter pay durations or performance periods, I investigate the moderating effects of state-wide shocks on mobility restrictions and the CEO's capabilities based on past experiences. The findings offer some support for the mechanisms I propose, countering the alternative explanation of female CEOs' preferences. Overall, this study provides the first evidence of gender differences in elements of pay structure at the executive level that extend beyond disparities in sheer monetary value.

STR: **Market Reactions to Gendered Speech Patterns: Uptalk, Earnings Calls, and the #MeToo Movement**  

Author: **Laura Fritsch**, *U. of Oxford*

Author: **Anantha Krishna Divakaruni**, *U. of Bergen*

Author: **Alan D. Morrison**, *Oxford U., Saïd Business School*

Author: **Howard Jones**, *Oxford U., Saïd Business School*

Information is revealed by how people speak, as well as by what they say. Using audio recordings, we study uptalk (rising intonation) by executives in earnings calls. Unexpected uptalk by female, but not male, executives predicts lower earnings. Analysts respond to female uptalk with lower recommendations and earnings forecasts, and bid-ask spreads widen when female executives speak and use uptalk. These results are consistent with sociolinguistic studies which find that uptalk is a female-typed characteristic that signals uncertainty. #MeToo did not alter the market response to female uptalk, but it engendered a favourable response to male uptalk.

STR: **Enter the Multiverse to Assess a Relationship's Robustness: The Case of CEO Gender on CEO Pay**    

Author: **Martin Götz**, *U. of Zurich*

Author: **Christina Matz Carnes**, *Indiana U. - Kelley School of Business*

Author: **Ernest O'Boyle**, *Indiana U.*

Like most strategic management research, studies of how CEO gender affects CEO pay entail a myriad of choices (e.g., sampling, variable operationalization, model specification, analytical approach). We argue justifiable alternative choices result in contradictory findings for the relationship found in the literature. We review the literature on CEO gender and CEO pay to deduce justifiable researcher choice combinations of samples, variable operationalizations, model specifications, and analytical approaches. Using these alternatives, we derive a multiverse analysis of 3,840 combinations of these choices as a tool to assess the impact of the variability these choices have on estimates of the relationship. Finally, we discuss the joint results that indicate no clear effect of CEO gender regarding CEO pay.

STR: **Queen Bees or Regal Leaders at the Top Management?** 

Author: **Henrique Minetto Brabo**, *FGV EAESP Sao Paulo School of Business Administration*

Author: **Fernando Deodato Domingos**, *FGV-EAESP*

In this study, we delve into the impact of women occupying top leadership positions on their female subordinates and the overall organizational landscape concerning gender equality. Following an exploratory approach, we employ a difference-in-difference methodology to assess the female leadership effect on a series of outcomes (e.g., gender gap, vertical mobility). In sum, we take advantage of granular and individual-level longitudinal data from Brazilian firms, tracking when the firm leader (e.g., CEO) changed from a man to a woman. None of our findings show differences in the consequences for other female employees after the gender change in the leadership of their companies. Although 'no evidence of difference' does not read the same as 'evidence of no difference,' our findings do not support the so-called 'queen-bee phenomena.' We contribute to gender-related studies with much-needed research addressing endogeneity concerns and aiming to identify causal relationships in the topic. Nevertheless, we highlight more research is needed to further unpack the mechanisms behind the actions of female leaders and the ultimate consequences for other women in different hierarchies.

Modeling Firm Growth and Organizational Design

Organizer: **Jaeho Choi**, *HKUST Business School*
Organizer: **Saerom Lee**, *The Wharton School, U. of Pennsylvania*
Discussant: **Oliver Baumann**, *U. of Southern Denmark*
Presenter: **Helge JD Klapper**, *Purdue U.*
Presenter: **Ekin Ilseven**, *Catolica Lisbon School of Business and Economics*
Presenter: **Gianluigi Giustiziero**, *IE Business School*

This proposed symposium aims to bring together prominent scholars who explore the modeling of firm growth and organizational design. The study of firm growth and organizational design has a long history within the management literature, and formal modeling has served as a useful methodological approach to generating meaningful insights on these topics. The scholars invited to participate in this symposium will share their cutting-edge research and insights into questions such as the interplay of centralization and knowledge complexity in decision-making, the effects of stress accumulation on organizational performance, the challenges and implications of scaling in digital platforms, and the evolution of hierarchy and span of control in new ventures. Overall, the symposium aims to shed light on the contingencies that improve or worsen decision quality, prevent organizational members' exhaustion, and provide practical implications for managers responsible for designing their organizational structures and scaling their new ventures.

Interorganizational Networks

Session Moderator: **Sruthi Monica Thatchenkery**, *Vanderbilt U.*

STR: **Renewal of Interfirm Collaboration: A Theory of (Mis) Aligned Perception** 

Author: **Sruthi Monica Thatchenkery**, *Vanderbilt U.*

Author: **Henning Piezunka**, *INSEAD*

Competitive tension is a common problem in inter-firm collaborations, often leading to disappointment and eventual dissolution of the relationship. Yet prior work suggests that partners should be able to foresee and manage competitive tension. Why, then, does competitive tension remain an issue? We suggest that whether partners actually perceive each other as competitors is a key yet understudied aspect of how competition shapes collaboration. We hypothesize that misaligned perceptions where one firm perceives the other as a competitor, but not vice versa, lead to misplaced expectations about partner behavior and collaboration outcome, and thus to expectancy violations and mismanagement of the collaboration. Consequently, collaborations with misaligned perceptions are the least likely to renew. We test our theory by leveraging a longitudinal dataset of collaborations in the US enterprise software industry and find indeed that collaborations where the perceptions are misaligned tend not to be renewed. An examination of structural context illustrates how third parties can moderate the effect of misaligned perceptions. We contribute to the literature on interfirm collaboration and perception in social networks.

STR: **A Structuration Perspective on Board Interlocks and Corporate Strategic Action** 

Author: **Steffen Triebel**, *U. of Exeter Business School*

Author: **Julia Brennecke**, *U. of Potsdam*

Author: **Christiana Weber**, *Leibniz U. Hannover*

Studies on board interlocks are divided into two streams, one examining their dynamics; the other, their consequences. Our paper proposes that both phenomena – board interlock dynamics and board interlock consequences – are interdependent. Adopting a structuration theoretical perspective, we theorize and empirically demonstrate how firm's corporate strategic actions (specifically, acquisitions and divestitures) influence their board interlock networks and how these networks, in turn, influence the firm's corporate strategic actions, revealing their recursive nature. Integrating these heretofore disjunct research streams, we complement the corporate governance literature by providing evidence that corporate strategic actions and board interlock networks coevolve. We contribute to theory on strategic networks by applying a structuration theory lens. Lastly, we illustrate methodological advances by using stochastic actor-oriented models to analyze coevolution processes.

 STR: **Temporal Patterns of Ventures' Alliance Portfolio Formation & Innovation: A Configurational Approach**  

Author: **Niklas Dreymann**, *U. of Goettingen*

Author: **Suleika Bort**, *U. of Passau*

Author: **Indre Maurer**, *U. of Goettingen*

Author: **Mark Ebers**, *U. zu Koeln*

The temporal patterns of R&D alliance portfolio (AP) formation and how they link to ventures' innovation are still a largely white spot on the map of alliance and network research. Extant studies provide important insights into the impact of AP structure and management on innovation outcomes. Yet, we still know little about the role of the temporal ordering and progression of AP formation. We address this shortcoming and adopt a longitudinal configurational approach to explore how the temporal attributes of new ventures' alliance formation and their complex interdependencies over time link to innovation. We draw on a proprietary longitudinal dataset of 53 pharmaceutical biotechnology ventures to track when, how frequently, for how long, in what rhythm, and how concentrated in time these ventures form R&D alliances during their early development phases. Our findings reveal that within each development phase different configurations of temporal patterns of alliance formation are associated with high innovation outcome. Furthermore, our findings suggest three distinct equifinal trajectories – consistent time-paced, focused-to-time-paced, and punctuated-to-time-paced – that highly innovative ventures take to (re-)configure their AP across the early phases. By showing how the temporal attributes that characterize the patterns of AP formation relate to ventures' innovation, this study contributes to applying a dynamic lens to AP research.

STR: **All About Him? CEO Narcissism, Gender and Alliance Network Structural Holes**

Author: **Shilpam Dubey**, *U. of Minnesota*

Author: **Pankaj Kumar**, *Virginia Tech*

Author: **Aks Zaheer**, *U. of Minnesota*

While prior research has focused on the impact of external factors in network structure formation, the influence of internal factors in shaping these networks remains relatively less explored. This paper aims to extend scholarly understanding by examining the role of executives' personality characteristics and demographic traits in firms' alliance structural holes creation. Specifically, we investigate the role of CEO narcissism on structural hole spanning and further examine how CEO gender moderates this relationship. Using an exogenous instrument to account for CEO selection effects, our hypotheses regarding the effects of CEO narcissism, CEO gender, and their interactions in the context of structural holes spanned in the alliance networks of 663 CEOs in S&P 1500 firms from 1998 to 2017 corroborate our arguments. Our findings indicate that firms led by narcissistic CEOs tend to develop alliance networks with plentiful structural holes. Moreover, we find that the positive relationship between CEO narcissism and structural holes spanning is attenuated if a firm has a female CEO.

Panelist: **Timothy B. Folta**, *U. of Connecticut*

Panelist: **Tim Michaelis**, *Northern Illinois U.*

Panelist: **Daniel Tzabbar**, *Drexel U.*

Panelist: **Christian Schwens**, *U. of Cologne*

Hybrid entrepreneurship, that is starting a new company while continuing in the current employment position has received increased attention during the last few years. Prior research suggests that risks and uncertainty associated with entrepreneurial activity induce individuals to enter self-employment through a hybrid pathway and that start-ups launched by hybrid entrepreneurs outperform other entrants in terms of survival as hybrid entrepreneurs can test the viability of their business ideas or learn about their capabilities and fit with the market. While scholarly interest in hybrid entrepreneurship has started to blossom during the last few years, several theoretical and empirical lacunae exist in the literature that need to be addressed. For example, little is known about how hybrid entrepreneurs allocate their time and attention between day work and start-up activity, how hybrid entrepreneurs circumvent barriers such as noncompete covenants, and how external parties such as investors and other resource holders evaluate start-ups launched by hybrid entrepreneurs. The objective of this symposium is to bring together scholars interested in this topic to identify avenues for future theoretical and empirical works that could help in a better understanding of the phenomenon of hybrid entrepreneurship.

Managing Geopolitical Risks

Distinguished Speaker: **Robert J. Weiner**, *George Washington U.*
Distinguished Speaker: **Michael A. Witt**, *King's Business School*
Presenter: **Mike W. Peng**, *U. of Texas at Dallas*
Presenter: **Flladina Zilja**, *Copenhagen Business School*
Organizer: **Sinziana Dorobantu**, *NYU Stern School of Business*
Organizer: **Gilbert Kofi Adarkwah**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*
Organizer: **Christopher Albert Sabel**, *Rotterdam School of Management, Erasmus U.*

Geopolitical risk has emerged as an important factor in foreign investment decisions in recent years. The rise of geopolitical tensions worldwide and the fragmentation of relationships between countries have introduced new dimensions to foreign investment risks. MNEs and their managers are taking notice. Many have established dedicated roles to address geopolitical risk. For example, in 2023, the Financial Times reported that Goldman Sachs had launched a Global Institute to advise clients on geopolitical matters due to heightened demand. Similarly, Lazard established a geopolitical risk unit to “capitalize on global volatility.” The symposium will open with introductory keynote comments by two prominent scholars in the field, it will continue with four paper presentations, and it will conclude with a brief question-and-answer session with the audience. The ensuing discussion is envisioned to help advance both conceptual and empirical work on the management of geopolitical risk. We hope to also shed light on promising areas for further research that leverage both novel approaches to theory and explore new empirical settings.

Venture Scaling: A Human Capital Perspective

Panelist: **Charles Eric Eesley**, *Stanford MS&E*

Organizer: **Liinus Hietaniemi**, *IESE Business School*

Panelist: **William Reuben Hurst**, *U. of Maryland R.H. Smith School of Business*

Panelist: **Aleksandra Joanna Kacperczyk**, *London Business School*

Panelist: **Matt Marx**, *Cornell U.*

Organizer: **J. Daniel Kim**, *The Wharton School, U. of Pennsylvania*

Organizer: **Saerom Lee**, *The Wharton School, U. of Pennsylvania*

Venture scaling has drawn much interest in recent years among academics and practitioners alike. When startups pursue rapid extremal growth (i.e., new sales), they typically address the ensuing managerial challenges by hiring new employees beyond the founding team. This implies that human capital is a fundamental piece of the venture scaling process. As such, a growing body of work has started to apply a variety of theoretical lenses and research methods to advance our understanding of venture scaling and its connection to talent. The purpose of this professional development workshop is to draw attention to these latest scholarly developments and to enhance engagement across disciplinary and methodological boundaries, with the goal of promoting our comprehensive understanding of venture scaling. To this aim, we have gathered various prominent scholars with expertise and cutting-edge research in venture scaling. These panelists will, first, frame our session by sharing their own perspective on venture scaling and human capital. Then, a subsequent panel discussion and audience Q&A will synthesize these presentations and push our collective thinking forward to inspire future research and directions on venture scaling. Overall, this workshop will offer a structured opportunity to stimulate new research ideas and methods on venture scaling and to network with scholars that share an interest in this strategically important yet under-explored domain.

AI and New Venture Success

Session Moderator: **Sanjeev Kumar**, *Faculty of Business, Sohar U., Oman*

TIM: Orchestrating Sustainable Competitive Advantage in Start-Ups Through Artificial Intelligence

Author: **Sanjeev Kumar**, *Faculty of Business, Sohar U., Oman*
Author: **Prikshat Verma**, *Central Queensland U.*
Author: **Jayanta Chakraborti**, *GIBS, Bengaluru*
Author: **Happy Paul**, *Indian Institute of Management Visakhapatnam*
Author: **Etinder Pal Singh**, *Apeejay School of Management, India*

This study explores the role of AI adoption in establishing a sustainable competitive advantage in startups. It examines four factors: 'Effort Expectancy', 'Performance Expectancy', 'Social Influence', and 'Hedonic Motivations' as potential antecedents of AI adoption. The research further conceptualizes and refines constructs of 'AI-Augmented Information Processing Capabilities (AIPC)' and 'Digital Marketing Effectiveness (DME)', respectively, and postulates them as outcomes of AI adoption in startups. The study examines the direct impacts of these variables on the 'Sustained Competitive Advantage' of startups. The results, based on data from 362 Indian startups, suggest that all four factors (EE, PE, SI & HM) have a positive impact on AI adoption intentions of startup entrepreneurs. These results firmly pit these four factors as antecedents of AI adoption. The findings also suggest a positive impact of AI adoption on sustained competitive advantage, which can be partially explained by AIPC and DME. The study further identifies parallel mediation, sequential mediation, and direct effects between AI adoption, AIPC, DME, and SCA. These results underscore the importance of adopting AI and development of AI-augmented information processing capabilities and resultant digital marketing effectiveness to gain sustainable competitive advantage in technology-savvy startup ecosystem. The research provides insights for startup entrepreneurs and other industries to make informed decisions on how AI adoption augurs information processing capabilities for achieving digital marketing effectiveness and sustained competitive advantage.

TIM: Finetuning Artificial Intelligence for Entrepreneurial Pitching Effectiveness

Author: **Yanto Chandra**, *City U. of Hong Kong*
Author: **Liang Shang**, *The Education U. of Hong Kong*

The rise of artificial intelligence (AI) presents challenges yet also opportunities to understand whether and how it can be deployed by entrepreneurs to tell better stories to attract resources. In this study, we first introduced the notion of AI-generated versus human-generated storytelling and explored the potential merit of LLM AI to enhance entrepreneur's pitching effectiveness. In doing so, we fine-tuned ChatGPT GPT 4 that was fed with winning pitches from Shark Tank and had it transformed and refined losing pitches and evaluated their differences. We conducted three evaluations that involved two human experts to score the AI-refined versus original (losing) pitches using measures of pitch effectiveness, quantitative natural language analyses of the two types of pitches, and qualitative feedback from entrepreneurs and specialists (n=17) to make sense of the results. Overall, we found that AI-refined pitches generally outperformed their original human-generated (losing) pitches while also offering some caveats to the findings. We discuss what LLM AI will mean for entrepreneurship storytelling research and its implications for theory and practice and propose future research agendas.

TIM: The Relationship Between AI Innovation, R&D Intensity, and New Venture Growth

Author: **Xiin Li**, *central south U. business school*
Author: **Ya Su**, *Central South U.*
Author: **Shihao Mao**, *central south U. business school*

In the context of Industry 4.0, artificial intelligence innovation plays an increasingly important role in new venture growth. To improve operational productivity, AI technology has been increasingly applied in many industries. In this study, we examine the relationship between AI innovation and firm growth as moderated by R&D intensity based on data from 985 new ventures in China during the period from 2010 to 2020. The empirical results show that AI innovation can negatively affect firm growth, while beyond a certain level, it acts in the opposite direction, exhibiting a U-shaped relationship. Furthermore, R&D intensity steepens the U-shaped curve, thereby weakening the positive impact of AI innovation on firm growth. This result indicates that R&D intensity is not always beneficial. Finally, we provide several prominent practical implications for new ventures.

TIM: Navigating Regulatory Waters: Aligning Identity and Technological Capability in AI Medical Startups

Author: **Haoyu Zhang**, *Leeds U. Business School*
Author: **Youngbin Joo**, *U. of Leeds*
Author: **Krsto Pandza**, *U. of Leeds*

Focusing on the convergence of emergent and enabling artificial intelligence (AI) with medical technology under significant regulatory compliance, we theoretically and empirically demonstrate the influence of the alignment between technological capabilities and identity claims on entrepreneurial performance in product approval. Furthermore, we explore the contingent role of media coverage on such linkage. We develop competing hypotheses on the capability-identity linkage (alignment versus complementary views) and on the contingent role of media coverage (attention versus hype views). Our analysis of the FDA review time of 414 AI/ML-enabled medical devices by start-ups supports the positive influence of the alignment between technological capabilities and identity claims (alignment view) and the deleterious moderating influence of media coverage (hype view). Our paper offers theoretical insights into the relationship between identity claims, technological capabilities, and regulatory compliance in the pursuit of innovation in the domain of Artificial Intelligence as a Medical Device (AIaMD).

Commercialization Strategies

Session Moderator: **Du Liu**, *East China Normal U.*

TIM: Commercialise or Sleep? Capturing Value from Patenting 

Author: **Du Liu**, *East China Normal U.*

This paper investigates how firms manage sleeping patents within patent thickets and their impact on patent disputes and competition. I explore how firms gain value from patents in scenarios involving patent disputes and competition in bargaining games. The model considers the entry of a firm with a sleeping patent, which can either commercialize the patent or sell it to a firm with disputed patents or an alleged infringer. The model shows that potential benefits from patent litigation drive firms to sell or acquire sleeping patents. Moreover, the relative win rate in patent litigation influences the choice of patent buyers and commercialization decisions. Holding sleeping patents promotes cooperative patent strategies and enhances innovation incentives. The research offers a comprehensive examination of companies' patent deployment, taking market dynamics into consideration, and provides policy insights for effective patent management.

TIM: Preventing Others From Commercializing Your Innovation: Evidence From Creative Commons Licenses

Author: **Erdem Yilmaz**, *Rotterdam School of Management, Erasmus U.*

Author: **Tim Meyer**, *U. of St. Gallen*

Author: **Milan Miric**, *U. of Southern California -Marshall School of Business*

Online innovation communities are an important source of innovation for many organizations. While contributions to such communities are typically made without financial compensation, these contributions are often governed by licenses such as Creative Commons that may prevent others from building upon and commercializing them. While this can diminish the usefulness of contributions, there is limited work analyzing what leads individuals to impose restrictions on the use of their work. In this paper, we examine innovators imposing restrictive licenses within the 3D-printable design community Thingiverse. Our analyses suggest that innovators are more likely to restrict commercialization of their contributions as their reputation increases and when reusing contributions created by others. These findings contribute to innovation communities and the growing literature on property rights in digital markets.

TIM: Two Regimes: New Ventures' Product Commercialization Strategy and Competition for Technologies   

Author: **Yiyang Zhu**, *Montclair State U.*

Author: **Haiyang Li**, *Rice U.*

Innovation processes involve both upstream and downstream activities. Yet, existing research has focused primarily on the role of upstream technologies in downstream product development. In this study, I propose that new ventures' commercialization strategy may also affect upstream competition for the underlying technologies (i.e., higher patent litigation risk). In particular, due to the regulatory emphasis on the effectiveness of new products when granting a quicker approval, a new venture may disclose information about the functional equivalence between its new product and existing offerings. This strategy, while facilitating regulatory review, may render a venture's technologies seemingly less unique (i.e., technology equivalence) and susceptible to patent infringement accusations. I provide a theoretical account to explain this unanticipated consequence in the commercialization process by drawing from innovation appropriation literature, and also propose strategies that may help new ventures mitigate the litigation risk, leveraging a novel dataset in the medical device industry.

TIM: Marketing Authorization and Strategic Patenting: Evidence from Pharmaceuticals (WITHDRAWN)      

Author: **Dennis Byrski**, *Max Planck Institute for Innovation and Competition*

Author: **Lucy Xiaolu Wang**, *Assistant Professor at UMass Amherst*

Patents are designed to incentivize innovation. However, pharmaceutical firms often extend the period of market exclusivity with secondary patents on marginally beneficial improvements. Such behaviors evoke discussions about raising patentability standards. This study examines whether pharmaceutical firms move away from filing strategic patents once the focal drug gains marketing authorization and the disclosed trial-related information becomes novelty-threatening prior art. We construct novel patent-drug dyadic data and leverage unique European drug patent and marketing contexts. Using an event study methodology, we exploit plausibly exogenous variation in the length of time from patent filing to drug approval. First, we illustrate that drugs with early and late marketing authorization share similar ex ante patent and drug characteristics. Second, we support the hypothesis that strategic patenting behavior decreases substantially after marketing authorization. In contrast, meaningful follow-on innovations remain unaffected. Third, we show that these effects are likely driven by obstacles in the enforceability of marginal patents filed after approval. We analyze heterogeneity across firm type, patent type, disease type, and enforceability. Our results suggest that post-marketing increases in patentability standards are welfare-enhancing given examiners' and firms' self-adjustments, and we highlight the importance of better data provision to patent examiners to increase the quality of follow-up inventions.

Network Effects in Innovation Ecosystems

Session Moderator: **Thomas Bejarano**, *U. of Massachusetts, Boston*

TIM: Sensemaking and Sensegiving: An Exploration into a Cluster Facilitators Network Building Efforts

Author: **Thomas Bejarano**, *U. of Massachusetts, Boston*

Attempts at geographic cluster facilitation often focus on building network linkages among the new cluster's participants. An emerging stream of literature focuses on the role of cluster facilitators in establishing trust between actors, to catalyze these linkages. (Coletti, 2010, p. 681; Ingstrup, 2013; Ingstrup & Damgaard, 2013). Industry events are often used as a means toward this goal and it is through this mobilization effort that the network linkages that bring the cluster to life are said to form (Sydow et al., 2011). Though much has been written regarding the facilitator's' role in promoting the cluster, we know much less about how these facilitators, through the use of events, actually interplay with the network and how this, in turn, affects the cluster as a whole. In this exploratory study, I ask how a facilitator, attempting to foster network linkages through industry events, navigates this process when trust may not yet be fully established and the network itself is rather ambiguous. Exploring this through a sensemaking lens, I use Affiliation data spanning 2009 to 2014, along with qualitative interviews from a cluster facilitators network-building efforts in and around Boston Massachusetts. Results suggest to get to that through the malleability plasticity of entrepreneurial stories changing through recursive acts of sensemaking and sense giving, stories act as a sinew connecting the happenings within the events and extending further outside the events. After a discussion of the methods and analysis, I outline major findings and implications for future research and policymaking. Keywords: storytelling, sensemaking, economic clusters, network building

TIM: Re-Examining Innovation Ecosystem S-Curves: Network Effects and the Pace of Technology Substitution

Author: **Marvin Lutz Müller**, *U. of Regensburg*

Author: **Stefanie Steinhäuser**, *Technical U. of Applied Sciences Amberg-Weiden*

This paper explores the variance in the pace of innovation diffusion and technology substitution across different technologies and industries, with a specific focus on the role of network effects within innovation ecosystems. Traditional literature on innovation ecosystems often overlooks these network effects, which are crucial in understanding substitution dynamics. This study aims to provide a comprehensive analysis of how positive network effects within an innovation ecosystem can accelerate technology substitution. Employing a systems-based approach, we investigate the diffusion of EVs through a single case study. The study triangulates qualitative data from 14 expert interviews and quantitative data from an online survey of 120 participants, alongside archival materials. This methodological triangulation reveals that a well-developed charging infrastructure significantly hastens the substitution rate of ICEVs. We identify four key aspects of charging infrastructure that influence EV acceptance, offering new insights into the interplay between central and complementary technologies within an innovation ecosystem. The findings underscore the critical impact of network effects on the speed of innovation diffusion and substitution, providing valuable guidance for decision-makers in organizations. By highlighting the strategic importance of network effects, this research contributes to a deeper understanding of innovation ecosystems and offers a novel perspective on fostering successful innovation adoption and market penetration.

TIM: Dynamics of Ecosystem Governance on Technology Platform: Network Analysis of Siemens MindSphere

Author: **Kazuyuki Motohashi**, *U. of Tokyo*

In order to develop an innovation ecosystem and to maintain healthy condition of the ecosystem by contributions from partners, the ecosystem owner has to manage the balance between control over the partners and allowing autonomy of their activities. While substantial numbers of literature discuss about the comparative statics of the optimal degree of "control" over "autonomy", there is few studies empirically investigating the dynamics governance model in a process of ecosystem development. This paper sheds new light on such issue, by using the information of Siemens IoT Platform, called MindSphere. Specifically, by measuring the similarity among the partners in terms of its business domain, we have constructed the indicator of complementarity among platform participants. Then, Siemens's platform governance strategy is evaluated by using Burt's constraint index (measuring structural holes in network data). It is found that Siemens change its governance model from facilitating mutual complementarity among partners at early stage of platform development, to induce more competition among in its later stage by using network externality as a centripetal force.

TIM: Relational and Social Capital as Drivers of CE in Knowledge-Based Entrepreneurial Ecosystems

Author: **María Esmeralda Lardón-López**, *U. of Granada*

Author: **Víctor J. García-Morales**, *full professor*

Author: **Rodrigo Martín-Rojas**, *U. of Granada*

Author: **Jeehan Awad**, *U. of Granada*

The aim of this paper is to investigate whether a company belonging to a knowledge-based entrepreneurial ecosystem (KBEE) influences the increase in relational capital (relationship with customers, suppliers and allies) and social capital, if each one of these dimensions arise positively to the corporate entrepreneurial spirit, as well as whether it positively affects organizational performance. The conceptual framework is based on the theory of complexity and the perspective of dynamic capabilities, complementing the theory of resources and capabilities, since the use of information and communication technologies or social media technologies in companies promotes numerous interactions with users, clients, consumers, suppliers, business allies, employees and other stakeholders that improve the creation and exchange of knowledge and actively support innovation processes, constituting ecosystems for innovation and entrepreneurship or "complex innovation ecologies". The research has been carried out based on a sample of 138 Spanish technology-based companies belonging to entrepreneurial ecosystems of 47 Spanish universities. The main contribution consists of proposing an empirical model that shows how membership in a KBEE positively affects the development of relational and social capital of companies, as well as the increase in corporate entrepreneurship and, consequently, organizational performance.

Success of Inventor Teams

Session Moderator: **Frank Van Der Wouden**, *U. of Hong Kong*

TIM: The Returns to Inventor Experience and Collaboration 

Author: **Frank Van Der Wouden**, *U. of Hong Kong*
Author: **Christopher Esposito**, *UCLA Anderson School of Management*

We measure the rate of inventor knowledge obsolescence and study its relationship with the organization of invention. Our analysis of 4.6 million disambiguated inventors between 1836 and 2000 shows that: (1) inventors learn more slowly than their technology fields evolve, and (2) the gap between these rates grew larger over time. Therefore, senior inventors increasingly lack knowledge of the new and active ideas in their fields. We additionally show that this gap's growth coincided with a decrease in senior inventors' ability to produce impactful inventions, and an increase in inventors' reliance on organizational capabilities for rapid invention, as evidenced by increased collaboration. Together, our results suggest that knowledge obsolescence is compressing inventors' innovative careers and making organizational capabilities for adaptation more important.

TIM: Social Dynamics and Prediction Accuracy in Collective Decisions: Intuitive vs Scientific Approaches 

Author: **Sebastian Niederberger**, *ETH Zurich*

This paper focuses on the interaction of social influence with scientific and intuitive approaches in collective decision-making and under varying degrees of task complexities. By including the effects of being exposed to social information in the form of a peer estimate, we expand on a prior empirical framework by explicitly incorporating the element of social influence in the experimental design. We find that using the scientific approach under social influence results in higher collective performance than intuition. However, due to social influence, the collective accuracy for the intuitive approach improves to a greater degree, especially in the context of highly complex tasks. Regarding the micro-mechanisms that explain these findings, scientific thinkers have been observed to incorporate the provided social information in a manner similar to intuition. Conversely, intuitive thinkers tend to engage in more deliberation and reflection due to having access to social information. Therefore, our empirical results suggest that social influence is a mechanism that enables convergence in outcomes and potentially in terms of the cognitive processes utilized. Through this, not only can social influence further improve the collective accuracy of a group, but it also enables a balance of the limitations and trade-offs that are associated with each prediction approach.

TIM: The Impact of Local Bank Failures on Team Persistence in R&D  

Author: **Chun-Yu Ho**, *U. At Albany-SUNY*
Author: **Gerald Marschke**, *U. at Albany, State U. of New York*
Author: **Kyoungah Noh**, *U. At Albany-SUNY*

The aim of this paper is to explore the collaborative relationships between inventors and how team-specific human capital influences their repeated collaboration during periods of bank failures. Using U.S. patent data from 2000 to 2012, we have three main findings. First, we show that bank failures significantly lower both the number of team patents and inventors that have collaborators. Second, we find that negative banking shocks decrease the likelihood that inventor teams remain together for projects in the subsequent periods. On the other hand, we provide evidence that spatial proximity, past collaboration, and small team size play a critical role in preserving co-authorships that are weakened through the effect of bank failures.

TIM: Recognizing Disruptive Innovation Opportunities: A Configurational Approach to Team Learning  

Author: **Zhiwei WANG**, *Fuzhou U.*
Author: **Lican Wei**, *Lingnan U.*

Predicting, prospective sensemaking, and creating potential disruptive innovation are critically important but challenging. In fast-changing environments, the recognition of disruptive innovation opportunities is more likely to result from collective endeavors rather than individual efforts. Despite teams being the natural incubators for innovative activities, the contributing factors that enable teams to generate disruptive innovation opportunities remain largely unknown. We take an ex-ante perspective of disruptive innovation and examine how individual and team level learning antecedents interact and contribute to the recognition of disruptive innovation opportunities. We employ a configurational approach - fuzzy-set Qualitative Comparative Analysis (fsQCA) - to identify different cross-level antecedents and our findings reveal three distinct team-level pathways with unique configurations leading to a high level of disruptive innovation opportunities, namely, sharing-integrating, improvisation-inspired, and star-lead. We also identify two pathways for a not-high level of disruptive innovation opportunities. This study enriches the disruptive innovation literature by introducing the ex-ante perspective and elucidating how teams might proactively, collaboratively, and creatively recognize disruptive opportunities. Furthermore, this study offers a new perspective for learning on how opportunity recognition of disruptive innovation can be conceptualized as a team learning process and through which to achieve a pragmatic synthesis between opportunity discovery and opportunity creation.

Open Innovation as Adaptation

Session Moderator: **Matthew Ayamga**, *Wageningen U. & Research Center*

TIM: Open Innovation as an Adaptive Strategy in Mitigating the Challenges Posed by Digital Innovation 

Author: **Matthew Ayamga**, *Wageningen U. & Research Center*
Author: **Ayalew Kassahun**, *Wageningen U. & Research Center*
Author: **Wilfred Dolfsma**, *Wageningen U. & Research Center*
Author: **Bedir Tekinerdogan**, *Wageningen U. & Research Center*

In the contemporary digital landscape, the rapid surge of digital innovations is profoundly reshaping societies, firms, and economies, offering unprecedented opportunities for efficiency, transformation, and growth. However, this transformative journey is not devoid of challenges and complexities intrinsic to innovation. Existing studies on digital innovation tend to focus more on the prospects, exploring the feasibility of open innovation. Yet, there is a conspicuous gap in perceiving open innovation as a proactive response to challenges encountered in the adoption and implementation of digital technologies. Filling this research gap, our study draws from interviews and documents to analyze the emergence of open innovation strategies as a result of firms' responses to challenges when introducing their digital innovations to farmers in Ghana. Our results illustrate that firms' responses to challenges faced led them to proactively utilize a combination of both internal and external resources. Internal resources were drawn from firms' capabilities in software and Artificial Intelligence (AI) development. The pursuit of external resources led firms to engage in partnerships with external parties, taking various forms: (1) tactical partnering, (2) operational partnering, (3) partnering to acquire new human resources, (4) partnerships for obtaining new financial resources, and (5) partnering for acquiring new competencies. Partnering for new financial resources in particular was due to the complexity of Big Data analysis that triggered firms to seek external support. Finally, we discuss these findings for theoretical and managerial implications dealing with the complexities of digital innovation and seeking effective open innovation practices.

TIM: Decentralized Autonomous Organizations and Collective Innovation: An Empirical Investigation   

Author: **Ying-Ying Hsieh**, *Imperial College Business School*
Author: **Sebastian Brenk**, *Nijmegen School of Management, Radboud U. Nijmegen*

This study investigates the impact of community governance on collective innovation in decentralized autonomous organizations (DAOs). While DAOs are structured as self-organized communities such as open source software development (OSSD) communities for collective value creation, DAOs differ from OSSD in that they can financially incentivize contributors with cryptocurrency tokens, enabling private value appropriation. However, research on the 'private-collective' model of innovation (PCI) focuses on either private or collective governance separately, with the former focusing on the firm and the latter anchoring on self-organized communities. DAOs offer an opportunity to unpack the interaction between the private and collective governance mechanisms and their influence on collective innovation. Analyzing 45 DAO development communities from April 2013 to April 2018, we find that community governance promotes collective innovation; this effect weakens when interacting with centralized control. This study contributes to the PCI literature by establishing a deeper understanding of the private-collective innovation continuum and the interaction of the two models.

TIM: Emotional Intelligence and Open Innovation Practices: The Mediating Role of Work Relationships

Author: **Syed Muntasir Husain Bokhari**, *Doctor of Business Administration*
Author: **Lakeesha K. Ransom**, *Asian Institute of Technology*
Author: **Djoen San Santoso**, *Associate Professor*

In high-tech firms, promoting both internal and external knowledge sources, often referred to as open innovation, plays a pivotal role in fostering innovation. This emphasis is particularly crucial for emerging market firms, which typically possess limited technological expertise, hindering their innovation performance. Thus, it becomes imperative for emerging market firms to optimize the utilization of both internal and external knowledge sources among their employees. This strategic approach facilitates the narrowing of the technological gap and enables firms to catch up with their counterparts in developed markets. This study integrates literature on emotional intelligence, open innovation, and work relationships to delve into the impact of employees' emotional intelligence on their internal and external knowledge sources acquisition, while simultaneously considering the mediating role of work relationships. To empirically test our conceptual model, we collected data from 379 employees within the telecommunication industry across South and Southeast Asia. Our findings demonstrate a significant and positive relationship between emotional intelligence with both internal and external knowledge sources. Moreover, our investigation highlights that work relationships share significant and positive relationship with both internal and external knowledge sources. Furthermore, our research reveals that work relationships act as mediator in the relationships.

TIM: Processes of Collaborative Innovation: A Qualitative Meta Analysis

Author: **Hannah Fults**, *KIN Center for Digital Innovation, Vrije U. Amsterdam*
Author: **Hans Berends**, *Vrije U. Amsterdam*
Author: **Fleur Deken**, *Vrije U. Amsterdam*

Research on collaborative innovation has been flourishing over the past two decades. Although a growing number of process studies have been published that demonstrate the intricate interplay between innovation and collaboration processes, we still lack important insight into the underlying mechanisms that explain the direction and progress in collaborative innovation processes. The fundamental challenge that actors must address is to engage in collective action despite significant uncertainty being associated with innovation which prevents actors from specifying precise resource needs and selecting partners in a linear fashion. We address this challenge through a qualitative meta-analysis of published in-depth processual case studies. Our abductive analysis explains how switching between three fundamental mechanisms—nucleating, situated engagement, and bidirectional configuring—enabled reaching and strengthening prospective alignment over time. These three mechanisms enable explaining the difference between ampliative and interrupted sequences in the cases we analyzed and help unpacking how multiple actors transformed their resources into joint value.

Innovation Pathways Linking Academia and Industry

Session Moderator: **Muthu De Silva**, *Birkbeck, U. of London*

TIM: **How Do Firms Shape Their Interactions with Universities to Build Capital?**

Author: **Muthu De Silva**, *Birkbeck, U. of London*
Author: **Federica Rossi**, *U. di Modena e Reggio Emilia*
Author: **Nicola Searle**, *Goldsmiths, U. of London*

In the initial stages of university-industry collaborations (UICs) the chosen form of the collaboration and how potential collaborators are approached strongly influence their development and success. We investigate how the mode of initiation of UICs depends on firms' objectives to build economic, intellectual and reputational capital. We argue that: (i) capital building is not just an outcome of successful UICs, but an objective that influences firms' behaviour from the start, and (ii) firms' subjective evaluation of the effectiveness of interaction channels acts as a mediator between intention and behaviour. Our empirical analysis, building on a survey of 190 UK-based firms, shows positive associations between: economic capital-building objectives and institutional mode of initiation, mediated by the perceived effectiveness of knowledge acquisition channels; reputational capital-building and individual mode of initiation, mediated by the perceived effectiveness of knowledge co-creation channels; intellectual capital-building and both institutional and individual modes, mediated by the perceived effectiveness of, respectively, knowledge acquisition and co-creation channels (the latter when the firm intends to build new intellectual capital, the former when it intends to exploit existing capital). Our findings offer practical implications regarding how firms and universities should initiate interactions depending on the firms' objectives.

TIM: **Are Firms Stealing Talents? The Sorting of Scientists Between Industry and Academia**

Author: **Justine Boudou**, *Harvard Business School*

Note for the reviewer: This paper uses confidential data. Pending approval expected in mid-January, I have submitted a version with confidential data blacked out. All findings mentioned in the paper are statistically significant. -----
-----While the supply of scientists and its consequences for innovation has been widely studied, the allocation of scientists across sectors has received less attention. Because individuals are heterogeneous in skills and some occupations have greater potential of generating significant spillovers than others, the matching between jobs and individuals is of critical importance. In this paper, I study the allocation of Ph.D. at graduation across the academic and the private sector and its consequences for firms, science and the economy. While the share of students joining the private sector has substantially increased in the last decade, the consequences of this allocation remain unclear. Are firms recruiting the individuals who would be particularly productive in the private sector? Or are they diverting those who would have been prolific academic researchers? Using a newly-created dataset covering more than 40 cohorts of Ph.D. graduates with information about their earnings and their publication output, I first estimate the causal impact of joining the private sector vs Academia on earnings and publication output. To derive causal estimates, I use an instrumental variable design that relies on variation in the propensity of bachelor fields close in the knowledge space to lead to Industry vs Academia after a Ph.D. I show that scientists who start their career in the private sector generate [X more/less] publications and earn [X% more/less], compared to scientists who start their career in a university. I extend my analysis to the estimation of Marginal Treatment Effects in order to assess heterogeneity across individuals. I find that those who select into the [academic/private] sector lack non-research related skills that are rewarded in the [academic/private] sector. I also find that firms and universities compete for the same pool of "superstar" individuals, but that universities still possess an hiring advantage. I then use these publication-wage reduced-form estimates in a simple model of social returns that allows me to shed light on the extent of misallocation across sectors.

TIM: **Social Capital and Formal Contracts in University-Industry Collaborations for Innovation**

Author: **Hsing-Fen Lee**, *School of Business and Management, Royal Holloway, U. of London, UK*
Author: **Marcela Miozzo**, *King's College London*

Drawing on a survey of university academics and their innovation collaborations with industry, we address the conflicting results in the literature regarding the influence of social capital and formal contracts on university-industry collaborations for innovation. We suggest that the existing literature's inconclusive results may be explained by a lack of attention to equifinality and to the conjunction of multiple explanatory conditions of the complex phenomenon. We go beyond debates over the substitution or complementarity of social capital and formal contracts in supporting inter-organisational collaborations for innovation. Rather than attempting to untangle how the individual dimensions of social capital and formal contracts are conducive to the collaborations between universities and firms for innovation, we employ a configuration approach and fuzzy-set qualitative comparative analysis to explore their interrelated and complex dynamics. In doing so, our study offers alternative insights that extend the literature on university-industry collaborations. We develop an analytical framework that highlights the distinctive and contrasting configurations of social capital dimensions and formal contracts that are conducive to the development of, as well as knowledge transfer in, different types of collaborations. Our study contributes to the literature on the governance of inter-organisational collaborations by contextualising the key mechanisms in the dynamics of collaboration.

TIM: **Do Career Preferences Drive Entrepreneurial Learning in Pre-Incubators?**

Author: **Greta Serpente**, *Department of management, Bologna U.*
Author: **Daniela Bolzani**, *Department of management, Bologna U.*

While literature on entrepreneurship education and training by pre-incubators has proliferated, scholars have started to critically try to explain the contradictory findings of impact studies. In this regard, the career preferences of early-career academics who enrol in the programs are an issue that deserves more attention because of the high level of commitment required in new venture creation. Pre-incubators can be a testing ground in this regard, allowing incubates to explore and test whether their career preferences are in line with this task while being actively involved in the entrepreneurial learning process. The research question we aim to answer is: Do career preferences drive entrepreneurial learning in pre-incubators? If yes, how? The data is collected in a Business Plan Competition offered by a pre-incubator program in Italy, through semi-structured interviews, field observations, web materials, and surveys. The result of this study provides several insights that contribute to the flow of literature on career development in academic entrepreneurship along with policy and practice recommendations.

User Contributions to Platforms

Session Moderator: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*

TIM: **Free Private Strategy and Open-Source Contributions: Evidence from GitHub**

Author: **Jiawei Chen**, *School of Information Management & Engineering, Shanghai U. of Fin & Eco*
Author: **Di Zhou**, *School of Economics & Management, Tongji U.*

User contribution has become an important source of content on many platforms, with the freemium strategy being widely deployed by platforms to motivate different types of users to make contributions. In open-source communities like GitHub, users can frequently engage in writing code for public repositories and in this way make instant open-source contributions; or, alternatively, they can choose to first launch and work on projects in private repositories and then make them public later on some time afterwards to permit packed open-source contributions. Some individuals active in this field are of the view that providing free access to private repositories can in turn help promote the development of open-source communities, while still others hold the opposite view. To settle this debate, we examine the impacts from the change to a freemium strategy on open-source contributions and its underlying mechanisms. Using a panel data set obtained from GitHub, this paper found that the free private strategy had a positive impact on the overall level of open-source contributions. We further discovered that for professional users, the free private strategy generated a lurker effect, wherein their instant open-source contributions were reduced, as well as a delay effect, wherein their packed open-source contributions were increased. The shift in attention from public repositories to private repositories explains the changes in professional users' contribution patterns. This paper sheds new insights on the research into platform pricing strategy and digs deep into the open-source contributions. The findings of the paper suggest that platforms not only evaluate the overall impact of platform strategies, but also pay more attention to the heterogeneous impact on different types of users, especially on those users who contribute the most to the platform.

TIM: **Instagram as an External Enabler: The Roles and Mechanisms that Shape Entrepreneurial Activity**

Author: **Chris James Carter**, *U. of Nottingham*
Author: **Hannah Noke**, *U. of Nottingham*
Author: **Kadja Manninen**, *Manchester Metropolitan U.*

This paper explores Instagram as an external enabler of social media entrepreneurship, adopting a process-oriented approach for examining how and when enabling mechanisms are activated to enhance entrepreneurial outcomes for platform users. While prior literature indicates that social media technologies play an increasingly influential role in shaping entrepreneurial activity, the precise nature of this relationship has received little empirical attention to date. Using semi-structured interview data from 15 case studies of social media entrepreneurs, we find that Instagram embodies many of the enabling mechanisms proposed by the External Enabler (EE) framework, but that the venture triggering role requires modification, and two novel mechanisms merit future consideration: "Market engagement" and "Resource collaboration". Additionally, mechanisms are observed across all stages of the entrepreneurial process, with some exerting a particularly prominent role in shaping both markets and products/services through the platform. We highlight various implications for entrepreneurship education and platform design. Keywords: External enabler; Social media entrepreneurship; Social media, Instagram

TIM: **Platform Design Change and User Engagement: A Natural Experiment on Twitter**

Author: **Chengdi Fa**, *Amsterdam Business School, U. of Amsterdam*
Author: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*

Platform competition literature emphasizes the importance of network size on platform value; however, as platforms expand in scale, the challenge of diminishing network effects emerges. Recognizing this, the role of user engagement as a critical driver for sustained platform success has garnered heightened attention. We investigate how platform-specific content, tailored to the unique features of the platform, influence user engagement. Focusing on Twitter's character limit increase, designed to enhance platform-specific content creation, we investigate its impact on user engagement. Employing a synthetic control method and difference-in-difference estimation, our findings reveal that the character limit increase promotes platform-specific content creation by specific users (such as journalists). We suggest that crafting platform-specific content fuels user engagement (e.g., likes, replies, and retweets) on the platform. Importantly, we demonstrate that this impact is more pronounced for users with extensive networks and those generating creative content. We conclude with both theoretical and practical implications for platform ecosystems.

TIM: **Toward A Process Model of a Harmonious Retail Platform Ecosystem**

Author: **Tong HE**, *Xi'an Jiaotong Liverpool U.*
Author: **Zi Wang**, *IESEG School of Management, France*

By harnessing advanced data analytics, digital giants like Alibaba and Amazon are rapidly expanding their platform ecosystems, disrupting the longstanding dominance of brick-and-mortar retailers. However, this digital transformation poses risks of unfair exploitation for complementors and customers due to the power of AI and big data analytics wielded by these platform companies. Although recent literature emphasizes the need to safeguard the well-being of consumers and complementors and maintain ecosystem health, empirical research providing grounded guidance and policy implications on cultivating a harmonious retail platform ecosystem remains limited. This study, guided by grounded theory, empirically and inductively investigates a qualitatively different platform ecosystem over three years. This ecosystem is characterized by inclusivity, customer orientation, non-predatory practices, mutual benefit, and commercial viability. We identify three contingent mechanisms that underpin such a harmonious retail platform ecosystem: social capital energizing, grassroots infrastructuring, and operation abridging, in which each mechanism is enabled by everyday digital technologies that have become an integral part of daily life rather than the exclusive domain of a few major digital platforms. Our findings demonstrate that a harmonious platform ecosystem can be built on top of everyday digital technologies to orchestrate retail networks and co-create value with every ecosystem member instead of relying on novel and sophisticated ITs, such as artificial intelligence. Rather than devaluing the role of artificial intelligence, the process model we develop offers a multi-stakeholder and ecosystem-wide perspective that speaks to the platform ecosystem and retailing literature.

Participant: **Monica Marion**, *Indiana U.*
Presenter: **Andrew Hanks**, *Ohio State U.*
Participant: **Stasa Milojevic**, *Indiana U.*
Participant: **Bruce Weinberg**, *Ohio State U.*

In this symposium, we will examine a wide array of questions and hypotheses that focus on the people who conduct science -- as a complement to more established research traditions that focus on the publications and patents that people produce. Talks will cover topics that relate to a variety of career stages and background characteristics such as: What are the characteristics of scientists who are also inventors? How is Artificial Intelligence being integrated into crowd science projects? How does media coverage about research variably impact the authors of the research? Talks will also feature innovative data resources including one presentation that is able to examine the ways in which External Letters variably influence academic careers with respect to tenure and promotion decisions (particularly in relation to faculty who seek and gain one or more patents).

Managing Technological Transitions: From Machines to Software and AI in the Auto Industry

Organizer: **Fernando Suarez**, *Northeastern U.*

Organizer: **Diego Zunino**, *SKEMA Business School - U. Côte d'Azur*

Participant: **Frank T. Rothaermel**, *Georgia Tech*

Participant: **Rebecca Karp**, *Harvard Business School*

Participant: **John Paul MacDuffie**, *U. of Pennsylvania*

Participant: **Mia Chang-Zunino**, *ESCP Business School*

This panel symposium brings together prominent and emerging scholars on the topic of technological transitions with a particular focus on how recent developments in artificial intelligence, automation, and digital technologies are transforming existing industries. The symposium takes a deep dive in the technological transitions of the automotive industry. The automotive ecosystem contributes to nearly 5% of the American GDP and is facing two major technological transitions. On the one hand, there is a transition from internal combustion engines to alternative systems such as electric and fuel-cell engines. On the other hand, vehicles increasingly include automation components towards the vision of the self-driving car. These transitions entail strategic and organizational challenges for both incumbents and new entrants. The panelists present complementary perspectives about how to manage these transitions and assess the consequences of different strategies on firm performance.

The Interplay Between Firm Innovation and the External Environment

Organizer: **Jino Lu**, *Washington U. in St. Louis, Olin Business School*
Presenter: **Xiaoli Tang**, *Bocconi U.*
Presenter: **Jino Lu**, *Washington U. in St. Louis, Olin Business School*
Presenter: **Dror Shvadron**, -
Presenter: **Yuheng Ding**, *U. of Maryland, College Park*
Discussant: **Nicholas Argyres**, *Washington U. in St. Louis*
Discussant: **Felix Poege**, *Bocconi U.*

Supporting this year's annual meeting theme of "Innovating for The Future", this presenter symposium seeks to discuss – and to stimulate discussion about – the interplay between firm innovation and their external environment and the subsequent implications for firms and society. We bring together four papers that make impactful contributions by constructing unique datasets to facilitate answering such important questions as: How do external regulatory and technological environments shape firms' technological trajectories? What role do young firms play in technology adoption in developing economies? How can firms influence their external technological environment to their own benefit?

Age, Late Careers, and Retirement

Session Moderator: **Guodong Cui**, *Shandong U.*

CAR: **A Self-Determination Perspective on the Relationship Between Age-Inclusive HR Practices and SAW**  

Author: **Guodong Cui**, *Shandong U.*
Author: **Ying Zhang**, *Renmin U. of China*

To combat population aging in the workplace, we draw on self-determination theory to elucidate how age-inclusive human resource practices (AIHRP) can promote successful aging at work for older workers. A thorough examination of the hypothesized model was implemented using a survey (Study 1) and a scenario experimental study design (Study 2). Results from a three-wave time-lagged survey of 280 employees across 65 organizations (Study 1) revealed AIHRP were positively related to needs for competence, relatedness, and autonomy, which in turn contributed to successful aging at work among older workers. Moreover, individual psychological resilience was shown to strengthen the relationship between psychological needs and successful aging at work. Study 2 adopted a scenario experimental approach covering 165 older workers to further verify the positive influence of AIHRP on successful aging at work. This study depicts the mechanisms of age-inclusive HR practices on successful aging at work from a self-determination perspective, which enriches the existing body of research on successful aging at work and deepens our collective understanding of how organizations can motivate older employees.

CAR: **Who Am I in Retirement? Antecedents and Outcomes of Retirement Self-Uncertainty** 

Author: **Karyn Dossinger**, *Loyola U. Chicago*
Author: **Gregory Robert Beaver**, *Suffolk U.*

Feeling certain about who one is and their place in the world is fundamental to human psychological functioning; however, significant life transitions, such as retirement, may prompt uncertainty about the self. This study introduces the concept of retirement self-uncertainty, or individual perceptions that the self-concept in retirement is unknown. In this study, we establish retirement self-uncertainty as a relevant psychological response for understanding the retirement adjustment process. We propose and test a conditional process model of retirement self-uncertainty using a time-lagged study of retired adults living in the United States. We find that the involuntariness of the retirement decision and financial hardship during retirement were positively associated with retirement self-uncertainty; subjective health status during retirement was negatively associated with retirement self-uncertainty. Calling orientation, or perceptions that pre-retirement work held significant meaning and purpose, strengthened the positive relationship between financial hardship and retirement self-uncertainty, but did not moderate relationships between involuntary retirement and subjective health with retirement self-uncertainty. Finally, retirement self-uncertainty was negatively associated with retirement satisfaction and psychological well-being. Our study expands insight into how uncertainty manifests during the retirement transition, offering new understanding of how and when uncertainty about the self-concept hinders adjustment.

CAR: **A Systematic Review of Factors Impacting Older Workers' Experiences with Technology in the Workplace** 

Author: **Judah Adeniyi**, *Memorial U. of Newfoundland*
Author: **Travor C. Brown**, *Memorial U. of Newfoundland*

The impact of technology on the work experiences of older workers is a topic of growing interest. As the global population ages, leading to an increased representation of older employees in the workforce, understanding the dynamics of their careers in the evolving technological landscape becomes crucial. Despite this demographic shift, there is a noticeable gap in research addressing the factors influencing older workers' experiences within the changing technological work environment. To bridge this gap, we conducted a comprehensive systematic literature review, encompassing 121 papers from peer-reviewed journal articles to grey literature. This review not only synthesizes and evaluates existing research but also provides significant implications for both scholars and practitioners. It provides valuable insights into individual career development, career management strategies, and the relationship between technology and careers, offering directions for future research and strategies to ensure a technologically adaptive work environment for older workers.

CAR: **Relational Spirals and Thriving: a Longitudinal Investigation of Older Workers**     

Author: **Rajiv Amarnani**, *U. of Western Australia*
Author: **Miaojia Huang**, *U. of Western Australia*
Author: **Prashant Bordia**, *Australian National U.*
Author: **Imogen Sykes-Bridge**, *Australian National U.*
Author: **Patrick Raymund Matutina Garcia**, *Macquarie U.*

Thriving is believed to occur when employees experience progress and momentum in the organization. This conceptual basis for thriving is inherently temporal—implying an underlying individual change process—which sets thriving apart from other well-being criteria in HRM literature. However, limited research has explored the development process leading to thriving. This paper develops and tests a theoretical model on the dynamic origins of thriving in a socially important context: the aging workforce. Specifically, we propose that older workers thrive when they experience relational spirals: a deepening of the employee-organization relationship as psychological contracts and role expansion drive each other in a mutually reinforcing spiral. Results from a large-scale nationally representative longitudinal study of 3,370 Australian older workers—spanning 1.5 years and three time points—support the proposed model. Older workers' relational psychological contracts and role expansion form a mutually reinforcing spiral process over time, leading to higher levels of thriving. These results held even after imposing autoregressive control of lagged variables at earlier time points, and after accounting for transactional psychological contracts. Our theorizing and empirical approach brings dynamic processes to the forefront of HR research on thriving and point to implications for the role of HR in successful aging.

Author: **Yafan Yu**, *U. of Southampton*

Author: **Mina Beigi**, *Southampton Business School, U. of Southampton*

Author: **Jane Parry**, *Southampton Business School, U. of Southampton*

We present a systematic review of 54 empirical studies that examine the links between age-based perceptions/bias and career-related outcomes. Drawing on social cognitive theory, we conduct a systematic and interdisciplinary review that outlines the direct and indirect links between (a) positive and negative stereotypes and age discrimination and (b) individual and organisational career outcomes and acknowledges the contextual factors that influence this process. Our findings suggest that negative age-related stereotypes can directly or indirectly lead to discriminatory opportunity provision and employment practices, loss of enthusiasm for career planning, detriment to health, negative performance, and an unfriendly working climate through three pathways from the employee's perspective. Also, positive age-related stereotypes are positively associated with self-efficacy and can lead to equity in employment practices, passion for career development, and a friendly work climate. Our review provides insights for future research on age discrimination in the workplace and has practical implications for managers and policymakers.

Participant: **Gudela Grote**, *ETH Zürich*

In response to career scholars' increasing attentiveness to the complex outcomes of boundaryless careers (Guan, Arthur, Khapova, Hall & Lord, 2019) and the urgency in policymakers' search for innovative solutions to the fast changes in labor markets (Gmyrek, Berg & Bescond, 2023), our paper symposium provides the space to discuss opportunities and challenges associated with boundaryless careers. We bring together scholars conducting conceptual and empirical research in less-studied career contexts, offering fresh insights and new avenues for future research into boundaryless careers. The presentations in our symposium directly examine mechanisms that can lead to greater inequalities or enhanced opportunities in boundaryless careers. While we identify challenges, our symposium also offers a note of hope identifying mechanisms that can lead to greater opportunities for employees, particularly those likely to be disadvantaged.

Among the myriad grand challenges in today's world as highlighted by the AOM 2024 conference theme, economic inequality is one of prime concern (Bapuji et al., 2020). While some people enjoy professional and economic success in society and the workplace, many are classified as the "working poor" and face enduring financial strains (Leana et al., 2012). Traditionally, organizational researchers have used personality and other individual differences to predict job outcomes and career success (Ng et al., 2005; Seibert et al., 2024) but have rarely examined the long-term, fundamental impact of work on the person. With widening economic inequality, a pressing research question is how people change as a result of their career success, or the lack thereof. Using innovative research methods and data sources with high ecological validity, the current symposium addresses this question with four presentations that investigated the longitudinal, reciprocal relationships between career success/stress (extrinsic and intrinsic career success, chronic underemployment, and job/financial stress) and changes in individual characteristics previously considered stable, including personality traits, goals, and values. Collectively, this set of studies contributes to the organizational literature by answering the recent call for management scholars to study income and income inequality as drivers of organizational behavior (Leana & Meuris, 2015) and further expands the outcomes of interest from short-term cognition, affect, and behavior to long-term changes and development of the person. Examining changes in personality and other individual characteristics as a result of work experiences and illuminating the dynamics of individual differences, rather than treating them as stable dispositions, represent a major paradigm shift for understanding worker behavior and experience in organizational research (Judge, 2023). This set of studies also advances careers research by incorporating a temporal perspective on career success and investigating the underemployed and financially strained—a previously understudied population (Seibert et al., 2024). Practically, findings from this symposium have important implications for the management and development of employees as well as effective utilization of human capital in society.

Emotions and Well-Being in Conflict, Negotiation, and Social Exchange

Session Moderator: **Timea David**, *ESSCA School of Management*

CM: **Managing Relationship Conflict at Work: The Effect of Emotion Regulation and Social Interactions**

Author: **Timea David**, *ESSCA School of Management*

Author: **Hsi-An Shih**, *National Cheng Kung U.*

Author: **Tsai-Hsun Cheng**, *National Cheng Kung U.*

While disagreements can ignite a creative spark, relationship conflicts often create dysfunctional dynamics that hinder the realization of innovative ideas. We build on the emotion regulation framework to investigate the influence of emotion regulation strategies on social interactions and their implications for employees' innovative performance. We examined two commonly used emotion regulation strategies, expressive suppression (response-focused) and cognitive reappraisal (antecedent-focused) and to test their effects on innovation via contrasting social interaction processes. Team reflexivity was also considered as a potential moderating factor. The findings from a two-wave multi-source study revealed that expressive suppression in response to relationship conflict leads to interaction avoidance, hindering employee innovation, while cognitive reappraisal serves as a more adaptive emotion regulation strategy because it enables social expansion, thereby benefitting innovative performance. We found no support for an indirect moderating effect of team reflexivity. Our research highlights the contrasting effects of response-focused and antecedent-focused emotion regulation strategies on innovation. Understanding these dynamics is crucial for organizations seeking to foster innovation while simultaneously managing relationship conflicts among employees.

CM: **Daily Negotiation and Its Effects on Short and Longer-Term Well-Being**

Author: **Matteo Di Stasi**, *CUNEFU*.

Author: **Martin Schweinsberg**, *ESMT European School of Management and Technology*

Author: **Jordi Quoidbach**, *ESADE Business & Law School*

The present study examines three widely-held assumptions about negotiation that have never been tested outside the confines of a laboratory: (1) it's a daily activity, (2) it's generally unpleasant, and yet (3) it leads to happier lives. Leveraging an app-based experience-sampling methodology, we found that 25% of daily interactions involve negotiation, often resulting in a short-term dip in happiness. However, frequent negotiators reported higher overall happiness, underscoring the long-term benefits of this skill. The most common negotiation activities involved 'reaching an agreement' and 'making a joint decision', while formal 'bargaining' was less frequently used. We found negotiation to be more prevalent in professional interactions than in personal relationships. Additionally, our data revealed no significant gender or age differences in negotiation frequency, challenging traditional stereotypes.

CM: **Envy Hampers Win-Win Negotiations**

Author: **Hong Zhang**, *Leuphana U. Lüneburg*

Author: **Roman Trötschel**, *Leuphana U. Lüneburg*

Author: **Kai Zhang**, *Leuphana U. Lüneburg*

Author: **Peter Gollwitzer**, *New York U.*

Envy is a social experience, and it invariably occurs in dyads of the envious and the envied persons. Given the importance of envy as a social phenomenon, the current research seeks to investigate how envy affects interpersonal interactions in joint decision-making situations of negotiations. We propose that due to the painful feelings of being envious, envy will decrease the interpersonal trust between the envious and envied actor and ultimately harm their joint decision making. Moreover, we explored how if-then plans (i.e., implementation intentions) can help the envious actors to increase their trust in the envy situation, and thereby mitigate the negative effects of envy in negotiations. In general, the current research project focuses on the significant role of envy in the interactive processes of negotiations. Integrating the literature on negotiation and envy, we aim to highlight whether, how, and why envy impacts negotiators' perceptions, behaviors, and achieved outcomes. By investigating potential interventions to overcome the negative effects of envy, we establish and validate effective tools to break through the envy barrier and help joint decision-makers achieve optimal solutions.

CM: **Interpersonal Helping and Team Performance: Power, Dependence, and Social Exchange Perspective**

Author: **Young Won Rhee**, *Jackson State U.*

We investigate how employees' dyadic helping behavior is predicted by a coworker or interaction target's social influence in a team, and how this pattern of helping behaviors exerts an upward influence on the team process and outcome. Drawing on the power, dependence, and social exchange perspective, we further identify team conflict as a critical moderator that strengthens the relationship between target social influence and dyadic helping behavior. The power and dependence perspective also suggests that a dyadic social exchange relationship between two members is likely to impact the relationship patterns involving other members in the network of social exchanges in the team. Hence, we predict that the team-level configuration of helping based on the extent to which team members' dyadic helping behavior is shaped by target social influence will affect subsequent team process (i.e., team trust) and outcome (i.e., team performance) negatively. The current conceptual framework was empirically tested by a field survey and online experimental studies. This study highlights the importance of distinct forms and configurations of helping behaviors that occur in a team context, which may lead to disparate organizational outcomes.

Participant: **Chenxue Hou**, *U. of Bristol*
Presenter: **Barbara S. Lawrence**, *U. of California, Los Angeles*
Participant: **Sarah Wittman**, *George Mason U.*
Participant: **Chester S. Spell**, *Rutgers U., Camden*

Much has been unveiled about the impact of faultlines on team functioning over the past two decades of research. However, most studies only focused on faultlines within small groups, while dismissing the possibility of faultlines at higher levels. This symposium aims to advance our comprehension of how faultlines operate at the macro-level. Firstly, Danneels and Vestal delve into the influence of demographic and information-based faultlines within top management teams on a firm's exploration of new products, with a focus on examining constructive conflict as a potential boundary condition. Secondly, Shin, You, and Chung investigate the role of individual board member power as a moderating factor in the impact of faultlines within top management teams on board member departures. Following this, Su and Hou concentrate on faultlines within film production teams and their influence on the success of films, with particular attention to the individual power of film directors. The fourth presentation by Lawrence and Wittman explores organizational faultlines in the context of intra-organizational communities, examining how being a member of these communities can shape employees' career expectations and networks. Lastly, Yang, Bezrukova, and Spell examine the impact of state-level faultlines in the United States during the COVID pandemic on people's health practices, subsequently influencing pandemic and economic outcomes.

Neoliberalism, Postcapitalism, Humanism and Hope

Session Moderator: **Jonas Friedrich**, *Research Institute for Organizational Psychology*

CMS: **Working Beyond Neoliberalism: Organizing Alternativity Through an Ethics of Care (WITHDRAWN)**  

Author: **Jonas Friedrich**, *Research Institute for Organizational Psychology*
Author: **Christina Andrea Lüthy**, *Lund U.*

The urgency to reimagine neoliberal capitalism challenges scholars to explore how we can organize alternatively. In this paper, we argue that a feminist ethics of care, which stresses our fundamental interdependence and responsibility to particular others, provides a novel relational understanding of the organization and maintenance of alternativity. Relying on an ethnography of a campaign and consultancy cooperative, we show how an ethical adherence to flourishing, vulnerability, and solidarity informs an alternative coordination, valuation, and orientation of work. We theorize how the cooperative maintains this alternativity through the organization of a 'deliberative-responsive space'. Departing from scholarship that focuses on principles and practices in alternative organizing, our study emphasizes the organization of alternativity as an ongoing ethical responsiveness to different needs, capacities, and perspectives. We underline that a relational ethics and the responsive organizing it calls for provides a more situative and dynamic approach to dealing with plurality and conflict that frequently degenerate alternative organizations.

CMS: **Reflexivity After Asymmetry: New Humanism and New Possibilities for Critical Reflexive Practice**   

Author: **Julie Wolfram Cox**, *Monash U.*
Author: **Andreas Pekarek**, *U. of Melbourne*
Author: **John S Hassard**, *U. of Manchester*

Although reflexivity has become an enduring and flourishing trope in contemporary organization studies, it is challenged by increasing recognition of post- and anti-humanist philosophical positions that decenter the privileging of asymmetrical, human-centered capabilities. We discuss the nature and context of this challenge, with particular reference to what has been termed new humanism, a term for a range of perspectives and vocabularies from across the social sciences that recognize without privileging human potential in relation to more-than-human entanglements. We outline several new humanist contributions after this (re-)turn to asymmetry in management and organization studies. In combination, we show how new humanism can provide a conceptual underpinning for critical management research projects and, in addition, for critical reflexive practice without humanistic hubris.

 CMS: **Transforming Hope Labour: Badiou, the COVID-19 Event, and Contingent Academic Work** 

Author: **Elina Meliou**, *Brunel U. London*
Author: **Ana Lopes**, *Newcastle U.*

Studies of hope labour emphasise individual's commitment and attachment to unpaid or undercompensated labour, a phenomenon normalised by neoliberal ideology. However, they provide limited insights into how change and transformation can occur in neoliberalism. In the wake of the Covid-19 pandemic, which interrupted the established order and transformed the political economy, we address this lacuna by drawing on Badiou's theoretical ideas of the event. We theorise and demonstrate how the Covid-19 event has transformed the patterns of contingent academic work that sustain and reproduce hope labour. Through an analysis of forty interviews with contingent academics in the United Kingdom in the wake of the Covid-19 event, we illuminate the emergence of a new present manifested in patterns of 'transforming academic passion' and 'transforming academic professionalism'. This novel contribution enriches our understanding of hope labour and precarity within the neoliberal university by highlighting the subjective break experienced by contingent academics, disrupting the continuity of hope labour and giving rise to new discourses and practices. Our analysis sheds light on the nuanced dynamics at play in the research of academic work, emphasizing the transformative potential inherent in the event.

CMS: **Organising Postcapitalism: Mapping the Terrain for Actionable Knowledge**  

Author: **Ozan Nadir Alakavuklar**, *Utrecht U., School of Governance*
Author: **Patrizia Zanoni**, *Hasselt U.*

In this essay, we review eight prominent critical traditions inspired by Marxism and advance a vocabulary to theorise alternative organising as a means to achieve postcapitalism. By challenging the characterisation of alternative organising within capitalist relations as 'ambiguous', we argue for re-embedding this literature into the critique of capitalism. We aim to develop a new postcapitalist perspective for actionable organisational knowledge. We pose two research questions: (1) How can the economy and society be reconceptualised postcapitalistically in theory? (2) how can these concepts be politically mobilised for postcapitalist organising? As a contribution, by reintroducing critical political economy into the scholarly conversation on alternative organising, we demonstrate how postcapitalist knowledge can be productive for performative social change and for envisioning novel forms of organising differently. Our study not only offers a fresh reconceptualisation of the economy and society but also introduces theoretical possibilities for the politics of alternative organising.

Work Effort and Private Time: Conflict or Balance?

Session Moderator: **Yichuan Zeng**, *China Agricultural U.*

CTO: **The Effect of Organizational Expectations for Electronic-Message Monitoring on Work-Family Conflict**

Author: **Wang Juan**, *Northwestern Polytechnical U.*
Author: **Yang Liu**, *Northwestern Polytechnical U.*
Author: **Hongwei He**, *Alliance Manchester Business School, U. of Manchester*
Author: **Zhe Zhang**, *Xi'an Jiaotong U.*

Although organizational expectations on electronic-message monitoring (OEEM) have become prevalent in companies, scholars have paid little attention to the effects of OEEM on employee outcomes, especially work-family conflict. Drawing on job demands-resource theory and the dualistic model of passion, we develop a theoretical model to explore how and when OEEM influences the work-family conflict of employees. Via two scenario-based experiments (N = 164, N = 184) and a multi-wave field study (N = 352), we find that OEEM can increase the work-family conflict of employees by increasing their obsessive passion and reducing their harmonious passion. Moreover, external CSR can weaken the positive relationship between OEEM and employees' obsessive passion as well as the indirect effect of obsessive passion on the relationship between OEEM and work-family conflict. Our study contributes to the understanding of the effect of OEEM on employees' work-family conflict and sheds light on the social impact of external CSR on the mitigation of the negative effect of OEEM on employees' work-family conflict in the wake of the COVID-19 outbreak.

CTO: **How W ICTs Influences Knowledge Hiding? A Moderated Chain Mediation Model**

Author: **Chao Zhang**, *Tongji U.*
Author: **Wenshun Li**, *Tongji U.*
Author: **Xianglu Wang**, *Tongji U.*

Despite the belief that the Work-Related Use of Information and Communication Technologies After Hours (W ICTs) enhances the convenience of knowledge exchange among employees, existing research lacks a motivational perspective on W ICTs' impact on employee knowledge hiding. To investigate the influence of W ICTs on knowledge hiding—how and when it occurs—we explored the relationship and underlying mechanisms between W ICTs and knowledge hiding based on the Conservation of Resources theory and Cognitive-Affective Personality Systems Theory. Analysis of data collected from 336 employees revealed that W ICTs significantly promote employees' knowledge hiding behavior. Role overload and moral disengagement respectively mediate the relationship between W ICTs and knowledge hiding, forming a chained mediating role. Organizational segmentation supply moderates this effect by attenuating W ICTs' positive impact on role overload. In conclusion, the research findings carry important theoretical and managerial implications for the study of W ICTs and knowledge hiding.

CTO: **Working During Private Hours From a Mental Accounting of Time Perspective**

Author: **Martina Hartner-Tiefenthaler**, *TU Wien*
Author: **Julia Schoellbauer**, *U. of Vienna*

Engaging in work activities during private hours is a widespread phenomenon among knowledge workers that exceeds the time spent on work while reducing the time left to invest in private life. Although research so far emphasized the detrimental consequences of working during private hours, little is known about its impact on subjective work-nonwork balance—a well-being indicator specifically important in today's lives—and on workers' time management strategies to mitigate the consequences. Drawing on mental accounting of time theory, we argue that working during private hours shifts the mental time budgets for work and private life and thus disrupts the balance between both domains. Consequently, we hypothesize that engaging in private activities during working hours mitigates this negative effect because it vice versa reduces the time invested in work and increases the time spent on private matters and thus re-balances the mental time budgets. Finally, we propose reciprocity of both behaviors. Two empirical studies widely support our hypotheses. Our insights present a novel perspective on the interplay of boundary-spanning behaviors and expose them as contemporary time management strategies aiming to maintain a comfortable balance between work and private life.

IT for Municipal Government: Technology, Public Service, and Wellbeing

Session Moderator: **João Barata**, *U. of Coimbra*

CTO: **Digital Dynamics in the Urban Attractiveness: The Intersection of Social Media and Smart Cities**

Author: **Filippo Marchesani**, *D'Annunzio U. of Chieti-Pescara, Italy*

Author: **Federica Ceci**, *G. D'Annunzio U. of Chieti-Pescara*

Author: **Ian McCarthy**, *SFU*

Smart city initiatives involve using digital technologies to enhance user experiences and improve the efficiency and attractiveness of urban environments. In this study, we examine how a city's responsiveness to social media impacts the effect of digital technology implementation on the city's urban attractiveness. We suggest that this impact occurs because the relationship, visibility, location, sharing and grouping aspects of social media influence the adoption and use of digital technologies in smart cities, and resulting user structures and behaviors. We use data for 30 Italian cities (2010-2021) to show that digital implementation reduces their effect on urban attractiveness after a certain threshold, and that social media platforms moderate this relationship, extending the threshold point. Moreover, we show how these effects vary for local and international users of a city. These findings contribute to smart city research by corroborating social media's role in contemporary cities and providing practical implications for institutions and public management in orchestrating smart city projects.

CTO: **Beyond Functionality: Understanding How Digital Platform Features Impact on Users' Wellbeing**

Author: **Ana Domingos Canhoto**, *U. of Sussex Business School*

Author: **Danae Manika**, *Brunel Business School, Brunel U. London*

Author: **Emma Wainwright**, *Brunel U. London*

Author: **Donna-Marie Holder**, *Brunel U. London*

Digital technology's pervasive presence in modern life has both positive and negative implications for users' wellbeing. Despite growing awareness of this effect, the role of specific features in shaping users' overall welfare remains inadequately understood. This paper investigates the nuanced relationship between digital platform features and users' wellbeing. Drawing on the Conservation of Resources theory and consumer behaviour's low vs high involvement tasks framework, the research pursues this goal in the context of a local authority's digital interactions with citizens. The empirical investigation, centred on a case study of an English local authority, reveals that specific platform features support or limit wellbeing based on their alignment with users' valued outcomes, varying according to task involvement. This study advances the theoretical understanding of the intricate relationship between digital technology and human experiences, emphasizing the importance of considering wellbeing in digital system design and implementation.

CTO: **The Stasis Effect: How Digital Platform Reliance Undermines Salience of Public Service Improvements**

Author: **Godofredo Mesa Ramizo**, *Nanyang Business School, Nanyang Technological U., Singapore*

This study surfaces a conceptual pathway through which user reliance on digital platforms can undermine the issue salience of improvements in public services that compete with the digital platform's services. Sixty-four (64) in-depth interviews with ride-hailing platform users in Manila and Jakarta indicate that when certain platform features and contextual factors exist, user reliance on platform solutions can demote the issue salience of competing mass transport systems and shift users' support away from public transport improvements. I interpret the data using the opinion-policy theory from political science. Following this well-established theory, I conceptualise how technologies create a "stasis effect," which describes how platform reliance can deactivate social clamour for competing public services, thus putting in stasis the linkage public opinion and actual government policy that would otherwise lead to public service improvements. The contributions to the literature on societal impacts of information systems are discussed, as well as the methodological and epistemological adaptations required when cross-pollinating a distant discipline (like political science) into the field of information systems.

Trust and Reliance On AI

Session Moderator: **Orneita Burton**, *Abilene Christian U.*

CTO: **The Ambivalent Nature of Trust in AI**

Author: **Gaurav Bansal**, *U. of Wisconsin - Green Bay*
Author: **Zhuoli Axelton**, *U. of Wisconsin - Green Bay*

Despite the excitement around AI as a game-changing technology and the belief that it represents the "ultimate breakthrough," we are witnessing an AI productivity paradox wherein there is a gap between AI advancements and actual gains in labor productivity due to the simultaneous existence of AI's forward-looking optimism and backward-looking disappointment fueled by technological prowess as well as social disruption associated with AI respectively. Thus, this paper attempts to understand how the AI productivity paradox could create simultaneous positive and negative valence in AI at the individual employee level. We also attempt to understand effective measures companies can employ to alleviate employee concerns and enhance AI adoption to unlock the productivity bottleneck. Our study employed an experimental survey design and collected data from MTurk respondents. Our findings demonstrate that open communication is pivotal in building trust, and trust in AI could exhibit both system-like and human-like attributes. Moreover, trust in AI may create ambivalence by simultaneously advancing intentions and triggering reactance, with human-like trust having a slightly greater impact on intentions. Thus, our study attempts to unravel the intricate dynamics surrounding AI trust. Theoretical, practical, and social implications are discussed.

CTO: **Examining Human Over-Reliance on AI-Enabled Decision Aids**

Author: **J. Irudhaya Rajesh**, *Flinders U.*
Author: **Divya Sripada**, *VIT BUSINESS SCHOOL, Vellore Institute of Technology - Chennai*
Author: **Adela Jana McMurray**, *Flinders U.*
Author: **Bhavna Bajaj**, *Australian Institute of Business*
Author: **Tim Van Erp**, *Flinders U.*

As world events, volatility, and innovation propel us into the industry 5.0 era, businesses must understand how AI-enabled decision tools are used in their workplaces. Anchored to the three-stage human-AI-enabled decision aids interaction process, this study identifies the role of technology-oriented, psychological, and cognitive factors in human over-reliance on AI-enabled decision aids. Designed in two stages, the study's extensive literature review generated a list of seven key factors (intrinsic AI opacity, modality effect, perfect automation schema, availability AI negativity heuristics, need for cognition, psychological ownership and power autonomy) that potentially influence human over-reliance on AI. This informed the second stage of survey development in empirically testing the relationships in a scenario-based vignette survey experiment. Using Smart PLS-SEM, the significant results yielded new knowledge by showing that the modality effect and perfect automation schema had a significant positive relationship with over-reliance on AI, while the intrinsic AI opacity had a significant negative relationship. The remaining cognitive and psychological factors did not have a significant negative relationship, but the direction tended to show a negative direction. This novel study assists in enhancing the understanding of human over-reliance on AI-enabled decision aids and taking necessary steps to mitigate the undue reliance on AI.

CTO: **The Role of Social Value Orientation and Offer Fairness in Accepting Offers from AI**

Author: **Bixiang Han**, *Stevens Institute of Technology*
Author: **Bei Yan**, *Stevens Institute of Technology*

As AI is increasingly deployed to interact with customers, it is important to understand why people differ in their preference to accept offers from AI. This study examines to what extent people's social value orientation (prosocial vs. proself) shapes their reaction to an unfair offer from AI vs. Humans. I conducted an online experiment in which people received an unfair offer from either AI or humans. We measured people's social value orientation and varied the fairness level of the offer. The results showed that prosocials are more likely to receive slightly unfair offers from humans' than AI's but tend to reject humans more than AI when the offer is highly unfair. In contrast, proselfs consistently reject highly unfair offers regardless of the source. This suggests that prosocials are more likely to extend the benefit of the doubt to humans than AIs for slightly unfair offers but are more inclined to punish humans than AIs for highly unfair offers. These findings demonstrate that researchers and practitioners should consider people's social value orientation while studying and designing AI that interacts with customers.

Corporate Data: Valuation, Business Models, and Information Security

Session Moderator: **Lauri Kristian Wessel**, *European Uni Viadrina, Frankfurt (Oder)*

CTO: **Dynamic Valuation of Data in Bayesian Decision-Making: A Stackelberg Competition Approach**

Author: **Ting Gong**, *Tsinghua U.*

Author: **Yong Wang**, *Tsinghua U.*

The rise of data analytics has revolutionized how firms make decisions, emphasizing the crucial role of Information Production Functions (IPFs) in converting raw data into actionable knowledge. One of the most well-established mechanisms for continually refining these data-driven insights is Bayesian updating. Despite its utility, the current literature fails to meet expectations in two key areas: understanding how the value of data changes dynamically over time and exploring the implications of varying IPFs in competitive frameworks like the Stackelberg competition. This paper bridges these gaps by introducing an integrated framework that combines Bayesian updating, IPFs, demand functions, and KL divergence. We extend our exploration to the realms of Stackelberg competition and technology-driven entry barriers, providing a comprehensive analysis of information value, competitive strategy, and the role of technology in shaping both.

CTO: **Managing the Complexities of Digital Goods' Anti-Rivalry in Contemporary Business Model Innovation**

Author: **Ville Eloranta**, *Aalto U. School of Business*

Author: **Annika Bengts**, *Aalto U. School of Business*

Author: **Apurva Ganoo**, *Aalto U. School of Business*

Our study investigates how business models, analyzed from a business model pattern perspective, can benefit from the anti-rivalry of digital goods. Following the state-of-the-art research in digitalization, we acknowledge that digital goods have the potential to increase in value when used; hence, they are characterized as “anti-rival.” This contrasts with standard goods—which decrease in value when used, making them “rival.” Mixing anti-rival and rival resources and goods in a single business model creates institutional complexity, which can be addressed with complexity management. We are particularly interested in complexity management approaches that do not artificially limit the value-creation potential of anti-rival goods. To that end, our analysis revealed seven complexity management mechanisms and 39 related business model patterns. The mechanisms and patterns were categorized into three metamechanisms offering distinct opportunities and challenges for business model innovators seeking anti-rival benefits. When reflected against institutional complexity theory, the approaches can be further divided between symbiosis-seeking (leveraging complexity) and synergy-seeking (decreasing complexity) approaches. Our study contributes to the ongoing discourse surrounding anti-rival goods by highlighting how business models can unleash their additive value-creation potential without unsustainably exploiting rival resources.

CTO: **Prevent or Promote? CEO Regulatory Focus, Data Breach, and Corporate Information Security Awareness**

Author: **Inmyung Choi**, *Texas Tech U.*

Author: **Daniel Chen**, *Baylor U.*

A fundamental question in cybersecurity research is what makes firms develop a higher level of information security awareness (ISA), referring to a sense of awareness of senior managers on security threats and countermeasures. Recent research suggests that top managers' attributes may influence their engagement in information security (IS) activities. However, this line of research has yet to seriously consider why some CEOs are more aware of security issues and/or are more active in preventing potential threats from information security than others. Drawing upon the regulatory focus literature, we examine how CEO regulatory focus, which captures the degree to which CEOs pursue their goals through promotion or prevention focus, shapes the ISA of firms. In particular, we demonstrate that CEO prevention focus is positively related to ISA, while CEO promotion focus is negatively associated with ISA. Furthermore, we show that promotion-focused CEOs are more likely to engage in ISA when their firms experience data breaches, while the engagement of prevention-focused CEOs in ISA is not affected as much. Moreover, building upon the literature on behavioral theory of firms (BTOF), we argue that the relationship between CEO and ISA is more nuanced depending upon the firm performance relative to aspiration level. Our results underscore that the regulatory focus of CEOs is a pivotal lever to promote or impede ISA contingent upon the data breaches and the aspiration level of their firms.

Algorithmic Management: Tasks, Technology, and Trust

Session Moderator: **Diego Gomez-Zara**, *U. of Notre Dame*

CTO: **Workers' Judgments of Organizational and Technological Characteristics of Algorithmic Control**

Author: **Armin Alizadeh**, *Technische U., Darmstadt*
Author: **Martin Wiener**, *TU Dresden*
Author: **Benlian Alexander**, *Technische U. Darmstadt*

We explore how workers judge algorithmic control systems - organizational control systems based on advanced digital technologies used for automated direction, evaluation, and discipline of employees. Moving beyond the scope of previous research, which predominantly focused on isolated aspects of algorithmic control, such as specific control mechanisms, forms, or functions, our investigation underscores the critical importance of the organizational and technological contexts in shaping workers' judgments of these systems. Employing a vignette study approach, we examine the influence of important organizational and technological characteristics of algorithmic control on workers' judgments of autonomy, exploitation, and acceptance. Our findings support that a comprehensive examination of algorithmic control, integrating its organizational, technological, and control dimensions, offers a more profound and contextual understanding of how workers perceive and judge these systems. Furthermore, our study identifies pivotal factors that play a crucial role in employees' evaluations of algorithmic control systems. This research significantly augments the existing body of literature by demonstrating the imperative of investigating algorithmic control within its specific organizational and technological embeddings, rather than in isolation. The insights gained from our study provide valuable implications for practitioners and policymakers engaged in the design and governance of algorithmic control systems.

CTO: **Trust in Algorithmic Management: The Role of Task Type and Prior Discrimination Experience**

Author: **Josephine Mago Moritz**, *Heinrich-Heine U. of Dusseldorf*
Author: **Carla Schmidt**, -

Algorithmic management (AM) is increasingly used, extending its application from labor platforms to more traditional employment settings. While AM offers several benefits for organizations, such as higher efficiency of processes, applicants and employees oftentimes perceive its use as untrustworthy. We propose that perceived informational and interpersonal justice account for these perceptions. We assume that the relationship between AM use and justice perceptions is moderated by type of task conducted by the AM system and by prior discrimination experience by a (former) supervisor. To test these hypotheses, we conducted an online experiment (n=173). Our results demonstrate that AM use was negatively associated with justice and trust perceptions and that justice perceptions mediated the relationship between AM use and trust. Type of task moderated the relationship between AM use and interpersonal justice but not informational justice, indicating context-dependency of AM perceptions. Further, the negative effect of AM use on justice was weakened if participants had previously experienced discrimination by a (former) supervisor. We propose the use of AM might help to lower fear of making discrimination experiences again.

CTO: **Artificial Stupidity and Coping Strategies**

Author: **Mengyue Su**, *Xi'an Jiaotong-Liverpool U.*
Author: **Hao Ma**, *National School of Development at Peking U.*

While AI is supposed to augment the capability of human beings, paradoxically, it could also dehumanize, suppress, and demobilize them and result in mistakes, failures, and even disasters, actually manifesting itself in some forms of artificial stupidity (AS). This article dissects two basic types of artificial stupidity -- replacement and enslavement -- and suggests corresponding coping strategies. Replacement happens when human efforts and intelligence are entirely replaced by AI, which could result in a lack of human sensitivity, overlooking interdependencies and firm-specificity, and an inability to deal with extreme challenges. Enslavement happens through dehumanization, suppression, and alienation of human users of AI. Coping strategies to remedy AS include improving the training data, machine learning process, and the learning of firm-specific knowledge through supervised learning, fostering AI-user fit and complementarity, and building trust and understanding between AI and its users.

Innovating for a Diverse Digital Future: Insights and Strategies for Tomorrow's Organizations

Session Chair: **Maya J. Cratsley**, *U. of Southern California - Marshall School of Business*
Coordinator: **Yiran Wang**, *U. of Southern California*
Presenter: **Maya J. Cratsley**, *U. of Southern California - Marshall School of Business*
Presenter: **Brian Robert Lattimore**, -
Presenter: **Merrick Osborne**, *Haas School of Business, UC Berkeley*
Presenter: **Yiran Wang**, *U. of Southern California*

The workplace of the future is evolving to become not only increasingly digitized but also more diverse in its makeup. A report from McKinsey estimated that in 2020 organizations collectively spent \$7.5 billion investing in diversity, equity, and inclusion efforts (DEI), predicting that number to more than double to \$15.4 billion by 2026 (McKinsey & Company, 2023). At the same time, Deloitte's 2023 Global Technology Leadership Study estimated that the average organization dedicates 5.49% of revenue to investing in technology (Deloitte Insights, 2023). These numbers point to the dual importance of diversity and technology in the modern organization. However, little work by organizational scholars considering the dual impact of increasing diversity and technological advancement in organizations, and how organizations can best prepare for this future. In order to innovate for a better future, we must consider technological innovation in tandem with goals such as increasing diversity, making organizations more equitable, and implementing fairness as a default. The four presentations in this symposium offer multiple perspectives on the key issues facing organizations of the future when it comes to diversity, equity, and technology, as well as offering potential tools and solutions that organizations can leverage as they try to adapt to the future of work. The first presentation explores how the introduction of AI-based large language models such as ChatGPT may change the landscape of organizations in a way that meaningfully impacts intergroup interactions. The second presentation also explores how AI may change organizations, examining the differential consequences of AI for members of different racial groups. The third presentation zooms out a bit, offering a novel theoretical model of how bias emerges in Machine Learning Models, and what organizations can do to prevent it. Finally, the fourth presentation looks towards the future with empirically-tested solutions for how we might better understand one another's experiences as our organizations continue to diversify.

Women Directors on Boards

Session Moderator: **Yashodhara Basuthakur**, *Texas A&M U., Mays Business School*

DEI: Progress or Illusion : How Women Gain Outside Directorships But Not Internal Rewards   

Author: **Yashodhara Basuthakur**, *Texas A&M U., Mays Business School*

Author: **Michael C. Withers**, *Texas A&M U.*

Author: **Amy Hillman**, *Arizona State U.*

Recent studies show how a gender premium has led to a significant rise in women's representation on the US corporate boards. However, what factors influence their first-time outside board appointments and whether or not a seat on an outside board allows first-time women directors to capture the certification benefits of board membership remain open questions. In this study, we integrate insights from the signaling theory, board certification, and the female leadership advantage literature to theorize that women executives with no prior board experience have a higher likelihood of being selected as an outside director compared to their male counterparts, especially when environmental, firm-level, and board-level factors enable women's competence signals to be unequivocally perceived by the hiring board. However, unlike male executives, a corporate board seat does not translate to career advantages for female executives at their home firms. We empirically test these predictions using a sample of men and women in executive roles currently or previously on S&P 1500 firms beginning in 2003.

DEI: A Review of the Effects of Women on Corporate Boards  

Author: **Yang Yang**, *Rowan U.*

Author: **Alison M. Konrad**, *Western U.*

Understanding the effects of women on corporate boards (WOCB) has significant implications for business, management, gender equality, and policymaking. The purpose of this research is to synthesize the literature that investigated the influence of WOCB on various firm outcomes. We first review studies that considered endogeneity issues to improve causal inferences. Built on the insights offered by this body of literature, we identify unanswered questions and provide a framework to facilitate interpreting the mixed findings and suggest directions for future research that can advance our knowledge concerning the roles of WOCB in affecting board functioning and firm outcomes.

DEI: Board Diversity in Private vs. Public Firms 

Author: **Johan Cassel**, *Vanderbilt U.*

Author: **James P. Weston**, *Jones Graduate School of Business, Rice U.*

Author: **Emmanuel Yimfor**, *Columbia U.*

We test whether differences in ownership structure influence race and gender diversity in corporate boards. We find that privately-owned, venture-backed companies appoint a lower proportion of minorities and women to their boards compared to publicly traded firms. After the George Floyd Social Justice Movements of 2020, the racial diversity gap in appointments widened significantly from 7 to 30 percentage points, as private firms responded less to social and media pressure to diversify. The lack of diversity in venture-capital (VC) backed private firms is persistent and remains following firms' IPO, leading to a diversity gap between VC- and non-VC-backed public firms. We show real effects of board diversity, as companies with Black directors are more likely to hire Black employees, an effect absent for Hispanic and female directors. Our study, which uses image recognition techniques combined with extensive manual review to build the first large database of board diversity in VC-backed private firms, highlights the influence of both venture capitalists and public shareholders on board composition and its implications on employee composition.

DEI: Opportunity in Disguise? Examining Career Paths of Female Directors Following Glass Cliff Assignments

Author: **Xiaoxu Zhang**, *U. of St. Gallen (HSG)*

Author: **Wei Lin**, *U. of St. Gallen (HSG)*

The glass cliff phenomenon, which denotes the greater tendency of women than men to be placed on precarious leadership positions, has attracted huge scholarly interest since the notion's inception. By framing women-held upper echelons roles as "cliff", the glass cliff scholarship thus far has concentrated on uncovering how systematic biases towards women extend into higher-end labor markets, manifested as the "think crisis, think female" association in director appointment process and a greater exposure to courtesy stigma in consequence to their affiliation with crisis-stricken firms. This paper adopts a different angle to explore the potential upsides of glass cliff assignments. Based on a large-scale matched sample of Chinese listed firms, our analyses reveal that 1) preferential selection of women to top corporate ranks is not universal but rather contingent on the configurations of crisis situations and that 2) directorships in distressed firms can increase female directors' future employability in the director labor market. Our findings contribute to the glass cliff literature in two ways. First, we provide more nuanced understandings to the glass cliff phenomenon by clarifying the boundary conditions. Second, by introducing insights from research on ex post settling up in director labor market and on double standards of competence, we locate long-term opportunities embodied in precarious leadership assignments.

Presenter: **Catherine Shea**, *Carnegie Mellon U. - Tepper School of Business*

Accumulated evidence suggests that men and women systematically differ in the patterns of social relations they establish and the benefits they obtain from networks. While increasing efforts have been put into exploring the resource- and signal-related mechanisms underlying the structural origins of gender inequality, they remain fragmented and lack depth and granularity. Scholars are clearly aware of these deficiencies and call for a more comprehensive conceptual framework to integrate different sources underpinning gender differences in network development and utilization. Moreover, understanding how network advantages leak for women requires moving beyond merely focusing on general resources and signals transmitted via network ties. Rather, future research should seek to differentiate between these resources and signals based on their attributes and then investigate how these differences will be reflected in their functions in influencing people's cognitions, affects, behaviors, and workplace outcomes. In response to these emerging discussions, our symposium brings together four cutting-edge research projects on gender differences in resources obtained from networks and signals derived from patterns of social relationships. This line of work provides a promising starting point for the contingencies under which women's network disadvantages can be alleviated, closed, or even overturned. For example, our conversations can provide advice to women on how to strategically shape their social relations and exploit network-related advantages for their work performance and career development without incurring the development of negative internal feelings and undesirable external responses from others.

Effects of Gendered Leadership

Session Moderator: **Karryna Madison**, *Australian National U.*

DEI: Rewrite The Recipe: A Gendered Examination of Social Exchange Theory in Leadership Research

Author: **Karryna Madison**, *Australian National U.*
Author: **Nathan Eva**, *Monash Business School*
Author: **Helen De Cieri**, *Monash U.*
Author: **Zen Goh**, *Monash Business School*

Social exchange theory asserts that individuals generally reciprocate the positive or negative behavior shown to them. Given its broad applicability, social exchange theory has had extensive use within leadership research, primarily explaining why leader behavior influences follower outcomes. Despite social exchange theory's prominence in elucidating leader–follower dynamics, the literature exhibits a significant gap in addressing how gender shapes these relationships. My critical analysis identifies a pervasive omission of gender considerations in existing research, which has profound implications for the depth and accuracy of our comprehension of leader–follower exchanges. To redress this oversight, I introduce two gender perspectives to advance the social exchange literature: gender in organizations, which examines the role of gender within the existing organizational structures, and gendering organizations, which explores how organizational processes and interactions actively construct gender roles. These perspectives seek to advance and challenge our understanding of the gendered nuances in leader–follower social exchange relationships, offering new avenues for scholarly inquiry in the field of leadership.

DEI: Gender and Race Effects on Leaders: The Role of Status Cues

Author: **Theano Lianidou**, *Richmond American U. London*
Author: **Ashley Lytle**, *Stevens Institute of Technology*

This research seeks to understand how a leader's or an aspiring leader's expressive (e.g., a name indicating race) and indicative (e.g., an elite university's graduation photo on the wall) status cues influence the effects of the leader's gender and race on leader selection and leadership impressions. We conducted two studies with MTurk participants who were employed. Our findings suggest additive effects of leader gender and expressive status cues, each moderated by the perceiver's social dominance orientation (SDO), on the leader's status and a three-way interaction between leader gender and race (combined), indicative status cues, and the perceiver's SDO: indicative status cues influenced leader selection and leadership impression through status favorably for White men. In contrast, they influenced leader selection and leadership impressions through status unfavorably for Black women, but only when the perceiver's SDO was higher. Contributions and future research directions are discussed.

DEI: Employee Feedback Acceptance: Roadblocks at the Intersection of Leader Gender and Relative Age

Author: **Julian Pfrombeck**, *The Chinese U. of Hong Kong*
Author: **Adam Galinsky**, *Columbia U.*

Both female and younger managers face many difficulties in navigating organizational life. The present research investigates how the intersection of gender and relative age (i.e., the age difference between leader and employee) affects feedback reception. Integrating social hierarchy and intersectional perspectives with the leadership and feedback literatures, we propose that feedback provided by relatively younger female leaders will be the least accepted by employees because of their lower status. We further propose that this experience of being in a powerful position but with lower status leads to a vicious cycle that degrades the quality of the feedback managers provide. In two field studies and one experimental study (total N = 784), the age difference between leader and subordinate significantly impacted the receptivity of feedback from female managers, but age did not play a role for male managers. These findings deepen our understanding of the obstacles that younger female managers face in organizations. We discuss actions organizations can take to boost the feedback legitimacy coming from younger female leaders.

DEI: Reviewing Hypotheses in the Gender and Leadership Literature: A Hypothesis Review

Author: **HeyIn Gang**, *Saginaw Valley State U.*
Author: **Marc H. Anderson**, *Iowa State U.*

Academics have long sought to understand the gender gap in upper management, and a sizable literature attempts to explain it, but new approaches to understanding this topic are needed. We conduct a new form of systematic literature review we call a hypothesis review that focuses explicitly on analyzing the body of hypotheses in a research area. This form of literature review has certain advantages over existing narrative literature reviews and meta-analyses of the field. We searched 14 leading management and psychology journals between 2000 to 2022, yielding 226 articles with 863 distinct hypotheses. We grouped hypotheses into six thematic categories, including conditions giving (1) women an advantage or (2) women a disadvantage. We also categorized hypotheses according to their logical form (e.g., direct, moderation, mediation) within each thematic category. This review contributes to the field of gender and leadership in three ways: (1) by providing quantitative and qualitative evidence about the extent to which past studies have focused on women's advantages and disadvantages; (2) by examining the conditions and contexts where women have advantages and disadvantages; and (3) by identifying novel research questions that could help the field progress.

Organizational Norms and Exclusivity

Session Moderator: **Hussain Tariq**, *King Fahd U. of Petroleum and Minerals*

DEI: **Dissimilarity Matters: The Supervisor's Moral Exclusion Perspective of Supervisee-Directed Knowledge**

Author: **Hussain Tariq**, *King Fahd U. of Petroleum and Minerals*

The recent vertical level investigation of knowledge hiding behavior, that is, supervisor knowledge hiding (SKH) from his or her direct reports, focuses only on its destructive ramifications, and ignores the left side of the equation. This article attempts to answer why and when supervisors hide knowledge from their direct reports. To do so, from the perspective of moral exclusion theory, this study explains that supervisor relationship conflict with direct reports (SRC) mediates the effect of supervisor deep-level dissimilarity (SDD) with direct reports and SKH. In addition, the model also develops multiple moderated mediation relationships (i.e., two-way interaction and three-way interaction) to explain that the indirect effect is contingent on supervisor evaluations of direct reports' performance (SEP) and supervisor outcome dependence (SOD) on direct reports. To test the supervisor's moral exclusion perspective of supervisee-directed knowledge hiding behavior, the author designed the time-lagged field study and collected data from a number of private and public sector universities, located in the Punjab province of Pakistan (N = 846). The participants were the graduate-level supervisors, and the author believed that it could be the appropriate work setting to test the supervisor's own perceptions of deep-level dissimilarity, relationship conflicts, performance evaluations, outcome dependence, and supervisee-directed knowledge hiding behavior. As predicted, the findings of the time-lagged field study were consistent with the hypothesized simple mediation, that is, SDD provoked SRC, which in turn triggered SKH (Hypothesis 1). Contrary to the predication (Hypothesis 2), the two-way interaction findings revealed that the mediated relationship is stronger when a supervisor perceives direct reports as high performers. Finally, the three-way interaction findings provide support for the notion (Hypothesis 3) that the mediated relationship significantly weakens at the high values of SEP and SOD. Organizational scholars have put their efforts to explore the negative ramifications of SKH, and ignore the "left side of the equation." Being the first study to investigate the possible antecedents of SKH, this study focuses on the moral exclusion theory to answer "why supervisors hide knowledge from their direct reports."

DEI: **Institutional and Resource-Based Perspectives on Corporate Sexual Equality and Firm Performance**

Author: **Yi-Ting Lin**, *Department of Business Administration, National Chung Hsing U., Taiwan*

Author: **You-Ta Chuang**, *York U.*

While previous research has explored the impact of corporate sexual equality practices (CSEPs) or LGBT+ friendly policies on organizational performance, there has been limited empirical investigation into factors leading to the adoption of CSEPs and the underlying mechanisms and conditions influencing the relationship between CSEPs and performance. Moreover, most research on diversity management for LGBT+ employees has been conducted in Western contexts, leaving uncertainty about whether CSEP strategies are effective in Asian workplaces. To address these gaps, this study has been designed as a multi-wave investigation into corporate sexual equality management to augment the existing body of literature. The data for this multi-wave study consist of responses from questionnaire surveys. Additionally, documentary data such as firm performance metrics are paired with survey data for hypothesis testing. Structural equation modeling (SEM) analysis is employed to examine the hypotheses. Drawing from institutional theory and resource-based view (RBV), the current study indicates that, among three institutional forces, normative institutional forces exert the most significant influence on the CSEP adoption. Additionally, the results uncover that three types of institutional forces have diverse moderating effects on the mediating effects of a firm's intellectual capital and corporate reputation between CSEPs and organizational performance. Ultimately, theoretical and managerial implications are discussed.

DEI: **Exploring Women's Inclusion in STEM Through a Job Crafting Framework**

Author: **Cecelia Corson**, *U. of Pennsylvania*

Author: **M. Gloria Gonzalez-Morales**, *Claremont Graduate U.*

As of 2023, the total number of Nobel Prizes granted in Science, Technology, Engineering, and Math (STEM) fields was roughly 622 and of those, only 26 have been awarded to women. STEM fields have historically excluded women at all levels with increasing impact at the higher levels of the career ladder (NSF, 2010). To address the stark gender gap in many organizational spaces including STEM, organizations have turned to diversity training with undetermined effectiveness (Devine & Ash, 2022). Through this qualitative study, and taking a positive organizational scholarship perspective, we investigate allyship behaviors that lead to women's belonging in STEM spaces using a job crafting and appreciative inquiry framework to guide our questions. Through our analysis and findings, we uncovered the impact that leaders had on women's experiences of belonging, the specific ways that connecting with others led to women's experiences of belonging, and the specific behaviors that led to women's experiences of authentic belonging. Through this study, we answer the call for a more behavior-based, long-term intervention focus of inclusion that can serve to facilitate women's authentic belonging in STEM fields. Keywords: gender, STEM, qualitative, inclusion, belonging, job crafting

DEI: **The Role of Autonomy and Norms in Creating Inclusive Organizations**

Author: **Claire Sandman Malcomb**, *ILR, Cornell U.*

Author: **Emily Zitek**, *Cornell U.*

As ally behavior policies, or policies that aim to create inclusive organizations and elicit engagement from all employees within the organization, become more common in workplaces, there seems to be little consensus on the best way to implement these policies. In this paper, we examine one type of ally behavior policy in an organization—a pronoun policy—to better understand how organizations should implement policies to increase organizational inclusivity. Across a series of studies, we examine how cisgender (cis) and transgender and gender nonconforming (TGNC) people react to pronoun policies that vary in how controlling the organizational environment is. Specifically, we examine the perceived inclusivity of an organization that implements a pronoun policy (i.e., instructions to display one's pronouns) as optional, encouraged, or mandatory. We find that while everyone perceives mandatory policies to be the least inclusive, cis and TGNC people differ in their preferences for optional and encouraged policies. Specifically, cis people view optional policies as the most inclusive, and this is explained by increased perceptions of autonomy over their decision to engage in the policy. While TGNC people also care about autonomy, they also value building norms of engagement, leading TGNC people to view both optional and encouraged policies as inclusive. We contribute to the theory on organizational inclusivity by showing the importance of autonomy and building norms in the conceptualization of inclusion, and we provide practical recommendations for organizations to implement ally behavior policies more effectively.

Rooted Resistance: The Complexities of Hair and Non-Conforming Self-Presentations in the Workplace

Organizer: **Holly Slay Ferraro**, *Villanova U.*
Organizer: **Samantha E. Erskine**, *UMass Boston College of Management*
Organizer: **Naomi Samuel**, *Fuqua School of Business, Duke U.*
Discussant: **Tina R. Opie**, *Babson College*

This presenter symposium brings together five pioneering papers that dissect intersectional dynamics of self-presentation within organizational contexts, particularly as they relate to Black identity in the U.S. and Central America. Each paper presents a novel perspective on the ways in which hair and other aspects of appearance shape and are shaped by racialized, gendered, and classed experiences in the workplace. These works highlight systemic gendered racism (Wingfield, 2008) and establish the need for additional research examining the intrapersonal, interpersonal, and organizational implications of cultural expectations, norms, and values on diversity, equity, inclusion, and belongingness.

Navigating Challenges

Session Moderator: **Diego Matricano**, *U. degli studi della Campania*

ENT: **Est Modus in Rebus**

Author: **Diego Matricano**, *U. degli studi della Campania*
Author: **Eric Liguori**, *Florida State U.*

Scholars interested in the study of entrepreneurship processes can approach this task in two different ways: they can propose a new theory based on previous ones, i.e. theorizing, or they can research a theory based on empirical observations, i.e. theory building. This paper embraces the second approach and takes into account some proxies to operationalize a specific dynamic view of entrepreneurship processes, including the concepts of dynamic capabilities in entrepreneurship, the likeability bias, and the quest for balance. By looking at entrepreneurship as a global phenomenon and by relying on data retrieved from the Global Entrepreneurship Monitor – G.E.M. website, the results emerging from stochastic frontier analyses – SFAs allow focusing on random and technical inefficiencies of specific models. These inefficiencies lead to questioning the dynamic view of entrepreneurship processes and suggest advancing theory building in entrepreneurship carefully. Beyond statistical principles, the reflections concerning the risks associated with the attempt to operationalize the dynamic view of entrepreneurship processes – i.e., theory building – urge scholars to proceed in a careful and balanced way when trying to advance this research.

ENT: **Entrepreneurial Resourcefulness Throughout Crisis: Leveraging vs. Absorbing Temporary Fields**

Author: **Katharina Scheidgen**, *Georg-August-U. Göttingen*
Author: **Franziska Günzel-Jensen**, *Aarhus BSS, Aarhus U.*
Author: **Simon L. Schmidt**, *Georg-August-U. Göttingen*

Resourcefulness might not only help entrepreneurial ventures to sustain resource inflow when crises constrain their resource environments, but also enable them to deploy opportunities for resource mobilization that might emerge around coping with the consequences of the crises. However, as most studies emphasize either how entrepreneurial ventures can resourcefully overcome resource constraint or help society cope with crisis, we lack a profound understanding of how ventures can resourcefully deploy this mutuality. Building on a longitudinal, qualitative multiple case study across 17 entrepreneurial ventures during the COVID-19 pandemic in Germany, we identified that a temporary field emerged around the societal consequences of the crisis. Ventures who leveraged the temporary field resourcefully deployed the mutuality of resource constraint and opportunity by simultaneously engaging with both. In contrast, ventures who absorbed the temporary field foremost deployed opportunities for resource mobilization only within the temporary field and avoided constraint. While the former enabled entrepreneurial ventures to sustain resource inflow throughout the crisis, the latter did not. As our core contribution, we contribute a theoretical model that recognizes both—constraint and opportunity—to advance a more systematic understanding of how entrepreneurial ventures resourcefully navigate crises.

ENT: **Entrepreneurs Wanted: Occupational Stigma and Parental Expectations as Barriers to Entrepreneurship**

Author: **Nathaniel HILL**, *Darla Moore School of Business, U. of South Carolina*
Author: **Christopher B. Yenkey**, *U. of South Carolina- Moore School*

Poverty contexts like sub-Saharan Africa need more innovative, opportunity-driven entrepreneurship which is more likely to lead to job creation and economic growth. Prior work examining the barriers to this type of entrepreneurship in poverty contexts has generally focused on the constraints associated with limited human capital, insufficient financial capital, and poorly enforced institutions and property rights, while overlooking the role of occupational stigma and parental expectations. Entrepreneurship can be stigmatized due to its association with low-status individuals and its association with corruption. These two sources of stigma and the importance of parental approval of career choices, have rarely been studied as independent and significant constraints that inhibit individuals to enter into entrepreneurship. Yet, they represent important factors for occupational choices made by the university-educated, the group with the greatest potential for starting businesses that can grow and create jobs. Using a survey tool and innovative behavioral game experiment, this study examines the effects of these understudied constraints on the career choices of the university-educated in sub-Saharan Africa. A more complete understanding of the barriers to entrepreneurship amongst the university-educated will allow for better intervention tools and training, so that those who might be able to overcome the oft-studied limitations of financial and human capital needs will be more likely to choose to become entrepreneurs.

ENT: **Entrepreneurs' Networking Behavior and Ethical Practice: The Mediating Role of Structural Hole**

Author: **Yifei Wang**, *Tongji U.*
Author: **Feng Wei**, *Tongji U.*
Author: **Yi Li**, *Shanghai U.*

Although some attention has been paid to entrepreneurial ethics, previous studies have mainly focused on the characteristics of entrepreneurs and new ventures when investigating the antecedents of new ventures' ethical practices, ignoring the potential effects of entrepreneurs' networking behaviors and entrepreneurial networks. This study investigated the effects of different types of entrepreneurs' networking behaviors on new ventures' ethical practices via the level of structural holes in entrepreneurial networks, and the moderating role of institutional support. According to survey data from 220 entrepreneurs, we found that network-broadening behavior had a J-shaped curvilinear relationship with the level of structural holes, while network-deepening behavior had a negative relationship with the level of structural holes. The structural hole level mediated the relationships between the two networking behaviors and ethical practices. Institutional support weakened the negative relationship between network-deepening behavior and ethical practice via the level of structural holes. This study enriches the understanding of the antecedents and mechanisms of new ventures' ethical practice from the perspective of entrepreneurial network and provides practical suggestions for preventing unethical practices.

Knowledge

Session Moderator: **Indu Khurana**, *Hampden-Sydney College*

ENT: **Navigating the Knowledge Breadth-Depth Paradox in Entrepreneurship**

Author: **Indu Khurana**, *Hampden-Sydney College*

Author: **Mark D. Packard**, *Florida Atlantic U.*

Author: **Jagannadha Tamvada**, *U. of Southampton*

Author: **David Audretsch**, *Indiana U., Bloomington*

Individuals invariably encounter conflicting demands—paradoxes—that intricately shape their experiences. This struggle becomes particularly pronounced when faced with the crucial decision of selecting between contrasting learning pathways. Traditionally, individuals followed the conventional route of pursuing higher education at universities, shaping their future occupational choices. However, a contemporary trend has emerged, advocating for skill-based vocational education as a government-promoted pathway to entrepreneurship. This paradigm shift has instigated a competition between the established path of traditional general education and the rising trend of skill-based vocational education. Drawing upon paradox theory and utilizing a nationally representative administrative dataset, we introduce and examine manifestations of the knowledge breadth–depth paradox in entrepreneurship. Specifically, we investigate the impact of this breadth–depth paradox on prospective entrepreneurs’ preparatory education and training, on the form the entrepreneurial venture takes, and on their performance. Our study reveals that individuals confronted with the choice between general (breadth) and vocational (depth) education are equally inclined to pursue entrepreneurship. However, the type of education they choose significantly influences the venture form manifested and subsequent performance. Opting for general education directs individuals towards higher-earning employer roles, whereas vocational education leads them towards self-employment with more modest earnings. This highlights the intricate interplay between distinct learning pathways and subsequent activities and outcomes, elucidating the paradoxes individuals confront as they navigate the complexities within the entrepreneurial journey. Navigating these paradoxes involves a critical decision-making process entailing the selection of educational trajectories, ultimately shaping career trajectories and economic outcomes, and serving as a groundwork for understanding educational, organizational, and systemic paradoxes.

ENT: **Knowledge Spillovers and Niche Entrepreneurship**

Author: **Erik Lehmann**, *U. of Augsburg*

Author: **Julian Schenkenhofer**, *U. degli Studi di Bergamo*

Author: **Silvio Vismara**, *U. of Bergamo*

To strive for market and technology leadership, innovation is key for niche entrepreneurs. While research underlines that regions benefit economically from a high concentration of niche entrepreneurs, it is unclear which role the geographical area plays for their innovation performance. Using a sample of 1,372 German niche entrepreneurs, this article investigates (1) whether niche entrepreneurs benefit from agglomeration effects and resulting knowledge spillovers for their innovation performance and (2) whether the agglomeration effects are stronger for more industry-wise heterogeneous clusters. Our results show that locating in a cluster increases the patenting rate by a factor of 1.49. The effect is stronger for more heterogeneous clusters.

ENT: **Know Thy Neighbor: Community Organizing and Knowledge Spillovers**

Author: **Devin Stein**, *U. of Alabama*

Entrepreneurship scholars have been paying increasing attention to the use of self-organizing communities as an organizational form that enables many diverse stakeholders to collectively act to create public value. Self-organizing is a process that unites multiple actors towards a shared objective through collective action, and is both costly and knowledge intensive. Despite evidence that this form of organizing can create considerable value, however, most communities do not self-organize. The purpose of this paper is to conduct an exploratory analysis of why some communities self-organize in response to collective problems and others do not. We argue that existing solutions to collective problems, including self-organizing in neighboring communities, the presence of local civic organizations, and responses from higher levels of governance, generate valuable spillovers of knowledge about how to organize. These sources of knowledge can reduce the costs of self-organizing, and are embedded in a community’s regional environment. We test our theory with an original longitudinal dataset of community-level fire prevention initiatives in California from 2002 – 2018. Results suggest that communities are more likely to self-organize when a problem is more salient, and when they are closer to existing models of organizing. These findings, though only a start to understanding how communities self-organize, have important implications for identifying sustainable local solutions to complex social issues.

ENT: **Know-What or Know-How to Venture? Ill-Definedness of Entrepreneurship and Role of Experiences**

Author: **Baris Istiqliler**, *U. of Mannheim, Business School*

This paper conceptualizes entrepreneurship as a design domain with different degrees of ill definedness and develops hypotheses regarding the merits of industry and venturing experiences. It posits that industry experience of founders is more beneficial to entrepreneurial performance when the ill-definedness is higher due to originality impetus or when ventures’ focus is on standardized products offered to large audiences. On the contrary, it argues that venturing experience of founders is better for the performance when the ill-definedness is lower due to functionality impetus or when ventures focus on customized products offered to smaller audiences. Analyses conducted with a panel dataset capturing 3,703 German firms and 12,384 firm-year observations between 2008-2018 offer support for the hypotheses.

ENT: **Entrepreneurship Myths and Emancipatory Trajectories in an Incubator for Marginalized Individuals**

Author: **Federica Fusaro**, *EMLYON Business School*
Author: **Nevena Radoynovska**, *EMLYON Business School*
Author: **Benjamin Huybrechts**, *IESEG School of Management*

Narratives of entrepreneurship as a force for good have taken on mythical qualities—relying on assumptions about the ideal entrepreneur, ideal venture, and ideal means of achieving success that are disconnected from much of reality. Among others, these myths are carried and transmitted by entrepreneurship-supporting intermediaries. For intermediaries catering to entrepreneurs who largely conform to mainstream ideals—Western, male, college-educated, and white—the myths pose minimal challenges. However, they present a dilemma for intermediaries relying on entrepreneurship as an emancipatory tool for marginalized groups. In this context, how does the appropriation of mainstream entrepreneurship myths affect the emancipatory trajectories of marginalized entrepreneurs? Relying on a 2-year ethnography of a French incubator supporting entrepreneurs from disadvantaged neighborhoods (banlieues), we find that participants who appropriated mainstream entrepreneurial myths achieved both material and subjective emancipation by leveraging the incubator’s resources. By contrast, although entrepreneurs who rejected the myths forewent material resources, they achieved subjective emancipation on their own terms. Our findings contribute to the literatures on emancipatory entrepreneurship and entrepreneurship for social change. Importantly, we show how an economic interpretation of emancipation, coupled with decontextualized models of entrepreneurship support, may hinder different forms of emancipation among marginalized entrepreneurs.
