The exchange of information is often a key ingredient of high performance in collaborations within and between organizations. Research has shown that modular organization design can shape the extent and complexity of information exchange, thus facilitating self-organizing coordinated processes. However, the (top-down) design of organizational modularity may not always cohere with the (bottom-up) information-sharing behavior by employees, thereby undermining effective collaboration. Specifically, employees may withhold information if they fear that their partners might misuse the shared information for their own benefit. Using a formal model, we analyze how two cognitive mechanisms—relational contracts and virtual bargaining—may help overcome this problem and enable employees to exchange information in a self-organizing way. We explain and predict how different parameters of organizational design influence the extent of information exchange under these cognitive mechanisms. We propose that managers who succeed in aligning the modular organization design with the employees' information-sharing behavior will achieve more effective self-organized collaboration and higher performance.

Panelist: **Jennifer Rhymer**, *UCL School of Management*
Panelist: **Mary Beth Watson-Manheim**, *U. of Illinois at Chicago*

Concerns about work isolation have become prevalent as more employees perform work away from their co-workers, whether from home, a coworking space, or a company office with co-workers in different locations. Remote and hybrid work complicates the notion of isolation, which may take on various dimensions – physical, social, or professional – which may or may not be aligned with one another. Further, while isolation is often considered to be detrimental for workers, especially when it leads to loneliness or hinders career growth, it may also be beneficial for certain groups, e.g. experts, digital nomads, those with family responsibilities, and marginalized groups, as it allows them greater flexibility and autonomy. Today’s organizations must navigate this tension and design remote work in a way that meets their employees’ needs for flexibility while also fostering a work climate that is inclusive and engaging, regardless of one’s location. Our PDW is aimed at bringing together cross-disciplinary experts with diverse backgrounds in relevant fields to discuss their research, the latest trends and challenges associated with isolation in remote work, and various ways to address them. We will begin with a panel presentation, followed by a moderated question and answer session. The workshop participants will then separate into themed small group discussions led by one or more of the panelists. Finally, we will regroup for a summary of key points, takeaways, and research action plans developed at each table. These will be captured by the organizers and shared with participants after the workshop.

Panelist: **Anneloes M. L. Raes**, *IESE Business School*
Panelist: **Ansgar Richter**, *Frankfurt School of Finance & Management*

Europe, with its numerous highly ranked universities and business schools and ease of mobility between countries, is an attractive location for pursuing an academic career. However, navigating different recruiting and selection processes, cultures, and languages can be challenging. Although this PDW is particularly targeted towards late-stage PhD students and junior faculty, who are interested in starting or continuing their academic careers at a European university, it is also relevant for all AOM members interested in finding an academic job in the European market, regardless of career level and country where they completed their PhD. Our panelists currently work at European universities and are either involved in and/or have recently gone through the recruiting process in a country different from where they completed their PhD. Our discussion will include topics such as where to search for job openings, how to manage the application process and how to build an academic profile for the European market. The PDW begins with panelists sharing their individual experiences with the application and recruiting processes, a joint discussion, and a short Q&A session. These will be followed by roundtable discussions focusing on job-search strategies and recruiting processes in six European countries. The workshop will conclude with a final Q&A session.

Publishing in AMC

Presenter: **Benjamin Martell Galvin**, *BYU*

Presenter: **Elizabeth L. Rose**, *Indian Institute of Management, Udaipur*

Academy of Management Collections (AMC) is a new and exciting publication that will make an important contribution to the AOM's portfolio of publications. AMC has a unique format, in that each issue consists of a selection of articles from AOM publications, tied together by an original paper that serves to curate the collection. In this session, the AMC editors will introduce you to the publication, share its mission, and talk about how AMC will benefit both scholars and practitioners. They will also provide an overview of what a collection – including the curating essay – will look like, how a successful proposal can be developed and submitted, and how the review process works. There will also be time to ask questions and obtain insights directly from the AMC editors.

PDW Proposal: Visualizing Qualitative Data and Theory 2.0

Organizer: **Elizabeth Long Lingo**, *Worcester Polytechnic Institute*

Organizer: **Ozumcan Demir Caliskan**, *Imperial College London*

Organizer: **Karen Jansen**, *NC State U.*

Facilitator: **Victor Seidel**, *Babson College*

Presenter: **Colin Muneo Fisher**, *UCL School of Management*

Presenter: **Spencer Harrison**, *INSEAD*

Building on last year's successful inaugural PDW, this interactive session tackles the challenge of how scholars might utilize visualization to analyze and present complex, multi-level qualitative data and theory in a compelling and parsimonious way. This year, we will present a newly developed framework that imagines visualizing qualitative data and theory as a collective creative process. We articulate the particular challenges and opportunities arising at different phases of this process and offer pragmatic solutions drawn from lived experience and the design field. Taken together, we seek to create a space for discovery and elaboration around questions such as: what are potential untapped opportunities to utilize visualization to drive theory development in qualitative research? What common challenges arise when scholars attempt to use visualization to communicate their emergent theory to collaborators, research community, editors, and reviewers? What unique nuances need to be considered when attempting to visualize time and temporality or iterative, intersecting, and recursive processes? What are possible new best practices that could be adopted? Bridging both theory and practice, this hands-on PDW will: (1) strengthen participants' awareness of the challenges and opportunities of visualizing as a fundamental qualitative methodological practice; (2) offer participants the opportunity to receive feedback on their work-in-progress visualizations and to learn from others' visualization efforts; (3) articulate new best practices and technological tools available for designing more effective visualizations; and (4) forge a community of scholars interested in visualization as a subject of theoretical and methodological inquiry.

The first part of our workshop will involve presentations by our organizers and presenters around challenges and best practices related to qualitative data visualization. The second part, Small Group Working Sessions, will offer participants the opportunity to present and/or to learn from others' work-in-progress visualizations, feedback, and constructive discussion. Both parts are open to all participants of the AoM Annual Meeting. Everyone is invited to bring their latest version of a work-in-progress visualization to our PDW session. (Rough sketches and drafts are great!) Both paper and digital versions are welcome--the goal is to be able to easily share it with others at a round table. While not required, we invite participants seeking feedback on their work-in-progress visualizations to "pre-register/apply" for the PDW via this link: <https://forms.gle/JJpoY2tDpqNgJDvG8>.

CEO Decision Making

Session Moderator: **Thomas Keil**, *U. of Zurich*

STR: Closeness or Competence: The Effect of CEO Cognitive Style on Successor Choice in Family Firms

Author: **Chunhui Cao**, *School of Business and Management, Shanghai International Studies U.*
Author: **Mengfei Cheng**, *School of Business and Management, Shanghai International Studies U.*
Author: **Jiangyan Li**, *Chongqing U.*

According to earlier studies, closeness and competence are two crucial attributes that exhibit a family firm's preference for its successor. However, it remains unobvious about when and why family firms have heterogeneous preferences when making successor choices. Integrating the attention-based view of the firm with upper echelons theory, we propose that the cognitive styles of incumbent family chief executive officers (CEOs) affect their attention towards closeness and competence attributes, which in turn influence the successor choices. Specifically, CEOs with higher levels of intuitive cognitive style tend to pay attention to closeness and select a family member successor, whereas CEOs with higher levels of systematic cognitive style tend to concentrate on competence and choose a non-family member successor. We further suggest that such relationships are moderated by pre-succession socioemotional endowment loss and performance loss. We find empirical support by conducting two studies, one based on a sample of 85 family CEOs from S&P 1500 firms between 2000-2020 by measuring cognitive style using a video-metric technique, and one based on a sample of 134 Chinese family CEOs collected from questionnaires. The findings of this study offer an attention-based view of family business succession, particularly by digging out the cognitive style heterogeneity of family CEOs in their successor selection.

STR: A National Identity Perspective on CEO Decision-Making  

Author: **Gian-Luca Angelo Asquini**, *U. of Zurich*
Author: **Stevó Pavicevic**, *Frankfurt School of Finance & Management gGMBH*
Author: **Thomas Keil**, *U. of Zurich*

This paper addresses a critical gap in upper echelons literature by examining the impact of executives' national identity on strategic decision-making. Focusing on CEOs of firms targeted for an acquisition, we develop and test a theory that explains how the strength of a CEO's national identity influences the choice between selling a firm to foreign or domestic acquirers. Drawing on social and political psychology insights, we argue that CEOs with a strong national identity are less likely to support the firm's sale to foreign acquirers due to heightened feelings of threat and unease when considering the prospect of target firms becoming foreign assets. Analyzing 1,577 acquisitions of public US firms, we find a significant negative relationship between CEO national identity strength and the likelihood of selling to foreign acquirers, particularly in highly regulated industries. This study contributes to the understanding of CEOs' influence on strategic decisions, extends research on social identity, and advances the literature on acquisitions.

STR: Uncovering Trait Activation Within the Big Five: Neurotic CEOs and Firms' Climate Change Response 

Author: **Ben David Dalka**, *U. of Goettingen*
Author: **Sebastian Firk**, *U. of Groningen*
Author: **Yannik Gehrke**, *U. of Goettingen*
Author: **Michael Wolff**, *U. of Goettingen*

Research in psychology emphasizes that trait-associated behavior is a result of an interaction between personality and the specific situational context. Despite the well-known importance of this person-situation interaction, the issue has received surprisingly little attention within upper echelons research. In this study, we build upon trait activation theory to theorize CEO influence on firms' strategic outcomes as a function of personality and situational trigger events activating trait-associated behavior. Focusing on neuroticism, a trait central to psychology and associated with high reactivity to external stimuli, our theory suggests that trait-associated behavior varies considerably depending on the exposure to situational trigger events in both a CEO's professional and personal context. We test our hypotheses by examining the association between CEO neuroticism and firms' climate change response on a longitudinal sample covering 1,277 CEOs of S&P 1,500 firms. Our empirical results show that while neurotic CEOs on average do not show a climate change response different from their peers, this association changes significantly when considering the exposure to situational trigger events, even leading to opposite results. We emphasize the importance of not isolating CEO personality from the context of the decisions, but to consider personality and situation as two sides of the same coin.

STR: From Self-Hardship to Alleviating Others' Struggles: CEO Trauma Experiences and Poverty Alleviation 

Author: **Du Yongzhi**, *Northwestern Polytechnical U.*

How does a CEO's poverty trauma affect a firm's participation in poverty alleviation? Do CEOs with poverty trauma prefer generic to strategic involvement when addressing poverty alleviation, or vice versa? Drawing upon self-improvement motivation literature, we suggest that CEOs with early-life poverty trauma engage more in both strategic and generic poverty alleviation efforts, and they show a more pronounced preference for strategic tactics over generic ones. We further argue that firm efficiency orientation has a stronger effect on the relationship between CEOs' early-life poverty trauma and strategic involvement in poverty alleviation, as compared to generic ones. Data from Chinese publicly listed firms from 2016-2021 largely supports our predictions.

CEO Political Ideology

Session Moderator: **Christina Walker Robichaud**, *U. of Montana*

STR: CEO-Board Political Alignment: Performance Declines from Homogeneity and Mitigating CEO Traits

Author: **James Grabowski**, *U. of Arkansas at Little Rock*

Author: **Christina Walker Robichaud**, *U. of Montana*

Author: **David B. Wangrow**, *Marquette U.*

People increasingly group themselves with others who share their political ideologies. Such ideological alignment is likely to occur in workgroups, including boards of directors. This study focuses on how a firm's performance is affected by political alignment between its CEO and board members. While some research has highlighted positive outcomes from shared group characteristics, homogeneity has been found to be harmful for considering alternative perspectives, information-sharing, and complex problem solving. We suggest that substantial political alignment between a CEO and board members negatively impacts firm performance, but that CEOs who possess discretion-oriented psychological traits can mitigate these negative effects. Utilizing a dataset that models political donation history and CEO psychological traits, we find that firm performance declines with CEO-Board political alignment. We further find that these deleterious effects are mitigated by CEOs with a more internal locus of control or substantial cognitive complexity. We discuss implications from these findings.

STR: Ideology and Innovation: Decoding the Impact of CEO's Political Ideology on Corporate Innovation

Author: **Michael Hagen**, *Heinrich-Heine U. of Dusseldorf*

Over the past 20 years, there has been a noticeable growth in political polarization and partisan hostility. Still unexplored are the effects of political ideology, more specifically the level of political liberalism, including the interaction with CEO duality on innovation strategies. Following the upper echelons theory, we hypothesize that whereas conservative CEOs are more likely to pursue technology-based innovation outputs, liberal CEOs are more likely to invest more in innovation and seek market-based innovation outputs. Moreover, we hypothesize that when a CEO also holds the position of board chair, the influence of their political ideology on innovation is amplified. By examining data from S&P 500 firms and their CEOs between 2000 and 2022, we find evidence to support our hypotheses. The findings demonstrate how CEO values affect how decisions are made within their companies.

STR: CEO Political Ideology and Woke CEO Activism: The Role of Board Engagedness  

Author: **Scarlet Lausen**, *Leeds U. Business School*

Author: **Jatinder Singh Sidhu**, *Leeds U. Business School*

There is much interest in understanding what drives CEOs to become activists. Recent research positioned CEOs' political ideology as a key driver of their activism because one's values affect one's conduct. The findings of this study confirm this proposition by showing that the more a CEO espouses a liberal political ideology, the more they engage in what this paper terms 'woke CEO activism' that supports progressive and left-wing causes. However, anecdotal evidence has previously suggested that a CEO's political ideology might not always predict the direction and frequency of their activism. Some conservative CEOs have for example been observed to engage in activism that espouses liberal political values. Consequently, this research suggests that this is because CEOs are not solely driven by their values, but also by instrumental motives. This study furthermore develops new theory by proposing that differences in the engagedness of corporate boards can explain why these drivers might not always predict CEOs' woke activism engagement. The findings suggest that as boards become more engaged, that is, smaller, less busy and more independent, they become more successful at mitigating CEOs' inclination to engage in woke activism because of their more active monitoring approach.

STR: Reconsidering CEOs' Political Ideology in Evenhanded Outcomes and Pro-Social Corporate Practices

Author: **Moritz Appels**, *Rotterdam School of Management, Erasmus U.*

Author: **Marc Kowalick**, *Rotterdam School of Management, Erasmus U.*

Author: **Michael Woywode**, *U. of Mannheim*

Reflecting their fundamental value systems, CEOs' political ideology is considered a central predictor of their strategic decision-making. Extant scholarship predominantly applies the motivated cognition paradigm to accredit a preference for evenhanded outcomes and pro-social practices particularly to liberal CEOs due to their distinct endorsement of equality. Yet, moral psychologists increasingly call for a broader understanding of the values differentiating liberals and conservatives. We therefore introduce moral foundations theory to the study of upper echelons, according to which liberal and conservative CEOs differ in their focus on individual- versus group-centric concerns but should both endorse evenhanded outcomes and pro-social behaviors. We find considerable evidence for corresponding U-shaped rather than linear effects of CEOs' political ideology in a sample of over 1,300 S&P CEOs.

Technology, Innovation, and the Institutional Environment in China

Session Moderator: **Qadeer Abdul**, *Xi'an Jiaotong U. School of Management*

STR: **Speed of Pro-market Reforms and Environmental Innovation: An Institutional Dynamics Perspective**

Author: **Qadeer Abdul**, *Xi'an Jiaotong U. School of Management*

Author: **Xu Jiang**, *Xi'an Jiaotong U.*

Do rapid pro-market reforms stimulate firms to conduct environmental innovation or discourage such risky activities? This study sought to answer that question taking an institutional dynamics perspective. Results obtained with a sample of publicly-listed firms in China covering 2010 through 2018 indicate that faster pro-market reforms enable firms to obtain more environmental innovation subsidies, but conversion of the subsidies into environmental innovation performance is negatively moderated by the speed of pro-market reforms. Reform speed displays an inverted U-shaped relationship with environmental innovation performance, implying that gradual reform is most suitable for encouraging firms' environmental innovation performance. These findings provide implications for institutional theory from a dynamic view by explaining whether rapid pro-market reforms facilitate or discourage environmental innovation in a major transition economy.

STR: **R&D Investment During a Crisis: Chinese Listed Firms in the US-China Trade War**

Author: **Junru Shang**, *School of Management, Shanghai U.*

Research and development (R&D) investment is a strategic response to crises for firms. We study the relationship between the US-China trade war and R&D investment in affected firms from a threat-response perspective. By treating the US-China trade war as a quasi-natural experiment and using panel data from Chinese A-share listed firms for the 2010-2022 period, we present robust evidence. On average, the threat posed by the US-China trade war led experimental group firms to increase R&D investments, firms with trade activities with the US only demonstrated a temporary increase in R&D investment, while those in technology-intensive industries showed a sustained increase. Additionally, facing the threat of the US-China trade war, when firms have trade activities with the US, compared with non-state-owned firms and firms with a high degree of internationalization, state-owned firms and firms with a low degree of internationalization increase R&D investment; When firms belong to technology-intensive industries, there is no significant difference in R&D investment between state-owned and non-state-owned firms, as well as firms with high and low degree of internationalization.

STR: **Change Starts at the Top: How to Align TMT Characteristics Towards Successful Digital Transformation**

Author: **Ying Huang**, *Business School of Hohai U.*

Author: **Yan TAO**, *Nanjing U.*

Do the top management team characteristics have vital impacts on digital transformation? How can a firm effectively construct the appropriate executive team to ensure digital transformation? There is a scarcity of theoretical arguments and empirical evidence investigating these problems. This paper adopts necessary condition analysis (NCA) to explore the necessity causality between TMT characteristics and digital transformation using a multi-source dataset of 1679 Chinese listed companies from 2019 to 2021. Based on the dynamic managerial capabilities theory, we developed a research framework to discuss the necessity impact of nine crucial TMT characteristics on digital transformation in terms of managerial cognition, managerial human capital, and managerial social capital dimensions. Our findings indicated that all TMT characteristics except "Knowledge network" are necessary conditions, and their relations to digital transformation present different criticality and direction: managerial myopia has a very large negative effect; the political connection has a large negative effect; business linkage, age, and functional experience heterogeneity also have large effects, but they present two directions of necessity, which shows as inverted U pattern; opportunity belief, technology focus, and education level have medium positive effects. Furthermore, various stages of digital transformation require differentiated TMT characteristics in kind and degree: managerial myopia and political connection are of primary concern in the initial stage; the inverted U effect of business linkage and functional experience heterogeneity emerges in the growth stage; all conditions must be in place in the maturity stage. Besides, opportunity belief, technology focus, education level, and functional experience heterogeneity show the feature of necessity inefficiency, and improper resource allocation on these TMT Characteristics will decrease the effectiveness of digital transformation. This study sheds light on the pivotal significance of the top management team for digital transformation by providing a nuanced understanding of the necessary conditions. Also, it has novel implications for organizations to align TMT characteristics toward successful digital transformation.

STR: **Technological Entry and Exit After Innovation Underperformance**

Author: **Yang Ye**, *Southwestern U. of Finance and Economics*

Author: **Ran Quan**, *Syracuse U. Whitman School of Management*

The Behavioral Theory of the Firm delves into how performance under the aspiration level influences a firm's strategic actions. However, much of the existing research has predominantly concentrated on financial performance, neglecting the impact of other non-financial metrics. In addressing this gap, our study posits a crucial link between firms' technological performance and their strategic decisions regarding entry into new technological domains and exit from existing ones. Building on insights from Behavioral Theory and Faultline Theory, we contend that the challenges associated with technological entry can be mitigated through conflict-resolving corporate governance mechanisms, specifically the presence of strong managerial task-related faultlines. Leveraging patent assignment and reassignment data from Chinese publicly listed firms spanning from 2007 to 2020, we empirically tested our theoretical framework. Our findings substantiate that when a firm's technological performance falls below the aspiration level, it is more inclined to enter new technological domains and less likely to exit existing classes. Furthermore, we uncovered nuanced moderation effects; specifically, strong Top Management Team (TMT) task-related faultlines and social classification faultlines differentially influence the firm's implementation of strategic changes in response to negative performance feedback.

Managerial Discretion and Learning

Session Moderator: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*

STR: Attention to Internal Environments and Managerial Discretion: From a Contingency Perspective  

Author: **Jaemin Kim**, *Oakland U.*
Author: **Michael Greiner**, *Oakland U.*

Previous research has shown that managers' focus on the internal environments, which are more controllable and certain than the external environments, enhances the current direction of strategy. This study examines executive attention to two distinct, internal environments – discretionary and routinized - that may trigger attentional conflict differently and how each attention impacts a firm's strategic change. To measure the executive attention, we apply LDA topic modeling to 571 shareholder letters issued by publicly traded firms and match the identified topic with practically grounded classification to increase the validity. For robustness, we adopt dictionary-based content analysis. Our findings indicate that a firm's strategic change increased as executives paid more attention to internal environments related to human involvement. Furthermore, CEO duality makes the attention more impactful on strategic change. This study contributes to extending the attention-based view by integrating it with a contingency theory that under CEO duality, the attention to internal, discretionary environments accelerates managers to become stewards who make risky decisions rather than avoid risks that could harm their careers.

STR: How Does Political Slack Influence the Process of Learning from Performance Feedback?  

Author: **Jaemin Lee**, *Korea U.*
Author: **Xiaowei Luo**, *INSEAD*
Author: **Ji-Yub (Jay) Kim**, *INSEAD*

We extend performance feedback research by considering the influence of dominant coalitions' political goals on firms' responses to performance feedback. We propose that dominant coalitions use the opportunity afforded by strong performance to make changes that reinforce their dominance, while taking defensive maneuvers to neutralize the threats to their dominance posed by poor performance. However, dominant coalitions' ability to leverage the opportunities or address the threats depends on the amount of political slack they have. Our analysis of South Korean family-controlled firms shows that endowed with enough political slack, a family coalition can retain the incumbent family CEO despite below-aspiration performance and initiate a family CEO succession, especially by a next-generation family member, even when above-aspiration performance calls for the retention of the incumbent CEO.

STR: CEO Current Option Wealth at Risk and Lobbying Breadth: A Behavioral Agency Perspective 

Author: **Le Xu**, *Hofstra U.*
Author: **Mirzokhidjon Abdurakhmonov**, *U. of Nebraska, Lincoln*

CEO compensation research that draws on the behavioral agency model has largely focused on the market-related behaviors that CEOs undertake in response to growing equity risk bearing. In this study, we examine the impact of CEO equity risk bearing on corporate political activity (CPA) — an overlooked nonmarket behavior. Specifically, we hypothesize that CEOs with large current stock option wealth will increase the breadth of lobbying, the most common and effective form of CPA. We argue that while industry regulation and the presence of foreign institutional ownership strengthens, being government contractors will weaken the main relationship. We find broad support for our hypotheses in a sample of publicly traded US firms listed in the S&P 1500 index between 2009 and 2016. Our study sheds new light on CEOs' nonmarket behavioral response to their growing equity risk bearing and provides new insight on CEO compensation as an important individual-level driver of CPA decisions.

STR: Organizational Political Deviance and the Voluntary Turnover of Politician Directors 

Author: **Can Ouyang**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*
Author: **Xuchang Chen**, *Peking U.*
Author: **Stephanie L. Wang**, *Indiana U., Bloomington*
Author: **Tao Bai**, *U. of Queensland*

The existing literature on corporate political action has predominantly focused on firm decisions, neglecting the individual-level perspective. Our study addresses this gap by investigating the voluntary turnover of politician directors, who are board members with prior work experience in the government. Drawing upon the unfolding model of turnover, we argue that firm actions that deviate from government agendas can serve as a shock to politician directors, threatening their personal ideologies and political connections. While political deviance as a shock may trigger voluntary turnover among these directors, individual responses vary. We further argue that politician directors are more likely to opt for voluntary turnover as their response when they perceive the shock to be sufficiently strong and view voluntary turnover as a viable means to mitigate the shock's impacts. To test our hypotheses, we analyze a sample of 8,077 politician directors from publicly listed Chinese firms. We specifically examine these directors' responses to firms' environmental misconduct, which contradicts the Chinese government's environmental protection agenda. Our findings contribute to the research on corporate political action, employee turnover, and environmental misconduct.

Value Creation and Firm Boundaries

Session Moderator: **Murat Tarakci**, *Erasmus U.*

STR: Entrepreneurial Orientation Similarity and Joint Venture's Shareholder Value Creation

Author: **Sicong Zhang**, *The Southwestern U. of Finance and Economics (SWUFE)*

This study explores the connection between entrepreneurial orientation (EO) and joint venture (JV) capital market performance. We propose that the similarity in EO between JV partners fosters mutual trust and reduces conflicts. Furthermore, we posit that the impact of EO similarity on performance is more pronounced in the presence of ambiguous JV contracts and when a focal partner holds a higher equity ownership. To measure EO similarity, we utilize computer-aided textual analysis and develop a novel measure. Empirical testing is conducted using JV formation data from 2000 to 2020, involving U.S. publicly traded firms. The findings support our hypotheses, indicating that EO similarity positively influences JV capital market performance.

STR: Institutional and Organizational Drivers of Alliance Formation? Evidence from China's MAH Reform

Author: **Murat Tarakci**, *Erasmus U.*

Author: **Xuemei Xie**, *Tongji U., Shanghai, P.R. China*

Author: **Hongwei Wang**, *Tongji U.*

Prior research on alliances extols the merits of alliances such as pooling expertise and resources to sharing risks and costs. Yet, firms still shun on forming alliances. We develop theory that combines the new institutional economics (NIE) and transaction cost economics (TCE) to overcome barriers toward alliances. Our theory argues that institutional deregulation can help mitigate the perceived risks of forming alliances, but that its effectiveness is limited mainly to small firms. This is because small firms are more eager for complementary resources and other benefits that come from partnering with other organizations and adapting to the regulatory change. To test these hypotheses, we look at a quasi-natural experiment in China (i.e., MAH system) where regulatory barriers to alliance formation were eased in pilot provinces but not in others. The results suggest that easing these barriers facilitated alliance formation and small firms benefited from it more. The study contributes to the literature on alliance formation, including offering insight into why firms may be hesitant to engage in interorganizational collaborations and unearths the role of organizational frictions above and beyond institutional barriers. It also highlights the potential for regulatory interventions to facilitate alliance formation.

STR: Should I Stay or Should I Go? Implications of Acquirer-Advisor Relationships for Serial Acquirers  

Author: **Yan Xinyan**, *U. of South Florida*

Author: **Shawn Mobbs**, *U. of Alabama*

Author: **Paul L. Drnevich**, *U. of Alabama*

Acquisitions are complex transactions which often require long-term relationships between firms and their advisors. Such relationships hold a very high potential for agency concerns, which have remained a persistent challenge in both research and practice. We leverage exchange and agency theories to examine the benefits associated with the status of a serial acquirer's exchange relationships with regards to balancing the benefits of advisory relationships while minimizing agency concerns and costs. We initially study a 20-year sample of serial takeover sequences using firm-level propensity scored matching and find that acquirers demonstrating a willingness to switch experience more favorable reactions from shareholders, pay lower acquisition premiums and fees, and complete deals more quickly. Further subsequent analysis on an expanded 30-year sample indicates that when acquirers have more bargaining power over their advisors, switching advisors can help acquirers get a better deal by paying a lower premium without having to pay higher fees, however shareholders may frequently fail to recognize such benefits. Collectively, these observations offer some interesting implications for future M&A research and practice.

Discussant: **Rebecca Rheinhardt Kehoe**, *Cornell U.*

Entrepreneurial new ventures harness founders' and employees' human capital to enhance performance. Individual knowledge, skills, abilities, and other characteristics (KSAOs) aggregate at the firm level to create competitive advantage for new ventures. In this symposium, we bring together four papers that study how individual human capital influences firm-level outcomes. Different types of human capital at different levels of analysis are introduced, thereby highlighting novel mechanisms of how they influence entrepreneurial ventures' strategy and performance.

Panelist: **Saeed Khanagha**, *Vrije U. Amsterdam*
Panelist: **Carmelo Cennamo**, *Copenhagen Business School*
Panelist: **Tobias Kretschmer**, *LMU Munich*

The purpose of this symposium is to bridge the micro and macro perspectives through a strategic leadership perspective. Such integration is essential for a comprehensive understanding of how individual components, interactions, and interfaces within an ecosystem contribute to the larger landscape, as well as understanding how strategic leadership operates within business ecosystems. In essence, the bridge between micro and macro perspectives is a conduit for understanding the dynamics of ecosystems and understanding strategic leadership influences at larger scale.

The Influence of Shareholder Activism on Boards

Organizer: **Eugene See**, *Coastal Carolina U.*
Discussant: **Christina L. Ahmadjian**, *Hitotsubashi U.*
Presenter: **Maria Goranova**, *U. of Wisconsin, Milwaukee*
Presenter: **Christina L. Ahmadjian**, *Hitotsubashi U.*
Presenter: **Albert Minkyu Ahn**, *Hong Kong Baptist U.*
Presenter: **Eugene See**, *Coastal Carolina U.*

Recent years have seen an upsurge in shareholder activism, or the actions taken by shareholders to influence firm policies and practices. As boards of directors are responsible for fundamental decisions that affect change in a firm's strategy, activist shareholders rely upon board representation as the primary mechanism for promoting their vision of change in the firms they target. Despite the prevalence of activist board representation, management research has thus far lagged in addressing theory regarding its implication for firms. Through four distinct papers addressing the influence of shareholder activism on boards, this presenter symposium aims to promote theoretical dialogue regarding how we may advance our understanding of this unique but understudied phenomenon.

Behavioral Strategy in Action: Innovation Lessons and Opportunities in China

Organizer: **Christina Fang**, *New York U.*

Organizer: **Tieying Yu**, *Boston College*

Presenter: **Weiru Chen**, *China Europe International Business School (CEIBS)*

Participant: **Sean Wuxiong Cao**, *CBC Group*

Presenter: **Taiyuan Wang**, *China Europe International Business School (CEIBS)*

Presenter: **Minyuan Zhao**, *Washington U. in St. Louis, Olin Business School*

Facilitator: **Qi Li**, *Chinese U. of Hong Kong*

Behavioral Strategy is concerned with finding profit opportunities. In teaching as well as practice, the implicit assumption is that not all opportunities have been exploited. Rather, there is money left on the table, the only problem is how to spot these arbitrage opportunities. Yet despite the centrality of this question to strategy, little progress has been made both theoretically and empirically. Theoretically, to examine this question we need to combine evidence on how and why arbitrage opportunities can persist in factor and product markets, across the behavior sciences including organization theory. Empirically, new business phenomena have raised many more interesting questions than we can answer as a field, ranging from crypto strategy to mega platforms. One such phenomenon is the rise of Chinese entrepreneurs and strategists who have been innovative despite the lack of institutional resources. In this PDW, we have two primary goals. First, we would like to contribute to the behavioral strategy discourse, by bringing together researchers from the frontlines of Chinese innovations to discuss 1) how real life strategists in China have been able to discover and exploit market opportunities and 2) what general strategy lessons may help inform behavior strategy theory. A second goal is to create an opportunity for junior scholars interested in this line of work to be exposed to current development in this area, to identify ways in which they can improve the quality of their work and shape future directions of research.

Data-Driven HR Strategies: Uncovering Insights through Advanced Analytical Techniques

Session Moderator: **Farveh Farivar**, *Curtin University*

HR: **Exploring Work-Life Conflict and Work Engagement: Untangling the ‘Chicken or the Egg’ Dilemma**

Author: **Farveh Farivar**, *Curtin University*

Author: **Louis Geneste**, *Curtin U.*

Author: **Mohsen Yaghoubi**, *Nian Electronic*

This study adopted an asymmetric configurational approach known as fuzzy-set qualitative comparative analysis (fsQCA) to investigate the directional relationship between work-life conflict and work engagement. Previous studies found ‘chicken or the egg’ controversies centred on whether work engagement increased the conflict between work and non-work responsibilities or whether work-life conflict prevented employees from engaging in work. We suggest that this ‘chicken or the egg’ puzzle can be solved by shifting the analytical approach from regression-based techniques to a set-theoretic approach. We add to the literature by estimating work engagement as the intersection of vigour, dedication, and absorption, widely considered as work engagement’s sub-factors. Analysing data from 416 employees, we found that some work-life conflict dimensions contribute to the lack of work engagement and found no evidence to support the directional relationship occurring the other way around. By applying fsQCA, we initiate an argument that work-life and life-work conflict dimensions possibly contribute to the lack of work engagement rather than having a negative relationship with work engagement.

HR: **Exploring Causal Complexity in the Adoption of Human Resource Analytics – Necessary and Sufficient Conditions (WITHDRAWN)**

Author: **Sateesh Shet**, *Northumbria U.*

Author: **Francesco Veri**, *U. of Zurich*

Although human resource analytics (HRA) is being increasingly adopted into businesses, limited empirical research is available on the factors affecting its adoption, such as sufficient conditions and what “level” of Technological – Organization – People (TOP) factors make HRA adoption necessary. To discuss HRA adoption, we developed three hypotheses based on complexity theory that defined causal relationships in terms of the configuration of structural and agent-based factors. We analyzed the survey data related to HRA adoption based on technological, organizational, environmental, data governance, and individual factors using fuzzy set qualitative comparative analysis (fsQCA). The analysis reveals that the configuration of structural and agent-based factors takes different trajectories. Although technology and/or environmental factors are necessary for HRA adoption, their interaction, along with agent-based factors as individual and organizational elements, constitutes a sufficient condition. Our study findings may help both practitioners and researchers to understand the factors that play a role in their decision to adopt HRA. Keywords: Human resource analytics, fsQCA, complexity theory, data analytics, big data

HR: **Driver Configurations for Sustainable Human Resource Management**

Author: **Wei Liu**, *Shandong U., China*

Author: **Guiyao Tang**, *Shandong U.*

Author: **Junyun Jia**, *Shandong U.*

Author: **Yu Tu**, *Shandong U.*

Author: **Xinyi Zhou**, *Shandong U.*

Author: **Qian Sun**, *School of Management, Shandong U.*

Sustainable Human Resource Management (HRM) represents a new approach to managing human resources, seeking to reconcile the relationship between HRM practice and achievements beyond financial metrics. However, there is little integrative research examining the multifaceted determinants of sustainable HRM. Based on institutional theory and upper echelons theory, we advance a multilevel argument that challenges prevailing explanations regarding an organization’s single driver to implement a specific HRM system. Employing a configurational approach, we investigate how six antecedents encompassing external and internal organizational factors shape the landscape of sustainable HRM. There emerge three configurations facilitating highly sustainable HRM and two configurations leading to non-highly sustainable HRM. In the case of highly sustainable HRM, the three antecedents external to the organization—government regulation, public service, and innovative environment—synergistically complement one another. Conversely, the three factors within the internal organizational environment—organizational governance structure, sustainability strategy, and executives’ sustainability perception—show substitutional relationships. Additional analyses further revealed two configurations resulting in not-highly sustainable HRM. Theoretical and managerial implications are discussed.

HR: **Determinants of Employee Winning Rate in Telecommuting Labor Disputes: A Configuration Approach**

Author: **Zhenwu Jiang**, *Business School of Hunan U., China*

Author: **Yuhua Xie**, *Business School of Hunan U., China*

Author: **Chang Gao**, *Business School of Hunan U., China*

Author: **Huiru Li**, *Business School of Hunan U., China*

This research responds to the critical need to safeguard labor rights during major crises, with a specific focus on the COVID-19 pandemic. Employing a novel fuzzy-set configurational approach, we conducted an in-depth analysis of 292 labor dispute cases related to telecommuting in China throughout 2020. The study reveals that the elevated success rates observed among telecommuting employees in labor disputes result from the synergistic interplay of multiple factors, forming five cohesive configurations. Our recommendations emphasize the refinement of governmental policies to reduce labor disputes and the establishment of robust internal communication mechanisms within enterprises. This research represents a pioneering effort by empirically testing power interrelations using a configurational approach, offering nuanced insights into the success rates of telecommuting workers. Its distinctive contribution lies in the holistic exploration of interdependent power configurations, enriching the existing literature on telecommuting and providing practical implications for effective labor governance during times of crises.

Presenter: **Min Ju Lee**, *UT Austin*
Participant: **Andrew Brodsky**, *U. of Texas at Austin*

Following the dissipation of the pandemic, the professional landscape has settled into what may be described as a new normal. Current data indicates that 55% of employees have resumed on-site work, 15.5% are working entirely remotely, and 28.6% are engaged in a hybrid model of employment (Barrero, Bloom & Davis, 2023). In light of these emerging new ways of working, there is a need for research to better understand employees' experiences in remote and hybrid work settings. Notably, while effective communication has been recognized as crucial to the success of remote workers (Shockley, Allen, Dodd, & Waiwood, 2021), there is a lack of detailed investigation into the interactional dynamics between remote/hybrid employees and their coworkers or leaders. This symposium will feature four research presentations that bridge this gap, specifically focusing on social-relational interactions in remote/hybrid work environments. The symposium aims to provide insights into several critical questions related to how to harness the benefits of both in-person and remote work while concurrently addressing their respective limitations.

Experiment 529 Micro-Missions: HE's Unique Capacity to Shape Entrepreneurial Ecosystems via Open Edu

Session Chair: **Emmalinde Roelofse**, *Black Capital Study + Projects*
Distinguished Speaker: **ReShonda Young**, *U. of Northern Iowa*
Distinguished Speaker: **Matthew Glibert**, *U. of Northern Iowa*

Losing hope in the cookie-cutter internships that leave learners and organizations hungry for real impact? Join us for a nutritiously dense multi-award-winning project, Experiment 529 Micro-Missions. It is a revolutionary approach to learning through short-term, tech-fueled real-world projects that empower students, high/new growth entrepreneurs, nonprofits, and government to supercharge their innovation and problem-solving skills, tools, and resources; automate processes; and unlock the highest potential future growth potential. In Higher Education's changing learning landscape, this workshop delves into the unique superpower of the educator-researcher to guide learners' micro-missions and ignite a dynamic ecosystem of open education adventures using action research fundamentals for a real-time, data-informed approach to changing needs and evolving patterns around hot spots and bottlenecks in an entrepreneurial ecosystem.

Navigating the New Publishing Game: Challenges and Opportunities in Mobilizing History in Management

Organizer: **Nicholous Mark Deal**, *Mount Saint Vincent U.*
Panelist: **Anthony Gould**, *U. Laval*
Panelist: **Christopher Michael Hartt**, *Dalhousie U.*
Panelist: **Christina Lubinski**, *Copenhagen Business School*
Panelist: **Jeffrey Muldoon**, *Emporia State U.*

Regardless of career stage, getting research published in management and organization studies is becoming increasingly difficult for a variety of reasons including: conventional expectations of normal science, increased institutional pressures on research productivity, the rise of predatory outlets, and disruptions in the environment such as the global pandemic and artificial intelligence. Mobilizing historical knowledge also shares its own set of challenges. This PDW brings together the editorial teams from the journals specializing in the advancement of history in management and organization studies to give voice to these challenges and opportunities facing the publication game. Drawing upon their experiences editing *Business History*, *Industrielle / Industrial Relations*, the *Journal of Management History*, and *Qualitative Research in Organizations and Management*, our panelists will shed light on these issues confronting journals and authors. We aim to be interactive as possible by holding spacing for authors and participants to ask questions, share frustrations and insights into the publication process, and engage with one another in collegial dialogue about the wider changes impacting the intellectual reach of history journals in our field.

Eye-Tracking Methods for Management Research

Organizer: **George Christopoulos**, *Nanyang Business School, NTU Singapore*

Presenter: **Frédéric Ooms**, *HEC Liège - Management School of the U. of Liège*

Presenter: **Jakub Edward Cichor**, *TUM School of Management, Technical U. of Munich*

Presenter: **Jit Wei, Aaron Ang**, *Nanyang Business School, Nanyang Technological U., Singapore*

Eye tracking (ET) is a non-invasive sampling method capable of identifying a person's visual attention focus. Its main advantages are high temporal granularity (less than a second), relatively low susceptibility to social desirability or other biases, and detecting unconscious attentional influence ("blindsight"); eye-blinking patterns can also be used as a means to measure mental fatigue. The PDW will (i) explain the psychophysiology of visual attention and how information is transformed from simple visual signals into complex cognition such as attention; (ii) explain what kind of (organizational) research questions can be addressed using ET (iii) introduce the different methods of ET analyses and methodological principles and pitfalls when designing ET experiments (including choosing appropriate equipment) (iv) (time allowing) allow participants to experiment with a prepared set of data to come up with possible research questions and run preliminary analysis on it. We will end with a generic discussion on how to use eye-tracking, future applications and specific questions that the audience might have.

Global Research Collaboration PDW

Organizer: **Tatiana Andreeva**, *Maynooth U.*
Organizer: **Constanze Eib**, *Stockholm School of Economics*
Organizer: **Robert Litchfield**, *Washington and Jefferson College*
Organizer: **Hongxia Peng**, *Rouen U.*
Panelist: **Matej Cerne**, *School of Economics and Business, U. of Ljubljana, Slovenia*
Panelist: **Gokhan Ertug**, *Singapore Management U.*
Panelist: **N. Sharon Hill**, *George Washington U.*
Panelist: **Dana B. Minbaeva**, *King's College London*

Numerous societal grand challenges (George et al., 2016), such as climate change, sustainable development, eradication of poverty, decent working conditions, and economic growth, require global collaboration. To meet these challenges, management scholars may increasingly require not just content knowledge but also skill in collaborating with one another across national and cultural boundaries. The 'Global Research Collaboration PDW' centers around questions related to how to initiate, organize, coordinate, and maintain a global research collaboration, as well as how to overcome obstacles and manage different institutional and cultural logics in the global context. By recognizing research collaborations as an explicit area where scholars may develop and exercise skills, this workshop will foster reflection and practice exchange amongst researchers. This workshop will encourage global and/or early career management scholars interested in global collaboration projects to learn from established researchers and ask questions about global collaboration projects. We will accomplish these goals through an in-person workshop with two interlocking features. First, a selected group of experienced scholars share their global research collaboration experiences. Second, PDW attendees will engage in roundtable discussions to help identify success factors for global collaboration and discuss practices to facilitate and improve existing and future projects.

Women academics face challenging circumstances in their professional lives. Relative to their male colleagues, they can expect longer review times (Hengel, 2016), less credit for their research contributions when working in a team (Sarsons, 2017), biased evaluations of their teaching from students (Mengel, et al., 2017, Boring, et al., 2016), and cultures that are more likely to frame men through a professional lens and women through personal and physical lenses (Wu, 2017; Wolfers, 2017; Rivera, 2017). Many of these effects have been shown to be heightened where gender intersects with other marginalized demographics such as race (Miller and Roksa 2020). In the face of this rough terrain facing women in academia, it can be easy to lose sight of the institutionalized barriers to success as a woman academic and personalize negative experiences. We can also lose sight of the allies, supporters, and mentors who catalyze our ability to persist or our ability to act as insider social change agents to build stronger communities of practice. Through this PDW, we offer a three-pronged approach to helping women academics and allies broaden their sight to develop and grow a feeling of community, support, and self-efficacy. We will share stories of persistence, highlight work by academics on this area, and work towards recommendations for leadership and communities of practice to support women academics. This PDW builds off the success of the past six years of "Nevertheless she persisted" PDWs to emphasize the ways in which women and their allies working together help each other to succeed.

This timely and engaging PDW is part of a new multi-year initiative aimed at exploring the scholarly foundations of ODC. In 2024, the effort consists of a series of webinars that will explore different perspectives on the research and practices related to creating vibrant, healthy, and flourishing teams, organizations, and communities. This PDW will help to deepen and strengthen the insights of the webinars, also serving as a forum to generate awareness and engagement with this endeavor, capture tacit knowledge from ODC scholars and colleagues from related fields, and develop perspectives on future directions. The PDW includes five phases: (1) Introduction to the ODC Foundations initiative, (2) review and dialogue on the highlights of the webinars, (3) engaged dialogue as an invitation to join the initiative, (4) exploration of future possibilities, and (5) designing for the next steps. This lively workshop aspires to attract the engagement of people who relate to ODC from different perspectives and in different forms, such as scholars, practitioners, lecturers, students, and executives. After all, only in the spirit of collaboration will we be able to explore the scholarly foundations of ODC to create vibrant, healthy, and flourishing teams, organizations, and communities. Preregistration is requested but not required to attend. Please email d.vanmontfort@my.nyenrode.nl to register.

Panelist: **Gerry M. McNamara**, Michigan State U.

The panel symposium turns a spotlight on literature reviews as stand-alone research articles, their roles for the production of new knowledge and advancing theory as well as methodological approaches to conduct them. In this symposium, a panel comprised of editors of some of the most influential journals that publish reviews discuss the roles of reviews in management research, what forms they could take and what makes effective reviews. They will provide junior and senior scholars across multiple AOM divisions with advice and guidance for conducting and eventually publishing rigorous and impactful review articles.

Research Frontiers on the Attention-Based View of the Firm

Organizer: **Stefano Brusoni**, *ETH Zürich*

Organizer: **William Ocasio**, *U. of Illinois at Urbana-Champaign*

Participant: **Matthew James Hurst**, *Warwick Business School*

Participant: **Tingting Lang**, *School of Business, Renmin U. of China*

Participant: **Caroline A. Bartel**, *U. of Texas at Austin*

Participant: **Dylan Boynton**, *Eli Broad School of Business, Michigan State U.*

Participant: **Davide Nicolini**, *U. of Warwick*

Participant: **John Joseph**, *U. of California, Irvine*

Organizer: **Amit Nigam**, *City, U. of London*

Participant: **Anna Plotnikova**, *Vrije U. Amsterdam, School of Business and Economics*

Participant: **Claus Rerup**, *Frankfurt School of Finance & Management*

Participant: **Ravi S. Kudesia**, *Fox School of Business, Temple U.*

Participant: **Theresa Cho**, *Seoul National U.*

Participant: **E. Geoffrey Love**, *U. of Illinois at Urbana-Champaign*

Participant: **Richard Whittington**, *U. of Oxford*

Participant: **Timo Olavi Vuori**, *Aalto U.*

This PDW will provide insights on how to conduct research and develop theory on the Attention-Based View (ABV) of the firm. ABV views organizations as systems of structurally distributed attention, where the focus of decision makers' attention shapes strategy and organizational actions. While the original theory has been widely applied, ABV has subsequently delivered multiple theoretical advances and variations. These include research on attentional engagement, attention(al) control, dynamic ABV, with variations of the ABV highlighting mindfulness, emotions, communicative practices, and attentional infrastructure. The PDW will provide examples of theoretical and methodological advances and variants to the audience, all represented by leading scholars. The format of this exploration into ABV will be comprehensive and interactive. It includes breakout groups led by a diverse group of contributors to a 2024 special issue of Strategic Organizations on ABV, who will shed light on their research efforts. This will foster an environment of active engagement and debate among participants. The event will culminate in a final plenary session, summarizing the key takeaways and setting the stage for future research directions in the fields of strategic management, organizational theory, managerial and organizational cognition, and strategy as practice.

Dealing With Career and Job Insecurity in Future Careers

Session Moderator: **Rentao Miao**, *Capital U. of Economics and Business*

CAR: **The Double-Edged Sword Effect of Job Insecurity: A Dual Mediation Model of Career Self-Management**

Author: **Rentao Miao**, *Capital U. of Economics and Business*
Author: **Zhengrui Li**, *School of Labor Economics, Capital U. of Economics and Business*
Author: **Nikos Bozionelos**, *EMLYON Business School*
Author: **Jiayue Zhang**, *School of Labor Economics, Capital U. of Economics and Business*

Uncertainty in the employment environment has led to concerns about the growing job insecurity of employees. Although much of the literature alleges negative effects of job insecurity, the possibility that insecurity may also have positive utility is not negligible. Based on the cognitive appraisal theory of stress and the conservation of resources theory, we investigated the relationship of job insecurity with job engagement and turnover intention, and examined the role of internal and external career self-management (CSM) and career resilience in this relationship. Using a two-wave time-lagged design with two sourced data (employees and their supervisors), we found that (a) job insecurity was positively related with job engagement; (b) internal CSM mediated the relationship between job insecurity and job engagement, and external CSM mediates the relationship between job insecurity and turnover intention; (c) Career resilience negatively and positively, respectively, moderated the relationship between job insecurity and internal and external CSM, and (d), career resilience moderated these mediating effects. The findings make substantial theoretical implications that enable a more thorough understanding of the impact of job insecurity.

CAR: **Examining Career Insecurity: The Role of Workplace Characteristics in Remote Work**

Author: **Nitin Sharma**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*
Author: **Manjari Singh**, *Indian Institute of Management, Ahmedabad*

Employees' anxieties get exacerbated by remote management of work. The surge in the number of remote workers in organizations because of the pandemic condition has considerably impacted their sense of career insecurity. Furthermore, as the organizations' business declined, the organizational atmosphere for these individuals became increasingly stressful, heightening a sense of precariousness. Using the concepts from protean theory, we propose a conceptual model that depicts the relationship between workplace characteristics and career insecurity in remote work environments. Through a systematic literature review of 30 academic publications, we examine the aspects of remote work and career insecurity, as well as how they influence employee behavior. The paper contributes to the protean career literature, contingent work arrangements in the form of remote work, and aspects of career insecurity. The research further seeks to provide prescriptive insights that organizations can analyze and align their practices and policies to run more efficient remote operations.

CAR: **Is Looking Forward to the Future Good for Your Career? The Role of Work Engagement and Job Security**

Author: **Chia-Wu Lin**, *National Dong Hwa U.*
Author: **Bright Malema Mbeye**, *National Dong Hwa U.*
Author: **Chia-Yen Wu**, *Office of Institutional Research, National Dong Hwa U., Taiwan*
Author: **Chen-Ju Lin**, *National Dong Hwa U.*

This study employs self-determination theory to investigate the influence of a future temporal focus on the development of protean career orientations among self-determined employees. Data was collected through a two-phase survey using paper-based questionnaires from 240 full-time employees across diverse industries in Taiwan. The findings reveal that a future temporal focus positively affects job engagement and expected financial security, subsequently fostering protean career orientation. Additionally, the study identifies the moderating role of perceived job security in the relationship between future temporal focus and work engagement. When job security is perceived as low, individuals find it challenging to maintain their focus on the future, impacting their anticipated financial security and, consequently, their protean career orientation. These results underscore the importance of creating conducive working conditions that support career orientation among employees. This research makes a valuable contribution by illuminating the key factors influencing work engagement and career development. Keywords: Future temporal focus; perceived job security; work engagement; expected future financial security; protean career orientation; self-determination theory

CAR: **Not Only a "Foe": Examining the Opposing Effects of Career Insecurity on Proactive Career Behavior**

Author: **Tonglin Wu**, *U. of International Business and Economics*
Author: **Zijun Cai**, *Beijing Normal U.*
Author: **Li Guo**, *U. of International Business and Economics*

Despite the prevalence of career insecurity, the research about it is only at the beginning stage. Existing studies mainly portrayed it as a "toxic" phenomenon, focusing on its negative influence on work and career outcomes. Based on the control model of self-regulation, the current study aims to challenge this view by revealing its opposing effects on proactive career behavior, which is critical for long-term and sustainable career success. We argue that career insecurity reflects a perceived discrepancy that one's current career path deviates from the desired one, which triggers a "discrepancy-reduction" process in which people more reflect on past experiences and then engage more in proactive career behavior and an "expectancy-assessment" process in which people downward regulate their career confidence and then engage less in proactive career behavior. Furthermore, adopting a goal hierarchy perspective, the model argues that self-relevant goals influence specific regulation strategies. We thus propose that self-esteem, which describes to what extent people desire to build a positive self-perception, would enhance the positive indirect effect and buffer the negative indirect effect. Through an online recall experiment and a three-wave time-lag study, we found support for the above arguments. The findings could encourage scholars to adopt a more balanced view of career insecurity and enrich the understanding of why and when it matters.

Participant: **Ans De Vos**, *U. of Antwerp/Antwerp Management School*
Participant: **Annabelle Hofer**, *U. of Cologne*

In a context of rapid and disruptive change, there is a need for innovations in the way careers are being conceived, researched and managed. In recent years, the topic of sustainable careers has received increased interest from scholars as a promising perspective to understand contemporary careers, as evidenced by various academic publications. Sustainable careers research focuses on the dynamic interplay of person, context, and time to study how person-career fit can enhance the long-term sustainability (i.e., happiness, health, and productivity) and success of people's careers. Recent research has applied the sustainable career model to, for example, the challenges of career sustainability for different groups of workers, the processes involved in career sustainability over time, and the interplay of multiple stakeholders in different contexts affecting sustainable careers. However, there is a need for further (critical) examination of the key relationships between context, person and time in affecting career sustainability as well as in the meaning of and interplay between its key indicators (health, happiness, productivity). There is a need to further develop and expand existing models with more specific concepts to allow for targeted empirical research testing the basic principles of career sustainability. Therefore, this symposium brings together five state-of-the-art research projects that each add a valuable phenomenon that expands and deepens the model of sustainable careers: (1) digitization, (2) multiple job holding, (3) career empowerment, (4) career sacrifice, and (5) sustainable career orientation. The first paper addresses the pertinent challenges for careers brought along by rapid digitization and provides a comprehensive review of empirical studies addressing how the increase in various types of digital tools impacts individuals' career trajectories. In the second paper, the enriching versus depleting impact of multiple jobholding on career sustainability is explored through a qualitative study, thereby considering the dimensions of person, context and time. The third paper builds upon the interplay between person and context and addresses the role of the leader in stimulating career empowerment as a vehicle for career sustainability. The fourth paper takes a sensemaking perspective to theorize about career sacrifice valuation as a process which may explain whether and how unconventional and sometimes imperfect decisions may still lead to sustainable careers over time. In the fifth paper, the concept of sustainable career orientations is introduced and operationalized via a scale validation study, aimed to further our understanding of who might be more or less likely to focus on establishing high levels of career sustainability. Taken together, the five papers included in this symposium provide new insights into the meaning of sustainable careers, offering suggestions for further refinement, adaptations, and empirical examination.

Exploring Immersive Technology and Knowledge Creation in Higher Education Institutions

Organizer: **Juana Du**, *Royal Roads U.*
Organizer: **Jun Li**, *U. of New Hampshire*

This caucus invites researchers to engage in a conversation on immersive technology in higher education institutions through the lens of diversity, equity and inclusion (DEI). From a knowledge management perspective, insights regarding immersive technology as a catalyst for knowledge creation and campus inclusion, particularly for marginalized groups will be discussed.

This caucus builds on previous AOM symposia and presentations, addresses researchers working on discursive institutional approaches and focuses on responsible and sustainable innovation. It provides a platform for participating scholars to discuss results and methods, aims at establishing a network of researchers and at exploring potential future joint actions.

Why this caucus? This caucus builds on a variety of previous AOM symposia and presentations (e.g. AOM 2022 “The Role and Relevance of Discourse and Discursive Perspectives in Organizational Change”). It will bring together scholars working on discursive institutional theory in areas related to sustainability, responsibility and innovation and provides a platform for participating scholars to discuss results and methods. It aims at establishing a network of researchers working in this area and at exploring potential future joint actions, such as AOM symposia, special issues or even joint research projects. As the topic of the caucus is strongly related to the general theme of the AOM 2024 meeting, we expect a broad outreach to AOM members, especially in the TIM, SIM, ONE and ODC division. Discursive institutionalism and organizational change Discursive institutionalism, a key concept of new institutional theory, focuses on the interplay of ideas, discourse and institutions, on competing logics and on how content and interactive processes of discourse lead to change (Campbell and Pedersen 2001; Schmidt 2002, 2008, 2010). Discursive institutionalism aims at understanding narratives, discourses and framing strategies that influence policy, governance and social practices. While discursive institutionalism originates from political science, it also influenced organization scientists, who developed a discourse-centered understanding of organizational change (Grant and Marshak 2011; Heracleous and Barrett 2001; Marshak 2002). Focusing on innovation, responsibility and sustainability While application of discursive institutionalism in innovation management is rather at the beginning (e.g. Knox 2023), several studies applied such approaches to analyze the dissemination of Corporate Social Responsibility (Coraiola & Barros 2022), institutional aspects of Responsible Innovation (Ivanova et al. 2023), corporate engagement for sustainable development (Vidra & Van den Broek, 2019) and sustainability transitions (Genus 2016). These studies have in common that discourses are perceived as a foundation of legitimacy on the one hand, and as instruments of change on the other (e.g. through re-framing, adaptation and/or adoption of discursive frames). Relating to the conference theme Addressing innovation from the perspective of discursive institutionalism provides an innovative lens for examining the interplay of innovation, policy, and purpose in the organization, while providing insights for managers to navigate the tensions that arise between the profit-oriented purpose of business on the one hand and responsibility and sustainability-oriented expectations of society on the other. What we want to achieve The main desired outcome of this caucus is to establish a network of scholars interested in the discursive foundations of responsible and sustainable innovation. It provides a platform for participating scholars to discuss results and methods, aims at establishing a network of researchers and at exploring potential future joint actions in applying discursive institutionalism in organization studies and organization change. In order to encourage collaboration and exchange of ideas the agenda of the caucus consists of (a) short introduction of the topic and the participants (b) discussions of joint actions in smaller groups, (c) wrap up of future collaborations and planning of next steps.

Creativity at Work: Building a Research Committee and Charting the Path Forward

Organizer: **Martina Pizzinato**, *UCL School of Management*
Organizer: **Colin Muneo Fisher**, *UCL School of Management*

Because creativity is essential at work, its study has a long history within management studies (Harrison, Rouse, Fisher, & Amabile, 2022). However, attempts to create a community of creativity researchers have been rare. This caucus aims at connecting scholars in the field to: (1) discuss the future of creativity research; (2) encourage collaboration; and (3) foster a scholarly community.

Gender Pay Gap and Disparities

Session Moderator: **Sunjin Pak**, *California State U., Bakersfield*

DEI: **Identifying the Working Hours Thresholds Impacting Health and Gender Wage Disparities**     

Author: **Sunjin Pak**, *California State U., Bakersfield*
Author: **Amit Kramer**, *U. of Illinois Urbana-Champaign*
Author: **Yun-Kyoung Kim**, *Salisbury U.*

In this study, we investigate the intricate interplay of working hours and perceived health, and its subsequent influence on gender wage disparity in South Korea. Drawing from the Korean Labor and Income Panel Study (KLIPS) spanning 2013 to 2021, a causal link between working hours and perceived health is established. Employing cross-lagged and instrumental variable approaches, this study highlights the distinct health impacts of working hours on men and women, resulting in gender-specific wage differences. The 2018 policy amendment in South Korea, which lowered the maximum weekly working hours, served as an instrumental variable. Key findings reveal an inverted U-curve relationship between working hours and health, with discerned inflection points at 41.36 hours per week for men and 28.95 hours for women. Additionally, our analysis uncovers a bidirectional relationship between self-perceived health and earnings. Consequently, prolonged work durations have a more pronounced negative impact on women's health, which might contribute to wage discrepancies. In summary, South Korea's 2018 initiative to curtail weekly working hours might play a pivotal role in narrowing both the health and wage disparities between genders. As the workforce transitions towards schedules that prioritize individual health boundaries, it is plausible to anticipate a progression towards more balanced health and wage outcomes across genders in the South Korean work environment.

DEI: **The "Hidden" Gender Gap in Self-Promotion**   

Author: **Jenny Chang**, *Carnegie Mellon U. - Department of Social and Decision Sciences*
Author: **Silvia Saccardo**, *Carnegie Mellon U. - Department of Social and Decision Sciences*
Author: **Jana Gallus**, *UCLA Anderson School of Management*

Advertising one's credentials is crucial for career outcomes in organizational settings where individual performance is not easily observable. Consequently, if women engage in self-advocacy less often or advocate for themselves less fervently, it may exacerbate gender gaps in labor market outcomes. Across a series of pre-registered experiments involving 14,092 participants, including 8,546 adults and 5,546 adolescents, we investigate gender differences in whether and how men and women promote their credentials. We observe a consistent pattern across both adults and adolescents: women not only exhibit lower rates of self-promotion but, even when prompted to do so, convey lower self-ratings compared to their male counterparts. Importantly, this intensive margin gender gap persists even among those individuals who choose to self-promote on the extensive margin. In additional study waves employing various information treatments to address these gaps, we find that no treatment impacts both extensive and intensive margin gaps simultaneously, suggesting that these gaps are driven by different mechanisms. These gender gaps have important implications for economic outcomes, as self-promotion improves hiring outcomes for both men and women in our study context. Our findings highlight the importance of considering both extensive and intensive margin measures when documenting gender gaps and designing interventions.

DEI: **Occupational Devaluation, but Organizational Revaluation? Understanding Gendered Pay Discrimination** 

Author: **Sophie Johanna Moser**, *U. of Konstanz*

This article aims to understand how wage differences between women and men who do the same work differ across occupations and organizations. Specifically, the study investigates whether the share of women within an occupation is a potential driver of within-job wage gaps and whether organizational gender diversity goals act as buffers thereof. Drawing from a culturalist perspective, I hypothesize that occupational devaluation, the tendency that female-dominated occupations are devalued and thus underpaid, affects women to a greater extent than men and thus intensifies within-job pay gaps. Further drawing from a rational choice perspective, I hypothesize that organizational revaluation, a tendency that organizations engage in less pay discrimination against women due to their ambitious diversity goals buffers the pay gap, especially when female underrepresentation is high. An extensive field study that combines three years of salary information on 51,713 employees provided by the employer review platform Kununu with occupation data from the German Microcensus and organization data from 160 annual reports is conducted and supports the study hypotheses. I discuss how my findings can inform the development of novel theory on gender wage inequality and derive implications for managers and policymakers in practice.

DEI: **A Meta-Analytic Review of Pay Transparency Laws and Their Effectiveness in Reducing Gender Pay Gaps**    

Author: **Sebastian Von Beck**, *LMU Munich*
Author: **Felix Bölingen**, *LMU Munich*

Governmental efforts to reduce the gender pay gap have resulted in a plethora of pay transparency laws. The effectiveness of such laws is subject to a vigorous scholarly debate and has prompted several policy evaluations. Despite the efforts to assess whether individual pay transparency laws are effective in reducing the gender pay gap, surprisingly little attention has been paid to which kind of pay transparency laws are effective in reducing the gender pay gap. Our article leverages both a systematic review of European and U.S. pay transparency laws and a systematic review of empirical studies evaluating the effectiveness of pay transparency laws to meta-analytically extrapolate which configurational aspects, which we call law design features, of pay transparency laws render them effective. Our article seeks to emphasize how choices of law design features can influence the effectiveness of pay transparency laws in reducing the gender pay gap. We aim to provide policy makers with a better-informed basis for designing potent pay transparency laws.

Gender Non-Conformity and Abuse

Session Moderator: **Galen J. Talis**, *James Madison U.*

DEI: Transgender and Gender Non-Conforming Leaders and Leadership: A Foundational and Integrative Review    

Author: **Galen J. Talis**, *James Madison U.*

Gender and leadership research has traditionally employed a binary framework, overlooking the experiences of transgender and gender non-conforming (TGNC) leaders and forcing leaders of all genders and intersectional identities into a dichotomous frame. This paper reviewed interdisciplinary literature using a robust search strategy in three academic databases and Google Scholar, as well as across eight leadership studies journals. Sixteen sources involving 440 leaders' experiences were found. The author conducted a thematic analysis to explore how TGNC leaders' experiences challenge and advance leadership theories, deepen understanding of discrimination, and offer ways to support their emergence and success. TGNC leaders' experiences bring new perspectives to the areas of identity development, leader emergence, leadership style, and workplace discrimination. By exploring these areas with a more inclusive conception of gender and from the vantage point of an exceptionally marginalized group, this work proposes ways to increase the validity of future research questions and bolster ongoing efforts toward greater diversity, equity, and inclusion for all people.

DEI: From Experience of Institutional Contradiction to Change-Oriented Behavior of LG Employees in China   

Author: **Chris Zhang**, *U. of Houston - Downtown*

Author: **You-Ta Chuang**, *York U.*

Author: **Jing Wang**, *York U.*

Author: **Robin Church**, *Toronto Metropolitan U.*

Although research on the experiences of sexual minority employees has made significant progress in the past two decades, most studies have focused predominantly on the negative consequences sexual minority employees encounter in the face of workplace heterosexism. The role of change agent that sexual minority employees may play in terms of disrupting and advocating equal treatment has been overlooked. Further, very few studies related to sexual minority employees were conducted outside of USA. Through 2 studies conducted in China, we link the literature from institutional change and reasoned action theory to examine the factors would trigger lesbian and gay (LG) employees to engage in changing workplace heterosexism, the behaviors would LG employees display to change workplace heterosexism, and factors would impede/facilitate LG employees' engagement in changing workplace heterosexism. Study 1 revealed that LG employees display both explicit and implicit change-oriented behaviors. Study 2 found that the experience of institutional contradiction derived from LG employees' personal interest of receiving equal treatment and workplace heterosexism is the trigger for LG employees to have the intention to change workplace heterosexism and subsequently display change-oriented behaviors. In addition, LG employees' organizational continuance commitment and perceived changeability play different roles in shaping LG employees' intention to change and change-oriented behaviors. Key words: LG employees, institutional contradiction, change-oriented behavior, proactivity continuance commitment, perceived changeability

DEI: Guilt and Shame Proneness on Perceived Abuse Among Transgender Employees in the United States  

Author: **Bryan Blake Darden**, *Western Carolina U.*

Author: **Emma Best**, *Wake Forest U.*

We investigate how transgender and cisgender employees differ in their perceptions of perceived abusive supervision considering proneness towards guilt and shame. Our findings show that times have begun to change, and past workplace and personal aggressions have created a resilient transgender workforce in the United States. We draw on resilience theory to better understand how feelings of guilt and shame, along with perceived abusive supervision, have created a different transgender workforce in the United States that previously hypothesized. We found that in a survey of 395 full-time employees, including 150 transgender employees, transgender employees have reduced proneness to guilt. In addition, when guilt proneness, guilt repair, shame proneness and shame withdraw are included, transgender employees also exhibited less perceived abuse compared to their cisgender respondents.

DEI: Interplay of Structural and Agency Forces in the Adoption Timing of LGBTQ-Friendly HR Policies  

Author: **Dongdong Huang**, *Business School, Nankai U.*

Author: **Junghoon Park**, *Loyola Marymount U.*

Author: **Jeffrey Augugliaro**, *Iona U.*

Author: **Sihan A**, *Business School, Nankai U.*

Author: **Huinan Zhang**, *Nankai U.*

We investigate the interplay of top-down structural and bottom-up agency forces on the timing of adopting lesbian, gay, bisexual, transgender, and queer (LGBTQ)-friendly human resource policies. Utilizing configurational analyses on data from Fortune Global 500 firms, we identify distinct adoption patterns. Early adopters are associated with a combination of strong legislative and ideological support for LGBTQ rights, alongside active NGO involvement and influential internal change agents, leading to rapid institutional change. Late-adopters, influenced by limited human rights policy and NGO activism, adopt these policies at a slower pace. Non-adopters show resistance to change, typically devoid of any change forces except for NGO activism. These findings underscore the need for a synergistic approach that integrates various forces to accelerate institutional change and promote diversity and inclusivity in corporate settings.

Panelist: **Clare Kelliher**, *Cranfield U.*

Panelist: **Alexandra Beauregard**, *Birkbeck, U. of London*

Panelist: **Maria Adamson**, *Queen Mary U. of London*

Organizational interest in flexible working (e.g., remote, hybrid, part-time work; flextime) as a mainstream employment and organizational workforce strategy has increased dramatically during the COVID-19 pandemic. Yet many questions remain for research and practice on the future of flexible working and what it will look like in a post-pandemic world, which this panel seeks to address. This symposium brings together a panel of experts for an interactive discussion on the future of flexibility. First, it is unclear whether increased employee access to flexible working is a long-term shift in the employment relationship or a temporary employer response to a crisis, as many employers have begun to pull back on flexibility. Second, the implications of flexibility for inequality regarding opportunities for access and the potential stigma and unintended career consequences for use are concerning. Third, we lack understanding of employment institutional contexts regarding flexibility responses vary widely across countries. For example, some nations, such as the U.K., have taken a more activist approach than in the U.S. by adopting laws and public policy initiatives supporting flexible working and offering incentives to employers to not to lay off employees. Fourth, there remains ambiguity around the theory and measurement of flexibility and hybrid working concepts. Finally, there is also a lack of clarity on how to evaluate its dual agenda benefits for employers and employees, which is critical for advancing future research. The panel discussion will address these issues. The symposium's topic aligns with the AOM (2024) theme of "Innovating for the Future" because workplace flexibility is of importance to scholars and practitioners as they rethink traditional ways of managing and organizing.

Despite some advancements, women continue to be significantly underrepresented in leadership roles across various sectors worldwide, notably in the senior management levels of organizations. An impressive body of research has sought to understand the drivers of this gender disparity in leadership. According to gender and leadership scholars, one reason this inequality occurs is due to the stereotypical belief that women lack the masculine, agentic traits that are deemed as important for leaders to possess (Eagly & Karau, 2002; Schein, 1973; Heilman, Caleo, & Manzi, 2023). When women become leaders, they also risk experiencing social and economic reprisals when they enact the agentic behaviors that are often considered necessary in leadership because agentic qualities are also perceived as socially undesirable in women (Akinola, Martin, & Phillips, 2018; Mishra & Kray, 2022; Rudman et al., 2012; Prentice & Carranza, 2002). Perhaps due to a cultural emphasis on prototypes of leaders tend to be masculine and agentic in nature (Koenig, Eagly, Mitchell, & Ristikari, 2011; Vial & Napier, 2018), the literature has focused on how agentic perceptions contribute to gender disparities in leadership. A comparatively smaller body of work has examined how communal qualities that are more strongly ascribed to women, such as being “affectionate, helpful, kind, sympathetic, interpersonally sensitive, nurturant, and gentle,” influence the leadership aspirations, behaviors, and outcomes of men and women (Eagly & Karau, 2002: 574, although see Hentschel et al., 2018 for an exception). Nonetheless, communality plays an important role in many illustrious theories of gender and leadership. For example, role congruity theory posits that the under-emergence of women leaders occurs because people presume that communal women tend to lack agency and agentic women experience social and economic backlash because they are perceived to lack desirable communal traits that are prescribed for their gender role (Eagly & Karau, 2002). Therefore, the goal of this symposium is to deepen our understanding of how communal traits and stereotypes contribute to gender and leadership disparities. The first three papers focus on the experiences of men and women prior to the leadership selection process by examining how communality influences gender dynamics in career choice and leadership aspirations (Papers 1 to 3). The final two papers focus on the experiences of women and men after they have become leaders, examining the role of communality in understanding of differences in how male and female leaders communicate after they have become leaders as well as how perceivers react to communal male and female leaders (Papers 4 and 5).

South Asian Women's Experiences and Challenges in the U.S.: Future Directions for Scholarship

Organizer: **Pooja Khatija**, *Case Western Reserve U.*
Organizer: **Poonam Zantye**, *Boston College*
Panelist: **Barnini Bhattacharyya**, *Ivey Business School*
Panelist: **Diana Bilimoria**, *Case Western Reserve U.*
Panelist: **Janaki Gooty**, *U. of North Carolina, Charlotte*
Panelist: **Monica Adya**, *Rutgers U., Camden*
Panelist: **Shimul Melwani**, *U. of North Carolina, Chapel Hill*
Panelist: **Garima Sharma**, *American U., Kogod School of Business*

The goal of this panel is to discuss the lived experiences of South Asian women in the U.S., both in academia and other U.S. workplaces, to understand their unique paths and challenges. There have been multiple calls for research to better understand the workplace and social experiences of Asians. Research scholarship calls for the need to move beyond looking at Asians in America as a monolith and understanding the unique experiences of the Asian subgroups. South Asians, specifically Asian Indians, are the fastest growing Asian group in the U.S. Surprisingly, there is limited data on the lived experiences of South Asians. There is even lesser understanding of the intersectional experiences of South Asian women, especially for immigrant or first-generation women. While intersectionality in terms of ethnicity and gender play a role in their experiences, the salience of cultural identities and gender roles may be exacerbated in the context of immigration, when they adjust to an environment with new cultural norms. Thus, in this panel symposium, we are interested in discussing the lived experiences, challenges, and navigation strategies for South Asian women in U.S. academia and other workplaces. More broadly, we would like to discuss the directions that DEI research needs to take to ensure that we expand scholarship to better understand the experiences of South Asian women.

Participant: **Jo-Ellen Pozner**, *Santa Clara U.*

Framing inclusion as a competitive advantage has become standard business practice in recent years. This symposium explores the causes and consequences of inclusion across various levels of analysis: the workgroup (Roberson et al.), the organization (Sitzmann et al. and Kossek et al.), and the industry (Pozner & Woolley). The papers examine factors that contribute to inclusion, including individuals' positions in networks (Roberson et al.), organizational work-family support structures (Kossek et al.), and interactions with others through industry communities (Pozner & Woolley). Additionally, the papers explore a range of consequences both for individuals' well-being (e.g., outcomes of caregivers, Kossek et al.) and for firm performance (e.g., firms' labor productivity, Sitzmann et al.). The symposium will conclude with discussant Lisa Nishii, whose remarks – in conjunction with the papers presented in the session – will further the audience's understanding of the causes and consequences of inclusion across workgroups, organizations, and industries.

Venture-Corporate Collaboration

Session Moderator: **Marcel Niklas Rueckwald**, *U. of St. Gallen (HSG)*

ENT: **Venture Clienting: Founder Capabilities in Startup Collaborations with Multibusiness Organizations**

Author: **Marcel Niklas Rueckwald**, *U. of St. Gallen (HSG)*

Startup-corporate collaboration is essential to the value creation of both startups and established firms, yet the emerging theory that a process focused on venture client units (VCUs) best facilitates this kind of cooperation has not received much empirical backing. This study of sixteen collaborations between startups and multibusiness organizations with VCUs asks how founders create collaborations that perform at high levels. Our emergent theory unexpectedly emphasizes that a BU-centric process led by a joined team of founders and executives leads to better collaborations than a VCU-centric process. We make contributions to the theory of social networks, transaction cost economics, and information processing. Our most significant discovery broadens the scope of complexity theory: we discover that highly performing startups function as complex adaptive systems.

ENT: **From Pitch to Partnership: Startup Engagement Strategies for Securing Corporate Collaborations**

Author: **Elie Abi Saad**, *Umeå School of Business, Economics, and Statistics*

Author: **Medhanie Gaim**, *Umeå U.*

Author: **Sujith Nair**, *BI Norwegian Business School*

This study explores partnership formation dynamics between startups and corporations. The literature on strategic alliances has placed significant emphasis on establishing a "fit" between internal organizational strategy and external resource needs. However, our research indicates that in the context of corporate-startup corporations (CSCs), this "fit" is rather co-constructed than evaluated in advance. Drawing from extensive fieldwork observations of 150 "first meetings" between corporates and entrepreneurs, we find that interest in collaboration is driven by the interplay between technology, adaptability, and alignment. Adopting a configuration approach and employing a fuzzy-set qualitative comparative analysis (fsQCA), we uncover three unique patterns through which startups can secure interest from a corporation to collaborate. Contrary to the conventional strategy of matching startups based on how well their solution align with corporate needs, we advocate for establishing the right meeting conditions so that both parties can co-create mutually-beneficial collaboration opportunities. Taken together, our study underscores the fluid nature of corporate-startup relations, with interest in collaboration being (re)defined as the partnership formation process unfolds.

ENT: **Hatching and Fledging? A Meta-Analysis of the Performance Effects of Business Incubators**

Author: **Jorge Vinicio Murillo-Rojas**, *INCAE Business School*

Author: **Jan Brinckmann**, *ESADE Business School*

Author: **Marc Van Essen**, *U. of South Carolina*

Business incubators are some of the most frequently used instruments to foster entrepreneurship. However, studies investigating the influence of incubation programs on supported new ventures have yielded mixed and contradictory findings. Little is known about how different types of incubators affect supported ventures' performance dimensions such as innovation, survival, growth, profits, and employment. In this meta-analysis, we synthesize 182 individual effect sizes capturing the development of 55,219 firms being supported by incubators. We uncover how participation affects various performance dimensions to different degrees and highlight novel salient contextual considerations of participation in incubators-new firm performance relationship. Our results contribute to the entrepreneurship theory research and add valuable insights for policymakers, entrepreneurs, and other practitioners.

ENT: **Resource Commitment and Partner Selection in Asymmetric Corporate-Startup Collaborations**

Author: **Sophia Pauer**, *U. of Innsbruck*

Author: **Kurt Matzler**, *U. of Innsbruck*

Author: **Stella Herrmann**, *Student*

Corporates are increasingly approaching startups to benefit from their innovative capabilities. This new approach to innovation can create competition among entrepreneurial partners. However, the reasons why startups choose to engage in such asymmetric collaborations are not well understood. In this paper, we investigate the dynamics of these collaborations, exploring the motives, selection criteria, and willingness of startups to partner from a resource-based perspective. To address this gap, we conduct a conjoint experiment to examine the relationship between diverse resource commitments and startups' inclination to partner. We confirm the substantial influence of Das and Teng's (1998) resource typologies on partner selection. Notably, we find that a partner's attractiveness diminishes when they possess a similar market portfolio, potentially fostering future competition. Therefore, corporates must address their partners' potential concerns and risks regarding their opportunistic behavior. To contribute to the literature, we adopt a resource-centered approach that emphasizes the critical role of capabilities in an entrepreneur's decision-making process and demonstrates their influential role in forging successful collaborations with established partners. Ultimately, we improve the understanding of the partner selection process, providing useful guidance for both new and established firms looking for mutually beneficial partnerships in the early stages of collaboration.

Venture Capital International

Session Moderator: **David Wunder**, *Aalto U.*

ENT: **Complementary Resources Across Borders: Cross-Border Corporate Venture Capital in Green Ventures**

Author: **David Wunder**, *Aalto U.*

Author: **Markku Maula**, *Aalto U.*

Corporate venture capital (CVC) and cross-border VC (CBVC) are two important types of venture funding, previously studied in isolation despite their frequent overlap. They are vital for sustainable ventures requiring complementary resources unavailable from traditional VCs or local CVCs. Drawing on resource dependence theory, we hypothesize that green ventures form cross-border ties with corporations possessing green resources due to resource reliance. Moreover, green ventures face greater constraints in countries with lower climate performance, increasing cross-border ties with green corporations. Our analysis of European innovative ventures supports these hypotheses, offering insights into cross-border CVC investments in sustainable ventures and practical implications.

ENT: **Institutional Support for Growth and VC Investment in Established vs. Emerging Sectors**

Author: **JungYun Han**, *National Taiwan U.*

Author: **Charles Eric Eesley**, *Stanford MS&E*

Although it is well known that increasing institutional support promotes the entry and growth of startups, less is discussed about its impact on intermediaries (e.g., VC firms) as part of the entrepreneurial ecosystem. From the perspective of a regulatory pillar in institutionalism, this study investigates how adopting the new law for sector growth affects VC firms' investment strategy in its early period, facing the dilemma of cherry-picking in the stable established sector vs. frog-kissing in the highly ambiguous emerging sector. Using the quarterly data of entire U.S. VC firms, 2020 August -2023 February, we test how the U.S. government's enactment of the CHIPS and Science Act for revitalizing the semiconductor industry (established sector) and supporting key technology areas (emerging sector) affects the VC firms' investment in these two sectors differently. Our results show that the enactment leads VC firms to increase investing in the established sector while reducing investment in the emerging sector. The opposite pattern happens mainly because, despite the regulatory favors, incomplete institutionalization during the early regulatory changes becomes additional source of ambiguity in emerging sector, further increasing investment risk. Furthermore, we find that VC firms' political embeddedness amplifies the benefits of investing in the established sector, whereas their reputation (ability to deliver high returns) mitigates investment risks in certain technology areas in the emerging sector. Taken together, our study contributes to the institutionalism and entrepreneurship literature by suggesting how institutional support in its early period affects intermediaries' strategy differently depending on the sector types.

ENT: **Government Intervention in Venture Capital Investment in China**

Author: **Tao Wang**, *U. of Bristol*

In this study, I examine the impact of government intervention in venture capital (GIVC) on the innovation volume and strategy of invested companies in China. I use hand-collected data and find that GIVC investment is not better at increasing the innovation volume of invested companies than other types of venture capital investment in general, but can have a stronger impact on innovation volume during economic downturns and when the government is the minority investor. In terms of innovation strategy, GIVC investment has a stronger impact on exploratory innovation, but a weaker impact on exploitative innovation, compared with private VC investment.

ENT: **Alignment and Divergence in Government and Private VC: The Amplifying Role of Geopolitical Risks**

Author: **Mingtao Xu**, *School of Economics and Management Tsinghua U.*

Author: **Tan Li**, *Soochow U.*

Author: **Victor Cui**, *U. of Waterloo*

This paper investigates the impact of geopolitical situation on the dynamics between Government Venture Capital (GVC) and Private Venture Capital (PVC) investments. Exploiting the US-China trade war since 2018, we observe that PVCs in China became less likely to invest in GVC-funded startups under heightened geopolitical tensions, and the effect is stronger for more prominent GVCs. However, in areas with significant government subsidies such as high-tech industries, GVCs' involvement serves as a compelling signal to private investors such that the negative impact is mitigated or even reversed. Our findings contribute new insights to the fields of strategic management and international business by elucidating how venture capital strategies adapt in response to geopolitical risks. The study also provides valuable guidance for practitioners and policymakers navigating complex global investment landscapes.

Gender and Entrepreneurship II

Session Moderator: **Kevin Koziol**, *U. of Passau*

ENT: **Gender Disparities in Entrepreneurial Equity Financing – A Systematic Literature Review**

Author: **Kevin Koziol**, *U. of Passau*
Author: **Maja Schmitz**, *U. of Passau*
Author: **Suleika Bort**, *U. of Passau*

A growing body of research addresses the question of whether and why female-led and male-led ventures differ in their funding success. With this systematic literature review we aim to shed light on the multiple sources and mechanisms of gender disparities in entrepreneurial equity financing. Based on 71 carefully selected studies, we identified various boundary conditions, which we organized into five well-defined dimensions (entrepreneur's human and social capital, entrepreneur's and investor's verbal and non-verbal communication, investor characteristics, venture strategy and characteristics, and contextual factors). We observed that most of these boundary conditions have a different impact on the funding success of women-led and men-led ventures, as they can either impede or enhance access to capital. Moreover, the study results seem to vary depending on the financing form and context. Our review provides theoretical and methodological implications for future research, which may serve to disentangle inconsistent findings. We offer policy makers, investors and female entrepreneurs useful advice on how to alleviate gender disparities in equity financing.

ENT: **Entrepreneurial Behavior of Women: The Fine Line Between Causation and Effectuation**

Author: **Vania Jorge Nassif**, *U. Nove de Julho - UNINOVE - São Paulo*
Author: **Marcia M. Garçon**, *Faculdade Sebrae*
Author: **Marcos Hashimoto**, *Bradley U.*
Author: **Candido Vieira Borges**, *U. Federal de Goiás*
Author: **Edmilson Lima**, *U. Nove de Julho*

This research aimed to identify and characterize a predominant entrepreneurial behavior among Brazilian women entrepreneurs, whether causation or effectuation. The research relied on a qualitative approach with data from in-depth semi-structured interviews, which collected narratives about the trajectory of 65 women entrepreneurs chosen according to the snowball technique. All interviewees are part of the Women Entrepreneurs Network (WEN), established in Brazil. There is still much to be studied about the methods used for entrepreneurship, such as regarding effectuation and causation, especially when it comes to female entrepreneurship. In this sense, the originality of this article lies mainly in the fact that it is a study of female entrepreneurship under the perspectives of effectuation and causation, responding to particularly adverse conditions caused by obstacles such as gender differences, sexism, discrimination, and role conflicts. The findings indicate that there is a predominance of the effectuation approach in the responses of female entrepreneurship to adversities and the use of causation in certain less frequent situations. This result agrees with previous studies and reinforces that both entrepreneurial logics are not mutually exclusive, but complementary. This research also reinforces that effectual behavior can occur in different types of entrepreneurial activity, not only in those with a high level of uncertainty. The contributions obtained converge to a better understanding of the practices of effectuation and causation, but now also in the context of Brazilian women entrepreneurs, and indicate the need for more research on the practices and impacts of effectuation and causation in female entrepreneurship.

ENT: **Entrepreneurial Choice and Economic Returns of Women: Digital Financial Inclusion as a Moderator**

Author: **Xinyu Liu**, *Tongji U.*
Author: **Jialin Song**, *School of Economics & Management, Tongji U.*

Digital financial inclusion is commonly recognized as a strategy for promoting women's entrepreneurial behavior. This paper examines the impact of digital financial inclusion on women's entrepreneurial intention and income by using a national sample consisting of matched data from a digital financial inclusion index and a nationally representative survey. The results show that (1) females are less inclined to pursue entrepreneurship as a career choice, (2) female entrepreneurs earn lower income compared to their male counterparts, (3) digital financial inclusion mitigates the negative relationship between female gender and the choice to pursue entrepreneurship, and (4) digital financial inclusion strengthens the negative association between female gender and entrepreneurial income. This study explores the potential negative effect of digital financial inclusion which breaks the automagical assumption of empowerment of digital financial inclusion.

ENT: **Female Entrepreneurship and Growth: Systematic Literature Review and Future Directions**

Author: **Nomah Javed**, *Stud*

Growth of Female led businesses has garnered considerable attention from scholars and policy makers and gained momentum worldwide. This body of research is diverse, individualistic, and fragmented has oftentimes generated contradictory findings. This has hindered streamlined development in this promising area of research. In this paper a systematic analysis of growth-oriented literature on female entrepreneurs published in the last ten years is first conducted to take stock of the theoretical and empirical development, analyze trends, and identify research themes and developmental patterns in this area. Second, based on a systematic review of literature published over the last decade, the author provides a comprehensive framework for a holistic and multidisciplinary view regarding this topic linking antecedents, challenges, enablers, and strategies employed by women to achieve growth. Third gaps are identified in the body of research to identify fruitful areas of future research that can be explored further within this burgeoning stream of literature.

Learning and Entrepreneurship

Session Moderator: **Yunjie He**, *Beijing U. of Chemical Technology*

ENT: **Entrepreneurial Learning, Digital Capabilities and Inclusive Entrepreneurial Performance**

Author: **Yunjie He**, *Beijing U. of Chemical Technology*

Author: **Kun Fu**, *Loughborough U.*

Author: **Ye Zhang**, *Beijing U. of Chemical Technology*

Studying the entrepreneurial behavior of entrepreneurs at the bottom of pyramid (BOP) is important for promoting social equity and contributing to sustainable development goals. There is a lack of empirical understanding of the factors that may influence inclusive entrepreneurial performance. Designing a questionnaire based on the Chinese context, this study examines the impact of entrepreneurial learning on inclusive entrepreneurial performance and explores the mediating role of digital capabilities. Using a sample of 409 BOP entrepreneurs, we find that (1) exploitative and exploratory entrepreneurial learning can significantly improve individual-level, organizational-level, and social-level inclusive entrepreneurial performance. (2) digital capabilities partially mediates between exploitative entrepreneurial learning and inclusive entrepreneurial performance. (3) digital capabilities partially mediates the relationship between exploratory entrepreneurial learning and individual-level and social-level entrepreneurial performance. (4) digital capabilities fully mediates between exploratory entrepreneurial learning and organizational-level entrepreneurial performance. The results of the study enriches the understanding of how entrepreneurial learning affects inclusive entrepreneurship, providing both theoretical and practical evidence.

ENT: **The Nexus Between Long-Term Orientation, Learning Capabilities and Digital Innovation**

Author: **Jonas Soluk**, *Stockholm School of Economics*

Author: **Ivan Miroshnychenko**, *IMD*

Author: **Mattias Nordqvist**, *Stockholm School of Economics*

Author: **Magnus Mahrng**, *Stockholm School of Economics*

We use a sequential mixed methods approach to explore the relationship between long-term orientation (LTO), learning capabilities, and digital product innovation in firms with varying degrees of family influence. Although extant research has emphasized the relevance of digital innovation for long-term success, little is known about how firms can draw on LTO as a prevalent dominant logic and learning capabilities to create business value. More specifically, we find empirical evidence for a mediation effect with a positive association between LTO and learning capabilities on the one hand and learning capabilities and digital product innovation on the other. Surprisingly, and in contrast to our hypothesis, we find a negative moderating effect of family influence on the relationship between LTO and learning capabilities. To complement the large-scale statistical analysis and to explain the underlying mechanisms of this counterintuitive empirical result, we build on a qualitative investigation of family-influenced firms. Our qualitative findings suggest that the role of LTO and learning capabilities in the digital economy is more nuanced than previous literature suggests. Specifically, we reveal six impeding mechanisms that are associated with family influence. With these insights, we extend previous knowledge on digital product innovation, family influence, and learning as a crucial dynamic capability.

ENT: **A Gendered View on the Impact of Different Teaching Models in Entrepreneurship Education (WITHDRAWN)**

Author: **Ilaria Cascavilla**, *U. degli Studi di Bergamo*

Author: **Tommaso Minola**, *U. of Bergamo*

Entrepreneurship Education (EE) programs have grown rapidly within and across universities to provide students with the competencies necessary to handle the challenges of today's labor market and society. There are numerous ways to teach EE, and recent literature has discovered that different teaching models actually lead to different impacts and outcomes. However, it is yet unclear how such differences are related to the individuals' socio-demographic characteristics and how the social contexts in which students are embedded influence this relationship. This research contributes to the literature by investigating how the students' gender and the gender of self-employed parents (where existing) affect the outcomes of EE. Using a sample of 366 Italian students from 42 different courses in 16 universities that attended EE courses and answered the Italian GUESSS 2018, we find that being woman tends to reduce learning in general and, surprisingly, in more practice-oriented teaching models; we also find that such pattern is inverted (i.e., being a woman tends to increase learning, especially from practice-oriented teaching models) when women have only a self-employed mother and not a self-employed father.

ENT: **Entrepreneurial Learning in the Resource Mobilization Process**

Author: **You Wu**, *Chinese U. of Hong Kong*

Author: **Song Wang**, *Zhejiang U.*

Resource mobilization is crucial, yet challenging, for early-stage ventures. While numerous studies have concentrated on the antecedents or outcomes of resource mobilization, the process, especially the interactions between entrepreneurs and investors during early-stage financing, remains less explored. By utilizing data from an online platform that documents the communications between entrepreneurs and early-stage investors, we discover that learning plays a significant role in the resource mobilization process. We hypothesize that this learning effect is more pronounced for entrepreneurs without a degree from a top university and entrepreneurs without serial startup experience. We further examine the learning mechanism through two mediators: the constructive feedback received by entrepreneurs (the input of learning), and the revisions of business plans (the output of learning). We find empirical support from a proprietary dataset consisting of 780,904 business plan submissions from 9,418 entrepreneurial projects. Our study contributes to entrepreneurial resource mobilization literature by elucidating entrepreneurial learning through resource mobilization attempts. Furthermore, it provides practical implications for entrepreneurs to not just focus on raising money but also to reap the learning benefits from their interactions with investors.

Family Firms III

Session Moderator: **Rosalie Schwörer**, *Vrije U. Amsterdam*

ENT: The Role of Family Dynamics on Transition Processes in Family Firms

Author: **Rosalie Schwörer**, *Vrije U. Amsterdam*
Author: **Elco Van Burg**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Janina Klein**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Jörg Büechl**, *U. Aalen*

In a qualitative study of 16 family firms in Germany, we examine four family dynamics, namely cohesion of extended families, multiple involved family members, predecessor-successor-relationship, and parents and partner influence. 31 semi-structured interviews with predecessor and successor CEOs identified that the family dynamics have different influences on four major transition mechanisms, namely control, knowledge transfer, harboring, and emotional alignment that lead to two outcomes, heritage maintenance and transformation. Our findings are encapsulated in a family dynamic-transition-outcome model.

ENT: Becoming a Successor in a Family Firm: The Critical Role of Institutional Context

Author: **Peng Ren**, *U. of Louisville*
Author: **Isabel C. Botero**, *U. of Louisville*
Author: **Daniel L. Bennett**, *U. of Louisville*
Author: **Stephan F. Gohmann**, *U. of Louisville*

This study explores how individual factors (i.e., internal locus of control and entrepreneurial self-efficacy) and institutional components (i.e., economic freedom that represents formal institutions and individualism that represents informal institutions) combine to predict the intentions of family business successors to join the family firm. We merge data from a variety of individual-level and country-level datasets to test our hypotheses. Results from a multilevel multinomial logistic regression analysis indicate that individual and institutional factors influence the career intentions of university students with family business background. Specifically, high self-efficacy students living in high economic freedom or highly individualistic countries are, relative to low self-efficacy students, (a) less likely to prefer employment to family business succession and (b) more likely to prefer founding a new venture to succession. However, the locus of control and career intentions relationship is not contingent on these institutional factors. Implications are discussed.

ENT: How Do You Feel? A Systematic Review on Affect in Family Business Research

Author: **Jiani Fan**, *U. of Alabama, Tuscaloosa*

Emotion research in family business remains relatively scarce and fragmented. To enhance the knowledge base of emotion research in family business, the current systematic literature review summarized the commonly studied contexts, theoretical framework development and emotion variables under different themes in the literature. Ninety-one peer-reviewed journal articles retrieved from high-quality journals from four different databases were coded and analyzed for emotion-related evidence. Results revealed the lack of research utilizing theoretical frameworks other than socioemotional wealth. The current review also identified the limited study context exploration and insufficient evidence on negative affect as well as antecedents and outcomes of both discrete emotions and affect valence. The current review contributes to the literature by improving the specificity of emotion research in family business and providing a comparison of emotions studied between family business literature and entrepreneurship literature. Future research can focus on specifying emotion-related research purposes, extending the investigation of emotion-related themes, and reexamining existing emotion-related constructs.

ENT: Why Being Good Matters: The Impact of CSR and Family Business Brand on Organizational Attractiveness

Author: **Sonia M. Strano**, *Louisiana State U.*
Author: **Tomasz Antoni Fediuk**, *Family Business Strong, LLC*
Author: **Marco Galvagno**, *U. of Catania*
Author: **Vincenzo Pisano**, *U. of Catania*

Building on Signaling Theory (Spence, 1973), this paper investigates how Corporate Social Responsibility (CSR) influences the relationship between the communication of the family business brand and organizational attractiveness. Specifically, the paper analyzes the combined effect of the family business brand and CSR on applicants' perceptions of family firms and, consequently, on organizational attractiveness. Utilizing a 2 x 2 experimental design (Communicating the family business brand: yes-no; Communication of CSR Practices: yes-no), the study tests whether CSR moderates the relationship between the communication of the family business brand and applicants' perceptions, such as compensation, advancement opportunities, prestige, and organizational justice, and examines how these perceptions impact organizational attractiveness. The results demonstrate that CSR communication acts as a moderator, significantly enhancing applicants' perceptions of compensation, advancement opportunities, and prestige. However, it is only the enhanced perception of prestige that positively affects organizational attractiveness. These findings contribute to the literature on family business branding and CSR by emphasizing organizational attractiveness from an applicant perspective.

Author: **Melania Riefolo**, *U. of Foggia*

Author: **Jan-Philipp Ahrens**, *U. of Mannheim*

This study investigates the impact of various desired attributes of succession candidates on family firm incumbent's succession intention for candidate nomination. Examining personal, relational, and processual configurations of succession candidates, we draw on survey responses from 714 family firm owner-managers. Our findings reveal that a candidate's commitment, moral character, and conformity with the incumbent's procedural visions of the succession process significantly increase the likelihood of being nominated as a successor. Our results additionally indicate that the presence of either a family or non-family candidate could amplify the impact of particular successor attributes on the incumbent's succession preferences. Notably, the presence of family candidates emphasizes the importance of a high-quality moral character, while the effect of high procedural conformity is accentuated when considering only non-family successors. This research contributes to the understanding of incumbents' decision-making in successor selection, shedding light on how individual attributes of successors shape nomination intentions. The study concludes by suggesting potential avenues for future research in this domain.

Session Moderator: **Mona Itani**, *American U. of Beirut*

ENT: **A Conflict Entrepreneurial Recovery Framework in Muslim Majority Countries**

Author: **Tamer Koburtay**, *Abu Dhabi U.*

Author: **Zaid Alqhaiwi**, *School of Management, RMIT U.*

This study offers a contextual, multilevel recovery framework for entrepreneurs in conflict areas. Drawing on a combined theoretical underpinning of Koburtay et al.'s (2022) model of well-being in Islam and Ryff's (1989) theory of eudaimonic psychological well-being (PWB), this study explores the implications of residing in conflict areas for entrepreneurs' PWB. A related aim is to study how religiosity may act as a coping mechanism for entrepreneurs in such a context. Drawing on qualitative data collected from 22 entrepreneurs residing in conflict zones (Palestine and Libya), our findings show that residing in such areas improves components of entrepreneurs' PWB (e.g., self-acceptance) and also ruins other components of their PWB (e.g., positive relations with others). The findings also suggest that religiosity (from an Islamic lens) improves entrepreneurs' PWB. The study is theoretically and contextually novel, and offers fresh insights into the interplay between religion and well-being in conflict areas.

ENT: **A Tame Nightmare: Unpacking the Curvilinear Relationship Between Constraints and Resilience**

Author: **Hao Wang**, *School of Economics and Management Tsinghua U.*

Author: **Yikai Guo**, *School of Business, Renmin U. of China*

Author: **Wenjie Bao**, *Guanghua School of Management, Peking U.*

Previous research largely indicates that resource constraints are harmful to organizational resilience in crisis and should be eliminated. In this study we draw on views from resource constraint and social psychology literature to investigate (1) whether are there potential benefits to this detrimental effect and (2) how an entrepreneur's negative affect acts as an explanatory mechanism of such effect? Specifically, we propose an inverted U-shape relationship between three types of resource constraint (constraint from supplier, buyer, and financial constraint) and resilience, such a curvilinear effect is mediated by the entrepreneur's negative affect. A study of 844 Chinese small and medium-sized enterprises in the context of Covid-19 pandemic provides support for our hypotheses except for financial constraint, which shows only half of the inverted U-shape effect (a threshold effect). Theoretical and practical implications are discussed.

ENT: **Female Entrepreneurial Resilience and Recovery in the Aftermath of the Beirut Blast**

Author: **Mona Itani**, *American U. of Beirut*

Author: **Rayan Fawaz**, *U. of Sussex*

Author: **Dima Jamali**, *Canadian U. of Dubai*

Author: **Shintaro Okazaki**, *King's College London*

The aftermath of the horrific Beirut Port Explosion in 2020 left an unprecedented amount of physical and material damage, destruction, mental trauma, and economic losses at a time when the national healthcare system and economy were already bleeding due to a parallel financial meltdown and a global pandemic. Although several studies and reports have highlighted the macro impact of the blast on the country and the economy, little attention was given to female owners of micro, small, and medium-sized businesses (MSME's) that were directly affected by the blast. When studying this underrepresented group, emphasis should not only be made to the business and its recovery but also to the entrepreneur herself, her wellbeing, and her relationship with her social surroundings, since the former is often a result of the latter. This qualitative study builds upon focus groups and in-depth interviews with over twenty women entrepreneurs who suffered directly from the blast in an attempt to come up with a framework for entrepreneurial resilience and recovery based on an integrative approach that can be applied to extreme contexts of convoluted crises. Our qualitative study showed that in extreme contexts of adversity and in the absence of governmental and external support, female entrepreneurs leverage their negative feelings of mistrust, hopelessness, and denial to rebel against the crippled system and create positive opportunities by contributing in creating a parallel support ecosystem that allows their businesses and other businesses around them to thrive and flourish.

ENT: **The Role of Career Resilience in the Stress Adjustment of Recently Started Entrepreneurs**

Author: **Ismail Elalaoui**, *UQTR*

Author: **Etienne St-Jean**, *UQTR*

Entrepreneurship is considered one of the most demanding careers, and one in which entrepreneurs must endure periods of considerable stress, threatening their well-being, commitment and future in this career. Drawing on transactional theories of stress, the career resilience literature and the Broaden and build theory, we propose that entrepreneurial career resilience can reduce the impact of entrepreneurs' perceived stress on their job satisfaction and intention to stay in entrepreneurship. We tested our model with a moderate mediation effect using a four-wave longitudinal analysis on a sample of newly-started entrepreneurs. The results showed that entrepreneurs' perceived stress exerted a significant direct negative influence on their job satisfaction, and a significant indirect negative influence on their intention to stay in entrepreneurship (by decreasing satisfaction). We also found that new entrepreneurs' career resilience positively moderated the impact of perceived stress on their job satisfaction, and that the latter fully mediated the effect of stress on intention to remain an entrepreneur. Furthermore, the results showed that the direct effect of stress on job satisfaction and the indirect effect of stress on intention to remain an entrepreneur were conditional on the level of career resilience, so that these effects were significantly weaker for entrepreneurs with high levels of resilience as opposed to those with low levels of resilience.

ENT: In the Eyes of Managers: Organizational Slack, Sensemaking, and Entrepreneurial Orientation

Author: **Naga Lakshmi Damaraju**, *Sonoma State U.*
Author: **Brian Pinkham**, *Erasmus U. Rotterdam*
Author: **Gregory G. Dess**, *U. of Texas at Dallas*
Author: **Haibin Yang**, *Chinese U. of Hong Kong*

Entrepreneurial orientation (EO) influences firm performance. Yet, our understanding of its antecedents is largely underdeveloped. In this study, we develop a theoretical framework to understand how a firm's slack resources influence managerial sensemaking for threat and opportunity interpretation, which further influence the formation of EO. Specifically, we argue that a firm's absorbed slack is more positively related to a manager's threat interpretation, while its unabsorbed slack is more positively related to a manager's opportunity interpretation. In addition, managers' threat or opportunity interpretation distinctively affects the formation of EO. Analyses of responses from Chinese firms in the semiconductor and pharmaceutical industries support our thesis.

ENT: As Above so Below? Entrepreneurial Leadership and Employees' Intrapreneurial Behavior

Author: **Lan Zhou**, *Business School of Nankai U.*
Author: **Wangbin Hu**, *Business School of Nankai U.*
Author: **Zhu Yu**, *Business School of Nankai U.*
Author: **Huichen Shang**, *Business School of Nankai U.*
Author: **Yahui Zhang**, *Shandong U. of Technology*

While previous research has underlined leadership as an effective organizational factor that promotes employees' intrapreneurial behavior (EIB), little is known about how entrepreneurial leadership influence EIB. Drawing on the social information processing theory, our theoretical model explores the direct effect of entrepreneurial leadership on EIB and the indirect effect that employees' passion for inventing in this relationship. Moreover, our moderated mediation model predicts organizational embeddedness as a boundary condition to this indirect effect. We use multi-wave survey data from 302 employees to test our model. Entrepreneurial leadership positively influences EIB, with employees' invention passion serving as a mediating factor. Organizational embeddedness not only moderates the impact of employees' invention passion on EIB but also further moderates the indirect effects of entrepreneurial leadership on EIB through employees' invention passion. The aforementioned effects are stronger when organizational embeddedness is higher. This study contributes to enriching the theoretical understanding of 'leadership-EIB' and inspires managers to stimulate EIB by adapting their leadership styles.

ENT: Innovation Loop in the Smart City: Synergies Between Talent, Urban and Economic Environment

Author: **Filippo Marchesani**, *D'Annunzio U. of Chieti-Pescara, Italy*
Author: **Francesca Masciarelli**, *G. D'Annunzio U. of Chieti-Pescara*
Author: **Quang Hung Doan**, *Foreign Trade U., Hanoi*
Author: **Rama Krishna Reddy Kummitha**, *U. of Essex Business School*

Attracting and retaining talent plays a pivotal and transformative role in driving the advancement of smart city initiatives. These initiatives, boosted by talent acquisition and incoming knowledge flow, are crucial in elevating urban innovations and a forward-looking innovative economic environment. The interplay between these factors remains the subject of ongoing scholarly discourse. This study investigates the intricate relationship between urban innovation, innovative economic growth, and talent attraction within smart cities. Focusing on the Italian context—a nation at the forefront of European smart city policies—we employ a spatial panel data approach that encompasses 30 Italian cities over 13 years (2009–2021). Our results indicate the essence of an 'innovation loop' that drives and catalyzes contemporary smart cities. The originality of this study lies in its pioneering nature, yielding tangible insights into the intricate relationship between innovation and smart city development. It offers novel implications for various stakeholders, including policymakers, urban planners, and entrepreneurs, supported by empirical evidence.

ENT: Impact of Grandiose Narcissism and Perspective-Taking on New Venture Idea Quality

Author: **Aakash Sapru**, *Iona U.*
Author: **Brandon Mueller**, *Iowa State U.*

We integrate the agency-communion model of narcissism with the narcissistic admiration and rivalry concept to underscore how communal narcissism, narcissistic admiration, and narcissistic rivalry influence new venture idea quality through their differential associations with perspective-taking. We integrate narcissistic organizational identification theory and construal level theory to explain why and how narcissistic overtones are transferred from entrepreneurs with high levels of narcissism to their venture ideas. We perform a self-replication and test our hypotheses on a sample of students and entrepreneurs and find similar patterns of results. Overall, we find that while communal narcissism positively influences perspective-taking and idea quality, narcissistic rivalry has the opposite effect.

Minorities and Diversification

Session Moderator: **Fredrick Rice**, *Morgan State U.*

ENT: **Gender Bias in the Viewership of Expressed Passion: Evidence From YouTube Contentpreneurs**

Author: **Fredrick Rice**, *Morgan State U.*

Author: **Pyayt Phyo Oo**, *U. of Texas At Arlington*

Though entrepreneurial passion has gained significant attention in recent years, very little scholarship has scholars have yet to explore how notions of gender and gendered traits impact how such passion is received. The current study integrates emotional contagious theory and gender role congruity theory to posit theoretical predictions regarding the extent to which men's and women's passion expression are differentially received by observers and how the difference is further contingent upon agentic vs. communal traits. We validate our predictions using videometric measures of passion extracted from 302 YouTube-based contentpreneurs. Capturing passion from three different sources— verbal, vocal, and facial expressions, our results reveal that passion expressed by men is more likely to receive favorable viewer responses than that expressed by women. Moreover, gender congruent modes of communication further improve favorable responses for both men and women contentpreneurs.

ENT: **Double Bind of Female Social Entrepreneurs: Role Congruity, Signaling, and Funding Outcomes**

Author: **Shubham Singh**, *Rutgers Business School*

Author: **Katy Grigg**, *Rutgers Business School*

This study examines gender-based funding disparities in social ventures, focusing specifically on challenges encountered by all-female founder-led teams seeking equity capital from venture capitalists. Anchored in Role Congruity Theory (RCT), asserting women's innate suitability for social venture leadership, the research unveils a paradox: despite RCT aligning women's traits with social entrepreneurship demands, all-female teams face discrimination in equity capital acquisition compared to all-male counterparts. Analyzing data from 15,455 social ventures across 177 countries, this study challenges RCT's expectations. It stresses female entrepreneurs must convey unique signals for equivalent credibility and investor confidence. Findings suggest all-female teams can enhance equity funding likelihood by signaling competence and maturity through a blend of economic and social cues, transcending gender bias. The study highlights the distinctive signals needed by female entrepreneurs, possibly rooted in underlying gender biases. It not only exposes limitations in RCT and existing theories but also identifies effective strategies for female founders to overcome societal gender biases, expanding the discourse on gender dynamics in entrepreneurial funding.

ENT: **Diversification as an Entrepreneurial Strategy**

Author: **David Lucas**, *Syracuse U. Whitman School of Management*

Diversification, a core focus of corporate strategy, is typically viewed as peripheral to the emergence of new ventures. But need it be so? This paper calls attention to the “born-diversified firm,” which enters multiple industries at its incorporation. Born-diversified firms are unique relative to other new firms in that they do not pursue a singular opportunity but rather the efficient recombination of activities across industries. They are also unique relative to established diversifiers: whereas corporate diversification patterns have been shown to converge toward commonly observed, “efficient” industry combinations, new ventures are known for novel combinations with the potential to redefine efficient behavior. Integrating diversification arguments with theories of imitative and innovative entrepreneurship, I hypothesize a U-shaped relationship between strategic conformity—the relative prevalence of the new venture's industry combinations among diversified incumbents—and firm dissolution: born-diversified firms can succeed in very rare industry configurations or very typical ones more so than moderately common configurations. I also suggest that this pattern will be mitigated by industry portfolio changes, which are theorized to be more likely for firms with rarer industry combinations. I find evidence for the theory in a sample of over 74,000 born-diversified private firms incorporated in the United Kingdom observed from incorporation in 2017 through mid-2023.

ENT: **Boundary Fluidity & Entrepreneurship: Space Between Insiders & Outsiders in Itinerant Communities**

Author: **Sholape Akinnawo**, *Loughborough U. London*

Author: **Geoffrey T. Wood**, *U. of Western Ontario*

This study extends theorizing on the impact of insiderness and outsiderhood on entrepreneurial activity, its commercial outcomes, and the impact on individual entrepreneurs. We study the case of the self-marginalized canalboat community (a group of spatially mobile individuals living on boats in inland waterways in the United Kingdom) whose complex relationships with wider society defy simple insider-outsider dichotomies, and which we describe as 'boundary fluidity.' This group represents an intentional, alternative lifestyle challenging societal norms, particularly regarding home ownership, occupancy, and sedentariness. By investigating the power discrepancy between the self-marginalised and local governance on entrepreneurial growth or sustainability, we aim to extend the limited literature on self-marginalized entrepreneurship and to constructively contribute to recent interest in more nuanced forms of entrepreneurship. Focusing on the case of the canalboat community and utilising a multi-method qualitative research design, we find that for self-marginalised entrepreneurs, not only is entrepreneurship seen as an emancipatory tool, but the likelihood of facing challenges such as scalability constraints and resource scarcity is greatly increased in comparison to their mainstream counterparts. Moreover, unlike in other spaces of marginalized entrepreneurship, the boundaries between insiderhood and outsiderhood are particularly fluid, where entrepreneurs are willing to adjust their strategies to appeal to both insiders and outsiders, based on entrepreneurial goals.

Framing and Deception: Implications for Entrepreneurship and Innovation

Session Chair: **Yuliya Snihur**, *IESE Business School*
Session Chair: **Raghu Garud**, *Pennsylvania State U.*
Session Chair: **Nelson Phillips**, *U. of California, Santa Barbara*
Session Chair: **Llewellyn D W Thomas**, *IESE Business School*
Panelist: **Shahzad Ansari**, *U. of Cambridge*
Panelist: **Gino Cattani**, *New York U.*
Panelist: **Simone Ferriani**, *U. of Bologna*
Panelist: **Greg Fisher**, *Indiana U.*
Panelist: **Pinar Ozcan**, *Oxford U., Saïd Business School*
Panelist: **Tim Weiss**, *Imperial College London*

Building on Goffman's (1959) foundational work, framing refers to the use of rhetorical devices by entrepreneurs and innovators to construct meaning around their novel endeavors and to influence audience engagement by focusing attention on selected salient features of their ventures. It is through framing that entrepreneurs and innovators gain and maintain legitimacy from audiences for their endeavors. However, most studies focus on framing novel ventures in the best possible light without deception, stopping short of investigating how framing can lead to deception when envisioning, enacting, and hyping the future. This panel symposium will bring together scholars studying sometimes deceptive practices by entrepreneurs and innovators, including legitimacy lies, misrepresentations, fabrications, and fraud with the intention to: (a) develop a common future research agenda, (b) generate new conversations on framing processes and their consequences in terms of deception, legitimacy loss, and societal impact, and (c) consider opportunities for empirical research in terms of settings and methods.

HCM: New Product Development Process of Frugal Innovations in Healthcare

Author: **Yasser A. Bhatti**, *Prince Mohammad Bin Salman College of Business & Entrepreneurship - MBSC*
Author: **Ibtehal Attaelmanan**, *Imperial College London*

New product development (NPD) has long been recognized as a critical capability of firms to develop products and services for competitive advantage. While there is much understanding of the NPD process, its application in understanding the product development process of emerging trends in innovation, such as low cost or frugal innovations is limited and as related to healthcare sector is even more limited. Through qualitative research methods we studied 11 cases of frugal innovations in surgery and explored their product development process. We compared our findings to the generic NPD process to highlight aspects deemed different or more important in frugal innovation. We found five key factors deemed influential to the development process for frugal innovations: Need, quality, feedback, multidisciplinary teams, and especially the role of existing offerings and found that these were iteratively applied throughout rather than in sequence. To leverage potential of low cost frugal innovations and remain competitive in the face of rising pressures on cost, quality and growing demand, managers and developers should consider adapting and revisiting their NPD process. This research helps extend our understanding of the applicability of NPD to emerging models in innovation studies and proposes a revised framework of NPD for frugal innovations in healthcare.

HCM: Service Line Changes at Target Hospitals Following Acquisitions by Multihospital Systems

Author: **Huseyin Tanriverdi**, *U. of Texas at Austin*
Author: **Xiaoxuan Yang**, *U. of Texas at Austin*
Author: **Nitya Prakash**, *The U. of Texas at Austin*
Author: **Sarah Lalani**, *The U. of Texas at Austin*

The surge in hospital closures and service eliminations negatively affect hospitals' mission to provide life-saving services to patients. Financially struggling hospitals become acquisition targets for large multihospital systems (MHSs). Acquisitions promise to return the struggling targets to financial stability, but they also threaten to reduce services and restrict patients' access to hospital services. Some MHSs avoid such negative outcomes and even expand the targets' service lines, while others opt to shut down or consolidate the service lines. There is a shortage of research on which MHS and target characteristics affect such decisions. We hypothesize that the target's service digitization level and the MHS's enterprise-wide information technology (IT) and analytics platforms affect whether the target's services are eliminated, expanded, or consolidated after a merger and acquisition (M&A) deal. We tested the hypotheses in a sample of 688 target hospitals acquired by 209 MHSs during the period between 2007 and 2018 using a generalized difference-in-differences strategy and the coarsened exact matching method. We found that the target's digitization level interacts with the MHS's analytics and IT platforms to jointly determine how service lines are changed at the target following the M&A transaction. Contrary to the extant assumptions, the target's rural/urban status, financial performance, and service similarity with the MHS do not affect the service elimination, expansion, or consolidation outcomes. To achieve the financial goals of the M&A deal without compromising patients' access to services, hospitals need to promote service digitization whereas MHSs need to create enterprise-wide IT and analytics platforms.

HCM: Using Argyris' Ladder of Inference to Understand Caregiver Attitudes Toward a Clinical Technology

Author: **Theadora Sakata**, *Intermountain HealthCare*
Author: **Esther Olsen**, *Stanford U.*
Author: **Roger Bohn**, -
Author: **Sara Singer**, *Stanford U.*

Workers often have mixed attitudes toward new technologies they interact with, especially when the full effects of a technology take time to become clear. We conducted semi-structured qualitative interviews of clinicians and managers from the intensive care units of a large academic medical center. We used Argyris' Ladder of Inference, a model well established in organizational behavior theory but rarely applied in healthcare systems, to understand differences in their perspectives around a new patient positioning technology. We identified two main ladders: one which inferred the technology supports helpful processes such as quality improvement, and another which inferred it leads to tampering and individual workarounds. Ladders of inference helped organize contrasting attitudes toward the technology and provided insights about how technologies and the people who use them should be managed.

HCM: Individual and Collective Improvisation in Healthcare: A Multilevel Approach

Author: **Zhanna Novikov**, *UTHealth School of Public Health*
Author: **Wiljeana Jackson Glover**, *Babson College*
Author: **Esther Olsen**, *Stanford U.*
Author: **Sara Singer**, *Stanford U.*

Despite decades of acknowledging improvisation's importance for organizational adaptability, its full potential remains unrecognized. Consequently, many organizations, particularly in healthcare, hesitate to actively promote improvisation. This hesitation comes from a gap in research, which has considered individual and group improvisation separately but not how they connect or how they benefit organizations' work. To address this gap, we conducted a qualitative study involving interviews with nurses, doctors, and administrative staff in clinical departments in two US-based healthcare systems during the COVID-19 pandemic. We identified four improvisation patterns: individual, collective, continuum (starting as individual and transitioning to collective), and mutually enabling (shifting between individual and collective improvisation). These patterns are predicted by a variety of task characteristics, individual traits, and contextual factors, and lead to diverse outcomes in healthcare settings. Through a comparison of predictors, processes, and outcomes between individual and collective improvisation patterns, our study enriches improvisation theory and informs effective improvisation within organizations.

What Does it Mean to “Perform”? Insights from a Changing Workplace

Session Moderator: **Debjani Ghosh**, *Robert Vackar college of Business and Entrepreneurship*

HR: **Stuck but Energized: How Thriving Explains the Job Embeddedness and Performance Link**   

Author: **Kohyar Kiazad**, *Monash U.*

Author: **Brian R. Cooper**, *Monash U.*

Author: **Debjani Ghosh**, *Robert Vackar college of Business and Entrepreneurship*

Author: **Tracey Shea**, *Monash Business School*

Integrating job embeddedness (JE) and conservation of resources (COR) theories, the present study tested a moderated-mediation framework, in which thriving mediates the positive relationship of JE with work behaviors more strongly for employees whose families are also embedded in the organization. Time-lagged data from 340 employees and their immediate supervisors ($n = 112$) shows that thriving mediates the positive relationship of JE with job performance, but this indirect effect is stronger for employees whose families are less embedded in the organization, suggesting negative family influence. The present findings are nevertheless noteworthy because they establish important psychological health benefits associated with JE, clarify how thriving is an alternative mechanism through which JE positively influences job performance, and promote understanding of the intersection of work and family in the context of JE. Specific implications of these findings for theory and practice are discussed.

HR: **The Network of Goals: How Objectives and Key Results Shape Job Performance** 

Author: **Yue Yuan**, *U. of Hong Kong*

Author: **Shuning Liu**, *U. of Hong Kong*

Author: **Helen Hailin Zhao**, *U. of Hong Kong*

Objectives and Key Results (OKRs) have gained popularity in human resource management practices, as they effectively align and coordinate employee goals in organizations via digital dashboards. While goal-setting theory has established the effects of goal specificity and goal difficulty on performance, it falls short in addressing the influence of goal interdependence among organizational members on job performance. In the context of OKRs, the goals set by all organizational members are linked together in a large goal network that is accessible to all. The study of OKRs can advance the goal-setting theory by introducing a network approach to examine goal interdependence. We found that both goal specificity and difficulty positively influence job performance, aligning with goal setting theory. We further found that these positive effects are significantly amplified when they are better connected with other OKRs (high goal centrality) within the organization and when OKRs are positioned closer to the OKRs set by members in higher organizational hierarchy (high goal proximity). Our findings highlight the importance of considering interdependent goals within a network and underscore the pivotal role of the network location of goals in shaping job performance.

HR: **Time Flies at Work: How Work Design Shapes the Experienced Passage of Time**

Author: **Helen Hailin Zhao**, *U. of Hong Kong*

Author: **Yue Yuan**, *U. of Hong Kong*

Author: **Chen Zhang**, *Tsinghua U.*

Author: **Zhiming Wu**, *School of Economics and Management Tsinghua U.*

The experienced passage of time—how quickly or slowly time seems to pass compared to normal—is a fundamental aspect of work experience. It remains less understood what kind of work characteristics result in faster or slower experienced passage of time. This omission is critical as the experienced passage of time carries important hedonic and productivity implications. Work design affects the allocation of an individual's attentional resources, thereby speeding up or slowing down the experienced passage of time. Through a survey study (Study 1) and three experimental studies (Study 2), our findings suggest that work characteristics (autonomy, complexity, and interdependence) and experienced passage of time exhibit an inverted U-shaped relationship. Specifically, Study 1 supported the inverted U-shaped relationship of complexity, while Study 2 replicated this finding and further supported the inverted U-shaped relationships of autonomy and interdependence. Works that are excessively complex or overly simplistic, too autonomous or overly constrained, or too interdependent or overly independent slow down the experienced passage of time, ultimately reducing job performance and well-being. These findings advance our understanding of subjective time in organizational contexts and expand work design research from a temporal perspective.

HR: **Beyond Performance Level: The Effect of Individual Pay-for-Performance on Performance Variation** 

Author: **Xueqing Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Michael Sturman**, *Rutgers U.*

Author: **Tae-Youn Park**, *SKK Business School*

Author: **Eric (Shaoxue) Wu**, *Beijing Jiaotong U.*

Performance variation, which refers to the extent to which one's performance deviates from its overall level and trend, has been a crucial but long ignored aspect of employees' dynamic performance profile. In this study, we propose a theoretical model that relates a compensation practice—individual pay-for-performance (PFP) intensity (i.e., marginal gains in pay employees derive from increased individual performance)—to the variation of employee performance. We examined how individual PFP intensity is associated with employee performance variation as well as how the association between individual PFP intensity and employee performance variation varies by employees' job experience and organizational position. To test the theoretical model, we collected longitudinal data from 1,056 individuals over 12 months (a total of 11,566 observations) at a commercial bank in China. The main results of this study reveal a significant negative effect of individual PFP intensity on performance variation, which was stronger among employees who rank higher in the organization. We discuss the implications for theory and practice on dynamic performance and compensation and offer future research directions.

Career Pathways: Navigating Leadership and Management Challenges

Session Moderator: **Zhonghao Wang**, *U. of Houston - Downtown*

HR: **A Tale of Two Targets: A New Framework of Job Crafting**

Author: **Zhonghao Wang**, *U. of Houston - Downtown*

Attention to job crafting, a form of redesigning work features through employees' self-initiated changes, has greatly increased among management researchers and practitioners over the past decade. As the term may suggest, it is commonly assumed that job crafting targets at the job. However, this assumption could be flawed, as some crafting behaviors directly change the individual crafter instead of the job. Failure to consider this possibility would lead to an insufficient understanding of the utility of job crafting. To advance the theories of job crafting, this research proposes a new framework of self-oriented crafting and job-oriented crafting that distinguish two different targets of impact. In two empirical studies, this research found initial evidence supporting the validity of self-oriented crafting and job-oriented crafting. Moreover, the two new types of job crafting were found to have differential predictors (i.e., affective commitment to organization versus task-contingent conscientiousness), outcomes (i.e., counterproductive work behavior versus task performance), and boundary conditions (i.e., supervisor emotional support versus instrumental support). Theoretical implications, recommendations for management practices, and future research directions are discussed.

HR: **Peeking into the Era of AI-Human Resources Management: An Optimal Distinctiveness Perspective**

Author: **Bilian Lin**, *U. at Albany, State U. of New York*

Author: **Dong Liu**, *Georgia Institute of Technology*

Author: **Ryan Shuwei Hsu**, *Department of Business Administration, National Chengchi U.*

Author: **Li Zhu**, *Peking U.*

Author: **Aichia Chuang**, *U. of North Carolina, Greensboro*

Author: **Yu Yang**, *Central U. of Finance and Economics, Beijing, China*

AI-human interactions have become increasingly prevalent in organizations during the era of digital advancement. Drawing on the Optimal Distinctiveness Theory, this research focuses on identifying and testing AI-HRM inclusion and distinctiveness practices. We explore how the interaction effect of AI-HRM inclusion and distinctiveness practices positively impacts human employees' creativity through their collaboration and competition with AI applications. In Study 1, we develop and validate a scale for each of the two practices by conducting a qualitative study with 36 participants in Taiwan and a survey for exploratory factor analysis (EFA) among 340 employees in the U.S. Study 2 involves testing a theoretical model related to the two AI-HRM practices using a survey method with 3,686 participants from China. The findings reveal that AI-human inclusion practices enhance collaboration and competition between human employees and AI, thereby fostering creativity. Additionally, AI-human distinctiveness practices strengthen the positive relationship between AI-human inclusion practices and human employees' competition with AI. Overall, AI-human inclusion practices facilitate human employees' creativity through their collaborative and competitive interactions with AI. This research represents a significant advancement in transforming traditional HRM approaches into AI-HRM practices, highlighting an enduring trend in this era of intelligence: the partnership between humans and artificial intelligence is poised to unleash a stronger synergy.

HR: **How Does Nonstandard Work Schedule Affect Turnover Intention?**

Author: **Xiaoxiao Gao**, *China Center for Special Economic Zone Research, Shenzhen U.*

Author: **Lei Lu**, *Peking U.*

Nonstandard work schedules are a general trend, but they will also affect employees' normal social life. This study draws on the job demand-resource model and the need to belong theory to explore the impact of nonstandard work schedules on employee turnover intention, focusing on the mediating role of employees' fear of missing out, the moderating role of need to belong, and the second-order moderating role of perceived organizational support. A three-stage time-lag research design was used to collect 413 valid responses from Chinese employees. Hypothesized relationships were tested using the PROCESS macro in SPSS. The results show that there is a positive relationship between nonstandard work schedules and employee turnover intention. Furthermore, fear of missing out can mediate the relationship between nonstandard work schedules and turnover intention, while need to belong can moderate this moderating effect. Perceived organizational support can mitigate this effect. This study not only demonstrates the impact of nonstandard work schedules on employees' turnover intentions, but also proves the importance of employees' psychological needs and provides an important basis for organizations to meet employee needs and reduce turnover rates.

HR: **Transitioning Leader – Critical Effects of Contextual Factors on Leader Competency Development**

Author: **Kalpna Perungudi Srinivasan**, *XLRI-Xavier School of Management, Jamshedpur, India*

Leader development theories are sparse and have seldom studied the sustainability of leader skill development, given development can result in either positive or negative outcomes. We argue that studying transitioning experiences provides us insight into early career challenges that leaders face and thereby allows for assessing the effect of the complex interplay of individual and contextual factors on leader development. We examine whether and, if so, how developmental challenges can help create sustainable leader end-state competencies given conditional roles played by the factors. The nature of our inquiry allows us to use a composite-based SEM method, such as partial least square SEM (PLS-SEM), to test our theory. We find that developmental challenges impact leader development positively through leader's self and means efficacy, and this effect is further influenced by the level of job autonomy that the transitioning leader perceives, leading to positive development in leader end-state competencies. Our theory, therefore, lends to future research and practitioners the importance of leader efficacies in its three aggregate forms. It also emphatically signifies the need for perceived job autonomy as a facilitator to the developmental process of transitioning leaders.

Presenter: **Truit Gray**, *Bowling Green State U.*

Discussant: **Amy L. Kristof-Brown**, *U. of Iowa*

Despite the commonality of misfit experiences at work and the negative implications they have for both employees and employers, the field still has a limited understanding of how misfit emerges, how employees avoid and/or cope with misfit, what attitudinal and behavioral outcomes are associated with misfit, and what organizations can do to effectively manage misfit. In this symposium, we deepen our understanding of this complex phenomenon through four research presentations that adopt different theoretical perspectives, employ a variety of study designs (e.g., qualitative, experimental, and multisource and multiwave field studies), and utilize an array of analytic methods (e.g., polynomial regression and response surface modeling) to explore the topic of misfit. Featured research explores how we can diagnose, prevent, and even benefit from misfit experiences and contains valuable insights for both researchers and practitioners on how to effectively navigate misfit at work.

Navigating New Frontiers: Evolving Dynamics of Newcomer Socialization in the New Age

Discussant: **Talya N. Bauer**, *Portland State U.*
Organizer: **Songqi Liu**, *National Science Foundation*
Organizer: **Ying Wu**, *U. of Illinois Chicago*

Considering important trends in organizational contexts (e.g., remote work becoming more prevalent and integrating artificial intelligence [AI] into workplace processes), traditional methods of newcomer socialization are being challenged and re-evaluated. In an era marked by rapid technological advancements and shifting work paradigms, the process of newcomer socialization in organizations has become increasingly complex and multifaceted. Additionally, the profile of newcomers has evolved; they were once perceived primarily as undistinctive and embedded, but now display much heterogeneity in attributes and social relations. Moreover, with the increased fluidity of careers in the lifespan, it becomes more common for older and/or more experienced individuals to become organizational newcomers, challenging traditional models of socialization, which tend to overlook what newcomers bring to the workplace (good or bad) beyond their education. Further, high-status employees are increasingly transient, leading to a rise in high-status newcomers within organizations. Overall, this symposium serves as a critical platform for discussing and dissecting these emerging trends, offering a unique opportunity for scholars, practitioners, and organizational leaders to gain insights into the challenges and opportunities presented by the new work arrangements. Bringing together the latest empirical studies from leading experts and early career scholars helps create a bridge between cutting-edge academic insights and real-world organizational practices. This symposium not only disseminates new findings in newcomer socialization but also encourages a dialogue between researchers and practitioners. Such interactions are vital for ensuring that theoretical advancements are grounded in practical realities and that the pressing challenges faced by organizations inform research agendas.

Navigating the Intended and Unintended Consequences of Compensation Strategies in Organizations

Organizer: **Saehee Kang**, *Florida State U.*
Organizer: **Yea Hee Ko**, *Binghamton U.-State U. of New York*
Discussant: **Barry Gerhart**, *U. of Wisconsin, Madison*

Compensation is a pivotal organizational decision that can significantly influence competitive advantage. It has long been recognized as a fundamental tool to motivate managers and employees to engage in desired role behaviors. In practice, however, these compensation strategies often extend their influence far beyond targeted behaviors and outcomes and can have unintended consequences on the organization. Evaluating the full range of its intended and unintended effects is critical to leveraging compensation as an effective tool for organizational success. This symposium is designed to delve deeply into these multifaceted impacts, specifically examining how compensation shapes organizational members' attitudes, behaviors, and collective outcomes in expected and unexpected ways.

Diversity, Equality, Inclusion in Management Education

Session Moderator: **Theano Lianidou**, *Richmond American U. London*

MED: **Understanding Female Learner Reactions to Case Studies Portraying Female Leaders** ✈️ 🙌

Author: **Theano Lianidou**, *Richmond American U. London*

Author: **S Nazli Wasti**, *Middle East Technical U. (ODTU)*

Author: **Peter G Dominick**, *Stevens Institute of Technology*

A relatively recent development in management education is case studies portraying female leaders. To gain a better understanding of how female learners react to such case studies, we conducted two qualitative studies: Study 1 used the reactions of three female US university students (learners) towards thirteen case studies. Study 2 used the reactions of five American and five Turkish female learners towards four of the thirteen case studies of Study 1. Both studies showed that case studies with female leader protagonists help female learners to see themselves as leaders (identity work), provide lessons about leadership in general and leadership as a female leader, and increase sensitivity to gender- and race-related discrimination. However, the strength of these effects depends on the case study's narrative and the learner's culture and individual characteristics.

MED: **Antecedents of Perceived Learning: Role of Contextual Support, Learning Self-Efficacy and Race** 📖 🧘 🗨️ 🖥️ 🙌

Author: **Barjinder Singh**, *Elon U.*

Author: **Stephanie Thomas Solansky**, *Texas State U.*

Author: **Donna Y. Stringer**, *U. of Houston, Clear Lake*

Previous research on student learning has focused on teaching strategies as precursors of student learning, while the role played by the learning environment as an antecedent of perceived learning has been neglected. Also, the role of psychological mechanisms that underlie the relationship between contextual environmental antecedents and student learning has not been adequately examined. Drawing on the conservation of resources theory, we hypothesize that contextual support antecedents are associated with student learning and learning self-efficacy mediates this relationship. Furthermore, we propose that race moderates the first stage of the mediation, whereby the relationships between contextual support resources and learning self-efficacy are stronger for students of color. Results, which are based on a survey of management students from a business school of a large Midwestern university, reveal that the relationships between contextual support and perceived learning are indeed mediated by learning self-efficacy. We also found support for race-moderated contextual support – learning self-efficacy relationships. For the efficient management of diversity and to enhance management learning experiences within higher educational institutions, research and practical implications are also discussed.

MED: **Beyond Reasonable Doubt: Reclaiming and Supporting Lived Uncertainty for a More Human MLE**

Author: **Amanda Hay**, *Nottingham Trent U.*

Author: **Sarah Robinson**, *U. of Glasgow*

Our paper contributes to moves to humanize the business school by challenging the denial of the human emotion of doubt as an integral aspect of learning. Adopting a Freirean lens on humanization, we seek to understand business academics' experiences of doubt as a starting point to enhance future learning possibilities for ourselves and our students. We draw on 30 semi-structured interviews with academics across the globe to offer two contributions. First, we offer thick descriptions of academics' experiences of doubt which enable us to begin to reclaim it and recover who we are as unfinished and questioning human beings. Second, our analysis of doubt extends Freire's discussions of humanization by deepening understandings of its emotional aspects. Building on Spicer's (2021) conceptualization of doubt as a 'double edged sword', we show how in the neoliberal business school context, since doubt is experienced as 'beyond reasonable', its capacity to cut often endangers its capacity to sharpen so fundamental to learning. Our implications, consider both how educators' doubt can be better supported through collective and structural solutions, and how if proclaimed, this can be mobilized in the classroom with our students to imagine a more human and, perhaps more purposeful, management education.

MED: **The Role of Universities in Creating a More Inclusive Society (WITHDRAWN)** 🖥️

Author: **Rita Nascimento**, *NOVA School of Business and Economics*

Author: **Anne-Laure Fayard**, *NOVA School of Business and Economics*

Author: **Filipa Lancaster**, *NOVA School of Business and Economics*

The inclusion of people with disabilities is a critical societal challenge that needs more than conventional inclusion methods such as quotas and positive discrimination. Drawing on a 16-month qualitative study of an extra-curricular program bringing together business school students and youth with disabilities to work together to prepare to enter the job market, we show how business schools, and universities more broadly, can move past these methods and contribute to lasting transformations in the values and behaviors of their students. Our analysis explores the three practices used by the program organizers – leveling boundaries between the two groups, creating a spatio-temporal rhythm, and engaging all stakeholders. We found that the program not only helped students develop a more inclusive mindset, but also challenged all participants' perception of inclusion as a binary concept, with rigid boundaries between "abled" and "disabled" individuals. We contribute to the pieces of literature on education for sustainability and inclusion, shedding light on effective practices for fostering inclusive societies within higher education institutions. Our findings encourage a broader discourse on the role of universities in societal transformation and inclusive education, providing insights for academia, practitioners, and policymakers alike.

Leadership Evolution: A Workshop on Reconceptualizing Effective Leadership for Success

Facilitator: **Rebecca J. Reichard**, *Claremont Graduate U.*
Facilitator: **Timothy Raider Smith**, *Claremont Graduate U.*
Facilitator: **Challie Frostick**, *Claremont Graduate U.*
Facilitator: **Luke DeCoste**, *Claremont Graduate U.*
Facilitator: **Kristine Powers**, *Claremont Graduate U.*
Facilitator: **Daniel Smith**, *Claremont Graduate U.*

This workshop provides participants with an evidence-based reconceptualization of effective leadership. Participants will learn about various channels of communications, fostering strong connections and creating positive contexts, balanced decision-making, gaining commitment from followers, and identifying the reasons why one leads. Components of the workshop include an online self-assessment and feedback report, lecture, active learning activities, and facilitated small group discussion. Participants will leave the workshop with a greater understanding of their leadership strengths and weaknesses and three SMART action strategies to implement in their personal leader development plan.

Attendees are required to complete a 20-minute online leadership self- assessment prior to the workshop. As we will be working with your results during the session, attendees must have access to their personalized report during the workshop. To complete the complementary self-assessment, follow these instructions and email LeAD360@cgu.edu with any questions.

The self-assessment can be accessed at the link below: <https://tinyurl.com/3zmn9ha6>

Click on the orange reserve a spot button
Enter the promo code: AOM6P2024 Hit apply and you'll be able to purchase the LeADself Assessment only for free.

Panelist: **Nina Granqvist**, *Aalto U.*
Panelist: **Stine Grodal**, *Northeastern U.*
Panelist: **Christi Lockwood**, *U. of Virginia - McIntire School of Commerce*

This panel symposium aims to advance research on market categories and categorization by highlighting the role of heterogeneity and interplay among market participants. Specifically, we explore how both the actors' and audiences' heterogeneity and their interactions may influence evaluation outcomes and shape category dynamics. In doing so, we extend the scope of category studies by engaging recent scholarship in cultural entrepreneurship and social evaluations. This symposium brings together a group of six scholars, comprising five panelists and a distinguished discussant, renowned for their expertise in this area. They will provide profound insights into the implications of actor and audience heterogeneity for our understanding of categories and categorization. Our goal is to underscore the dynamic aspect and inherent heterogeneity among market participants in categories research, explore different methodological approaches, and consider new directions for future work in this area of study.

Presenter: **Amit Nigam**, *City, U. of London*
Presenter: **Charitini Stavropoulou**, *City, U. of London*

Framed from a perspective of inhabited institutionalism, this symposium brings together four empirical studies situated in the healthcare field that advance understanding of how actors use power and engage in political work to construct, maintain, and change institutions. These studies reveal new insights concerning actor interactions within institutionalized settings that provide important avenues for developing theory that can inform healthcare practice. Discussion of the presentations collectively will help to advance these novel approaches.

Enacting Organizational Paradoxes: Performances, Sociomaterialities, Dialectics, and Power

Participant: **Gail T. Fairhurst**, *U. of Cincinnati*

Participant: **Linda L. Putnam**, *U. of California, Santa Barbara*

Participant: **Rebecca Bednarek**, *Victoria Management School*

Participant: **Tim Hargrave**, *Central Washington U.*

Participant: **Tim Kuhn**, *U. of Colorado, Boulder*

Participant: **DaJung Woo**, *Rutgers U., New Brunswick*

This panel addresses a performative view of organizational paradoxes. Panel participants will address two central issues: #1: How should we study the sociomaterial in the enactment of organizational paradoxes? What is the role of dialectics in this process? How can we focus on temporal flows and multiple tensions in enacting paradoxes? How can paradox researchers embrace power as ubiquitous and pervasive in tensional performances? #2: How can we help organizations and organizational members become aware of and develop effective repertoires or sets of responses for acting in the midst of paradoxes? How can organizations experiment with and acquire response sets after previously failed attempts in reacting to paradoxes?

Sustainability Transitions: Policy Impacts and Organizational Adaptations

Session Moderator: **Quanling Cai**, *Tianjin U.*

ONE: **A Group Study of Employment Levels in Low-Carbon Pilot Cities: Complex Configuration Perspective**

Author: **Quanling Cai**, *Tianjin U.*

This study employs a dynamic fuzzy-set qualitative comparative analysis (fsQCA) approach using panel data from 121 low-carbon pilot cities in China during the period of 2007 to 2019. Rooted in complex systems theory and the triple bottom line framework (Economy-Society-Environment), the study aims to investigate the optimal allocation of resources to influence the governance performance of regional employment. The investigation reveals several significant findings. Firstly, following the implementation of China's low-carbon pilot policies, there is an observable decline in employment levels in the short term. However, over the long term, these policies have limited impact on overall employment figures while demonstrating a notable effect on high-level urban wages. Secondly, pronounced disparities in employment levels are observed among China's low-carbon pilot cities, which can be attributed to uneven spatial distribution influenced by population sizes and economic development levels across regions. Lastly, the research identifies four distinct development models for low-carbon pilot cities: human resources-driven model, energy transition-driven model, industrial cluster-driven model, and comprehensive factor-driven model. These models present opportunities for both low-carbon urban development and improved employment levels. The research findings offer valuable insights into governance strategies for China's low-carbon pilot cities, facilitating context-specific promotion of local low-carbon urban development and enhancing employment opportunities.

ONE: **Greenhoused Organizations: Climate Information and the Transformation of Corporate Sustainability**

Author: **Janna Huang**, *UC Berkeley*

Demands for institutional accountability have hinged on quantification, such as accounting and rankings, to shine a light into organizational behavior. In the crucible of climate change driven by the corporate sector, information-driven governance regimes have extended into climate governance for corporations. This paper charts the transformation of corporate sustainability in response to emerging global regulatory mandates for the disclosure of climate information. I draw on 53 interviews with sustainability professionals working in corporate climate disclosure and 15 months of participant observation of the world's largest climate disclosure platform (the Carbon Disclosure Project). In efforts to measure and lower greenhouse gas emissions, climate information yields "greenhoused organizations" in which corporate sustainability practices are increasingly illuminated through pressures to quantify and disclose sustainability metrics, but collecting data alone does not ultimately effect much change to lower global temperatures. This simultaneous dynamic between transformation and stasis occurs via two data-driven mechanisms: 1) metrification – whereby organizational processes are recast into sustainability metrics; and 2) fixation – whereby organizational change fixates on sustainability metrics alone as a proxy for accountability for climate change. The greenhoused organization is both disciplined, transforming organizational processes around the collection of sustainability data, and also decoupled, fixating on data collection rather than substantively lowering emissions.

ONE: **Gold or Green Finger: Government Influence in Venture Capital Investments and Green Innovations**

Author: **Xiaomin Fan**, *Nanjing U. of Science and Technology*

The potential market failure of insufficient investment from private venture capital firms creates a rationale for the establishment and development of governmental venture capital firms. However, the effectiveness of governmental venture capital on the environmental performances of the funded firms is largely ignored. Based on resource dependency theory, our study sheds light on the government's influence in venture capital investments on funded firms' green innovations. Using the context of the energy-intensive sectors in China, we adopt a staggered difference-in-difference approach and find target firms funded by government-supported venture capital firms are associated with a lower percentage of green innovations than those funded by private venture capital firms. Meanwhile, as the government level gets higher, the province is less marketized, and the difference will be strengthened. Our study extends prior literature on the resource dependency theory from the perspective of governmental intervention and adds evidence to the venture capital literature in different ways. This study yields important strategy and policy implications.

ONE: **Policy Framework and Cleantech Entrepreneurship in Europe: A Machine Learning Approach**

Author: **Annalisa Croce**, *Politecnico di Milano School of Management*

Author: **Laura Toschi**, *U. of Bologna*

Author: **Elisa Ughetto**, *Politecnico di Torino*

Author: **Sara Zanni**, *Alma Mater Studiorum U. di Bologna*

The pursuit of a sustainable and clean energy future has emerged as a paramount global imperative of the 21st century. Achieving this transition is a multifaceted and complex endeavour that requires a harmonious interplay of factors: effective policy frameworks, cleantech firms, and the transformative power of data science. By focusing on the European context, this paper advances the field in several directions. First, it explores the use of machine learning (ML) techniques to identify cleantech firms by analysing their mission statements and addressing the weaknesses of the existing methods. Second, it collects a unique and comprehensive dataset of national-level policies addressing the different topics covered by the European Green Deal. Third, in a regression analysis at country level, it examines the interplay between the national regulatory framework and the birth and growth of the cleantech landscape, by distinguishing between innovators (firms which develop the cleantech) and ecosystem firms (which adopt the cleantech). Our results indicate that the introduction of policies favours by itself the birth of cleantech innovator firms and their growth in the country. An increasing number of policies has a regulatory effect in the cleantech ecosystem limiting the number of newborn firms while favouring the growth of existing ones.

Panelist: **A. Wren Montgomery**, *Ivey Business School*
Panelist: **Maurizio Zollo**, *Imperial College Business School*

Organizations worldwide are increasingly pressured to act more responsibly. A key strategy they are using to address these pressures is disclosing their efforts and impacts in the environmental and social arenas. Firms' efforts to communicate their environmental and social performance and practices have increased in recent years, but so have instances of greenwashing. The United Nations identified greenwashing as a major barrier to achieving a sustainable future because it misleads stakeholders and detracts from genuine, impactful action in this realm. In response to the growing issue of greenwashing, governments and supranational organizations worldwide have started to implement legislation to curb this practice. These regulatory changes pose both challenges and opportunities for companies. Our panel symposium brings together leading scholars on this topic to engage in a dynamic discussion on management theory and practice related to greenwashing and corporate miscommunication issues more broadly. The purpose of this panel symposium is to explore existing research on greenwashing and to stimulate further investigation into this critical global issue.

Sharing Best Teaching Practices for Boosting Diversity, Equity and Inclusion in Operations & Supply Chain Management

Organizer: **Veronica Haydee Villena**, *W. P. Carey School of Business, Arizona State U.*

Organizer: **Desiree Van Dun**, *U. of Twente*

Panelist: **Lisa Ellram**, *Miami U.*

Panelist: **Morgan Swink**, *Texas Christian U.*

Panelist: **Dayna Simpson**, *Monash U.*

The domain of OSCM currently experiences an increased focus boosting diversity, equity, and inclusion, as shown in growing bodies of literature related to modern slavery, NGO collaboration, international supplier relationships, gender challenges, etcetera. How do we translate this DEI focus to our classrooms? Which DEI topics can we include in our curriculum? How can we navigate (and make good use of) the challenges teaching an international or minority students? Our panelists will vividly discuss and engage with the audience to share novel approaches to bringing these topics to life among our students. We look forward to seeing you there!

Session Type: **PDW Workshop**
Program Session: **852** | Submission: **18990** | Sponsor(s): **(RM, OB, STR, HR, ENT, IM, OMT, TIM)**
Scheduled: **Sunday, Aug 11 2024 1:15PM - 3:15PM CT (UTC-5)** at **Swissotel Chicago** in **Vevey 4**

How to Design, Conduct and Publish High-Quality Replication Studies

Organizer: **Xavier Martin**, *Tilburg U.*
Organizer: **Andreas Schwab**, *Iowa State U.*
Panelist: **Jose M. Cortina**, *Virginia Commonwealth U.*
Panelist: **William Obenauer**, *U. of Maine*
Discussant: **Sungyong Chang**, *London Business School*
Discussant: **William S Schulze**, *U. of Utah*
Discussant: **Scott Seibert**, *U. at Buffalo School of Management*

This workshop will introduce participants to best practices on how to select studies to replicate, execute their replications, and publish their findings. Replication of prior research is a necessary part of scholarship to establish and refine quantitative management theories. The workshop will feature both conceptual frameworks and practical advice from experienced authors and editors. The role of replications in research training and PhD education will also be discussed. Besides presentations and panel discussions, Q&A segments and round-table discussions will offer participants opportunities to receive specific hands-on advice and recommendations. Participation in this workshop will not require prior application and the discussion will be open to all, but interested authors will be given the opportunity to submit an abstract of a proposed replication study for deeper feedback.

Those interested in receiving feedback on a specific proposal should submit a short proposal (no more than 5-pages double-spaced) by June 15, 2024, to organizer Xavier Martin at ReplicationsAoM2024@gmail.com.

Emotion Work

Session Moderator: **Timo Olavi Vuori**, *Aalto U.*

SAP: **Emotion Work in Employee Sensemaking and Sensegiving around Concurrent Strategic Changes** 

Author: **Maria Bak Skov**, *N/A*

Author: **Toke Bjerregaard**, *Nottingham Business School, NTU*

Organizations in pluralistic or volatile environments are often compelled to realize multiple, simultaneous strategies. Building on a longitudinal case study, this paper advances knowledge on how the emotion work of employees is involved in sensemaking and -giving processes that shape concurrent strategic changes bottom-up. The findings are combined in a conceptual process model and make three contributions. First, they further research on emotions in strategic management by explaining how emotional accounts and displays are developed and mobilized across strategic changes in iterative dynamics of breaking managerial sensegiving, retreating sensemaking from developing joint accounts of change, cross-change sense-channeling, -giving, and -silencing. Emotional practices are differently combined as employees cycle through intricate dynamics of shaping concurrent, otherwise separate strategic changes bottom-up. Second, the article provides insights into how emotions are social accomplishments through jointly developed emotional accounts and displays in social interactions over strategy. Third, the research explicates and explains how space and emotion work interact in strategy processes. Emotion work is differently accomplished across formal and informal spaces, while space also is shaped and demarcated through this work.

SAP: **Impact of Past and Current Integration Experiences on Emotional Appraisal in Post-Merger Integration**  

Author: **Timo Olavi Vuori**, *Aalto U.*

Author: **Eero Vaara**, *U. of Oxford*

We conducted a real-time qualitative study of the post-merger integration process between Nokia and Alcatel-Lucent in 2015-2023 to increase our understanding of the emotional dynamics of integration—which recent research has shown could be consequential to integration success. Our findings reveal prior research has undertheorized how organizational histories influence organization leaders' and members' appraisals and emotions during integration, emotions that influence subsequent cognition and action. Specifically, past integration experiences produce emotion-based narratives about integration, shaping organization members' emotions toward integration in the unfolding present. We develop an analytically generalizable process model that elucidates how the present situation and organizational history jointly influence organization members' appraisals and emotions, which in turn influence their integration behaviors. Our findings contribute to theory on post-merger integration and emotions in organizations.

SAP: **Futophobia: How Organizational Members Engage with Fears of Dystopias** 

Author: **Sarah Stanske**, *Leuphana U. Lüneburg*

Author: **Jochen Koch**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **David Nils Seidl**, *U. of Zurich*

Despite the prevalence of dystopian futures, our understanding of how organizational members engage with these is limited. This study introduces the concept of 'futophobia', a fear of futures that are linked to pessimistic imaginations of undesirable outcomes, and outlines members' engagement with as well as their responses to such dystopian outlooks. We conducted a single case study within a public broadcasting company whose members expressed omnipresent fears of the future concerning the potential ceasing of the overall public broadcasting system and low audience rates. Based on our analysis, we distinguish between fears of near and distant futures, showing how members engage in varying practices and innovation initiatives in the wake of these types of futophobia. The contributions of our study are threefold. First, the introduction of 'futophobia' extends the literature on future-making, providing insights into how members grapple with dystopian futures. Second, the study identifies innovation hyperopia and myopia as innovation outcomes in the wake of futophobia, highlighting the coexistence of both myopic and bold, hyperopic innovation activities within an organization. Lastly, our research contributes to understanding expectations-of-expectations, showing how members' responses to futophobia are influenced by others' expectations about organizational outlooks. Overall, the study calls for a closer examination of how organizational members engage with pervasive fears associated with dystopias in contemporary organizational life.

SAP: **That Escalated Quickly: Anger and the Production of History** 

Author: **Jarmo Taskinen**, *U. of Jyväskylä*

Author: **Juha-Antti Lamberg**, *U. of Jyväskylä*

Author: **Antti Sihvonen**, *Jyväskylä U. School of Business and Economics, Jyväskylä, Finland*

Author: **Henriikka Tikkanen**, *Aalto U.*

Emotions can profoundly influence how people recall the past. Our study examines the role of a particular negative emotion, anger, in retelling the past of a merger and its aftermath between two notable Finnish media companies. Our data consists of oral history accounts from person involved in the merger which were collected during three different times during and after the merger. We used a grounded theory approach to analyze how anger manifests in retelling the past and how anger develops over time. Our findings show that anger strongly influences how informants narrate past events and it takes on three primary forms in the oral accounts. These different forms of anger focus on narrating history against a threat in the present, narrating history as a revelation of resentment, and narrating history through contemplation of past conflicts. Over time, temporal distance raises the importance of emotion as retrospective memories become narrower and angrier over time. Different forms of anger and their influence on history production enable us to question the veracity of truth claims made in oral history accounts and to understand why the memories regarding the same events can vary substantially from person to person.

Routine Dynamics

Session Moderator: **Verena Timmer**, *Witten/Herdecke U.*

SAP: **Paths to Data Transfer: Exploring Routine Change for Compliant Data Sharing**

Author: **Leighann Eileithyia Kimble**, *Vrije U. Amsterdam, School of Business and Economics*

Author: **Hans Berends**, *Vrije U. Amsterdam*

Author: **Philipp Tuertscher**, *Vrije U. Amsterdam*

In this paper, we explore routine change in an organization implementing compliance with an external regulation. We study changes in patterns of action, over time, in a biomedical group implementing routine change for compliance with the General Data Protection Regulation (GDPR), a recent external regulation that impacts data sharing. Using longitudinal data from our field study at BioResearch, we identified four distinct phases of implementing compliance: pre-GDPR, educating, enforcing, and integrating. Utilizing narrative networks, we visualize patterns of action within each of these phases, highlighting change, stability, and variability in the data sharing routine as the organization implements compliance. Implementing compliance impacted the data sharing routine as new actors and artifacts were introduced, resulting in a tension between the goals of compliance and data transfer. We explain how this tension emerged as well as how it was resolved through two key changes: (a) an integration of artifacts from outside the compliance domain and (b) a shift in the role of internal regulators. Our findings contribute to the understanding of roles, artifacts, actors, and interactions in both routine dynamics and regulation and compliance.

SAP: **Enacting Relations: The Role of Artificial Intelligence for the Stability of Routines**

Author: **Daniel Gaeckle**, *U. of Stuttgart School of Management*

Author: **Christian Alexander Mahringer**, *U. of Stuttgart*

Author: **Birgit Elisabeth Renzl**, *U. of Stuttgart*

This paper assesses the influence of artificial intelligence on the dynamics of organizational routines. Using an ethnographic study of an organization that operates a supercomputer (the artificial intelligence), we examine the counterintuitive observation that actors keep routines stable despite suggestions to change routines. We identify three different practices (i.e., depriving, amplifying and subordinating) that actors use to accomplish the stability of their routines, and we find that, in each of those practices, actors relate to the artificial intelligence technology. Building on these findings, we theorize that the role of AI for routine stability can be described as a process of enacting relations. Our insights contribute to research on artificial intelligence technology and organizing and routine dynamics.

SAP: **Organizing Complexity: An Inductive Inquiry into Algorithmic Routines Expansion**

Author: **Verena Timmer**, *Witten/Herdecke U.*

Author: **Mehdi Safavi**, *Cranfield School of Management*

Routine expansion is undertheorized—we know little about how, through the expansion of the space of possible paths, routines transition in a situation of ever-increasing complexity. Using data from 6 years of participant observation and drawing insights from recent advances in process and practice research, as well as routine dynamics studies, we propose new insights on how routines expand while remain functional. Charting the transitional phases of an algorithmic routine that is undergoing a significant expansion, we describe four major biographical moments of our algorithmic routine(s) and explicate three transitional cycles between these biographical moments that enable us to develop a theoretical model for organising increasing level of complexity in algorithmic routines expansion. We make three main contributions to the extant body of research. First, as an early and revelatory study of routines expansion, we show how through expansion and contraction mechanisms, routine participants keep the routine(s) in-balance and functional, despite the ever-increasing complexity. Second, we extend research on standardization and flexibility by showing how actors purposefully limit variations in performances through not only their background knowing but also the capability to fully detach from the routine and shift to a more analytic reflection. Third, we contribute to research on routine interdependence and integration by showing how, through the design of performance objects, a single routine splits into three interdependent routines to control the space of possible paths in routine expansion.

SAP: **Provisional Directionality: How Scrum Teams Use Organizational Routines to Accomplish Agility**

Author: **Christian Alexander Mahringer**, *U. of Stuttgart*

Author: **Katharina Dittrich**, *Warwick Business School*

Author: **Birgit Elisabeth Renzl**, *U. of Stuttgart*

Agile ways of working are central to contemporary organizing, but little is known about how agility is accomplished in practice. This paper draws on a twelve-month ethnographic study of a software development team to examine how Scrum teams use organizational routines to accomplish agility. We find that relentlessly enacting the typical patterns of organizational routines in different ways creates and recreates ‘provisional directionality’—a tentative realm of possible actions. Provisional directionality is what enables Scrum teams to accomplish agility. The findings contribute to research (a) by unpacking how agility is accomplished in practice, (b) by emphasizing the prospective dimension of patterning in organizational routines, and (c) by outlining provisional directionality as a tool for empirical research. Moreover, our findings yield implications for managing Scrum teams.

Session Moderator: **Pascal Flurin Meier**, *U. of Zurich*

STR: Do Individual Directors Matter? Lead Independent Director Characteristics and Planned CEO Succession 

Author: **Wei Shen**, *Arizona State U.*
Author: **Zeyu Zhao**, *Arizona State U.*

This study attempts to contribute to the understanding of the impact of individual directors, and lead independent directors in particular, on corporate governance in the context of CEO succession. Drawing from an upper echelon theory perspective, we theorize that what matters is not whether there is a lead independent director, but who that person is. Specifically, we predict that lead independent directors with prior CEO experience, longer board tenure, and fewer external board memberships are more effective in promoting planned CEO succession. Using data on 380 CEO successions from a sample of S&P 500 firms between 2010 and 2018, we found support for our theoretical predictions. Our theory and supportive findings have important implications for research and practice regarding lead independent directors, CEO succession, and corporate governance.

STR: Struck by Luck: Noisy Capability Cues and CEO Dismissal 

Author: **Raphael Flepp**, *U. of Zurich*
Author: **Pascal Flurin Meier**, *U. of Zurich*

The board's key decision to dismiss or to retain the current CEO is associated with complexity and uncertainty because CEO ability is not directly observable. Instead, boards must rely on capability cues when evaluating the ability of the CEO. However, capability cues are frequently noisy, encompassing both informative cues about CEO ability and luck factors from which nothing about the ability of the CEO can be inferred. Expanding on the behavioral theory of boards, we theorize that boards fail to perfectly distinguish between informative cues and luck factors, and misattribute luck factors to CEO ability. Thus, we conjecture that boards are less likely to dismiss CEOs when capability cues appear more favorable due to luck factors. Using cognitive capabilities and the decision-context as contingency factors, we further argue that this effect is attenuated by director experience but accentuated by pressure from misinformed institutional investors. Exploiting a regression discontinuity design to test for the causal impact of luck factors, our results support our hypotheses.

STR: Who Shall Succeed? The Effects of Board of Directors' Facial Masculinity on CEO Successors

Author: **Sicong Zhang**, *The Southwestern U. of Finance and Economics (SWUFE)*
Author: **Samyul Cho**, *Oregon State U.*
Author: **Jonathan D. Arthurs**, *Oregon State U.*

Drawing on research on facial masculinity and a sociopolitical view of governance, this study examines how boards of directors' facial masculinity is related to incoming CEOs' facial masculinity vis-a-vis outgoing CEOs. We find that more masculine boards are more likely to hire less masculine incoming CEOs vis-a-vis outgoing CEOs because they could increase their influence over the incoming CEO. In addition, when firms' prior performance is poor and product market threats are high, the proclivity to choose less masculine CEOs becomes weaker because the unfavorable competitive situation induces boards to choose more masculine CEO successors who can change the unfavorable competitive situation. This study contributes to the literature by highlighting how the boards of directors' facial masculinity influences the characteristics of incoming CEO successors.

STR: Board of Directors Versus the CEO: The Influence of Social Networks on CEO Dismissal   

Author: **Andreas Procopiou**, *Open U. of Cyprus*
Author: **Andreas Petrou**, *Cyprus U. of Technology*

This study draws on social capital theory and social network analysis literature to examine the research question of when CEOs are dismissed. It views CEO dismissal as a contest between the board and the CEO powered by their position within the upper echelons social networks. We test hypotheses on firms listed in Standard and Poor's ExecuComp for the period 2000-2016 using a Cox (1972) semiparametric proportional hazard model. Findings show that the higher the network centrality of directors in the upper echelons social networks, the more likely they are to dismiss the CEO. In addition, this relationship is negatively moderated by the centrality of the CEO's position within the social network, and the overlap of the CEO's and the directors' social networks. The study extends the literature on the socio-political perspective as it finds that the directors' social networks affect CEO dismissal. Findings have implications for the criteria used to select board directors.

Utilizing Knowledge for Innovation

Session Moderator: **Elisabeth Krull**, *Alliance Manchester Business School, U. of Manchester*

TIM: Knowledge Integration and Strategy Tools 

Author: **Elisabeth Krull**, *Alliance Manchester Business School, U. of Manchester*

Author: **Peter Smith**, *U. of Auckland*

Author: **Kenneth Husted**, *U. of Auckland*

This paper examines the role of strategy tools in integrating diverse knowledge. Building on the understanding that knowledge integration (KI) is a multi-level organisational phenomenon that benefits from both the divergence and convergence of knowledge, we develop the concept of composite strategy tools. Such tools are assemblages of tools and techniques used to produce KI. Based on the in-depth case study of the use of a composite tool in two projects in an organisation, we identify two subprocesses of KI cycling between the meso- and micro-level to create strategic outcomes at the macro-level. Considering strategy tools as boundary objects, this study contributes to the theoretical elaboration of how composite strategy tools can enable knowledge divergence and convergence, producing KI at the individual, group, and organisational levels. It further suggests that more attention should be paid to the dynamics unfolding within what we call composite tools.

TIM: The Impact of Gamification on the Utilization of Knowledge: The Mediating Role of Perceived Function  

Author: **Mira Sammour**, *Adnan Kassar School of Business, Lebanese American U., Beirut, Lebanon*

Author: **Silva Karkouliau**, *Lebanese American U.*

The knowledge of the gamification processes needs to advance and offer organizations helpful guidance to enhance their knowledge and promote an environment of continuous development. Thus, this study explores the impact of gamification on the utilization of knowledge: The mediating role of perceived functional, social, emotional, and epistemic value. A sample of 439 employees working in were sent a 27 close-ended questionnaire divided into 8 sections which were measured using a 5-point scale. Gamification is found to have a positive effect on knowledge utilization. Furthermore, perceived value partially moderates the relation between gamification and knowledge utilization. Managers must create more efficient gamification strategies that are tailored to their staff in order to improve performance and create a more enjoyable experience. Little research is available about gamification's impact in the context of knowledge utilization. Keywords: Gamification, Enjoyment, Usefulness, Motivation, Perceived Value, Knowledge Utilization.

TIM: Revisiting the Relationship Between Depth & Breadth of Technological Knowledge and Firm Performance 

Author: **Mohammad Saleh Farazi**, *Sheffield U. Management School, U. of Sheffield, UK*

Author: **Mohammad Reza Arasti**, *Sharif U. of Technology*

Author: **Ali Esfandyarpour**, *Sharif U. of Technology*

Author: **Iman Miremadi**, -

This article examines the relationship between the depth and breadth of knowledge on the one hand and the firm performance on the other, revisiting this relationship through the mediating mechanism of technological diversity. By using a Machine Learning algorithm, we empirically distinguish between the technological knowledge possessed by a firm and the technologies it actually uses in operations. We analyze a sample of 204 biopharma companies from 2006 to 2018 and show that the depth and breadth of technological knowledge have a positive impact on a firm's technology diversity. We then show that the firm's technology diversity in turn contributes to its financial performance and this relationship is positively moderated by the market diversification strategy of the firm. Our findings contribute to the research body on the relationship between knowledge resources and firm performance, by highlighting that rather than knowledge possessed by a firm, it's the technologies used by the firm that primarily determine its performance.

TIM: Virtuous or Vicious? Nexus Between Knowledge Sharing and Knowledge Hiding in Innovation Context      

Author: **Abraham Cyril Issac**, *Indian Institute of Technology - Guwahati*

Knowledge transfer is understood as a critical element for almost any initiatives pertaining to innovation. This understanding is further reinforced with the exponential increase of technological influxes into the knowledge management realm. Our study follows a qualitative research design and attempts to explore the inevitable and dynamic link between knowledge transfer, technology, and innovation. A total of 50 respondents employed in US and UK firms across various sectors participated in this study. Our study elicits the emergence of different dimensions of knowledge transfer- knowledge sharing, knowledge hiding and knowledge arbitrage acting variedly in the context of innovation. The results suggest a positive association between knowledge transfer, technology and innovation which is enhanced by the Covid-19 crisis as it warranted more distributed teams and new work contracts.

Upper and Middle Management Effects on Innovation

Session Moderator: **Ly Ngo**, *Asian Institute of Technology*

TIM: Middle-Managers' Meeting Characteristics and Innovation Performance: The Managers' Well-Being Effect  

Author: **Ly Ngo**, *Asian Institute of Technology*

Author: **Yuosre F. Badir**, *Asian Institute of Technology*

Middle managers act at the interface between top-tier managerial ranks and other hierarchical levels within an organization. There is growing recognition of the valuable contributions they make to strategic change, organizational renewal, and the fostering of entrepreneurial activities and innovation. However, middle managers often face an overload of meetings, which may impact their performance. This study evaluates the positive and negative effects of meeting characteristics on middle managers' performance. Specifically, it examines the effects of meeting frequency, length, subject relevance, and management on middle managers' innovative work output (IWO). Furthermore, this study explores the potential mediating role of middle managers' emotional exhaustion (MEE) in the relationship between meeting characteristics and IWO. Analysis of data from 235 middle managers across various Vietnamese industries reveals that subject relevance, effective management, and, longer meetings enhance IWO. Conversely, meeting frequency exhibits a complex, inverted U-shaped relationship with IWO. Additionally, MEE partially mediates the relationship between meeting characteristics and IWO. These findings underscore the significance of meeting dynamics in influencing managerial innovation and well-being.

TIM: Strategic Power Balance: CMO-CTO Power Disparity and its Impact on SMEs' Innovation

Author: **Yiyuan Mai**, *Huazhong U. of Science and Technology*

Author: **Xinyi Cheng**, *School of Management, Huazhong U. of Science and Technology*

Author: **Zhuxin Ye**, *Huazhong U. of Science and Technology*

This study seeks to explain how CMO (Chief Marketing Officer)-CTO (Chief Technology Officer) power disparity influences the innovation performance of Small and Medium-sized Enterprises (SMEs). Drawing on the knowledge-based view, we proposed that CMO-CTO power disparity and SMEs' innovation have an inverted U-shaped relationship, implying that both excessively high or low disparities are detrimental to collaboration and knowledge integration within the dyad. Furthermore, this research explores the moderating effects of gender dynamics within CMO-CTO pairs and the extent of firm internationalization. Using a sample of Chinese SMEs in different manufacturing sectors, we find that the inverted U-shaped relationship is flatter in firms where the CMO or the CTO is female and in firms with a high degree of internationalization. These results provide important implications for CMO-CTO interactions and intrateam power dynamics.

TIM: The Status Contingent Impact of CEO Political Ideology on Discrimination Against Female Scientists  

Author: **Ali Radfard**, *Aston Business School*

Author: **Sama Hassani**, *amirkabir U. of technology*

We seek to address the gender gap in corporate patenting, focusing on the impact of CEO political ideology. We draw from social dominance theory and hypothesize that in firms with conservative CEOs, the ratio of female inventors and female-led patent applications reduce. Further, we argue that CEO social status should weaken the effect of CEO political conservatism on gender bias in firm patenting. We find support for our hypotheses on a panel of 162 CEOs in a window between 2005-2014.

TIM: Long-Term Incentives to Innovate: Top Down or Bottom Up?

Author: **Trey Cummings**, *Johns Hopkins Carey Business School*

Author: **Leonardo Mayer Kluppel**, *Ohio State U.*

CEO compensation has received extensive attention in academic literature and popular press due to its increasing magnitude compared to lower level employees in recent decades. Long-term aspects of that compensation theoretically align CEO decision-making with shareholders on long-term investments such as innovation. Although CEOs do control certain decisions that impact innovation, lower level employees also may require and respond to long-term incentives because they play an important role in both identifying innovative opportunities and generating the innovations. This research investigates the relative impact of long-term compensation incentives at multiple organizational levels by utilizing restricted access US Census firm-level innovation survey data including R&D compensation data. Empirical results reveal that CEO and Executive long-term compensation incentives have much less explanatory power compared to long-term compensation within the R&D organization. A key implication is that firm governance focusing on executive incentives may not adequately impact innovation.

Next Gen Technologies Reshaping Work and Strategy

Session Moderator: **Ludovica Moi**, *U. of Cagliari*

TIM: **Phygital Capabilities: Microfoundations and Dynamic Interplay**

Author: **Ludovica Moi**, *U. of Cagliari*

Author: **GIANLUCA PUSCEDDU**, *U. degli Studi di Cagliari*

Author: **Francesca Cabiddu**, *U. of Cagliari*

The concept of “phygital” is increasingly spreading in the contemporary business landscape. As businesses embrace this hybrid of physical and digital realms, a critical inquiry emerges: what are the microfoundations of phygital capabilities? To answer this research question, our study adopts a case-study approach focusing on Webidoo Store, Europe’s first phygital, tech-experience store. By introducing a new conceptual framework for phygital capability development, our findings identify and explore the microfoundations that enable the development of a firm’s phygital sensing, seizing, and reconfiguring Dynamic Capabilities. In addition, the study extends prior literature showing that phygital capabilities are not isolated silos within an organization. Instead, they are interconnected and involve a continuous interplay, influencing each other. This research also has important implications for managers aiming to build and maintain a competitive advantage in today’s business scenarios where physical and virtual worlds are increasingly integrated.

TIM: **Reshaping Interdisciplinary Collaboration: Evolution of Boundary Objects in the Industrial Metaverse**

Author: **Maximilian Glienke**, *RWTH Aachen U.*

Author: **Nicole Hartwich**, *RWTH Aachen U.*

Author: **Daniel Wagner**, -

Author: **Christina Dienhart**, *Institute for Technology and Innovation Management at RWTH Aachen*

Author: **David Antons**, *RWTH Aachen U.*

Promoted as the next generation of the Internet and a technology that will fundamentally change our daily lives, the Metaverse has become one of the biggest technology trends of our time. For the manufacturing industry in particular, the Industrial Metaverse has the potential to radically change the way machines, equipment and processes are designed by enabling a real-time 3D collaboration space. This has significant effects on the characteristics and implications of traditional CAD-based boundary objects, virtual artefacts such as 2D or 3D models that are used in interdisciplinary collaboration. In an individual case study, we therefore observed the use of NVIDIA’s Omniverse, a metaverse-enabled real-time 3D collaboration tool, for interdisciplinary factory planning at BMW. Through expert interviews with 22 employees, observation of 8 collaboration sessions and a descriptive survey of 35 engineers, we were able to deepen our understanding of how boundary objects evolve in the Industrial Metaverse and thus shape interdisciplinary collaboration. We propose that the Industrial Metaverse enables boundary objects to create a shared, socio-interactive and dynamically evolving 3D collaborative space that extends beyond existing boundaries between engineering disciplines. Furthermore, we propose that these enhanced characteristics greatly facilitate interdisciplinary understanding, negotiation and decision-making, ultimately supporting collaboration processes. Our case study provides a first insight into understanding this emerging phenomenon and highlights the need for further research.

TIM: **Out of Strategy: How Should We Account for Blockchain in Strategic Management?**

Author: **Egor Krivosheya**, *Moscow School of Management Skolkovo*

Author: **Ekaterina Semerikova**, *Moscow School of Management Skolkovo*

Despite the growing interest of practitioners in applications of distributed ledger technology (DLT), including blockchain and new insights into organizational forms such applications provide, the strategic management field has largely remained silent around the mechanisms through which such new organizing occurs. Accounting for existing literature on blockchain in other management areas, we develop a conceptual framework to analyze microfoundations of strategy that change because of wider DLT applications. Particularly, we propose that DLT affects value creation and capture via three key mechanisms: the nature of user value provided by the firm, governance, and business logic. We show that each of these mechanisms is connected to core technical elements of the DLT systems (tokens, consensus protocols, and smart contracts, respectively). We argue that characteristics related to these three nexuses are associated with projects’ performance and may provide a useful lens for strategy and management scholars to study DLT application effects.

TIM: **The Use of VR Technology in Vocational Interventions for Improving Career Development**

Author: **Hira Khan**, *U. degli Studi della Campania Luigi Vanvitelli*

Author: **Alessandro Lo Presti**, *U. of Campania “Luigi Vanvitelli”*

Author: **Jon P. Briscoe**, *Northern Illinois U.*

Purpose - This systematic review examines the role and effectiveness of Virtual Reality (VR) technology in vocational interventions for career development. The study specifically investigates individual experiences with VR technology and its impact on interview performance, job skills acquisition, and overall career development. Design/methodology/approach - Following a systematic review protocol registered with PROSPERO (Registration No. CRD42023408829), we conducted a comprehensive analysis of literature published from 2010 to 2023. Employing PRISMA and SWiM methodologies, we synthesized data from 18 peer-reviewed articles to gain insights into the use of VR technology in vocational interventions. Findings - Our review reveals that VR technology has emerged as a valuable tool in career development, providing immersive and realistic experiences for individuals to enhance their interview skills and acquire job-related competencies. It offers a feasible alternative to traditional face-to-face interventions, enabling individuals to practice and receive feedback in a safe and controlled virtual environment. However, we also identified several challenges and areas requiring further research, such as the need for more randomized controlled trials, long-term follow-ups, and the examination of cost-effectiveness. Research limitations/implications - While our findings are based on the studies included in this review, they provide valuable insights and highlight avenues for future research in the field of VR technology in vocational interventions and career development. Practical implications - Organizations and career development practitioners can leverage the findings of this review to incorporate VR technology into their strategies and interventions. By utilizing VR technology, they can optimize vocational interventions, improve interview performance, and facilitate the acquisition of job skills, ultimately enhancing individuals’ career development outcomes. Originality/value - This research contributes to the limited body of literature on the use of VR technology in vocational interventions for career development. By providing an in-depth analysis of the existing studies, our systematic review offers valuable insights and identifies areas for future research and practice. Keywords: Virtual Reality, Career Development, Vocational Interventions, Technology in Career Development, Systematic Review.

From Boards to Teams: New Views on Diversity and Innovation

Session Moderator: **Elko Klijn**, *Old Dominion U.*

TIM: Firms' Board Diversity, Ownership Governance and Radical Innovation Quality

Author: **Li Liu**, *School of Economics & Management, Tongji U.*

Author: **Wan Cheng**, *Shanghai Jiao Tong U.*

Author: **Jingyu Li**, *0723*

This study draws upon the institutional logic perspective to investigate the combined efforts of board diversity and ownership governance in affecting the quality of radical innovation. By viewing technological level and application scope as two crucial dimensions of radical innovation quality, this study indicates that board diversity in state-owned enterprises (SOEs) has a stronger impact on the application scope than on the leading technological level of radical innovation, whereas board diversity in non-SOEs has a greater influence on the leading level rather than the application scope of radical innovation. Furthermore, by comparing the mechanisms underlying board diversity in SOEs and non-SOEs, we find that non-SOEs with high levels of board diversity tend to prioritize enhancing the technological level of radical innovation compared to SOEs, while SOEs with high levels of board diversity focus more on expanding the application scope than non-SOEs. These findings significantly contribute to theory development and have important implications for managerial practices.

TIM: How Does CEO Succession Affect Innovation Ambidexterity? The Role of Board Network Centrality

Author: **Chunling Zhu**, *School of Business, Renmin U. of China*

Author: **Yihui Xiao**, *School of Business, Renmin U. of China*

Author: **Wanwan Huo**, *School of Business, Renmin U. of China*

While Chief Executive Officers (CEOs) succession type is broadly discussed as an essential driver of corporate strategic activities, their role in shaping firms' innovation ambidexterity remains largely under-explored. Integrating power circulation theory and the integrated agency-resource dependence theory, we explore how three types of CEO succession affect the trade-offs between exploratory innovation and exploitative innovation of firms in different ways, and how board network centrality conditions the focal relationships. We theorize that there is a negative relationship between follower succession and innovation ambidexterity, which can be weakened by board network centrality. We also propose a positive relationship between contender succession and innovation ambidexterity, which can be strengthened by board network centrality. We further predict a positive relationship between outsider succession and innovation ambidexterity, which can be weakened by board network centrality. Our sample of listed firms in the manufacturing industry in China between 2011 and 2020 support all the hypotheses. Our study contributes to power circulation theory by examining the differential influences of CEO succession types on innovation ambidexterity. We also bridge the power circulation theory and innovation ambidexterity literature by considering the effects of board network centrality on the focal relationships.

TIM: Rethinking Team Diversity Through Individual Components

Author: **Ankur Chavda**, *HEC Paris*

The diversity of knowledge at the team level is known to be a key driver of team performance on knowledge-intensive problems. However, the extant literature is ambiguous about how team knowledge diversity emerges from the individuals that comprise a team and consequently how such team composition affects performance. In this paper, we address these questions by first algebraically decomposing the standard measure of team diversity, the H-Index, into two components, average individual knowledge diversity and knowledge distance between team members. We then theorize that individual knowledge diversity enables the recombination of unique pieces of knowledge but reduces the deep domain knowledge necessary to create novel problem solutions. In addition, knowledge distance between members ensures that each member provides incremental knowledge, enabling novel knowledge recombination, at the cost of reduced coordination. Consequently, we argue optimal team performance is likely to arise when individuals have intermediate knowledge diversities and an intermediate knowledge distance between them. We find empirical support for our theory using the film industry, viewing the main cast members of each film as a team whose members vary by the diversity of their prior film genre experiences. Ultimately, our study suggests that separate examination of the individual level components of team knowledge diversity is necessary to understand the relationship between team knowledge diversity and performance.

TIM: The Value of Diversity: A Meta-Analysis of the Relationship between Gender and Innovation

Author: **Malin Fiedler**, *Technical U. of Munich*

Author: **Theresa Treffers**, *TUM School of Management, Technische U. München*

Author: **Isabell Melanie Welpe**, *Technical U. of Munich*

The female gender and gender diversity of women and men on teams are suggested to have a considerable impact on innovation in organizations. Theoretical and empirical evidence, however, is inconclusive and likely dependent on the context and type of innovation, i.e., input, output and subtypes such as tech or green innovation. On the basis of our meta-analysis of 86 empirical studies from 2010 to 2023, we test the relationship between two gender representations—1) binary (i.e., one woman or no woman) and 2) diversity (i.e., ratio of women)—on innovation input (i.e., investment in innovation) and output (i.e., product, process, or organizational innovation) and examine contextual factors at the firm, industry, and cultural levels. We find that both gender representations have a negative impact on innovation input and a positive impact on innovation output. The effect is greater for a diversity than for a binary gender representation. The relationship between any gender representation and innovation input is stronger in older and larger firms and weaker in more masculine and uncertainty-avoidant cultures. Our results show the importance of distinguishing between innovation input and output for innovation management research. We also show that there is indeed a “value of diversity”, adding to the research on gender diversity in organizations.

Author: **Rene Olie**, *Erasmus U. Rotterdam*

Author: **Andreas Moosdorf**, *FH Aachen*

This study delves into multinational enterprises' (MNEs) strategic establishment of foreign subsidiaries to foster innovation expansion. Historically rooted in familiar areas, MNEs are venturing into diverse country settings over time. The resultant cultural disparities between parent companies and recently established and more mature subsidiaries prompt an exploration of potential differences in innovation engagement. At the same time, it necessitates differential treatment for optimal innovation outcomes and the role that subsidiary boards play in this process. Through a survey of 199 subsidiaries, this research scrutinizes the intricate linkages between cultural distance, foreign subsidiary board engagement, and innovation activities. Findings highlight the pivotal role of cultural divergence in shaping both explorative and exploitative innovation within subsidiaries, particularly in tandem with board involvement intensity. The study underscores nuanced strategies for culturally close subsidiaries: heightened board engagement, specifically in advisory, monitoring, and coordination roles, positively impacts explorative innovation. Similarly, to bolster exploitative innovation in such subsidiaries, intensive advising of both subsidiary and parent boards are crucial. Conversely, in culturally distant subsidiaries, a calibrated approach emerges. To avoid diluting desired innovation outcomes, boards should curtail involvement compared to close subsidiaries, striking a balance that aligns with achieving comparable innovation results. This research emphasizes the intricate relationship between cultural proximity, board participation, and innovation strategies in foreign subsidiaries, advocating a more tailored approaches to optimize subsidiary innovation outcomes.

Innovation Response to Public Policy

Session Moderator: **Vu Chu Tuan**, *School of Management, U. of Ottawa*

TIM: Innovation in Developing Countries: The Role of Corruption and Informality

Author: **Vu Chu Tuan**, *School of Management, U. of Ottawa*
Author: **Hien Tran**, *School of Management, U. of Ottawa*
Author: **Mark Freel**, *Telfer School of Management, U. of Ottawa*
Author: **Trang Pham**, *Telfer School of Management, U. of Ottawa*

This paper explores the independent and interactive effects of informality and corruption on new product introduction by firms in developing economies to argue that bureaucracy and uncertainty can drive firms into unethical or unproductive behaviors to adapt themselves to their circumstances, to innovate, and to thrive. Viewed through the lens of contingency theory, we theorize that developing economy firms respond to institutional voids by adopting an adaptive strategy that entails operating in the informal economy and, simultaneously, engaging in corruption/bribery to overcome the 'liabilities of informality'. On the one hand, firms position themselves in the informal sector to avoid the high transaction costs resulting from underdeveloped resource markets and weak governance in developing economies. On the other hand, to mitigate the associated informality costs, firms are motivated to engage in bribery to 'grease the wheels', enabling them to build networks, bypass bureaucracy, and gather resources for innovative (rather than imitative) product introductions. Both the separate and interactive effects of informality and corruption on the introduction of new products are significant. However, the interaction is moderated by institutional quality, such that the combined impact of informality and corruption in the form of 'productive' bribery fades away as the quality of institutional environment improves. Empirical analysis of a sample of more than 65,000 enterprises during the 2006-2021 period from the World Bank Enterprise Survey confirms our general propositions

TIM: Innovation, Policy and Resilience of the Hospitality and Tourism Sector in the UK

Author: **Noora Al-Muhannadi**, *U. of Manchester*
Author: **Dimitri Gagliardi**, *U. of Manchester*
Author: **Ronnie Ramlogan**, *U. of Manchester*

The paper identifies how the innovative responses from the hospitality and tourism sector to the COVID-19 crisis alongside policy support increased their resilience. The paper uses conceptual elaboration based on academic literature and documentary analysis of press archives to explain the use of innovation in reducing the implications of COVID-19 on firms within the hospitality and tourism sector in the UK. The research outcome is a framework highlighting how innovation and policy support contribute to the resilience of the hospitality sector. Our documentary analysis also proposes a novel classification of hospitality and tourism innovation in the post-pandemic era.

TIM: Policy Instrument Mix and Firm Innovation Performance: The Moderating Role of Financial Slack

Author: **Jingjing Guo**, *Institutes of Science and Development, Chinese Academy of Sciences*
Author: **Yueqi Wang**, *Dalian U. of Technology*

Given innovation sparks numerous uncertainties, risks and failures, a deliberately designed policy instrument mix has been deemed more appropriate than a single instrument to address these issues. However, prior literature lacks sufficient investigation to firm-level innovation implications of instrument mix. Drawing upon the institutional theory, we establish the nexus between instrument mix (in terms of intensity and diversity, respectively) and firm innovation performance in the context of emerging economy, as well as the contingent role of financial slack as target firms' characteristic. The bottom-up approach is adopted to quantitatively measure these two design features of instrument mix by scoring each policy instrument and then aggregating them at the instrument mix level. Using archival data on listed firms in Chinese photovoltaic industry from 2012 to 2017 and relevant national policy documents between 2010 and 2017, we find an inverted U-shaped relationship between instrument mix diversity and firm innovation performance. By contrast, the nonlinear influence of instrument mix intensity is significant only when financial slack is considered and being attenuated. Overall, our work contributes to extending the policy mix literature in the context of emerging economies, and delivers critical management and policy implications.

TIM: Patent Remedies and Patent Valuation: Evidence from China

Author: **Huiyan Zhang**, *School of Economics and Management Tsinghua U.*

This paper investigates the role of patent enforcement in the private value of patent valuation and firm innovation decisions in China. The structural estimation of patent value and counterfactual simulations show that strengthening patent enforcement by promoting damage awards significantly boosts the private value of utility models- the inferior type of patents- while leaving the private value of invention patents- the more innovative type of patents- almost unchanged. A series of reduced-form analyses on a comprehensive sample of Chinese patenting firms confirm the theoretical prediction and indicate a tendency of firms to shift towards incremental innovation.

TIM: A Study on the Mechanism of Network Hierarchy on Collaborative Innovation of Enterprises

Author: **Min Lin, U.**
Author: **Yue Wang, U**

Recent network science research has found that the node importance ranking indicator (Ks) obtained by the k-core decomposition method has better representation ability and can make up for the shortcomings of traditional centrality and intermediacy indicators. Based on complex network theory and innovation management theory, this study explores the potential impact mechanism of network hierarchy on collaborative innovation of enterprises. By using the K-core decomposition algorithm, this study defines the network hierarchy indicator for the position of enterprises in the collaborative innovation network, and combines the capability elements of enterprises, according to the stage characteristics, divides the absorptive capacity into potential absorptive capacity and realized absorptive capacity, and constructs a theoretical model of network hierarchy affecting the collaborative innovation performance of enterprises. By collecting the collaborative R&D data of 364 listed biopharmaceutical companies in the world, and using the negative binomial regression method to test the research hypotheses empirically. The analysis results show that network hierarchy plays a positive role in improving the innovation performance of enterprises. Although the correlation between network hierarchy and potential absorptive capacity is not significant, realized absorptive capacity is significantly positively correlated with network hierarchy, and has a direct driving effect on collaborative innovation performance. In addition, the study also found that realized absorptive capacity plays a mediating effect between network hierarchy and innovation performance. This study shows that enterprises in a higher position of network hierarchy can better absorb information and knowledge, thus promoting their innovation performance, and realized absorptive capacity plays a key role in this process. Finally, this paper puts forward some strategic suggestions for enterprises to better use network resources.

TIM: Enhancing Social Innovation: The Interplay of Business Model and Networks in Social Entrepreneurship

Author: **Ataullah Kiani, Wenzhou-Kean U.**
Author: **Dan Wang, Xihua U.**

This study examines the role of business model design and network intensity in shaping the relationship between social entrepreneurial orientation and social innovation in 220 small and medium-sized enterprises (SMEs) in China. As social entrepreneurship gains prominence in driving positive social change, understanding the contextual factors that influence its effectiveness becomes crucial. The study, employing institutional theory, utilizes data on social entrepreneurial orientation, business model, network intensity, and social innovation outcomes to analyze the interplay between these variables. The findings highlight the significant moderating effect of business model design on the relationship between social entrepreneurial orientation and social innovation. Efficiency centered and novelty centered business models align an organization's social mission with operational strategies, optimizing resource allocation and enhancing stakeholder value. Additionally, network intensity moderates the link between social entrepreneurial orientation and social innovation, as strong connections with stakeholders amplify the positive impact. Robust networks facilitate knowledge exchange, collaboration, and resource sharing, promoting the co-creation of innovative solutions to societal challenges. These findings hold important implications for practitioners, policymakers, and researchers aiming to foster social innovation and entrepreneurship in the Chinese SME context.

TIM: Coevolution of Collaborative Networks and Innovation Implementation Behaviors of Project-Based Firms

Author: **Shiting Shao, School of Economics and Management, Tongji U.**
Author: **Doingping Cao, School of Economics & Management, Tongji U.**
Author: **Massimo Maoret, IESE Business School**

As in the typical chicken-or-egg causality dilemma, it is challenging to disentangle whether the innovation implementation behaviors of an organization are a precursor to or a consequence of its relationship networks. Drawing on a longitudinal data set of digitalization practices in the project-based construction industry and the advances in network-behaviors dynamics modeling, we investigate how inter-organizational collaborative networks and organizational innovation implementation behaviors of project-based firms (PBFs) coevolve over time through the interplay of social selection and influence processes. The findings provide clear evidence that the dynamics of project-based collaborative networks is shaped by and, in turn, shapes the dynamics of innovation implementation behaviors of PBFs. The results show that compared with those sharing similar innovation implementation behaviors with clients, PBFs with higher levels of innovation implementation behaviors are more likely to be selected as project partners. With regard to the social influence process, the results show that compared with the impacts of their institutional equivalent peers, PBFs tend to be more substantially impacted by the behaviors of their project-based cohesive partners. The results further show that such impacts are more substantially based on the imitate-the-average effect as compared with the imitate-the-best effect. As an exploratory effort of developing a coevolution perspective to systematically investigate the coevolution of inter-organizational networks and organizational behaviors, this study provides a systematic and nuanced understanding of how heterogenous PBFs concretely interact with each other through temporary projects and how such interactions contingently facilitate or inhibit the inter-organizational diffusion of innovative practices. The findings contribute to the literature on partner selection, innovation diffusion, as well as organizational evolution and provide important managerial implications for managers and policymakers.

TIM: Innovation Hubs in Rural Areas: A Qualitative Analysis of Roles, Types, and Impacts

Author: **Stephanie Duchek, Fraunhofer Institute for Industrial Engineering IAO**
Author: **Sarah Hoene, Fraunhofer Institute for Industrial Engineering IAO**

Innovation hubs are a promising new way to foster innovations in rural areas. However, research in this field is still at a preliminary stage. The literature neither provides a clear definition, nor a systematic overview of roles and types of these hubs. To help close this research gap, we first conducted expert interviews with ten different innovation hubs in rural areas in Germany. Based on our qualitative content analysis, we were able to identify four central roles of such hubs (supporters, knowledge brokers, networkers, and physical experiment spaces) and develop an analysis scheme for evaluating hubs regarding these roles. Second, we applied these findings to a total sample of 45 innovation hubs in rural areas in Germany which enabled us to provide a detailed characterization and comparison of different types of innovation hubs. Further, we offer insights into the specific influence of these types on the development of rural areas as well as requirements for their long-term survival. With these insights, our study provides a useful basis for future research on the concept and impact of innovation hubs as well as a successful management of innovation hubs in practice.

TIM: Blockchain Technology Adoption, Cryptocurrency Investment and Firm Innovation  

Author: **Xin Wang**, *School of Business Administration, Hunan U.*
Author: **Zheng Yao**, *School of Business Administration, Hunan U.*
Author: **Chaoqun Ma**, *School of Business Administration, Hunan U.*

Blockchain technology has increasingly attracted attention from innovators, owing to its distinctive characteristics, such as decentralization, data tamper-resistance and traceable records. Nevertheless, the theoretical research investigating the relationship between blockchain technology and firm innovation remains limited. Drawing upon the resource-based view and signaling theory, this study integrates the internal resource allocation and external signal interaction that influence firm innovation into a comprehensive research framework. The study explores how a firm's experience of adopting blockchain technology impacts its innovation performance, and uncovers the nuances of firm innovation diversity. Employing empirical research on data from 1,738 Chinese listed firms between 2010 and 2022, we discover that the experience of adopting blockchain technology has a negative effect on firm innovation (or independent innovation) due to internal resource crowding out. Simultaneously, it exerts a positive influence on collaborative innovation as a result of external signal transmission. Importantly, cryptocurrency investment can positively moderate the negative relationship between the experience of adopting blockchain technology and firm innovation (or independent innovation) owing to the compensatory effect of resources. Conversely, it can negatively moderate the positive relationship between the experience of adopting blockchain technology and collaborative innovation due to the interaction of conflicting signals, potentially causing confusion among collaborators. The findings of this study hold significant theoretical and practical implications for advancing the understanding of firm innovation.

TIM: Motive and Opportunity: Information & Communication Technology and the Exploration of New Knowledge   

Author: **Casidhe Horan Troyer**, *London Business School*
Author: **Catherine Magelssen**, *London Business School*

This study examines the impact of a major advance in information and communication technologies (ICTs) on the exploration of new knowledge in innovation. While some scholars have emphasized that ICTs should increase exploration because it reduces the costs of searching for and integrating new knowledge, mounting evidence that ICTs are leveraged to exploit and build on familiar knowledge instead raises questions about whether ICTs are effective tools for exploration. We propose that the distinct motivational challenges arising from the relatively uncertain, distant, and diffuse returns to exploring new knowledge may constrain the response to ICTs, increasing exploration despite the lower cost. Therefore, we hypothesize that whether ICTs increase exploration critically depends on the management of innovation, specifically R&D unit autonomy and, for non-autonomous (managed) R&D units, the quality of monitoring. We examine the impact of the staggered introduction of broadband, a landmark ICT, on R&D unit exploration in multinational firms. We find that R&D units increase exploration post-broadband, but only when their managing unit also has access to broadband, thereby enabling the managing unit to provide high-quality monitoring. The data indicate that difference in exploration between autonomous and managed R&D units narrows post-broadband, suggesting that ICTs may disrupt the strategic value of autonomy for R&D unit innovation by improving monitoring.

TIM: Towards a Uniform Creativity: The Unseen Cost of ChatGPT Dependency in Innovation

Author: **QingHan Liu**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Yiyong Zhou**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Jihao Huang**, *Beijing Yuxin Technology Company*
Author: **Guiquan Li**, *Peking U., School of Psychological and Cognitive Sciences*

We explored the unbearable costs of ChatGPT use on sustained creativity through a pre-registered seven-day lab experiment and a follow-up survey in a month. 61 college students participated in the study and completed 16 different kinds of creative tasks, resulting in a substantial collection of 3302 ideas and 427 solutions. Half of them used ChatGPT to generate responses while the other half completed the tasks by themselves. Our findings indicate a temporary enhancement in creativity levels with ChatGPT use, accompanied by an increasing convergence in ideas. Crucially, when ChatGPT support was removed from participants who had developed a dependency, their initially boosted creativity levels dropped back to baseline, while the trend toward homogenized thinking persisted. This study reveals the potential negative consequences of ChatGPT dependency: in the long term, rather than augmenting creativity, ChatGPT may inadvertently hinder the diversity of innovative thought. These insights underscore the need for cautious integration of AI in creative processes and highlight the importance of fostering genuine and diverse innovation in scientific research.

TIM: Faster, Higher, Stronger, Together? The Impact of Blockchain Application on Innovation  

Author: **Zhaochen Li**, *Chinese Academy of Social Sciences*
Author: **Zimu Xu**, *Cranfield School of Management*

This study investigates the role of blockchain technology in fostering innovation within businesses, using a regression analysis of data from Chinese companies between 2007 and 2020. The results indicate that integrating blockchain technology significantly boosts business innovation by enhancing operational efficiency and broadening the scope of operations. Additionally, the study finds that businesses with greater technological and financial resources experience a more pronounced positive effect from blockchain adoption on innovation. The research also shows a substantial correlation between the use of blockchain technology and improvements in various innovation dimensions, including technology cycle time, citations, commercialization, and collaboration. This paper offers a detailed examination of how blockchain technology impacts innovation, presenting strong empirical evidence from a comprehensive dataset and contributing to a deeper understanding of this evolving relationship.

OMT: **Understanding Risky Organizational Change: A First-Principles Approach**

Author: **Felipe Csaszar**, *U. of Michigan*

Author: **Cha Li**, *U. of Texas at Austin*

The literature on aspirations and risky organizational change has documented a wide range of empirical patterns and relied on a mix of theories to explain them, resulting in fragmented insights and limited predictive power. We develop a formal model to address these limitations. In our model, organizations evaluate projects based on reference-dependent utility functions. We demonstrate that the diverse patterns observed in the literature can be explained by a small set of behaviorally-plausible assumptions regarding the shape of the organization's utility function, the characteristics of the projects being evaluated, and the noisiness of the evaluation process. Our model provides a parsimonious micro-foundation to the literature on aspirations and risky organizational change as well as many testable predictions regarding the propensity of risky organizational change.

OMT: **Employee Slack: Wealth and Organizational Adaptation**

Author: **Amir Sasson**, *BI Norwegian Business School*

Author: **David Jonas Schroeder**, *Copenhagen Business School*

The resource availability explanation of organizational adaptation and performance hinges upon the idea of buffering the technical core against uncertainty through the strategic management of financial and human resources to create a cushion of slack. Our paper complements those explanations by investigating the concept of employee slack — resources in excess of current consumption needs — and its influence on organizational adaptation and performance. Using the population of Norwegian residents and for-profit firms from 2010-2017 and leveraging the repeal of inheritance tax as a quasi-natural experiment, we assess to extent to which employee slack contributes to organizational adaptation and its successful execution. Our findings reveal that employee slack a) is a critical resource that affects both the willingness of employees to engage in and successfully execute adaptive actions and b) amends and complements our understanding of the relations between organizational slack and organizational adaptation and performance. Collectively, our findings highlight the importance of individual-level resources in shaping organizational outcomes. We advance our knowledge of various forms of organizational slack, the antecedents of organizational adaptation and performance and the little-explored wealth dynamics within organizations.

OMT: **How Individuals Create Dynamic Capabilities**

Author: **Jane Bjørn Vedel**, *Copenhagen Business School*

Dynamic capabilities are important for organizational performance. However, we know little about individuals' actions in developing them. We set out to study: How and why do individuals create dynamic capabilities? Based on an in-depth study of 63 researchers in the biomedical field, we observed that after receiving a large grant some developed, while others did not, dynamic capabilities. This variation could be explained by their temporal structuring, which led us to categorize them into four groups: The synergizers, the disruptors, the subsumed, and the isolated. The synergizers and the disruptors used strategies for implementing and acquiring resources and therefore developed dynamic capabilities. The synergizers developed coupled dynamic capabilities and the disruptors developed decoupled dynamic capabilities. In contrast, the subsumed only used strategies for implementing resources and therefore only developed coupled ordinary capabilities. Lastly, the isolated neither used strategies for implementing nor for acquiring resources and thus only developed decoupled ordinary capabilities. This paper extends the dynamic capabilities literature by identifying the strategies which enable individuals to develop dynamic capabilities. Furthermore, the paper identifies how individual level strategies shape continuous change or lead to disruptions at the organizational level. Lastly, the paper integrates temporality theory into the literature on dynamic capabilities.

OMT: **Divergent Behavioral Responses to Performance Shortfalls**

Author: **Eugene Taeha Paik**, *U. of Mississippi*

Author: **Songcui Hu**, *U. of Arizona*

The literature on problemistic search has not sufficiently delved into how firms differentially navigate search landscapes and distinctively respond to performance shortfalls relative to their aspirations. We examine the significant role of organizational scope in shaping firms' problemistic search. Specifically, we investigate how generalists and specialists differ in their market category expansions in response to performance shortfalls. We posit that variations in the audience structure and decision-making routines of generalists and specialists shape their problemistic search, influencing both search tendency and direction. Regarding search tendency, we suggest that although firms typically become more inclined to expand their market category as performance shortfalls increase, generalists are less likely to do so than specialists. Regarding search direction, compared to specialists, generalists are more likely to focus on short-distance category expansion while concurrently engaging more deeply in the new category. We test our hypotheses using the data from the U.S. recorded music industry between 1963 and 2005. The results support our theoretical predictions. This research contributes to the problemistic search literature by underscoring the pivotal role of organizational scope in guiding problemistic search.

An interdisciplinary team of scholars will share examples and guidance for repurposing academic research to better engage with university stakeholders such as alumni, donors, on-campus partners, the community surrounding the university, and local, state, and federal policymakers. The research team will share 1) what called them to want to be more impactful with their research, 2) tips learned for repurposing their research for a broader audience, 3) how addressing societal issues met their personal service goals but also the needs of students, alumni, and surrounding community partners that expect academic products to benefit them as well; and 4) how funding opportunities encouraged them to go beyond the goal of publishing in academic journals to make their research more practical. During this two-hour professional development workshop, participants will actively work to re-imagine their most recent publications for the following audiences: 1) on-campus symposia with students, faculty, and staff; 2) alumni; 3) donors that have funded centers or projects; and 4) local, state, and federal policymakers. Participants will be exposed to a multi-modal approach to engagement including social media postings, campus communications, alumni magazines and newsletters, participation in symposia, podcasts, and thought leader convenings, and participation in the legislative process. The format will alternate between the team sharing examples of what they have done, to participants brainstorming collaboratively to develop their own implementation plans they can begin immediately following the workshop.

Exploring Contextualized Nonmarket Strategies to Manage Geopolitical Risk and ESG

Panelist: **Anna Krzeminska**, *Macquarie Business School, Macquarie U.*

Panelist: **Hannah Trittin**, *Leuphana U. Lüneburg*

Panelist: **Dorothee Maria Winkler**, *U. of Zurich*

Panelist: **Tahiru Azaaviele Liedong**, *School of Management, U. of Bath*

Panelist: **Daniel Nyberg**, *The U. of Queensland*

Panelist: **Pei Sun**, *Alliance Manchester Business School, U. of Manchester*

Managing the nexus between societal and political demands represents an important challenge for today's organizations. Nonmarket strategy research debates the relationship between corporate social responsibility (CSR) and corporate political activity (CPA), particularly how the CSR-CPA relationship varies across different contexts such as autocratic vs democratic states. This is important for the management of both ESG referring to CSR and geopolitical risk referring to CPA: not only for firms conducting international business with autocratic states such as China and Russia, but also for firms dealing with domestic geopolitical risks, such as a change of local environmental regulations or political polarization and their ESG implications: How can contextualized nonmarket strategies help manage geopolitical risk and ESG in contemporary firms? The purpose of this panel symposia is to structure the emerging debate on the relationship of CSR and CPA, to enable discussion among the so-far often siloed contextual research camps, as well as to critically discuss central assumptions and research opportunities within nonmarket strategy scholarship.

Responsible Management Pedagogy Caucus - Innovating the Future Through Impactful i5 Pedagogy

Organizer: **Dirk C. Moosmayer**, *Kedge Business School*
Organizer: **Meredith Conlin Storey**, *PRME Secretariat / United Nations Global Compact Office*

The i5 is the largest project under the roof of the PRME. It builds on research by the LEGO Foundation that finds learning most effective when applying the five characteristics of personal meaningfulness, active engagement, iteration, social engagement and joyfulness. The purpose of the PRME i5 project is to transfer and apply these practices of effective playful learning into the domain of business schools in order to create an impactful pedagogy for responsible management that is also applicable to other business domains and divisions. The PRME i5 framework was initially developed in 2022 and was launched publicly in summer 2023. Since then, PRME undertook various activities to roll out the i5 framework and build a community of practice. At the same time, the i5 framework has faced some criticism for its limited integration of various existing responsible leadership pedagogies, and for its seemingly limited specificity to the responsible leadership theme more generally. In this caucus, we aim to convene people who are interested in furthering creative pedagogy and praxis for responsible management education by not only applying it in their teaching, but also developing the i5 framework and clarifying the connections to other existing pedagogies and by articulating to their own experiences.

Restoring the “Positive” Back Into Positive Work Cultures

Presenter: **Adam Wood**, *Woodbury U.*
Presenter: **Svetlana S. Holt**, *Woodbury U.*

Work cultures have struggled, especially in light of the recent “anti-work” movement, to establish and maintain positive environments for their employees. This Professional Development Workshop (PDW) presents three distinct ways in which organizational leaders can learn to create more positive and concomitantly inclusive work environments. We will begin with an initial interactive exercise, in which we create the experience of being excluded from a group. Next, we will proceed to an examination using appreciative inquiry in which participants examine the reasons behind the results of their “least preferred co-worker” test. Finally, we will engage in an experiential exercise in which participants learn how to bring more motivating feedback to their followers through the use of positive reward “lollipop” moments. The common denominator amongst these three exercises is learning to focus on the impact of small, positive motivators that increase our connectedness in spite of the many aspects that may isolate and alienate us from one another in workplaces, especially considering the physical and psychological distances that have become commonplace through added employee dispersion.

Participant: **Njoke Thomas**, *Boston College*

The creator economy has grown exponentially in its economic, cultural, and social impact during the past decade, but management scholarship has yet to catch up with this significant phenomenon. To facilitate emerging research on the creator economy, this panel symposium brings together scholars from various subfields of management as part of a conversation that seeks to define the most valuable theoretical and practical aspects of this phenomenon. Given the connections of content creators to gig and platform work, entrepreneurship, cultural production, and work and occupations, we have invited four panelists from each of these areas to engage in a conversation with members of the Creator Economy Working Group. Through the moderated discussion and audience dialogue, our hope is that this panel symposium will provide a generative starting point from which we can develop a shared understanding on how to update and develop theory to explain this phenomenon while engaging in a mutually fruitful stream of research that brings the creator economy into the mainstream of management scholarship.

Facilitator: **Madeline Toubiana**, *Telfer School of Management, U. of Ottawa*
Facilitator: **Chantal Van Esch**, *Cal Poly Pomona*

There has been ongoing dialogue in our field regarding the value and potential pitfalls of studies which are conducted “off the beaten path.” The settings and focal populations at the center of this work vary widely, but are often referred to as “atypical”, “unorthodox,” “extreme,” or “unusual.” These reductive labels, however, tend to shortchange and/or do not do justice to the complex experiences of scholars who undertake these inquiries. This workshop has been organized as a panel symposium for two years to showcase lessons learned by qualitative scholars who have successfully navigated hurdles that are methodological, political, and ethical in nature. This year, based on feedback from a growing number of attendees, we are (1) transitioning to a PDW format to facilitate deeper interactions and direct feedback; and (2) focusing discussions on a pervasive tension when interfacing with atypical contexts: safe-guarding informant dignity while conducting high impact qualitative research. There is often no single boilerplate, exemplar, or sage advisor ready to give advice on how to manage this tension, leaving scholars to face unknown pitfalls as they singlehandedly improvise a research program that is both impactful and just to those under study. In addition, researchers may find themselves unable to manage idiosyncrasies and procedural challenges of their work, including its emotionally taxing nature. We hope to stimulate learning and inquiry to guide doctoral students, junior faculty, and/or those who are new to this arena, creating a community of scholars who do their work “off the beaten path”.

No pre-registration is necessary.

Presenter: **Ken Moon**, *The Wharton School, U. of Pennsylvania*

Based on the very successful attendance we experienced at AoM 2021, 2022, and 2023 (100+ attendees), we propose a fourth edition of this PDW, which aims to expose researchers in strategic management to novel and cutting-edge data and methodologies to address relevant questions in the field that are still missing an answer often due to empirical limitations. In this year's edition of the PDW, we focus on showcasing novel datasets and empirical approaches that can help researchers address issues related to corporate strategy, organization design, innovation and technology management, and human capital management. The first part of the PDW will focus on presentations by the invited panelists, who will discuss the use of novel data and methodologies within specific research projects. This year, we will also feature a Strategic Management Journal co-editor to share her reflections on the peer-review process for papers that leverage novel methods and data sources. The panelists' presentations will be followed by a Q&A session with the audience and a series of roundtables where participants can interact with each other and the panelists and discuss ongoing research projects. With this PDW, we aim to continue nurturing a community of scholars interested in using cutting-edge methods and novel data sources to advance the understanding of fundamental questions in management research. We have thus compiled the content of past editions of the PDW on a website (<https://newmethodsanddata.com/>), which we will make available to the broader AoM community in due time to stimulate a fruitful conversation around the topic.

This Professional Development Workshop (PDW) aims to catalyze cutting-edge research in strategic management, with a focus on emerging and frontier markets and other underexplored institutional settings. The objective is to engage scholars in discussions that examine unexplored questions and encourage rigorous testing of existing theories in strategy, as well as the formulation of new theories that emerge from these unique contexts. Emerging and frontier markets—accounting for nearly 50% of global GDP and two-thirds of global growth over the past decade—pose unique challenges and opportunities for strategic management research. These markets often lack robust formal institutions yet possess influential informal systems that can inform new research frameworks. Moreover, the lack of structured, easily accessible data in these contexts requires researchers to take creative methodological approaches. The PDW aims to bring together established scholars who have studied these underexplored contexts and encourage a rich discussion on testing existing theories as well as formulation of new theories in strategy, that expand the scope of strategic management research to such understudied markets and institutional contexts.

Information for participants: The panel discussion of the session is open to all, however, capacity for the second half of the session related to the paper development workshop is limited due to the small-group, interactive roundtable/paper feedback format. We expect to be able to accommodate up to approximately 50 participants for the roundtable/paper feedback session. We therefore recommend that interested participants pre-register for the workshop using the Qualtrics survey form given here: https://upenn.co1.qualtrics.com/jfe/form/SV_0Dl2DpT6w130psG. Participants interested in pre-registering must do so by June 30, 2024. Pre-registration is required for participants who wish to receive feedback on a paper proposal. All participants including those who have not pre-registered are welcome to attend the panel presentations in the first part of the workshop. As part of the pre-registration, participants will be asked to indicate if they are interested in joining the final group discussions. If so, they will need to submit a 5-page proposal and participants wishing to receive feedback should include their top 3 choices among the listed discussants for the PDW. Registration should also include the name, affiliation, and current position (student, assistant professor, full professor, etc.) of the participant. Participants should also send a paragraph stating any specific issues related to the proposal that they are interested in discussing. The information provided by the participants as part of the pre-registration will be used to allocate participants to roundtables and will also be distributed among discussants prior to the session. In order to make the roundtable paper feedback session the most beneficial to participants, we will be selecting abstracts based on project quality and research fit with the discussants.

Work Attitudes and Job Performance: Exploring the Links and Strategies for Improvement

Session Moderator: **Huan Chen**, *Central U. of Finance and Economics*

HR: **Unraveling the Ethical, Prosocial, and Performance Outcomes of Leader High Performance Expectations**

Author: **Huan Chen**, *Central U. of Finance and Economics*

Author: **Zhen Wang**, *Central U. of Finance and Economics*

While prior research has predominantly emphasized the positive aspects of leader high performance expectations (LHPE), this study analyses whether, how, and when LHPE hinders ethical and prosocial conducts while improving employee performance. We propose an integrated model based on goal shielding theory in which, while LHPE facilitates employee performance progress through the prioritization of performance goal, it also leads to increased performance-improving noncompliant behavior and decreased organizational citizenship behavior via the same mechanism. Almost all of our hypotheses were supported by analysis of a three-wave, time-lagged survey data set from 321 employees. It was also shown that the double-edged sword effects of LHPE are more pronounced when employees are in more competitive climate. These findings emphasize the importance of striking a balance when employing LHPE, acknowledging both its potential benefits and limitations.

HR: **The Effect of Formal Mentoring on Newcomers' Pro-organization Proactive Behavior**

Author: **Jia Liu**, *School of Management, Shandong U.*

Author: **Han Meng**, *School of Management, Shandong U.*

Author: **Di Cai**, *Shandong U.*

Author: **Baoyi Feng**, *School of Management, Shandong U.*

Previous studies on formal mentoring have typically focused on the positive impact of mentoring on newcomers' growth and development, while overlooking the potential for formal mentoring to also encourage newcomers to contribute to organizational development. By exploring how and when mentoring stimulates newcomers' pro-organizational proactive behavior (POPB), this study examines the effects of formal mentoring beyond socialization, enriching the nomological network of mentoring. Based on social identity theory, we propose that formal mentoring positively influences newcomers' POPB via organizational identification, which represents the organizational identity of newcomers. Furthermore, newcomers' future work self salience (FWSS), which represents the personal identity of newcomers, would weaken the indirect effect of formal mentoring on POPB via organizational identification. Based on a sample of 317 newcomers and their leaders, the results of a three-wave time-lagged and multi-source study showed that organizational identification mediated the formal mentoring-POPB relationship. What's more, the indirect effect of formal mentoring on POPB via organizational identification was weak for newcomers with high FWSS. The findings have important implications for mentoring literature and management practice.

HR: **Extending the Link Between Self-Leadership and Extra-Role Performance During Organizational Change**

Author: **Verena Linnenborn**, *U. of Duisburg-Essen, Germany*

Self-leadership is suggested to be a meaningful resource for employees to retain orientation and therefore contributes to a functioning organization, especially during organizational change. To shed light on the relevance of self-leadership during organizational change, we investigate the effects of self-leadership considering employees' change fatigue, which is assumed to decrease psychological need satisfaction. Drawing from self-determination theory in combination with job demands-resources theory, we assume that self-leadership enhances extra-role performance through psychological need satisfaction. Further, considering the boost hypothesis within job demands-resources theory, we suggest that self-leadership is more important for employees' psychological need satisfaction and extra-role performance if their change fatigue is high. To test our hypotheses, we conducted a multiple regression analysis employing the PROCES package and using a two-wave sample from a German insurance company. Our results show that the relation between self-leadership and extra-role performance is partially mediated by psychological need satisfaction. Moreover, change fatigue reduces psychological need satisfaction and strengthens the relations of self-leadership with psychological need satisfaction and with extra-role performance. Thus, this study provides support for the compensating properties of self-leadership for mitigating the psychological fatigue caused by organizational change among employees.

HR: **The Impact of Leader Expressed Humility on Employee Social Orientation: A Moderated Dual-Path Model**

Author: **Junghwan Park**, *Fox School of Business, Temple U.*

Humility has long been regarded as a virtue in literature, bringing multiple benefits and thus, should be encouraged. Despite the emphasis on its benefits and necessity, there is a growing trend of a lack of humility among employees that creates a disconnect between scholarly discussion and practice. Drawing upon literature on social motives and attribution theory, I investigate the possibility that humble leaders might inadvertently prevent employees from adopting the other-oriented nature of the humble behavior they display. Specifically, I suggest that leader humility can enhance both other- and self-focused social orientations and subsequent behaviors while impression management attribution moderates the mechanisms. The results support the dual-path mediation pathways between leader humility and employee self- and other-oriented behaviors via self-concern and other-orientation, but failed to support for the moderating role of impression management attribution. Implications and directions for future research are discussed.

CSR Impact

Session Moderator: **Marieke Huysentruyt**, *HEC Paris*

STR: **CSR and Recruiting** 

Author: **Qiang Li**, *China Europe International Business School (CEIBS)*
Author: **Bingyi Qin**, *City U. of Hong Kong*
Author: **Wenfeng Wang**, *southern U. of science and technology*
Author: **Zheng Wang**, *City U. of Hong Kong*

Employees prefer to join socially responsible firms. How can firms with high CSR reputations take advantage of this preference in the labor market? We shed light on this question by investigating one important firm action: setting skill requirements in job postings to target desired employees. Based on social identity and signaling theory, firms' CSR reputation can enhance prospective employees' identification with the firm and signal their fairness to all stakeholders, including employees. Thus firms' CSR reputation can give them an advantage in the labor market, enabling them to raise skill requirements in job postings to target high-quality employees. Using online job posting data, we provide large-sample empirical evidence that firms with higher CSR performance have higher requirements for their prospective employees in terms of education, experience, cognitive skills, and social skills. The positive effects of CSR reputation on skill requirements are more pronounced when firms are less visible, when the local community values social responsibility more, and when the competition for talent is more intensive in the local labor market. To validate that setting higher skill requirements in job postings can help firms with high CSR reputations recruit better-quality employees, we show that their skill requirements and CSR reputations are positively associated with the actual skillsets of newly hired employees. In sum, our study suggests that firms could take action to translate their CSR reputation into a competitive advantage, and enhancing skill requirements in job postings can be one such means.

STR: **Diversity and/or Inclusion? Evidence from Disability Quota and Inclusion Laws in Brazil**    

Author: **Leandro Nardi**, *HEC Paris*
Author: **Marieke Huysentruyt**, *HEC Paris*
Author: **Tomasz Obloj**, *Indiana U. - Kelley School of Business*
Author: **Thomaz Teodorovicz**, *Assistant Professor, Copenhagen Business School*

This paper investigates how firms respond to legislative pressures to pursue diversity and inclusion goals. Adopting a question-driven approach, we study firms' responses to legislation aimed at improving employment conditions for people with disabilities (PwD) in Brazil. Specifically, we analyze two significant legislative shifts: one in 2012, aimed at strengthening enforcement of pre-existing (diversity-oriented) disability quotas, and another in 2015, focused on broader inclusion of PwD in society. Applying various econometric approaches to a comprehensive matched employer-employee database, and drawing insights from in-depth interviews, we find that, while the changes in legislation led to significantly increased hiring of PwD, these average effects mask important heterogeneity. Accordingly, responses to the law changes were significantly stronger for quota laggards—i.e., firms that fail to meet their disability quotas—particularly for those trailing their quotas by wider margins. Community-level support for PwD (proxied by the existence of school facilities adapted to the needs of PwD in the vicinity of a firm's headquarter) was also associated with stronger responses, while firms' commitments to diversity in dimensions other than disability (i.e., race, gender, and education background) were associated with weaker responses. Critically, we also show that, in the absence of a complementary inclusion law, heightened diversity efforts may come at a cost to inclusion: higher representation was associated with an increase in the disability wage gap that was equivalent to a 5-year setback to equitable wages of PwD. These greater wage disparities were only mitigated following the enactment of the inclusion law.

STR: **Workplace Wellbeing and Firm Performance** 

Author: **Jan-Emmanuel De Neve**, *Oxford U., Saïd Business School*
Author: **Micah Kaats**, *Harvard U.*
Author: **George Ward**, *U. of Oxford*

This paper examines the relationship between employee wellbeing and firm financial performance, a topic that has long been of great relevance to both academic researchers as well as practitioners. We use novel large-scale data from Indeed, a major jobs website, to assess the relationship between workplace wellbeing and firm performance. Our measures of employee wellbeing include self-reported job satisfaction, purpose, happiness, and stress, which we aggregate to over 1,600 listed companies in the United States. Using company-level employee wellbeing measures to predict firm performance, we find that wellbeing is associated with firm profitability. Overall, these descriptive results show a strong positive relationship between employee wellbeing and firm performance. This has key implications for the ways in which firms should treat their workers and, more broadly, for the role of human resource management in a firm's strategy. We discuss a number of limitations to the analyses and point to directions for further research.

STR: **Does Self-Regulation Generate Desired Social Outcomes? Evidence from Payment Transparency in Africa**    

Author: **Xiaoli Tang**, *Bocconi U.*
Author: **Daniel Walter Elfenbein**, *Washington U. in St. Louis*
Author: **Tatenda Marume Geoffrey Pasipanodya**, *Washington U. in St. Louis, Olin Business School*

We investigate the effectiveness of multi-stakeholder initiatives (MSIs) as a governance mechanism in tackling global sustainability challenges, focusing on the Extractive Industries Transparency Initiative (EITI). We evaluate whether MSIs, seen as an alternative to industry self-regulation, lead firms to commit to and achieve higher social or environmental standards. We explore the symbolic versus substantive nature of these voluntary commitments and their actual impact on social outcomes. By examining the EITI, which aims to reduce corruption in extractive industries through payment transparency, we assess the impact of EITI membership on transparency performance and local perceptions of corruption. Utilizing data on the staggered adoption of mandatory disclosure by firms in Europe and Canada, we find that EITI-supporting firms show better transparency. Additionally, geo-coded survey data from Africa reveals that local perceptions of corruption decrease near areas of new investments by EITI-supporting firms. These findings indicate that self-regulation initiatives can yield positive social outcomes. The study contributes to the debate on the social impact of private-sector CSR initiatives and the effectiveness of MSIs in addressing sustainability challenges.

Performance, Disclosure and Inequality

Session Moderator: **Robert Andersen**, *Ivey Business School*

STR: **Effects of Cognitive Diversity Amid Earnings Surprises on Market Reaction and Financial Performance**  

Author: **Jeanine Pieternel Porck**, *Oklahoma State U.*

Author: **Cole Evan Short**, *Pepperdine Graziadio Business School*

Author: **Rosa Kim**, *Oklahoma State U.*

Author: **Owen Nelson Parker**, *UT Arlington*

Conventional wisdom holds that top managers should have diverse perspectives and ideas, i.e., cognitive diversity, to navigate unexpected events and foster organizational performance. However, the theoretical puzzle of how firm-specific unexpected events interact with cognitive diversity remains largely unsolved, as findings are equivocal, based on proxies rather than actual cognitive differences, and focused on unexpected events within the environment rather than firm-specific events. To resolve the puzzle, we build and test a fine-grained theory of how cognitive diversity affects both market reaction and financial performance when the top management has to respond to an unexpected event. Drawing on Expectancy Violation Theory and Uncertainty Regulation, we predict that high cognitive diversity generally harms market response amid unexpected events, and negatively impacts financial performance. However, we propose cognitive diversity has contingent benefits following negative or positive earnings surprises - after a negative surprise, the market's negative reaction to diversity diminishes, and after a positive surprise, diversity aids financial performance. We find broad support for our predictions, analyzing more than 22.3 million words spoken by top management teams of S&P 500 firms from 2008-2019 across 17,210 quarterly earnings calls.

STR: **A Cross-National Analysis of Prosperity, Inequality and Trust in the Free Market**

Author: **Robert Andersen**, *Ivey Business School*

Author: **Curtis LaButte**, *Ivey Business School*

Using data from the World Values Survey on more than 231,368 individuals from 202 surveys nested within 86 countries collected between 1995 and 2020, we assess the impact of economic conditions on cross-national differences in public trust in the free market. We find that trust is highest in countries that are rich and have relatively low levels of income inequality. We also find that within country inequality has little impact on confidence in highly prosperous countries—i.e., overall confidence in the free market is high regardless of the shape of the income distribution and one's position within it. The story differs dramatically in poor countries, however. As GDP per capita lessens, the impact of within country income inequality becomes increasingly negative. Moreover, those at the bottom of the distribution become much less confident as inequality rises, resulting in a strong positive relationship between individual-level income and confidence in the free market. We end with a discussion of the implications of these findings for international business investments.

STR: **Who to Target: Financial Performance, ESG Disclosure, and Short-Selling Activities in S&P 1500 Firms** 

Author: **Luman Yu**, *The Hong Kong Polytechnic U.*

Author: **Shuping Li**, *Hong Kong Polytechnic U.*

Author: **Joohong Robert Park**, *The Hong Kong Polytechnic U.*

Despite the increasingly critical role of short sellers in corporate governance, limited research has explored which firms attract short sellers. This paper fills in this gap by examining the financial and non-financial antecedents of short selling activities. Specifically, we argue that firms with poor financial performance and high ESG disclosure quality may be perceived as having higher managerial opportunism within the firm, inducing higher perceived firm risk and thus more short selling activities. This effect should be more salient when a firm's ESG engagement is more likely to be symbolic rather than substantive. Using a longitudinal dataset of 2,574 S&P 1500 firms between 2006 and 2019, our empirical analyses support our predictions. Our findings contribute to literature on corporate governance, in particular short selling.

STR: **Bombastic Promise or Undue Modesty? Governing ESG Decoupling in State-Owned Enterprises**

Author: **Qingling Jin**, *U. of Toronto*

Author: **Changwha Chung**, *Korea U.*

Author: **Hyounjin Lee**, *Kookmin U.*

Existing literature has increasingly focused on the misalignment between firms' external and internal behaviors in the context of corporate social responsibility (CSR). We address the research gap by investigating the effect of state control on environmental, social, and governance (ESG) decoupling. Drawing on institutional theory and stakeholder theory, we distinguish between means-ends decoupling and reverse decoupling to better understand how state control affects the decoupling mechanism distinctively. To test our hypotheses, we used a panel dataset of 306 firms in China from 2011 to 2018. Importantly, we find that means-ends decoupling is rare in the Chinese context, and state-owned enterprises (SOEs), compared to other types of enterprises, are more likely to engage in ESG decoupling under the reluctance to obtain additional expectations and attention from diversified stakeholders. Our study develops a novel standpoint under the context of sustainability strategies in Chinese SOEs from a corporate governance perspective.

Platform Strategy and Growth

Session Moderator: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*

STR: Myopic Expansions on Platforms: Evidence From Mobile Application Markets  

Author: **Ahmadreza Mostajabi**, *London Business School*
Author: **Aldona Kapacinskaite**, *Department of Management and Technology, Bocconi U.*
Author: **Keyvan Vakili**, *London Business School*

The literature on market design and multisided platforms focuses primarily on the positive impact of resolving market frictions on the aggregate market size and efficiency. In this paper, we argue that extensive resolution of market frictions associated with market entry on multisided platforms can nudge platform participants to overlook the heterogeneous nature of different markets and, consequently, to engage in large-scale, myopic market expansions. These expansions, in turn, can lead to lower customer satisfaction and performance. We test our arguments in the context of Apple's App Store. We find that app developers' large-scale market expansions increase their client base in the short run but negatively affect their ratings, downloads, financial performance, and innovation rate in the longer run.

STR: Post-Mates No More? Complementor Engagement Following Platform Acquisition  

Author: **Hyuck David Chung**, *U. of Michigan*

How does a platform acquisition influence complementors on the target platform? The acquisition increases the number of users on the merged platform and provides complementors with stronger network effects. However, not all complementors may benefit from the enlarged user base. I argue that complementors on the target platform incur adjustment costs after the acquisition, which leads to a competitive disadvantage in attracting users relative to complementors on the acquiring platform. The competitive disadvantage may escalate with the number of complementors on the acquiring platform and force complementors on the target platform to leave the merged platform. I empirically test these arguments using Uber Eats' acquisition of Postmates in the U.S. food delivery industry. I find that Postmates restaurants were more likely to leave Uber Eats and switch to competing platforms (i.e., DoorDash or Grubhub) in cities where Uber Eats had a relatively larger number of restaurants before the acquisition. This effect was weaker for Postmates restaurants that also operated on Uber Eats before the acquisition but stronger for Postmates restaurants that also operated on competing platforms before the acquisition.

STR: Building the Plane While Flying It: The Emergence of a Multi-Platform Configuration

Author: **Hong Hou**, *Peking U.*
Author: **Qinli LU**, *INSEAD*
Author: **Nathan Furr**, *INSEAD*

While digital platforms have the potential to disrupt or transform industries, it remains unclear how platform organizations achieve network effects in complex industry contexts. Drawing on a unique setting of a platform-driven transformation of the fast-moving consumption-good industry, this case study reveals how industry complexity and task complexity rooted in an established industry architecture cut off the positive feedback of network effects. We propose a process model to theorize how a novel, "hybrid" business model, i.e., a multi-platform configuration, emerges to overcome these impediments and transfer the industry successfully. It suggests that, in addition to facilitating cross-side interaction, a viable platform business model needs to achieve resource mobilization and resource combination, both of which are contingent on the industry context where it operates.

STR: Complementors' Response to Increased Platform Competition: Evidence from YouTube and Twitch 

Author: **Niloofar Abolfathi**, *Singapore Management U.*

We explore the efforts and performance of different complementors following intensified platform competition. We argue that multihoming complementors exert more effort than their single-homing counterparts only when platforms target heterogeneous market segments and between-platform competition for users is relatively low. When platforms compete for the same user base, however, multihoming complementors exert less effort and thus underperform relative to single-homing complementors due to their different incentives: For multihoming complementors an increase in the attractiveness of one platform comes at the expense of a reduced attractiveness of the other. We find empirical support for our theory using a unique, hand-collected dataset of YouTube gaming channels faced with an external shock that increased content overlap and thus competition with the rival gaming platform Twitch.

Inside Versus Outside CEOs

Session Moderator: **Richard L. Priem**, *Texas Christian U.*

STR: **In-N-Out CEOs: Do Competitive Actions Taken by New CEOs Affect the Likelihood of Early Dismissal?**

Author: **Hermann Ndofor**, *Indiana U., Indianapolis*

Author: **Richard L. Priem**, *Texas Christian U.*

Author: **Michael C. Withers**, *Texas A&M U.*

New CEOs, particularly those who come from outside the organization, are often mandated to bring about significant change. However, they also require time to familiarize themselves with the firm and their role before making consequential strategic decisions. Drawing from attention-based view and expectancy violations theory, we suggest that the speed, intensity, and novelty of competitive actions taken by new CEOs would affect differently the early-tenure dismissal likelihoods for new outsider and new insider CEOs. In our sample of S&P 1500 successions between 2005 and 2015, we find that new outsider CEOs who initiate competitive actions soon after succession face a greater likelihood of early-tenure dismissal than insider CEOs initiating quickly competitive actions. Furthermore, new outsider CEOs who initiate multiple competitive actions or embrace continuity with the prior CEO's actions are more likely to be dismissed early, while new outsider CEOs who initiate novel competitive actions are less likely to face early-tenure dismissal. These relationships are reversed for new insider CEOs. Our research highlights the heterogenous effects of competitive actions repertoire, novelty and speed for new insider and outsider CEOs, and their significant practical implications.

STR: **To Each Their Own: Unraveling the Roots of Managers' Strategic Preferences**

Author: **Ithai Stern**, *INSEAD*

Author: **Razvan Lungeanu**, *Northeastern U.*

Using detailed career history data for all top management team (TMT) members of all Forbes 500 publicly held pharmaceutical companies, we differentiate between managers who were externally hired into the TMT and those who were internally promoted and examine where their respective strategic preferences come from. Findings show that the strategic preferences of externally hired TMT members are primarily shaped by their work experiences, while those of internally promoted members emerge from a process whereby entry-level organizational newcomers are imprinted with the practices that prevailed in the organization and the industry at the time of joining the organization. Testing our hypotheses in the context of a firms' choice of technology sourcing vehicles, our findings help explain why some organizations have a greater variety of strategic responses than others. We discuss the implications of our findings for the literature on managerial preferences and to the question of whether organizations are better off hiring a new manager from inside or outside the organization.

STR: **It's the Network: Why Outsider CEOs Bring (Less) Strategic Change**

Author: **Yao Ma**, *U. of Neuchâtel*

Author: **Claudia D. Jonczyk**, *U. of Neuchâtel*

Author: **Dimitrios Georgakakis**, *U. of Leeds*

There has been much controversy about the effects of CEO succession origin on strategic change. While some scholars argue that outsider CEOs are more likely to act as agents of strategic renewal, others highlight that outsider CEOs lack firm-specific skills for promoting swift strategic changes. Taking a social network perspective, we develop a contingency framework that reconciling these opposing views. We postulate that the extant contradiction is attributed to the incoming CEO's relational network prior to succession and the performance conditions surrounding the firm (i.e., "turnaround" versus "business-as-usual" conditions). Data from 2208 CEO succession events in S&P 1500 companies between 2000 and 2017 show the mediating effect of new CEO's networks with the firm's board of directors and external business elites. Externally recruited CEOs tend to have a weaker internal network and a larger external network, which results in a higher degree of strategic change in a business-as-usual situation but lower strategic change in firms facing turnaround situations. Overall, our study provides a network view of CEO succession origin to highlight when hiring an outsider CEO is more likely to lead to swift and adaptive action.

STR: **Neither Insider nor Outsider: Independent Directors Who Become Executives**

Author: **Inn Hee Gee**, *U. of Oklahoma*

Author: **Albert Cannella**, *Texas A&M U., College Station*

Author: **Amy Hillman**, *Arizona State U.*

Executive succession is a critical event for organizations. Traditional succession research has often focused on when CEO succession involves an executive from inside the organization versus when a new CEO is selected from outside the organization. We depart from this tradition to explore an increasingly common phenomenon: when an independent outside director changes his or her role to that of an executive. As candidates for executive roles, independent directors are neither insiders nor outsiders, as they often have significant inside information because of board service yet they have not had executive experience in the firm. From an information asymmetry perspective, choosing a director as an executive can reduce adverse selection because the remaining top management team and board have come to know the individual's skills, expertise, and working style and presumably have built some level of trust and respect that a complete outsider would lack. Building upon the concept of board/director capital, we hypothesize about what makes one director more likely to become an executive of the firm than others. We find support for our hypotheses using a dataset comprised of the S&P 1500 between 2000 and 2019.

Foresight, Adaptation, and Technological Evolution

Session Moderator: **Franco Malerba**, *Bocconi U.*

STR: Shaping with Purpose: Redesign the Industry Environment After the Emergence of a Dominant Technology

Author: **Charlotte Jacobs**, *Louisiana State U.*
Author: **Gwendolyn Kuo-fang Lee**, *U. of Florida*

This study examines how firms shape their industry environment as a strategic response to the emergence of a dominant technology. We propose that firms whose technologies lost to the dominant one may enact endogenous shaping as a strategic response when their corporate purpose is threatened by the dominant technology. We also explore how the presence of purpose-driven firms affects the further evolution of the 'losing' technologies that these firms develop. We study purpose-driven shaping by conducting an empirical analysis of the photovoltaic (PV) cell industry. We find that firms developing 'losing' technologies in the PV cell industry enacted shaping to redesign the industry environment towards their vision for the future. The shaping activities of these firms reveal patterns of evolution that the theories of dominant design have not considered. Whereas the theories predict that innovation would shift from product to process after the emergence of a dominant design, for the 'losing' technologies we discover no such shift. The persistent pursuit of product innovation suggests that the 'losing' technologies may carry the potential to challenge the dominant technology when purpose-driven firms aspire to shape the industry environment. While technological discontinuity has been regarded in existing theories as an exogenous event that disrupts the dominant design, we explain how the dominant design may be disrupted endogenously by 'losing' technologies that are not radical or new-to-the-world.

STR: The Long and Short of It: Individual-Level Industry Forecasting and Temporal Duality

Author: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*
Author: **Daniel Wilde**, *Indiana U. - Kelley School of Business*

Forecasting the industry context underpins much of the canonical perspectives within the field of Strategy. Additionally, many of the core tradeoffs illuminated in the field are premised upon different forward-looking expectations between short-term and long-term outcomes. While extant literature has begun to offer important clarity regarding antecedents toward superior foresight, the focus has largely been on understanding foresight around short-term outcomes, which is but half of the story. In this study, we complement existing literature by offering a perspective of how individuals navigate the complexities of forecasting across different temporal horizons: a duality between short- and long-term issues. Integrating the behavioral decision theory and industry evolution literatures, we argue that individuals tend to overreact in the short-term of industry evolution and underreact in the long term due to a fundamental difference between common linear cognitive processes and nonlinear (S-curve) industry outcomes. Utilizing a novel dataset of 7,569 forecasts by 505 participants who participated in parallel short-term and long-term industry forecasting tournaments related to the evolution of the automotive industry, we find support for our hypotheses. Further, in post hoc analyses, we explore individual-level differences in belief updating patterns and background, identifying the role of overreaction, underreaction, and domain experience in shaping industry foresight across different temporal horizons.

STR: The Impact of Technological Change on Knowledge Production and Exchange

Author: **Paul Huenermund**, *Copenhagen Business School*
Author: **Tianjiao Xu**, *Copenhagen Business School - Department of Strategy and Innovation*

Research shows that technological changes may dramatically reshape the distribution of competitive advantages within an industry across firms or individuals, sometimes taking the form of superstar effects. While such dynamics have been demonstrated for, for example, the entertainment industries, less is known about them in the context of industries and activities directed at producing and exchanging knowledge. To examine this issue, we hypothesize that changing to internet-based formats for knowledge production and exchange impacts opportunity costs on both the supply and demand side in such a way that 1) superstar effects and 2) the representation of women in these activities are strengthened. However, we 3) offer competing hypotheses with respect to the implications for knowledge proximity in knowledge production and exchange. Empirically, we focus on the impact of the Covid-19 pandemic on the conduct of research seminars in strategic management at the world's leading business schools. A consequence of the pandemic was that most seminar activity worldwide moved online. Analyzing hand-collected seminar data (covering the years 2016 to 2021, 73 business schools, 3,694 unique seminar presenters, and 5,346 seminars) merged with data on presenters and the schools with which they are affiliated, we find that technological change induced by the pandemic strengthened superstar effects in seminar activity, increased the representation of female presenters, and affected topic overlap differently in lower- versus higher-ranked school.

STR: Adaptation to Technological Discontinuities: How Demand-side Disruptions Favor Incumbents

Author: **Grace Liu**, *ETH Zurich*
Author: **Franco Malerba**, *Bocconi U.*
Author: **Roberto Fontana**, *U. of Pavia & Bocconi U.*

Technological discontinuities present both opportunities and challenges for incumbent firms. Furthermore, the impact of technological discontinuities extends beyond the realm of supply-side factors, exerting a transformative influence on demand-side conditions. Specifically, the characteristics of customers may undergo radical changes in a new technological generation due to shifts in their preferences and, at times, the emergence of a new customer segment. This paper investigates the implications of incumbents' market-related capabilities in adapting to technological discontinuities by recognizing the demand-side changes influenced by their prior market experiences. We conduct empirical tests on our hypotheses using longitudinal data on market entry and exit within various technological generations in the computer printer industry throughout its entire life cycle. Our findings indicate that the preceding market experiences associated with the emerging customer segment may constitute a contributing factor to incumbent heterogeneity, influencing the successful continuation of their business in subsequent technological epochs.

Emerging Markets and Business Groups

Session Moderator: **Nan Zhou**, *Tongji U.*

STR: Business Group-Affiliation and Firm-Bank Relationships: Evidence from India  

Author: **BIBEK BHATTACHARYA**, *Assistant Professor Indian Institute of Management Ahmedabad*

Author: **Lakshmi Goyal**, *Assistant Professor Indian Institute of Management Ahmedabad*

Author: **Sandeep Yadav**, *Indian Institute of Management Bangalore, India*

Multiple banking relationships have benefits but also impose costs; choosing to partner with numerous banks is a strategic choice worthy of further research. Moreover, organizational forms such as business groups have access to group-wide financial and informational resources and therefore may not seek such banking relationships. Thus, to understand the relationship between group affiliation and multiple banking relationships, we utilize insights from the substantial body of research on business groups to theorize that financial and informational resources provided by associating with several banks complement those provided on account of group affiliation. We further draw on research on institutional voids to suggest that creditor reforms benefit standalone firms more than group affiliates in creating a more equitable environment for firms seeking credit. Thus, we expect business group affiliation to positively relate to multiple banking relationships, with the baseline weakening after the onset of creditor reforms. We find strong support for our predictions on a sample of 14,305 Indian firms from 1989 to 2022. Our novel insights seek to contribute to the research on business groups, specifically to research questioning the relevance of business group affiliation in emerging economies and research on multiple banking relationships.

STR: Performance Feedback, National Innovation Policies, and Technological Catch-Up Strategies

Author: **Lakshmi Goyal**, *Assistant Professor Indian Institute of Management Ahmedabad*

Author: **Vikas Goyal**, *Indian Institute of Management, Indore*

How does performance shortfall affect problemistic search by firms from emerging economies? Despite the importance of context of emerging economies in the proliferation of the problemistic search research, attempts to achieve the same remain far and few. Thus, advancing scholarship on the emerging economy firm's search behavior following performance shortfall, this study combines research on the problemistic search theory, with the literature on catch-up strategies and national policies. We suggest that emerging economy firms exhibit an external orientation to search and pursue technological catch-up strategies following performance shortfall. Further, the national innovation policies that outline the government's emphasis on technology transfer and assimilation moderate the baseline relationship. We examine our predictions on a sample of Indian manufacturing firms during the period 1992 – 2018 and find empirical support. This study contributes to the nascent stream of research examining emerging economy firm's problemistic search behavior and underlines the role of national policies that guide formation of institutions and firm search processes.

STR: Status Shocks and Digital Transformation: Evidence from Chinese Niche Champions

Author: **Yapu Zhao**, *Nanjing U. of Aeronautics and Astronautics*

Author: **Qian Xu**, *Nanjing U. of Aeronautics and Astronautics*

Existing firms may need to radically change themselves to succeed in the emerging digital world, and digital transformation is an important way to do so. So what drives firms' digital transformation? This study establishes a link between positive status shocks and firms' digital transformation. We have exploited the unique empirical opportunity generated by the release of Niche Champions in China since 2016. Difference-in-difference analyses on matched samples show that status shock is positively related to a firm's digital transformation. We further find that human capital enhances, while managerial myopia weakens the effects of status shocks on digital transformation. The implications of our research for digital transformation and status research are discussed.

STR: Local CSR and Emerging Market Firms' Upgrading: Evidence from China 

Author: **Nan Zhou**, *Tongji U.*

Author: **Kerui Gao**, *School of Economics & Management, Tongji U.*

This study examines the influence of local CSR on emerging market firms' (EMFs') upgrading. We first explain the role of local stakeholders in supplying resources needed for upgrading, and the signaling role of local CSR. Then, we argue the role of local CSR in strategically signaling and accessing resources from local society members and promoting EMFs' upgrading. Accordingly, we hypothesize a positive relationship between local CSR and EMFs' upgrading. We also examine the moderating role of the level of institutional development and a firm's financial constraints on the relationship between local CSR and upgrading. We found that the positive relationship between local CSR and upgrading is stronger for firms located in regions with less developed institutional environments and with higher financial constraints. A sample of listed firms in China from 2006 to 2022 supports our argument.

Participant: **Georg Wernicke**, *HEC Paris*
Participant: **Joao Albino Pimentel**, *U. of South Carolina, Darla Moore School of Business*

This presenter symposium showcases research frontiers on firms' strategic responses to the market and non-market challenges that arise from political polarization in both domestic and international contexts. These range from underexamined, non-ideological predictors of corporate and CEO activism on contentious socio-political issues (e.g., corporate reputation, CEO narcissism) to the influence of stakeholders on the expanding venues (e.g., corporate campaign contributions, corporate LGBTQ policies) of corporate activism; and implications of political polarization for international business (e.g., divestiture). The four presentations in this symposium adopt a range of methodological approaches (e.g., matched-sample regressions, machine learning techniques, and difference-in-differences designs), and collectively contribute to the existing literature on corporate and CEO activism, stakeholder management, non-market strategies, corporate political activities, social issues in management, and international management.

Presenter: **Dovev Lavie**, *Bocconi U.*
Presenter: **Manuela Hoehn-Weiss**, *Oregon State U.*

This symposium brings together a panel of experts to delve into the cutting-edge research in interfirm collaboration literature. Our focus is on investigating how firms can effectively create and appropriate value by adeptly managing the dynamics within and across interfirm collaborations. The dynamics within a collaboration arise when competitive and cooperative tensions evolve within the single collaboration, while the dynamics across collaborations arise when these individual collaborations are interdependent on each other. By examining various forms of interfirm collaborations and employing unique datasets, we aim to enrich our understanding of the inception, evolution, and strategic implications of individual interfirm collaborations and the collections of them.

Accelerating Tech Entrepreneurship

Session Chair: **Stephen Michael Impink**, *HEC Paris*
Presenter: **Nataliya Wright**, *Columbia Business School*
Presenter: **Amisha Miller**, *NYU Stern*
Presenter: **Daniel Fehder**, *U. of Southern California - Marshall School of Business*
Discussant: **Sandy Yu**, *U. of Minnesota*
Discussant: **Abhishek Nagaraj**, *UC Berkeley & NBER*
Discussant: **David Hsu**, *The Wharton School, U. of Pennsylvania*

Accelerators have emerged as important stimulants of high-tech entrepreneurial growth. And they do so through helping startups signal their quality (Howell, 2017; Yu, 2019), providing business education (Fehder and Hochberg, 2014; Gonzalez-Urbe and Leatherbee, 2018; Hallen et al., 2020), as well as by selecting higher quality startups (Wright, Koning, and Khanna, 2023; Yin and Luo, 2018). But these effects might not accrue equally to all startups, shaping whether accelerators help bridge or exacerbate disparities in entrepreneurial growth (Wright, 2023) and the extent to which they influence the direction of their technologies (Impink, 2023). We propose to bring together three papers presented by Dan Fehder, Amisha Miller, Michael Impink, and Nataliya Wright, discussed by David Hsu, Abhishek Nagaraj, and Sandy Yu, to understand the heterogeneous selection and treatment effects of accelerators. The panel reveals how accelerators select and benefit startups more that are already in more resourced positions, whether it be in terms of being located in US hubs, possessing dominant technological stacks, having a viable business idea, and having founders with represented ethnic and gender backgrounds. In doing so, these accelerators appear to complement the existing resources of startups rather than compensate for their resource constraints.

The Dark Side of Careers: Career Inaction, Interruption, and Trauma

Session Moderator: **Xinyi Bian**, *Nankai U., China*

CAR: **Career Interruption Stigma: A Complex, Fluid, and Dynamic Construct**

Author: **Xinyi Bian**, *Nankai U., China*

Author: **Jia Wang**, *Texas A&M U.*

Women are leaving the workforce, and their difficulty in reentering the workplace are critical issues that call for action and attention from all concerned parties. Unfortunately, there is a lack of empirical investigation on women's career interruption experiences. Building upon our qualitative study of 40 Chinese women who interrupted their careers, we found the existence of career interruption stigma. This psychological oppression causes tremendous adverse outcomes for labeled and separated women with career-interruption experiences. We define career interruption stigma as a complex, fluid, and dynamic stigmatization construct comprised of age, gender, and unemployment stigma elements. In addition, the career interruption stigma is subject to societal, economic, and cultural influences. By presenting a fine-grained case of career interruption stigma, we not only decipher how social dynamics and interrelatedness of stigma elements shape women's careers but also unveil women's struggles with temporary unemployment that are unintentionally hidden in the existing literature, thereby defining critical agendas that will change the landscape of workforce and career development research.

CAR: **Trapped in the Careers: How Do Employees Interpret and Respond When They Experience Career Inaction**

Author: **Yin Zhu**, *Central U. of Finance and Economics*

Author: **Zhen Wang**, *Central U. of Finance and Economics*

Author: **Fubin Jiang**, *Central U. of Finance and Economics*

Career inaction, or failing to act adequately for a period of time to make a desired change in one's career, is common. Individuals expressing a desire for promotions and wage increases, for example, remain in their current positions, those considering leaving the occupation eventually stay, and those wishing to start a business fail to take action. While these phenomena are widespread, research regarding how they affect employees at work is very limited. Drawing on attribution theory and stress research, this study presents an integrated understanding of how employees think, feel, and behave when facing career inaction. Specifically, we established the idea of blame attribution for career inaction (namely, self- and other-directed blame attribution) and investigated how they related to individuals' emotional and behavioral reactions to career inaction. Three-wave data from 302 employees was used to investigate the research questions. The findings indicated that when experiencing career inaction, employees who tend to blame themselves are more likely to suffer anxiety and engage in work withdrawal, whereas those who blame others tend to experience anger and engage in interpersonal deviance. Overall, this study enhances the development of career inaction theory and assists the practice of career management.

CAR: **Traumatic Career Transition, Organizational Conditions, and Posttraumatic Growth**

Author: **Dina Banerjee**, *Indian Institute of Management Udaipur*

Author: **ALKA SHARMA**, *Indian Institute of Management, Udaipur*

Addressing several gaps in the literature on post-traumatic growth, we explore the experiences of 27 trauma victims who lost the careers they strongly identified with in response to life-threatening events followed by physical disability. Our aim is to examine the impact of traumatic career transition on post-traumatic growth via future career choices and post-transition organizational interventions. In the process we also study how post-traumatic growth influences organizational changes. Data are derived from 174 in-depth interviews with trauma victims, their family members, friends, and vocational trainers, as well as multiple individual and organizational level documents. Qualitative data analyses based on the grounded theory method suggest that traumatic career transition initiate post-traumatic growth with a new-found focus on self and family. Trauma victims undergo three stages of post-traumatic growth until they feel comfortable with their new careers. Further, in each stage of post-traumatic growth, career transition, career choice, and post-transition organization (respectively) play a significant role. This study contributes to the post-traumatic growth theory by illustrating the impact of (a) trauma on career transition, (b) career transition on future career-related decisions, (c) organization on post-traumatic growth, and (d) post-traumatic growth on organizational change.

CAR: **Navigating Robotization Uncertainty: HRM Support Empowering Employees Amidst Digital Disruption**

Author: **Kawtar Bahanni**, *Sunway Business School*

Author: **Yuka Fujimoto**, *Sunway Business School*

Author: **Ester Bolt**, *Leeds U. Business School*

While many organizations are increasingly substituting human labor with robots, there exists limited scholarly understanding of how employees respond to this change. Based on career construction theory, we conducted a mixed-method study to explore how employees react to the uncertainty caused by the introduction of collaborative robots (cobots) in their workplaces. In Study 1, a survey of 308 automotive manufacturing employees in Morocco discovered that the perceived threat of robotic disruption heightened job insecurity, subsequently fueling turnover intentions. Our research revealed that perceived human resource management (HRM) support paradoxically strengthened the connection between turnover intentions and entrepreneurial intention in this uncertain landscape. Study 2 involved a qualitative study, incorporating interviews with 10 employees and 5 HR managers from the same context as Study 1. Thematic data analysis showed the pivotal role of HRM support in three key aspects: (1) enabling the seamless integration of cobots into the workforce, (2) heightening employee awareness, thereby activating concerns about the threat of robotic disruption, and (3) fostering employees' empowerment influencing their career transition into versatile professionals equipped with enhanced entrepreneurial intentions. Our findings illuminate the proactive response of employees to the evolving job landscape, showcasing a resilient workforce amidst the threat of robotic disruption.

Advances in artificial intelligence (AI) are transforming key organizational processes, including decision-making, problem-solving, learning, and knowledge production. As AI reshapes the organizational landscape, the methodological toolkit of organizational scholars is evolving, too. New data types and novel approaches to collecting and analyzing this data are being generated that can help uncover how AI is reshaping organizations and work. This evolution opens doors to novel research opportunities that not only advance organizational theory, but also hold practical and policy implications for innovating for the future. Our PDW comprises two parts designed to facilitate methodological exploration and collaboration. The first segment features a panel discussion among scholars who employ different methodological approaches to investigating AI in the workplaces. During this moderated session, qualitative and quantitative experts will discuss the distinctive insights and theoretical contributions afforded by their chosen methods, method-specific constraints and potential complementarities, and valuable guidance to fellow researchers exploring this domain. The second part of our PDW centers on roundtable discussions guided by methodological experts. These interactive sessions offer researchers, including PhD students, a platform to delve deeper into specific methodologies, seek guidance, and pose questions related to their AI-focused research. Our PDW's overarching goal is to ignite methodological innovation and experimentation in the study of AI in the workplace. By fostering connections among researchers employing a variety of methods, we aim to inspire collaborative exploration of this critical empirical phenomenon, and provide opportunities to learn from and find inspiration in research that employs methods different from one's own.

Presenter: **Olympia Nakos**, *U. of Georgia*
Participant: **Jessica Beth Rodell**, *U. of Georgia*
Participant: **Braydon Shanklin**, *U. of Georgia*

The nature of one's work environment has a critical impact on employee performance and commitment. At the risk of oversimplifying the story, positive features – whether it pertains to the organization, leadership, work design, relationships, etc. – tend to inspire positive experiences and reactions for employees. Yet, theoretically, there is also a sense that all good things can turn bad at some point. Indeed, it is likely that positive psychological phenomena have an inflection point where their effects turn negative – something often referred to as the “too-much-of-a-good-thing” effect (Grant & Schwartz, 2011; Pierce & Aguinis, 2013). The goal in this symposium is to explore the limits of workplace positivity. Each presentation focuses on a different aspect of the work experience that is typically seen as positive – perceived organizational support, meaningfulness, socializing, and coworker positivity – and examines how it may generate unanticipated negative outcomes.

The PCMT Model of Organizational Support - When Positive Aspects of Work Have Negative Consequences

Critically Reflecting on Works of Art – Facilitating Empathy in Management Education

Presenter: **Lucy Gill-Simmen**, *Royal Holloway, U. of London*

'No one cares how much you know, until they know how much you care'. - Theodore Roosevelt To be realistic in our aims to be able to respond to the world's challenges, we are required to equip generations of the future with the managerial skills to do so. One particular skill that often surfaces in conversations around managing with purpose is that of empathy. Whilst being an empathetic person does not guarantee action when a person is in need, it is a positive indicator of action in the future (Decety and Ickes, 2009). de Andreotti (2014) argues that if we are not willing to confront our own assumptions and limitations then we risk reproducing the systems of belief and practices that harm those we wish to serve. Emotional empathy relates to experiencing another person's emotional responses; the cognitive component refers to the capacity of understanding others' emotions (Sevillano et al., 2007). While empathy between individuals has long been a concern of humanities and social sciences, it has been neglected in management education. Future business managers and leaders will need to have empathy with others, with the planet and the world's causes. Thus, the cognitive capacity to understand issues such as progressive deterioration of natural resources which may occur as a result of irresponsible management of a business is critical (Tam, 2013). As educators, the question arises as to how empathy can be cultivated amongst management students?

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Building Blocks of Leadership: A Lego-Based Experience of Work Design Impact on Leaders' Perspective

Presenter: **Andrea Fischbach**, *German Police U.*

Presenter: **Florian Erik Klonek**, *Deakin U.*

Distinguished Speaker: **Sharon Parker**, *Centre for Transformative Work Design / Curtin U.*

Participant: **Nele Feldbusch**, *German Police U.*

Participant: **Nicolai Kleineidam**, *German Police U.*

Participant: **Anastasiia Lynnyk**, *German Police U.*

We argue when leaders understand their impact on the work context that can create engagement and productivity they can realize that it is not just people's own personal attributes that lead them to be engaged and productive. Drawing on experiential learning theory, self-determination theory, and job design theory, we employ a Lego game incorporating work design principles—featuring either an enriched and diversified job with high autonomy or a poor and monotonous job with high managerial control—in an in-classroom exercise tailored for police leaders in the German Police University Master program. During the TLC@AOM session, participants will experience how having own positive (i.e., enriched diversified autonomous) or negative (i.e., poor simplified controlled) work design experiences shifts how one's orientation changes from a control-focused towards an autonomy-focused work design understanding. We will engage in discussions with participants on how experiencing the effects of poor and enriched work design in a safe and reflection-promoting environment can support leadership development, broadening leaders' perspective and attitude toward work design. In the new world of work, leaders' perspective on supporting the health and well-being of their followers is crucial. With this focus, our session contributes to recent calls for building leadership development on theory and aligns with the AOM 2024 theme, "Innovation for the Future."

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

All About Live Cases and How to Try Them Out

Participant: **Meredith J. Woodwark**, *Wilfrid Laurier U.*
Participant: **Brent D. Beal**, *U. of Texas at Tyler*

Live cases are an important pedagogical innovation to prepare students more realistically for their future workplaces. This session will introduce case writers to the concept of live cases, clearly describe how they differ from traditional case writing, provide a step-by-step guide to creating a live case, and suggest how they are most effectively used in a classroom. Our interactive session will cover both live cases based solely on secondary data as well as those based on proprietary data provided by a live case partner company. Writing live cases with companies provides opportunities for live case writers to tailor the case to mimic real world examples, better preparing business students for scenarios they could face upon entering the workforce. Importantly, we will outline how live cases can also be done remotely.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Turning Groups into Professional Teams: ‘Team Boosting’, The Toolbox to Support Teamwork

Coordinator: **Sandrine LE PONTOIS**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*
Coordinator: **Stéphane Foliard**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*
Facilitator: **Jean Bibeau**, *U. de Sherbrooke*
Facilitator: **Julie Solbreux**, *UNamur*

The purpose of this workshop is to discover the ‘Team Boosting’ toolbox (Creative Commons license, English/French) through practice to both: - support students in the development of teamwork KSAs and competences involved in their learning experience (for example entrepreneurial experience); - support teachers in their professional development by using tools and methods to support and assess the teamwork KSAs and competences developed during the coaching of student teams. The PDW make the participants experiment two activities coming from the toolbox: 1/ Activity 1: Building a team ‘Fast Teammates’ (cards game, participants form groups of 4) 2/ Activity 2: Solving a problem as a team ‘Skill’orchestra’ -Groups become teams in building their transactive memory (problem-based learning). 3/ Presentation of the complete toolbox The ‘Team Boosting’ toolbox contains several tools integrated into five categories identified by pictograms (overlapping in whole or in part depending on the tools): - Teamwork principles and challenges (group vs team) - Teamwork and self/others-knowledge - Teamwork and assertiveness - Teamwork and work methodologies - Teamwork and reflective practice (individual/group) - especially the assessment of the learning experience and how to collectively put in place conditions favorable to teamwork Expected Outcomes - Understand the main principles and challenges of teamwork; - Turn student group into teams thanks to learning situations supporting teamwork KSAs and competences by using various types of tools (tests, card games...); - Elaborate a formal feedback for students regarding their individual teamwork softskills - Support the professional development of teachers working with student groups/teams

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Pedagogy Based on “Deliberate Learning From Failure” and “Culture Setting” Approach

Presenter: **Ameek Kaur**, *National U. of Singapore*

Presenter: **Michael Frese**, *Asia School of Business*

Panelist: **Thijs Willems**, *Singapore U. of Technology and Design*

Panelist: **Qian Huang**, *Singapore U. of Technology and Design*

Panelist: **King Wang Poon**, *Singapore U. of Technology and Design*

Training the next generation of leaders and professionals to be innovative problem solvers, is no longer enough. Being action oriented for quick turnarounds and being resilient towards failures, to be able to learn quickly and adapt, have become essential qualities needed to navigate this fast-changing technological world around us. To bring about any change in behavior or attitude in a group (e.g. students in a classroom for this discussion) one needs to establish the appropriate supporting culture through norms setting and regular communication. In this session we discuss about enhancing the problem-based learning approach by taking two important perspectives into consideration - learning from failures, and importance of setting the appropriate culture. We will be sharing our teaching and course design experiences from two different universities – one a design and technology focused university, and other a business school. The session brings together the idea of iterative design from the engineering domain, and the learnings from the action theory and error management culture from the business domain, to discuss about the pedagogy approach that nurtures students to be action oriented, failure tolerant, and innovative problem solvers. This session aims to extend the discussion with the attendees in reviewing their own current pedagogical approaches and developing action plans for enhancing their current courses, to interweave the underlying objective of nurturing innovative problem solvers who are also adaptable and resilient when put in challenging situations.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

AI-Powered Research Ideation: A Hands-On Workshop

Participant: **Renee Maria Rottner**, *U. of California, Santa Barbara*
Participant: **Danielle Morales**, *U. of California, Santa Barbara*
Participant: **Brandon Lepine**, *U. of California, Santa Barbara*
Participant: **Fares Ahmad**, *U. of California Santa Barbara*
Participant: **Mostafa Khoshbash**, *U. of California, Santa Barbara*

Discover the transformative potential of artificial intelligence (AI) in generating research ideas and conducting literature reviews through our interactive workshop, "AI-Powered Research Ideation." This 60-minute session is designed for academics seeking innovative teaching methods and enhanced research outcomes, and is based on lessons learned from a successful PhD seminar. We will guide you through practical exercises and cutting-edge AI tool demonstrations. Attendees will engage in generating research ideas using a general-purpose AI tool (chatGPT, Bard, etc.), and then shown how to build on those ideas using several other AI tools, providing a firsthand experience of AI-powered research creativity. The session will begin with an introduction to the original PhD seminar exercise, which educators can readily adapt for their own courses. Participants then explore the potential of AI tools for research idea development and literature searches. Beyond chatGPT, live demonstrations of tools like Scite, Elicit, Semantic Scholar, or others will showcase the possibilities of AI in academic research and the PhD classroom. Students from the PhD seminar will offer valuable insights into how AI transformed their research ideation process. The workshop culminates in a Q&A session, providing an opportunity for attendees to seek additional guidance or share their experiences. Participation in this workshop equips you with practical skills and resources to leverage AI in teaching and research. Enhance your ability to nurture research creativity and innovation in your students leaving with concrete ideas for incorporating AI into your academic practices and teaching.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Leveraging Today's Entrepreneurship Program Into Building Tomorrow's Ecosystem

Organizer: **Kent Neupert**, *Boise State U.*

Panelist: **Donald Siegel**, *Arizona State U.*

Organizer: **Karen Nicholas**, *Boise State U.*

Participant: **Michael Whitney**, *Boise State U.*

This session introduces the broader concept of the entrepreneurial ecosystem (EE) and the role of entrepreneurial education programs in developing nascent entrepreneurs within an EE. This session is broken into three parts. First, we introduce the broader framework of EEs and identify key components within EEs. Second, we discuss findings from ten years of I-Corps data. Finally, using an established EE framework, the audience assesses their EE and their program fit. We finish with experienced entrepreneurship educators discussing how to leverage current programs and resources to match future ecosystem development. By the end of this session, the successful participant will be able to: - Describe an entrepreneur ecosystem, including the components and the benefits. - Identify and assess the key factors in their local entrepreneur ecosystem. - Understand how entrepreneurs' ecosystems change over time, how the needs of entrepreneurs change during growth, and how to align the two aspects. - Analyze the alignment between current entrepreneurship education programs and the broader community resources and needs - Begin the process of creating a plan to leverage programs and resources that meet future needs in the participant's entrepreneur ecosystem.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Yes, I Can Feel the Impact: An Experiential Approach to Teaching Microaggression

Participant: **Ashwini Gangadharan**, *Kutztown U.*

Participant: **Ankur P. Nandedkar**, *Millersville U. of Pennsylvania*

In the era where we are getting more and more conscious about diversity, equity, and inclusion (DEI), microaggression is a significant topic of discussion in the workplace and education. Microaggression is defined as subtle insults (verbal, nonverbal, and/or visual) directed toward racial minorities, often automatically or unconsciously" (Solorzano et al., 2000). Most of the time microaggressions are in the form of micro insults that may be unintentional and unconscious but have a negative psychological impact on the victims of microaggression (e.g., Mays et al., 2007). Regardless of the intent of the microaggression, the psychological impact caused by this is detrimental to the victims. Hence, it is noteworthy for academics to teach about microaggression in classrooms while discussing diversity and DEI. As the topic of microaggression is rather sensitive and subtle, it is often difficult to teach. In this session, we focus on the impact of microaggression over its intent through simulations so that the attendees can experience and analyze the psychological impact of microaggressions from a victim's lens. We will be using two web-based simulations as tools namely, Killing Me Softly and Mind Field, to demonstrate the psychological impacts of microaggression on the victims. The sessions intend to accomplish two main goals – (1) applying pedagogical tools to teach microaggression through experiential learning and (2) awareness of possible instances of microaggression in the classroom and discussing strategies to prevent them.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Using International Student Diversity to Supercharge Marketing, Law & Global Business Classes

Participant: **Robert Neer**, *Hult International Business School*

Participant: **Niland Mortimer**, *Professor of Practice, Hult International Business School*

International business students bring exceptional diversity to business school classrooms. In this session, experienced international undergraduate business school educators, who teach classes that routinely include students from dozens of countries, at a school with campuses in multiple international locations, discuss how to leverage student diversity to facilitate educational discussions about marketing, law, and global business. Practical examples from recent classroom experiences illustrate conclusions. An informal session structure will allow time for questions and discussion.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Integrating Generative AI in Education: Experiences and Insights from Two Entrepreneurship Courses

Presenter: **Sebastian Krakowski**, *Stockholm School of Economics*
Presenter: **Perry Klebahn**, *Stanford U.*

The advent of Generative AI (GenAI) tools like ChatGPT is revolutionizing not only the business world but also education. This session will disseminate key insights from two pioneering entrepreneurship courses in the US and Europe respectively, where GenAI was fundamentally integrated into the curriculum. The US course had an exploratory approach, leveraging AI as a core tool for augmenting ideation and development (by expanding options and perspectives). Consequently, the European course was set up as an experimental research project, using extensive student learning logs, surveys, and focus groups and to capture GenAI's impact on student entrepreneurs and their learning experience. The courses unveiled profound insights into student engagement with GenAI, revealing its efficacy in fostering innovative thinking, refining venture strategies, and enhancing communication skills. A striking finding was the extensive use of GenAI in creating "personas" for target users and investors, which significantly aided students in preparing for venture capital pitches. However, the findings underscored emotional aspects relating to GenAI adoption, and the necessity of psychological safety within the classroom and startup teams to foster an environment conducive to successful exploration and innovation using GenAI tools. This session will not only share these findings but also feature an interactive workshop that demonstrates the pedagogical approaches employed. Attendees will engage in GenAI-based exercises, simulating the entrepreneurial learning experience. This proposal aligns with the 'Innovating for the Future' theme, highlighting GenAI's potential to transform educational practices and prepare students to navigate the complexities of entrepreneurship and innovation in the digital age.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

More New Venture Growth

Session Moderator: **Chandra Bhushan Dubey**, *Oklahoma State U.*

ENT: **Navigating High-Growth: The Dynamics of Learning and Unlearning**

Author: **Euclides Major**, *NOVA School of Business and Economics*
Author: **Ricardo Zozimo**, *Nova School of Business and Economics, U. Nova de Lisboa*
Author: **David Urbano**, *U. Autònoma De Barcelona*

This paper examines the key learning processes of high growth firms including gazelles, scale-ups, superstars, and mature HGFs. By studying ten high-growth firms in Europe considering different institutional contexts we investigate the evolution of learning processes and their role in the transitions typical of scaling-up processes. Through theory elaboration and data analysis, we develop an emergent theoretical framework for understanding learning and unlearning transitions in scaling-up contexts. Our findings show that managing learning transitions are essential for the learning and unlearning that underpin activity of these ventures as they grow. Responding to recent calls, our work enriches the understanding of high growth firms with a focus on learning processes.

ENT: **The Impacts of Resource Orchestration on High Growth Episodes**

Author: **Thao Nguyen**, *Newcastle U.*
Author: **Kevin Francis Mole**, *U. of Warwick*

As high-growth firms contribute disproportionately to job creation and wealth, studies focus on identifying them in the population. However, some argue that high growth patterns can occur in any firm and lack of understanding how that happens. This study aims to unfold impacts of strategic management on high growth. Using the UK Longitudinal Small Business Survey 2015-2019 and coarsened exact matching method, this paper finds that resource orchestration has a significant impact on high growth. We show that some certain types of resources and capabilities being developed simultaneously increase the probability of superior performance, but some others being bundled together deteriorate the chance. It, thus, contributes to the conversation on the role of strategic management on high growth episodes.

ENT: **Key to Successful Scale-Up: Unlocking Product-Market Fit Rapidly versus Pacing Organizational Growth**

Author: **Abhishek Bhatia**, *London Business School*
Author: **Gary Dushnitsky**, *London Business School*

The scale-up phase in nascent companies plays a pivotal role in the entrepreneurial landscape. It is the stage where companies transition from promising start-ups to sustainable, high-growth ventures. One view suggests that successful scaling is a function of external constraints, such as unlocking demand and reaching Product-Market Fit (PMF). Another view emphasizes internal constraints, advocating the need to pace organizational scaling to realize learning. Using novel customer-level data for Software-as-a-Service (SaaS) start-ups, we study the interplay between the speed of new customer acquisition and its customer retention capability. We investigate whether successful scale-ups achieve sustainable competitive advantage whereby they not only acquire new customers but also retain them. The evidence reveals that ventures rapidly acquiring customers also exhibit heightened retention rates. This finding is consistent with the dominance of external product-market considerations over internal organizational constraints in this context. We further explore the effect of (i) an external (adverse) shock to product-market demand (i.e., the introduction of the General Data Protection Regulation (GDPR) in the European Union); and (ii) an internal feature (relaxing) the organizational constraints (i.e., usage of data-driven tools helping the entrepreneurial organization to learn at scale). Overall, the findings provide rich insights into a key debate in entrepreneurship practice and literature about the optimal approach to scaling.

ENT: **A Process Model of New Venture Growth Discrepancy Between Growth-Oriented Female and Male-Led Firms**

Author: **Fatemeh L. Halabisaz**, *IE U.*
Author: **Jose Lejarraga**, *IE U.*

This study presents a process model investigating the divergence in long-term growth trajectories between growth-oriented female and male-led ventures. Drawing from role congruity theory and social cognitive theory, we propose that female-led startups encounter biased expectations and evaluations from resource providers due to perceived incongruity, influencing a shift towards a defensive growth strategy. This strategic shift negatively impacts the growth of female-led ventures over time, contrasting with unaffected male-led firms. Utilizing firm-level accelerator data, our findings support the proposed growth discrepancy model, contributing to the literature on growth and growth divergence.

The Virtual Workplace: Strategies for Managing Remote Work and Work-Life Balance

Session Moderator: **MITALI MATHUR**, *Indian Institute of Management, Ranchi*

HR: **Consequences of Virtual Work: A Bibliometric Analysis and Integrated Framework**

Author: **MITALI MATHUR**, *Indian Institute of Management, Ranchi*
Author: **Varun Elembilassery**, *Indian Institute of Management, Ranchi*

Virtual work has been studied in diverse ways in the extant literature by using multiple terminologies with closely related or interchangeable meaning. In addition, past review studies on virtual work have either focussed on the overall area of virtual work including its antecedents and implementation, or have focused on a specific construct such as employee well-being or work-family conflict. However, such reviews rarely have a defined focus on the wide array of variables that get impacted when virtual work is implemented. The objective of this study is to understand the current dynamics of the research on virtual work with a specific focus on the consequences it has at an individual, group and organizational level. We conducted a bibliometric analysis of 2306 studies published between the year 2000 and 2023 across various disciplines. We included all the related terminologies that depict work away from physical offices. The findings identify seven clusters of consequence variables across individual, group, and organizational level. Amongst the different terminologies being used to represent work away from physical offices, “virtual work” as a term is frequently used to study group level consequence variables, whereas “telework”, “telecommute”, “remote work”, and work from home” are used to study individual and organizational level consequence variables. This study develops a framework by integrating the consequence variable clusters, keyword cohorts and level of analysis. This study also offers future research directions at individual, group and organizational level. The focus of this study is novel and the paper contributes to the literature by developing an integrated framework and offering new directions for research. Keywords: Virtual work, consequences, individual, group, organisation

HR: **Work from Anywhere, but Where? Understanding Knowledge Workers' Work Location Selection**

Author: **Maximilian Kuchenbauer**, *Johannes Kepler U. Linz*
Author: **Almina Besic**, *Johannes Kepler U. Linz*

Remote work has experienced a remarkable surge in popularity, challenging the traditional assumption that employees must be physically present in the office, however, as organizations transition back to office-based operations, many employees are reluctant to return. This study investigates the impact of work flexibility on knowledge workers' work location choices and the individual motivations behind their decisions. Based on 25 semi-structured interviews with knowledge workers in the DACH region with flexible working arrangements, we explore the underlying motives for location selection, work location, and associated geographic mobility in the context of the remote work transformation. Our findings indicate that work flexibility is employed to optimize work-life balance by tailoring the work location to fulfil individual motivations. The choice of work location is embedded within the framework of geographic mobility and its associated costs. We identified that location adjustments can be categorized based on resource allocation, such as time, finances, and social capital, leading to micro-, meso-, and macro-mobilities. Our study contributes to the expanding literature on geographic mobility and remote work, and it provides directions for future research on work location and work flexibility for knowledge workers.

HR: **Balancing Acts: Institutionalizing Flexible Work in the Quest for an Unstable Equilibrium**

Author: **Claudia Manca**, *U. of Bologna*
Author: **Louise Harder Fischer**, *IT-U*
Author: **Christine Ipsen**, *Technical U. of Denmark (DTU)*

We draw on generative mechanisms to study how managers cope with a tension inherent in flexible work: the opportunity to determine when, where, and how to work can give employees the opportunity to flexibly address their personal and professional needs, while simultaneously placing new demands for structuring their activities and relationships. Drawing on a longitudinal case of a Danish pharmaceutical company and its transformation towards flexible work, we analyze how middle managers balance out flexibility and structure in a way to achieve an unstable equilibrium of the work practices that unleashes adaptability by generating continuous change. We discuss how the identified managerial practices reconnect two contradictory and yet complementary patterns of individualization and socialization, in a way to reduce the inertia of existing structures while also providing employees with the conditions to safely experiment with new ways of working.

HR: **Telework and Firm Performance: Individual Access versus Organizational Dispersion**

Author: **Marvin Neu**, *HSG U. of St. Gallen*
Author: **Leon Barton**, *U. of St. Gallen*
Author: **Amanda Shantz**, *U. of St. Gallen*
Author: **Heike Bruch**, *U. of St. Gallen*

We developed a dual-pathway, multi-level conceptual model that depicts the relationship between telework and firm performance. On the one hand, individual telework access is associated with greater levels of firm performance because it prompts social exchange processes between the employee and employer, resulting in lower employee turnover intentions. On the other hand, organizational telework dispersion is associated with lower firm performance because it prompts social identity processes; high dispersion in access to telework creates a psychological gap within an organization that is associated with lower levels of collective positive affective tone. Higher levels of collective organizational identification offset the negative effect of organizational telework dispersion on collective positive affective tone. This multi-level model is tested and supported by a multisource dataset containing 18,111 employees from 119 companies. Note: The first two authors contributed equally to this manuscript (authorship order is random).

Emerging Insights on Social Class at Micro and Macro Levels

Organizer: **Steven Kardel**, *Pennsylvania State U.*
Discussant: **Jennifer J. Kish-Gephart**, *U. of Massachusetts, Amherst*
Presenter: **Sharvika Kherde**, -
Participant: **Andrea Dittmann**, *U. of Southern California - Marshall School of Business*
Participant: **Kristin Laurin**, *U. of British Columbia*
Participant: **Muhan Zhang**, *The Chinese U. of Hong Kong, HK*
Presenter: **Michelle K. Lee**, *Smith School of Business, Queen's U.*
Participant: **Shelby Gai**, *Michigan State U.*
Organizer: **Sridhar Polineni**, *Ross School of Business, U. of Michigan*
Participant: **Caren Colaco**, -
Participant: **Stephane Côté**, *U. of Toronto*

This symposium highlights emerging insights related to social class, an important and overlooked aspect of diversity in organizations. The five papers presented in this symposium will cover various topics within the micro and macro domains of management. At the micro level, the papers reveal the complex interplay of social class background with other marginalized identities, such as gender and immigrant status, in shaping workplace experiences. Their nuanced analysis underscores the need to consider social class as a part of multiple identities shaping the lives of students and employees. Additionally, this symposium also integrates social class and conflict literature, proposing that class-based self-conceptions underlie the responses to workplace conflict. At the macro level, the papers delve into how CEO's social class background shapes stakeholder perceptions and career outcomes. They enrich our understanding of how class-based stereotypes and shifting competence standards follow executives to the apex of corporate hierarchy, carrying career implications even after they have demonstrated merit through significant upward mobility. Together, these papers significantly advance our understanding of how social class, though often invisible, has a profound impact on attitudes and outcomes in the workplace.

Bridging Qualitative and Quantitative Research: Exploring Three Mixed-Methods Approaches

Organizer: **Mia Chang-Zunino**, *ESCP Business School*

Organizer: **Douglas Hannah**, *Boston U.*

Panelist: **Stefano Brusoni**, *ETH Zürich*

Panelist: **Peer Fiss**, *U. of Southern California*

Panelist: **Carolyn Fu**, *Harvard Business School*

Panelist: **Amisha Miller**, *NYU Stern*

Panelist: **Chiara Spina**, *INSEAD*

The integration of qualitative and quantitative research methods is gaining momentum, offering the potential for accelerated cumulative theory building and testing. This symposium explores the challenges and opportunities presented by mixed-methods research. A panel of renowned senior scholars and emerging junior researchers will share their editorial insights and practical experiences during review processes, discussing issues such as methodological alignment, construct consistency, and best practices. In so doing, our panel presents three distinct avenues for mixed-methods studies: (1) Qualitative analyses and field/lab experiments, (2) Qualitative Comparative Analyses (QCA) and regression, and (3) Qualitative analyses and formal modeling (simulation). These avenues have already yielded significant contributions published in top research outlets. By bringing together five distinguished scholars in strategy and organization theory, each with expertise in one of these avenues, this symposium aims to foster dialogue about the promises and challenges of mixed-methods and cumulative theory-building and testing.

New Avenues in Meaningful Work and Calling Research

Session Moderator: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*

CAR: All Play and No Work: Antecedents and Consequences of Pursuing a Calling Outside of Work

Author: **Chia-Jung Tsay**, *U. of Wisconsin-Madison*
Author: **Otilia Obodaru**, *Rice U.*

Current generations have greater freedom in career choices, among the cultural messages about the value of pursuing one's passion. These dynamics converge with existing literature suggesting that answering a calling means pursuing the activity one feels a calling for as a full-time job and to build a career on it. The alternative, i.e., not answering one's calling, has attracted much less attention from management scholars. We suggest that conceptualizing callings as either answered or unanswered in terms of a full-time job obscures important complexity in how people relate to and enact their callings. Through a qualitative, inductive study of 81 professional musicians whose full-time jobs are in domains unrelated to music, we introduce the construct of "non-work callings", i.e. activities perceived as callings which are pursued outside of the domain of work. We differentiate non-work callings from constructs such as hobby/leisure, side hustle, and gig. Based on our data, we illustrate the experience of answering a calling outside of work and explain why and how people enact their callings, including the surprising number of ways in which they perceive this experience to be superior to the option of having pursued their calling in the work domain. Finally, we outline how this novel construct changes the way we understand callings, meaning, professional identity, and the meaning of work and nonwork.

CAR: So, You've Got Pain? Make Meaning of It! Why and How Individuals Turn Traumas Into Meaningful Work

Author: **Claire Schulze Schleithoff**, *Vrije U. Amsterdam, School of Business and Economics*

This paper explores how individuals manage to turn their traumas into meaningful work experiences. Drawing on the insights of 45 diversity, equity and inclusion (DEI) professionals, we found that their own (traumatic) experiences with discrimination and exclusion plays an important role for their profession. More specifically, DEI professionals aim to establish initiatives in organizations that address the inequalities they were facing for their whole lives and fight for justice and better conditions for others. Hence, through their work, DEI professionals realize the relevance in their own stories and subsequently find meaningfulness in their traumas. In so doing, they view their work as meaningful. We further saw that they apply two strategies that help them to deal with their work in order to draw on their traumas and turn them into work meaningfulness. These strategies are detaching emotionally from drawbacks and turning to their social network. Our findings provide new insights to the literature on meaningful work as well as the literature on post-traumatic growth. In addition, we provide valuable insights for practitioners in their endeavour to foster DEI throughout organizations.

CAR: Job Crafting for MEANINGFUL Work and Meaningful WORK: A Theoretical Extension of Job Crafting Theory

Author: **Samuel Mortimer**, *Saïd Business School U. of Oxford*
Author: **Farsan Madjdi**, *GSB, U. of Cape Town*
Author: **Badri Zolfaghari**, *GSB, U. of Cape Town*

While there have been significant changes in the world of work, one element that has been consistently present is the quest for meaningful work. Due to the variety of individual and organizational level benefits of meaningful work, researchers have explored the mechanisms by which it can be achieved within organizational settings. But work can be liminal and precarious, and it increasingly occurs outside the structures and boundaries of an organization. Consequently, the search for its meaningful work does not only comprise meaningfulness at work, but also the search for meaningful work itself. In the paper, we explore how meaningful work is not only obtained but also maintained by drawing from two parallel—though independently developed—research streams: job crafting and proactive career behaviors. We generate new theory on job crafting to understand the interactions between job crafting behaviors that aim at meaningfulness and those that aim at professionalization. We explore the boundary conditions of when these two kinds of crafting behavior complement each other and when they are in tension. Finally, we introduce the construct of integrative job crafting—meta-crafting behaviors that involve changing the cognitive, task, and relational boundaries of other job crafting behaviors—to capture the ways that individuals proactively manage and resolve these tensions.

CAR: What Makes a Meaningful Day? Navigating Reciprocity and Variability in Crafting Meaningfulness Deals

Author: **Elaf Basri**, *U. of Edinburgh business school*
Author: **Susan E. Murphy**, *U. of Edinburgh*
Author: **Yumeng Yue**, *U. of Edinburgh business school*

Despite the increased emphasis on meaningful work and the expectation that it should form a crucial part of the "new deal" in employee-employer relationships, pursuing and sustaining meaningful work amidst its inherent daily fluctuations remains elusive and challenging, even in seemingly meaningful jobs. Emerging evidence points to meaningfulness's dynamic and potentially transient nature, yet we still lack a nuanced, holistic account of the ebb and flow of meaningfulness that explains what makes and sustains a meaningful day. Grounded in psychological contract theory and work orientations, we propose the "meaningfulness deal," a dynamic framework that views meaningful work as the core currency that shapes the reciprocal exchange of contributions between employees and employers. We utilize a two-phase design, including a 10-day experience sampling and a two-wave longitudinal study, to test hypotheses at the within- and between-person levels. We find that daily fulfillment of individualized paths to meaningfulness increases meaningfulness, resulting in employees feeling compelled to reciprocate with helping behaviors. Following a cyclical dynamic, we also find that reciprocation on one day leads to a positive spillover effect as employers provide further opportunities for pursuing meaningfulness the following day. We find an inverted U relationship between the number of paths pursued and global but not daily meaningfulness, challenging the assumption that more meaningfulness is always better. Finally, our results reveal how the daily pursuit of meaningful work aggregates to what we call "meaningfulness variability," which links daily experiences with broad, long-term outcomes such as decreased global meaningfulness and performance.

Career Mobility and Career Retention

Session Moderator: **Shane Hayden-Smyth**, *Trinity Business School, Trinity College Dublin*

CAR: **Career Mobility of Cancer Survivors: An Interdisciplinary Review, Synthesis and Research Agenda**

Author: **Shane Hayden-Smyth**, *Trinity Business School, Trinity College Dublin*
Author: **Wladislaw Rivkin**, *Trinity Business School, Trinity College Dublin*
Author: **Marian Crowley-Henry**, *Maynooth U.*
Author: **Amanda Roe**, -

Statistically, one in two individuals will get cancer during their lifetime. As the curability of cancer increases one focal question remains: How does this prevalent illness affect employees' careers after being cured? The complex societal challenge of health and wellbeing across the population is pertinent in Career Studies. This paper focuses on the career mobility of post-cancer employees, and seeks to add to this nascent research domain in Career Studies through an interdisciplinary systematic literature review. This is relevant and timely due to the increasing incidence and prevalence of cancer in the workplace, and its ubiquitous interdisciplinary importance. Supplementing extant knowledge pertaining to career transitions, our interdisciplinary systematic literature review of 23 studies provides further insights into the career mobility of cancer survivors. Following thematic synthesis, six analytical themes were identified. Integrating these themes with the liminal theoretical lens utilised in management studies, a theoretical process model of career mobility post-cancer was developed. The findings of this review contribute significantly to management and occupational health literature by adding further nuance to our understanding of how cancer survivors orient their careers post-treatment and what factors may impact their vocational decision-making process, informing organisational policies and practice.

CAR: **How and When Occupational Commitment Helps or Hurts Employee Retention?**

Author: **Hongsong Guo**, *Central U. of Finance and Economics*
Author: **Fei Zhu**, *Central U. of Finance and Economics*
Author: **Yanjun Guan**, *Durham U. Business School*

Previous research on occupational commitment has primarily focused on the proactivity within organizations and has concluded that occupational commitment has an exclusively negative effect on turnover intention. Drawing on the boundaryless career perspective and the dual-faceted conceptualization of career self-management, we challenge this prevailing conclusion by developing a double-edged model, which posit dual career development trajectory of occupational committers—one underscoring internal cultivation, and the other external exploration. Based on four-wave data from 302 employed participants, we find that: (a) regarding the internal cultivation trajectory, occupational commitment is completely associated with reduced turnover intention through the serial mediation of internally oriented career self-management and internal career opportunities; (b) for the external exploration trajectory, occupational commitment also relates to increased turnover intention through the serial mediation of externally oriented career self-management and external career opportunities, but only among occupational committers with strong boundaryless mindset. Our research reveals the duality of occupational commitment in relation to employee retention, while highlighting how the consequences of occupational commitment, including career behaviors, rewards, and final mobility inclination, may differ depending on one's career orientation. Theoretical and practical implications are discussed.

CAR: **A Structuration Theory Perspective on Voluntary Career Transitions**

Author: **Nitesh Bhat**, *Indian Institute of Management, Bangalore*
Author: **Rajalaxmi Kamath**, *Indian Institute of Management, Bangalore*

The central idea of this conceptual paper is that voluntary career transitions, while coming across as narratives of inspired individuals exercising their personal choice, are in fact inextricably linked to their social network. Thus, what the individual perceives as a voluntary decision of a career transition can be reconceptualised as being both, agentic and structural. Similarly, we argue that an individual's social networks are a product of self-selection towards their career transitions in a quest for meaningful work. We develop this recursive link primarily using Giddens' theory of structuration and the duality implied between structure and agency. Viewing voluntary career transitions as a quest for meaningful work, leading to, and stemming from, a purposive curation of an individual's social network, we present propositions to demonstrate how the two are intertwined. Our study contributes to understanding the sources of meaningful work, emergence of career transitions, formation and dynamics of social networks and to broader issues of social mobility. We do so by providing propositions that enable the operationalising of Structuration Theory, using the frameworks of meaningful work and social networks.

CAR: **The Role of Disruptive Events for Career Paths: Transitioning from Intrapreneur to Entrepreneur (WITHDRAWN)**

Author: **Jolien Roelandt**, *Ghent U.*
Author: **Petra Andries**, *Ghent U.*

This paper aims to identify which factors affect the decision of intrapreneurs to transition into entrepreneurship, i.e. to leave their employer and found their own company. In line with insights from entrepreneurial intention literature, we examine the relation between their intention to transition and their actual transition. Building on Shapero and Sokol's (1982) Entrepreneurial Event model and recent insight from the career management literature, we argue that this relation will be reinforced by the number of displacing events that happen in the intrapreneur's work-related and personal life. We test and confirm our hypotheses using time-lagged survey data on 292 intrapreneurs. Our findings improve our understanding of why intrapreneurs do or do not become entrepreneurs. They also add to the entrepreneurial intention and the broader career literature, which hitherto have mainly presented qualitative evidence on the role of displacing events. They further have important practical implications for intrapreneurs, their managers, and policy makers concerned with innovation in established firms and new ventures.

Artificial Intelligence (AI) has taken the world by storm, and its impact on higher education is undeniable. While much of the conversation is about AI and student use, this caucus is being assembled to examine the opportunities and threats to the university educator role. How can we harness its power while being mindful of how it may undermine our existence? Join us in this Caucus Session where non-technical participants will share their current experiences, learnings, and best practices as well as their anticipated concerns utilizing AI assistants like ChatGPT to support their roles as educators. While the opportunities for creativity and time saving are many, so are the ethical and managerial concerns. For example: concerns about ethics and evaluations of job performance, pros and cons of transparency of using AI, to what extent does it reflect an educator's competence if they are using AI as a content creator versus using AI as a time saver, a peer collaborator/idea generator.

Cultivating Future-Ready Organizational Cultures: Agility, Inclusivity and Distributed Leadership

Organizer: **Marcus Robert Astley**, *Bloomsbury Institute London*

Organizer: **Pooja Gupta**, *Bloomsbury Institute London*

Participant: **Felix Arndt**, *U. of Guelph*

Participant: **Wilson Ng**, *IDRAC Business School*

Participant: **Veronique Ambrosini**, *Monash U.*

Participant: **Sebastian Fourné**, *Wilfrid Laurier U.*

Participant: **Barak S. Aharonson**, *U. of Guelph*

In the future, all organisations will need to be: agile, responsive, inclusive, richly diverse and highly networked, using distributed leadership principles. This caucus program aims to foster an in-depth exploration of leadership, dynamic capabilities and inclusion through a series of presentations, interactive discussions, and workshops. It will provide an opportunity to participants to connect and map out the critical components required of an organisation's culture to make it fit for purpose.

Session 1: Presentation Dynamic Capabilities (15 mins), Session 2: Distributed Leadership and management (40 min), • Group activity on distributed leadership followed by Open discussion (20 Minutes), Session 3: Inclusion and diversity- Panel Discussion (20 min) and Networking Reception with eminent academic experts.

Building on the insights from eight previous AOM caucuses and publications from this group, this caucus considers how organisations innovate to be uniquely different (to be competitive) and uniquely the same (to conform institutionally) once their purpose for innovating (and being) is agreed and proactively acted upon by its key stakeholders. This work has the potential to inform strategic management, strategy as practice, organizational change, organizational behavior, organizational theory, human resource and project scholarship. Previous caucuses have already led to a special issue, edited book of chapters involving 17 scholars and symposia on the subject. The caucus group is currently working on a book that explores modern strategy, change and transformational project leadership practices. Other collaborative projects are currently being planned. We believe this caucus would be of great interest to practitioners too, as much still needs to be learned about how the strategy and change interface can be navigated to achieve innovation success.

Light refreshments will be served. All welcome.

How can critical management scholars actively facilitate peace in an environment where unprecedented events threaten to fracture and polarize scholarly communities? This plenary session will delve into the intersection of peace, and critical management and organization studies (MOS) by exploring the pivotal role that the field's theories and practices can play in fostering a culture of peace within diverse workplaces and broader society. In an era marked by life changing global challenges and other rapid societal transformations, the ethical/moral obligation for scholars and organizations to actively contribute to peace cannot be understated. Hence, this plenary session aims to unravel the ways in which the field of critical management and organization studies can help scholars and other social actors to envision, design, share and implement initiatives that contribute to peace within organizations and societies across the world on a sustainable basis.

Identity Conflicts and Struggles

Session Moderator: **Anna Yan**, *Fuqua School of Business, Duke U.*

DEI: **Diversity Commodification: The Role of Marginalized Identities on Hiring Aimed to Improve Diversity**  

Author: **Anna Yan**, *Fuqua School of Business, Duke U.*

Author: **Angelica Leigh**, *Fuqua School of Business, Duke U.*

In recent years, organizations have increasingly set diversity hiring targets that pledge to hire more individuals with marginalized identities. Although organizations may be well-intentioned in doing so, we argue that these hiring targets have the potential to breed their own forms of bias. In this paper, we integrate racial capitalism theory with research on intersectionality to suggest that diversity hiring targets lead decision makers to engage in diversity commodification and use an intersectional selection lens that favors candidates based on the number and content of their marginalized identities. Specifically, across three studies, we find that diversity hiring targets can lead to a preference for candidates with multiple marginalized identities along their gender and race (e.g., Black women and other racial minority women) over candidates with fewer marginalized identities (e.g., a Black man). We also find that the preference for Black women may be greater than that of other racial minority women, indicating that the former are the prototypical individual of organizational diversity efforts. Finally, we find other marginalized identities (e.g., sexual orientation) may be peripheral to the organizational selection lens and their effects may amplify existing preferences. Taken together, these findings highlight the need to carefully examine organizational diversity efforts like diversity hiring targets and the biases they may inadvertently reinforce.

DEI: **Regret, Guilt and Frustration: Japanese Career Women's Persistent Identity Conflict**   

Author: **Markus Pudelko**, *U. of Tuebingen*

Author: **Helene Tenzer**, *LMU Munich School of Management*

This qualitative study explores how individuals experience and respond to identity conflict and sheds light on their feelings towards the employed response strategies. Our findings are based on 125 in-depth interviews with Japanese career women who face incompatible expectations for their roles in their professional and private lives. We show how this dilemma leads to an identity conflict to which the women react with one out of three identity work strategies. Furthermore, our study reveals that while these strategies may resolve incompatible external role expectations, they do not effectively diminish internalized dilemmas. As a result of these persisting dilemma situations, individuals experience increasingly entrenched negative emotions such as guilt, regret, frustration and disempowerment. Our study contributes to identity research by demonstrating that identity work strategies do not always lead to identity reconciliation. Additionally, we enrich female career and work-family balance research by showing that career women are often confronted with dilemma situations that do not allow them to define for themselves a career path that integrates role expectations from the professional and private domain. Moreover, our study has broader implications for paradox research and organization studies, as it provides evidence that we should not automatically assume that managerial dilemmas can successfully be resolved. By underscoring the persistence of some dilemma situations, our research encourages future research on managing paradoxes in organizational contexts.

DEI: **"And Then I Undress the Work": Materiality and the Embodied Identity Work Among Working Mothers**   

Author: **Taija Tuulia Turunen**, *Aalto U. School of Business*

Author: **Saija Katila**, *Dr.Sc. (Econ. & Bus. Adm.) Senior Lecturer*

Author: **Astrid Huopalainen**, *Aalto U. School of Business*

Author: **Seonyoung Hwang**, *Aalto U. School of Business*

How do professional women, who experience normative expectations in both their professional lives and motherhood, utilize attire and accessories as ways to navigate their multiple identities after maternity leave? Existing research in organization studies has given limited attention to the role of embodiment, particularly the use of material attire, in identity work. This paper explores the multifaceted roles of clothing, makeup, and accessories among professional women, who continuously transition between the often-conflicting realms of work and motherhood. Based on 31 semi-structured interviews with professional women in Finland we demonstrate how this form of identity work is enacted through material strategies of shielding, staging, transitioning, performing, and safeguarding. We link these strategies to various emotional and communicative outcomes, thereby extending the ongoing conversation on embodied identity work with insights into the significance of materiality in identity work. As our key contribution, we illustrate the diverse ways materiality is employed in embodied identity work—sometimes to 'hide' or transform the maternal body and at other times to elevate its status and professionalism. Our second theoretical contribution sheds light on the tabooed aspects of embodied identity work and its most abject dimensions. Thirdly, we emphasize the contextual importance of embodied identity work. Collectively, we show how motherhood introduces additional concerns, opportunities for empowerment, and possibilities to resist oppressive norms in women's embodied identity work.

DEI: **In the Liminality of Ethnic and Occupational Identity: Identity Struggles of Tea Garden Laborers**    

Author: **Poonam Barhoi**, *Institute of Management Technology Ghaziabad, India*

Identity struggles create various conflicts for individuals on their personal and social front. With the lens of liminality, I explore how an in-betweenness state of ethnic identity vs. occupation-based identity creates identity struggles. Here, I delve into the identity struggles faced by the marginal laborers in tea gardens in Assam, India, who identify themselves as 'Adivasi' (Ethnic identity) and 'Laborers' (Occupational Identity). I conducted twenty-five qualitative interviews with the tea garden laborers. The study discusses the liminal experiences of the tea garden workers and their identity works to navigate their identity conflict arising from the liminal experiences into five broad themes: Self and social identification as Adivasi (ethnic), Self and social identification as laborers (occupation-based), Identity crisis at the liminality of ethnic and occupation-based identity, Reclaiming Adivasi (ethnic) identity, and Reclaiming identity and rights as laborers. The study brings novel insights into the various identity work that individuals in prolonged positional liminality perform in order to protect their social identities. The study further discusses the clash of institutionalized identity with under-institutionalized identity and its related tensions in practicing identity work. Keywords: Liminality, Identity Work, Indigeneity, Ethnic identity, Occupational identity, Laborer.

Intersectionality and Workforce

Session Moderator: **Dr. Neferiatiti Holt**, *Walden U.*

DEI: An Empirical Examination of the Intersectionality of Black Women's Experiences in the Workforce  

Author: **Dr. Neferiatiti Holt**, *Walden U.*
Author: **Hamid H. Kazeroony**, *Walden U.*
Author: **Teresa Lao**, *Walden U.*

Abstract Black women in America encounter double discrimination within the workforce, stemming from both their gender and race. They navigate the complexities of living with these intersecting identities while simultaneously confronting additional challenges associated with their gender and the color of their skin. This qualitative descriptive phenomenological study aimed to explore Black women's experiences of discrimination in the workforce based on gender and race. The conceptual frameworks that grounded this study were general systems theory and intersectionality theory. Purposive sampling was used to identify participants; data was collected through semi-structured interviews with 13 Black women who work in a large city in central Texas. Thematic analysis based on descriptive phenomenology was applied to reveal themes and explore participants' perceptions of their experiences in the workplace. Five themes were identified from analysis of the data collected through coding and journal notes: (a) Black women's work experiences and intersectionality; (b) the importance of workplace diversity; (c) glass/concrete ceiling and career advancement; (d) representation matters; and (e) coping, support systems, and resources. The results from this study could provide a framework for Black women to experience better work environments that support them on their career journeys. Removing barriers can assist in career advancement among this population, reducing emotional taxation and creating safe spaces, resulting in a positive social change. The study findings could promote positive social change by highlighting the experiences of Black women who face discrimination based on the intersection of race and gender and the coping mechanisms, support systems, and resources that are effective in helping Black women navigate the challenges and discrimination they face in the workplace.

DEI: Intersectional Entrepreneurial Identities at the Crossroads: A Study of Female Minority Founders   

Author: **Pisitta Vongswasdi**, *WHU Otto Beisheim School of Management*
Author: **Julia Katharina de Groote**, *WHU Otto Beisheim School of Management*
Author: **Janine Vanessa Heinrich**, -
Author: **Jamie Jocelyn Ladge**, *Boston College*

Female minority founders (FMFs) often encounter unique challenges in the entrepreneurial world. Our study, focusing on FMFs in Berlin, utilizes an intersectionality lens to better understand these challenges and their impact on the founders' journey. We uncover structural barriers perpetuating inequality, alongside factors that either exacerbate or lessen these issues. Our findings reveal a complex process of identity and image management by FMFs, significantly contributing to entrepreneurship and identity literature.

DEI: To Share or Not to Share: How Microaggressions and Intersectionality Affect Knowledge Sharing 

Author: **Minoo Selseleh**, *Faculty of Liberal Arts and Professional Studies, York U.*
Author: **Jing Wang**, *York U.*

Knowledge sharing is fundamental for organizations' competitive advantage. It drives innovation, enhances efficiency, and fosters a culture of continuous learning and collaboration. Research suggests that a diverse employee body is important in knowledge sharing because it brings together varied perspectives, experiences, and skills, and fosters a richer and more innovative exchange of ideas. Yet, little is known about factors hindering or supporting knowledge sharing among different employee groups. This paper theorizes how the intersectionality of race and gender may trigger microaggressions, which in turn impact knowledge sharing. Theoretically, the research is among the first attempts to integrate knowledge sharing and microaggression literature. It enhances the comprehension of contextual factors in Nonaka's SECI knowledge sharing model. Practically, it equips employers with theoretical tools to develop effective strategies for cultivating a culture of knowledge sharing among diverse employees.

DEI: Intersectionality of the High Skilled Professionals' Retention Decisions: Evidence from H1B Records  

Author: **Xin Lucy Liu**, *Columbia Business School*
Author: **Yihan Becca Wang**, -
Author: **Michael W. Morris**, *Columbia U.*

Among millions of international students who study in the U.S. every year, who stay and work in the U.S. and build their life as an immigrant, and what drives their decisions? Drawing from Social Dominance Theory, we analyzed the intersection between country of origin and gender on global professionals' staying rate in the U.S. and proposed social status prospects to be an important driver of their migration decisions. In Study 1, utilizing the H1B visa data, we found a relatively higher rate of female stayers in EA professionals (vs. those outside EA) and a relatively lower rate of female stayers in Northern and Western European professionals (vs. those outside NW Europe). In addition, utilizing the political gender parity scores, we found that high male advantage of social status prospects in their home country and low male advantage of their heritage group in the U.S. can explain a relatively higher rate of female stayers. In Study 2, we conduct an experiment on young professionals in China and test how men and women react differently towards gender parity conditions among EA Americans in the U.S. in terms of their status prospects and, thus, their intention to work in the U.S.

Interpersonal differences abound in the workplace. Reaping the benefits of organizational diversity requires understanding and appreciating one another's different backgrounds, worldviews, perspectives, and viewpoints. However, the innate ease and preference associated with interacting with similar others makes relating across differences challenging in a number of ways. The five papers in this symposium provide cutting-edge insights into breakdowns in understanding that can occur across interpersonal differences in organizations, including both the emotional and cognitive processes underlying these breakdowns, as well as potential tools to prevent and repair them.

As organizational research begins to catch up with the largely theoretical framework around the experience and effects of diversity at work, we propose a symposium that focuses on managing marginalization at work through the issues surrounding impression management. The purpose of this symposium is to explore the impact of social and contextual factors on interpersonal impression management choices and outcomes. Specifically, the presentations in this symposium investigate how organizational factors and individuals' experiences with identity-related issues influence their (a) self-perceptions, (b) image concerns, and (c) self-expression choices. By integrating literature on marginalized identities, impression management, and authenticity, we aim to generate discussions around how employees navigate their identities in complex workplace dynamics, how managers can be allies against stereotyping processes, and how organizations can develop future work environments that promote individuals' sense of self and well-being.

Contemporary organizations have been calling for inclusive leadership to promote workplace inclusion. However, the existing literature on inclusive leadership has not yet adequately addressed questions such as what inclusive leadership encompasses, how it influences marginalized groups, and the mechanisms through which it impacts individual and organizational outcomes. This symposium brings together four papers that collectively add novel insights into these questions, from a multilevel and multi-identity-group perspective. The four papers offer four different approaches of capturing inclusive leadership, at the individual, group, and organizational levels. They also delve into the impact of inclusive leadership on group members and particularly on marginalized groups such as women and people with disabilities. They further ask questions related to conduits of inclusive leadership at individual and organizational levels, examining new mechanisms such as disability identity threat and organizational climate of gender stereotypes. This symposium challenges the participants to re-think how inclusive leadership can be understood in novel ways, how diversity can be better integrated into this research, and how inclusive leadership impacts individuals' perceptions, decisions, effectiveness, and organizational climate and knowledge use. Insights into these questions can broaden perspectives for future research and provide practical guidance on how to develop inclusive managers and organizations.

Entrepreneurial Ecosystem Development

Session Moderator: **Dev K. Dutta**, *U. of New Hampshire*

ENT: **A Decentralized Trust Approach to a Public-Private Blockchain Entrepreneurial Ecosystem**

Author: **Yichen Xi**, *U. of Birmingham*
Author: **Endrit Kromidha**, *U. of Birmingham*
Author: **Eric Shiu**, *U. of Birmingham*

Prior research on trust has predominantly focused on benevolence, credibility, integrity, and satisfaction. In trans-organizational settings, these forces can be linked to control and power, but in the context of blockchain organizational relationships, a new approach is needed to understand trust. Blockchain entrepreneurial ecosystem in the public sector aims to introduce changes by capitalizing on the decentralized nature of such technology. This study contributes by proposing a new decentralized trust approach built on cognition, stimulation, inclusiveness, and consensus while simultaneously advocating for the incorporation of egalitarian principles. The framework proposed here can be expended and applied to the broader context of digital entrepreneurship ecosystem. In doing so, the study contributes to policy and practice by reconceptualizing of technology-enabled decentralized trust between public sector organizations, entrepreneurship, and innovation.

ENT: **Foreign Entrepreneurial Ecosystem Constraints: Explaining Sub-Ecosystem Emergence and Decline**

Author: **Maximilian Scheu**, *U. of Hohenheim*
Author: **Leif Brändle**, *U. of Hohenheim*
Author: **Andreas Kuckertz**, *U. of Hohenheim*

The entrepreneurial ecosystem (EE) framework examines the elements and dynamics within a regional setting to promote productive entrepreneurship. However, from research about foreign entrepreneurs, we know that not all entrepreneurs within a regional context have equal access to resources and networks, giving rise to several forms of sub-structures within a regional setting. We thus raise the concern that EE elements and structures do not equally account for the accessibility and availability of entrepreneurial sub-populations and that such constraints likely promote sub-ecosystem emergence. Our empirical study of the EE of Shanghai from a foreign entrepreneurial perspective covers the period from 2019 to 2023 by drawing on interview data, on-site observations, and archival data, thus addressing how foreign entrepreneurs embed themselves within the EE. Our findings reveal a foreign entrepreneurial sub-ecosystem emerging from the intertwined impact of ecosystem constraints and assets of foreignness. Yet, ecosystem dynamics enhancing ecosystem constraints have a self-reinforcing effect on the decline of the foreign entrepreneurial sub-ecosystem, subsequently diminishing foreign entrepreneurial activities.

ENT: **What Configurations Facilitate Digital Entrepreneurial Ecosystem: An Institutional Theory Perspective**

Author: **Junyun Jia**, *Shandong U.*
Author: **Yihao Guo**, *School of Management, Shandong U.*

Prior studies on the digital entrepreneurial ecosystem (DEE) have primarily concentrated on delineating its inherent characteristics and overlooked its driving contexts. This study aims to fill this gap by exploring when firms build a digital entrepreneurial ecosystem. Based on neo-institutional theory, we develop a typology of institutional contexts associated with digital entrepreneurial ecosystem building. We posit that favorable institutional conditions facilitate firms to develop a digital entrepreneurial ecosystem by forming a configuration. Thus, we hypothesize a primary institutional configuration where regulative institutional context, normative institutional context, and cognitive institutional context. Further, according to neo-institutional theory, we introduce TMT gender diversity and resource slack and propose two alternative types conducive to the building of a digital entrepreneurial ecosystem. Using a fuzzy-set qualitative comparative analysis (fsQCA) method, we conducted a comprehensive examination of 104 cases within the Chinese context to substantiate our research hypotheses. Our analysis unearthed compelling evidence suggesting that the combination of institutional conditions promotes the building of a digital entrepreneurial ecosystem. In addition, the two alternative types provide functional substitutes for the primary type: (1) low resource slack substitutes for the digital cognitive depth, and (2) TMT gender diversity substitutes for institutional quality. Through our study, we build an institutional configurational model to advance a holistic understanding of the theoretical drivers of digital entrepreneurial ecosystem, contributing to the research of the digital entrepreneurial ecosystem, institutional theory, TMT gender diversity, and resource slack.

ENT: **Gendering Dynamics in Entrepreneurial Ecosystem Emergence**

Author: **Quynh Thi Bao Le**, *Umeå School of Business, Economics, and Statistics*

There is an implicit tendency to emphasize macro-, ecosystem-level dynamics rather than the underlying mechanisms that link entrepreneurs and their ecosystems (Roundy & Lyons, 2022a) in entrepreneurial ecosystem (EE) research. Current literature on EEs mostly describes the components of EEs but fails to explain how these components interact to understand the dynamics of EE (Acs et al., 2017). Doing so may result in the assumption that all actors in EE are considered homogeneous within categories (Brydges & Pugh, 2021), and that EE is equally supportive to all entrepreneurs, and that EE is a gender-neutral concept (McAdam et al., 2019). This contradicts gender and entrepreneurship research, which implies women entrepreneurs are often considered the other and on the “losing side” in entrepreneurship. Most importantly, it underestimates the role of entrepreneurs as central players who build and sustain EE (Brown & Mason, 2017; McElhaney, 2006; Roundy & Lyons, 2022b), as well as the catalyst for actions (Isenberg, 2010). Employing grounded theory and processual approach under Femtech as research context, this research aims to rectify these limitations and sheds light on the gendering dynamics of EE, investigating how entrepreneurs, through actions and interactions with other entrepreneurial actors, explain the EE emergence phenomenon.

Strategic Perspective

Session Moderator: **Syeda Nimra Batool**, *Royal Holloway, U. of London*

ENT: **Keep the Fire Burning: Shared Leadership, ADHD Symptoms and Entrepreneurial Passion in Tech Ventures**

Author: **Syeda Nimra Batool**, *Royal Holloway, U. of London*
Author: **Hassan Imam**, *U. of Tsukuba*
Author: **Stefanie Bröring**, *Ruhr U. Bochum*
Author: **Fei Zhu**, *U. of Nottingham, China*

Building on the person-environment fit theory, this paper answers two questions in the context of high technology new ventures: whether shared leadership influences the founders' entrepreneurial passion, and whether this relationship is stronger for entrepreneurs exhibiting high ADHD symptoms. We collected multisource data from 247 high technology new ventures by surveying both the founder/co-founder and one randomly selected team member from each venture. Findings indicate that ventures which adopt a shared leadership approach have higher levels of entrepreneurial passion for inventing, founding, and developing of founders. Furthermore, we found that the relationship between shared leadership and the entrepreneurial passion of founders was contingent on the level of ADHD symptoms exhibited by the founder. In addition to the theoretical implications, this study provides the implications for practitioners, academia, and policymakers.

ENT: **Integrating Utility and Perception: A Systematic Review of Social Impact in Social Entrepreneurship**

Author: **Georgios Polychronopoulos**, *Prague U. of Economics and Business*
Author: **Martin Lukes**, *Prague U. of Economics and Business*

Social impact, while central to entrepreneurship research, remains an ambiguous concept. This study conducts an integrative review to enhance construct clarity around social impact in the context of social entrepreneurship. Analyzing 118 articles spanning three decades, we identify two distinct perspectives in the literature: 1) social impact as utility, and 2) social impact as perception. The utility perspective, through a functionalist lens, objectively views social impact as utility for intended beneficiaries, focusing on measurable outcomes and inherent positive value. Conversely, the perception perspective, from an interpretivist standpoint, subjectively interprets social impact in terms of broader systemic changes in societal structures and norms. Our critical analysis and synthesis of social impact and its related constructs delineate the similarities and differences between these perspectives, providing insights towards their integration. This study offers a nuanced understanding of social impact, bridging divergent viewpoints, and guides future research towards a programmatic theory of social impact.

ENT: **It's Always Darkest Before Dawn: The Role of Pre-Venture Adversity on Founder Identity Construction**

Author: **Ishara Maharaj**, *United Arab Emirates U.*

The challenges of the entrepreneurial journey are often explored in relation to adversity. Yet, the forms of adversity in low-income regions remain an underexamined area of entrepreneurship research. This study focuses on informal entrepreneurship in South Africa's township communities, employing an identity theoretical lens to unravel the identity dynamics shaped by pre-venture adversity within an impoverished context. We introduce the concept of identity disconfirmation – the negation of valued role and/or social identities – and connect it to entrepreneurial motivation. We join the small but growing group of scholars who challenge prevailing views of the necessity-driven narrative in developing economies by revealing the integral role of multiple adversities in shaping founder identities and diverse entrepreneurial motives. Taking a qualitative approach, using life-course methodology over three years, our study contributes to entrepreneurship research by establishing a vital link between context, identity, and entrepreneurial motivation. Our study provides valuable insights into how informal entrepreneurs transcend the dark times in their life histories through their venturing efforts by illuminating how multiple forms of adversity influence identity construction and entrepreneurial motives.

ENT: **Institutional Logics, Time Horizons and Family Firms' Acquisitions**

Author: **Michele Pinelli**, *U. Ca' Foscari of Venice - Dept. of Management*
Author: **Francesco Chirico**, *Macquarie Business School, Macquarie U.*

Fit in time horizons of acquirers and targets implies more compatible institutional logics and, in turn, easier understanding, more aligned goals and smoother organizational integration. As family firms have an especially pronounced long-term perspective, we argue that family firms have thus an incentive to undertake acquisitions in more long-term oriented countries than nonfamily firms. We also contend that this incentive is stronger for family firms from long-term oriented countries but it weakens when environmental uncertainty is low. We argue, indeed, that when acquisitions' riskiness is low due to environmental stability, family firm acquirers from short-term oriented countries can afford to take on the additional risk of acquiring targets in less long-term oriented countries. With overall supporting empirical results from an analysis on a global sample of 964 international acquisitions undertaken between 2011 and 2016 by 606 family and nonfamily firms, this study contributes to the growing literature on family firms' acquisitions by shedding light on how family control affects target selection choices.

Informality

Session Moderator: **Athina Skiadopoulou**, *U. of Alabama*

ENT: **Does Competition from Informal Firms Really Influence New Product Development by Formal Firms?**

Author: **Athina Skiadopoulou**, *U. of Alabama*
Author: **Sandra Mortal**, *U. of Alabama*

Considerable interest centers around the strategic consequences of competition from informal (unregistered) firms. In this vein, McCann and Bahl (2017) build on the attention-based view to argue that informal competition is positively associated with new product development by formal firms and this relationship is weakened by formal competition, prevalence of irregular payments, and optimism about the regulatory environment. With the goal of advancing knowledge accumulation, we reexamine McCann and Bahl's (2017) research model by conducting a series of studies, including an exact replication of the original investigation and reexamining their findings across time and space. Our findings reveal that while the original research model is well-supported in an exact replication, its temporal and spatial generalizability is limited. Implications and directions for future research are discussed.

ENT: **To Exit or to Remain in Informality? A Study of Informal Entrepreneurs' Exit Intention**

Author: **Isabel-Maria Bodas-Freitas**, *Grenoble Ecole de Management*
Author: **Cornelia Lawson**, *U. of Manchester*
Author: **Fakher Omezzine**, *Montpellier Business School*

This paper examines the intention of entrepreneurs to remain informal entrepreneurs or exit to wage employment in three African countries. Building on the entrepreneurial cognition, exit and informality literatures, we propose that informal entrepreneurs' intention to exit to wage employment depends on the extent to which the entrepreneur is involved in searching for new knowledge and information to improve their business activity, as well as the characteristics of the entrepreneur and the nature of the venture. We examine empirically this issue, while accounting for the self-selection of these entrepreneurs into the informal sector, using data from the World Bank Enterprise Survey and the Informal Sector Business Survey for Zambia (2019), Mozambique (2018), and Somalia (2019). Results suggest that intention to exit informal entrepreneurship for wage employment has an inverted u-shaped relationship with the extent of the entrepreneur's involvement in active search. The results also suggest that the u-shaped relationship between active search and intention to exit is only observed for male entrepreneurs, while for female entrepreneurs search has a linear effect on exit intentions. We also find that the relationship between search and exit is stronger for sole entrepreneurs rather than for entrepreneurs at firms with multiple employees. We discuss the implications of our study for both theory and practice.

ENT: **Examining the Role of Formal and Informal Institutions in Driving Entrepreneurship in the Informal**

Author: **Rama Krishna Reddy**, *California State U. San Bernardino*
Author: **Anamika Datta**, -
Author: **Frances H. Fabian**, *U. of Memphis*

This study examines institutional factors in relation to levels of entrepreneurship in the informal sector. Using data from 81 countries from 2006 to 2018 with a total of 530 country-year observations, we first tested the formal legal institution of property rights protections, finding greater property rights related to lower informal entrepreneurship. We further examined the moderating role played by the country's cultural dimensions of uncertainty avoidance and individualism on the property rights-informal entrepreneurship relationship and found both significant. The varied impact from cultural/norm institutions shows informative pattern differences for policymakers interested in the potential effectiveness of greater legal protections.

ENT: **A Holistic View of Financial and Non-financial Aspirations on Family Firms' Illegal Behavior**

Author: **Feifei Lu**, *Shanghai U.*
Author: **Kriti Jain**, *IE Business School*
Author: **Zhu Zhu**, *Montclair State U.*

This study draws on the behavioral theory of the firm, goal-setting theory, and the socio-emotional wealth perspective to explore the interplay between financial aspiration fulfillment and illegitimate practices in the context of family businesses, alongside the moderating influence of emotional attachment. In study 1, we analyzed a dataset comprising 2,833 Chinese family firms over the 2005-2022 period, which included 21,041 firm-year observations. Our findings indicate an inverted U-shaped relationship between the attainment of financial aspirations and the propensity for illegal behavior within family firms. Moreover, we observed that emotional attachment weakens this relationship. The second study entailed a field survey of 193 Chinese family firms, with results that corroborate those of study 1. In study 3, to ascertain the causal link between financial aspiration attainment and illegal behavior, we conducted a randomized experiment in a controlled environment, engaging a representative sample of the U.S. general population. Employing this mixed-methods approach enhances the robustness of our findings, offering solid internal and external validity.

Innovating

Session Moderator: **Jun Li**, *U. of New Hampshire*

ENT: **Exploring the Multifaceted Antecedent Configurations of Employee Innovative Behavior**

Author: **Sujuan Geng**, *Nanjing U.*

Author: **ZhiWei Xu**, *Nanjing U.*

Author: **Fei Xiao**, *Nanjing U. School of business*

Author: **Huajin Tan**, *Nanjing U.*

Employee innovative behavior is the key to improving an organization's autonomous innovation capability and competitiveness. This study employs fuzzy set qualitative comparative analysis (fsQCA) to investigate the complex causal relationships that lead to employee innovative behaviors and confirm the multiple concurrent characteristics that drive employee innovative behaviors. First, based on a theoretical framework of the social information processing model, this study investigates the intrinsic mechanisms of employee innovative behavior using the logic of cue encoding and interpretation, clarification of innovative goals, response construction, response decision, and behavior enactment; second, this study brings together market uncertainty, digital transformation, individual entrepreneurial orientation, trust, perceived organizational support, task performance, and critical thinking ability, as well as contributions in employee innovative behavior; third, based on 478 employee data from 72 Chinese firms and 368 employee data from 50 American companies, this study compares the configurational paths of employee innovative behavior in different dominant cultural contexts, providing evidence for generalizing the similarities and differences in employee innovation behavior in individualism and collectivism.

ENT: **The Synergistic Effect of Causation and Effectuation on New Venture's Innovation**

Author: **Yiyuan Mai**, *Huazhong U. of Science and Technology*

Author: **Yunjie Song**, *School of Management, Huazhong U. of Science and Technology*

Author: **Jun Li**, *U. of New Hampshire*

Author: **Zhuxin Ye**, *Huazhong U. of Science and Technology*

The entrepreneurial process is highly uncertain, making it challenging for a single decision-making approach to effectively navigate. In this study, we contribute to the discussion on strategic decision-making logics by examining the interplay between causation and effectuation, detailing their individual and interactive impacts on the innovation of new ventures. Utilizing three rounds of surveys of 404 founding team members from 91 new ventures, we find that innovation of new ventures benefits from the synergy of causation and effectuation. The founding team's boundary-spanning behavior mediates the relationship between this synergistic effect and innovation of new ventures. Accounting for various expressions of boundary-spanning behavior, this mediation effect strengthens as the founding team's trust increases. We provide valuable insights for decision making and strategic behavior for founding teams to enhance the innovation of new ventures.

ENT: **Enterprises Innovating Towards a Circular Economy**

Author: **Judy Matthews**, *Queensland U. of Technology*

This paper reports on the findings of an investigation with founders of small and medium construction enterprises which are concerned to improve the sustainability of their products, processes and services. Focused on one small innovative enterprise, our findings indicate that increasing intention and actions to move towards more sustainable processes and outcomes includes addressing organizational and policy issues. However, their actions go beyond a broad focus on reducing the waste and pollution from their industry and are concerned with initiatives more related to a circular economy, such as designing out waste, keeping materials and products in use as long as possible and in regenerating natural systems.

ENT: **Innovative Entrepreneurial Activity in Latin America and the Effect of External Environmental Shocks**

Author: **Sebastian Uriarte**, *Business School, U. Adolfo Ibanez*

Author: **Vesna Mandakovic**, *U. del Desarrollo*

Author: **Jose Ernesto Amoros**, *EGADE Business School, Tecnologico de Monterrey*

Through human capital theory and the external enablers (EE) framework, this study investigates the dynamics of innovative entrepreneurial activity (IEA) among nascent entrepreneurs in Latin America and the Caribbean (LAC) and how the mechanisms of an external environmental shock, such as the COVID-19 pandemic, reshaped these dynamics. We test our hypotheses using data from the Global Entrepreneurship Monitor (GEM) of four representative LAC countries covering the period from 2019 to 2021. We empirically found that the COVID-19 pandemic acted as an EE for the enhancement of outcomes toward more innovative entrepreneurial activity. Additionally, the pandemic reduced the educational gap, maintained the entrepreneurial experience gap at the same level, and increased the opportunity confidence gap among new entrepreneurs and innovators in LAC countries. We discuss the theoretical contributions that focus on the relationships between EEs and innovative entrepreneurial activity in LAC countries and their practical implications, centering on how entrepreneurs, along with public and private actors, can meet the challenges of the new normal caused by the COVID-19 pandemic.

New Venture Performance

Session Moderator: **Carrington Motley**, *Carnegie Mellon U. - Tepper School of Business*

ENT: **Pivoting and Performance: Negative Feedback, Heterogeneous Business Idea Change, and Performance**

Author: **Carrington Motley**, *Carnegie Mellon U. - Tepper School of Business*
Author: **Michael Leatherbee**, *Pontificia U. Católica de Chile*

Prior research on business idea change focuses on when entrepreneurs resist making changes and how to implement changes effectively but misses a crucial fact: entrepreneurs have choices when it comes to business idea changes. Thus, current theory has yet to grapple with the heterogeneity of business idea change. Dividing the business idea into a core and periphery, we develop and test a theory of the relationship between negative feedback and business idea change and the performance implications of making changes to each part. Using a unique sample of 305 ventures participating in the I-Corps program across 24 cohorts, we find that entrepreneurs are most responsive to negative feedback about the core of their business idea and that only business idea changes to the core are positively related to subsequent performance.

ENT: **The Impostor Phenomenon and Venture Performance**

Author: **Sana Zafar**, *Georgia Southern U.*

Entrepreneurs are frequently considered confident, overconfident, or even hubristic. While many entrepreneurs may feel this way, an alarming number of entrepreneurs in fact feel like they are impostors (i.e., that others have wrongly overestimated their competence). Yet, little is known about the outcomes of such feelings for entrepreneurs and their ventures. In this research, I seek to build an understanding of why entrepreneurs may feel like impostors, and how these experiences affect their behaviors and ultimately venture performance. In Study 1, I conduct qualitative analysis involving interviews with 28 entrepreneurs. My findings suggest that experiences of the impostor phenomenon affect the way entrepreneurs hire employees, perceive the growth and scalability of their ventures, and engage in generally avoidant behaviors. In Study 2, I corroborate these findings using a sample of 226 entrepreneurs recruited via Prolific. My findings show that over three-fourths (77%) of the total entrepreneurs surveyed for Study 2 experienced rare to intense impostor experiences and that these experiences negatively predict venture performance. I conclude with evidence that support from an entrepreneur's network can mitigate these negative effects.

ENT: **Network-Based Entrepreneurial Learning and Business Performance**

Author: **Henrietta Ngozi Onwuegbuzie**, *Lagos Business School Pan Atlantic U. Nigeria*
Author: **Olayode W. Agboola**, *Lagos Business School Pan Atlantic U. Nigeria*
Author: **Chiziterem Iwumune**, *Lagos Business School Pan Atlantic U. Nigeria*

This study investigates the link between network activities and characteristics and entrepreneurial learning and performance. Though extant studies have highlighted that networks are a potential source of learning, the actual network activities and characteristics that translate into learning and their impact on entrepreneurial outcomes have been largely understudied. Using the qualitative research approach, based on face-to-face interviews of sixty-seven (67) entrepreneurs undergoing a three-month Entrepreneurship Development Programme (EDP) in Nigeria, the study finds that network-based entrepreneurial learning occurs through specific networking activities such as feedback, observation, and learning from failure of others in the network, or simply through conversing, active listening, as well as reading about network members. In addition, findings reveal that network characteristics of interconnectedness, size, density, collaboration, and mutual benefits constitute learning opportunities for entrepreneurs within their networks. Furthermore, the study reports evidence supporting the positive impact of network-based entrepreneurial learning on participants' business growth, entrepreneurial innovation as well as on turnover and revenue. The study concludes that entrepreneurs learn from networks through certain networking activities rather than by just being a member of networks and recommends that entrepreneurial development programmes should incorporate skills to enhance entrepreneurs' ability in performing these activities within their networks.

ENT: **Celebrity Capital in Entrepreneurial Teams: Understanding Venture Performance in Cultural Industries**

Author: **Yasaman Gorji**, *ESSCA School of Management*
Author: **Michael Carney**, *Concordia U., Montreal*
Author: **Nastaran Simarasi**, *California State Polytechnic U., Pomona*

We introduce the concept of celebrity capital into the entrepreneurial team literature. Recruiting celebrities enhances an entrepreneurial team's capacity to mobilize resources to support the team's performance. We also theorize that some celebrities have central positions in scale-free social networks that show highly skewed distributions. We consider two types of celebrity capital: the degree of fame and popularity at the time of founding and a more extended-term indicator of celebrity, which we describe as durable celebrity capital. We find that the former promotes resources and positively moderates celebrity network ties. However, a durable celebrity is associated with longer-term productivity through making strategic affiliations. We analyze 302 ventures and a comprehensive pool of over 10,000 celebrities, out of which 1093 are actively engaged in their own production companies. Our study contributes to a nuanced understanding of how celebrity capital, divergent from traditional endorsements, can be strategically harnessed within entrepreneurial contexts. It underscores the importance of studying celebrity entrepreneurship, not merely as a case of resource abundance but as a phenomenon that offers insights into alternative forms of resource mobilization and strategic network building. Our findings can generalize to other professions where 'star employees' develop recognition visibility in national talent pools where star status affects the entrepreneurial team recruitment process.

Social Venture Funding

Session Moderator: **Lolita Emanuelle Walker**, -

ENT: **Gender Bias After Failure - How Crowd Lenders Disadvantage Female-Led Social Ventures**

Author: **Caroline Lindlar**, *Heinrich Heine U. Düsseldorf*

Author: **Eva Alexandra Jakob**, *U. of Bayreuth*

Failure in young ventures often happens and significantly influences future funding, with female entrepreneurs facing more challenges. These challenges are often found in male-dominated contexts and traditional funding due to perceived role incongruence. Crowdfunding presents an alternative funding stream, yet perceptions of failure linked to gender remain uncertain. Using social role theory and role congruity theory, we propose that gender bias after failure also exists in crowdfunding but is reduced in female-dominated contexts, such as social entrepreneurship, due to role congruence. Using an audio vignette experiment with 172 participants, we show an unconscious gender bias in funding toward women after failure, even in female-dominated contexts.

ENT: **The Quest for Capital: How Social Entrepreneurs Navigate External Financing Challenges**

Author: **Niko Gerlach**, *Heinrich Heine U. Düsseldorf*

Author: **Deike Schluetter**, *Heinrich-Heine U. of Dusseldorf*

Securing external financing poses a major challenge for social entrepreneurs (SEs). This study explores the strategies and underlying evaluation processes employed by SEs to address obstacles to obtaining external financing. Drawing on insights from 31 interviews with SEs and accompanying secondary data, we identify three types of obstacles that SEs encounter: deficient business orientation, ignorance of financiers, and systemic issues. To address these obstacles, SEs undergo an evaluation process and employ three distinct response strategies to secure external financing: financier-centric adaptation, persuasion and strategic network building. However, we also identified a fourth strategy in which SEs defer seeking external financing to preserve autonomy when overcoming obstacles would endanger their independence. Our research extends the literature on financing social enterprises by adopting a process perspective, enabling us to shed light on the black box between the obstacles SEs encounter and their response strategies. This study holds several implications for SEs, financiers, and policymakers.

ENT: **Greening the Portfolio: LP Preferences for Social Impact and Sustainability Orientation of VC Funds**

Author: **Qiang Xiong**, *Department of Management and Technology, Bocconi U.*

Author: **Andrea Fosfuri**, *Bocconi U.*

Author: **Nicola Misani**, *Bocconi U.*

Author: **YANGYANG CHENG**, *Department of Management and Technology, Bocconi U.*

This study investigates the burgeoning phenomenon of investing in sustainability and traces the influence stemming from the origins of venture capital. We examine how limited partners with varying preferences for social impact wield their influence on shaping venture capital funds' sustainability orientation. Using a large sample covering 4,419 funds and their investments in 45,872 ventures, our research reveals that funds predominantly backed by limited partners with a higher willingness to pay for social impact tend to include a greater number of sustainability-driven startups in their portfolios. Moreover, this effect is more pronounced in conventional venture capital funds and early-stage funds, as well as when the fund is managed by first-time and young VC firms. Our findings underscore the crucial role of limited partners in shaping the sustainability orientation of venture capital funds.

ENT: **Impact of Social Venture Capital on Deal and Post-Funding Financial Outcomes of Social Ventures**

Author: **Jagriti Srivastava**, *Indian Institute of Management Amritsar*

Author: **Sai Chittaranjan Kalubandi**, *Indian Institute of Management, Bangalore*

Author: **Balagopal Gopalakrishnan**, *Indian Institute of Management, Ahmedabad*

Author: **Ludvig Levasseur**, *Indian Institute of Management, Bangalore*

Author: **Thomas Houston Allison**, *Texas Christian U.*

Author: **Jeremy Collin Short**, *U. of North Texas*

In this paper, we find that a shared focus on commercial returns and social welfare leads to higher funding and valuation in Social Venture Capital (SVC) deals. We also find that (1) a domestic market focus of the SVC firm plays a positive moderating role on deal valuation, (2) the growth stage of the investee plays a positive moderating role on funding and deal valuation, and (3) VC syndicates have a negative impact on the relationships between SVC and funding and deal valuation. Overall, SVC has a positive and significant effect on investee's post-funding financial performance.

Microfoundations and Ecosystem

Session Moderator: **Ravi Roshan**, *Doctoral Student at Indian Institute of Management Lucknow*

ENT: **Entrepreneurial Ecosystems for Kirznerian and Schumpeterian Entrepreneurship in an Emerging Economy**

Author: **Ravi Roshan**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Krishna Chandra Balodi**, *Indian Institute of Management Lucknow*

Entrepreneurship acknowledged as a critical driver of economic performance and regional growth, is not a homogenous phenomenon. The variety of entrepreneurship encompasses heterogeneity in the form of Kirznerian and Schumpeterian entrepreneurship. This paper opines that the entrepreneurial ecosystem (EE), consisting of multiple interdependent actors and factors, draws on region-specific strengths to stimulate various forms of entrepreneurship. Recent advances in the EE literature acknowledge the interdependencies among multiple EE constituents, indicating the possibility of multiple conjunctural causations and equifinality of outcomes. With enough regional variation in geography, demography, culture, and economic development within and across periods, India is an exemplary context to examine how various combinations of EE elements shape Kirznerian and Schumpeterian entrepreneurship in an emerging economy. We use fuzzy set qualitative comparative analysis (fsQCA), a set-theoretic method, on a panel dataset of 32 Indian provinces from 2020 to 2022 to obtain six EE configurations each for high Kirznerian and Schumpeterian entrepreneurship. Our findings show that 'knowledge' is necessary for high Kirznerian entrepreneurship while both 'knowledge' and 'finance' are necessary for high Schumpeterian entrepreneurship. The sufficiency analysis exhibited varying combinations of EE elements for Kirznerian and Schumpeterian entrepreneurship in different Indian provinces. Results also show that some EE elements display complementarity and substitution effects, thus providing alternative paths to high Kirznerian and Schumpeterian entrepreneurship. Digital infrastructure, combined with other EE elements, significantly contributes to high Kirznerian and Schumpeterian configurational recipes. The transition analysis revealed that ecosystems must include 'intermediate services' as a key ingredient to transition from a high Kirznerian to a high Schumpeterian configuration.

ENT: **Transition Economy Entrepreneurial Ecosystems - A Review, Insights, and Future Research Directions**

Author: **Victor Schiller**, *Bayes Business School*

Since 1989, the former communist Eastern European, Balkan region, and Baltic State transition economies have been extensively investigated by practitioners, policymakers, and researchers. Despite expectations of entrepreneurship as a key driver in these economies, existing research has not fully captured the mechanisms, phenomena, and pathways that enable or impede productive entrepreneurship in these emerging markets. This task remains particularly elusive due to the multiple levels at which these mechanisms operate. Therefore, this paper aims to do two things. First, it develops a three-element conceptual model based on existing developed economy entrepreneurial ecosystem (EE) literature that illustrates the individual and combined effect of stakeholder alignment catalysts, entrepreneur mindset catalysts, and sociocultural catalysts in nurturing productive entrepreneurship. Second, it applies this model to systematically analyze transition economy research, identifying the combined multi-level effects of these key elements and mechanisms and how they can foster or hinder entrepreneurship. Although past research has broadly studied the three conceptual model perspectives individually, these findings offer new insights into the multi-level combined effects in the transition economy ecosystem context while also potentially applying to other emerging EEs in various states of evolution. The paper concludes with directions for future research to better understand the unique entrepreneurial challenges in these regions.

ENT: **Re-Discovering Hybridity in the Digitalization of Social Enterprises: A Microfoundations Perspective**

Author: **Xiaoti Hu**, *Southampton Business School, U. of Southampton*
Author: **Ivan Ivanov**, *Southampton Business School, U. of Southampton*
Author: **Martina Battisti**, *Grenoble Ecole de Management*

This study draws upon existing theories of hybridity in social entrepreneurship, technology-associated organizational change, and microfoundations of organizational strategy to form a novel framework to analyze forms of hybridity and tensions in social entrepreneurship during the digitalization process. Through qualitative empirical analysis, our findings demonstrate that digitalization in social enterprises operates as a dynamic system encompassing individual beliefs, value recognition, motivation, power relations and control. These factors collectively give rise to internal hybrid tensions and resistance. Consequently, this study bridges the existing gap in multilevel analysis of hybridity in social entrepreneurship research by providing empirical insights into the micro-level processes and dynamics of digitalization. It also extends our understanding of digitalization as a multi-level, and multi-actor phenomenon, while shedding light on its 'dark side'.

ENT: **Microfoundations of Market Creation and Evolution: Information Uncertainty & Complexity Perspective**

Author: **Nenad Apostoloski**, *INSEAD*

This paper introduces a microfoundations perspective on market creation and evolution, offering a unified market topology based on entrepreneurial opportunities: the Allocative, Discovery, and Creation Zones. These zones, representing different levels of information uncertainty (entropy), provide a framework for analyzing firms' evolution within the market. Incorporating insights from complexity science, the paper models the market as a complex adaptive system operating in near equilibrium, far-from-equilibrium, and chaotic modes. Furthermore, it introduces a firm typology based on decision-making logic (effectuation and causation) to analyze their behavior and evolution within the market zones. Lastly, the paper presents propositions with potential outcomes of diverse scenarios shaped by the presence of different firm types in various market zones, offering insights into firm evolution (entry, survival, pivoting, growth) and market dynamics (growth, new market creation, demise).

Session Chair: **Andrea Caputo**, *U. of Trento & U. of Lincoln*

Session Chair: **Daniel Richard Clark**, *Ivey Business School*

Session Chair: **Jeffrey S. Hornsby**, *U. of Missouri, Kansas City*

While there is a consensus about the Entrepreneurial Mindset (EM) being a critical driver of new ventures and large organizations, there is a lack of clarity and agreement about what EM is and how it can help entrepreneurs navigate uncertainties in their journey and generate entrepreneurial culture that fosters innovation within organizations. This precedence has also stunted the development of pedagogical tools that are theoretically robust and practically useful due to the blurred understanding of the concept. Thus, we present this professional development workshop to discuss, critically analyze, and elaborate on the current and future research avenues of EM research in entrepreneurship and organizational contexts. Specifically, we intend to nurture discussions pertaining to different theoretical positions on the conceptualization of EM and how each of the interpretations of EM helps or limits us in reaching a comprehensive understanding of the concept. Further, we shall discuss different methodological approaches that previous scholars have taken to unravel the understanding of EM and which methodological tools future scholars can utilize to enhance the knowledge of EM. Thus, this PDW will provide a ground for scholars interested in entrepreneurial and organizational cognition, emotions, and behaviors to cultivate new knowledge about EM and enrich this elusive concept through multi-disciplinary perspectives. This new knowledge will carve the possibilities of pedagogical tools that will be theoretically consistent and practically valuable.

How to Experiment: Lessons from Practitioners

Organizer: **Naja Pape**, *INSEAD*
Organizer: **Chiara Spina**, *INSEAD*
Panelist: **Arnaldo Camuffo**, *Bocconi U.*
Panelist: **Rembrand Michael Koning**, *Harvard Business School*
Panelist: **Solene Delecourt**, *UC Berkeley*
Panelist: **Marieke Huysentruyt**, *HEC Paris*
Panelist: **Seyedeh Zahra Hejrati**, *Stanford U.*
Participant: **Iavor Bojinov**, *Harvard Business School*

This symposium proposes that experiments have the potential to be used more effectively in strategy and entrepreneurship research if they leverage methodological innovations from practitioners – from startups and international conglomerates to government agencies and NGOs. Practitioners traditionally diverge from researchers in their use of experiments, prioritizing a pragmatic understanding of ‘what works’ by leveraging large samples and adaptive approaches to experiments. The symposium combines the perspectives of experts on experiments in prominent organizations captured on video with a live debate and commentary with management scholars with deep expertise in experiments. The management scholars participating in the live debate will ‘translate’ best practices from the “real world”, and discuss to what extent and how they can be applied to research in strategy and entrepreneurship by putting them in the context of their own work. Presenters will outline specific opportunities to advance the theory, techniques, and variety of topics that methodologically advanced experiments can address and provide actionable insights for researchers at all stages of their career. This symposium builds on the success of the symposia held during the Academy of Management 2022 and 2023 that focused on insights from economics and psychology, respectively, and combined saw participation from over 150 scholars.

Utilizing Various Platforms in Healthcare

Session Moderator: **Elmira Mirbahaeddin**, *Telfer School of Management, U. of Ottawa*

HCM: **Transcending Technology Boundaries & Maintaining Sense of Community in Virtual Mental Health Support**    

Author: **Elmira Mirbahaeddin**, *Telfer School of Management, U. of Ottawa*
Author: **Samia Chreim**, *U. of Ottawa*

The urgent need for accessible community-based mental health support became evident during the COVID-19 pandemic, and this need continues today. One way to improve access is to provide some support services virtually. In this qualitative study involving 40 interviews with managers, workers, and service users of a mental health support organization, we aimed to understand 1) experiences related to the need for mental health support during and following the pandemic, 2) the role of technological factors in accessing mental health support, and 3) whether and how a sense of community can be established among mental health support peers in a virtual space where connections are mediated by technology. The results reveal the value and limits of virtual mental health support services, that technological factors act as both boundaries and bridges to accessing these services, and that there are 5 strategies that help maintain a sense of community in a virtual environment. The importance of providing hybrid services consisting of both in-person and virtual mental health support to reach a broad spectrum of service users is highlighted, and so is the significance of considering resource allocation that allows mental health support provision to those who need it most.

HCM: **AI Adoption in the Healthcare Sector: A Framework of Value, HR and Policy Factors**

Author: **Hila Chalutz-Ben Gal**, *Bar Ilan U.*
Author: **Alessandro MARGHERITA**, *U. of Salento*

The application of Artificial Intelligence (AI) is today a topic largely debated in many fields due to the potentially disruptive impact of technology. A domain which is particularly relevant for the significant societal and policy implications of AI adoption is healthcare. Whereas AI can assist health professionals in undertaking time-critical tasks, the adoption of AI is a complex endeavor with multifaceted perspectives. This study aims to present an extensive analysis and a conceptual framework of aspects associated with adoption of AI. We conduct a systematic review of an extensive body of cross-disciplinary literature, and we build an integrative framework describing three categories of factors of AI adoption, i.e. value and risk-related factors, human resource and organization-related factors, and policy and management-related factors. We describe the three dimensions by identifying 9 sub-dimensions, which are concerned with adopting AI. For each aspect, we report highlights and research insights derived from the analyzed literature. The paper has a theoretical value, since it advances the current understanding of cross-disciplinary elements associated to AI adoption, and it elaborates ideas in terms of societal and policy impacts of AI in the health domain. Furthermore, the study provides practitioners and policy makers with a reference model useful to identify and assess the aspects influencing the preparedness of organizations and societies to AI adoption in healthcare.

HCM: **Rethinking the U.S. Healthcare System: Policy-Relevant Insights from Social Media Analyses**   

Author: **Rodina Bizri-Baryak**, *Central Michigan U.*
Author: **Hayley Schroeder**, *Central Michigan U.*
Author: **Muna Abdulmajid**, *Central Michigan U.*
Author: **Morgan Binge**, *Central Michigan U.*
Author: **Lana Ivanitskaya**, *Central Michigan U.*

Seeking diverse perspectives on the future of the U.S. healthcare system, we analyzed 6,594 YouTube comments to April 2021 New York Times video titled "What Does US Healthcare Look Like Abroad?" with a million views. Qualitative coding, with AI-enabled semantic network visualization and linguistic analysis, produced triangulated insights. U.S. system concerns centered on access, affordability, and medical debt-related financial distress. Described as inefficient and profit-driven, with a substantial influence from pharmaceutical lobbying, lacking universal coverage, the U.S. system's design misaligned with the core values of many Americans. Acknowledging the need for U.S. healthcare reform, the commenters proposed solutions: government negotiation of drug prices; tax redistribution to aid vulnerable populations and middle class; advocating for public opinion shifts to view healthcare as a fundamental right and to stop equating universal healthcare with socialism or communism; and political action. Unique commenters with comparative health system knowledge often spoke negatively of the U.S. system, but some praised its service efficiency and support for the unemployed. The semantic network visualization confirmed widespread concerns, ideological debates about reform directions, and consideration of societal, political, and economic contexts. Narrative and experiential comments with system critiques (vs. not) scored higher on authenticity. Problem-solving comments with solutions (vs. not) scored higher on being analytical. The YouTube platform promises policy-relevant insights for health system architects and reformers. During the pandemic, it served as a global town hall where U.S.- and non-US commenters compared healthcare experiences, advocated for change, and corrected each other's misconceptions.

Author: **Hong Yu Liu**, *Warwick Business School*

Author: **James C. Hayton**, *Warwick Business School*

How are automation and robotics transforming work and employment in the healthcare sector? In light of the rapid development of artificial intelligence (AI), advanced robotics and automation in recent years, many researchers and industry leaders have used statistical models to predict that new technologies will increasingly replace human workers in professional sectors, including healthcare services. Some commentaries also tend to (over-)simplify the impact of technology on employment by suggesting what jobs will be the winners/losers in this wave of economic transformation. However, such dichotomous conceptualisation pays no attention to the organisational context in which technology is implemented and may conceal the variety of workers' experiences when working with new technology. In this article, we argue that the impact of technology on work and employment is not pre-determined; yet, it should be a combination of positive and negative experiences at work, which is highly contextualised in a specific workplace setting. Drawing on the social construction of technology (SCOT) theory, this article uses the colorectal department of an NHS Hospital in England as a case study. Over the decades, the National Health Service (NHS) in England has been a well-researched site for studying the implementation of new technology and its potential impacts on delivering healthcare services. Although past studies have significantly advanced our understanding of the values and boundaries of medical professionals and processes of change in healthcare organisations, their primary focus is on information technology (IT), and the healthcare workforce is often perceived to be a receiver of the change. The interaction between surgical robots and healthcare professionals, on the other hand, is minimally discussed despite the surging popularity of robotic surgeries in the UK in recent years. Furthermore, scant attention is paid to their work experiences in navigating changes brought by new technologies; this knowledge gap needs to be addressed as healthcare professionals' work experience is a direct contributor to their job motivations and the quality of services delivered and has implication to the future of public healthcare system in society. This article aims to precisely fill this research gap by asking the following research questions. It tries to understand (1) what motivates healthcare professionals to adopt a new surgical robot? Also, (2) how does the implementation of a surgical robot impact healthcare professionals' work experience? Lastly, (3) what is the role of organisational management in determining how healthcare professionals experience such impact? This article is the first in-depth case study to look at the implementation process of the Da Vinci surgical robot in a British hospital. This article contributes to the timely debate around the future of work by investigating the implementation process of the da Vinci surgical robot system in the hospital and presenting its impact on healthcare professionals' work experiences in detail. The empirical basis of this article is formulated by 12 months of case study research at this hospital, supplemented by 20 in-depth interviews, multiple in-formal conversations, and on-site observations. This article demonstrates that both positive and negative experiences co-exist in the transformation of the workplace, and we argue that the management approach in the hospital plays an essential role in shaping how healthcare professionals experience the complexities of benefits and drawbacks during the implementation process, consequentially determining the impact of technology on their work experience. Most importantly, our findings indicate that the implementation of the new technology (i.e., the surgical robot) shows no displacement effect on the healthcare workforce in this hospital, which poses a new question to the technology displacement hypothesis advocated by some commentators.

Leadership and Well-being: Strategies for Enhancing Work Attitudes and Employee Health

Session Moderator: **Steffen Burkert**, *LMU Munich School of Management*

HR: **Psychopathic CEOs and Employee Gender Pay Gap: An Empirical Analysis**

Author: **Steffen Burkert**, *LMU Munich School of Management*

Author: **Aino Tenhiälä**, *IE Business School*

Author: **Ingo Weller**, *LMU Munich*

Author: **Jukka Pekka Partanen**, *U. of Vaasa*

An extensive body of research has studied the origins of the gender pay gap (GPG), either from a macro-level perspective (e.g., how equality laws reduce the GPG) or a micro-level perspective (e.g., how career choices affect the GPG). However, little is known about the role of firms – the place where pay decisions are made and the foundations for the GPG are laid. In this study, we examine how psychopathic tendencies of Chief Executive Officers (CEOs) shape GPG in their firms. We integrate upper echelons theory with the literature on the GPG and the work on psychopathic leadership to argue that CEOs higher on psychopathic tendencies widen the GPG within firms. We test our hypothesis with a comprehensive and novel panel dataset that encompasses matched employee, firm, and CEO data from Finnish firms from 2009 to 2020. In line with expectations, we find a higher GPG in firms that are led by CEOs with a higher level of psychopathy. In additional analyses, we show that this effect is contingent on firm size, whether the CEO is founder and an entrepreneur, and the male-dominance of jobs and firms. These findings have important implications for our understanding of the causes of the GPG.

HR: **CSR Perceptions as Drivers of Employee Engagement: The Role of Leadership**

Author: **Marlene Gruber**, *WU Vienna*

Author: **Guenter Stahl**, *WU Vienna*

Author: **Jürgen Deller**, *Leuphana U. Lüneburg*

As levels of employee engagement are decreasing across the globe, a nuanced comprehension of its driving forces becomes imperative. In this study, we advance research on the role of corporate social responsibility (CSR) in fostering engagement at work from a leadership perspective. Drawing on the sensemaking research and Kahn's (1990) engagement framework, we suggest that top management trustworthiness mediates the link between CSR and employee engagement. Additionally, we posit supervisor's responsible leadership RL style and symbolic motives behind CSR as crucial boundary conditions. Results based on a time-lagged survey study among 633 employees in Austria and Germany find support for the mediating role of top management trustworthiness. Our results also underscore the significance of employees' perceptions of symbolic CSR motives in reinforcing the indirect link between CSR and employee engagement. We find no support for the hypothesized moderating role of supervisor responsible leadership. Our findings contribute to a better understanding of the role of leadership in fostering employee engagement through CSR. The implications and significance of these results for management practice and future research are discussed.

HR: **Too Vulnerable to Commit My Work: Individual Differences in Vulnerability, Rumination, and Commitment**

Author: **Jian Shi**, *Vrije U. Amsterdam*

Author: **Qian Wang**, *Huazhong U. of Science and Technology*

Research revealed that the COVID-19 pandemic has significantly impacted employees' work patterns and work experiences worldwide. It remains unclear whether some employees fared worse than others during and beyond the pandemic and how their individual differences in vulnerability shaped work experiences. Drawing on the evolutionary psychology perspective of behavioral immune system, we argued that a fundamental factor in how employees respond to the pandemic was the extent to which they perceived themselves as vulnerable to infectious diseases. Employees with higher susceptibility to infectious diseases were expected to repetitively think about their work and commit less to their organizations during the pandemic as a functional response to the threats. We also argued that a health-oriented leadership style could decrease employees' rumination and increase their commitment, especially for the most vulnerable employees. We conducted a three-wave field survey on working adults in the United Kingdom at the mild stage of the pandemic. Results showed that employees who feel more vulnerable to infectious diseases are more ruminated about their work, in turn inhibiting their commitment to the organizations during the pandemic. We discuss the theoretical and practical implications of findings for promoting a safe and healthy post-pandemic workplace, especially for the most vulnerable employees.

HR: **The Hours of Multiple Job Holding: The Spillover-Crossover Effects on Spouses**

Author: **Madison Schnacker**, *U. of Nebraska, Lincoln*

Author: **Jenna Renae Pieper**, *U. of Nebraska, Lincoln*

This study investigates the spillover-crossover effects of multiple job holding (MJH) on multiple job holders' (MJHers) spouses' job satisfaction and mental health, specifically through the work-family conflict (WFC) and spousal family-to-work (FWC). Drawing upon the Job Demands-Resources (JD-R) theory, we explore how the hours beyond what a MJHer works in their main job impact their spouse's job satisfaction and mental health, and the dynamic work-family conflict (WFC) and family-to-work conflict (FWC) play in this impact. Using a nationally representative dataset from the Household, Income, and Labor Dynamics in Australia (HILDA) survey, we examine the relationships and spillover-crossover effects among the number of hours MJHers work, WFC, FWC, job satisfaction, and the well-being of MJHers' spouses through our proposed Demands-Based Spillover-Crossover Model (DB-SCM).

Participant: **Rick Reed**, *Assistant Professor at Le Moyne College*
Participant: **Ksenia Keplinger**, *Max Planck Institute for Intelligent Systems*

In the wake of a global mental health crisis, management scholars have recommended taking a more nuanced perspective of employee mental health and well-being. Recent interdisciplinary reviews have called for researchers to adequately differentiate between poor mental health and severe mental health conditions (Rosado-Solomon, Koopmann, Lee, & Cronin, 2023), while considering their respective roles along the 'mental health continuum' (Kelloway, Dimoff, & Gilbert, 2023: 365). This symposium seeks to present research with novel implications for employee well-being at various points along this continuum. First, this symposium introduces novel phenomena (e.g., AI) that may lead employee mental well-being to fluctuate or worsen. Second, this symposium introduces novel research on the experience of having mental health conditions while being employed; it also introduces a novel category of stigma, and the associated implications for both employees and organizations.

Powering Employee Wellness Through HR Systems and Support

Session Moderator: **Yin Lee**, *Ajou U.*

HR: **Differences in Performance Effects of Collective Turnover Between Family and Nonfamily Firms**

Author: **Yin Lee**, *Ajou U.*

Existing research suggests that the relationship between collective turnover and firm performance is contingent on a number of contextual factors. However, little is known about how the performance effects of collective turnover could vary between family and nonfamily firms. The fundamental difference between family and nonfamily firms in many aspects warrant an investigation. Using a panel data on Korean firms from 2007 to 2017, this study found that family firms experience greater performance loss from collective turnover than nonfamily counterparts. Also, this study showed that the difference in the performance effects of collective turnover between family and nonfamily firms is more salient in the service industry than manufacturing industry and at the lower-level usage of high-involvement work practices. Theoretical contributions to family firm and collective turnover literature are discussed.

HR: **To Build a Thriving Workforce: The Role of Well-Being-Oriented Human Resource Management**

Author: **Qijie Xiao**, *Monash Suzhou Research Institute of Science and Technology*

Author: **Zen Goh**, *Monash Business School*

Author: **Yujie Cai**, *SKEMA Business School, China Campus*

Amid recent chaos and uncertainties, organizations need to design and implement novel human resource management (HRM) practices to build a thriving workforce that is healthy, growing, and energized, meeting the needs for human sustainability. This study mobilized the socially embedded model of thriving (SEMT) to investigate how specific well-being-oriented HRM (WBHRM) practices improve job satisfaction and organizational citizenship behavior (OCB) through the sequential mediating impacts of work needs satisfaction and thriving at work, moderated by HRM system strength. Based on three-wave and multisource data collected from 316 employee-manager responses in China's manufacturing industry, we identified the chain-mediating roles played by needs satisfaction and thriving at work in the relationships between WBHRM and job satisfaction and OCB. Furthermore, we revealed that HRM system strength, as a core organizational climate, moderates the indirect influence of WBHRM on thriving at work, which advances our understanding of SEMT's central premise of the critical role of environments in fostering thriving. We also theorize the psychological mechanisms that link WBHRM, thriving, job satisfaction, and OCB.

HR: **Career Plateaus' Dual Spiral Impact on Public Service Motivation: A Resource Conservation View**

Author: **Xiaoyu Guan**, *School of Government, Beijing Normal U.*

Author: **Bowen Li**, *Beijing Normal U.*

Author: **Xiangjing Wang**, *Beijing Normal U.*

Author: **Xinyu Wang**, *Beijing Normal U.*

This study investigates the career plateau among civil servants in China and its consequences on their public service motivations (PSM). Drawing on the Conservation of Resources (COR) theory, we posit that career plateaus simultaneously engender both a resource loss spiral and a resource gain spiral, exerting distinct effects on PSM. Study 1 (N=354) demonstrates that career plateaus detrimentally affect PSM by depleting psychological resources, particularly for civil servants with high levels of growth need strength. Study 2 (N=402) reveals a buffering mechanism for career plateaus, indicating that voluntary secondment helps individuals on career plateaus reshape their PSM. The theoretical model was tested using the PROCESS in SPSS on a sample of surveyed Chinese civil servants. Results support the mediating roles of ego depletion and voluntary secondment in the relationship between career plateaus and PSM, as well as the moderating effect of growth need strength. This study establishes a theoretical model for the career development mechanism of civil servants, offering practical guidance for the improvement of their career development.

HR: **Leader-Subordinate HR Attribution (Dis)Agreement and Employee Well-Being: A Signaling Theory View**

Author: **Byron Y. Lee**, *China Europe International Business School (CEIBS)*

Author: **Ying Wang**, *School of Management and Economics, Beijing Institute of Technology*

Author: **Sunghoon Kim**, *U. of Sydney Business School*

Author: **Qizhong Yang**, *Rutgers U., New Brunswick*

Despite theory that highlights the importance of both leader and subordinate perceptions of human resource (HR) practices, most studies have focused on perceptions related to the content of HR. We contribute to the literature by using signaling theory to examine leader-subordinate perceptions of HR attribution. We develop and test a model by arguing that (dis)agreement between leader-subordinate perceptions of well-being HR attribution has meaningful effects on employee well-being through organizational-based self-esteem (OBSE). Using a polynomial regression model, our results show that when employee well-being HR attribution is congruent with leader well-being HR attribution, employee OBSE increases which results in an increase in employee well-being. Our study advances the HR literature by highlighting the critical importance of taking a dyadic perspective to understanding the impact of HR attributions.

Technologies and Their Stakeholders in HRM: Insights Derived From Worker-Centered Experiences

Presenter: **Xiangmin Liu**, *Rutgers U., New Brunswick*
Presenter: **Jenna E. Myers**, *U. Of Toronto-Ind Rel Lbr*
Presenter: **Christine A. Riordan**, *U. of Illinois at Urbana-Champaign*
Discussant: **Hye Jin Rho**, *Michigan State U.*

Technologies are transforming all facets of human resource management in organizations, from hiring processes to training programs to the management and structure of workflows. These changes affect not only the work and decision-making of managers and other organizational leaders, but also of employees. Employees face a wide range of impacts, from reconfigured opportunity structures in hiring, to demand for new skills sets and training, and to changed discretion and autonomy in undertaking their work. At the same time, technologies also bring new stakeholders into the fold. Developers and vendors are designing artificial intelligence applications to recruit and screen job applications, training protocols to ensure sustained use of their products, and algorithmic management applications to automate decisions regarding labor allocation and workflow. This symposium takes these two trends – the transformation of various HRM applications through technology and the addition of new stakeholders to HRM practices – as a starting point. Specifically, we focus on three processes and their technological transformations: AI-enabled recruitment and hiring; training; and algorithmic management. Empirical studies on each emphasize the experience of employees with such technologies and illustrate how the role of additional stakeholders—namely, the developers and vendors of technology—are integral to this experience. The proposed symposium thus offers a range of insights as to how various stakeholders may collaborate to derive equitably distributed value from technologies designed to improve organizations' human resource management practices and explores challenges and limitations to doing so.

How Does AI Change the 'Human' in HRM? Challenges, Paradoxes and Promises

Discussant: **Ashish Malik**, *Ashish Malik, Professor, Queen's U. of Belfast, UK*
Coordinator: **Marion Fortin**, *TSM-Research, Toulouse Capitole U.*
Coordinator: **Domenico Di Prisco**, *Luiss Guido Carli U.*

This symposium comprises four presentations that explore the integration and impact of Artificial Intelligence (AI) in HR management. As AI technologies are reshaping HR functions, the presentations delve into how AI can support human well-being, uphold ethical standards, and optimize organizational functioning. Ama Sam and Homberg set the scene with a systematic literature review, synthesizing knowledge and revealing diverse perspectives on the relationship between AI, automation, and employee well-being. da Motta Veiga and Figueroa-Armijos then investigate the ethical perceptions that job applicants versus recruiters have of AI in hiring, across different hiring methods. Lesperance's presentation explores how AI technologies can enhance the role and identity of HR within organizations, challenging the conventional division between strategic and operational HR. Lastly, di Prisco and Fortin reveal the central role of the concept of "humanness" in shaping but also justifying recruiters' attitudes and reactions toward AI. Together, we hope that these presentations will spark a rich discussion of the challenges and effects of AI integration in HR, offering valuable insights for researchers and practitioners.

Panelist: **Henry Mintzberg**, *McGill U. - Desautels Faculty of Management*
Panelist: **John Paul Stephens**, *Case Western Reserve U.*

Organizations has been using diverse tools to address the needs for the employees' well-being and individual development, investing growing budgets and efforts into this important goals. Peer coaching groups (PCGs) can become a low-cost, inclusive, and adaptive toolset to address these pressing needs. Hundreds of global business communities, Fortune 500 companies, non-profit organizations, and prominent business schools have successfully employed different PCG settings. At the same time, amidst the wide diversity of practitioners' approaches to PCGs, scholarly literature lacks explanation of what factors and why make PCGs effective in fostering the performance, learning, and well-being of the participants. Thus, this panel symposium provides an arena for scholars and practitioners to explore different designs of PCGs: the practitioners will explain their PCGs' designs and engage scholars in a discussion on underlying mechanisms that drive each setting and factors that impact its process and outcomes. As a result, we hope that the audience will learn about the value of PCGs, diverse approaches to designing PCGs, and the theoretical bases of their effectiveness.

Management Educator and Practice

Session Moderator: **Eric B. Dent**, *Florida Gulf Coast U.*

MED: From Management Science to Practicing Humanities Courageously: 50 Years of JME with Peter Vaill   

Author: **Eric B. Dent**, *Florida Gulf Coast U.*

Author: **David S. Fearon**, *Central Connecticut State U.*

[[Preparing for this JME Special Issue]] This paper addresses several questions of the Special Issue, such as "What does it mean to be a Management Educator? How has our profession evolved? And how might it look in the future?" through the lens of the JME publications of Peter B. Vaill, a long-time, distinguished shaper of JME for most of its 50 years. Vaill noted that the early years of Management education were incredibly exciting as breakthroughs piled up regularly and school of management were where the "action" was in the 1970s. As the field became more scientific, many innovations continued, but almost exclusively those taking a positivist and objectivist form. Vaill's writings don't simply call for a return to the good old days, but see even greater and richer advances coming from, for example, centering learning on the experience of the practice of the action taker and emboldening her or him to act courageously. The next 50 years of JME are yet to be fashioned, but the future proposed here would include Management faculty modeling courage by conducting classes that are emergent, so that the professor and students both learn in the moment. Management faculty would know their field as well as doctors do after years of education, residency, and fellowship. They would then continue to practice management in some way to understand and mold this dynamic field that they teach. Such a practice would result in far more interactive classes where students have greater appreciation for the "feeling, judgment, sense, proportion, balance, and appropriateness" (Barnard, 1938, p. 235) of management and ideally develop a greater passion for Management.

MED: Noise, Noise Everywhere: Mixed Signals from Academic Promotion Decisions 

Author: **Adam Keeley**, *Maynooth U., Ireland*

Author: **Olga Igorevna Ryazanova**, *Maynooth U.*

Author: **Peter McNamara**, *Maynooth U.*

While academics need to achieve quality performance in research, teaching, and service to achieve an advancement in rank, many claim that the goalposts of achievement are unclear and subjective. At the same time, we know that institutions use the academic promotion process to achieve the long- and short-term strategic needs of the institution. It may be that the need to strategically deviate from initially communicated promotion policies has led academics to be presented with signal noise regarding what performance is needed to achieve an advancement in rank. As a result, this study explored how credible are the signals sent by higher education institutions via their academic promotion decisions for advancement to senior faculty ranks. To achieve this, we analyzed the research and service activities of 561 faculty from Ireland, the UK, the US, Canada, Australia, and New Zealand who were recently promoted to Senior Lecturer up to Professor. From our analysis, we found that the promotion process creates three levels of signal noise, overall signal noise (at the rank level), internal signal noise (at the institutional level), and external signal noise (at the regional level). These signal noises are created as institutions make continuously inconsistent promotion decisions for individuals being promoted to Senior Lecturer, Associate Professor, and Professor. These findings call into question assumptions academics have about academic careers (e.g., citations are an important metric for career advancement) and the career-related decisions we make when benchmarking against those who have gone before us as we find not all ranks are created equally.

MED: Peer Review and Personal Ties: The Challenge to Impartiality in Publishing in the Academy of Management Journals

Author: **Maria Aluchna**, *Warsaw School of Economics*

Author: **Akanksha Bedi**, *Western Washington U.*

Author: **Benson Honig**, *McMaster U.*

In this paper, we examine the personal ties between authors and editors of the regular and special issues published in three Academy of Management journal (Academy of Management Journal, Academy of Management and Learning Education, Academy of Management Discoveries). The analysis of the sample of 511 articles published in 44 issues in years 2004-2020 indicates that the author-editor ties are higher for lower impact factor journals and special issues. Moreover, special issues of higher impact AOM journals demonstrate fewer insider effects than special issues of lower impact factor AOM journals.

MED: Exploring Organizational Processes that Enable Contrapower Harassment in Academia 

Author: **Samah Shaffakat**, *U. of Liverpool Management School*

Author: **Pisitta Vongswasdi**, *WHU Otto Beisheim School of Management*

Author: **James Stewart**, *Liverpool John Moores U.*

Author: **Lilian Otaye-Ebede**, *U. of Liverpool Management School*

This paper investigates the phenomenon of 'contrapower harassment' in UK higher education sector where students exert undue influence and hostility towards their educators. The research examines how neoliberal ideologies and the commodification of education have led to a shift in the power dynamics, enabling such harassment. Through in-depth qualitative interviews with faculty members from various UK universities, the study uncovers the various forms and impacts of this harassment, and importantly identifies the key institutional processes embedded in the UK higher education system that facilitate it. The findings also illustrate how academics and university staff accommodate this new power relations and hostile work environment. This study contributes to the discourse on the challenges faced by academics in a neoliberal educational environment and provides rich empirical insight into a growing, yet rarely-discussed aspect of academic life. These insights are important at a time when university claim academic well-being while undermining it in practice.

Discussant: **Hamid Foroughi**, *Warwick Business School*
Facilitator: **Jana Boevers**, *Bielefeld U.*
Panelist: **Diego Coraiola**, *U. of Victoria*

Memory work (i.e. 'how we (re)construct the past') and identity work ('who we think we are') are deeply intertwined with collective remembering shaping and being shaped by the construction of individual and collective identities. This symposium seeks to advance organizational memory studies and explore the linkages of memory work to identity work as both of these forms of social symbolic work are important for understanding how members respond to the multi-faceted, concurrent challenges that organizations face. It aims to develop scholarship by exploring important new directions stemming from: 1) the opportunity to examine how memory work enriches the study of identity work (and vice versa); 2) the opportunity to explore memory work and identity work at different levels of analysis and their effects; and 3) the opportunity to explore the potential value of focusing on temporality for theorizing on memory work and identity work. In this symposium, we want to stimulate discussion about this connection and how scholars can better reimagine the organization from the inside out, i.e. the purposeful reflexive efforts that its members engage in when constructing and negotiating memories and identity, by unlocking a wave of insights from bringing together the study of remembering and being.

Advancing Scholarship through Abductive Reasoning and Question-Driven Research

Organizer: **Derek Harmon**, *U. of Michigan*

Organizer: **Eunice Yunjin Rhee**, *Seattle U.*

Panelist: **Derek Harmon**, *U. of Michigan*

Panelist: **Jiao Luo**, *U. of Minnesota*

Panelist: **Amanda Sharkey**, *U. of Notre Dame*

Panelist: **David A. Kirsch**, *U. of Maryland*

This symposium highlights the importance of adopting abductive reasoning and a question-driven approach in research, especially when dealing with phenomena that challenge or extend beyond existing theories, or in cases where data and methodologies are insufficient. It will serve as a platform for scholars experienced in these methodologies to share insights and experiences, with a focus on applying these approaches in a theoretically robust and methodologically sound manner. Discussions will cover the motivations behind adopting a question-driven approach, the unique challenges and benefits of diverging from traditional hypothesis testing, and effective strategies for data interpretation and navigating the journal review process.

Facilitator: **Pauli Pakarinen**, *Aalto U.*

Management scholars have a long-standing interest in expertise, a phenomenon, and a concept with significant consequences for important individual, group, organizational, occupational, and institutional practices and outcomes. Organizational research has so far approached the topic from various perspectives that draw on rich and varied traditions of studying expertise across social and behavioral sciences. However, challenges around conceptual and definitional clarity, as well as unclear distinctiveness from related concepts like knowledge, skill, and learning, may hinder the value of the concept in studying important contemporary phenomena that shape and are shaped by expertise. Experts and expertise also face significant contestation and change, due to phenomena including, but not limited to, emerging technologies like generative artificial intelligence and automation; media issues like mis- and disinformation; and political trends such as populism and polarization. It is, therefore, imperative to take stock of how expertise has been considered in organizational research, and further, chart a way forward for future research. By taking stock of previous research and exploring new avenues for inquiry in contemporary organizations, our PDW thus aims to focus on how management and organization scholars can study expertise in and around organizations and contribute to organization and management theory. Our PDW will stimulate discussion and reflection on this question through presentations and a panel discussion. Through facilitated roundtables, we will encourage new scholars to engage with the study of expertise, and throughout the program, build community around the study of expertise in and around organizations.

Across the Academy, scholars have increasingly been focusing on how employees organize within and across organizations to combat critical societal issues, such as the climate crisis, race and gender inequalities, and worker rights in supply chains. In this PDW, we seek to bridge knowledge silos to create a broader community of researchers and educators around insider social change agents: individuals or groups who seek to propel their organizations toward contributing to positive social change. We structure the PDW in two parts. Part 1 consists of a panel of leading management scholars who will share their knowledge and expertise in studying insider social change agents across academic fields and societal issues. The goal of the panel discussion is to connect as-yet siloed lines of inquiry and explore synergies between them under the insider social change agents umbrella. Part 2 includes several roundtable discussions that will allow emerging and established researchers to connect around empirically defined topic areas and identify frontiers, challenges, and opportunities for developing their scholarship. By structuring roundtables around empirically defined topic areas, we seek to enable focused discussions that can cross-fertilize insights across literatures, generating novel communities of practice and knowledge outcomes. Overall, the PDW aims to empower researchers to co-create opportunities for future research, education, and impact that reimagine and transform organizations from the bottom-up and inside out.

To pre-register for Part 2, please submit an abstract by July 12 to elisa.alt@kcl.ac.uk. The abstract (no more than 200 words) should be focused on forward-looking perspectives and/or questions for the roundtables, which will be facilitated by topic experts. Doctoral students interested in co-designing and/or co-facilitating roundtables are especially encouraged to pre-register. Walk-ins are also welcome for Part 2.

Author: **Nan Wang**, *Lingnan U.*

As awareness increases about the rapid deterioration of the natural environment, public concerns about organizational environmental reputations have been growing. However, current studies exploring the antecedents of organizations' environmental reputation primarily focus on environmental disclosures, green policies, and CSR practices; little research focuses on CEO's psychological states or thinking modes. Based on upper echelons theory and the attention-based view, this study explores the effect of CEO bottom-line mentality on organizational environmental reputation and the moderating role of financial performance. Data were collected from 118 CEOs, 118 CFOs, 118 CHOs, and their employees at three time points. Results indicated that CEO bottom-line mentality negatively influences organizational environmental reputation by negatively influencing the implementation of Green HRM. The company's financial performance moderated the relationship between CEO bottom-line mentality and Green HRM, and the mediating effect of Green HRM on the relationship between CEO bottom-line mentality and organizational environmental reputation. Theoretical implications and practical implications are also discussed in this paper.

ONE: Corporate Social Responsibility and Ethics: Employee Attentiveness to Climate Change as a Moderator

Author: **Mary Triana**, *Owen Graduate School of Management Vanderbilt U.*
Author: **Jorge Delgado**, *UMass Amherst*
Author: **M. Fernanda Garcia**, *U. of Texas at El Paso*
Author: **Huafang Liu**, *Zicklin School of Business, Baruch College, City U. of New York*

Based on scope of justice theory and norms of reciprocity, we examine how employees respond to corporate social responsibility (CSR) toward the environment, depending upon how attentive employees are to the problems of climate change. In a supervisor-subordinate survey of employee pairs, CSR toward the environment is associated with subordinate perceptions that the organization's management is ethical which, in turn, is associated with how much organizational citizenship behavior toward the organization (OCBO) subordinates report their supervisors doing. That is, there is an indirect effect of CSR toward the environment to supervisor OCBO through subordinate perceptions of ethical management. Both the relationship between CSR toward the environment and subordinate perceptions of ethical management as well as supervisor OCBO were strengthened for subordinates who are more attentive to the problems of climate change compared to subordinates who are less attentive to the problems of climate change. In a supplemental experiment sampling employees who read a scenario manipulating high or low CSR toward the environment, we replicate the indirect effect from the field survey. Results from the experiment show that CSR toward the environment is indirectly related to anticipated supervisor OCBO through subordinate perceptions of an ethical organization. A supplemental sample from Refinitiv ESG with U.S. public firms also supports our findings that CSR toward the environment is positively associated with organizational ethics, especially when the firm is more attentive to the problems of climate change (in this case, is a signatory to the Equator Principles).

ONE: Who is More Concerned? CEO Political Ideology and Firm's Perceived Exposure to Climate Change

Author: **Jingru YU**, *The Chinese U. of Hong Kong*
Author: **Haibin Yang**, *Chinese U. of Hong Kong*

Why do some firms respond to climate change, a pressing challenge for both human and business? Previous research has extensively explored diverse adaptation strategies adopted by firms while neglecting this fundamental question. Our study shifts the focus towards examining whether and how CEO political ideology influences a firm's perceived exposure to climate change in the aftermath of salient environmental events such as hurricanes. Drawing from the political ideology literature, we posit that, a conservative CEO, due to a lack of information and attention to hurricanes, is more likely to perceive a higher exposure to climate change. This is attributed to conservative CEO's reliance on the sudden salience information, which provides increased availability and the most recent observability of climate change. We further contend that the positive relationship between CEO conservatism and perceived exposure to climate change is weakened where the climate change attention is higher. Results based on S&P 1500 firms supports our argument. This study contributes to the climate change literature by highlighting CEO political ideology as a novel determinant in shaping a firm's response to it.

ONE: Do CEOs with Government Work Experience Foster Enterprise Investment in Pollution Control

Author: **Mixiang Peng**, *ZheJiang GongShang U.*
Author: **Chaolin Zhang**, *Hunan U. of Technology and Business*

Enterprises are important subjects and participants in environmental protection, but how to enable enterprises to actively carry out environmental protection is a problem that scholars have been examining for some time. From the perspective of imprinting theory, this paper discusses the impact of CEO government work experience on the enterprise investment in pollution control, as well as the boundary conditions of this impact. The study uses Chinese private enterprise survey data from 2008 to 2014, consisting of 12,684 observations. The results indicated that the CEO having government work experience is positively associated with enterprise investment in pollution control. In addition, CEO low status perception positively moderates the relationship between CEO government work experience and enterprise investment in pollution control. This paper enriches the research of imprint theory at the personal level, and also enriches the relevant research on the impact of status perception on enterprise decision-making. It has a certain practical significance for hiring CEOs with government work experience to promote enterprise environmental protection.

Environmental Policy and Market Dynamics in Sustainability

Session Moderator: **Gian Maria Mallarino**, *PhD Candidate at Bocconi U.*

ONE: Issue Field Interaction In The Voluntary Carbon Market

Author: **Gian Maria Mallarino**, *PhD Candidate at Bocconi U.*

Author: **Mislav Radic**, *Bocconi U.*

Author: **Valentina Mele**, *Bocconi U.*

Issue fields are arenas where specific events, developments, and trends are deemed consequential and receive sustained attention from field members including activists, businesses, and governments. While issue field members frequently interact across different fields, current research predominantly concentrates on the internal evolution and dynamics within specific fields. We draw on an in-depth longitudinal analysis of the historical development of the carbon removal field, to understand the role of field-to-field interaction in issue field evolution. Our findings show how the broader carbon removal field developed into two distinctive sub-fields – the compliance and voluntary carbon market and unveil the three main actors in present in both, whose interactions were pivotal for each other's evolution. By doing so, our research begins to unpack the mechanisms and consequences of field-to-field interactions within the context of issue fields, with a particular emphasis on those formed around pressing societal grand challenges.

ONE: Policy Effectiveness and Optimal Strategies of Environmental Tax: Evidence from China

Author: **Xiaomin Lyu**, *Beijing Information Science and Technology U.*

Author: **Jingjing Wang**, *Beijing Information Science and Technology U.*

Author: **Hui Wang**, *Beijing Information Science and Technology U.*

Author: **Shunming Zhang**, *Renmin U. of China*

As a market-based environmental regulation, the environmental tax is one of China's most important environmental economic policies in China, have been levied since January 1st, 2018. Its predecessor is the pollutant discharge fee, an administration-based ecological policy and the Chinese government has collected since 1979. Based on the quasi-natural experiment implemented in accordance with the Environmental Protection Tax Law of China, this paper analyzes the impact of environmental tax reform in China in a computable general equilibrium model. Using real data in 2018, we present the benchmark equilibrium under the minimum environment tax rates. Then, we examine two environmental tax alternatives by adjusting the tax rate levels and make a comparison of their impacts on GDP growth and social welfare. We find that there is a maximum GDP, and the government can boost economic development at the expense of total social welfare by increasing environmental tax rates. One possible reason is that high-polluting industries increase outputs to offset the rising costs incurred by environmental taxes, consequently promoting short-term economic growth. However, it distorts resource allocation and thus lowers social welfare. Further, we simulate the impacts of different environmental tax rate mixes of the water and air pollutants and find that GDP, economic growth, and social welfare are more sensitive to the tax rate of water pollutants. Finally, we investigate the mechanism of reducing the total pollutants when the environmental tax burden is fixed. Results indicate that social welfare can be improved by slightly slowing economic development. This paper provides substantial empirical evidence for improving environmental tax policies in China, such as reducing total pollutants discharged, moderately increasing the environmental tax rate, and capacity control of high-polluting industries.

ONE: Advocacy Group Messaging on Oil and Gas: Unveiling Policy Narratives Through Text Mining and Network

Author: **Yutong Si**, *Northeastern U.*

Research suggests that advocacy groups use various narrative strategies to achieve their policy goals on social media. However, little has been written to compare the narrative strategies employed by competing advocacy groups in the U.S. oil and gas policy subsystem. Applying a text mining and network approach, this study uses the Narrative Policy Framework (NPF) to examine how advocacy groups use narrative strategies to support or oppose oil and gas development through X (formerly called Twitter) from 2009 to 2023. Structural topic modeling (STM) reveals six prominent themes, which are organized into a taxonomy of narrative strategies to show how they correlate with different groups and how they change over time. While the pro-oil and gas groups use a logic of job creation, energy security, energy independence, and energy sufficiency to emphasize policy benefits, the anti-oil and gas groups focus on policy costs including air pollution, health threats, climate change, and wildlife devastation. Furthermore, a mention network is presented based on social network analysis (SNA), demonstrating that the pro-oil and gas advocacy groups have more outgoing connections. This paper suggests a holistic approach to unveiling policy narratives as a whole and highlights the role of networks in advancing policy agendas.

ONE: The Illusion of Science-Based Targets in Tackling Scope 3 Emissions and Supply Chain Carbon Leakage

Author: **Qian Li**, *Cardiff Business School, Cardiff U.*

This study empirically examines the impact of science-based targets (SBTs) on Scope 3 emissions and supply chain carbon leakage in a sample of international firms from 2010 to 2021. Using a staggered difference-in-differences approach with dynamic treatment effects, we investigate how SBTs affect emissions in the three years before and after their commitment, as well as how supply chain innovation and outreach strategies interact with SBTs commitment. Our results show that companies that adopt SBTs experience a short-term increase in Scope 3 upstream carbon intensity, while a significant decrease in Scope 1 and 2 emissions intensity. This short-term increase may be due to the challenge of implementing changes quickly across all three scopes and the potential for carbon leakage in the upstream supply chain in the short term. In the longer term, we find that SBTs commitment can lead to further reductions in Scope 3 upstream intensity due to the impact of supply chain innovation. Companies that establish SBTs significantly increase their supply chain engagement outreach and transparency only in the third year after target setting. Using social exchange theory as a theoretical lens, we posit that companies, perhaps influenced by the principles of subjective cost-benefit analysis and reciprocity inherent in the theory, resist engaging in sustained supply chain carbon leakage, especially under external stakeholder pressures. Our findings have important implications for companies and policymakers seeking to improve the effectiveness of SBTs in reducing greenhouse gas emissions in supply chains.

Panelist: **Winnie Jiang**, *INSEAD*

In management research, there is a noticeable gap between qualitative and quantitative scholarship. These approaches employ distinct forms of empirical evidence—qualitative research relies on text, verbal, and visual data, while quantitative research involves numeric and experimental data. Additionally, these approaches follow different modes of theorizing, with qualitative methods often being purely inductive and quantitative methods typically being deductive. However, the very distinctions between these methodologies suggest that combining them could yield unique insights that might be unattainable otherwise. The purpose of this Professional Development Workshop (PDW) is to illuminate the process of integrating both methodologies. We bring together accomplished scholars who have effectively utilized mixed methods in their research, and who bring valuable insights concerning the challenges and opportunities associated with blending qualitative and quantitative approaches.

If you have any specific questions about conducting mixed-methods research that you would like us to incorporate into the Q&A with the panelists, please contact Miya Draga in advance of the session (miya.draga@rotman.utoronto.ca).

Sustainable and Purposeful Strategizing

Session Moderator: **Martin Friesl**, *Otto-Friedrich U. Bamberg*

SAP: **Extending Strategifying by Cultural Coupling: Purposefying Led by Chief Purpose Officers**  

Author: **Nicole Steller**, *Witten/Herdecke U.*

Author: **Albena Björck**, *ZHAW School of Management and Law*

The increasing institutionalization of corporate Purpose by the role of a Chief Purpose Officer signifies a pivotal transition in corporate priorities, emphasizing the imperative of Purpose-driven management. While the extant literature underscores the critical role of strategy in embedding Purpose in organizational frameworks, knowledge about the strategic practice of linking Purpose and strategy is scarce, and empirical studies are missing. Based on 44 in-depth interviews with a global sample across various industries and company sizes, our study is the first empirical investigation into the strategic practice of Purpose officers, predominantly Chief Purpose Officers. Grounded in the Strategy-as-Practice tradition, we address an inconsistency of current knowledge on strategifying work by considering the flat ontology perspective. We examine the strategic micro-foundations and identified four interrelated types of strategifying work: Cognitive Coupling, Relational Coupling, Material Coupling, and Cultural Coupling. The contributions of our study are threefold. First, we contribute to Strategy-as-Practice research by revealing the interdependence of different types of strategifying work and emphasizing their overlap and mutual influence. Second, we introduce a new type, cultural coupling, critical to facilitating the integration of Purpose as a fundamental component of the corporate ethos, the shared understanding of doing business. Third, we contribute to the emerging purpose literature by theorizing an incremental Purposefying framework and demonstrate how the role of a Purpose officer shapes the boundaries of organizational strategy. We discuss implications for research and practice.

SAP: **Orchestrating Communities of Practice for Grand Challenges: A Delicate Balancing Act**  

Author: **Sabrina Courtois**, *LouRIM, UCLouvain*

Author: **Valérie Swaen**, *U. Catholique de Louvain*

While communities of practice (CoPs) can offer participatory architectures necessary for grand challenges, they are also non-consensual places, making it difficult for coordinated action for grand challenges to take place. In this study, we reinvigorate the debate of 'what CoPs are for' by studying communities of practice in the perspective of their potential to help tackle grand challenges. After reviewing the CoP and grand challenges literatures and relevant CoP concepts such as identity and participation, we draw findings from a three-year ethnography of an inter-organizational community of practice focused on sustainability. We present the historical evolution of the community as processual and co-constituted by (re-)negotiating the CoP's identity, orchestrating the CoP for grand challenges and assessing the CoP's contributions to these grand challenges. We theorize that, over time, it was through fragmenting its identity and multiplying forms of peripheral participation, that the CoP managed to manoeuvre towards a so-called 'delicate balancing act' to contribute to grand challenges, by acknowledging complexity, embracing diversity, and addressing urgency.

SAP: **Ongoing Strategizing in Practice: The Case of the Metropolitan Economic Development Association**  

Author: **John M. Bryson**, *U. of Minnesota Twin Cities*

Author: **Danbi Seo**, *Arizona State U.*

Author: **Yuan Cheng**, *U. of Minnesota Twin Cities*

Author: **Barbara C. Crosby**, *U. of Minnesota*

Author: **Shuping Wang**, *Maxwell School, Syracuse U.*

There is a dearth of high-quality process studies of ongoing strategizing efforts by nonprofit organizations. Our research is guided by two questions: How can strategizing be conceptualized and measured as a set of interrelated activities? And what does strategizing look like over time as a set of activities? This paper helps address these questions. It is based on a multi-year, mixed-method study of the strategizing efforts of a nonprofit organization, the Metropolitan Economic Development Association (MEDA), located in the Twin Cities area of Minnesota, USA. MEDA is a nonprofit focused on supporting minority-owned businesses and entrepreneurs of color. The study employs a longitudinal single-case study design, drawing especially on 86 monthly interviews – and simultaneously produced cognitive maps – over a nine-year period (August 2014 – June 2023) of three successive MEDA CEOs and an interim leader between CEOs, interviews of other senior staff, meeting notes, reflection notes on the interviews and meetings, and extensive archival data. Based on analyzing the relevant literature and our empirical data, we propose that strategizing consists of five generic activities: diagnosis, prognosis, orienting, mobilizing, and structuring. While diagnosis was the predominant activity, all the activities were present in virtually every CEO interview – a finding that supports the idea that strategizing is a persistent, ongoing set of activities as senior leaders confront a continuous flow of multiple issues and events. The profile of activities changes as the context changes – for example, during periods in which formal strategic planning is under way and during subsequent implementation efforts. The profile of activities also differs across CEOs because the context differed, as did the CEOs. We conclude with several implications for future theorizing, research, and practice.

SAP: **Structural Perspectives on Organizational Sustainability**  

Author: **Annabelle Mueller**, *U. of Bamberg, Germany*

Author: **Martin Friesl**, *Otto-Friedrich U. Bamberg*

Within the past decade, sustainability-related organizational change has become a topical issue for management scholars. The realignment of organizational structures is central to this transition, as they define accountability for and create long-term commitment to sustainability. However, despite having attracted substantial attention, a wide array of disparate approaches to organizational structures, their evolution and effects exists in the sustainability literature, resulting in an incoherent and fragmented body of research. To address this issue, we conduct an integrative review of 182 articles on organizational structures for sustainability. We present our results as a typology of four research approaches to organizational structures in the sustainability literature (sustainability structures as formal roles, roles in action, formal arrangements, and social accomplishments). Then, we redirect future research to capture the full range of formal sustainability designs, the heterogeneity of structural change 'journeys' and their protagonists, and sustainability performance effects of organizational structures in context. Our review furthermore highlights the renewed relevance of organizational structures in management and organization research over and above an engagement with organizational sustainability.

Business Innovation as a Force for Good in a Time of Climate Change

Organizer: **Chris Laszlo**, *Weatherhead School of Management, Case Western Reserve U.*

Panelist: **Sandra A. Waddock**, *Boston College*

Panelist: **Anita Mendiratta**, *Keshav Mahavidyalaya, U. of Delhi*

Panelist: **Mekobe Ajebe**, *PhD Candidate at Weatherhead School of Management, Case Western Reserve U.*

Panelist: **Ju Young Lee**, *Ivey Business School*

This symposium considers the business innovation implications of COP 28 to address rising global challenges such as climate change while avoiding actions that may be perceived as greenwashing. The topic of business innovation as a force for good is imperative at a time when incremental changes and only doing less harm are proving insufficient. Chris Laszlo will discuss the problem of closing the gap between Sustainability and ESG-driven business innovation goals and the capacity of a company to deliver against those goals. Sandra Waddock will suggest that the business case has not worked and that systemic change needs to be and can be catalyzed to transform businesses. Anita Mendiratta will discuss the implications of non-value-creating business innovations, which aim to gain stakeholder approval but fail to offer meaningful solutions to the climate crisis. Mekobe Ajebe will examine how business innovation in the energy sector, positioned as a force for good, can address COP 28 commitments and facilitate a broader transformation. Ju Young Lee will discuss the importance of incorporating systems thinking into corporate innovation processes.

R&D Strategy in the Pharmaceutical Industry

Session Moderator: **Sina Khoshokhan**, *U. of Colorado, Boulder*

STR: The Costs They Are a-Rising: Commercialization Costs and the Innovation Process in Drug Development

Author: **Sina Khoshokhan**, *U. of Colorado, Boulder*

Commercialization is a crucial phase in the innovation process and its associated costs significantly influence R&D decisions. Yet our understanding of how commercialization costs impact various stages of innovation remains underdeveloped. In this study, I investigate the effects of commercialization costs on early- and late-stages of the innovation process in a quasi- experimental setting. Specifically, I leverage sudden policy shifts in the US Food and Drug Administration (FDA) that increased commercialization costs for drugs in certain therapeutic areas. Employing a difference-in-differences methodology, I trace the impacts of these elevated costs on discovery and clinical trial advancement of 3,357 drug candidates between 1997 and 2015. My research places emphasis on the contrasting roles that startups and established firms have in innovation. My findings reveal that while commercialization costs diminish the late-stage efforts in commercializing innovations, especially by established firms, they stimulate an environment conducive to early-stage entrepreneurial drug discovery efforts. Furthermore, I find that the disruption that commercialization costs create in markets for technology drives these opposite findings: new discoveries remain without buyers in technology markets, failing to complete their development process as commercialized products.

STR: The Hard Way? Learning and Drug Development Success (or Failure) in the Pharmaceutical Industry

Author: **Daniela Silvestri**, *Politecnico di Milano*

Author: **Rene Belderbos**, *KU Leuven, Faculty of Economics and Business*

Author: **Bart Leten**, *KU Leuven*

Author: **Massimo Riccaboni**, *IMT*

We investigate the extent to which a company's drug successful development benefits from previous - successful or failed - related development efforts in-house (experiential learning) or from other companies (vicarious learning). In a comprehensive framework, we also distinguish learning within and across therapeutic domains, as well as learning in the form of belief formation (at the start of a project) from learning as belief updating (during a project). Based on extensive information on 6,518 drug development projects, we find that projects that build on previous successes are more likely to develop marketable drugs, with the effects most pronounced for experiential learning, within-domain learning, and belief updating. Learning from previous failures also occurs, but only in the context of updating beliefs within the same domain. Belief formation learning from prior failure reduces the probability of drug development success if it concerns vicarious learning across domains.

STR: The Effects of Earnings Pressure on Technological Search in the Biopharmaceutical Industry

Author: **Shinhye Gloria Ahn**, *Seoul National U.*

Author: **Cecile K. Cho**, *Korea U.*

Although the influence of the financial market on firms' innovation performance has received increasing attention from scholars, the impact of the earnings pressure on firms' technological search activities has not been systematically examined. To address this gap, we propose that when firms face earnings pressure from security analysts, they not only attempt to improve their short-term earnings performance but also undertake impression management strategies for the sake of shaping the perception of financial market stakeholders. These dual motivations are expected to result in distinct changes in firms' technological search behavior, characterized by a decrease in the breadth and depth of search activities, along with an increase in the volume of search activities. Furthermore, we predict that the effects of earnings pressure on firms' technological search vary depending on the specific characteristics of the firms and the analysts. Specifically, the coverage of the analysts is expected to strengthen the effects of earnings pressure, while the scientific status of the firms in the knowledge community and educational background of the firms' chief executives weaken the effects. To empirically test our hypotheses, we analyze data from global biopharmaceutical firms between 2001 and 2019. Overall, our findings generally support the predicted relationships. These findings have meaningful implications for managers in technology firms and policymakers in governments, providing insights on how to foster firms' innovativeness in the context of the financial market and its stakeholders.

STR: There is Nothing Permanent Except Change: Trade-offs and the Substitution Paradox

Author: **Jason Sigler**, *The Ohio State U. Fisher College of Business*

Author: **Jaideep Anand**, *Ohio State U.*

When firms prevent imitation, they encourage substitution. We do not know if this trade-off is dynamic or static, nor do we know the contingencies as to when this trade-off occurs. While prior literature has examined the environmental factors affecting this relationship, we turn to firm-specific characteristics to show that not all firms are equally affected by this interdependency. We study this paradox using a natural experiment – the Biologics Price Competition and Innovation Act of 2009. We show that the substitution paradox is, in fact, dynamic and subject to boundary conditions. Firm-specific causal ambiguity and other impediments to asset accumulation are essential contingencies affecting a firm's decision-making. The results support our hypotheses while drawing important implications about the applicability of the VRIN framework.

Enhancing Value Creation and Capture: Navigating Challenges and Opportunities

Session Moderator: **Tunji Adegbesan**, *Bridge Institute for Strategy & Society*

STR: **Shared Gains but not Shared Losses: Value Capture by Stakeholders of US Airlines Over Four Decades**

Author: **Natarajan Balasubramanian**, *Syracuse U.*
Author: **Marvin B Lieberman**, *UCLA Anderson School of Management*
Author: **Marco Testoni**, *Miami Herbert Business School*

After demonstrating the connection between two models of value appropriation—the Brandenburger and Stuart model and the VCA model—we consider how value appropriation by a firm's stakeholders is linked to value creation and firm performance. Applying the VCA model to annual data on 16 airlines over four decades, we find that while economic gains are shared among multiple stakeholders, economic losses are largely borne by capital. Furthermore, we find that firm financial performance is weakly correlated with total value creation, but strongly positively correlated with gains to capital and negatively with gains to consumers. Together, our findings suggest nuanced patterns of value capture that depend not only on the magnitude of value creation but also on whether value creation is positive or negative.

STR: **You Have to Play to Win: Inside the Black Box of Creating and Capturing Value in Open Innovation**

Author: **John Pritchard**, *U. of Denver*
Author: **Paul M Olk**, *U. of Denver*

Open innovation (OI) represents an important approach for understanding how firms create and capture value. While research has explained how value can be created through open innovation, the findings have been ambiguous about whether value is captured from open innovation by an investing firm, and the literature provides few details about the process of value capture. We explore the value capture process by proposing a model that accounts for a direct relationship of open innovation on firm performance, but also explicates a mediating relationship where a firm's dynamic capabilities play a central role in the sensing and seizing knowledge as part of the value creation process, and then reconfiguring the knowledge into intangible assets as part of the value capture process, which then affects performance. We develop propositions about specific relationships between the contextual factors of market uncertainty, open innovation ecosystems, and industry diversity, and the internal activities of acquiring external knowledge, creating internal knowledge, and transforming it into intangible assets, and how this leads to performance. The model and propositions provide direction for future research into evaluating the potential mediating role of dynamic capabilities in explaining value capture from open innovation.

STR: **Value Creation in the Business of (Outer) Space: An Integrative Framework and Research Opportunities**

Author: **Petteri Leppänen**, *IE Business School*
Author: **Oliver T. Alexy**, *Technical U. of Munich*

Recent advancements in commercial space technologies have led to a notable decrease in the cost of launching satellites and other spacecraft. Consequently, the space sector is rapidly transforming and becoming a new potential source of value for a multitude of industries from pharmaceuticals to agriculture. Management scholarship, in turn, may not only help to understand how, when, and why space represents a new opportunity for business and a potential need to adapt, but also if and where new theorizing may be required to make sense of the space economy. The purpose of this study is to provide an overview of the sector and a systematic reflection of its potential and pitfalls. We begin by reviewing the historical and recent developments in the space economy as well as key literature. Next, we explore value creation in the complex space ecosystem and seek to understand its drivers, challenges, and broader implications, leading to a proposed integrative research framework of the business of space. Finally, we examine the potential need for new theoretical perspectives and highlight several areas for future research. Overall, by providing a comprehensive overview of the sector and its links to theories in strategic management, innovation, and entrepreneurship, our study offers insights for scholars interested in complex ecosystems of value creation, strategy and governance in emerging industries, and the business of space.

STR: **When Does the Specificity of Human Capital Lead to Superior Performance?**

Author: **Ebes Esho**, *U. of Johannesburg South Africa*
Author: **Tunji Adegbesan**, *Bridge Institute for Strategy & Society*

Strategic human capital research emphasizes the importance of firm-specific human capital and mobility constraints. Research has thus far overlooked the possibility that human capital specificity, the extent of its transferability across diverse contexts beyond firms, affects value appropriation and performance. This paper explores when human capital specificity leads to superior performance using performance data of sales staff, a context known for its task-specificity and transferability across contexts. Results show that human capital is fundamentally task-specific and that sales performance is driven by task-specific human capital and level of complementary resources provided by the firm. However, complementarity is only created between each firm and individuals' human capital developed within it. Consequently, firm-specific human capital and mobility constraints may have different value appropriation mechanisms. We also contribute by using data from an actual business context rather than the conventional use of sports context for human capital research on complementarity.

Strategies to Include Underserved Communities

Organizer: **Octavio Barros**, *Inspere Institute of Education and Research*

Organizer: **Sandro Cabral**, *Inspere Institute of Education and Research*

Organizer: **Sergio Giovanetti Lazzarini**, *Western U.*

Panelist: **Romain Boulongne**, *IESE*

Panelist: **Aline Gatignon**, *The Wharton School, U. of Pennsylvania*

Panelist: **Marieke Huysentruyt**, *HEC Paris*

Panelist: **Jiao Luo**, *U. of Minnesota*

Management research has increasingly recognized the importance of organizations pursuing value in the public interest and tackling societal grand challenges, such as pervasive global inequalities. More recently, literature has highlighted the imperative for firms to adapt their strategies when engaging with underserved and vulnerable communities. Nevertheless, there is still significant room for understanding how organizations and researchers can be more effective in approaching stakeholders from these regions, as well as comprehending the various challenges and liabilities faced when dealing with such localities. In that sense, the objective of this PDW is to discuss how to overcome research barriers within this field in a way that creates a common language among authors while respecting the multidimensional nature of vulnerability. In the first panel, four prominent researchers in Strategy will present papers showcasing methodologies and theoretical frameworks introduced to investigate various types of underserved needs. Then, in a final group discussion session, PDW attendees will have the opportunity to discuss their ideas centered on underserved communities with other participants and panelists.

No pre-registration required. For additional details about the PDW, feel free to contact the organizers at octavioadb@al.insper.edu.br.

When Failure Benefits Innovation

Session Moderator: **Giacomo Marchesini**, *Copenhagen Business School - Department of Strategy and Innovation*

TIM: Turning the Tide: Persistent Search after Technological Failures  

Author: **Giacomo Marchesini**, *Copenhagen Business School - Department of Strategy and Innovation*

There is a longstanding agreement in management literature that failures should be tolerated to achieve innovative breakthroughs. However, less is known about how organizational search processes unfold after having encountered a failure and how firms can persist in searching within the same idea in order to fix it. This study builds on cognitive research on scientific reasoning to introduce a theory of persistent search during the discovery of a technological invention. This theory argues that organizations search for the latent value of a fully novel technology by generating alternatives (i.e., hypotheses on how the technology works) and experimenting with them. Biases characterize discovery search processes in both the hypotheses and the experiments. After a failure, solely persisting in searching for evidence is detrimental, but a coupled persistent search in the evidence space and the hypotheses space can improve the likelihood of reaching a successful result for the failed technology. The theory is tested by using a unique dataset of dynamic portfolios of research projects built on drug-development data.

TIM: How Failures In Causal Mechanisms Influence Innovation Search

Author: **Kiran Awate**, *Virginia Tech*
Author: **Mona V Makhija**, *Ohio State U.*

Identification of new causal relationships among knowledge components is a critical but understudied element of recombination search. The more novel an innovation, the more causal relationships among knowledge components will differ from previous innovations. Difficulties in working out causal relationships will lead to many failures. We suggest that learning from different types of causal failures can assist firms in diagnosing a rugged underlying technological landscape associated with knowledge components, improving the likelihood of novel outcomes. We consider two types of causal failures, those dispersed within a knowledge domain and those from other knowledge domains. Drawing on a unique database that allows us to assess such failures in more than 40,000 drug innovation projects, we find that both types of causal failures in the search process help to improve the novelty of subsequent innovations. Even so, the inclusion of more varied knowledge components in the search process diminishes the ability to derive insights from causal failures. These results not only highlight the importance of causal failures in the innovation search process, they shed light on the contradictory nature of search associated with knowledge components and causal mechanisms.

TIM: Does Others' Experience Matter for My Innovation Performance? A Quasi Replication and Extension 

Author: **Kiran Awate**, *Virginia Tech*
Author: **Kannan Srikanth**, *The Ohio State U. Fisher College of Business*
Author: **Oded Shenkar**, *Ohio State U.*

Do firms learn from others' innovation experiences? The literature on vicarious learning suggests that firms learn from others' failure experiences, but this empirical evidence mainly stems from operational disasters rather than innovation. The literature on alliances suggests that firms learn from their alliance partners in innovative contexts, but it has not considered whether partners' innovation experience—particularly success versus failure experience—influences the focal firm's innovation outcomes. Neither stream of literature considers what firms learn or the limits to such learning. We investigate these questions in the context of firms' learning from others' clinical trial experience in the pharmaceutical industry. We find that firms' introduction of successful new drugs increases with their own and their partners' failure experience, thus identifying boundary conditions to claims in prior work on vicarious learning. In addition, we find that increasing partners' experience is associated with the introduction of more novel drugs by the focal firm and increased selectivity in its clinical trials. Meanwhile, it is neither associated with chemical complexity (molecular novelty) in its drugs nor with improved success in areas outside of the alliance scope. This finding suggests that learning from alliance partners may be confined to context-specific development knowledge rather than more general scientific knowledge. Despite limitations imposed by our context and measures, our results suggest important avenues for future research.

TIM: Beyond Ego: The Impact of Intellectual Humility on New Venture Team Processes and Performance

Author: **Marieke Funck**, *Paderborn U.*
Author: **Slawa Tomin**, *Paderborn U.*

In the dynamic environment of new venture teams (NVTs), where new information and diverse perspectives necessitate ongoing adaptation, intellectual humility assumes a central role. Intellectual humility is marked by openness to alternative viewpoints, recognition of the fallibility of personal beliefs and opinions, and the capacity to engage in fair and constructive negotiation. We investigate the role of intellectual humility in NVTs' dynamics in terms of its influence on interpersonal conflict and information elaboration and how influence is distributed on the team. Our findings reveal that intellectual humility has a positive effect on the equal distribution of influence, reduces interpersonal conflict, and enhances information elaboration in NVTs. These findings expand our understanding of NVTs' dynamics and provide valuable insights into the role of intellectual humility in the field of entrepreneurship.

Stakeholder Influences on Innovation

Session Moderator: **Ayodeji Daramola**, *Nova School of Business and Economics, U. Nova de Lisboa*

TIM: The Antecedents and Consequences of Product Safety Management

Author: **Andy Zhu**, *Grenoble Ecole de Management*

Author: **Maximilian Von Zedtwitz**, *Copenhagen Business School*

Author: **Dimitris G. Assimakopoulos**, *CEREN, EA 7477, Burgundy School of Business - U. Bourgogne Franche-Comté*

This paper examines how firm-internal product safety processes are affected by external pressures and internal top management commitment and how such safety management processes determine product safety after market introduction. We build and test a theoretical model among eight variables: coercive pressure, management commitment to safety, product complexity, risk level of product categories, resource availability, prevailing safety climate, safety management processes (SMP), and product safety performance. Using data from 284 manufacturing firms, we found that the effects of coercive pressure on the deployment of SMP are transmitted via management commitment to safety, and that product complexity negatively moderates the effect of coercive pressure on management commitment to safety. In addition, our findings suggest that management commitment to safety is positively related to resource availability and to prevailing safety climate. Our analyses also reveal that both resource availability and prevailing safety climate have direct effects on the deployment of SMP, and their effects on product safety performance are fully mediated by SMP. Finally, the deployment of SMP was found to be positively associated with product safety performance. We discuss the implications of these findings for the field of product safety.

TIM: Roles of Multi-level Governments in Orchestrating the Transformative Innovation Process

Author: **Kaihua Chen**, *Institutes of Science and Development, Chinese Academy of Sciences*

Author: **Zehua Xue**, *Institutes of Science and Development, Chinese Academy of Sciences*

Author: **Rui Guo**, *U. of Chinese Academy of Sciences*

Author: **Lutao Ning**, *Queen Mary U. of London*

The lack of social impetus for transformative innovation foregrounds a more entrepreneurial and directional role of the government. However, there is limited exploration on how the government can orchestrate innovation process to promote transformative innovation. We address this gap by constructing an analytical matrix to reflect different focuses and combinations of multi-level government roles in the entire transformative innovation process. Drawing from existing research, this study conceptualizes eight critical roles of the government, namely planning, coordinating, allocating, promoting, providing, regulating, evaluating, and publicizing, in transformative innovation. Then by examining a recent policy experiment case of Sustainable Development Agenda Innovation Demonstration Zones in China, this study differentiates specific government roles into five stages of innovation process. Thus, we enhance the governance capabilities of the government to facilitate transformative innovation. Finally, we uncover the heterogeneity of preferences among central, provincial and municipal governments and finds that these multi-level governance actors have distinct roles at different stage of transformative innovation process. Moreover, they must collaboratively utilize diverse policy instruments to maximize their roles within the scope of their administrative power. The results suggest that policies need to be holistic across the innovation process and multi-level governments.

TIM: External Stakeholders in Innovation Processes: A Computational Review on Current Trends

Author: **Nicholas Schwarz**, *Institute for Technology and Innovation Management at RWTH Aachen*

Author: **Nicole Hartwich**, *RWTH Aachen U.*

There is extensive research exploring the role of external partners in innovation processes. Despite common interests, different literature streams have only limited connection and there is no systematic overview integrating them: What are salient topics when research considers external partners in the innovation process? Where are structural differences between these literature streams? Against this backdrop, we conduct a computational literature review of 17 literature streams based 7,356 full text articles. As first review consolidating these literature streams into an overarching perspective, our analysis results in a topic landscape of 97 topics that describe the current state of research. Our topic model reveals a dominance of phenomenological research, calling for an increase in theoretical groundwork to span bridges between different literature streams. Through a network analysis, we identified four clusters among literature streams: Collaborative Ventures and their Management, Supply Chain Collaboration, Collaboration in Regional Clusters, Open Innovation Approaches and Ecosystems. In particular, our analysis shows the distinct position of the Open Innovation Approaches and Ecosystems cluster. While the cluster attracts large attention, it also faces the risk of becoming a fragmented research field. Finally, we provide four avenues for future research based on a list of concrete research question.

TIM: Cultivating AI Gardens in Emerging Markets, the Role of Community-Led Initiatives

Author: **Ayodeji Daramola**, *Nova School of Business and Economics, U. Nova de Lisboa*

Author: **Leid Zejnilovic**, *NOVA School of Business and Economics*

This paper investigates the emergence of community-led initiatives as a response to institutional voids within emerging contexts. These initiatives have ignited a period of substantial growth, fostering transformative change across local, national, and continental domains. While discourse on transformative social innovation has become increasingly prominent, there is limited exploration of the role of community-led initiatives in facilitating transformative social innovation (TSI) within emerging ecosystems, our research seeks to bridge this gap. To achieve this, we employ a comparative case study approach, examining three community-led initiatives across multiple African countries through 22 in-depth interviews. The novelty of our approach lies in shifting the perspective from a firm-centric view, which emphasizes stakeholder prominence, to a community-directed perspective that promotes collaboration and participation. This shift allows us to reevaluate the transformative impacts of these initiatives within emerging contexts. Findings from our case studies indicate the prominence and interpretive flexibility of these efforts. Results emphasize the exposure, international impact and entrenched connections that these initiatives facilitate, highlighting their efforts as stimulating significant and previously unremarked community-led change. .

Phoenix From the Ashes? Industry and Technology Re-Emergence

Session Moderator: **Stefan Wuorinen**, *Xavier U.*

TIM: Back in Black: Technological Evolution and Re-Emergence 

Author: **Stefan Wuorinen**, *Xavier U.*
Author: **Tian Chen**, *U. of Hawaii at Manoa*

We explore the differences in the use and re-use of form and function aspects of technologies. Technological evolution and product life-cycle models detail the processes of introduction, competition, and growth, and eventually decline as new technologies are introduced and displace older models. These models have primarily described the functional components as the dominant driver in the selection mechanism. We present the argument that design-based inventions, in particular, can exhibit some level of re-emergence as consumers' acceptance of design styles may cycle in such a manner to desire products, features, and form factors found in older technologies. These design preferences can change separate from the technical functionality, resulting in technologies seemingly evolving in one dimension but re-emerging or being reused in another, even after new dominant designs have been selected. We test this using design patents representing the way an invention looks through industrial design as compared to utility patents covering an invention's function. We find that design-based inventions have a higher variance of backward re-use and are more likely to re-emerge even after a period of decline.

TIM: A Pluralistic Perspective on the Evolution of Technology: The History of the Electric Guitar

Author: **Mariano Mastrogiorgio**, *IE Business School*
Author: **Antonio Mastrogiorgio**, *John Cabot U.*

Tracing the origins and subsequent emergence of new technological artifacts has received increased attention in innovation studies. Despite this interest, most of these studies still build on the Neo-Darwinian gradualist model of evolution. Closer inspection of historical records across a variety of settings, however, reveals that this model is not entirely consistent with observed patterns characterizing the evolution of technological artifacts, which instead indicate the existence of a plurality of evolutionary mechanisms. Accordingly, our goal in this paper is to demonstrate the importance of evolutionary pluralism to fully appreciate the various mechanisms that shape the evolution of technology. We illustrate the novel insights of this perspective through a historical case study of the evolution of the electric guitar—whose evolutionary trajectory is not consistent with the Neo-Darwinian model—and discuss its broader implications for innovation and policymaking.

TIM: Industry Termination Initiative and R&D Organizations: Evidence from Nuclear Phase Out in Korea 

Author: **Seungryl Ryan Shin**, *Ulsan National Institute of Science and Technology*
Author: **YURA JUNG**, -

How does the government's industry termination initiative influence R&D organizations in the related sector? Exploiting a unique event in Korea, this paper documents how research-focused organizations are susceptible to the government's termination initiative for the related industry. Following the sudden regime change from the Park Geun-hye to the Moon Jae-in administration and the new government's announcement of the initiative to eliminate nuclear power plants in Korea, R&D grants in the nuclear sector resulted in 8.6% fewer research papers, relative to R&D grants in other engineering sectors. Such a change was muted for patent outcomes. The effects were primarily driven by basic research in university and government-funded laboratories, especially those located in the research hubs in Korea, i.e., Seoul and Daejeon. These effects were not directly linked to the termination of nuclear plants, as evidenced by the absence of significant changes in research activities in geographical locations close to existing nuclear plants. Instead, this paper provides evidence that the effects attribute to R&D organizations in the nuclear sector i) reducing research efforts, ii) decreasing investment in new research equipment, and iii) decreased next-generation researchers (i.e., those with master's degrees) participating in the research.

TIM: Socio-Technical Imaginaries in Technology Transitions: An Analytic Narrative of the Post-ICE Age  

Author: **Sanjay Jain**, *California State U., Northridge*
Author: **Anil Nair**, *Old Dominion U.*
Author: **Matthew Farrell**, *Austin Peay State U.*
Author: **Habib Ashraful Islam**, *Eastern Washington U.*

We integrate insights from the literatures on socio-technical imaginaries (STI) and the multilevel perspective (MLP) frameworks to understand the re-emergence of the electric car, which was instigated by a regime dominated by internal combustion engine (ICE) cars. Employing a "microhistories" methodology, we document how actors in the automotive industry took steps that enabled alternate technologies to form, gain momentum, and eventually coexist with the extant regime. Our account delineates the key role that actors play in defining proto imaginaries, as well as their performativity of these proto imaginaries. We observe interactivity between levels that serves to shape the broader adoption of niche technologies. Our insights highlight how nascent imaginaries and the processes they undergo shape an ongoing technological transition, thereby contributing to and complementing the STI and MLP literatures.

Innovating Beyond Organizational Boundaries

Session Moderator: **Daphne W. Yiu**, *Singapore Management U.*

TIM: Open Innovations in Co-Creation Community Platform: Bonding, Crowding and Complementor's Engagement  

Author: **Daphne W. Yiu**, *Singapore Management U.*
Author: **Yiqian Lu**, *Chinese U. of Hong Kong*
Author: **Heyang Sun**, *Chinese U. of Hong Kong*
Author: **William P. Wan**, *Chinese U. of Hong Kong*

This study underscores how community bonding and crowding mechanisms are intertwined to facilitate complementor's engagement in a co-creation community platform. Co-creation community serves as both a social place for a firm and a valuable source of open innovation via the active involvement of its members. Using social identification and linguistic theories, we posit that affective bonding mechanisms, aroused and conveyed by linguistic cues in online computer-mediated communication, play an important role for complementor's community identity and hedonism, thus stimulating their continued engagement in contributing creative ideas in the co-creation community platform. In addition, strategic cooperation theories also highlight the incentives given by community crowding mechanisms. As such, we further posit that the bonding and crowding mechanisms are intertwined to influence complementor's continued engagement. Using a crawled set of 20,278 ideas and 780,840 comments from an exemplary brand co-creation community platform during 2008 and 2020, we find supporting evidence to our hypotheses. Our study sheds new light on the community interaction aspects of open innovations in an ideation platform by highlighting the underlying bonding and crowding mechanisms in a co-creation community.

TIM: Fostering Collaboration Between Scale-Ups and Corporations: An Action Research Study   

Author: **Mariela Fontenelle Assis**, *FGVEAESP Sao Paulo School of Business Administration*
Author: **Thomaz Wood**, *FGVEAESP Sao Paulo School of Business Administration*

This article discusses how scale-ups perceive the generation of good business with corporations and collaborative practices to enhance both productive business arrangements and innovation. Researchers have shown increasing interest in corporations' efforts to accelerate innovation through collaborations, and also in scale-ups, i.e., startups in the scaling stage of their business lifecycle. These collaborations with scale-ups can generate significant impacts for the parties involved. While many studies adopt the corporations' point of view, this research prioritizes the perspective of scale-ups. The action research method was adopted to improve practices at a global non-profit organization that acts as an intermediary supporting corporations and scale-ups in open innovation initiatives. The study revealed entrepreneurs' views on "good business" with corporations, how this engagement contributes to scale-up growth, and the practices that enhance good business between the parties. Finally, the research proposes a framework for good business, encompassing collaborative practices between corporations and scale-ups. In addition, the results lead to specific recommendations for corporations and scale-ups, as well as for support organizations that facilitate the relationship between them.

TIM: IPOs and Innovation in Open Source   

Author: **Yuping Li**, *U. of Colorado, Boulder*
Author: **Huiyi Litan**, *Tsinghua U.*

While a prominent stream of research has studied how going public affects firm innovation, research on how it affects firm employees' innovation activity remains scant. We address this gap by examining how going public affects where employees' innovation activity is being directed—toward their firm's projects (internal innovation) versus external entities' projects (external innovation)—post-IPO, and the mechanisms driving such changes. Applying an instrumented difference-in-differences technique to granular, activity-level data on employees' contribution to their firms' open source software projects and to the projects of other entities pre- and post-IPO, we show that going public decreases employees' internal innovation activity but increases their external innovation activity. Further, these effects are moderated by employees' internal and external collaboration ties, and are mainly driven by those who eventually depart the firm post-IPO. However, open source contribution from third-party nonemployee developers to the firm increases post-IPO, which may compensate for the reduced internal innovation by firm employees.

TIM: How Do Organizations Turn Jointly-Developed Tacit Knowledge into Explicit Solutions?  

Author: **Ruben Ogink**, *Eindhoven U. of Technology*
Author: **Martin C. Goossen**, *Old Dominion U.*
Author: **Georges Romme**, *Eindhoven U. of Technology*
Author: **Henk Akkermans**, *Tilburg U.*

Creating and exchanging tacit knowledge is widely considered as a key driver for interorganizational collaboration, especially in the context of open innovation. Yet, it is less well understood how organizations jointly transform tacit knowledge into explicit solutions, which often is a critical step in collaborative innovation processes. This paper explores this process in an embedded longitudinal case study of a loosely-coupled multi-partner open innovation program. We find five distinct mechanisms that drive codification from tacit knowledge to explicit knowledge and solutions. Furthermore, these mechanisms vary with the nature of tacit knowledge: whereas data sharing and direct expert interaction are key drivers for exchanging weaker tacit knowledge and making it explicit, creating and codifying strong tacit knowledge occur through radical goalsetting and proof-of-concept development. Different contextual and partner-specific factors appear to enable the effectiveness of each mechanism. These findings contribute to the literatures on tacit knowledge transfer, interorganizational collaboration, and open innovation.

What Drives Innovation: Market Pull or Data Push?

Session Moderator: **Stefano Horst Baruffaldi**, *Politecnico di Milano School of Management*

TIM: Scientific Paradigms, Graphics Processing Units and the Evolution of Artificial Intelligence

Author: **Stefano Horst Baruffaldi**, *Politecnico di Milano School of Management*
Author: **Dietmar Harhoff**, *Max Planck Institute for Innovation and Competition*
Author: **Anna-Sophie Liebender-Luc**, *Max Planck Institute for Innovation and Competition*

A sudden shift in scientific and technological paradigms lies at the heart of recent advancements in artificial intelligence (AI). Around 2012, traditional symbolic AI gave way to neural networks (NN) as the dominant approach for AI research. This coincided with the sudden successful application of graphics processing units (GPUs) as computational technology. GPUs had been invented for a different application, i.e. accelerating complex graphics displays, mostly in video games. We claim that these developments reflect the nature of breakthrough innovations and have implications for regions competing to become AI leaders. We investigate the role of expertise in GPUs for the uptake of AI innovation across regions globally. To this end, we construct a global database covering 2,088 urban areas for the period from 2000 to 2020. The data encompass a broad set of measures describing AI research and innovation activities, based on publications, patents and startups. We document the ascendancy of neural AI and its association with GPU expertise. Panel OLS and IV regressions demonstrate that after 2012 GPU- and NN-related human capital had a strong effect on the growth of AI-related patents and startups. We discuss implications for innovation policy.

TIM: Impact of Foreign Policy on Domestic Corporate Innovation

Author: **Shibo Zhou**, *Copenhagen Business School*
Author: **Kedong Chen**, *Old Dominion U.*
Author: **Xiaojin Liu**, *Virginia Commonwealth U.*

We analyze the unintended consequences of foreign government policies on domestic inventors. In 2009, the Chinese government launched the policy of "national innovative cities" to support the innovation of firms in selected regions. However, the unintended consequence of the policy is unclear at the inventor level, in particular, for those foreign inventors who have experience working with Chinese firms that are exposed to the policy intervention. Our research is guided by the research question: How does government support influence foreign inventors who have collaborated with domestic firms before? By employing the difference-in-differences (DiD) technique in the quasi-experimental setting, we examine the influence of government intervention on foreign partners. We find that foreign inventors who have established relationships with firms in selected cities experience an increase in collaborators and innovations. We further show that inventors with less patent stock take better advantage of cross-border government support. Taken together, the findings of the study suggest that government support can facilitate unintended cross-border knowledge flows and strengthen the innovation performance of "treated" foreign inventors.

TIM: Determinants of Innovations Within Firms: The Case of Portuguese Firms

Author: **Priscila Ferreira**, *U. of Minho*
Author: **George Saridakis**, *U. of Kent*
Author: **Bochra Idris**, *Ozyegin U.*

In this study, we analyse seven waves of the Community Innovation Survey data to examine factors influencing innovation in firms, focusing on international markets, public funding, and market competition. Our investigation differentiates between product, process, organizational, and marketing innovation. Findings highlight the pivotal role of international market engagement and external funding in fostering innovation, particularly in new products and production methods. The influence of external funding varies across innovation types, diminishing in organizational and marketing innovations. The study reveals a nuanced relationship between market competition and product innovation, suggesting a nonlinear pattern up to a certain threshold. Policy recommendations include a comprehensive approach to innovation, leveraging international market engagement, monitoring market concentration, optimizing public funding, providing targeted support for SMEs, and implementing stability measures during economic downturns. These aim to foster innovation, enhance competitiveness, and support economic development and resilience.

TIM: Government Data and Agricultural Productivity: Evidence from the National Agriculture Imagery Program

Author: **Yuchen Zhang**, *Tulane U.*
Author: **Brian Wu**, *U. of Michigan*

This paper examines whether and how government data can help tackle the lack of digital data in the agricultural sector. Specifically, we investigate the impact of adding near-infrared (NIR) band data to the National Agriculture Imagery Program on agricultural productivity. Following this addition, we observe a rise in productivity equivalent to a 2.6 million-ton increase in the US corn yield, valued at approximately \$520 million. Our mechanism assessment, however, reveals that the positive effect exists only when data quality and human capital supply are sufficiently high. We further examine how NIR data inclusion affects farm profitability, efficient chemical and fertilizer use, and technological upgrades. Our research sheds new light on the importance of overcoming data availability challenges in foundational sectors that were not born digital.

Disclosing Information and Litigating Patents

Session Moderator: **David Tobias Angenendt**, *TUM School of Management, Technical U. of Munich*

TIM: Strategic Information Disclosure: The Case of Pending Patents

Author: **David Tobias Angenendt**, *TUM School of Management, Technical U. of Munich*

Author: **Bernhard Ganglmair**, *ZEW Mannheim*

Author: **Jong-Min Oh**, *Sungkyunkwan U.*

In many jurisdictions, the existence and contents of patent applications are unknown to third parties until the application is published by the patent office at least 18 months after the initial filing. In contrast to other features of the patent system, this publication lag has received little analytical attention. The patent applicant can expedite public awareness of the existing application and the respective technology by announcing the patent application before its automatic publication. In our model, the applicant balances a negative effect of disclosure on its informational advantage in the short run (value of secrecy) with a positive long-run effect stemming from potential deterrence of a rival's R&D (value of deterring innovation). We give conditions under which announcing the pending patent deters a rival's innovation. We show that, in equilibrium, the applicant's decision to announce and the rival's decision to innovate are non-monotonic in the strength of the application and the strength of the patent. We present evidence supporting core predictions of our model by identifying press releases, one channel for disclosing business information, that announce nothing but the recent filing of patent applications. Using a technique suggested in the corporate finance literature, we estimate a measure of the nature of competition for all major NAICS codes. In doing so, we are the first to provide broad evidence supporting the prediction dating back to Gal-or (1986) that cost disclosure depends on the nature of competition in an industry.

TIM: Equilibrium Effects of the Availability of Injunctions in Standard-Essential Patent Licensing (WITHDRAWN)  

Author: **Benno Buehler**, *Charles River Associates*

Author: **Dominik Fischer**, *Charles River Associates*

Author: **Bernhard Ganglmair**, *ZEW Mannheim*

In this paper, we present a simple patent licensing-litigation game to study how a patent holder's access to injunctions against an alleged infringer of a standard essential patent affects equilibrium royalty rates and litigation outcomes. In the European Court of Justice's Huawei v. ZTE judgment, the Court stipulates that injunctions are granted only if the patent holder's royalty rate offer is fair, reasonable, and non-discriminatory (FRAND) while the implementer's counteroffer is not. In recent decisions, German courts have deviated from this ruling by granting injunctions regardless of the nature of the patent holder's offer, only requiring a non-FRAND counteroffer by the implementer. Expanding the access to injunctions in this way introduces the possibility of injunctions being granted even if the original offer is non-FRAND. We find that when the court's assessment of FRAND is sufficiently noisy, this can lead to higher equilibrium royalties and an increased risk of patent hold-up. Increased royalties are driven by the patent holder making more aggressive offers and the implementer responding with more cautious counteroffers to avoid triggering an injunction. Because in the amended framework, the patent holder's offer is immaterial for the court's injunction decision, a more cautious counteroffer can eventually decrease the court's use of injunctions and lower injunction rates, particularly for intermediate levels of court noise. Welfare implications of more accessible injunctions depend on the interpretation of the optimal FRAND rate.

TIM: Competition or Diversion? Effect of Public Sharing of Data on Research Productivity of Data Provider   

Author: **Seokbeom Kwon**, *Sungkyunkwan U.*

Scientists are concerned that public disclosure of research data will harm their research productivity because of reduced exclusive research publication opportunities with uncertain reciprocal rewards from data recipients. However, literature on scientists' competitive behavior in resource sharing and their intentions to use others' resources reveals that this concern is subject to theoretical ambiguity. The present research examines the effect of openly sharing research data on the research productivity of the data providers. Our empirical strategy takes advantage of the funding policy initiatives by the U.S. National Institute of Health (NIH), which started requiring investigators of projects to publicly share their research data via a designated online data archive. Using panel difference-in-differences regression and the synthetic control approach, we found no evidence of a negative impact on the research productivity of data providers. Our additional analyses suggest that the null effect is attributed to the data recipients' use of the data to pursue different research inquiries from data providers. Our research has science policy implications, particularly in designing institutions to support sustainable research data-sharing practices among scientists.

TIM: One Lawsuit, Two Signals: The Two-Sided Influence of IP Litigation Reputation on R&D Collaboration

Author: **Rene Belderbos**, *KU Leuven, Faculty of Economics and Business*

Author: **Sarah Edris**, *Maastricht U., School of Business & Economics*

Author: **Victor Gilsing**, *Vrije U. Amsterdam*

We draw on signaling theory to argue that a tough reputation based on IP litigation can be either detrimental or instrumental to the formation of new collaborative ties. This is because under information asymmetry, potential partner firms rely on observable signals to assess partner firms' attractiveness. While IP litigation reputation signals aggressiveness, it also signals the presence of a focal firm's high-quality resources that it seeks to protect. In the absence of a focal firm's prior collaboration, the latter dominates. The discouraging effect of IP litigation reputation is particularly dominant if new collaborations are with rival firms competing in the same market. We find support for these hypotheses in a simultaneous analysis of new partner collaborations of leading firms in the pharmaceutical industry, 1995-2015.

New Insights on Recombination and Search

Session Moderator: **Christos Kolympiris**, *Warwick Business School*

TIM: Cues for Cures: How Scientists Search

Author: **Christos Kolympiris**, *Warwick Business School*
Author: **Kyriakos Drivas**, *U. of Piraeus*
Author: **Matthew Helsby**, *CiteAb*
Author: **Andrew Chalmers**, *CiteAb*
Author: **Ammon Salter**, *Warwick Business School*
Author: **Nicos Nicolaou**, *U. of Warwick*

The search process in the sciences is subject to a paradox where the high stakes of research necessitate deliberate efforts, yet scientists often prioritize speed and convenience over thoroughness. We delve into this paradox via a natural field experiment and a large-scale field experiment both exploiting rich clickstream data from a popular antibody search platform. First, we examine the interplay between positioning and quality indicators as cues within the scientific search process. Second, we explore the heterogeneous effects of positioning on different types of actors and across different choice architectures. We reveal four main findings. One, scientists choose options, including inputs for their research, that are of the highest quality according to imperfect quality indicators, primarily because those indicators place the options in the most prominent areas in the presentation. Two, the impact of such positioning effects is lower for experts and those who search more deeply. Three, offering a larger number of default options to choose from causally increases the demand for the top options in the presentation. Four, inferior options according to quality indicators are more likely to be chosen if choice architecture places them at optimal positions in different choice sets. We discuss the implications of these findings for scientific search and for technology platforms that support it.

TIM: Depth Versus Breadth in the Hierarchical Recombination of Technology

Author: **Likun Cao**, *U. Of Chicago*
Author: **James Evans**, *U. Of Chicago*

Depth and breadth are widely contrasted strategies of search for generating new technologies through recombination. Breadth of technological search is often associated with the exploration of new possibilities and is juxtaposed with depth of search, which references the exploitation of existing ones. We argue that the two qualities should be understood and measured independently, with breadth reflecting broad technical recombination and depth technical specificity. We operationalize deep and broad recombination using machine learning to project the network of prior technological combinations onto a Poincaré disk in negatively curved hyperbolic space, which natively represents the hierarchy of technology, with depth captured by components' difference in radius from center and breadth difference in angle. We validate this model with established metrics, a range of examples, and its conceptual treatment of depth and breadth as independent quantities, holding virtually no empirical correlation. Then we demonstrate how depth drives short-term advancement, increasing the number and quality of early adopters, while breadth forecasts long-term advance, enlarging the scope of relevant audiences to the inventive design. We explore distinct mechanisms through which this occurs, and show that local search garners more local recognition in the short term, but greater "lock-in" in the longer term. Finally, we analyze follow-up invention to reveal the unfolding interplay of exploitation and exploration, highlighting their synergistic relationship, especially within companies that can strategically allocate engineering resources to build on prior advances. We conclude with theoretical and strategic implications of these insights and the novel embedding representations that yielded them.

TIM: Fostering Creativity Through the Exploitation of Scientific and Technological Knowledge (WITHDRAWN)

Author: **Paul-Emmanuel Anckaert**, *SKEMA Business School, U. Côte d'Azur, GREDEG*
Author: **Bruno Cassiman**, *KU Leuven & IESE Business School*

The most creative inventions – i.e., inventions that are both novel and highly valuable – in the lithium-ion battery field are developed by inventors that exploit their own field-specific knowledge base leveraging scientific and technological knowledge components they previously developed. This observation contrasts with the findings of prior literature that has argued that exploration driven by inventors new to a field tends to drive novel and breakthrough inventions. We argue that the technological context and characteristics of the recombinant search process underlying technology development provide important theoretical boundaries to these prior findings and should be considered. In a complex and science-driven technology field, we would expect the inventor's own accumulated scientific and technological field-specific knowledge base to play an important role for advancing that technology field and to matter more for generating novel and breakthrough inventions.

TIM: When Do Firms Engage in Knowledge Recombination in Technology Development?

Author: **Jeongeun Seo**, *Yonsei U. School of Business*
Author: **Wonsang Ryu**, *Korea Advanced Institute of Science and Technology (KAIST), College of Business*

Prior research on knowledge recombination has largely focused on the recombination process and its innovative outcomes, resulting in a limited understanding of its antecedents, specifically, when firms engage in knowledge recombination. To address this research gap, we examine how out(under)performance duration, the length of time that a firm has been consistently out(under)performing, affects its technology development through knowledge recombination. In doing so, we focus on the reconfiguration of existing knowledge components within the current knowledge base, which is unique in that it encompasses elements of both exploitation and exploration. Drawing on previous research on knowledge recombination, performance feedback, and organizational search, we argue that technology development via existing-knowledge reconfiguration has an inverted U-shaped relationship with outperformance duration as well as underperformance duration. We test our hypotheses utilizing the patents applied for by the U.S. listed manufacturing companies in the high-technology industries from 2005 to 2019, and our results largely lend support to our hypotheses. Keywords: Knowledge recombination; out(under)performance duration; existing-knowledge reconfiguration; organizational search behavior

TIM: **The Strategic Challenge of Recombining Distant Knowledge After Hiring** 

Author: **Tom Ngo**, *Pennsylvania State U.*

Hiring can bring new knowledge into an organization but such knowledge often remains isolated. This study examines when new hires and incumbents (with distant knowledge) at the hiring organization collaborate. Our analysis of 14 years of data from the Academy of Management conference suggests that prior ties and collaboration experience are associated with post-mobility collaboration, but such collaborations tend to be among actors with similar knowledge. While distant knowledge has the potential to create new sources of value, it is also harder to integrate. We find that efforts to recombine such knowledge are more likely when actors have prior experience traversing large knowledge distances. The common practice of seeking people who collaborate frequently and/or who have ties to current employees may not achieve strategic objectives.

Future of Geographic and Technological Emergence

Organizer: **Min Jung Kim**, *U. of Illinois at Urbana-Champaign*

Organizer: **Sandeep Pillai**, *Department of Management and Technology, Bocconi U.*

Panelist: **Juan Alcacer**, *Harvard U.*

Panelist: **Maryann P. Feldman**, *Arizona State U.*

Panelist: **Mahka Moeen**, *U. of Wisconsin*

Panelist: **Alexander Oettl**, *Georgia Institute of Technology*

Panelist: **Francisco Polidoro**, *U. of Texas at Austin*

Panelist: **Olav Sorenson**, *UCLA Anderson School of Management*

In this PDW, we will discuss the interactions between geographic conditions and technological trajectories. The rich literature on geography of innovation and regional agglomeration has shed light on the antecedents and consequences of geographic clustering for both regions and firms. In parallel, the extensive literature on technological trajectories has offered insights about the emergence and evolution of technologies and associated industries. However, at this intersection, the interplay of geographic and technological emergence can play an integral role. On one hand, technological innovation has become increasingly spatially concentrated, where certain regions not only outperform others, but also propagate opportunities for further technology advancements. On the other hand, emerging technologies with no pre-existing geographic roots have attracted the attention of aspiring geographic regions, toward shaping these industries of the future and the concurrent regional prosperity. These trends suggest that it is vital to have a deeper understanding of the mechanisms through which geographic conditions may interact with the emergence and evolution of technologies. Consequently, in our proposed PDW, a panel of experts will engage with the audience to explore and highlight potential research opportunities at this intersection. The format of the PDW will encompass structured panel presentations, open discussions, and interactive round table discussions, with no prerequisite for pre-registration.

Calls for Courage: Exploring Conceptualizations and Contexts for Courage at Work

Organizer: **Edwyna Theresa Hill**, *U. of South Carolina*
Organizer: **Toschia M. Hogan**, *Chaifetz School of Business, Saint Louis U.*
Organizer: **Tiffany Dawn Johnson**, *Georgia Institute of Technology*
Discussant: **Monica C. Worline**, *Stanford U. Center for Compassion and Altruism Research*
Presenter: **Raquel Renee Kessinger**, *Boston College*
Presenter: **Laurel Detert**, *U. of Michigan, Ross School of Business*
Presenter: **Toschia M. Hogan**, *Chaifetz School of Business, Saint Louis U.*
Presenter: **Samantha E. Erskine**, *UMass Boston College of Management*

Courage has long been regarded as an important virtue in society. More recently, scholars have begun to explore the unique role that courage plays in organizational dynamics. Much of the research on workplace courage has focused on explaining why employees engage in courageous action. Yet, despite the growing focus on courage in organizations, there still remains a number of unanswered questions in the literature on workplace courage, such as the role of courage in social movements, the influence of courage on allyship, how observers make judgements about whether an act is courageous or not, and the nature of courageous followers in organizations. The papers in this symposium address these unanswered questions. In doing so, this symposium helps advance our understanding of workplace courage and highlight new directions for the study of workplace courage.

Search and Learning

Session Moderator: **Jori Kalkman**, *Netherlands Defence Academy*

OMT: **Navigating Unexpected Events: Way-Shaping by Search and Rescue Teams After the Earthquake in Turkey** 

Author: **Jori Kalkman**, *Netherlands Defence Academy*

Existing research offers much insight into how organizations coordinate to adapt to unexpected events. Yet, the lived experiences of organizational members who are tasked with this responsibility have received very limited attention and primarily emphasized risks of trauma. Thus, I raise the question: How do organizational members navigate unexpected situations? To answer this questions, I analyzed interviews and visual data on a Search and Rescue team deployed to Turkey after the February 2023 earthquake. Findings show that team members approach the situation with radical acceptance, they have a resilience mentality, and they pursue a fair performance. This disposition, mindset, and motivation helps them to engage in way-shaping: they navigate through the unexpected event by creating opportunities for effective and live-saving humanitarian interventions in a chaotic context. These findings offer contributions to the literature on organizational responses to unexpected events, meaningful work, and sensemaking.

OMT: **Information Search and Attention Shifts During Performance Shocks** 

Author: **Martin Schulz**, *U. of British Columbia*

Author: **Erik Robert Strauss**, *U. of Witten/Herdecke*

Author: **Leona Wiegmann**, *Monash Business School*

Organizational performance shocks – i.e., unexpected performance variations – can present challenges for organizations. Paying attention to performance shocks – before and after they happen – is important for organizational adaptation and responsiveness. But do organizations reallocate their attention before and after performance shocks? Do positive and negative shocks have the same effects on attention? We study the relationship between performance shocks and organizational attention allocation empirically with longitudinal data about information source use of knowledge workers of a large corporation. Our results indicate that performance shocks affect attention shifts of the knowledge workers, but positive and negative shocks have different effects. Negative shocks intensify problematic search and allocation of attention to sources of problem-relevant information. Positive shocks intensify opportunistic search and allocation of attention to sources of opportunity-relevant information. The results support the view that performance shocks shape organizational attention because they induce search, and that positive and negative shocks have different effects because they induce different types of search.

 OMT: **Less Severe but More Intense: Achievability as Search Motivation in the Vicinity of Aspirations** 

Author: **Karen Van Gia Tu**, *U. of Groningen*

Author: **Pasi Kuusela**, *U. of Groningen, Faculty of Economics and Business*

Author: **Pedro Faria**, *U. of Groningen*

Author: **Jordi Surroca**, *U. of Liverpool Management School*

While research in the behavioral theory of the firm has often shown that organizations intensify their search as their performance falls further below aspirations, some studies unexpectedly found that organizations are highly responsive also when their performance falls only slightly below aspirations. We reconcile these puzzling findings by studying organizations' motivation to address their performance shortfall in the vicinity of aspirations. Our core argument is that organizations perceive closing a small performance-aspiration gap as easily achievable. Following the self-efficacy perspective, this perceived achievability motivates organizations to intensify their search to close such gap. Overall, we predict that organizations' propensity to change decreases when performance falls from slightly to moderately below aspirations, before increasing as performance falls further below aspirations. Further, we suggest the effect of performance slightly below aspirations on change to be stronger when organizations possess a high level of success experience. Using U.S. patent data from 1980 to 2015, we find support for our hypotheses. Our study contributes to the behavioral theory of the firm by showing a more complex functional form of the relationship between performance shortfall and search, thus deviating from the typical linear and inverted-U shaped patterns.

OMT: **Introducing Variations Through Replacement: Uncovering the Mechanisms of Organizational Unlearning** 

Author: **Ning Xu**, *Zhejiang U., China*

Organizational unlearning, defined as intentionally discarding established routines, benefits further learning and improves R&D performance in organizations. However, compared to its beneficial consequence, our understanding of ways to facilitate organizational unlearning remains unclear. Noting that individuals are central not only to the emergence of routines but also to their endogenous evolution over time, we investigate how the replacement of a member may affect organizational unlearning. We simulate an R&D organization in which members closely collaborate with each other and take interdependent actions. We examine the properties of the replacement by disentangling two variations—new ideas and new beliefs—that may be introduced into the organization, and using organizational memory and constancy of action as two key metrics to uncover the temporal evolution dynamics of routines. Our results suggest that both variations can facilitate organizational unlearning but through different means: while idea-related variations prompt individual deviations in actions to alter the perceived payoffs shaped by interdependence and then modify members' formed beliefs regarding old routines (i.e., action?belief), belief-related variations induce direct changes in members' formed beliefs, enabling them to reduce their commitment to existing actions (i.e., belief?action). When the alternative action is believed to be more effective than the one which it replaces, organizations may be inclined to repeatedly take this deviate action and allow the emergence of the new routine; otherwise, unlearning may be followed by relearning (i.e., ending the trial and reverting to the old routine). Therefore, organizational unlearning does not necessarily lead to better performance outcomes. Furthermore, idea- and belief-related variations may jointly facilitate organizational unlearning more and reduce the reversion to the old routines more. This effect becomes even stronger when the replacement involves a new hire with higher influence.

Panelist: **Poonam Zantye**, *Boston College*

The "Understanding and Empowering the Asian Diaspora in Academia" workshop, drawing from the "Voices of Asian Diaspora" monthly meetings initiated by the Management, Spirituality, and Religion (MSR) Division at AOM, aims to address the multifaceted challenges faced by Asian scholars in the academic sphere since COVID. Since its inception on May 17, 2023, these meetings have become a crucial platform for Asian diaspora scholars to voice their unique concerns, share experiences, and build a robust support system. This workshop is designed to encapsulate and extend these discussions, offering insights into navigating racial profiling, minor aggressions, identity challenges, mental health issues, graduate student struggles, and the intricacies of academic publishing and funding. Comprising a series of panel discussions led by experienced academicians, the workshop will explore strategies to address these challenges, fostering an environment of understanding, solidarity, and actionable solutions. The sessions will cover topics ranging from coping with racial profiling and microaggressions to understanding the nuances of faculty identity in minority contexts. Mental health concerns specific to Asian scholars, challenges faced by Asian graduate students, and effective ways to ally with Asian colleagues will also be discussed. Additionally, the workshop will provide valuable insights into grant writing, networking, and strategies to increase academic paper citations, crucial for scholarly success. This workshop aims not only to enlighten but also to empower attendees with practical tools and knowledge, enhancing their capability to thrive in diverse academic environments and contribute meaningfully to their respective fields.

Panelist: **David P. Daniels**, *NUS Business School*
Panelist: **Chia-Yen Chiu**, *U. of Adelaide*
Panelist: **Anran Li**, *Monash Business School*

Many management scholars are interested in taking their career to a new culture and context. Although the opportunities to teach and conduct organizational research at business schools around the globe have significantly increased, first-hand information on business schools outside of North America and Europe can be hard to come by. This PDW is designed for both junior and senior OB scholars who would like more information regarding academic careers at reputable business schools in the Pacific-Asia region. It will bring together seven panelists currently working at schools in Australia, mainland China, Hong Kong, and Singapore. The panelists include junior and more senior faculty, who are “international hires” themselves, and/or have experience in recruiting and hiring international faculty for institutions in this region. The panel will provide information, highlight challenges, and share distinctive features for academic careers in each country/region, including tacit knowledge and unspoken rules that applicants should be aware of. Topics for discussion include: What does the hiring and job application process look like? How are faculty evaluated, and what types of tenure and contracts are used? What are key challenges that international faculty experience in adapting to the national culture and university system? What was most surprising for international faculty, so far? What are the norms of professional conduct (e.g., do’s and don’ts in presenting oneself and one’s work)? The PDW includes individual presentations by panelists, country-specific roundtable discussions, and a closing Q&A.

Teaching Intuition in Management Education

Participant: **Julie Ellen Benesh**, *The Chicago School*

Participant: **Elizabeth Schwab**, *Chicago School of Professional Psychology*

Research suggests that successful management professionals are perceptive and empathetic, hallmarks of intuitive thought, yet many refrain from leveraging their intuitive skills. This is primarily due to negative self-reinforcing social norms and internal narratives regarding what is acceptable or unacceptable to use in the workplace, in turn leading to the minimization or dismissal of intuition as an acceptable leadership skill. This ultimately can inhibit natural leadership ability, limiting the tools we can use to make complex and expedient decisions. Learners can overcome this negative self-reinforcing feedback loop by building the ability to trust oneself. Participants in this workshop will learn how management educators can help develop intuition, how to leverage intuitive thought, and how to help self and others build trust in this capacity.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Harmonizing Grading and Feedback: Using the Harmonized Appraisal Assessment Methodology

Presenter: **Colin Idzert Sarkies Lee**, *Erasmus U. Rotterdam*

Facilitator: **Chintan Kella**, *Department of Organisation and Personnel Management, Rotterdam School of Management*

Feedback is important, but writing high-information feedback for students can be unrewarding for educators, given the limited time and resources available for grading. To address this issue, we created a new student assessment methodology for unstructured and semi-structured assignments, such as essays and presentations, which aims to provide an efficient and effective approach to the creation of high-information feedback and fair assessment so as to optimize the positive impact of assessment on students' learning and development. The approach, which we termed Harmonized Appraisal (HAPP), uses the grader's input on a relatively detailed grading form to compute the student's scores on a conventional rubric and to aggregate a high-information feedback message by leveraging a comment bank. In this session, we present the basic principles on which the approach builds, discuss the key findings from our research on HAPP, and will give participants the opportunity to get some hands-on experience with HAPP methodology. After the session, participants should be able to implement the HAPP methodology in their own institutions and courses.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Leading the Change: Advanced Practices Using GenAI as a Co-Pilot for Teaching Excellence

Facilitator: **Bert Verhoeven**, *The U. of Newcastle, Australia*
Facilitator: **Vishal Rana**, *Griffith Business School, Griffith U.*

Effective Generative AI (Gen-AI) integration in teaching and learning promises personalized instruction, collaborative engagement, improved student outcomes, enhanced efficiency and cost-effectiveness as well as more meaningful work for educators. But how do we define and achieve excellence in Gen-AI-enhanced hybrid learning? Recognizing the gap in practical applications within higher education, our session invites participants to join a collaborative discussion and workshop, focusing on practical, real-world Gen-AI applications. Drawing from 18 months of firsthand experiences, we'll share insights from two universities where Gen-AI as a learning tool has been a mandatory component in experiential classes across diverse disciplines like Entrepreneurship, Design Thinking, Problem Solving, and HR Management. These insights are gleaned from engaging hundreds of students at undergraduate and master's levels, providing a rich, multi-dimensional perspective on the transformative power of the ethical use of Gen-AI in educational settings. We will engage in enlightening discussions and lead interactive activities centered around three pivotal aspects of Gen-AI-enhanced hybrid learning: 1. Gen-AI in Experiential Learning. 2. Optimizing Gen-AI-Hybrid Classrooms for effective learning. 3. Disruption of Gen-AI in Education and future challenges.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

No More Answering ‘Stupid Questions’: Exploring Customized GPTs in Education

Organizer: **Susanna Kultalahti**, *U. of Vaasa*
Facilitator: **Anni Rajala**, *U. of Vaasa*

Are you overwhelmed by repetitive student inquiries and a constant flood of emails about issues you have already addressed? This workshop presents a dual solution to meet student needs while efficiently managing your time and resources. We will explore one of the most innovative AI-assisted tools available: customized Generative Pre-trained Transformer (GPT). The session employs a SWOT analysis to assess the strengths, weaknesses, opportunities, and threats of this tool. Imagine a scenario where all course-related information – from syllabus details to thesis guidelines – is consolidated in one accessible location. Here, students can safely ask any question, even those deemed trivial, and receive the necessary information autonomously, without the need for teacher intervention through repetitive emails or posts. Historically, the most impactful and memorable TLC-sessions have been those fostering robust participant interaction. This session continues this tradition by providing a platform for exchanging ideas, addressing concerns, and collectively exploring exciting new possibilities. It is relevant for educators interested in technology-enhanced classrooms, experiential learning, curricular design, and teaching resources.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

The Elephant in the Classroom: Adapting to the Newest Member of the Class – AI

Presenter: **Tricia Pal**, *Texas Tech U.*

Presenter: **Feruzan Irani Williams**, *Texas Tech U.*

Since late 2022, a new player has entered our management classrooms—generative AI. Despite concerns such as academic integrity issues or overreliance replacing learning, there is an urgent call for educators to adapt this emerging technology into their teaching practices, much like our graduates are going to have to incorporate it into their future work. This interactive session will start with a discussion on how ChatGPT and generative AI has changed our classrooms in the first year and a half of its general availability, the challenges that come with it, potential opportunities for teaching and learning, and end by challenging participants to reimagine assessments or activities that incorporate AI instead of trying to fight against it. The session will encourage broad discussion and sharing of ideas and resources beyond the time we are together through a shared Dropbox folder in which the presenters and session participants will share both how they are responding to concerns surrounding generative AI and how they are embracing the technology.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Beyond words: A Workshop on Writing and Teaching with Comic Cases

Participant: **Yasser Rahrovani**, *Ivey Business School*

This workshop unveils a novel approach to teaching sensitive topics, such as sexual harassment, through the integration of graphic novels (comic). Recognizing the limitations of traditional methods in capturing the attention of visually and auditorily oriented students, the proposal advocates for harnessing the power of comics to make teaching enjoyable for professors and joyful for students. Instructors will embark on a comprehensive journey, gaining four valuable insights into (1) when to employ comics as an instructional tool, (2) the effective pedagogical techniques for teaching with comics, (3) a critical examination of the impact of comic-based cases compared to their traditional text counterparts, and (4) step-by-step process of crafting a compelling comic case. The workshop offers pragmatic insights and tangible skillsets to various educators, especially in HR, OB, or EDI in any domain such as IT and Entrepreneurship, to extend their educational content accessibility and impact.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Innovative Experiential Learning in MBA Education: Connecting Pedagogy to Community and Practice

Organizer: **Pooria Assadi**, *California State U. Sacramento*
Facilitator: **Pooria Assadi**, *California State U. Sacramento*

MBA education requires innovation and redesign to better connect pedagogy to community and practice in order to ultimately enhance its relevance, quality, and impact. In this session, the participants will gain valuable insights regarding the contemporary methods, including experiential learning, to effectively achieve this connection, and learn about the benefits and challenges of pursuing and implementing such innovative pedagogies.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Teaching Religion and Business: Practical Advice for Engaging Classes

Participant: **Robert Neer**, *Hult International Business School*

Participant: **Rajendra Shirole**, *Hult International Business School*

Participant: **David Starr**, *Hult International Business School*

Understanding basic economic principles of major world religions provides invaluable support for business students preparing for global careers. Graduate and undergraduate instructors from a global business school with students from over 50 countries and multiple international campus locations will explain central business concepts in such texts such as the Bible, Qur'an, Bhagavad Gita and others, illuminated by key textual passages and case study examples. Presenters will share practical examples of teaching religious materials to a highly diverse group of business students. An informal session structure will allow time for questions and discussion.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Guided-Flexible Curriculum/Syllabus: Co-Designing Curriculum/Syllabus

Presenter: **Artin Backtash-Rad**, *U. of Surrey*

The Guided-Flexible Curriculum/Syllabus is a mindset and a course/module design strategy to give more voice and ownership to the students regarding what should be covered in their course and each of their modules. This symposium proposes an exploration of the significance and benefits of active student participation in university curriculum/syllabus design. The inclusion of students in curriculum/syllabus development is a transformative approach that recognizes learners as co-creators of their educational journey, fostering a more responsive and inclusive learning environment. This workshop aims to illustrate the positive impacts of such participation on the quality and relevance of higher education. It will target university academics across various disciplines, focusing on practical applications in course and program design. Through interactive methods, participants will gain insights into integrating student voices in curriculum/syllabus development, enhancing the alignment of educational offerings with student needs and contemporary societal demands. The session will offer practical strategies and resources for academics to implement student-centered curriculum/syllabus design in their teaching practices. The inclusion of student perspectives in curriculum/syllabus development is not only a pedagogical imperative but also a strategic approach to foster a more engaging and relevant higher education landscape (Bovill et al., 2016).

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Prioritizing Student Well-Being in Global Virtual Teams: The Impact of Self-Efficacy and Resilience

Presenter: **Mona Pearl**, *Sidhu School of Business and Leadership-Wilkes U.*

The ongoing COVID-19 pandemic has given rise to heightened mental health challenges, leading to a 25% rise in depression and anxiety disorders worldwide (ILO, 2022). 45% of US college students reported having moderate-to-severe depressive symptoms (University of Michigan, 2023) and globally, 36% worldwide reported experiencing anxiety or depression during the COVID-19 pandemic (WHO, 2022). Workplaces and educational institutions increasingly face challenges in ensuring student and employee well-being. From 2021 to 2023, we used structural equation modeling (SEM) to assess changes in learner well-being from participation on global virtual teams (GVTs). Students from Brazil, Canada, Netherlands, Mexico and the US were assessed before (n=201) and after (n=250) their GVTs experience. Results indicate that before the GVT experience an increase in resilience led to an increase of self-reported well-being. Likewise, after the GVT experience, resilience increases led to increases in well-being. The role of culture had no impact in either model before or after the GVT experience.

This session is part of the Teaching and Learning Conference (TLC@AOM). A separate TLC@AOM registration fee of \$120 (USD) is required. Space is limited and registration is on a first-come, first-served basis. The deadline to register is 11 August, unless sold out. [Register for TLC@AOM.](#)

Participant: **Jennifer E Jennings**, *U. of Alberta*

Workplace mistreatment is a pervasive and costly phenomenon within organizations. It is an umbrella term that includes a variety of interpersonal harmful behaviors, such as abusive supervision, workplace incivility, and workplace ostracism. Research indicates that, on average, 34% of employees have experienced mistreatment, with 44% having observed it. The estimated annual cost of workplace mistreatment to organizations ranges from \$691.70 billion to \$1.97 trillion. Given its prevalence and detrimental impact, previous research has extensively examined the antecedents and outcomes of workplace mistreatment from the perspectives of targets, perpetrators, and observers. Despite significant progress in prior studies, the existing literature still grapples with mixed findings and knowledge gaps, leaving many essential questions unanswered. For instance, there remains uncertainty about how supervisors react to covert mistreatment behaviors from their employees, why supervisors may mistreat employees who render favors to them, how being authentic can make one rude toward others, and why observers may respond negatively to those who are mistreated. This symposium aims to address these questions by bringing together four papers. These papers utilize diverse methods, from experience sampling methods to multi-wave surveys to scenario experiments, exploring workplace mistreatment at various levels and over different time spans. Additionally, they draw on novel theoretical perspectives, providing fresh insights into workplace mistreatment from the viewpoints of targets, perpetrators, and observers.

Relational Perspectives on Corporate Leadership

Session Moderator: **Rian HJ Drogendijk**, *U. of Groningen*

STR: **When are Women Open to Risk? How Director Identities Influence Firms' Financial Risk-Taking** 

Author: **Anish Purkayastha**, *U. of Sydney Business School*
Author: **Amy Hillman**, *Arizona State U.*

In some aspects of organizational life, women have been shown to be more risk adverse than men (e.g., acquisitions, cross-listings, personal career dimensions). Individuals, however, are composed of multiple identities, each with varying levels of strength of identification and contextual salience. We meld insights from identity theory into the debate around gender risk aversion to identify conditions under which women may be more open to risk. Our focus is on women directors and financial risk-taking decisions made by the board. Rather than assuming gender risk-taking propensity is always fixed, we ask: When are women on boards of directors open to financial risk-taking? We build theoretical insights about women directors' identities to explore the relationships between identity with being a director (independence vs. dependence), identity with the organization (owner vs. outsider), identity salience (finance committee membership) and financial risk-taking behavior in the form of the firm's foreign investment portfolio. We test our hypotheses using 1,308 observations from 2010-2020 from 141 Indian firms. Our findings indicate that more nuanced consideration of women director's identities in corporate governance is warranted to understand their risk-taking behavior and represent early empirical insight into the role of directors' identification.

STR: **CEO-Board Co-Optation: An Integrated Bourdieusian-Managerial Power Perspective**  

Author: **Tasawar Nawaz**, *186413*
Author: **Nader S. Virk**, *Manchester Metropolitan U. Business School*
Author: **Basel Awartani**, *King Fahd U. of Petroleum and Minerals*

An integrated Bourdieusian-managerial power theoretical continuum proposes that managers use their social capital to empower themselves in settings where social stratification plays a role in access, and exercise of control. This internalisation of social capital facilitates company managers to pursue their self-serving agenda. An iterative mixed-method approach is employed to evaluate the predictions of the proposed framework: support from social relationships may result in asymmetric economic rents for company owners and managers. Interview analysis elicits the cohesive nature of the social capital and how managers exploit it-mimetic to sectioning of control and normative protective practices in the society. Empirical findings show that management-board co-optation inflates agency costs in multiple ways. Findings reinforce predictions of the proposed framework. The implications of incorporating mechanisms that replicate social normative practices and resultant increased managerial power contribute to the emerging literature on cost appropriation of managerial-board connections.

STR: **Executive and Director Social Capital: Differential Effects on Corporate Value of Newly Listed Firms**  

Author: **Han Jiang**, *Chinese U. of Hong Kong, Shenzhen*
Author: **Yi Yang**, *Tongji U.*
Author: **Feng Wei**, *Tongji U.*
Author: **Meichen Dong**, *School of Economics and Management Tsinghua U.*

We highlight the distinct implications of social capital possessed by newly listed firms' executives and directors for corporate value through an agent-based framework of network embeddedness. Given their distinct roles and responsibilities, embeddedness benefits and costs derived from social capital reflect differently on executives and directors. Consequently, these two types of upper-echelon social capital exert varying influences on corporate value. Furthermore, the environmental dynamism of the firm, which affects the job demands of executives and directors, is likely to modify the effects of executive social capital and director social capital. Empirical evidence obtained from Chinese newly listed firms largely supports our theoretical hypotheses. Our research makes valuable contributions to the literature on interorganizational networks, strategic leadership, and newly listed firms.

STR: **Subsidiary Leadership Practices for Managing Subsidiary Identity in the MNC** 

Author: **Deborah Mireles**, *U. of Galway*
Author: **Pamela Sharkey Scott**, *Dulin City U.*
Author: **Josephine Igoe**, *U. of Galway*
Author: **Rian HJ Drogendijk**, *U. of Groningen*

This paper examines how subsidiary leaders manage the interplay of identities in the MNC to achieve both distinctiveness and sameness, and how their individual practices shape high-order identities. Drawing on 30 interviews, we reveal how subsidiary leaders manage four identity domains: distinct subsidiary identity, nested subsidiary identity, covert subsidiary identity and individual identity. This paper advances our understanding of the complexities of identity within the MNC and identifies the subsidiary leadership practices to achieve subsidiary distinctiveness and legitimacy (or not) within the organization.

Learning and Adjustment in the Management of New Products and Technologies

Session Moderator: **Jorge Tamayo**, *Harvard Business School*

STR: **Can't See the Forest for the Trees?: Types of Related Experiences for Resource Utilization** 

Author: **Naoki Yasuda**, *Rikkyo U.*

Resource utilization is a crucial factor in gaining a competitive advantage. Research on organizational learning suggests that experience-based knowledge can promote utilization. However, an analysis regarding what specific type of experience is important remains unexplored due to the poor classification of organizational experience. This study proposes a novel classification of firm experiences consisting of three categories: (1) weakly-related experiences, (2) strongly-related experiences, and (3) direct experiences. Using this classification, our work examines how varying degrees of relatedness contribute to the effective utilization of newly introduced resources. Using data on newly introduced aircraft introduced between 1960 and 2019, this study first found that weakly-related experiences exert a greater positive influence on effective utilization than strongly-related experiences. Furthermore, this article uncovers that direct experiences are substitutes for the two types of related experiences. The presence of heterogeneous experiences also supplements the effects of related experiences. These findings contribute to the literature on organizational learning from relatedness, and resource utilization.

STR: **The Role of Customer Subsidies in Spurring Incumbents' Investments in New Technologies**  

Author: **John Eklund**, *U. of Southern California*

Author: **Rahul Kapoor**, *The Wharton School, U. of Pennsylvania*

Incumbent firms face a major tradeoff when deciding to invest in emerging new technologies during a period of significant uncertainty around customer adoption: invest preemptively and valuable resources may be wasted, delay investments and an important market opportunity may be missed. In many cases, public support is often required to facilitate customer adoption of emerging technologies via subsidies, especially if these technologies can have an important societal impact. Drawing on the notion of adjustment costs that incumbents face during periods of industry change, we argue that such subsidies, in addition to spurring downstream adoption, can also help to reduce incumbents' adjustment costs and spur preemptive upstream investments in new technologies. Further, the impact of subsidies is greater for incumbents who face a greater threat of technological obsolescence, and who are less likely to preemptively invest in the new technologies. We find support for our arguments in the context of the US electric utility industry between 2000 and 2018. The study illustrates how public subsidies that are often targeted toward demand-side adoption of emerging technologies can also have important heterogeneous supply-side effects in terms of incumbents' investments in such technologies.

STR: **Organizational Responses to Product Cycles**

Author: **Jorge Tamayo**, *Harvard Business School*

Author: **Achyuta Adhvaryu**, *UCSD*

Author: **Vittorio Bassi**, *USC*

Author: **Anant Nyshadham**, *U. of Michigan, Ross School of Business*

Author: **Nicolas Torres**, *GBL*

We use daily administrative data from a leading automobile manufacturer to study the organizational impacts of introducing new models to the auto assembly line. We first show that costly defects per vehicle spike when new models are introduced. As a response, the firm trains in problem-solving skills and promotes lower- and mid-level employees to solve the more complex problems that arise, thus moving to a less pyramidal knowledge hierarchy with fewer layers. We develop an extension to the classic theory of knowledge-based hierarchies that reconciles our novel empirical results by allowing the firm to also invest in its training resources.

STR: **The Effects of a Firm's Product Redesign and New Product Introduction Experience on its Performance** 

Author: **Jae Kyun Yoo**, *West Texas A&MU*.

Research suggests that the type of experience a firm accumulates affects its performance. However, there is little research investigating the effects of specific types of a firm's product development experience on its performance. This study examines the effects of a firm's product redesign experience and new product introduction experience on its performance, which is measured by the average owner satisfaction ratings across a firm's products. The research setting includes major (U.S. domestic and international) automobile firms competing in the U.S. market from 2005 to 2017. The research finds empirically that an increase in a firm's product redesign experience decreases the average owner satisfaction rating across its fleet of automobiles. Also, an increase in a firm's new product introduction experience decreases its average owner satisfaction rating across its fleet of automobiles. Finally, an increase in both product redesign and new product introduction experiences increases a firm's average owner satisfaction rating across its fleet of automobiles. This study contributes to the extant research literature by explaining and predicting the consequences of a firm's type of product development experience on its performance.

Entrepreneurship Dynamics: Navigating Challenges, Building Resilience, and Leveraging Narratives

Session Moderator: **Mirjam Knockaert**, *Ghent U.*

STR: **Antecedents of Minority-Owned SME Resilience** → 📄

Author: **Ari Dothan**, *IDC Herzliya*

Author: **Melike Nur Findikoglu**, *Ozyegin U.*

Our study aims to enhance the understanding of how minority-owned SMEs can build resilience by exploring organizational, motivational, cognitive and networking capabilities. To this end, we analyze the relationships of the firm's resilience with its flexibility, represented by its entrepreneurial orientation, its stability, manifested as the extent of its management practices, its generative work environment, and its embeddedness in mainstream and minority networks. Analysis of a sample of Arab-owned SMEs operating in Israel reveals significant positive effects of entrepreneurial orientation and management practices on resilience, with entrepreneurial orientation exerting a fivefold stronger impact. Finally, the embeddedness in mainstream stakeholder groups-- customers and financiers -- increases resilience, while higher embeddedness in minority stakeholder groups decreases it. Our findings integrate multiple realms to inform the SME owners and managers in terms of the balance between their investments in flexibility and in stable operations.

STR: **Unraveling University and Region Effect: A Variance Decomposition of Academic Spin-Off Performance**

Author: **Julia Mokhtar**, *Ghent U.*

Author: **Mirjam Knockaert**, *Ghent U.*

Author: **Tom R. Vanacker**, *Ghent U. and U. of Exeter*

Academic spin-offs (ASOs) originate from universities that are in turn embedded in regional ecosystems. As such, ASOs are embedded in interdependent contexts with their own resources and logics. While past research has usually focused on factors related to ASO performance at one contextual level, systems theory suggests the need to account for multiple contextual levels. We rely on multi-level modeling and use longitudinal data on 3,164 ASOs from 212 research-active universities in 99 different regions in 10 European countries. We find that the region effect accounts for significant variance in ASO performance, however, surprisingly, the university effect is negligible. Our study contributes to research at the nexus of academic entrepreneurship and variance decomposition in strategy.

STR: **From Margins to Mainstream: The Narrative Dilemma in Scaling Social Ventures** → 🗣️

Author: **Diana Jue-Rajasingh**, *Rice U.*

Author: **Wesley Wu-Yi Koo**, *Johns Hopkins Carey Business School*

Growth is an important goal of entrepreneurial ventures, and an important tool for entrepreneurs is storytelling. This research asks how a social venture's communication of its values-laden origin story to non-marginalized customers affects their reactions to the venture and its products. We run a two-wave field experiment with an Indian feminine hygiene company that is attempting to scale beyond its initial rural customers and find that 1) telling its origin story did not lead to enhanced outcomes compared to not telling the story at all, 2) this outcome was driven by the mechanism of stigma transfer, as opposed to dissimilarity or cynicism, and 3) when told with a social responsibility frame, there was lower customer identification but increased support by non-purchase means (e.g., joining the mailing list). These results urge growing entrepreneurial ventures to consider the trade-offs of telling their origin stories to new audiences. On the one hand, origin stories may generate unintended consequences in eliciting negative emotions among new, mainstream customers, which may be mitigated by putting a different frame on the origin story (i.e., a product frame). On the other hand, origin stories may lead to other forms of support for scale by different means.

STR: **The First Small Firm Effect: Early Career Experience and Employees' Transition to Entrepreneurship** 📄

Author: **Florence E M Honore**, *U. of Wisconsin, Madison*

Author: **Haifeng Wang**, *U. of Wisconsin, Madison*

Extensive work shows that organizational context predicts the likelihood of employees' transitions to entrepreneurship. The literature typically focuses on the role of firm size as a comprehensive proxy for the differences in acquired organizational knowledge and skills. While most prior studies have focused on studying single firms and experience immediately preceding entrepreneurship, recent work has started examining the role of prior organizational experience more broadly. We expand this view by arguing that focusing on early employment in one's career trajectory is particularly relevant. By doing so, we bring together the literature on the role of prior experience in entrepreneurship with the literature on formative work experiences. Using a rich employer-employee linked dataset, we find that working for a smaller first employer is an important driver of entrepreneurial transitions even for employees who hold multiple jobs and who work for a large firm immediately before transitioning to entrepreneurship. We also find that early career experience in all small firms is not equal. The small firm effect does not extend to very small firms that exhibit low growth, diverging from arguments made in prior work. Employees who start their careers in these small firms do not accumulate diverse experiences across jobs either. We employ an instrumental variable approach to isolate the effect of firm size from the effects of self-selection and heterogeneity in preferences.

STR: **Hybrid Entrepreneurship and Wage Dynamics**

Author: **Francesco Castellaneta**, SKEMA Business School, U. Côte d'Azur (GREDEG)

Author: **Vera Rocha**, Copenhagen Business School

Author: **Di Tong**, Shanghai International Studies U.

Author: **Daniel Tzabbar**, Drexel U.

Using matched employer-employee data from Portugal between 1994 and 2009, we examine the relationship between hybrid entrepreneurship and employee wages. Based on confirmation bias theory, we theorize and demonstrate an overall wage penalty associated with an employee's experience with hybrid entrepreneurship relative to their peers. However, compared with low performers, high performers – meaning the top earners in the firm – earn a small but significant wage premium when engaging in hybrid entrepreneurship. Female employees are penalized significantly less than their male counterparts for engaging in hybrid entrepreneurship. After exploring various potential mechanisms, we find reduced bargaining power to be a main reason why hybrid entrepreneurs incur a wage penalty. By implication, our results provide a meeting place for entrepreneurship, strategic human capital, and gender scholars.

Platform Design and Governance

Session Moderator: **Jay (Jinwon) Park**, *U. of California, Irvine*

STR: **Name Your Price: Dual Strategic Responses to Platform Design Change**   

Author: **Jovana Karanovic**, *Rotterdam School of Management, Erasmus U.*
Author: **Hakan Ozalp**, *Amsterdam Business School, U. of Amsterdam*
Author: **Carmelo Cennamo**, *Copenhagen Business School*
Author: **Mark Boons**, *Vrije U. Amsterdam*

Price-setting is one of the most crucial platform design choices, which can make the difference between a platform marketplace thriving or failing. While centralized (prices set by the platform owner) vs. decentralized pricing (prices set by users) may be a fixed choice for some platforms, others may also undergo a design change — making a switch from one model to another with a goal of maximizing platform’s value potential. We explore a unique context whereby a major platform for household services made a pricing design change — passing the control over price setting from the platform owner to service providers. We unravel differing responses between incumbents and new entrants, offering a rare account of individual providers’ responses to the introduction of decentralized pricing. Our research reveals that incumbents, despite their established reputation, exhibit risk aversion in altering prices, prioritizing stable client relations over the prospects of higher earnings. Conversely, new entrants raise their prices after securing some visibility and reputation (i.e., earning 5-star rating). At the platform level, a shift to decentralized pricing has enhanced the platform owner’s revenue stream while negatively impacting providers’ ability to secure demand and revenues, on average. Our findings offer a different account of how autonomy over strategic decisions such as price-setting might have negative consequences on service providers.

STR: **“Dropping the F-Bomb”: Vocabulary Choice in Feedback and Novelty in Online User Community Innovation** 

Author: **Jay (Jinwon) Park**, *U. of California, Irvine*

We investigate how the vocabulary choice in peer feedback influences the novelty of online community-driven innovations. To study this, we investigate field data from the implementation of a profanity filter in an online innovation community. Implementation of this filter, installed sequentially in different parts of the community, provides a quasi-natural experiment setting where we can examine how the changes in the feedback-provider’s vocabulary choice impact the feedback-receiver’s novelty in generating innovations. We use a natural language processing technique to analyze a dataset of 6 million feedback comments and 1 million update notes in these communities and compare changes in vocabulary choice and novelty regarding 266,000 workshop ideas before and after the filter implementation. We find that implementing profanity filters makes feedback-providers choose vocabularies that are more peaceful, clearer, and concise in formulating feedback, but this reduces the novelty of new updates in feedback-receiver’s content. We contribute to the theories of online user communities and language-based views of organizations.

STR: **Algorithm Learning: Intermediary Tradeoff and Strategic Purpose of Having Influencers on Instagram**   

Author: **Jong Sig Chung**, *McCombs School of Business, U. of Texas at Austin*
Author: **PuayKhoon Toh**, *U. of Texas at Austin*

In the digital realm, a key role of a platform is to intermediate between its complementors and users, primarily through algorithmic intermediation. Yet, algorithm is often not the only intermediary on the platform, and third-party human intermediaries often co-exist on the platform. The coexistence of third-party human intermediaries on these platforms prompts a critical question of their purpose and strategic contributions to the platform. Departing from traditional indirect network effects logic, this study contends that human intermediaries, even in their act of competing directly with algorithm, can foster algorithmic learning. We test our propositions in the context of Instagram platform, where both algorithm and human influencers act as intermediaries between advertising brands (complementors) and users. Findings suggest that algorithm and human intermediaries have distinctive advantages in intermediating between complementors and users, and algorithm learns vicariously from observing human intermediaries.

STR: **Identity Assurance in Platform Ecosystems: Unveiling the Impact of Real-Name Policy on Complementor** 

Author: **Xuyan Yang**, *Guanghua School of Management, Peking U.*
Author: **Bingrui Zhong**, *National U. of Singapore (NUS)*

Orchestrating the relationship between the platform and complementors is critical within a platform ecosystem, but it poses significant challenges. This study extends the platform governance literature by incorporating the meta-organization framework and stakeholder theory from strategic management. We examine the relationship between platform governance, a prominent policy for governing platform access, and financial performance of complementor. By utilizing the real-name policy as a measure of platform governance and analyzing the financial reports of 141 Chinese commercial banks that joined the Alipay fast payment system in 2015, we present empirical evidence indicating that the implementation of the real-name policy enhances the financial performance of complementors. Moreover, we find that this effect is moderated by the Internet Penetration Rate.

Behavioral Strategy Theories

Session Moderator: **Daniella Laureiro Martinez**, *ETH Zürich*

STR: **Thumbs up! Organizational Action and Learning for Grand Challenges**   

Author: **Tomoko Yokoi**, *IMD Business School, ETH Zurich*

Author: **Daniella Laureiro Martinez**, *ETH Zürich*

Author: **Stefano Brusoni**, *ETH Zürich*

Author: **Philipp Benedikt Becker**, *WU Vienna U. of Economics and Business*

Organizations play a crucial role in addressing grand challenges; however, they often grapple with the complexities that arise from their gradual development, constant evolution and involvement of multiple stakeholders. We suggest that a shift from structural to adaptive processual approaches is important. We propose a model of organizational learning for addressing grand challenges that highlights attention and routinization as key mechanisms. In our model, the structured interaction of these two elements enables organizations to effectively learn from salient events, improve responses and develop the capacity to anticipate and proactively tackle similar challenges in the future. Our model is drawn from a historical case study of the Unicode Consortium-an international standards body responsible for the encoding and maintenance of emojis. The organization learned from a series of crises as it sought to address the grand challenge of social justice through more diverse and inclusive representation in emojis. We contend that attention was pivotal in enabling a focus on key evolving issues of diversity and inclusion, while routinization acted as a supportive structure for enhancing efficiency and responsiveness in a continuously evolving landscape.

STR: **Beyond Bounded Rationality: Implementing Hybrid Unfolding Rationality**  

Author: **Alberto Costa**, *U. of Rome Lumsa*

Author: **Giovanni Battista Dagnino**, *U. of Rome Lumsa*

The integration of digital technologies in the management realm is literally revolutionizing the landscape of firm decision-making, thereby prompting for a reassessment of traditional approaches in the face of increasing intricacies and complexities. Herbert Simon's idea of bounded rationality, undoubtedly a foundational notion in understanding human decision-making, has heretofore played a pivotal role in this context by proving more reliable than the previous understanding of full or Olympic human rationality. However, the inception of the digital age, marked by exponential technological advancements, the availability of big amounts of data, and the increasing influence of artificial intelligence (AI), has unexpectedly unveiled the inherent limitations of bounded rationality. To overcome these precincts, this paper explores the contours of the challenges that the digital age poses to bounded rationality and proposes the implementation of a third kind of rationality driven by human-AI interaction that we term 'hybrid unfolding rationality.' By contributing to a more nuanced understanding of human-AI decision-making, we emphasize the need for a type of rationality exposing the cognitive dynamics that support human-AI collaboration in building, refining, and revising procedures and rules of interaction in an iterative and recursive fashion within the firm context. The study highlights the key conceptual and managerial implications of hybrid unfolding rationality and suggests some fruitful avenues for future research.

STR: **Real Options Reasoning, Real Options Pricing, Real Options... Nothing: 20 Years after Debate**

Author: **Arkadiy V. Sakhartov**, *U. of Illinois at Urbana-Champaign*

Author: **Joseph T. Mahoney**, *U. of Illinois at Urbana-Champaign*

Author: **Jeffrey J. Reuer**, *Purdue U.*

Are real options useful for management research? Twenty years ago, this topic was hotly debated in the *Academy Management Review*. The major charge to real options was that the theory, in its existing state, was limitedly applicable to management research. What appeared to be only a minor, accompanying caveat was that the theory lacked conceptual uniqueness. Whereas responses of the advocates of real options to the uniqueness caveat were disparate, the limitations posed in the charge of inapplicability were deemed naturally remediable and, thus, not limiting the use of real options. Such responses left a strong impression that real options lost the debate. Following that outcome, the use of real options in management research started to stagnate. This paper carefully reviews positions of the two opposing parties in the debate, establishes the conceptual uniqueness of real options, and outlines solutions to the charges to the non-applicability of real options to management research.

STR: **Towards a Triadic Attention-Based View: Explaining the Microfoundations of Strategy Emergence** 

Author: **Olli-Pekka Kauppila**, *Hanken School of Economics*

Author: **Eero Vaara**, *U. of Oxford*

The attention-based view posits that the realized strategy of the firm is defined based on the issues attended to by organizational decision-makers. Whereas earlier research has focused on the implications of an organizational actor attending to an object (i.e., a dyadic approach to attention), our paper seeks to extend understanding by theorizing how an individual might advance strategy emergence through joint attention processes (i.e., a triadic approach to attention). Building on cognitive psychology and social brokering theories, our paper outlines a microfoundational process through which the object of one individual's attention transforms into a joint object of attention for a group of organizational members. By targeting the attention and relationships of other actors, organizational actors engage in processing triadic associations among self, another actor, and a joint object of attention. We suggest that an organizational actor might influence the attention of another individual to a specific issue or a third actor, and these agentic behaviors are supported by rhetorical tactics. Moreover, by increasing trust, normative commitment, and cognitive alignment among coattending individuals, joint attention contributes to the emergence of joint action, and the strategic agenda of the firm.

Governance of Interfirm Partnerships

Session Moderator: **Majid Abdi**, *U. of Sydney Business School*

STR: **Governance of multilateral cooperation for innovation. A case study in the European Aerospace**

Author: **Audrey Rouyre**, *Montpellier Business School*

Author: **Anne-Sophie Fernandez**, *U. of Montpellier*

Author: **Paul Chiambaretto**, *Montpellier Business School and Ecole Polytechnique*

Multi-partner alliances (MPAs) play a crucial role in R&D cooperation. MPAs often involve competitors as partners, considered for their ability to provide complementary and compatible resources, making their contribution essential to the development of innovations. The study focuses on the governance of multilateral cooperation for innovation, seeking to understand how to combine formal and informal mechanisms. Through a case study in the European aerospace industry, analyzing projects such as MTG, Galileo and Cleansky, the results reveal that, as the number of partners and competitors increases, formal mechanisms become crucial to coordinate, monitor and protect knowledge. However, once the agreement is formalized, partners and competitors rely on informal mechanisms to foster cooperation and knowledge sharing. Thus, the article highlights the importance of adopting a hybrid approach to governance, emphasizing that, in the face of increasing multilateral cooperation, increased formalization is necessary to prevent value destruction, while maintaining a balance with informal mechanisms to encourage flexibility and knowledge sharing.

STR: **Navigating Complexity and Novelty: a Stakeholder Governance Framework for PPP Projects**

Author: **Africa Arino**, *IESE Business School*

Author: **Pascual Berrone**, *IESE Business School*

Author: **Joan E. Ricart**, *IESE Business School*

Author: **Xavier Sobrepere**, *Tilburg School of Social and Behavioral Sciences*

Author: **Alexis Yong**, *IESE Business School*

Public-Private Partnership (PPP) projects are pivotal in tackling intricate societal challenges by leveraging synergies among diverse stakeholders. Despite their increasing prevalence, a theoretical exploration of the governance mechanisms to manage such partnerships is lacking. This paper develops a stakeholder governance framework for PPPs that proposes that project complexity and novelty define governance mechanism effectiveness. We focus on purpose-driven projects (high-complexity, high-novelty projects aimed at addressing grand challenges) to distill the different governance mechanisms needed to secure the proper value creation and distribution. Specifically, we present a set of propositions that outline how the different lifecycle stages in these PPPs, each representing unique challenges in a context of evolving stakeholder dynamics, demand diverse combinations of formal and informal, contractual and relational governance mechanisms. By theorizing and illustrating these interrelations, our framework contributes to a deeper understanding of stakeholder governance in PPPs, with implications for academics, practitioners, and policymakers engaged in the design, implementation, and management of partnerships tackling societal grand challenges.

STR: **Asset Specificity Perception Bias in Innovation Partnerships**

Author: **Russell Coff**, *Wisconsin School of Business*

Author: **Libby Leann Weber**, *U. of California, Irvine*

In a highly uncertain world, it is imperative to efficiently govern innovative buyer-supplier exchanges, which are often characterized by high asset specificity, the key indicator of governance choice in transaction economics (TCE). While TCE traditionally assumes asset specificity is easily observed and measured, recent research suggests managers' perceptions of specificity typically drive these decisions instead. Additionally, since managers are boundedly rational, these perceptions are likely to be biased. We contribute by exploring the direction and potential of asset specificity perception biases, and how they may lead to inefficient governance. We first argue that false uniqueness and confirmation biases influence buyer and supplier asset specificity perceptions in opposite directions. We then propose that perceptions of human asset specificity are more likely to be biased than other types and that bias is more likely when the exchange features radical as opposed to incremental innovation. Finally, we examine the impact of these unconscious biases, arguing that buyer bias is more likely to be dominant in discrete exchanges, resulting in costly over-governance compared to that predicted from standard TCE theory. This paper expands our understanding of biased specificity perceptions and their impact on efficient governance and value capture for innovation partnerships.

STR: **The Direct and Indirect Performance Implications of Inter-firm Governance**

Author: **Majid Abdi**, *U. of Sydney Business School*

We argue that interfirm governance arrangements source a substantial indirect effect on exchange performance owing to their capacity to uphold transaction-specific investments (TSIs). This indirect effect is often overlooked in the extant literature which conceptualizes asset specificity as an inherent transaction attribute that shapes (rather than partially emanates from) the governance arrangements. Examining foreign-market entry partnerships of US firms, we provide empirical evidence that this often-overlooked indirect effect (i.e., upholding TSIs) is the only mechanism through which contractual governance enhances the exchange performance (i.e., no direct effect). Relational governance, in contrast, affects the exchange performance both directly and indirectly. We employ instrumental variables to identify the governance arrangements irrespective of the reverse effect of transaction's inherent attributes. This allows estimating the causal impact of governance on specific investments and thereby the indirect performance consequences of governance through their TSI augmentations. While governance is often reduced to proper reflection of known transaction attributes, our study demonstrates the malleability of economic exchange to governance, and accounts for a major—yet often overlooked—path through which governance arrangements affect exchange performance.

Organizational Challenges and Human Factors

Session Moderator: **Miguel Espinosa**, *Bocconi U.*

STR: A Resource Constraint Logic on Multiple Goals

Author: **Elizabeth Lim**, *Georgia State U.*

The performance feedback literature has overlooked how the synthesis of both elements—feedback on multiple performance goals of different importance and at different levels—affects organizational change within the context of internationalization. We argue that performance shortfalls on profitability and sales growth goals of different priority at the corporate level induces diverging rates of internationalization due to resource constraints. We also posit that business unit goals (profitability and growth) modify the relationship between corporate profitability shortfalls and internationalization rates, providing additional insights into how tensions between multiple goals at different levels in the organizational structure engender heterogeneous patterns of internationalization. Empirical findings from a population of publicly-listed multiunit firms on the Russell 3000 index over the period 1998-2016 supported the hypotheses.

STR: The Speed of Digital Transformation and Firm Performance

Author: **Hai Guo**, *Renmin U. of China*

Author: **Yingjie Bai**, *School of Business, Renmin U. of China*

Author: **Zhuen Yang**, *School of Business, Renmin U. of China*

To address the key question of whether the faster the speed of digital transformation is the better, it is necessary to delve into the specific process of digital transformation to conduct dynamic research. Based on the perspective of strategic change speed, we empirically examine the differential impact of the initiation and implementation speed of digital transformation on the short- and long-term performance of firms from the process perspective, using the listed companies in China's Shanghai and Shenzhen A-shares from 2007 to 2021. We find that the initiation of digital transformation is negatively related to short-term performance and positively related to long-term performance; on the contrary, the implementation speed of digital transformation is positively related to short-term performance and negatively related to long-term performance. Slack resources can strengthen and weaken the impact of the initiation speed of digital transformation on short-term and long-term firm performance respectively, while strengthen and weaken the impact of implementation speed on short-term and long-term performance respectively. By distinguishing the initiation and implementation speed of digital transformation, we aim to clarify the theoretical paradoxes of "first mover - follower" and the "change - stability", and integrate them in the study of digital transformation process.

STR: Value Dissonance at the Workplace

Author: **Miguel Espinosa**, *Bocconi U.*

Author: **Alexia Delfino**, *Bocconi U.*

We conduct a large-scale survey with a global bank to measure workers' personal values and investigate their power to explain worker-level productivity. Using granular organizational data, we construct measures of workers' value misalignment with their teammates and their boss. We show that workers who have different values than their colleagues and than their managers perform worse than those who have similar values. This negative effect is stronger and robust for value misalignment with bosses and in hard productivity measures. Exploratory evidence suggests that value misalignment hinders workers' motivation and increases managers' difficulties in coordinating employees. However, teams with improved and frequent communication can better mitigate the challenges arising from divergent values.

STR: Barriers to Firm Performance: Experimental Evidence of the Importance of Relational Contracts

Author: **Francisco Brahm**, *London Business School*

Author: **Jeanne Lafortune**, *Pontificia U. Católica de Chile*

Author: **Catherine Magelssen**, *London Business School*

Author: **Jose Tessada**, *Pontificia U. Católica de Chile*

Firms often fail to adopt organizational practices that improve their performance. Existing research suggests several reasons why this may occur: managers do not perceive a problem, do not understand what to do, are not motivated to act, or have difficulty in building relational contracts with workers. We conducted a large-scale field experiment on 12,761 small and medium enterprises to study how these four factors influence the adoption of workplace safety. We found that only the relational treatment, which emphasized mutual effort by managers and workers, was effective: it reduced the rate and severity of accidents and increased the types of safety training nudged by our treatment. The results are substantial and long-lasting, and stronger when treatment dosage is higher. The effect was enhanced when combined with the manager motivational and understanding treatments, but not the perception treatment. This study provides evidence of the primal importance of relational contracts and suggests that the effects of manager motivation and understanding are insufficient without relational contracts in place for workforce safety practices.

STR: In Search of Solutions: Impact of Machine Intelligence on Knowledge Sourcing

Author: **Bowen Zhou**, *Singapore Management U.*
Author: **Nianchen Han**, *Nanyang Business School, NTU Singapore*
Author: **Liang Chen**, *Singapore Management U.*

Although scholars have long studied knowledge search from a problem-solving perspective, research examining how technological changes shape the specific components of knowledge search, namely problem formulation and solution finding, remains scant. This study bridges this gap by teasing apart these components and examining how Artificial Intelligence-Generated Content (AIGC) technologies impact the solution finding process. Leveraging the advent of ChatGPT in a quasi-experiment design, our analysis of data from Stack Overflow, a platform for crowdsourcing coding knowledge, shows that the likelihood of programmers getting responses increases post-ChatGPT, after controlling for changes in problem formulation. However, this increase does not lead to increasing likelihood of locating satisfactory solutions, and instead results in a prolonged duration for locating accepted solutions as well as extensive post-acceptance discussions. Additionally, we also explore how the direction of programmers' knowledge search moderates these effects and we attribute such heterogeneity to varying capabilities of solution evaluation, an overlooked conceptual factor in prior research.

STR: The Effects of Robots on the Workplace

Author: **Adrianto Adrianto**, *U. of Minnesota*
Author: **Avner Ben-Ner**, *U. of Minnesota*
Author: **Ainhua Urtasun**, *U. pública de navarra*

This paper examines the effects of robots across various occupations in US manufacturing plants, extending extant research conducted at the firm and industry levels. We use a difference-in-differences approach matched on industry, commuting zone, and plant size to estimate how employment and skill demand for various occupations change after robot adoption. We find that the introduction of robots is associated with 150 percent increase in the number of job postings and an increase in employment of 15 percent; the increase is larger in production jobs than in support jobs. Comparing effects across plants within adopting firms, we show that the expansion only occurs in the robotic plants, suggesting that prior firm-level studies overlooked the distinction between adopter and (majority) nonadopter plants within firms, underestimating the robotization effect. We find a negligible employment effect at the industry level as the positive effect in adopters is counterbalanced by the lost of workers in nonadopters. The majority of jobs do not change skill composition following the adoption, but the robotized part of the plant requires more design, production, maintenance, repair, and programming skills. We provide credible evidence that the productivity and robot-human complementarity effects dominate any displacement effect and that loss of employment is limited to outcompeted nonadopters.

STR: The Uneven Impact of Generative AI on Entrepreneurial Performance

Author: **Nick Otis**, *Haas School of Business, UC Berkeley*
Author: **Rowan Clarke**, *Harvard Business School*
Author: **Solene Delecourt**, *UC Berkeley*
Author: **David Holtz**, *Haas School of Business, UC Berkeley*

There is a growing belief that scalable and low-cost AI assistance can improve firm decision-making and economic performance. However, running a business involves a myriad of open-ended problems, making it hard to generalize from recent studies showing that generative AI improves performance on well-defined writing tasks. In our five-month field experiment with 640 Kenyan entrepreneurs, we assessed the impact of AI-generated advice on small business revenues and profits. Participants were randomly assigned to a control group that received a standard business guide or to a treatment group that received a GPT-4 powered AI business mentor via WhatsApp. While we find no average treatment effect, this is because the causal effect of generative AI access varied with the baseline business performance of the entrepreneur: high performers benefited by just over 20% from AI advice, whereas low performers did roughly 10% worse with AI assistance. Exploratory analysis of the WhatsApp interaction logs shows that both groups sought the AI mentor's advice, but that low performers did worse because they sought help on much more challenging business tasks. These findings highlight how the tasks selected by firms and entrepreneurs for AI assistance fundamentally shape who will benefit from generative AI.

STR: The Impact of Technology-Supported Training on the Performance of Underserved Small Entrepreneurs

Author: **Octavio Barros**, *Inspire Institute of Education and Research*
Author: **Leandro Nardi**, *HEC Paris*
Author: **Sandro Cabral**, *Inspire Institute of Education and Research*
Author: **Sergio Giovanetti Lazzarini**, *Western U.*

We assess the potential of digital technologies in supporting business activity in underserved regions by investigating the responses of small entrepreneurs in those regions to variations in the mode of provision of digital business training programs. Specifically, we analyze and compare how learning and practice adoption are affected by three distinct provision modes of the same program content: a static training module without any sort of interaction; an interactive training module that involves engaging with automated chatbots; and an interactive module that combines interactions with automated chatbots and human agents. To empirically gauge the effectiveness of each mode of provision, our study encompasses data from a four-arm randomized controlled trial involving 461 small entrepreneurs from Brazilian underserved regions, who participated in a real-world training program on financial literacy during July 2022. We fail to detect a significant effect of the online training, either on its own or complemented by human or chat-based support. In fact, we observe a negative effect of the training on participants' learning of financial practices when interactions occurred exclusively with the chatbot. Our extension analyses indicate that these negative effects depend on participants' level of digital literacy, which affects their ability to engage effectively with the online application. Furthermore, the treatment involving human support is also subject to the level of engagement of the entrepreneurs and yielded negative effects on sales among less attentive participants. Overall, our study questions the effectiveness of digital technologies in supporting business activity in underserved regions. We propose that, even though these tools may potentially increase access for entrepreneurs in such areas, there are significant constraints and vulnerabilities that undermine their ability to fully harness the benefits of such initiatives. Hence, in such contexts, the use of digital technologies should be approached with caution.

Digital Transformation: Amplifying the Value in Global Value Chains and Strategic Innovation

Session Moderator: **Juan Alberto Sanchis Llopis**, *U. of Valencia and ERICES*

STR: **Dancing to the Tune? Digital Transformation and Funding of Startups in Media and Entertainment** 

Author: **Sonal Nayak**, *Doctoral Student at Indian Institute of Management Bangalore*

Author: **Ludvig Levasseur**, *Indian Institute of Management, Bangalore*

Author: **Vijayaraghavan Venkataraman**, *Indian Institute of Management, Bangalore*

Digital is transforming several industries and disrupting value chains. Digital is sometimes seen as enabling the spread of value chain activities across locations but at other times as reinforcing traditional colocation advantages across activities. While prior research has focused often on incumbent adaptation to such technological change, we look at startups, instead, and how they are affected based on their position in the value chain as well as co-location with other startups along the chain. We develop a theory of digital multiplicity composed of digital variety upstream and digital scale downstream to explain asymmetric benefits to colocation wherein downstream startups tend to benefit more from collocated upstream ones. We analyze the location and outcomes of startups from the US media and entertainment industry amid digital diffusion and find broad support for our theories. Our paper has implications for the literature on digital transformation, innovation ecosystems, as well as strategic entrepreneurship.

 STR: **Data Privacy, Scaling, and Firm Scope: Evidence from the GDPR**  

Author: **Jingya You**, *U. of Illinois at Urbana-Champaign*

The dramatic growth of the digital economy has led to widespread increases in the collection, storage, process, and dissemination of personal data, making data privacy an important and pressing issue for firms, policymakers, and researchers. The prior literature on privacy protections has largely documented their negative impacts on organizational outcomes, such as impeding technology adoption and diffusion, reducing the efficacy of advertising, lowering financial performance, and hindering startups' fundraising. While the literature has provided empirical evidence of several economic consequences of privacy protections, it has thus far provided limited insights into the role of privacy protections in firm scaling and its associated implications for corporate strategy. To address this gap, in the current paper we investigate the following two research questions: How do privacy protections affect firm scaling? And, how do changes in scaling (opportunities) affect firm scope? Since enhanced privacy protections limit digital firms' ability to leverage data network effects and data-driven learning, we posit that they are associated with a decrease in firm scaling. Further, when firms experience a decrease in scaling, they are more likely to expand their scope. This is because decreased scaling reduces the opportunity costs of spreading resources across multiple businesses. To test our hypotheses, we leverage a quasi-natural experiment provided by the enactment of General Data Protection Regulation (GDPR) in E.U. in 2018. Using a difference-in-differences methodology, we find that the implementation of GDPR is associated with a 37.7% decrease in scaling relative to the mean value of scaling pre-GDPR. To examine the relationship between scaling and firm scope, we adopt an instrumental variable (IV) approach that uses the firm's exposure to GDPR as an IV for firm scaling. The IV estimates show that the decrease in scaling associated with GDPR implementation relates to a 36.0% increase in diversification relative to the mean value of diversification pre-GDPR. We conduct further supplementary analyses to validate our identification strategies, explore heterogenous treatment effects, and verify the robustness of our primary results. These findings seek to extend the emerging stream of research on scaling, contribute to the scholarship on corporate strategy, and provide valuable insights for policymakers.

 STR: **How Startups Scale into New Markets: Large-Scale Evidence from Digital Language Tools**   

Author: **Nataliya Wright**, *Columbia Business School*

Author: **Ed Saiedi**, *BI Norwegian Business School*

Technology startups often scale by entering new markets. Doing so as a full commitment allows gaining more users to spur network effects, while doing so experimentally by staging market entries enables more learning. (When) do startups expand into new markets as full commitments or experimentally? We assess this question in the international context. As the first study to track startup internationalization worldwide, we use BuiltWith data on language adoption by nearly 50,000 software firms from 2001-2022. Startups, on average, adopt languages gradually, even from smaller markets and with platform business models. These results suggest that startups pursue market expansion experimentally.

 STR: **Digitalization and Global Value Chain Participation: Evidence from Spanish Manufacturing Firms** 

Author: **Juan Alberto Sanchis Llopis**, *U. of Valencia and ERICES*

Author: **Dolores Añon**, *U. de Valencia*

Author: **Amparo Sanchis Llopis**, *U. of Valencia and ERICES*

Author: **Juan A. Mañez**, *U. of Valencia and ERICES*

In this study we explore the relationship between the adoption of digital technologies and firms' participation in global value chains (GVCs). Using a sample of Spanish manufacturing firms for 2006-2018, we analyse the impact of digitalization on firms' participation in GVCs and its intensity. We construct a general synthetic index of digitalization at the firm level, but also distinguish between information and telecommunication technologies (ICTs) and automation. We consider both the direct effects of digitalization, and the indirect effects that arise from its impact on productivity. Our results suggest that digitalization is a key driver of firms' participation in GVCs. We find evidence supporting both a positive direct and indirect effect of digitalization on GVC participation. The direct effect is to a higher extent attributable to the use of ICT technologies rather than to automation technologies. By contrast, only automation has a positive direct effect on GVC intensive margin.

Should we re-think commonly held assumptions about how large firms operate? If so, what are the implications for scholars and practitioners? This symposium aims to open the black box of how large organizations operate and foster a rich discussion of some of the commonly held assumptions and propositions in the field based on recent micro-level empirical evidence. Considering the increasingly broad, digitally-powered, multi-business firms; rise of new factors underpinning the benefits and costs of firm scope; growing complexities from climate crisis and diverse regulatory environments; and availability of data; the field may be ripe for such an endeavor. This symposium draws on three recent, cutting-edge papers that offer a detailed empirical analysis of the mechanisms that operate within large corporates. The first analyzes the contents of internal formal contracts between organizational units. Its findings push back against the foundational theoretical distinction between the choice of contracts and hierarchy in theories of the firm that has been taken for granted by scholars. The second uncovers the trade-off between the benefits from synergies and the flexibility to redeploy in adapting to regulatory contexts. The third articulates a framework for the upsides and downsides of firm scope and identifies an increasingly important set of benefits related to common ownership akin to those that emerge in firms that co-exist in an ecosystem. This symposium aims to foster a rich discussion, led by two leading scholars who will delve into the manuscripts, common threads, and consider the implications for scholars and practitioners in the field.

In today's dynamic, uncertain, and ambiguous environment, the future is often "unpredictably different from the past, and information about the future is incomplete, unknown, or unavailable" (Furr & Eisenhardt 2021: 1916). Firms struggle to understand and adapt to changes driven by emerging technologies (like large language models), escalating geopolitical tensions (such as the Ukrainian wars), and macroeconomic shifts (including interest rate hikes). These challenges underscore the need to comprehend how decision-makers understand that decision-making context, how they interpret ambiguous or even contradictory feedback, and how they mobilize internal and external support for change in a highly uncertain environment. This symposium aims to enrich our understanding by showcasing new research in a diverse set of entrepreneurial and innovation contexts. For example, Jamie Seoyeon Song and Jaeho Choi explore the impact of divergent feedback on entrepreneurial pivoting in the context of Product Hunt. Xirong (Subrina) Shen, Cha Li, Francisco Polidoro Jr., and Jizhen Li utilize detailed data on A/B testing in a large tech firm to investigate how experiences with interdependence affect decision-makers' subsequent product innovation searches. Amy Zhao-Ding and Vibha Gaba's paper probes how market aggregate feedback—user evaluations for existing competitive products—informs Photo & Video mobile app developers' product positioning in the functional space. Hui Sun employs computational simulation to uncover how ambiguity—an intrinsic property of language—shapes the evolution of interpretations within organizations. Collectively, the set of papers explores nuances in how organizations learn and adapt in complex decision-making contexts with diverse, ambiguous, and interdependent feedback.

Technology Standards in Ecosystems: Designer, Design Rules, and Implications for Firm and Ecosystem

Participant: **Ron Adner**, *Dartmouth College*
Participant: **Charlotte Jacobs**, *Louisiana State U.*
Participant: **Gwendolyn Kuo-fang Lee**, *U. of Florida*

Participant: **Daniel Albert**, *Drexel*
Participant: **Martin Ganco**, *Wisconsin School of Business*

While technology standards and standard-setting organizations have been the foci of economics and policy scholars for decades, there is a renewed interest among strategic management and innovation scholars in examining the role of standards in firm strategy and performance. A key reason for this research resurgence is the foundational role that standards play as ‘alignment structures’ that spur the growth of modern day platforms and ecosystems. While standards are central to the growth and success of platforms and ecosystems, their crucial role has often been implicitly assumed in the recent literature that showcases these types of organizations. The literature on standards, on the other hand, has been focused on the inter-firm level of analysis, with clear opportunities to both broaden and narrow the scope of research while integrating more directly with mainstream strategy questions. Thus, there is a need for a dedicated forum that can bring together scholars who can speak to these unaddressed research challenges and opportunities. Our objective is to reinvigorate discussions on the core issues around technology standards and the standardization process, emphasizing their profound influence on firm, ecosystem, and industry dynamics. The proposed symposium aims to spotlight emerging research ideas in technology standards by bringing together a collection of papers to present their insights on the strategic implications of standard specification, implementation, and adoption for subsequent competition and performance. The four papers encompass diverse theoretical perspectives including ecosystems, demand-side view, evolutionary perspective, and modularity, and employ a wide range of methodologies including conceptual, quantitative, qualitative, and computational modeling methods. By sharing ongoing endeavors that drive research on standards and their related issues, this symposium seeks to deepen our understanding of standards as the bedrock of technological and industry evolution.

Next Decade Bot Research

Organizer: **Carolina Salge**, *U. of Georgia*
Organizer: **Anna Priante**, *Rotterdam School of Management*
Organizer: **Aaron Schecter**, *U. of Georgia*
Presenter: **Jason Thatcher**, *U. of Colorado Boulder*
Presenter: **Elena Karahanna**, *U. of Georgia*
Presenter: **Jerry Kane**, *U. of Georgia*

Bots, automated entities in online social networks, have a substantial presence on digital platforms. They are capable of posting messages quickly and extensively, thereby potentially influencing communication dynamics and the spread of information. However, their behavior can range from ethical to unethical (Salge and Berente 2017), leading to either beneficial or detrimental effects in society. On the positive side, studies have demonstrated that bots can be valuable in organizational contexts, such as in coordinating tasks (Hukal et al. 2019) and influencing human-to-human interactions (Seering et al. 2018), particularly in communication processes (Safadi et al. (2021). Conversely, there is evidence that bots can sway public opinion (Forelle et al. 2015), diffuse information rapidly (Mønsted et al. 2017), affect political elections (Bessi and Ferrara 2016; Martini et al. 2021), and propagate false news (Shao et al. 2018). Additionally, bots pose challenges to the validity of online social network research due to the potential confounding effects they introduce, which scholars must carefully control and account for (Salge and Karahanna 2018). Following our two successful Professional Development Workshops (PDWs) on “Researching Bots in Online Social Networks” at the Academy of Management (AoM) 2022 Annual Meeting in Seattle, and on “Bot Theory, Methods, and Ethics” at the 2023 Annual Meeting in Boston, we have gained substantial insights into the opportunities and challenges associated with bot research. These workshops highlighted the widespread impact of bots and underscored the need for more comprehensive theorizing in this area, as discussed in Salge et al. (2022). Eager to continue enriching discussions and strengthening ties within the AoM community, we propose a new PDW titled “Next Decade Bot Research.” Through this workshop, we aim to: (1) Survey the first decade of research on bots. (2) Provide a research agenda that expands work on bots into new uncharted territories. (3) Discuss how bots can be leveraged for experimental research. (4) Converse about the implications of generative AI for research on bots. This PDW also aims to sustain and further develop the interdisciplinary community of scholars dedicated to bot research, a collective that we began nurturing two years ago in Seattle.

Creative Solutions in HR: Driving Firm Outcomes Through Innovation and Diversity

Session Moderator: **Jin Nam Choi**, *Seoul National U.*

HR: **Internal and External Labor for Innovation: Firm-level Contingencies of Diversity and Knowledge Flow**

Author: **Jung Woo Shin**, *Seoul National U.*

Author: **Jin Nam Choi**, *Seoul National U.*

This study examines how firms employing different labor utilization strategies can achieve innovation through two firm-level contingencies: workforce diversity and knowledge flow facilitating human resource (HR) practices. Drawing on the knowledge-based view (KBV) theory, we propose that firms leveraging their internal workforce not only directly drive firm innovation but also acquire additional innovation benefits through having firm-level gender diversity and adopting knowledge flow HR practices. The utilization of external labor, however, requires more intricate workforce management, as innovation may be hindered without adequate knowledge-integration mechanisms to assimilate external labor introduced to the organization. Our analysis based on multisource, large-scale firm-level data collected from 727 Korean organizations at two time points over a 3-year period provided empirical support for our hypotheses. In addition, we found that knowledge flow HR practices may be insufficient in harnessing the advantages of a highly heterogeneous workforce comprising high gender diversity and external labor. The current analysis empirically validates the KBV-based theoretical arguments that firms capable of balancing between knowledge depth and breadth through utilizing internal and external sources of knowledge can successfully enhance innovation, offering new insights into firm-level contingencies that enable firms to achieve such equilibrium and innovation outcomes.

HR: **The Double-Edged Sword of Generative AI Usage on Employee Creativity: A Dual Pathway Model**

Author: **Liping Chen**, *Guanghua School of Management, Peking U.*

Author: **Minya Xu**, *Guanghua School of Management, Peking U.*

Author: **Scott Dust**, *U. of Cincinnati*

This paper examines the effects of generative artificial intelligence (AI) on employees' creativity. While prior scholars generally theorized that generative AI as a powerful tool facilitates individual creativity, we contest that this assumption is overly simplistic and optimistic. Drawing upon the theories of the creative process, we develop a research model that illustrates both the positive and negative impacts of generative AI usage on employees' creativity. We validate the model with data from a multi-source, three-wave field survey. Specifically, we found that generative AI fosters employees' creativity through its positive effect on absorptive capacity. However, generative AI usage hampers employees' creativity through its negative effect on their cognitive elaboration. We also found that interpersonal interaction neutralizes the negative impact of generative AI on cognitive elaboration, highlighting the crucial complementary role of human-human interaction in the context of human-machine interaction. Theoretical and practical implications specific to the impact of generative AI on employee creativity are discussed.

HR: **Performance Appraisal Purposes and Employee Creativity: A Multidimensional Perspective**

Author: **Xiaoya Wen**, *Chongqing U.*

Author: **Yong Zhang**, *Chongqing U.*

Author: **Hao Qu**, *Chongqing U.*

Author: **Yiwen Tuo**, *Chongqing U.*

Modern organizations widely implement performance appraisal to manage employees' work, yet the role of performance appraisal for employee creativity remain ambiguous, with positive, negative, or even insignificant relations being reported in literature. The present research aims to address such ambiguity. We introduce multidimensional conceptualization of both performance appraisal and creativity, and draw from self-determination theory and learned industriousness theory to develop a multilevel conceptual framework incorporating diverse linkages between performance appraisal and creativity. Using time-lagged survey data collected from 582 employees working in 49 companies, we found that developmental performance appraisal was positively related to radical creativity through intrinsic motivation, whereas administrative performance appraisal was positively related to incremental creativity through extrinsic motivation. These findings extend our theoretical understandings of performance appraisal-creativity relationship, and offer important practical implications for innovation and creativity management.

HR: **Are Human Resource Practices Gendered? Exploring its Effect on Managerial Career**

Author: **Sumita Datta**, *S P Jain Institute of Management and Research*

Author: **Seema Das**, *Indian Institute of Management Mumbai*

Author: **Jorge Gomes**, -

Author: **Shivganesh Bhargava**, *Indian Institute of Technology*

Research has consistently demonstrated the existence of a leaky career pipeline where the ratio of women vis-à-vis men keeps decreasing as they move into higher echelons of management. Evidently Human Resource Practices (HRPs) don't seem to be helping in enhancing gender equity in managerial careers. Following Theory of Gendered Organization (Acker, 1990), this research explores whether and how gender bias may still be embedded within formalized HR practices with respect to their impact on career motivation and development. Employing a sequential mixed methodology, data was collected in two phases. In the first phase of the study data was obtained using quantitative methods from a sample of managers (N = 403), at various stages of their careers, drawn from 11 large global and Indian MNCs operating in India. This was followed by a qualitative study using in-depth interviews with 31 women professionals across various levels of management in the second phase. The quantitative study reveals that HRPs impact career motivation of men and women in significantly different ways. Further, the qualitative research suggests that HRPs when filtered through the lens of gender identity and interwoven with gendered social support lead to unintended effects on career motivation and thereby career development of female managerial employees. Implications of the research for both theory as well as practice are discussed.

Where Management and Labor History Meet

Participant: **Jeffrey Muldoon**, *Emporia State U.*
Participant: **David Jacobs**, *American U., Kogod School of Business*
Participant: **Anthony Gould**, *U. Laval*
Participant: **Hindy Schachter**, *New Jersey Institute of Technology*
Participant: **Ellen Shaffner**, *Mount Saint Vincent U.*

The purpose of this PDW is to provide a forum for exploring the overlap between management and labor history fields. Although the two fields have much in common, our purpose is to examine the areas shared between management thought and the worker experience in history. Traditionally, both fields have generally ignored each other even though management thought and practice and labor behaviors have a synergistic relationship. Therefore, we seek to use a format of lecture and discussion to encourage scholars to consider a fruitful dialogue between the two fields moving forward. Our contention is that the evolution of management thought was the result of its interaction with the labor movement and that labor history evolved due to its interaction with management. If we seek to understand one, we must understand the other.

Panelist: **Martin J. Kilduff**, *UCL School of Management*

Panelist: **Paul Leonardi**, *UC Santa Barbara*

Moderator: **Alexandra Gerbasi**, *U. of Exeter Business School*

The agency issue is at the conceptual core of organizational social network research and theory because it concerns the relations between individual choices and the system of interdependencies that the interplay between people and structure involves. This tension concerning agency has surfaced in social network theory since its beginnings and gained popularity in the last decade, influencing leading theoretical approaches to organizational social networks. In this panel symposium, in which we invited leading scholars in the field, we aim to build consensus on the relevance of network agency for current research in management and adjacent disciplines, address its critical issues and controversies, and envisage future research implications and directions.

Why Career and Identity Construction is Important for Current Careers

Session Moderator: **Yufan Deng**, *Southwestern U. of Finance and Economics*

CAR: **Career Advancement Towards Leadership: An Examination Through the Lens of Role Identity Management**

Author: **Yufan Deng**, *Southwestern U. of Finance and Economics*

Author: **Dishi Hu**, *U. of North Carolina Greensboro*

Previous research on leader transition mainly focuses on how new leaders adapt to their new leadership roles and utilize different leadership styles to meet followers' expectations. However, there has been limited exploration of the strategies used by leaders promoted from within peer groups, particularly from a career development standpoint. This research, informed by the socialization framework and role identity theory, suggests that newly promoted leaders may adopt different strategies for managing their role identities as they acclimatize to leadership roles. In Study 1, we introduce three distinct role identity management strategies and develop and validate measures for these strategies. Study 2 examines how these strategies affect transition outcomes (transition satisfaction and leader effectiveness) through mechanisms of leader adjustment (leader role clarity and leadership self-efficacy). Overall, this research highlights the experiences of leaders promoted from peer positions and explores how changes in role identity can influence their leadership transition, offering both theoretical and practical insights.

CAR: **The Pursuit of Preferred Identities Among Dutch Young Professionals and its Role in Well-being**

Author: **Yoy Bergs**, *Nyenrode Business U.*

Author: **Pascale Peters**, *Nyenrode Business U.*

Author: **Xander Lub**, *Hogeschool Utrecht*

Author: **Robert Blomme**, *Blomme*

In this qualitative study, we explore how Dutch young professionals do identity work to build and maintain their preferred work-nonwork identities and how this plays a role in their well-being. Drawing on interview data from a sample of 37 participants, we demonstrate that Dutch young professionals desire to be and be seen as successful in both their work and nonwork lives. More specifically, we reveal how young professionals view the notion of success going beyond their professional achievements, including personal fulfilment, maintaining social relationships, and improving their physical, mental, and spiritual well-being. We identify two strategies guiding the young professionals' work-nonwork identity work: optimizing and prioritizing. Regarding optimizing, we demonstrate how identity work on multiple preferred identities can trigger two simultaneous processes: a short-term motivational process and a long-term health impairment process. Their underlying dynamics initially lead to positive outcomes, such as pride and self-esteem, but in the longer run result in mental health complaints. Regarding prioritizing, we find that some participants have learned that optimizing is not sustainable in the longer run and therefore have shifted to prioritizing their core identities, strikingly not necessarily being their career-centric identities. Our findings are important in the light of the increase in mental health complaints among young professionals, which can have a severe impact on their career development and functioning in modern society.

CAR: **How Could AI Impact Employees' Career Growth? The Role of Thriving at Work and Identity Threat**

Author: **Yunyun Yuan**, *School of Management, Beijing Institute of Technology, Beijing*

Author: **Yuxin Wang**, *Beijing Institute of Technology*

Author: **Pingqing Liu**, *Beijing Institute of Technology*

Grounded in self-regulation theory, this study examines the influence of the usage of artificial intelligence (AI) on employee career growth, with a focus on two mediating factors: thriving at work and identity threat. It investigates how AI affects career progression through these dual pathways and examines the moderating roles of learning goal orientation and performance goal orientation. The research finds that AI use positively affects career growth by promoting a thriving work environment and by triggering an identity threat that motivates employees to work harder, the latter being contrary to initial expectations. The study also uncovers that performance goal orientation strengthens the link between AI-induced identity threat and career advancement. However, learning goal orientation's moderating effect is not significant, possibly due to individual differences in core self-evaluations affecting responses to AI technology in the workplace. This complexity highlights the varied impacts of AI on employees, suggesting that reactions to AI integration may not uniformly view it to enhance individual skills.

CAR: **When Parallel Identities Converge: Career Construction of Multiple Job Holders**

Author: **Aparna Sudha Ramachandran**, *S P Jain Institute of Management and Research (SPJIMR) Mumbai India*

Author: **Snehal Shah**, *S P Jain Institute of Management and Research*

Author: **Amit Jain**, *S P Jain Institute of Management and Research*

We present a qualitative study of the careers of a cohort of full-time employees who moonlight as platformised creative workers. Interpretive Phenomenological Analysis was performed to expand the theoretical understanding of the career development of multiple job holders. We interviewed a sample of 15 social media content creators who have full-time jobs. The findings revealed a mechanism through which individuals activate their career identities, enabling voluntary career transitions. Career adaptability dimensions and multiple contextual factors prompt identity activation, eventually determining their career pathways. Based on these findings, we have proposed a process model for the career development of multiple job holders. The study adds to the Career Construction Theory by affirming the role of adaptability and context in career development while highlighting the scope for permissive moonlighting policies by employers.

Interdependencies and Endogeneity Problems in Strategy Research: A Way Forward

Organizer: **Marat Davletshin**, *Colorado State U.*

Organizer: **Stephen Thomas Downing**, *U. of Missouri*

Strategy scholars hope to explain increasingly more dynamic relations that entail complex interdependencies and thus endogeneity—when variables are jointly determined, leading to difficulties in establishing causal relationships. While network analysis methods deal with this endogeneity, unfamiliarity and technical barriers delay their adoption in strategy research. This Caucus aims to form a community where scholars discuss solutions to the complex web of interdependencies that cause endogeneity issues.

SROI, Meet ESG! Designing a Universal Impact Measure for Social Enterprises and For-Profits

Organizer: **Cheryl Gladu**, *Thompson Rivers U.*
Facilitator: **Bruce Carruthers Martin**, *Thompson Rivers U.*
Coordinator: **Peace Jilani**, *Thompson Rivers U.*
Coordinator: **Digvijay Kulshreshta**, *Thompson Rivers U.*

We connect the long-sought goal of a comprehensive social enterprise impact measure with the more recent search for a for-profit ESG measure. This professionally facilitated design thinking session will produce low-fidelity prototypes of a single, comprehensive measure that is suitable for application to both for-profit firms and hybrid social enterprises.

This caucus enables researchers and practitioners across the spectrum—from innovation for social and sustainable good to profit maximization for traditional for-profit firms—to come together in a way that bridges and engages them in a ground-breaking ideation effort. In facilitated groups, participants will develop low fidelity prototypes of a single, comprehensive measure that is suitable for application to both for-profit firms and hybrid social enterprises. Participants will leave with at least one low-fidelity prototype of such a measure which they can take home and test in practice and/or in their own research. Hence, this session allows participants to fully embrace the “Innovating for the Future” conference theme and do so in a way that can surface potentially disruptive innovations in measurement of organizational performance and outcomes. Participants will form new collaborations, and new research and practice orientations that will enable, in the session and afterwards, innovative ideas and conceptions of future measurement possibilities that meet the needs of people, planet, and profit for all types of organizations. We will run a professionally facilitated designing thinking session suitable for engaging scholars and practitioners with interest and expertise in Social Enterprise, Accounting, Sustainability, CSR, ESG, SROI, Carbon Accounting, Ethics, Strategy, Financial Management, or Non-Profit studies from around the world. Caucus design will promote maximum interaction among scholars and practitioners from different disciplines/fields, to broaden scope and encourage development of original, hybrid perspectives. KEYWORDS: Impact Measurement, ESG, SROI, Sustainability, Design Thinking

Participant: **Jack Anthony Goncalo**, *U. of Illinois at Urbana-Champaign*

Despite the increasing focus on employee welfare, workplace objectification—viewing and treating employees as instruments of profit—remains a prevalent phenomenon in today’s workplace around the world. Featuring five papers by research teams from ten different institutions across North America, Europe, and Asia, the proposed symposium aims to advance scholarly discussions on workplace objectification with a focus on three interconnected themes: (1) conceptual critique and reflections on the key progresses and pitfalls of workplace objectification research, (2) empirical examination of novel antecedents (e.g., performance pressure) and consequences of workplace objectification (e.g., creativity), and (3) extension of the phenomenology of workplace objectification to previously understudied dimensions (e.g., third party/witness reactions). The symposium incorporates theories and evidence on different manifestations of workplace objectification (i.e., instrumentalization, dehumanization, commodification) in diverse contexts with mixed methodologies. It offers novel theoretical and practical insights into workplace objectification that can benefit organizations and individuals alike.

Objectification at Work: A Review, Synthesis, and Research Agenda

Redefining Women Entrepreneurs

Session Moderator: **Andrea E. Smith-Hunter**, *Siena College*

DEI: **A Country-Context Matrix on the Challenges of Female Entrepreneurial Activity**  

Author: **Riccarda Anna Joas**, *Technical U. of Munich*
Author: **Eva-Marie Steisslinger**, *Technische U. München, TUM School of Management*
Author: **Isabell Melanie Welpe**, *Technical U. of Munich*

Scholars studying female entrepreneurs claim we need a comprehensive understanding of challenges to frame appropriate policies and interventions. Yet, while past research has studied challenges, limited focus has been dedicated to the macroeconomic maturity level of a country where the woman lives and its impact on the challenges. To merge the insights about challenges globally, we conducted a systematic literature review and synthesized previously disparate streams of work, based on studies published in the leading management and entrepreneurship journals between 2010 and June 2023. The review was guided by the research question: “What is holding women back from pursuing the path of entrepreneurship given the context of macroeconomic maturity?”. Based on the published literature we propose conceptual 3x3 matrices condensing the existing research and providing the ground for future research routes and theoretical implications. We find that, while the essence of what is holding women back from entrepreneurial activities differs between developed- and developing countries, the core determinant is in both contexts the sociocultural environment.

DEI: **An Exploratory Study of Indigenous Female Entrepreneurship: Cluster Analysis and More**  

Author: **Andrea E. Smith-Hunter**, *Siena College*
Author: **Joseph McCollum**, *Siena College*
Author: **Necip Doganaksoy**, *Siena College*

The landscape of Native American female-owned enterprises remains an underexplored domain, warranting attention to highlight their contributions and challenges. In this study, an exploratory data analysis was conducted, encompassing 4,296 Native American female entrepreneurs. The aim was to illuminate distinctive findings and potential pathways for future investigation. Our research confirms prevailing theories on the existence of cultural and economic clusters within this demographic. Moreover, we delve into discernible patterns and trends, seeking to elucidate factors contributing to sustained entrepreneurial endeavors. Employing correlational analysis and visual representations, intriguing insights emerged, shedding light on the entrepreneurial landscape among Native American women. Furthermore, this study advocates for the exploration of specific areas deserving deeper scrutiny. By highlighting noteworthy observations and suggesting prospective research avenues, this research aims to catalyze further exploration and understanding of Native American female entrepreneurship.

DEI: **Redefining the Age of Enterprise: Embracing Senior Women Entrepreneurs in the Work Ecosystem** 

Author: **Yusuf Alparslan Dibek**, *Marmara U.*
Author: **Erhan Aydin**, *Liverpool Business School, Liverpool John Moores U.*

This study explores the shift in entrepreneurship from a youth-centric focus to an emphasis on senior entrepreneurs, particularly women over 45. Utilizing a qualitative approach, it examines the influence of family dynamics, diverse capital forms (economic, social, and symbolic), and cultural perceptions on senior women's entrepreneurial journeys. The findings highlight the unique advantages senior women bring, including extensive life experiences and established networks, juxtaposed against challenges such as societal biases and age-related barriers. This paper contributes to redefining entrepreneurship by advocating for a broader understanding across various life stages, emphasizing the untapped potential and need for greater support for senior women entrepreneurs. This research thus calls for an inclusive approach in entrepreneurship policies and practices, recognizing the diverse contributions across age and gender spectrums.

DEI: **The Influence of Parents and Adolescent Social Identity on the Choice to Become an Entrepreneur**  

Author: **Angela Randolph**, *Babson College*
Author: **Alisa Boguslavskaya Jno-Charles**, *Babson College*
Author: **William B. Gartner**, *Babson College*

This paper explores how parents' business ownership, parenting styles, socioeconomic status, and adolescents' social identities affect subsequent adolescent entrepreneurship as measured by adolescents' choices to pursue entrepreneurship. Using the National Longitudinal Survey of Youth (NLSY97), we find that business ownership matters – children of parents who are not business owners are less likely to pursue entrepreneurship. Yet, adolescents from wealthier families in which parents did not own businesses were likelier to choose entrepreneurship than those with less wealth. We show that parenting styles, ownership, and socioeconomic characteristics affect adolescent entrepreneurship differently, indicating that there is no best parental profile to influence adolescents' subsequent entrepreneurship across all socioeconomic situations and social identities.

Cultural Microaggressions and Gender

Session Moderator: **Mihwa Seong**, *U. of St. Gallen (HSG)*

DEI: The Surprising Dark Side of MNCs' CSR Engagement: Dynamics Between National Culture and Gender    

Author: **Mihwa Seong**, *U. of St. Gallen (HSG)*
Author: **Kiera Dempsey-Brench**, *Trinity Business School, Trinity College Dublin*
Author: **Amanda Shantz**, *U. of St. Gallen*

It is evident that addressing future grand challenges cannot rely on merely reacting to major social and environmental events but requires constant innovation and concerted efforts from all stakeholders. Against this backdrop, multinational corporations (MNCs) are increasingly adopting employee volunteer programs (EVPs) as part of their CSR initiatives to harness their power to disseminate social impact throughout their operations spread across the globe. In this study, we focus on a specific form of EVP at a Fortune 500 MNC wherein the MNC provides support (in our context, financial support) for employees to initiate and lead their own volunteer projects. This lies in contrast to the traditional top-down EVPs where the mandates of volunteer projects are predetermined by leadership. In investigating the financial support provided for employees' initiation of volunteer projects, we find that women employees receive less financial support for their efforts. In addition, we find that the local culture – more specifically, the degree to which the culture is amenable to challenging the existing social hierarchies and structures – plays a significant role in mitigating (or exacerbating) this gender disparity. Our findings underscore the unexpected externalities of CSR engagement at an international scale, whereby well-intended MNCs' initiatives that aim to benefit stakeholders outside the firm can create gender inequality within. We call for future studies to further investigate the unique challenges of CSR engagement through social innovations that MNCs experience.

DEI: Contextualization of Inclusion: Evidence from MNC Subsidiaries in Emerging Economies

Author: **Sana Ahmed**, *Henley Business School, U. of Reading, United Kingdom*

There is very little research in non-western contexts on what practices make organizations inclusive. There is also limited existing empirical evidence on transfer of diversity and inclusion practices from home to host country in case of MNCs. This study was conducted in multinational subsidiaries with their parent companies headquartered in the US & Europe. Multiple case methodology was used along with semi-structured interviews to measure experiences of organizational diversity and inclusion. The study provided a valuable insight into the transfer of diversity and inclusion practices to MNC subsidiaries and managers' perceptions of diversity and associated organizational initiatives for inclusion management. The findings suggested that workforce diversity is crucial for MNCs global operations but addressing specific cultural biases operating in the local context can be extremely challenging. It also highlighted that what is considered "inclusive" is context based and western-centric models are inadequate in creating inclusive organizations within non-western contexts. Keywords: Diversity, Inclusion, MNC, South Asia, Pakistan

DEI: A Cultural Values Framework for Research on Retirement   

Author: **Justin Marcus**, *Koc U.*
Author: **Noura Al Mursi**, *Koc U.*

Given a dearth of theory and data on cultural values differences in retirement, we provide a multilevel framework (societal, organizational, individual) with accompanying theoretical propositions and recommended future research directions on culture and retirement. The framework integrates cross cultural management scholarship on cultural values, including collectivism and tightness, with DEI scholarship on ageism at work to help understand the cultural boundary conditions of essence on associations between retiree demography and the decision to retire, post-retirement work, and retirement adjustment. Individual and cultural values typified by both an emphasis on group boundaries (collectivism) and an emphasis on group norms (tightness) are theorized to give rise to more negative consequences for retirees. Cultural values differences between organizations and societies on hierarchy, including power distance and gender egalitarianism, are additionally theorized to give rise to more negative consequences for retirees of lower social status and women, respectively. Suggested future research directions adopting a holistic focus on cultural differences in retirement not just at the country level but also between organizations, departments, teams, and even individuals are provided, with concrete recommendations on how best to design and execute studies on culture and retirement.

DEI: Cultural Microaggressions in Multinational Organizations: Organizational Inclusivity and Coping    

Author: **Regina McWilliams**, *U. of Missouri- St. Louis*
Author: **Matthew Aplin-Houtz**, *Brooklyn College*
Author: **Gerald Gao**, *U. of Missouri-St.Louis*

In multinational corporations, the extensive and diverse nature of their operations, encompassing a wide range of cultures and nationalities, often gives rise to cultural microaggressions. These subtle, often unintended discriminatory acts or remarks based on one's culture can have a substantial impact on organizational dynamics, leading to lower perceptions of inclusivity, increased job stress, and lower employee engagement. Despite a robust and growing literature on general microaggressions, there is a significant vacuum in understanding the specific impact of cultural microaggressions in such diverse settings. Using the Minority Stress Model as a lens, this study aims to fill this research gap by exploring the influence of cultural microaggressions on employment results in these complex circumstances. As such, we surveyed 184 foreign-born employees at multinational firms and used structural equation modeling to analyze the data. The results showed a strong relationship between cultural microaggressions and greater occupational stress. Furthermore, the result indicate that coping strategies can moderate occupational stress. We discuss our findings and suggest managerial implication - emphasize the need of having strong inclusion policies and providing staff with appropriate coping techniques to lessen the negative consequences of these microaggressions.

As the world grapples with unprecedented complexity, organizations search for fresh perspectives and unconventional talent pools to navigate disruptive forces and forge innovative solutions. Enter neurodiversity: a vibrant tapestry of unique cognitive styles associated with autism, ADHD, dyslexia, and other neurodevelopmental differences. These emerging communities and rising generations hold immense potential to enrich organizations with novel ideas and unconventional approaches. Yet, despite a blossoming public awareness, many neurodivergent individuals remain locked out of meaningful employment, their unique talents remaining untapped until the workplace becomes more neuro-inclusive. This symposium tackles this critical gap, presenting empirical research on innovating in the workplace to support the neurodiverse workforce of the future. We delve into the crucial aspects of selection, retention, and performance, engaging with diverse stakeholders – neurodivergent individuals, hiring managers, and HR professionals – to gain multi-level insights.

Participant: **Nicholas Anthony Smith**, *ohsu-psu school of public health*
Participant: **Sabrina DeeAnn Volpone**, *U. of Colorado, Boulder*
Participant: **Ryan Ragaglia**, *U. of Colorado, Boulder*

Over the last 20 years, research on identity management, the strategic choices employees make to manage others' impressions of their association with a stigmatized identity(ies), has contributed to a growing understanding of the crucial role of employment experiences for people with marginalized identities (e.g., employees with disabilities, sexual minorities). The identity management literature is at a critical juncture, however, as employees with marginalized identities are increasingly bringing new and more complex aspects of themselves to work (e.g., intersectional identities) that are not well understood in current research. As such, to aid scholars in 'Innovating for the Future' during the 84th Annual Meeting of the Academy of Management, we aim to spark dialogue about how scholars can innovate theorizing around identity management processes in a way that better illuminates the lived experiences of marginalized employees. To achieve this, we included research in this symposium that employed grounded theory methodologies to deepen the novel theoretical contributions of the work offered. As such, the presentations, along with the unique theory-focused discussion that will take place after, are poised to help scholars innovate the future of the identity management literature using the developments presented in the symposium that are centered on illuminating the lived experiences of marginalized employees.

Presenter: **Jacob W. Roberson**, *USC Marshall School of Business*
Presenter: **Stephanie Jingxian Yu**, *The Wharton School, U. of Pennsylvania*

Organizations and its members play a role in producing and reproducing the gender and racial inequality reflected in larger society (e.g., Amis, Mair & Munir, 2020; Hebl, Cheng & Ng, 2019). Organizational gatekeepers can perpetuate these disproportionately unequal outcomes, while marginalized employees process and act in response to unequal treatment. Drawing on multiple methods and theories, the present symposium investigates how both gatekeepers and marginalized employees perceive, process, perpetuate and experience the complexities of such inequality in the work context. Across four papers, we consider the nuances of how inequality is perceived and perpetuated by gatekeepers (including skin tone and ideology), while also asking how certain contexts can exacerbate the experience of inequality for marginalized employees (such as resource allocation and organizational culture). Our discussant, Rebecca Ponce de Leon, an expert on inequality in organizations, will guide a discussion about the current research and directions for future research.

Entrepreneurial Finance: Lending and Borrowing

Session Moderator: **Majid Rahimi**, *U. of Alabama*

ENT: **Investing Again after Failure? Crowd Lenders' Decision to Sustainable Ventures Promising Multiple**

Author: **Caroline Lindlar**, *Heinrich Heine U. Düsseldorf*
Author: **Eva Alexandra Jakob**, *U. of Bayreuth*
Author: **Jeannette Mai Dinh**, *Heinrich-Heine U. of Dusseldorf*
Author: **Marius Wehner**, *Heinrich-Heine U. of Dusseldorf*

A significant number of crowdlending campaigns – including sustainable campaigns – fail after securing successful funding. Yet our understanding of how crowd lenders respond to failures of campaigns promising multiple values, such as realizing sustainable (social or environmental) value and financial return, remains limited. We conducted a vignette-based experiment investigating crowd lenders' reactions to failure in sustainable versus commercial campaigns. Our findings reveal uniform negative reactions to failure among lenders, irrespective of the initially promised values. However, in the aftermath of failure, socially compared to commercially framed campaigns experience higher subsequent investments the higher lenders' self-transcendence values. By contrast, lenders with high self-enhancement values showed lower subsequent investments in socially compared to commercially framed campaigns. We did not find any significant effect for environmentally framed campaigns. This study adds a failure perspective to research on sustainable crowdfunding by emphasizing the importance of aligning campaign values with lender values to mitigate the effect of failure and potentially promote forgiveness in subsequent investment decisions.

ENT: **Financial Knowledge and Borrower Discouragement: The Role of Occupational Status, Gender and Race**

Author: **Anoosheh Rostamkalaei**, *York U., Canada*
Author: **Allan Riding**, *Professor Emeritus, Telfer School of Management*
Author: **George Saridakis**, *U. of Kent*

We use the U.S. Federal Reserve Survey of Household Economics and Decisionmaking from 2017 to 2022 to study how financial knowledge affects borrower discouragement. Our results show that financial knowledge lowers the likelihood of borrower discouragement. However, this effect is not significant for different lending attitudes in our sub-sample analyses. We find that self-employment, gender and race are important predictors of borrower discouragement, and their effects are generally robust to the inclusion of financial knowledge. However, we also report some variations of these effects across sub-samples. We conduct several robustness tests and control for sample self-selection.

ENT: **The Fallacy of Sunk Cost: The Impact of Investors' Sunk Cost on Reinvestment in Underperforming Firms**

Author: **Alexander Narh Tetteh**, *school of management, USTC*
Author: **Qingxiong Derek Weng**, *school of management, USTC*
Author: **Boyka Simeonova**, *U. of Leicester*
Author: **Mathew Hughes**, *U. of Leicester*
Author: **Hafiz Habib Tayyab**, *Univevrsity of Science and Technology of China*

While existing studies mainly examine founders' persistence in underperforming firms (UPF), little is known about when key stakeholders, such as investors, persist in UPF. Drawing on sensemaking theory, we theorize that investors, tethered by sunk costs in previously funded firms but underperforming, are likely to exhibit persistence. Using a conjoint experiment with 2,016 decisions nested within 126 participants, we find that when considered in isolation, investors' sunk cost has no direct significant effect on their decision to persist and reinvest in firms they initially funded but are underperforming. However, when considered conjoint with the entrepreneur's personal investment, their knowledge of the entrepreneur's high level of personal investment, as well as the entrepreneur's ability to conduct rigorous market research following the firm's underperformance, influence investors' decisions to overlook their sunk cost to persist and reinvest. Furthermore, we find that when the firm's business model can be made less intricate, investors are more likely to be swayed by their sunk costs when deciding to reinvest. Finally, we observe that when UPF has a reputation for corporate social responsibility, investors are willing to support these firms in reinvestments despite having incurred a sunk cost.

ENT: **Femininity and Masculinity in Pitches: How Entrepreneurial Traits Affect Microlending Success**

Author: **Jayaram Suryanarayana Uparna**, *IIM Udaipur*
Author: **Dalhia Mani**, *Indian Institute of Management, Bangalore*

Entrepreneurship and agentic-masculine traits such as positivity, competence, and creativity, are celebrated in entrepreneurship research. Practitioners predict that sharpening these in pitches even in small-scale entrepreneurship as beneficial. We predict that it is only women entrepreneurs (and not men), and especially women who display entrepreneurial traits in their pitches, who fit the role expectations of entrepreneurs in the microlending context best, and benefit from the fastest funding speeds. We find support for these predictions in a dataset involving 600,000 entrepreneurs. Our research on gender and crowd-financed microlending shows how, unlike in the commercial entrepreneurship context, display of entrepreneurial traits like positivity, provides women funding advantage in microlending.

Entrepreneurial Finance Signals 2

Session Moderator: **Miranda Welbourne Eleazar**, *U. of Iowa*

ENT: **ESG Transparency and Impression Management of Venture Capitalists**

Author: **Miranda Welbourne Eleazar**, *U. of Iowa*
Author: **Haemin Dennis Park**, *U. of Texas at Dallas*

Environmental, social, and governance (ESG) issues continue to gain attention and have important consequences in both public and private firms. Despite the attention to how ESG affects the ability of ventures to obtain funding, the effect of ESG transparency of venture capitalists (VCs) has not been examined. This is particularly important because VCs' ESG activities may be directly related to their ability to nurture and develop their portfolio firms. As a result, their disclosure in terms of ESG activities may impact how potential subsequent investors and portfolio firm entrepreneurs view the VCs. We apply a novel impression management perspective to the VC context to study how VCs' ESG transparency affects their success. Because firm attributes and actions may affect the impressions that they convey, we further consider the moderating effects of the VCs' investment in portfolio firms with the high likelihood of impact, the high likelihood of risk of harm, portfolio diversity, and whether the VC is women-led. We contribute to the literature on entrepreneurship in VC investments, impression management, and ESG transparency.

ENT: **When Competence Meets Warmth: Interactions Between Costly and Costless Signals in Crowdfunding**

Author: **Wanxiang Cai**, *U. of Bristol Business School*
Author: **Hai-Anh Tran**, *Alliance Manchester Business School, U. of Manchester*
Author: **Guowei Huang**, *Alliance Manchester Business School, U. of Manchester*
Author: **Bach Nguyen**, *U. of Exeter Business School*

Due to the information asymmetry in financial markets, entrepreneurs need to send signals to investors to acquire financial capital. Traditional signalling theory suggests that signals must be costly to differentiate high-quality from low-quality firms. Recent studies show costless signals can be effective in some markets. Furthermore, the influence of costless signals is shaped by costly signals. We propose a framework to explain how costly signals interact with costless ones to affect crowdfunding performance. We broadly classify signals into competence-related and warmth-related signals. While costless signals such as influence tactics affect crowdfunders' decision-making, their effectiveness depends on the consistency with costly signals: the effectiveness will increase if the costless signals are accompanied by similar costly signals (e.g., both are competence-related or warmth-related). The framework is partially supported by empirical evidence. Our research contributes to signalling theory, influence tactics, and crowdfunding research.

ENT: **Pushing the Envelope: How Stretch Goals Shape Funding Decision in Crowdfunding**

Author: **Tanguy Tresor Sindiheburu**, *Nottingham U. Business School China*
Author: **Xiaodie Pu**, *U. of Nottingham Ningbo China*
Author: **Ting-Kuei Kuo**, *National U. of Singapore*
Author: **Jin Chen**, *U. of Nottingham Ningbo China*

Does the adoption of stretch goals effectively encourage backers to support crowdfunding projects? Drawing on a comprehensive data from a leading Southeast Asian crowdfunding platform, we examine the effects of stretch goal adoption on backers' decision process. Distinguishing three aspects of backers' funding decision: likelihood to invest, amount invested and decision time, we integrate insights from the sensemaking and goal setting literature to theorize the effects of stretch goals on backers' funding decision process. We find that stretch goals have a negative impact on the likelihood to invest while positively affecting amount invested and decision time. Furthermore, we consider the moderating influence of backer's experience on the observed impacts. Our results challenge the dominant wisdom, revealing that stretch goals encourage increased engagement from already participating individuals while deterring initial participation. We attribute this discrepancy to the voluntary nature of crowdfunding's stretch goals which contrast with the mandatory context of stretch goals in traditional settings such as organizations. Our study contributes to the broader understanding of stretch goals as tools to motivate individuals by providing a nuanced view of their impact in discretionary participation contexts like crowdfunding. The study offers valuable insights for entrepreneurs and platform designers seeking a comprehensive understanding of how stretch goals shape backers' funding decision.

ENT: **The Role of Entrepreneurs' Emancipatory Motive in Reward-Based Crowdfunding**

Author: **Zahid Rahman**, *Dhillon School of Business, U. of Lethbridge*

While scholars have started investigating entrepreneurial actions aiming at overcoming constraints (although primarily social), a key area remains understudied: how these emancipatory entrepreneurs get funding for their ventures and whether there are critical differences in entrepreneurial pitches when founders wish to overcome social vs. personal constraints. Drawing on framing literature and regulatory focus theory, in this paper, I propose effective framing strategies for overcoming each type of constraints (social vs. personal) in reward-based crowdfunding platforms. I argue that when an entrepreneur founds a new venture in order to overcome any personal constraints, an entrepreneurial pitch framed with the prevention focus motive will receive a higher pledge amount from a backer than if it highlights the promotion focus motive. Alternatively, when a founder aims to overcome social constraints, a backer will commit more funds if the pitch is framed to evoke a promotion-oriented rather than a prevention-oriented motive. An online controlled experiment with 475 MTurk panel members supports these hypotheses.

Creativity and Innovation

Session Moderator: **Amber Olson**, *U. of Alabama, Tuscaloosa*

ENT: **How New Ventures Navigate Innovation Search in Ties with Virtual Incubators**

Author: **Qian Ma**, *School of Economics and Management Tsinghua U.*
Author: **Delin Yang**, *School of Economics and Management Tsinghua U.*
Author: **Shilong Jia**, *School of Economics and Management Tsinghua U.*

Search for external knowledge is vital for new ventures' innovative activities. Constrained by internal search scope, they rely on external connections to facilitate their innovation search. Given the emergence of virtual incubators as a novel support institution for new ventures, we try to answer how new ventures utilize their tie with virtual incubator to conduct innovation search. We employed a multi-case study of China's well-known virtual incubator, Tusstar, and interviewed six software new ventures affiliated with it. Our case study illustrate that new ventures, based on their ties with virtual incubator, undergo an innovation search process consisting of three stages: framing, directing, and extrapolating. Throughout this process, new ventures engage in increasingly profound and comprehensive effectuation logic based on external connections, forming more flexible and open search activities by fully leveraging their existing external ties. Overall, our research contributes to the literature by discussing the combination and shift of decision-making logic for new ventures in innovation search. Furthermore, by demonstrating the learning effects of new ventures during innovation search with external connections, our study contributes to the literature on innovation search.

ENT: **Bring Industry Context Back in: Schemas, Team Faultlines, and Business Model Innovation**

Author: **Yingzhao Xiao**, *Tianjin U.*
Author: **Fuwei Li**, *Business School, Nankai U.*
Author: **Jun Yang**, *School of management, Zhejiang U.*

In relation to the question of where new business models come from, extant work generally treats business model innovation (BMI) as a key decision for entrepreneurial teams. Yet, team members can be diverse in terms of their cognitive views toward business models, leading to incomplete understanding of how entrepreneurial teams leverage cognitive resources for BMI. Drawing on the cognitive view of BMI, this study explores how and under which conditions schemas, an important managerial cognition ascribed from prior industry experience, influence BMI. With data from 799 IT-based entrepreneurial firms in China, empirical results support a three-way interaction among schemas, team faultlines, and industry context, indicating that the sharing of schemas in entrepreneurial teams is critical for BMI, but whether it can bring about actual innovation outcomes depends on the industry context in which the firm operates. This study thus contributes to the cognitive view of BMI and aids in understanding the role of situated context in BMI.

ENT: **Innovating Under Fire? Entrepreneur-Investor Conflict and the Radicalness and Speed of Innovation**

Author: **Pia Christine Otto**, *Innovation and Entrepreneurship Group (WIN) – TIME Research Area, RWTH Aachen U.*
Author: **Andrea Greven**, *WHU Otto Beisheim School of Management*

This research investigates the impact of task conflict between entrepreneurs and their investors on young ventures' innovation radicalness and speed. Due to the mutual dependence and close strategic collaboration of entrepreneurs and investors, task conflict within this dyad is frequent, and its prevalence has been linked to a severe impact on the overall innovativeness of young ventures. However, our understanding remains incomplete, mainly regarding how specific innovation characteristics are altered due to task conflict. By focusing on innovation radicalness and speed, we aim to answer two particular questions: Does innovation become more or less radical in times of task conflict? Slower or faster? Additionally, by considering the contingency framework, this study introduces procedural justice as a moderating variable. We gathered survey data from May to October 2023 using founder directories from two of Germany's most entrepreneurial institutes, ultimately utilizing data from 115 entrepreneurs. Our study makes significant contributions to both theory and practice. It deepens research on the conflict-innovation relationship and its contingencies while also providing entrepreneurs and investors with insights into how task conflict affects innovation radicalness and speed and how procedural justice can be used as a mitigation tool. Our findings support three out of four hypotheses, indicating that task conflict in the entrepreneur-investor dyad leads to less radical and slower innovations and that procedural justice can attenuate the negative relationship.

ENT: **To Brave Challenges: Imaginativeness, Environmental Dynamism and Public Leaders' Effectual Behavior**

Author: **Katrin Bauer**, *TU Dortmund U.*
Author: **Alex Kier**, *Washington State U.*

Grand challenges increasingly burden public leaders, requiring them to flexibly respond to the resulting uncertainty. We postulate that the effectuation principles that allow entrepreneurs to navigate such uncertainty also apply to public leaders, enabling them to creatively combine constrained resources on hand. However, to date, research has only limitedly focused on factors that foster public leaders' flexible uncertainty coping routines. Drawing upon the creative cognition lens and promoting a cross-disciplinary approach, we theorize that effectual behavior in public leaders varies by the degree of creative, social, and practical imaginativeness, further contingent upon environmental dynamism, a major root of uncertainty. To test our theorizing, we conduct a survey of 324 public leaders throughout Germany, amid the COVID-19 pandemic. We find differences in effectual behavior pertaining to the degree of individuals' social and practical imaginativeness and differing moderating effects of environmental dynamism on these two relationships, delineating a boundary condition to effectual behavior. We thereby build theory of public entrepreneurship explaining how entrepreneurial, effectual behavior is critical to the public sector. We conclude by unpacking the implications of our findings for practice in public sector organizations.

University Spinouts

Session Moderator: **Matthias Qian**, *ESMT Berlin*

ENT: **How Does Equity Allocation in University Spinouts Affect Fundraising Success? Evidence from the UK** 

Author: **Matthias Qian**, *ESMT Berlin*

Author: **Thomas Hellmann**, *U. of Oxford*

Author: **Junida Mulla**, *Saïd Business School U. of Oxford*

This paper examines the impact of university spin-out ownership on subsequent fundraising success. The analysis is based on a formal theory and uses detailed data from UK spin-outs. Using an instrumental variable based on precedence set by prior spin-outs, we find that 10% higher university stakes reduce the likelihood of venture capital by 3% per year. The negative effect is concentrated in less science-intensive spin-outs, and in spin-outs where the founding team includes scientists transitioning to become entrepreneurs. A 10% larger university stake also decreases the rate at which spin-outs are formed by 5%. High university stakes impede spin-out success.

ENT: **Founder's Prior Experience and the Development of Network Capability in Academic Spin-Offs**

Author: **Monika Sienknecht**, *CAU U. of Kiel*

Research on academic spin-offs (ASOs) generally calls for developing organizational capabilities, while at the same time, attesting particular challenges due to limited knowledge and experience of the science-based founding team. I argue that in order to build a specific type of competitive capability i.e., network capability, ASOs make use of the congenital knowledge, drawing upon two different types of pre-founding R&D collaboration experience of the founding team. A cross-sectional study of 229 ASOs suggests that broad pre-founding R&D collaboration experience with both, scientists and industry partners, promotes networking capability development. Shared experience among the founding team negatively moderates both relationships. The results extend our understanding of the lasting effects of founding team's prior experience on organizational capability development in ASOs. They suggest that scientists with vast experience from collaborative R&D in academia transitioning to an entrepreneurial setting equip their ASO with extensive networking capabilities. Yet, founder's shared R&D collaboration experience constrain the inheritance of broad collaboration experience to the ASOs network capability.

ENT: **How Can Cooperative Governance Make a University Entrepreneurial? The Case of Mondragon University** 

Author: **Lucia Alejandra Rodriguez-Aceves**, *U. of Bergamo*

Author: **Maite Couto-Ortega**, *Mondragon Unibertsitatea*

Author: **Tommaso Minola**, *U. of Bergamo*

Author: **Leire Markuerkiaga-Arritola**, *Mondragon Unibertsitatea*

Author: **Davide Hahn**, *U. of Bergamo*

This paper presents a single case study on the Cooperative University of Mondragon to delve into the intricate process of Higher Education Institutions (HEIs) adopting the entrepreneurial university (EU) framework across their diverse missions. Through qualitative data and analysis, this research seeks to unravel the organizational solutions employed by the University of Mondragon in embracing entrepreneurial behaviors, by building on a specific type of governance (i.e., cooperative). The findings shed light on how the Cooperative University of Mondragon, as a prominent example, leverages on a long-term vision that puts entrepreneurship at the center of its decision-making, as well as management tools and governance elements that favor collective participation and intrinsic motivation. This study advances our understanding of the evolving landscape of higher education and its entrepreneurial drift. It does so by (i) addressing the need for more research on governance in EUs; (ii) complementing existing studies on the role of university leadership in the adoption of entrepreneurial behaviors seizing opportunities and; (iii) identifying strategies to overcome barriers that inherently characterize large organizations and thus can impede universities to be entrepreneurial. Overall our study offers a set of practical implications for the adoption of entrepreneurial behaviors in HEIs.

ENT: **Universities' Sustainability Practices and the Incubation of Firms with Sustainable Orientation** 

Author: **Douglas Wegner**, *FDC - Fundação Dom Cabral*

Author: **Elisa Thomas**, *U. of Houston Downtown*

Author: **Marcelo Dias**, *Federal U. of Pelotas*

This study aims to analyze the relationship between universities' internal sustainable practices and their support for sustainable entrepreneurship, ultimately contributing to a more comprehensive understanding of universities' role in promoting sustainability and sustainable business development. We analyzed 60 U.S. universities that adopt five dimensions of sustainability practices and support business incubators. A Qualitative Comparative Analysis revealed that universities with higher scores towards sustainability in teaching and research, internal operations, strategic planning, community engagement and innovation also show a higher ratio of incubated startups that adopt a value proposition focused on sustainability. The results contribute to the theory by showing that a holistic approach to sustainability at the University level instills entrepreneurs to incubate startups that consider sustainability central to their new ventures. The results also contribute to the practice by offering guidance to universities that aim to positively contribute to implementing their third mission and impact society to become more sustainable.

Strategic Leadership

Session Moderator: **Sonal Kumar**, *Assistant professor of finance, Bryant U.*

ENT: **Founder Gender and Firm Exit Routes: The Mediating Roles of Firm Size and VC Financing**

Author: **Sonal Kumar**, *Assistant professor of finance, Bryant U.*

Author: **R. Isil Yavuz**, *Bryant U.*

Author: **Leila Zbib**, *Bryant U.*

Author: **Peter Nigro**, *Bryant U.*

While it is well established that founder gender influences starting and managing new ventures, little is known about the influence of founder gender on firm exits. In this paper, by drawing on liberal feminist and social feminist theories, we argue that female entrepreneurs are less likely to have positive exits via M&As and IPOs, and that firm size venture capital (VC) financing are two important factors mediating this relationship. We test our hypothesis using data from Crunchbase dataset on 18,495 new ventures in the US and find that firm size and VC financing fully mediate the negative relationship between female-founded firms and IPOs, but partially mediate the negative relationship between female-founded firms and M&As. These results are robust to propensity score matching. This paper provides valuable contributions to the entrepreneurship literature by explicitly investigating the mechanisms through which gender influences probabilities of positive firm exits via M&A or IPO and has important practical implications for policymakers.

ENT: **Firm-Level Consequences of Entrepreneurs' Life Events – A Dynamic Multilevel Theory**

Author: **Mateja Andric**, *U. of St. Gallen, Switzerland*

Entrepreneurs experience a variety of events in their lives such as marriage, the birth of a child, divorce, but also adverse health events or the death of relatives. Such life events do not only change the lives of entrepreneurs, but likely also affect their firms. Integrating theories on the work-life interface and on power-dependence relations, this conceptual study introduces a dynamic multilevel theoretical framework that outlines the processes through which entrepreneurs' life events incur changes in firm goals and firm performance. The proposed theory also explicates boundary conditions that influence how strongly firm-level outcomes change in response to entrepreneurs' life events. This study advances a perspective of firms' temporal embeddedness in entrepreneurs' lives, suggesting that shifts in firm goals and firm performance over time can reflect changes in entrepreneurs' lives emanating from life events that they experience.

ENT: **External Successors and Performance Change in Small Businesses: The Upper-Echelon Perspective**

Author: **Dorian Boutedjaoud**, *Burgundy School of Business*

Author: **Karim Messeghem**, *U. of Montpellier*

This paper investigates the roots of the strategies used by external successors to ensure business continuity and preserve employment. We employ the upper echelon perspective to show how top executives' characteristics – such as creativity and entrepreneurial alertness – shape organizational outcomes and lead to improved financial performance for small businesses. The study focuses on a sample of 283 French external successors. We find that creativity triggers entrepreneurial alertness, thereby increasing financial performance. Our research contributes to the upper echelon perspective and explains how the basic background characteristics of external successors shape organizational outcomes and contribute to the revitalization of the business.

ENT: **For the Long Haul: Family Firm Influence on Buyer-Supplier Relationships**

Author: **Kristen Raney**, *U. of Virginia - McIntire School of Commerce*

Author: **Pablo Casas Arce**, *W. P. Carey School of Business, Arizona State U.*

Author: **Asis Martinez Jerez**, *Cornell Nolan School of Hotel Administration*

Author: **Luis R. Gomez-Mejia**, *Arizona State U.*

Careful management of strategic partnerships, such as buyer-supplier relationships (BSR), represents a critical source of competitive advantage. Despite the importance of developing and maintaining longer-term strategic partnerships, we have limited understanding of why firms implement different approaches to buyer-supplier relationships (BSRs). That, is what are the factors that influence the pursuit and management of longer versus shorter term relationships. In this study, we draw on the socioemotional wealth perspective to theorize about the influence of family ownership and involvement on firm management of BSRs. Through integrating the literature on family business with the disparate literature on BSR management from management, marketing, supply chain, and accounting, we extend our understanding of family firms and buyer-supplier relationship management.

Uncertainty

Session Moderator: **Farzana Chowdhury**, *Durham U. Business School*

ENT: **Career Transitions and Uncertainty Acceptance**

Author: **Farzana Chowdhury**, *Durham U. Business School*
Author: **Daniel Richard Clark**, *Ivey Business School*
Author: **Robert J. Pidduck**, *Old Dominion U.*

People's decisions to accept uncertainty are critical to career- and change-related decisions. Uncertainty acceptance can occur at any age or career stage, but the motivation and connection to the career stages remain undertheorized. Evolving conceptions of the "future of work" have accelerated through conditions emerging from significant shocks such as global pandemics and geopolitical tensions, changing conditions such as technology-enabled remote work, and steadily rising global aging. Given the importance of maintaining one's livelihood and a general aversion to the stress-inducing uncertainty associated with career changes, the recent wave of career shifts underscores the limited conceptual tools scholars have with which to investigate and understand when, why, and how individuals are willing to accept and even instigate career-change uncertainties. Cognizant of the need to better identify, describe, and predict the origins and drivers of uncertainty acceptance, we utilize the person-environment fit perspective in theorizing a model whereby the desirability and feasibility of accepting uncertainty serve as a purposeful response to career dissonance, resulting from the fit, or misfit, individuals perceive concerning their existing career conditions and aspirations. We propose that individual and cultural factors moderate the desirability and feasibility of accepting uncertainty. We conclude by discussing the implications for both career and entrepreneurship literature.

ENT: **Configurations of Entrepreneurial Behaviors Amid Various Uncertainty for New Venturing Performance**

Author: **Wenjing Zhao**, *School of Management, Shanghai U.*

New ventures face a variety of environmental uncertainties as they pursue high performance, which requires firms to adopt appropriate entrepreneurial behavior to leverage uncertainties and thus benefit from them. This study aims to explore what kinds of multi-faceted entrepreneurial behaviors configurations (e.g., causation, effectuation, and entrepreneurial bricolage) best aligned with the external environment (e.g., state uncertainty, effect uncertainty, and response uncertainty) from a holistic perspective. Based on questionnaire survey data from 143 new start-ups in the China's software industry, this study employ fuzzy-set qualitative comparative analysis (fsQCA). The findings indicate that no single entrepreneurial behavior is effective, but when multiple entrepreneurial behaviors are combined, they can make better use of various environmental uncertainties to achieve high performance. Specifically, there are three configurations for high new venture performance: state uncertainty-effectuation, effect uncertainty-effectuation, and mixed environmental uncertainty-causation and entrepreneurial bricolage.

ENT: **The Effects of Monochronicity on Serendipity and Innovation Performance in Dynamic Environments**

Author: **Andrew E. F. Fultz**, *U. of Texas at El Paso*
Author: **Keith Hmieleski**, *Texas Christian U.*

Growing research indicates that business outcomes often involve some combination of effort and luck, or what is labeled serendipity—the unexpected discovery of opportunity brought about by purposeful action. Despite growing interest in serendipity, however, understanding remains limited about what firms can do to cultivate and leverage such unexpected findings. The current study demonstrates a positive relationship between firms' preferences for handling tasks one at a time sequentially (monochronicity) and the occurrence of serendipity. Further, our findings illustrate a positive relationship between serendipity and innovation performance in new ventures, a relationship that is enhanced when firms operate in rapidly changing environments. Our study provides important implications for entrepreneurship and management research on the role of agency in cultivating serendipity and for important contextual constraints that shape the value serendipity generates.

ENT: **The Economic Consequences of Hybrid Entrepreneurship: The Moderating Role of Uncertainty Avoidance**

Author: **Jialin Song**, *School of Economics & Management, Tongji U.*
Author: **Xinyu Liu**, *Tongji U.*

How does family diversity affect the income growth of hybrid entrepreneurs across different regional uncertainty avoidance level? The effect of family dynamics has received little attention in research on entrepreneurial income. Building on the family embeddedness perspective, we hypothesize that the diversity of family households at surface (age and gender) and deep (work experience and education) levels impacts the hybrid entrepreneurs' income. We further theorize that the effects of family diversity on hybrid entrepreneurial income are moderated by regional uncertainty avoidance, which largely determines the ways hybrid entrepreneurs develop attitudes and skills in dealing with family diversity. Using a sample from the China Health and Nutrition Survey (CHNS), our findings demonstrate that the hybrid entrepreneurial income is affected by deep-level diversity and surface-level diversity among family households. Moreover, regional uncertainty avoidance weakens the relationship between surface-level diversity and the hybrid entrepreneurial income, while strengthening the effects of deep-level diversity such as education diversity. This study contributes to the ongoing discussion about family dynamics and entrepreneurship variations and provides important theoretical and practical implications.

Perspectives in Entrepreneurship

Session Moderator: **Masoud Karami**, *U. of Otago*

ENT: **Creativity, Alertness, and Entrepreneurship: A Multilevel Meta-Analysis**

Author: **Masoud Karami**, *U. of Otago*
Author: **Clécio Araujo**, *pontifical catholic U. of rio grande do sul*
Author: **Jintong Tang**, *Saint Louis U.*
Author: **Lucas Roldan**, *PUCRS - Business School*

Contributing to ongoing conversations about the central role of creativity in entrepreneurship, we propose that creativity leads to positive entrepreneurial outcomes through a crucial mediating mechanism: entrepreneurial alertness. We conducted a multilevel meta-analysis of 92 published studies with 209 effect sizes extracted and a cumulative sample size of 927,615 participants. Our findings suggest that alertness fine-tunes creativity and channels it toward more promising opportunities, innovation, and firm performance. Integrating Schumpeterian and Kirznerian perspectives, this study provides a pragmatist view of entrepreneurship and paves the way for further theorizing the association between creativity and alertness in explaining entrepreneurial outcomes.

ENT: **Understanding the Role of Empathy in Entrepreneurship: A Review and Future Directions**

Author: **Sukriti Hari**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*
Author: **Sarnish Kour**, *LM Thapar School of Management Thapar U. Patiala (Punjab) India*
Author: **Raja Singaram**, *U. of Galway*

Empathy is a frequently invoked construct in the entrepreneurship literature to study a wide range of issues such as opportunity recognition and identification, novel ideation, entrepreneurial pitching success, social entrepreneurial intentions and motivations and entrepreneurial education. In this literature review, we catalog the studies and bring out the different conceptualizations, related concepts, measure and use of empathy in entrepreneurship research. The development of a specific construct such as entrepreneurial empathy is recommended. We describe the problems in the extant literature and recommend future research directions that take empathy beyond the nascent stages of the entrepreneurship process.

ENT: **In Search of Readability Across Entrepreneurship Research Journals**

Author: **Jill R. Kickul**, *USC Marshall School of Business*
Author: **Mark D. Griffiths**, *Retired*
Author: **Malin Brännback**, *Abo Akademi U.*
Author: **Sönke Mestwerdt**, *ESCP Business School*

The entrepreneurship research field has grown dramatically over the last decades in terms of overall rigor, relevance, and impact. However, we arguably still need to improve how our research translates to other audiences outside of academia. Given that most of our empirical work surveys entrepreneurship practitioners, our scholarship should have practical significance and relevance to their endeavors. The purpose of this paper is to examine the overall readability and accessibility of published entrepreneurship research with implications for its relevance and knowledge creation for stakeholders such as entrepreneurs, investors, policymakers, and students. Data were collected from the most cited articles from ten entrepreneurship journals between 2000-2019 (N=281). Surprisingly, empirical articles had a higher readability score than conceptual and qualitative articles and there was significant variation on readability across the journals. Lastly, we found support that readability scores of articles were positively related to their citation scores after controlling for number of authors and article age.

ENT: **The Problem of Opportunities and the Promise of Artifacts for Conceptualizing Entrepreneurship**

Author: **Henrik Berglund**, *Chalmers U. of Technology*

This paper argues for the theoretical and practical merits of replacing the economics-inspired nexus of individuals and opportunities with a design-oriented triad of individuals, environments, and especially the artifacts progressively designed at their interface. This shift has two related advantages. First, distinguishing between artifacts and environmental circumstances lets us conceptualize the illusive 'non-actor nexus component' with more clarity. Second, by highlighting the nature and significance of artifacts—pitches, prototypes, and plans as well as ventures as final outcomes—the design triad mirrors entrepreneurial practice thereby reducing the gap between theory and practice.

Venture Capital Influencing Factors

Session Moderator: **Alina Polkläsener**, *TU Dortmund U.*

ENT: **Starting Off Strong: How Early Employees Influence Venture Funding in the AI Sector**

Author: **Alina Polkläsener**, *TU Dortmund U.*

Rising investment amounts and increasing patent filing numbers accelerate venture scaling in the artificial intelligence (AI) sector. To achieve sustainable competitiveness and attract investors within this fast emerging, highly innovative environment, founders of AI ventures need to complement their founding team with the "right" employees early on. However, insights on the human capital of early employees and the respective signaling effect on external stakeholders are scarce. Therefore, we combine data from Crunchbase and LinkedIn to derive a unique sample of 15,134 early employees at 1,775 US-based AI ventures. Our study explains how early employees can be clustered into three groups that mirror the key tasks arising in early-stage AI ventures, namely industry and management experts suited for business tasks, academic IT managers equipped with the skills to conduct high-complexity tech tasks, and tech specialists providing the human capital required for low-complexity tech tasks. Based on signaling theory, we derive that the early hiring of industry and management experts sends the strongest positive signal towards investors and, thus, leads to the highest venture funding, followed by academic IT managers, and, lastly, tech specialists. This study contributes to human capital and signaling theory literature by examining the understudied group of early employees and introduces a temporal component into the commonly static entrepreneurship research by analyzing the moderating role of the venture's maturity stage. Our results have practical implications for both founders and investors in the AI sector supporting informed hiring and funding decisions.

ENT: **I Think We Should See Other People: The Impact of Network Turnover on VC Investment Performance**

Author: **Jitse Duijsters**, *U. of Groningen*

Author: **Vareska Van De Vrande**, *Rotterdam School of Management, Erasmus U.*

This study examines the conditions under which turnover in a firm's venture capital investment network affects its subsequent investment performance. While a firm's connections are crucial in predicting investment success, relying on the same connections over time can breed inertia and complacency. In this paper, we argue that there is an optimal point of network turnover, but also that this is dependent on the characteristics of the former partners with whom ties are severed. We collected a panel dataset of 5,157 venture capital firms across the 1990-2018 time period, and show that partner centrality and relational embeddedness affect the inverted U-shaped relationship between network turnover and subsequent IPOs. In doing so, we move beyond prior work on the project or investment level, and argue that there are additional consequences to turnover when considering the entire portfolio of ties rather than individual investments. Our findings contribute to literature taking a dynamic view on inter-organizational portfolios, and the boundary conditions of turnover in the venture capital context.

ENT: **The Role of Actively Open-Minded Thinking and Control Orientation in VC Investment Outcomes**

Author: **Randy Stein**, *California State Polytechnic U., Pomona*

Author: **Tovin Schwartz**, *vFunction, Menlo Park, CA*

Author: **Denis Iurchenko**, *California State Polytechnic U., Pomona*

Research has started to show how predictive and control strategies can each be effective in investment and entrepreneurial decisions. We bridge effectuation theory with theory on Actively-Open Minded Thinking (AOT), a construct tapping analytical, debiased reasoning skills and, in a study of venture capital investors, we present evidence supporting a novel hypothesis that AOT and being oriented towards control logic have a complimentary role in predicting success. When either AOT or control orientation, but not both, is relatively high, investors report more homerun exits. We contribute to the effectuation literature by suggesting that AOT is a type of predictive logic that captures the benefits of prediction not previously captured by conceptualizations. Additionally, while the venture capital literature has previously stressed that venture capitalists tend to be prediction oriented, we show that control orientation can be linked to success.

ENT: **Racial Minority Entrepreneurs and Venture Capital Funding**

Author: **Mauricio Mercado**, *Syracuse U.*

Author: **Jose Antonio Cerecedo-Lopez**, *U. of Texas At San Antonio*

Despite minority entrepreneurs being prone to starting more businesses than their non-minority counterparts these underrepresented groups are met with limited probabilities of receiving VC funding. To date, our understanding of how entrepreneurs' minority status influences VC decision-making is limited. The lack of access to VC capital that minority entrepreneurs face is particularly problematic as it precludes the start-up from achieving its growth potential, hinders its ability to grow at a rate that is comparable to start-ups owned by non-minority competitors, and at a broader level deprives the economy of countless potential new jobs created. To understand the inequitable funding that minority entrepreneurs receive, VC-minority entrepreneur relationship using the stereotype content model (SCM) and Intergroup Contact Theory are analyzed. Specifically, authors hypothesize that entrepreneurs' minority status, relative to non-minority entrepreneurs, negatively affects investor willingness to fund such ventures via the assessment of trustworthiness and competence of the entrepreneurs. However, we posit that VCs engaging in positive imagined intergroup contact may ameliorate the negative effects of VC stereotyping. Findings expand our systematic understanding of the investor-minority entrepreneur relationship by explaining the mechanisms through which investors make decisions about minority entrepreneurs, how dissimilarity biases influence VC decision making, and how minority entrepreneurs can potentially counteract negative subconscious investor perceptions.

Exceptional Performance and Growth

Session Moderator: **Kaushik Gala**, *Iowa State U.*

ENT: **A Distributional Perspective of Exceptional Entrepreneurial Performance**

Author: **Kaushik Gala**, *Iowa State U.*
Author: **Andreas Schwab**, *Iowa State U.*

Researchers, policymakers, practitioners, and educators increasingly recognize the extreme variation of performance in entrepreneurship. However, a variance-centric understanding of entrepreneurial outcomes remains largely lacking. While extreme performers draw attention via case studies, celebrity status, and media stories, those who teach, promote, or pursue entrepreneurship often focus on 'average' entrepreneurs or ventures. In response, scholars have begun to adopt distributions as a lens to examine the variance in quantitative measures of entrepreneurial performance. Therefore, this exploratory empirical study proposes a framework to examine exceptional performance in entrepreneurial endeavors. Here, we introduce and explicate three aspects of performance distributions – tail extremity, tail frequency, and tail impact. Moreover, we introduce a methodological innovation, the moment-ratio plot, and simulations to extract nuanced insights into exceptional performance using statistical data reported in past average-centric studies. Finally, we discuss the implications of related findings for targeted policy interventions, venture creation, venture capital investing, corporate venturing, entrepreneurship pedagogy, and future research.

ENT: **Exceptional Performers**

Author: **William John Wales**, *U. at Albany, State U. of New York*
Author: **Maksim Belitski**, *Loyola U. New Orleans*
Author: **Jeffrey A. Martin**, *U. of Alabama, Tuscaloosa*
Author: **Tatiana Romanova Stettler**, *Kent State U.*

This study tracks firm excellence in the wild by exploring the phenomenon of exceptional firm performance, focusing on outliers that achieve 'escape velocity' and transcend typical growth metrics. Utilizing a mix of qualitative and quantitative data-driven approaches, we examine organizational, regional, and industry factors that contribute to a firm's exceptional status. Our methodology involves collecting data on 14.9 million observations and 1,458,915 firms in the United Kingdom during 2001-2017 and probing the drivers of outlier firms. We adopt an abductive reasoning process, guided by previous findings on firm acceleration and growth, to explore potential factors influencing outlier emergence. This flexible approach enables us to delve into the dynamics of outlier development and formulate policy recommendations. To this end, our study examines the role of context in outlier emergence by focusing on factors that influence a firm's likelihood of becoming an exceptional outlier, and demonstrating that exceptional performers can emerge at multiple levels, including the firm, industry, and ecosystem regional levels. Taken together, what we find expands our understanding of exceptional performers, shedding light on the mechanisms within a firm and its organizational context that generate such exceptional outcomes.

ENT: **How Predictable Is Exceptional Venture Growth? Using Machine Learning to Predict Unicorn Ventures**

Author: **Suresh B Kotha**, *U. of Washington, Seattle*
Author: **Benjamin L. Hallen**, *U. of Washington, Seattle*
Author: **Sung Ho Park**, *U. of Oregon*
Author: **Ryan Allen**, *U. of Washington*
Author: **Seowon Joseph Shin**, *U. of Washington, Tacoma*

We examine how predictable is eventually achieving unicorn status for early-stage entrepreneurial startups (i.e., achieving a billion-dollar valuation while private). While past studies have examined factors impacting new firm growth, they have not explored the overall predictability of growth or examined the exceptional growth of outlier startups in modern entrepreneurship. Predicting outlier growth is essential for many stakeholders – including potential investors, employees, and partners – who wish to discern which startups to work with. We examine this using state-of-the-art Machine Learning (ML) algorithms tailored for predictive models on rich early founder and venture attributes across 2,845 startups. When tasked with pinpointing the 10 startups with the highest probability of becoming unicorns in the holdout test set, our most effective model successfully identifies 2.3 actual unicorns on average from its top 10 predictions. While a 3-fold improvement over pure chance, this predictability is still moderate. We consider how this extends past scholarship on the benefits of early founder, industry, and resource advantages to show their role in also driving outlier growth, while additionally suggesting that much variance remains for scholarship on new firm growth to explain. We also elaborate on how prediction-oriented modern ML methods open new avenues for entrepreneurial research.

ENT: **“Ecosystem Work” in Orchestrating and Scaling Startup Support Interventions**

Author: **Elie Abi Saad**, *Umeå School of Business, Economics, and Statistics*
Author: **Medhanie Gaim**, *Umeå U.*
Author: **Sujith Nair**, *BI Norwegian Business School*

In this paper, we examine how startup support interventions are orchestrated and scaled over time by zooming in on the micro-foundations that underpin their functioning. Specifically, we show how interventions that change existing venturing behaviors emerge from the interplay between macro-level ecosystem characteristics (e.g., structure, governance, and institutions) and micro-level communal initiatives, which themselves are facilitated (or impeded) by strategies to help maximize their reach and propagate their impact. We illustrate this process through an in-depth case study tracing the evolution of a startup-incumbent matchmaking program from a small pilot project to a national flagship initiative in Sweden. We introduce the concept of "ecosystem work" to capture the coordinated efforts to foster a diverse and co-evolving network around the intervention with the ultimately goal of fostering venturing activities. Our micro-foundational model of entrepreneurial support contributes to research by theorizing how localized changes to individual-level (inter)actions can transform venturing behaviors in the ecosystem, thereby illuminating new strategies for intermediaries seeking to foster entrepreneurial activity in more relevant, efficient, and scalable ways.

Human and Social Capital

Session Moderator: **Abdul Waris Jalili**, *Ph.D. Candidate, Harbin Institute of Technology*

ENT: **Entrepreneurship Education and Student Entrepreneurial Intention: A Comprehensive Review, Synthesis**     

Author: **Abdul Waris Jalili**, *Ph.D. Candidate, Harbin Institute of Technology*
Author: **Yanqing Wang**, *Associate Professor, Harbin Institute of Technology*
Author: **Som Suor**, *PhD candidate, School of Economics and Management*
Author: **Yasin Rahimi**, *Postgraduate Student*

This review paper seeks to address two key research questions: Does entrepreneurship education reliably forecast students' entrepreneurial intentions? if so, how and when does this predictive relationship occur? To answer these queries, we conducted a thorough, systematic search and review of empirical articles published between 2013 and 2023. A total of 35 papers meeting specific criteria—such as reporting empirical results, being published in English, and addressing the aforementioned research questions—were included in the analysis. The collective findings of these studies indicate a generally positive predictive relationship between entrepreneurship education and student entrepreneurial intentions. However, recent findings indicate that this connection may exhibit greater complexity than initially perceived. Notably, a range of mediators and moderators have been identified, highlighting instances where entrepreneurship education exerts an indirect influence on student entrepreneurial intentions. Although certain boundary conditions have been explored, additional research on moderators is deeply essential. The review underscores the need for more robust research designs to establish causality in this domain. Consequently, there is a crucial call to examine different facets of entrepreneurial education independently and assess complex relationships more comprehensively. This approach is imperative for gaining a nuanced understanding of the dynamics at play in shaping students' entrepreneurial intentions.

ENT: **Social Capital and Firm Performance in Developing Countries: Mediating Role of Dynamic Capabilities** 

Author: **Joyce Komakech Nabisaalu**, *U. of Mississippi*

The study investigates how entrepreneurs in developing countries transform social capital into firm performance effectively amidst challenging contextual conditions and uncertainties to navigate resource scarcity. Advanced strategic capabilities are argued to be cultivated by entrepreneurs in response to heightened costs associated with accessing social capital. Drawing on data from 406 entrepreneurs from Uganda, East Africa, a mediated model is tested, wherein sensing, seizing, and reconfiguring capabilities mediate the relationships between social capital dimensions (social network and relational capital) and firm performance. The findings highlight the direct influence of an entrepreneur's social network on firm performance, while a seizing capability suppresses this relationship. Notably relational capital requires the development of all three types of capabilities to translate its intangible value into an enhanced firm performance. The study contributes both theoretically and practically to social capital and dynamic capabilities.

Author: **Franz Waldenberger**, *German Institute for Japanese Studies*

While the performance implications of firms' entrepreneurial orientation (EO) have been extensively studied, less is known about EO antecedents. Furthermore, most studies that have examined EO predictors have focused on external or organizational factors. We identify start-up founders' human capital, which has been found to influence business outcomes of start-ups, as an antecedent of the firms' EO. We study the influence of four sub-dimensions of founders' human capital (higher education, business leadership experience, entrepreneurial experience, and international experience) on three EO sub-dimensions (innovativeness, proactiveness, and risk-taking) in a longitudinal study of 1,029 start-ups from China, South Korea and Japan. While the founders' higher education is not related to any EO sub-dimension, their entrepreneurial experience is positively related to the start-ups' proactiveness, and their business leadership experience and international experience are positively related to all three EO sub-dimensions. From a theoretical perspective, our findings demonstrate a need to differentiate between sub-dimensions of founders' human capital when studying their influence on start-ups' EO. In addition to commonly used sub-dimensions, we highlight the importance of international experience. From a practical perspective, our results indicate that founders can leverage their business leadership experience, entrepreneurial experience and international experience to strengthen their firms' EO.

ENT: **The Effects of Entrepreneurship Education: A Literature Review on Task and Non-Task-Related Outcomes**

Author: **Ilaria Cascavilla**, *U. degli Studi di Bergamo*
Author: **Tommaso Minola**, *U. of Bergamo*

The importance of entrepreneurship as a key driver of job creation and economic growth is widely recognized. Entrepreneurial University, with its Entrepreneurship Education interventions and programs, aims to promote entrepreneurship in many ways. However, the role of the Entrepreneurial University goes well beyond venture creation. This study systematically reviews 160 empirical articles from 2000 to 2023 on the effect of Entrepreneurship Education. The findings reveal that previous research focused on assessing the impact of entrepreneurship courses solely on outcomes associated with entrepreneurship-related dynamics and venture creation. Embracing the Human Capital in entrepreneurship research [Marvel et al. (2016), *Entrepreneurship: Theory and Practice*, 40(3), 599-626], we first elaborate why a specific task-related investment in human capital, such as Entrepreneurship Education, could lead to both task-related and non-task-related outcomes; then we show that, despite such potential, the literature currently overlooks the non-task-related dimensions and only focus on task-related ones. In addition, this study presents a research agenda to identify which specific categories of outcomes require further exploration. The study emphasizes the need to focus on non-task-related knowledge, skills, and abilities that are beneficial for success in various domains, not just for aspiring entrepreneurs.

Entrepreneurial Journey

Session Moderator: **Bob Bastian**, *U. of Trento*

ENT: **Metacognition and Stakeholder Enrollment: Cognitive Frames in the Entrepreneurial Process**

Author: **Bob Bastian**, *U. of Trento*

Author: **Nicolai J. Foss**, *Copenhagen Business School*

Entrepreneurs are often critically dependent on their stakeholders. An important challenge for entrepreneurs is to convince and involve key stakeholders so that they see themselves as part of a collective effort towards realizing a novel value proposition, that is, they adopt a We-framing of the collaboration. We argue that stakeholders are stratified in terms of their importance to the entrepreneurial venture and how much interaction is required between the entrepreneur and the relevant stakeholders. Awareness about collaboration goals as well as collaboration frictions is particularly important for relations that involve the key stakeholders. This involves incorporating the knowledge representations of the key relevant stakeholders to formulate mutual collaboration goals, but also includes devising ways to anticipate and reduce potential frictions to the collaboration, particularly when adaptation is required. To better understand this challenge, we draw on recent cognitive science literature, theorizing a social metacognition perspective on stakeholder enrollment. We conceptualize joint metacognition as a way through which entrepreneurs and their key stakeholders jointly reach greater understanding in their process of enrollment, and describe how perceived goals, knowledge, and beliefs of others are adjusted to what is best for the collaboration, and how debiasing may assist this process. Lastly, we discuss two distinct forms of metacognition which leads entrepreneurs and key stakeholders to consider their collaboration goals and overcome cognitive frictions.

ENT: **Maintaining Balance Through the Ups and Downs of Entrepreneurial Venturing**

Author: **Lauren Atkinson Zettel**, *Central Michigan U.*

The emotional rollercoaster of entrepreneurship is characterized by encounters with challenges that impede the progress of venture founders. For this reason, resilience, which is reflected in the ability to maintain functioning through such challenges, has become of particular interest to scholars of entrepreneurial venturing. The literature on psychological resilience emphasizes the ability of resilient individuals to maintain and utilize positive emotions to their advantage in challenging times. Yet, the resilience literature has largely overlooked the role of affective fluctuations in resilience processes, which is problematic for entrepreneurs facing the highs and lows of venturing. This research investigates the relationship between resilience and affective fluctuations for entrepreneurs working through a venture-related challenge. The results have implications both for the theory of psychological resilience, as well as for how entrepreneurs may enact resilience in adverse circumstances.

ENT: **Long-Term Strategic Decisions in Family Firms: A Temporal Motivation Theory Perspective**

Author: **Zulfiqer Ali Haider**, *Assistant Professor, Western U.*

Author: **James J Chrisman**, *Mississippi State U.*

Author: **Hanqing Chevy Fang**, *U. of Missouri/Rolla*

Author: **Zhenyu Wu**, -

In this paper, we use temporal motivation theory to study long-term oriented strategic decisions in family firms. We focus on the four key aspects of this theory (time sensitivity, expectancy, value and the framing of losses and gains) and test whether its predictions apply to family firms' long-term strategic decisions which are proxied by a composite measure based on asset durability, capital expenditure and research and development expenses. Our findings on an international longitudinal sample of publicly-listed firms from 2007-2018 show that, while family firms have lower sensitivity to time delays in future utilities, the extent of actual long-term decisions are significantly influenced by their economic and non-economic performance, the family generation in control, as well as the interaction between and family- and national-level values.

ENT: **Market Switching in Serial Entrepreneurship and Venture Performance in the US Feature Film Industry**

Author: **Qinyue Chen**, *School of Business, Renmin U. of China*

For serial entrepreneurs, they are often faced with two alternatives when entering a new market, that is starting a new business in the original market category or switching to a new market category. Drawing on the entrepreneurial learning theory, we examine how serial entrepreneurs' market switching activities contribute to venture performance. Using cross-sectional data of 1887 observations based on the U.S. feature film industry from 2011 to 2020, our findings reveal a U-shaped relationship between serial entrepreneurs' market switching and venture performance. We also find that both serial entrepreneurs' degree of specialization and market competition intensity would attenuate this curvilinear relationship. These findings offer fresh insights into the literature on serial entrepreneurship by investigating the outcomes of market switching and exploring the learning process. This study also provides valuable guidance for serial entrepreneurs when deciding whether to switch markets.

Rural Entrepreneurship

Session Moderator: **Leif Brändle**, *U. of Hohenheim*

ENT: **Mobility Maintenance: Intergenerational Social Mobility and Entrepreneurial Entry**

Author: **Leif Brändle**, *U. of Hohenheim*

Author: **Anna-Lena Rönnert**, *U. of Hohenheim*

Author: **Christopher Albert Sabel**, *Rotterdam School of Management, Erasmus U.*

Increasing evidence shows that social class affects the propensity to pursue entrepreneurial opportunities. However, entrepreneurship research has either focused on the impact of social class during childhood or the effects of the current social class while neglecting movements between social classes (i.e., social mobility). While higher social class positions facilitate entrepreneurial entry, we argue that mobility maintenance, especially avoiding the loss of job and wage stability, explains why the upwardly mobile are less likely to become entrepreneurs. We explore under which conditions social mobility affects entrepreneurial entry. Based on longitudinal data on 21,960 individuals, we demonstrate that, while higher social class is positively associated with entrepreneurial entry, upwardly mobile individuals, when compared to immobile individuals, are less likely to enter entrepreneurship. Contrary to common assumptions in the literature on family backgrounds, we find that having entrepreneurial parents reinforces this relationship. We attribute this to upwardly mobile individuals' tendencies to dissociate from their parents' social class.

ENT: **When May Age Not be a Barrier to Entrepreneurial Entry of Senior People in Rural Areas**

Author: **Honglan Yu**, *Huddersfield Business School, U. of Huddersfield*

Author: **Xiaoying Li**, *U. of Essex Business School*

Author: **Qihai Huang**, *Huddersfield Business School, U. of Huddersfield, UK*

Author: **Guowei Cai**, *Sun Yat-Sen U. Business School*

This paper aims to contribute to senior entrepreneurship and rural entrepreneurship literature by developing a contingency view regarding the likelihood of entrepreneurship entry by senior people in rural areas in emerging economies. Based on utility theory, we propose that multi-level factors and their joint effects help overcome the barriers to entrepreneurial entry by older individuals. Our results, based on the Chinese Labour-force Dynamics Surveys (CLDS) data comprising 8,692 individual-year observations in 209 villages in 2012, 2014 and 2016, indicate that individual geographical mobility attenuates the negative effect of older age on entrepreneurship entry in rural areas. While village democratic governance does not independently have a mitigating effect, its interaction with individual geographical mobility weakens the negative impact of older age on entrepreneurship entry. Our research has theoretical and policy significance for understanding entrepreneurial entry of senior people in rural areas in addressing the challenges of ageing society.

ENT: **Age Diversity and Social Entrepreneurship: A Neuroscience Perspective**

Author: **Rai Siddhant Sinha**, *NEOMA Business School*

Author: **Sreevas Sahasranamam**, *U. of Glasgow*

Often entrepreneurs of different ages team up for a social impact, yet current entrepreneurship literature is evasive of how age diversity impacts social venture performance. Extant research provides us with contradictory arguments about the relationship between age diversity and firm performance, leaving us with more questions than answers. Thus, this work dives deeper into the cognitive realm of entrepreneurial team dynamics and offers a fresh perspective informed by affective neuroscience literature integrated with the upper echelons theory to provide empirical evidence of how age diversity in teams hurts social venture performance and discuss its boundary conditions.

ENT: **Unearthing Tales of Rural Entrepreneurship in Developed and Developing Economies**

Author: **Janvi Patel**, *IIM Kozhikode*

Author: **Anubha Shekhar Sinha**, *Indian Institute of Management, Kozhikode*

While the broader field of entrepreneurship has witnessed substantial attention in recent decades, the specific subdomain of "rural entrepreneurship" has experienced a notable lag. Furthermore, research on rural entrepreneurship has predominantly concentrated on developed economies, primarily emphasizing agricultural activities. Consequently, there is a compelling need to amalgamate the literature from both developed and developing economies to present a comprehensive understanding of rural entrepreneurship and encourage its broader application. This review seeks to examine the antecedents and outcomes for rural entrepreneurs in both developing and developed economies. In developing economies, rural entrepreneurship is markedly influenced by necessity-driven factors, whereas in developed economies, it is predominantly motivated by opportunistic considerations. This review encompasses an analysis of 131 studies published in leading management and entrepreneurship journals spanning the period from 1991 to 2021. Entrepreneurs in rural areas of developing economies often engage in entrepreneurial endeavors as a means to address challenges such as unemployment, poverty, and destitution. In contrast, their counterparts in developed economies embark on entrepreneurship for additional income, optimal resource utilization, and mitigating social isolation. Keywords: Rural entrepreneurship, developed economies, developing economies, systematic literature review, antecedents, outcomes

Leadership and Strategy

Session Moderator: **Tabea Brüning**, *Leuphana U. Lüneburg*

ENT: **Unintended Consequences of Field Experiments in Poverty Settings**

Author: **Tabea Brüning**, *Leuphana U. Lüneburg*
Author: **Tim Weiss**, *Imperial College London*

Extant research has shown that field experiments may generate unintended consequences. Yet, our understanding of these and how to mitigate their impact remains nascent. In this study, we conduct a follow-up fieldwork and qualitative investigation of a large-scale randomized controlled field experiment in Sub-Saharan Africa. Our empirical results suggest that the field experiments realized two unintended sub-treatments. We capture the subsequent unintended effects and their impact on the decision-making and actions of participants. We argue that unintended consequences provide an insight into the non-theorized dimension of field experiments that interact, often in unforeseeable ways, with the intended, theorized dimension of field experiments. We propose in situ and post hoc observational and interview data collections as a methodological innovation to pragmatically track and mitigate unintended consequences. We also propose a fully embedded case study design of field experiments to systematically build our understanding of how non-theorized and theorized dimensions of field experiments interact in shaping dependent variables.

ENT: **Unmasking Entrepreneurial Leadership: Aspects by Which Leaders Influence Small Business**

Author: **Kingsley O. Omeihe**, *U. of the West of Scotland*
Author: **Ibiyemi Omeihe**, *U. of the West of Scotland*
Author: **Stephen Isa**, *The Business School, Edinburgh Napier U., Edinburgh, UK*

This present paper explores the state of entrepreneurial leadership in small businesses, an area that is very much in its infancy. It discusses the context of entrepreneurial leadership and summarises research evidence related to the narratives of Nigerian business owners. Using field data and existing literature, we advance a formal definition of entrepreneurial leadership and induce the introduction of entrepreneurial relational characteristics, attributes and skills. We demonstrate the socially constructed nature of entrepreneurial leadership and indicate the seemingly valuable interplay between selective and strategic attributes. Central to our contribution is the notion that empathy and people management are dominant relational characteristics. We conclude by providing implications for practice and policy as well as directions for future research.

ENT: **Understanding the Family Business Effect in Online Environments: Exploring Family Business Brands**

Author: **Fabian Diaz**, *U. of Louisville*
Author: **Isabel C. Botero**, *U. of Louisville*

Researchers have argued for the “family business effect” (i.e., the benefit of the connection between family and business systems) as a source of differentiation in the marketplace. However, most of that work lacks ecological validity and focuses on the family business as the sole provider of information about the family brand. This study explores how family business brands work in online environments and the impact that they have on online reputation. We test our ideas with a dataset of 12,310 businesses, amassing 331,256 reviews between 2006 and 2021. Our results provide support for the notion that family firm branding on online platforms is generally beneficial for businesses’ online reputation. However, contrary to our expectations, we also find that reviewer usage of family firm branding terms on their reviews has an attenuating effect on the relationship between family firm branding by the firm and their online reputation. Implications of these results are discussed.

ENT: **Understanding Resource Orchestration in Start-ups : Exploratory Case Studies in Africa**

Author: **Toussaint Bugandwa**, *UCLouvain*
Author: **Mahamadou Biga Diambeidou**, *LouRIM, UCLouvain*
Author: **Brett Gilbert**, *American U.*
Author: **Daniel Manyabe**, -
Author: **Yeguignafere Diarrassouba**, *CESAG*
Author: **Benoit Gailly**, *LOURIM, Louvain School of Management*
Author: **Gyewan Moon**, *Kyungpook National U.*

Startups in developed countries lack equal access to resources, and this reality complicates entrepreneurs’ ability to orchestrate their resources to create competitive advantage. Despite this fact, we know less about how entrepreneurs in resource constrained environments navigate the challenges of the environment to acquire the resources their ventures require. This research explores this question in the context of the Democratic Republic of Congo in Africa. Using a qualitative approach, 13 startups are interviewed and analyzed to understand how entrepreneurs structured, bundled and leveraged resources to build companies in an environment with few resources for technology venture creation. Results show that the resource orchestration process is not easily followed by these ventures, and questions its application in resource-constrained contexts, and especially in the under-researched context of Francophone Africa. One of the contribution that this study offers is the insight that local partners at founding may be more important than international partners for helping firms manage resources in resource constrained environments. Keywords: Africa, Startups, Resource Orchestration, Lean Startup, Technology

Entrepreneurship and Well-Being I

Session Moderator: **Omima Elkailani**, *Alberta School of Business*

 **ENT: Coping with Indeterminate Dangers in a Violent Conflict Zone: A Study of Libyan Women Entrepreneurs**    

Author: **Omima Elkailani**, *Alberta School of Business*

Author: **Jennifer E Jennings**, *U. of Alberta*

Responding to the call for recalibrated entrepreneurship research that embraces the pluralism of entrepreneurial activity and is open to contextually grounded theorizing, this paper investigates the lived experiences of women entrepreneurs in a violent conflict zone. Although such contexts may seem 'extraordinary' relative to the stable and benign settings underlying the vast majority of extant scholarship, unfortunately, such environments are 'ordinary' for the millions of people who live within them. Adopting an inductive theory-building approach, we analyzed qualitative data collected from interviews with 30 women who had launched businesses in Libya—a country that has become one of the most dangerous in the world after the 2011 Arab Spring uprising. Our findings illuminate the indeterminate everyday dangers that exist for women entrepreneurs in such a context, the tactics that they implement as attempted coping/surviving mechanisms, and the consequences for themselves, their businesses, and other citizens. Collectively, the emergent insights from our study not only extend—but also challenge—several taken-for-granted understandings about entrepreneurship, derived primarily from Western theory and research, in which entrepreneurs are presumed to operate in environments of relative peace.

ENT: Historical Pathogen Prevalence, Collectivism, and Different Forms of Entrepreneurship 

Author: **Yida Tao**, *Shanghai U.*

Author: **Xiaoyu Yu**, *Shanghai U.*

This study draws on the parasite stress theory of values to investigate the epidemiological origins of entrepreneurship. This study considers both the rate of entrepreneurship and the proportions of three forms of high-quality entrepreneurship (i.e., technology entrepreneurship, growth-aspiring entrepreneurship, and export-oriented entrepreneurship). By analyzing a country-level dataset spanning 14 years, this study finds that historical pathogen prevalence positively affects the rate of entrepreneurship, but negatively affects the proportions of technology entrepreneurship, growth-aspiring entrepreneurship, and export-oriented entrepreneurship. Collectivism is found to mediate the effects of historical pathogen prevalence on entrepreneurship and technology entrepreneurship. We also find partial support for the hypothesis that collectivism mediates the effects of historical pathogen prevalence on export-oriented entrepreneurship. This study contributes to a better understanding of the relationship between infectious diseases and entrepreneurship (and more broadly, economic activity), and reconciles the inconsistent findings in the literature on the relationship between collectivism and entrepreneurship. The implications for policy-makers are also discussed.

ENT: Mindfulness Enhances Entrepreneurial Well-Being Through Supporting Co-Founder Goal-Coordination

Author: **Eva Peters**, *Singapore Management U.*

Author: **Jochen Matthias Reb**, *Singapore Management U.*

Author: **Kenneth Tan**, *Singapore Management U.*

Research on entrepreneurial well-being (EWB) is increasingly moving to the center stage of entrepreneurship research. However, limited research has explored co-founder relationships and their influence on EWB. Taking a relational perspective, we draw on Self-Determination Theory and Transactive Goal Dynamics Theory to propose that mindfulness supports better goal coordination among co-founders, which leads to better relationship quality and, ultimately, higher individual EWB. Across two studies involving 516 entrepreneurs, we found support for a sequential mediation from mindfulness via goal coordination to co-founder relationship quality and, finally, entrepreneurial well-being. We discuss contributions to the entrepreneurship, mindfulness, and interpersonal relationships literature.

ENT: Same Role at Work, Different Role in the Family: Gender Differences in Sources of Well-being 

Author: **Xu YAN**, *Hong Kong U. of Science and Technology*

Author: **Liangang Cui**, *Business School at Nankai U.*

This study explores the different pathways to entrepreneurial well-being for male and female entrepreneurs by simultaneously considering the conditions of the work-family interface and entrepreneurial identity. Drawing upon role congruence theory and job demand-resource theory, we propose that, influenced by role stereotypes, male entrepreneurs' well-being is determined more by their work than their family, while female entrepreneurs' well-being is determined more by their family than their work. Furthermore, indicated by entrepreneurial identity, when entrepreneurship implies more resources than demands for entrepreneurs, work-family enrichment becomes more important than conflict, and vice versa. Our arguments are supported by the results of fuzzy-set qualitative comparative analysis and regression analysis conducted on a field survey of new venture founders in China. We contribute to a nuanced understanding of the gender differences in pathways to entrepreneurial well-being.

Society, business, and innovation are interlinked – meaning that the social context in which a company is embedded plays a critical role in influencing a company’s founding, growth, hiring, and capability to innovate. While extant research highlights several interdependencies between societal dynamics, business outcomes, and innovation, in today’s rapidly changing political and technological climate, there is an opportunity for scholars to strengthen our understanding of the intricate processes connecting business and society. The goal of this symposium is to advance more research in this area by identifying specific ways in which today’s society shapes business outcomes via political, technological, and social processes. Some critical questions that will be answered include: what is the impact of growing political polarity on the distribution of high-skilled labor, patents, and innovation? How do emerging technologies such as generative AI impact the information value of signals available in hiring and venture capital settings? Are nascent entrepreneurs in communities with stronger social ties able to exploit external advice better? In doing so, the symposium will bring together multidisciplinary management research to highlight the interplay between business, society, and innovation.

Unpacking Acceleration Heterogeneity: A Multilevel Perspective

Session Chair: **Shaker A. Zahra**, *U. of Minnesota*
Presenter: **Miriam Erez**, *Technion - Israel Institute of Technology*
Presenter: **Violetta Gerasymenko**, *Oregon State U.*
Presenter: **Sandy Yu**, *U. of Minnesota*
Presenter: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*
Presenter: **Shelly Lev-Koren**, *Technion - Israel Institute of Technology*

Research on business accelerators has grown rapidly over the past decade. This growth reflects the importance of accelerators for new ventures' growth and access to resources. Accelerators also provide new ventures with opportunities for networking and mentorship, promoting their learning and acquisition of the skills and capabilities essential for their survival and growth. Participating in these programs also gives new ventures opportunities to refine their business models and strategies, sharpening their competitive advantages. Further, admission into these accelerators serves as a signal of legitimacy that enhances these ventures' market standing. Given these diverse benefits, business accelerators have become a vital means of developing local, regional, and national entrepreneurial ecosystems that enhance job creation, improve employment, enable technological and social progress, and improve competitiveness. This symposium takes a multi-level approach to study new ventures' growth in accelerators from the micro, meso and macro levels. We do so by: (1) offering four empirical studies that cover the micro, meso, and macro levels; (2) highlighting points of intersection across these levels; and (3) articulating the theoretical, empirical, and practical implications for future research.

HCM: Factors Influencing Recruitment and Retention of Oklahoma FQHC Managers: A Phenomenological Study

Author: **Courtney Hamby**, *Northeastern State U.*

Author: **Carissa Smock**, *National U.*

Healthcare workforce shortage impacts all system stakeholders, particularly rural Federally Qualified Health Centers (FQHC) in the United States. The purpose of our study is to examine current workforce recruitment and retention practices perceived by managers in rural Oklahoma FQHC healthcare organizations. Our research utilizes a qualitative, phenomenological approach to conduct in-depth interviews via Zoom. We explore the lived experiences of rural FQHC managers with at least five years of experience to discern the nuanced aspects that influence their practices. Based on the literature, we developed the interview protocol, recorded, transcribed, interviewed, and performed member checking to ensure accuracy. Utilizing NVivo, we analyzed perceptions with a thematic analysis. We interviewed (n = 18) managers identifying key themes including learning and growth, positive experiences, COVID-related challenges, unawareness the FQHC mission upon employment, implementation of technology and word of mouth for recruitment, operational and competitive job market concerns, rewards and recognition, passion for serving the population as important recruitment, and retention factors for rural healthcare managers. Our research illuminates unique workforce recruitment and retention challenges faced by FQHC managers. Findings may assist healthcare practitioners, policymakers, and researchers invested in enhancing the effectiveness of recruitment and retention with targeted strategies within rural healthcare settings.

HCM: Escaping the Professional Identity “Straitjacket”: Towards a Model of Identity Plasticity

Author: **Elisabeth Andvik**, *BI Norwegian Business School*

Author: **Therese Egeland**, *NHH Norwegian School of Economics*

Author: **Vidar Schei**, *NHH Norwegian School of Economics*

Interprofessional teamwork may threaten professional identities and consequently impede collaboration. This is particularly the case in health care, where resilient professional identities and practices contradict. However, our ethnographic study of interprofessional health care teams showed that over time, professionals reduced identity tensions and escaped their professional identity “straitjacket” to extend their professional identity repertoire. Through real-time observations and interviews, we delineated the process of professional identity reconstruction, which has been insufficiently accounted for in interprofessional teams thus far. Drawing upon literature on identity work and identity play, we explicated five phases of identity reconstruction in our identity plasticity model: shattering, shielding, juggling, fusing, and embodying. This highlights the plastic nature of professional identities, in which advanced phases are fueled by a professional’s courage, vulnerability, and flexibility. Our findings contribute to theoretical insights on the plastic nature of identity, extending how professional identities become reconstructed in interprofessional teams. This has valuable implications for practice in highlighting mechanisms that may boost identity reconstruction to augment collaboration.

HCM: Racial/Ethnic Group Differences in Patient Psychological Safety: Qualitative Patient Narrative Study

Author: **Cheryl Rathert**, *Saint Louis U.*

Author: **Derick Simmons**, *Saint Louis U.*

Author: **Jessica N. Mittler**, *Virginia Commonwealth U.*

Author: **Kimberly Enard**, *Saint Louis U.*

Author: **Joanna Veazey Brooks**, *U. of Kansas Medical Center*

The existence of racial and ethnic disparities in health outcomes is well-established. In addition to historical discrimination and social determinants, disparities can result from lower-quality health care relationships historically marginalized groups may experience with health care providers and systems. The extent to which patients can connect with and be understood by care providers is thought to play a key role in their subsequent diagnoses, treatments, and finding the right care plans for them. Recent research has found that many patients express the need for psychological safety (PPS) in order to feel connected. Thus, we were interested in exploring whether there exist racial/ethnic differences in experiences of PPS, as a lack of safety could reduce patients’ abilities to connect with providers. This study used a patient narrative approach in a large sample of patients from across the U.S. (n=1766) to examine what patients say about PPS, and to explore the extent to which their descriptions may vary by race and/or ethnicity. Patient comments were coded to fit into one of four sequential psychological safety stages. Analysis found that nearly all patients described some level of PPS in order to feel connected, with greater proportions of Black and Hispanic/Latino patients expressing the need for inclusion safety, that is, the need to be welcome and respected as a human being. In contrast, White patients were more likely to express the need for contributor safety, or the need to have influence on their care. While our data are limited and preliminary, the finding of racial/ethnic differences in PPS in terms of connecting with providers is worthy of timely future research.

Author: **Alden Lai**, *New York U.*

Author: **Jemima Frimpong**, *New York U. (NYU), Abu Dhabi*

Proactive behaviors at work refer to behaviors that are self-starting, future-focused, and change oriented. These behaviors can benefit both the employee (e.g., job promotion) and organization (e.g., innovation). Proactive behaviors are generally thought of as positive and desired. However, they can also backfire (e.g., due to unintended consequences), reflecting what scholars have called the “proactivity paradox.” Through the perspectives of health care executives, we investigated how health care workers can be more effective when engaging in proactive behaviors. We used the episodic narrative interview method, where health care executives narrated instances of proactive behaviors among health care workers that they considered to be effective or ineffective. We then performed an inductive, qualitative analysis of these episodes. We found that the effectiveness of proactive behaviors among health care workers is shaped by three dimensions: managerial expectation (in)congruence (e.g., going through chain of command); organizational priority (in)congruence (e.g., not overly motivated by individual benefits); and boundaries of action and change (e.g., financial budgets). Our results show that engaging in proactive behaviors is not a straightforward process; there is a considerable amount of navigation needed for health care workers to be effective. Further, health care workers should equip themselves with knowledge on relevant expectations, priorities, and boundaries when engaging in proactive behaviors at work. Among the dimensions, managerial expectations may be the most challenging for health care workers to access. Health care managers and leaders should thus aim to share these expectations so that workers can better use proactivity to generate benefits for themselves and the organization.

Global HRM: Navigating Cross-Cultural Challenges and Multinational Strategies

Session Moderator: **Anna Yumiao Tian**, *Xi'an Jiaotong-Liverpool U.*

HR: **The Role Played by Trust in Reverse Knowledge Transfer: The Case of a Chinese Acquisition in the UK**

Author: **Anna Yumiao Tian**, *Xi'an Jiaotong-Liverpool U.*
Author: **Mohammad Faisal Ahammad**, *Sheffield Hallam U.*
Author: **Shlomo Yedidia Tarba**, *U. of Birmingham, UK*
Author: **Riikka Sarala**, *UNC Greensboro*
Author: **Ahmad Arslan**, *OBS - Oulu Business School Finland*
Author: **Pia Paulina Junni**, *Aalto U. School of Business*

Trust is a critical, yet under-examined mechanism in reverse knowledge transfer (KT) in cross border acquisition. Our article presents an empirical investigation of the role played by trust in reverse KT. Based on a survey conducted on a sample of 103 employees of a Chinese acquiring firm and its UK subsidiary, we established that trust is affected positively by distributive justice and negatively by psychic distance between acquiring and acquired firm. Moreover, we found that the negative effect of psychic distance on trust is lowest when perceptions of procedural justice are highest. Furthermore, we found that trust positively impacts reverse KT between acquiring and acquired firm, playing a pivotal role in it. Rather strikingly, we found no direct association between absorptive capacity of acquiring firm and reverse KT. However, we found that trust plays a mediating role in explaining the relationship between the absorptive capacity and reverse KT.

HR: **The Lived Experiences of Qualified Black Female Expatriates in the UAE**

Author: **Milena Tekeste**, -
Author: **Chris Brewster**, *Henley Business School, U. of Reading*

This study delves into the underexplored realm of the experiences of qualified black female self-initiated expatriates. Employing a multi-level framework, we investigate the interplay between macro-level societal perceptions, meso-level employment conditions, and micro-level interpersonal dynamics, with the United Arab Emirates as our research site. We reveal the profound impact of racial and gender discrimination, leading to a range of negative experiences, from subtle microaggressions to explicit stigmatization and biases. These experiences, in turn, significantly affect the mental health and well-being of black female expatriates, manifesting as anxiety and stress and leading to employment turnover. The study emphasizes the critical role of the leader-member dyad in influencing these experiences and underscores the urgent need for organizations to address institutional racism. The research advances our understanding of the challenges black female face in the expatriate context and calls for a comprehensive examination of workplace discrimination in the global labor market.

HR: **Talent Retention Effectiveness in the Era of Deglobalization: The Role of National Institutions**

Author: **Hilla Peretz**, *Braude Academic College of Engineering*
Author: **Vlad Vaiman**, *California Lutheran U.*

Aligned with the demand for a more nuanced understanding of the efficacy of talent retention strategies, this research investigates how institutional context moderates the relationship between retention strategies and organizational turnover rate. This connection is becoming especially crucial in the times of deglobalization, as this trend, whether temporary or more permanent, has significant implications for talent management in general, and talent retention in particular. Thus, the study enhances our understanding of the macro-level factors affecting talent retention strategies in MNC subsidiaries in the post-COVID, deglobalization era. Specifically, the study demonstrates that the effect of specific talent retention strategies (such as a 'wellbeing'-oriented strategy, an 'enrichment'-focused strategy, and a 'financial'-centric strategy) on voluntary employee turnover hinges, to a greater extent, on the institutional contexts of respective host countries. We discuss the theoretical and practical implications of our findings and suggest avenues for future investigation.

HR: **The Nature and Context of Human Resource Management in Cameroon**

Author: **Julius Nyiauwung**, *Maynooth U., Ireland*
Author: **Serge Mandiefe Piabuo**, *World Bank Cameroon*
Author: **Marian Crowley-Henry**, *Maynooth U.*
Author: **Janice Tieguhong Puatwoe**, *Research Centre for Sustainable Development (RECSUD) Cameroon*

This paper considers Human Resource Management in an African setting, specifically in the West-Central African country of Cameroon, a country with over 27 million inhabitants. The different influences on HRM practices in Cameroon are unpacked from qualitative interviews within different types of companies and from secondary sources. The findings point to a complex mix of local, imported and adapted HRM practices in a simultaneous flux of adoption, redesign, and disuse by companies in the country. The fluidity of the HRM model that is practised in Cameroon is underscored, as a constantly evolving and changing system, in alignment with the macro-, meso-, and micro-levels contextual features that shape, and are in turn influenced by, HRM approaches in Cameroon. We contribute to critical, international and contextual HRM in the Global South through evidence-based narratives within operating companies in Cameroon, discerning the key practices and influencing factors of HRM within the political, economic, institutional, historical, and organizational contexts of Cameroon.

Talent Management in the Digital Age: Strategies for Hiring and Recruitment

Session Moderator: **Farid Jahantab**, *Sam Houston State Uni*

HR: **A Workgroup Examination of Perceived Overqualification and Counterproductive Work Behaviors**

Author: **Farid Jahantab**, *Sam Houston State Uni*
Author: **Prajya Rakshit Vidyarthi**, *U. of Texas at El Paso*
Author: **Smriti Anand**, *Illinois Institute of Technology Stuart School of Business*

This study examines the possibility of a non-linear relationship between perceived overqualification (POQ) and counterproductive work behaviors (CWB) in the workgroup context of justice and task interdependence. Drawing upon justice theory, we integrate two contrasting perspectives on employee POQ to offer a more accurate nonlinear nature of the relationship between POQ and CWB moderated by workgroup attributes of justice climate and task interdependence. Multilevel analyses of multi-source data from 209 employees and 39 managers nested in 39 workgroups showed an inverted U-shaped relationship between POQ and CWB with the highest level of CWB occurring at the intermediate levels of POQ. Moreover, moderation analyses revealed that workgroup justice climate and task interdependence independently influence the curvilinear relationship between POQ and CWB. Implications and directions for future research are discussed.

HR: **It's all About Uncertainty: (De-) Activating Hope and the Hope-as-Ambiguity-Preference Hypothesis**

Author: **Sarah Klein**, *Brandenburg U. of Technology, Cottbus*
Author: **Diemo Urbig**, *Brandenburg U. of Technology Cottbus-Senftenberg*

Existing research focuses on hope as a motivational driver for personal effort. We argue that hope can facilitate individuals' decisions for and against effort, depending on different goal-related levels of uncertainty. Based on two experiments with hope-inducing scenarios, we tested our theory in a health context and in an occupational context with overall 662 participants. Our findings indicate that the effects of hope on individuals' goal-related actions are critically dependent on the level of outcome ambiguity. Depending on the level of ambiguity hope can trigger effortful or effort-avoidant behavior. We contribute to research by linking two disconnected theories, which ultimately leads to the hope-as-ambiguity-preference hypothesis and offers new research opportunities for research on hope in management and organization and on human decision making.

HR: **External Human Capital Sourcing Strategies of Lower-Reputation Professional Service Firms**

Author: **Ilhwan Na**, *U. of Kansas*
Author: **Clint Chadwick**, *U. of Kansas*

Attracting and employing workers with the necessary human capital, or human capital sourcing, is crucial for the success of any knowledge-intensive firm. Prior studies indicate that firms with a higher reputation gain a competitive advantage by leveraging worker human capital. However, firms with relatively low reputations may face inherent challenges when competing with higher-reputation counterparts for human capital sourcing. What are the specific challenges confronted by these firms, and what unique strategies can they implement to address these challenges? We propose a theoretical framework that examines labor market frictions as barriers to worker entry in lower-reputation firms and the coping strategies employed by these firms, within the professional service industries. Building on this framework, we then develop hypotheses concerning the unique preferences of lower-reputation firms for two strategies for human capital sourcing: (1) supplementary quality and opportunity signals and (2) alternative sources of labor untapped or underutilized by higher-reputation firms. Through an empirical analysis of multi-sourced data from U.S. corporate law firms spanning the years 2000 to 2020, we find evidence that mostly supports the specific behavioral patterns exhibited by lower-reputation firms. We then discuss the implications of these findings for the relevant literature.

HR: **Your Friend Cannot Work Here: How Referrers Respond When Their Employer Rejects Their Referral**

Author: **Jenna Renae Pieper**, *U. of Nebraska, Lincoln*
Author: **Madison Schnacker**, *U. of Nebraska, Lincoln*
Author: **Steven Schlachter**, *U. of Central Arkansas*

There is compelling evidence on the benefits of employee referrals and how the hiring of an employee's referral can positively influence important referrer outcomes. However, not all employee referrals make it through the selection process and are hired, and the literature is void of research examining how these referral rejections can impact referrers. The current paper seeks to address this gap. Drawing from social exchange theory, this paper argues that referrers will be negatively affected by referral rejections and certain boundary conditions (i.e., strength of the referrer-referral relationship, referrer constituent attachment, and perceived fairness in the hiring process) will buffer the negative effect. Across two experimental studies, results largely supported predictions. This research contributes to the literature by developing theory for how referral rejections negatively impact referrers, expanding the referral literature by being the first to consider referral rejections, and offering an empirical examination of referral rejections.

Presenter: **Gislene Feiten Haubrich**, *Stockholm School of Economics*

In the aftermath of a global pandemic, the demands for greater workplace flexibility have increased, with the rise of remote and hybrid work arrangements. Research has found that work arrangements such as remote work have been seen to improve employee well-being, productivity, and job satisfaction, with reports of a reduction in burnout. People can now work from anywhere, at any time, spanning spatial and temporal boundaries. However, this can lead to working longer hours, experiencing challenges in demarcating healthy boundaries, due to the spillover of work into non-work domains. This symposium presents five studies exploring the changing nature of work and the challenges and the ways in which these experiences may be improved. Each study focuses on remote and hybrid work arrangements and consider the following: 1) the influence of virtual meetings on technostress and work-family conflict, 2) whether changing work modalities influence the psychological contracts of employees, 3) enriched work design, spirit and work, meaningfulness and satisfaction with life, 4) the psychological detachment, thriving, work-nonwork balance between couples working in a hybrid setting and, 5) A thought- piece on participatory democracy in organizing, to make hybrid work arrangements work. Our esteemed discussant will then lead a general discussion, reflecting upon theoretical and practical implications and highlight future directions for research in this field.

Blurring Boundaries: the Effects of Virtual Meetings on Technostress and Work-Family Conflict

Presenter: **Barbara Körner**, *U. of Zurich*
Presenter: **Chao Ma**, *Australian National U.*
Presenter: **Yi-Ying Chang**, *National Taiwan U. of Science and Technology*

This symposium presents five empirical studies that explore positive and negative work and nonwork outcomes of overqualification. We ask and answer new developing questions in overqualification research with papers unpacking nonwork outcomes such as work-family enrichment and work outcomes such as CEO performance, entrepreneurship goal-setting behaviors, and voluntary turnover. The studies presented shed light on the novel insights on (1) how and why overqualified employees may experience positive or negative nonwork lives and (2) how these workers utilize their underused capacities in unique and new ways in their work lives to improve their performance and satisfaction.

This symposium contributes to the Academy of Management's conference theme "Innovating for the Future: Policy, Purpose, and Organizations," showcasing five papers that highlight the impact of personal and professional grief on work and personal well-being. Loss and grief are inevitable parts of personal and professional life. Despite how common, yet critical grief-related experiences may be in workers' lives, management scholarship on the topic remains limited in its understanding of (1) the personal beliefs and understandings people within organizations hold about grief and the influence these beliefs may have on the experience of grief at work, (2) the nuanced varieties in grieving employees' experiences with personal and professional loss contributing to how workers communicate, make sense of, and move forward with their grief and (3) how colleagues, leaders, and organizations can best support grieving employees. This symposium includes mixed methods, qualitative, and quantitative research perspectives that enrich the current understanding of grieving workers' beliefs and experiences and provides research-based recommendations for organizations in managing and supporting grieving individuals. Together, with discussion led by Professor Olivia "Mandy" O'Neill, these papers aim to provide insights into the processes and outcomes of grief and mourning for employees, their colleagues, and organizations, engage an emerging community of scholars focused on issues related to grief, well-being, and the work-life interface, and generate a strong program of future academic research.

Ethics, Race, and Organizational Dynamics: A Historical Perspective

Session Moderator: **Katsuki Aoki**, *Meiji U.*

This session explores the intersection of ethics, race, and organizational dynamics from a historical perspective, aiming to uncover how social and cultural factors influence behavior in organizations.

MH: **Double Diasporas Family Businesses: The Case of Trans-Generational Asian Tanzanians Conglomerates**  

Author: **Aloysius Marcus Kahindi**, *U. of Victoria*

In this article, we study double diaspora – where diasporas that have already established a homeland ('first host country') which is in Tanzania, they generate other layers of diasporas in foreign countries ('host countries'), yet their reverse flows of trade and investment activities remain in the first host country. Based on our qualitative analysis of 30 Asian-Tanzanian family businesses, we use an interpretative historical exploration approach to explain the socio-spatial interplay of reverse diaspora trade and investment activities in Tanzania and beyond. We found that family business groups have transnational aspirations that foster knowledge transfer and capital flows back to Tanzania. We also show how individuals are groomed by their respective family businesses, mainly first-born males, and then pursue their education and work experience in more than one country before they either return or choose not to return home. We provide insights into how double diasporas engage in multiple reverse trade and investment activities in their country of origin, Tanzania. We contribute to the complex historical and transnational network of double diasporas that shape Asian-Tanzanian family business activities in Tanzania and the Global South, particularly in the field of international business (IB).

MH: **“Ethnicity, Race and Corruption: An Investigation of History and Management Within South Africa”**   

Author: **Howard Jean-Denis**, *Pepperdine U.*

Author: **Mzamo P. Mangaliso**, *U. of Massachusetts, Amherst*

Author: **LaStarr Hollie**, *UMass Amherst*

The United Nations estimated that African leaders have siphoned more than 200 billion out of Africa in the year 1991, with little changing in subsequent decades (Owoye & Bissessar, 2018). The purpose of this research study is to explore how acts of corruption and the ethnic background of corruptors interact systematically within organizational life in Africa. Race has been explored widely in the academic literature, yet studies discussing corruption and race are underexplored. In the case of the African continent, race has been weaponized as a rationale to oppress large groups of people with entire countries such as South Africa still struggling to overcome this vicious cycle (Imiera, 2020). Historically, the Apartheid oppressive time period lasted from 1948 until 1994. This empirical study is critically important because it examines organizations within emerging markets in Africa as opposed to the more traditional focus on advanced, western economies. The importance of our research within the discourse relates to potential methodological and theoretical implications on how corruption exacerbates racial injustices globally. Ultimately, we aim to make novel contributions to the extant literature by examining race relations as measured by ethnic groups. We compiled a qualitative dataset of semi-structured interviews with business executives within the African context to explore their lived experiences with the phenomena.

MH: **The Closed Business Elite: Was There a Freemason Conspiracy in the Banking Industry 1960-2000?** 

Author: **Juha Kansikas**, *U. of Jyväskylä School of Business*

Author: **Jan-Peter Gustafsson**, *U. of Jyväskylä*

This study analyzes Freemason power in the Finnish banking industry by studying financial interlocks among the Finnish business elite between the 1960s and the 2000s. Financial interlocks are studied in the context of business elite corporate governance. Board positions in the banking, finance, and insurance industries create a powerful influence in negotiations as well as status for board members in terms of capital access. Financial interlocks occur when the same board member holds a corporate board position in a banking, finance, or insurance company, and simultaneously in one or more corporate boards. Using prosopography, a new database of 33 Freemasons belonging to the institutional business elite of Finland was created. However, no evidence of a Freemason conspiracy in the banking industry was found. Instead, the study identified individual Freemasons whose power among the institutional business elite was unquestionable.

MH: **Corporate Citizenship: From Corporate Social Responsibilities to Corporate Constitutional Rights**

Author: **Jae Hwan Lee**, *Rollins College*

Author: **Brandon Randolph-Seng**, *Texas A&M U., Commerce*

Past research on corporate citizenship has focused mostly on what corporations should do to demonstrate corporate responsibilities. The continued expansion of corporate rights by the US Supreme Court, however, has expanded what it means for a corporation to be a citizen. To help fill this gap in the literature, we describe a new conceptualization of corporate citizenship that captures corporations' deliberate actions to claim new rights. We emphasize that corporate citizenship is best understood when the corporation is thought of as an artificial person who may make intentional efforts to assert new rights, in addition to fulfilling the responsibilities expected of them and exercising the rights granted to them. After discussing the expansion of corporate rights by integrating the foregoing research, we then illustrate how corporations have asserted their newfound right to free speech.

MH: How HBC's Surrender of Rupert's Land Sealed the Fate of Indigenous Peoples in Canada

Author: **Ken Ogata**, York U.

Author: **Gary Spraakman**, York U., Canada

Author: **Alison Kemper**, Ted Rogers School of Management, Toronto Metropolitan U.

Structures both enable and constrain what is possible. We use structuration theory to understand how the colonization of Canada was rationalized through shifts in the social structures used to legitimize and enact particular actions by key actors. We trace shifts in the signification and domination structures that guided the relationships between the Hudson's Bay Company (HBC) and its shareholders, with the British Crown, the Dominion of Canada, and the Indigenous Peoples in Rupert's Land. Changes in HBC's business strategy, shifting from a fur trading company bartering with Indigenous Peoples, to a retailer and land developer serving European settlers, were influenced by social structures that legitimated particular courses of action. Specifically, the financialization of HBC 'assets' (Rupert's Land) through the 1863 IFS Prospectus, and subsequent pressures from the new shareholders for the colonization or 'sale' of Rupert's Land to the Dominion of Canada. These new capitalist structures of signification and domination persist today, thus complicating the project of Indigenous reconciliation.

Presenter: **Luis Roses**, -

Paradox theory has been mostly applied at the meso-level of analysis in organizations with concepts like organizational ambidexterity. In this symposium, we broaden the application of paradox theory to the micro-level with contributors from Belgium, the Netherlands, Spain, and the US. We introduce a neuroscience-based theory of paradoxical leadership behavior (PLB), study the importance of cultural intelligence to match PLB with the cultural context, explore the short-term versus long-term paradox in a US public organization, and examine paradoxes in teamwork and -motivation.

Data Work as an Organizational Subject: Crafting a Future Research Agenda

Moderator: **Ingrid Erickson**, *Syracuse U. School of Information*

Discussant: **Kathleen Pine**, *Arizona State U.*

Panelist: **Kasper Elmholdt**, *Aalborg U.*

Panelist: **Jeffrey V. Nickerson**, *Stevens Institute of Technology*

Panelist: **Lauren Waardenburg**, *ESSEC Business School*

Panelist: **Sarah Lebovitz**, *U. of Virginia*

Data work, broadly defined as the activities devoted to producing, managing, curating, analyzing, and deploying data, is becoming an increasingly critical part of all organizational activity. Yet, despite this empirical import, discussions of data work within our field are minimal, if not absent altogether. To rectify this lacuna, this symposium seeks to explore data work within the distinct context of organization and management studies, highlighting its particular consequentiality for developments in organizational theory. Central to our discussion will be the shifting role of data work in organizational contexts, specifically how the practices of data workers and the dynamics of emergent data-driven infrastructures may be impacting (and potentially destabilizing) our traditional understanding of such topics as organizational learning, authority, and culture. Our assembled panelists will draw on recent research to discuss several distinctive themes regarding data work across a set of empirical contexts, and, prompted by a commentary from our discussant and engagement from the audience, will conclude the session by outlining a targeted research agenda for the future study of data work.

Accessing resources, and subsequent success, is not equal for all entrepreneurs. Questions about disparities in entrepreneurship have garnered major attention in the literature. Marginalized individuals face pervasive barriers as a result of stakeholders and investors' biases. While past research has shown inherent barriers posed by marginalized identities, scant research has examined the strategic actions of both the entrepreneurs themselves and the supporting organizations in shaping these marginalized entrepreneurs' journeys and outcomes. Thus, our symposium aims to advance our understanding of how marginalized entrepreneurs and their supporting organizations, such as training programs and investment funds, navigate the challenges posed by marginalized identities. Our presenters explore various strategies and their effectiveness from the side of entrepreneurs and involved agencies in supporting marginalized entrepreneurs overcome challenges associated with their marginalized identities. We center around two interrelated questions: What strategies are employed by entrepreneurs who possess marginalized identities and the organizations that assist them in overcoming various challenges associated with marginalized identities? Under what conditions do these strategies successfully support marginalized entrepreneurs, and when do they not? Together, the presentations provide implications for social inequality and pose questions for future research, such as how narrative disclosure helps overcome stigma, how entrepreneurship can override negative status beliefs, how interactions between entrepreneurs and supporting agencies shape entrepreneurial journeys, how evaluation processes may fail to create a more level playing field for marginalized entrepreneurs, and what communication strategies towards marginalized entrepreneurs can effectively increase participation in training programs. Collectively, these papers underscore the resilience and resourcefulness of entrepreneurs from under-represented backgrounds and the importance of creating supportive ecosystems that acknowledge and address the unique challenges they face.

Spaces and Places for Imagination and Innovation

Organizer: **Paolo Aversa**, *King's College London*
Organizer: **Juliane Reinecke**, *Oxford U., Saïd Business School*
Panelist: **Eva Boxenbaum**, *Copenhagen Business School*
Panelist: **Santi Furnari**, *City, U. of London*
Panelist: **Elena Giovannoni**, *Birmingham Business School, U. of Birmingham, UK*
Panelist: **Gemma Irving**, *U. of Queensland*
Panelist: **Luis L. Martins**, *U. of Texas at Austin*
Panelist: **Violina Rindova**, *U. of California-Irvine*
Panelist: **Silviya Svejenova**, *Copenhagen Business School*
Panelist: **April L. Wright**, *Warwick Business School*

Spaces and places provide immersive experiences to foster imagination, creativity, and innovation. The material and immaterial features of spaces act as catalysts for the generation of new ideas, innovations, and industries. This symposium seeks to foster the creation of a global community of scholars who share a common interest in exploring and potentially contributing to the understanding of how spaces and places can foster or inhibit imagination and innovation, in order to jointly develop a comprehensive theorization. Our goal is to unite researchers who investigate the role of place, space, or imagination/innovation from various theoretical angles, embracing perspectives at micro, meso, and macro levels. We encourage diverse theoretical, methodological, and epistemological viewpoints. The symposium will feature a distinguished group of scholars spanning different disciplines, all of whom have, either implicitly or explicitly, delved into a theoretical understanding on the nature of spaces and places, the importance and role of imagination and innovation in organization and management theory, or both.

Navigating Political Polarization: Organizational Challenges and Strategic Responses

Organizer: **Ludovica Castiglia**, *IESE Business School*
Discussant: **Forrest Briscoe**, *Cornell U.*
Presenter: **Timothy Werner**, *U. of Texas at Austin*
Presenter: **Ludovica Castiglia**, *IESE Business School*
Presenter: **Grady Wallace Raines**, *Cornell SC Johnson College of Business*
Presenter: **Witold Jerzy Henisz**, *U. of Pennsylvania*
Participant: **Joel Adam Cobb**, *U. of Texas at Austin*
Participant: **Christopher Bruno**, *Management Department - The Wharton School, U. of Pennsylvania*
Participant: **Tyler Wry**, *The Wharton School, U. of Pennsylvania*

This symposium showcases current research projects on how political polarization shapes firms' strategies and performance. While most attention has focused on the societal repercussions of political polarization, far less research has focused on its impact on organizational strategies and outcomes. By spanning theoretical traditions and levels of analyses, the papers assembled in this symposium tackle this question, examining how polarization reshapes stakeholder relationships and corporate nonmarket strategies, influencing economic outcomes and presenting new challenges for firms navigating these shifts. They also explore how organizational practices spread in a polarized context, challenging the notion that institutionalization leads to uniformity. Finally, they offer new insights on how countermovements unfold within polarized sociopolitical contexts, strategically targeting and influencing corporations.

Challenges and Strategies in Sustainable Practice and Certification

Session Moderator: **Carol T. Kulik**, *U. of South Australia*

ONE: Too Expensive, Too Many, Too Hard: Sustainability Certification in the Australian Fashion Industry

Author: **Carol T. Kulik**, *U. of South Australia*

Author: **Sukhbir Kaur Sandhu**, *U. of South Australia*

Author: **Josephine Mckenzie**, *U. of South Australia*

Environmental certifications play a crucial role in instilling consumer trust and signalling adherence to environmental standards. However, the complexity and lack of consensus in measuring and implementing environmental standards results in confusion and high costs throughout the supply chain. Using qualitative data, we examine the perceived costs and benefits of environmental certification for organizations in the Australian fashion industry. Organizations in this industry encounter significant challenges in accessing and effectively leveraging environmental certification. The complexity of the contemporary certification landscape has led some organizations to turn to more comprehensive certification schemes, such as B Corp which offers a somewhat higher level of rigor in holding organizations to environmental standards. We document the challenges faced by organizations when engaging with certification practices in the Australian fashion industry. We suggest ways to address these issues and enhance the effectiveness of environmental certifications, to promote meaningful change and environmentally sustainable practices within the fashion industry.

ONE: Temporary Organizing with Nature: Reconfiguring the Organization-Natural Environment Interplay

Author: **Jonathan Feddersen**, *Copenhagen Business School*

Author: **Sunny Mosangzi Xu**, *Copenhagen Business School*

Author: **Tor Hernes**, *Copenhagen Business School*

Author: **Majken Schultz**, *Copenhagen Business School*

While previous studies have emphasized the social and institutional embeddedness of temporary organizing, scant attention has been paid to how temporary organizing takes place within the natural environment. This study explores how organizations engage in temporary organizing to reconfigure their relationship with the natural environment. Pursuing a situated temporal view, we investigated three exemplary cases in different industries. Even though each case organization pursued another envisioned organization-natural environment relationship, which we label decoupling from, reconnecting with, and rekindling of the natural environment, they followed a similar process of temporary organizing, which we synthesize in an empirical model. In all three cases, the temporalities of non-human actors extended beyond the temporal boundaries of temporary organizing efforts, what we theorize as temporal overflows. We consider how the dynamics of these temporal overflows varied across cases and affected which scaling pathways organizations pursued. Finally, we discuss the implications for temporary organizing research.

ONE: Family Ownership and the Impact of Motives on Sustainability Practices in SMEs

Author: **Mateja Bodlaj**, *U. of Ljubljana, School of Economics and Business*

Author: **Barbara Cater**, *U. of Ljubljana, School of Economics and Business*

Author: **Patricia Patricia Milic**, *U. of Ljubljana, School of Economics and Business*

Author: **Tomaz Cater**, *U. of Ljubljana, School of Economics and Business*

Author: **Vesna Zabkar**, *U. of Ljubljana, School of Economics and Business*

Given the lack of studies on the drivers of various sustainability practices within the realm of small and medium-sized enterprises (SMEs), this paper aims to enhance our understanding of how family ownership influences the relationship between three groups of motives (moral, relational, and instrumental) and SMEs' sustainability practices (environmental, social, and governance). We develop a conceptual model and empirically test it using survey-based data from 259 SMEs across different industries. The results indicate that family ownership positively moderates the relationships between moral motives and all three groups of sustainability practices. Contrary to our expectations, no statistically significant moderating effect of family ownership on the relationships between relational motives and the three groups sustainability practices was observed. Finally, family ownership strengthens the relationships between instrumental motives and two groups of SMEs' sustainability practices, namely social and governance, while its effect on the relationships between instrumental motives and environmental practices is not significant. The study contributes to the existing literature on Socio-Emotional Wealth (SEW) theory by offering a more systematic understanding of how family ownership shapes the relationships between SMEs' motives and sustainability practices.

ONE: All Sustainable? How Businesses can Manage Transitions to Sustainability

Author: **Leonardo Boni**, *Politecnico di Milano School of Management*

Author: **Gorgi Krlev**, *ESCP Business School*

Author: **Riccardo Fini**, *U. of Bologna*

Author: **Laura Toschi**, *U. of Bologna*

Growing demands from policy and the public urge firms to become more sustainable. Many businesses are reshaping their internal sustainability practices and are changing how they communicate their position on sustainability to external stakeholders. However, there are different combinations between the internal practices and the external communication of sustainability. We conduct qualitative, exploratory research, which combines a large scoping of cases with in-depth analysis to inform our conceptualization of an empirically grounded framework. We contribute to understanding the combinations of internal practices and external communication better and develop four different types of business sustainability: pretending, aspiring, signaling, and fully-fledged. Building on existing literature, we do not present these as better or worse states of sustainability but probe the ethical or pragmatic motives that lead businesses to assume their position. Thereby we uncover that there are justified and ethically questionable reasons for businesses to assume a certain type of sustainability. In contrast to existing literature, which has often assumed a static position, we also scrutinize the transition pathways businesses can take by moving from one type to another. We highlight five potential transition paths and develop strategic recommendations for how managers could foster or prevent such transitions.

Sustainable Innovation and Leadership: Navigating Organizational Change for the Future

Session Moderator: **Hui Lu**, *Nanjing U. of Science and Technology*

ONE: How can Green Ambidextrous Leadership Most Enhance Employees' Green Innovation Behavior?

Author: **Hui Lu**, *Nanjing U. of Science and Technology*
Author: **Huanmei Pi**, *China U. of Mining and Technology*
Author: **Shen Xu**, *New York U. Shanghai*
Author: **Sixuan Chen**, *Nanjing U. of Science and Technology*

The green innovation behavior of employees is essential for the sustainable development of organizations. Leadership has a crucial role in facilitating and promoting employee's green innovation initiatives. Existing research primarily focuses on a singular leadership style, which may not adequately support the adaptable transformation required to address the ever-changing demands of employees during the green innovation process, known as green exploration and green exploitation. Our study proposes the concept of green ambidextrous leadership, which aims to optimize the influence of leaders on employees' green innovation behaviors. Based on the cognitive-affective processing system framework, green ambidextrous leadership promotes employees' green mindfulness and harmonious green passion, hence improving their green innovation behavior. The findings indicate that employees are more inclined to demonstrate green innovation behavior when the levels of green opening and closing leadership are both high. The research has theoretical implications for the understanding of ambidextrous leadership and green innovation behavior. Additionally, the study provide practical insights into the mechanisms that motivate people to engage in green innovation behavior.

ONE: Regenerative Innovation: A Source of Competitive Advantage in the Anthropocene Era

Author: **Mac Nguyen**, *Gustavson School of Business, U. of Victoria*

This paper explores a new way to understand sustainable innovation—new and potentially useful ideas, products, services, or processes to improve sustainability performance. To do so, I adopt a regeneration perspective—an emerging paradigm in sustainability research. Innovation in the regenerative paradigm, or regenerative innovation, seeks to cultivate relationships with nature, and local communities to create positive impacts by restoring, reconciling, and reinforcing the quality of the social and ecological systems (SESS). This work conceptualizes and operationalizes regenerative innovation as a new construct, juxtaposing it with research on innovation in classical economics and strategy views, and on sustainable innovation in sustainability literature. Attempting to move the innovation construct into a new trajectory, this paper contributes to strategy research by recognizing regenerative innovation as a new, potential source of competitive advantage. I conclude the paper with theoretical implications and future research avenues.

ONE: Entrepreneurs' Journey Through Systems Thinking Tension in New Product Development

Author: **Viktorija Varaniute**, *Kaunas U. of Technology, School of Economics and Business*
Author: **Lina Dagiliene**, *Kaunas U. of Technology, School of Economics and Business*

By developing sustainable products, entrepreneurs can make a significant contribution to solving grand socio-ecological problems. However, they often face challenges when it comes to tackling complex sustainability issues and truly integrating them into new product development. Using the action research methodology, we intend to investigate why entrepreneurs confront tension to applying system thinking in the sustainable new product development, and how learning mechanisms can facilitate systems thinking. We explained that entrepreneurs encounter a tension of applying systems thinking due to four issues. We also identified learning mechanisms, such as learning from each other, and visualization, that were most useful in facilitating systems thinking for entrepreneurs in sustainable new product development.

ONE: Open Ambidextrous Learning: Green Technological Readiness, Green Innovation and Sustainability

Author: **Junggeun Kim**, *Hanyang U.*
Author: **Taewoo Roh**, *Hanyang U.*

This study delves into an exploration of the between green technological readiness, green innovation, and firms' sustainability performance within the context of Korean enterprises, aligning with the global emphasis on sustainability initiatives. To offer a nuanced understanding, this study posits open ambidextrous learning conceptualized as a second-order construct encompassing both inbound and outbound learning. The empirical analysis of 200 domestic manufacturing firms through a structural equation model substantiates that green technological readiness and green innovation impact sustainable performance, revealing the mediating role of open ambidextrous learning. Interestingly, the study does not discern a significant correlation between open ambidextrous learning and environmental performance. Nevertheless, a statistically significant effect of competitive performance on environmental performance was found, implying an indirect influence. The results of this empirical analysis contribute valuable insights into the interplay of green technology and corporate sustainable performance from the viewpoint of inter-organizational learning, suggesting Korean enterprises grappling with challenges in attaining sustainable performance can actively contemplate embracing green technology and cultivating inter-organizational learning.

Agency Perspectives and Strategic Leadership

Session Moderator: **Shelby Gai**, *Michigan State U.*

STR: Behavioural Theory of Corporate Governance in Multi-National Corporations  

Author: **Szymon Kaczmarek**, *Bayer*
Author: **Richard B. Nyuur**, *School of Management, U. of Bradford*
Author: **James A. Cunningham**, *Newcastle U. Business School*

This research represents a conceptual effort on the problems of corporate governance in the multi-national corporations (MNCs). It highlights the importance of the behavioural theory of corporate governance, which draws from the research streams of the agency and behavioural theory of the firm. This cross-theoretical hybridization allows for studying the micro-foundations of behaviour on the boards of directors in MNCs in relation to their subsidiaries and in the context of cultural influences. We utilize the notions of the socially situated and socially constituted agency together with the impact of the cultural differences in terms of schemas, norms and values on MNCs' headquarters boards of directors, in order to propose a unique model consisting of four theoretical propositions. The propositions specify the kind of impact to be expected from the resultant behavioural dynamics on the board functions of control and resource-provision.

STR: Recognizing the Role of Risk in Property Rights: A Challenge to the Residual Rights of Shareholders

Author: **Robert Wiseman**, *Michigan State U.*

We offer a novel criticism of shareholder primacy that calls attention to the role of risk in justifying property rights. Emerging from Common Law, property ownership must also include responsibility for what is owned. In the case of residual claimancy rights, we show for a number of reasons shareholders bear little residual risk, though they continue to bear investment risk. That is, developments in the U.S. equity markets have effectively insulated shareholders from losses related firm failure. The virtual elimination of residual risk results from reliable third-party financial information, the availability of sophisticated financial instruments, governmental and stock exchange regulations, and a highly liquid equity market. Finally, we suggest that employees bear the brunt of residual risk associated with firm failure and should replace shareholders as the primary claimant of a firm's residuals. In sum, we introduce the under-developed concept of risk allocation to the discussion of shareholder primacy and offer a distinction between residual risk and investment risk.

STR: Prospect Theory, Multiple Anchor Points and Risk-Taking  

Author: **Stefan Maric**, *Bentley U.*
Author: **Shelby Gai**, *Michigan State U.*

In this paper, we suggest that the current theorizing in prospect theory does not consider the existence of multiple anchor points. We suggest that individuals when making decisions under risk may consider goals with multiple progressing targets as having differential risk incentives due to upwards and downwards counterfactual thinking. We hypothesize that having multiple targets elicits greater risk-taking response and we consider the role of causal attribution of environmental as a key moderator. We test our theory using a novel granular dataset with performance-based CEO compensation data and a series of laboratory experiments we use to better understand the underlying mechanisms. We find broad support for our theory and consider practical implications.

STR: The Impact of CEOs' Social Evaluations on Hedge Fund Activism 

Author: **Saeid Bazmohammadi**, *John Molson School of Business, Concordia U.*
Author: **Young-Chul Jeong**, *Concordia U.*

Previous research has underscored the significance of CEO attributes in predicting the occurrence of hedge fund activism. Yet, the impact of CEOs' social evaluations on such activism has been largely overlooked. Our investigation delves into the likelihood that activist hedge funds may strategically target firms helmed by CEOs with notable social evaluations. We hypothesize and find that infamy CEOs, due to their high visibility and the strong negative emotional reactions they elicit, represent unique opportunities for activist hedge funds to step in. By examining this dynamic, our research not only contributes to the theoretical understanding of activist targeting strategies and CEOs' social evaluations but also offers practical insights for corporate leaders and governance practitioners.

Stakeholder Theory and Ethics

Session Moderator: **Felipe Mendes Borini**, *U. of Sao Paulo (FEA/USP)*

STR: Missing Agent Problems and the Limits to Stakeholder Management

Author: **Kate Odziemkowska**, *U. of Toronto, Rotman School of Management*

Author: **Aseem Kaul**, *U. of Minnesota*

Author: **Jiao Luo**, *U. of Minnesota*

Stakeholder theorists contend that firms can boost their value creation by enfranchising key stakeholders, implicitly assuming that stakeholders have agency, i.e., they can recognize and reciprocate the value being shared with them. In this paper, we interrogate that assumption, arguing that stakeholders are often heedless, powerless, or absent, and laying out the conditions under which firms' attempts to enfranchise stakeholders may go unrewarded—conditions we collectively define as missing agent problems. Profit-maximizing firms will avoid enfranchising stakeholders who lack agency, and firms that do enfranchise such stakeholders are likely to see their profits decline. Our study thus highlights an important but largely unexamined boundary condition of stakeholder theory, while offering a fresh perspective on the social impact of stakeholder management.

STR: Does Morality Explain Stakeholders' Reactions to Firms' Stakeholder Management?

Author: **Flore Bridoux**, *Erasmus U.*

Author: **Corentin Hericher**, *UCLouvain - LouRIM*

Author: **Jan-Willem Stoelhorst**, *U. of Amsterdam*

A defining feature of stakeholder theory is its argument that business and morality cannot be separated. Moreover, stakeholder theory has long argued that stakeholder-oriented firms will be able to create more value than shareholder-oriented firms by upholding moral standards when managing their stakeholders. However, there is little, if any, empirical evidence about the role morality plays in how stakeholders react to firms' stakeholder management. We therefore set out to study moral emotions as potential mechanisms explaining the impact of firms' stakeholder management on stakeholders' value-creation behaviors. Across two vignette-based experiments and a survey, we show that stakeholder-oriented firms are more likely to elicit value-creation behaviors in their stakeholders because they trigger more positive moral emotions, and that shareholder-oriented firms are less likely to elicit value-creation behaviors because they trigger more negative moral emotions. In addition to contributing to the theoretical development and empirical testing of stakeholder theory by hypothesizing and finding a role for stakeholders' moral emotions in explaining value creation, we also contribute to making stakeholder theory more amenable to empirical analysis by validating scales to measure firms' stakeholder and shareholder orientation.

STR: An Evolutionary Theory of the Firm: Managers, Stakeholders, and Collective Action Problems

Author: **Jan-Willem Stoelhorst**, *U. of Amsterdam*

Organizational economics (OE) has long inspired management scholars interested in theorizing about firms, but recent literature questions if OE can help management research and practice deal with the problems of contemporary firms. This paper develops a theory of the firm that takes a fundamentally different approach than traditional OE to answering the classical question 'Why do firms exist', and yet continues to build on economic concepts. Rather than seeing the existence of firms as a puzzle in the context of neoclassical theory, their existence is seen as a puzzle in the context of evolutionary theory – defined as a theory that explains human behavior and organization in terms of gene-culture co-evolution. Evolutionary theory suggests that the firm should not primarily be understood as an alternative to the market, but as a contemporary solution to collective action problems that emerge when agents become interdependent. The evolutionary theory of the firm that is developed overturns some of the most basic assumptions in OE, but at the same time offers an integrative approach to solving the main problems that OE has raised, an approach that is consistent with a stakeholder view of the role of firms and their managers in a capitalist system.

STR: Stakeholder Strategy: A New Strategic Positioning

Author: **Silvia Ferraz Nogueira De Tommaso**, *Faculty of Economics, Administration and Accounting of the U. of Sao Paulo*

Author: **Felipe Mendes Borini**, *U. of Sao Paulo (FEA/USP)*

The positioning strategies have been classified into typologies, mostly focused on a product-market perspective, and only a few considered a stakeholder perspective. Nevertheless, strategic positioning for stakeholders became a strong business promise and an academic research priority when the Business Roundtable's CEOs declared their firm's commitment to delivering value to multiple stakeholders for the future success of their companies, their communities, and their country. We aimed to understand how stakeholder management has driven a new strategic positioning. For that, we applied an exploratory inductive multiple case study. We developed in-depth interviews with 55 top leaders from 11 companies from 2020 to 2023. Our data revealed that a firm needs to embed four attributes to be better positioned in both the competitive and cooperative updated business contexts: stakeholders' alignment; stakeholders' joint value creation; stakeholders' interdependence awareness and walk-the-talk leadership. We contribute to the stakeholder theory literature in two ways: defining a stakeholder strategic positioning for a stakeholder approach management and defining stakeholder orientation as a firm's strategic positioning. Our managerial contributions lie in highlighting attributes of a stakeholder strategy to be incorporated by managers who are still figuring out how to manage their firms in uncertain business and societal contexts. In the updated scenario, competing for better products, services, and markets does not fulfill individual needs. Individuals are at the same time members of society, employees, investors, customers, and suppliers and have preferences and claims that may benefit or harm a firm's performance and change over time. Our research has limitations, so we suggest scholars could use the categories revealed in this paper to apply quantitative research.

External Influences on Corporate Choices

Session Moderator: **Elizabeth Demissie Degefe**, *Fuqua School of Business, Duke U.*

STR: Slipstream Strategy: How Product-Focused Incumbents Cooperate and Compete in the Face of Platforms 

Author: **Georg Reischauer**, *WU Vienna & JKU Linz*
Author: **Alexander Engelmann**, *WU Vienna U. of Economics and Business*
Author: **Annabelle Gawer**, *U. of Surrey*
Author: **Werner Helmut Hoffmann**, *WU Vienna U. of Economics and Business*

Product-focused incumbents such as engineering companies and carmakers increasingly create and capture value with digital extensions for their physical products. Concurrently, these incumbents also face platform entrants such as Google and Apple providing substitutes for these digital extensions. Scholars suggest that a viable strategic response to the entry of platforms is cooptation, the interplay of cooperation and competition. However, little is known about which cooptation strategy can best protect the digital extensions of product-focused incumbents. We address this gap with a longitudinal case study of “InnoCar,” a European carmaker whose digital extensions – car-specific digital services that enhance the driving experience, such as real-time navigation and infotainment – were attacked by Google and Apple. InnoCar defended these extensions with the distinct slipstream strategy, which comprises two phases. An incumbent first cooperates with platform entrants and product rivals to establish shared demand-related complementary assets and then competes with platform entrants on the quality of digital extensions. We develop a conceptual framework for how to execute the slipstream strategy and provide boundary conditions for its application. Our paper contributes to the cooptation literature and research on incumbent-platform entrant dynamics.

STR: Developing a Novel Theory of Corporate Misconduct Using Abductive Reasoning: A Mixed-Method Approach 

Author: **Elizabeth Demissie Degefe**, *Fuqua School of Business, Duke U.*
Author: **Zhi Liu**, *Peking U.*
Author: **Zeyu Zhao**, *Arizona State U.*
Author: **Krishna Savani**, *Department of Management and Marketing, The Hong Kong Polytechnic U.*

We propose that a mixed-method approach combining machine learning with follow-up studies is ideal for simultaneously engaging in prediction and explanation. Based on publicly available information, we trained a machine learning algorithm to predict whether publicly traded corporations engaged in misconduct. The algorithm correctly identified 58.2% of the misconduct cases in out-of-sample data, indicating high sensitivity. An analysis of the algorithm’s basis of prediction revealed a novel predictor of misconduct: the CEO’s outside directorships. Experiments found that managers informed that they were serving on multiple external boards experienced a greater sense of power, which increased their willingness to engage in misconduct. This research sets a new standard for identifying corporate misconduct based on publicly available data and builds a new theory of corporate misconduct.

STR: Cream Skimming and Financial Inclusion at the Base of the Pyramid: A Resource Dependence Story 

Author: **Nachiket Bhawe**, *U. of North Carolina Pembroke*
Author: **Srivardhini K. Jha**, *Indian Institute of Management, Bangalore*

The ability of MFIs to drive financial inclusion has been contested due to concerns that they may be selecting more credit worthy borrowers—i.e. ‘cream skimming’ borrowers. However, MFIs often work with banks through the business correspondent (BC) model, and the role of this inter-organizational arrangement on financial inclusion is unexplored. While the BC model can reduce information asymmetry and facilitate borrower selection, the bank’s influence over the MFI acts as a counterbalancing force. We draw on resource dependence theory to develop hypotheses on the behavior of MFIs when credit is scarce and demand is high i.e., when MFI dependence on banks is high. We use the policy shock of the 2016 currency demonetization in India as a natural experiment to test and validate the underlying assumptions of the role of power in resource dependence theory. Using a difference-in-differences analysis, we find that resource dependence constrains MFIs with BC model from indulging in cream skimming and fosters greater financial inclusion.

STR: Supply Base Concentration and Coordinator Structures: The Case of the Korean Popular Music Industry

Author: **Hyundo Choi**, *Dongguk U., Seoul*

Decentralized supply base can increase a chance of benefiting from broad supplier innovations, whereas centralized supply base strengthens integration and coordination among interdependent product components and tasks. Using the Korean popular music industry case from 2004 to 2013 and quantile regression, this study proposes the relationships between supply base concentration and new product development (NPD) market performance, varying conditional on the NPD market performance levels. Results show that the decentralized supply base increases NPD market performance only in low- and moderate-performance projects. Moreover, the analysis suggests that the decentralized supply base and coordinator structures jointly increase NPD market performance in high-performance projects as a coordinator unit with strong capabilities ease complex coordination works in decentralized supply base environments. This study highlights the importance of the supply base as NPD inputs and suggests how NPD project organizations exploit the supply base effectively from the organizational structure view.

Agency at the Crossroads: New Paths, Problems, and Perspectives for a Central Concept

Organizer: **Ibrat Djabbarov**, *Imperial College London*
Organizer: **Daniel Milner**, *Oklahoma State U.*
Organizer: **Andrey Pavlov**, *Cranfield School of Management*
Panelist: **Maria Jose Murcia**, *IAE Business School & CESIS, Austral U.*
Panelist: **Mike Zundel**, *U. of Liverpool Management School*
Panelist: **Mary Uhl-Bien**, *Texas Christian U.*
Panelist: **Sebastiano Massaro**, *Surrey Business School*

Our assumptions of agency characterize how we as scholars understand and research leadership, strategy, entrepreneurship, and technological changes, to name just a few. The concept of agency is central to creating, changing, and dealing with challenges ranging from minor issues to societal grand challenges. Although ubiquitous in organization research and an undercurrent in management theory and practice, agency remains largely under-theorized. As societies and organizations face wicked problems – e.g., societal grand challenges, inequity, mental health – bringing agency into the foreground can help scholars develop new perspectives and conceptual insights about how actors can be creative agents, change and enact change, and respond to challenges (Battilana, Yen, Ferreras, & Ramarajan, 2022; Sewell, 1992). Furthermore, the stories we pay attention to and the angles from which we study organizations as management scholars often favor agentic elements. For example, how peripheral and central actors instigate change at organizational or field levels (Greenwood & Suddaby, 2006; Greenwood, Suddaby, & Hinings, 2002; Suddaby & Greenwood, 2005), how entrepreneurs develop intentions, or managers strategize (Hengst, Jarzabkowski, Hoegl, & Muethel, 2020; Jarzabkowski, Bednarek, Chalkias, & Cacciatori, 2018) are all tightly connected to what it means to be an agent. Our interpretations and lenses may propel a particular view of agency. Scholars advancing the agential realism perspective argue that how we measure and observe shapes our perception of agency (Barad, 2007). For example, actor- network theory highlights that agency is not limited to humans and can extend to non-human entities such as objects and technologies (Latour, 2005). These perspectives are underpinned by researchers' assumptions and their ontological, epistemological, and methodological orientations (Gioia, 2022). Moreover, separate from the nature or ontology of agency are its causes and consequences. The diversity of organizational research examining a wide range of phenomena of creativity, change, and challenges across different contexts and theoretical lenses can yield new insights about the nature, causes, and consequences of human agency. As organization scholars, we can leverage the diversity of organizational research streams to develop fresh perspectives and nuances on agency. For this symposium, we invited scholars representing a broad range of perspectives to offer diverse insights on agency from different research streams in management and organization studies. Our expert panel will provide insights from processual and relational ontology, leadership and complexity, strategy and technology, and neuroscience.

Strategic Entrepreneurship and Venture Capital

Session Moderator: **Carlos Adrian Rodriguez**, *INCAE Business School*

STR: **Unpacking CVC Outcomes - CVC Activities, Strategic Breadth, and Firm Performance** 

Author: **Julia Demmer-Nolden**, *U. of Duesseldorf*

Corporate Venture Capital (CVC) investment activities are an essential mechanism for a Corporate firm to innovate and explore beyond the firm's boundaries and in parallel leverage the existing core business. From a Corporate investor's perspective, the question still is which role CVC investment activities play for the definition of strategic value, more particular the strategic breadth of attention, and how this is interrelated with other CVC outcomes, such as firm value. Drawing upon the attention-based view of the firm, we argue that more CVC investment activities lead to an overall increase of the Corporate's strategic breadth, as they encourage an incumbent to explore and exploit simultaneously, and thereby driving positive implications for the firm's performance. Based on a longitudinal panel dataset across various industries between 1997 and 2019, resulting in 542 unique Corporate firms and 4,171 firm-year observations, we find that the more CVC investment activities a Corporate engages in, the more the strategic breadth of attention increases. This effect even enhances with increasing competitive intensity. Furthermore, our research suggests a positive relationship between the breadth of strategic attention of a Corporate and its firm value.

STR: **Dominance and Prestige: How Entrepreneurs' Competence-Framing Influence Evaluation of the Venture**  

Author: **Lun Li**, *Beijing Normal U.*

Author: **Xue Liu**, -

Author: **Chang Lu**, *Guanghua School of Management, Peking U.*

Author: **Jiguo Qi**, *China U. of Petroleum Beijing*

Author: **Chuqing Zhang**, *beijing language and culture U.*

Previous research on entrepreneurial framing often focused on studying the linguistic features and content of framing, overlooking investigations into the entrepreneurs themselves. Our study explores how entrepreneurs utilize framing to convey information about their personal capabilities to external evaluators. By integrating literature on entrepreneurial framing with studies on dominance and prestige, we propose that perceived dominance can lead to higher appraisals due to its conveyance of decisiveness and power; similarly, perceived prestige, by signaling skills and commitment. Further linking entrepreneurs' perceived competence to audience characteristics, we demonstrate how evaluators' backgrounds influence their reactions to entrepreneurs' exhibited dominance and prestige during the review processes. Specifically, elite evaluators with prestigious education backgrounds tend to favor entrepreneurs who exhibit high dominance, while those with R&D backgrounds prefer entrepreneurs with high prestige. Utilizing a unique sample of science and technology venture program, we provide empirical support for the theoretical predictions. Our findings offer unique insights into understanding entrepreneurial framing and dominance and prestige literature.

STR: **Linking Strategic Positioning & Implementation: Monitoring Effects Over Profitability**  

Author: **Carlos Adrian Rodriguez**, *INCAE Business School*

Author: **Mauricio Melgarejo**, *Butler U.*

This study explores the link between strategy positioning and implementation by evaluating how adopting bundles of monitoring tools or practices affects profitability once a firm has chosen a strategy. We adopt an attention-based perspective to propose that profitability for a firm with an efficiency-seeking strategy is enhanced when the monitoring tools or practices comprehensively cover critical outputs expected from the strategy rather than focusing on the individual selection of specific tools or practices. We test this proposition in a panel dataset of 43 firms -763 data points- pursuing efficiency-seeking strategies. We found that the profitability effect of adopting monitoring tools or practices focused on three critical dimensions, i.e., target defining, controlling, and operations improving, is higher than adopting tools that do not cover these three dimensions simultaneously. In addition, we observe that the level of a firm's diversification moderates the effect of implementing monitoring tools or practices on financial performance.

 STR: **Legitimization by Aspiration Setting: Evidence from Token Supply in Initial Coin Offerings**

Author: **Nastaran Alimardaniaghani**, *The Ohio State U. Fisher College of Business*

The extant research on the behavioral theory of the firm has primarily focused on aspirations as vehicles for performance evaluations and subsequent strategic decision-making. However, how aspirations can be used as a resource acquisition signal—especially in the context of entities that lack historical performance (e.g., new ventures)—has been largely unexplored. I build on and expand an emerging stream of research in the behavioral theory tradition that highlights the importance of allocative aspiration setting (i.e., aspirations as means of resource acquisition) by integrating a legitimacy perspective. More specifically, I theorize and use the empirical setting of Initial Coin Offerings to demonstrate that setting aggressive aspirations signals greater legitimacy to the resource-providing audience of a new venture and hence, increases the odds of success. Additionally, I show that cognitive legitimacy signals, such as those that are formally disclosed by a new venture, alter the positive effect of aggressive aspiration signals on a new venture's success.

CSR and Competitive Dynamics

Session Moderator: **Jiangyan Li**, *Chongqing U.*

STR: **The More, The Merrier? Corporate Social Responsibility (CSR) Contracting and Firm Competitive Action**   

Author: **Shuping Li**, *Hong Kong Polytechnic U.*

Author: **Steve Sauerwald**, *U. of Houston*

Author: **Luman Yu**, *The Hong Kong Polytechnic U.*

We investigate the possible effects of a prominent corporate governance development, namely, CSR contracting (i.e., incorporating ESG metrics into CEO compensation packages), on firms' competitive actions. We draw on research on agency theory and theorize that compared with CEOs without CSR contracts, CEOs with CSR contracts perceive greater job security in their positions and thus are more motivated to engage in competitive actions by the firms they manage. However, as the complexity of CEOs' CSR contracting increases to involve diverse stakeholder interests, CEOs likely experience heightened job demands, leading to reduced information processing capabilities and rigidity in decision making. Consequently, they become less responsive to the competitive actions of their firms' rivals, reducing their competitive actions. To tease out the mechanism of CEO job demands associated with the complexity of CSR contracting, we assess three dimensions of CEOs' job environments: the time horizon of the CSR contract, the financial pressure faced by CEOs, and the increased monetary incentive for CEOs. We analyzed 38,113 firm-year observations of 3,116 firms from 1999 to 2020 (2,825 firm-year observations with CSR contracts) and found support for our hypotheses. Our study enriches the understanding of possible intended and unintended consequences of CSR contracting, while also generating implications for enhancing strategic leadership for firm competitive actions.

STR: **Normative and Strategic CSR as Responses to Peer Firms' Financial Misconduct** 

Author: **Fengwen Chen**, *School of Economics and Business Administration, Chongqing U.*

Author: **Bing Wang**, *Chongqing U.*

Author: **Jiangyan Li**, *Chongqing U.*

Prior research has shed much light on the consequences of corporate misbehavior, one of the research streams found the dual interorganizational spillover effects resultant from financial misconduct: a "stigma effect" that pollutes peer firms and a "competition effect" that benefits competing peers. Although the outcomes of these spillover effects are revealed explicitly, little is known about whether and how the innocent firm strategically responds to the legitimacy threat and the competitive opportunity. As corporate social responsibility (CSR) facilitates alleviating institutional and competitive pressures, we propose that an innocent firm can implement two CSR strategies in response to the two spillover effects: normative CSR to uphold legitimacy through conformity and strategic CSR to enhance competitiveness through differentiation. Using a sample of Chinese listed firms from 2009 to 2019, we show that innocent firms will increase normative CSR after peer firms' financial misconduct, especially firms motivated to repair potentially lost legitimacy. We also find that innocent firms with a motivation to compete with the culpable firms will improve strategic CSR. By investigating two CSR strategies in response to the stigma and competition effects, our research highlights the critical roles of CSR in pursuing business ethics and competitive advantages.

STR: **Power to My People: How Proximity to Political Power Affects Firm's Competitive Behavior**

Author: **Izuchukwu Evans Mbaraonye**, *U. of Missouri, Kansas City*

Author: **Jeffrey Thomas Cavanaugh**, *U. of Nebraska*

Author: **Cameron Jay Borgholthaus**, *Southern Illinois U., Edwardsville*

Current management research indicates that enhanced access to political power puts firms in a superior competitive position. This is because such access enables firms to leverage government-controlled resources in their competitive endeavors. However, insights from the behavioral theory of the Firm (BToF) suggest that easy and abundant access to resources, such as those that accompany firm's access to political power, may induce complacency in a firm's strategic behavior. Expanding on these insights, we contend that a firm's proximity to political power facilitates convenient and ample access to government resources. Consequently, we argue that this accessibility leads managers to become complacent in pursuing competitive actions. Our theoretical model and empirical tests contribute to the literature on business-government relationships and the literature on BToF.

STR: **Exploring the Untapped Influence of Stakeholders in Organizational Rivalry**

Author: **Waqas Nawaz**, *Smith School of Business, Queen's U.*

Extant literature posits that past competitive interactions between rival firms serve as antecedent to psychological animosity as well as mutual forbearance, but since these outcomes are antithetical, it remains a puzzle how firms decide to aggressively respond or strategically forbear a rival's attack. Despite the evidence that stakeholders influence organizational decisions, it is surprising that competitive dynamics scholarship did not examine this puzzle using a stakeholders' perspective. My goal in this work is to investigate how stakeholders' evaluation of rival's actions affect focal firm's decision to aggressively respond or strategically forbear, for which I utilize environmental action/response dyads of Coca-Cola and Pepsico over a period of 15 years (2006-2020). Findings suggest that some rival actions motivate focal firm to respond aggressively (influential actions) than others (skeptical and controversial actions), which is determined by the extent of stakeholders' approval of those actions. This work is the first of its kind to qualitatively study rivalry in an environmental sustainability context at a dyadic level (Coca-Cola vs. Pepsico).

Corporate Social Irresponsibility

Session Moderator: **Stephanie L. Wang**, *Indiana U., Bloomington*

STR: From Accusation to Advancement

Author: **Brian Park**, *Georgia State U.*

Author: **Chanhyuk Shin**, *Korea U.*

Author: **DuckJung Shin**, *Korea U. Business School*

Business groups involved in undesirable events, political or otherwise, need to regain legitimacy to defend against perceptions of organizational misconduct. We show how affiliates increase their Environmental, Social, and Governance (ESG) initiatives when their business groups are accused of misconduct. Our findings indicate that when misconduct accusations are aimed at business groups, their affiliates take ESG measures as a strategy to mitigate threats to the business groups' legitimacy. Further, this legitimacy recovery is typically achieved through a targeted approach, wherein the affiliates selectively prioritize a specific facet of ESG directly associated with the misconduct. Lastly, we report a positive spillover effect, in which the affiliates within non-accused business groups also strive to strengthen the same specific ESG component as the affiliates within accused business group to alleviate any potential guilt-by-association. Our study unveils how affiliates strategically engage in ESG activities in response to the accusation of misconduct toward business groups.

STR: The Price of Risk: Corporate Social Irresponsibility and New CEO Compensation

Author: **Michael Koch**, *Brunel Business School, Brunel U. London*

Author: **Yejee Lee**, *Indiana U., Bloomington*

Author: **Sarah Park**, *U. of Leicester*

Despite extensive research on corporate social irresponsibility (CSI) and its repercussions, there is no straightforward answer to its impact on newly appointed CEOs. In this study, we seek to examine the consequences of firms deviating from their social responsibilities, particularly in the context of the new CEO's initial compensation. We argue that firms' engagement in CSI leads to higher initial pay for new CEOs. The higher pay can be seen as a form of compensation for the risk, as CEOs face considerable uncertainty about the potential negative impact on their own reputation by joining such firms. We further propose that this impact is contingent on new CEOs' tolerance for the risk of negative reputation spillover. Specifically, we posit that a positive association between CSI and new CEO compensation is stronger for CEOs with greater prosocial orientation but weaker for CEOs with higher career variety. We support our argument with 1,168 observations of firm-CEO year-level data from 2007 to 2019. Our findings show that socially irresponsible firms pay a premium for new CEOs and that the amount of this premium depends on the risk tolerance of the CEOs.

STR: Empirically-Based Resistance Strategies: How Firms Resist Stakeholder Demands

Author: **Nicole West**, *U. of Texas at Dallas*

Author: **David G. Sirmon**, *U. of Washington*

How does a firm resist stakeholder demands while maintaining these critical relationships? The stakeholder literature has largely skirted this question because it was argued that resisting stakeholders would be so costly that the firm must concede to avoid potentially catastrophic outcomes. Joining the nascent research reconsidering this position, we theorize that empirically-based resistance strategies allow firms to resist stakeholder demands without degrading relationships or provoking substantial conflict. We postulate that stakeholder demands flow from issues, whose salience is informed by the stakeholders' shared values, as well as empirical evidence establishing the issue's existence, magnitude, causes/effects, and remedies. This leads to our primary theoretical argument: firm resistance focused squarely on the empirical aspects of an issue weakens perceptions of issue salience, thereby minimizing resulting demands, without threatening the stakeholders' shared values. We identify two novel empirically-based resistance strategies: validity disputing and validity promoting. Whereas both avoid addressing shareholders' shared values, validity disputing acts on empirical evidence to weaken perceptions of issue salience as well as resulting demands, while validity promoting accepts an issue's salience, but uses empirical evidence to advocate for the firm's preferred remedy to the issue. Cumulatively, these strategies produce a lack of consensus among stakeholders regarding an issue's existence, magnitude, causes/effects and/or remedies - without provoking the adversarial responses that resistance on stakeholders' shared values would foster.

STR: There Is a Dark Side to Everything: CEO Creativity and Corporate Social Irresponsibility

Author: **HE Li**, *Xi'an Jiaotong Liverpool U.*

Author: **Philip J. Steinberg**, *U. of Groningen, Faculty of Economics and Business*

Author: **Jordi Surroca**, *U. of Liverpool Management School*

Author: **Hille C. Bruns**, *Groningen U. (RuG)*

Individual creativity is generally regarded as an important competency for CEOs that positively affects organizational outcomes. However, based on recent insights from the field of psychology, we theorize that CEO creativity may also hold undesirable implications for the firm as it can increase firms' likelihood to engage in corporate socially irresponsible (CSIR) activities. Moreover, we identify conditions for when our theory applies. We propose that proximity to bankruptcy, strategic flexibility, and track record of corporate social responsibility serve as moderators that enhance our focal relationship. In a longitudinal study of 883 firms for years 2009 to 2020, we find support for the hypothesized relationship between CEO creativity and CSIR and the moderating effects of proximity to bankruptcy and strategic flexibility.

Strategic Decision-Making Dynamics: Balancing Internal Challenges and External Influences

Session Moderator: **Andrew von Nordenflycht**, *Simon Fraser U.*

STR: **Remedies for Growing Pains: How Venture Leaders Manage Stalemates When Scaling Senior Executive Team**      

Author: **Changjoon Rhee**, *HKUST Business School*

Author: **Sam Garg**, *HKUST Business School*

We investigate how venture leaders can effectively manage stalemates that arise after hiring professional executives. Using a multi-case inductive method, we analyze 21 actual top management team (TMT) stalemates—communication breakdowns between task-dependent parties—within four Hong Kong fintech ventures that raised venture capital. Our study contributes to the venture professionalization literature in several ways. We introduce negative intra-TMT dynamics into the literature by identifying stalemates that emerge during the professionalization process and classifying these stalemates as horizontal or vertical. More importantly, we develop a contingency framework that consists of four actions taken by the venture leaders to manage these stalemates. Our framework reveals that effective leaders use private mediation in horizontal stalemates and structural crafting in vertical stalemates, but not vice versa. In contrast, open discussion and decision enforcement, two actions suggested in prior conflict management literature, were found ineffective for all types of stalemates in our data. Beyond venture professionalization, we offer a fresh lens on conflict management as brokering by highlighting the space and hierarchy in the brokering process. We conclude by suggesting boundary conditions for our theoretical framework.

STR: **Inhouse vs Outsourced Skill Development in Professional Sports: Analysis of Baseball Careers** 

Author: **Andrew von Nordenflycht**, *Simon Fraser U.*

This study analyzes the effects of in-house vs. outsourced skill development on professional athletes' early careers, by analyzing selection and promotion of prospects (promising young players) by Major League Baseball teams. Drawing on research on worker skill development and labor market transaction costs, I theorize three benefits to having a top-tier professional club control the development process for a set of prospective athletes: (1) development of more club-specific skills; (2) better assessment of unmeasurable skills; and (3) ability to maximize general skill development. Focusing on US baseball players exploits the fact that some prospects enter the minor league system ("inhouse" development) at age 18 while others opt for college ("outsourced" development) and do not enter the professional system until age 22. Using a dataset of 9,785 players drafted into the league from 1987 to 2013, I find some evidence that internal development may generate more club-specific skills that aid prospects' careers. I find that from age 22, prospects that entered the minor leagues from high school may be less likely to be promoted to the top-tier league than those that developed in college—but among those that are promoted, the minor leaguers are promoted more quickly than the college prospects. Furthermore, I find that promotion rate and probability for minor league infielders than non-infielders, which is consistent with the assumption that infielders are more interdependent and thus benefit more from club-specific skills. I also find evidence that college draftees, relative to high school draftees, are more likely to be drafted below their pre-draft rankings. This is consistent with the idea that clubs are more concerned about the unmeasurable skills of college draftees, who will spend less time in the clubs' development system, than of high school draftees. These findings raise questions about the lack of in-house development systems in other major professional sports, such as US football and basketball.

STR: **Intergenerational Succession and Smart Manufacturing: The Effect of Sibling Number on Change Timing** 

Author: **Xiaowei Luo**, *INSEAD*

Author: **Shuangying Chen**, *U. of Electronic Science and Technology of China*

Author: **Boyi Chen**, *U. of Electronic Science and Technology of China*

Author: **Jun Wang**, *U. of Electronic Science and Technology of China*

Previous studies have suggested that treating intergenerational succession as a single event conceals the dynamics of strategic change. Structuring intergenerational succession as a two-stage process: a pre-appointment stage and a post-appointment stage, we argue that the dynamic timing of change is an important means for successor leaders to prove their personal authority and competence in authority. However, the intensity of the pressure to prove oneself varies in terms of timing for multiple-child versus single-child families, resulting in differences in the timing of change in these family firms. We posit that firms with a multi-child family are more likely to engage in strategic change at the pre-appointment stage due to the selection pressure. In comparison, firms with a single-child family are more likely to engage in strategic change at the post-appointment stage because the child-successor experiences little selection pressure and needs to establish their legitimacy after the formal appointment. These tendencies are stronger when the succession is contested. We test our arguments in the context of the deployment of smart manufacturing in Chinese listed family manufacturing firms between 2009 and 2019 and find consistent results. Our study contributes to a deeper understanding of how family size affects strategic change in family firms and demonstrates the fruitfulness of a multiphase process view of intergenerational succession.

STR: **Foreign Institutional Investors and Equity Share Decisions in Cross-Border Mergers and Acquisitions**  

Author: **Dennis Wajda**, *Coastal Carolina U.*

This study contributes to equity ownership research by showing the role of foreign institutional investors in shaping firms' equity share decisions in cross-border mergers and acquisitions (M&A). We argue that foreign institutional ownership (FIO) from a given country is positively associated with the share of equity sought in the target firm in this country because foreign institutional investors can help reduce information asymmetry between the acquiring and target firms. Moreover, this positive relationship is stronger if target firms are in countries with weaker institutional development because acquiring firms suffer from higher information asymmetry in this scenario and thus are more inclined to rely on foreign institutional investors for information. Findings from a sample of 4,166 cross-border M&As by US firms lend support to our arguments.

Technology Ecosystem Strategy

Session Moderator: **Andre Nemeah**, *Rennes School of Business*

STR: Data Ecosystems: Value Creation Processes, Configurations, and Evolution Patterns 

Author: **Cheng Huang**, *Fujian Normal U.*

Author: **Tianxi Yang**, *Tsinghua U.*

Author: **Yong Lin**, *U. of Birmingham*

In the digital age, data has emerged as a nonrival factor of production characterized by increasing returns to scale. However, its value is maximized only when it is fully transformed into products or services, and there is an inherent challenge regarding data privacy during its utilization. Addressing these complexities necessitates a multi-stakeholder, co-evolutionary mechanism - an ecosystem - to navigate uncertainties in the data market and fully unlock data's potential value. Building upon the theoretical framework concerning the overarching operations of business ecosystems, this paper delved into the intricacies of Data Ecosystem (DE) value creation. It scrutinizes the process, configuration, and evolutionary patterns of DE through a cross-case study involving leading digital firms and associations. Our cross-case analysis reveals a tripartite value creation process in DEs, comprised of data resource licensing, data factors trading, and data products/services development. For optimal value creation, the configuration of a DE should include both a data value network and a data community network. Informed by these elements, this study also outlines the evolutionary patterns of DEs. This research enriches the burgeoning literature on data markets and business ecosystem theory, particularly in complementarities and value creation processes. Moreover, it offers practical implications for firms aiming to construct effective data ecosystems.

STR: Resource Complementary Uncertainty and Strategies of Innovation Ecosystem

Author: **SHENGXI YANG**, *Sichuan U.*

Author: **Jiaming Yang**, *School of management, Zhejiang U.*

Author: **Lin He**, -

The highly collective uncertainty of innovation ecosystem is portrayed as unclear resource complementary participants, unstable allocation of participants' relationships, and untimely updating of complementary rules, which led to the complicity of complementary resource gaps identification, the generation of complementary resources, as well as final innovation results. While the existing understanding of complementary resource strategies became inapplicable with the emerging phenomenon. By conducting an abductive, exploratory multi-case analysis of Geely Stereoscopic Travel Ecosystem, Xiaomi Smart Home Ecosystem and DJI Drone Innovation Ecosystem. Our study contributes to innovation ecosystem literature by deconstructing ecosystem uncertainty to complementary participants and complementary functions. We also contribute to resource complementary strategy and complementarity research by identifying four strategies based on an integrated framework and providing a comprehensive understanding of not only what ecosystem complementarity is but also how it comes from.

STR: Ecosystem Strategies for Small Firms' Competitive Advantage: The Case of AI Ecosystem

Author: **Mohamad Najib Tarhini**, *Rennes School of Business*

Author: **Andre Nemeah**, *Rennes School of Business*

Recently, scholars highlighted the importance of orchestrating or joining an ecosystem for the development of artificial intelligence (AI). However, these researchers mainly focused on large firms' roles in the ecosystem orchestration or emergence, seeing small firms as affiliates, and calls for research that investigates whether small firms are equally suitable for orchestrating ecosystems. Conversely, they also stated the challenges that small firms face in comparison to larger ones in the adoption of AI. Yet, to date, there are no clear indications about small firms' strategies to face these AI challenges and compete with larger firms. In this paper, we aim to address this phenomenon by investigating the small firms' strategies in an AI ecosystem. To answer this question, we followed a qualitative research approach by conducting 20 interviews with executives from 13 different AI small firms in the Brittany region, France. Our findings show that AI small firms elaborated different ecosystem strategies based on a unique value proposition and different patterns of relationships. As a result, we coined two ecosystem strategies, the pure complementor strategy and the ambivalent strategy. Moreover, the study revealed multiple conditions necessary for AI ecosystems to emerge, in addition to different continuity factors from the client's and partners' side to preserve this ecosystem.

STR: Platform-Based Multimarket Competition: Strongholds, Strangleholds and Footholds

Author: **Erik Liesola**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Jens Schmidt**, *Aalto U., Department of Industrial Engineering and Management*

Classic strategy research on multimarket competition explains why firms refrain from fierce competition when meeting familiar competitors in multiple markets. Firms forbear because attacks and gains in one market may instigate counterattacks and greater losses in all other markets. This paper provides the first explicit attempt to bridge classic multimarket competition with contemporary platform competition. We propose that platform firms' strangleholds and footholds in each other's markets give rise to mutual spheres of influence which deter rivalry in their important strongholds. This complements extant platform theory by presenting an alternative explanation for leading platforms' stable and profitable businesses that is not based on demand economies of scale (network effects) and scope (platform envelopment). We conclude with implications for platform strategy research.

Diversification

Session Moderator: **Teresa Antonia Dickler**, *Philipps-U. Marburg*

STR: **Resource or Burden? CEO Reputation and Corporate Diversification** 

Author: **Nan Zhou**, *Tongji U.*

Author: **Wanjiao Zhang**, *Tongji U., Shanghai, PR. China*

This study examines how CEO reputation affects the level of corporate diversification from two distinct perspectives: resource versus burden. The resource perspective suggests that CEO reputation serves as quality and credibility signal in markets and reduces information asymmetry, thus providing sufficient resources to implement diversification strategy. By contrast, the burden perspective posits that CEO reputation induces CEO overconfidence, which encourages CEOs to ignore the risks of investments and engage in value-decreasing diversification. Both perspectives predict a positive relationship between CEO reputation and corporate diversification. To examine which perspective prevails, we examine the moderating effects of state ownership and free cash flow. If the resource perspective works, we expect that the two moderators will weaken this positive relationship. If the burden perspective works, we expect that the two moderators will strengthen the relationship. Using a sample of listed firms in China from 2006 to 2020, we find that CEO reputation is positively associated with the level of corporate diversification. Moreover, the state ownership and level of free cash flow weaken this positive relationship, supporting the resource perspective but not the burden perspective.

STR: **Examining the Impact of Capital Redeployment on Strategic Business Segment Disclosures**

Author: **SONALI KAUR BHATIA**, *IE U. - IE Business School Madrid, Spain*

Author: **Marco S. Giarratana**, *IE Business School*

Author: **Juan Santalo**, *IE Business School*

This study explores the impact of capital redeployment in internal capital markets on a firm's decision to disclose or withhold business segment information. It also investigates whether the relationship between capital redeployment and segment disclosure is moderated by the level of the firm's unabsorbed slack. Additionally, it examines how diversification in related product markets affects the likelihood of disclosing business segment information. This study demonstrates that diversified firms that redeploy capital across business segments are more likely to disclose a greater number of sectors. This strategic disclosure approach aligns with the broader goals of diversified firms with redeployment capabilities, aiming to strengthen their competitive position by discouraging potential competitors from entering their markets. Furthermore, the negative relationship between capital redeployment and segment non-disclosure is weakened as the firm's level of unabsorbed slack increases. Furthermore, firms diversifying in related product markets tend to disclose fewer sectors as their primary focus is safeguarding sources of synergy. These findings align with a unique dataset on the U.S. pharmaceutical industry from 1983 to 1992, covering diversification across three different industries within the U.S. medical sector and spanning a total of 85 product categories.

STR: **Stock Market's Influences on Resource Redeployment: The Roll of Sell-Side Analysts**

Author: **Raffaele Morandi Stagni**, *Department of Business Administration. U. Carlos III de Madrid*

Author: **Teresa Antonia Dickler**, *Philipps-U. Marburg*

This paper exploits exogenous shocks on a firm's coverage by stock market analysts, to investigate analysts' influence on resource redeployment within multi-business firms. We expect that firms might be constrained in their ability to capitalize on redeployment opportunities by the presence and pressure of external governance forces such as stock market analysts. This is because strategies emphasizing internal resource markets magnify asymmetric information between a firm's management and external analysts, thereby complicating evaluation by the financial community, and ultimately disincentivizing their use by corporate headquarters. Consistent with these ideas we find that the number of analysts following a firm's stock is negatively related to resource redeployment and that, vice versa, losing an analyst increases the amount of resources that a firm moves across its businesses. Moreover, we demonstrate that resource redeployment in response to analyst coverage loss is value creating and increases firms' strategic uniqueness.

STR: **Diversified Production and Market Power: Theory and Evidence from Renewables**  

Author: **Michele Fioretti**, *SciencesPo*

Author: **Junnan He**, *SciencesPo*

Author: **Jorge Tamayo**, *Harvard Business School*

We study the Colombian energy market, where diversified energy firms strategically substitute thermal generation for hydropower before droughts. This within-firm substitution, due to thermal generators internalizing the drop in hydropower supply during droughts, mitigates higher market prices. We show theoretically and empirically that these virtuous spillovers exist when thermal generators have market power but are severed when their residual demands are vertical or horizontal, which attenuates a firm's business stealing incentives. We conclude that industry consolidation can reduce prices if it promotes diversified production portfolios. Diversification can keep the green transition affordable by reducing the cost of renewable intermittencies.

STR: The Role of Local Supplier Perceived Unfairness in International Exchanges: A Contingency View 

Author: **Mengyang Wang**, *Huazhong U. of Science and Technology*
Author: **Jialin Du**, *Renmin U. of China*
Author: **Jiaxuan Li**, *School of Management, Huazhong U. of Science and Technology*

This study investigates how local supplier perceived unfairness influences exchange performance via supplier opportunism from two theoretical perspectives: equity theory and resource dependence theory (RDT). Equity theory postulates that when actors perceive unfairness in relationships, they engage in actions, such as adjusting inputs or efforts, to restore equity. However, RDT maintains that if actors depend on their partners for critical resources, they tend to tolerate perceived unfairness to acquire those resources for survival. Using unique primary data from 141 dyads of multinational corporations (MNCs) from developed economies and their suppliers in China, our results show that local supplier with perceived unfairness indeed are more likely to engage in opportunistic behaviors as a way to restore equity, which in turn hurts exchange performance. However, local supplier's dependence on international buyers attenuates this effect, whereas formal institutional distance magnifies it. Our study helps reconcile the divergent views of equity theory and RDT and illuminates the implications of perceived unfairness for ongoing interfirm relationships in an international exchange context.

STR: Boundary-Spanning Experiences of Middle Managers and Interorganizational Relationship Renewal

Author: **Rose Ji Youn Kim**, *U. of Kentucky*
Author: **Mukund Chari**, *U. of Colorado, Boulder*

Exchange managers serve as boundary-spanning individuals who represent their organizations in inter-organizational relationships (IORs). Given potential divergent perspectives within an organization of the value of current relationships, managers play an important role in advocating for partnerships and garnering support from stakeholders. We posit that their abilities in this regard hinge on their boundary-spanning experience. By examining corporate venture capital (CVC) investments, we elucidate how a CVC manager's external and internal boundary-spanning experience affect the likelihood of making follow-on investments in portfolio companies. We find that both kinds of experience enhance follow-on investment likelihood. We also find a complementary effect; the likelihood of follow-on investments is enhanced when the manager possesses both kinds of experience. Our findings enrich the literatures on IORs, CVC, and middle management

STR: R&D Centralization and Knowledge Sourcing in Technology Alliances 

Author: **Sandip Bisui**, *Purdue U.*
Author: **Jeffrey J. Reuer**, *Purdue U.*
Author: **Kyungsub Song**, *U. of Colorado Boulder*
Author: **Kun Zhang**, *Peking U. HSBC Business School*

This study bridges corporate strategy, organizational structure, and innovation research to explore the interplay between the centralization of an organization's R&D decision-making and its external knowledge sourcing. We propose that the intra-organizational decision-making of an organization plays an important role in its external knowledge exploration strategy, specifically in determining the organization's technology sourcing from its alliance partners. Analyses of technology alliances in the bio-pharmaceutical industry indicate that organizations with centralized R&D decision-making tend to search more extensively from their alliance partners and tend to leverage this knowledge to a wider extent. In particular, we show that organizations with centralized R&D decision-making source knowledge from their alliance partners beyond the scope of the focal alliance and that they are better able to use the externally sourced technologies in a wider range of technological areas within the organization compared to organizations with decentralized R&D decision-making.

STR: Collaboration Conundrum: Unraveling CEO Hubris and Alliance Formation 

Author: **Xuefei Yu**, *U. of Hong Kong*
Author: **Yi Tan**, *U. of Alabama in Huntsville*
Author: **Yongchuan Bao**, *U. of Alabama in Huntsville*

Why do firms vary so much in their attitudes toward alliance formations? While prior research has predominantly focused on external pressures, the potential impact of CEO cognitive biases—specifically hubris—on alliance formation has been largely overlooked. This study introduces the concept of CEO hubris as a key factor influencing firms' propensity to form alliances. Utilizing a media-based approach to quantify levels of CEO hubris within U.S. high-tech firms, our analysis reveals that increased CEO hubris is associated with less alliance formations. Interestingly, this relationship is more pronounced in munificent environments, yet it diminishes in markets characterized by high dynamism and complexity. These findings extend our understanding of strategic alliance formation by highlighting the critical role of CEO psychological traits, particularly hubris, in shaping organizational strategy.

Alliance Processes

Session Moderator: **Martin Kleis Pit**, *Faculty of Economics and Business, U. of Groningen*

STR: **Seeking Outside Help: The Role of Third-Party Intervention in Strategic Alliance Relational Recovery**  

Author: **Martin Kleis Pit**, *Faculty of Economics and Business, U. of Groningen*

Author: **Isabel Estrada Vaquero**, *Groningen U. (RuG)*

Author: **Floor Rink**, *U. of Groningen*

Prior alliance research has shown the inherent complexity and instability of alliances, and identified a key driver of such instability in that alliance relationships are frequently met with negative relational dynamics – characterized by competition and distrust. As such, alliance literature has studied solutions that alliance partners employ for relational recovery. In doing so, extant literature has focused on recovery solutions predominantly internally, i.e., within the boundaries of the alliance, despite the recognition that third parties can play an important and constructive role in facilitating alliance relationships. To explore the role of third-party interventions, we conduct an inductive case study of a dyadic alliance between two organizations in the Dutch fin-tech industry, that saw an intervention by an independent third party. We identify redirection of attention as a novel mechanism to understand how third-party interventions can facilitate relational recovery. Specifically, our study highlights that attention redirection toward the overarching goals of the alliance facilitates the repair and continuation of the alliance, provided that partners confirm complementarity (in skills and resources) and compatibility (in culture).

STR: **Fuzzy Logic and Alliance: A Configurational Approach to Improve Alliance Performance** 

Author: **Lijun Pan**, *U. of International Business and Economics*

Author: **Dong Chen**, *Loyola Marymount U.*

Author: **Zhenning Yang**, *U. of International Business and Economics*

Author: **Donghong Li**, *School of Economics and Management Tsinghua U.*

In a growing competitive external environment, strategic alliances are becoming increasingly vital, but they face a variety of obstacles to high performance. Prior alliance research has focused on a limited subset of alliance motivations and operational mechanisms, instead of examining multiple determinants of high performance. We attribute this to the mismatch between studying causally complex relationships using conventional symmetric regression methods. Instead, using a configurational approach, this paper constructs a research framework based on cross-sectional questionnaire data from the Chinese Ministry of Science and Technology's assessment of 56 first pilot alliances in 2012 and dynamic tracking data of alliance performance from 2013 to 2019. This paper mines the pathways of how strategic alliances improve performance by integrating alliance motivation and alliance operational mechanisms and offers an asymmetric perspective to identify the causal complexity of high and not-high performance. This research concludes that no single condition is necessary for high performance and that the combination of alliance motivation and alliance operational mechanism generates four pathways to high performance. Our study develops a configurational model to advance a holistic understanding of alliance performance, contributing to offering a more complete picture of how alliances operate and explaining why individually conflicting results can be true collectively. We also demonstrate how configurational theory can be employed to analyze the alliance's performance.

STR: **The Unique Nature and Dynamics of Multiparty Alliances: Insights from Three Decades of Research** 

Author: **Wenqian Wang**, *Hong Kong Baptist U.*

Author: **Jiabei Hu**, *Purdue U., West Lafayette*

Author: **Fabrice Lumineau**, *U. of Hong Kong*

Multiparty alliances – i.e., collaborative arrangements among more than two organizations – have been gaining increasing relevance as a means to gain a sustainable competitive advantage. Distinguishing themselves from widely studied dyadic alliances, they exhibit unique characteristics. However, current research on multiparty alliances has been largely fragmented, encompassing a diverse array of topics, levels of analysis, and theoretical perspectives. In order to gain a holistic and comprehensive understanding of the specific features of multiparty alliances, we conducted a systematic review of scholarly publications in leading management journals spanning over 30 years. We adopted the generic alliance lifecycle perspective to analyze and integrate 154 relevant articles. Our review finds that multiparty alliances display important qualitative differences in each of the three phases: the order of entry in the partner selection phase, the change of reciprocity in the alliance design phase, and faultlines in the post-formation implementation phase. Our analysis leads us to an integrative framework highlighting both the differences and the dynamic interactions among the three phases of a multiparty alliance. Our framework opens rich opportunities for future studies to deepen our understanding of multiparty alliances.

STR: **Is it Worth Returning to the Negotiation Table? Contract Adaptation's Impact on Alliance Outcome** 

Author: **Doerte Leusmann**, *U. of Passau*

Author: **Matthias Schulz**, *Georg-August-U. Göttingen*

Author: **Christian Schwens**, *U. of Cologne*

Author: **Carolin Haeussler**, *U. of Passau*

This paper examines how contracts and their adaptations over the course of strategic alliances influence alliance innovation outcome. Drawing on transaction cost economics, we argue that contract adaptation increases efficiency as the adapted contract re-aligns to transactional attributes, which, in turn, positively influences the alliance innovation outcome. Moreover, we introduce the concept of alliance partners embracing contingencies and argue that contingency adaptability clauses employed in the initial contract positively moderate the baseline relationship. We test our theory on a longitudinal dataset of 340 alliances from the biopharmaceutical industry. Our study contributes to strategic alliance research by explaining if and under which circumstances an innovation outcome of a strategic alliance, i.e., a drug approval in the biopharmaceutical context, is influenced through contracts and their adaptation as the alliance evolves over time. Empirically, employing an instrumental variable regression approach helps us to mitigate potential endogeneity concerns.

Panelist: **Timo Olavi Vuori**, *Aalto U.*

Celebrating the fortieth anniversary of Upper Echelons Theory (UET), this symposium delves into the evolving role of top-executives' cognition in the novel, unique, and increasingly important context of business ecosystems. UET posits that executives' background—their experiences, preferences, and dispositions—significantly shape organizational outcomes. We reexamine UET by exploring how the nature and strategic implications of top-executives' cognition in business ecosystems differ from standard assumptions in the extant literature, given the idiosyncrasies of business ecosystems such as their meta-organizational structure and the focus on collaborative value creation and shared value distribution. The symposium explores three interrelated themes: the unique challenges that business ecosystems pose to strategic leaders, the idiosyncratic processes and structures of executive cognition influencing sensemaking and decision-making in these ecosystems, and the use of so-far underleveraged streams of cognitive psychology and linguistics to theoretically and empirically explore the implications of top executives' characteristics in these contexts.

Nationalism has become a major social and political issue in recent years, and its importance to strategic and managerial fabrics of organizations has never been greater. Organizational and strategy scholars have studied nationalism from diverse angles, but discussions have been fragmented, and an integrated perspective is to emerge. This symposium has two goals. The first goal is to showcase nationalism research in organizational theory, strategy, and international business to spark more studies on this increasingly important topic. The second goal is to aggregate these studies to understand better nationalism's effects on business organizations and broader corporate landscapes. Civic, economic, techno-nationalistic, and other nationalism topics will be discussed during this symposium. Furthermore, the latest research methodologies and analytical frameworks are brought together. This scholarly exchange at the forefront of nationalism research in management and strategy seeks to enhance our understanding of the ever-changing nationalism-business relationship.

It has been nearly 30 years since Donald C. Hambrick published the seminal article entitled “Top Management Groups: A Conceptual Integration and Reconsideration of the ‘Team’ Label” that introduced the concept of behavioral integration. Defined as the degree to which the top management group “engages in mutual and collective interaction” (Hambrick, 1994: 188-189), behavioral integration has emerged as a unifying construct that captures the harmonisation of team processes at the strategic apex of the organisation. The article, which has been cited nearly 1500 times, significantly advanced upper-echelon research by opening up the black box of team process, allowing scholars to better explain the conditions under top management attributes are most likely to explain and predict strategic choice, behavior, and outcomes. The 30th anniversary of the article provides an opportune moment to reflect upon and synthesize the scholarly progress on the concept of behavioral integration, and to stimulate some new directions for future development of the concept.

Panelist: **Sekou Bermiss**, *U. of North Carolina, Chapel Hill*

Political polarization has been growing around the world, with this phenomenon being particularly severe in the US. This is clear from the increasing alignment between individuals' partisan identity and political ideology, and in the increasing hostility between Democrats and Republicans. Moreover, growing research suggests that these political divisions have important implications for understanding organizations. Although there is considerable overlap between micro- and macro-organizational work in this domain, these literatures have largely developed independently. The goal of the proposed panel symposium is to bring together scholars from both camps, as well as those conducting basic disciplinary work in political science, to increase awareness of each others' work, and to discuss potential avenues for future research.

“Problems” with AI: How Artificial Intelligence Helps Frame and Formulate Problems in Organization

Coordinator: **Chan Hyung Park**, *Scientist, ETH ZURICH*
Discussant: **Markus Baer**, *Washington U. in St. Louis*
Coordinator: **Johnathan Cromwell**, *U. of San Francisco*

This symposium investigates the intersection of two topics that are gaining traction in academic conversations across the Academy. The first is based on a phenomenon, which is the rapid rise of generative AI technologies that are transforming work and posing serious questions about how they will affect human productivity and well-being. The other is based on theory, which is the rising awareness that effective strategies for innovation and management depend on their fit with the nature of problems that they aim to solve, which in turn depends on how well individuals frame and formulate problems. Scholars have been theorizing on the importance of framing and formulating “problems” for several decades, but the topics have received growing interest in recent years due to prominent publications highlighting their fundamental role in (a) defining opportunities to pursue during strategic decision-making, (b) providing a focal point for gaining resources in entrepreneurial ventures, and (c) creating the fundamental context in which problem-solving occurs to drive creativity and innovation. Problem framing and formulation are likely to become even more important for organizational actors in organizational research because generative AI technologies are effective in and increasingly capable of creating solutions across various tasks, modalities, and contexts once problems are clearly defined. Therefore, this symposium is both timely and relevant to help shape the conversation on these important topics, which will be facilitated by many leading voices in the field.

Participant: **Stefano Brusoni**, *ETH Zürich*

Participant: **John Paul MacDuffie**, *U. of Pennsylvania*

Participant: **Mahka Moeen**, *U. of Wisconsin*

Participant: **Melissa Schilling**, *New York U.*

The past year has been marked by the dramatic speed adoption and advancement of Generative AI. In the midst of this real-time revolution we have a unique opportunity to use GenAI disruption as an opportunity to explore the power and the limit of existing theories to guide out thinking: How does generative AI fit into our existing theories, as we seek to understand how it may disrupt pre-existing structures? Where does GenAI stretch or break them – what new contingencies does it reveal? What is required of research programs to be useful to managers, policy members and citizens living through this technological revolution that is unfolding before our very eyes? In the spirit of a theory-building panel symposium, this session will be organized not as a series of presentations but as a series of interesting yet challenging questions posed to the panel, which will draw on their work, and research in the field more broadly. This symposium will hit close to home: our closing discussion will focus on the impact of GenAI for business schools and business academe, considering the implications for the competitive landscape for business schools and their students, including new complements and substitutes, and the modes and requirements of adaptation and response in our own institutions.

The Humanistic Management Caucus is a gathering for those researchers, teachers, and practitioners who are interested in putting human beings front and center in the organizational context. We intend to offer a co-creative space to develop better management theory, practice, pedagogy and policy that can support the protection of dignity and the promotion of well-being to improve lives. The Caucus is focused on co-creating novel research projects, teaching programs, and practitioner engagement projects. We will host world renowned thought leaders and practitioners to stimulate conversations and collaborations.

Towards a Further Understanding of Career Shocks in Career Development

Session Moderator: **Vrinda Khattar**, *Indian Institute of Management Mumbai*

CAR: **Parrying the Blow: How Indian Women Cope with Career Shocks**

Author: **Vrinda Khattar**, *Indian Institute of Management Mumbai*
Author: **Upasnaa Agarwal**, *Professor at IIM Mumbai*
Author: **Dana McDaniel Sumpter**, *Pepperdine Graziadio Business School*
Author: **Mona Zanhour**, *California State U., Long Beach*
Author: **Gahana Rao**, *Research Associate*

While research on career shocks has blossomed in recent years, there is concern that research on broad employee samples insufficiently accounts for the unique needs and concerns of particular employee groups. With only a nascent understanding of how career shocks impact the careers of women, this study explores how women cope with an array of different forms of career shocks, including motherhood, health scares, and the Covid-19 pandemic. From 33 semi-structured interviews with Indian working women, it was discovered that women use a combination of coping styles in responding to career shocks, including social support, agency, spirituality, and dissociation. Our inductive approach discovered novel coping strategies, including how women used spirituality as a meaning-making coping mechanism. This study contributes to careers literature by integrating personal and contextual factors in career continuation, identifying specific coping mechanisms to career shocks experienced by women, and expanding theoretical understanding of career coping strategies to understudied cultural contexts

CAR: **How Career Shocks Make “Sense”: A Chain Mediation Model**

Author: **Qing Zhang**, *School of Government, Beijing Normal U.*
Author: **Rui Xiong**, *Faculty of Education, Beijing Normal U.*
Author: **Haibo Yu**, *Beijing Normal U.*
Author: **Siyuan Liu**, *School of Government, Beijing Normal U.*
Author: **Xiaokun Liu**, *School of Government, Beijing Normal U.*

In the dynamic professional context, employees seek fulfillment beyond material rewards, emphasizing spiritual satisfaction and self-realization. The importance of meaningfulness has become prominent. According to sensemaking theory, we explored that career shocks are associated with subjective career success through career crafting and meaningfulness. In Study 1, we employ a three-wave survey and established a chain mediation model. The results show that positive career shocks do not directly relate to meaningfulness, while negative career shocks have an adverse impact. Career crafting mediates the relationship between career shocks and meaningfulness. It is verified that positive and negative career shocks are related to subjective career success through the sensemaking process, albeit in opposite directions. To complement and explain the findings, we selected 8 participants from the survey for in-depth interviews in Study 2. Through coding of interview data, the qualitative results provide a possible explanation. It reveals that individual attributions, mismatch with career plan, and focus on the self may constitute explanatory pathways through which positive career shocks cannot directly affect meaningfulness, but rather through career crafting. Conversely, negative career shocks are influenced by personal traits and organizational factors. Indeed, there exists variation in the construction of meaningfulness arising from negative career shocks, influenced by temporal distance. Our findings provide theoretical and practical insights into enhancing meaningfulness amidst career shocks.

CAR: **Different Scenarios Of Career Self-Management In The Presence and Absence of Career Shocks**

Author: **Francisco Wilhelm**, *U. of Bern, Work and Organisational Psychology*
Author: **Andreas Hirschi**, *U. of Bern, Work and Organisational Psychology*
Author: **Daniel Spurk**, *U. of Bern*
Author: **Dawa Schläpfer**, *U. of Bern, Work and Organisational Psychology*

The article examines growth trajectories of career self-management (CSM) and career shocks, focusing on how individuals manage their careers proactively in the absence of career shocks or reactively when experiencing a career shock. Using a heterogeneous sample of 502 employees surveyed over nine waves, we conducted growth mixture analyses to estimate different hypothesized growth trajectory profiles. Analyses revealed six different profiles, including the hypothesized proactive, reactive, passive-avoidant and passive-unaffected shapes. Results showed that promotion and prevention regulatory focus predicted membership into these different profiles, whereas, contrary to hypotheses, organizational support and role ambiguity did not. Results are discussed against the background of theories of career self-regulation and underscore the complexity of career development in turbulent times.

CAR: **Beyond the Diagnosis: A Kaleidoscope Career Perspective on Health-Related Career Shocks**

Author: **Navya Bagga**, *Department of management studies, Indian Institute of Technology Delhi*
Author: **Vivek G. Nair**, *IIT Delhi*

The confluence of the changing world of work and the increasing prevalence of chronic illnesses pose intricate challenges that demand the attention of individuals, managers, and organizations. Yet, there is a limited exploration on how individuals experience and respond to the career shock of chronic illnesses. Drawing on 30 semi-structured interviews, this qualitative study reimagines the Kaleidoscope Career Model (KCM) in a developing economy context. It aims to understand how individuals with chronic illnesses redefine their career paths, aligning with the KCM parameters of authenticity, balance and challenge. We delve into the interplay between the primary career shock of chronic illness and a series of interconnected shocks to unpack how individuals perceive the KCM parameters. Furthermore, we highlight the pivotal role of social support in fortifying their determination and coping with the career shocks influenced by chronic illness. Lastly, our study elaborates that disclosure is context-driven and varies across the KCM parameters. It serves as a strategic tool to help individuals propel forward in their careers. The present study offers insights into the complexities and career choices individuals make when health takes center stage.

New Perspectives on Diverse Career Outcomes

Session Moderator: **Xiangmin Liu**, *Rutgers U., New Brunswick*

CAR: Examining the Impact of STEM College Majors on Career Outcomes Across Race and Sex Groups

Author: **Xiangmin Liu**, *Rutgers U., New Brunswick*
Author: **Liang Zhang**, *New York U.*

We investigate the relationships between college majors, career choices, and earnings disparities among college graduates with STEM degrees across sex and racial/ethnic groups. Utilizing data from the American Community Survey (ACS) and Occupational Information Network (O*NET), we find that college majors and career choices are loosely aligned, with a large proportion of STEM graduates working in non-STEM occupations. In particular, females and racial/ethnic minorities are more likely to choose basic-skill and high-skill non-STEM occupations than their male and Asian/white counterparts. Furthermore, our findings reveal significant variations in earnings premiums among STEM majors, contingent on their career choices. High-skill STEM occupations offer the largest earnings premiums, followed by high-skill non-STEM occupations. Remarkably, there is no earnings premium associated with a STEM degree among college graduates who work in basic-skill occupations. These results underscore the crucial role of career choices in shaping the development of the STEM workforce and highlight their influence on earnings disparities associated with sex and race/ethnicity.

CAR: The Ripple Effect of Career Compromise on Feedback-Seeking and Extra-Role Behaviors

Author: **Shengming Liu**, *Fudan U.*
Author: **Scott Dust**, *U. of Cincinnati*
Author: **Minya Xu**, *Guanghua School of Management, Peking U.*
Author: **Daniel M. Peat**, *U. of Cincinnati*

Despite the importance of aligning personal career aspirations with job roles, the impact of career compromise on organizational dynamics, particularly on extra-role behaviors, remains underexplored. This study integrates Self-Discrepancy Theory (SDT) to investigate how career compromise influences extra-role behaviors in the form of task proactivity and helping behavior and the mediating role of thriving at work. Additionally, we suggest that two forms of feedback-seeking—inquiry and moderating—will have differential moderating effects. Using a sample of 401 full-time employees across various industries, we find support for the indirect effect of career compromise on task proactivity and helping behavior. Additionally, our findings support our hypotheses that feedback-seeking inquiry buffers the negative impact of career compromise while feedback-seeking monitoring strengthens the negative impact of career compromise. Theoretical and practical implications specific to careers and feedback-seeking are discussed.

CAR: Separate the Sheep from the Goats: Career Breadth, Work Performance, and Managerial Advancement

Author: **Sverre Ubisch**, *The norwegian defence research establishment*

Studies of career specialization and labor market outcomes often struggle to distinguish between quality- and signal-based explanations. To address this issue, we reexamine the relationship between specialization and career advancement in an internal labor market where information asymmetries and associated signaling play a minimal role. Tracing careers through middle and senior management ranks in the Norwegian Armed Forces, we find that career specialization benefits promotion to middle management while career breadth benefits promotion to senior management. Furthermore, we find that performance quality amplifies the effect of specialization for middle management promotions but not for senior management promotions. Thus, we clarify the role of performance quality as a guide in the evaluation of generalists and specialists. Our results also shed light on the demand for generalist and specialist expertise for different managerial ranks and how hierarchies shape careers and expertise accumulation.

CAR: “Bringing it all Back Home” – The Impact of Repatriated Capital in a Born-Global Career

Author: **Edward O'Connor**, *Maynooth U.*
Author: **Adele SmithAuchmuty**, *Maynooth U. School of Business, Ireland*

Focusing on the careers of repatriated Self-Initiated Expatriates (SIEs) and situated within a Born Global industry context, this qualitative study employs a Bourdieusian perspective on capital to develop a systematic exploration of the capital mobilization of the repatriated Irish SIEs. This career study explores the impact of the repatriates' mobilization of their economic, cultural, and social capital within a purposely selected case study of a collective of Irish animation firms. Despite the growing interest in SIEs, we know very little about their repatriation experiences. In assessing the impact of repatriated SIEs' capital mobilization on their careers, the study addresses what has been described as the “near absence of research on SIE repatriation”.

Careers Across Time

Session Moderator: **Domingo Valero**, *Lucerne U. of Applied Sciences and Arts*

CAR: **Contrast or Reinforcement Mechanism? Disentangling the Dynamics of Change in Work Values Across Time**

Author: **Domingo Valero**, *Lucerne U. of Applied Sciences and Arts*
Author: **Madeleine Haenggli**, *U. Carlos III of Madrid*
Author: **Scott Seibert**, *U. at Buffalo School of Management*

Two conflicting hypotheses exist on how work values change across time – Are they modelled in contrast to a perception of lack or surplus (contrast hypothesis) or reinforced by respective work rewards (reinforcement hypothesis)? We suggest that the results may depend on the level of analysis that is used to explore the data (sample-average, between-person, within-person) and investigated this question performing a bivariate latent growth curve model with intrinsic work values and rewards data from 999 individuals followed across 16 years from the age of 21/22 to 37/38 extended by an autoregressive latent trajectory model structured residuals. We further relate the levels and trajectories in work values and rewards to work centrality and job satisfaction. We find support for a divergent development of work values (contrast) on the sample-average level, a conjoint development (reinforcement) on the between-sample level, and no clear relations on the within-person level of analysis. Our findings help bring clarity to the inconsistent empirical evidence on how individuals' work values change over time. Moreover, they can inform employers regarding the typical development of work values in their workforce and how work rewards may be best designed to maintain high intrinsic work values and satisfaction.

CAR: **The Career Trajectories of High Potential**

Author: **Kylie Hershey**, *U. of Kansas*
Author: **Jill Ellingson**, *U. of Kansas*

Many scholars define potential in terms of an individual's career trajectory, or the degree of success an individual is capable of achieving throughout their career. Accordingly, the literature on potential assumes the career trajectories of individuals with potential differ from those with more limited potential. This study marks the first empirical test of this assumption. We hypothesize about the comparative shapes of the career trajectories of individuals with potential and those with more limited potential and highlight gender as a key moderator of the career success trajectories of individuals with potential. We empirically test our ideas in a sample of full-time, for-profit and government workers over forty years in the workforce. Results suggest individuals with potential initiate their career with an advantage, experience more pronounced growth in career success than those with limited potential, and procure increasingly higher career success over time. Women with potential, however, were unable to confer the same levels of career success as men with potential.

CAR: **Resilience Imprint: CEO Childhood Famine Experience and Organization Resilience**

Author: **Jingwen Liang**, *Beijing U. of Posts and Telecommunications*
Author: **Mengyu Zhuang**, *Beijing U. of Posts and Telecommunications*

In the context of turbulence, resilience is a key factor for the stable development of organizations. However, the influence of CEOs' past experiences and personal traits on organizational resilience remains under-explored. In this research, drawing on imprinting theory, we propose that CEOs who experienced famine during childhood have a positive impact on enhancing organizational resilience. We find that childhood famine experiences shape CEOs' achievement orientation while attenuating their difference orientation, both of which mediate the relationship between childhood famine experiences and organizational resilience. Additionally, we examine the moderating roles of firm age and ownership. We discover that in younger, non-state-owned firms, differentiation orientation plays a more significant role in enhancing organizational resilience. Our research contributes to the literature on imprinting theory and organizational resilience.

CAR: **The Influence of Being Left Behind in Childhood on Individuals' Lifetime Development**

Children being left behind by parents is a major social problem in many countries. Nevertheless, there is a paucity of studies that have investigated whether this experience, concerning the parent-child relationship, holds any implications for an individual's lifelong development. In this study, drawing upon imprinting theory, we tested the effects of being left behind and found that this experience may influence several important outcomes, including criminal activities, salary level, and job satisfaction through individuals' mental health. In addition, another critical imprint: education, appears to moderate the mediating effects of mental health, such that when individuals achieve highly through education, the detrimental influences of being left behind in childhood on critical outcomes via mental health will be weakened. A representative and longitudinal database with 8,984 participants (1997 National Longitudinal Survey of Youth) was used to test hypotheses, and develop theoretical and practical implications.

Discussant: **Lisa Ellen Cohen**, *McGill U.*

Due to economic, technological, and cultural changes, career paths whereby individuals move in and out of alternative working arrangements, build careers from hobbies, or transition into new occupations via non-traditional training programs are becoming increasingly common. While management scholars have developed rich theories on identity and skill development in external labor markets, we have less understanding of the pathways that shape discontinuous career transitions—transitions that entail major and simultaneous occupational and organizational changes. In this symposium, we focus on the tech sector as a setting for examining the nontraditional reskilling pathways that have begun to shape discontinuous career transitions, such as Massive Online Open Courses (MOOCs) and bootcamps. We raise the question of whether and how value can be more equitably distributed to employees and employers through new forms of training and labor market matching. We also examine how these new pathways—and the individuals that move through them—come to be recognized as legitimate by employers. We explore these questions by addressing both the supply and demand sides of the labor market and by examining multiple touchpoints in the training and hiring process. We begin by exploring employers' sense-making around skill demands, shedding light on how skill requirements change in IT occupations. This motivates why new and alternative career pathways and training institutions have developed in response to rapid, demand-side change. We then discuss dynamics of knowledge development and job searching experienced by participants in these alternative pathways, as well as implications for our theories of occupational entry, learning, and socialization.

Trust, Transgressions, and Humanization of and in Organizations

Session Moderator: **Edward C. Tomlinson**, *U. of South Florida*

CM: **Trust Repair in Politically Polarized Workplaces**

Author: **Edward C. Tomlinson**, *U. of South Florida*

As the political landscape has grown more contentious in recent years, workplaces (as a microcosm of society) have encountered increased political polarization. Researchers and practitioners alike have noted that political polarization undermines workplace relationships and the trust that sustains them. In response, I integrate trust repair research with the broader conflict management literature to develop a conceptual model of trust repair in politically polarized workplaces. These insights yield a new construct (constructive engagement) posited to occupy a central role in facilitating increased trustworthiness perceptions of a coworker in one's political outgroup. Drawing from the contact hypothesis (Allport, 1979), I also propose how organizations can create and maintain conditions that strengthen the beneficial effects of constructive engagement. Finally, I argue that repaired perceptions of trustworthiness will lead to repaired trust at both individual and relationship levels, and ultimately more constructive psychological and behavioral outcomes.

CM: **How Do Conservative Ideologies Influence Humanization of Organizations?**

Author: **Vanessa Sa**, *Cornell SC Johnson College of Business*

Author: **Simone Tang**, *Cornell U.*

In an era marked by organizations' heightened socio-political consciousness and discussions of corporate personhood, how do organizations' conservative ideologies shape the extent to which people perceive them as possessing human-like qualities? Across three experiments, we find that right-leaning and religious companies are perceived as possessing fewer human traits when compared to liberal and no-ideology ones. This is because people perceive these organizations as more inflexible. Our work deepens the understanding of the factors that increase humanization of organizations. We also contribute to both academic discourse and practical implications for organizations seeking to navigate the evolving landscape of public perception in an increasingly politicized business environment.

CM: **Examining Institutional Contradictions: A Persistent Threat to Institutional Trust**

Author: **Chris Long**, *St. John's U., New York*

Author: **Sim B. Sitkin**, *Duke U.*

This conceptual paper provides new insights into institutional trust and distrust development. How institutions respond to stakeholder expectations directly impact their capacity to engender stakeholder trust. We examine several contradictions that are fundamental aspects of institutional dynamics and emerge as a result of stakeholder expectations. We discuss the character and composition of these contradictions and outline ways that institutions effectively and ineffectively address these contradictions. Finally, we discuss how stakeholders process institutional contradictions and discuss some general ways that institutions can remediate the negative effects of contradictions.

CM: **Rapid Retotalization to Organizational Distrust After Value-Based Transgressions**

Author: **Branko Bozic**, -

Author: **Chris Long**, *St. John's U., New York*

This conceptual article addresses the need for more research on distrust in general, and the emergence of pervasive distrust in particular, as highlighted by Bijlsma-Frankema et al. (2015), Sitkin and Bijlsma-Frankema (2018), and Six and Latusek (2023). We offer a novel explanation of pervasive organizational distrust that arises following shocking, value-based organizational transgressions. We explain how stakeholders can come to rapidly exhibit a deep and pervasive distrust in organizations that commit shocking, value-based transgressions. In develop our ideas, we draw on Shattered Assumptions Theory (Janoff-Bulman, 1989, 1992) and Slavoj Žižek's (2018, 2019, 2023) concept of re-totalization to explain how stakeholders perceptions of intractably complex and intractable feelings of vulnerability, lead them rapidly to formulate a re-totalized view of the transgressing organization. In addition to providing a perspective on how stakeholders can come to rapidly distrust an organization, this theory provides important contributions to research on distrust development and distrust remediation, and trust repair.

Difficult Conversations, Remediation, and Dispute Resolution Within and Across People and Cultures

Session Moderator: **Suraj Sharma**, *Calvin U.*

CM: **Norm Violations and Remediation Dynamics in Honor, Face and Dignity Cultures**

Author: **Suraj Sharma**, *Calvin U.*

Author: **Zhaleh Semnani-Azad**, *California State U., Northridge*

Author: **Ying-yi Hong**, *Nanyang Technological U.*

Author: **Soroush Aslani**, *U. of Wisconsin*

Author: **Ingrid Zukerman**, *Monash U.*

Social norms provide guidelines for appropriate behavior. Not adhering to these norms can result in a norm violation with devastating consequences. Social norms and people's cognitive processes are influenced by culture. The honor, face and dignity framework proposes that cultures have different norms and unique cognitive mechanisms due to differences in perceived self-worth and social structure. We outline a conceptual process model that outlines how norm violations are detected and evaluated and propose ways violations may be remediated to avoid or resolve conflict that may arise from norm violations in each culture. This study contributes to the literature by outlining a process of the mechanisms and outcomes of norm violations and remediations in different cultures. In a globalized and multicultural world, understanding how each people from different cultures perceive and react to norm violations is necessary for harmonious relations and managing conflict when it arises.

CM: **Difficult Conversations as Self-Regulatory Conflicts**

Author: **Yena Kim**, *U. of Chicago Booth School of business*

Difficult conversations can foster understanding and growth. Yet, many people struggle to initiate these conversations. Although prior work has primarily concluded that this occurs because people lack understanding of the benefits of difficult conversations, here, we tested whether the struggle to have difficult conversations might reflect a self-regulatory conflict. We first descriptively examined whether people characterize difficult conversations as having a structure in which the costs precede the benefits, typical of self-regulatory conflicts. Across diverse samples (laypeople from the U.S., politicians, physicians, university students from Hong Kong), we found that they do (Studies 1a–1d, 2). We then tested whether people psychologically experience difficult conversations as a self-regulatory conflict by testing whether they prefer to have them in the distant versus near future, a prototypical test of self-regulatory conflict (Studies 3a–3b). Finally, we investigated whether people are aware of the self-regulatory nature of difficult conversations by examining their willingness to take up costly commitment devices (Study 4). Our findings shed light on the nature of difficult conversations and point to interventions to promote honesty in personal and professional life.

CM: **Multilevel and Multidirection Trust in Transfer Pricing Dispute Resolution: Evidence From Indonesia**

Author: **Achmad Saad Maulana**, *U. of Birmingham*

Author: **Penelope Tuck**, *U. of Birmingham*

Author: **Mayya Konovalova**, *U. of Birmingham*

While research on trust has made significant development in recent decades, it has frequently been advanced independently at separate levels, with a focus on either trust in individuals or organisations (e.g., Zaheer et al., 1998, Stahl et al., 2011, Dyer and Chu, 2003). Despite the inherently multilevel nature of trust, there is a noticeable shortage of trust research that combines multiple levels of analysis (Fulmer and Dirks, 2018, Fulmer and Gelfand, 2012). Moreover, there is a lack of research specifically examining the dynamics of trust involving three different parties engaged in trust relationship among each other, particularly in the context of inter-organisation. To address this research gap, we conducted a qualitative and interpretive case study on transfer pricing dispute resolution in Indonesia, involving a relationship between three distinct organisations: the taxpayers, the tax authority, and the tax court. To gather data, we conducted 35 semi-structured interviews with the key stakeholders and participant observations within the dispute resolution process, which were then analysed using the thematic analysis method suggested by Braun and Clarke (2006). The study advances current research on inter-organisational trust by examining the reciprocal nature of trust between taxpayers and the tax authority concurrently in the context of tax disputes, both at the individual and organisational levels, through the integration of multi-level analysis. Additionally, the study takes into account the involvement of the tax court, shedding light on an additional facet of trust involving three distinct entities with multi-directional trust.

CM: **Intergenerational Confrontation and Organizational Change in the Israeli-Palestinian Peace Context**

Author: **Ambreen Ben-Shmuel**, *Department of Sociology, The Hebrew U.*

There is increasing media attention pointing to diverging generational perspectives and intergenerational rifts on major social, environmental, and political issues. This is of particular interest in social movement organizations, where members' involvement and dedication stem from their identification with organizational values and goals, such as environmentalism or peace. Drawing on Mannheimian conceptions of sociological generations formed around transformative political periods, this article explores how different generational perspectives trickle into organizations and, subsequently, how the intergenerational encounter shapes organizations. I explore how social generations form around critical junctures, namely, transformative political periods, and adopt different ideologies, which, in an organizational context, can lead to intergenerational confrontation and organizational change. This article builds on ethnographic research and an in-depth case study of a cross-border environmental cooperation organization operating in the Israel and Palestine context, demonstrating how the height then failure of the Oslo peace process created two political generations of peace and environmental activists, with different approaches to peace and environmental engagement within the same organization, leading to intergenerational negotiation, shaping the organization over time.

CMS: How to Improve CSR Education in Multicultural Settings: Questioning Carroll's Pyramid of CSR Model

Author: **Rebecca Chunghee Kim**, *Nagoya U. of Commerce and Business*

While contemporary capitalist society is stimulating corporate social responsibility (CSR)-related themes such as the UN SDGs and ESG as dominant narratives, educators have voiced concerns about the actual issue of how to integrate these emerging phenomena into management education. I performed mixed methods research by conducting a qualitative survey about the critical interpretations of CSR using samples collected from international business school students in Asia over a 6-year period (n = 1221). Their perceptions were analyzed by matching against Carroll's well-known four-part definitional framework, the pyramid of CSR, to gauge the degree to which CSR theories are received. The results revealed that: 1) the majority of Asian students understood CSR different from expectations; 2) Carroll's CSR pyramid is not well perceived by students in Asia; and 3) many students are aware that CSR is a culturally hypersensitive subject. Therefore, I propose a set of three critical recommendations for developing inclusive CSR education in multicultural settings: 1) emphasizing the "changing" role of business in global society and contemporary capitalism; 2) emphasizing the necessity of blending Western CSR theories with sustainable development issues in each nation; and 3) illuminating more details about cultural sensitivity in notions of CSR.

CMS: Critical Entrepreneurship Education: Educators' Reflections to Emancipate Learners

Author: **Niveen Eid**, *Birzeit U.*

Author: **Devi Akella**, *Albany State U.*

Critical entrepreneurship education (CEE), by integrating the tenets of critical pedagogy (CP) with entrepreneurship education (EE), has been forced to acknowledge the pluralistic and inclusive tendencies of entrepreneurship along with its hidden, political intents such as resistance and emancipation. Thereby, raising critical questions pertaining to the curriculum and teaching modalities adopted by EE. This paper contributes to the areas of CEE, CP, and EE by considering the role of educators in developing entrepreneurial students, especially those students residing in atypical contexts characterized by political oppression, or those belonging to the ethnic and minority groups who often face racial and ethnic discrimination. The educator's responsibility in designing critical pedagogies for one's classroom is accentuated, while employing an introspective, collaborative auto-ethnography (CAE) qualitative inquiry to effectively capture the personal experiences of educators as a part of the learning process. Empirical findings in the form of three themes: Anti-Functionalism, Alternative Discourses and Critical Pedagogies not only test the pedagogical models of Freire (1970) and Verduijn and Berglund (2020), but also provide fresh insights pertaining to critical pedagogical strategies effective in emphasizing the non-economic facets of entrepreneurship and in developing entrepreneurial students who are able to confront societal inequities and generate "out of the box" solutions.

CMS: A Social Media Platform to Advance Critical Management Education and the Mode 3 University

Author: **Amy Zidulka**, *Royal Roads U.*

The term "mode 3 university"—what Barnett (2017) has called "the ecological university" and Nørgård, Mor, and Bengtsen (2019) the "networking university"—has been employed to describe a reimagination of the university as an institution that is more entangled with the world outside its walls. This paper contextualizes Critical Management Education (CME) scholarship that champions further engagement with the world as aligned with the mode 3 vision and advocates for realizing this vision via a university owned and managed social media platform. The platform would be a space of connection between students, faculty, staff, and the broader world. It would blur boundaries between formal and informal learning and between the social, civic, and academic spheres. The university's identity would shift from its current identity as a provider of classes to being a site of learning and community. Social media would not be the only means by which such connection would happen but would be a central enabler. While formal classes would remain important, they would be decentred as the dominant sites of learning. This paper contributes to CME by advancing a critical process pedagogy that advocates for out-of-class engagement. It further contributes by drawing links between CME and scholarship from outside the discipline of management that explores critically informed post-digital pedagogies, and specifically how social media's conduciveness to self-directed informal learning, democratic co-creation of knowledge, and collective organizing might be leveraged to serve emancipatory ends.

CMS: 'Hooked and Anxious': Platform Capitalism and the Psychic Effects of Digitalization

Author: **Aliette Lambert**, *School of Management, U. of Bath*

Author: **Alice Ro Sofie Wickström**, *School of Business, Economics & Law, U. of Gothenburg, Sweden*

Author: **George Ferns**, *School of Management, U. of Bath*

Digital platforms have received burgeoning attention from organization and management scholars; however, the psychic effects of increasingly invasive technologies, such as social media, are not extensively explored. We focus on anxiety as a psychosocial effect of platform capitalism and digitalization by elaborating on Teresa Brennan's theorization of the connection between cultural and technological development, subject formations, and space-time relations. We propose four interconnected socio-organizational processes, reproduced by digital platforms and their associated algorithms, that inform and propel anxiety, illustrated by composite narratives: objectification, immediacy, disembodiment, and difference. Our narratives emphasize a spatio-temporal shift in how the subject relates to itself and others, conditioning the emergence of a reactive subjectivity informed by digital technologies that both respond to and foster widespread anxiety. To conclude, we discuss how this reactive subjectivity is tied to capital interests, notably those of platform corporations, invested reproducing (organizational) power by propelling an anxious feeling state.

Empowering Change: Innovations and Insights in Social and Emancipatory Entrepreneurship Research

Organizer: **Rick Colbourne**, *Sprott School of Business, Carleton U.*

Organizer: **Kate Monahan**, *Sprott School of Business, Carleton U.*

Panelist: **Annaleena Parhankangas**, *Iowa State U.*

Panelist: **Peter W. Moroz**, *Hill Levene School of Business*

Panelist: **Vadim Grinevich**, *U. of Bradford School of Management*

This Panel Symposium aims to explore the complex interplay of privilege and marginalization at societal and individual levels in the entrepreneurial landscape. Our focus encompasses adapting to evolving societal norms and expectations, as well as fostering equitable transitions in the face of various disruptions. Such disruptions may arise from shifts in social values and beliefs, the emergence of digital platforms, advancements in media technology, and instances of social unrest. The panel brings together entrepreneurship scholars to discuss issues and challenges related to research at the intersection of social and emancipatory entrepreneurship, just transitions, intersectionality and racialized and marginalized communities. Its objective is to shift attention away from an exclusive focus on economic wealth creation to frame a more dynamic understanding of social and emancipatory entrepreneurship as a catalyst for social change with multiple possible outcomes, such as poverty alleviation, the elimination of oppression, and/or decolonization, etc. A significant aim is (i) to encourage research that transcends traditional diversity categories, fostering deeper insights into intersectionality and its impact on entrepreneurship, especially in marginalized and racialized communities, and (ii) explore the unique motivations behind venture creation in context of social and emancipatory entrepreneurship, particularly those ventures aimed at societal change and facilitating just transitions.

Corporate Engagement in Social Media: Stakeholders and Strategy

Session Moderator: **Mohamed Hédi Charki**, *EDHEC Business School*

CTO: **Staying Ahead of the Game: Bystander Customer Engagement Following a Peer's Failure** 

Author: **Srikanth Paruchuri**, *Texas A&M U.*
Author: **Naveen Kumar**, *U. of Oklahoma*
Author: **Erik Hoempler**, *Texas A&M U., Mays Business School*
Author: **Alok Saboo**, *Georgia State U., J. Mack Robinson College of Business*

Research shows bystander firms face uncertainty about spillovers from a peer's reputational event, such as competence failure. Extending these earlier findings on spillovers, this research investigates bystander reactions to uncertainty arising from such reputational event. Specifically focusing on online reputation management actions, we theorize and find empirical evidence that same-category bystanders differentially engage with customer reviews after the peer's failure when compared to non-bystanders. Empirically testing this in the context of restaurant actions on Yelp platform around Chipotle's E. coli outbreak in Seattle, we find that bystanders differentially respond more to highly influential reviews—reviews with negative tenor and those written by very active reviewers—than non-bystanders. These findings have implications for research on organizational misconduct, spillovers, and online reputation management.

CTO: **Effect of Social Media Use for Organizational Communication on Proactive Socialization Behavior**

Author: **Yong ZHANG**, *Shandong U.*
Author: **Jia Liu**, *School of Management, Shandong U.*
Author: **Li Yao**, *Guanghua School of Management, Peking U.*
Author: **Di Cai**, *Shandong U.*
Author: **Bing Liu**, *Shandong U.*

Social media has become a daily communication tool and recent scholars have paid more attention to the role of social media in newcomer socialization. However, current research on this topic adopts a newcomer-centric approach and focuses on the effects of newcomers' social media use for accelerating their adaptation. Drawing upon communication visibility theory, the present study adopts an organization-centric approach and explores how social media use for organizational communication assists newcomers in engaging in proactive socialization behavior. Results from a time lagged survey study show that social media use for organizational communication has a positive indirect effect on newcomers' proactive socialization behavior via message transparency and network transience. Furthermore, perceived mentoring quality reduces the effect of social media use for organizational communication on proactive socialization behavior via message transparency. We discuss the theoretical and practical implications of the findings.

CTO: **An Attention-Based View of Corporate Social Media Engagement** 

Author: **Eric C. Larson**, *U. of Illinois at Urbana-Champaign*
Author: **Carl Vieregger**, *Drake U.*

Almost all companies seek to engage with their customers and other stakeholders via social media, yet little academic research attempts to analyze the association between corporate social media engagement (CSME) and firm-level strategic decision-making. This dearth of research is due to a lack of an appropriate theoretical lens to study the relationship, as well as the absence of a comprehensive, large-sample dataset that captures the influence of CSME. Our research here makes two contributions to the fields of social media strategy and strategic decision-making: first, we propose that the attention-based view (ABV) of the firm should be applied to understand the association between social media and multi-stakeholder strategic decision-making; second, we develop, describe, and make publicly available a unique dataset that enables the empirical testing of these potential relationships. We also present some preliminary, exploratory, and summary results that point to future research opportunities. These exploratory results are intended to serve as a foundation for future research that is targeted at understanding and measuring the concept of CSME and its strategic implications.

Raising Capital: Crowdfunding and Investors

Session Moderator: **Daniel Pienta**, *U. of Tennessee, Knoxville*

CTO: **News Contagion, Investors' Decisions, and ICOs' Success**

Author: **Andrea Moro**, *Lund U.*

Author: **Johannes Gartner**, *TU Delft*

Author: **Yacine Belghitar**, *Cranfield School of Management*

Our research explores the influence of news and comments, specifically those circulated by reliable sources such as the Financial Times, on the ability of firms undertaking an Initial Coin Offering (ICO) to achieve their target fundraising goal, known as the soft-cap. We employ contagion theory as a framework to investigate whether an increased volume or a more favorable net sentiment of such news and comments enhances the likelihood of token issuers meeting the soft-cap, by steering investor decision-making processes. Our findings indicate a positive, yet non-linear, impact of reliable news sources, which significantly bolsters the odds of reaching soft-cap, from 0.4 to up .9. We propose that reliable news and commentary operate through three primary channels: initially, they serve to raise awareness and legitimize the ICO, while over the long term, they play a more informational role. Our results are robust against reverse causality and omitted variable bias.

CTO: **Does Recommendation Help? The Role of Backer Conversion in Attracting Crowd-Fundraising**

Author: **Zhenzhen Jin**, *Southern U. of Science and Technology, China*

Author: **Yukun Yang**, *Southern U. of Science and Technology, China*

Reward-based crowdfunding creators usually find it challenging to discover and attract a broad range of potential backers due to the limited options of project promotion channels. Despite the notice of the essential value of backers for the existing crowdfunding projects, there is a lack of understanding with regard to excavating their value and transferring such value to a new project. This research focuses on a commonly used promotion method – peer project recommendation and examines its influences on the performance of recommended projects. Drawing on the mere exposure effect and trust theory, we argue backer conversion as an underlying mechanism for the effects of recommendation on recommended project performance. The results demonstrate an average positive effect between recommendation and recommended project performance, partially mediated through backer conversion. Considering the boundary conditions of recommender-related and recommendation-related features, we find that the recommendation effect is amplified by creator's experience and the readability of recommendation context. We also find that the mediated effect of backer conversion is strengthened by the update frequency of the recommender project while weakened by the timing of recommendation. We discuss the theoretical and practical implications of our findings.

CTO: **Understanding Crowdfunding Success and Subsequent Campaigns**

Author: **Lusi Yang**, *Georgia State U.*

Crowdfunding has become an important fundraising method for entrepreneurs. In this study, we examine the role of successful crowdfunding experiences in serial entrepreneurship. Although serial entrepreneurs are typically more mature and receive higher success rates, it remains unclear how their successes affect their subsequent crowdfunding performance, given the mixed views of crowdfunding experiences in prior literature. To uncover the tension of crowdfunding success, we draw on the organizational learning literature and propose an overall negative effect of successful experiences, considering the prominence of superstitious learning (i.e., individuals erroneously associate their success with specific actions that may not contribute to success) in crowdfunding. Based on the features of crowdfunding and the proposed theoretical mechanisms, we further identify the contingencies where the characteristics of experience and campaign can weaken or strengthen the effect of success. Experience relatedness and engaging in backing experiences are expected to mitigate the negative effect of success, whereas campaign goal overshooting can strengthen such effect. The empirical analysis of 10,795 crowdfunding campaigns from 3,978 serial entrepreneurs on Kickstarter confirms our theoretical predictions. Our findings contribute to crowdfunding literature in terms of the tension of crowdfunding success and offer practical insights for overcoming the negative effects of past success.

Digital Transformation Enablers: Top Management, Technological Capabilities, and Community

Session Moderator: **Sameer Borwankar**, *McGill U. - Desautels Faculty of Management*

CTO: **Master One's Craft: CEOs With IT Backgrounds and Firm Digital Innovation**

Author: **Lingxue Yi**, *School of Business, Sun Yat-sen U.*

Author: **Yichi Jiang**, *School of Economics and Business Administration, Chongqing U.*

We investigated the impact of CEOs with information technology (IT) backgrounds on firm digital innovation. Using Chinese A-share listed firms in 2007-2022, we found that CEOs with IT backgrounds can significantly enhance a firm's digital innovation. Heterogeneity tests indicate that the promotion of digital innovation by CEOs with IT backgrounds is more pronounced in state-owned firms, firms facing a competitive disadvantage, and regions with lower levels of marketization. Two conduits through which CEOs with IT backgrounds stimulate digital innovation are the augmentation of digital attention and the elevation of human capital levels. Furthermore, CEOs with IT backgrounds can create shareholder wealth by driving firm digital innovation. We examine the driving factors of digital innovation activities from the perspective of CEO's personal traits, providing crucial insights into expediting digital talent development and supporting firm digital transformation.

CTO: **Driving Digital Transformation: The Impact of Founder CEOs, Board Size, and Expertise**

Author: **Ying Feng**, *Xi'an Jiaotong-Liverpool U.*

This article explores the impact of CEO founder status on firm digital transformation performance and the contingencies that could influence the relationship. Based on a panel dataset that contains all Chinese listed companies that conducted online business between 2014 and 2019, we find that companies managed by founder CEOs are likely to perform better in digital transformation than those managed by non-founder CEOs. Furthermore, our analysis shows that a larger board and supervisory board could decrease the positive influences that founder CEO exerts on digital transformation. On the contrary, when the founder CEO has prior founding experience, his or her positive impact on the firm's digital transformation performance will likely be enhanced.

CTO: **Digital Technology and Tourism Development: Evidence from the E-Commerce Pilot City Policy in China**

Author: **Liping Fu**, *College of Management and Economics, Tianjin U.*

Author: **Jie Yang**, *College of Management and Economics, Tianjin U.*

Digital technology has become a strong driving force in tourism development. With the e-commerce pilot city policy as a quasi-natural experiment, this paper uses the multi-period difference-in-differences (DID) model to explore the effect of digital technology on tourism development and its transmission mechanism. The empirical analyses cover a panel data of 280 prefecture-level cities in China from 2003 to 2019. The results show that (i) the e-commerce pilot city policy has a promoting effect on tourism development. (ii) The e-commerce pilot city policy promotes tourism development through reducing tourism environmental cost and increasing tourism network attention. (iii) In large and above cities and high Internet scale cities, the e-commerce pilot city policy has a greater effect on promoting tourism development. The conclusions provide empirical evidence for tourism-driven effect of digital technology and provide important policy implications for digital transformation of tourism industry.

CTO: **Digital Transformation in Industrial Districts: The Role of Relational Learning in Managing Imprints**

Author: **Anna Marrucci**, *Department of Economics and Management - U. of Florence*

Author: **Riccardo Rialti**, *U. of Milan*

Digital transformation is impacting businesses around the world. However, there are divergent perspectives on how traditional SMEs in industrial districts cope with technological trajectories. Based on imprinting theory, this research delves into the role of relational learning, with the aim of clarifying why some district SMEs undergo radical transformation while others do not. Six case studies within the textile district of Prato (Italy) were selected, with 24 interviews with 18 key informants. Using an inductive approach based on Grounded Theory, the study interprets the coded data, shedding light on the digital transformation trajectories of SMEs and the industrial district as a whole. The findings emphasize that relational learning capability enables SMEs to manage different imprints, prioritizing the right ones at the right times. District SMEs with relational learning capabilities are more likely to embrace digital transformation through disruptive innovations and are predisposed to become imprinted. This study fills a gap in the literature, providing a comprehensive exploration of how change spreads across industrial districts and underscoring the need to identify why firms choose specific digital transformation paths.

Factors Affecting Digital Posture and Orientation

Session Moderator: **Gavin Wang**, *U. of Texas at Dallas - Jindal School of Management*

CTO: **Information-Based Herding as a Driver of a Firm's Digital Orientation**  

Author: **Florian Johannes Oppolzer**, *Heinrich-Heine U. of Dusseldorf*

This study integrates major facets of information-based herding theory into strategic information systems (IS) research and theorizes that firms turn to peers to reduce the uncertainty associated with the pursuit of digital strategies. We expect that a firm's degree of digital orientation is influenced by the digital orientation of the firm's peers. The theoretically derived research model is validated empirically using data from Compustat, BoardEx, and annual reports covering up to 1,412 S&P 1500 corporations between 2001 and 2018. We use a sophisticated identification strategy based on partially overlapping peers to exclude the notion that mere simultaneity effects drive our findings. Our findings indicate the presence of a herding effect that is sensitive to peer-level. On the firm level, the presence of a Chief Information Officer or Chief Digital Officer (CIO or CDO) on the firm's top management team (TMT) reduces and partly even suppresses imitation.

CTO: **Where to go for Digital Transformation of Small and Medium-Sized Enterprises in China** 

Author: **Jiajia Liu**, *Beijing U. of Chemical Technology*

Author: **Kaiyue Deng**, *Beijing U. of Chemical Technology*

Author: **Ye Zhang**, *Beijing U. of Chemical Technology*

The orderly advancement of digital transformation in small and medium-sized enterprises (SMEs) is currently hindered by constraints in technology, human resources and financial resources. This study, based on the Technology-Organization-Environment (TOE) framework and survey data from 469 SMEs, investigates the key factors influencing digital transformation in SMEs. The research reveals that: (i) SMEs exhibit a high level of digital awareness, yet their degree of digital transformation remains relatively low, resulting in insignificant enhancement in quality and efficiency. This is primarily attributed to the close correlation between the level of digital transformation and factors such as the age of the enterprise, its size, industry stage, and industry category. Therefore, this study selects enterprise age, size, industry stage, ownership nature, and industry category as control variables; (ii) empirical results, with the utilization of a structural equation model, indicate that technological development, the external environment, and organizational flexibility are the three major influencing factors for digital transformation in SMEs. The external environment exerts the strongest impact, followed by technological development, with organizational flexibility having the least influence; and (iii) among the external environmental factors, digital ecological positioning, partnership, policies, and technological uncertainty have the most substantial impact; regarding technology development factors, digital technology R&D personnel and digital R&D capital investment impose the greatest impact; as for organizational flexibility factors, the digital transformation support level and organizational resource absorption and transfer ability have the highest impact. Based on the aforementioned research conclusions, this paper proposes a targeted pathway for the digital transformation of SMEs.

CTO: **Heterogeneity in Digital Posture of Family Firms in Emerging Economies**   

Author: **Abhishek Kathuria**, *Indian School of Business*

Author: **Abhishek Sachdeva**, *Indian School of Business*

Author: **Prasanna Karhade**, *Chinese U. of Hong Kong*

Author: **Sougata Ray**, *Indian School of Business*

Family firms, the predominant form of business in emerging economies, differ in their business strategies, behaviors, and outcomes from non-family firms. We conceptualize Digital Posturing as a set of signals firms produce to convey their focus on digital technologies. We propose three hypotheses extending the baseline hypothesis that family firms differ from non-family firms in their Digital Posture. First, Family Business Group (FBG) affiliation negatively influences digital posturing, as FBGs may serve as market-supporting institutions providing financial capital to member firms. Second, there is a negative influence of Foreign Ownership on Digital Posture, which is intensified in the presence of FBG affiliation, as foreign promoters offer financial capital, reducing the need for extensive Digital Posturing to attract external funds. Third, there is a positive influence of the Strength of Family Ties on Digital Posture, which weakens due to FBG affiliation, as external stakeholders perceive such firms as more conservative, and these firms suffer from greater opacity. Empirical analysis, using panel regression on archival data from listed family firms in India (2016-2021), supports our theory, emphasizing how FBG affiliation shapes the strategic IT behavior of firms. This study contributes to the growing literature on family firms within the information systems field.

Opportunities and Challenges of Decentralization in the Blockchain Age

Organizer: **Christoph Müller-Bloch**, *ESSEC Business School*
Organizer: **Daniel Obermeier**, *NYU Stern School of Business*
Panelist: **Jungpil Hahn**, *National U. of Singapore*
Panelist: **Hanna Halaburda**, *New York U.*
Panelist: **Ola Henfridsson**, *U. of Miami*
Panelist: **Ying-Ying Hsieh**, *Imperial College Business School*
Panelist: **Youngjin Yoo**, *Case Western Reserve U.*
Panelist: **Mariia Petryk**, *George Mason U.*

The advent of blockchain technology has ushered in a new era of decentralization. These efforts have promised to enhance transparency, inclusion, and democracy, ultimately leading to a fairer distribution of created value. In recent years, a dynamic community of scholars has begun investigating these experimental efforts to unravel the opportunities and challenges presented by blockchain-enabled decentralization. Existing research indicates that achieving and sustaining the promises of blockchain-based decentralization is often challenging, seldom leading to the envisioned paradigm shift. However, this research is currently scattered across different fields, theoretical perspectives, and technological levels. This has resulted in ambiguities regarding the conceptualization of decentralization and has impeded scientific progress. Therefore, we believe there is a need to bring together leading scholars with diverse research foci and methodological expertise to discuss and provide direction on how this new form of technology-based decentralization has shaped and will continue to shape management theory. This panel symposium aims to provide a forum for elaborating on the nature of blockchain-enabled decentralization, debating the associated opportunities and challenges, and identifying areas of interest for future research. In a facilitated discussion, we will raise these questions and provide ample opportunities for participants to learn from their peers, contributing to the advancement of leading management research on blockchain-enabled decentralization.

Harassment and Sexual Orientation

Session Moderator: **John Millea**, *Henley Business School, U. of Reading*

DEI: Time After Time: The Cumulative Effects of Bias, Discrimination, and Harassment on Working Women      

Author: **John Millea**, *Henley Business School, U. of Reading*

Time after time working women around the world continue to experience substantial gender bias and harassment as they strive to achieve their full potential within organizations and society. Despite a wealth of prior research evidencing and describing various forms of bias and harassment, empirical testament of their long-term effects within organizational settings is scarce, with critical questions left largely neglected in the literature. Specifically, “What effects do various forms of gender bias and harassment have on working women themselves, their family members, and their organizations?” and “What are the temporal dynamics of these effects, i.e., when, where, and how do the effects of bias and harassment emerge and intensify, how do repeated exposures compound, and how together do they accumulate into long-lasting effects?” Through an analysis of 68 research studies published between 2013 – 2023, this scoping review maps the breadth of evidence available on these questions, advancing the understanding of the cumulative effects of bias and harassment, and providing theoretical and practical implications and insights for academics and practitioners as they research and develop diversity, equity, and inclusion strategies and solutions that address the stereotypes, inequities and discrimination experienced by working women.

DEI: Sexual Orientation and Career Interests: The Moderating Role of LGB Acceptance & Cultural Tightness  

Author: **Yan Yi Lance Du**, *U. of Illinois at Urbana-Champaign*

Author: **Michele Joy Gelfand**, *U. of Maryland*

Author: **Fritz Drasgow**, *U. of Illinois*

Research suggests that lesbian, gay, and bisexual (LGB) people are underrepresented in some occupations. To better understand personal and environmental factors that contribute to LGB+ disparities, an important but underexplored domain is sexual minorities' career interests. Drawing on the gender-shift hypothesis (Lippa, 2008), this study examined the relationship between sexual orientation and Holland's (1997) RIASEC (Realistic, Investigative, Artistic, Social, Enterprising, and Conventional) interests (Study 1, N = 56,317). Leveraging Social Cognitive Career Theory (SCCT; Lent et al., 1994), we also investigated the effects of two potential moderators on this relationship: social acceptance toward LGB+ people and cultural tightness-looseness (Study 2, N = 102,629, 79 countries). Results revealed sexual orientation differences in interests that support the gender-shift hypothesis: lesbian women shifted in male-typical and gay men shifted in female-typical directions in Realistic and Social interests. In addition, multilevel analyses found that SO differences in career interests are generally larger in more LGB accepting and loose countries. These findings suggest that more permissive and loose countries offer sexual minorities greater latitude to pursue non-gender-traditional careers. Our research offers a large-scale investigation of sexual orientation differences in career interests and offers useful insights for policymakers seeking to address LGB+ disparities.

DEI: Bystander Intervention and Leader Gender Effect on Perceived Supervisor Support in Sexual Harassment

Author: **Renee McCauley**, *George Mason U.*

Author: **Yijue Liang**, *George Mason U.*

We present a model of the followers' subjective evaluation of supervisor support in the face of sexual harassment. Integrating conservation of resources theory and role congruity theory, we argue that the subjective value of a supervisor's intervention behavior is contingent upon the behavior's congruence with leader and gender stereotypes. We classify Liang's (2022) five types of sexual harassment bystander intervention into agentic and communal actions and argue that men supervisors' ratings of perceived supervisor support will not differ based on the type of bystander intervention they provide. Conversely, we believe that women will receive lower ratings of supervisor support when they engage in agentic bystander interventions than when they engage in communal bystander interventions. We then discuss the theoretical and practical contributions to the sexual harassment bystander intervention literature and conservation of resource theory while suggesting avenues for future research.

DEI: The Consequences and Reactions of Women Victims of Sexual Harassment in the Brazilian Organizations      

Author: **Alice De Freitas Oleto**, *FDC - Fundação Dom Cabral*

Author: **José Vítor Palhares**, *Fundação Osório*

Despite the relevance of its study within organizations, work-related sexual harassment is still a topic little studied in Brazilian academic reality, which guided this study. Considering the possibilities for analyzing the theme, this research aims to understand the consequences and reactions of women victims of sexual harassment in organizations. To this end, we developed a qualitative study based on data (grounded theory). Data was gathered through 43 interviews with women who work in Brazilian organizations. The results indicate that sexual violence at work has consequences for women's physical and mental health, exposing victims to degrading and traumatizing situations. The main reactions include blaming the victim and silencing the violence suffered due to fear of dismissal or shame. We hope that this study encourages Business Administration researchers to continue investigating sexual harassment committed against women, regardless of their position in the company, to strengthen a field of study that is still in its infancy and encourage management practices that seek to prevent and combat this type of violence in the workplace.

Navigating Diverse Spaces

Session Moderator: **Sun Young Kim**, *Kedge Business School*

DEI: Lay Beliefs of the Ethical Decision Quality Advantage for Diverse Groups

Author: **Sun Young Kim**, *Kedge Business School*
Author: **Mario Pandelaere**, *Virginia Tech*

Although people seemingly favor diverse teams, they tend to prefer non-diverse ones when they are a part of the team. We examine how lay beliefs about diversity and the nature of the task define group formation choices. Across three studies, we find that diversity is valued more for tasks that involve ethical judgments or evaluations, compared to other types of tasks. In this process, the match between the range of perspectives that a task requires and the assumed range that a group provides is critical, such that diverse groups are believed to offer a wider range of perspectives than less diverse groups, in turn leading to a perception of ethical decision quality advantage for diverse groups: A belief that diverse teams make better decisions than non-diverse ones, especially for ethical tasks. Our research helps to elucidate when diversity presumably provides more benefits and why diversity is chosen for groups.

DEI: Organizational Socialization of Employees with Blindness: Navigating Ableism in Diverse Spaces

Author: **Tarun Kumar Vashisth**, *Indian Institute of Management Bodh Gaya*
Author: **Sushil Nifadkar**, *U. of Nebraska, Lincoln*
Author: **Rajesh Chandwani**, *Indian Institute of Management, Ahmedabad*

An effective organizational socialization is extremely crucial for the adjustment of newcomers in general and persons with disabilities (PWDs) in particular. However, despite its increased relevance, organizational socialization for PWDs remains underexplored. We contribute to the emerging yet nascent literature on the above topic by conducting a qualitative study among employees with blindness (EBs) engaged in formal permanent employment in different industries at junior and middle management levels. We invoke Lefebvre's spatial perspective to comprehend EBs' lived experiences during organizational socialization. Our findings establish that spaces are not ableist inherently, but organizational spaces often perform ableism, more so initially, due to prevalent ableist discourses, lack of knowledge regarding a particular EBs' capabilities, and lack of colleagues' sensitization. This results in EBs' lived experiences infused with feeling of exclusion and perceived unequal power-relations with non-disabled employees during socialization. However, spatial practice, conceived in an inclusive way, can result in enabling spaces for EBs, infusing their lived experiences with inclusion. Thus, we highlight differential performativity of organizational spaces for EBs, and problematize the notion of neutral organizational spaces. Keywords: Organizational Socialization, Persons with Disabilities, Ableist Organizational Spaces, Inclusive Organizational Spaces, Differential performativity of organizational spaces

DEI: Unveiling the Complexities: A Longitudinal Investigation of Culturally Diverse Teams

Author: **Linshan Fu**, *U. of Nottingham China*
Author: **Jie Wang**, *U. of Nottingham Ningbo China*
Author: **Martin J Liu**, *U. of Nottingham, China*

Despite the extensive literature on culturally diverse teams, our understanding of their impact remains limited. This study addresses this persistent limitation by applying the categorization-elaboration model (CEM) to investigate how value diversity (i.e., power distance, uncertainty avoidance and collectivism) unfold impacts on team cohesion and team information elaboration over time. Specifically, we expect value diversity would differently impact the initial level and change of team cohesion and information elaboration. Through a four-wave longitudinal field survey spanning approximately ten months, we examined 115 culturally diverse teams. Our study reveals that while value diversity has distinctive and time-varying effects on team cohesion and information elaboration, the results yield a more nuanced and intricate understanding of how value diversity in culturally diverse teams unfolds impacts. The theoretical and practical implications of our findings are discussed.

DEI: Generational Differences in Responses to Diversity Rationales

Author: **Eileen Y. Suh**, *Boston U. Questrom School of Business*
Author: **Evan P. Apfelbaum**, *Boston U. Questrom School of Business*
Author: **Nir Halevy**, *Stanford U.*

Because employee buy-in has been identified as a critical component of change with respect to diversity, organizations frequently attempt to make diversity-related events seem more appealing by offering reasons for why one should attend them. For example, organizations justify these diversity-related events as learning opportunities to attain practical skills in a diverse world, opportunities to promote social justice, or judgment-free spaces to discuss sensitive topics. It is important to empirically test whether providing these justifications is effective, because the signals they send can unintentionally hinder the very goals that they aim to achieve. It is particularly critical to examine the effects of these diversity justifications in an organizational setting with multiple stakeholders, because the ways that organizations discuss diversity can elicit varying responses across individuals from different backgrounds. In this paper, we examine whether these managerial practices are actually effective in engaging the individuals that they target in a multi-stakeholder field context. In two pre-registered field experiments at a large academic institution (N = 47,807), we find that providing a justification has a positive effect on younger generation's registration and attendance rates, whereas it has a negative effect on the older generation's engagement in these events, after controlling for other relevant factors such as gender, race, and staff/student status. In a follow-up lab experiment, we find evidence that organizations' attempts to influence people via diversity justifications affect older generation adversely, but not younger generation, due to a difference in the sense of obligation that they feel toward the organization. Based on research on psychological reactance (Brehm, 1966), we theorize that diversity justifications trigger disengagement among those who feel more obligated to attend (e.g., older generation) due to a perceived threat to their autonomy.

Participant: **Aparna Joshi**, *Ross School of Business, U. of Michigan*
Participant: **Mary Eve Speech**, *U. of Georgia*

Although concealable stigmatized identities are fundamental to individual identity and carry positive benefits for the individual when shared with others, individuals are still hesitant to disclose such identities in the workplace due to risk of social devaluation and negative stereotypes. As such, given the taboo nature of such identities, employees with concealable stigmatized identities often grapple with the decision whether to disclose their identity at work or keep their identity hidden, and how to effectively manage workplace relationships and social interactions at work. In an effort to further understand how people navigate such disclosures and subsequent relationships in the workplace, the papers in this symposium highlight various concealable stigmatized identities and examine: (a) what motivates individuals to disclose their concealable identities; (b) what disclosure strategies exist for specific identities; (c) how employees navigating work relationships in relation to their identities; and (d) how individuals engage in identity work to understanding one's identity.

An essential pathway toward improving the workplace experience and dynamics of those with disabilities is the complex array of external factors present within organizations. Such factors influence both how these employees perceive themselves, as well as how others in the workplace perceive disability. Research that explores this topic is particularly valuable given the breadth and scope of disability in society, but still there exists a pronounced scarcity of disability as a dimension of diversity and inclusion within organizations. The papers in this symposium aim to contribute novel and important insights to this underrepresented domain of disability in the workplace by studying the impact of organizational factors – including climate, policies, and practices – on the interactions and perceptions of employees with disabilities in the workplace.

Participant: **Peter Belmi**, *U. of Virginia*

This symposium examines the complex and often contradictory nature of addressing workplace inequities through diversity initiatives. Organizations are increasingly investing in diversity and inclusion (D&I) efforts, as evidenced by the prevalence of Chief Diversity Officers and comprehensive diversity training programs among Fortune 1000 companies. These efforts represent a deliberate strategy to cultivate equitable and inclusive workplaces. However, the symposium emphasizes the necessity of evaluating the impact of these practices to ensure they contribute to real and sustainable change, rather than being mere symbolic gestures. The studies featured explore the complex dynamics of workplace inequities and the often paradoxical outcomes of well-intentioned D&I efforts. These studies employ various methods such as surveys, audit studies, and experiments to assess organizational policies across different contexts. Key findings include: 1) Gender differences in EEOC judgments of merit, with claims filed by women in masculine industries more likely to be granted merit. 2) The impact of free speech appeals on reducing accountability for workplace bias, highlighting a failure in achieving D&I goals. 3) The concept of strategic ignorance in sexual harassment claims, indicating that claims of ignorance may not always be made in good faith. 4) The effectiveness of positive versus negative feedback in motivating equitable behaviors among city councilors. 5) The exploitation of first-generation college students in organizations due to positive stereotypes. These studies collectively reveal the intricate nature of addressing workplace inequities, underscoring the need for more nuanced and effective strategies in fostering true equity and fairness in the workplace.

Synthesizing the Literature

Session Moderator: **Jiani Fan**, *U. of Alabama, Tuscaloosa*

ENT: Venture Capital Research: Meta-Analysis

Author: **Ludvig Levasseur**, *Indian Institute of Management, Bangalore*
Author: **Sai Chittaranjan Kalubandi**, *Indian Institute of Management, Bangalore*
Author: **Saneesh Edacherian**, *Birmingham Business School, U. of Birmingham*
Author: **Thomas Houston Allison**, *Texas Christian U.*
Author: **Siri Ann Terjesen**, *Florida Atlantic U.*

Prior research is inconclusive on how venture capital (VC) backing affects new venture performance. Our meta-analysis of 102 articles quantitatively reviews, evaluates, and discusses key findings. We test the VC investment-funded firm performance relationship through multiple performance aspects and highlight the important moderating role of entrepreneur ties, networks, and social capital and we offer future directions.

ENT: Hybrid Entrepreneurship: An Integrative Systematic Literature Review and Research Agenda

Author: **Charis Asante-Agyei**, *Syracuse U.*
Author: **Joaquin Cestino**, *Jonkoping International Business School*

Over half of businesses are started by people who are already employed, a phenomenon called hybrid entrepreneurship (HE). Although research on hybrid entrepreneurship has increased in recent years, the diversity of perspectives has led to a fragmented literature that makes it difficult to advance our understanding of this phenomenon. We fill this gap by conducting an inclusive systematic review of research conducted on hybrid entrepreneurship. Our review integrates existing research in a framework of antecedents and outcomes of hybrid entrepreneurship. This enables us to propose opportunities for future research to contribute to areas that have been overlooked. In doing so, we contribute to the emerging literature on hybrid entrepreneurship.

ENT: Corporate Accelerators: A Systematic Literature Review and Agenda for Future Research

Author: **Ravi Roshan**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Vivek Kumar Jha**, *Doctoral Student at Indian Institute of Management Lucknow*
Author: **Sabyasachi Sinha**, *Indian Institute of Management, Lucknow*

Established firms are increasingly finding avenues of collaboration and engagement with startup firms. For these organizations, corporate accelerator programs (CA) are increasingly becoming important vehicles in pursuing innovation and the need to stay relevant through corporate-startup engagement. On the other hand, startups also benefit significantly from these short-term, fast-paced programs that support them in entering markets and building strategic partnerships. Aiming to map the emerging stream of CA literature, this paper reviews extant research through scholarly articles published in journals indexed in Scopus, Web of science, and EBSCO databases. Following a systematic literature review approach, this study synthesizes insights on (a) the classification of CAs, (b) the objectives, processes, and outcomes for different stakeholders, and (c) key theoretical lenses used in CA research. The study also highlights gaps in the present understanding of corporate accelerators and outlines a research agenda by identifying key research questions and issues where further research would benefit this emergent stream.

ENT: Shedding Light on the Organizational Growth Puzzle: A Systematic Review and Integrative Framework

Author: **Hanako Frawley**, *U. of Western Australia*
Author: **Richard Gruner**, *U. of Western Australia*
Author: **Mark Edwards**, *Jonkoping International Business School*
Author: **Christine Soo**, *U. of Western Australia*

Since Penrose's (1959) book explored the concept of organizational growth, different research fields including entrepreneurship and strategic management, have devoted considerable attention to organizational growth research. Specifically, researchers have focused on how organizations grow and how much organizations grow. Yet, despite the sustained interest, organizational growth research is heterogeneous, inconsistent, and disconnected. With this in mind, we explore perspectives of organizational growth within the management literature. We systematically review 147 peer-reviewed journal articles published between 1960 and 2021 to consolidate the empirical and theoretical research from diverse fields. The review identifies and explores six different theoretical perspectives distilled from the extant literature—economic, strategic orientation, sustainability, managerial, resource-based view, and life cycle—based on six elements: (i) definition; (ii) underlying theory; (iii) determinants; (iv) processes; (v) outcomes, and (vi) contribution to organizational growth research. Based on these six perspectives, we develop an integrative framework, which maps the landscape of past and current research by encompassing organizational growth desires, possibilities, choices, and outcomes. The proposed integrative framework advances the literature by changing the focus to what is organizational growth and synthesizes fragmented research findings to develop a comprehensive understanding of organizational growth, which can serve as a foundation for future research.

Entrepreneurial Finance: Identity

Session Moderator: **Soyeon Park**, *Korea U. Business School*

ENT: **Narrative Tone and Facial Emotion Management of Risk Disclosure in Crowdfunding**

Author: **Soyeon Park**, *Korea U. Business School*

Author: **Daeil Nam**, *Korea U. Business School*

In response to criticism of the risks inherited in crowdfunding, platforms such as Kickstarter mandated creators to disclose risks in every campaign page. However, the industry lacks specific regulations, and the research tracking its effect has not gained much attention so far. Building on a prior view of risk as losses only, we first argue that positive narrative tone negatively affects the crowdfunding outcome. Then, we adopt regulatory focus theory to test the moderating effect of risks delivered with different regulatory focus. Lastly, we analyze facial emotions of creators' profile images to examine the interacting effects of verbal and nonverbal signals in situations where the investment judgments are made under high uncertainties. Through analysis with new methodological approach on the projects on Kickstarter, this study reveals that the negative relationship between positive narrative tone of risk disclosure and crowdfunding success is positively moderated if the risk has a prevention-focused view. It also finds out that the positive facial emotion mitigates the negative effect of positive risk disclosure and vice versa. This study has practical implications that can benefit all participants in crowdfunding by suggesting ways to address information asymmetry among creators, funders, and even platforms in terms of risk management.

ENT: **Poker Face: Nonverbal Emotion Restraint and Gender in Crowdfunding Pitches**

Author: **Jjongni Mao**, *PhD Candidate at Bocconi U.*

Author: **Charles Williams**, *Bocconi U.*

This paper studies the impact of nonverbal emotional restraint in crowdfunding pitches on early-stage resource mobilization. By exercising emotional restraint, entrepreneurs can project a sought-after image of rationality and emotional regulation. However, it is essential to align this practice with societal expectations of entrepreneurs, taking into account the influence of gender norms. Leveraging pre-trained machine learning algorithms, we analyzed 183 crowdfunding videos, extracting features from verbal content, facial expressions, and voice attributes. The findings reveal a positive correlation between demeanors that restrain emotions on the face and crowdfunding success for male entrepreneurs, whereas the correlation is negative for female entrepreneurs. Although emotional restraint is often valued in entrepreneurship and business as a signal of emotional regulation and the ability to make effective decisions under pressure, crowdfunding backers generally expect more emotional expression from female presenters. The observation that crowdfunding backers are aligned with more gender-typical modes of expression for women offers one possible explanation for why women have been more successful in crowdfunding than in traditional entrepreneurial finance.

ENT: **Dark Shadow of Identity Disclosure in Crowdfunding After Racially Salient Events**

Author: **Arvin Sahaym**, *Washington State U.*

Author: **Lin Jiang**, *U. of South Florida*

Author: **Annaleena Parhankangas**, *Iowa State U.*

Author: **Chien-Sheng Richard Chan**, *Stony Brook U.-State U. of New York*

Author: **Pyayt Phyo Oo**, *U. of Texas At Arlington*

Extant research suggests that minority entrepreneurs disproportionately suffer from racial salient events. However, a nuanced view of why this happens, who suffers the most, for how long such suffering occurs, and how to mitigate this racial disparity afterward has yet to be fully examined, particularly in entrepreneurial financing. By integrating the insights of social identity theory's derivative of racial salience and consumer animosity theory's derivative of pandemic animosity, this study theorizes how external resource providers exhibit bias against minority entrepreneurs in response to racially salient events that targeted the minority group. We suggest that minority entrepreneurs' suffering can be mitigated in both a passive and active way: waiting for the event-driven salience to face over time or strategic avoiding visible representation of the minority in fundraising efforts. Using the fundraising attempts of minority (Asian) entrepreneurs through crowdfunding before and after the surge of anti-Asian movements during the COVID pandemic, we find support for our theorization. This study contributes valuable insights to understanding discrimination and animosity within entrepreneurship, paving the way for more inclusive and equitable economic opportunities for all.

ENT: **Self-Disclosure of Weaknesses and Entrepreneurs' Access to Financial Capital**

Author: **Vijja Tang**, *Jones Graduate School of Business, Rice U.*

Author: **Haiyang Li**, *Rice U.*

Author: **Tommy Pan Fang**, *Jones Graduate School of Business, Rice U.*

This paper examines how self-disclosure of weakness affects entrepreneurs' access to financial capital based on two field studies. While existing literature has focused on how entrepreneurs emphasize positive information in self-presentation, less is known about whether and how entrepreneurs voluntarily disclose unfavorable information about the new venture to acquire financial capital. We propose that entrepreneurs can enhance their access to financial capital by actively disclosing their weaknesses, thereby cultivating both cognition-based and affect-based trust among investors. Furthermore, we hypothesize that the effectiveness of such disclosure is contingent upon how the weakness is attributed and the level of language concreteness employed. We suggest that employing concrete language in self-disclosure of external weaknesses proves more effective in attracting financial capital. This approach enables entrepreneurs to substantiate the credibility of external attributions, thus reinforcing cognition-based trust. Conversely, using less concrete language in self-disclosure of internal weaknesses is more effective, as it helps entrepreneurs evade potential audience backlash associated with internal attributions, thereby sustaining affect-based trust. Our hypotheses find support in the results obtained from a dataset comprising 43,628 crowdfunding campaigns on Kickstarter, as well as from a dataset of a business plan competition involving 262 teams.

ENT: Valuing the “Other”: A Framework for Understanding Lived Experience as a Source of Capital in the Entrepreneurial Process   

Author: **Jessica Jones**, *U. of Tennessee*
Author: **Andrea Caldwell Marquez**, *U. of Texas At San Antonio*
Author: **Jessica Kirk**, *U. of Memphis*

While prior research recognizes the importance of an entrepreneur’s experience, existing conceptualizations of experience fail to capture the full reality and diversity of life experiences that influence the entrepreneurial process. We build on extant work to define and theorize lived experience as an overlooked resource stock comprised of three dimensions: closeness, context specificity, and duration. We then integrate lived experience into the entrepreneurial process, showing that disclosure and legitimacy are contingent on the relational factors between entrepreneurs and their specific audiences. The theory of lived experience fundamentally shifts the inputs that scholars conceive of as critical factors for the entrepreneurial process and has important implications, particularly for understanding how entrepreneurs address grand challenges.

ENT: Up Top Down Low: Exploring Autonomy in Hybrid Entrepreneurship Among Medical Doctors in Ghana  

Author: **Charis Asante-Agyei**, *Syracuse U.*
Author: **Ingrid Erickson**, *Syracuse U. School of Information*

Recent research has begun to reveal how and why hybrid entrepreneurs pursue non-monetary benefits, including important aspects of their work and identity such as autonomy. Despite these scholarly developments, there is a lack of consensus on how hybrid entrepreneurs experience these benefits. This research addresses this open question by exploring when and how hybrid entrepreneurs experience autonomy in their dual work contexts. We do so by conducting a qualitative study of medical doctors in Ghana who simultaneously operate a business alongside their medical practice. This study advances a new model of entrepreneurial autonomy and contributes to emerging research on hybrid entrepreneurship from a qualitative lens.

ENT: What Aids or Hinders the Succession Intentions of Daughters of Family Business Owners?

Author: **Farhad Uddin Ahmed**, *Assistant Professor in International Business at Maynooth U. Ireland*
Author: **Eric Clinton**, *Dublin City U.*
Author: **Roisin Lyons**, *Kemmy Business School, U. of Limerick*
Author: **Colm O’Gorman**, *Dublin City U.*

This study explores the drivers of succession intention in daughters of family business owners. Using a dataset of 7,798 daughters from 44 countries, we find that parental instrumental support and family business work experience positively influence succession intentions. Moreover, subjective norms moderate these relationships, demonstrating the role that social groups play in the formation of succession intentions. Lastly, we explore the influence of national gender inequality on the succession intentions of family business progeny, noting its effect on a sample of daughters (n = 7,798) and sons (n=7,225). Our results point to a systemic national gender gap effect on succession intentions.

ENT: Vibrant Ecosystems and Effective Startup Programs: What Startups Need and Benefit the Most  

Author: **Fabian Sommer**, *U. of Innsbruck School of Management*
Author: **Johann Fueller**, *U. of Innsbruck*

Prior research highlights the importance of startup programs as well as vibrant ecosystems for startup success. However, little is known about the factors contributing to the effectiveness of startup programs, and how the surrounding entrepreneurial ecosystem moderates these elements. This paper examines the interplay between startup programs and entrepreneurial ecosystems. Specifically, we answer the question, what key factors within startup programs foster startup success, and how are these influenced by the dynamics of the entrepreneurial ecosystem? Utilizing a quantitative approach, this research analyzes responses from 131 participants of diverse startup programs, employing PLS-SEM. The study’s findings highlight the critical role of extensive networking services, program customization and the strength of the surrounding ecosystem in boosting startup support programs’ effectiveness. It also reveals a complex interaction between the entrepreneurial ecosystem’s strength and program effectiveness: in resource-rich ecosystems, the importance of the support programs networking services diminishes, whereas the value of usage intensity grows in stronger ecosystems, underscoring a dynamic interplay between program factors and the ecosystem. This research contributes to the understanding of the symbiotic nature of program factors and the surrounding ecosystem, providing valuable insights for policymakers and support organization leaders. It underscores the importance of a holistic approach that integrates both program and ecosystem characteristics to optimize the effectiveness of support programs.

Venture Funding

Session Moderator: **Thomas Fritz**, *Aachen U. of Applied Sciences*

ENT: **Yes Today, No Tomorrow. Exploration of Post-Due Diligence Deal Cancellations in Pitch Competitions**

Author: **Livia Boerner**, *U. of Paderborn*
Author: **Bernd Frick**, *U. of Paderborn*

Early-stage entrepreneurs exert significant efforts to secure deals with angel investors during televised startup pitch competitions. However, a substantial number of these deals face cancellation during the subsequent due diligence process. Drawing upon interpersonal persuasion theory and information asymmetry in the pitch context, we investigate deal cancellations as instances of biased communication and strategic misrepresentation. Analyzing a novel dataset comprising N = 1,334 pitches from the British format Dragons' Den and the German format Die Höhle der Löwen, we explore the occurrence and determinants of deal cancellation. Our examination delves into differences related to gender and size of the involved parties, pitch format, and the level of financial risk. Our findings reveal a bias against female investors, higher cancellation rates for more costly deals and a distinct effect based on the country of the format. This work sheds light on the usually opaque due diligence processes and interpersonal dynamics inherent in entrepreneurial finance, offering new insights into the black box of deal cancellations.

ENT: **The Role of Environmental, Social, and Governance Orientation for Venture Funding Success**

Author: **Dominik Schmelter**, *Chair of Innovation Management, TU Dortmund U.*
Author: **Steffen Strese**, *TU Dortmund U.*

Sustainable ventures are often proclaimed as potential solution for the grand challenges of our times such as climate change, rising social inequalities, and corruption. They are characterized by a high level of sustainability orientation, combining profitable business opportunities with environmental, social, and governance goals. However, financial implications of sustainability orientation remain ambiguous. Research finds conflicting results regarding the funding success of sustainable ventures, especially in the field of professional investors such as venture capitalist and business angels. A potential lack of financial resources from this main source of venture funding might limit sustainable ventures' growth as well as their positive impact towards sustainable change. Based on signaling theory, we investigate the relationship between the three dimensions of sustainability orientation - environmental, social, and governance - and venture funding success, measured as the amount of funding received by professional investors. We investigate a sample of 10,073 ventures and find that environmental and social orientation are negatively related to funding success, while governance orientation indicates a positive relation. Our study advances sustainable entrepreneurship literature and signaling theory by shedding light on positive and harmful signals of different dimensions of sustainability orientation towards professional investors.

ENT: **The Currency of Past Association: Legacy Spillover of Protégé's Performance on VC Fundraising**

Author: **Hyunsun Kim-Hahm**, *Eastern Illinois U.*

Researchers studying entrepreneurship have long been interested in the socio-cognitive aspects of evaluating startups and their endorsers. This interest reflects the importance of affiliations in entrepreneurial settings. I take a unique approach to examine whether and how venture capital (VC) firms benefit from their past associations with startup protégé companies they previously endorsed. I model unique spillover effects based on the legacy of the past, examining the influence of a previous protégé company's current performance on the VC firm's subsequent fundraising. The results, using multiple performance measures, generally support the positive relationships. The positive relationships tend to be stronger when the similarity between the VC firm's current portfolio and the protégé company is greater. The empirical setting is the U.S. VC industry from 1980 to 2018, consisting of 740 VC firms and 2,286 protégé companies that successfully went through IPO exits.

ENT: **Examining the Effects of Founders' Social Identities on Access to Innovation Funding**

Author: **Beldina Owalla**, *Oxford Brookes Business School*
Author: **Elvis Nyanzu**, *Oxford Brookes Business School*
Author: **Tim Vorley**, *Oxford Brookes Business School*

SME innovation plays a central role in achieving regional economic development, with firms led by minority groups making significant contributions to the UK economy. However, access to funding still presents a major barrier for underrepresented founders, impeding their engagement in innovation and resulting in missed opportunities to promote sustainable and inclusive economic growth. Our study advances knowledge on the accessibility of innovation funding by adopting an intersectional lens to examine the impact of founders' social identities (i.e. gender, ethnicity and education) on their success in obtaining funding. It draws on innovation funding applications data submitted by founders of small and micro businesses between 2016 and 2023. We make the following contributions. Our findings indicate that despite being underrepresented, women founders who apply for innovation funding are as successful as men. Additionally, the heterogeneity of underrepresented founders and specific intersectional challenges influencing access to innovation funding is emphasized. This highlights the complexities of entrepreneurship and innovation processes and the shortfalls of analysing individual attributes in isolation. We also draw attention to some potential biases that might arise during the funding application processes due to perceived social status associated with founders' educational background. Implications for policy and practice are also highlighted.

Hybridity 

Session Moderator: **Prakash Devkota**, *Nord U.*

 **ENT: Social Entrepreneurship Across The Economic Boundaries: Examination of Assumptions and Implications**

Author: **Prakash Devkota**, *Nord U.*

Social entrepreneurship (SE) is often promoted as a solution to the pressing problem of extreme poverty. However, social entrepreneurship discourse still lacks a clear worldview. This has led to different discourse conceptualizations in different schools of thought, overlooking the potentially divergent implications of those differing interpretations. This article demonstrates how SE discourse could be conceptualized differently in the mainstream as opposed to alternative economic frameworks such as Ecological Economics (EE) and how these diverse interpretations could lead to different implications for theory and practice. To this end, the paper examines the different attributes of SE against the fundamental assumptions of neo-classical and Ecological Economics, applying the framework in Kuhn's Theory of Scientific Revolutions as a frame of analysis. Building on Kuhn's theory, this article argues that for SE to evolve as an effective tool for social change, it must distance itself from some of the fundamental assumptions of mainstream economics, where EE can provide valuable guidance moving forward. Finally, this paper proposes ontological SE assumptions: intrinsic motivation and ethical virtue drive entrepreneurs, organizations inspired by the goal of common good and spiritual leadership, and the market serves as an arena for cooperation.

 **ENT: Steady Through the Storm: How Social Venture Pivoting Sustains Organizational Hybridity** 

Author: **Meng Zhao**, *Nanyang Business School*

Author: **Garima Sharma**, *American U., Kogod School of Business*

As with all new ventures, in the face of ongoing organizational and environmental pressures, social ventures must consider large-scale business model change. However, changes of this magnitude inevitably expose the ventures to risks of compromising their social mission. Prior studies on organizational hybridity have focused on the smaller operational, personnel, and governance changes, which help to continuously deliver social and financial value while presuming the stability of the ventures' business models. In doing so, these studies have overlooked the opportunities of more foundational business model shifts for sustained organizational hybridity. To address this omission, the current study asks 1) How do social ventures change their business model to address ongoing challenges to hybridity? and 2) Why do social ventures differ in their approach to such business model change? We answer these questions by drawing upon 129 interviews with 51 leading social ventures in nine Asian countries. Our findings offer a novel theory of 'social venture pivoting', in which we show how ventures differ in business model attributes related to beneficiary inclusiveness and value integrativeness, and how entrepreneurs interact with these attributes to ensure the mission's continuity in business model change, thereby sustaining organizational hybridity. Our emergent model contributes to the research on the governance of organizational hybridity by demonstrating strategic changes as a means to sustain hybridity, revealing the importance of enacting change-continuity duality to sustain hybridity, and highlighting a hybrid governance mechanism rooted in entrepreneurs' engagement with their business models.

ENT: Do Hybrid Entrepreneurs Perform Better? The Impact of Entrepreneurial Thresholds as Mediators

Author: **Dalee Yoon**, *U. of Hawaii at Manoa*

Author: **Joon Mahn Lee**, *Seoul National U.*

Drawing from the literature on the entrepreneurial threshold, we develop a theory of how hybrid entrepreneurship may affect the financing and commercialization of an entrepreneurial activity. The central premise is that hybrid entrepreneurs will have a lower entrepreneurial threshold than full-time entrepreneurs, which will subsequently affect the likelihood of achieving their financing and commercialization goals. On the one hand, hybrid entrepreneurs are expected initially to have a lower entrepreneurial threshold, which may increase the likelihood of success in achieving a financing goal. Accordingly, we hypothesize that the higher financing success rates of hybrid entrepreneurs are mitigated by lower entrepreneurial thresholds, which are shaped by expected returns that are less risky and more reasonable. On the other hand, we argue that, due to their lower entrepreneurial thresholds, hybrid entrepreneurs will simultaneously have a lower likelihood of success in achieving a commercialization goal. We found strong support for our arguments in the context of crowdfunding projects in the video game category over the period of 2009-2012. Our findings illustrate that entrepreneurial success may be better understood by considering the heterogeneity in the entrepreneurial threshold in relation to the entrepreneurs' performance.

ENT: Sustainability Opportunity and Commercial Opportunity: A Comparison Study  

Author: **MAHSHAD GHAZALI**, *Research assistant*

While sustainable entrepreneurs (SEs) undeniably contribute significantly to economic, social, and environmental well-being, a thorough comprehension of their distinctive characteristics is imperative for a more insightful examination of this phenomenon. This article delves into the foundations of entrepreneurship literature, specifically focusing on the concept of opportunity, aiming to elucidate the uniqueness of sustainable entrepreneurs. Our argument posits that sustainability opportunities are objective entities with a problem-solving nature, emanating from market imperfections and thriving within sustainable entrepreneurial ecosystems. These opportunities are systematically discovered through intentional search processes. In contrast, commercial opportunities exhibit greater diversity in both nature and origin. The article thoroughly explores theoretical and practical implications arising from these discernible differences.

Decision Making

Session Moderator: **Douglas Hannah**, *Boston U.*

ENT: **“Inverse” Founding and Alternative Paths of Entrepreneurial Organizing**

Author: **Douglas Hannah**, *Boston U.*
Author: **Valerio Iannucci**, *Boston U. Questrom School of Business*

A central concern in entrepreneurship research is how founders recognize opportunities and organize to capture them. Prior work highlights the role of information asymmetries derived from prior experience and the identification of opportunities as key inputs in the subsequent venture formation process. Yet, is this the only way in which entrepreneurs launch ventures? To address this question, we conducted a field study of 72 de novo entrepreneurial organizations founded in the U.S. in the wake of the COVID-19 pandemic. Surprisingly, less than half of our sample aligns with extant depictions of the entrepreneurial process. By tracing the sequence of steps undertaken by each venture, we identify three distinct “pathways” by which founders recognize opportunities and organize to capture them. Two align with prior research, the third is a novel sequence we term the inverse founding path. We first trace how these three paths unfold over time. We then unpack how the differences between them shape key strategic outcomes such as organizational structure, growth patterns, strategic drift, and longevity. Overall, this study contributes to research on entrepreneurial processes and user innovation, and it carries important implications for research on entrepreneurship and communities.

ENT: **A Relational View of Entrepreneurial Opportunities**

Author: **Wei Hua**, *Texas Tech U.*
Author: **Ronald K. Mitchell**, *Texas Tech U.*
Author: **Rob Mitchell**, *Colorado State U.*

In response to recent work that examines entrepreneurial opportunities as they emerge through social action expressed in the ordinary language of entrepreneurs, we aim to extend the ordinary language perspective on entrepreneurial opportunities, which focuses on the semantics of linguistic analysis, by explaining how the pragmatics—specifically the relational context—enables expressions of entrepreneurial opportunities to become even more meaningful. We adopt a stakeholder approach to examine the social actions that produce first, second, and third-person focality in entrepreneurial action, thereby to offer a relational view of entrepreneurial opportunities. This research contributes to strengthening the notion of opportunity for understanding entrepreneurial agency across various research settings, complementing and extending the ordinary language perspective by addressing context, and further enabling convergence and integration of stakeholder theory and the entrepreneurship research literature.

ENT: **A Journey’s End: Examining Entrepreneurs’ Decisions to Exit Their New Ventures**

Author: **Frederik Riar**, *U. of Bern*
Author: **David Scott Jiang**, *Elon U.*
Author: **Andreas Hack**, *U. of Bern*
Author: **Franz Kellermanns**, *U. of North Carolina, Charlotte*

This research explores the factors influencing entrepreneurs’ decisions to exit their businesses. It draws upon social cognitive career theory and socioemotional selectivity theory to examine how variations over an entrepreneur’s life-span affect their exit decisions. The study also investigates contingency factors that may alter or mitigate these exit intentions. Finally, it discusses the findings’ theoretical implications and proposes directions for further research in this domain.

ENT: **A Jungian Analysis of Historical Narratives in Family Business**

Author: **Esra Paca**, *Rennes School of Business*
Author: **Paraskevi Dimakou**, *Stockholm School of Economics*

While our understanding of the conscious processes that shape historical narratives in family businesses has grown, there remains an intriguing gap in comprehending the psychodynamic underpinnings of these narratives. Employing a Jungian perspective in a case study of a family business in Turkey, our research aims to uncover the hidden layers of symbolism, archetypes, and the collective unconscious that bring these narratives to life, particularly in cases where they turn into mythologies. In so doing, we gain deeper insights into how myths emerge in the family business profoundly impacting the relationships among members. Our work takes a first step towards utilizing a psychodynamic lens to comprehend the underlying processes that originally shape historical narratives in family firms.

Influences and Transitions

Session Moderator: **Prem Thapamagar**, *U. of Science and Technology of China*

ENT: **Motivation by Role Models: Do They Inspire or Discourage Us?**

Author: **Noor Ul Amin**, *U. of Science and Technology of China*
Author: **Nisar Ahmad**, *school of management, USTC*
Author: **Prem Thapamagar**, *U. of Science and Technology of China*
Author: **Suliman Khan**, *U. of Swat*

While prior research has suggested links between role models and individuals' entrepreneurial career intentions, there is a scarcity of empirical research on the impact of entrepreneurial role models (ERMs) (i.e., positive vs negative) on employees' entrepreneurial career intention (ECI) in SMEs. To address this gap, our study draws on social learning theory conducts two experimental studies to determine the impact of role models in the workplace. We collected data from 216 individuals (i.e., students and employees) in China to analyse the effects of positive role models, and 198 for negative role models. Our findings demonstrate that successful role models have a significant impact on employees' ECIs. Additionally, fear of failure plays a substantial role in diminishing individuals' ECI. We also find that negative role models significantly impact individuals' ECI and should not be ignored while considering the importance of attaining an entrepreneurial career. Our study contributes to the literature by shedding light on the importance of ERMs in shaping employees' ECIs and highlights the role of fear of failure in this process. At last, the study provides implications for educational institutions to widen entrepreneurial practices and strengthen the students' entrepreneurial intentions.

ENT: **No Sticks or Stones, But Words May Forever Hurt Me**

Author: **Andrew Joseph Foley**, *Cornell SC Johnson College of Business*

This paper investigates: 1) the impact of negotiation rationales on the outcomes of initial role negotiations and 2) how these outcomes influence individual turnover rates in that role over time. I argue that the outcomes of these negotiations will leave a lasting "imprint" on the role being negotiated that creates a "zero-sum" dynamic between the turnover of role-creators and their successors. I also argue that this imprinting is more likely to occur when employees resort to certain rationales during these negotiations. Specifically, when role creators employ constraint rationales during their role negotiation, they will tend to be more successful at negotiating the role's parameters to align with their own unique skills; their own turnover will thus be reduced. Future role holders, however, will be disadvantaged because they will have expected (and be equipped to perform) a "typical" role; they will thus experience higher turnover. By contrast, initial employees who resort to disparagement rationales will be less successful in their role negotiations and will thus assume more "typical" roles; their turnover will therefore be higher. Future job seekers should thus be able to perform such roles well because they will align with what is considered "typical" in their industry; their turnover will thus be lower. This paper contributes to the literature on role formation by highlighting how the micro-level dynamics (rationales) of initial role negotiations impact their outcomes. It also contributes to the negotiations literature by both highlighting multilevel mechanisms through which negotiations influence organizational performance and responding to calls to study the long-term, and often unintentional, impacts of negotiation outcomes.

ENT: **Next-Generation Involvement in the Family Business: The Role of Birth Order**

Author: **Mohamed Ashraf Genedy**, *Jönköping International Business School*
Author: **Lucia Naldi**, *Jonkoping International Business School*
Author: **Karin Maria Kristina Hellerstedt**, *Jonkoping International Business School*

Family business studies exploring intergenerational dynamics often suggest that the offspring of business-owning parents typically follow a career path within the parent's business or start their own ventures. While this literature is extensive, it typically treats offspring as a homogeneous group, overlooking potential personality differences. In this study, we address this gap by drawing on birth order theory to examine the differences in the early career choices to join and leave the parent's business among siblings of business-owning parents. Using a unique sample of offspring in Sweden, we employ hazard models and show that later-borns are more likely to join their parent's business compared to earlier-born siblings during their early career stages. However, when the offspring join the parent's business, later-borns are also more likely to leave the parent's business unless the parent's business is underperforming.

ENT: **Opportunities Don't Simply Die: They Hibernate, Metamorph and Reawaken**

Author: **KANAN ASIF**, *U. of Massachusetts Lowell*
Author: **Michael P. Ciuchta**, *U. of Massachusetts, Lowell*

Throughout the entrepreneurial trajectory, entrepreneurs come across a number of opportunities. A few of these opportunities are pursued while others are abandoned. But what happens to the abandoned opportunities? Do they remain abandoned forever, or can such abandoned opportunities be revived. The purpose of this conceptual paper is twofold. First, building upon the literature in entrepreneurship, innovation, and creativity, this study proposes a novel opportunity lifecycle model which not only explains the lifecycle of ideas pursued, but also explains the life-after-abandonment of the abandoned ideas. This paper further proposes different modes of opportunity abandonment (opportunity death and opportunity hibernation), and theorizes various modes through which abandoned or dead ideas are revived (reawakening of hibernated ideas, metamorphosis, and reincarnation of dead ideas). In this way, this paper explains the transition of ideas from incubation to life and death, and highlights an important source of latent growth in form of hibernated and dead ideas. Lastly, this paper highlights practical implications and provides directions for future research.

Africa's Data in Management Scholarship

Organizer: **Ikenna Stanley-Paschal Uzuegbunam**, *Howard U.*
Organizer: **Valentina Assenova**, *The Wharton School, U. of Pennsylvania*
Presenter: **Nnamdi Madichie**, *Bloomsbury Institute London*
Participant: **Paul Igwe**, *Lincoln U.*
Participant: **Luqman Afolabi**, *U. of Kigali*
Presenter: **Ethan Poskanzer**, *U. of Colorado*

This symposium has three related objectives. First, the symposium will highlight the innovative use of African data sources to study organizations. Considering some of the challenges associated with the availability, access, and sustainability of data from Africa, the symposium will feature empirical research studies that have undertaken innovative research approaches to identify and collect data for research. The papers collectively demonstrate viable approaches that researchers are taking toward discovering empirically grounded management insights in Africa. Second, the symposium will offer insight into novel methodologies in the curation and deployment of African sourced data in management research. For example, the symposium will help reveal how the diverse cultures (and languages) in Africa give rise to the development and deployment of novel methodologies in management and organizational settings. Finally, the symposium draws attention to how management and organizational research using African data and methodologies reveal new perspectives about organizations and the future of organizing that are relevant to other managerial contexts outside of Africa. Thus, the symposium offers opportunities to derive implications that challenge prevailing ideas in extant management research.

Training Academic Entrepreneurs to Innovate for the Future: Evidence from the I-Corps Program

Organizer: **Donald Siegel**, *Arizona State U.*

Organizer: **Maribel Guerrero**, *Global Center for Technology Transfer, Arizona State U.*

Discussant: **Maryann P. Feldman**, *Arizona State U.*

Discussant: **Demetria Gallagher**, *VentureWell*

In 2011, the U.S. National Science Foundation (NSF) established the Innovation Corps (I-Corps) program, which has become the world's largest entrepreneurial training program for would-be academic entrepreneurs. I-Corps prepares university and federal lab scientists and engineers to extend their focus beyond the laboratory to accelerate the transfer of cutting-edge research into commercial success. As I-Corps has expanded, it has made its presence felt in academic entrepreneurship. There are now ten NSF I-Corps Regional "Hubs," involving over 80 research universities. According to the NSF I-Corps Biennial Report (2021), I-Corps has educated more than 6,500 grant participants from the NSF, National Institutes of Health (NIH), and Department of Energy (DOE), and trained more than 2,300 entrepreneurial teams. These teams are typically small (i.e., three individuals) and include individuals with both scientific and business-related expertise. I-Corps teams have raised more than \$1.2 Billion in subsequent funding for start-up activity. Evaluating the effectiveness of the I-Corps program is critical to its future success since NSF and other federal agencies are looking to expand the program. Duval-couetil, Epstein, and Huang-saad (2022) note that I-Corps has been evaluated in a number of ways, and they suggest a need for alternative evaluation and assessment data that could be used to better understand the effects of regional programs, as well as how those programs might be improved. However, the overarching theme of this symposium is linking entrepreneurship and innovation literature to assess the effectiveness of an entrepreneurship training program (the NSF I-Corps program) on generating potential entrepreneurs (academic entrepreneurs) and show how this program is producing sustainable impacts on society (innovations). Four presentations are included in the symposium, representing different approaches to understanding the critical role of Hubs of I-Corps trainees across the U.S. by reinforcing the fundamental components of the entrepreneurial and innovation process. The presentations in this session illustrate a variety of "micro" and "macro" perspectives on academic entrepreneurship (Waldman, Vaulont, Balven, Siegel, & Rupp, 2022; Siegel & Wright, 2015), including theories of organizational justice; identity; role conflict; ambivalence; championing/leadership; feedback; knowledge spillovers; diversity, equity, and inclusion; business model experimentation; pivoting; strategy formulation and implementation; networks; and team dynamics. Likewise, novel methods to provide evidence and implications. Our session is also inspired by the AOM 2024 theme "Innovating for the future: policy, purpose and organizations" since it deals with a federal program that is targeted to train the next generation of successful academic entrepreneurs. Presentations In the first paper, Nordstom, Siegel, and Opoku highlight the need for better theories and evaluation methodologies for the NSF I-Corps program. In this regard, the authors assert that to better evaluate the effectiveness of I-Corps, it is important to examine the magnitude of knowledge spillovers and improve our understanding of the mechanisms of spillover generation and their impact on entrepreneurial outcomes. To accomplish this, the authors note that their project consists of two phases. In the first phase, they conduct a quantitative analysis of the knowledge spillover effects of I-Corps training on lab members and peers of PIs. In the second phase, they conduct a qualitative analysis of the effects of I-Corps training on the relationships that scientists have with university technology transfer offices, incubators, research parks, funding agencies, donors, investors, and industry, as well as how it affects educational programs (e.g., how they teach and mentor graduate students). This project proposes new theories and methods to understand impacts and provides evidence of outcomes for evaluating the future of the NSF I-Corps program and academic entrepreneurship. This conversation will be extended by exploring the individual level in the next presentation. Tran, Newman, Wiklund, and Bellavitis analyze the impact of diversity on startup success within the NSF I-Corps program. They use social identity theory as their theoretical framework to study how biases are formed, how they evolve, and how they influence the manner in which startups are evaluated, supported, and funded. Their empirical analysis is based on an online survey of NSF I-Corps participants. Their dependent variable is startup success, with the following key independent variables: neurodiversity, specifically attention deficit hyperactivity disorder (ADHD) and autism intensities. Of course, they also include key demographic variables, such as race and gender. Although they are still collecting data, they will present their preliminary findings in Chicago. In the following presentation, Li adds to the conversation regarding the importance of context in the experimentation process, by focusing on the unique science and engineering contexts of the I-Corps program. In particular, since experimentation is an approach that is rooted in the scientific method and familiar to scientific researchers, the author proposes to study how I-Corps teams engage in business model experimentation. To do this, the author plans to collect a large and longitudinal sample from the NSF I-Corps program. First, the I-Corps program is an ideal context for analyzing business model experimentation. Second, through the I-Corps program we will collect not only longitudinal data (pre- and post-entry into I-Corps) but also data for comparison groups (i.e., those that apply but are not selected into I-Corps). This project proposes new theories and methods to understand the business model experimentation and provides evidence of processes, contexts, and outcomes for evaluating the future of the NSF I-Corps program and academic entrepreneurship. Finally, Neupert, Nicholas, and Whitney have two objectives in their study. The first goal is to connect the NSF I-Corps program to the broader entrepreneurial ecosystem of the university. A second goal is to assess the effectiveness of the program, using a national database of I-Corps programs at multiple universities. Their evaluation of the I-Corps program is based on computing change scores for variables related to the Business Model Canvas (BMC) in terms of differences between program participants' understanding of BMC concepts before they participate in the program and their understanding of BMC concepts after they participate in the program. BMC is a nine-cell framework for understanding the important aspects of a business operation, including key resources, key activities, key partners, cost structure, value proposition, channels, customer relations, customer segments, and revenue streams.

COVID-19 & Its Effects in Healthcare

Session Moderator: **Anand Bhardwaj**, *McGill U. - Desautels Faculty of Management*

HCM: **Leading from the Frontline: Autonomy and Improvisation in a Hospital During Times of Crisis** 

Author: **Anand Bhardwaj**, *McGill U. - Desautels Faculty of Management*

Author: **Samer Faraj**, *McGill U.*

How organizations coordinate a unified response under system-wide disruption impacting multiple units in different ways is a crucial question for healthcare organizations today. To address this question, we report on a qualitative field study of a frontline hospital over the course of the 2020-2022 COVID-19 pandemic. Our findings reveal that such crises require multiple extended coordinated response processes where central coordinators assign new work, prioritize resources, and modulate the autonomy and improvisational ability of multiple organizational sub-units to mount organization-wide responses. We contribute to healthcare management and coordination research by offering a process model for coordinating responses to broad-scale disruption that leverages local knowledge and resourcefulness of experienced hospital personnel under conditions of disruption, and allows for standardization and refinement as disruptions are resolved or normalized.

 HCM: **We Need an Expert! How Expertise on Boards Changes in Crisis**   

Author: **Sasmira Matta**, *The Wharton School, U. of Pennsylvania*

Research has indicated that boards are both important for times of crisis and that boards experience heightened turnover during crisis. This study extends previous literature by aggregating individuals on boards into categories of professional expertise to assess turnover at the level of expertise instead of at the level of an individual. Using a novel dataset of board membership from local boards of health (LBOH), the boards of local health departments in the United States, I show that the composition of professional expertise on LBOH shifts following the start of the COVID-19 pandemic. Specifically, there is a substitution of non-health/science professionals with health professionals. With expertise shifting to align with the health crisis, I show that boards are potentially helpful during crisis because of their ability to reconfigure to acquire the appropriate expertise. I also show that shift in the composition of professional expertise are moderated by crisis severity, political ideology, and team familiarity.

HCM: **A Population Health Approach: An Organizational Case Study of Mental Models Among Hospital Leaders**

Author: **Braeden Terpou**, *Institute for Better Health, Trillium Health Partners*

Author: **Marissa Bird**, *Trillium Health Partners*

Author: **Diya Srinivasan**, *Institute for Better Health, Trillium Health Partners*

Author: **Shalu Bains**, *Trillium Health Partners*

Author: **Laura Rosella**, *Institute for Better Health, Trillium Health Partners*

Author: **Laura Desveaux**, *Institute for Better Health, Trillium Health Partners*

The COVID-19 pandemic thrust health systems worldwide into levels of unprecedented strain. As the pandemic waves recede, a new challenge emerges—addressing the healthcare needs of a growing population against the backdrop of historical backlogs, worsening access, and health system burnout. This reality has prompted many hospitals to revisit their strategic plans with an emphasis on modernizing healthcare delivery. Some hospitals have opted for a population health approach, which encompasses the delivery of acute care along with proactively promoting the overall health of the population. The successful execution of this approach requires aligning health system leaders' comprehension of this approach and its operationalization. In this qualitative case study, we interviewed 13 senior leaders at a large community hospital to explore their perspectives and beliefs regarding the operationalization of a population health approach. We found varying accounts of the approach's value, benefits, and importance, highlighting an opportunity to align leaders' thinking. Leaders identified the organization's low risk tolerance and decision-making structures as cultural aspects requiring evolution to support success. These findings illustrate the current state from which the organization aims to evolve and underscore the importance of identifying and aligning leaders' underlying perspectives and beliefs as a precursor to successful implementation.

 HCM: **The Frame Matters: Leaders' Optimistic Realism During Crisis**

Author: **Michaela Kerrissey**, *Harvard U.*

Author: **Ingrid Nembhard**, *The Wharton School, U. of Pennsylvania*

Author: **Amy C. Edmondson**, *Harvard U.*

Leadership behavior can affect employees' ability to perform and thrive in organizational situations characterized by intense challenge or stress. We draw on the literatures on framing and on crisis to develop a leadership concept, optimistic realism, that describes a particular way of framing a situation. We define optimistic realism as the tendency to speak candidly about work challenges, while projecting a hopeful stance about the future. We hypothesize that leader behaviors that frame the situation with optimistic realism enable workers to learn, remain committed, and adapt. Leveraging survey data from clinicians in intensive care units across two time points during the early years of the COVID-19 pandemic (n=557 and n=153, respectively), we find that healthcare workers whose leaders convey both optimism and realism to a greater degree – comprising the optimistic realism construct – report more proactive learning, greater intent to stay with the organization, and less burnout, relative to those reporting low on both (all p-values <.01), and these relationships persist over time. Relative to workers whose leaders are low on both, workers with leaders who emphasize one dimension over the other report greater intent to stay but similar levels of proactive behavior, and different burnout effects. Our findings contribute to the crisis management and healthcare management literatures by identifying leader framing as a factor in mitigating adverse effects of crisis (e.g., less proactive learning), and by identifying optimistic realism as an effective frame for this goal. We discuss implications for healthcare leadership practice, where challenge is increasingly common.

The Strength of Networks in Healthcare

Session Moderator: **Daniele Mascia**, *Luiss Guido Carli U.*

HCM: **Social Networks and Leadership in Health Care Organizations: Brokerage, Diversity, and Gender**

Author: **Daniele Mascia**, *Luiss Guido Carli U.*

Author: **Luca Giorgio**, *U. Europea di Roma*

This study examines the relationship between the structure of intra-organizational advice networks and leadership in health care organizations. Drawing on social network theories and network-based approaches to leadership, we propose that health professionals' structural brokerage, the diversity of their network contacts, and gender are related to their leadership, as perceived by other organizational members. We collected demographic, social network and leadership data from a population of health care professionals in a large, top-tier local health authority in the Italian National Health Service. The results show that the structural brokerage and network diversity – i.e., advice relations that span different professional groups – of health care professionals positively affect their likelihood of being perceived as leaders by other organizational members. We also find that gender moderates the relationship between brokerage and leadership, such that female brokers are more likely than men to be perceived as leaders. The present findings are relevant to the literature on leadership and social networks, as they identify the role that individual and network characteristics play on the emergence of informal leaders in health care organizations.

 HCM: **It Does Not Add Up: A Mixed-Methods Study of Collaborative Healthcare Networks**  

Author: **Maïke Vanessa Tietschert**, *Erasmus School of Health & Policy Management, Rotterdam*

Author: **Daan Westra**, *Maastricht U.*

Inter-organizational collaboration in networks is the preferred approach to address the complex challenges the healthcare sector faces, as well as to deliver high value health services. Research on inter-organizational networks has flourished but remains conceptually and empirically siloed. Using a sequential mixed-methods design, this study answers recent calls for multi-level studies of healthcare networks. We first quantitatively model system-oriented patient sharing networks using claims data of 48 thousand dementia patients in 31 regions in the Netherlands across three years. We subsequently conducted qualitative interviews in two of these regions to understand actors' perception of their network structure and how they purposefully collaborate within these ties. Our quantitative results reveal low density and high centralization of networks, albeit with some variation, across the 31 networks in our sample within a given year. Over time, these structural features remain very stable however. Our qualitative results furthermore indicate that actors deliberately collaborate in various purpose-oriented networks including a small subset of actors and that important actors, such as social care providers and informal caregivers, are missing from the claims-based network. Networks represent a supra-organizational structure, transcending traditional organizational boundaries. However, our results suggest that paradoxically, delving into any network fails to yield a comprehensive understanding, despite the inherent purpose of conducting network analysis to attain such insights. Consequently, most network perspectives represent inherently incomplete perspectives, highlighting the intricate nature of interconnected systems and the challenges associated with capturing their entirety.

HCM: **Seeing the Forest for the Trees: Towards Uniform Measurement of Purpose-Oriented Healthcare Networks**  

Author: **Robin Peeters**, *Maastricht U.*

Author: **Daan Westra**, *Maastricht U.*

Author: **Rachel Gifford**, *Maastricht U.*

Author: **Niels Hameleers**, *Maastricht U.*

Author: **Joerg Raab**, *Tilburg U.*

Author: **Larry R. Hearld**, *U. of Alabama, Birmingham*

Author: **Dirk Ruwaard**, *Maastricht U.*

Purpose-oriented networks the dominant organizational form to address healthcare's grand challenges. While research on networks has proliferated, many of them still fail. The research field on networks is fragmented, assessing different determinants of network effectiveness in different ways, using low samples, and without comparability between studies. To address these shortcomings, this paper aims to standardize the measurement of purpose-oriented healthcare networks and lay the foundation for a questionnaire that can systematically measure the determinants of networks. This study consists of three phases: 1) systematic literature review of the questionnaires used to assess purpose-oriented networks in healthcare; 2) identify relevant questionnaires from adjacent literature; and 3) review the psychometric properties of the included questionnaires. Our results show that, articles in healthcare report badly on the psychometric properties of used questionnaires. Additionally, they often use questionnaires that are developed for the sole purpose of one article or other instruments that have no tested psychometric properties, even though questionnaires with good psychometric properties are available in general management and public administration literature. We encourage scholars to use existing constructs that have indications of good psychometric properties if they are available combining process, structure, and context determinants, and outcomes to study their interrelatedness. If no construct is available, scholars should rigorously develop and test new constructs according to widely available scientific guidelines. Finally, researchers should continuously assess the psychometric properties of constructs when using them in different circumstances (e.g. context, respondents).

HCM: **Corporatization, Management Autonomy, and the Mediating Role of Clientelism**  

Author: **Maryam Zahmatkesh**, *Royal Holloway School of Business and Management*

Author: **Ian Kirkpatrick**, *U. of York Management School*

Corporatization reforms in the public sector are now a global phenomenon, although research highlights the gap between rhetoric and reality. While corporatisation offers to increase the formal autonomy of public organisations and their managers, in practice greater autonomy is often not realised. However, our comparative understanding of these reforms and the role of national, institutional and cultural conditions remains under-developed. In this paper we address this concern focusing on the mediating role of clientelism and patronage. As an empirical case we focus on the experience of corporatisation in the Iranian healthcare sector where management relationships are heavily influenced by patronage networks. Our analysis of two public hospitals highlights the contrasting way patronage networks shape the degree of autonomy experienced by managers. While in one hospital the patronage system facilitated autonomy, in the other managers felt less empowered. We conclude by arguing that more attention should be given to the role of patronage and clientelism in understanding the nature and impact of NPM reforms, especially in developing country contexts.

Healthcare Provider Engagement

Session Moderator: **Tiago Rodrigues Gonçalves**, *ISEG/ULisboa*

HCM: **Anonymity and Healthcare Worker Engagement in Creativity: A Field Experiment and Interview Study (WITHDRAWN)**  

Author: **Olivia Jung**, *U. of California, Los Angeles*
Author: **Paula McCree**, *Massachusetts General Hospital / Harvard Medical School*
Author: **Hiyam Nadel**, *Massachusetts General Hospital / Harvard Medical School*

Bridging literatures on creativity and open innovation in the healthcare context, we asked: Does anonymity help or hinder employees' willingness to engage in creativity via an open innovation mechanism? We partnered with the Nursing and Patient Care Services of a hospital in the United States that organized an innovation contest, inviting over 8,800 nurses, health professionals, and support staff (e.g., medical assistants, environmental services staff) to submit ideas to improve the organization of health services. We conducted a field experiment, in which treated employees were told that ideas would be shared anonymously, and untreated employees were told that names and roles will be attached to ideas. To account for unintended spillover effects, randomization took place at individual and work-area levels. We then interviewed 14 employees from the same hospital to understand the experimental results. Anonymity was not found to be a universally effective motivator that spurs creativity among all employees. Instead, anonymity had a differential impact based on one's role and position. Support staff, who sit lower in the organizational and occupational hierarchies, were less likely to engage in creativity via the innovation contest compared to other roles, but their engagement increased with the promise of anonymity. For these employees, anonymity helped them to feel that their ideas would be taken seriously and assuaged any fear of retaliation associated with idea sharing. In contrast, middle managers were more likely to engage in creativity, but their engagement decreased with the anonymity treatment. The desire to be acknowledged for ideas meant they wanted their ideas to be identifiable. Considering the organizational context and how it shapes employees' beliefs about engaging in creativity is critical when trying to motivate engagement in creativity. Our findings suggest that one needs to deeply consider the organizational context and embedded roles when deploying incentives to increase employees' engagement in creativity.

HCM: **Socially Complex Configurations of Workplace Happiness in Healthcare: Across and After the Pandemic** 

Author: **Tiago Rodrigues Gonçalves**, *ISEG/ULisboa*
Author: **Carla Curado**, *ISEG (Lisbon School of Economics & Management), U. de Lisboa*
Author: **Lucía Muñoz-Pascual**, *IME, U. de Salamanca*

The COVID-19 pandemic presented healthcare professionals with extraordinary challenges, prompting a critical examination of managerial practices that can enhance their well-being, particularly in the context of workplace happiness. Drawing on the foundations of Positive Psychology, this research delves into the psychosocial intricacies surrounding workplace happiness among healthcare professionals. We employ configurational analyses based on a set-theory rationale, exploring individual differences, social meaning (measured by the quality of social networks and competitive culture), and a sense of purpose (influenced by ethical leadership) as factors shaping workplace happiness. We follow a longitudinal approach, aligned with the WHO's pre- and post-lockdown recommendations, to address empirical gaps and contextual differences, using a fuzzy-set qualitative comparative analysis. Therefore, we empirically analyze configurations influencing workplace happiness among Portuguese healthcare professionals during the pandemic ($n = 179$) and in a subsequent post-pandemic follow-up ($n = 153$). The findings reveal variations in configurations leading to the presence or absence of workplace happiness among professionals during and after the pandemic, contributing to distinctions that underscore adaptive needs that can influence managerial intervention. We discuss practical implications for preventive measures, emphasizing the dynamic nature of managerial strategies during crises and contributing valuable insights for future crisis management in healthcare settings.

HCM: **Workplace Incivility in Caregiving: Relations to Work Motivation and Psychological Need Satisfaction**   

Author: **Tomas Jungert**, *Lund U.*
Author: **Kristoffer Holm**, *Malmö U.*

Workplace incivility is a pervasive issue with implications for employee well-being. Drawing upon Self-Determination Theory, this study explores the association between experienced workplace incivility, need satisfaction, and work motivation and investigates whether workplace incivility is negatively associated with autonomous work motivation. We hypothesize that experiencing workplace incivility will diminish autonomous work motivation. A sample of 481 employees in the healthcare sector participated. Data were collected through strategic sampling. The results indicate that experienced incivility negatively impacting need satisfaction. Extrinsic motivation was associated positively with experienced incivility and negatively with competence need satisfaction. The relations between workplace incivility and extrinsic, introjected, and intrinsic motivation were statistically mediated by competence need satisfaction. These findings shed light on the complex interplay between workplace incivility, need satisfaction, and work motivation within caregiving professions, offering valuable insights into organizational practices and future research.

Author: **David Warner**, *U. of Alabama, Birmingham*

Author: **Cindy Cain**, *U. of Alabama, Birmingham*

Author: **Magdalena Szafarski**, *U. of Alabama at Birmingham*

The COVID-19 pandemic significantly disrupted healthcare systems globally, presenting challenges for healthcare professionals. This study explores the impact of the pandemic on healthcare workers' trust in leaders, comparing acute 2021 and more stable 2022 periods. It investigates how moral distress, organizational change, belongingness, and perceived organizational support influenced trust in supervisors and senior leaders across these phases. Using anonymous survey data from a Southeastern U.S. academic medical center, responses from 2,991 professionals in 2021 and 2,581 in 2022 were analyzed. The study employed ordinal logistic regression to assess the relationship between trust and various factors, while accounting for demographic variables. Results revealed a decline in trust towards leadership, particularly in senior leaders (59% in 2021 to 54% in 2022). Moral distress from patient care challenges and rapid organizational changes negatively influenced trust. In contrast, a sense of belongingness and perceived organizational support positively impacted trust levels. These relationships were significantly different between the two pandemic phases. In conclusion, healthcare workers' trust in leadership eroded during the pandemic, influenced by care experiences and organizational support perceptions. Enhancing staff wellbeing and fostering belongingness could bolster trust in leaders, underscoring leadership's role in nurturing workplace trust and institutional resilience during crises.

Global shifts in the geopolitical, environmental, demographic, and technological landscape are introducing unprecedented levels of uncertainty into labor markets and employment relations. With the world waiting for answers, the onus is on management scholars to offer new theoretical approaches and evidence-based insights that might allow managers, policymakers, and labor leaders to more effectively and collaboratively meet the challenges presented (AOM, 2022). This global shift also demands that organizations and organizational scholars pay greater attention to diversity, equity, and inclusion (DEI) practices. Research on DEI practices has been conducted primarily on mono-cultural Western-oriented or “WEIRD” (i.e., Western, Educated, Industrialized, Rich, & Democratic; Henrich, 2021) countries (Nishi & Zbilgin, 2007; Rad et al., 2018). However, legislative frameworks, political, societal, religious, and governance factors result in DEI practices that vary from country to country and differ considerably from the West (Zbilgin & Syed, 2010; Klarsfeld et al., 2022). Countries in the South Asian region—Afghanistan, Bangladesh, Bhutan, India, Maldives, Nepal, Pakistan, and Sri Lanka—are multicultural developing economies that vary widely along various factors, including education, democracy, and degree of industrialization, among others. The South Asian region is also home to three (i.e., India, Pakistan, & Bangladesh) of the world's most-populated countries (Neufeld, 2021; Worldometer, 2023), and has become increasingly critical to the global economy (IMF, 2019). Yet, there is a dearth of research on DEI in South Asia (Saifuddin et al., 2022; Syed & Pio, 2013), which not only restricts our knowledge, but also hampers our field's ability to provide guidance to organizations, governments, and other stakeholders on how to structure and implement effective DEI policies and programs.

Managing Cross-Border Partnerships

Session Moderator: **Marília Schocair**, *U. of São Paulo (FEA-RP/USP)*

IM: Proximities, Trust and Distrust in Alliances: A Review and Research Agenda

Author: **Marília Schocair**, *U. of São Paulo (FEA-RP/USP)*
Author: **Simone Galina**, *U. of Sao Paulo*

Since the proposals made by Boschma in 2005, the interrelationship between trust and proximity has been undeniable. However, with the advancement of both literatures over the years, new questions have emerged about the role of these constructs in the practice of international alliances. This article aims to conduct an in-depth review of these themes and correlate them, including the dimension of distrust that has been suppressed from previous analyses. To illustrate our arguments, we present a model that theoretically portrays the possibilities of different configurations of these constructs. We close the discussion with propositions and a research agenda.

IM: Explaining IJV Partner Withdrawal: The Effect of Partner-Specific Dynamics

Author: **Hamza Aib**, *U. of M'sila*

This research examines partner-specific factors on the abrupt withdrawal of partners in international joint ventures (IJVs). Drawing upon legitimacy theory, we hypothesize that local state participation and business-relatedness between IJV partners have negative effects on the occurrence of abrupt IJV partner withdrawal. Additionally, we hypothesize that business-relatedness leads to abrupt IJV partner withdrawal when the local partner is state-owned, and the market performance of the IJV partners is symmetric. Using event history analysis on a dataset of French-foreign joint ventures (JVs), our findings demonstrate that local state participation has a mitigating effect on the likelihood of both partial and entire abrupt IJV partner withdrawal. Surprisingly, our results indicate an insignificant relationship between business-relatedness among IJV partners and abrupt IJV partner withdrawal. Nevertheless, our findings reveal that business-relatedness leads to the entire abrupt withdrawal of IJV partners when the local partner is state-owned and the market performance of the IJV partners is symmetric.

IM: Influence of Host Governance and Investment Environment on MNCs' Innovative Partnership Strategies

Author: **YICHI HSIAO**, *National Central U.*
Author: **Chun-Ping Yeh**, *National Taiwan U. of Science and Technology*

This study investigates how host country governance and investment climate impact multinational corporations' (MNCs) choice of R&D partners, a topic less examined in existing literature. Drawing from the transaction cost perspective and a behavioral theory of the firm, we analyzed data from 1,980 non-service sector MNCs in Taiwan (2007-2012), totaling 4,921 observations. The results reveal varying partner preferences based on MNCs' satisfaction with the host country's governance and investment conditions. Higher governance satisfaction led MNCs to choose partners within the value chain, while high investment environment satisfaction saw MNCs select third-party consultants or research centers as partners. Furthermore, MNCs performing poorly were less likely to source technology from parent firms, instead favoring external consultants or research centers during negative performance periods. This research offers new insights into MNCs' partner selection and practical implications.

IM: How MNEs Partner with Local Organizations in a Least Developed Economy

Author: **Mohammad Rana**, *Aalborg U. Business School*
Author: **Matthew Allen**, *Manchester Metropolitan U. Business School*
Author: **Jiajia Liu**, *Huddersfield Business School, U. of Huddersfield, UK*

Attracting more 'quality' inward foreign direct investment (iFDI) is a key policy aim in many least developed countries (LDCs). Such investment may benefit local firms, enhance economic growth, and have societal advantages. Undertaking a comparative institutional analysis, we seek to explain why some multinational enterprises (MNEs) adopt policies and practices that are likely to have greater host-country benefits. We examine how institutions condition a) two MNEs, one Danish and one British, that both operate in the pharmaceutical industry, and b) the quality of their FDI in Bangladesh, an LDC. Home-country macro-level institutions constitute our focal firms, moulding our focal firms' decisions and interaction with local organizations. Our research contributes to institutional theory by highlighting how institutions condition the mechanisms that constitute and generate quality iFDI, revealing how a seemingly distant institution within MNEs home countries shapes and underpins the enactment of practices and mechanisms at the micro level in a host country.

IM: Emergence of Guinness's Corporate Political Activity to Regulatory Change

Author: **Aleksi Niittymies**, *Aalto U., Department of Management Studies*

Author: **Kalle Pajunen**, *Tampere U.*

Author: **Ewald Kibler**, *Aalto U.*

Drawing from the rich historical case of Guinness's responses to updates in Australian customs regulations in 1924, we unpack the interrelated dynamics of MNEs' corporate political activity (CPA) responses in the face of regulatory shock. We provide a model of how an MNE's CPA responses evolve at the level of individual managers. Our model specifically explains how (1) the strategic choices emerged in the tension between two actor groups who had distinct roles and motives and crucially influenced the trajectory of these responses; (2) the process was driven by the interrelated dynamics of strategic responses, where any given response shaped other responses' boundaries, motivations, and goals; (3) the distinction between materialized and considered (i.e., non-materialized) strategic responses played a significant role. In conclusion, we discuss how our theoretical insights advance the CPA literature concerning MNEs' political activities.

IM: Leaving the Backseat: The Active Role of Multinational Firms in China-US Decoupling

Author: **Anne Jamison**, *Copenhagen Business School*

Author: **Harald Pühr**, *U. of Innsbruck*

The decoupling between China and the United States has become a major topic in the context of deglobalization. Several studies have explored the factors that drive decoupling and analyzed its implications for multinational firms. However, in most cases, firms are portrayed as passive actors who are left to deal with the consequences of this process. To address this issue, we propose a framework that describes decoupling as a bargaining process between firms and states. We start by outlining a bilateral bargaining framework and then expand it to a bicentric framework involving firms and their home and host country governments. In this framework, decoupling is determined by relevance and agency. Relevance refers to whether governments want firms to decouple, and agency refers to whether firms can avoid doing so. Our exploratory data analysis shows that this framework aligns with the decoupling behavior of US multinational enterprises.

IM: Holding Back the Damage: Strong Political Institutions and the Effect of Populism on Business Invest

Author: **Margherita Corina**, *NEOMA Business School*

Author: **Alfonso Carballo-Perez**, *NEOMA Business School*

Populism is a political phenomenon which attempts to harness existing institutions for populist ends, a goal which can have deleterious consequences for business. But can national institutions resist this pressure and mitigate the damage done to firms? This paper investigates how the rise of governments with populist ideology influences corporate investment, unraveling the intricate connection between a country's political institutions and the investment behavior of companies. Based on a data set covering more than 35,000 companies from 41 countries spanning the period 1995 to 2021, we show that the detrimental influence of populist ideology on corporate investment is less harmful for firms investing in countries with greater checks and balances, manifested in electoral systems, judicial independence, and government accountability. This result is robust to several specifications, including addressing potential endogeneity concerns arising from uncertainty generated by previous waves of populist electoral success. Our work shows that populism may, on average, be bad for business but that strong institutions may mitigate these effects.

IM: Wish You Weren't Here: Tax Havens, Corruption, and the Reputation Damage of the MNE

Author: **Stephen Brammer**, *U. of Bath*

Author: **Chris Michael Jones**, *Aston U.*

Author: **Giulio Nardella**, *ESCP Business School*

Author: **Yama Temouri**, *Khalifa U., Abu Dhabi, UAE*

Whilst tax haven use by multinational enterprises (MNEs) is often associated with economic and societal harm, studies have theorized a limited relationship between tax haven use and corporate reputation. This is surprising, given the wealth of evidence which illustrates how corporate reputations are frequently damaged following socially and economically harmful MNE activity. To advance our understanding, this study focuses on the underexplored heterogeneity associated with tax havens, specifically - their location characteristics. Drawing on attribution theory and the country reputation perspective, we theorize and explain how MNE engagement with tax havens and countries characterized by corruption, shape stakeholder perceptions, thereby heightening reputation risks. Our longitudinal analysis, involving 1,961 tax haven subsidiaries of 326 MNEs, supports our theorizing. Among our principal contributions, this paper advances theory regarding the informal regulation of tax haven use and the dark side of international business.

International Entrepreneurship in the Digital Age

Session Moderator: **Haishan Yuan**, *Ivey Business School*

IM: A Quasi-Experimental Study of Cross-Border Web-search Traffic to E-commerce Amidst Regional Unrest   

Author: **Rui Yang**, *Tongji U.*

Author: **Xinran Joyce Wang**, *Zicklin School of Business, Baruch College, City U. of New York*

In an era marked by both de-globalization trends and the rise of digital internationalization, this paper presents a novel perspective on how regional armed conflicts may paradoxically facilitate international expansion via digital e-commerce platform. Challenging traditional views that associate geopolitical tensions with reduced international business involvement, this study reveals an unexpected catalyst for cross-border customer acquisition through digital internationalization. Utilizing a difference-in-differences quasi-experimental design, we examine the impact of the breakout of Russia-Ukraine conflict escalation on the international web-search traffic of conflict-affected European e-commerce websites in countries adjacent to Russia and Ukraine, compared to their non-adjacent counterparts. Our findings challenge accepted wisdom and highlight a novel form of international involvement that thrives amidst geopolitical strife, offering insights into the evolving dynamics of how digital e-commerce platforms thrive in and exploit geopolitical disruptions, enriching our understanding of IB theory in the digital age. Our research contributes to the literature in geopolitical tensions in international business, new forms of international market entry, and digital internationalization process.

IM: Do Informal Economy Drivers 'Gig It'? Persistence of Informal Economy in the Face of Digitization 

Author: **Anna Lamin**, *Northeastern U.*

Author: **Maral Muratbekova-Touron**, *ESCP Business School*

Author: **Saule DYUSSEMBINA**, *Bang College of Business, KIMEPU.*

We examine how the entry of gig-economy platforms in developing markets affects informal economy participants. Some advantages of gig-economy platforms such as flexibility and low entry barriers already exist in informal economies. But others such as algorithmic matching, bring greater efficiency to a largely unstructured market, suggesting that informal economy participants should join platforms. However not all do. Why do some informal economy participants choose to compete against gig-economy platforms rather than join them? Drawing and extending on the concept of social capital, we hypothesize that informal economy participants with greater horizontal and vertical social capital will eschew platforms entirely. Horizontal social capital develops between informal participants in the form of relational networks while vertical social capital forms between participants and customers. We examine what happened to Kazakhstan's informal taxi market after Uber and Yandex.Taxi entered the market. We survey 220 drivers to find out why some drivers chose to avoid the platforms entirely. We find support for our arguments suggesting that social capital created in the informal economy can offset the benefits of gig-economy platforms in developing markets, adding to our understanding of how digital technologies transfer to dissimilar contexts.

IM: Exploring how Big Data Analytics Influences the Degree of Internationalization  

Author: **Chi Vu**, *Durham U. Business School*

This study examines the impact of Big Data Analytics (BDA) utilization on firms' international performance, particularly the degree of internationalization. Departing from conventional approaches, we explore the determinant of internationalization through the lens of BDA utilization. Our research addresses the interactions between BDA utilization and technological discontinuity, performance feedback, and organizational legitimacy, shedding light on their distinct roles in shaping internationalization outcomes. By introducing an inertia perspective, we uncover a negative interaction between performance feedback and BDA, influencing internationalization. The study also reveals the inhibiting effect of institutionalization inertia resulting from the interaction between BDA utilization and organizational legitimacy. Moreover, we identify organizational technological discontinuity as a crucial boundary condition enhancing international success for BDA-utilizing firms. Our findings offer valuable insights into the evolving landscape of BDA and international business, benefiting academics, practitioners, and policymakers.

IM: Institutional Antecedents of Business Model Innovation in Emerging Digital Cultural Industries   

Author: **Irina Mihailova**, *U. of Eastern Finland*

Digital technologies triggered transformation of cultural consumption and production, particularly in emerging sectors where firms rely on digital and innovative business models to target international markets. Being enabled by global technological changes, firms' business model innovation (BMI) also requires creativity shown to be embedded in local cultural norms and values. However, the knowledge on BMI, creativity, and internationalization is fragmented across the literature. Particularly, there is a lack of understanding about home country's antecedents of international BMI in digital cultural sectors. Employing institutional theory and creativity lenses, I follow an inductive theory-building approach to examine institutional antecedents of BMI through case study research of Finnish firms in mobile gaming and digital education sectors. Findings reveal that these firms rely on collective and collaborative creativity embedded in socio-cultural networks and driven by perceptions of country-of-origin strengths in development of their international BMI. Formal institutions support Finnish firms not only financially, but also by strengthening socio-cultural practices across industry networks. The tight alignment between formal and socio-cultural institutions creates favorable conditions for Finnish firms to engage in international BMI. These insights contribute to the research on creativity and innovation by delineating novel concepts of collective and collaborative creativity; expands the explanatory power of country-of-origin impacts from a producer perspective and contributes to the institutional literature by detailing the case of institutional reinforcement that supports BMI in emerging digital cultural industries.

When do Political Disruptions Lead MNEs to Divest?

Session Moderator: **Klaus Meyer**, *Ivey Business School*

IM: Foreign Divestment in the Shadow of Political Regime Collision: An Event History Analysis → 🖨️ 🙋

Author: **Peng Wang**, *BNU-HKBU United International College*
Author: **Chenguang Hu**, *BNU-HKBU United International College*
Author: **Andrew Delios**, *National U. of Singapore*

Political confrontation is drawing increasing attention along with the rise of de-globalization. However, it remains a mystery whether the ideological and political regime confrontation has been active in the era of globalization. Based on the social identity theory, this study proposes that the strength of a foreign subsidiary's political regime identity and thus the probability of foreign divestment will be higher if the political regime distance between the home and host countries is greater. Moreover, subsidiary-level factors (i.e., local state equity and foreign parent size) and institution-level factors (i.e., regional ideological strength and geographical dispersion) will shape the strength of foreign identity in different ways. The hypotheses are largely supported by a survival analysis based on a sample of Sino-foreign international joint ventures in China. Overall, the study fine-tunes political differences by narrowing the scope to political regime distance and verifies the silent but persistent political confrontation in the era of globalization.

IM: Conflict Historical Failed Peace, CEO Past Focus, and Multinationals' Responses To Host-Country Wars (WITHDRAWN)

Author: **Chang Liu**, *Chinese U. of Hong Kong*

This paper studies how failed peace—instances when an armed conflict enters a period of peace (i.e., a period of inactivity characterized by the absence of conflict) but then recurs—in a conflict's historical progression influence multinational enterprises' (MNEs') divestment responses to the conflict when it is currently active. I argue that instances of failed peace, especially repeated failures in a conflict's history erode decision-makers' confidence in the complete resolution of the conflict and sustained post-conflict peace. Such negative perceptions make MNE decision-makers even more likely to decide to divest exposed subsidiaries in response. I further propose that the moderating effect of a conflict's past instances of failed peace on MNEs' current responses to the conflict is stronger when MNE CEOs have a stronger past temporal focus, a cognitive attribute that makes CEOs more likely to attend to the past for information and generalize past observations to future inferences. Analyses using a sample of S&P 1500 firms and their foreign subsidiaries over 2004-2014 support my hypotheses. My findings are robust to the possible confounding effect of conflict duration, and are consistent irrespective of the reasons leading to the periods of peace.

IM: The Fleeting Distance: Speed of Institutional Distance Change and MNEs' De-Internationalization

Author: **YUMIN CAO**, *U. of Macau*
Author: **Lin Yuan**, *U. of Macau*
Author: **Xiaoyun Chen**, *U. of Macau*

Institutional distance plays a pivotal role in shaping the de-internationalization decisions of multinational enterprises (MNEs). The dynamic view of institutional distance takes time into consideration, which leads to the speed of institutional distance change, rather than static institutional distance between the home country and the host country. Drawing upon institutional theory, This study examines the impact of the speed of institutional distance change on MNEs' de-internationalization process and investigates the mechanisms through which MNEs can achieve profitability from divestment, particularly during periods of institutional distance change. To conduct our empirical analysis, we construct a comprehensive dataset encompassing Chinese MNEs from 1992 to 2019. Through the application of fixed-effects regression analyses, we provide robust evidence supporting a positive influence of the speed of institutional distance change on MNEs' de-internationalization. Furthermore, we find that the speed of institutional distance change acts as a moderator in the relationship between de-internationalization and firms' performance. These findings contribute to our understanding of the dynamic nature of institutional distance and highlight the potential benefits of MNEs' profitability in the face of bilateral uncertainty.

IM: Navigating in Times of Massive Global Uncertainty: MNEs Performance in the Wake of Rare Events

Author: **Alfonso Carballo-Perez**, *NEOMA Business School*
Author: **Margherita Corina**, *NEOMA Business School*

An important body of literature on Global Strategy underscores the distinct advantages that multinational companies possess over their domestic counterparts in mitigating uncertainty through diversified corporate decision-making. However, little is known about the operational strategies employed by multinationals when faced with a rare and massive global uncertainty shock. In this article, we integrate insights from global strategy and the rare events literature in economics to propose a theoretical framework, where we explore how certain events, characterized by widespread uncertainty and adverse global environmental changes, can compromise the advantages of multinational corporations compared to single-country firms. Utilizing a dataset of over 350,000 U.S. companies and focusing on the recent COVID-19 pandemic as a global rare event, we test our hypotheses where our findings highlight the negative impact on the performance of multinational corporations, emphasizing their heightened vulnerability relative to single-country companies. Furthermore, we show that the recovery of multinationals is slower compared to domestic companies, given that in the aftermath of a global and exogenous crisis, MNEs face greater complexity by navigating diverse political and regulatory environments.

Putting The Heart Back Into Publishing

Moderator: **Melodena Stephens**, *Mohammed Bin Rashid School of Government*

Panelist: **Ram Mudambi**, *Temple U.*

Panelist: **Timothy Michael Devinney**, *Alliance Manchester Business School, U. of Manchester*

Panelist: **Arie Y. Lewin**, *Duke U.*

Panelist: **Rosalie L. Tung**, *Simon Fraser U.*

Panelist: **Elizabeth L. Rose**, *Indian Institute of Management, Udaipur*

Panelist: **Lilac Nachum**, *City U. New York*

This panel of senior scholars will focus on what it means to have heart in publishing. They will do this through their individual stories. The panellist will highlight the challenges scholars face today with the publish and perish dilemma and also recommend what should be done, drawing on their global experiences in management, consulting, teaching, journal editors and research scholars. We will deliberate the new trends (predatory journals, paper mills, platform survey sites, big data, and AI) that threaten the foundation on what it means to be published. This panel hopes that through their deliberations, and through sharing of knowledge we can return back to the heart of research – the love of knowledge and the quest to produce something we can use to solve problems that may help make a better world. We welcome researchers from all disciplines to listen and to share their stories of how manage to publish with heart.

Annual Meeting Career Fair Interviews

Annual Meeting Career Fair Interviews allow those recruiting to meet one-on-one with those who are either on the market or soon to be on the market. All participating employers have active job postings on the Career Services Job Board along with contact information. These interviews are primarily arranged ahead of the Annual Meeting but can also be initiated on-site. Interested job seekers should visit the Annual Meeting Career Fair website or stop by the Career Services Registration table to check in with staff and ask questions.

Embracing Uncertainty: Balancing Exploitation and Exploration for Continuous Innovation

Session Moderator: **Sonal Choudhary**, *U. of York, School for Business and Society*

This session explores how organizations adapt to uncertainty by balancing familiar practices with new explorations. Topics include the role of consultants in guiding transitions, the potential of shared services for transformation, and tools for managing organizational adaptability.

MC: Consulting the Ambidextrous: How Do Consultants Steer Transitions in Decentralised Organisations?   

Author: **Sonal Choudhary**, *U. of York, School for Business and Society*
Author: **Raymond Obayi**, *Alliance Manchester Business School, U. of Manchester*
Author: **Rakesh Nayak**, *Infosys Ltd*

How do decentralized organizations navigate the complex terrain of emerging technologies? Which consultants are ideally suited to guide them through these intricate landscapes? We explore these critical questions in the context of an emerging decentralized and organizational type called 'Farmer Producer Organizations', comprising smallholders aggregated by governments for resource pooling, risk management and market access. We offer a framework that unveil how these entities leverage different degrees of structural and contextual ambidexterity to manoeuvre rapidly evolving technological and regulatory environments. This insight offers significant implications for management consultants and policymakers engaged in the realm of decentralized systems.

MC: The Cheap Back Office Becomes a Transformation Driver: Managing Ambidexterity in Shared Services

Author: **Dirk Klimkeit**, *Baden-Wuerttemberg Cooperative State U.*
Author: **Markus Reihlen**, *Leuphana U. Lüneburg*

Shared Service Organizations (SSOs) have long focused on performing repetitive, routine tasks most efficiently. More recently, robotic process automation (RPA) has reinforced a trend towards more complex, innovative, and transformational tasks as traditional tasks become automated. Drawing on interviews in various SSOs, we adopt an ambidexterity perspective to analyze how this shift plays out as, in various ways, routine and non-routine tasks are performed simultaneously, at least during the transition period. We find two modes of how explorative and exploitative tasks are organized, each with different implications for skill and talent management requirements. Work in SSOs is, in several cases, getting professionalized, making SSOs relevant to the literature on talent management in professional service firms (PSFs).

MC: Balancing Exploitation and Exploration: A SEAM-Driven KPIs Tool for Organizational Ambidexterity   

Author: **Khaled El Haj Ismail**, *U. of Balamand, U. Lyon 3, and ISEOR Research Center*
Author: **Françoise Goter-Grivot**, *ISEOR, Magellan, IAE Lyon, U. Jean Moulin*

Organizational ambidexterity (OA) has been linked to enhanced performance and growth in organizations. Achieving this balance, however, poses a challenge in modern market dynamics, as it demands systems and methodologies capable of balancing the utilization of existing resources with the pursuit of innovative opportunities. However, performance management has predominantly focused on monitoring and evaluating an organization's capacity for exploitation, often neglecting the exploration aspect. This paper, which is part of a doctoral study, explores the development of a performance management tool utilizing SMART Key Performance Indicators (KPIs). This tool is designed to assist organizations in effectively managing and optimizing both exploitation and exploration activities. It is grounded in an ambidexterity framework that is informed by the outcomes of a management intervention based on the Socio-Economic Approach to Management (SEAM). The findings of the research show that implementing SEAM can assist organizations in collaboratively developing an internal performance management framework. This framework is capable of tracking performance in both exploitation and exploration by first identifying the root causes of dysfunctions. It then categorizes these dysfunctions according to their relevance to either of the two antecedents of OA. Following this, the framework involves the creation of KPIs, setting realistic and measurable economic and performance targets for each indicator, and finally evaluating these targets over a defined evaluation period.

MC: Navigating Uncertainty: Interplay of Credit Growth, Shareholder Sentiment, and Management Strategies

Author: **Arpit Kumar Parija**, *XLRI Xavier School of Management, Delhi-NCR*

In the dynamic landscape of financial institutions, our research unveils a compelling link between bank credit growth, shareholder sentiment, and equity returns. Traditionally associated with finance, our study uniquely delves into the management implications of this phenomenon. We discover that elevated shareholder sentiment significantly influences the performance of bank stocks, especially in scenarios marked by opacity or uncertainty surrounding the quality of bank loans. Our findings underscore the critical role of effective management strategies in navigating such intricate dynamics. Notably, a heightened level of financial reporting opacity intensifies the predictive power of credit growth on equity returns, emphasizing the need for informed managerial decision-making in the face of evolving market conditions. This research sheds light on the strategic considerations that management teams must undertake in steering financial institutions towards sustainable success in an environment characterized by uncertainty and sentiment-driven dynamics.

Leading Change: CEOs and Managers as Catalysts for Innovation

Session Moderator: **Francesco Testa**, *Scuola Superiore Sant'Anna*

Focusing on leadership's role in fostering innovation, this session discusses CEO compensation and firm performance, the influence of founder knowledge on startup outcomes, and the importance of enhancing managers' awareness in driving change.

MC: Co-Developing Knowledge with Managers: Moving Beyond Research-Practice Tensions to Generate Impact  

Author: **Francesco Testa**, *Scuola Superiore Sant'Anna*
Author: **Niccolò Maria Todaro**, *Sant'Anna School of Advanced Studies*
Author: **Emilio Passetti**, *Department of Economics and Management "Marco Fanno", U. of Padova*

The paper addresses the persistent research-practice gap between academia and industry, emphasizing the need for effective collaboration to bridge this divide. The increasing complexity of societal problems and the interdisciplinary nature of knowledge underscore the importance of connecting scientific discovery with practical application. Empirically, the paper analyzes the case of the Health, Safety and Environment Laboratory project, a multi-year collaboration between academics and large companies in Italy. The study aims to answer questions about how co-creation partnerships evolve to generate impacts and how tensions related to research-practice collaboration are managed and evolve during the project. The findings contribute to the literature by introducing a four-phase co-creation model, identifying specific tensions, and amplifying two mechanisms that characterize co-creation partnerships and the management of the tensions.

MC: Developing Managers' Awareness, a Performance Lever for the Public Service

Author: **Marie-Christine Watel**, *CORHIS & U. Paul Valéry, Montpellier*

In a complex, changing, uncertain, post-pandemic context, impacted by major ecological, social and political crises in particular, the Public Service on the front line and still influenced by New Public Management (NPM) is always in search of performance. Our research focuses on the difficulties encountered by local managers in managing day-to-day performance. Increasingly complex management situations and unclear performance mechanisms make their day-to-day management work difficult. This generates hidden performance costs in the sense of Savall and Zardet's socio-economic theory (1989, 1995, 2004). Local managers' ability to read and understand contexts and situations requires an awareness that is essential to decision-making. How can we develop situational awareness in Public Service managers, so that they can develop socio-economic performance? To do this, we will mobilize Endsley's (1995) concept of "Situation Awareness" combined with Girin's (2000, 2016) concept of management situation and organizational arrangement to show the importance of awareness in the decision-making process in management situations. Our research design is based on Savall and Zardet's Intervention-Research approach (1989, 1995, 2004). The socio-economic approach will guide our intervention in the field. Our starting hypothesis is that a manager who develops situational awareness will be able to adapt his or her decision-making and actions to the dynamics of complex situations. The thesis will be based on two research sites in the Public Service sector.

MC: CEO Compensation and Firm Performance: A Study on the Moderating Roles of CEO Origin and Firm Size    

Author: **Rida Elias**, *California State U., Dominguez Hills*
Author: **Najoie Nasr**, *Haigazian U.*
Author: **Bassam Farah**, *Loyola Marymount U.*

This study delves into the critical role of Chief Executive Officers (CEOs) in organizational performance, with a specific focus on the impact of CEO origin (internal vs. external) on the relationship between CEO compensation and firm financial performance. CEOs often draw significant attention and controversy, especially regarding their compensation and the succession process. Our research investigates these aspects, contributing novel insights to both the Resource-Based View (RBV) and CEO succession literature. We analyze a comprehensive dataset of publicly traded companies in the US and Canada, examining the relationship between CEO compensation and firm performance moderated by CEO origin. The study reveals that internally promoted CEOs, compared to externally hired counterparts, differently influence the relationship between CEO compensation and firm performance. Our findings indicate that internally promoted CEOs strengthen the positive relationship between compensation and ROA. In contrast, externally recruited CEOs present a different scenario, often involving higher compensation but with a less straightforward impact on firm performance. We also explore how firm size moderates this relationship, uncovering complex dynamics that challenge traditional assumptions in strategic management.

MC: Factors Influencing HealthTech Startup Firm Outcomes: Does Founder / CEO Industry Knowledge Matter?  

Author: **William Gaynor**, *Marymount U.*

DOCTORAL PAPER: There is an unexplained startup failure phenomenon occurring in U.S. HealthTech. The U.S. HealthTech startup failure rate is above 90% whereas U.S. technology startups in other industries fail at a rate of 60-70% (BLS). The purpose of this research is to examine U.S. HealthTech startup Founder / CEO individual entrepreneurial orientation (EO), the moderating role of Founder / CEO individual pre-existing healthcare industry tacit knowledge (TK), the mediating role of Founder / CEO individual market orientation (MO), and how these variables may influence U.S. HealthTech startup firm financial performance at exit (ROI to investors). To begin to explore the U.S. HealthTech startup environment, a pre-study focus group was conducted with U.S. HealthTech entrepreneurs. The qualitative study uncovered major themes that are used as the basis of a quantitative study. The quantitative study sampling targets 458 U.S. HealthTech startup Founders / CEOs who achieved exits (favorable and unfavorable) between 1/1/2003 and 12/31/2023. The findings of this study will better inform U.S. HealthTech startup entrepreneurs and investors about how Founder / CEO individual characteristics of EO, pre-existing healthcare industry TK, and MO may be determinants of a U.S. HealthTech startup firm's success or failure.

Learning Resources

Session Moderator: **Maïke Liu**, *Nanjing Normal U.*

MED: [Study Resources, Students' Well-Being and Entrepreneurship Outcomes: A Longitudinal Study](#) 📖 🖱️ 🙌

Author: **Maïke Liu**, *Nanjing Normal U.*

Building on the job demands-resources theory, this study aims to investigate the relationships between study resources, personal resources, students' well-being, and entrepreneurship outcomes. Longitudinal data were collected across three time points. A total of 154 Dutch students completed a questionnaire at the start, middle, and the end of an entrepreneurship program. The results of structural equation modelling demonstrated that study resources, specifically teacher-student relationships and student-student relationships, positively related to study engagement, which, in turn, fostered students' entrepreneurial intentions. Moreover, student-student relationships related stronger to enhanced study engagement for students with high personal resources (psychological capital). Regarding the negative side of well-being, we found that student-student relationships significantly reduced study exhaustion, and study exhaustion negatively related to students' entrepreneurship competence. Results confirmed the importance of study resources and personal resources in fostering students' well-being and entrepreneurship outcomes. The findings contribute to continually improving teaching effectiveness of entrepreneurship programs.

MED: [Political and Ideological Blind Spots in Introduction to Management Textbooks](#) 📖 🖱️ 🙌

Author: **Lemaro R. Thompson**, *Florida Southern College*

Political polarization, a major American concern with significant societal and business implications, is notably absent from business school curricula, a situation that underscores the long-standing criticism of these institutions for being detached from pressing issues. In this study, we actively examined how well business school curricula address political polarization and political ideology by analyzing popular introductory management textbooks. Despite the wealth of academic research in strategic management, organizational behavior, and psychology, our findings reveal a stark reality: these textbooks largely ignore discussions on political ideology and political polarization. Most textbooks don't even mention "political ideology," and only one briefly touches on "political polarization." This significant omission highlights the disconnect between the impact of political ideology on organizational behavior and decision-making and the content of business education, pointing to an urgent need for business schools to better prepare future leaders and workers to navigate today's politically charged environment.

MED: [How Did CEOs Learn Not to Diversify? Institutional Change and MBA Corporate Finance Textbooks](#)

Author: **Ernie Englander**, *George Washington U.*

Jung and Shin (ASQ, 2019) demonstrated that institutional change in one domain can contribute to change in another domain. In particular, they argued that a change in the MBA finance curriculum reversed the previous use of diversifying acquisitions by CEOs when they eventually reached the top echelon of corporate decision-making. They argued that the dominant theory regarding mergers and acquisitions for those CEOs who earned their MBAs prior to the 1970s encouraged the creation and building of conglomerates. Beginning in the 1970s and continuing since then, an agency-theoretic logic emerged that reversed this support for conglomerates and, instead, proscribed their existence. Jung and Shin did not, however, explain HOW the future CEOs learned not to diversify as MBA students. I propose the answer is to be found in their MBA finance textbooks. Textbooks are a little-examined academic topic despite the importance of graduate education as a foundation for managerial cognition and the subsequent strategic choices made by CEOs. I identify the leading MBA finance textbooks that were initially published in the years prior to the emergence of the agency-theoretic logic and, then, trace the changes which the authors made through the multiple editions of their textbooks as the agency-theoretic logic became dominant. I show that, in fact, the descriptive and prescriptive language in the textbooks regarding diversifying acquisitions and conglomerates changed from edition to edition as the agency-theoretic logic took hold. These textbooks went from support or neutrality to an outright rejection of diversifying acquisitions.

MED: [The Dynamics of Gamified Management Education: Paradoxical Role of Autonomy](#) 📖 🖱️ 🙌 🧘 🗨️ 🖱️ 🙌

Author: **Nibu John Thomas**, *IIT Madras*

Author: **Rupashree Baral**, *Indian Institute of Technology, Madras*

Gamification is the use of game design elements in contexts such as learning and work. A decade of research reveals that gamification is effective in a wide range of settings. Furthermore, it is predicted that the importance of gamification will increase significantly in the new era with metaverse and artificial intelligence. Even though several studies have proven that gamification is effective, its underlying dynamics in management education need further clarity. Research divulges that gamification enriches the value of a setting by activating a unique game-like experience. The current study examines the factors influencing this experience in gamified management education. The findings reveal the motivational antecedences that influence the experience and illuminate the paradoxical role of autonomy. The paper provides theoretical and practical inputs for enriching gamified management education.

Author: **Ming-Jer Chen**, *U. of Virginia*

Author: **Pranav Dalmia**, *Saïd Business School U. of Oxford*

Case method is a widely employed pedagogical approach across management schools. While its increasing adoption is attributed to the benefits the method provides, case teaching and learning presents its own array of challenges. This paper draws on extant literature as well as personal experience to provide an exposition of these challenges and proposes how they might be resolved by way of an "ambi-oneness" approach. It casts these challenges in the form of oppositional forces or tensions, categorizing them as belonging to the philosophical, teaching, or learning domains. It then proposes how an ambi-oneness approach might be used to successfully resolve, integrate, and even leverage these tensions. Towards achieving this objective, the paper introduces the recently conceptualized ambi-oneness framework, explicating its two conceptual building blocks – "ambicultural thinking" and the "power of one". It then provides an exposition of a series of ambi-oneness learning experiences ("discoveries") – teaching and learning practices from the management classroom – which have enabled success in addressing the inherent tensions of the case method. Thereafter, the paper maps out the relation between this set of ambi-oneness practices and the enumerated case tensions. To aid deeper understanding, this mapping is accompanied by an illustrative analysis for how one specific tension – active vs passive learning – can be addressed through the practices elucidated. We believe that our paper presents important conceptual (research) and practical (teaching) implications for management scholars and instructors employing the case method.

Entrepreneurial Leadership: Lessons from History

Session Moderator: **Leslie A. DeChurch**, *Northwestern U.*

This session examines the historical dynamics of entrepreneurial leadership, drawing lessons from notable historical figures and events. By analyzing the leaders' decisions and outcomes of past leadership endeavors it aims to provide valuable insights for contemporary leaders navigating complex business landscapes.

MH: Implicit Motivations of Entrepreneurial Philanthropists: A Psychobiographical Analysis

Author: **Mario Joseph Hayek**, *Texas A&M U., Commerce*

Author: **Alexander Williams**, *Texas A&M U., Commerce*

Author: **Amanda C. Brown**, *U. of North Texas*

Author: **Amitava Bose Bapi**, *U. of Pikeville*

This paper explores the implicit motivations of entrepreneurial philanthropists by performing a psychobiographical analysis of Andrew Carnegie, a man who ruthlessly became the wealthiest person of his time only to donate much of his fortune later in life. An analysis of his implicit motives helps uncover why individuals who ruthlessly pursue entrepreneurial endeavors generously return the fruit of their efforts back to society. Our findings suggest that the configuration of the implicit motivations of entrepreneurial philanthropists change with achievement motivation decreasing and power motivation increasing over time hence, explaining the shift of focus from self to others.

MH: Aren't We Doing the Same Old Thing? Applying Kautilyan Vintage Paradigm to 21st Century Management

Author: **Rajashik Roy Choudhury**, *Doctoral Student at Indian Institute of Management Bangalore*

In today's changing world, where perspectives and frameworks are getting outmoded quickly due to the emergence of innovative products, services, practices, strategies etc., I argue that the lessons given by ancient Indian teacher Kautilya in his famous treatise Arthashastra are still relevant and valid in 21st century management practices even after 2350 years of its composition. In other words, I develop a multi-level framework based on the Kautilyan paradigm to show that it offers both micro as well as macro-level intuitions through which present-day leaders can manage both employee & group levels as well as organizational-level challenges. Scholars who applied Kautilya in contemporary contexts mostly concentrated on specific aspects of ethics, laws, economics, structure, agriculture, management etc. and did not seem to propose a holistic framework for practitioners. Also, previous attempts at analyzing Kautilya's teachings for management purposes did not differentiate the takeaways for micro and macro levels. Through this paper, I not only address these gaps but also show how an ancient philosopher like Kautilya came up with futuristic suggestions for kings and ministers that provide a guide to today's managers and CEOs.

MH: Leading a Renaissance: Leadership Dynamics Within and Across the Medici (1360-1503)

Author: **Kim Nguyen**, *Northwestern U.*

Author: **Anoop A. Javalagi**, *Northwestern U.*

Author: **Leslie A. DeChurch**, *Northwestern U.*

The Italian Renaissance was a cultural, artistic, and intellectual movement that emerged in Italy during the late 14th century. The movement was centered in Florence where a succession of influential Medici bankers played a pivotal role. This paper characterizes the leadership of the Medici beginning with Giovanni who founded the bank to Piero di Cosimo whose exile marked the end of the High Renaissance. We take an episodic perspective to probe the temporal dynamics characterizing leadership as adaptive or consistent as each Medici pursued his ambitions over time and successive generations. We answer three questions involving time and leadership. First, to what extent did the Medici adapt to events by shifting their leadership versus remaining consistent in their approach? Second, what changes were observed in the leadership of each Medici early and later in their lives? Third, to what extent were the Medici leaders consistent or different across successive generations? The case of the early Medici in Florence during such an influential period offers a uniquely valuable opportunity to understand leadership dynamics within and between leaders across time. The implications of these findings and new directions for leadership theory are discussed.

Sensemaking, Voice, and AI: Exploring Organizational Dynamics

Session Moderator: **James Hughey**, *U. of Utah, David Eccles School of Business*

MOC: **The Heterogeneity of Sensebreaking**

Author: **James Hughey**, *U. of Utah, David Eccles School of Business*
Author: **Craig Brimhall**, *UCLA Anderson School of Management*
Author: **Devin Rapp**, *San Diego State U., Fowler College of Business*
Author: **Christopher G. Myers**, *Johns Hopkins Carey Business School*

A fundamental premise of the sensemaking literature is that the disruption of sense (commonly referred to as a sensebreaking event) gives rise to meaning voids that, in turn, trigger sensemaking. Despite this theoretical basis, we know surprisingly little about how sensebreaking events impair meaning. In other words, while we know a lot about how individuals make sense, we know comparatively little about how individuals break sense. Using qualitative data collected from healthcare workers, this paper explores the experience of sensebreaking amidst a global crisis—the COVID-19 pandemic. Our findings reveal that, despite evincing all the classic characteristics of a sensebreaking event, many of our participants did not perceive the pandemic as such. Among those whose sense was broken, however, we unearthed multiple senses susceptible to disruption and widespread variation in the degrees to which they were disrupted. While we document sensebreaking's effects on sensemaking and learning, our study also suggests that sensegiving—when it vacillates beyond expectation, contradicts past practice, or is perceived as incommensurate with experience—can paradoxically promote sensebreaking. In this important respect, our study speaks to the difficulty of distributed sensemaking and the fragility of institutional trust during a crisis.

MOC: **Development of New Capabilities Through Collective Sensemaking of Project's Breakdowns**

Author: **Mahshid Tootoonchy**, *U. Of Sydney*

Project breakdowns, marked by contingent events and often accompanied by negative emotions, present opportunities for cultivating a learning culture within organizations to effectively manage such challenges. An empirical analysis of six cases in the manufacturing industry demonstrates how managerial cognition plays a pivotal role in facilitating project learning from failure, devising coping strategies, and fostering innovation. This paper contributes by framing the sensemaking of breakdowns as either reinforcing existing capabilities or transforming them. In the latter cases, shared managerial cognitions are shown to facilitate decision-making, allowing for the reframing of current routines and the strategic choice of new capabilities.

MOC: **When and Why does Employee Voice Lead to Managerial Endorsement?**

Author: **Hanna Kalmanovich-Cohen**, *Oakland U.*

When and why does employee voice lead to managerial endorsement? Building on both attribution theory and impression management theory, this paper suggests an integrative framework of how employee voice can lead to managerial endorsement through a direct evaluation of employees' motives. Specifically, we suggest that when a manager attributes an employee's motives to prosocial values rather than impression management values, he or she is more likely to take action based on the employee's feedback. This paper also investigates the moderating role of voice visibility. Across two studies, we provide initial evidence to support our hypotheses. First, we conduct an experiment to demonstrate that voice visibility and managerial attribution of voice motives affect how managers respond to employee voice. Second, we test the mediating effect of managerial attribution of voice motives (i.e., prosocial motives and impression management motives), by utilizing a measurement-of-mediation design among business professional.

MOC: **AI Aversion or Appreciation? Meta-Analytic Evidence for a Capability-Personalization Framework**

Author: **Xin Qin**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Xiang Zhou**, *Sun Yat-Sen U.*
Author: **Chen Chen**, *Sun Yat-sen Business School, Sun Yat-sen U.*
Author: **Dongyuan Wu**, *Fudan U.*
Author: **Hansen Zhou**, *School of Business, Sun Yat-sen U.*
Author: **Xiaowei Dong**, *Business School, Sun Yat-Sen U.*
Author: **LIMEI CAO**, *School of Business, Sun Yat-sen U.*
Author: **Jackson G. Lu**, *MIT Sloan School of Management*

Artificial intelligence (AI) is transforming human life. While some studies find that people prefer humans over AI (AI aversion), others find the opposite (AI appreciation). To reconcile these conflicting findings, our Capability-Personalization Framework posits that when deciding between AI and humans in a decision context, individuals focus on two dimensions: (a) perceived capability of AI and (b) perceived necessity for personalization. We propose that individuals appreciate AI when (a) AI is perceived as more capable than humans and (b) personalization is unnecessary in a given decision context; otherwise, AI aversion occurs. Our Capability-Personalization Framework is supported by a meta-analysis of 442 effect sizes from 163 studies (N = 82,078): AI appreciation occurs ($d = 0.27$, 95% CI = [0.17, 0.37]) when AI is perceived as more capable than humans and personalization is unnecessary in a given decision context, otherwise AI aversion occurs ($d = -0.50$, 95% CI = [-0.63, -0.37]). These effects are moderated by AI embodiment (robot vs. algorithm), outcome nature (behavior vs. attitude), and country-level unemployment rate and college degree percentage. Overall, our integrative framework and meta-analysis advance knowledge about AI-human preferences and provide important implications for AI developers and users.

Mindsets and Monetary Decisions

Session Moderator: **Christina Altendorfer**, *Catholic U. Eichstätt-Ingolstadt*

MOC: **A Systematic Literature Review on Mindset Definitions**

Author: **Christina Altendorfer**, *Catholic U. Eichstätt-Ingolstadt*

The construct 'mindset' has become central to research and practice, yet there is no consensus on the meaning of the concept, with various definitions proposed. This paper systematically reviews mindset definitions in the management and business literature to address the conceptual confusion surrounding mindset and to enhance concept clarity. A qualitative content analysis of 76 publications reveals eight categories of defining mindset components: ability, behaviors, belief systems, cognitive processes and attributes, knowledge, mental states, personal dispositions and behavioral tendencies, and personal perspectives and worldviews. These categorizations reveal that according to the management and business literature, a mindset comprises stable, dynamic, and action-related characteristics. In addition to examining similarities and differences between definitions of mindset, this study identifies several research gaps encompassing an ambiguous use and understanding of mindset, a lack of engagement with prior research, and a lack of empirical studies on the nature of the construct. Based on these gaps, the author proposes a promising path for future studies to address the fuzziness of mindset definitions and to unpack the defining components more fully.

MOC: **The Role of Counterfactual Emotions on Early-Stage Investment Decisions**

Author: **Eduardo Andres Boada**, *IE Business School*

Author: **Daniel Lerner**, *IE Business School*

Author: **Jose Lejarra**, *IE U.*

Emotions are an important, yet understudied aspect of early-stage investors' decisions. In this article, we study how the negative counterfactual emotions of regret and envy may impact these individuals' intention to invest in a new venture opportunity. We take into account the negative emotional consequences of both errors of commission and omission in this context, as well as its social embeddedness in our conceptualization. We make predictions regarding the direction and relative magnitude of the effects of counterfactual emotions on investment intention and test them in two decision-making experiments using a sample of investors. Our findings provide preliminary evidence that shows counterfactual emotions are relevant factors in early-stage investors' decision-making process.

MOC: **From Warm Glow to Cold Chill: The Effect of Choice Framing on Donations**

Author: **Ilana Brody**, *UCLA Anderson School of Management*

Author: **Hengchen Dai**, *UCLA Anderson School of Management*

Author: **Jana Gallus**, *UCLA Anderson School of Management*

Author: **Kiki Koutmeridou**, *DonorVoice*

Extant research and practitioner advice tout that organizations should give people choice to increase their prosociality. With three preregistered experiments across field and online settings (N=25,399), we challenge this assumption, identify conditions under which choice can be helpful versus harmful, and uncover the underlying psychological processes. We first show that relative to no choice, a choice framed as "what to give" (e.g., a "Basic Needs Basket" or a "Survivor's Kit") increases donation interest by elevating a sense of agency. However, framing that same choice as "who to help" (e.g., "Help a Child" or "Help a Trafficked Girl") as opposed to "what to give" reduces donation interest as it causes decision discomfort. Importantly, the two competing mechanisms of agency and decision discomfort may cancel out when a choice framed as "who to help" is compared to not giving choice. This research provides a framework to understand the nuanced effects of giving choice on prosociality. While choice can enhance feelings of agency and satisfy individuals' quest for a "warm glow", facing a tradeoff between two recipient populations may instead elicit a "cold chill", freezing the likelihood of donating at all.

MOC: **Reviewing Managerial Mental Representations: A Taxonomy and a Future Research Path**

Author: **Philipp Benedikt Becker**, *WU Vienna U. of Economics and Business*

Author: **Daniella Laureiro Martinez**, *ETH Zürich*

Author: **Zorica Zagorac-Uremovic**, *ETH Zürich*

This paper presents a comprehensive review of Managerial Mental Representations (MMRs) referring to cognitive abstractions enabling organization members to navigate complex task environments. Despite their importance for a wide range of management research contexts, MMR concepts lack a unified understanding due to the use of various quasi-synonyms such as mental models, schemas, knowledge structures, cognitive frames, and mindsets. This review examines 179 studies conducted over the last 30 years that employ one of 32 identified MMR terms. Leveraging hierarchical clustering reveals shared notions among MMR definitions providing an empirical base to synthesize research. Additionally, we explore the roles of MMRs in different research designs and discuss their operationalization. This study aims to foster future MMR research by providing guidance based on a taxonomy of the most commonly used MMR terms, a broad overview of existing MMR research, and a discussion of methodological approaches. Finally, we propose future research directions that include the use of advanced natural language processing, exploring the dynamics and contextuality of MMRs, and examining the interaction between MMRs and artificial intelligence.

Leadership for Positive Workplace Dynamics

Session Moderator: **Fu Yang**, *Southwestern U. of Finance and Economics*

MOC: **Is Leader Humor a Life Buoy in the Workplace Waves? A Social Information Processing Perspective**

Author: **Fu Yang**, *Southwestern U. of Finance and Economics*
Author: **Deping Wen**, *Southwestern U. of Finance and Economics*

Despite a substantial literature on the consequences of leader humor, relatively few studies have examined its function of relational lubrication in a context that is full of conflict. To extend comprehension of leader humor's broader effects, we draw on social information processing theory to investigate how and when leader humor exerts influences on team performance and team organizational citizenship behavior (OCB). We tested our model using multilevel path analysis with time-lagged, multisource data from China. Results of multilevel path analysis showed that leader humor enhanced team performance and team OCB, through prompting the development of interpersonal justice climate. These predictions were more pronounced under higher relationship conflict compared with lower relationship conflict. Taken together, our results offer new insights into the breadth of impacts of leader humor based on social information processing theory, and provide practical implications for practitioners about how to build effective teams through relational management.

MOC: **Positivity at Work: The Impact of Positive Leadership on Employee Outcomes**

Author: **Stephanie Kelm**, *U. of Duisburg-Essen, Germany*
Author: **Margret Borchert**, *U. of Duisburg-Essen, Germany*

Positive leadership, a theory originating from positive psychology, has often been used as a synonym or category for various leadership styles (e.g., transformational, ethical, or authentic leadership). With the ongoing debate about the relevance of these leadership styles for future research, it is particularly important to reduce the conflation of concepts and acknowledge that positive leadership is a distinct leadership style and not a "catch-all" term for various leadership styles. Based on work design theory and incorporating self-determination theory, we argue that positive leadership directly and indirectly influences affective commitment, which is a relevant outcome in times of skilled labor shortages. We hypothesize that psychological need satisfaction and well-being act individually and, as an extension of work design theory, as serial mediators between positive leadership and affective commitment. We conduct a two-wave-study with 282 employees of a German company in the finance and insurance sector to test the proposed effects. The results suggest that positive leadership improves affective commitment. Additionally, psychological need satisfaction and well-being mediate this relationship individually and serially. Overall, our study underlines the importance of positive leadership as a relevant leadership style and contributes to the research fields of work design theory and self-determination theory.

MOC: **Ethical, Servant, and Authentic Leadership and Fostering Employee Knowledge Sharing: A Meta-Analysis**

Author: **Kui Yin**, *U. of Science and Technology Beijing*
Author: **ZhiKang Chi**, *U. of Science and Technology Beijing*
Author: **Kaili Zhang**, *East China U. of Science and Technology*
Author: **NianNian Dong**, *U. of Science and Technology Beijing*
Author: **Oliver Sheldon**, *Rutgers U.*
Author: **Yejun Zhang**, *Texas State U.*
Author: **Min Wan**, *Texas State U.*

While prior studies have demonstrated that three moral forms of leadership (ethical, servant, and authentic leadership) are positively related to employees' knowledge sharing, we still know little regarding their relative importance on this important employee behavior. Drawing on self-determination theory (SDT), this study employed meta-analytic techniques to compare their effects on knowledge sharing, and the mediating role of psychological empowerment driving these effects. Our findings revealed that (1) authentic leadership is the most important in fostering knowledge sharing among these three moral forms of leadership; (2) compared to ethical and authentic leadership, servant leadership explained more variance toward psychological empowerment; (3) psychological empowerment mediated the relationship between each moral forms of leadership and employee knowledge sharing. This study provided a deep and fine-grained understanding of the relative importance of these three forms of leadership in promoting employee knowledge sharing and the mechanism through which they do so. We conclude by discussing theoretical and practical implications of our findings, and delineating avenues for future research.

MOC: **When and How Ambidextrous Leadership Enhances Versus Inhibits Employee Innovation**

Author: **Rongsong Wang**, *East China Normal U.*
Author: **Chunyan WANG**, *Faculty of Economics and Management, East China Normal U.*
Author: **Mengying Wu**, *Shanghai Normal U.*

Although subordinates' stress is closely correlated with ambidextrous leadership (AL), surprisingly little organizational research considered the role of challenge-hindrance stressor framework (CHSF) when discussing the leadership approach. We enrich the ambidextrous leadership theory by integrating it with CHSF to argue that AL comprises a double-edged sword for innovative work behavior (IWB) through both the positive mechanism of perceived challenge stressors (PCS) and the negative mechanism of perceived hindrance stressors (PHS). Additionally, we propose the curvilinear moderating role of conscientiousness (CO) drawing upon the resource allocation framework (RAF). We found support for our hypotheses across a video experiment (84 participants across two conditions) and a survey study (three-wave, 218 matched samples). Taken together, our findings provide new evidence for the double-edged sword effect of AL and reveal the importance of examining subordinates' forms of stress and CO in this leadership process.

This symposium presents cutting edge research on collective intelligence (CI). CI is the phenomenon of groups outperforming even the most skilled individuals. Organizations are a key way through which societies constitute groups and structure their interactions and therefore is a seat of collective intelligence. The papers here address some of the ways group processes are structured and the implications for organization performance.

Purpose, Meaning, and Consciousness in Leadership

Session Moderator: **Giuseppe Argiolas**, *Sophia U. Institute*

This session explores the interplay of purpose, meaning, and consciousness in leadership, focusing on how these factors shape leader behaviors and influence followers' work experiences. By bringing together these research streams, this session aims to advance our understanding of how leaders can cultivate and leverage purpose, meaning, and consciousness to create more fulfilling and impactful workplaces.

MSR: **Communion: The Nature of a Purpose-Driven Leadership**     

Author: **AIZA DE TORRES ASI**, *Sophia U. Institute*

Author: **Giuseppe Argiolas**, *Sophia U. Institute*

Author: **Michela Floris**, *U. of Cagliari*

Drawing out the ontological nature of leadership, this paper argues that communion is the essence of leadership that seeks to capture both achieving organizational goals and the leader's and members' need for self-realization. In this paper, we address this issue by employing an in-depth ontological analysis of the notions of communion and purpose in leadership studies. While this analysis exposes the communal dimension of leadership to motivate each other (leader and members) in the community, it does not rescind but transcends the prevalent contemporary definition of leadership based on the leader's outward tendency to influence the members. The framework is built on a progressive ontological approach: from relational leadership as a sensemaking process to communityship as a sense-giving process, until we reach communionship as a sense-sharing process. This study, offering a set of propositions, shows inspiring scholarly and practical implications, suggesting new avenues for further research.

MSR: **Leader Bottom-Line Mentality and the Meaning of Work** 

Author: **Salar Mesdaghinia**, *Eastern Michigan U.*

Author: **Zihan Liu**, *U. of Illinois at Springfield*

We propose that leader bottom-line mentality (BLM), characterized by focusing single-mindedly on bottom-line results, renders work meaningless and negatively impacts employee attitudes and behaviors. We also propose that these effects are stronger among employees with a strong moral identity who value serving a greater purpose by their work. The findings across three studies in China and the United States indicate that leader BLM is associated with a sense of work meaningfulness among employees, which in turn relates to lower job satisfaction, reduced extra-role performance, higher job neglect, and greater turnover intentions. The findings also show that these effects are stronger for employees with high moral identity. Our findings advocate for organizations and leaders to adopt a broader perspective beyond just bottom-line objectives in order to enhance employee attitudes and business success.

MSR: **Conceptualizing Conscious Leadership – An Integrative Approach** 

Author: **Tracy F. Chang**, *Rutgers U.*

This paper aims to define conscious leadership, an emerging concept in organizational leadership. While several definitions have been discussed, there has not been a systematic approach to conceptualizing conscious leadership, and a consensus on its definition has yet to come. This paper will review the literature and discuss the definitions proposed. Further, the paper develops a working definition by integrating the perspective from the science of yoga.

Recognizing how organizations of all kinds are increasingly emphasizing radical innovation to compete successfully, in this Presenter Symposium, we are proposing five presentations on how to manage employees for taking on initiatives that otherwise have a low rate of success. We bring together ten management scholars, researchers, and practitioners from academia, industry, and administration covering four countries for sharing with AOM audience their findings on how to motivate, engage, and train employees for such initiatives. They cover topics related to philosophy, metaphors, and the arts. In the process, topics of stoicism, the world's largest epics, superpowers and the role of virtue and happiness in enhancing successful undertakings are considered. With the advance of AI, internationalism, and technology quacking the pace of change, we are presenting a preview of how the organizations of the future can manage risky endeavors by having employees take risk and make personal sacrifice to tread the unknown. We consider how to create a work environment that motivates employees to succeed in discovering the unknown and undertake the unthinkable. We provide various means recommended in the ancient wisdom to achieve these. We also provide unconventional sources, reach unexplored venues, understand and interpret the requisite knowledge, behavior, and the mind.

Trust Me, it Works! Trust Research

Session Moderator: **Bart De Jong**, *Durham U. Business School*

OB: Felt Trust: A Critical Review, Constructive Redirection, and Exploratory Meta-Analysis

Author: **Bart De Jong**, *Durham U. Business School*
Author: **Allan Lee**, *U. of Exeter Business School*
Author: **Harjinder Gill**, *U. of Guelph*
Author: **Xiaotong (Janey) Zheng**, *Durham U. Business School*

After decades of scholarly focus on studying trust from the trustor's perspective, there has been a rapidly growing interest in understanding trust from the trustee's perspective, with a particular emphasis on felt trust (i.e., a trustee's perception of being trusted by a trustor). The fundamental assumption underlying this trustee-centric perspective is that it complements the dominant trustor-centric perspective and enables a more comprehensive understanding of how trust manifests and operates in the workplace. Unfortunately, our critical review of 121 felt trust studies reported in 87 manuscripts reveals major problems in three areas (conceptualization and measurement, theorizing, and research methods) that prevent this field from reaching its full potential. To remedy this, we build on existing frameworks, best practices, and exemplars from the (felt) trust literature to outline a constructive redirection of the field. We subsequently empirically test the field's fundamental assumption by meta-analytically exploring the distinctiveness and incremental validity of felt trust beyond other trust concepts. Taken together, our envisioned redirection and meta-analytic findings enable the field of felt trust to live up to its promise and enrich understanding of organizational trust.

OB: Will Creative Employees Be More Trusted and Promoted by Leaders?

Author: **Xue Peng**, *Sun Yat-sen -U.*
Author: **Wen Cheng**, *Lingnan College/Sun Yat-sen U.*

The existing literature has assumed that leaders inherently recognize the value of employee creative behavior and, in turn, trust and promote those creative employees. However, the decision-making process behind promoting creative employees is often complex for leaders. The present research aims to explore when leaders will trust and promote creative employees. Drawing on the uncertainty management theory, we argue that leaders with lower control appraisals, as opposed to those with higher control appraisals, may perceive a high-level uncertainty, thereby reluctant to trust and promote creative employees. A three-wave survey data from 279 leader-employee dyads was collected to test our hypotheses. The results show that the positive indirect effect of employee creative behavior on employee promotability through leader trust in employee is weaker (versus stronger) when leader control appraisals are lower (versus higher). These empirical findings provide support for our hypothesis. Implications for theory and practice are discussed, and suggestions for future research are identified.

OB: Profiles of Organizational Commitment: Implications for Work Relationships

Author: **Ian R. Gellatly**, *U. of Alberta*
Author: **Emma Lei Jing**, *NEOMA Business School*

Organizational behavior scholars have long debated how best to conceptualize commitment. Should commitment be viewed and studied as a type of overarching bond that captures how people feel toward their organization? Should we conceptualize commitment as distinct yet correlated bonds and mindsets that configure within individuals to produce a holistic commitment experience? Do these unique phenomenological experiences change how people see and respond to work? Using a person-oriented conceptual and analytical strategy we attempt to address these questions by observing the implications of different commitment profiles (unique combinations of global, affective, continuance, and normative commitment). Conceptually, this approach further clarifies the nature of commitment experience. From a methodological perspective, profiles that include both a global experience plus the specific commitment mindsets create conditions where theoretically-interesting mindset combinations not normally see can emerge. Specifically, in this study (N=1,103 working adults) we compare two approaches to profile construction and show the utility of a bifactor approach. Moreover, we confirm that a set of work-relationship outcomes (organizational trust, perceived similarity, cohesion, and psychological safety) are all sensitive to the nature of these commitment profiles in theoretical and practical ways.

OB: Trust-Building Behaviors and Control Mechanisms in Hierarchical Dyads: A Grounded Model

Author: **Catharina Claudia Jecklin**, *Bond Business School, Bond U., Australia*

Trust-control dynamics have captured the scholarly attention for decades. Despite ongoing efforts, the relationship between trust and control remains inconclusive. This paper sheds light on how managerial trust-building behaviors and control mechanisms interrelate when building employee trust in the workplace. The study gleaned insights from semi-structured interviews with managers and employees from a fifty-year old, mid-sized construction and property development company. Grounded theory methodology brought forth four distinct dimensions of trust-building behaviors, including (1) foundational, (2) organizational, (3) analytical, and (4) context-driven trust-building behaviors. Furthermore, linkages to different forms of control were identified to better understand how trust and control interact. Findings suggest that the overall complementary function of input, action and output controls oscillates depending on context and the degree to which employees' trust expectations are met, offering new avenues for future research.

Walking Down the Idea Journey

Session Moderator: **Zhou Xiaozhou**, *School of Management, Harbin Institute of Technology*

OB: Understanding How Creative Leader Influence Employee Creativity: The Roles of Proactive Behavior and Conformity Value

Author: **Zhou Xiaozhou**, *School of Management, Harbin Institute of Technology*

Author: **Jijiang Wang**, *School of Management, Harbin Institute of Technology*

Author: **Li Zhang**, *Harbin Institute of Technology*

Drawing on social learning theory, the study presents a moderated mediation model to examine the role of proactive behavior and conformity value in the positive relationship between creative leaders and employees' creativity. The two-wave data are collected from 230 employees and their leaders in an automobile manufacturing enterprise in China, in which employees are encouraged to be creative because they need to implement new novel designs and proposals to attract consumers. The statistical analysis reveal that proactive behavior partially mediates the influence of creative leaders on employees' creativity. Conformity value moderates not only the relationship between creative leaders and proactive behavior but also the indirect effect of creative leader on employees' creativity via proactive behavior. The relationship and the mediating mechanism are stronger in the presence of employees' higher conformity value. We discuss the theoretical and practical implications as well as future research directions of the findings.

OB: After the Finish Line: Effects of Submission and Winning in an Idea Campaign on Subsequent Outcomes   

Author: **Ryan Shuwei Hsu**, *Department of Business Administration, National Chengchi U.*

Author: **Aichia Chuang**, *U. of North Carolina, Greensboro*

As the prevalence of creative idea campaigns continues to grow, this study investigates the spillover effects of employees' submitting to and winning in a creative idea campaign on their subsequent post-campaign creative and routine work outcomes. Specifically, we examine the mediating role of perceived task significance in explaining the above relationships. We introduce a field intervention in a Call Center of a television shopping company, where we implement a creative idea campaign. Results reveal that submitting to and winning rewards in a creative idea campaign positively influences subsequent work outcomes (i.e., enhanced creativity, decreased errors, and improved efficiency) through the mediation of employees' perception of task significance. Additionally, we explore the effect of submitting ideas yet not winning rewards and again find positive lasting effects: employees who did not win also exhibited increased creativity and reduced errors. Theoretical and practical implications are discussed.

OB: Blurred Visions and Team Tensions: Contradictory Subgoals in Team Knowledge Integration

Author: **Rylee Linhardt**, *Rice U.*

Author: **Gabriela Fernandez**, *Rice U.*

Author: **Lila Berger**, *Rice U.*

Author: **Eduardo Salas**, *Rice U.*

Team innovation has become increasingly critical for organizations and has become of growing interest in organizational behavior literature. The effectiveness of innovation teams hinges on the ability for diverse team members to integrate their knowledge and derive a collective understanding of the creative problem. Knowledge integration is an outcome of both effective team cognition and social processes where both must coevolve for teams to integrate the most knowledge and derive more novel insights on how to implement the idea. In the following paper, we provide a conceptual framework of how the evolution of the team's cognitive and social processes lead to more knowledge integration in innovation teams across time. We consider how the cognitive and social processes are influenced by a team's shared vision and the team subgoals each diverse team member uses to derive implementation strategies for the innovative idea. In doing so, we provide a counterintuitive conceptualization of how knowledge can be integrated effectively by proposing that team members who are more diverse and have developed incongruent subgoals will generate the most novel knowledge that lead to innovative solutions.

OB: Exploring the Role of Affective Trajectories in the Idea Journey   

Author: **Roja Alexandra Ratzinger**, *Johannes Kepler U. Linz*

Author: **Claudio Biscaro**, *Johannes Kepler U. Linz*

In this work, we draw on the notion of affective trajectory to theorize the role of affective states in the generation, elaboration, championing, and implementation of creative ideas—known as the idea journey. Whereas prior literature has demonstrated that creators' affective states exert a significant impact on diverse aspects of creativity and innovation, such as generating new ideas, polishing them, sorting them, improving them, and even pitching them, it has generated a trove of mixed results as to whether positive or negative affective states facilitate the idea journey. To address this issue, we propose that only by conceptualizing the idea journey as a sequence of activities, and affect as a transient state that can range from positive to negative and vice versa, we can make sense of the myriad of mixed findings. Overall, this work contributes to the vast literature on creativity and innovation by theorizing the affective journey of creators.

OB: The Effects of Voice Distinctiveness and Voice Consensus on Managerial Responses to Employee Voice

Author: **Zhenzhen Zhang**, *Qingdao U. of Technology*
Author: **Jie Li**, *Xi'an Jiaotong U. School of Management*
Author: **Qiaozhuan Liang**, *Xi'an Jiaotong U.*

Organizations encourage employees to voice ideas, but how can employees ensure that managers respond positively? Is it wiser to voice about a variety of issues or about only one specific issue? And to what extent do the voice patterns within the team and managers' beliefs influence how managers react to voice? Building on attribution theory, we address these questions in two studies. In our first (scenario) study with 184 employees, we find that when employees voice on different issues rather than on one specific issue, managers are more likely to attribute the voice to prosocial and performance-enhancement motives, and that these attributions positively influence managers' endorsement of voice. This effect is stronger when managers hold the implicit belief that speaking up is safe. Our second (field) study shows that employees who engage in moderate levels of voice are rated as better performers than those who rarely voice or voice very frequently, especially when the frequency of employees' voice deviates from the voice frequency of their peers. These findings highlight that not only the frequency of voice, but also other voice patterns, and managers' implicit voice theories influence managers' responses to voice.

OB: An Uncertainty-Management Model Depicting Employees' Responses to Organizational Crisis 

Author: **Jinyun Duan**, *East China Normal U.*
Author: **Wang Xiaotian**, *East China Normal U.*
Author: **Yue Xu**, *Xi'an Jiaotong-Liverpool U.*
Author: **Lixiaoyun Shi**, *East China Normal U.*

Based on uncertainty management theory and the voice literature, we propose that organizational justice serves as a boundary condition determining how employees respond to organizational crises with different types of voice (i.e., prosocial or self-interested). We conducted 2 survey studies to test our hypotheses: Study 1 focused on employee individual crisis perception and justice perception with a sample of 401 employee-supervisor dyads, and Study 2 focused on TMT member-rated organizational crisis and organization-level justice climate with a sample of 40 TMT members and 385 employee-supervisor dyads. Both studies demonstrated the organizational crisis's positive indirect effect on employee prosocial voice via prosocial motive when organizational justice was higher, and its positive indirect effect on employee self-interested voice via self-interested motive when organizational justice was lower. We then discussed our implications for organizational crisis and voice literature.

OB: That's the Way Clients Like It: The Impact of Independent Workers' Voice Behaviors on Client Outcomes  

Author: **Neveen Mohamed**, *Vlerick Business School*
Author: **Katleen De Stobbeleir**, *Vlerick Business School*

We develop and test a theory of how client outcomes are influenced by independent workers' (i.e., individuals who work on project-basis outside the boundaries of organizations) expression of ideas (promotive voice) and concerns (prohibitive voice). Drawing on role accumulation theory, we argue and show that holding multiple jobs encourages independent workers, such as human resources and marketing consultants, to engage in voice behaviors. Extending these arguments about role accumulation, we further show that client satisfaction and loyalty intentions are positively influenced by workers' promotive and prohibitive voice respectively. Our findings, based on a field study with dyadic survey data from 239 independent workers and their clients, enrich our theoretical understanding of voice behaviors in contemporary work settings. They also reveal important implications for independent workers about the voice choices they could make to influence specific client outcomes, and for organizations about why they may perceive higher level of satisfaction and loyalty toward some of their flexible workforce.

OB: The Gendered Costs of Voice (Un) Enacted for Belonging

Author: **Crystal I Chien Farh**, *U. of Washington, Michael G. Foster School of Business*
Author: **Blair Middlebrook**, *U. of Washington*
Author: **Jo K. Oh**, *U. of Connecticut*
Author: **Andrew Yu**, *U. of Melbourne*

Despite their constructive intent, employees' suggestions and concerns are often not enacted. In this paper, we consider the impact of voice enactment (and in particular, low voice enactment) on the voicer's sense of belonging. Drawing on self-in-role theory (Kahn, 1990) and social belonging theory (Walton & Cohen, 2007), we argue that because voice employs and displays the self, voicers look to collective reactions to their voice—expressed through voice enactment—to inform whether the self fits in, is accepted, and is valued. We further argue that the effect of voice enactment on belonging is strengthened for women in majority-men settings due to their heightened experience of social identity threat. Data from active-duty marines (Study 1) and employees of a maritime service organization (supplemental study) showed that low voice enactment reduced belonging more strongly for women compared to men in majority-men settings. Data from a randomized controlled experiment (Study 2) further showed that the strengthened relationship between voice enactment and belonging for women in majority-men settings was mediated through social identity threat. Altogether, our work highlights the asymmetrical cost of low voice enactment for women in majority-men settings, as well as its importance for equalizing belonging in gender-skewed organizations.

To Voice, or Not to Voice?

Session Moderator: **Dominik Dilba**, *Chemnitz U. of Technology*

OB: Uneventful Days? A Cautionary Tale About the Underestimated Role of Triggers of Employee Silence

Author: **Dominik Dilba**, *Chemnitz U. of Technology*
Author: **Bertolt Matthias Meyer**, *Technische U. Chemnitz*

The literature on employee silence is clear that silence requires relevant input to share, i.e. employees must have encountered issues or have generated ideas to speak up or remain silent about. We draw on Event System Theory and posit that workplace events are a major source of such input. Examining employee silence without accounting for preceding workplace events undermines the interpretability and validity of empirical findings based on standard survey approaches, since conventional questionnaires neither examine the presence of events to remain silent about, nor their independent effects on outcomes attributed to silence. Re-analyzing a cross-cultural dataset (N = 8222 in 35 samples), we show that some samples include up to 60 % of participants who did not encounter relevant events to remain silent about. In another re-analysis (N = 675 in 75 teams, and N = 894 in 107 teams), we show that the associations between employee silence and outcomes are overestimated when the independent effects of events are not accounted for. Lastly, we examined the magnitude and boundary conditions for these biases through simulations. We discuss the impact of these insights on existing survey approaches and advocate for explicitly event-centered theories and research designs to improve future research.

OB: Work-Related Issues and (Not) Talking About Them: An Event Perspective on Employee Voice and Silence

Author: **Dominik Dilba**, *Chemnitz U. of Technology*
Author: **Bertolt Matthias Meyer**, *Technische U. Chemnitz*

Employee voice and silence require input that could be shared, which means that they are conditional concepts that depend on preceding issues and events that generate this input. However, existing research often construes voice and silence as general behavioral tendencies and rarely disentangles the consequences of (often negative) workplace events from the consequences of whether employees speak up about them or not. To improve future research about voice, silence, and their consequences, we thus propose a conceptualization of voice and silence on the event level, where voice and silence intentions and actual behavior follow from workplace events, latent voice opportunities, and situational expected utility considerations. We test this framework with two studies: Study 1 employs a vignette (N = 241) while Study 2 (N = 221) uses recollections of workplace events. Results demonstrate the usefulness of separating workplace events, employee motives, and voice / silence intentions or behavior. We discuss implications of researching specific events and associated employee decisions for other research areas beyond employee voice and silence.

OB: Does Team Identification Boost Voice Uniformly Across Different Personality Profiles?

Author: **Minnie She**, *U. of Amsterdam*
Author: **Richard Ronay**, *Amsterdam Business School, U. of Amsterdam*
Author: **Deanne N. Den Hartog**, *U. of Amsterdam*

Voice is considered a valuable asset to team performance. Social identification has been shown to boost voice behaviors in workgroups, but the underlying mechanism is rarely explored. Based on social discounting, we propose that felt social distance from one's group or team might influence the perceived trade-off between (personal) costs and (group) benefits driving the expression of voice. Considering that personality affects the general tendency of social discounting, different personality compositions might discount the value of voice differently. We used a modified social discounting task to measure discounting rates of information sharing in a team setting and compare rates between different personality compositions. Results from a sample of 425 college students show that the value of engaging in voice decreases as a function of social identification, which has similar discounting properties as the discounting of money in previous studies. We also found that while those with a sociable personality were the most generous in sharing money, they shared the least information with the team under a voice-stimulating scenario. Looking at voice through the lens of social discounting, we quantify the value of sharing information with teams, thus, providing a possible explanation of how identification could boost voice behaviors. Future research on voice, social discounting, and personality can incorporate motives of engaging in voice to uncover determinants of voice.

OB: Gendered Effects of Voice Solicitation: Do Leaders Get What They (Really) Want from Who They Want?

Author: **Blair Middlebrook**, *U. of Washington*

Leader voice solicitation—a leader's individually-directed requests for opinions, suggestions, concerns—has been portrayed as a solution to the issue of withheld employee voice (i.e., silence). However, extant literature has only considered how much leader voice solicitation increases voice quantity, without any examination of the nature of the actual content of the resulting voice. This work contends that the true measure of leader voice solicitation efficacy lies in the quality of the resulting voice and examine the psychological effects that may inform this relationship. Drawing from the relational theory of procedural justice, I argue that leader voice solicitation has a positive indirect effect on voice quality via felt social worth. However, I also propose that this positive indirect effect is weaker for women, in comparison to men, by drawing from social identity and tokenism theory. By unraveling new, nuanced dimensions of leader voice solicitation, this research contributes to the broader understanding of leader voice solicitation, shedding light on the interplay of gender, leadership, and employee voice within organizational contexts, leadership, and employee voice within organizational contexts.

Safety First? Safety and Well-Being

Session Moderator: **Huw Flatau-Harrison**, *Deakin U.*

OB: A Diary Study of the Impact of Challenge Demands on Safety-Specific Transformational Leadership 

Author: **Huw Flatau-Harrison**, *Deakin U.*

Author: **Zitong Sheng**, *Deakin U.*

Author: **Joshua Wood**, *Deakin U.*

Author: **Hongmin Yan**, *Griffith U.*

Author: **Alexander Newman**, *Melbourne Business School, U. of Melbourne*

Contrasting theoretical perspectives of the role that challenge demands play in promoting safety-specific transformational leadership (SSTL) were tested in a daily diary study. Specifically, in line with the Challenge-Hindrance Stressor Framework, while we hypothesized that challenge demands (i.e., quantitative workload and problem-solving demands) would predict higher levels of SSTL at the between-person level, conversely, and in line with Conservation of Resources theory, we also hypothesized that at the within-person level the results would be flipped, with challenge demands predicting lower levels of SSTL. Findings emanating from data obtained amongst 161 frontline safety leaders across 5 consecutive working days (within-person $n = 526$), provided partial support for our hypotheses. At the between-person level, there was a positive relationship between problem solving demands and SSTL, while quantitative workload positively related to SSTL only for leaders with lower job tenure. By contrast, at the within-person level, there was a negative relationship between daily problem-solving demands and daily SSTL. In line with our theorizing, the latter relationship was only present in leaders with lower job tenure. Theoretical implications for the Challenge-Hindrance Stressor Framework and Conservation of Resources theory are discussed, and practical implications for managing frontline safety leader demands are outlined.

OB: Darkness to Daylight: A Bibliometric Analysis on the Relationship Between Sleep and Work Performance

Author: **Jure Andolšek**, *U. of Ljubljana School of economics and business*

This study presents a comprehensive bibliometric analysis of the literature on sleep and work performance, identifying key trends and gaps in the field. Employing co-citation, co-occurrence, and bibliographic coupling techniques, we systematically mapped the intellectual structure and key themes within this area. Our analysis revealed three main themes: The impact of sleep disorders on work performance, the interplay between sleep and shift work within the Job Demands-Resources model, and the unique challenges of sleep in high-stress environments. These themes highlight a shift from focusing on sleep disorders' direct effects to a broader consideration of sleep's role in employee well-being, productivity and human sustainability. The study integrates its findings with the Job Demands-Resources model, offering new perspectives on managing sleep-related issues in various work contexts. We identify practical insights for improving sleep health and propose future research directions, emphasizing the growing importance of employee well-being. This work contributes to both theoretical understanding and practical applications in organizational health, emphasizing the critical role of sleep in enhancing employee performance and well-being.

OB: Modesty Makes One Always Blessed: Unveiling the Cognitive Dynamics of Humble Leadership on Leaders

Author: **Xinyu Liu**, *School of Economics and Management Tsinghua U.*

Author: **Zhiying Shi**, *School of Management, Fudan U.*

Author: **Biya Ren**, *U. of Glasgow*

Author: **Longfei Cui**, *Tongji U.*

Based on Social Cognitive Theory (SCT), this study explores the impacts of humble leadership on leaders and the underlying mechanism. We conducted an experiment (Study 1) and a field survey (Study 2) to test our hypotheses. The results show that humble leadership positively influences leaders' self-cognition (i.e., reducing self-depletion) and work perception (i.e., enhancing work meaningfulness), which in turn increases leader work engagement and subjective well-being. Furthermore, for teams with higher cognitive diversity, the effects of humble leadership on reducing leaders' self-depletion and enhancing work meaningfulness are more pronounced.

OB: Exploring the Influence of Health-Oriented Leadership on Subordinates' Well-Being and Outcomes 

Author: **Kuoching Cavin Yen**, *Graduate School of Resource Management and Decision Science, National Defense U.*

Author: **Tingko Lee**, *Graduate School of Resource Management and Decision Science, National Defense U.*

Author: **Chi-Hua Chun**, *Army of Republic of China*

This study investigates the role of health-oriented leadership in shaping employee well-being and organizational outcomes. Drawing on social exchange theory, we explore how leaders' health consciousness, values, and behaviors influence employee work engagement, reduce emotional exhaustion, and influence task performance and organizational commitment. The study employs a time-lagged, multisource data collection approach, analyzing 487 valid leader-subordinate dyads with an average team size of 3.9 members. Our findings reveal that (1) health-oriented leadership, distinct from transformational leadership and controlled for subordinate workload, significantly enhances subordinates' work engagement; (2) in turn, positively affects their task performance voice behavior and reduces turnover intentions; and (3) our results demonstrate that such leadership effectively mitigates subordinates' emotional exhaustion; (4) this study further examines the mediating roles of work engagement and emotional exhaustion in the relationship between health-oriented leadership and subordinate outcomes. Theoretical contributions to leadership and health management literature are discussed alongside practical implications for organizational leadership practices and directions for future research.

Emotional Rollercoaster: The Ups and Downs of Emotions

Session Moderator: **Daphna Motro**, *Hofstra U.*

OB: **Reactions to Mega-Threats Among Members of the Harming Group: A Moral Cleansing Approach** 

Author: **Daphna Motro**, *Hofstra U.*
Author: **Aleksander P.J. Ellis**, *U. of Arizona*

The concept of mega-threats – negative, identity-related events that receive significant media attention – have been shown to have significant negative effects on members of the harmed group; effects that have implications for their behavior at work. We look to build on the original theory and empirical evidence by shifting focus to how mega-threats impact members of the harming group. Drawing on moral cleansing theory, we argue that members of the harming group feel increased levels of guilt following a mega-threat. Those individuals then strive to cleanse their guilt by reducing their in-group solidarity and engaging in increased helping toward members of the harmed group. Further, we argue that cleansing guilt by reducing in-group solidarity will be stronger when individuals possess strong purity/sanctity (a dimension of moral foundations). Across three main studies and one supplemental study, we found that participants felt greater guilt and decreased in-group solidarity after witnessing a mega-threat (police brutality against George Floyd), which then increased helping behaviors towards Black Americans. We also found support for the moderating role of purity/sanctity.

OB: **Self-Conscious Emotions in the Workplace: When are Good Emotions Bad and Bad Emotions Good?** 

Author: **David Joseph Keating**, *U. of Mississippi*
Author: **Sophia Quick**, *U. of Mississippi*

At face value, self-conscious emotions (e.g., pride, shame) should have straightforward links to positive or negative outcomes in the workplace. Theories of emotions would support this viewpoint, with evolution, non-cognitive-based emotion theories (e.g., Ekman, 1977; James-Lange, 1884; Robinson, 1995) providing a conceptual foundation for implicit emotion-outcome relationships (i.e., positive emotions – positive outcomes and negative emotions – negative outcomes), and cognitive, appraisal-based theories of emotions (e.g., Lazarus, 1991; Roseman, 1984) incorporating additional cognitive factors that contribute to how an employee experiences and reacts to an emotional event. Together, these theories provide a conceptual foundation for both implicit and paradoxical emotion-outcome relationships (i.e., inherently negative emotions (e.g., guilt, shame) leading to positive workplace outcomes and vice versa). In the organization sciences, a plethora of studies use discrete emotions to explain the connections between their antecedents and outcomes of interest. In this manuscript, we conduct a systematic quantitative review of all studies that have examined self-conscious emotions in workplace settings and perform a meta-analysis that examines the evidence for consistent as well as counterintuitive relationships between self-conscious emotions and workplace constructs. This meta-analysis sheds light on the role of self-conscious emotions in the workplace and helps to guide future research by providing insight into the expected—and unexpected—outcomes of workplace emotions.

OB: **The Influence of Employee Daily Investment Results on Work Consequences**

Author: **Yuqing Liu**, *Peking U., School of Psychological and Cognitive Sciences*
Author: **Bingjie Lu**, *U. of Florida*

Although considerable research has examined how employees' non-work domain influences the work domain due to the increasingly blurred work/non-work boundaries, the daily spillover effects of private investment behavior to workplace outcomes remain underexplored. Drawing on the Affective Events Theory, we use a daily diary approach to uncover these daily dynamics. Our findings revealed that daily investment gains were related to an increase in work engagement through an increase in positive affect and a decrease in negative affect. In addition, daily investment gains were related to an increase in helping behavior through a decrease in negative affect. Conversely, daily investment losses were linked to a decrease in work engagement and helping through similar affective channels. We further found financial goal importance as an important boundary condition for the emotional responses triggered by investment results. When financial goal importance is higher, the relationship between investment losses and changes in positive and negative affect becomes stronger. This research highlights the spillover effect of employee investment behavior on workplace outcomes, offering insights for organization management by acknowledging the role of non-work domains.

OB: **“Are You Really Going to Eat That?” Toward an Understanding of Workplace Food Shaming** 

Author: **Amanda S. Patel**, *Suffolk U.*
Author: **Michael Matthews**, *U. of Texas Rio Grande Valley*
Author: **Giselle Elaine Antoine**, *Washington U. in St. Louis, Olin Business School*
Author: **Vanessa Liu**, *Singapore U. of Social Sciences*
Author: **Gregory Robert Beaver**, *Suffolk U.*

Previous research on workplace eating has demonstrated a link between employee eating and work. While nascent research shows that eating behaviors influence coworker perceptions, we argue that workplace eating goes beyond this and serves a key social function. To that end, we develop the construct of workplace food shaming (i.e., signaling disapproval of coworker food choices). Relying on social self-preservation theory, we argue demonstrate that workplace food shaming leads to work withdrawal. We further argue and find that a healthy eating identity, through workplace healthy eating, strengthens the relationship between workplace food shaming and withdrawal. We contribute to our theoretical understanding of workplace food shaming by elucidating the social function it serves and demonstrate its importance for organizationally relevant outcomes.

Decision Making and Work Behavior

Session Moderator: **Melissa Innes**, *U. of Sunshine Coast*

OB: **Exploring Individual Foresight: Implications for Organisational Learning and Innovation in Firms**

Author: **Melissa Innes**, *U. of Sunshine Coast*

Corporate foresight is considered an organizational capability that contributes to the innovativeness and sustained competitive advantage of firms, particularly in the presence of organizational learning. Business literature positions individuals as an important component of the corporate foresight process, however, it provides limited clarification about how individuals do foresight; or more specifically how they experience foresight in organizations. Embracing the resource-based view of the firm to consider the role of knowledge management in innovation, this study seeks further understanding of how individuals utilize tacit knowledge in Individual Foresight (IF) and engage in organizational learning mechanisms to contribute to innovativeness. I examine the microfoundations of Individual Foresight (IF) to determine how employees experience IF in an organizational context. Adopting a phenomenological approach, twenty-seven interpretive phenomenological analysis (IPA) interviews were conducted with employees across finance and insurance, and utilities industries resulting in a theoretical framework of IF comprising four elements: The Person, The Process, The Outcomes, and The Context. Examining the lifeworld of individuals as they experience foresight revealed a rich tapestry of both personal and intra-organizational social capital interactions useful in demonstrating the role of IF for innovation in firms. Mechanisms such as storytelling, mentorship, group and personal reflection, supported by an appropriate culture, leadership approach and human resource strategies confirm the value of fostering IF to encourage innovative outcomes for firms. This study advances foresight research by broadening existing knowledge and understanding of the role of individuals in the foresight process, and uniquely, by enhancing understanding of how individuals experience foresight in an organisational setting. Implications for HR practitioners and foresight researchers are discussed.

OB: **Everyone is on Board, Now What? The Link Between Team Consensus and Decision Commitment**

Author: **Nathan A. Bragaw**, *U. of Delaware*

Author: **Dustin J. Slesman**, *U. of Delaware*

Author: **Kyle J. Emich**, *U. of Delaware*

Consensus is often considered a critical team decision-making outcome because it has long been associated with the subsequent commitment of team members to the decision. We contend that consensus is a dynamic multilevel process that may take different forms (i.e., aligned, discovered, calculated, and acquiesced), each of which has a different influence on team member decision commitment. We examine the effects of these four consensus types on post-decision commitment across two experiments, using different tasks and employing both perceptual and behavioral commitment measures. Our results show robust differences in commitment across the four consensus types. Team members are more committed to a consensual decision when it aligns with their individually preferred choice (aligned consensus) as compared to when it represents a merely acceptable choice (discovered consensus) or when their teammates convince them to change their preferences through group discussion (calculated consensus). Moreover, these three consensus types all engender more commitment than when team members are pressured into agreeing to a collective decision (acquiesced consensus). Overall, this research emphasizes the importance of understanding how teams come to consensus instead of simply whether they come to consensus.

OB: **Autonomist Leadership and Organizational Practice in Leaderless Street Bands**

Author: **Meghan Kallman**, *U. of Massachusetts, Boston*

For decades, research on leadership in organizations focused its attention mainly on hierarchical and/or professional organizations in the Global North. In doing so, it neglected the organizational practices and insights that emerge from other sites of organizing. In the past twenty years however, there has been a surge of research to exploring shared leadership: a shift from understanding the actions and interactions of “leaders” to understanding the intersubjective “leadership” brought about by group members themselves. Using ethnographic and qualitative data from nine US street brass bands, this chapter analyzes shared leadership practices within leaderless, democratic groups. Specifically, it theorizes these practices as autonomist leadership, seeking to understand the political and ideological values that inform group processes, and how those processes enable the bands to meet both their functional and interpretive needs in the absence of a single “leader”. By engaging with the daily practices that constitute organizing life for these musicians—practices that also shape the identities of their participants—I argue that political principles of collective decision-making and commitment to inclusion can produce organizational practices and habits that are as durable as they are complex, including significant organizational learning. That is, I show how autonomist groups are enabled by prefigurative organizational practices based in political principles.

OB: **People Avoid Asking Gossips for Advice**

Author: **Alexis Gordon**, *The Wharton School, U. of Pennsylvania*

Author: **Maurice Schweitzer**, *U. of Pennsylvania*

We identify a key factor that influences whether or not and whom people ask for advice: a potential advisor’s reputation for gossip. Across 5 studies, we demonstrate that an individual’s reputation for gossip reduces others’ willingness to ask them for advice, even when the potential advisor is highly competent and easily accessible. We show that people are concerned that gossips will judgmentally tell others about their advice seeking. We also show that, in addition to avoiding advisors who gossip, people seek out advisors with reputations for discretion. Our results advance our understanding of the advice seeking process by considering advice within a broad social context. Our findings also highlight an important cost of gossip for both individuals and their organizations.

Author: **David Levari**, *Brown U.*

Author: **Adam Mastroianni**, *Columbia Business School*

Author: **Jacob Verrey**, *Harvard U.*

Author: **In Gim**, *Yale U.*

Author: **Sean Devine**, *McGill U.*

Author: **Daniel Gilbert**, *Harvard U.*

When working together, employees often need to decide whether to step in and help one another. Do they know when to do so? In a series of experiments, we introduce a novel method that allows us to measure how well a task is performed when one person takes over from another, and the counterfactual they cannot see: performance if the takeover had never happened. Most participants took over for their partners, decreased task performance, and incorrectly believed that they had improved it. This may happen because people do not properly forecast task trajectories over time, and because they step in too early to see how well their partners perform, and fail to exceed that performance. Finally, using these mechanisms, we report two more experiments in which manipulating task visibility and performance trajectories improves takeover efficacy. Takeovers are common in cooperative contexts, but people may not realize when they harm the performances they are meant to improve.

Speaking Up: Antecedents of Employee Voice

Session Moderator: **Ryan Shuwei Hsu**, *Department of Business Administration, National Chengchi U.*

OB: **Employee Voice in the Digital Void: Navigating Contextual Challenges in a High-Context Culture**    

Author: **Yi-Ching Chen**, *National Taiwan Normal U.*

Author: **Ryan Shuwei Hsu**, *Department of Business Administration, National Chengchi U.*

Author: **Anita Pelling Chen**, *National Taiwan Normal U.*

Communication technologies allow employees to express work-related suggestions and concerns digitally, from anywhere and at any time, absent context. However, for employees accustomed to high-context communication, loss of context equates to losing guideposts to their usual communication practices. This leads us to examine high-context communicators' concerns about and strategies for digital voice. Results of an inductive qualitative study with 43 workers from a high-context Chinese culture suggest that high-context communicators often struggle with digital voice because it imperfectly provides the context needed to guide their usual high-context communication. Given these concerns, high-context communicators develop five self-censorship strategies to accommodate their digital voice. High-context communicators may opt not to express digital voice at all or to express digital voice with diplomatic language so that the expressed digital voice is carefully crafted to be relationally noncontroversial, linguistically terse, or associatively vague. Findings suggest that digital voice is mentally taxing for high-context communicators while documenting the interplay of employee voice, communication technology, and culturally bound communication norms.

OB: **How Knowledge Shapes Psychological Safety for Voice on Patient Safety in Surgical Hierarchy** 

Author: **Emmanuel Kwasi Mawuena**, *Sheffield Business School, Sheffield Hallam U., UK*

Author: **Russell Mannion**, *U. of Birmingham*

Author: **Adrian John Wilkinson**, *Griffith U.*

Despite the inseparable nature of power and knowledge, voice and silence research has focused on the detrimental effect of hierarchical power on voice without disentangling how knowledge and hierarchy interrelate in shaping voice and silence. Addressing this gap, we analysed 67 multidisciplinary professional interviews in surgical teams in Ghana. We found that knowledge provides a strong authority for voice among surgical teams quite independent of hierarchy. While knowledgeable team members with substantial hierarchical power effectively exercised upward voice, hierarchical caveat over knowledge and uncertainty limited lower hierarchies from utilising their knowledge for voice in authority gradient. Whereas knowledgeable superiors welcomed voice, those who are deficient in knowledge and expertise were less receptive to voice thereby posing a significant impediment for upward voice. Finally, a small cadre of distinguished 'medical 'gods' who are revered for their rare knowledge status commanded voice authority among their peers, and their eminent status served to suppress the psychological safety of wider team members for voice. We conclude that formal hierarchical authority and knowledgeability are anchored within surgical teams and understanding the complex interplay between knowledge and hierarchy is crucial to implementing effective interventions to promote voice in such knowledge-intensive and highly status-conscious environments. Keywords: Hierarchy; Knowledge, Power, Voice and Silence; Patient Safety; Surgery; Ghana

OB: **Be the Architect of Professional Future: Investigating the Pathways Between Self-Leadership and Voice** 

Author: **Xiangfan Wu**, *Xinjiang U. of Finance and Economics*

Author: **Taiping Feng**, *Xinjiang U. of Finance and Economics*

Author: **Ho Kwong Kwan**, *China Europe International Business School (CEIBS)*

In the era of digital advancement and escalating organizational competition, it's crucial for companies to analyze employee feedback to enhance operational capabilities comprehensively. A key challenge facing organizations is maximizing employees' self-leadership to boost their willingness to speak up. This paper leverages self-determination theory to develop a mediated moderation model, examining how organizational-based self-esteem (OBSE) influences employee voice through self-leadership. Utilizing data from 323 employees and their 62 supervisors, the study reveals that OBSE acts as a mediator between self-leadership and both promotive and prohibitive types of employee voice. Additionally, the effectiveness of this mediation is influenced by the perceived participative climate within the organization. These findings offer valuable insights for human resource management practices, highlighting the importance of fostering a supportive environment that empowers employee self-leadership and voice.

OB: **Will I Speak up Again? It Depends on how My Voice was Rejected** 

Author: **Yan Rong**, *College of Business, Shanghai U. of Finance and Economics*

Author: **Yang Sui**, *U. of Science and Technology Beijing*

Author: **Shaofei Wang**, *Shanghai U. of Finance and Economics*

Author: **Weimei Liu**, *U. of Science and Technology Beijing*

This article examines the effect of managerial voice rejection strategy (assessed by constructiveness and politeness) on employees' subsequent voice behavior (assessed by quality and frequency) through their task and social attribution of the rejections, and the interaction between constructiveness and politeness of rejection on their attribution. In one field study and two experimental studies, we found that constructive rejection enhances task attribution while polite rejection decreases social attribution; and the presence of one type strategy can influence the effectiveness of the other in shaping employees' perceptions. Specifically, the impact of constructive rejection on task attribution is more potent when polite rejection is minimized, and vice versa. These relationships between managerial voice rejection strategy and employees' subsequent voice are mediated by their attributions, such that task attribution encourages employees to improve suggestion quality, and social attribution decreases voice frequency. We discuss implications for research on voice rejection strategies and attribution.

Mirror Mirror on the Wall: Social Comparison Processes

Session Moderator: **Vivek Mishra**, *Indian Institute of Management, Lucknow*

OB: **Conjoint Effect of Individual Differences and Valence Ambiguity in Eliciting Observers' Silences**

Author: **Vivek Mishra**, *Indian Institute of Management, Lucknow*

Utilizing moral foundation theory (MFT), this study posits that observers' acceptance of unethical pro-organizational behavior (UPB) aligns with their inclination towards loyalty or fairness values. Furthermore, it contends that observers' personal acceptance shapes their perception of peers' UPB endorsement, thereby influencing their pro-organizational and quiescence silence. A two-phased vignette-based field survey involving 292 working individuals in the USA was conducted to test these hypotheses. The results reveal that observers' preference for loyalty over fairness moderates their personal acceptance of UPB and influences the perceived peers' UPB acceptance. This distinction in moral preference leads to the manifestation of distinct biases, such as false consensus or uniqueness bias. Loyalty-preferring observers exhibit a false consensus bias, while fairness-preferring observers demonstrate a uniqueness bias. Importantly, this study illuminates the intricate nature of UPB observer behavior, demonstrating that loyalty-preferring UPB observers are more likely to maintain pro-organizational silences, while fairness-preferring UPB observers are inclined towards quiescence silence. In essence, the study uniquely contributes by delineating how varying moral preferences among UPB observers give rise to divergent biases, elucidating the complex motivations driving their choices to maintain silence.

OB: **Two Faces of Impression Management: The Contradictory Impacts of Impression-Management Tactics**

Author: **Dongwon Choi**, *Ewha Womans U.*

Author: **Hae-jung Hong**, *NEOMA Business School*

We explore the negative interpersonal implications of impression-management and the moderating role of impression-management motives (IMM). To this end, we argue that impression management is positively related to leader-member exchange, resulting in better performance evaluations, and to coworkers' contempt, leading to more social undermining. We also propose that IMM mitigates the positive association between impression-management tactics and leader-member exchange, which strengthens the impact of impression-management tactics on coworkers' contempt. Specifically, we hypothesize two effects of impression-management tactics and IMM—a beneficial impact on performance evaluations through leader-member exchange and a detrimental impact on social undermining through coworkers' contempt—and suggest a boundary condition that may change the associations among the variables. We test our hypotheses in a study of 116 employees on 29 teams in organizations active in manufacturing, publishing, service, and finance in South Korea. The results support our overarching theory.

OB: **An Instrumental Perspective on the Interpersonal Implications of Upward LMX Social Comparison**

Author: **Juhui Geng**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Xinxin Li**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Runtian Jing**, *Shanghai Jiao Tong U.*

Prior research has focused on self-evaluation as the primary motive for LMX-related social comparisons, overlooking the instrumental motive in social dynamics. Drawing on social exchange theory and taking an instrumental perspective, we contend that upward LMX social comparison is positively associated with helping behavior and negatively associated with social undermining toward the comparative target via perceived relationship instrumentality—the subjective assessment of the extent to which cultivating a positive relationship with a particular coworker is beneficial for obtaining work-related resources. We also identify perceived LLX as a critical variable that strengthens the association between upward LMX social comparison and perceived relationship instrumentality. The results from a vignette-based experiment and a time-lagged field study involving 939 participants provide consistent support for our proposed model. Our findings demonstrate the instrumental motive behind LMX social comparisons and highlight the importance of considering the broader social context to understand the triadic relationship among the leader, the comparer, and the compared target.

OB: **Unpacking Workplace Envy: The Role of Organizational Justice and Self-Evaluation Motives**

Author: **Amnah Ameen**, *U. of Connecticut*

Envy is a prevalent emotion in organizational settings, often triggered by individuals perceiving discrepancies between their situation and the more favorable conditions of their peers. This emotional response becomes especially potent when these discrepancies concern aspirations or values essential to one's self-concept. The emergence of envy is not an isolated feeling but intertwines with the overarching dynamics of self-evaluation motives. Self-evaluation motives can lead individuals to either self-enhance or self-protect against perceived discrepancies. The perceived legitimacy of these discrepancies, a judgment often intertwined with concepts of organizational justice and the legitimation literatures, determines the nature of these responses. The perceived legitimacy of these gaps plays an important role: are these discrepancies viewed as justifiable differences based on merit and fair processes, or are the outcome of undeserved privileges? Such perceptions, in turn, shape one's behavioral patterns. Central to this dynamic is the influence of one's Core Self-Evaluations – innate judgments rooted in self-worth and capabilities. Building on theories of self-assessment, I theorize that envy's motivational process shapes the diverse reactions to feelings of envy. This paper has important implications for researchers trying to understand envy's divergent outcomes and practitioners aiming to develop effective and conducive workplace environments that counteract envy's destructive strategies.

Research on Leaders as Abusers

Session Moderator: **Zhang Zhe**, *Xi'an Jiaotong U.*

OB: I Did Something Wrong: How and When Leaders Ruminates and Recover from Their Abusive Supervision 

Author: **Zhang Zhe**, *Xi'an Jiaotong U.*

Author: **Xinyi Chen**, *Xi'an Jiaotong U. School of Management*

Author: **Xingze Jia**, *Xi'an Jiaotong U. School of Management*

Although prior studies have begun to focus on how employees recover from abusive supervision experiences, how leaders ruminate on and recover from their abusive supervision remains unclear. On the basis of cognitive theories of rumination, we propose that abusive supervision is linked to two forms of rumination after work (i.e., affect-focused rumination and problem-solving pondering), which subsequently influence leaders' next-day work engagement. Specifically, we suggest that affect-focused rumination and problem-solving pondering will hinder and facilitate leaders' next-day work engagement, respectively. We also identify the past focus and future focus of leaders as moderators in the relationship between abusive supervision and the two forms of rumination. Using an experience sampling methodology for 10 workdays with data from 59 leaders, we find that leaders' abusive supervision hinders their next-day work engagement through affect-focused rumination, which is aggravated by past focus and mitigated by future focus. However, the problem-solving pondering path is not supported. We conclude by discussing the theoretical and practical implications of our findings and proposing future research directions.

OB: Examining When Former Supervisor's Abusive Behavior Affects Newcomers' Adjustment in Their New Job 

Author: **Eric Adom Asante**, *U. of Nottingham Ningbo China*

Author: **Hamid Khurshid**, *Hong Kong Metropolitan U.*

Author: **Emmanuel Affum-Osei**, *Kwame Nkrumah U. of Science & Technology, Kumasi*

Author: **Faisal Khurshid**, *Hong Kong Metropolitan U.*

Author: **Collins Azunu**, *Ghana Specialty Fats Ltd. Ghana*

Most work on abusive supervision has focused on consequences for the victim within the same organization. However, some abused victims may decide to leave the organization instead of staying and retaliating towards the organization or the supervisor. This paper aims to understand the impact of former supervisors' abusive behavior on victims' adjustment at their new workplace. Specifically, we examine how former supervisors' abusive behavior affects victims' in-role behaviors and job satisfaction at their new workplace. Building on the social-cognitive model of transference, we propose that former supervisors' abusive behavior will enhance victims' interaction avoidance while limiting their feedback seeking from their current supervisors. This we argue will negatively affect their in-role behaviors and job satisfaction at their new workplace. We further suggest that these indirect effects are stronger when negative rather than positive gossip about the current supervisor is high. Results from two field studies largely support our assertions, indicating that former supervisors' abusive behavior affects victims' in-role behaviors and job satisfaction at their new workplace via interaction avoidance and feedback seeking. These effects are stronger when negative rather than positive gossip about the current supervisor is high. Theoretical and practical implications are discussed.

OB: Unraveling the Paradox of Abusive Supervision: How It Ignites Knowledge Hiding and Knowledge Sharing 

Author: **Yuxin Liu**, *U. of International Business and Economics*

Author: **Yun Chen**, *U. of International Business and Economics*

Author: **Rongrong Zhang**, *U. of International Business and Economics*

Author: **Xuefei Wang**, *U. of International Business and Economics*

This study aims to present a unified picture of the relationship between abusive supervision and knowledge management behaviors to answer a fundamental question: How and when does abusive supervision evoke knowledge hiding and knowledge sharing among employees? Drawing from a face-based perspective, we propose a dual-path effect on knowledge hiding and knowledge sharing, mediated by two forms of face threat: capability-based and relationship-based. Additionally, we investigate the moderating role of individual perceptions of the motivational climate. We use a two-wave survey from 517 employees and a 216 employees' experiment. Results found that employees who perceive a performance climate as dominant are more likely to engage in knowledge hiding as a result of capability-based face threats triggered by abusive supervision. On the other hand, employees with a mastery climate perception are more inclined to respond to abusive supervision by increasing knowledge sharing through relationship-based face threats. These findings have important implications for research and practice.

OB: Why Abusive Supervision Pervades College Sports: A Game Theory Model About Games

Author: **Jennifer Kuan**, *California State U., Monterey Bay*

Author: **Elizabeth A. Adair**, *California State U., Monterey Bay*

Author: **Karlee Postheher**, *California State U., Monterey Bay*

A growing body of research explains the causes of abusive supervision and the harm it brings to employees. But because abusive supervision can negatively impact firm performance, an open question is why it persists, often for extended periods of time. We posit that, in certain situations, there are two dimensions of supervisory quality, such that performance in one dimension compensates for poor performance in another dimension. A system of moral credit could thus keep an abusive supervisor in place for performance in one area while causing deleterious effects on employees and the organization. Leading scholars of abusive supervision have observed that sports present extreme cases of abuse. We, therefore, use college athletics as a business setting to examine how moral credit might explain the persistence of abusive supervision. A game theory model incorporates institutional details prior to recent rule changes. We find that NCAA rules constrained athletes' choices, allowing colleges to prioritize coaches' athletic performance over their abusiveness. Our study thus contributes an analytical framework for understanding and mitigating abusive supervision and identifies worker mobility as an issue more broadly beyond the sports setting. We also contribute to a growing body of literature that uses sports settings to analyze general business problems.

Now, Go! Regulating Work Engagement

Session Moderator: **Verma Prikshat**, -

OB: Job Reattachment and Engagement: The Role of Supervisory Dependence and Team Compassion 

Author: **Akanksha Jaiswal**, *Loyola Institute of Business Administration*

Author: **Dr. Santoshi Sengupta**, *Graphic Era Hill U.*

Author: **Prikshat Verma**, *Central Queensland U.*

Author: **Madhusmita Panda**, *U. of the People*

Author: **Arup Varma**, *Loyola U. Chicago*

This research deals with the impact of the pandemic on the vocational behavior of employees. After working-from-home for about two years during the pandemic, employees were asked to return to work-from-office (fully or in the hybrid mode) in the post-COVID era. The present study data were collected from 250 supervisor-subordinate dyads and were time-lagged. Since employees demonstrated lack of willingness to return to work-from-office, we aimed to assess their level of reattachment and engagement with their jobs in the office environment and its impact on individual performance and work withdrawal behaviors. We further examined the moderating roles of supervisory dependence and team compassionate behavior. Our analyses showed that job reattachment had a significant positive impact on engagement. Further, supervisory dependence and team compassionate behavior significantly moderated the reattachment-engagement relationship. Engagement was found to be a significant mediator between job reattachment-performance and job reattachment-withdrawal relationships and moderated-mediation was also found to be significant. We discuss theoretical and practical implications of the study.

OB: Can You Handle High Expectations When Encountering an Early Setback? The Role of Resilience

Author: **Julian Nuessle**, *PHD student in Organization and Management at U. of Tübingen*

Author: **Kerstin Pull**, *U. of Tuebingen*

When favorites in a competition encounter early setbacks, they experience a discrepancy between high performance expectations and low initial performance, potentially increasing the likelihood of underperforming. To the contrary, underdogs showing low initial performance in a competition do not experience this discrepancy. In our paper, we theoretically and empirically explore to what extent trait resilience moderates the link between high performance expectations, early setbacks and performance. In a field study using a regression discontinuity design and analyzing 143,264 table tennis games, we find low resilient individuals who face high performance expectations and encounter poor initial performance to perform discontinuously worse than low resilient individuals who face low performance expectations and encounter poor initial performance. For high resilient individuals who encounter poor initial performance there is, however, no discontinuity between favorites and underdogs.

OB: Are There Benefits to Staying Mentally Engaged With Work During Work Breaks?

Author: **Maximiliano Escaffi-Schwarz**, *U. Diego Portales*

Author: **David Holman**, *U. of Manchester*

Author: **David Hughes**, *U. of Manchester, UK*

In this paper we shift the theoretical emphasis of work breaks research from a focus on task disengagement strategies (e.g., relaxing) to one that also embraces the benefits of task engagement strategies (e.g., problem-solving pondering) during work breaks. Drawing on Conservation of Resources theory, we develop a theoretical model proposing that task engagement and task disengagement strategies during work breaks benefit performance at work when they help to acquire and conserve resources (e.g., knowledge, energy) relevant for post-break activities. A diary study (885 observations from 121 individuals) revealed that problem-solving pondering during breaks fostered post-break creative and task performance, whereas conflict-solving pondering during breaks fostered post-break contextual performance, while task disengagement strategies (i.e., relaxation and psychological detachment) do not. Ultimately, results suggest that task engagement strategies can be beneficial to post-break work behaviors and thus point towards the need to a comprehensive understanding of work-break behaviors that consider both task disengagement and task engagement work break behaviors.

OB: The Double-Edged Effect of Voice Rejection on Subsequent Voice: The Moderating Role of Explanations 

Author: **Minjun Yoo**, *Seoul National U.*

Author: **MINJU OH**, *Seoul National U.*

Author: **Sangeun Park**, *Seoul National U.*

Author: **Jeong Hoon Seol**, *Republic of Korea Naval Academy*

Previous research has suggested that voice rejection, defined as explicitly disapproving employee suggestions, reduces subsequent voice. However, recent evidence indicates that voice rejection may not always dampen, and could instead inspire employees' ongoing engagement. Drawing on social information processing theory, we explore these contradictory findings, hypothesizing the dual mediating roles of employees' voice safety and self-perception of poor voice quality, along with the moderating role of supervisors' explanations in the relationship between supervisor-employee voice interaction dynamic. Using a two-wave survey, we collected data from 189 supervisor-employee dyads to test these hypotheses. Our results revealed that voice rejection can lead to an affectively negative path, specifically a diminishing voice safety that decreases subsequent voice. However, we also found a cognitively positive path where voice rejection leads employees to become aware of their poor voice quality, enhancing their subsequent voice constructiveness. Moreover, sensitive explanations mitigate the negative impact of voice rejection on voice safety, while specific explanations facilitate the positive impact on self-perception of poor voice quality, identifying the relative importance of each type of explanation. This research challenges the consensus that voice rejection generally has a negative impact on subsequent voice and contributes to understanding the boundary conditions of voice rejection.

People Are People: Emotional and Social Skills at Work

Session Moderator: **Timea David**, *ESSCA School of Management*

OB: **On the Surface or by the Heart: Unpacking the Depleting Effect of Responding to Coworker Envy**

Author: **Timea David**, *ESSCA School of Management*

Author: **Hsi-An Shih**, *National Cheng Kung U.*

Experiencing workplace envy is recognized as a stress-inducing encounter, primarily due to the associated social repercussions. The present research seeks to complement this view by investigating the depleting impact of responding to perceptions of being envied. Building on extant resource theory, we develop and test a model that elucidates how two prevalent responses to envy—surface acting and altruistic helping—deplete the resources of envied employees and thus impair their engagement. Additionally, we propose that leader integrity, as a relevant organizational factor, moderates these negative indirect effects of perceptions of envy on engagement. We test this moderated mediation effect through a time-lag multi-source survey study. Our findings indicate that perceptions of being envied can prompt both surface acting and altruistic helping behaviors. Notably, surface acting emerges as the more resource-depleting behavior, exerting a more detrimental impact on work engagement. This research contributes significantly to both theoretical understanding and practical applications by highlighting the resource-depleting nature of responses to perceived envy.

OB: **Emotional Labor Management in E-Smile Service: Does Pay-For-Performance Work?**

Author: **Ziteng Zhang**, *China U. of Mining and Technology*

Author: **Chen Ding**, *Nanjing U.*

Author: **Ru Li**, *Nanjing U. of Finance and Economics*

Author: **Jinsheng Li**, *Guilin U. of Technology*

The management of emotional labor is often overlooked and under researched due to its intangible and unmeasurable nature; however, e-smile service may offer a new opportunity for its management. We aim to explore the impact of pay-for-performance on emotional labor management in e-smile service, drawing on self-determination theory, and develop a moderated mediation model with perceived insider status (PIS) as the moderator and work performance as the outcome variable. We collected two-wave data from 387 online customer agents from travel agencies on Chinese online travel platforms and used structural equation modeling with Mplus 7.4 to analyze the hypotheses. Results indicate that (a) pay-for-performance enhances both deep and surface acting in e-smile service; (b) deep acting has a positive effect on both task performance and perceived customer service performance, while surface acting only affects task performance; and (c) PIS weakens the mediation of surface acting between pay-for-performance and task performance. We advance the research on emotional labor motivation by exploring features of e-smile service and pay-for-performance, contribute to bridging the gap between emotional labor and performance outcomes by applying self-determination theory, and enrich the connotation and application fields of emotional labor. The findings provide practical insights for improving the quality and effectiveness of e-smile services in the tourism industry.

OB: **Is Dealing with Emotions a Women's Skill? A Meta-Analysis of Gender and Emotional Intelligence**

Author: **Vera Hampel**, *U. of Zurich*

Author: **Mary Hausfeld**, *U. of Zurich*

Author: **Jochen I. Menges**, *U. of Zurich*

Emotional intelligence has traditionally and colloquially been ascribed to women, yet theories on the subject appear genderblind and empirical scholarship on gender differences in emotional intelligence has proven inconclusive. To expand theories to be more gender-sensitive and to update research on gender differences in emotional intelligence, we examine whether and how gender differences manifest in emotional intelligence through a meta-analytic review of 716 studies. The results suggest gender effects on general emotional intelligence, as well as more nuanced and at times inconsistent gender effects across specific emotional abilities. Specifically, we found that women performed better in other-focused compared to self-focused emotional abilities, a distinction that has received little attention in emotional intelligence scholarship. The results also show that context affects the results, as people in leadership positions exhibit greater gender differences favoring women compared to non-leaders. Finally, gender differences varied according to the measurement of emotional intelligence, with self-reports seemingly underrepresenting actual gender differences measured by performance measures. Overall, these findings suggest that emotional intelligence theory and research need to better distinguish between self-focused and other-focused abilities, that gender differences may be dependent upon context and that certain types of measurement of emotional intelligence may have obscured gender differences.

OB: **Making Emotional Intelligence Work at Work? An Experimental Intervention to Unlock Emotion Abilities**

Author: **Vera Hampel**, *U. of Zurich*

Author: **Lauren Christine Howe**, *U. of Zurich*

Emotion abilities have been shown to be beneficial at work, yet it remains surprisingly unclear how people can be encouraged to utilize their potential. To leverage emotion abilities for individuals during teamwork, our study experimentally tested interventions that aimed to increase the application of emotion abilities. A total of 267 participants received one of three types of weekly reflection exercises (focused either on other-focused emotion recognition, other-focused emotion regulation, or a task-focused control condition). Results suggested no direct relationship to individual performance for either initial emotion abilities or the designed intervention. Instead, only participants who had higher initial levels of emotional intelligence performed better over time when they completed a weekly intervention that encouraged them to reflect on the emotion regulation of others, compared to the control condition. Theoretically, our research underlines first, the need for EI scholarship to incorporate the context in which EI operates; second, the value of differentiating other-focused abilities; and third, that effects of EI abilities may not be immediate but can unfold over time. Practically, our research suggests that the application of other-focused emotion abilities can be encouraged at work to increase performance, while also calling for caution when designing and implementing one-size-fits-all solutions.

As the study of identity management continues to evolve, scholars have begun to transition from focusing on identity signaling to identity disclosure at work (Arnett, 2023; Kang et al., 2016; Kirgios et al., 2022; Milkman et al., 2015). As a nascent area of study, scholars within the realm of explicit identity disclosure have thus far focused on when and why disclosers receive support in response to their low-status identity disclosure (Arnett, 2023; Kirgios et al., 2022). In this symposium, we extend theory and research in this area by exploring the full cycle of low-status identity disclosure and integrating both intrapersonal and interpersonal perspectives. Across our five empirical papers, we examine a new framework for identity management, consider the expectations individuals have of others' identity management, and investigate when low-status identity disclosures can backfire. Last, our expert discussant, Steve Blader—leading scholar in status and social identity—will guide a discussion at the end of the session on the symposium themes and engage the audience in questions about the current research and directions for future work.

Despite the extant research highlighting the benefits of having difficult conversations, its inherent complexity – particularly due to the interdependent, multimodal, and highly contextualized nature of conversation – has impeded its empirical advancement and theoretical integration. Furthermore, previous research has assumed that having, or being able to have, difficult conversations is invariably beneficial for individuals, teams, and organizations. However, exactly how these conversations unfold and lead to positive outcomes remain a mystery. In this symposium, five presentations will explore why and how particular conversational elements within difficult contexts, such as grief, distrust, conflict, diverging goals, and advice giving and seeking, may lead to better or worse outcomes for individuals in organizational settings. In total, the symposium offers empirical and theoretical insights into the burgeoning science of conversation research, as well as practical solutions for managers, leaders, and employees who wish to create spaces where people are heard and feel connected to others.

What About Labor?: A Broader Conceptualization of Worker Voice (CANCELLED)

Presenter: **Justin Vinton**, *Rutgers U., School of Management and Labor Relations*

Presenter: **J. Ryan Lamare**, *U. of Illinois at Urbana-Champaign*

Discussant: **Adrienne E. Eaton**, -

Presenter: **John Kallas**, *U. of Illinois Urbana-Champaign*

Organizer: **Justin Vinton**, *Rutgers U., School of Management and Labor Relations*

Worker voice has been conceptualized in various ways both across and within related fields dedicated to the study of work, including Organizational Behavior (OB), Human Resources (HR), and Industrial Relations (IR). While OB and HR have generally viewed the voice of workers as a means to improve organizational performance, IR has been broader in understanding voice not only as a way to improve performance, but as an objective in its own right. Particularly, this broader conception of voice involves the extent to which workers can value their contribution to an organization, improve their lives in the workplace and at home, and speak up within and beyond the workplace towards broader organizational, occupational, societal, and economic goals. As young scholars of voice, we suggest that the current voice conceptualizations do not fully account for work and workers in the modern era of organizations, and may leave out important perspectives from other stakeholders to organizations. While performance-related voice is important, there are other salient dimensions of worker voice involving different mechanisms, enactments, targets, and results that may be overlooked when the focus is almost exclusively on organizational performance. We further assert that clarifying these different aspects of voice can help develop a stronger theory and more comprehensive understanding of the complexities of the 21st century workplace, which has been riddled with challenges for labor on the frontlines. Given the state of the labor movement in the US, we also hope our IR perspective can help illuminate why workers' voices are important to organizations as well as to workers themselves and other stakeholders. The papers in this symposium thus cover understudied formal voice mechanisms facilitated by unions, such as labor-management partnership, labor organizing, and strikes, as well as other voice mechanisms in non-union organizations. In light of the many social, economic, and workplace challenges and inequities that were only exacerbated during the recent COVID-19 pandemic, as well as the waves of labor action and unrest that have followed in both the private and public sectors, we contend that a broader perspective of voice will be a necessary and central contribution in order to better understand the future of work, workers, and organizations alike.

Presenter: **Ezgi Ozgumus**, *London Business School*

To overcome conflicting reports on how diversity interventions and initiatives lead to both positive and negative outcomes, some scholars have called for a greater focus on the context in which certain actions and behaviors take place. As such, our symposium aims to focus on the effects of context, but more specifically how the proportion of organizational diversity, or the representation of underrepresented members from racial/ethnic and gender groups, influences outcomes. In this symposium, three empirical papers explore the implications of proportional demographic representation in organizational diversity and how it influences instrumental outcomes including hiring decisions, status conferral in groups, and organizational practices to improve diversity, equity, and inclusion. At the conclusion of the presentation, Robin Ely, a prolific scholar who has conducted extensive analyses on group diversity and proportional representation of underrepresented minority members in teams, will facilitate an engaging group discussion of the papers with the audience and presenters with key commentary.

Putting the Worker Front and Center in MTM Arrangements: New Theoretical Directions

Organizer: **Ozias Moore**, *Lehigh U.*
Organizer: **Tammy L. Rapp**, *Ohio U.*
Organizer: **Saleem Mistry**, *U. of Delaware*
Discussant: **Jaclyn Ann Margolis**, *Pepperdine U.*

Despite the progress in advancing our understanding of multiple team membership (MTM), much remains to be learned, particularly with regard to broadening the theoretical perspectives used to examine employees' experiences across their multiple teams. Prior studies have primarily considered the effects of multiteaming on individuals from a stress or constraint perspective, highlighting the negative implications for employees in these arrangements. Yet, research drawing on different theoretical lenses also indicates that MTMs have positive implications. To address this limitation, this symposium emphasizes innovating for the future by bringing together five papers that showcase multiple theoretical perspectives to explain the effects of multiteaming on individuals (e.g., COR theory, interactionist perspective on roles, and social exchange theory), thereby advancing unanswered questions that extend theory by examining the impact of MTM on individual, team, and organizational outcomes in the experiences of MTM employees across their teams (e.g., fatigue, stress, and knowledge exchange). These papers also showcase a variety of research designs, including qualitative and quantitative approaches (e.g., multilevel models, daily team switching, a multiple-embedded case study) in various contexts (e.g., global emergency crises and mixed teams of multiteamers and single-teamers). We hope to provide a forum that advances promising areas for future MTM research.

The growing digitalization of work tasks and processes, increasing use of texts and emails, and the rise of hybrid and remote work have amplified growing tensions over work and nonwork boundaries. For example, employees and employers are increasingly navigating control over the work-nonwork nexus, which are rapidly shifting and blurring. Issues such as how to implement hybrid and remote work, when and how employees take breaks, availability during work and nonwork hours, control over work schedules and overwork, and aligning expectations and attributions between organizations and employees illustrate growing challenges. Unfortunately, research on work practices both formal (e.g., telework, work schedule policies) and informal (e.g., after hours email, text availability) and employee and organizational experiences related to the work-nonwork boundary is scattered, across the complex issues noted above. Moreover synergistic theoretical views on boundary management, job design, gender, flexibility, management control, and well-being and recovery are not well-integrated nor are and macro and micro perspectives. Divergence in boundary practices across different occupations, cultures, employers, and individuals has further obfuscated this literature. Consequentially, scholarship on the work-nonwork boundary has become a siloed literature that addresses boundary challenges in a piecemeal and ad hoc fashion. The goal of this symposium is to integrate and advance understanding regarding the changing dynamics and control over the work-nonwork boundary as a critical future of work issue. The papers in this symposium highlight the many ways the work-life boundary (e.g., cognitive, emotional, physical, time) is in flux, and has had to be renegotiated and redefined for employees and employers across many issues, stakeholders, and contexts. By integrating a rich range of employer and employee challenges being affected by the changing dynamics of work-nonwork boundaries and bringing together varied theoretical lenses and diverse perspectives, this symposium is able to address tensions and challenges in modern boundary management.

Long before the COVID-19 pandemic, the United States Surgeon General declared loneliness as an epidemic (Murthy, 2017) and specifically identified an individual's work environment as a context where loneliness can emerge and have dire consequences (Seitz, 2023; McDaid, 2022). Indeed, research has demonstrated that 80% percent of employees experience loneliness at work (Twaronite, 2022) and that it is related to a multitude of negative outcomes, such as emotional exhaustion (Anand & Mishra, 2018) and decreased organizational commitment (Ayazlar & Güzel, 2014), job satisfaction (Wright et al., 2006), performance (Ozcelik & Barsade, 2018), and engagement (Jung et al., 2021). Thus, unfortunately, workplace loneliness is a prevalent and pernicious experience in modern organizations. In light of this crisis, management scholars have begun to examine the outcomes of workplace loneliness but have devoted far less attention to identifying the factors that may cause workplace loneliness, exploring how workplace loneliness may emerge at the team level, and investigating how to curb workplace loneliness. Therefore, this symposium brings together six papers that aid in addressing these gaps in our understanding of workplace loneliness. Together, these papers focus on investigating the experience of workplace loneliness in critical groups, such as those with stigmatized identities, entrepreneurs, and leaders, and invite a discussion of possible solutions to limit workplace loneliness and mitigate its negative consequences in individuals and teams.

Comparative Studies of Guanxi and Social Networks - Capitalizing on Mixed Methods and Big Data

Participant: **Ronald S. Burt**, *Bocconi U.*
Participant: **Sonja Opper**, *Department of Management and Technology, Bocconi U.*
Participant: **Xiao-Ping Chen**, *U. of Washington*
Participant: **Song Wang**, *Zhejiang U.*
Participant: **Jingzhou Pan**, *Tianjin U.*
Participant: **Jar-Der Luo**, *Tsinghua U.*
Participant: **Xiaoyun (Aarn) Cao**, *Illinois Institute of Technology Stuart School of Business*

Participant: **Jiatan Chen**, *School of Economics and Management Tsinghua U.*
Participant: **Junyuan Liu**, *School of Economics and Management, Tsinghua U.*
Participant: **XIN GAO**, *U. Of Chicago*

Research has consistently demonstrated that guanxi and social networks confer substantial advantages for individuals (e.g., Burt, 1992, 2004; Mannucci & Perry-Smith, 2022), groups (e.g., Reagans & Zuckerman, 2001; Reagans, Zuckerman, & McEvily, 2004) and organizations (e.g., Luo, Huang, & Wang, 2012; Opper, Nee, & Holm, 2017) across various contexts. These contexts range from developed institutions (Borgatti, Brass, & Halgin, 2014) to transforming economies (Karhunen, Kosonen, McCarthy, & Puffer, 2018). Despite the considerable progress in understanding their important impact, ongoing debates persist in comparative explorations of guanxi and social networks, particularly within cross-cultural contexts (e.g., Burt & Burzynska, 2017; Chen & Ren, 2023; Xiao & Tsui, 2007). Beyond this conventional understanding, the advent of digital technologies has substantially altered network structure and interpersonal processes within contemporary organizations (Kellogg, Valentine, & Christin, 2020), potentially giving rise to new paradigms of guanxi and social networks. The COVID-19 pandemic may further expedite the influence of digitalization on the workplace. This emphasis extends to the development of guanxi and social network studies, incorporating innovative use of big data and mixed methods such as machine learning algorithms. To advance the field, this panel symposium seeks to engage a group of scholars in discussions on harnessing mixed methods and big data to address novel research questions in comparative studies of guanxi and social networks, with aspiration of making substantial contributions to both theoretical developments and empirical extensions.

Presenter: **Daria Morozova**, *Leiden U., The Netherlands*

We like to think that we know what being human means. However, the conversation about what differentiates us from featherless bipeds or talking automata has been going on for millennia and it becomes even more important as artificial intelligence (AI) and other intelligent machines become better at imitating humans, challenging the existence of jobs and professions. In this symposium, we address how the meaning of humanness changes when people work with intelligent technologies, how humanness is experienced at work and beyond, and how people think about themselves and other humans while interacting with intelligent machines in metahuman systems where people and machines learn from each other. The five papers in this symposium address the notion of humanness in human-AI interaction from different theoretical and methodological vantage points (qualitative, quantitative, and conceptual) and consider these interactions from both the participant and the onlooker perspectives.

Reassessing the Role of Technology in Organizational Practices

Session Moderator: **Lingxiao Qian**, *School of Economics and Management, Tsinghua U.*

ODC: **Deciphering AI's Role in Corporate Innovation: A Study of AI Resources, Capability and Performance**

Author: **Lingxiao Qian**, *School of Economics and Management, Tsinghua U.*
Author: **Ximing Yin**, *School of Management and Economics, Beijing Institute of Technology*

Breakthroughs in artificial intelligence have spawned numerous AI companies. Yet, AI's role in facilitating corporate innovation and competence remains understudied. Based on innovation theories, the resource-based view, and the organizational change theory, we develop a framework that integrates organizational AI resources, AI innovation capability, and corporate performance to depict how AI empowers corporate innovation and competence. Utilizing panel data from Chinese A-share listed companies from 2012 to 2022, we identify 17,016 company-year observations and examine the impact of companies' AI resources on their corporate performance and the mediating role of AI innovation capability. The results reveal that companies' AI resources, including data, human, and strategic resources, enhance their corporate performance, and that AI innovation capability mediates the impact of AI resources on corporate performance. Further, we provide evidence that a greater extent of human-machine collaboration improves corporate performance by enhancing AI innovation capabilities, as the interaction term between data resources and human resources shows a positive impact. Our research is among the first studies to characterize the role of AI in corporate innovation and competence with a large-N empirical analysis based on a third-party database and it contributes to innovation theories and AI development.

ODC: **Intellectual Narrative of Remote Working: Bibliometric Analysis and Future Research Agenda**

Author: **Ashwani Kumar**, *Research Scholar at IIM Lucknow*
Author: **Girish Balasubramanian**, *IIM Lucknow*

Purpose: Very few retrospective studies have been conducted to understand the intellectual narrative of remote working. This study offers important insights to the development of research literature in this domain. Methodology This study provides a bibliometric analysis and manual content analysis of the remote working literature. The study includes 688 articles published in top-rated journals in management, psychology, and social sciences from 2001 to 2023. Findings: The review enrich the extant literature by identifying and analyzing the top published works, authors, journals, and research themes. The content analysis also leads to the identification of major themes, theoretical lenses being used, and major future research directions. Originality The study provides useful insights for academicians and future researchers to enhance the intellectual narrative and organizations to meet the challenges and make remote working more effective in the future. Keywords: Bibliometric Analysis, Systematic Literature Review, Remote working, Remote Work, Work from Home, Telework, Covid-19.

ODC: **The Role of Mundane Technologies in Industry-Level Transformation**

Author: **Lauri Juhani Paavola**, *U. of Eastern Finland*
Author: **Richard Cuthbertson**, *U. of Oxford*

We conduct an inductive longitudinal study of a transformation in the UK grocery retailing industry to examine how the everyday use of mundane technologies influences firm- and industry-level transformations. Our analysis shows how the introduction of a new customer data analytics at Tesco slowly transformed the entire industry including suppliers, competitors, and customers, with one practice infecting another. By elucidating how mundane technologies and industries are mutually constitutive, we show how they can not only be conceived as the stable building blocks of an organization, but also as generative systems driving organizational outcomes. Accordingly, identifying relative costs of technologies as an important driver behind their impact, we show how even mundane technologies can be crucial for transformation as their impact may spill over into other action patterns, creating a chain reaction that results into an industry-level transformation. Further, our findings underline the importance of studying technologies in their networks within and across organizations and over time.

ODC: **Towards a Dynamic View on Leading Change**

Author: **Saskia Hasreiter**, *LMU Munich School of Management*

This paper explores the use and impact of digital technology (DT) in organizational change, emphasizing its role in shaping leader-recipient interactions. Despite the promises of DT to address challenges in change management, research on how DT supports change leadership and influences interactions remains limited. This study fills this gap by proposing a conceptual framework that integrates DT into organizational change through three key leadership functions: participation, communication, and support. Additionally, it considers change recipients' perspectives, focusing on change ability, motivation, and opportunity. By examining these aspects collectively, the paper provides a comprehensive analysis of the potential impact of DT on organizational change practices, offering insights into both opportunities and challenges. The findings contribute to both theory and practice, enhancing our understanding of the intersection between organizational change and digital technology.

ODC: **Technology Adoption in Elderly Care Homes: Understanding Virtual Reality Integration Dynamics**

Author: **Johanna Anzengruber**, *Upper Austria U. of A.S*
Author: **Julia Backmann**, *U. of Münster*

While technology adoption is common practice in modern organizations, understanding individual attitudes towards emerging technologies, such as Virtual Reality, is crucial for successful digital transformation, especially in traditionally non-digital sectors like the care industry. Our study, conducted in elderly care homes, who decided to introduce VR technologies for a pilot period of three months, included 99 semi-structured interviews with employees, leaders, and seniors. Over these months, we observed their engagement with and attitudes towards the technology. Over the course of the time, it became evident that while most organizations faced initial implementation challenges, there were mainly two explaining mechanisms that separated the organizations adopting VR from non-adopters: (1) the initial motives of the staff and the leaders and the (2) the collective integration dynamics. By combining the technology acceptance model with the social judgement theory, we identified two distinct pathways influencing VR adoption: whereas a positive attitude and the willingness to experiment led to an upward spiral in technology adoption, resistance and frustration among staff resulted in a downward spiral. This study highlights the importance of individual and collective attitudes in the adoption of new technologies in the care industry and, hence, provides a multilevel lens of the technology acceptance model.

Leadership Strategies in Times of Change: Insights and Challenges

Session Moderator: **Salla Lehtonen**, *U. of Turku and SAMK*

ODC: **Crisis Leadership from a Leadership-as-Practice Perspective: Avenues for Future Research**

Author: **Salla Lehtonen**, *U. of Turku and SAMK*

Author: **Hannele M J Seeck**, *LUT U. and LSE*

Author: **Suvi Satama**, *Aalto U. School of Business*

Author: **Joseph A. Raelin**, *Lappeenranta U. of Technology*

This conceptual paper presents an analysis of the potential contribution of the leadership-as-practice (L-A-P) perspective to crisis leadership research. There are three research avenues through which the L-A-P view can especially contribute to the crisis leadership literature: (1) interpreting crisis leadership as a collectively social, continuously evolving practice; (2) studying the dynamic and complex interrelationship between routines and improvisation in crisis leadership; and (3) mapping the evolving learning process embedded in crisis leadership. These three aspects also have practical relevance for managers and employees in their encounters with the crisis situations they face.

ODC: **Leadership of Organizational Change: A Review and Complexity Leadership Perspective**

Author: **RONA ELIZABETH KURIAN**, *Indian Institute of Management Kozhikode*

Author: **K Unnikrishnan Nair**, *Indian Institute of Management, Kozhikode*

Leadership and organizational change- the two constructs often discussed together, have drawn considerable research attention over decades. However, despite the scholarly advances achieved, this literature has mostly remained fragmented and reviews integrating the two have been few. These limitations raise challenges in gathering comprehensive insights on this literature, understanding and tracing the developmental trajectories of the field, and exploring future directions for research in the area. This study integrates literature on organizational change and leadership, combining bibliometric techniques and an in-depth review. Results reveal the intellectual (co-citation analysis and bibliometric coupling of documents) and conceptual structure (co-word analysis) of the literature and identify the overarching themes within. Analysis further highlights the inadequately addressed key factors for enabling a successful change, and makes a compelling case for adopting complexity leadership approach to address the challenges, particularly emergent and futuristic, in leading organizational change. The review also pinpoints specific theoretical and methodological improvements and advancements required in the field.

ODC: **Narrative Reflexivity as Leaderful Practice**

Author: **Helen Chung**, *Seattle Pacific U.*

Author: **Nahrie Chung**, *Seattle Pacific U.*

This paper reimagines leadership by proposing the concept of narrative reflexivity as a practice to interrogate the stories we tell ourselves and each other towards an ethics of relationality. It offers an understanding of dialectic, emergent narrative phenomena in organizational life, arguing that both stories and storytellers can act as leaders and exhibit leaderful behavior. Such practice activates awareness of hegemonic stories alongside marginalized stories, introducing doubt, curiosity, pause and co-creative tension into the process of engaging with collective leadership narratives. We draw upon case studies to ground the operationalization of narrative reflexivity at each of the three levels of narrative activity: individual, group, and collective. Within the leadership-as-practice movement, which reconceptualizes leadership as an emergent and processual collective activity, narrative reflexivity opens up the possibility of evaluating our stories, understanding others' stories, and coproducing new stories for collective acting.

ODC: **Identity Leadership: A Systematic Literature Review and Critical Analysis**

Author: **Khang Hoàng Lê**, *RMIT U. Vietnam*

Author: **Giang Trung Hoang**, *RMIT U. Vietnam*

As the significance of identity in organizations grows, particularly as diverse identities intersect and diverge, identity leadership has emerged as an important leadership style that can unite organizational members and enhance positive outcomes at different levels. However, there are several weaknesses linked to the conceptualization of identity leadership, such as oversimplifying identity in organizations and neglecting the potential risk of identity fusion. To address these weaknesses, a systematic review is vital and timely to map the current landscape of empirical research on identity leadership and contribute to a deeper understanding of the subject. Our study makes four major contributions to the leadership literature. First, our review critically analyzes the conceptualization of identity leadership and highlights potential pitfalls in current approaches. Second, we evaluate the methodological strengths and weaknesses of empirical studies on this topic across various fields. Third, we advocate for improvements in both conceptual and methodological aspects to facilitate a more nuanced exploration of identity leadership. Last, our study introduces a new nomological network and outlines a research agenda for future studies on identity leadership.

Future-Focused Innovation through Ancient Traditions

Organizer: **Joan F. Marques**, *Woodbury U.*

Presenter: **Tom Elwood Culham**, *Beedie School of Business Simon Fraser U.*

Presenter: **Payal Kumar**, *Indian school of hospitality*

In this symposium, three seasoned scholars from USA, Canada and India, will present a set of ancient philosophies and traditions to discuss broadly acceptable pathways toward future-focused innovation. Drawing from their studies and experiences with Buddhist psychology, Daoist philosophy, and Hinduism respectively, they will compare and contrast behavioral approaches with an aim to offer scholars and organizational leaders a set of behavioral tools to enhance the sense of mutuality, respect, and interconnectedness, leading to elevated innovative performance of diverse teams. The aim is to invoke a synergistic thought process between the presenters and participants toward deeper understanding, not only related to the concepts discussed, but also including additional perspectives and practices toward collective future innovation.

Presenter: **Chloe R. Cameron**, *Ivey Business School*
Participant: **Robert Austin**, *Ivey Business School*

Neurodiversity traits have become of interest to practitioners implementing recruitment and development efforts (ex: Microsoft, EY), and scholars. Recent theory has been introduced on reconceptualizing leadership as neurodiverse, and reconceptualizing workplaces and social phenomena as neurodiverse friendly. A recent autism and employment integrative review highlighted how there is little leadership research that addresses neurominority leadership outcomes. The review also highlighted that the majority of published research should be interpreted with caution due to small sample sizes. This symposium introduces new research that utilizes mixed methods to examine neurominorities' leadership and the social influence of colleagues. The research in the symposium explores consequences of neurominority identities and how neurominority identities affect outcomes at the individual and firm levels of analysis. The symposium ends with how future neurodiversity leadership and social phenomena research can increase methodological rigor and yield positive outcomes from neurominority employee contributions.

OMT is thrilled to honor David Krackhardt as our 2024 OMT Distinguished Scholar.

This award recognizes a scholar whose contributions have been central to the intellectual development of the field of organization studies. As individuals, each Distinguished Scholar embodies a career of scholarly achievement and has had a significant impact on OMT scholarship. Over the past 15 years, Krackhardt's research has focused on how the theoretical insights and methodological innovations of network analysis can enhance our understanding of how organizations function. Krackhardt has also introduced numerous methodological advancements to the field and opened up new areas of inquiry. He is the recipient of many awards and is an established intellectual leader in the OMT community. Krackhardt's significant scholarly contributions include his pioneering idea of "cognitive social structures," which reshaped our understanding of how individuals and groups perceive and navigate organizational relationships; his analysis of the roles of Simmelian (super-strong) ties in organizations; his work on adapting the quadratic assignment procedure (QAP) to multiple regression analyses of network data; and the development of the KrackPlot network visualization software. His published works have appeared in a variety of journals in the fields of psychology, sociology, anthropology, and management. David Krackhardt is currently Professor of Organizations at the Carnegie Mellon University's Heinz College of Information Systems and Public Policy, with a joint appointment at the Tepper School of Business.

Please join us for breakfast and a chance to hear more about Dr. Krackhardt's scholarship across his career.

ONE: A Typology of Courses in Sustainability in Management Education

Author: **Nancy B. Kurland**, *Franklin & Marshall College*
Author: **Elshaday Melkamu**, *Franklin & Marshall College*

This paper examines the teaching of ecological sustainability in contemporary American business education. We do so through two phases. In Phase 1, we systematically collected data on which of the top undergraduate and graduate US business programs offer a sustainability-related course, identifying 224 courses from 152 unique institutions. In Phase 2, we analyzed 78 syllabi from 48 unique schools we collected from our Phase 1 inquiries. We identify course themes at the individual, organization, and systemic levels. We develop a typology of six types of course designs that incorporate to varying degrees natural and social science concepts, and adopt a general business or a narrow functional perspective. Lastly, we find that faculty themselves demonstrate interdisciplinarity in their formal education. We conclude by surmising about whether Sustainability in Management Education is experiencing a coalescence in the field towards the creation of a discipline in its own right.

ONE: Paradox of Control: A Complex Systems View on Sustainability Approaches in UK Universities

Author: **Antonia Voigt**, *U. of Bristol*
Author: **Andrew MacLaren**, *Edinburgh Business School, Heriot Watt U.*

Over recent decades, Higher Education Institutions have transformed from passive contributors to active participants in the global sustainability movement. However, progress has been hindered by a lack of robust theoretical frameworks and extensive data. Addressing this gap, this paper employs the lens of complex systems to analyze the sustainability approaches of all 140 UK universities. We draw on the analysis of minutes of strategic meetings of 67 of these universities and semi-structured interviews conducted with sustainability managers at 25 of them. The findings reveal a paradox of control that as universities relinquish control over sustainability integration, they create conditions for effective organizational change, particularly when directing resources toward research and teaching. This paradox underscores an inverse relationship between organizational control and sustainability impact. The most successful approaches align sustainability with instrumental activities, such as research and teaching, acknowledging the intrinsic complexity of sustainable change. In contrast, less effective strategies involve attempting to control unpredictable aspects of the operating environment. The practice-relevant findings, provide valuable insights for change agents in universities, empowering them to advocate for sustainability actions, and assists university managers in making informed decisions about implementation. Our systematic index of the sustainability approaches of 140 universities in the United Kingdom allows us to explain how these organizations strategically approach change to embed sustainability in their everyday life. We draw on the analysis of minutes of strategic meetings of 67 of these universities and semi-structured interviews conducted with sustainability managers at 25 of them. These data sources provide necessary insights into universities' motivations, challenges and opportunities of becoming sustainable and make this research design holistic. We argue that UK universities' efforts for sustainability can be described as an inverse relationship between organizational control and sustainability impact. We call this phenomenon a paradox of control. As universities decrease the scope of control over how sustainability is integrated into their organizations, they create favorable conditions to achieve organizational change. The most effective sustainability approaches can be found in universities that direct institutional resources towards coupling sustainability to their activities of instrumental value, namely research and teaching. These approaches are effective for two reasons: they are more attuned to the intrinsic complexity of change for sustainability; and organizational control over the integration of sustainability is only applied to those aspects of teaching and research in which universities have expertise and with which they create economic value. Conversely, less effective sustainability approaches are those where institutions attempt to control features of their operating environment that are inherently unpredictable. Our paradox of control is a practice-relevant concept that can give change agents in universities a stronger grasp of how to press for actions for sustainability and supports university managers to make better informed decisions about how to implement them.

ONE: Market or Community Logics? How MNE Subsidiaries Respond to Mandated Social Innovation in India

Author: **Irene Chu**, *Newcastle U. Business School*
Author: **Mayank Sewak**, *Newcastle U. Business School*
Author: **Rohitkumar Trivedi**, *School of Management, U. of Bradford*

Despite growing concern in the social innovation (SI) literature about the tackling of grand challenges, our understanding of the role of multinational enterprises (MNEs) remains in its infancy. This article examines foreign MNE subsidiaries' SI investments focusing on United Nations' Sustainable Development Goals (UNSDGs) in host countries. Using financial data from large listed subsidiaries of foreign MNEs operating in India, along with hand-collected data from firms' disclosures of corporate social responsibility (CSR) activity for five years starting in 2015, we utilise the externalities framework propounded by Montiel et al. (2021). This neatly translates the 17 UNSDGS into actionable goals to examine the efforts of foreign MNE subsidiaries in increasing positive externalities as opposed to reducing negative externalities via SI related investment in host countries. The study also evaluates the effects of the local embeddedness of the foreign MNE subsidiaries on SI investment. We find that MNE subsidiaries tend to favour increasing positive externalities as compared to reducing negative externalities through their SI investments. Also, older subsidiaries tend to prioritize greater investments in SI projects related to reducing negative externalities and subsidiaries with higher MNE ownership tend to reduce investments in SI projects related to increasing positive externalities. We discuss possible interpretations of the exploratory results using the institutional logics perspective and conclude with implications for policy and future research.

ONE: **Dreams Deferred: The Challenges of Integrating Sustainability in Business Education**

Author: **Jean Garner Stead**, *East Tennessee State U.*

Author: **Michelle Sullivan**, *East Tennessee State U.*

Business schools face an innovation resistance blind spot despite growing calls from within academic halls and industry practitioners for an increased focus on sustainability. This research explores that blind spot through the lens of a veteran professor and an upstart doctoral student who united to teach a new sustainable marketing course. To benchmark institutional performance, they surveyed students and faculty regarding the perceived importance, curriculum integration, and awareness of sustainability issues. Results exposed alarming gaps, revealing business programs falling behind student priorities and demands. With Gen Z exhibiting rising sustainability concerns, business schools are surprisingly stagnant. While these findings emerged from only one AACSB accredited state institution, similarities across the business education landscape suggest broader relevance and application. Through reflective dialogue, the professor-student duo examines why business schools struggle adapting to meet contemporary sustainability expectations. They probe institutional inertia and cultural paradigms reinforced by faculty socialization. Finally, recommendations are presented for overcoming barriers to change, accelerating innovation, and better serving students and society. This study aims to spur self-evaluation and swift action in business schools to address the sustainability blind spot laid bare before dreams for progress are deferred.

Leadership, Organizational Behavior, and Sustainability Performance

Session Moderator: **Muhammad Arshad**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

ONE: **A Pathway from Green Norms to Green Creative Behavior: Integration of Gender and Approach Motivation**

Author: **Muhammad Arshad**, *CERGAM, IAE Aix Graduate School of Management, Aix-Marseille U., France*

Author: **Sumbal Waqas**, *Lahore Business School The U. of Lahore*

Author: **Sadia Afzal**, *EDC Paris Business School, OCRE Laboratory, Courbevoie, France*

The present study investigates the impact of green social norms on the employees' green creative behavior. By employing the social norms theory, we propose an integrated model that explores the influence of green social norms on employees' green creative behavior, mediated by their green intention. Additionally, we examine how gender and approach motivation moderate the proposed mediating effect. We collected data from 495 employees and 99 supervisors in health sector organizations in Pakistan by conducting two surveys. Structural equation modeling was employed to test the measurement and hypothesized models. The findings of this study provide support for the majority of the hypotheses. The results indicate a positive relationship between green social norms and employees' green creative behavior. Furthermore, green social norms indirectly influence employees' green creative behavior through their green intention. Gender moderates the indirect effect, with a stronger effect observed among female individuals compared to their male counterparts. Moreover, the indirect effect is moderated by approach motivation, with a stronger effect observed among employees with higher approach motivation compared to those with lower approach motivation. Interestingly, the effect is strongest for females with higher approach motivation, while it is insignificant for both males and females with lower approach motivation. This study has important implications for academics and policymakers, suggesting the development of green social norms to enhance employees' green creative behavior.

ONE: **"They Treat You Like an Animal:" Reimagining Ethical Working Lives Through the Human/Animal Boundary**

Author: **Kate Dashper**, *Leeds Beckett U.*

Author: **Helen Wadham**, *Manchester Metropolitan U. Business School*

Work and organisations are considered to be predominantly human domains, and the labour of other animals in the service of human needs is often unrecognised and undervalued. The human/animal boundary reflects the anthropocentrism of understandings of work and results in the marginalisation of animals in organisations, but may also provide opportunity to re-examine work to identify and develop more humane practices for all. This paper argues that some animals should be recognised as workers and thus accorded consideration, rights and protection. Drawing on a multispecies ethnography of work between humans and horses in forestry and trekking tourism, the human/animal boundary is used as a framework through which to examine other organisational boundaries - work/play; in work/out of work; individual/group; work/home - and to reimagine more compassionate and ethical approaches to work for human and animal workers.

ONE: **Chief Sustainability Officer's Role Centrality and Corporate Sustainability Performance**

Author: **Taiwo Abraham**, *U. of Texas Rio Grande Valley*

Author: **Gabriel Owusu**, *U. of Texas Rio Grande Valley*

Author: **Xuan Wang**, *U. of Texas Rio Grande Valley*

Corporate Sustainability Performance (CSP) has gained substantial attention as firms recognize its potential impact on competitive advantage. In response, there has been a significant increase in the appointment of Chief Sustainability Officers (CSOs) tasked with managing sustainability performance and integrating systemic sustainability initiatives for business growth. In this research, we draw upon upper echelon theory and social network theory to argue that merely having a CSO does not enhance CSP. However, the centrality of CSO within organizational networks significantly augments CSP. Further, leveraging literature from institutional theory and stakeholder theory, we provide a fresh perspective on how organizations should approach the introduction of CSO, thereby expanding the discourse on the interplay between CSO and CSP. This research provides an explanation on how social network perspective can improve upper echelons, stakeholder, and institutional views of strategy. We discuss the implications of our findings for practice and research.

ONE: **Entrepreneur Status Perception and Corporate Environmental Strategy in China**

Author: **Juelin Yin**, *Sun Yat-Sen U.*

Author: **Xinyi Hua**, *Sun Yat-Sen U.*

Author: **Xueji Liang**, *Xi'an Jiaotong-Liverpool U.*

Corporate environmental strategy (CES) is an essential component of high-quality development for organisations and society. Despite a growing stream of literature examining the determinants of CES, the role of entrepreneurs has yet to be discovered. Combining upper echelons theory with social class literature, we examine whether and how entrepreneur status perception (ESP) influences CES. Using data from the Chinese Private Enterprise Survey from 2008 to 2018, we demonstrate that entrepreneurs with high-status perceptions tend to increase investment in CES. Further, this enhancing effect of status perception on CES is moderated by managerial discretion, as a result of political identity, entrepreneur-chairman duality, firm market position and government interference. These findings extend the understanding of the antecedents of CES by revealing the critical influence of entrepreneur cognition of status and clarifying the boundary conditions of the status-CES link.

The corporate sustainability (CS) paradox, i.e., the persistent pursuit of contradicting yet interdependent economic, social, and ecological interests, has been described as inherent to organizing and integral for today's corporate leaders. By taking a paradox approach it has been assumed that leaders might skillfully deal with the tensions inherent to CS. However, we lack both theoretical ground and empirical evidence on paradoxical leadership in the context of corporate sustainability, which incorporates both material-realist (i.e., planetary boundaries) tensions next to socio-constructionist trade-offs (i.e., triple-bottom line). Therefore, we conducted an integrative review to understand the boundary conditions of paradoxical leadership (PL), specifically in the context of corporate sustainability. The review identifies challenges in the literature on PL hindering a valid assessment of its effectiveness, offering four key contributions. Firstly, PL lacks differentiation between socially constructed and material-realistic contradictions in CS. While PL emphasizes negotiating tensions, the review argues that CS involves non-negotiable, contradictory demands. Secondly, the review questions the inherent positivity of PL, pointing to potential negative organizational and social outcomes. Thirdly, there is an observed conflation in PL's operationalization, with measures being ambiguous and often intertwined with established leadership styles. Lastly, current research on PL inadequately addresses CS, lacking comprehensive investigations into all three CS pillars and requiring more rigorous designs for conclusive insights.

Interorganizational Dynamics and Collaboration

Session Moderator: **Eva Niesten**, *SKEMA Business School - U. Côte d'Azur*

ONE: **Mitigating Uncertainty in Sustainable Business Ecosystems: Ecosystem Strategies of Solar Firms**

Author: **Eva Niesten**, *SKEMA Business School - U. Côte d'Azur*
Author: **Albert Jolink**, *SKEMA Business School - U. Côte d'Azur*
Author: **Jonatan Pinkse**, *King's College London*

A key challenge for firms in sustainable business ecosystems (SBEs) is to create and capture environmental, social, and economic value. Whilst these firms create sustainable value, they operate within contexts of sustainability transitions that are often replete with uncertainty. We conduct a longitudinal study on the ecosystem strategies of utility-scale solar developers and how they adapt their strategies to respond to uncertainty. Our findings show that successful solar firms, those that capture economic value and survive while creating environmental and social value, adopt a bottleneck strategy, which solves solar energy's variability bottleneck, mitigates technological uncertainty, and grows the SBE. Other successful firms use a component strategy by creating ecosystem links with upstream complementors to purchase solar technology, with downstream complementors to sell solar energy, and thereby avoid exposure to and mitigate technological, competitive, and market uncertainty. They continuously reallocate ecosystem resources and create ecosystem links with development banks and communities to cope with regulatory and political uncertainty and deliver social value. Successful firms develop more solar plants and avoid more carbon emissions to deliver environmental value. Unsuccessful firms, those that fail to capture economic value and go bankrupt, adopt a system strategy by taking upstream and downstream ecosystem positions in which they are negatively impacted by competitive, technological, and regulatory uncertainty. Our findings contribute to literature on SBEs by showing how firms cope with uncertainty in sustainability transitions by adapting their ecosystem strategies for greater sustainable value.

ONE: **Suppliers' Green Strategic Intent and Buyers' Environmental Performance**

Author: **Adeel Khalid**, -
Author: **Shaker Bani-Melhem**, *U. of Sharjah, UAE*
Author: **Muhammad Waheed Akhtar**, *Rabat Business School, International U. of Rabat, Morocco*
Author: **Munazza Saeed**, *National U. of Computer and Emerging Sciences, Chiniot-Faisalabad Campus*
Author: **Muhammad Usman**, *U. of Sharjah*

Given the importance of big data for organizations' performance and competitive advantage and the scarcity of research on its antecedents and outcomes in the business-to-business context, we build on dynamic capability theory to examine the role of supplier green strategic intent as an antecedent of supplier green big data capability. To enhance the network of the outcomes of green big data capability, we propose that green big data capability positively influences supplier sustainable positioning. We further hypothesize that supplier green strategic intent has an indirect positive association with buyer environmental performance via green big data capability and sustainable positioning. Finally, we propose interfirm green knowledge sharing as an important boundary condition of the relationship between green strategic intent and green big data capability and the indirect association between green strategic intent and buyer environmental performance. Our results based on time-lagged and two-source data supported the proposed relationships. Our study offers several imperative practical implications that can help organizations develop big data capability and use it to protect the natural environment.

ONE: **Of Friends and Foes: Dynamics of Managing Tensions in Interorganizational Collaborations**

Author: **Maria Schmidt**, *RWTH Aachen U.*
Author: **Philipp A. Trotter**, *U. of Wuppertal - Schumpeter School of Business and Economics*
Author: **Aoife Marie Brophy**, *U. of Oxford*
Author: **David Antons**, *RWTH Aachen U.*

While scholars recognize the prevalence of colliding institutional logics in interorganizational collaborations, research offers incomplete perspectives on how institutional logic conflicts are concretely mediated, especially in contexts characterized by an uncertain institutional environment. In these settings, collaborative mechanisms that work in stable institutional environments may not be appropriate or may even prove ineffective. In response, this study explores how interorganizational collaborations overcome logic conflicts in uncertain institutional environments. We use a multiple case study approach, drawing on interviews and observations of three interorganizational collaborations in the off-grid energy sector in Uganda. We advance research by examining how distinct institutional logics materialize and interact, and we unpack the mediators that aggravated or mitigated emerging logic conflicts. We further explore the impact of an uncertain institutional environment on these collaborations. Focusing on this empirically rich, but dramatically understudied context, we deepen our understanding of the specific elements determining the degrees of logic harmonization and the resulting goal and action alignment in interorganizational collaborations.

ONE: **The Sustainability Performance Implications of Inter-Firm Coopetition**

Author: **Yemisi Oke**, *RWTH Aachen U. - Innovation and Entrepreneurship Group (WIN)*
Author: **Denise Fischer-Kreer**, *U. of Bonn*

How inter-firm coopetition – simultaneous cooperation and competition among firms – influences a firm's sustainability performance is of high interest for research and practice as competition can both create and destroy value. However, previous research has often taken a one-sided view on coopetition, has paid little attention to nuances, and has focused on financial performance outcomes, neglecting environmental and social performance as equally important elements of firm performance. The purpose of this study is thus to extend coopetition literature by investigating the influence of product market overlap, which reflects the intensity of competition in alliance relationships, on a firm's sustainability performance. We test our hypotheses with a dataset of 542 firm-year observations between 2005 and 2021. First, our empirical analyses indicate that product market overlap in alliances has U-shaped relationships with environmental and with social performance. Second, our results show that sustainability governance significantly moderates one of these two relationships, namely the effect of product market overlap on social performance. We contribute to the coopetition literature by, first, investigating both benefits and dark sides of coopetition, second, promoting a nuanced understanding of coopetition by investigating product market overlap, and third, analyzing sustainability performance as under-researched outcome.

Leadership & Diversity: Pathways to Public & Nonprofit Performance

Session Moderator: **Alexander Henderson**, *Marist College*

This presentation will share research on the impact of inclusive leadership and equitable environments on workforce performance, the influence of leadership styles on community relationships, diversity management in nonprofits led by people of color, and the career benefits of international volunteerism.

PNP: **Leaders of Color and Diversity Management Practices: A Study of Human Service Nonprofits in Georgia**

Author: **Bo Li**, *U. at Albany, State U. of New York*

The nonprofit racial/ethnic leadership gap has become a critical discourse in nonprofit management due to its potential effect on organizational practices and outcomes. A better understanding of the differences between the people of color (POC)-led and White-led nonprofits may help address the issue. This study focuses on the association between nonprofit leaders' race/ethnicity and diversity management practices to examine whether and how POC-led nonprofits act differently than comparable White-led nonprofits. Combining data from an original online survey of human service nonprofits in Georgia with Form 990 tax data and US Census data, the study found that nonprofits governed by a racially/ethnically diverse board are more likely to engage in diversity management. The racial/ethnic composition of the board also relates to an ED's attitudes toward diversity: EDs of color hold more positive attitudes toward diversity than White EDs when working with White-dominated boards, while White EDs value diversity more when the board is POC-dominated. The findings enrich our understanding of the associations between leaders' race/ethnicity and the organizational practices in diversity management.

PNP: **Is an International Volunteer Job Helpful for My Future Career?**

Author: **Yi-chun Lin**, *National Taiwan Normal U.*

Author: **Jyh-Horng Lee**, *International Cooperation and Development Fund (TaiwanICDF)*

Author: **Yu-lun Feng**, *International Cooperation and Development Fund (TaiwanICDF)*

Based on self-determination theory, this study examines the indirect effects of skills-based volunteering on perceived employability and proactive work behavior as moderated by competence-based employability. Specifically, we address this issue by a two-wave time-lagged approach and using a sample of 178 international skills-based volunteers who joined the voluntary service program provided by a nonprofit organization, TaiwanICDF. Statistic procedures such as hierarchical regression and bootstrapping analysis based on Hayes' PROCESS on SPSS 28 were conducted to test the hypotheses. Our findings revealed that competence-based employability fully mediates the effects of skills-based volunteering on perceived internal and external employability. It also partially mediates the effect of skills-based volunteering on proactive work behavior. Overall, this study provides evidence of the relevance of using self-determination theory to highlight that international volunteers need to be skillful and professional in their voluntary service to drive their future career development after fulfilling a volunteering assignment.

PNP: **Perspectives of Professionalism: Leadership Style, Proactive Personality, & Perceptions of Community**

Author: **Alexander Henderson**, *Marist College*

Author: **James Melitski**, *Marist College*

Community relationships have long been an important component in how we think about the work of street-level bureaucrats, something which is especially true in the context of policing. Though community policing initiatives have been in place for several decades, there has been a renewed focus on the intersection of law enforcement and communities in recent years. Law enforcement officers develop perspectives of these relationships with communities through formal programs and everyday interactions with constituents. Perceptions of these relational components of policing are also influenced by a number of factors that are concretely related to the work context, individual personality, and other influential personnel. The purpose of this research is to examine the impact of three key factors – servant leadership, proactive personality, and autonomy – on perspectives of community relationships. This study uses data from a web-based survey of sworn law enforcement officials across the United States collected in late 2020 and early 2021. Findings here indicate that both servant leadership and proactive personality are positively related to perceptions of community relationships, with the former having a slightly larger relative impact. Concluding comments are provided with an emphasis on crafting a better understanding of the factors that shape community relationships.

PNP: **Performance in a Diverse Workforce: Inclusive Leadership, Climate, and Equitable Work Arrangements**

Author: **Youngseok Yoon**, *U. of Texas at Dallas*

Author: **Meghna Sabharwal**, *U. of Texas at Dallas*

Inclusive management has garnered significant attention, yet literature has explored less the organizational inclusion with interaction of different work arrangements to achieve organizational effectiveness. Using the data from federal employees in the US, this study examines the effects of inclusive leadership on organizational performance, which is mediated by inclusive climate. It also investigates the moderating role of different work arrangements in the relationship between inclusive leadership and climate. The results demonstrate the positive association between inclusive leadership and organizational performance, which is significantly mediated by inclusive climate. Findings also highlight that the positive relationship between inclusive leadership and climate is pronounced with greater workplace flexibility. This study advances the comprehensive framework of inclusive management accounting for leadership and organizational climate under different work arrangements. The practical implications from this study will benefit public administrators and inform inclusive management practices in post-pandemic work environments.

Beyond State Boundaries: Understanding Migration, Compassion, & Conflict in Global Contexts

Session Moderator: **Maria Aluchna**, *Warsaw School of Economics*

The presentation will examine the mechanisms of donor support during humanitarian crisis, the role of NGOs in facilitating migrant labor market integration, the development of cross-border governance frameworks for sustainable development, and the media's influence on perceptions of refugees.

PNP: Framework for Cross-Border Governance: From Cross-Border Critical Factors to Sustainable Development

Author: **Caroline Krüger**, *U. de São Paulo*

Author: **Adriana Fiorani Pennabel**, *School of Economics, Management and Accounting of Ribeirão Preto, USP*

Author: **Marco Antonio Catussi Paschoalotto**, *School of Economics and Management, U. of Minho, Braga, Portugal*

Author: **Claudia Souza Passador**, *U. of Sao Paulo (FEA-RP/USP)*

Author: **Adriana Cristina Ferreira Caldana**, *U. of Sao Paulo (FEA-RP/USP)*

Cross-border regions became a central discussion space regarding political stability and global sustainability. These places are considered peripheral spaces with low socioeconomic indexes and profound sustainable development (SD) challenges. In this context, cross-border governance (CG) can help these regions by proposing policy coordination or cross-border interdependency management to achieve better results. However, the CG literature has not discussed the critical factors for solving the border challenges, nor have studies approached the impact of CG on regional SD. Our research aims to identify the critical factors for CG and propose theoretical and practical tools for helping border regions advance toward SD. To do so, we conducted a systematic literature review and semi-structured interviews with experts. The data led us to develop a framework to assist scholars and policymakers in understanding and tackling CG, highlighting its critical importance. In total, 12 critical factors emerged in four CG dimensions - Territorial, Resources, Institutional, and Political-Regulatory, which can help political cooperation for integrated regional programs towards SD. Additionally, we propose a CG model for SD that indicates how CG can be implemented to promote SD in cross-border regions.

PNP: NGOs' Support for Migrants' Integration on the Labour Market: Ukrainian Refugees in Poland

Author: **Maria Aluchna**, *Warsaw School of Economics*

Author: **Agata Chutnik**, *Fundacja Inicjatyw Społeczno-Ekonomicznych*

Author: **Farimah Hakem Zadeh**, *York U., Toronto*

Author: **Marta Pachocka**, *SGH Warsaw School of Economics*

This paper examines the role of NGO support for migrants' integration in the labour market through entrepreneurship endeavours. Drawing on the Resource-Based View and institutional theory, we formulate research questions on how NGOs operate in the institutional environment, organise resources and address the needs of their beneficiaries. We adopt the triangulation approach and analyse the national and EU legislation, media releases and 15 case studies based on interviews with NGO representatives operating in Warsaw, Poland's largest metropolis and the capital city with the highest proportion of foreign residents and a well-developed NGO base. Using the evidence from the case of forced migration from Ukraine to Poland following the Russian aggression in 2022, we extend the literature on institutional voids by demonstrating that they can be complemented by the wide range of NGOs' activities.

PNP: Media Framing of Refugees in Switzerland: Taking a Microhistory Approach

Author: **Charlotte Traeger**, *U. of Bern*

Author: **Claus Jacobs**, *U. of Bern*

How do the media frame the influx of refugees in Switzerland and what are the policy responses? Known as the process and practices of meaning negotiation and construction, framing plays a crucial role when it comes to understanding social problems, their construction and policy responses. To examine this question, which is critical to both scholars and practitioners, we take a microhistory approach to explore the media framing of refugee influxes to Switzerland on two recent occasions, 2015/2016 and 2022/2023. Using expert interviews, press articles and press releases, we conduct an interpretative, comparative case study and shed light on the process and practices of media framing of refugee influxes in Switzerland, as well as their consequences for public policy. By situating these cases in the broader history of framing of refugees in Switzerland, we show the patterns between contemporary and past practices of framing. Our analysis reveals an alternance between framing refugees as an opportunity, which enriches the country socially, economically and culturally and a threat to local identity and society well-functioning. We found a dichotomy between refugees portrayed as isolated individuals from Europe and groups of refugees portrayed as an overflow from outside of Europe, constituting a financial burden for the country. We discuss the implications of such binary framing for policy responses and present our contributions to framing theory, research on social problems and public policy.

Author: **Olga Iermolenko**, *Nord U. Business School*

Author: **Valeriia Melnyk**, *Nord U. Business School*

Author: **Carolyn Cordery**, *Victoria U. of Wellington*

The accountability of charity organizations is crucial for their work and existence, as these organizations depend on continuous public donations. Meeting the needs of all stakeholders puts additional challenges on charities and forces them to use different ways/forms of accountability. Recently, social media has been extensively used for both charity fundraising and reporting/accountability. With few exceptions, the current literature describes this process as rather one-sided – where charity organizations pursue their agendas without engaging with or responding to crowds accessing their social media. This research uses netnographic and interview data to investigate how public social media engagement reconfigures a charity’s accountability during wartime. We utilize the case of a significant Ukrainian charity fund that gathered over USD 110 million in donations in 2022 via social media to meet the needs of the army and victims of the Russo-Ukrainian war. Social media enabled crowds to question and critique the fund’s accountability generating a crowd-based accountability dialogue to which the charity needed to respond. Consequently, the charity evolved dialogic accountability processes between the crowd, the fund and its celebrity founder, the latter playing a mediating role in the fund’s dialogue with the crowd. This study adds to the literature on online publics and crowd-based accountability as dialogue. A particularly significant facet of this study concerns the highly sensitized context where, despite the exigencies faced, donors’ expectations of accountability remain high. Charity organizations, other NGOs and governments can learn from this use of social media as a crowd-based accountability tool to enable real dialogue during significant crises (in our case, the Russo-Ukrainian war).

Next-Generation: Crafting More Effective Ways to Deliver Public Goods & Services

Session Moderator: **Adina Dudau**, *Adam Smith Business School, U. of Glasgow*

This presentation will navigate the drivers of co-production in addressing environmental and health challenges, explore the role of intermediary organizations in motivating collaborative efforts, examine the critical role of cultural competence in community services for racial equity, and contrast perspectives on technology's role in client relationships.

PNP: **Technology and Client Relationships: Juxtaposing Organizational & Addiction Counseling Perspectives**   

Author: **Magdalena Waeber**, *U. of Bern*

Author: **Emamdeen Fohim**, *U. of Bern*

Author: **Claus Jacobs**, *U. of Bern*

Digitalization has been reshaping professional services across various sectors, with profound implications for delivering care and support services. Given its dramatic global increase, this transformation is particularly pronounced in the field of addiction counseling, a socially significant professional service. As the professional-client relationship is critical in addiction counseling, its evolution in the digital age requires careful consideration. Through a formative, synthetic review drawing on two pertinent strands of scholarship, this paper aims to improve our understanding of the impact of technology on the professional-client relationship. We concretize how technology impacts client relationships by classifying eight concepts derived from the organizational and management literature review. We juxtapose these concepts with the identified critical design features – identified from the addiction counseling literature review – that are essential to maintaining a strong client relationship in this context. An initial framework derived from this systematic juxtaposition offers more fine-grained insights into the opportunities and tensions when professionals use technology in designing constructive client relationships. Importantly, this framework provides a conceptually sound foundation for future research endeavors.

PNP: **What Motivates Co-Production in Environmental and Health Threats: Active and Passive Co-Production**   

Author: **Jongmin Lee**, *Indiana U., Bloomington*

Author: **Hyunseok Hwang**, *U. of Houston*

Author: **Arnold Vedlitz**, *Texas A&M U.*

Coproduction varies in their formats and is subject to strong heterogeneity with field-specific conditions. Also, the selection bias in coproduction participation concerns the consistency of findings. However, the field is still limited in testing complex relationships between motivators. Therefore, using the Public Opinion Survey on Environmental Health Risk Perceptions and Policy Preferences, this study tests the effect of the salience of environmental and health threats on motivations to active and passive coproduction moderated by internal efficacy and external efficacy through a series of Multiple Moderated Regression (MMR) analyses. This study aims to contribute to the field by capturing more meaningful variations of coproduction motivation and yield practical implications on whether additional government efforts or nonprofits' presence as an alternative problem solver can influence citizens' motivation to coproduce. This study found that the salience of environmental and health threats increases the motivation to participate in both passive and active modes of coproduction negatively moderated by low external efficacy (nonprofit presence as alternative problem solvers) when controlling for the education, race, income, gender, housing status, and political ideology of citizens.

PNP: **Cultural Competence in Community-Level Initiatives to Advance Racial Equity in Homeless Services**   

Author: **Emily Nwakupda**, *The U. of Texas at Arlington*

Author: **Saerim Kim**, *Suffolk U.*

Author: **Andrew Sullivan**, *U. of Central Florida*

Author: **Kotomi Yokokura**, *U. of Kentucky*

Author: **Hyokyung Kwak**, *College of Charleston*

This study investigates how communities in the United States address racial inequality in homelessness through the cultural competency framework (Cross et al., 1989) and Sweeting's (2022) initiatives. Structural racism perpetuates historical trauma and disparities in public services, particularly affecting vulnerable racial groups. Using HUD Continuum of Care (CoC) funding applications, we identify actions taken by CoCs to tackle racial inequity in homeless services. While most CoCs demonstrate cultural proficiency, they often miss opportunities to further advance proficiency. Further, the most common actions are frequently disconnected from proficiency. We highlight the importance of actively developing cultural competence in organizations and communities when addressing complex issues like homelessness. It also offers an empirical application of Sweeting's framework, providing valuable insights for future research on social equity in public service provision. Keywords: Homelessness, racial equity, cultural competency, community-level initiatives, content analysis

PNP: **Intermediary Organizations and Motivation to Co-Produce: Understanding Sequential Co-Production**   

Author: **Georgios Kominis**, *U. of Glasgow*

Author: **Adina Dudau**, *Adam Smith Business School, U. of Glasgow*

Author: **Shereif Kholeif**, *U. of Glasgow*

Author: **Kieran Dowling**, *U. of Glasgow*

Against the backdrop of burgeoning co-production literature, this paper addresses the lesser-known role of co-production intermediaries and of the processes through which they foster motivation for co-production. Drawing on self-determination theory (SDT), we unravel motivational processes through which co-production intermediaries can facilitate self-sustained co-production sequences. Our data comes from an in-depth analysis of a co-production program that utilizes sports as a vehicle to turn service users into co-producers. Our proposed theory, sequential co-production, holds promise to public administration theory and practice, extending the potential of co-production beyond the gratification of immediate self-interest of co-producers with direct benefit from the service. Through sequential co-production, past beneficiaries are seen to 'pay-it-forward' by to others co-producing services for others, thereby creating a self-propelling, therefore sustainable, co-production model.

Qualitative Insights: Methodological Rigor and Innovation in Organizational Research

Session Moderator: **Herman Aguinis**, *George Washington U.*

RM: **Data Gathering for Grounded Theory**

Author: **Scott F. Turner**, *U. of South Carolina*
Author: **Yoojin Jeong**, *U. of South Carolina*
Author: **Eugenia Cacciatori**, *Bayes Business School, City U. of London*
Author: **Paul Bliese**, *Darla Moore School of Business, U. of South Carolina*

This study seeks to contribute to the literature on research design for grounded theory work. While extant research offers significant guidance for the analysis of data in grounded theory research, much less attention has been given to the collection of data. We propose that the characteristics of the theory being developed play a central role in the design of data collection, and that the process of collecting and analyzing data can in turn shape the attributes of the emergent grounded theory. Our core contribution lies in proposing a framework that brings together the principles of intentionality, multiplicity, temporality, and consequentiality to offer guidance for data gathering in grounded theory research.

RM: **Defining, Assessing, and Reporting Saturation in Qualitative Research: Review and Recommendations**

Author: **Ozias Moore**, *Lehigh U.*
Author: **Herman Aguinis**, *George Washington U.*
Author: **Tanja R. Darden**, *Towson U.*
Author: **Ayana N. Younge**, *U. of Virginia, Darden School of Business*

Saturation is a critical yet vaguely defined concept in qualitative research, referring to the point where new data cease to yield additional insights about the studied phenomenon. We reviewed 429 influential sources addressing saturation and documented a lack of clarity and inconsistencies in how saturation is defined, assessed, and reported. Its unclear definition and inconsistent assessment result in excessive data collection or premature data gathering cessation. Significantly, a vague definition, assessment, and reporting of saturation affects a study's trustworthiness and, consequently, has detrimental implications for theory development and testing. To address these challenges, we offer a decision-making process to guide, but not dictate, how to define, assess, and report evidence that saturation has been reached. Our recommendations simultaneously accommodate different theoretical and design approaches and enhance transparency and trustworthiness in qualitative studies. We discuss how the proposed methodological improvements have important implications for advancing management theory development and testing.

RM: **Application of Prototype Analysis to Organizational Research: A Critical Methodological Review**

Author: **Sandra Kiffin-Petersen**, *U. of Western Australia*
Author: **Sharon Purchase**, *U. of Western Australia*
Author: **Doina Olaru**, *UWA*
Author: **Brett Smith**, *U. of Western Australia*

Prototypes – internalized knowledge structures of the most typical or characteristic features of a concept – are considered important because they influence cognitive processing. And yet, prototypes of organizational concepts are relatively uncommon. To introduce prototype analysis to a wider audience of organizational scholars we conducted a critical methodological literature review following Aguinis, Ramani, and Alabduljader's (2023) recommended 6-step procedure. 64 prototype analyses published in 29 journals were categorized and content analyzed. The analysis resulted in a 3-way taxonomy of studies based on concept category, relationship type, and theoretical development. While prototype analyses typically comprise a sequence of 4-6 independent studies, we found variation in the number and type of studies. Some prototype studies also use the features to create a measure or in model testing. The potential benefits of prototyping for organizational research are many, given the many abstract and unobservable concepts applicable to the workplace that are difficult to directly measure, and that also often have cross-cultural applications. We conclude our review with best practice recommendations and future research suggestions in applying prototype analysis to organizational concepts.

RM: **When Language Disrupts Theory-Method Fit: Managing Linguistic Diversity in Qualitative Work**

Author: **Patrick D. Shulist**, *Aalto U.*
Author: **Miguel Rivera-Santos**, *Babson College*
Author: **Rebecca Piekkari**, *Aalto U. School of Business*

The literature on achieving theory-method fit implicitly treats research contexts as monolingual. Yet, management research contexts are linguistically diverse, involving multiple languages, different English dialects, and informants with limited English proficiency. Therefore, this literature provides limited guidance for scholars engaged in qualitative cross-language research. Addressing this gap, our core contribution is a framework for theory-method-language fit. Within this framework, language connects to theory and method, as language is the foundation by which conceptual and empirical meanings are built and transferred. Against this background, finding fit means aligning the choice of a study's focus, considerations of how linguistic diversity may disrupt the ability to transfer meaning related to this focus, and the strategies available to the researcher for minimizing these disruptions. In doing so, changes to theory, method, and language are equally viable. Overall, our framework gives scholars a systematic approach for reflexively finding fit in their own cross-language studies or assessing fit in others' studies. We also contribute to discussions on the process of finding fit, transparency in qualitative work, and on extending research into non-Western contexts.

Advances In Experimental Methods: Validation, Statistical Power, And Tests of Mediating Effects

Session Chair: **Nathan Philip Podsakoff**, *U. of Arizona*

Although generally considered underrepresented in management research, experiments have recently received increased attention from scholars in this domain. This trend has highlighted several limitations of current practices and approaches to experimental design. This symposium is designed to address some of these issues. More specifically, the presentations in this symposium are designed to advance three critical aspects of the experimental design process: (a) the validation of manipulations, (b) power analysis in experimental contexts, and (c) testing mediating effects models using experimental designs. The presenters provide state-of-the-method reviews, discuss the limitations of current practices, provide guidelines for application, and make recommendations on best practices for management scholars developing or reviewing experimental studies of organizational phenomena.

Future-Making

Session Moderator: **Alice Comi**, *Tongji U.*

SAP: **Pragmatism as a Philosophy-in-Use for Future-Making: Learning from the Bjarke Ingels Group** 

Author: **Nico Klenner**, *Australian National U.*
Author: **Silvia Sanasi**, *Free U. of Bozen-Bolzano*
Author: **Stefano Magistretti**, *Politecnico di Milano*

Research on future-making has sparked a burgeoning debate on how futures are imagined and constructed. However, we lack insights into how organizations can succeed at making actionable futures, i.e., futures that are perceived as desirable, yet feasible. Given the inherent tension between desirability and feasibility, organizations require adequate frameworks that guide the making of actionable futures. To this end, we propose that pragmatism can provide helpful guardrails. We illustrate the potential of pragmatism by drawing on the future-making language used in the communication of Bjarke Ingels Group, a globally renowned architecture firm. Furthermore, we discuss how pragmatic language can help building legitimacy across diverse groups of stakeholders. This study contributes to the emerging literature on future-making and organizational imagination. Managers, entrepreneurs, innovators, and policymakers will find value in this study as it offers guidance on leveraging pragmatism as a philosophy-in-use for future-making.

SAP: **Strategists Traveling Through Time: The Use of Rhetorical Future-Making Practices in Strategy Work** 

Author: **Jouni Virtaharju**, *Hanken School of Economics*
Author: **Virpi Sorsa**, *Jyväskylä U. School of Business and Economics, Jyväskylä, Finland*

We explore how future-making practices are rhetorically constructed in strategy work. We apply practice theory and literature on rhetorical history to explain how organizational strategists enact futures applying past and present constructions. Our research followed the evolution of strategy work in a municipal organization over six years. Our analysis reveals four different future-making practices adopted in strategy work. These practices connect past, present and future using continuous and discontinuous transitions. Each practice entails a particular constructed future, suggesting particular strategic action in the organization. We further explore how the future-making practices influenced the strategy formation in the case organization. Our study complements the earlier strategy-as-practice studies on temporality and studies of rhetorical history and strategy work. Our study sheds new light on how constructed futures are conceptualized in strategic management.

SAP: **If You Build It, Will They Come? Investigating How Organizations Construct Strategic Futures**

Author: **Jennifer Sloan**, *Alberta School of Business*

While prior research has provided valuable insights into how history influences organizational trajectories, there is still much to learn about how organizations construct and engage with future possibilities. Thus, this study asks: How do organizations construct futures that are cohesive enough to guide strategic action? Drawing from an ethnographic study conducted in a construction firm, I uncover three core mechanisms – (1) mapping temporal terrains, (2) symbolizing settlement, and (3) engineering agency - that illuminate how actors dynamically navigate pasts, presents, and futures to coordinate strategic action. I introduce the concept of temporal dexterity to describe an organization's proficiency in linking different temporal moments in ways that harness present actions toward future goals. By examining the practices that shape future construction, this study aims to deepen our understanding of future-making processes in organizations and provide valuable insights for that enhance strategy enactment.

SAP: **Mediated Organizational Identity Work: Future-Making in Family Firms**  

Author: **Silvia Sanasi**, *Free U. of Bozen-Bolzano*
Author: **Emanuela Rondi**, *U. degli Studi di Bergamo*

This study aims to understand how long-established family firms can innovate by imagining their future while being trapped in their past and current identity. The study presents an in-depth case study on a long-established family firm that is collaborating with a science and technology park to develop innovation projects with a distant future orientation. Our findings illustrate that family firm members and the science and technology park's advisors, acting as mediators, collectively construct narratives of the future through mediated identity work that enables them to make sense of innovation considering the family firm's past, present, and future organizational identity. The study extends the emerging literature on future-making to long-established family firms, and contributes to the existing understanding of the tension between tradition and innovation in family firms with a perspective on the role of mediators in conducting organizational identity work to solve temporal tensions. The study also draws managerial implications for innovation practitioners.

Tensions, Dialectics, and Paradoxes

Session Moderator: **Iris Seidemann**, *U. of Hamburg*

SAP: **Paradox Nestedness: A Holonic Approach to Tensions Across Parts and Whole**  

Author: **Eric Knight**, *Macquarie Business School, Macquarie U.*

Author: **Josh Keller**, *UNSW Sydney*

Author: **Wendy K. Smith**, *U. of Delaware*

Scholars increasingly turn to paradox theory to unpack interwoven opposites. Addressing the complexity of these opposites requires understanding how such tensions surface across levels of analysis. Yet while scholars depict paradoxes as nested across levels, confusion about the nature of nestedness results in varied applications and outcomes. In this paper, we address this confusion. Drawing on the idea of a holon – an entity that is both a whole unto itself while also being a part of a broader whole – we depict nestedness as a paradoxical relationship between the whole and the part. Recognizing variance in this parts/whole paradox, we introduce an approach that distinguishes four idealized types of paradox nestedness and explore their different implications for navigating interdependent opposites. By unpacking nestedness, our approach invites greater nuance and complexity for future paradox scholars.

SAP: **From Managing Tensions to Managing Thresholds: Microfoundations of Unfolding Hybrid Ambidexterity** 

Author: **Pauline Charlotte Reinecke**, *Hamburg U. of Technology*

Author: **Alexander Ricardo Beyer**, *Hamburg U. of Technology*

Author: **Svenja Damberg**, *U. of Twente*

Author: **Thomas Wrona**, *Hamburg U. of Technology*

Ambidexterity is a highly tension-filled strategic concern that attempts to combine the fundamentally divergent logics of exploration and exploitation. While the present research is concerned with the management of these tensions, little consideration is given to effects that result from this unfolding process over time and are manifested in critical thresholds. In our study, we reveal the pivotal role of handling these thresholds for the direction in which ambi-dexterity processes develop. We build on a six-month ethnographic study of a company in the European energy market (EnergyCo) to investigate the process of building an incubator (IncuCo). We show changes between a phase of more control that promotes integration and inhibits progress and a phase of driving ambidexterity towards acceleration that promotes differentiation and creates counter-movements. Highlighting the within-phase tensions and between-phase thresholds, we contribute to research on the microfoundations of hybrid ambidexterity by highlighting the role of thresholds to manage the complex dynamics underlying hybrid ambidexterity and the multiple interests of actors, which we theorize as double faces of ambidexterity.

 SAP: **How the Change Recipients' Temporal Experiences Influence Planned Organizational Change**  

Author: **Marina Biniari**, *U. of Sussex Business School*

Author: **Quy Nguyen Huy**, *INSEAD*

Author: **Davide Ravasi**, *UCL School of Management*

Scant empirical research has investigated how change recipients navigate the temporal dimensions of planned organizational change during implementation when the temporal need for continuity is prevalent. Based on a real-time, longitudinal study, we investigated how change recipients experienced and responded to the temporal tensions the implementation of a change initiative elicited within a multi-divisional engineering company. Our analysis revealed that variations in how change recipients reallocated their work time to the initiative reflected their perceived incongruence between the organization's and the change initiative's temporal controls. The gradual realization of this incongruence triggered conflict among change recipients in how they valued and allocated work time to change implementation. In turn, high variance in change recipients' time allocation actions caused change implementation delays and lack of synchronization. Our study contributes to the planned change literature by revealing the temporal underpinnings of change recipients' responses to change implementation.

SAP: **A Bright Future: Dialectical Insights in Strategy-Making** 

Author: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

While the future is unknowable, this intriguing temporal category has become a predominant topic in the discourse of modernity. However, less is known about the various ways in which actors engage with the tensions and contradictions of the future in strategy-making. Although previous insightful research has begun to address how social actors engage with tensions between, for example, near and distant futures, further understanding of how they synthesize such existing tensions in the process of strategy-making is necessary. Therefore, this paper presents a dialectical framework that discusses different tensions and contradictions of the future, processes of dialectical inquiry, and ways that social actors synthesize such tensions through the future-making practice of imagining. This study makes interrelated contributions to research into a practice-based perspective on the future and strategy-making. It also outlines future research opportunities regarding this essential concept.

Global to Local Sustainability: Place-Based Adaptation for Social Enterprise, NGOs, and Value Chains

Session Moderator: **Carolyn Johanna Waldner**, *ESCP Business School*

SIM: Think Global, Act Local: How Social Entrepreneurs Adapt Business Models to Meet Grand Challenges   

Author: **Esther Leibel**, *Boston U.*
Author: **Natalya Vinokurova**, *Lehigh U.*

Grand challenges are universal problems in search of scalable solutions such as new business models. However, the effectiveness of solutions depends critically on their fit with the local context. How do social entrepreneurs decide how to adapt existing business models to their contexts? We address this question in an inductive study of Slow Money—a microfinance organization that promotes sustainable food production in the U.S. In investigating how Slow Money adapted the investment club business model to different locations, we find that evaluating the external fit and learning about the internal fit of the business model can serve as substitutes in the process of local adaptation. Our findings shed light on the interplay between cognitive and experiential search in adapting business models to address grand challenges.

SIM: Between Global Synergies and Local Adaption: How NGOs Deal with Global-Local Tensions   

Author: **Carolyn Johanna Waldner**, *ESCP Business School*
Author: **Stephanie Schrage**, *U. of Kiel, Germany*
Author: **Andreas Rasche**, *Copenhagen Business School*

Addressing grand challenges confronts organizations with global-local and other paradoxes that can result in paradox knots, where the response to one paradox impacts another. Drawing on a longitudinal qualitative case study of a non-governmental organization (NGO) operating in Uganda, we study how such knots impact paradox salience, that is their visibility and perceived urgency. We elucidate the knotted nature of two paradoxes: a global-local paradox and an identity elasticity paradox. Our analysis shows how the salience of these paradoxes developed inversely as the NGO's response to the global-local paradox amplified the salience of the identity elasticity paradox while its response to the identity elasticity paradox mitigated the salience of the global-local paradox. With these findings we contribute to paradox literature by developing the concept of 'knotting mechanisms' that tie paradoxes together and at the same time impact their salience. We explain how such mechanisms can produce different types of paradox knots. We further contribute to the literature on global-local tension in the context of NGOs by providing a more comprehensive understanding of local adaption of NGOs is not just a reaction to the 'misfit' between global and local conditions, but rather to the paradox knot with the organizational identity elasticity paradox.

SIM: Framing Global Value Chains Sustainability Research 

Author: **Diogo Vallim**, *Copenhagen Business School*
Author: **John James Loomis**, *FGV-EAESP: Fundação Getulio Vargas's Sao Paulo School of Business Administration*
Author: **Jose Antonio Puppim De Oliveira**, *Fundacao Getulio Vargas*

World trade is now driven through Global Value Chains (GVCs), which present social and economic benefits, yet can also drive severe environmental sustainability challenges requiring critical analysis through a systematic review. Given the lack of integration among the different literatures on value chains in management, business and beyond, this review aims to define the best approaches to carry out research on sustainability in the GVCs according to the research topic and object. First, it identified two modes that sustainability can be strengthened by GVCs. The "sustainability-in-chains" mode is composed of intra-firm and inter-firm initiatives, where aspects of strategy, internalization and competition are better incorporated in the analysis by using the firm-centric tools associated with the Global Value Chains (GVCs) tradition. In contrast, initiatives that instrumentalize value chains to achieve impacts at the territorial level beyond the chain compose the "sustainability-through-chains" mode. The analysis of these initiatives incorporates elements of policy, natural resources, and culture, requiring the use of networked tools associated with the Global Production Networks (GPNs) tradition. Second, based on these two modes, the article proposes a framework to align the analysis of sustainability topics with value chain analysis traditions according to five categorizations: governance, non-firm actors' role in implementation, interaction with the broader socio-political context, unit of analysis and perspectives of upgrading. This allows management and business researchers to identify the best conceptual approach to analyse a specific angle within a research topic.

SIM: Glocalization Work: Development of Glocal Supply Chains for Sustainable Textiles in Ethiopia 

Author: **Sarah Castaldi**, *Nijmegen School of Management, Radboud U. Nijmegen*
Author: **Rieneke Slager**, *U. of Groningen*

We conceptualize glocalization as a form of institutional work that aims to address grand societal challenges such as the development of sustainable global value chains (GVCs) by connecting global and local actors. We study the attempts at glocalization work in a NGO-led multi-stakeholder initiative that includes private and public organizations, aimed at developing a sustainable textile supply chain in Ethiopia. We find that glocalization work in this setting entails contextualizing, upgrading and brokering. We discuss the implications of our findings for the study of GVCs and institutional work, as well as policy implications for the governance of sustainable GVCs.

Empirical Examinations of Corporate Social Performance (CSP) and Impact Measurement

Session Moderator: **Ali M. Shahzad**, *James Madison U.*

SIM: Organizational Social Impact Measurement and Valuation. A Review and Critical Reflection

Author: **Felizia Sophie Von Schweinitz**, *U. of Hamburg*
Author: **Amy Vogel**, *Ludwig Maximilian U. of Munich*

Amidst urgent global challenges, ranging from social injustice to environmental sustainability, organizations are increasingly recognizing their responsibility and accountability beyond mere financial outcomes. Employing social impact measurement and valuation methods emerges as a promising solution for organizations in navigating strategic alignment, stakeholder orientation, and legitimization. Yet, organizations face challenges in grasping and measuring their impact, selecting and employing established methods, and defining a common currency. To address these challenges, we provide an overview in the existing approaches to organizational social impact measurement and valuation and on how their operationalization is discussed by researchers. Through a systematic review using the PRISMA framework, we assess 26 articles, identifying a fragmented research landscape on organizational social impact measurement and valuation, with methodological variances, lacking consistency and transparency in measurement, a predominant focus on output-level measurement, and insufficient method development and refinement for social impact valuation. We amplify research on organizational social impact measurement and valuation by offering insights regarding measurement operationalization, particularly on the indicator level, and emphasize the need for transparent operationalization. We contribute to the state of research on social impact valuation and point out various methodological and moral implications arise from valuating organizational social outcomes and impact that offer potentials for further research.

SIM: Navigating the Disclosure Landscape: The Influence of Industry and Region on Corporate Philanthropy

Author: **Nana Liu**, *Shanghai U. of Finance and Economics*
Author: **Ruchunyi Fu**, *Shanghai U. of Finance and Economics*

How do firms manage the non-market information released by peer firms? This study sheds light on corporate philanthropy in China and proposes that the disclosure intensity at the industry and regional levels have distinct influences on how firms perceive their competitive environment as well as their philanthropic decisions. Building upon the threat-opportunity framework, we suggest that information obtained from industrial peers is more likely to trigger a perception of threats, while information from regional peers can help firms identify opportunities. Moreover, we delineate the boundary conditions of our baseline effects by examining the moderating effects of three crucial contextual factors. Implications to the studies on information disclosure and category research are also discussed.

SIM: State-Owned Enterprises, Political Ideology, and Corporate Social Performance

Author: **Leonardo Henrique Lima De Pilla**, *Fundação Getúlio Vargas/EBAPE*
Author: **Alketa Peci**, *EBAPE/FGV*
Author: **Rodrigo De Oliveira Leite**, *COPPEAD Graduate School of Business, UFRJ, Rio de Janeiro*

The effects of state ownership on firms' outcomes depend on how governments influence the goals of state-owned enterprises. Yet scant scholarly attention has been devoted to understanding what circumstances shape governmental influence on SOEs' corporate social performance (CSP). Addressing that gap is important because SOEs are becoming increasingly more hybrid, and must thus balance multiple private and public stakeholders' financial and social goals. We contend that, compared to non-SOEs, SOEs face additional institutional and legitimacy pressures that lead them to act in socially responsible ways, resulting in higher social and environmental CSP. However, these pressures are moderated by two other factors that determine the strength of governmental influence: whether the state has a majority shareholding and the incumbent government's political ideology. We examine a 12-year panel of 150 Brazilian listed firms, including 41 SOEs, and demonstrate that state ownership is positively associated with the social dimension of CSP but only when the state is the majority shareholder, and thus able to strongly influence SOEs' goals. Moreover, the more right-leaning the government, the weaker becomes the moderating effect of majority state ownership. This is because political ideology determines how governments influence the tradeoffs between SOEs' economic and social goals.

SIM: An Investigation of Corporate Social Performance Before, During, and After an Environmental Jolt

Author: **Olivia Aronson**, *U. of Richmond*
Author: **Matthew LaFont**, *Randolph, Macon College*

The role of business in the creation and proliferation of social and environmental issues is increasingly understood and known. Scholars searching for ways to improve the relationship between organizations, society, and the natural environment have concentrated on examining factors that encourage organizational participation in corporate social performance (CSP) initiatives, this research has primarily focused on identifying antecedent and outcome variables. However, few studies examine the trend of organizational participation in CSP over time or in the context of broader economic cycles. This study uses a sample of 238 publicly traded companies from 2003-2012 to examine organizational participation in CSP before, during, and after an environmental jolt, the financial crisis of 2007/2008; we also consider the firm- and industry- level variables that may affect this trend.

Intersections, Interactions, Tensions, and Transformative Impacts of Organizing Structures

Session Moderator: **Niko Gerlach**, *Heinrich Heine U. Düsseldorf*

SIM: Integrative Interactions: The Microfoundations of Transformative Hybrid Organizing   

Author: **Yi Ming Ng**, *Kellogg School of Management, Northwestern U.*
Author: **Alwyn Lim**, *U. of Southern California*

Hybrid organizations are key players in the movement to mainstream stakeholder capitalism. Yet, their influence on institutional market logics remains under studied. Turning to hitherto overlooked microfoundations of hybrid organizations, we employ a strategic interactionist and discourse ethics approach to posit that the routine stakeholder interactions of hybrids are key mechanisms of transformative hybrid organizing. Through in-depth interviews with 30 chief executives of social enterprises, B Corporations, and service co-operatives in Singapore, we identify a typology of interaction frames hybrids adopt that align with traditional or progressive market logics. A cross-case analysis finds that while progressive frames are associated with transformative impact, hybrids that integrate both traditional and progressive frames in their stakeholder interactions reported transformative outcomes the most. Through this, we theorize the role of integrative interactions – bringing together diverse business and societal values, norms, and engagement forms beyond transactional relations – in advancing hybrid organizing in the market. We further discuss the role of organizational and business network innovation for such integrative responsible leadership and implications for the hybrid organizing movement.

SIM: Hybrid Organizations for Regional Development: Regional Strategies for Positive Change   

Author: **Gianluca Gionfriddo**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Author: **Valentina Cucino**, *Institute of Management, Scuola Superiore Sant'Anna, Pisa*
Author: **Michela Lazzeroni**, *U. of Pisa*
Author: **Andrea Piccaluga**, *Scuola Superiore Sant'Anna*

In this study, Hybrid Organizations (HOs) are conceptualized as agents of positive change for regional development. By drawing on Structuration Theory, four cases of HOs located in Central Italy are analyzed to understand their role in transforming social structures of signification, domination and legitimation. Three different change strategies are identified by triangulating qualitative evidence on 38 change actions that generated sustainable value for local communities and rural areas. By (1) guiding, (2) realizing or (3) orchestrating positive change for regional development, HOs can respectively inspire other agents, directly implement or administrate resources to answer social/environmental needs of regional systems.

SIM: Navigating Tensions in Self-Organization and Organizational Democracy. A Qualitative Investigation 

Author: **Christian Martin Kroll**, *U. of Mannheim*
Author: **Rebecca Christin Ruehle**, *Vrije U. Amsterdam, School of Business and Economics*
Author: **Andreas Zeuch**, *Executive*

Topics like organizing beyond hierarchy, organizational agility, and the future of work are trending. Two concepts related to this trend are self-organization and organizational democracy, which are rarely conceptualized together in the academic debate. In contrast, business practice often combines elements of self-organization and democracy. Our phenomenon-driven qualitative research investigates this in-between realm in four organizations (71 interviews). Thereby, we focused on the question how organizations navigate the tensions emerging from self-organization and organizational democracy. Our in-depth analysis, based on grounded theory and the Gioia methodology, resulted in a model, which consists of three different types to navigate tensions: 1) an idealistic mindset, i.e. the ambition of creating something better in contrast to an 'old world of work'; 2) an either-or mindset, i.e. conflicts based on a binary understanding of the different tensions; 3) a both-and mindset; i.e. constructive acceptance and structuration. Our model constitutes a valuable foundation for future research on the intersection of self-organization and organizational democracy, pushing the academic debate forward.

SIM: From Self-Managing Organisations (SMOs) to Self-Determining Organisations (SDOs)   

Author: **Anne-Sophie Dubey**, *I3 - CRG - École Polytechnique*

This research seeks 'a third way' between 'naively' pretending to abolish the tension between autonomy and control or simply 'demonising' it. Respectively, it challenges the idea that, in order to empower workers, 'all it takes' is to remove reporting lines, as more and more examples (GitHub, Zappos, Mobil Wood, etc.) reinstate managers after experimenting in this direction; further, it tries to be more charitable than critical management studies claiming that empowering managers manipulate employees into being more engaged at work through the promise of 'liberation', while not keeping their word in practice (e.g., Picard & Islam, 2020). To do so, the paper relies on an 'extreme' case of employee empowerment, where the possibilities for autonomy seem to be limited at first sight: how can workers be empowered in a highly regulated sector (i.e., the insurance sector here)? Through this qualitative study, the paper defends an original account of decentralising authorities inspired from self-determination theory (SDT, Gagné & Deci, 2005), coined as self-determining organising (SDO). Essentially, this amounts to challenging Lee & Edmondson's (2017) famous 'radical' approach known as self-managing organisations (SMOs), by advancing an inductive model backing up the experimental view of employee empowerment (e.g., Battistelli et al., 2023).

Corporate Political Activity: Conceptual, Quantitative, and Qualitative Insights

Session Moderator: **Tanusree Jain**, *Copenhagen Business School*

SIM: Taking a Stand: Examining the Link Between Corporate Sociopolitical Activism and Venture Growth

Author: **Maurice Jerel Murphy**, *U. of Georgia*

Author: **Jake B. Grandy**, *U. of Arkansas*

Author: **Seowon Joseph Shin**, *U. of Washington, Tacoma*

High-growth entrepreneurial ventures, increasingly take public stances on controversial sociopolitical issues that do not directly impact their business interests. However, unlike established firms who research suggests will be punished by investors for engaging in corporate sociopolitical activism (CSA), anecdotal evidence suggests entrepreneurial ventures may actually benefit therefrom. Blending signaling and identity theories, we argue that investors will respond positively to entrepreneurial ventures' CSA because as it sends quality signals to investors regarding ventures' emerging brand identity, as well as their ability to attract a larger total addressable market. We also assert that investors will be more inclined to respond positively to the CSA of ventures early in their lifecycle than in later stages. Furthermore, we argue that the signaling effect of CSA is weaker when ventures already provide other quality signals, suggesting a crowding out effect. We test our theory using a novel dataset of US unicorns from 20. Our results support our theorizing. This work extends entrepreneurship literature through demonstrating that nonmarket engagement can promote venture growth. It also contributes to the nascent CSA literature by elucidating one of the instances in which investors respond positively to this emergent nonmarket strategy.

SIM: Corporate Political Activity in Areas of Limited Statehood – A Governance Approach

Author: **Sameer Azizi**, *Roskilde U.*

Author: **Tanusree Jain**, *Copenhagen Business School*

Author: **Harry J. Van Buren**, *U. of Tennessee, Chattanooga*

This paper presents a response to the need for a contextual understanding of Corporate Political Activity (CPA) in contexts of limited statehood. The authors propose an analytical framework that emphasizes the unique characteristics of formal and informal institutions and actors in developing countries. We argue that the current debates on the political role of business often overlook the diversity of state capacity and stakeholder dynamics in these contexts. The authors suggest that Western conceptualizations of state-centric governance have biased CPA discussions to date. Instead, we advocate for a multi-level governance framework that recognizes the diversity of actors and their interests in relation to various political issues relevant to the CPA discourse. In result, we propose that adopting a multilevel governance perspective can facilitate a revision of existing binary notions of formality, legality, and ethics in business-society relations. Our framework can contribute to a more nuanced understanding of the political nature and role of corporations in contexts with varying degrees of statehood. The authors encourage further research in this area to challenge prevailing conceptualizations of business-government relations.

SIM: Corporate Political Activity, Marginality, and Societal Outcomes

Author: **Pouyan Tabasinejad**, *York U., Canada*

Author: **Yuval Deutsch**, *York U.*

The legitimacy of corporate political activity (CPA) has generally been examined through an ethical lens, where the two sides of the ongoing debate cannot agree as to whether CPA is beneficial or harmful for society as a whole. Drawing on egalitarian arguments and marginality theory, we present a framework of CPA's effect on society during crisis conditions. Using the COVID-19 pandemic as a natural experiment, we empirically test our framework in the United States, where approximately half of all fifty states allow direct political donations from corporations to politicians and the other half prohibit them. We find support for our predictions. We find that the economies of states in which corporate political donations are legal weathered the pandemic better than states in which they are prohibited. Further, we find that corporate political donations exacerbate the harmful effects of crises on marginalized communities. The positive relationship between marginalized communities and excess deaths during the COVID-19 pandemic was significantly stronger in states where political donations are legal than in states where such donations are not legal.

SIM: Decoding Corporate Support for Democracy: A Study in Eastern Germany

Author: **Benedikt Daniel Sebastian Kapteina**, *Dresden U. of Technology*

Author: **Rolf Bruehl**, *ESCP Business School*

This qualitative study navigates the dynamic interplay between Corporate Political Activity (CPA) and political Corporate Social Responsibility (CSR) approaches, seeking to elucidate and comprehend corporations' political engagements and the underlying motivations propelling them. Responding to the demand for more detailed research, we illuminate the ways in which companies actively participate in political spheres, investing in activities that bolster democratic decision-making—a crucial facet of Western democracies. In our exploration, we shed light on specific political initiatives such as election appeals, employee-centric political workshops, and overlooked political discussion panels, thus filling a gap in the management literature. Through interviews with German CEOs and senior executives, we delve into the motivations prompting certain companies to assume a proactive political role in democracies. Our findings contribute to the realms of CPA and political CSR research by delineating previously understudied political activities. Importantly, we empirically establish that corporate motivations for these political engagements extend beyond the economic motives extensively documented in CPA literature, encompassing moral motivations embedded within the management's ethos.

Author: **Swadip Bhattacharjee**, *U. of Wollongong, Australia*

Author: **Xiaofei Pan**, *U. of Wollongong, Australia*

Author: **Searat Ali**, *U. of Wollongong*

Author: **Abdullah Al-Mamun**, *U. of Wollongong*

The 2010 Citizens United decisions have altered the corporate political spending pattern in the United States (US) and simultaneously sparked intense debates on the disclosure of political spending; consequently, there is a heightened demand for increased external scrutiny (DeBoskey, Luo, & Wang, 2018a; Prabhat & Primo, 2019). In that scenario, our study aims to investigate the relationship between political spending disclosure (PSD) and audit fees in US companies. Covering a sample of S&P 500 companies, spanning from 2011 to 2021, we find a positive association between PSD and audit fees. The finding indicates that transparency of companies' political spending, instead of mitigating audit risk, exposes their political stance to external actors, which auditors may consider a potential audit risk and necessitate increased audit effort, resulting in higher audit fees. Our results are robust to a battery of endogeneity tests. In additional analyses, we report that better corporate governance and good reporting quality could weaken the positive association between PSD and audit fees. In aggregate, auditors were concerned about political transparency, whereas our findings unveil the auditors' perceptions regarding political transparency in US companies. These insights assist companies in making informed decisions regarding PSD.

Amidst the world's pressing challenges, the prevailing notion of innovation solely as a tool for 'capital valorisation' and the ultimate driver of economic growth is facing increasing scrutiny (Robra et al., 2023, Sheikh and Wu 2023). There is a growing call, both within academic and policy circles, to reconsider the trajectory of innovation (Bhatti et al 2018, Bhaduri et al., 2023). Scholars argue that the existing top-down elitist approach to innovation, coupled with insufficient incentive structures and an over-reliance on traditional methods, has exacerbated socioeconomic disparities globally. The apparent shortcomings in the global healthcare system, wealth inequality, developmental deficits, and the emergence of 'vaccine and digital apartheid's' highlight the necessity to re-evaluate the prevailing innovation and development models (Yunus 2023). Inherent tensions accompanying the prevailing producer-based innovation paradigm have become especially pronounced. The overall economic system of capitalism has also come under question. At the same time, both development and innovation scholars have argued that there is no better time than now to rectify these issues—but that it will only be possible to reimagine innovation and development models.

Environmental Strategies and Sustainability

Session Moderator: **Haram Seo**, *Texas A&M U., Mays Business School*

STR: **The Nature of Import Competition and Firms' Environmental Engagement in Emerging Markets**

Author: **Daniela Maggioni**, *U. Cattolica del Sacro Cuore, Milano*
Author: **Grazia D. Santangelo**, *Copenhagen Business School*
Author: **Seda KOYMEN-OZER**, *Baskent U.*

We study the relationship between firm environmental engagement and the nature of import competition in emerging markets by distinguishing between differentiation-based and cost-based import competition. Drawing on the institutional perspective of CSR, we argue that differentiation-based import competition is associated with a greater reduction in firm environmental engagement than cost-based import competition. Firms in emerging markets are not used to competing on non-price factors. Thus, they cut corners and reallocate their resources away from environmental activities to investments in capital stocks. We also advance that the reduction in a firm's environmental engagement is less pronounced for firms with higher product quality and more diversified product portfolios because they can leverage customer loyalty and reduce the "directness" of foreign competition, respectively. We test and find support for our arguments on a sample of manufacturing firms in Turkey over the period 2009-2015. Our study advances research on the relationship between market competition and corporate social responsibility.

STR: **The Global Sourcing of Green Products**

Author: **Heather Berry**, *McDonough School of Business Georgetown U.*
Author: **Jasmina Chauvin**, *McDonough School of Business Georgetown U.*
Author: **Yuxi Cheng**, *U. of Liverpool Management School*
Author: **Narae Lee**, *Korea Advanced Institute of Science and Technology (KAIST)*

While international trade in green products is seen as a key factor in facilitating a global transition toward low-carbon economies, our knowledge of firm sourcing strategies for such products is limited. In this paper, we examine how global sourcing strategies for green products are affected by the stringency of country environmental standards and green technological development within a country. Because of the importance of observable and credible sustainable manufacturing practices throughout firm global value chains and unique knowledge requirements for green products, we expect country institutional contexts to have different effects on the global sourcing decisions for green versus non-green products. Our findings using data on U.S. imports for more than 5,000 distinct products over the 2002–2019 period show that green products are more likely to be sourced from countries with higher environmental standards and advanced technology, while non-green product sourcing patterns align with prior research, which emphasizes the appeal of lower environmental standards and cost-efficiency considerations. Overall, this paper identifies an important boundary condition for the pollution haven effect in global sourcing and unlike prior work that argues that higher environmental standards hurt exporters, suggests that such standards benefit green product exporters.

STR: **Let the Cat out of the Bag: Public Disclosure of Stakeholder Mistreatment and Firm Innovation**

Author: **Eunkwang Seo**, *Oklahoma State U.*
Author: **Haram Seo**, *Texas A&M U., Mays Business School*
Author: **Junbeom Park**, *U. of Illinois at Urbana-Champaign, Gies College of Business*

This study examines the underexplored possibility that the public disclosure of stakeholder mistreatment—in particular, employee mistreatment—may lead to increased innovation activities in firms, underscoring the importance of firm size as a critical contingency to this effect. While the extant literature highlighting the significance of stakeholders as key resource providers suggests the negative impact of stakeholder mistreatment disclosure on firms' ability to innovate, our study spotlights its potential positive effect on firms' motivation to innovate and theorizes that the latter effect may dominate the former effect in case of large firms, compared to small firms. Using a Regression Discontinuity design based on inspections of Occupational Safety and Health Administration, we find strong support for our theory. These findings contribute to our knowledge about the strategic implication of stakeholder mistreatment, drivers of firm innovation and its competitive dynamics, highlighting a nuanced and complicated effect of employee mistreatment on firm performance.

STR: **Innovation as a Buffer: Environmental Institutional Pressure and Organizational Strategic Response**

Author: **Li Jingwen**, *School of management, Zhejiang U.*

Institutional theory suggests that companies facing environmental regulatory pressures often employ five strategic responses: acquiescence, compromise, avoidance, defiance, and manipulation. In the case of water quality monitoring stations, which primarily capture emissions from upstream areas, local government officials tend to impose stricter environmental standards on upstream companies rather than downstream ones due to the political significance of monitoring station readings. Previous studies lack the short-term strategic response of firms facing environmental institutional pressure. This study, based on institutional theory, utilizes the implicit spatial regression discontinuity design inherent in China's water quality monitoring system to examine how upstream high-tech manufacturing firms strategically respond after the establishment of monitoring stations. By leveraging a new firm-level dataset that includes geographic coding of emissions and patents, and taking advantage of this regulatory discontinuity, our empirical findings reveal that upstream high-tech firms, compared to their downstream counterparts, tend to adopt avoidance as a strategic response to environmental regulatory pressures. They strategically increase patent applications in the short term to project an image of an innovative company, serving as a buffering strategy to reduce the likelihood of inspections by regulatory agencies.

Using AI to Innovate

Session Moderator: **Thomas Clauss**, *U. of Witten/Herdecke*

TIM: The Interplay Between Cognitive and Emotional Framing in Gaining Support for AI-based Innovations  

Author: **Rebecca Alguera Kleine**, *Witten/Herdecke U.*

Author: **Tobias Roeth**, *U. of Bremen*

Author: **Thomas Clauss**, *U. of Witten/Herdecke*

Artificial intelligence (AI) provides large potentials for non-incremental innovation. However, to gain support for investment decisions on AI-based innovations, strategic actors must apply different framing behaviors to construct and negotiate the meaning of these innovations. Still, it remains unclear how the emotional and cognitive components of framing shape the understanding and support for AI-based innovation, and how they are interrelated with process formalization as the structural context. Addressing this shortcoming, we conducted multiple case study research, drawing on insights from 53 interviews, on-site observations, and archival data in three cases. Our inductive coding reveals that strategic actors use two framing behaviors, 'grounding in the business' and 'calling on feelings', to engage in 'mobilizing support' and shape a final investment decision for AI-based innovations. Further, process formalization guides and reinforces the cognitive 'grounding in the business' while the emotional 'calling on feelings' flexibilizes processes. The emergent framework shows that the absence of process formalization leads to AI being framed in an unstructured way, withdrawing the foundation for support in AI-based innovation. Yet, using emotional framing is further needed to enable the sensitizing for the malleability of AI-based innovations and to cultivate trust in AI. Thus, emotional framing complements cognitive framing in shaping the trust in AI and, thereby, decisions to invest in AI-based innovations substantially and roll them out. This study extends our understanding of how strategic leaders can successfully cope with the challenges of AI-based innovations, how framing is grounded in process formalization, and how emotional framing complements cognitive framing.

TIM: Unlocking Novel Knowledge Recombinations: The Impact of AI Adoption on Manufacturing Innovation  

Author: **Xinying Qu**, *Lally School of Management, Rensselaer Polytechnic Institute*

Author: **Shyam Kumar**, *Lally School of Management, Rensselaer Polytechnic Institute*

Author: **J.P. Eggers**, *New York U.*

This study investigates the impact of AI adoption on innovation novelty within the manufacturing industry. Drawing on the concept of AI as an enabling technology, we examine how AI adoption fosters novel recombinations of manufacturing knowledge. Additionally, we examine how firms can leverage the existing knowledge base to achieve these recombinations. Our sample comprises 419,165 patents invented by U.S. manufacturing firms between 2005 and 2019. First, we find that, on average, AI adoption is associated with patent inventions that exhibit greater novelty. The result underlines AI's pivotal role as an enabling force for innovation among end-user firms. Second, we find that the positive relationship between AI adoption and innovation novelty is stronger when firms build on more specialized, in-depth manufacturing knowledge. Complementing the first finding, this result underscores the value of integrating distant AI knowledge search with a focused domain knowledge base for effective enabling technology adoption. Third, we find that, on average, AI adoption is associated with patent inventions that exhibit higher economic value, implying a potential gain in competitive advantage for the inventor firms. Overall, our research provides insights into the implications of AI adoption in downstream application sectors, highlighting the knowledge search and knowledge base essential to facilitating novel recombinations.

TIM: Generative AI in Product Innovation: An Experimental Study of Humans' Creativity Evaluations  

Author: **Henrik Schartmann**, *U. of Muenster*

Author: **Ann-Katrin Eicke**, *U. of Muenster*

The emergence of generative Artificial Intelligence (AI) raised expectations to enhance creativity in product innovation management. While prior work supports the notion of AI broadening the idea generation stage toward more creative solutions, little is known of whether humans evaluate AI-generated ideas as creative. This is important as humans select which idea to pursue further so that their creativity perceptions decide upon the implementation of AI-generated ideas. To address this issue, we build on the Double Diamond framework and analyze humans' creativity perceptions of an AI-generated idea compared to a human-generated one. By moderating this effect through disclosure of the idea generator, i.e., AI or human, we examine the mechanism of AI aversion as a main perception driver. We conduct an online scenario experiment with 275 participants for ANOVA-based hypothesis analysis. Our results reveal that AI-generated ideas achieve significantly lower creativity and novelty scores than human-generated ones. Disclosure increases this contrast by increasing creativity for the human-generated innovations and decreasing it if AI-generated. Overall, we contribute to the product innovation management literature by expanding the AI-inspired Double Diamond framework including the idea evaluation stage, and revealing the devaluation of AI-generated ideas, especially under disclosure, thereby referring to AI aversion theory.

Author: **Holger Ernst**, *WHU Otto Beisheim School of Management*

Author: **Priscilla Sarai Kraft**, *WHU Otto Beisheim School of Management*

Author: **Kevin Wohlhauser**, *WHU*

Recent research and case examples of prominent firms suggest that Artificial Intelligence (AI) can reshape how firms innovate. Empirical research on the influence of using AI in the innovation process on innovation project performance, however, is missing. To extend this stream of research, we build on dynamic capability (DC) theory to develop a framework that links the use of AI in the innovation process with innovation project performance and analyzes how this relationship is moderated by the level of innovation project novelty. We further theorize that digital strategy, analytic translators (i.e., employees who support the communication between technical and non-technical, domain specific employees), and make-or-buy decisions (with regard to AI) help firms stimulate the use of AI in the innovation process. We use data from a sample consisting of 122 innovation projects from 102 business units spanning multiple industries to test our hypotheses. In support of our theory, the results demonstrate that the use of AI in the innovation process is positively related to innovation performance and that this relationship is stronger for more novel innovation projects. The results further reveal that two out of three antecedents, i.e., analytics translators and the existence of a digital strategy, have a positive impact on the use of AI in the innovation process. Together, our study contributes to the growing stream of research on the role of AI for innovation by providing empirical evidence that AI can enhance innovation performance, especially for more novel innovations. We also provide novel findings on how firms can stimulate the use of AI in their innovation process by demonstrating two crucial antecedents. Building on our findings, we discuss academic and managerial implications to advance our understanding on antecedents and performance effects of using AI in the innovation process.

Drivers of Business Model Innovation

Session Moderator: **Angel Sharma**, *U. of Newcastle Australia*

TIM: Business Model Innovation and Cognitive Complexity: The Moderating Effect of Environmental Dynamism  

Author: **Angel Sharma**, *U. of Newcastle Australia*

Author: **Arahat Sundar Tuladhar**, *UNSW-Sydney*

We investigate how firms' cognitive complexity (vis-à-vis decision makers) affects their propensity to innovate their business models. We hypothesize a negative direct effect of firm's cognitive complexity and a positive moderating influence of environmental dynamism on business model innovation intensity. We find that firms' cognitive complexity (vis-à-vis decision makers) is negatively associated with business model innovation and this relationship becomes positive as dynamism increases from low to high. We incorporate a novel computer-aided text analysis of letters to shareholders and earnings call transcripts of S&P 500 firms between 2004 and 2020. Our research provides an enhanced understanding of the cognitive antecedents of business model innovation, through an exploration of how firms' cognitive complexity may enhance or impede business model innovation intensity and the boundary conditions in this relationship.

TIM: Business Model Design When Facing Competing Goals: Unveiling the Role of Regulatory Focus 

Author: **Nidhida Lin**, *Macquarie Business School, Macquarie U.*

Author: **Krithika Randhawa**, *U. Of Sydney*

Author: **Ralf Wilden**, *Macquarie Business School, Macquarie U.*

Author: **Paavo Ritala**, *LUT Business School*

Designing a business model is challenging as entrepreneurs need to respond to multiple and often competing demands. Yet, little research has investigated the decision-making process underlying business model design when facing competing goals and the micro-level mechanism (e.g., cognition, motivation) that explain differences in such decisions. We argue that the regulatory focus of entrepreneurs influences how they emphasize novelty and resource efficiency in designing their venture's business model to meet competing goals of long-term stakeholder value (i.e., environmental impact) and short-term shareholder value (i.e., financial impact). Our findings from applying a discrete choice experiment conducted on 261 entrepreneurs show that when facing competing goals, promotion-focused entrepreneurs put strong emphasis on the novelty of a business model while prevention-focused entrepreneurs put little emphasis on novelty but maintain their attention toward resource efficiency, which is recognized as a tried and tested approach to achieve short-term (financial) goals. We contribute by disentangling the entrepreneurial decision-making process underlying business model design and, importantly, account for the role of entrepreneurs' motivation in explaining the differences in business model design choices.

TIM: Adapting to Change: Unveiling the Synergy Between Strategic Agility and Business Model Innovation

Author: **Laura Melzer**, *Technische U. Dresden*

Author: **Sarah Mueller-Saegebrecht**, *TU Dresden*

Author: **Herbert Nold**, *Polk State College*

Today's organizations must be able to respond flexibly to change and develop the ability to constantly adapt business models according to new trends and opportunities. In this context, the concepts of strategic agility (SA) and business model innovation (BMI) are often cited by managers and consultants as approaches to help companies develop new competitive advantages. Based on a systematic literature review, this paper explores the relationship and synergies between these two concepts and then combines them into a holistic theoretical framework. Our framework provides 11 novel propositions that can be applied in future work to quantitatively test the relationship between SA and BMI. In addition, our framework sheds light on factors and concepts that have received little attention in describing the relationship between SA and BMI, such as organizational culture and IT-based capabilities. Another theoretical contribution of our work are new meta-capabilities of SA, which we apply for the first time to define SA based on approaches from the literature: strategic-innovative, resource-based, and internal-supporting capabilities. Our theoretical framework provides insights into elementary capabilities and conditions that must be present in order to actively apply both concepts in an organization.

 **TIM: Dynamic Managerial Capabilities, Business Model Innovation, and Digitalization**

Author: **WeiQi Zhang**, *Zhejiang U., China*

Author: **Sihan Li**, *Zhejiang U.*

Author: **Yi Sun**, *U. of Cambridge Department of Engineering*

Author: **Xiaobo Wu**, *Zhejiang U.*

Dynamic managerial capabilities refer to the ability of managers to integrate, construct, and reconfigure existing resources and competencies through personal perception, skills, and motivation, in order to adapt to and shape the evolving competitive environment. Drawing upon complexity theory, this study investigates the impact of dynamic managerial capabilities on firms' business model innovation and examines the moderating role of firms' digitalization based on 507 samples. The results indicate that dynamic managerial capabilities positively influence both efficiency-centered and novelty-centered business model innovation, with firms' digitalization playing a positive moderating role in this process. Additionally, the study examines the three-way interaction effect, revealing that the higher the level of environmental turbulence, the greater the positive impact of digitalization on the relationship between dynamic managerial capabilities and efficiency-centered business model innovation. This research unveils the crucial role of executives' dynamic managerial capabilities in business model innovation in today's digital era, providing theoretical guidance for firm strategic decision-making.

Complementors and Value Creation in Ecosystems

Session Moderator: **Peter Thomas Bryant**, *IE Business School*

TIM: Complementor or Depreciator: Relationship Risks in Digital Ecosystems

Author: **Peter Thomas Bryant**, *IE Business School*

In digital ecosystems, value creation is heavily dependent on “complementors,” meaning firms which create more value by working together than separately. Stated formally, complementary firms are “superadditive” exploiters of shared positive risks. However, some relationships reduce overall value owing to negative risks. Firms are then anti-complementors or “subadditive,” meaning they create less value together than separately and may ultimately incur losses. I define such firms as “depreciators” for each other rather than complementors. Network effects amplify these outcomes. Positive network effects amplify complementary value creation as “supermodularity,” driving increasing differences and economic returns. Whereas negative network effects amplify depreciating value destruction as “submodularity,” fueling decreasing differences and diminishing returns. Importantly, both types of network effects are increasing rapidly owing to the expansion of digital networks and artificial intelligence (AI). However, even as these systems grow, their complexity, opacity and dynamism make them difficult to observe let alone manage and govern. Particularly, advanced AI diffuses rapidly within ecosystems yet is often non-explainable and opaque. Firms may assume complementarity and only later discover depreciation after exponential value destruction. My paper explains these dynamics and the implications for theories of organization and the firm, risk and strategy in digital ecosystems.

TIM: The Double-Edged Sword of App Subscription Services: Signaling Effects on User-Perceived Quality

Author: **Matthias Erath**, *Technical U. Dortmund*

Author: **Bastian Kindermann**, *Chair for Technology & Management, TU Dortmund U.*

Extant platform literature has emphasized the integral role of customer feedback in facilitating value creation within platform ecosystems. In the complex interplay between platform owners, complementors, and end users, app subscription services have emerged as a novel form of complement distribution, constituting a significant pivot in value creation and value capture. Despite the central role of customer feedback in shaping platform ecosystems, we have limited knowledge on how intra-platform app subscription services are perceived by consumers. Drawing on signaling theory, we address this gap in research and examine how the jointly conveyed quality signal via subscription services affects user-perceived quality of complements. Our analysis employs a difference-in-difference framework and multiple panel regressions on a novel dataset of 3,609 app-month level observations from the U.S. launch of the Google Play Pass app subscription program. We find that participation in an app subscription service has a negative effect on user-perceived quality, induced by a dispersion of complement quality in mature platform ecosystems and emerging discrepancies between user expectation and subsequent experience. We describe two contingency factors that mitigate the negative effect, confirming curated endorsements and high levels of complement reputation as effective quality signals. The findings of our study mark an important contribution to signaling theory and advance the literature on platform ecosystems to the context of app subscription services. Moreover, our findings serve as an insightful framework for platform practitioners.

TIM: Dealing with Interaction Challenges in Innovation Ecosystems: Unfolding Complementors' Capabilities

Author: **Alexandra Elena Carst**, *Kyoto U.*

Complementors play a key role in the value-creation process of an ecosystem's proposition, but their relationships with other actors are complex and often involve both cooperation and competition (i.e., coopetition). To navigate various ecosystem challenges in such volatile environments, complementors require capabilities. This study uses multiple case studies to examine the capabilities that complementors rely on in their dynamic interactions with other actors in the wind energy ecosystem. Our findings indicate that complementors employ varying portfolios of capabilities, including adaptability, networking, ecosystem thinking, balancing sharing with secrecy, sensing, seizing, coopetition capability, and transforming. In different combinations, these capabilities enable wind energy complementors to cope with ecosystem evolution and technological trends, ensure compatibility and respond to the requirements of focal firms, maintain their own position and sustain competitive advantage, as well as deal with coopetitive tensions.

TIM: Managing Platform Value Through Business Model Governance

Author: **Tommy Pan Fang**, *Jones Graduate School of Business, Rice U.*

A considerable body of work has examined how platforms govern complementors—third-party firms who offer complementary products and services that enhance the overall ecosystem value. Yet, platform owners need to capture a share of the ecosystem value to remain viable. Platform owners, thus, face a conundrum in governance: encouraging complementor value creation, while finding ways to capture value simultaneously. In this paper, I capture this critical tradeoff that platform owners face by examining how platforms govern complementors' business models—the value creation activities and value capture methods of a complementor. I conduct a large-scale quantitative study of 15,604 mobile applications in 2021. I leverage an unexpected Apple policy impairing in-app advertising business models of complementors, and find that these applications are more likely to exit from the platform after the policy change. Moreover, impacted applications shift effort from developing new features to fixing existing issues, diminishing the overall value creation. While this change negatively affected the revenues that Apple received from third-party applications, Apple was able to increase value capture from its own applications and advertising network. These findings enrich our understanding of how platform owners use governance to balance between value creation and value capture in an ecosystem.

Firm Differences and Green Innovation

Session Moderator: **Qing Zhu**, *School of Economics and Management of Wuhan U.*

TIM: Search Deeply or Widely? The Effect of Digital Orientation on Eco-Innovation  

Author: **Qing Zhu**, *School of Economics and Management of Wuhan U.*

Author: **Yi Xie**, -

To achieve eco-innovation (EI), scholars in the fields of environmental economics and innovation management have emphasized either legitimacy- or efficiency-based solutions. However, both types of solutions still treat knowledge search strategies as external and often neglect a significant construct-digital orientation (DO). We highlight the role of DO in the EI and posit that external search behaviors serve as a mediating mechanism linking DO to EI. Based on the survey of 309 Chinese manufacturing small and medium enterprises (SMEs), we assess the proposed model through partial least squares structural equation modeling (PLS-SEM). The findings indicate that DO positively influences eco-process innovation through a combination of search breadth and depth. Additionally, it promotes eco-product innovation primarily through search depth, and eco-management innovation through search breadth. This is the first attempt to explore the EI by combining DO and external search behaviors, and its findings provide recommendations for matching search effort with firm-specific EI needs and strategic orientation.

TIM: R&D Decentralisation and Green Innovation: The Role of Technological Diversification

Author: **Songyang Wu**, *Queen Mary U. of London*

Author: **Lutao Ning**, *Queen Mary U. of London*

Author: **Shijun Mu**, *Queen Mary U. of London*

Given the importance of green technologies for businesses and the environment, we have little understanding of how and through what theoretical mechanisms firms' R&D organisational structure uses the knowledge at its disposal to promote green innovation. Therefore, based on the knowledge management perspective, this study investigates the relationship between firms' R&D decentralisation and their green innovation performance and the moderating roles of differentiated technological diversification patterns in this process. Using panel data of 2,333 Chinese listed manufacturing firms from 2010 to 2020, our empirical results show that R&D decentralisation has an inverted U-shaped relationship with the firms' green technological innovation. Moreover, related technological diversification would steepen the curvilinear relationship between R&D decentralisation and green innovation, while unrelated technological diversification can flatten the U-shaped relationship with a higher optimal level of R&D decentralisation. Our study recommends policymakers and managers should consider the characteristics of firms' internal R&D structure and knowledge repositories to effectively facilitate firms to develop green innovation.

TIM: Unlocking Green Breakthrough Potential: The Interplay of Unabsorbed Slack and Board Liberalism 

Author: **Mirjam Brandl**, *Johannes Gutenberg U. Mainz*

Author: **Bjoern C. Mitzinneck**, *Groningen U. (RuG)*

Author: **Holmer Kok**, *Stockholm School of Economics*

In times of accelerating environmental crises, firms hold substantial resources that could be used for sustainable transitions through green breakthrough innovation. While scholars agree that resource abundance, such as high unabsorbed slack, fosters risk-taking in managers and thereby leads to increases in R&D investment and resulting innovation output of firms, it is unclear under which conditions such resources are funneled into socially relevant innovation, such as green breakthrough innovations. Drawing on the behavioral theory of the firm and the concept of slack search in particular, we suggest that unabsorbed slack increases a firm's propensity to engage in high-risk green breakthrough innovation. However, we argue this association will be stronger for firms with a more liberal-leaning compared to a conservative-leaning board. Testing our hypotheses on a sample of S&P500 firms between 2002 and 2014, we find empirical support. Our study reveals an important antecedent of green breakthrough innovation and highlights the role of managerial cognition in directing slack search toward socially beneficial innovation.

TIM: Does Firm Age Matter for Environmental Innovation Intensity? 

Author: **Yi-chuan Liao**, *National Dong Hwa U.*

Author: **Weichieh Su**, *National Chengchi U.*

Author: **Pengcheng Ma**, *Renmin Business School, Renmin U.*

This study examines how a firm's growth stages are related to its investment in environmental innovation. We hypothesize that there is an inverted U-shaped relationship between firm age and environmental innovation intensity. In addition, this study proposes a contingent perspective that the regional product-market development, and industry competition complement the knowledge in heterogeneous curvilinear relationship between firms' age and environmental innovation intensity. Employing data from China sample firms for the period 2010–2017, we perform a panel regression to verify our hypotheses. The results show that younger firms focus more on environmental invention intensity, but, as they age, their tendency to invest in environmental innovation decreases. This study also found that regional product market development weakens the inverted U-shaped relationship between firm age and environmental invention.

Corporate R&D Capabilities: Borders and Boundaries

Session Moderator: **Honggi Lee**, *U. of New Hampshire*

TIM: The Role of Corporate Research in Technology Competition

Author: **Honggi Lee**, *U. of New Hampshire*

How does corporate research influence technology search strategies of firms facing an increased level of competition? While prior studies have argued that technology search strategies of firms can be influenced by various internal and external factors, a systematic investigation into such contingent factors is scarce. In this study, we examine how corporate research, a key factor that enables firms to evaluate, assimilate, and use external knowledge, influences the technology search strategies of firms when they face an increased level of competition from similar inventions. Based on a sample of 2,421 U.S. public firms for the sample period of 1980 through 2015, we find that, on average, firms tend to reduce the level of technology exploration when they face an increased level of technology competition. However, firms with a higher level of research engagement pursue technology exploration more than firms with a lower level of research engagement. Additionally, we provide evidence that firms with a higher level of research engagement tend to produce inventions of higher novelty and quality compared to firms with a lower level of research engagement.

TIM: The Availability of Technological Capabilities to Support Demands from Regulators

Author: **Åke Freij**, *Stockholm School of Economics*

Technology promises to offer significant benefits in operating a business. At the same time, firms have major challenges in dealing with regulatory requirements. Despite this, studies of technological capabilities offer little insight into the functionality available for supporting regulatory compliance requirements. With both compliance demands and technological complexity evolving at record speed, this is an area demanding increased understanding. This paper analyses data from 107 regulatory technology solution providers for the anti-money laundry compliance field. Conclusions from the study point to a strong availability of basic capabilities for managing products, understanding end markets, and tracking linkages between actors. There is weaker support for capabilities in basic operations. Also, advanced support is less frequent, and the ability to innovate is close to non-existent. The conclusions offer tangible recommendations to practitioners and policymakers concerning the potential benefits and pitfalls of applying technology for regulatory compliance.

TIM: Technological Diversity of Semiconductor Firms: IDM Versus Pure-Play Foundry

Author: **PoYang Cheng**, *National Tsing Hua U.*

Author: **Shih-Chang Hung**, *National Tsing Hua U.*

We examined the effect of organizational boundary choices (integration vs. specialization) on technological diversity in semiconductors by comparing four firms, two specialized foundries (i.e., TSMC and UMC) and two system integrators (i.e., Samsung and Intel), using a topic modeling approach to analyze patent documents. We find that, although the technological diversity of integrated device manufacturers (IDMs; i.e., Intel and Samsung) is initially higher than that of foundries (i.e., TSMC and UMC), foundries gradually catch up and even surpass IDMs. Such changes are likely to occur because foundry companies, as technology dis-integrators, need to customize their process technology more adaptably than their IDM rivals. Our most important contribution is to show how specialized, disintegrated firms can more effectively exploit economies of scope in technology through persistence and diversification than vertical integrators.

TIM: Geographic Dispersion and Commercially Successful Innovations

Author: **Tareq Alharbi**, *Florida International U.*

Author: **Aya S. Chacar**, *Florida International U.*

Author: **Arun Kumaraswamy**, *Florida International U.*

This study explores the impact of geographic dispersion of R&D laboratories on successful new innovation in the pharmaceutical industry. This study proposes that the negative effects of such dispersion will be minimized in high stake environments where the pressure and incentives to innovate are very high. This study also proposes that the negative effects of such dispersion can be dampened, and conversely the positive effects can be enhanced, by two moderating factors: a firm's knowledge breadth and external knowledge network. Using data from 136 companies over 25 years, the study shows that the positive effect of geographic dispersion dominates. However, both moderating factors present a negative and significant effect on innovation, suggesting a dilution or diseconomies of scale and scope overpower any benefits from such interactions.

TIM: Inclusive Research and Innovation in Engineering – Theory Building from Five Case Studies

Author: **Claudia Werker**, *TU Delft*

Author: **Marielle Feenstra**, *TU Delft*

Author: **Gernot Pruschak**, *Bern U. of Applied Sciences*

Considering the diversity of human beings in research and innovation projects is important for societal inclusion. Yet especially STEM research and innovation projects only occasionally consider all human beings potentially affected by their innovation. In this paper, we therefore investigate whether STEM researchers and innovators in engineering consider the diversity of human beings in their projects and how this changes their technological and business success. We answer our research questions using an explorative theory-building approach in which we analyze twenty interviews with project leaders and team members of five research and innovation project teams working on high tech STEM innovations. Their efforts are funded within Horizon 2020 framework. We find that none of the project teams considered the diversity of human beings at project inception to start with. At the same time, STEM researchers and innovators agreed on the importance of and started considering the diversity of human beings after learning about the responsibility of research and innovation from social scientists. Furthermore, we show that open innovation practices like co-creation and knowledge sharing enhance the consideration of the diversity of human beings whereas increased entrepreneurial mindset helps STEM researchers and innovators to see the business potential of considering the diversity of human beings in their research and innovation projects. After all we show that inclusivity in STEM research and innovation broadens the search horizon, may help to develop insights and solutions that can be more responsible, more ethically, and more socially acceptable.

AI or the Crowd?

Session Moderator: **Léonard Boussioux**, *U. of Washington, Michael G. Foster School of Business*

TIM: **The Crowdless Future? How Generative AI Is Shaping the Future of Human Crowdsourcing**

Author: **Léonard Boussioux**, *U. of Washington, Michael G. Foster School of Business*

Author: **Jacqueline Lane**, *Harvard U.*

Author: **Miaomiao Zhang**, *Harvard Business School*

Author: **Vladimir Jacimovic**, *Continuum Labs*

Author: **Karim R. Lakhani**, *Harvard U.*

The rapid advances in generative AI have the potential to reshape organizational innovation, raising uncertainty about the role of human solvers in this new era of augmented intelligence. We initiated a crowdsourcing challenge focused on sustainable, circular economy business opportunities, comparing the capabilities of GPT-4 and human solvers in generating novel and valuable solutions. The challenge attracted a diverse range of global solvers from various industries. 300 evaluators assessed a randomized selection of 13 out of 234 human and AI solutions, totaling 3,900 evaluator–solution pairs. Our findings reveal that, although AI solutions delivered more environmental and financial value—possibly due to a tendency to align with the central patterns seen in their training—human outputs were rated as more innovative, including extreme outcomes at the right tail of the novelty distribution. Our analysis of the rich solution text using natural language processing techniques reveals considerable overlap in semantic dissimilarity metrics between human and AI responses, but humans still exhibit greater linguistic nuances than AI. This study illuminates the promise of AI in augmenting human crowdsourcing for solving complex organizational problems and sets the groundwork for a possible integrative human-AI approach to innovative problem-solving.

TIM: **The Concept of Open Data – A Review, Critique, and Ways Forward**

Author: **Malin Sofia Kristina Petré**n, *Chalmers U. of Technology*

Author: **Marcus Holgersson**, *Chalmers U. of Technology*

Open data are attracting increasing scholarly attention and the number of open data initiatives in the digital industry is growing. Value and demand for data are boosted even more by platformization and the recent surge in AI development. As a result of the growing interest in and use of open data, a conceptual variation has evolved that does not resonate well with the prevalent dichotomous view of openness, which typically assumes that a certain set of conditions needs to be met for data to be considered open. Our conceptual review of the use of “open data” in the management literature reveals that open data is a multidimensional concept. We identify six main dimensions in our conceptual analysis, and argue that—rather than seeing data as either open or closed—these dimensions can be used to design the openness of data. This design perspective holds great potential for future research and practice to expand the use of open data in private business contexts where the value of open data is still largely untapped. The freedom to design openness may incentivize private firms to open up data, and unleash powers of innovation and economic growth.

TIM: **Prototype and the Quality of Crowdsourcing Submission: The Mediating Role of Submission Behavior**

Author: **Yi Zhong**, *School of Mathematics, Shenzhen U.*

Author: **Shuijing Jie**, *Xi'an Jiaotong-Liverpool U.*

Author: **Yifu Li**, *International Institute of Finance, School of Management, U. of Science*

Author: **Peng Luo**, *School of Mathematics, Shenzhen U., Shenzhen, China*

Crowdsourcing contest organizers provide prototypes and hope to improve the quality of submissions. However, a rare study analyzed the extent and the mechanism of the number of prototypes that impact the quality of submission in crowdsourcing. In this study, we analyzed a dataset of 1538 crowdsourcing contest projects from the website of 99 Designs. We find an inverted U-shaped relationship between prototype number and quality of submissions. Our findings suggest that providing 4 or 5 prototypes leads to relatively optimal quality submissions. We offered several managerial implications for both organizers and competition platforms.

TIM: **The Dark Side of Gamification: Unintended Consequences of Designing Gamified Crowdsourcing Platforms**

Author: **Michela Beretta**, *Aarhus BSS, Aarhus U.*

Author: **Emilie Ruiz**, *U. de Strasbourg - CNRS BETA*

It is increasingly common for firms to implement gamification elements in their crowdsourcing platforms. Growing research attention has thus been placed on understanding the role of gamification in crowdsourcing for innovation. While much crowdsourcing literature points to the positive effects and benefits of gamification in engaging crowds in innovation activities, little is still known about its potential negative effects. More specifically, recent studies emphasize the need to better understand how gamification can lead to the emergence of unintended consequences on crowd engagement, fostering opposite behaviors than what was originally intended by firms. In order to unfold this, we conducted a qualitative, multiple case study of four firms implementing gamification in their crowdsourcing platforms. We discuss how the way the gamification system was designed ended up creating unintended consequences which did not align with the firms' initial expectations and goals. These related to: 1) sustaining engagement (with gamification leading to participants' demotivation and loss of interest), 2) fostering strategic behaviors (with gamification leading participants to focus more on quantity of contributions as well as fostering competitive behaviors), and 3) increasing participants' expectations (related to earning extrinsic rewards and to the evaluation of provided inputs), creating a mismatch. By doing so, we respond to recent calls about the need to better understand the negative effects of gamification elements in crowdsourcing and how they can undermine participants' behaviors and engagement.

Futurescapes: Web 3.0, Industry 4.0, 5.0

Session Moderator: **Thiago Fabricio Felipe**, *Queensland U. of Technology*

TIM: **Deciphering the Web of Industry 4.0: Digital Transformation in Commercial Banks**

Author: **Thiago Fabricio Felipe**, *Queensland U. of Technology*

Author: **Agnes Toth-Peter**, *Queensland U. of Technology*

Author: **Shane Mathews**, *Queensland U. of Technology*

Author: **Uwe Dulleck**, *U. of Canberra*

The existing body of literature exploring innovations and digital transformations in the banking sector emphasizes the emergence of competitive business models by FinTechs and digital banks. Despite their significance, commercial banks remain the predominant players. Thus, comprehending how commercial banks assimilate disruptive technologies encompassing Industry 4.0's technological advancements is crucial. This systematic literature review aims to pinpoint the primary strategies commercial banks employ in response to heightened competition and crises. Analysing 238 articles up to 2023, we crafted a conceptual framework resembling a 'spider's web.' This framework illuminates how Industry 4.0 initiates a cohesive digitalization flow. Our findings reveal an interdependent relationship among elements in three distinct groups, underscoring that the success of the digital transformation hinges on banks' comprehensive understanding of these relationships and their adoption of a holistic approach.

TIM: **The Innovation Landscape After AI: Industry 5.0 Impact of Technical Affordances**

Author: **Päivi Hanna Maria Aaltonen**, *Lappeenranta U. of Technology*

Author: **Luke Treves**, *LUT*

Author: **Anttoni Halme**, *Lappeenranta U. of Technology*

Evaluations of the future impact of technologies rarely succeed in painting an accurate picture. While the wide use of smart phones was expected, the 2010's variety of applications was not. Most recently in 2020, the term Industry 5.0 has referred how the advanced AI technologies, such as virtual simulation and autonomous robots, impact society as a whole. The technological capabilities of AI are expanding rapidly, creating an exponential surge in opportunities for affordances, potentially into innovative products, novel markets and ways to navigate the disruptive global environment. However, the demands of advances AI in firms innovative capabilities are not fully explored, despite the emergence of an intensified necessity to comprehend radical innovation within a realm brimming with uncertainties and inflated prospects, urging a deeper exploration through empirical and conceptual research. To tackle this challenge, this manuscript delves into a comprehensive State-of-the-Art survey spanning a nation and conducts additional in-depth interviews with 7 case firms deeply involved in advanced AI technologies. It aims to delineate the swiftly evolving global landscape and proposes a research agenda aimed at conceptualizing the field of opportunities and entrepreneurial decision-making within this disruptive AI-driven environment, contributing to advancing the understanding of innovative capabilities in the age of AI.

TIM: **Is There a Reliable Finovative Stock Market Prediction Machine ?**

Author: **Momin Farhan**, *Confiz - Principal Data Engineer*

Author: **Farhan Mahboob**, *Bahria U. Karachi Campus*

Author: **Muhammad Qureshi**, *Muhammad Ali Jinnah U.*

Author: **Zareen Asif**, *Institute of Business Management, Karachi, Pakistan*

Author: **Naveeda Akhter Katper**, -

Author: **Ummi Naiemah Binti Saraih**, *Faculty of Business & Communication, U. Malaysia Perlis*

This explanatory study investigates the existence of a predictive financial machine that can forecast future stock prices within the confines of acceptable accuracy and reliability, as it unravels the dynamics surrounding the prime objective of investors to maximize returns, based on technical rather than on fundamental analysis. The quest traverse from the tradition domain of econometrics, whose knowledge based has now incorporated many fields and techniques of bioscience (genetic algorithm and programing) and computer science (artificial neural networks, deep learning, fuzzy based), enabling investigation into concepts of prudential behavioral finance and quantum physics, into the emerging field of FinTech. The financial machine, at the disposal of stakeholders, is potentially an innovative legal public electronic money printing press, which, with an acceptable accuracy predicts future trends and pricing, taking the concept of profit maximization to a new dimension. While the concept of perfect prediction is not computationally possible, enlightened investors can benefit from superior gains, considering future stock market direction, and returns, on a daily, weekly and monthly basis, with different levels of confidence. Stakeholders may need to employ hybrid models, systematically and logically breaking tasks into stages, and selecting from an array of finovative techniques, keeping focus on the overall objective; machine learning techniques can extract latent knowledge from timeseries macroeconomic indicators, and even from crowd-sourced knowledge bases, to considerably enhance the quality of stock market forecasting. As FinTech develops into an evolving domain, yet to reach the maturity stage, the contemporary landscape comprises of, support vector machine (SVM), long short-term memory (LSTM), neural network, and machine learning primarily using US data, as the prominent financial stock market predicting techniques, although emerging markets also offer promising prospects. Nevertheless, in the contemporary stock market forecasting arena, the most common techniques employed are based on HMM, ANN, RNN and fuzzy-based deep learning, although given the complexities, and uncontrollable factors, the progressive finovative evolution is likely to continue unabated, in conformance with the adaptive market hypothesis (AMH).

Author: **Francesco Cappa**, *Luiss Guido Carli U.*

Author: **Paolo Boccardelli**, *Luiss Guido Carli U.*

In this article, we explore what managers think about the web 3.0 phenomenon by focusing on the metaverse and NFT technologies as well as their implications for businesses. By adopting a resource-based view, we conducted a qualitative and quantitative study involving over one hundred managers from different industries. Our findings show that managers consider the main areas of application of the metaverse to be marketing and HR management. NFT technologies are seen as tools that can leverage revenue growth and act synergistically with the metaverse to increase the value brought to customers. Our results also indicate that notwithstanding managers' willingness to allocate further resources to the metaverse and NFT solutions, these investments could be limited in the future, as these technologies are still perceived to be volatile. This study contributes to the literature on the strategies concerning web 3.0 by reinforcing the entrepreneurial significance of the metaverse and NFT solutions as valuable disruptive technologies that can amplify firms' competitive advantages in the market. However, their adoption may also entail difficulties for businesses.

This symposium delves into the expanding domain of Deep Technology and its imperatives for commercialization, elucidating the formidable challenges faced by startups operating within this paradigm. In line with the overarching theme of AOM 2024, the symposium aims to emphasize the vital role of progressing science and innovative technology in enhancing both societal and economic futures. The array of five presentations encapsulates a comprehensive exploration of various facets intrinsic to deep tech, ranging from fundamental challenges faced by deep technology projects to the significance of innovation in driving business performance and growth, and from founder role transitions during early phases of deep technology ventures to the struggle for securing funding from venture capitalists in the early stages of science-based startups. Employing a methodological blend of quantitative and qualitative approaches, the symposium endeavors to enrich our comprehension of the intricate trajectory from laboratory-based innovation to market realization within the context of deep tech. The symposium's pertinence extends across the domains of Technology and Innovation Management (TIM), Entrepreneurship (ENT), and Strategy (STR), contributing substantively to the management of technology, entrepreneurial discourse, and the strategic underpinnings of nascent venture teams. In pursuit of this objective, it aims to foster a sophisticated comprehension of the complex technological landscape, offering insights relevant to diverse sectors within the expansive domain of management science.

Participant: **Maytal Saar-Tsechansky**, *U. of Texas at Austin*

Innovation has, over the last few decades, been closely intertwined with digital technologies and the successive breakthroughs consequent upon their diffusion. New strategic initiatives and organizational arrangements (e.g., platforms and ecosystems) have developed and continue to emerge as socioeconomic actors seek to take advantage of the shifting furniture of the world (i.e., new things and processes, relations and architectures) brought about by digital technologies and accommodate it. As digital innovation has gained significance in the economy and society, scholars from various fields have brought rich and diverse perspectives to advance our understanding of the phenomenon. While these different perspectives undoubtedly enriched our collective understanding of innovation, they have led to fragmented discourses within intellectual echo chambers. The goal of the proposed panel symposium is to bring scholars representing different perspectives to probe the next frontier of digital innovation. In the proposed panel, we feature perspectives including modularity, network externalities, open innovation and generativity, architectural recombination, digital data objects, and algorithms.

Predictors and Outcomes of Work-and Career-Related Resources

Session Moderator: **Monica L. Forret**, *St. Ambrose U.*

CAR: **Networking in an Immigrant Community-Based Organization: An Examination of Benefits**

Author: **Mohamed Khalil**, *St. Ambrose U.*

Author: **Monica L. Forret**, *St. Ambrose U.*

Author: **Sherry E. Sullivan**, *Bowling Green State U.*

Immigration is on the rise in many countries. Immigrant community-based organizations (CBOs) facilitate the adjustment of immigrants to their new society and help them maintain their cultural identity. The purpose of this study was to explore the activities immigrants participate in at CBOs and the types of networking benefits they receive. A survey completed by 343 Sudanese immigrants showed that they utilized their CBOs for cultural/social activities, democracy events, language/religion classes, school and job help, business activities, health resources, and religious purposes. Attending cultural/social activities and democracy events, participating in language and religion classes, seeking school and job help, and participating in business activities were positively related to receiving a wide variety of benefits such as work-related assistance, career sponsorship, social support, job search assistance, business assistance, protection and guidance, and information and ideas. Further analyses examined characteristics of immigrants that predicted their use of CBOs. The findings underscore the potential CBOs have for making a positive impact on the lives of immigrants.

CAR: **Malleable Determinants of Networking Behaviors**

Author: **Hans-Georg Wolff**, *U. of Cologne*

Author: **Gina Charleen Kistner**, *U. of Cologne*

Scholars consider networking behaviors as a proactive means to attain work and career goals. With a focus on how to foster networking, research has shifted from a focus on stable individual dispositions to more malleable constructs that may be levers in networking interventions. Recently, somewhat diverging findings concerning attitudes as determinants of networking behaviors have emerged. Studies using a lay theories framework found that attitudes affect networking (Kuwabara, Zou, Aven, Hildebrand, & Iyengar, 2020), whereas studies using a theory of planned behavior lens report that attitudes are of minor importance (Wehrauch, Wolff, Stein, Kuonath, & Frey, 2023). We seek to conceptually replicate these findings and compare them in a single study. Our preregistered two wave study (N = 340 working people) uses constructs from lay theories (i.e., lay beliefs and attitudes) as well as the theory of planned behavior (attitudes, intentions, subjective norms, and perceived behavioral control) to predict networking behaviors. Findings show that subjective norms and perceived behavioral control are the strongest determinants of networking behavior, whereas attitudes are of less importance. Effects of lay theories appear to occur only under specific boundary conditions. Our findings thus point to subjective norms and perceived behavioral control as potent levers to foster networking behavior. They also suggest that research should move beyond individual dispositions as determinants of networking and should take contextual determinants (i.e., norms) into account.

CAR: **Understanding How New Professionals Learned and Grew After Covid-19: Social and Digital Learning**

Author: **Nicola Anne Thomas**, *Sheffield U. Management School*

Author: **Helen Philippa Narelle Hughes**, *U. of Leeds*

Author: **Ruri Proto**, *Sheffield U. Management School, U. of Sheffield, UK*

Drawing on competing theoretical perspectives of Social Learning Theory and Socio-Technical Systems Theory, we investigate competency development in early-career professionals across in-person, remote, and hybrid work and educational settings, covering the phases before, during, and after the Covid-19 pandemic. Contrary to traditional assumptions from Social Learning Theory, our results demonstrate that competency development is not compromised in remote and hybrid environments, challenging the idea that face-to-face learning is superior. Additionally, our findings show that a hybrid educational background equips early career professionals with a higher competency baseline as they transition to the workplace than either in-person or fully remote education. This advantage, we argue, arises from practicing the simultaneous processing of complex social cues in both online and physical environments in their education—a concept we introduce as ‘Socio-Digital Learning’. Our conclusions draw from a distinctive sample: 905 individuals embarking on a full-time, paid, graduate-level placement year, marking their initial year in a professional setting. This study challenges assumptions about early-career competency development amid macro-changes like remote work.

CAR: **Augmentation or Compensation: How do Newcomers' Relational Resources interact to Predict Engagement?**

Author: **Helena Cooper-Thomas**, *Auckland U. of Technology (AUT)*

Author: **Jenny Chen**, *U. of the West of England*

Author: **Gordon W. Cheung**, *U. of Auckland*

Author: **Linda Trenberth**, *Birkbeck U. of London*

Newcomer proactive behaviors have positive, null, and sometimes contingent associations with adjustment outcomes. To further understand past mixed results, we draw on alternative theoretical perspectives to investigate how the newcomer relationship-building behavior of general socializing interacts with other relational resources to predict emotional and cognitive engagement. First, applying conservation of resources theory, we argue an augmentative effect under high insider guidance (via serial tactics). Second, utilizing attachment theory, we argue a compensatory effect under low insider guidance (via serial tactics). In Study 1 at a Chinese food manufacturer, unexpectedly, we found significant positive relationships between general socializing and engagement irrespective of serial tactics' level. Drawing on the relational perspective of engagement, we propose structural factors provide a boundary condition, and therefore we extend our investigation to include task interdependence as a moderator. In Study 2 at an Australian university, the results support a compensatory effect of general socializing: When newcomers experience low serial tactics under low task interdependence, general socializing predicts higher emotional and cognitive engagement. However, when newcomers experience high serial tactics under low task interdependence, general socializing is detrimental for cognitive engagement. This supports a relational perspective combined with attachment-seeking in understanding resource combinations predicting newcomer engagement.

Career Decisions and Performance of Specific Occupational Groups

Session Moderator: **Yuejun Lawrance CAI**, *HKUST Business School*

CAR: **The Surname Order Bias Undermining Scholar's Working Performance** 

Author: **Yuejun Lawrance CAI**, *HKUST Business School*
Author: **Kin Fai Ellick Wong**, *Hong Kong U. of Science and Technology*
Author: **Jessica Yuk Yee Kwong**, *Chinese U. of Hong Kong*

Citation rate is commonly regarded as a measure for determining the performance of individuals working in academia. Previous studies using archival data found that the alphabetical order of researchers' surnames influences their citation rate. However, the causality in their findings was limited because their methodology could not rule out alternative explanations, and the effect of the order on in-text citation decisions across different citation systems has been under-investigated. Accordingly, the present study experimentally manipulated citation systems and the alphabetical order of first authors' surnames in a hypothetical article. Our findings indicate that references from first authors with earlier (vs. later) alphabetical order surnames were more likely to be cited. This effect was stronger under the alphabetical citation system compared to the numerical system. Practically, these findings highlight the need for improving the alphabetical citation system to enhance the communication and dissemination of knowledge and objectivity in evaluating scholars' research impact.

CAR: **Staying in a Stigmatized Industry: a Relational View of Passion in Hospitality** 

Author: **Kyoung-Hee Yu**, *U. of Technology, Sydney*
Author: **Mihajla Gavin**, *U. of Technology Sydney*

What motivates someone to stay in or leave a stigmatized industry? During the turbulence of the COVID-19 pandemic, many workers left 'stigmatized' industries, yet, curiously, many endured in them, or even returned despite varied challenges. Drawing upon concepts of the 'passion principle' and 'stigma', this article develops a relational view of the passion principle, proposing that passion can enable workers in stigmatized industries to defy stigma and reframe the meaning behind negative social evaluations of their industry. We draw upon insights from an empirical qualitative study which examined decisions of workers and business owners to stay in or leave the Australian hospitality industry during the COVID-19 pandemic. Our theoretical contribution lies in explaining 'passion' for work in terms of social support and relationality, departing from extant explanations of passion via self-fulfilment. In addition to contributing to scholarship on the meaning of work, we also contribute to literature on responses to stigmatization of work by proposing that passion enables workers in stigmatized industries to defy stigma and reframe the meaning behind negative social evaluations of their industry.

CAR: **Trade Union Officers' Departure Decisions: A Comparative Study**  

Author: **Lorenzo Frangi**, *UQAM U. of Quebec in Montreal, Canada*
Author: **Andrea Signoretti**, *U. of Trento*
Author: **Tingting Zhang**, *U. of Illinois at Urbana-Champaign*

Our research examines the factors influencing trade union officers' decisions to leave their profession in Canada, Italy, and the United States, identifying three key determinants unique to their line of work: push, pull, and values. Utilizing 101 semi-structured interviews, we develop a six-category typology rooted in these factors. The findings emphasize a notable disconnect between officers' values and union missions or operations, coupled with significant impacts from national industrial relations systems, an understudied factor in career management. We also explore the implications of these findings for union organizational policies.

CAR: **Take a Stance, Take the Lead? CEO Career Concerns and Social Media Use** 

Author: **Jule Klass**, *U. of Goettingen*

This study provides evidence that CEOs' career concerns affect their use of social media. We hypothesize that CEOs who are relatively more concerned about the assessment of their abilities have stronger incentives to signal their talent to the market using social media. We find that CEOs in the early stage of their career are more likely to engage in social media. The positive association of CEO career concerns and social media use holds when examining non-firm as well as controversial social media use and is weakened by an increasing CEO-TMT pay gap. We contribute to research on factors determining CEOs' use of social media.

A Careers Approach of Entrepreneurship

Organizer: **Seyeon Kim**, *Stanford Graduate School of Business*
Presenter: **Tristan L. Botelho**, *Yale School of Management*
Presenter: **Aleksandra Joanna Kacperczyk**, *London Business School*
Presenter: **Tiantian Yang**, *U. of Pennsylvania*
Discussant: **Olav Sorenson**, *UCLA Anderson School of Management*

Research investigating how entrepreneurship interacts with individual career outcomes and trajectories are continuing to grow. The proposed symposium highlights the value of this careers approach of entrepreneurship in expanding our views of both entrepreneurship and of career processes. The symposium brings together a group of scholars that have been advancing this exciting field of inquiry to foster further exchanges and growth. Presentations will showcase questions around who are able to successfully transition into entrepreneurship or exit entrepreneurship to re-enter paid employment, as well as around who are able to reap benefits from entrepreneurship.

Presenter: **Bethany Cockburn**, *Northern Illinois U.*
Participant: **Michael B. Arthur**, *Suffolk U.*

The irreversible global trend of population aging and its critical implications for labor supply have led to a significant increase of scholarly interest in the areas of aging, transition, and retirement (Froidevaux, 2024). Although research efforts have enhanced our understanding of retirement and its antecedents and outcomes (Wang & Shi, 2014), current knowledge about aging and retirement is far from complete (Wang & Huang, 2023). This symposium consists of four papers, each addressing important research questions at one or more of the retirement phases according to the temporal process model of retirement (Shultz & Wang 2011; Froidevaux, 2024): retirement planning and decision making, bridge employment, retirement transition, and retirement adjustment. To first provide an overview on the entire retirement process, we start with Paper 1 on how the self and life structure interact during the four phases of the retirement process, followed by three papers that look into a specific phase. Digging into the retirement planning and decision-making phase, Paper 2 explores the challenges aging leaders are facing before retirement so that they anticipate (retaining) losing relevance in the organization, followed by Paper 3 that discusses how spirituality fosters sustainable careers so that the decision to retire fully may no longer be necessary for psychological reasons only. Finally, addressing the retirement adjustment phase, Paper 4 examines how emeriti professors enact their lives after retirement and what factors contribute to their life satisfaction.

Ethical Decision-Making and Behavior: The Role of Morality, Whistleblowing, and Leadership

Session Moderator: **Vivek Mishra**, *Indian Institute of Management, Lucknow*

CM: **Whistleblowers' Enigma Amidst Subjective Unethicality in Unethical Pro-Organizational Behavior**

Author: **Vivek Mishra**, *Indian Institute of Management, Lucknow*

This research delves into the whistleblowing intentions of observers of unethical pro-organizational behavior (UPB), utilizing the moral foundation theory to suggest a tradeoff between loyalty and fairness resulting from observed UPB. We propose that observers favoring loyalty over fairness are likely to indicate their intentions to blow the whistle, with this relationship being influenced by the perceived ethicality of observed UPB. In a multi-phase study involving vignettes, data was collected from 292 workers in the USA. Our results demonstrate that the loyalty and fairness dilemma significantly predicts both internal and external whistleblowing intentions among observers. Importantly, the mediation pathway through perceived ethicality is effective, particularly in the context of UPB. These findings contribute to the UPB literature by highlighting how the pro-organizational aspect of UPB can pose additional challenges to employees' whistleblowing efforts by masking UPB as ethical conduct. Additionally, studying whistleblowing as observers' reactions to UPB adds layers of complexity to the existing whistleblowing literature as well, providing a more nuanced understanding of the varying ethical challenges of whistleblowing. The UPB-specific perceived ethicality mediation pathway underscores the role of subjectivity in the individuals' perception as the whistleblowing barrier when the unethicality of observed behavior depends greatly on the social norms and cultural acceptance.

CM: **People Punish False Information Less than Stems from Biased Beliefs than Dishonesty**

Author: **Laura Wallace**, *U. of Chicago Booth School of business*

Author: **Emma Levine**, *U. Of Chicago*

A fruitful literature has examined the consequences of dishonesty and lying in particular. However, lying is only one source of false misinformation. When communicators fail to seek out accurate information or verify the information they have, they may form biased beliefs. When communicators share these beliefs, they contribute to misinformation. In the present work, we examine reactions to false information stemming from a communicator's biased beliefs ("bias") versus a communicator's decision to lie ("dishonesty"). Five studies demonstrate that people are less likely to punish falsehoods from biased versus dishonest communicators, even when these processes are intentional and lead to identical harms. Increased punishment of dishonesty is driven, at least in part, by the belief that dishonest actors are less constrained by moral rules and norms than (even intentionally) biased actors. By providing insight into how people react to false information from biased communicators, this work deepens our understanding of multiple facets of deception, broadens the field's understanding of sources of societal conflict, and sheds light on the challenges associated with punishing misinformation.

CM: **How Trust Congruence Influences Unethical Pro-Supervisor Behavior**

Author: **Karim Mignonac**, *U. of Toulouse Capitole*

Author: **Marie Caussimont**, *U. of Toulouse Capitole*

Author: **Jennifer Boutant**, *U. of Toulouse Capitole*

Author: **Caroline Manville**, *U. of Toulouse Capitole*

Recent research and conventional wisdom suggest that behavioral demonstrations of trust by supervisors toward their subordinates are most effective when those demonstrations match subordinates' desires. In the present research, we offer a more nuanced view by identifying one downside of a match between supervisors' expressions with subordinates' desired trusting behaviors (i.e., trust congruence). Drawing on social exchange theory and social cognition theory, we argue that trust congruence helps promote positive social exchange relationships between supervisors and subordinates. The desire to maintain or reinforce these relationships, in turn, leads subordinates to engage in unethical pro-supervisor behavior indirectly via moral disengagement. We further argue that ethical leadership represents an important boundary condition with regard to this process, as it guides subordinates' social exchange responses and thus prevents them from engaging in behaviors that are not aligned with the ethical expectations of their supervisors. Our model is supported by two time-lagged field studies. This research improves our understanding of the ethical consequences of trust congruence and has practical implications for organizations seeking to support trust-building initiatives.

CM: **Charisma and Humanity: The Powerful Signals of Effective Leadership in Times of Uncertainty**

Author: **Stephanie D. Gapud**, *Spring Hill College*

Author: **Faith Fox**, *U. of Evansville*

Author: **George Richard Faint**, *Troy U.*

Author: **Wendelyn Risher**, *Southeastern Oklahoma State U.*

Drawing on signaling theory and using a partial least squares structural equation modeling (PLS-SEM) approach, we analyzed secondary data from 59 countries to understand the impact of leadership styles, national culture, corruption, and community mobility on COVID-19 outcomes. Our findings reveal that leadership styles characterized by charisma and a humane orientation positively influence community mobility, leading to better quarantine behavior and improved COVID-19 outcomes. Furthermore, we find that cultural dimensions, particularly uncertainty avoidance, play a significant role in shaping leadership perceptions and subsequent community responses. This study underscores the importance of effective communication by leaders, transparency, and trust-building during crises. This study also highlights the need to consider cultural factors when formulating crisis response strategies. These findings have implications for policymakers and leaders as they navigate future crises and work to promote positive public health outcomes.

Rising globalization of the workforce alongside increasing multinational trends in organizations means that workers are more likely than ever to work or study in another country at some point during their career. While a host of research has shown that multiculturalism increases creativity and innovation, much less is understood about how experience across cultures influences interpersonal dynamics at work. In particular, theory is underdeveloped on how experiences in another culture can reshape the way workers perceive and feel about others. In five papers, this symposium highlights the nuances in which multiculturalism influences people's beliefs and feelings towards others, including the mindset one should adopt when facing difficulties, the valuation of social connections, moral concern toward various others, and bias toward outgroup members. Overall, this symposium aims to contribute to research that helps organizations and members navigate new cultural situations in this increasingly globalized world.

Effective communication is fundamental to organizations - it is essential for building relationships, improving individuals' performance and lower well-being. However, people often struggle to navigate communications to achieve the intended interpersonal outcomes, resulting in misunderstandings, conflicts, lower performance, and well-being. In this symposium, we bring together leading scholars in communication research to share their most recent works that unpack how the way we communicate influences our impressions and relationships. The papers focus on various aspects of communication, including content (i.e., what to say), the temporal dimension (i.e., when or whether to respond), and interpersonal outcomes (i.e., people's impressions of their communication partners). They draw on empirical research conducted with various methods including surveys, experiments, natural language processing methods, and machine learning to investigate communication phenomena in multiple settings. The findings provide deep insights into how people make judgments and decisions in communication and suggest effective interventions that can guide communications for more positive outcomes.

Existing work on trust relationships and relational repair, which encompasses forgiveness and trust repair, has often focused on the victim-transgressor dyad. The development and repair of such relationships, however, is influenced not only by the two involved parties, but also those embedded in the surrounding network. The methodologically diverse papers that comprise this symposium highlight recent research that provides a more complete picture of factors that influence relationships and the relational repair processes of trust repair and forgiveness, such as the network surrounding an embedded negotiating dyad, the role of third parties, and the impact of publicity. Altogether, the papers in the symposium seek to invite discussion and future research on the roles of multiple parties in building and rebuilding relationships. Overall, this work further contributes to our understanding of relational processes, which will be increasingly important to study as the nature of work continues to evolve.

CMS: A Narratological Approach to Studying Internal Organizational Legitimacy

Author: **Kerrie Howard**, *Royal Holloway, U. of London*
Author: **Andrew D. Brown**, *U. of Bath*

Taking a narrative approach, this paper explores how in the face of contradictory official narratives members negotiate the legitimacy of their organization's practices. Based on an in-depth interview study of Walgreens Boots Alliance (WBA) we show that actors instantiated a contradiction between corporate narratives that championed healthism and pro-nicotine product sales. We analyze how members supported, contested, and adopted positions of silence and ambivalence in relation to the sale of tobacco products to make three sets of contributions to theory. First, this paper analyzes how contradictions are narratological formations that once constituted may raise significant issues of internal legitimacy. Second, we argue that the internal legitimacy of organizational practices and the official narratives that support them is negotiated discursively by members in their personal narratives in which they position themselves as moral agents. Third, we outline the implications of a narrative conception of internal legitimacy which suggests that it is talked into existence in a polyphony of competing discursive processes. Our theorizing suggests that internal legitimacy is more contested, and a more potentially fragile accomplishment than previously considered, but nevertheless often relatively stable and enduring.

CMS: Dialogical Accounting, Knowledge, and Power in a Public Policy Management Council 

Author: **Manuela De Almeida Fernandes Ferreira**, *Rio de Janeiro Legislative Assembly*
Author: **Fernanda Filgueiras Sauerbronn**, *U. Federal do Rio de Janeiro - UFRJ*
Author: **Cleia Maria Silva**, *U. Federal Rural do Rio de Janeiro*

Based on critical dialogical accounting literature, this research analyzed how accounting knowledge influences power relations and dialogical processes in a deliberative arena of social assistance policy in Rio de Janeiro, Brazil. The social assistance policy management council is a constitutionally defined deliberative instance, frequently defined, and analyzed by the Habermasian approach to explore its communicative action potential. However, we argue that accounting knowledge is fundamental in enabling and restraining democratic potential in achieving dialogical processes. We chose the Social Assistance Municipal Council of Rio de Janeiro as a single case study. Data collection involved documentary research, meetings, non-participatory observation, and interviews with representatives from the government, civil society, technical staff, and managers from the municipal secretariat. Results point to governmental and service providers' councilors dominating accounting themes, being an advantage in constructing argumentation on participatory decision-making. In contrast, councilors representing policy users revealed difficulties concerning accounting language and techniques, restraining dialogicity, and their capacity to sustain divergent positions on policy social control. Final discussions point to the need to embrace otherwise pedagogy to improve dialogical potency.

CMS: Philanthropy, Racial Justice Organizations, and the Political Economy of Accountability

Author: **Adam Saifer**, *U. of British Columbia, Okanagan*
Author: **Patrizia Zanoni**, *Hasselt U.*

Prompted by the Black Lives Matter movement, as well as COVID-19's deepening of societal disparities, philanthropic foundations in North America have increasingly claimed racial justice as a core part of their mission and grantmaking strategy. This study draws on the concept of racial capitalism to examine racial justice organizations' [RJOs] accountability relations towards their philanthropic funders. Drawing on interviews with leaders of 30 Canadian RJOs, we show how accountability relations towards white wealthy philanthropies tightly entangle RJOs in the political economy of racial capitalism, structurally undermining—both epistemically and materially—their capacity to promote racial justice. This analysis departs from extant accounts of RJO-philanthropy accountability relations which have focused on processes of depoliticization caused by RJOs' financial dependence on philanthropies. More specifically, we argue that accountability relations towards philanthropies place RJOs in a unique “bind of double dispossession”. To obtain material resources from philanthropies that are partially redistributing wealth expropriated from the racialized communities they represent, RJOs are expected to meet the epistemic demands of philanthropies. In doing so, they reproduce the partitioning that legitimizes and fuels the accumulation of philanthropic assets under racial capitalism. This study advances the critical philanthropy literature by showing how the political economy of philanthropy and donor-grantee relations are reciprocally connected in ways that re-entrench the material and epistemic foundations of the racial capitalist social order.

CMS: Organizational Wrongdoing Within the UN Sustainable Development Goals: A Bibliometric Analysis 

Author: **Liliya Mergaliyeva**, *Henley Business School, U. of Reading, United Kingdom*
Author: **Irina Heim**, *Henley Business School, U. of Reading, United Kingdom*

The purpose of this study is to map the literature on organizational wrongdoing in the context of the United Nations Sustainable Development Goals (SDGs) using metadata extracted from a large set of academic journal articles indexed in the Web of Science database for the period 2000-2023. Sources were identified from databases across the fields of economics, business and management. The inclusion criteria targeted articles explicitly discussing organizational wrongdoing and their relation to SDGs, with a focus on the SDGs' three pillars: social, environmental and economic aspects. Our analysis revealed the absence of a univocal definition of organizational wrongdoing across the identified disciplines, surfacing a various interpretations that frequently align with one or more of the SDGs' three pillars. The extant literature associates organizational wrongdoing with specific SDGs, displaying concentrated patterns in geographic locations. Our analysis suggests that the interpretation of organizational wrongdoing is context-dependent, varying across different geographies. Hence, this study contributes to a more cohesive understanding of organizational wrongdoing in the context of SDGs and proposes the foundation for a novel conceptual framework. It highlights the need for a novel, systematic approach to understanding wrongdoing and encourages further interdisciplinary research to develop frameworks that align organizational practices with SDGs.

Scheduled: **Monday, Aug 12 2024 9:45AM - 11:15AM CT (UTC-5)** at **Fairmont Chicago Millennium Park** in
Diplomat Room

Creative Democracy: Enlisting Pragmatist Ethics for Sustainable Organizations

Facilitator: **David Jarrett**, *U. of Missouri, Kansas City*

Panelist: **Barbara Simpson**, *U. of Strathclyde*

Panelist: **Catherine Casler**, *Northumbria U.*

Panelist: **Line Revsbaek**, *Aalborg U.*

Panelist: **Matt Statler**, *New York U.*

In this symposium, the panelists will draw from classical Pragmatism to deliver fresh insights on enlisting creative democracy for ethical action in support of sustainability. The symposium will 1) surface themes that offer promise to sustainability research, education, and practice based on the vision of creative democracy found in Pragmatist scholarship, 2) provoke participants to consider from which ideas we must separate ourselves in order to advance sustainability research and practice, 3) present promising examples of management practice and education interventions that benefit – or would benefit – from stronger roots in Pragmatist ethics, and 4) create a dialogue between audience members and panelists on what Pragmatist ideals of creative democracy and ethics imply for sustainability.

Chatbots: What Are They Good For?

Session Moderator: **Matthias Soellner**, *U. of Kassel*

CTO: **Overcoming the Stigma Barrier: Conversational Information-Seeking from AI Chatbots vs. Humans**

Author: **Behnaz Bojd**, *U. of California Irvine*

Author: **Aravinda Garimella**, *U. of Illinois at Urbana-Champaign*

Author: **Haonan Yin**, *U. of California, Irvine*

Timely access to information plays a critical role in mitigating the impact of challenging circumstances. However, stigma presents a significant barrier to information-seeking. We examine the willingness to seek information from AI chatbots in stigmatized situations. Using a series of randomized controlled experiments, we analyze the effect of stigma on individuals' likelihood of seeking information from AI chatbots versus human experts. We examine the need for anonymity and privacy as potential mechanisms. Our findings show that individuals prefer human experts to AI chatbots in general (algorithm aversion); however, they prefer AI chatbots in stigmatized situations. This effect is more pronounced among individuals with high anonymity concerns and is mediated by information source-specific anonymity concerns. Our findings provide actionable insights to healthcare providers and organizations working with stigmatized issues to employ AI chatbots on their websites and support lines. Chatbots can provide timely access to critical information, catering to the needs of individuals who might be hesitant to engage with human experts initially.

CTO: **AI for High-Value Customers: Examining the Impact of VIP Status on Customer Interaction**

Author: **Bin Li**, *Harbin Institute of Technology*

Author: **Nakyung Kyung**, *National U. of Singapore*

Author: **Dandan Qiao**, *National U. of Singapore*

Author: **Luning Liu**, *Harbin Institute of Technology*

Companies are increasingly providing customer service through artificial intelligence (AI) agents, helping customers on a real-time basis. Furthermore, AI agents grant VIP status to high-value customers. This study investigates how the granting of VIP status via AI agents affects customers' resistance to AI. By leveraging the secondary data from a large telecommunication company, we examine how the granting of VIP status via AI agents affects customers' resistance to AI agents in call center customer service. Our result suggests that granting VIP status via AI agents increases their transfer requests to human agents and decreases the interaction rounds. Moreover, our results reveal that AI resistance is heterogeneous depending on the type of work. The resistance is increased for problem feedback, transactional service, and information query. However, for business consultation, the resistance of high-value customers with VIP status is not salient. We also provide additional evidence for the underlying mechanism that VIP status reduces their effort in the human-AI interaction process. Therefore, high-value customers are more likely to transfer to human agents. Practical and theoretical implications will be provided further.

CTO: **Can Chatbots be Emotional? Understanding the Impact of Chatbots' Emojis on Consumer Response**

Author: **Tiantian Wang**, *Alliance Manchester Business School, U. of Manchester*

Author: **K. Nadia Papamichail**, *Alliance Manchester Business School, U. of Manchester*

Author: **Sahar Karimi**, *U. of Liverpool Management School*

Chatbots have become an important tool for communicating with customers. This study examines how emojis can affect such communications by expressing emotion. Grounded on Emotional Contagion Theory, this paper examines the effect of emoji usage by chatbots on customer relationship perception and its sequential impact on purchase intention. Through three experiments, we show that the use of emojis can increase the perception of customer-chatbot rapport, and this relationship is serially mediated by the perceived chatbot emotion and consumer pleasure. The impact of emojis usage on customer-chatbot rapport is moderated by the presence of semantic grounding. We also demonstrate that customer-chatbot rapport positively influences purchase intention. We contribute to the literature by demonstrating how emojis affect rapport building, the underlying mechanism and boundary conditions. This research provides important implications for marketing managers and chatbot developers in terms of the design and implementation of chatbots.

CTO: **Mitigating Chatbot Communication Breakdown: A User-Chatbot Congruence Perspective**

Author: **Weiyu Wang**, *U. of Oklahoma*

Author: **Hua (Jonathan) Ye**, *U. of Oklahoma*

Author: **Radhika Santhanam**, *U. of Oklahoma*

The rapid expansion of chatbot use redefines the boundaries between human agents and technology in customer service sectors. Chatbots are revolutionizing service delivery by providing instantaneous responses, diminishing wait times, and tailoring personalized services. Despite these benefits, numerous cases of communication breakdown and low chatbot efficacy have been reported in the news. Research has mainly examined the influence of anthropomorphic designs on chatbot efficacy. Nevertheless, there remains a need for more understanding of the drivers of communication breakdown, e.g., the congruence between a user's goal specificity and a chatbot's communication style. Adopting the Communication Accommodation Theory, we examine how the congruence between user goal specificity and chatbot communication style influences users' perceived communication breakdown and frustration. Furthermore, it delves into the role of disclosing employee involvement as a strategic tool to alleviate user frustration during these breakdowns. To answer the research questions, we conducted an online experiment. We found that the congruence significantly reduces communication breakdown, and that communication breakdown mediates the relationship between congruence and user frustration. In addition, the disclosure of employee involvement mitigates the impact of communication breakdown on users' frustration. Our research contributes to chatbot literature by revealing the antecedents and outcomes of communication breakdown from a congruence perspective. These findings not only enrich our understanding of effective chatbot design but also underscore the importance of human employees in digital customer service environments.

When AI Gives Advice Do We Listen?

Session Moderator: **Anuschka Schmitt**, *U. of St. Gallen, Institute of Information Management*

CTO: **Predictive Algorithms as Legitimizing Resources (WITHDRAWN)** 

Author: **Sino Esthappan**, *Northwestern U.*

Predictive algorithms are quantitative decision-making aids that have rapidly proliferated across organizations. While predictive algorithms are associated with organizational legitimacy, they also yield errors that may undermine the authority of decision-makers. How do organizational actors navigate this contradiction? In this article, I use qualitative data from four large US criminal courts to investigate how judges made pretrial release decisions using algorithmic risk assessments. I find that judges selectively invoked risk scores to reconcile contradictions in highly salient bureaucratic, legal, and political institutional logics. These findings highlight how organizational processes enable judges to mobilize risk scores as legitimating resources.

 CTO: **Between Formal Authority and Authority of Competence – The Mechanisms of Algorithmic Conformity** 

Author: **Yotam Liel**, *Coller School of Management, Tel Aviv U.*

Author: **Lior Zalmanson**, *Coller School of Management, Tel Aviv U.*

In the era of AI-human collaborations within organizations, preserving independent human judgment is crucial. Recent studies reveal a concerning trend known as "algorithmic conformity," where individuals frequently adhere to flawed algorithmic recommendations. Despite the documented prevalence of this behavior, the underlying mechanisms have remained elusive. Addressing this gap, our study proposes two key mechanisms influencing individuals' conformity to algorithmic recommendations in work-related contexts: the perceived superior capabilities of algorithms ("authority of competence") and the belief that these algorithms may hold formal authority in the work environment, including the ability to enforce consequences for non-compliance ("formal authority"). Through realistic gig-work simulations involving 1,134 participants, our experiments demonstrate that algorithmic compliance is driven by perceived competence but is significantly amplified when workers attribute formal authority to algorithms. Additional experiments reveal that explicitly acknowledging AI's formal authority intensifies algorithmic conformity. Remarkably, this inclination persists even in task domains perceived as less suitable for AI, such as facial sentiment recognition. In this context, algorithmic conformity is primarily driven by perceptions of formal authority rather than competence. These findings underscore the inherent risks associated with algorithmic collaboration, emphasizing the imperative to educate, empower and train humans-in-the-loop to exercise their judgment in gig-economy settings and beyond.

CTO: **From Lay Belief to Advice Adoption: Expectation Violations and Trust in Algorithmic Advisors**  

Author: **Li Lu**, *West Chester U. of Pennsylvania*

Author: **Bei Yan**, *Stevens Institute of Technology*

We increasingly employ algorithms to offer advice to employees in various organizational contexts. Yet, existing research has found conflicting evidence regarding how people utilize advice provided by algorithms. Extending algorithmic advice research, our study integrates expectancy violation theory and the trust literature to investigate a set of serial psychological mechanisms linking people's lay beliefs of algorithms and their adoption of algorithm advice. Specifically, we examine how advisor type (algorithms versus humans) interacts with information type (subjective, e.g., social skills, versus objective, e.g., standard test scores) to affect people's expectation violations, trust in advice, and their ultimate advice adoption. Through two online experiments, we show that people view algorithm advice based on subjective information as violating their expectations more than that based on objective information. Concurrently, they perceive human advice based on objective information to violate their expectations more. This effect predicts their trust in the advice offered by algorithms and humans, which affects their likelihood of change their decisions based on the advice. These findings highlight the importance of considering user expectations when understanding the influence of algorithm advice on decision making.

Remote Work: The Influence of Corporate Policies and Technologies

Session Moderator: **Abhishek Behl**, *Keele Business School, Keele U., U.K*

CTO: **The Effect of Mobile Device Management on Work-From-Home Productivity: Insights from US Public Firms**

Author: **Jaechol Park**, *Sauder School of Business, U. of British Columbia*
Author: **Myunghwan Lee**, *Sauder School of Business, U. of British Columbia*
Author: **Gene Moo Lee**, *Sauder School of Business, U. of British Columbia*

The use of mobile IT, providing employees with accessibility, flexibility, and connectivity, has become increasingly vital for businesses, especially for work-from-home during the COVID-19 pandemic. However, despite its prevalence and importance in the industry, the business value of mobile device management (MDM) and its role in establishing digital resilience remain underexplored in the literature. To address this research gap, our study examines the effect of MDM on a firm's resilience to the pandemic. Drawing on the resource-based view (RBV), we utilize novel proprietary data from a global MDM solution provider for U.S. public firms. We find that firms with MDM have better financial performance during the pandemic, demonstrating greater resilience to the shock. Additionally, we explore the moderating role of external and internal factors, revealing that firms with high environmental munificence or those with low IT capabilities experience greater resilience effects from MDM. Furthermore, we observe heterogeneous effects across industries that firms in industry sectors demanding greater mobility have a greater resilience effect from MDM. This study contributes to the information systems literature by emphasizing the business value of MDM and its crucial role in building digital resilience.

CTO: **Employee Voice in Enterprise Social Media**

Author: **Tuba Bakici**, *ISC Paris Business School*
Author: **S. Kubra Canhilal**, *Institut Supérieur de Gestion*
Author: **António Cunha Meneses Abrantes**, *TBS Business School*

In an era of digital connectivity, understanding the complex dynamics of employee voice behavior in new channels like enterprise social media is crucial for cultivating a robust workforce and essential to harness the full benefits of such technologies. This study, grounded in regulatory focus theory, investigates how the affordances of visibility and persistence within ESM influence the relationship between perceived organizational justice, utilitarian motivation, and employees' voice behavior. Through two studies, we explore these relationships. Study 1 (N=102) employs an experimental design to examine the impact of organizational justice on voice behavior in a hypothetical enterprise social media context exploring whether utilitarian motivation mediates this relationship. In Study 2, we collected survey data (N=439) from actual ESM users at three different time points in which we examined both the direct and indirect effects of organizational justice on ESM voice behavior, considering the moderated mediation role of persistence and visibility affordances. The findings, derived from two distinct studies, revealed utilitarian motivation as a crucial mediator in the relationship between organizational justice and ESM voice. Study 2 presented that persistence affordance mitigates the impact of perceived justice and utilitarian motivation on voice.

CTO: **Unraveling the Ramifications of Organizational Sanctions Against Moonlighting**

Author: **Sahil Raj**, *Punjabi U.*
Author: **Amanpreet Singh**, *Research methodology*
Author: **Amit kumar Bhardwaj**, *L.M. Thapar School of Management, Thapar Institute of Engineering & Technology*
Author: **Abhishek Behl**, *Keele Business School, Keele U., U.K*
Author: **Pawan S. Budhwar**, *Aston U.*

In the recent past, organizational sanctions against moonlighting have grabbed the researchers' attention, yet this area of research is still nascent. Our study augments the understanding of the possible ramifications of organizational sanctions against moonlighting on employees. It is based on a mixed-method approach to identify the negative stimulus (organizational sanctions against moonlighting), negative intrinsic states (feelings of organizational cynicism and feelings of organizational deviance), and coping mechanisms (knowledge-hiding intentions and intentions to quit). Since no scales are currently available to measure organizational sanctions against moonlighting, this study first develops and validates a new multi-item scale to measure organizational sanctions against moonlighting. Our conceptual model is anchored on the Stimulus-Organism-Response Theory (SOR). Based on the data collected in two waves (longitudinal research design) from 550 Indian IT industry employees, the results confirm the mediating influence of feelings of organizational cynicism and feelings of organizational deviance. The results also indicate Enterprise Social Media (ESM) has a positive and significant influence as a moderating variable on the association of feelings of organizational cynicism and knowledge-hiding intentions and intentions to quit, respectively.

In the Wake of Digitalization: Examining Processes and Tensions of Technological Change

Presenter: **Jennifer Lauren Nelson**, *U. of Illinois at Urbana-Champaign*
Organizer: **Jennifer Lauren Nelson**, *U. of Illinois at Urbana-Champaign*
Presenter: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*
Organizer: **Hatim A. Rahman**, *Northwestern Kellogg School of Management*
Discussant: **Susan Scott**, *Imperial College Business School*
Participant: **Stella Pachidi**, *U. of Cambridge*
Presenter: **Lior Zalmanson**, *Coller School of Management, Tel Aviv U.*
Presenter: **Shani Evenstein Sigalov**, *Tel Aviv U.*
Presenter: **Virginia Leavell**, *Cambridge Judge Business School*

This symposium examines the myriad consequences wrought by digital transformations in organizations and industries: intended, unintended, and corollary. As categorized by Scott and Orlikowski (2022), intended consequences generated through technological change are usually visible and anticipated; unintended consequences are similarly visible and direct, but unanticipated; and less visible, indirect corollary effects occur when digitalization challenges institutional values, norms, and rules in industries, potentially displacing them. Papers in this symposium address research questions related to knowledge production, workers' mobility in labor markets, and change management, all with respect to how digitalization transforms organizations and industries. By exploring these questions in research contexts such as Wikipedia, digital labor markets, information services, and agencies that maintain public infrastructure, this symposium advances research on how digitalization transforms industries in not only a direct, but also indirect, pathways. By grappling with different kinds of "changes occurring at some temporal and spatial remove from the main events" (Orlikowski & Scott, 2023, 2), the four papers in this symposium provide the opportunity to clarify and build on conceptual differences among different types of technological changes and their outcomes using examples of industries being digitalized.

Misinformation: Covid, Climate Change, and “Reliable” Sources

Session Moderator: **Romilla Syed**, *U. of Massachusetts Boston*

CTO: **Longitudinal Analysis of Health Misinformation: A Case of COVID-19 Pandemic**

Author: **Romilla Syed**, *U. of Massachusetts Boston*
Author: **Archana Shinde**, *U. of Massachusetts, Boston*
Author: **Emmanuelle Vaast**, *McGill U.*

We conduct a longitudinal analysis of health misinformation to understand its temporal patterns and impact on public health behaviors. Informed by the Health Belief Model, we analyzed 12521 fact-checked claims related to COVID-19 posted between Jan 03, 2020, when the pandemic emerged, and May 11, 2023, when the public health emergency ended. Keeping up with the computational theory construction paradigm, we employed several methods to identify health belief topics, claim veracity (i.e., true, false, or misleading), media of origination (i.e., social or web media), and modality (i.e., lean or rich). Following the temporal bracketing approach, we analyze the patterns of misinformation (i.e., false and misleading claims) during eight stages encompassing several surge and recovery periods, as well as emergence and wind-down. Furthermore, we correlated misinformation patterns with vaccination trends to determine the impact of misinformation on public health behavior. Based on the empirical evidence, we develop propositions to theorize about the phenomenon of misinformation and health behavior. This study contributes by conducting a longitudinal analysis of health misinformation and provides insights into the patterns of health beliefs that originate on social and web media in different modalities. Further, this study contributes by providing insights into the impact of misinformation on health behaviors. The insights might interest several public health experts and policymakers in designing better communication and intervention strategies to counter the false narrative about the pandemic. The study could also inform the development of better approaches to identifying, monitoring, and fact-checking misinformation. Finally, the study lays the ground to examine further motivations, mechanisms, and impacts of sharing health misinformation on online platforms.

CTO: **Presidential Communications During the Pandemic: Mediating Polarization & Trust, Moderating Mobility**

Author: **Mikhail V. Oet**, *Northeastern U.*
Author: **Tuomas Takko**, *Aalto U.*
Author: **Xiaomu Zhou**, *Northeastern U.*
Author: **Ryan Oet**, *Swarthmore College*

Crisis communication from government officials requires carefully constructed strategies to maintain public trust, reduce uncertainty and improve compliance with non-pharmaceutical interventions during pandemics and other crisis-like scenarios. At the same time, communication can reduce or increase the polarization of public sentiment toward government actions. While data on government communications and public social media is widely available, the means to process the vast range of possible opinionated groups, populations, and themes are complex and computationally demanding. In this study, we investigate a system model consisting of novel measures to measure public trust and emotional polarization, government officials' communications, and physical outcomes related to the pandemic in terms of compliance with restrictions, public health, and forward-looking economic conditions. We present methods for measuring emotional polarization in public Twitter discourse by constructing components with reduced dimensionality from the numerous sentiments in the unstructured text. We apply the methods to two months of data from the USA using the different states as separate subsystems. Our results show that the Presidential Communications on Twitter mediate the relationship between the pandemic public health outcomes with social media polarization and public trust. In contrast, some results still need to be more conclusive within the two-month dataset used in the evaluation. Most notably, polarization varies between user populations in different states.

CTO: **Climate Misinformation Production: Beliefs, Physical Environmental Experiences, and Affordances**

Author: **John-Patrick Akinyemi**, *UT Austin*
Author: **Sirkka Jarvenpaa**, *U. of Texas at Austin*
Author: **Thushara Gunda**, *Sandia National Laboratories*

The dynamic nature of climate facts and beliefs demands deeper exploration into the emergence, not just spread, of misinformation. Information Systems literature studies how repetition and replication affect misinformation spread, emphasizing nuances in its spread rather than emergence. To investigate misinformation emergence in a context characterized by fluid scientific evidence and undefined public beliefs, we examine: With what do beliefs interact to produce online climate misinformation? How and why do these interactions occur? How are physical and digital affordances involved? We conducted a single case study on Chemtrails (i.e., visible cloud formations) to explore when and how perceived misinformation about geoengineering initially started. Our findings underscore the significance of situational context in the complex relationship among climate beliefs, physical and digital experiences with cloud structures, affordances, and digital technology in producing perceived online misinformation. We highlight how repetition and replication are influenced by prior physical phenomena and the contextual factors surrounding visual content. For present and future innovation, it is crucial to connect innovations to everyday experiences and consider diverse environmental contexts when introducing them, ultimately shaping public opinion and acceptance.

Author: **Carlos Carrasco Farre**, *Toulouse Business School*

This study explores the mimetic isomorphism strategies used by actors in the media institutional field and the extent to which non-high-legitimacy sources (disinformation and misinformation) attempt to imitate high-legitimacy sources to signal veracity. Drawing on the literature on legitimacy, we investigate two main research questions: first, to what extent do non-high-legitimacy sources attempt to mimic high-legitimacy sources through mimetic isomorphism, and second, how do these mimicking strategies vary across different levels of legitimacy? Using a dataset of 93,958 media articles, we measure isomorphism through a similarity network of sources (calculated using natural language processing). Using this network, we calculate several centrality measures to measure how similar each category is to all the other categories through local assortativity and the shortest paths between them, to reveal the potential bridging role of medium-legitimacy sources, mediating the isomorphic behavior between low and high legitimacy sources. The results indicate that high-legitimacy actors are highly similar to other members of their category, indicating that they adhere to the same norms and practices as other high-legitimacy sources in the ecosystem. We also find that medium-legitimacy sources tend to mimic high-legitimacy sources through isomorphism, but this is not true for low-legitimacy actors. These findings have important implications for understanding the role of legitimacy in shaping strategic choices of misinformation sources and how it delimits a two-stage mimetic isomorphism mechanism in the media institutional field.

Discussant: **Alexandra Michel**, *Independent Researcher*
Participant: **Ella Hafermalz**, *Vrije U. Amsterdam*
Participant: **Maura Soekijad**, *Vrije U. Amsterdam*

This symposium explores how the field of technology and organization studies may benefit from paying more attention to the role of the body. As recent studies have shown, lived experiences, sensemaking, knowing, coordination and overall performance at work become reconfigured as emerging technologies reshape physical engagement and human interaction. Four papers will be presented exploring questions around how a focus on the body allows us to understand changes in knowing; situation awareness; movement at work; and coordination. The diversity of research settings (sports, police work, restaurants, and healthcare) offers us the possibility to reflect on boundary conditions and build conceptual bridges in examining the importance of an embodiment perspective for theorizing technology, work and organizing. Two discussants with expertise in embodiment will help connect the studies with the growing stream of literature on embodiment and will facilitate discussion with the audience to explore avenues for future research.

Bias and Differential Treatment

Session Moderator: **Marilla Hayman**, *Le Moyne College*

DEI: **Racial Bias in Performance Ratings – Unpacking the Source and Direction of Inaccuracy**

Author: **Marilla Hayman**, *Le Moyne College*

Author: **Cody Bradley**, *James Madison U.*

Author: **Lauren Simon**, *U. of Arkansas*

Accurate and consistent performance ratings are an integral part of equitable performance management systems, yet research suggests that there is a bias that favors White workers and disadvantages Black workers. As the nature and nuances of this bias are unclear, the aim of this study is to explore the sources and forms of racial differences in performance ratings and determine if these differences vary based on performance level. Through an experiment manipulating the race of hypothetical employees undergoing annual performance reviews (N = 306), we found performance rating differences between White and Black employees, depending on performance level and rater race. Specifically, Black raters tended to inflate the performance ratings of both Black and White employees at below-average levels of performance, while White raters allocated larger bonuses to White employees at average or above-average levels of performance. In addition to highlighting that these racial biases still exist, this study contributes to our understanding by exploring both the sources and targets of these biases as well as adding context to the discussion by showing that biases occur primarily when employees deviate from average performance levels.

DEI: **Intersecting Biases: Does Veteran Status Overcome Disability and Gender Disadvantages in Employment**

Author: **Mason Ameri**, *Rutgers Business School*

Author: **Terri R Kurtzberg**, *Rutgers Business School*

Author: **Adrienne Colella**, *Tulane U.*

Author: **Lisa Schur**, *Rutgers U.*

Author: **Douglas Kruse**, *Rutgers U.*

Author: **Meera Adya**, -

Using field, lab, and qualitative methodologies, we explore how veteran status influences employer reactions to job applicants and how it intersects with other marginalized populations based on disability and gender. First, a randomized field experiment examined responses to applications for over 6,000 customer service jobs. Next, a lab experiment investigated an applicant with a disability to assess the effects of veteran status on interviewing. A third quantitative and qualitative study explored people's perceptions on the topics of veteran status, disability, and gender as they relate to hiring. Results show that veterans are favored over nonveterans for hiring (based primarily on their greater trust in their skills and training). These results hold for candidates with disabilities, demonstrating that positive reactions to some identities may help mitigate the stigma associated with others. These findings shed light on our understanding of intersectionality, specifically which elements may be dominant when multiple identities collide.

DEI: **The Influence of Automation on Gender Bias in Knowledge Evaluations**

Author: **Shaoqin Tang**, *U. of Colorado, Boulder*

Author: **Ethan Poskanzer**, *U. of Colorado*

Automation and related technologies can now augment more tasks than ever and are being used to assist in the production of new knowledge. Although prior literature has started to explore the role of automation in knowledge production, our understanding of the mechanisms through which automation influences knowledge production remains incomplete. We address this gap by studying the impact of automation on gender bias in the evaluation of knowledge workers' inputs. Building on the literature on rational inattention, we argue that automation can mitigate gender bias in the evaluation of knowledge by assisting evaluators in overcoming explicit costs and opportunity costs associated with information processing. Utilizing data on open source software project collaboration on GitHub, we find that automating the contribution evaluation process is correlated with a higher acceptance rate for contributions from female contributors. Moreover, this effect is magnified when the knowledge contribution contains numerous elements and when evaluators are evaluating multiple contributions simultaneously.

DEI: **Decoding Authorship: Unveiling Global South Scholars in Academic Research**

Author: **Poonam Singh**, *Maynooth U., Ireland*

This study delves into the nuances of research article authorship, particularly focusing on the representation and perception of Global South Scholars (GSS) in the academic landscape. It examines how the presentation of an author's name, institutional affiliation, and country-specific details influence the interpretation of research quality. Drawing on existing literature and empirical analysis, we theorize whether research originating from Global South countries is perceived differently compared to similar studies from more developed regions. Our conceptualization reveals systemic biases and disparities in the academic evaluation process, highlighting the need for more inclusive and equitable recognition practices in scholarly awards. This research contributes to a better understanding of the underrepresentation of GSS and offers actionable insights to enhance diversity and inclusivity in the academic community.

Reality and Rhetoric of Inclusion

Session Moderator: **Chloe R. Cameron**, *Ivey Business School*

DEI: From Assimilation to Inclusion: The Role of Institutional Work 

Author: **Chloe R. Cameron**, *Ivey Business School*
Author: **Robert Austin**, *Ivey Business School*

As organizations continue to struggle to realize the potential benefits associated with diverse workforces, it is imperative that they deconflate mechanisms and outcomes associated with assimilation and inclusion. Doing so will enable them to shift the burden of conformity from disadvantaged individuals towards the organization, enabling more inclusive, productive work environments. Here, we apply the concept of institutional work to understand how this can be done in the context of varying interests among social groups. By studying the progression of neurodiversity employment, we find that a user-centric approach to alternative practice development can draw attention to problematic institutions and that selecting a high-order prevailing institution as a complementary input to inform the practice development process can enable more success in subsequent phases of institutional work. Finally, we introduce the construct of institutional sheltering and suggest its potential relevance to institutional work that would otherwise conflict with multiple prevailing institutions.

DEI: Walk the Talk, Walk the Tightrope: Complex Impact of Disability-Inclusion on Workplace Productivity   

Author: **Yanhua Bird**, *Boston U. Questrom School of Business*
Author: **Qi Li**, *Chinese U. of Hong Kong*
Author: **Xiaoyu Zhou**, *ShanghaiTech U.*

Despite growing recognition of the importance of Diversity, Equity, and Inclusion (DEI) initiatives in modern workplaces, the integration of physically disabled employees and its broader implications remain under-explored. This paper investigates the complex dynamics of disability-inclusion initiatives within organizations, particularly focusing on their impact on non-disabled coworkers' productivity and the role of frontline managers' managerial capacity. Utilizing a mixed-method approach that combines natural experiments and semi-structured interviews, we provide nuanced insights into the unintended productivity implications of DEI policies concerning physically disabled individuals. We find that although companies walk the talk, they are walking the tightrope. Specifically, our findings reveal a paradox: while frontline managers support disability-inclusion initiatives, limited managerial capacity leads to a reallocation of resources, inadvertently affecting the productivity of non-disabled employees. This effect is particularly pronounced among underperforming employees but is mitigated under female supervisors, who tend to prioritize performance feedback and focus on supporting subordinates' negative emotion management rather than boosting the morale. Our study contributes to the limited body of DEI literature on physical disability by examining productivity implications for coworkers and advancing the understanding of gender and leadership effectiveness in the context of disability-inclusion. The insights gained offer valuable policy implications for business practitioners seeking to navigate the challenges of integrating physically disabled employees without compromising overall productivity.

DEI: What Do We Actually Do to Include Each Other: Exploring the Content of Employee Inclusion Behaviors

Author: **Stacey L. Parker**, *U. of Queensland*
Author: **Niklas Steffens**, *U. of Queensland*

Drawing on Optimal Distinctiveness Theory (Brewer, 1991) as applied to workgroup inclusion (Shore, 2011), the current research examines received and exhibited workgroup inclusion behavior among employees. Content analysis of open-ended surveys from 233 employees' evidence clear themes of involvement, value signaling, interpersonal care, and identity acceptance. One additional theme of advancing equal opportunities emerged from analysis of exhibited inclusion behaviors, which was not apparent among reports of received inclusion behaviors. Our findings advance theorizing by suggesting that inclusion behaviors may be capable of facilitating one's sense of belonging as well as their sense of uniqueness. We therefore propose a new framework to more accurately capture how one employee inclusion behavior facilitates a state of 'optimal distinctiveness'. Indeed, this framework accounts for both belongingness and uniqueness pathways simultaneously, rather than treating these pathways as separate processes, as has been previously theorized (e.g., Randel et al., 2018). Recommendations for theoretical implications and future research on employee workgroup inclusion behaviors are discussed.

DEI: Language of Change: Building an Inclusive Culture Through Diversity Rhetoric and Narrative 

Author: **Xue (Sunny) Xiang**, *U. of Toronto, Rotman School of Management*
Author: **Soo Min Toh**, *U. of Toronto*

A fundamental culture change towards more inclusion in organizations is required to fully utilize the benefits of diversity. However, the know-how of creating a culture of inclusion has been underexplored. To address this gap, we explain how the diversity rhetoric and narratives organizations utilize play an essential role in the creation of such a culture through their impact on social majority middle managers' identity as leaders and their inclusive leadership behaviors. Drawing from the leadership perspective of culture change and the organizational change literature, we theorize a progress model of culture creation, such that organizational diversity rhetoric and narratives can either activate or subdue threats to social majority middle managers' leader identity, which can in turn decrease or increase their inclusive leadership behaviors. In this way, behaviors modeled by middle managers shape the culture of the team they lead, and the team-level culture change will eventually spread to affect the organization-level culture. We further propose two moderating mechanisms affecting the strength of the threat response: middle managers' past experience managing diversity and change and their perceived fairness of the organizational diversity policies.

Critical Issues Facing Asian Americans and Pacific Islanders (AAPI) at Work

Organizer: **Robert Lee Bonner**, *San Francisco State U.*
Organizer: **Alexander Lewis**, *UTSA*
Presenter: **Odilia Yim**, *U. of Toronto*
Presenter: **Duoc Van Nguyen**, *Teachers College, Columbia U.*
Presenter: **Yu-Shan Hsu**, *John Molson School of Business, Concordia U.*
Presenter: **Kyoung-Hee Yu**, *U. of Technology, Sydney*

The conversation surrounding Asian Americans and Pacific Islanders (AAPIs) within Western society carries a distinctive complexity. AAPIs are frequently portrayed as "model minorities," which has led to their exclusion from numerous discussions about equity. The apparent neglect of AAPI communities' experiences in both organizations and society underscores the imperative for us to address this issue. In this symposium, we present four papers associated with the special issue of *American Behavioral Scientist*, with the aim of addressing the lack of discussion surrounding the AAPI experiences in Western workplaces and society. The first paper unpacks the complexity in how AAPI populations—specifically the Chinese diaspora in Canada—choose to label themselves with respect to their ethnic identities. The second paper examines instances where AAPI employees are unable to walk away from microaggressions and instead must maintain working relationships with the aggressors, identifying two forms of microaggressions that are sustained in these relationships. The third paper examines the differential effects of the work-life balance tradeoff for AAPI and White employees, finding that AAPI employees often face greater conflict between work and family. The final paper introduces the idea of precarious multiculturalism to motivate a more substantive approach to inclusion, one which engages with social structure to engender system transformation towards more stable forms of multiculturalism. Collectively, these papers offer an interdisciplinary examination of the complexities of AAPI experiences in the Western context.

Participant: **Sarah S M Townsend**, *U. of Southern California*

There has been a growing impetus to delve deeper into the nuanced complexities of minority experiences in organizational research. This symposium goes beyond traditional gender, racial, and social class research to study minority groups previously understudied and intersections of identities. Our four presentations examine Asian American employees, lower SES females in negotiations, and social class transitioners, and unveil various forms of unique costs faced by these groups, from unacknowledged discrimination and exploitation to missed opportunities of negotiations and cultural mismatch. This symposium hopes to highlight the importance of breaking traditional dichotomies in diversity research and contribute to creating an inclusive workplace for everyone.

Women are exposed to and shaped by societal expectations and biases. They face societal stereotypes and biases that shape the experience of leadership in ways that constrain their agency and advancement. However, some of them have navigated the challenges and gained a foothold by bringing in new perspectives and leadership styles that positively transform organizational and societal cultures. Such seemingly equivocal findings of women's experiences in strategic leadership positions suggest a potential opportunity for theorizing and exploring the contextual conditions that determine the ways that women continue to shape and are shaped by the social environment around them. This symposium bridges the macro and micro divide to highlight not only how entities in the social environments, such as regulatory bodies, media, and online forums, continue to disadvantage women leaders but also how women in strategic leadership positions build on their leadership styles, social ties, and cognitive and behavioral factors to influence the social environment. As such, it examines such characteristics as both a cause and a consequence of women in leadership positions, to help uncover boundary conditions to existing theories related to gender diversity and social environments and bridge existing theories in the micro- and macro-organizational domains. Overall, the studies included in this symposium showcase how social environments influence the meaning of—and are influenced by—gender and diversity in leadership positions.

B-Corps

Session Moderator: **Marleth Judith Morales Marengo**, *U. of Alabama, Tuscaloosa*

ENT: **B Corp Certification and Early-Stage Venture Funding**

Author: **Theodor Lucian Vladasel**, *U. Pompeu Fabra and Barcelona School of Economics*

Author: **Timo Hans Van Balen**, *Utrecht U. School of Economics*

Does B Corp certification help startups acquire external finance? Research and practice implicitly assume an affirmative answer, but B Corp certification's influence on early-stage funding is ambiguous. We argue that certification lowers the likelihood of funding from traditional investors by revealing dispersed managerial attention, but appeals to impact investors as a natural preference fit. Conditional on receiving financing, we expect certification to facilitate option monitoring, lowering uncertainty and attracting additional funds. We find partial support for our hypotheses in a matched sample of 720 startups. Certification decreases the chances of raising traditional finance, but has no effect on impact funding. Conversely, impact, but not traditional, investors supply more capital to certified ventures conditional on investing. Interviews with early-stage investors show that, contrary to our expectations, impact investors also recognize certification's negative attention allocation effects in early-stage firms, while relying on alternative impact assessment tools to select investments. Certification enhances transparency for ventures receiving funding, allowing impact investors to better track investment options, signaling lower risk and higher quality. Our study advances research on B Corps, venture certification, investor sensemaking, and impact investing by offering a nuanced view of the benefits and costs of certification for young firms.

ENT: **Pathways to Scaling International Impact: Exploring Capabilities in B Corps**

Author: **Lydia Bals**, *Mainz U. of Applied Sciences*

Author: **Francesca Ciulli**, *Tilburg U.*

Author: **Kelsey Taylor**, *U. of Manitoba*

With the rising global awareness of sustainable development issues, hybrid ventures have increasingly brought their solutions across borders to scale their impact internationally. Yet, international business (IB) studies have largely concentrated on international scaling undertaken via sales growth for economic goals. We instead offer an elaborated conceptualisation of international impact scaling, which includes internal growth, partnership, and dissemination downstream and upstream in the value chain. Stemming from prior IB research that views capabilities as critical "firm-specific advantages" for international expansion, we investigate which capabilities hybrid ventures leverage when scaling impact internationally and to what extent they differ across scaling strategies. We adopt a qualitative method to analyse seven B Corps, a type of hybrid venture whose impact is certified. The findings uncover an array of relevant cognitive, managerial, and organisational capabilities for international impact scaling. The study contributes to international scaling research and the literature on hybrid ventures.

ENT: **Exploring the Signaling Effect of B Corp Certification in Entrepreneurial Finance**

Author: **Thilo Pollmeier**, *U. of Luxembourg*

Author: **Mirko Hirschmann**, *U. of Luxembourg*

Author: **Christian Fisch**, *U. of Luxembourg*

The B Corp certification is the outcome of a thorough certification process and attests that a venture adheres to rigorous social and environmental standards. We analyze 1,231 B Corp certified ventures and 1,231 comparable non-certified ventures to understand the impact of B Corp certification on funding likelihood. Furthermore, we focus on the signaling strength of B Corp certification demonstrating that within the cohort of B Corps, higher certification scores are more effective in attracting investment, but only up to a certain point. Our findings provide a nuanced understanding of the role of signal strength in the funding of entrepreneurial ventures.

ENT: **Governors' Tenure and VCs' Early-stage Investing: A Subnational Institutional Perspective**

Author: **Rui Shen**, *School of management, Zhejiang U.*

Author: **Qingyun Lu**, *School of management, Zhejiang U.*

Author: **Can Li**, *China U. of Political Science and Law*

Author: **Lei Hou**, *Shanghai Jiaotong U.*

Drawing on the subnational institutional perspective, the study examines the role of governors in shaping the institutional environment and altering venture capital (VC) firms' perceived risks associated with early-stage investments. Using data about provincial governors and VC investments in China from 2000 to 2016, we find that VC firms' early-stage investment relates to the local governor's tenure in a U-shaped manner considering the varying level of political uncertainty over the tenure. The U-shaped relationship is steeper when the provincial governor is promoted to the current position and is flatter for government-backed VC firms. Incorporating the political business cycle perspective, the study contributes to the institutional theory literature by highlighting the role of politicians who serve as subnational institutional agents in VC firms' risky decisions. It also enriches the VC literature by adding a novel explanation of early-stage investments.

Gender and Entrepreneurship III

Session Moderator: **Danny Chung**, *California State U., Chico*

ENT: **Women Empowerment and Female Entrepreneurship: Evidence from a Natural Experiment in India**   

Author: **Danny Chung**, *California State U., Chico*

Author: **Simon Parker**, *Ivey Business School*

How do legal property and inheritance rights affect the propensity of women to become entrepreneurs? Entrepreneurship is believed to improve the economic prospects of women and alleviate poverty, especially in developing countries, where women's property and inheritance rights (WPIR) are often limited. Yet, despite burgeoning scholarly and policy interest, we still know relatively little about how changes to women's property and inheritance rights affect women entrepreneurship. This paper uses the state-level amendments to the Hindu Succession Act of 1956 as a natural experiment to examine the impact of an improved WPIR on women's participation in entrepreneurship. We find strong causal evidence that the improved WPIR allowed women to leave domestic duties for economic activities, especially entrepreneurship. Further investigation suggests that the likely mechanism is to be the increased intra-household bargaining power bestowed upon women via improved WPIR.

ENT: **Green Femininities: Studying Gender Performativity on Women Ecopreneurs**

Author: **Diana Garcia**, *ESCP Business School*

Author: **Caroline Verzat**, *Novancia Business School*

Research reveals a greater propensity among women entrepreneurs towards environmentally oriented ventures. However, societal expectations often impact women's participation in entrepreneurship, typically associated with masculinity. Traditional binary viewpoints on gender fail to acknowledge women's capability to navigate gender norms and stereotypes. To move beyond a static view and acknowledge that gender is multifaceted and complex, this research examined the gender performances of women entrepreneurs venturing into the environmental sector (ecopreneurs) using Butler's performativity theory. We followed a qualitative approach, analyzing data from 25 interviews and 5,314 online posts using a novel methodological technique based on Large Language Model algorithms for relevant online data selection. We argue that women ecopreneurs enact 'green femininities,' which refers to the blend of femininity and masculinity adapting to situations and audiences. We identified four gender performance types among women ecopreneurs: femininity, masculinity, androgyny, and dissonance. It is vital to comprehend how women ecopreneurs manage gendered expectations, especially if we wish to support more environmentally-oriented ventures to address today's challenges.

ENT: **Gender Differences in Resource Allocation: The Impact of Shifting Standards and Benevolent Sexism**  

Author: **David W. Sullivan**, *U. of Houston*

Author: **Joel Andrus**, *U. of Missouri*

Author: **James Bort**, *DePaul U.*

Despite improved access to entrepreneurial financing, women continue to experience gender bias. Although current sentiment across society strongly advocates for the advancement of women—which is further reflected and perpetuated by benevolent sexism beliefs that protect and revere women through intentional chivalrous behavior—these same beliefs that promote the protection and promotion of women may also be, unintentionally and inadvertently, further perpetuating underlying stereotypical influences that promote gender bias. Using rewards-based crowdfunding as a context, we integrate ambivalent sexism theory with the shifting standards model to posit and test how benevolent sexism beliefs of entrepreneurial backers reinforce underlying stereotypes, not by holding women back, but rather by helping to indirectly propel men forward in entrepreneurship. Across an archival field study of over 10,000 Kickstarter campaigns, combined with a randomized vignette-base experiment, we show that women, on the one hand, receive higher levels of subjective evaluations but lower levels of objective funding. These results are further exacerbated by the backer's benevolent sexism beliefs, which is a key mechanism that both can hinder and help women. This research lays the foundation for further investigations into the relationship between women, entrepreneurial success, and investors characteristics.

ENT: **Breaking Down Gender Barriers: Empowering Women Entrepreneurs Through Innovation and Identity Choice**  

Author: **Louise Kelly**, *U. of La Verne*

Author: **Stacy Brecht**, *Azusa Pacific U.*

Author: **Rashmi Asudani**, *Siena College*

This study examines the experience of women entrepreneurs in light of socially embedded gender assumptions women need to navigate to achieve entrepreneurial success in both the for-profit and nonprofit sectors. This research looks at how women craft their identity and self-presentation to get their basic needs met in an environment that is often hostile to their entrepreneurial leadership. Using self-determination theory as our theoretical lens, we conducted qualitative interviews consisting of 10 women business owners in the for-profit sector and 10 women business owners in the nonprofit sector to examine the trajectory and experiences in the practice of women entrepreneurs. The study looks at strategies of women entrepreneurs for overcoming entrenched sexism, highlighting the pivotal role of addressing gender bias in promoting equity. The study also documents the resilience displayed by individuals in asserting their identities amidst pervasive gendered biases, highlighting the significance of self-empowerment. Lastly, the study underscores the transformative potential of breakthrough innovation as a catalyst for dismantling gender bias. Moreover, within the context of these themes, we integrate the foundational principles of self-determination theory, which asserts that all individuals possess intrinsic psychological needs—namely, autonomy, competence, and relatedness—that serve as essential drivers of personal growth and developmental progress.

Founder Attributes

Session Moderator: **Pasquale Massimo Picone**, *U. of Palermo*

ENT: **Hubristic Founders and Entrepreneurial Exit: A Proposed Interpretative Framework**  

Author: **Pasquale Massimo Picone**, *U. of Palermo*
Author: **Nadia Di Paola**, *U. of Naples Federico II*
Author: **Giovanni Battista Dagnino**, *U. of Rome Lumsa*

As typically occurs in new venture creation, founders' biases play a crucial role not only in entrepreneurial founding, but also in the context of entrepreneurial exit. In this paper, we build an interpretive framework that offers an explanation for pursuing exit strategies administrated by hubristic founders. First, we posit that hubris affects founders' intentions and the performance threshold associated with entrepreneurial exit. Then, we claim that, when the firm shows performance below the expected threshold, hubristic founders are prone to escalate firm investments and insist on following strategic choices that have previously resulted in inadequate performance. This hubristic behavior is likely to lead to an entrepreneurial exit that falls into bankruptcy. Additionally, we argue that when a firm shows a performance above the expected threshold, hubristic founders prefer to walk out of the business by means of a financial harvesting strategy, thereby excluding stewardship behavior option in such conditions. However, in these conditions, founders' hubris becomes as well the key hurdle to close the financial harvest deal. Implications for entrepreneurial exit inquiry, hubris theory of entrepreneurship, and for practicing entrepreneurs are eventually presented and discussed. We conclude by mentioning the paper's limitations and suggesting some avenues for future inquiry.

ENT: **The Cascading Effects of Lead Founder Personality on New Venture Team Processes** 

Author: **Katie Brownell**, *Virginia Tech*
Author: **Timothy P. Munyon**, *U. of Tennessee, Knoxville*

Across two studies of new venture teams, we apply socioanalytic theory to theorize and test linear and nonlinear relationships between lead founder personality and team innovation and team relationship conflict, and the mediating effects of these processes on new venture performance. Through competitive mediation modeling, we demonstrate that (1) team innovation and team relationship conflict have opposite directionalities of influence, (2) lead founder Machiavellianism and psychopathy have a curvilinear relationship with team innovation, while narcissism increases it, (3) lead founder Machiavellianism and psychopathy increase team relationship conflict, while narcissism decreases it, and (4) team innovation and team relationship conflict explain the complex relationships between lead founder personality and new venture performance.

ENT: **Is Founders' Self-Promotion Effective in Attracting Potential Partners? The Role of Endorsement**

Author: **Yue Zhang**, *U. of Science and Technology of China*
Author: **Hui Jiang**, *school of management, USTC*
Author: **Ting Ting Niu**, *U. of Science and Technology of China*
Author: **Wenyang Gao**, *U. of Science and Technology of China*

Due to a lack of material evidence and legitimacy in a venture, the founder often struggles with how to attract partners. Self-promotion is a common attraction strategy, but the existing literature has not yet discussed the process of its effectiveness. Based on signaling theory, this article analyzes the mechanism and boundary conditions of the founder's self-promotion affecting the willingness of potential partners to join. Through a scenario experiment (N = 351), we found that the founder's self-promotion has an inverse U-relationship with potential partners' willingness to join, and trust endorsement can alleviate the inverse U-shaped relationship. Furthermore, the moderating role of trust endorsement is achieved through the mediating role of potential partners' liking for the founder. This article expands theoretical understanding of self-promotion and has important practical significance for founders on how to use self-promotion.

ENT: **On the Role of Founder Workaholism and Narcissism in Business Model Innovation** 

Author: **Kseniia Veksler**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Daria Dvorkina**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Ivan Amarantov**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Galina Shirokova**, *National Research U. Higher School of Economics, St. Petersburg*
Author: **Virginia Bodolica**, *American U. of Sharjah*

This article seeks to analyze the relationship between business model innovation (BMI) and young firm performance, and the impact of founder's personal characteristics on this relationship. Drawing on the resource-based view and strategic leadership theory, we examine the moderating role of founder workaholism on the relationship between BMI and young firm performance and the moderating effect of founder narcissism on the moderating role of founder workaholism on the BMI-young firm performance relationship. Using a sample of 205 young firms from Russia, we demonstrate that BMI positively relates to young firm performance, while founder narcissism and workaholism have a reinforcing effect on this relationship. We discuss the implications of our study for both theory and practice.

Individuals and Feedback

Session Moderator: **Carmen Anna Elisa Baur**, *Technical U. of Munich*

ENT: Too Much of a Good Thing: When Feedback Diversity Harms Entrepreneurs' Opportunity Evaluation

Author: **Carmen Anna Elisa Baur**, *Technical U. of Munich*
Author: **Nicola Breugst**, *TUM School of Management, Technical U. of Munich*
Author: **Mirjam Knockaert**, *Ghent U.*

Entrepreneurs use feedback from various sources to evaluate and develop their opportunities. However, both research and practice have so far assumed that feedback mainly has a positive effect on opportunity evaluation. This assumption is potentially problematic because entrepreneurs may be confronted with high diversity of feedback, which can lead to challenges in processing the information received. We build on information processing and information overload as theoretical perspectives to investigate the conditions under which diverse feedback positively or negatively affects opportunity evaluation. Our results show that high feedback diversity has a negative overall impact on opportunity evaluation, and that this effect is conjointly moderated by entrepreneurial effort at the individual level and team information sharing. Specifically, our study suggests that entrepreneurial effort helps entrepreneurs to process diverse feedback, particularly when the team also engages to a large extent in information sharing. Our study challenges the assumption that more feedback is always better for opportunity evaluation and identifies important behavioral contingencies of the feedback-opportunity evaluation relationship.

ENT: The Role of Individual Differences in Entrepreneurs' Adaptations to Gains or Losses

Author: **Tim Michaelis**, *Northern Illinois U.*
Author: **Devaki Rau**, *Northern Illinois U.*
Author: **Nicholas Aaron Smith**, *Northern Illinois U.*
Author: **Rachel Saef**, *Northern Illinois U.*

Risk-taking is a fundamental aspect of entrepreneurship, and prospect theory (PT) has been widely applied to explain entrepreneurs' risk-taking behavior. However, research does not fully understand the process associated with the magnitude of reference point adaptation following gains or losses. This study aims to address this gap and extend the boundary conditions of PT by proposing that entrepreneurs will differ in the extent to which they adapt their reference points following gains or losses, and that individual-level traits will influence the magnitude of reference point adaptation. We also hypothesize a moderating influence of self-esteem and locus of control on the magnitude of reference point adaptation by entrepreneurs following a loss or gain respectively. Through two experiments, we find support for the proposed theoretical model.

ENT: More Feedback and More Progress? A Dynamic Account of Feedback Seeking in Opportunity Formation

Author: **Yingzhu Fu**, *central south U. business school*
Author: **Marilyn Ang Uy**, *Nanyang Business School, NTU Singapore*
Author: **Wai Fong Boh**, *Nanyang Technological U.*

In this research, we explore how individual differences influence the effectiveness of feedback seeking on opportunity formation. Drawing upon and extending the action regulation theory, we posit that the impact of feedback seeking on opportunity formation hinges on entrepreneurs' cognitive capacity to process feedback and their variations in the behavioral consistency of feedback seeking over time. Through an eight-wave longitudinal investigation involving 156 nascent entrepreneurs in Singapore, we discovered that the influence of feedback seeking on opportunity formation progress is contingent on metacognitive experience. Furthermore, variability in feedback seeking exhibits an inverted U-shaped relationship with opportunity formation progress, while the trajectory in feedback seeking positively impacts opportunity formation progress. We elaborate on the theoretical and practical significance of our study for entrepreneurship research.

ENT: How Do Goal Orientations Impact the Feedback Process in Daily Self-Regulated Entrepreneurial Effort?

Author: **Rai Siddhant Sinha**, *NEOMA Business School*
Author: **Nandakumar Mankavil Kovil Veettil**, *Indian Institute of Management, Kozhikode*

Entrepreneurial motivation literature has made giant strides, yet how it unfurls in the daily life of an entrepreneur largely remains a black box. In this study, we depict how the previous day's progress in the venture motivates the entrepreneur to expend efforts the next day via the mediating mechanism of affective state (as positive feedback) experienced in the morning by focusing on the within-person dynamics. Further, we explicate how learning goal orientation intensifies this feedback process and why it is important for entrepreneurs to be oriented toward learning rather than performance by focussing on the between-person dynamics. We execute this research by employing experience sampling methodology and analyzing multilevel data from daily surveys spread across 16 days (twice daily) from 87 entrepreneurs (n=1090 observation pairs). This paper makes important and critical contributions to entrepreneurship theory and practice.

Resilience in Adverse Conditions

Session Moderator: **Brent Clark**, *U. of Nebraska, Omaha*

ENT: **Defining Entrepreneurial Masculinity in A War-Torn Patriarchal Context**

Author: **Doaa Althalathini**, *Oxford Brookes U.*

Author: **Theodore Andrew Khoury**, *Portland State U.*

In this paper, we explore how gendered expectations within a war-torn, highly patriarchal context influence entrepreneurial masculinity. Men in such settings face employability hardships, due to structural complications exacerbated by war while facing predominant pressures to fulfill gender-bound “provider” roles. We implement a qualitative research design that draws upon in-depth interviews with 21 Iraqi entrepreneurs to reveal that entrepreneurial pursuits serve as coping endeavors to meet normative role expectations and allow for the realization of entrepreneurial masculinity amidst multifaceted challenges. This work contributes to gender and entrepreneurship studies by challenging dominant assumptions of male agency and the motivation behind the necessity entrepreneurship in patriarchal contexts.

ENT: **Entrepreneurial Refuseniks and the Strategies of ‘Little Earners’ in Deprived Communities**

Author: **Zografia Bika**, *U. of East Anglia (UEA)*

Author: **George Redhead**, *U. of East Anglia (UEA)*

The greater levels of inequality adversely affecting developed western economies in recent years has largely burdened the underprivileged. Engaging in context-sensitive theorising and challenging the preference of dominant ideal entrepreneurial types, we heed a broad scope of calls investigating how entrepreneurship manifests within deprived social housing neighbourhoods in a developed nation context. We introduce the notion of ‘little earners’ as a distinct manifestation of enterprise undertaken by entrepreneurial refuseniks – individuals who ‘refuse what they are refused’ and whose everyday entrepreneurial activity may not follow the societal letter of the law – to ameliorate contextual constraints and financial hardship. Drawing attention to how their entrepreneurship is firmly place-based, our study questions the relevance of ‘one size fits all’ micro-enterprise support and entrepreneurial policy, particularly concerning the standardisation of welfare benefits for those venturing into enterprise within left-behind places.

ENT: **Enacting Entrepreneurial Resilience: An Episodic Approach**

Author: **Lauren Atkinson Zettel**, *Central Michigan U.*

Author: **Carl P. Maertz**, *U. of Louisville*

Author: **Robert P. Garrett**, *U. of Memphis*

Author: **Isabel C. Botero**, *U. of Louisville*

Scholars of psychological resilience in entrepreneurship have begun to recognize the importance of depicting resilience, not as a trait or as a store of resources, but as an unfolding response to adversity encountered in entrepreneurial venturing. Yet, even current process-oriented models of entrepreneurial resilience focus on drawing on established resources or building resources for future resilience. Therefore, the entrepreneurship literature still lacks a depiction of what behaviors entrepreneurs can take in the moment to adapt to and overcome challenges. We propose that adopting an episodic, process approach to resilience allows scholars to explore how entrepreneurs enact resilience over time when responding to negative events. In this research, we develop a process model, informed by the literature on coping flexibility, to specify a series of thoughts and actions that entrepreneurs employ to adaptively respond to challenges encountered in the venturing domain.

ENT: **How Does Conflict Impact (Necessity) Entrepreneurship?**

Author: **Mirko Hirschmann**, *U. of Luxembourg*

Author: **Christian Fisch**, *U. of Luxembourg*

Author: **PP Momtaz**, *Bavarian State Institute for Higher Education Research and Planning + TU Munich*

The role of violent conflict for entrepreneurial activity is relatively underexplored. Drawing on institutional theory, a country’s level of conflict should reduce the individual propensity to engage in entrepreneurship and shift the type of activity from opportunity to necessity entrepreneurship. We analyze a comprehensive longitudinal sample of 1.2m individuals from 86 countries over the 2009–2017 period using multilevel analysis. Our results suggest that the likelihood of becoming an entrepreneur decreases with higher levels of violent conflicts, while the relative share of necessity entrepreneurship increases. Furthermore, by combining institutional with social-cognitive theory, we show that individual characteristics (i.e., entrepreneurial networks, entrepreneurial skills, and fear of failure) moderate the relationship between a country’s level of conflict and the individual likelihood of becoming a necessity entrepreneur.

Narratives

Session Moderator: **Bart Clarysse**, *ETH Zürich*

ENT: **In Search for Grand Solutions: Entrepreneurial Narratives to Engage and Maintain Stakeholder Support**

Author: **Bart Clarysse**, *ETH Zürich*
Author: **Rhea Li**, *ETH Zürich, D-MTEC*

This study investigates the crucial role of entrepreneurial narratives in navigating the intricate landscape of grand challenges and sustaining stakeholder engagement. Focused on addressing plastic pollution in oceans, our analysis tracks the evolution of the entrepreneur's narrative following the technical failure of the solution. Initially adopting a possibilistic approach accentuating the desirability of a solution, the narrative transitions to a more probabilistic stance in the second phase. Emphasizing a profound understanding of the problem, this phase seeks technically plausible solutions. The narrative undergoes a transformation from a monomyth featuring an individual hero to an inclusive story where the organization collaborates with the scientific community. While retaining a focus on the desirability of solving the problem, the revised narrative aligns with robust actions, enhancing solution plausibility and organizational credibility. The outcome is sustained and diversified support from a growing community of backers.

ENT: **A Typology of Circular Entrepreneurial Narratives in the Venturing Process**

Author: **Kaisa Henttonen**, *U. of Eastern Finland*
Author: **Ville-Veikko Piispanen**, *U. of Eastern Finland*
Author: **Hanna P. Lehtimäki**, *U. of Eastern Finland*

The aim of this paper is to inductively explore the opportunity narratives underlying circular venturing. The study aims at clarifying how circular entrepreneurs perceive of circularity throughout the venturing process. Our sub-questions are the following: What are the different narratives of circular economy employed by circular entrepreneurs and what role do these circular narratives play in the entrepreneurial process? Based on the results, we establish a typology of entrepreneurial circular opportunity narratives. The narratives are the following: Entrepreneurial "circular talk" of circularity visions, entrepreneurial "circular actions" and entrepreneurial "circular values." The findings shed more light on the role of narratives in circular venturing in terms of more sophisticated conceptualization based on how actual entrepreneurs experience and display circularity in the context of their ventures.

ENT: **Everybody Loves the Underdog? Prospective Investor Responses to Underdog Narratives in New Ventures**

Author: **Mark Bolinger**, *Appalachian State U.*
Author: **Katrina Brownell**, *U. of Southern California*

One of the principle concerns of new ventures is the gathering of resources to promote venture survival. This is often accomplished with the help of entrepreneurial narratives, which would be expected to emphasize a venture's strengths and other positive traits. However, anecdotal evidence suggests that some ventures use "underdog narratives," which claim "underdog" status, and not only acknowledge but often emphasize their barriers to success. This paper examines if and if so, why, potential investors respond positively to such narratives. Although we find a negative main effect of underdog narrative use on intended investment, further examination reveals that "underdog" narratives are just as effective as "favorite" narratives in terms of intended investment when investor personal risk is low, but that its effectiveness wanes as perceived risk increases. Furthermore, we find that that intended investment in perceived underdog ventures is higher for potential investors who consider the world to be an unjust rather than a just place. Our work is among the first to examine receiver reactions to underdog perceptions, and has important implications for both the theory of narrative and the range of potentially successful narratives that may be used in practice.

ENT: **Coming to Terms with the Empowerment-Complicity Tension in Social Entrepreneurship**

Author: **Nada Endrissat**, *Bern U. of Applied Sciences*
Author: **Christina Andrea Lüthy**, *Lund U.*

Despite their emancipatory aspirations, collective entrepreneurial efforts to change organizations bottom-up are often complicit with the power structures they seek to transform. Our study takes a closer look at how workers experience and deal with the tensions between emancipation and complicity and how this can inform the entrepreneurial process. Empirically, we draw from a qualitative single-case study of a private contemporary art museum in Russia, in which museum workers venture entrepreneurial initiatives to create the museum as an inclusive and politicized organization. Engaging with literature on affective embodiment, our findings suggest that vulnerability and critical hope are key in understanding how discomfort about complicity fosters critical reflections that reinvigorates hopeful entrepreneurial efforts for emancipation and new organizational responses. We show how this interplay drives entrepreneurial initiatives, spiraling the entrepreneurial process in an affective movement towards expansion or fragmentation. We contribute to scholarship on entrepreneurship by highlighting the affective and processual nature of dealing with the interlacing of emancipation and complicity, and to scholarship on affective embodiment, by deepening our understanding of the conditions that shape our ability to stay affected by our implication in power relations and harness these experiences in our organizational efforts for better futures.

ENT: **Person-Level Antecedents of Entrepreneurship: A Synthesis of Meta-Analytic Findings**

Author: **Michael P. Wilmot**, *U. of Arkansas Sam M. Walton College of Business*
Author: **Andreas Rauch**, *Audencia*
Author: **Saadat Saeed**, *Durham U.*
Author: **Michael Frese**, *Asia School of Business*

Entrepreneurship plays a vital role in innovation, job creation, and economic growth. Drawing on 33 meta-analyses reporting relations to 84 variables, which represent $N > 8.9$ million participants from $k > 1,000$ studies, we present the most exhaustive quantitative review to date of the person-level antecedents of entrepreneurship. To do so, we sort qualifying variables into an organizing framework of three entrepreneurship criteria (initiation, engagement, and performance) and three domains of antecedents (dispositions, human capital, and demographic characteristics). Overall, person-level antecedents display effects in a desirable direction for 96% of relations (grand mean $\rho = .17$), which is indicative of a small-to-moderate competitive advantage for entrepreneurship. Findings also reveal areas with more appreciable effects ($\rho = .15$), which we use, in conjunction with extant theory, to synthesize five themes that provide an explanatory account of person-level antecedents of entrepreneurship: (a) a general factor of entrepreneurship, (b) the entrepreneurial personality profile, (c) the value of specialization, (d) a cognitive omission, and (e) demographic inclusivity. Established from the best evidence, our five themes distill the literature into a solid foundation of knowledge and extend it by functioning as a runway for launching new scientific ventures. We conclude by discussing implications and future research directions, as well as contributions and limitations of findings.

ENT: **Organizing for Internal Corporate Venturing: Discipline, Playfulness, and ICV Unit's Agency**

Author: **Natalia Vuori**, *Aalto U.*
Author: **Marina Biniari**, *U. of Sussex Business School*

Scholars have proposed that to succeed in internal corporate venturing (ICV) leaders need to establish the appropriate level of control to balance between discipline that ensures ICV performance, and playfulness that fosters creativity and innovativeness. Our longitudinal study reveals the limitations of this top-down perspective. We found that the parent company's control can expose the gap between expected ICV performance and reality. ICV unit's employees can apprise this situation as a threat to the unit's competence and, thus, experience shared negative emotions. We found that the accumulation of these psychological reactions can trigger defensive behaviors such as bottom-up hedonic restructuring and legitimating weak interim ICV performance. Both behaviors decrease the parent company's control over the ICV unit, and lead to a hazardous disbalance between discipline and playfulness. Our study contributes significantly to the literature on internal corporate venturing by explaining how ICV units' psychological reactions to the control triggered bottom-up defensive behaviors that jeopardize ICV activities and performance.

ENT: **Out of the Ivory Tower: Unveiling Student Interactions with Entrepreneurship Ecosystem**

Author: **Stéphane Foliard**, *COACTIS - U. Lyon-Univ Jean Monnet - IAE Saint-Etienne*

To transform students into entrepreneurs, entrepreneurship education increasingly advocates experiential learning through real venture creation. While classroom experiences are well-documented, a comprehensive study of interactions between students and entrepreneurship ecosystem actors is essential for enhancing educational programs. Embracing the entrepreneurship ecosystem perspective, widely endorsed by scholars, policymakers, and practitioners, this grounded theory paper addresses the research question: How do students' interactions with EE actors contribute to their development as entrepreneurs? Specifically, it explores the context, nature, and outcomes of these interactions. Conducting inductive qualitative research, we interviewed 44 students engaged in entrepreneurial projects as part of their studies. Results reveal that interactions with EE actors are contingent and subject to prerequisites. Once initiated, these interactions transcend mere business relationships, evolving into informal mentoring that establishes a significant learning space. The study delineates technical learning, interpersonal skill development, acquisition of tacit knowledge related to the entrepreneurial culture, and understanding the implicit rules governing EE operations as distinct learning outcomes for students. These outcomes are pivotal for comprehending the ecosystem in which students aspire to operate and persuading actors to join their entrepreneurial pursuits.

ENT: **Organizational Blueprints as Situating Concepts: A Configurational View of Entrepreneurial Cognition**

Author: **Hamid Vahidnia**, *Texas Tech U.*

In dynamic contexts, heterogenous and changing configurations of concrete elements internal and external to an entrepreneur combine and produce emergent cognitive states under which situated entrepreneurial action takes place to enable strategic adaptation. I integrate socially situated cognition theory, configurational theory, and literature on organizational blueprints to answer: How does emergent entrepreneurial cognition underlie situated entrepreneurial action to enable strategic adaption in dynamic situations? I first offer a dynamic and configurational view of organizational blueprints as situating concepts: the cognitive ability to produce fitted versions of an entrepreneurial goal-state using concrete elements (actors, objects, etc.) tailored to each situation. I then explain three processes of cognitive scoping, cognitive linking, and cognitive naming that underlie dynamic organizational blueprints and enable situated entrepreneurial action and strategic adaption.

Interventions Across Healthcare

Session Moderator: **Pejmon Noghrehchi**, *The Ohio State U. College of Public Health*

HCM: Unlocking the Power of Joining a Virtual Team: Heterogeneous Impacts of Team Signaling in Telehealth

Author: **Shiyi Wang**, *Nanyang Business School, Nanyang Technological U., Singapore*

Author: **Siliang Tong**, *Nanyang Business School, NTU Singapore*

Author: **John Dong**, *Trinity Business School, Trinity College Dublin*

Author: **Jianjun Wang**, *Dalian U. of Technology*

The recent proliferation of Telehealth platforms has engendered immense business potential in improving patients' welfare with accessible medical resources and facilitates doctors to expand services to geo-distant locations. In particular, the development of information technology empowers the formation of virtual teams in which doctors can integrate medical resources and specialty knowledge across institutions and departments to provide more comprehensive medical services. This study aims to empirically examine the business value of joining a virtual team on individual doctor's patient demands. Drawing upon signaling theory, we develop a set of hypotheses to provide a theoretical explanation by which virtual team information could affect different types of doctors (e.g., job titles, tenure, popularity, and region) and what types of virtual team (e.g., specialty vs institution based) benefit individual doctors most. We leverage a quasi-natural experiment setting, in which an interface revamp on a leading Telehealth platform in China results in the disclosing information of the team members' identity. Applying Synthetic Difference-in-Differences (SynthDID), Generalized Synthetic Control (GSC), and Double Machine Learning (DML) to strengthen the causal identification, we document several novel findings. First, our results suggest that doctors could receive 27.0% more consultations by joining the virtual team. Second, we find that the impact of joining virtual teams is more significant for disadvantaged doctors. Third, our findings suggest that doctors can derive greater benefits from joining virtual teams with homogeneous institutions and heterogeneous specialties. Taken together, this paper provides pivotal insights for all stakeholders in Telehealth to understand the value of virtual teams and improve overall social welfare.

HCM: Effects of a Real-Time Information-Based Intervention on Physician Prescribing Behavior

Author: **Olivia Zhao**, *Harvard Business School*

Author: **Anna Sinaiko**, *Harvard T.H. Chan School of Public Health*

High out-of-pocket (OOP) prices for prescription drugs create financial difficulties for patients, and cost-related underuse of medications can adversely patient health. Simultaneously, many physicians report a willingness to address affordability concerns with patients, but often do not have access to accurate estimates of OOP prices for a specific patient and medication. One proposed solution to help physicians prescribe in a more cost-conscious manner is a physician-targeted real-time price transparency intervention (called a real-time benefit tool, or RTBT) that displays patient-specific OOP price estimates at the time of prescribing. We study the implementation of an RTBT at a large health system to explore how physician prescribing behavior for diabetes medications changed after implementation. We find that the tool appeared to reinforce existing physician prescribing patterns, but those with more clinical experience with diabetes medication orders or more interactions with the tool did change their prescribing patterns. This and future evidence on this relatively new technology should help inform the future design and implementation of RTBTs.

HCM: Managerial Training in Healthcare: A Longitudinal Analysis on Italian NHS Professionals

Author: **Federica Morandi**, *U. Cattolica del Sacro Cuore*

Author: **Alessandra Pernice**, *U. Cattolica del Sacro Cuore*

Author: **Sofia Di Pippo**, *U. Cattolica del Sacro Cuore*

Author: **Niccolò Salvini**, *U. Cattolica del Sacro Cuore*

Changes in organizational models and processes occurring in healthcare sector over the last 30 years have required healthcare professionals to assume innovative managerial competencies. This paper investigates the impact of managerial training on the development and implementation of managerial competencies of current and future managers in Italian healthcare, analyzing a small group of healthcare professionals. We collected data and conducted a longitudinal analysis on three different moments within a training camp, using a structured questionnaire based on Spencer and Spencer's (1995) competency model. Our results demonstrate that managerial training differentially influences participants' confidence in the competencies they possess, providing crucial indications for better projecting and implementing training in healthcare. Besides that, the individual analysis reveals that each participant reacts differently to the training, thus underlining the importance of customized programs. Moreover, positive correlations between competencies suggest the need to project healthcare training programs following a holistic approach. Finally, our results can be used to inform policymakers and institutions about how to better organize the training paths in healthcare and how to use the available resources to make future healthcare managers ready for the incoming challenges. Limitations are discussed, and they represent future directions for the development of the study.

Author: **Ohbet Cheon**, *The David D. Reh School of Business, Clarkson U.*

Author: **Noyoung You**, *Siena College*

Hospital-community partnerships have been increasingly emphasized to improve population health in recent decades. This study investigates the effectiveness of hospital-community partnerships in preventive healthcare interventions, addressing potential racial and ethnic disparities in impact. We measured the overall hospital-community partnerships with nine community organizations using the American Hospital Association (AHA) annual survey at the county level. Preventive healthcare interventions were also measured as preventable hospitalization rate, mammography screening, and flu vaccinations by racial and ethnic groups from various sub-datasets in County Health Ranking National (CHRN) data. We estimated ordinary least squared models with robust cluster standard errors at the state level and feasible generalized least squares (FGLS) models to examine the impact across racial and ethnic groups, including controls for county characteristics. Among 1,721 counties across 50 states in the United States, the findings indicated that hospital-community partnerships were effective in increasing mammography screening and flu vaccination rates in general. However, upon closer examination of the impact across race and ethnic groups, the impact was disproportionately distributed among racial and ethnic minorities. Hospital-community partnerships were not significantly associated with any of the interventions in the Black population, while they were effective in all three interventions in the White population. The findings highlight the imperative to design targeted hospital-community partnerships for racial and ethnic minorities to mitigate health disparities in preventive healthcare interventions.

What Drives Internationalization of Family Firms?

Session Moderator: **Jelena Cerar**, *WU Vienna*

IM: The Impact of Heterogeneity and Vulnerability on Family Firms' Internationalization Strategy Shift

Author: **Asimabha Bhowmick**, *Xavier School of Management (XLRI)*
Author: **Arindam Mondal**, *XLRI-Xavier School of Management*
Author: **Somnath Lahiri**, *Illinois State U.*
Author: **Avimanyu Datta**, *Illinois State U.*

Research on the internationalization process of family firms has grown in recent years. Yet, what prompts family firms to consider a shift in their internationalization strategy has not been examined. This study explores how family firms decide on shifting from a relatively less complicated exports strategy to outward foreign direct investment (FDI) that involves greater risk and higher resource commitment. This study argues that type of management (family vs. nonfamily) and vulnerabilities (internal and external) determine how family firms undertake strategic shift. Drawing on the mixed gamble perspective and utilizing a sample (n =278) of listed family firms from India, this study finds that, in general, family-managed firms are less likely to undertake the shift from exports to FDI as compared to nonfamily or professionally managed firms. Results further demonstrate that the likelihood of family-managed firms' strategic shift increases when they experience internal vulnerability (performance below aspirations) as well as external vulnerability (rising foreign competition). The study concludes by discussing the theoretical and managerial implications of the findings and highlighting fertile avenues for future research.

IM: Influence of Institutional Contexts on Family Firms' Internationalization: A Meta-Analysis

Author: **Sai Chittaranjan Kalubandi**, *Indian Institute of Management, Bangalore*
Author: **Apurva Sanaria**, *Indian Institute of Management Bangalore*
Author: **Harshitha Ravi**, *Academic Associate, Indian Institute of Management Bangalore*

In this paper we investigate the influence of formal institutional and informal institutions on the internationalization of family firms. We argue that the relationship between family firms and internationalization from countries with low tariff and regulatory trade barriers will be negative. Further, we argue that the relationship between the past and future time orientation culture, and sequential versus synchronous time orientation culture will influence the relationship between family firms and internationalization such that high past orientation and high sequential time orientation cultural will negatively influence the relationship between family firms and internationalization. Lastly, we argue that family firms from high sequential time orientation cultures will prefer exports as a preferred mode of internationalization. The results of meta analysis lend empirical support to our hypotheses.

IM: Impact of Nonfamily CEOs' Origin on Foreign Market Entry of Family Firms

Author: **Fei Tang**, *Xi'an Jiaotong-Liverpool U.*
Author: **Tao Bai**, *U. of Queensland*
Author: **Nikolaos Papageorgiadis**, *U. of Liverpool*
Author: **Yang Yu**, *RMIT U.*

The agency-based theoretical premise that nonfamily CEOs are risk-averse has been extensively researched, but the relationship between nonfamily CEOs and family firms' internationalization has yielded mixed results. We address this issue by examining the origin of nonfamily CEOs, that is, if they are internally promoted or externally recruited. We find that internally promoted nonfamily CEOs have stronger psychological ownership with family firms, resulting in a lower agency problem of risk-aversion. We also find that the strength of psychological ownership is influenced by governance mechanisms, such as managerial ownership incentives and family board monitoring.

IM: Family Ownership and Equity vs Non-Equity Choice in International Strategic Alliances

Author: **Sumit Chakraborty**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

The selection of entry modes significantly influences a company's strategic approach to international expansion. The ownership structure of firms plays a vital role in shaping preferences for entry modes. However, understanding how family and non-family firms differ in choosing between equity and non-equity modes remains inconclusive. This study addresses the inconsistency in previous empirical findings by delving into the equity vs. non-equity debate in the specific context of international strategic alliances. Employing an integrated risk perspective and mixed gamble perspective, we propose a theoretical argument suggesting that, in emerging markets, family firms would favour international equity strategic alliances (IJVs) over international non-equity strategic alliances (INEAs) compared to non-family firms. Furthermore, we posit that this preference is intensified by two factors—industry relatedness and the focal firm's prior experience in the alliance partner's home country—operating through the mechanism of relational dynamics between partners. Empirical tests conducted on a large sample of cross-border dyadic alliances formed by listed Indian firms over twenty years validate our predictions, contributing valuable insights to international entry-mode literature.

IM: **Escapism and Chinese SMEs' OFDI: The Role of Subnational Institutions and Firms' Institutional Ties**

Author: **Zibang Chen**, *U. of Manchester*

Author: **Axele Giroud**, *U. of Manchester*

Author: **Asmund Rygh**, *Alliance Manchester Business School, U. of Manchester*

The internationalisation of emerging-markets multinational enterprises (EMNEs) or small and medium-sized enterprises (SMEs) has been viewed as an escape from domestic institutional environments. So far most literature on institutional escapism was based on the national average of institutions, assuming the homogeneity of subnational institutions and firms' ability to deal with underdeveloped institutions. This underlying assumption may limit our understanding of the escapism phenomenon. To fill this gap, this paper explores how SMEs' escapism behaviours vary with the subnational region they locate and the institutional ties they have. Specifically, we study subnational institutions of marketisation and financial market openness, as well as firm-level ties of political connections and ties to industry associations. We contend that a developed marketisation, open financial markets, political connections, and ties to industry associations have a negative relation with Chinese SMEs' OFDI. The analysis of 242 Chinese private SMEs' OFDI activities from 2009 to 2019 provides empirical evidence for our arguments. We contribute by introducing more institutional dimensions to the "escape" view of SMEs' internationalisation and highlighting the variation in subnational institutions and firms' institutional ties. We add novel insight by examining the role of ties to industry associations that are rarely studied.

IM: **Antitrust Legislation and Product Market Internationalization: Evidence from Emerging Market SMEs**

Author: **Zhihong Wen**, *U. Of Sydney*

Author: **Huan Zhang**, *U. of Sydney Business School*

Author: **Vikas Kumar**, *U. of Sydney Business School*

Previous research has acknowledged the role of pro-market reforms, yet there has been limited discussion regarding how antitrust legislation, a specific type of increasingly prevalent market-oriented institution in recent decades, can influence SME internationalization. Drawing on the attention-based view and institution-based view, this study argues that antitrust legislation in emerging economies leads SMEs to focus their product market attention and efforts on domestic markets, thereby reducing their inclination toward internationalization. As predicted, our analysis of a sample of 26,412 firms from emerging countries indicates a significantly negative impact of antitrust legislation on the product market internationalization of SMEs. The results also reveal that both group affiliation and domestic private ownership negatively moderate the relationship between antitrust legislation and the product market internationalization of SMEs.

IM: **The Effect of Internationalization on Innovation in Emerging Economy Firms: Role of Board Diversity**

Author: **Saneesh Edacherian**, *Birmingham Business School, U. of Birmingham*

Author: **Nikolaus T. Uhlenbruck**, *U. of Montana*

Author: **Sunil Sharma**, *Indian Institute of Management, Ahmedabad*

There is consensus among researchers that the internationalization of emerging economy multinational enterprises (EMNEs) is motivated by their intention to acquire strategic assets such as innovative technologies, broaden their expertise, and enhance their skills. Yet the amount of research on the outcomes of EMNE internationalization and the role of strategic leaders in capturing the advantages of internationalization is scarce. To address this gap, we study the relationship between EMNE internationalization and innovation performance and the impact of two types of board-level diversity on this relationship. We test these relationships on a 21-year panel of 244 firms from the Indian biopharmaceutical industry. We find that EMNE internationalization has an inverted U-shaped relationship with innovation performance and this relationship is contingent on board functional and gender diversity. Our study contributes to the EMNE internationalization and upper echelons literatures.

IM: **Theorizing About Emerging Multinationals' Cross-Border Acquisitions**

Author: **Mike W. Peng**, *U. of Texas at Dallas*

Author: **Joyce Wang**, *Texas State U. - San Marcos*

Author: **En Xie**, *Tongji U.*

Author: **Sergey Lebedev**, *Kennesaw State U.*

Extending property rights theory, this article conceptualizes an emerging-economy multinational (emerging multinational or EMNE) as a collection of assets over which the EMNE has residual control, gained predominantly through cross-border acquisitions. Two intertwined puzzles emerge: (1) Why do EMNEs often bid higher for targets in developed economies? (2) Why do EMNEs tend to allow such targets significant autonomy? As two sides of the same coin, the two puzzles beg the question of whether an integrative answer exists. Leveraging property rights theory, complemented by a legitimacy-based view, we propose that an answer may lie in EMNEs' efforts to simultaneously maximize joint value creation, minimize target incentive loss, and overcome legitimacy deficits.

How Does the Political Context Affect Mergers and Acquisitions?

Session Moderator: **Shiqi Xu**, *Ivey Business School*

IM: The Impact of Foreign Investment Screening Mechanism on Chinese Technology-Related Acquisitions 

Author: **Zaiyang Xie**, *zhejiang U. of technology*
Author: **Liang Wang**, *U. of San Francisco*
Author: **Peiling Yu**, *School of Management, Zhejiang U. of Technology*

This study employed the difference-in-differences method to investigate the impact of the Foreign Investment Risk Review Modernization Act (FIRRMA) on technology-related cross-border acquisitions (CBAs) from China. Data from publicly listed Chinese high-tech firms spanning from 2010 to 2021 reveal that the implementation of FIRRMA decreased the likelihood of Chinese firms completing CBAs in the United States and led to a reduction in their transaction value. Among the CBAs that were completed, FIRRMA extended the duration of these transactions. Furthermore, these effects were more pronounced in the private enterprises than state-owned enterprises. This study represents one of the earliest empirical examinations of the impact of FIRRMA on Chinese CBAs.

IM: The Nationalism Trap in Cross-Border Acquisitions

Author: **Xu YAN**, *Hong Kong U. of Science and Technology*
Author: **Xinhao QIAO**, *Hong Kong U. of Science and Technology*
Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

There is increasing scholarly attention on nationalism, indicating that nationalism plays an important role in the context of international business. However, research on nationalism at the firm level is scarce. In this study, we investigate how firms' rhetorical nationalism affects their cross-border acquisitions (CBAs). We posit that there is a paradox in which firms with a higher level of nationalism are more likely to engage in CBAs but less likely to succeed. We find support for our argument based on a sample of attempted foreign acquisitions by Chinese public firms. Additionally, we discover that the impact of rhetorical nationalism on CBAs is contingent on the target country's nationalism, the national-security industry of target firms, and the institutional distance between the two countries.

IM: Navigating Regulatory Environment in Cross-Border Acquisitions: Family vs Non-Family Firms  

Author: **Sumit Chakraborty**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

This study explores the differences between family and non-family firms' proclivity towards stronger regulatory environments in the context of cross-border acquisitions (CBA), influencing their location choice preferences. Drawing on the socioemotional wealth (SEW) perspective, it argues that family firms prioritize robust regulatory environments for CBA as it offers long-term SEW advantages valued by family firms seeking to internationalize. Analyzing a large sample of cross-border acquisition deals initiated between 2000 and 2018 by Indian firms listed on the NSE500 index, the findings support the higher inclination of family firms toward stronger regulatory environments. The study also identifies the moderating effects of political affinity and family business legitimacy on this relationship. Integrating SEW and institutional theory, this research enhances the understanding of family firms' location choices and sheds light on the antecedents of host-country regulatory preference. Further, it underscores the role of informal institutions in shaping location preferences, contributing to the literature on family firm internationalization.

IM: Contingent Value of Political Connections in Cross-Border Acquisitions of Emerging Economy Firms 

Author: **Wenjun Tu**, *Ningbo U.*
Author: **Xiaolan Zheng**, *Nottingham U. Business School China*
Author: **Lei Li**, *U. of Nottingham Ningbo China*
Author: **Jiatao Li**, *Hong Kong U. of Science and Technology*

Prior studies suggest that an emerging economy (EE) firm's shareholder value after an announcement of a cross-border acquisition (CBA) is influenced by its political connections in the home country. Such influences are, however, contingent upon contextual factors. This study examines the context-specific stock market responses to the CBA announcements of EE firms with varying domestic political connections. We find that the stock market responds positively to CBA announcement of politically well-connected firms, but this relationship depends upon firm ownership structures and domestic institutional contexts. Our findings shed light on the contingent value of political connections of EE firms at the time of CBA announcement.

The General Manager of the Overseas Subsidiary

Session Moderator: **Xin Wang**, *U. of Illinois at Urbana-Champaign*

IM: Home-Host Government Conflict and MNEs' Subsidiary Manager Staffing Strategy: A Strategic Alignment

Author: **Xin Wang**, *U. of Illinois at Urbana-Champaign*
Author: **Kun Yao**, *U. of Illinois at Urbana-Champaign*

In this study, we explore how home-host government relations impact multinational enterprises (MNEs)' subsidiary manager staffing strategy. By emphasizing a strategic alignment between the host country environment and a subsidiary manager decision, we argue that MNEs' home-host government conflict, as a salient dimension of government relations, will decrease MNEs' likelihood of using expatriate managers. That is attributed to expatriates' disadvantages in providing essential resources and legitimacy to mitigate the increasing host country environmental uncertainty arising from home-host government conflict. Additionally, we argue that geographic distance will mitigate the main negative relationship by decreasing MNEs' expectation of home-host government conflict duration and escalation. On the contrary, home-host trade mutual dependence will intensify the negative impact of home-host government conflict on expatriate manager assignment through the enhancement of subsidiary managers' importance in leveraging host country resources to countervail extended cross-border market uncertainty. Using a sample of Japanese manufacturing firms and their foreign subsidiaries from 1993 to 2017, we find robust empirical evidence that corroborates our hypotheses.

IM: General Manager Turnover in MNC Subsidiaries: The Roles of Board Heterogeneity and CEO Network Size

Author: **Liang Li**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Marketa Rickley**, *UNC Greensboro*
Author: **Vanessa C. Hasse**, *Ivey Business School*

Subsidiary general managers (GMs) play a central role in foreign subsidiary governance. While their exit represents a loss of human capital for multinational companies (MNCs), we know relatively little about the dynamics underlying the phenomenon of subsidiary GM turnover. In this study, we thus address the subject by exploring the effects of MNC board tenure heterogeneity and CEO network size on GM turnover rates. Grounded in the tenets of upper echelons theory and using a longitudinal dataset with 6,577 observations across 1,603 foreign subsidiaries of Japanese MNCs between 2004 and 2020, we argue and show that greater heterogeneity in board tenures reduces the likelihood of subsidiary GM turnover. This finding supports the value-in-diversity perspective that MNC boards with greater tenure heterogeneity can enable better-informed decisions on foreign subsidiary GM turnover, thereby reducing the likelihood of premature dismissals or public scapegoating. However, we further find that CEOs with larger network sizes can override the attenuating effect of board tenure heterogeneity on subsidiary GM turnover rates, which we attribute to three interrelated mechanisms: relational power, signaling inclination, and informal knowledge-sharing. Together, these findings advance understanding of strategic leadership interfaces and the interdependent roles of top managers in international business contexts.

IM: Subsidiary Managers in the Middle – Code-Switching While Navigating International Boundaries

Author: **Soo Min Toh**, *U. of Toronto*
Author: **Hugh P. Gunz**, *U. of Toronto*
Author: **Xian Zhao**, *Northwestern Kellogg School of Management*

We introduce a new theoretical approach to analyzing the consequences of transitions across role boundaries, drawing on code-switching and approach/inhibition/avoidance (CS/AIA) theory (Anicich & Hirsh, 2017). We spotlight the experience of the managers of foreign subsidiaries that in the context of multinational organizations are positioned in the middle - with responsibilities spanning the subsidiary and the parent company. We present a model that shows how the theory points both to the sources and consequences of stress that such complex boundary-crossing can generate, but also to the opportunities that arise. In so doing, we expose the interaction dilemmas faced by subsidiary managers and advance research on subsidiary managers as knowledge conduits by examining not just whether or what they communicate, but how they do so.

IM: MNE Knowledge Management and General Manager Staffing in Local Market Seeking Subsidiaries

Author: **Jongmin Lee**, *Yonsei U. School of Business*
Author: **Liang Li**, *Ted Rogers School of Management, Toronto Metropolitan U.*
Author: **Andreas P.J. Schotter**, *Ivey Business School*
Author: **Shige Makino**, *Kyoto U.*

Multinational enterprises (MNEs) often deploy parent-country nationals (PCNs) to facilitate and safeguard knowledge transfer from headquarters (HQs) to foreign subsidiaries while using host-country nationals for local adaptation. Yet a simplistic understanding like this may lead to oversimplifications in the context of local-market-seeking subsidiaries. Given the critical boundary spanning role of subsidiary general managers (GMs), we theorize both the transaction cost minimization and value maximization implications of knowledge transfer, exploitation, and adaptation on subsidiary GM staffing decisions. Based on longitudinal data of 557 Japanese manufacturing MNEs between 1991 and 2020 operating across 47 countries, we found that when comparing a focal MNE with itself over time, there is a positive relationship between MNE R&D intensity and PCN GM deployment. This relationship is then moderated by the focal MNE's international R&D experience. However, when comparing the focal MNE with its peer MNEs, technologically leading firms are less likely to deploy PCN GMs in their local-market-seeking subsidiaries compared to technologically lagging firms.

New Perspectives on Competitive Dynamics in International Contexts

Session Moderator: **Aleksi Otto Eerola**, *HEC Montréal*

IM: Rivalry Between Multinational Corporations in Corporate Social Responsibility   

Author: **Der-Ting Huang**, *U. of Illinois at Urbana-Champaign*
Author: **Kun Yao**, *U. of Illinois at Urbana-Champaign*

This paper extends the competitive dynamics literature by exploring rivalry between multinational corporations (MNCs) in nonmarket arenas. Specifically, our study explores how an increase in the level of a rival's corporate social responsibility (CSR) leads to a competitive response by a focal MNC regarding its CSR practice. We develop a contingency view by investigating how two boundary conditions—observability and coordination in global markets—moderate the competitive interactions between the rival and the focal MNC in CSR. We empirically test our hypotheses with 3091 dyad-year observations across 35 host countries from 2009 to 2015, and the results corroborate our theoretical arguments.

IM: Expanding Beyond the Primary Market: Competitive Positioning and Internationalization

Author: **Prakash Raj Paudel**, *BI Norwegian Business School*
Author: **Pengfei Wang**, *BI Norwegian Business School*

Prior literature has long suggested that firm performance relies on their competitive positioning vis-à-vis competitors. While plausible, research in this stream usually assumes that all firms compete within one common, bounded marketplace (e.g., a country or region), but overlooks the fact that firms often expand their operations outside their primary marketplace. Such market expansion deserves attention as it may largely reshape the established relationship between positioning and performance. To shed light on this, we focus specifically on the neglected role of firm internationalization, which may help firms release competitive pressure in their domestic market. Analyzing firms' competition and internationalization in the U.S. between 1997 and 2017, we find support for our core claim: For firms with greater internationalization, the negative effect of competitive pressure on firm performance is significantly reduced. Moreover, internationalization is also found to drive firms' repositioning: Firms with greater internationalization tend to reposition away from their domestic competitors. These findings make important contributions to research on competition and international business.

IM: How to Swim with Sharks: Firms' Response to Technologically Advanced Foreign Entry

Author: **Wanyu Xu**, *National U. of Singapore*

This study investigates how domestic entrepreneurial firms (EFs) in the emerging economy of China strategize partnerships with established firms in response to technologically advanced foreign firm entry. While such partnerships are key for EFs to acquire market power and complementary knowledge assets, there are risks of potential misappropriation of EFs' knowledge assets by established firms (or corporate "sharks"). We examine how domestic EFs can effectively partner with established corporate sharks in response to technologically advanced foreign entrants, particularly through corporate venture capital (CVC) investments. Using the context of Tesla's Gigafactory entry into the Chinese new energy vehicle (NEV) industry as a result of a major top-down policy change to promote foreign competition in the domestic NEV market, we find an increase in syndicated partnerships formation between entry-affected EFs and CVC investors after tech-advanced foreign firm entry. This impact is more salient when independent venture capital (IVC) is involved, EFs are distant from coastal areas, and EFs are less prominent in the entrepreneurial setting. Our study sheds light on how EFs can strategically leverage domestic partnerships in response to foreign entrants and the understudied but important role of foreign firm entry in facilitating domestic collaborations in the entrepreneurial setting.

IM: Market Concentration and the Tendency to Internationalize: An Inverse U-Shape 

Author: **Pascal Simon Mayer**, *U. of Muenster*
Author: **David Lohmar**, *U. of Muenster*

Firm internationalization has been a central topic of scholarly interest in international business for decades. However, market concentration has received limited attention as an important factor in implementing internationalization strategies. In this study, we investigate the relationship between market concentration and firm internationalization strategy and propose an inverted U-shape. Based on longitudinal data of more than 24,000 firm-year observations between 2008 and 2019, we show that the relationship between market concentration and firms' internationalization strategy is indeed inverse U-shaped. Our findings indicate that internationalization intensifies with rising market concentration levels up to a certain peak, beyond which internationalization is declining. Moreover, we show that managerial ability and market fluidity intensity are two important contingencies that intensify this relationship and steepen the inverted U-shape. We contribute to the literature by bridging the two research streams on market concentration and firm internationalization and developing a novel text-based measure for firms' internationalization strategy.

Multinational LGBTQIA+ Policies in Contested International Business Environments

Session Chair: **William Newbury**, *Florida International U.*
Participant: **Naomi A. Gardberg**, *City U. of New York, Baruch College*
Participant: **Bryant A. Hudson**, *IÉSEG School of Management*
Participant: **Aharon Cohen Mohliver**, *London Business School*
Moderator: **Hidehiro Ito**, *Florida International U.*
Moderator: **Anthony D. Meyers**, *Baruch College & The Graduate Center, CUNY*

This symposium aims to explore three interrelated themes associated with the adoption of LGBTQIA+ policies by multinational corporations across international business environments where sentiments towards such policies may be contested. First, we will look at the management of organizational-level stigma faced by organizations serving the LGBTQIA+ community. We will also talk about how the nature of that stigma varies across institutional and country environments, and the implications of that for stigma management. Second, we will explore how contested environments potentially impact LGBTQIA+ policy adoption by MNEs. The LGBTQIA+ context provides a prototypical example of a contested environment where strong societal sentiments exist in both directions. Third, we will examine factors influencing external stakeholder reactions to company LGBTQIA+ policies once adopted. The degree to which supportive behaviors such as investing in a firm, purchasing a firm's products or services, and seeking employment in a firm are influenced by LGBTQIA+ policies is an important input into adopting such policies in the first place. Each of these three themes will be overviewed briefly by one of our session panelists. The session chair and co-moderators will then lead a discussion of these themes by exploring pre-assigned questions to each of the panelists, followed by general Q&A from the panel audience.

Regional Strategy: Assessing Past Achievements and Charting the Future for MNE Research

Session Chair: **Chang Hoon Oh**, *U. of Kansas*
Panelist: **Alain C. Verbeke**, *U. of Calgary*
Panelist: **Steven Altman**, *NYU Stern School of Business*
Panelist: **Christian Geisler Asmussen**, *Copenhagen Business School*
Panelist: **Jing Li**, *Simon Fraser U.*
Panelist: **Margarethe F Wiersema**, *U. of California, Irvine*

Our panel discussion will thoroughly examine the current state of knowledge in regional multinational enterprise (MNE) strategy, covering critical aspects like the regionalization vs. globalization debate, the impact of multinationality on MNE performance, regional strategies and subsidiary management, and the significance of institutional complexity. Beyond assessing existing knowledge, the panelists will also present future research questions, providing valuable guidance for scholars in advancing our understanding of regional MNE strategy. Recognizing the dynamic nature of international strategic management, our panel will incorporate emerging themes such as climate change, sustainability, and resilience into the discussion, ensuring our exploration remains at the forefront of addressing contemporary challenges. Leveraging their expertise, the panelists will organize presentations around key future research questions, offering a structured and insightful exploration of the pivotal issues shaping the future of regional MNE strategy.

The Role of Global High-Skilled Talent in Entrepreneurship and Innovation

Organizer: **Divya Sebastian**, *Fuqua School of Business, Duke U.*
Organizer: **LI Liu**, *U. Carlos III de Madrid (UC3M)*
Presenter: **Astrid Marinoni**, *Georgia Tech Scheller College of Business*
Presenter: **Britta Glennon**, *The Wharton School, U. of Pennsylvania*
Presenter: **Deepak Nayak**, *The Ohio State U. Fisher College of Business*
Presenter: **Raviv Murciano-Goroff**, *Boston U. Questrom School of Business*
Discussant: **Exequiel Hernandez**, *Wharton*
Discussant: **Heather Berry**, *McDonough School of Business Georgetown U.*

This symposium seeks to provide an understanding of the pivotal role of global talent in innovation and entrepreneurship. Against the backdrop of two prominent trends - namely, a significant shift in the high-skilled talent pool from developed countries, particularly the US, to emerging market giants like India and China, alongside the rise of global conflicts (e.g., US-China tensions and the Ukraine conflict)—the role of global talent on innovation and entrepreneurship have encountered increased complexities. This symposium aims to unravel the consequences of these trends and elucidate how firms can capitalize on the evolving global talent distribution. To attain these objectives, the symposium invites four papers on diverse aspects. Two papers will discuss the potential ramifications of global conflicts on knowledge creation and entrepreneurship, while the remaining two will study how firms strategically respond to and capitalize on the availability of global talent. By incorporating studies on both the countries sending talent and those receiving it, as well as investigating various outcomes like entrepreneurship, knowledge production, and firm innovation, this symposium seeks to enrich discussions and enrich the audience with valuable insights for their forthcoming research endeavors.

Project Reality: Flourishing in Innovation-driven Realities Through Organizational Ambidexterity

Organizer: **Carol McGuire**, *Miami U.*

Panelist: **Lori Kendall**, *The Ohio State U. Fisher College of Business*

Agile represents the latest iteration in a series of evolving mindsets and methods aimed at revolutionizing our approach to work. Yet organizational experience as they traverse a hybrid state of work gets very little notice in both practitioner and academic settings. Stakes raised further as Innovation drives accelerated and complex change to an organization's future processes, policies, and structures. Therefore, examining organizations living the reality of multiple ways of work becomes more critical. In this symposium, participants will be led by expert panelists through an examination of how an organization can be successful within a hybrid state. Using a prominent area of business life affected by the hybrid state of work – projects and project managers, participants will learn about organizational constructs that contribute to that success, such as organizational ambidexterity. We expect this symposium to be interesting for those who 1) are consultants in practice, 2) study consulting as a discipline, and 3) work in the space of organizational behavior and design. Participants will leave with practical tools for supporting organizations in multi-work states along with avenues for scholars to advance research in organizational change, transformation, and design.

Online Management Education

Session Moderator: **Jaclyn Perrmann**, *Northern Kentucky U.*

MED: The Paradoxical Dynamics of Student Engagement in Virtual Learning Environments     

Author: **Jaclyn Perrmann**, *Northern Kentucky U.*

Author: **Daniel M. Peat**, *U. of Cincinnati*

Author: **Amanda Christensen-Salem**, *U. of Cincinnati*

Author: **Fred Ochieng Walumbwa**, *Florida International U.*

Understanding student engagement, particularly in online classes, is crucial for optimizing learning experiences, yet the changing nature of engagement remains understudied. This study draws on self-determination theory to inductively explore the evolution of student engagement in terms of autonomy, competence, and relatedness, in online learning environments before, during, and after the Covid-19 pandemic. Utilizing a sample of over 400 students from 14 universities across four countries, we find that a paradox emerges with respect to the desire to be socially connected and the desire for increased autonomy and flexibility. We offer theoretical exploration of the changing nature of student engagement and best practices for engagement in virtual educational environments.

MED: Significant Learning in a Collaborative Online International Learning Platform   

Author: **Ruben Burga**, *U. of Guelph*

Author: **Isabel Rodriguez Tejado**, *U. de Navarra*

Author: **Amelia N. Indrajaya**, *Sekolah Tinggi Manajemen IPMI (IPMI International Business School)*

Author: **Anjali Chaudhry**, *Dominican U.*

Collaborative Online International Learning (COIL) holds a lot of promise as an experiential tool to enhance student learning. As management educators explore pedagogies for sustainability education, research is needed that examines whether COIL can serve as an effective tool to enhance students' significant learning in this context. This paper presents a study that utilized a mixed-method approach to evaluate the effectiveness of a COIL experience for educating business students on the role of business innovations for sustainability as described by the UN Sustainable Development Goals. As a collaboration of instructors from four different institutions across North America, Europe and Southeast Asia, this COIL incorporated Fink's taxonomy of significant learning. Findings from our survey-based research suggest that COIL students obtained superior student learning outcomes over non-COIL students on three of the six dimensions- integration, caring, and learning how to learn. Our qualitative study shows that the experience improved the students' learning along several of Fink's dimensions of significant learning.

MED: Synchronous Collaborative Software for Online Group Work: A Study of Student Perception (WITHDRAWN)  

Author: **Jason R. Lambert**, *Texas Woman's U.*

Author: **Lee Warren Brown**, *Texas Woman's U.*

Author: **Maria Barua**, *Texas Woman's U.*

Author: **Mark Tengesdal**, *Texas Woman's U.*

The use of synchronous collaborative software (SCS) is increasingly common in online education. To assess the impact of these tools on communication and collaboration in online group work, we conducted a study involving 440 undergraduate and MBA students. We found that students' perceptions of communication efficacy improved as the frequency of usage with SCS increased, and that students' perceptions of team cohesion improved, with larger improvements observed in teams that were more engaged with the tool. Additionally, a conditional indirect effect exists for SCS usage on team cohesion through communication efficacy. These findings suggest that SCS can be an effective and valuable tool for facilitating communication and collaboration in online group work.

MED: Student Engagement in Online Education: The Role of Technology, Compatibility, and Resource 

Author: **Holly H. Chiu**, *City U. of New York - Brooklyn College*

Author: **William Hampton-Sosa**, *Brooklyn College, City U. of New York*

Student engagement has long been the focus for educators. Much of the research has focused on student engagement in face-to-face classes. With the rise of e-learning, a significant challenge was how to promote student engagement in the online environment. We sampled 197 business students at a large Northeastern public commuter college and surveyed them about their experiences with online learning. The PLS-SEM analysis indicated that behavioral engagement was positively influenced by cognitive and emotional engagement. In turn, cognitive and emotional engagement were positively influenced by the e-learning technology's perceived usefulness and perceived ease of use, the latter indirectly. In addition, the results indicated that the compatibility of the e-learning platform with student's values and expectations was positively related to cognitive engagement. We also found that the student's resource availability, which has physical, emotional, and cognitive dimensions, was positively related to emotional and cognitive engagement.

MED: Walls Without Walls: Performing Self-Regulated Learning With Virtual Spaces

Author: **RUI SUN**, *New York U.*

Author: **Natalia Levina**, *New York U.*

Learning activities through virtual spaces in a hybrid environment has grown in significance since the beginning of the COVID-19 pandemic, giving an impetus for developing new digital spaces that can emulate or reconstruct traditional physical working environments. In this paper, we present a qualitative comparative field study investigating how people engage in self-regulated learning activities at a university library and with a digital study platform, ST.com. We adopt an agential realist perspective to analyze how self-regulated learners structure the learning environment with the digital learning space. We analyze how the digital elements in the virtual spaces are not standalone entities but become meaningful when learners actively include as well as exclude elements while performing the learning activities – a process we call agential cutting following an agential realism ontology. We discuss how our theorizing about self-regulated learning in hybrid environments informs a broader understanding of how knowledge work practices move into virtual spaces.

Leader-Follower Identity Dynamics: Current and Future Directions

Organizer: **Kyriaki Chalkiadaki**, *Durham U. Business School*
Panelist: **Bryan Acton**, *Binghamton U.-State U. of New York*
Panelist: **Zahira Jaser**, *U. of Sussex Business School*
Panelist: **Stefanie Johnson**, *U. of Colorado, Boulder*
Panelist: **Karolina Wenefrieda Nieberle**, *Durham U.*
Panelist: **Thomas Sy**, *U. of California, Riverside*
Organizer: **Xiaotong (Janey) Zheng**, *Durham U. Business School*

Individuals hold internal representations or schemas that were developed in the past (Murphy & Johnson, 2011) and include cognitions, emotions, and scripts that have an impact on how they labeled themselves and others as leaders (Eden & Leviatan, 2005; van Knippenberg et al., 2004) or followers (Whiteley et al., 2012) and those representations will influence their identities and interpersonal relations (Coyle & Foti, 2015; Dienesch & Liden, 1986; Engle & Lord, 1997; Lord et al., 1984; Lord & Maher, 1993). To better understand what urges leadership and followership behaviours and actions, we need to uncover and thoroughly examine the versatile ways that people employ to define themselves as leaders or followers. Leader-follower identity dynamics is a promising field of study with major implications on workplace like leader-follower identity switch- LFS (Sy & McCoy, 2014), role transitions within the same domain (Ashforth, 2001), effective momentary or/and shared leadership (Shondrick, Dinh & Lord 2010; Friedrich, Vessey, Schuelke, et al. 2009) and leadership development (Epitropaki et al., 2023; Lord et al., 2020). With our symposium we aim to function as a catalyst and ignite a thought-provoking discussion by exploring current and future research directions. Each one of the panelists will explore the topic from a different angle.

Presenter: **Ellen Shaffner**, *Mount Saint Vincent U.*
Discussant: **Nicholous Mark Deal**, *Mount Saint Vincent U.*

This presenter symposium provides a space for scholars from different areas of the Academy to come together to explore the potential gaps, linkages, and overlaps that exist at the intersection of research on organizational wrongdoing and irresponsibility and a methodological or conceptual engagement with the past. Specifically, we draw on a range of divisional experiences and approaches to explore (i) how organizations account for and manage their problematic past and (ii) the role memories and memory work play in historical and ongoing cases of wrongdoing. In doing so, the symposium will highlight the particular affordances and challenges that the past represents for understanding and tackling wrongdoing and irresponsibility. Three presentations will demonstrate specific historical and retrospective approaches, showing their potential value to organizational wrongdoing and irresponsibility research. Finally, we provide a space for dialogue on future directions and opportunities that stem from the intersection of these themes.

Power Dynamics in Leadership

Session Moderator: **Saskia Glaas**, *Ludwig Maximilian U. of Munich (LMU)*

MOC: **Empowering Leadership and Proactive Behavior: A Social Information Processing Perspective**

Author: **Yejun Zhang**, *Texas State U.*
Author: **Kui Yin**, *U. of Science and Technology Beijing*
Author: **Min Wan**, *Texas State U.*

Drawing on social information processing theory, we examined the mechanism as well as the boundary condition between empowering leadership and employee proactive behavior. Moving beyond the perspectives that have been suggested in prior studies, we provided a new account that was based on the social information processing perspective and proposed that empowering leadership would have a curvilinear effect (i.e., inverted U-shaped) on employee proactive behavior via perceived leader effectiveness. In addition, we predicted that employee's empowerment expectation would moderate the effect of empowering leadership on perceived leader effectiveness, as well as the indirect effect of empowering leadership on employees' proactive behavior. The proposed hypotheses were generally supported in a time-lagged data of 402 subordinates and their 97 supervisors; however, there was no moderating effect of employees' empowerment expectation. We discussed both theoretical and practical implications and identified the directions for future research.

MOC: **The Role of Class Privilege and Humility in Leadership**

Author: **Liuxin Yan**, *National U. of Singapore*
Author: **Grace Jia Hui Lim**, *Hong Kong Baptist U.*
Author: **Wei Jee Ong**, *National U. of Singapore*

Although the impact of class-based privilege is pervasive and long-lasting, upper-class individuals often fail to acknowledge that they have benefitted from unearned advantages and opportunities in achieving their success. Instead, those benefitting from class privileges often proactively deny and deflect these advantages, motivated by ideologies of meritocracy to reaffirm their image as "self-made". Expanding on this line of work, we tackle this phenomenon through an interpersonal lens by examining how observers perceive and react to individuals' self-awareness regarding the privileges associated with their social class background. Integrating theoretical insights from the social class and humility literatures, we propose acknowledging privilege as an impression management tactic for leaders from higher (vs. lower) social class backgrounds to signal their humility, which consequently enhances their likelihood of further getting promoted within an organization. We discuss theoretical and practical implications of our work.

MOC: **Coping with Daily Laissez-Faire Leadership: Crafting a Path to Success or Disengaging from Chaos?**

Author: **Saskia Glaas**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Huong Pham**, *U. of St. Gallen (HSG)*
Author: **Angela Kuonath**, *Ludwig Maximilian U. of Munich (LMU)*
Author: **Dieter Frey**, *Ludwig Maximilian U. of Munich (LMU)*

Laissez-faire leadership predominantly yields negative effects on employees, though some findings of positive effects exist. Moreover, how employees navigate this passive leadership style on a daily basis remains poorly understood. Grounded in transactional stress theory and the job demands-resources model, we argue that daily job crafting buffers the negative effects of laissez-faire leadership on next-day performance via evening job satisfaction, whereas daily disengagement coping worsens these effects. We collected data twice a day over one working week in an experience sampling study with 127 employees, (i.e., after work and before bedtime; 359 data points). Our findings revealed a positive indirect effect of laissez-faire leadership on next-day performance via evening job satisfaction on days when employees exhibited high levels of job crafting and low levels of disengagement coping. In contrast, a negative indirect effect was observed on days when job crafting was low and disengagement coping was high. This emphasizes the double-edged nature of daily laissez-faire leadership and that its effect within individuals depends on their chosen daily coping strategies. Our findings highlight the value of job crafting and the risks associated with disengagement coping when confronted with daily laissez-faire leadership.

MOC: **Helicopter Bosses: Development and Validation of the Micromanagement Scale**

Author: **Catherine Deen**, *U. of New South Wales*
Author: **Christian Kiewitz**, *U. of Dayton*
Author: **Jun-Yeob Kim**, *U. of Illinois at Urbana-Champaign*
Author: **Simon Lloyd D. Restubog**, *U. of Illinois at Urbana-Champaign*
Author: **Ying-Yi Chih**, *Australian National U.*
Author: **Robert Lu Tang**, *De La Salle-College of Saint Benilde*

Micromanagement (MM) is a popular topic in management circles, where its negative reputation is palpable. Surprisingly, academics have not shared this interest, resulting in a deficient understanding of MM marred by disjointed definitions and paradoxical views. Our research addresses this gap through a programmatic series of five studies that: (1) define the MM construct, (2) develop a psychometrically reliable and valid measure, and (3) validate a preliminary nomological network. Using combined deductive and inductive approaches, we establish a construct definition of MM. Subsequently, we develop and validate a 17-item Micromanagement Scale (MMS-17). Drawing on data from 10 distinct samples encompassing 2,098 individuals from diverse industries, we found that: (a) MM is a hierarchical construct with three key attributes (i.e., controlling, close monitoring, detail focus) and three key features (i.e., excessive, sustained, unnecessary), (b) the MMS-17 demonstrates discriminant validity vis-à-vis other leadership constructs (i.e., abusive supervision, authoritarian leadership, directive leadership, empowering leadership, initiating structure, participative leadership), and (d) the MMS-17 exhibits nomological validity through significant relationships with theorized antecedents (e.g., trust, leader-member exchange) and consequences (e.g., turnover intentions). We discuss the implications of the MMS's availability for the study of micromanagement with special focus on future research directions and practical implications.

Adapting to Remote and Flexible Work Environments

Session Moderator: **Bowen Shi**, *National U. of Singapore (NUS)*

MOC: **Daily Spillover Stressors: Incivility, Work-Family Conflict, and Temporary Smartphone Dependence**

Author: **Bowen Shi**, *National U. of Singapore (NUS)*
Author: **Yongjuan Li**, *Chinese Academy of Sciences*

In modern society, smartphones are widely used throughout the world, and little is known about the predictors of smartphone addiction in the daily working context. Our two-week experience-sampling study of 138 teachers revealed that incivility as a work stressor influences smartphone addiction through work-to-family conflict. We further examined the daily-level relationship between smartphone dependence and insomnia. The results showed that incivility from students, instead of coworkers, is positively correlated with work-to-family conflict, which in turn influences individuals' temporary smartphone dependence; lack of control moderates the relationship between work-to-family conflict and temporary smartphone dependence; and phone dependence is positively associated with insomnia. Our findings enrich compensatory internet use theory and the Interaction of Person-Affect-Cognition-Execution (I-PACE) model and expand the smartphone dependence research to the working area.

MOC: **Time Control Fatigue: Navigating Autonomy and Synchronization in Hybrid Work**

Author: **Ruilin Huang**, *Stockholm School of Economics*
Author: **Ioana Lupu**, *ESSEC Business School*
Author: **Lotta Hultin**, *Stockholm Business School*

Hybrid work has emerged as the dominant work arrangement in the post-COVID era, affording employees the flexibility to alternate between the physical office and remote locations. However, we know little about how the temporal structures in this context shape and are reshaped by workers' efforts to create and synchronize work rhythms. Drawing on in-depth interviews and diaries with knowledge workers, we explore how these workers experience and navigate time in the hybrid work context. The findings reveal that hybrid work shifts the responsibility to synchronize workflows from managers to individual workers, increasing the pressure for workers to temporally self-control—not only to determine their own work pace and rhythm but also to create and maintain the synchronization among group members. Despite individuals' higher perceived autonomy, our participants struggled to enact such synchronizations of workflows. This persistent yet unsuccessful struggle ultimately leads to a phenomenon we call time control fatigue. Taken together, our findings contribute new insights into the emergence of new forms of control amid spatial dispersion of workers, wherein the responsibility for synchronizing with temporal structures falls mostly on individual workers, enriching theory on individual entrainment and temporal experiences.

MOC: **Awakening to New Possibilities: Employee Responses to the COVID-Induced Transition to Remote Work**

Author: **Julia Coff**, *NYU Stern School of Business*
Author: **Frances J. Milliken**, *New York U.*
Author: **Kevin Woojin Lee**, *U. of British Columbia*

In this qualitative study, we sought to understand what accounted for the widespread post-COVID resistance to returning to previous ways of working. We interviewed 46 knowledge economy workers whose organizations had transitioned to fully remote work in the wake of the COVID-19 pandemic. Using a grounded theory approach, we found that the collective transition to remote work afforded our interviewees the opportunity to compare their remote and co-located work arrangements, notice contrasts between them, and realize that a new model for work was possible and desirable. We discuss the implications of our findings for designing work and offices in the future, given that what began as a temporary solution may, in the perspective of our interviewees, prevail as the new normal. We also theorize the implications of our findings for understanding the conditions under which individuals may make new sense of their work and organizations and resist that which they previously normalized.

MOC: **Flexible Work Arrangements Sabotage Expatriates' Job Effectiveness Through Interpersonal Conflict**

Author: **Anna Carmella Ocampo**, *ESADE Business School*
Author: **Quan Li**, *Nankai U., China*
Author: **Rebecca Mitchell**, *Macquarie U.*
Author: **Jun Gu**, *Macquarie Business School, Macquarie U.*
Author: **Robert Lu Tang**, *De La Salle-College of Saint Benilde*

This research calls into question the utility of flexible work arrangements (FWAs) in expatriate management. In a mixed methods study, we find that FWAs undermine expatriates' job effectiveness via increased perceptions of interpersonal work conflict. Study 1a presents an exploratory qualitative investigation that probes how the implementation of FWAs may bring forth task and relational challenges among expatriates who operate in international work environments (N=153). Study 1b employs independent expatriate-local peer dyads across two measurement periods to demonstrate that the adoption of FWAs in expatriate work engenders interpersonal work conflict. This, in turn, compromises two forms of job effectiveness: one that is task-based (i.e., in-role performance) and another that is relational-based (i.e., organizational citizenship behaviors) (N=140). These negative indirect relationships are exacerbated under conditions of low, as opposed to high, social support. The present findings emphasize the importance of designing jobs that nurture (rather than spoil) social and task relationships when managing a global workforce. We discuss the implications of these findings for theory and practice.

Participant: **Nathanael Fast**, *U. of Southern California*
Participant: **Margaret Jack**, *Syracuse U. School of Information*

Innovating for the future necessitates a deep theoretical understanding of how individuals cognitively and behaviorally cope with and adapt to shifting paradigms of work and rapid technological advancements. With this in mind, we offer an in-depth examination of the psychological and behavioral mechanisms underpinning how people perceive and react to emerging challenges and opportunities in the new world of work. The first presentation explores independent, creative workers, delving into their unique strategies for navigating non-traditional work structures and their adaptation in terms of both psychological orientation and physical presence. The second presentation challenges conventional views on busyness, proposing that individuals often engage in self-imposed busyness as a deliberate choice that can yield positive outcomes in terms of productivity and well-being. The third presentation introduces a relational theory of microaggressions, a phenomenon increasingly prevalent in modern work settings, and examines the perceptions and responses of individuals and the reactions of perpetrators. The fourth presentation shifts the focus to the perceptions of generative AI in the domain of advice-giving, probing into how individuals may experience the potential benefits and drawbacks of AI tools in the advice generation process. Finally, the last presentation underscores the significance of technology identification as a key factor influencing individuals' willingness to adopt new technologies, demonstrating its role in shaping technological integration in the workplace. Collectively, these presentations will shed light on the multifaceted ways in which human actors are responding to evolving work environments and offer important insights for understanding and navigating the future of work.

This symposium presents new insights into the role of virtue in leadership. Despite increased attention on moral-based leadership in both academic research and popular press, important questions remain about how virtues such as courage and humility inform leader practices as well as perceptions of existing and emergent leaders. Our symposium aims to expand our understanding of virtues in leadership contexts by 1) exploring how virtues such as courage shape proximal antecedents of leader emergence (e.g., expected leader effectiveness, perceived leader-like qualities), 2) identifying antecedents of virtuous leader behaviors (e.g., expressed humility), 3) extending research on the outcomes of virtuous leader behaviors to team-level outcomes (e.g., team silence), 4) testing boundary conditions that enhance or constrain the extent to which leaders exhibit humility (e.g., psychological closeness), and 5) integrating research on organizational virtuousness and follower moral identity. Leveraging multiple theories, methods, analytical levels, and perspectives of leaders and employees from four continents, these papers contribute to an expanded view of effective leadership that emphasizes both competence (being a good motivator of people) and virtue (pursuing worthy goals, in the right way, for the right reasons).

Intuition in Organizations: New Research Directions

Organizer: **Marta Sinclair**, *Griffith U.*
Participant: **Erez Yaakobi**, *Ono Academic College*
Participant: **Jacob Weisberg**, *Bar Ilan U.*
Participant: **Talya Miron-Shatz**, *Ono Academic College*

Participant: **Michael Grant**, *Uppsala U.*
Participant: **Alina Bas**, *New York U.*
Participant: **Viktor Dorfler**, *U. of Strathclyde Business School*

This 15th annual intuition symposium at AoM showcases new research directions in the discipline. The empirical contributions investigate the role of intuition in academic output and organizational forecasting. The conceptual contributions compare and contrast intuition with tacit knowledge and artificial intelligence. Both research streams are bound together through a contribution about a theoretically grounded training method that bears both conceptual and empirical implications. Specifically, Yaakobi et al. investigate the relationship between intuitive vs. analytical cognitive style of scientists and their research output, highlighting the difference between the number of publications and their impact factor, depending on job complexity. Innes illustrates how intuition contributes to individual foresight in organizational context and evaluates the implication for HR management. Culham investigates a non-western view on intuition, used to develop a training method suitable for a western classroom, and introduces a different understanding of intuition from the engineering discipline. Grant explores the similarities and overlaps between tacit knowledge and intuitive expertise, thus further developing the concept and speculating how the distinction might inform the current debate about artificial intelligence (AI). Finally, Bas and Dörfler compare and contrast AI capabilities and intuition functions, as defined by its six necessary features.

Spirituality, Mindfulness, and Ethical Decision Making in Modern Workplaces

Session Moderator: **Sharda Nandram**, *Nyenrode Business U.*

This session explores the role of spirituality and mindfulness in navigating complex decision-making processes and promoting fairness and responsibility in contemporary work environments. It aims to spark meaningful conversations about the role of spirituality and mindfulness in promoting ethical and responsible behavior in modern workplaces.

MSR: Navigating the Unknowable: Spaces and Holistic Dialogues for Spirituality-Informed Decision-Making

Author: **Sharda Nandram**, *Nyenrode Business U.*

Author: **Gaetan Mourmant**, *IESEG School of Management*

Author: **Puneet Bindlish**, *Vrije U. Amsterdam*

Based on classical grounded theory methodology, this paper proposes the significance of spaces and holistic dialogues as conducive factors facilitating the utilization of a distinct kind of intuition, subtle cues, in decision-making processes. In these instances, the experiential unknowable unknown realm of existence acts as a driving force to ways of knowing reality (epistemological dimension of existence). Our findings contribute to the conceptualization of spaces and dialogues. When a conducive space is established, stakeholders are likely to perceive and act upon it, leveraging their experiential realms of knowing to contribute to the organization's overarching purpose. The creation of such spaces introduces the tool of holistic dialogue, prompting stakeholders to utilize various types of information, rational and non-rational elements, subtle cues and diverse resources such as formal and informal channels, explicit and tacit ways of knowing. Through the cultivation of spaces and practice of holistic dialogue, stakeholders develop a set of capabilities that naturally aid them in sustaining their contribution to the organization's purpose while tapping into the cognitively unknowable unknown within their experiential domain. The capabilities developed include mindful perception and mindful sharing. This study contributes to the knowledge of the domain of experience, often regarded as a black box within organizational contexts.

MSR: Harmonizing Spirituality and Algorithmic Fairness in Contemporary Work Environments  

Author: **Siddhartha Satish Saxena**, *Heriot Watt U.*

Author: **Deepa Chaudhary**, *Other*

The article explores the intersection between spirituality and algorithmic fairness in the workplace. The authors argue that spirituality is crucial in fostering an inclusive and ethical work environment, especially in the age of artificial intelligence (AI) and machine learning. The proliferation of algorithms in various sectors has raised concerns about fairness, accountability, and transparency. The literature review highlights the importance of spirituality in organisational wisdom and ethical decision-making. It also discusses the role of fairness and spirituality in promoting equity and equality in organisations. Using bibliometric analysis, the study aims to fill a gap in the literature by exploring the relevance and interconnection between spirituality and algorithms in the workplace. Thus, contributing to the current debate on algorithmic fairness with spiritual insights. The article serves as a foundation for future studies in this area and encourage organisations to consider the spiritual dimensions of algorithmic decision-making.

MSR: Experiences of Othering in the Modern Mindfulness Movement: A Critical Race Theory Perspective 

Author: **Darby Roland**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Author: **Ellen Choi**, *Ted Rogers School of Management, Toronto Metropolitan U.*

Author: **Steven Kavartzis**, *Ted Rogers School of Management, Toronto Metropolitan U.*

This study, grounded in Critical Race Theory (CRT), investigates the phenomenon of the discovery of Othering in modern mindfulness spaces. We describe Othering as the perception of individuals or groups labelled or treated as fundamentally different from one's own identity or social group. Amidst the rising popularity of mindfulness practices in Western culture, this research explores how equality, diversity, and inclusion are experienced by individuals in the mindfulness practice community. Through qualitative interviews with a diverse group of 31 mindfulness practitioners and leaders, this study examines the intersectionality of race, identity, and mindfulness. Our findings suggest that People of Color (POC) experience Othering at the systemic, group, and individual level. At the systemic level, issues include commodification and implicit White supremacy, alongside group-level challenges like White-centric leadership, spiritual bypassing, and universalist approaches. Individually, participants express alienation and safety concerns in predominantly White mindfulness settings. Through our findings, we contribute valuable insights towards the theory and practice of mindfulness, placing particular emphasis on addressing systemic racism, understanding the consequences of performative diversity, and fostering a genuine sense of belonging. In doing so, we offer mindfulness scholarship and practice considerations toward the development, delivery and evaluation of equity and justice-informed mindfulness training.

MSR: Responsible Decisions are Pricey: Can Yoga-Based Practices Help Us to Make Responsible Decisions? 

Author: **Soumya Dutta**, *Doctoral Student at Indian Institute of Technology Bombay (IIT Bombay), India*

Author: **Ashish Pandey**, *Indian Institute of Technology, Bombay*

The depth and breadth of sustainable development necessitate fresh ideas beyond current attitudes and practices followed by organisations. Organisations need new thinking and enhancement of socially responsible decision-making to construct a sustainable and viable future. In this regard, effective self-management education would be vital in building decision-making ability. However, more research investigation is needed on the ways and means of enhancing the ability of socially responsible decision-making. We propose that Yoga-based practices (YBP) can help us make responsible decisions by enhancing equanimity and emotional awareness to address this need. We report three studies to examine the hypothesis. In Study 1, a survey-based study, we examined the impact of equanimity (EQM) on rational decision-making style (RDMS) mediated by emotional awareness (EA). In Study 2, an experimental vignette based study, we looked at the impact of RDMS on socially responsible decisions (SRD). Findings from both the studies supported the hypothesised model. In study 3, we examined the impact of YBP on equanimity using pre-post experiment design. The findings of Study 3 suggest that YBP enhances equanimity and that YBP is an effective, efficient, and sustainable training tool for building socially responsible decision-making ability among management students. We discussed the importance and implications of the finding for the field of Management, Spirituality and Religion research. We also contribute to the research domain of Organisation and Management education.

How Big is the Tent? Toward a Stronger Identity for Organizational Neuroscience and Biology

Session Chair: **Nir Milstein**, *Bar Ilan U.*

Panelist: **David A. Waldman**, *Arizona State U.*

Panelist: **Yair Berson**, *McMaster U.*

Panelist: **Song Zhaoli**, *NUS Business School*

Panelist: **Lara Engelbert**, *Vrije U. Amsterdam*

Discussant: **Danni Wang**, *Rutgers Business School*

The fields of organizational neuroscience and biology are still evolving, presenting an opportune moment to cultivate a more defined and robust identity for these emerging fields. Accordingly, it is important to consider the demarcation between organizational neuroscience and biology research, versus research disciplines that may be relevant, but nevertheless more tangential or auxiliary. This delineation is crucial for clarifying the disciplinary boundaries and asserting the foundational concepts, theory, and research methods of organizational neuroscience and biology. Our goal is not to demean fields of study or research methods that are distinct from, albeit potentially relevant to, organizational neuroscience and biology. Rather, we simply seek to provide more clarity when the terms ‘organizational neuroscience’ or ‘organizational biology’ are used. As described in detail below, our panel symposium aims to delve into several pivotal issues that can help shape the identity of these fields as they move forward. Those issues include (1) methods and concepts, (2) the potential for excessive reductionism, and (3) the “Big N/B” vs. “little o” dilemma in organizational neuroscience and biology.

Going the Distance: Research on Remote and Hybrid Work

Session Moderator: **Adrian Bidlingmaier**, *U. of Konstanz*

OB: **Who can Work From Home? Developing and Validating the Mobile Work Potential Score**

Author: **Adrian Bidlingmaier**, *U. of Konstanz*

Starting with the Coronavirus disease (COVID-19) pandemic, a large number of employees were working from home (WFH) or had other similar flexible working arrangements. Even with relaxation of the obligation to work mobile, these flexible working arrangements remain in many organizations. However, it remains unclear which jobs require physical presence in the organization and which jobs can be performed remotely without major restrictions. We therefore introduce the Mobile Work Potential Score (MWPS) as a scale to measure which tasks in the organization can be performed remotely and for which tasks physical presence at the workplace is required for successful task completion. We conducted two studies to develop and validate the scale. In Study 1 (N = 619), we investigated the underlying factor structure of the MWPS using exploratory and confirmatory factor analysis using survey data from a sample of a German financial services provider arguing that the scale consists of the four factors “Digitizability”, “Autonomy”, “Internal Cooperation” and “External Cooperation”. In Study 2 (N = 294), we cross-validated the factor structure using a workforce sample. While we do not find an effect on employee engagement, we do find that Mobile Work Potential is related to lower emotional exhaustion, higher performance, and higher job satisfaction when predominantly working mobile.

OB: **Every Coin has Two Sides: Organizational Justice in Remote Work**

Author: **Xiaochuan Song**, *Texas A&M U. - Kingsville*

Author: **Baiyun Gong**, *Nova Southeastern U.*

Author: **Ryan Shea**, *Right Management Florida/Caribbean Region*

In response to the COVID-19 pandemic, organizations assigned employees to work remotely on an unprecedentedly large scale. The abrupt and vast change in work mode makes organizational justice a salient issue, which profoundly influences employees' work outcomes. Employees' perceptions of organizational justice can be challenged, due to the transition toward remote work settings and loss of shared social context. How do the employees assess the fairness of the remote work arrangement? How will such an assessment impact their job-related attitudes? In this research, based on the results of a longitudinal survey among 434 U.S. workers, we investigate the dynamics involving organizational justice perception and workplace isolation in the remote work context. Our study reveals the role of isolation and justice as mediators, through which remote work impacts employees' turnover intention. Our findings suggest that the effect of remote work is not uniform across all situations. As an option of work mode, remote work arrangement can be perceived as a reward factor to enhance the perceived justice and drive down the turnover intention. Meanwhile, it may increase workplace isolation, which deteriorates perceived justice and increases turnover intention. The implications of the findings and the directions for future research are discussed.

OB: **Sustaining Remote Work: The Role of Movement Flexibility and Community Embeddedness**

Author: **Nabi Ebrahimi**, *UMass Lowell Manning School of Business*

Author: **Tamara Montag-Smit**, *UMass Lowell Manning School of Business*

Author: **David Greenway**, *UMass Lowell Manning School of Business*

One area that has become a primary focus of attention in the telecommuting debate is the potential negative effects of remote work on worker well-being due to isolation and loneliness. In this study, we aimed to explore if people are likely to relocate when they have the opportunity to work fully remotely, and if this geographical flexibility — a relatively unexplored aspect of telecommuting research — serves as a buffer against workplace loneliness and its associated poor mental health. Employing an exploratory sequential design mixed methods approach, we first analyzed qualitative data (N = 1362), uncovering the influence of Community Embeddedness (CE) on both the choice to stay and the decision to move. This qualitative insight informed the development of a theoretical model, which we tested using quantitative data (N = 671). The results indicated that while fully remote work is associated with increased workplace loneliness and subsequent poor mental health, the movement flexibility it offers—characterized as movement for personal reasons—acts as a buffering factor. Specifically, this flexibility was linked to enhanced CE, which our findings suggest serves as a buffer against the negative mental health impacts of workplace loneliness. Thus, movement flexibility through fully remote work can enable individuals to forge a sustainable career path despite the inherent challenges of such a work arrangement. The implications of our findings and suggestions for further research are discussed.

OB: **Visible from Afar: Remote Employees' Collaboration Responsiveness to Managerial Requests**

Author: **Hui Liao**, *U. of Maryland*

Author: **Yasha Spruha**, *U. of Maryland R.H. Smith School of Business*

Author: **Qiang Feng**, *UIBE*

Author: **Li Zhu**, *Peking U.*

Author: **Zhengyi Zhao**, *Beijing Information Science and Technology U.*

Amidst the ubiquity of remote work, this research examines the psychological stress and behavioral adaptations it engenders in employees, and the resultant managerial reactions. Integrating signaling theory with research on voluntary visibilizing, we propose that remote work triggers visibility anxiety, propelling employees to exhibit higher collaboration responsiveness towards managerial requests as a strategic attempt to augment their visibility. From the managerial perspective, we posit that managers trust employees exhibiting higher responsiveness more and thereby, give them higher performance evaluations and greater rewards. We obtained support for our theory through a multi-method empirical approach, which includes a natural field experiment in a technology firm using 1,098,750 objective collaboration records over an 18-week period from both experimental and control samples, and two pre-registered experiments and three scale-validation studies with working adults. Additionally, our research uncovers a less resource-intensive signalling strategy for remote employees, showing that promptly acknowledging managerial requests is nearly as effective as rapid task completion in building managerial trust. Our findings contribute to the burgeoning literature on remote work, elucidating the psychological mechanisms and behavioral dynamics for manager-employee collaborations in remote contexts, and offering novel practical implications for improving remote work relationships.

Creativity in Context

Session Moderator: **Cheng Chen**, *Faculty of Economics and Business, U. of Groningen*

OB: The Benefits of Redundancy: External Contact Duplication, Information Sharing, and Team Creativity

Author: **Cheng Chen**, *Faculty of Economics and Business, U. of Groningen*
Author: **Yingjie Yuan**, *U. of Groningen, Faculty of Economics and Business*
Author: **Stefan Berger**, *U. of Groningen*
Author: **Bernard A. Nijstad**, *U. of Groningen*

Scholars generally assume that non-redundant social relationships facilitate creativity while redundant ones constrain it. This paper demonstrates that redundant external relationships can, in fact, benefit team creativity. Adopting a team composition view, rather than a team global view, we introduce a new conceptualization of redundancy, namely external contact duplication, which captures the degree to which individual team members have the same external contacts. Drawing on team information processing and social network research, we highlight the previously overlooked information processing benefits of redundancy for team creativity in terms of social validation of external information and common ground between team members and external contacts. We hypothesize that external contact duplication stimulates intra-team external information sharing (the dissemination of externally acquired information among team members), which in turn fosters team creativity. We found support for our hypotheses in a sample of 72 work teams. Moreover, we found that team tenure moderated this indirect effect by weakening the relationship between external contact duplication and intra-team external information sharing. Overall, our study suggests a more nuanced understanding of structural redundancy and highlights an alternative mechanism through which it influences team creativity.

OB: When and Why Trust in Intelligent Machines affects Employees' Creative Behavior?

Author: **Shanghao Song**, *Beijing Normal U.*
Author: **Yunsheng Shi**, *Beijing Normal U.*
Author: **Xiaolin Ge**, *Beijing Normal U.*
Author: **Xiaoxuan Chen**, *Guanghua School of Management, Peking U.*
Author: **Longdi Li**, *Renmin U. of China*
Author: **Wenzhou Wang**, *Beijing Normal U.*
Author: **Haibo Yu**, *Beijing Normal U.*

As a human perception of nonhuman entities in the artificial intelligence era, trust in intelligent machines (including artificial intelligence, algorithms, robots, etc.) has been studied by scholars to explain whether intelligent machines can be quickly applied to organizations and promote organizational development. In this article, we focus on how and why employees' trust in intelligent machines affects their creative behavior. The results from two studies—a survey of 247 employees in Chinese organizations with intelligent machines and a vignette experimental study—were used to support our proposed theoretical model. The results indicate that employees' trust in intelligent machines can affect creative behavior through job crafting, and job autonomy plays a moderating role in this mechanism. Specifically, when job autonomy is high, trust in intelligent machines will promote job crafting and creative behavior; when job autonomy is low, this mediated relationship will result in a negative correlation.

OB: Giving Feedback to Whom? Relative Status, Tie Strength, and Feedback Giving

Author: **XINYU HU**, *Renmin Business School Renmin U. of China*

Feedback giving plays an important role in the workplace. However, high-quality feedback could be rare, and people may be reluctant to express their negative feedback to coworkers. We argue that considering the feedback process from the feedback providers' perspective can help clarify this phenomenon. In this research, we propose a framework to investigate how the social relationship between feedback seekers and feedback providers influences feedback giving. We expect that feedback providers' relative status positively influences their feedback-giving behavior, and tie strength negatively moderates this relationship. Further, we propose that the joint effect of relative status and tie strength is mediated by psychological safety. Two experimental studies provide evidence to support our hypotheses.

OB: Organizational Politics Harm Employee Creativity by Suppressing Prohibitive Voice

Author: **Kunjing Li**, *School of Innovation and Entrepreneurship, Hubei U. of Economics*
Author: **Jingyu Dong**, *Xi'an Jiaotong U.*
Author: **Hui Zhang**, *Xi'an Jiaotong U., China*
Author: **Shuxin Zhang**, *Xi'an Jiaotong U.*
Author: **Zhibin Mao**, *School of Innovation and Entrepreneurship, Hubei U. of Economics*

While previous research has explored various employee outcomes stemming from organizational politics, the significance of creativity, a vital performance outcome valued by both employees and organizations, has received insufficient attention. To complement this existing body of work, we seek to examine how and when organizational politics affect employee creativity. Employing a social information processing perspective, we posit that organizational politics hinder creativity by discouraging employees from attending to work-related issues and expressing their prohibitive voice. Furthermore, we propose that this suppressive effect becomes less salient among employees who have higher levels of creative self-efficacy or attentiveness. Our findings, derived from a multi-wave, multi-source field survey, reveal that organizational politics indirectly undermined creativity through their negative impact on prohibitive voice (even after controlling for other confounding mediating mechanisms). Additionally, we uncover that creative self-efficacy and attentiveness attenuated the adverse effect of organizational politics on prohibitive voice and subsequent creativity, respectively.

Author: **Isabel S. F. Fu**, *U. of Macau*

Existing literature largely examined the antecedents of employees' extra-role customer service behavior (ECSB) as originated from organizations, leaders, customers, and employees themselves. Interestingly, the impact of employees' team members, a core stakeholder working closely with employees, has been widely neglected. Based on the social learning theory and the social loafing theory, this study proposes two competing hypotheses to investigate the influence of other team members' ECSB on focal employees' ECSB. We conducted a three-phase survey and collected data from both supervisors and service employees of a retail chain. Multi-level path analytic models were constructed to test the hypotheses using Mplus 8.8. Results showed that observing other team members' ECSB can lead to focal employees' reduction of ECSB through social loafing. In addition, employees' own beliefs in self-reliance can buffer the negative impact of other team members' ECSB on focal employees' ECSB through social loafing. Our findings provide important theoretical implications for ECSB research and practical implications for managers on how to alleviate the negative impact of social loafing and promote ECSB.

OB: Frenemy: The Double-Edged Effect of Peers' Higher Conscientiousness in the Workgroup

Author: **Yanfen Wang**, *U. of Science and Technology of China*

Author: **Qingxiong Weng**, *U. of Science and Technology of China*

Conscientiousness is typically regarded as a favorable personality trait that contributes to positive work outcomes. However, little attention has been devoted to the complex effects of peers' high conscientiousness on employees' reactions in the workgroup. Based on the social comparison theory, the present study posited that perceiving peers' high conscientiousness in groups may have double-edged effects on the employees' emotional experience and subsequent behavioral responses. Further, this study postulated employees' zero-sum mindset as a key boundary condition that alters these effects. 300 peer-employee dyadic data collected from various industries in China were applied to verify these predictions. The findings indicated that when employees have a higher level of zero-sum mindset, perceiving peers' high conscientiousness can trigger their social undermining behaviors toward the peers via the feeling of relative deprivation. In contrast, when employees have a lower level of zero-sum mindset, perceiving peers' high conscientiousness can foster their helping behaviors toward peers via the feeling of inspiration. These findings not only develop a more complete and balanced understanding of conscientiousness in the workplace, but also provide practical insights for managers to improve group functioning through effective management of member interactions.

OB: How to Break Through the Identity Distress of the Workplace Vigilante? 

Author: **Mingze Li**, *Wuhan U. of Technology*

Author: **Xinyi Zhang**, *School of management\Bus Administration, Wuhan U. of Technology*

Workplace vigilantism refers to activities that employees carry out to monitor their workplace for signs of wrongdoings and effect unauthorized justice based on perceived sense of right and wrong. Extant research gives less attention to how individual differences might predict employees' vigilantism at work. We propose that employee individualism-collectivism orientations may lead to different cognition of workplace vigilantism, perceiving it with risk or efficacy as represented by employee perceptions of relationship cost or pro-team motivation, which in turn may affect their engagement in self-appointed mission of monitoring and punishing perceived wrongdoers. We also propose a moderator-task interdependence. We tested this theoretical model in a field study of a sample of 357 employees, which demonstrates that employee individualism orientation is negatively associated with workplace vigilantism via increased perceived risk of vigilantism; whereas employee collectivism orientation is positively associated with workplace vigilantism via increased perceived efficacy of vigilantism, and the relationship is weakened when task interdependence is high. Theoretical and practical implications are offered.

OB: Reciprocity Between Organizational Dehumanization and Taking Charge at Work: The Role of Thriving  

Author: **Rahman Khan**, *Westminster International U. in Tashkent*

Author: **Ghulam Murtaza**, *Kedge Business School*

Author: **Qurat-ul-ain Talpur**, *ESSCA School of Management*

This study explores the reciprocal relationship between organizational dehumanization and employees taking charge at work. Specifically, we test the negative impact of organizational dehumanization on taking charge at work and how this reduced taking charge can lead to further organizational dehumanization. Additionally, the study explores the attenuating role of thriving as a mitigation between organizational dehumanization and employees' taking charge at work. Two studies tested the hypothesized relationships. Findings of the experimental study (Study 1) conducted on university students confirmed that organizational dehumanization has a significant impact on taking charge at work. A longitudinal study (Study 2) was conducted on full-time employees and their supervisors at three time points (T1, T2, and T3). Data collected from 183 dyads confirmed that organizational dehumanization at T1 and T2 was significantly related to taking charge at work during T2 and T3. Furthermore, the reverse negative links from taking charge at work (T1 and T2) to organizational dehumanization (T2, T3) were also significant. By conducting moderation analysis, we confirmed the significant buffering role of thriving on the relationships between organizational dehumanization and taking charge at work at Time 1 and Time 2. We discuss the practical implications of our study results.

Personal and Social Bases of Decision Making

Session Moderator: **Sarah Bourdeau**, *School of Management, U. du Québec à Montréal (ESG UQAM)*

OB: **The Focus Theory of Normative Conduct and Employees' Projected Use of Work-Life Policies** 

Author: **Sarah Bourdeau**, *School of Management, U. du Québec à Montréal (ESG UQAM)*

Author: **Nathalie Houlfort**, *UQAM U. of Quebec in Montreal, Canada*

Author: **Patrick Coulombe**, *School of Management, U. du Québec à Montréal (ESG UQAM)*

Author: **Leandre Alexis Chenard-Poirier**, *École des Hautes Études Commerciales de Montréal - HEC Montreal*

Work-life policies (e.g., flexible schedule, onsite childcare) are implemented by organizations, but unfortunately, many employees still decide to abstain from taking advantage of such benefits (Magnaye, Kim, Eales, & Fast, 2023), positioning the importance of understanding the barriers and enablers affecting employees' decision-making processes when it comes to deciding to use or not work-life policies, one of which could be social norms (Mandeville, Halbesleben, & Whitman, 2016). However, current research has yet to show the impact of social norms in this context. Harnessing the focus theory of normative conduct (Cialdini, Kallgren, & Reno, 1991; Cialdini, Reno, & Kallgren, 1990), we investigate, in two scenario-based experiments, the distinctive (Study 1, N = 168) and additive (Study 2, N = 119) effects of injunctive and descriptive social norms to predict individuals' projected use of work-life policies. Our results reveal that, when controlling for work centrality, gender, parenthood status and managerial status, injunctive and descriptive social norms do have significant effects on employees' projected use of work-life policies.

OB: **Cognitive Moral Development and Unethical Pro-Organizational Behavior: The Moderating Role of Leader**  

Author: **Yi-Hui Ho**, *Chang Jung Christian U.*

Author: **Chieh-Yu Lin**, *Chang Jung Christian U.*

Although cognitive moral development (CMD) has been regarded as a critical individual characteristic affecting ethical decision-making, how the CMD underlies an individual's unethical pro-organizational behavior (UPB) is still largely unknown. Drawing on Kohlberg's moral development theory, this study attempts to empirically explore how UPB is associated with CMD and the moderating role of leader's UPB. Through a two-stage questionnaire survey on purchasing employees in Taiwan, research results reveal that UPB is significantly associated with CMD, and leader's UPB significantly moderates the association between CMD and UPB. Conventional employees are most likely to conduct UPB, followed by pre-conventional employees and post-conventional employees in order. When employees perceive that their leaders are likely to perform UPB, the association between their UPB and CMD will be stronger. Moreover, this study also concludes that the influences of leader's UPB on employees' UPB decrease with employees' CMD levels. In addition to advancing understanding of the role of CMD in UPB and the moderating effect of leader's UPB, this study provides practical implications for managing employees' UPB.

OB: **Advice Taking Under Time Pressure** 

Author: **Erik Kommol**, *WU Vienna*

Author: **Christopher Ulrich Lettl**, *WU Vienna U. of Economics and Business*

Many important decisions are not made alone, but decision-makers seek advice from others. In increasingly hypercompetitive markets, management teams are often placed under pressure to make strategic decisions fast. Therefore, decision-making and associated advice taking often takes place in decision environments that are associated with time pressure. In this paper, we study the influence of time manipulations on advice taking by using two pre-registered online experiments (n = 593). In the first experiment, we employ a classical judge-advisor system setup, where advice is presented unsolicited and is not associated with costs, to study the effect of time pressure on advice utilization. Results of this experiment indicate that confidence mediates the influence of time manipulations on advice utilization and that this effect is dependent on when time pressure is elicited in the advice taking process. To contribute to a more nuanced understanding of the effect of time pressure on advice taking, we additionally investigate how time pressure influences advice seeking behavior in environments where advice is optional and associated with costs. Results of the second experiment indicate that confidence moderates the effect of time pressure on advice seeking; individuals with a low confidence spent proportionally more time seeking advice compared to highly confident individuals when under time pressure. We emphasize the importance of considering the decision environments individuals are embedded in when taking advice while employing a process level perspective and distinguishing between different advice taking scenarios prevalent in the organizational context.

OB: **Beneath the Surface – How Dark Personality Traits of CEOs Influence Top Management Team Formation**

Author: **Lars Kimmig**, *RWTH Aachen U.*

The composition of the top management team (TMT) has a significant impact on firm-level outcomes. However, there has been little research on the role of CEO personality as a determining factor of TMT composition. We aim to address this gap by examining the impact of CEOs' dark triad personality traits – narcissism, Machiavellianism, and psychopathy – on the composition of TMTs. By leveraging a choice-based conjoint experiment with CEOs, our approach moves beyond previous research by utilizing direct personality measurements while introducing a novel set of criteria to assess TMT composition. This method enables a more nuanced understanding of how specific CEO personality traits impact the prioritization of different TMT criteria. We find that CEOs with dark personality tendencies place significantly less emphasis on interpersonal relations and cultural/diversity perspectives (i.e., trustworthiness, cultural fit, and team diversity) while prioritizing industry/functional knowledge and entrepreneurial thinking. We contribute to the strategic leadership literature by offering insights into the factors that influence the composition of the TMT and add empirical insights on the impact of CEO personality traits.

Author: **Matthieu Légeret**, *U. of Amsterdam*

Author: **Moritz Gruban**, *Royal Holloway, U. of London*

Despite evidence of a gap between hypothetical and real moral decisions, research on morality often relies on hypothetical decisions and dilemmas. To investigate the extent of hypothetical bias in moral decision-making, i.e., the difference between hypothetical and real decisions, we conducted three experiments on charitable giving. We focus on an individual aspect, incentives, and a social element, norms, of moral decisions. We also examine whether manipulating a social norm has a different effect on hypothetical bias for Amazon Mechanical Turk (MTurk) participants and university students. We find that hypothetical decisions led to higher reported donations than real donations in all three studies. The size of the incentives did not affect this difference, but the change in social norm only affected MTurk participants: when a moral decision is framed as a norm violation, MTurk participants no longer exhibit hypothetical bias. For university students, hypothetical bias remained despite the change in social norm. We discuss these findings in terms of implications for behavioral ethics as well as experimental methods.

I Think Therefore I Feel: Cognitions in Emotional Processes

Session Moderator: **Pawel Bilinski**, *Bayes Business School*

OB: **Using 'Mood Images' in an Annual Report to Influence Shareholder Say-On-Pay Votes**

Author: **Pawel Bilinski**, *Bayes Business School*

Author: **Jay Jung**, *Bayes Business School*

Author: **Zan Li**, *Bayes Business School*

We examine whether mood images (information-free graphical elements) in an annual report influence shareholder votes on the say-on-pay (SOP) proposals. We find that mood images promote heuristic decision making and increase shareholder voting support for the SOP proposal. However, in the presence of signals conflicting managers' proposal, mood images prompt a more critical shareholder evaluation of the SOP resolution, which negates mood images' positive effect on SOP resolution support. Our findings reveal the contingent nature of the effect mood images have on shareholder voting behavior consistent with the cognitive dissonance theory.

OB: **The Impact of AI Negative Feedback vs. Leader Negative Feedback on Employee Withdrawal Behavior**

Author: **Xinyue Li**, *U. of International Business and Economics*

Author: **Mingpeng Huang**, *U. of International Business and Economics*

Author: **Jialin Liu**, *U. of International Business and Economics*

Author: **Yifan Fan**, *U. of International Business and Economics*

In the context of widespread artificial intelligence (AI) application in the workplace, AI feedback has gradually become an important application in the field of employee performance management. Some companies have started providing negative feedback to employees through AI in an attempt to mitigate the adverse effects of such feedback. However, does AI truly play a role in intervening in negative feedback? We conducted a comprehensive comparison of the impact of AI negative feedback and leader negative feedback on employees. Within the framework of a feedback process model, we argue that compared to AI negative feedback, negative feedback from leaders induces greater feelings of shame in employees, subsequently leading to work withdrawal behaviors. Conversely, compared to negative feedback from leaders, AI negative feedback has a more detrimental effect on employees' self-efficacy, subsequently leading to work withdrawal behaviors. Additionally, we introduce employee AI knowledge as a moderating factor and propose that employee AI knowledge moderates the relationship between negative feedback sources and employee withdrawal behavior. Specifically, only those employees who perceive themselves as not very knowledgeable about AI feel more shame after receiving AI negative feedback compared to leader negative feedback. Conversely, only those employees who perceive themselves as quite knowledgeable about AI experience a greater blow to their confidence after receiving AI negative feedback compared to leader negative feedback. We conducted two experimental studies to validate all hypotheses. Our research has enriched the research of AI feedback and the comparative analysis of AI functionality with leader functionality, providing practical insights for businesses to effectively use AI for negative feedback.

OB: **Cognitive Diversity and Workplace Loneliness: A Moderated Mediation Model**

Author: **Sebastian Stoermer**, *TU Dresden*

Author: **Samuel Davies**, *U. of Bristol Business School*

Loneliness is a pervasive and serious phenomenon in today's workplaces. The experience of loneliness can negatively affect vital employee work attitudes and behaviors and, most importantly, jeopardize their mental and physical health. To contribute to the burgeoning research interest in workplace loneliness, this study examines the relation between individuals' perceptions of co-workers' cognitive diversity and workplace loneliness. Further, we position workplace loneliness as a mediator in the link between perceptions of co-workers' cognitive diversity and job satisfaction and synergy diversity climate as a moderator that can attenuate the association between perceptions of co-workers' cognitive diversity and workplace loneliness. We test our hypotheses using hierarchical regressions and PROCESS on a sample of 233 individuals. Results of our analyses corroborate our contentions and show that a strong synergy diversity climate can dampen the effects of perceptions of co-workers' cognitive diversity on workplace loneliness. Based on our findings, we derive a number of vital implications.

OB: **Affects and Decision-Making? The Moderating Role of Trait Conscientiousness and Emotional Stability**

Author: **An Hoang Kim Vo**, *PhD Candidate at National Sun Yat-Sen U., Taiwan*

Author: **Shin-I Shih**, *National Sun Yat-Sen U.*

Drawing on the core-affect and the personal resource allocation theories, this study considers both the activation and valence of affect influences on the quality of decision-making outcomes and the moderating role of trait conscientiousness and emotional stability. Across a daily experience-designed study that surveyed 59 employees during ten consecutive workdays, the research findings showed that high-activated and low-activated pleasant affects increased decision-making quality. Furthermore, low-activated negative affect is negatively associated with decision quality, but there is no evidence of the relationship between high-activated unpleasant affect and decision-making performance. When considering the moderating role of personality traits, the decision quality is high only when decision-makers experience low high-activated unpleasant affect and low-activated negative affect, and they are high on conscientious/emotional stability. The research findings provide a more systematic examination of the effect of affects on decision-making. It also provides theoretical implications regarding the boundary conditions of trait conscientiousness and emotional stability on the affects-decision quality relationship.

Doing Good and Going the Extra Mile

Session Moderator: **Hae-Lyeng Rose Kim**, *U. of Virginia Darden School of Business*

OB: Nature-Led Complacency: Biophilic Workplace Environments' Negative Impact on Work Behaviors

Author: **Hae-Lyeng Rose Kim**, *U. of Virginia Darden School of Business*

While existing research has suggested that being in a biophilic workplace environment (BWE), or environments that incorporate nature and natural elements, would generally have positive implications for employees, our understanding of the potential downside consequences of this contextual setting is underdeveloped. Leveraging insights from Attention Restoration Theory (ART; Kaplan & Kaplan, 1989; Kaplan, 1995), I hypothesize that the natural features of BWEs may draw one's attention away from tasks at hand and trigger employee complacency, thereby decreasing beneficial workplace behaviors, including proactive behavior and prosocial behavior. Furthermore, I argue that the positive relationship between BWEs and complacency may be stronger for employees who are lower (vs. higher) in mindfulness. I find support for my predictions through two pre-registered studies: 1) a longitudinal, multi-source field study involving 219 coworker dyads (438 employees) across 111 organizations in the Republic of Korea, and 2) an in-person experiment with undergraduate students at a large eastern U.S. university. Collectively, these studies aim to offer significant insights and implications regarding the consequences of various workplace environments.

OB: How and When Observed Illegitimate Tasks Affect Observers' Work Withdrawal and Helping Behavior

Author: **Yanfei Wang**, *South China U. of Technology*

Author: **Wenjuan Mei**, *Jinan U.*

Author: **Yu Zhu**, *Jinan U.*

Author: **Yuan Chen**, *Jinan U.*

Prior research has primarily focused on the victims' perspectives, while research to date has overlooked the impact of illegitimate tasks from observers' perspective. Drawing upon deontic justice theory, this study investigates how observers react to observed illegitimate tasks, and examines how these reactions are influenced by the observer's sense of deontic justice and moderated by their empathic concern. This study carried out an experiment and a three-wave survey. Results showed that observed illegitimate tasks decreased observers' sense of deontic justice, thereby promoting work withdrawal behavior, and helping behavior. Furthermore, our findings revealed that observers' empathic concern strengthened these direct and indirect connections. This study further discusses implications and suggests avenues for subsequent studies.

OB: The Consequences of Unethical Pro-Family Behavior

Author: **Mayowa Babalola**, *U. of Western Australia*

Author: **Yuanmei Qu**, *Rowan U.*

Author: **Moazzam Ali**, *COMSATS U., Islamabad, Lahore Campus*

Author: **Michael Muchiri**, *Alfaisal U.*

Author: **Muhammad Usman**, *NUST Business School, National U. of Sciences and Technology, Islamabad*

"For the sake of the family", recent research suggests that employees may go extra the mile to benefit their families even at the cost of violating organizational norms, a phenomenon referred to as unethical pro-family behavior (UPFB). Despite its prevalence in the workplace, UPFB research is still in its infancy and our understanding of its consequences for employees themselves remain very limited. Drawing from moral self-regulation theory, we propose that UPFB elicits ambivalent cognitions that have downstream consequences for employees' subsequent behaviors at home and at work. We propose that because of its beneficial nature to the family, UPFB elicits perceptions of family-based moral credits that in turn lead to family-directed incivility. Yet, given its violation of moral norms, UPFB elicits perceptions of organization-based moral deficits that in turn propel organization-directed helping behaviors. Results from a multi-wave study of 511 employee and spouse dyads in a wide range of industries provided support for our hypotheses. In addition, employees' moral identity weakened employees' perceived family-based moral credits following UPFB and strengthened employees' perceived organization-based moral deficits in the aftermath of UPFB. Implications for theory and practice are discussed.

OB: You Cannot Pour from an Empty Cup: The Impact of Employee Self-Compassion on Helping Behavior

Author: **Yanting Wang**, *Guanghua School of Management, Peking U.*

Author: **Yaqi Gao**, *Guanghua School of Management, Peking U.*

Author: **Dong Ju**, *Beijing Normal U.*

We examine the impact of self-compassion on employee work behavior, particularly its influence on interpersonal dynamics. By integrating conservation of resources theory and social mentality theory, we propose that self-compassion facilitates helping behaviors through the mechanism of perspective-taking, and this effect is moderated by employees' perceptions of their leaders' bottom-line mentality. We found support for our hypotheses across a scenario experiment and a multi-wave, multi-source survey. This research contributes new insights to the theoretical and practical understanding of self-compassion in organizations.

Status Dynamics in Organizations

Session Moderator: **Xiaoshuang Lin**, *U. of South Australia*

OB: **Does Humility Help Leaders Accumulate Their Status? A Perspective of Moral Virtue Theory of Status**  

Author: **Xiaoshuang Lin**, *U. of South Australia*

Author: **Bo Shao**, *Deakin U.*

Drawing on the moral virtue theory of status attainment (MVT), this research investigates whether and when humble leaders accumulate their status from followers. Influenced by humble leaders' self-awareness, openness, and teachability, followers admire humble leaders and meanwhile can perceive less weakness from those leaders. The positive influences of leader humility can be strengthened by followers' moral potency. When followers are high in followers' moral potency, they admire the humble virtue in leader humility and tend to confer more status to their leaders. Similarly, when followers are high in followers' moral potency, they are less likely to perceive leader weakness due to humble leader's capacity to maintain influences when facing moral problems. Those followers are more likely to confer status to humble leaders.

OB: **Leader Status-Leveling Behavior and Leadership Emergence: The Moderating Role of Leader Gender**

Author: **Shiyingzi Huang**, *Huazhong U. of Science and Technology*

Author: **Lirong Long**, *Huazhong U. of Science and Technology*

As modern organizations call for more equality and inclusive organizational climate, the emphasis on status-leveling to downplay organizational hierarchy has drawn widespread attention from scholars. However, the research on status-leveling behavior is still in its early stages and faces limitations in terms of mechanisms, and boundary conditions. Based on the SCM, this paper explores the positive impact of leader status-leveling behavior on formal leadership emergence through employees' perceived leader warmth, and examines the moderating role of leader gender in the above relationship. Through a multi-wave questionnaire survey (N = 212) and a scenario experiment (N = 200), the results showed that leader status-leveling behavior could promote formal leadership emergence through employee perceived leader warmth rather than competence. In addition, leader gender not only moderated the relationship between leader status-leveling behavior and perceived leader warmth, but also moderated the indirect effect of leader status-leveling behavior on formal leadership emergence via perceived leader warmth. In other words, the status-leveling behavior of male leaders is more effective than that of female leaders in promoting formal leadership emergence. This paper also discusses the theoretical and practical implications.

OB: **Leader-Experienced Unfairness, Leader Status, and Subordinates' Licensing of Leader Selfish Behavior**

Author: **Ying Wang**, *U. of International Business and Economics*

Author: **Run Ren**, *Peking U.*

The appointment of leaders to hierarchical positions entails the expectation that they will prioritize the welfare of their subordinates and the organizations as a whole. However, self-interested behaviors among leaders are prevalent in the business world. Given its harm to the group and the organization, extant research has mainly documented the negative reactions from the subordinates. This research sheds new light on the phenomenon that leader self-interested behaviors may sometimes be acceptable in the eyes of the subordinates. Extending the psychological licensing theory to the third-party domain and drawing on the justice literature, we develop a model of subordinate's acceptance of leader self-interested behavior as a third-party licensing process in response to their perceived leader-experienced unfairness. Specifically, when perceiving their leaders have experienced unfair treatment, subordinates tend to ascribe psychological entitlement to their leaders, and in turn be more likely to accept leaders' self-interested behaviors. Further, we propose that leaders' organizational status could assuage or amplify such third-party licensing effects: the unfairness-induced licensing effects will be amplified for leaders with lower status, but assuaged for those with higher status. Findings from a multi-wave field survey and an experiment support our hypotheses. Insights into theory, practice, and future research are addressed.

OB: **Who is Gossiping? Interactive Effects of Status and Status Conflict on Competence-Related Gossip**

Author: **Dong Pei**, *Singapore Management U.*

Author: **Abhijeet K. Vadera**, *Singapore Management U.*

Laypersons and scholars have conflicting views on the effect of status on gossip. Some argue that individuals with higher status may engage in less gossip than their lower-status counterparts because gossip is socially undesirable and associated with social costs, while others suggest that high status might engage in more gossip as it can be used to maintain/attain status and enhance relatedness with others. We draw on status and gossip literature to argue that the effect of status on gossip depends on one important characteristic of hierarchy — group status conflict. We also focus on one particular type — negative competence-related gossip, which refers to sharing negative information about a target's abilities and skills at work with others (e.g., lack of competence). Specifically, we hypothesize that status enhances negative competence-related gossip only when people perceive a higher level of group status conflict. In a two-wave field study with a round-robin design, we show that when status conflict is perceived as higher, higher-status individuals engage in more negative competence-related gossip. The supplemental analyses suggest that status did not interact with group status conflicts in predicting other types of gossip. We discuss the implications of our research for both status and gossip research and practice.

Advances in Work Motivation

Session Moderator: **Deeviya Francis Xavier**, *U. of Vienna*

OB: The Impact of AI Integration on Job Autonomy and Creative Self-Efficacy: A Cultural Perspective 

Author: **Deeviya Francis Xavier**, *U. of Vienna*

Author: **Christian Korunka**, *U. of Vienna*

Author: **Roni Reiter-Palmon**, *U. of Nebraska, Omaha*

This paper explores the relationship between Artificial Intelligence (AI) integration in the workplace, cultural orientation and its impact on job autonomy and creative self-efficacy. Our study employs a mixed-method experimental design across 480 individuals from different cultural backgrounds, specifically individualistic (United Kingdom) and collectivistic (Mexico) cultures. We evaluate how they perceive AI's role in their professional lives. We focus on two key aspects: job autonomy, the level of control and discretion employees have over their tasks, and creative self-efficacy, the confidence in one's ability to generate innovative ideas. Our findings revealed a significant decrease in job autonomy following AI integration across all participants. Interestingly, this decrease was more pronounced in the individualistic participants. Regarding creative self-efficacy, we found gender-specific impacts, with male participants experiencing a decrease, contrary to our expectations. Finally, our results supported the hypothesis that cultural orientation influences perceptions of AI, with collectivistic participants being more receptive to AI integration. These findings have significant implications for organizations integrating AI in multicultural environments. They highlight the importance of considering cultural differences in AI deployment strategies and suggest a need for culturally sensitive AI systems. The study also opens avenues for future research, particularly in exploring the role of other cultural dimensions, conducting longitudinal studies, and investigating ethical and bias-related aspects of AI in the workplace.

OB: Beyond Dualities: The Influence of Regulatory Focus & Paradox Mindset on Workplace Ambidexterity  

Author: **Carlos Rodríguez Gómez-Rico**, *U. Carlos III de Madrid (UC3M)*

Author: **Till Nicolas Deuschel**, *U. Carlos III de Madrid*

This study explores how regulatory focus influences ambidextrous behavior in employees, with a particular emphasis on the moderating role of a paradox mindset. Conducted with 206 government workers from a large U.S. financial institution, the research reveals a significant relationship between an individual's regulatory focus and their ambidexterity at work. Specifically, a higher promotion focus leads to increased exploration, whereas a higher prevention focus correlates with greater exploitation. The study also investigates the interaction between promotion and prevention focus, finding that one focus often dominates in the performance of exploration. Crucially, it demonstrates that a paradox mindset can moderate the relationship between regulatory focus and ambidexterity, suggesting that this mindset helps employees balance exploration and exploitation more effectively. These findings contribute to our understanding of individual-level ambidexterity and highlight the importance of cognitive mindsets in enhancing organizational adaptability and competitiveness.

OB: Triumph in Turmoil: The Influence of Self-Efficacy and Ethics on Crisis Leadership Effectiveness

Author: **Marina McCarthy**, *U. of Miami*

This exploratory study delves into the realms of crisis leadership, examining how leadership self-efficacy and ethical perspectives influence effectiveness in crisis situations. Utilizing a simulated crisis event the study employs a mixed-method approach combining participant surveys and expert evaluations. The findings reveal that higher self-efficacy in leaders positively correlates with effective crisis management. Furthermore, an ethical orientation towards stakeholders enhances leadership effectiveness, while a shareholder-centric view has a negative impact. These findings underscore the significance of ethical considerations and self-belief in guiding leaders through crisis situations. The study contributes to the broader discourse on leadership by highlighting crucial areas for development in leadership training and organizational culture, particularly in preparing leaders for the unforeseeable challenges of crisis management.

OB: Which Individuals Explore? Job Demands, Individual Creative Disposition, and Extent of Exploration  

Author: **Amit K. Nandkeolyar**, *Indian Institute of Management, Ahmedabad*

Author: **Prasad Balkundi**, *U. at Buffalo, The State U. of New York*

Exploration plays a critical role in achieving sustained competitive advantage. While a growing research stream on individual exploration has separately examined either individuals' formal roles or social context as predictors, we study the simultaneous interaction of individual dispositions and their context on their exploration behavior. In this paper, building bridges to the psychological literature, we hypothesize that job demands interact with individual creative disposition to influence the extent of individual exploration and performance. We empirically tested this framework using a field study of knowledge workers in an information technology firm and an experiment that involves solving a murder mystery. The findings from our studies provide broad support for our theorization and have implications for research on exploration, creativity, and job demands.

When Egos Connect: Social Networks Research

Session Moderator: **Farid Jahantab**, *Sam Houston State Uni*

OB: **Leader-Member Exchange Differentiation (LMXD) Development: A Social Network Perspective** 

Author: **Farid Jahantab**, *Sam Houston State Uni*

Author: **Farzaneh Fouladi**, *Doctoral Student*

In this study, we integrate leader-member exchange (LMX) theory with social network perspective to examine the implications of a follower influence social network for group level leader-member exchange differentiation (LMXD). Specifically, we propose that a follower's centrality in the workgroup influence network associates with the leader's attribution of the follower status which in turn affects LMXD. Further, we extend our theory to account for the workgroup membership and suggest that leader power distance and workgroup relationship conflict moderate the direct effect of the leader's attribution of the follower status on LMXD as well as the indirect effect of the follower's centrality in the workgroup influence network on LMXD via leader's attribution of the follower status. Multilevel analyses of multi-source time-lagged data from 991 employees and 180 followers nested in 180 workgroups supported our predictions. Theoretical and practical implications along with future research directions are discussed.

OB: **Seek Few but be Sought out by Many: How Age Shapes Networks That Enhance Performance**

Author: **Prasad Balkundi**, *U. at Buffalo, The State U. of New York*

Author: **Jigyasu Shukla**, *North Carolina A&T State U.*

Author: **Kameron Carter**, *Old Dominion U.*

Author: **Sally Hedrick**, *Purdue U., West Lafayette*

This paper seeks to find answer to the research question: how does age shape one's instrumental and expressive ties and eventually individual's performance using a meta-analysis of fifty-eight studies encompassing 11,418 employees in various organizations. Specifically, we investigate the mediating role of instrumental and expressive ties (both incoming and outgoing) in the age-performance association utilizing meta-analytic methods. When compared to younger employees, older employees were less likely to seek out friends and advice in workplace. In contrast, older employees were sought out more for advice than younger ones. Both younger and older employees had higher performance due to different network structures. Younger employees benefited from seeking out more advice whereas older employees benefited by providing advice to more people. Altogether, our results reveal the nuanced role that networks have in shaping the age-performance relationship.

OB: **Social Influence, Selection, and the Creativity Paradox in Intraorganizational Social Networks** 

Author: **Dennis Holding Jacobsen**, *Yale School of Management*

Author: **Diego Stea**, *Copenhagen Business School*

Although many scholars believe that creative employees enhance the creativity of their peers, studies have returned equivocal results. Drawing from normative conformity and cognitive fixation theories, we challenge the conventional top-down perspective of creative influence. Instead, we propose that in dynamic social systems, social ties serve as channels for both positive, neutral, and negative influences on creativity. Recognizing that employees are often connected with colleagues of diverse creative capacities, we predict that employees' creativity converge toward the average level of their workplace ties. Additionally, we draw on self-verification and social comparison theories to contend that employees prefer forming ties with colleagues of similar creativity levels, even if it prevents them from realizing their full creative potential. We test and find support for our theory in a three-year longitudinal field study conducted at an award-winning Italian architecture studio. Our research sheds light on a novel coevolutionary perspective and highlights a critical paradox: while influence pressures suggest that forming ties with more creative peers can potentially boost one's creativity, employees' selection preferences often lead them to overpopulate their networks with colleagues of similar creative acumen, contributing to the formation of relational echo chambers that effectively "trap" employees in their existing levels of creativity.

OB: **Silence from the Middle: Examining the Curvilinear Relationship Between Employee Status and Voice** 

Author: **Rui Shu**, *Shanghai U. of Finance and Economics*

Author: **Ling Zhang**, *Shanghai U. of Finance and Economics*

Author: **Limei Zhang**, *School of Management, Xi'an Jiaotong U.*

Author: **Alex Ning Li**, *U. of Texas at Dallas*

Author: **Jianfeng Chai**, *C-Coach*

Teams, where employees can freely express their constructive suggestions and opinions, can lead to various positive outcomes. However, the reality is that only a few members are willing to raise their voice, while the majority prefer to keep silent. In this study, we offer an explanation for this phenomenon by drawing insights from the theory of middle-status conformity. We propose a curvilinear relationship between employee status and their upward voice, suggesting that middle-status employees are less likely to speak up to their managers than higher- and lower-status employees. Using two social network-based field studies in different settings, as well as a scenario study, we provide convergent evidence to support the curvilinear relationship between status and voice as we proposed. Additionally, we find that leader-member exchange (LMX) plays a role in alleviating the unique challenges faced by middle-status employees, and we identify the mediating effect of status-based role expectation in accounting for their relationship. Last, we demonstrate how the voice of middle-status employees contributes to team objective performance, even when controlling for the voice of the higher- and lower-status employees. We discuss the theoretical and managerial implications of our findings.

Regulating Effort at Work

Session Moderator: **Brian C. Holtz**, *Temple U.*

OB: **Let Me Bloom! The Interplay Between Perceived Impact and Psychological Safety (WITHDRAWN)**   

Author: **Violetta Khoreva**, *Hanken School of Economics*
Author: **Tamara Galkina**, *Aalto U. School of Business*

This article applies the “behavioral activation system” (BAS) and “behavioral inhibition system” (BIS) perspective to examine volunteers’ thriving at work. Specifically, we explore how thriving at work results from the mechanisms of interplay between the perceived impact and psychological safety of these unpaid workers. Our empirical setting is an entrepreneurship-supporting non-governmental nonprofit organization based in Finland. Designed largely to support entrepreneurship, it relies heavily on employing volunteers. In total, our data comprise 215 interviews with top and middle-level decision-makers, and jobholders. We derive a dynamic model that demonstrates thriving is attained through the synergistic combination of perceived impact (BAS environmental cue) and psychological safety (BIS environmental cue). Thus, we respond to the calls to examine the antecedents for thriving at work at multiple levels. We also build on the literature on the simultaneity of BAS/BIS environmental cues, and go one step further by elucidating exactly how these independent cues are combined. In addition, we make a contextual contribution by focusing on a nonprofit organization that employs volunteers.

OB: **Don't Waste My Time! The Development and Validation of the Wasted Time Perceptions Scale** 

Author: **Brian C. Holtz**, *Temple U.*
Author: **Crystal M. Harold**, *Fox School of Business, Temple U.*
Author: **Harshad Girish Puranik**, *U. of Illinois at Chicago*
Author: **Kristian Gardner**, *Fox School of Business, Temple U.*

Anecdotal evidence in popular literature abounds about how perceiving that others have wasted one’s time is a common workplace experience with potentially negative consequences. Yet, there is a dearth of rigorous empirical research into the subjective nature of this psychological experience and its effect on employees. A lack of construct clarity and the absence of a validated measure to assess perceptions of having one’s time wasted have held scholarship back. To stimulate research on this topic, building on the recent focus on subjective time in the literature on time and adopting an entity-based approach, we offer a definition of wasted time perceptions and develop and validate a measure of this construct. Our five-item measure of wasted time perceptions demonstrated strong psychometric properties across five independent samples. Further, building on frustration-aggression theory (Fox & Spector, 1999), we demonstrate that wasted time perceptions predict core affective and behavioral outcomes in the management literature, above and beyond previously established predictors. We also show that our new measure is easily adaptable to, and differentiates across, different focal entities (e.g., boss, coworker, subordinate, customer) relevant to organizational scholars. Implications and future research directions are discussed.

OB: **Antecedents and Consequences of Remote Workers’ Felt Pressure to Prove Their Effort** 

Author: **Meika Schuster**, *RPTU Kaiserslautern-Landau*
Author: **Gisela I. Gerlach**, *RPTU*

Hybrid work, a flexible work model that combines on-site and remote work, has become the “new normal.” However, stereotypes persist depicting remote workers as less dedicated, engaging in non-work activities such as leisure, childcare or household duties, instead of doing their job. We argue that remote workers who perceive that they are subjected to bias feel the need to refute these negative stereotypes and show that they are dedicated to work – a phenomenon we call remote workers’ felt pressure to prove (their) effort. We drew on stereotype threat theory to introduce this novel concept and examine the antecedents and consequences. Using two-wave data collection with a sample of 407 remote workers, we found that team factors, i.e., team norms regarding remote work and felt trust by colleagues, predicted presumed bias against remote work, which in turn was positively related to remote workers’ felt pressure to prove their effort. Yet, contrary to our expectations, organizational norms regarding remote work and felt trust by supervisor were not directly related to presumed bias against remote work or indirectly related to felt pressure to prove effort. We found that this felt pressure negatively affected remote workers’ well-being as shown by increased stress and decreased psychological detachment, which both hindered job performance. Our study contributes to the literature on remote working and has implications for practices to counteract this pressure and maintain remote workers’ well-being and performance.

OB: **How and When Does Coworker Knowledge Sharing Influence Creativity? A Moderated Mediation Model**  

Author: **Soojin Lee**, *Korea U. at Sejong*
Author: **Ji Hoon Lee**, *Southern Illinois U.*
Author: **Gukdo Byun**, *Chungbuk National U. South Korea*
Author: **Steven J. Karau**, *Southern Illinois U. Carbondale*

Drawing on conservation of resources theory, the present study proposes the mechanisms and conditions under which coworker knowledge sharing influences employee creativity. The study focuses on employee self-efficacy as a mediating mechanism and job demands as a boundary condition for the indirect effect of coworker knowledge sharing on employee creativity via self-efficacy. Two studies were conducted to verify the predictions. Study 1 analyzed data from 198 supervisor-employee dyads in a state-owned enterprise in South Korea. Study 2 analyzed data from 241 dyads in six of the country’s largest private companies. The findings reveal a positive significant effect of coworker knowledge sharing on employee creativity, fully mediated by self-efficacy. Furthermore, findings demonstrate that job demand moderates both the effect of coworker knowledge sharing on employee self-efficacy and the indirect effect of coworker knowledge sharing on employee creativity via self-efficacy. The study also discusses the theoretical and practical implications.

I Lead, Therefore I Am: Leader Influence Research

Session Moderator: **Qinglin Zhao**, *Texas A&MU*.

OB: **Vision Communication: A Review and Future Direction**

Author: **Qinglin Zhao**, *Texas A&MU*.

Vision communication plays a crucial role in leadership, strategy management, communication, and organizational change. However, current research on vision communication is often isolated and lacks integration, resulting in a limited understanding of this topic. In an effort to provide a comprehensive framework, I integrate the existing literature on the types, mechanisms, and moderating factors of vision communication based on 128 papers. In particular, I identify three types of vision communication in current literature: content-free vision (e.g., visionary leadership), vision content (e.g., imaginary language, metaphor), and vision delivery (e.g., emotions, strong vision delivery). Additionally, I integrate four different theoretical perspectives to explain the influences of vision communication: cognition, motivation, identification, and emotion. With these four mechanisms, I then detail four kinds of moderating factors that influence the effects of vision communication. I also discuss the limitations and future directions of vision communication research.

OB: **Humble Leadership and Followership Behavior: A Dual Mediation Model**

Author: **Jianfeng Jia**, *Northeastern U. China*

Author: **Ruonan Zhao**, *Northeastern U. China*

Author: **Weipeng Liu**, *Northeastern U. China*

Author: **Liteng Zhang**, *Qingdao Metro*

Based on social information processing theory and warmth-competence framework, this study explored the dual mediating mechanisms and boundary condition between humble leadership and followership behavior. Using data collected from 309 employees at three waves, the results are as follows: First, humble leadership has a positive impact on perceived leader's warmth and competence. Second, perceived leader's warmth and competence play a double mediating role between humble leadership and followership behavior, and there is no significant difference between the two mediating effects. Third, employees' narcissism has a negative moderating effect on the relationship between humble leadership and perceived leader's warmth as well as competence, and further moderates the mediating effect of perceived leader's warmth and competence.

OB: **Examining Transformational Leaders Alchemy in Teachers: An Integrative Moderated-Mediation Analysis**

Author: **Nirved Kumar**, *Indian Institute of Management, Ahmedabad*

Author: **Furkan Khan**, *Doctoral Scholar, Indian Institute of Management Ahmedabad*

Improving individual (student and teacher) and school-level outcomes hinges on the integral role of teacher and their motivation at work. While motivation, as an energizing behavior, has various antecedents, the teachers' of the public education system in developing countries face challenges like the absence of performance incentives, an overload of non-teaching activities, and limited autonomy. This study empirically investigates organizational and individual factors influencing teacher motivation by examining the intricate relationship between transformational leadership, school climate, trust in school principals, and teacher motivation at work. Grounded in the Job Demands-Resources theory, the research explores how the principal's transformational leadership influences teacher motivation, considering underlying mechanisms and boundary conditions affecting the relationship. Data from n-755 senior secondary school teachers in New Delhi, India, collected through an online survey, underwent analysis via structural equation modeling in AMOS 22.0 and hierarchical regression analysis in SPSS 22.0. The findings unveil a positive association between transformational leadership and teacher motivation at work, moderated- mediated by trust in school principals and school climate, respectively. This research contributes theoretical insights into how job resources influence teachers' motivation at work, illuminating the new mechanisms and limits of the transformational leadership-teacher motivation relationship, particularly through specific pathways of school climate and trust in school principals.

OB: **Forbearance Leadership: "Doing Without Doing"**

Author: **Goce Andrevski**, *Queen's School of Business, Canada*

Author: **Melissa Trivisonno**, *Queen's U.*

Author: **Julian Barling**, *Queen's U.*

Author: **Matthias Spitzmuller**, *Queen's U. School of Business*

A central premise of leadership research is that leaders accomplish positive outcomes through their actions – they inspire, guide, motivate, and coach. By contrast, inactive approaches to leadership are seen as ineffective and harmful. We introduce the concept of forbearance leadership to demonstrate that a leader's purposefully inactive leadership behaviors can enhance leader effectiveness and follower job performance. Leaders exhibit forbearance leadership when they choose not to intervene, even though they are capable of acting and aware of the opportunity to do so. Building on theories of human development, we introduce two dimensions of forbearance leadership – forbearance learning and forbearance nurturing. We develop and validate a measure of the two dimensions of forbearance leadership and demonstrate how they are distinct from other passive leadership behaviors. Across four separate samples involving a total of 632 followers and 136 leader-follower dyads, we find support for our two-dimensional framework of forbearance leadership. Both forbearance behaviors are positively associated with affective trust and satisfaction with supervision and negatively related to role ambiguity. In addition, the congruence between leader-intended and follower-perceived forbearance leadership at Time 1 increased follower task performance and job dedication at Time 2.

Leadership and Ethics

Session Moderator: **Yuchi Wu**, *Central U. of Finance & Economics, China*

OB: Beyond Social Learning: How and When Leaders' Prevention Focus Causes Followers' Unethical Behavior 

Author: **Yuchi Wu**, *Central U. of Finance & Economics, China*

Author: **Fan Yang**, *Southeast U.*

Author: **Hongyu Zhang**, *Central U. of Finance and Economics*

Author: **Yi Lang**, *Beijing Foreign Studies U.*

Author: **Haoying Xu**, *Stevens Institute of Technology*

Leaders with a strong prevention focus are expected to have risk-averse and rule-bound followers according to the social learning perspective. However, this study draws on affective process theory to develop a model that posits that under certain circumstances, leaders' prevention focus might backfire and lead to followers' unethical behavior. The results from multi-wave and multisource surveys suggest that leaders' prevention focus is positively associated with their anxiety and further their followers' anxiety through emotional contagion, particularly for followers who have high leader-member exchange (LMX) relationships. Followers' anxiety will further increase their unethical behavior. Overall, an integrated moderated mediation model demonstrates that the indirect effect of the leader's prevention focus on followers' unethical behavior through their anxiety contagion is strongest when followers are closely aligned with their leaders. These findings reveal the important roles of emotions and relationship closeness in the process through which leaders influence followers' unethical behavior. Theoretical and practical implications are discussed.

OB: Leader Behavioral Integrity and Emotions

Author: **Anders Friis Marstand**, *Durham U. Business School*

Author: **Ilias Kapoutsis**, *Athens U. of Economics and Business*

Author: **Ziya Ete**, *Durham U.*

Leader behavioral integrity is consequential for employees, but we know little about how leaders react to their own behavioral integrity. We take an actor-centric perspective and draw on behavioral integrity theory and research on moral emotions to investigate how leaders respond emotionally and behaviorally to their own behavioral integrity. We test the hypothesized relationships in two studies using time-lagged designs. Across our studies we found that leader behavioral integrity reduced leader feelings of shame and that shame increased leader avoidance and reduced leader citizenship behaviors and task performance. Shame mediated the relationship between leader behavioral integrity and the three outcomes (i.e., leader avoidance, citizenship behaviors, and task performance). Consistent with our expectations, locus of control acted as an important boundary condition of the relationship between leader behavioral integrity and shame. Specifically, the negative relationship between leader behavioral integrity and leader feelings of shame was stronger when leaders believed they lacked control and others were in control of events in their life. Similarly, we found support for the hypothesized conditional indirect effect of locus of control on outcomes. We discuss theoretical and managerial implications for taking an actor-centric perspective to the study of leader behavioral integrity.

OB: Ethical Leadership's CSR Initiatives Consumer Well-Being in Multinational Hotels 

Author: **Muhammad Usman**, *U. of Sharjah*

Author: **Adeel Khalid**, -

Author: **Imran Shafique**, *COMSATS U., Islamabad, Lahore Campus*

Author: **Malik Imran Ahmad**, *Higher Colleges of Technology*

Despite increasing pressure from institutions and stakeholders to focus on Sustainable Development Goals, a noticeable research gap persists, particularly in understanding the precise nature of corporate social responsibility (CSR) initiatives of service sector multinational enterprises (MNEs) in relation to consumer well-being. To address this gap, using stakeholder theory, we developed a 2-2(2)-1 model consisting of the interrelations among ethical leadership, hotel disclosure of nutritional information, food healthiness, leader trait mindfulness, and consumer well-being. Based on data collected from three sources – 52 hotel managers, 329 employees, and 329 hotel guests – using a time-lagged design, the results revealed a direct positive association between ethical leadership and consumer well-being. Further, the study showed that ethical leadership positively influences consumer well-being through hotel DNI and food healthiness. The study also found support for the moderating influence of leader trait mindfulness on the effects of ethical leadership on hotel DNI, food healthiness, and consumer well-being. Our findings can help service MNEs to develop SCR interventions to deal with consumer well-being more effectively.

OB: A Motivated Information Processing Perspective on Team Leaders' Responses to Employee UPB 

Author: **Shuxia Zhang**, *Wayne State U.*

Author: **Xueqing Fan**, *Antai College of Economics and Management, Shanghai Jiao Tong U.*

Author: **Guangjian Liu**, *School of Management, Shandong U.*

Author: **Zhipeng Zhang**, *China U. of Labor Relations*

With the increasing scholarly attention on employee unethical pro-organizational behavior (UPB), we have gained rich knowledge about how leaders may impact employee UPB. However, much less is known about how employee UPB may impact a wide range of leader attitudes and behaviors. Building on the motivated information processing theory, the current study proposed that two important motivations in leaders' self-regulation process (i.e., moral identity and promotion focus) may work as boundary conditions that influence leaders' attention to the different aspects of employee UPB and their subsequent psychological and behavioral responses. Analyses of multi-wave, multi-source data from 84 work teams showed that when leaders' moral identity is high, they would pay more attention to the unethical component of employee UPB, which leads to their distrust in teams and subsequent team monitoring behaviors. In contrast, when leaders' promotion focus is high, their attention would be more directed to the pro-organizational component of employee UPB, which then results in their perceived team goal progress and team delegation behaviors. Our study contributes to a more nuanced understanding of leaders' psychological and behavioral responses to employee UPB and highlights the value of the motivated information processing theory in understanding this process.

Enhancing Trust and Credibility in OB Research: Focusing on Research Integrity

Organizer: **Rebecca J. Bennett**, *U. of Central Florida*

The 2024 OB Plenary focuses on the critical importance of research integrity. A panel of OB researchers will offer best practices and methodologies for upholding research integrity in organizational behavior research. The session will address emerging issues and dilemmas, such as data management, authorship ethics, and the responsible use of technology in research. This plenary aims to empower OB researchers with knowledge and tools to foster ethical research practices in their academic pursuits. By fostering a collective commitment to integrity, the session seeks to contribute to the advancement of robust and trustworthy knowledge in the field of Organizational Behavior.

The symposium "Speaking Up: In, And About, Groups" critically examines the dynamics of voice expression within workplace groups. The papers presented delve into the psychological calculations requisite to speaking up (or inviting others to speak up), with a focus on relieving the barriers to voicing in groups. The presentations examine these calculations in the context of extant research on workplace democracy, participatory group meetings, and the influence of voicer and voice-recipient identities. This symposium offers novel insights into how speaking up in and about groups shapes organizational practices and employee experiences, particularly in the realm of diversity, equity, and inclusion.

Beyond Skill and Smile: Navigating Interpersonal Evaluations and Dynamics

Discussant: **Jennifer Carson Marr**, *U. of Maryland*
Organizer: **Rebekah SungEun Hong**, *U. of Maryland, College Park*
Organizer: **Kun Wang**, *UCL School of Management*

Interpersonal evaluations of ability and character have a significant impact on individuals' behaviors towards others and the dynamics within organizations. Recent studies reveal that these evaluations are influenced by the characteristics of individuals, teams, and organizations, highlighting the importance of contextualizing these evaluations within specific organizational settings. In response, this symposium aims to expand the discussion on interpersonal evaluations and dynamics, investigating the complexities of workplace perceptions and dynamics across various organizational stages and contexts. The papers specifically examine recruitment and socialization processes, and team performance evaluations, and also offer practical strategies to enhance interpersonal perceptions.

Presenter: **Arthur S. Jago**, *U. of Washington, Tacoma*
Presenter: **Roman Briker**, *Maastricht U.*

Artificial intelligence (AI) stands at the forefront of current technological advancement, offering novel and promising opportunities for organizations. This symposium discusses current directions of managerial research on incorporating AI technologies into the workforce. The presentations aim to enhance organizations' knowledge of effectively using artificial intelligence (AI) to gain a competitive advantage in a rapidly evolving global environment. The first presentation investigates how allocating tasks to AI systems affects organizational citizenship behaviors, such as knowledge sharing. The second and third presentations examine tasks traditionally considered quintessentially human—promoting creativity (second presentation) and organizational diversity (third presentation). The fourth presentation investigates how guarantees of confidentiality affect people's acceptance of AI teaching tools. Our discussant, Batia Wiesenfeld, will comment on the four presentations and address prominent challenges in incorporating AI technologies into organizations.

Despite organizations' efforts to improve diversity and inclusion at work, many diversity practices have yielded limited impact, while some lead to unintended consequences. While existing research has primarily focused on assessing support for these practices, there remains a critical gap in understanding the contextual nuances influencing their impact. To bridge this gap, this symposium aims to investigate organizational practices promoting diversity. Across five papers, this symposium (1) addresses the limitations of current diversity practices and whom they work best for, (2) proposes practical and innovative interventions to reduce biases and increase representation during recruitment and hiring, and (3) explores causes for why DEI supporters may become opponents to safeguard against setbacks. Taken together, this symposium provides insights for organizations to consider when adopting diversity practices.

Research on employees with concealable health conditions – both physical and mental – has slowly increased over the years both in industrial-organizational psychology and management disciplines (Bolo et al., 2013; de Graaf et al., 2008; Follmer & Jones, 2018; Lyons et al., 2017; Santuzzi & Waltz, 2016). While this research is on the rise, the experiences of employees with concealable health conditions remain poorly understood. We extend the call for organizational scholarship to examine the role of workplace processes in employees' mental illnesses and employee well-being (Follmer & Jones, 2018) by bringing together emerging scholarship asking unique questions in this space. This is of grave importance, considering the increase in efforts by organizations to foster inclusion of employees with concealable identities. Specifically, the primary objective of our symposium is to present novel approaches to understanding employees with concealable mental health and psychological conditions. Each research team aims to leverage their results to provide insight into how to support these employees as they navigate work environments. Their findings have implications for encouraging organizations to think more comprehensively about the different ways to support mental health and employee well-being in the workplace.

The rapid integration of AI into creative domains marks a pivotal era, sparking both excitement and complex challenges. AI is reshaping the landscape of creativity, sometimes surpassing human cognitive capabilities and outputs, challenging the traditional view of human preeminence in creativity. The potential of AI to enhance human creativity is immense, offering unprecedented opportunities for innovation. Yet, a review of extant research shows that a lack of understanding of AI's capabilities, resistance, and increasing reliance on AI may impede realizing its full potential. As AI takes on human cognitive and physical traits, it leads to complex perceptions and dynamics in the workplace. This raises fundamental questions about human identity in the creative domain and the role humans and organizations should play in collaborating with AI on creative tasks. Acknowledging such complexities, this symposium positions humans at the center of organizational creativity and innovation, leveraging AI's potential as a partner and an impetus in creative efforts. It probes the complex interactions between humans and AI in creative settings, integrating theoretical and empirical insights across various levels and task domains. The goal is to foster engaging discussions, providing organizations and individuals fresh perspectives on the collaboration with AI on creative tasks. This dialogue seeks to navigate the challenges and opportunities, shaping a future where human creativity and AI collaborate to drive innovation and advancement.

Teams are a crucial component of modern organizations, with a significant portion of taskwork being completed by teams. Teams research often focuses on emergent states and teams processes, which are central to understanding team effectiveness. However, there are important divides within most primary studies. First, emergent states and team processes are typically captured using team members' self-reports, which are aggregated to the team level, potentially causing inconsistencies between individual and team-level constructs. Second, many studies presume that the team is the primary referent when members evaluate their group, but some scholars argue that important processes occur based on unique interactions among team members rather than the group's shared experience. Third, despite the dynamic nature of emergent states and team processes, much of the existing research is based on cross-sectional studies that fail to capture potential dynamism. These issues often go overlooked in team studies, limiting our understanding of team emergent states and processes. This symposium brings together three papers seeking to address these conceptual divides and provide new insights and avenues for future teams research.

Unleashing Creativity: Examining the Intersection of Innovation and Organizational Change

Session Moderator: **Pattama Lenuwat**, *Thammasat U.*

ODC: **The Roles of Supply Chain Resilience and Business Model Innovation in Sustaining Firm Performance**

Author: **Pattama Lenuwat**, *Thammasat U.*

Author: **Kedwadee Sombultawe**, *Thammasat Business School*

Author: **Chanchai Tangpong**, *North Dakota State U.*

Author: **Sakun Boon-itt**, *Thammasat U.*

Resource reconfiguration plays a crucial role in shaping a firm's performance, especially during severe supply chain disruptions. Nevertheless, the understanding of how reconfiguration in a firm's resources can sustain firm performance during such disruptions remains limited. As a result, this study examines the influence of resource reconfiguration on the enduring performance of firms. The findings indicate that during a severe supply chain disruption, the firms' resource configuration is a key driver of supply chain resilience and business model innovation, which serve as the dynamic capabilities duo to sustain firm performance. However, for firms that have already established a high level of supply chain disruption orientation, the relationship between resource configuration and these two dynamic capabilities becomes weaker. This study contributes to the theoretical advancement by clarifying the mechanism, as well as its boundary condition, whereby firms' resource configuration can sustain their performance through supply chain resilience and business model innovation in the face of severe supply chain disruptions.

ODC: **How Shared Purpose Drives Clarity, Confidence, and Commitment Needed in Environments of Innovation**

Author: **Patty Ann Lindstrom**, *Benedictine U.*

This research examined the links between organizational purpose and an organization's capacity to innovate. This inductive study answers the question, "What, if any, are the links between purpose and innovation in organizations?" The empirical setting and sample for this study included CEOs and senior leaders of large publicly traded and private corporations, global and national firms, and high-growth technology firms. Fourteen diverse organizations and 24 individuals were participants in which a grounded theory approach was used to examine the influence purpose has on innovation and the innovation process within organizations. The study proposes a conceptual process model that shows the dimensions that catalyze innovation when organizational purpose is strong. Three dimensions emerged in the data, which provide support for how purpose influences organizational innovation capacity: (a) defines clarity and initiates a strategic compass; (b) enhances organizational confidence, bonds people, teams, and organizations; and (c) enables endurance and builds commitment.

ODC: **Innovating for an Uncertain Future: Dynamic Capabilities for Seizing New Market Opportunities**

Author: **Richard Cuthbertson**, *U. of Oxford*

Author: **Lauri Juhani Paavola**, *U. of Eastern Finland*

This paper explores the capabilities of firms within a market through a longitudinal study over a quarter of a century. It highlights the differences between the primacy of dynamic capabilities of the most innovative firm in a market in dealing with uncertainty, and the primacy of the ordinary capabilities of the followers in waiting for certainty to appear. The first mover firm senses, seizes, and then transforms through their dynamic capabilities in operational and strategic, non-routine, decision-making. Follower firms may have sensing activities that resemble dynamic capabilities, but they delay seizing and transformation. This delay reflects the lack of senior management priority given to their dynamic capabilities, rendering them ordinary capabilities of belated change management, rather than dynamic entrepreneurial leadership. If these follower firms do not go out of business, they eventually sense the inevitable force of the market, and then transform, before seizing any remaining market opportunities.

ODC: **Human Capital and Firm's Innovation Direction**

Author: **Xizhao Wang**, *Northwestern Kellogg School of Management*

This paper studies how the sudden loss of personnel affects the direction of innovation in firms. This paper introduces three different measures (cosine distance, total variation distance, and Wasserstein distance) to systematically quantify changes in firm's innovation direction. I exploit a difference-in-difference approach to assess the change in innovation direction within U.S. public firms following sudden deaths of personnel. I find that the loss of upper-tail inventors significantly alters a firm's innovation trajectory, whereas losses of lower-tail inventors and losses at the management level do not. Further analysis underscores the organization's innovation direction is the aggregation of innovation direction from inventor's own expertise plus the innovation direction from team collaboration. The findings on technology distance between different groups of inventors highlight the hard-to-replace nature and the role of inventive human capital, exploring the dynamic capabilities of firms.

Exploring Connections and Faultlines: The Dynamics of Organizational Change

Session Moderator: **Siddhartha Satish Saxena**, *Heriot Watt U.*

ODC: **Analyzing the Intersection of Disability and Entrepreneurship: A Study on the Social Capital of EWD**

Author: **Siddhartha Satish Saxena**, *Heriot Watt U.*

Author: **Deepa Chaudhary**, *Other*

ABSTRACT The paper aims to examine - Do female Entrepreneurs with Disabilities (EWD) possess less social capital in their formal and informal networks than male EWDs? Drawing on the social capital theory and using an intersectionality lens, we argue that female and male EWD receive varying types of supportive (companionship and emotional support— positive social capital) or discordant relationships (conflict and exclusion— negative social capital) with different stakeholders. Using data for 463 EWDs, we focus on two stakeholders, viz., spouse, in the informal network, and venture capitalist, in the formal network. The paper contributes to the gender and entrepreneurship literature in three ways. First, it advances the intersectionality perspective in entrepreneurship literature by capturing the experiences of female and male EWD (gender and disability). Second, it highlights how the network of EWD may be a source of positive or negative social capital. Last, social capital largely remains studied from an entrepreneur's point of view — the receiving end. However, understanding the stakeholders who provide social capital to the entrepreneurs is rarely touched.

ODC: **The Interplay of Organizations in the Creative Economy: Analytical Reflections and Typologies**

Author: **Xinli Huang**, *U. of Sheffield*

Author: **Di Fan**, *School of Management, RMIT U.*

Over the last twenty years, the creative economy has emerged as a topic of significant interest. While much research has focused on the origins of creativity and the creative process itself within this economy, there remains a lack of understanding about how creativity intertwines with economic factors and the role of organizations within this dynamic. To address this gap, our study begins with a bibliometric literature review to explore current research on organizational challenges within the creative economy. We then develop a typology for organizational engagement in the creative economy, distinguishing between creative knowledge creation and application, and the alignment of organizations with either economic or artistic activities. This typology categorizes organizational involvement into four distinct modes: commercialized invention, repetitive production, aesthetic exhibition, and avant-garde art. Additionally, we propose four hypotheses to anticipate the conditions under which different organizational types may prosper in the creative economy. This research not only charts the intellectual landscape of the creative economy but also identifies its critical components and elucidates the diverse pathways through which organizations can achieve success in this vibrant economic sector.

ODC: **The Emergence of Organizational Routines in New Ventures**

Author: **Sindi Sheri**, *Jönköping International Business School, Jönköping U., Sweden*

Author: **Norbert Steigenberger**, *Umeå School of Business and Economics, Umeå U.*

For routine dynamics research, the question of how routines emerge in startups is central because the “standard model” of routines' emergence as a process of adaptation, selection, and retention does not apply to organizational scenarios where no routines exist that can be adapted or developed, leaving an important question, namely where the very first routines are coming from, underexplained. We argue that we need to deepen our understanding of the early stages of routines' emergence in startups. To develop this missing theory, we employ a longitudinal multi-case study approach, capturing routine emergence in the initial stages of four new ventures. We develop a process model that outlines routine emergence in startups as a three-stage process, starting from ideation to patterning, to routinization. We further develop theory on three mechanisms that importantly shape if an action pattern stabilizes into a routine or becomes discarded. Our paper offers two main contributions. First, we contribute an important puzzle piece to our understanding of the emergence of coordination in new ventures, outlining an important trajectory through which coordination does or does not develop in startups, adding new theory on how coordination is, at times purposefully, created, and when such attempts to establish coordination fail. Second, we add an important building block to the routine dynamics' literature, offering a novel theory on how routines emerge in the absence of pre-existing routine ecosystems, complementing previous research that theorizes routine emergence based on an ecology of pre-existing routines.

ODC: **Examination of the Role of Competitive Work Environment in Enhancing Employees' Openness to Share Knowledge**

Author: **Nour Albuloushi**, *Gulf U. for Science and Technology*

Author: **Noufou Ouedraogo**, *MacEwan U.*

Author: **Mohammed Laid Ouakouak**, *Gulf U. of Science and Technology*

Author: **Gertrude Iranganie Hewapathirana**, *Gulf U. of Science and Technology*

The purpose of this study is to investigate the effect of competitive work environment on openness to knowledge sharing. A conceptual model, drawing on the existing literature, is developed to analyze how a competitive work environment contributes to openness to sharing knowledge among employees in organizations. The conceptual model includes coworker desire to learn as a mediating variable and incentives to knowledge sharing and job security as moderating variables. Data collected from eight banks with a total of 237 employees is used to test the research hypotheses using structural equation modelling techniques. The results show that coworker desire to learn mediates the relationship between competitive work environment and openness to knowledge sharing, and both incentives to knowledge sharing and job security moderate the effect of competitive work environment on openness to knowledge sharing. We make theoretical and practical contributions in knowledge management by showing the mechanism through which competitive work environment contributes to openness to share knowledge in organizations.

Advancing Action Research for Personal, Team and Organizational Transformation

Organizer: **Carol Gorelick**, *Bowling Green State U.*

Presenter: **William Torbert**, *Global Leadership Associates & Boston College Professor Emeritus*

Presenter: **Danny Van Montfort**, *Nyenrode Business U.*

Presenter: **Freek Sanders**, *Nyenrode Business U.*

Presenter: **Tobias Fehr-Bosshard**, *U. of St. Gallen (HSG)*

The Advancing Action Research for Personal, Team, and Organizational Transformation Symposium presents an innovative action research paradigm of social science and transformation: Collaborative Developmental Action Inquiry (CDAI). Action research focuses on real organizational issues rather than issues created for research purposes. Indeed, it aims not only to understand social phenomena but also to realize effective change as a path to generating knowledge. The CDAI paradigm integrates quantitative, qualitative, and action research methodology by interweaving first-, second-, and third-person research/practice that simultaneously describe and transform actors and social systems. To indicate how the interplay of these three different levels of engagement enables the enactment of action research in contemporary organizations, three doctoral students will offer lively accounts of their research. A significant remainder of the symposium will be interactive and devoted to sharing participants' viewpoints, experiences, and ideas on action-oriented research. We aim to co-create timely action to establish such transformational approaches further.

Advancing Paradox Theory: To Be or Not To Be

Session Moderator: **Tomislav Hernaus**, *Faculty of Economics & Business, U. of Zagreb*

OMT: Multilevel Organizational Paradoxes for Superior Unit Performance: A Configurational Approach

Author: **Tomislav Hernaus**, *Faculty of Economics & Business, U. of Zagreb*
Author: **Nicola Cangialosi**, *U. degli Studi di Milano*
Author: **Alesa Sasa Sitar**, *School of Economics and Business, U. of Ljubljana, Slovenia*
Author: **Sara Melkic**, *Faculty of Economics and Business, U. of Zagreb*
Author: **Nikolina Dragicevic**, *Faculty of Economics & Business, U. of Zagreb*

Managers struggle to balance and optimize pairs of organizational opposites in a resource-constrained environment. Thus, we empirically explored the performativity of multi-dimensional (knotted) and multilevel (nested) paradoxes to advance the paradox research and increase practical understanding. Building on the inductive meta-theory of paradoxes, a time-lagged cross-level field study was conducted on 69 organizations and 313 line managers from two EU member countries. A multilevel fuzzy-set qualitative comparative analysis enabled us to identify three high-performing paradox configurations: Ambidextrous cooperation, Globalized cooperation, and Globalized ambidexterity. Each of these taxonomic solutions additionally included the organizational integration paradox. Research findings offer novel insights about paradox nestedness and knottedness based on a large-N QCA approach. Additionally, we provide pioneering knowledge about the paradox configuration–unit performance relationships.

OMT: Decomposing Both/And: SMART Strategies for Balancing Paradoxical Opposites

Author: **Xin Li**, *Newcastle U. Business School*

Organizational paradox literature points out the importance of both/and thinking and acting. While the notion of both/and is largely treated as a unitary concept, paradox scholars have associated it with diverse responses to paradoxical tensions, such as ambidexterity, Yin-Yang balancing, and Zhong-Yong middle way. To bring order to the literature, this paper aims to decompose the notion of both/and, and identify generic strategies for balancing paradoxical opposites, i.e., to hold or achieve both elements of a paradoxical tension simultaneously. We first review existing classifications of approaches to paradoxical tensions, resulting in the identification of six distinct non-either/or responses. We then use these distinct responses to help build a typology to accommodate and relate ten generic strategies, falling into five categorical types characterized as superficial, multiversal, amalgamative, reconciliatory, and transcendental, respectively (and hence the SMART acronym). Finally, we propose a prescriptive model of selection of generic strategies under different circumstances.

OMT: An Ontological Perspective on Nested Paradox in Organizations

Author: **Roland Daw**, *St Mary's U., Twickenham*

Scholars of organizational paradox are becoming increasingly interested in how paradoxes become hierarchically related to or determined by other paradoxes, a relationship often referred to as “nesting.” While studies of nested paradoxes have begun to illuminate the interdependencies between complex social and organizational phenomena, there is still little consensus about the nature and the workings of nesting itself. To address this, we review the organizational paradox literature and develop a typology of approaches to theorizing nested paradox. Our typology concentrates on how studies describe two properties of nesting paradoxes: their empirical and theoretical contiguity. From these two continua, we argue that there are three general approaches to theorizing nesting. While two of these categories have already yielded extensive theorization, the category that understands nested paradoxes as both highly empirically and theoretically contiguous remains largely empty. This category, we argue, is the most ontologically oriented way of thinking about nested paradox and, consequently, is particularly powerful for explaining the emergence and failure of organizations through paradox itself. We illustrate the explanatory potential of this perspective by analyzing WeWork’s dramatic rise and fall as an arrangement of nested paradoxes.

OMT: Paradox Symphony: Unfolding Multilevel Strategies in Organizational Dynamics

Author: **Muhammad Mustafa Raziq**, *U. of Sharjah*
Author: **Uzma Batool**, *NUST Business School, National U. of Sciences and Technology, Islamabad*
Author: **Naukhez Sarwar**, *National U. of Sciences and Technology (NUST)*

Paradox management research mainly centers around a leader’s role to manage multifaceted paradoxical situations and remains limited to situation-led specific mechanisms at the individual level. In this study, we seek to deepen our understanding on multiple organizational actors situated at different hierarchies’ and understand how these actors manage interwoven and frequently occurring paradoxical situations. We use longitudinal data collected at two points in time from executives, top management, team leads and employees working in the high-tech SMEs. Data on participants’ lived experiences, gleaned through semi structured interviews lead us to the development of a multi-level paradox management model. We show that: (a) leader behavioral flexibility is a key underlying mechanism as leader’s paradox communication determines whether other organizational actors perceive paradoxical situation as a threat or an opportunity; (b) leader engages followers in paradox management by exercising strategies such as empowered-accountability and capitalizing on followers capabilities; (c) followers proactively engage to stay ahead of the curve and plan the way forward; (d) leader and followers together foster disruptive organizational culture, enabling holistic and systemic thinking and managing paradoxical situations; and (e) the mechanisms are interwoven rather than leader or follower specific, and nested strategies are involved at the interplay of multiple organizational hierarchies. We offer significant theoretical and practical implications.

Corporate Responsibility and Improved Futures: You May Say I'm a Dreamer

Session Moderator: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

OMT: **Pressing Issues, Slow Actions: The Organizational Construction of Temporal Urgency**

Author: **Lorenzo Skade**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **Jochen Koch**, *European Uni Viadrina, Frankfurt (Oder)*

Author: **David Nils Seidl**, *U. of Zurich*

Organizations are confronted with many pressing issues in their environment. Yet, there is great variation in how they experience the urgency to act on these issues, which remains unexplained. Accordingly, we examine how organizations perceive and construct this temporal urgency, drawing on Niklas Luhmann's theory on time to do so. We argue that their idiosyncratic, subjective construction of urgency to respond to a particular issue results from the interplay between the sequencing of an issue's events over time (i.e., the issue's objective temporal structure) and the process by which organizations create and use temporal structures to organize and manage their activities (i.e., the organization's internal temporal structuring). In terms of the latter, we highlight the critical roles of three aspects: the organization's perception of how the effectiveness of its potential responses to the respective issues will decrease over time (i.e., the potential responses to the perceived temporal complexity of the issue); the temporal allocation of the organization's other activities; and the synchronization of the structuring of its actions toward issues with that of other organizations (i.e., temporal coupling). These findings have important implications for the literature on time and temporality and for organizations such as businesses, non-profit firms, and states.

OMT: **The Role of Social Aspirations in CSR Engagement**

Author: **Hyung-Kun Park**, *Rice U.*

Author: **Laszlo Tihanyi**, *Rice U.*

In this paper, we investigate the role of social aspiration levels built upon competitors' actions in the context of corporate social responsibility (CSR). We suggest that this behavior is motivated by a firm's expectation to avoid potential penalties resulting from failing to meet social expectations, rather than being driven by expected premiums. Our empirical analysis is based on a sample of 6,369 publicly traded firms in 77 countries and supports our hypotheses. The findings provide a valuable extension to the behavioral theory of the firm (BTOF) by shifting the focus to a setting with high ambiguity and providing a new approach to problem recognition and resolution in problemistic search. We also contribute to the CSR literature by emphasizing the significance of competitors's actions in firms' corporate social engagement.

OMT: **Making Sense of Causal Ambiguity: The Case of Corporate Social Responsibility (WITHDRAWN)**

Author: **Eva Katharina Schindwein**, *Bern U. of Applied Sciences*

Author: **David Risi**, *U. of St. Gallen*

Author: **Christopher Wickert**, *Vrije U. Amsterdam*

We explore the concept of causal ambiguity, which refers to ambiguity between causes and effects, and its application to the case of corporate social responsibility (CSR). Specifically, we focus on how managers involved in CSR make sense of the link between CSR activities and their non-financial impact. We conducted a qualitative study examining Swiss finance firms implementing CSR-related impact considerations into their operations. The findings reveal that managers construct causality between CSR activities and their environmental and social impacts in four ways. Based on these findings, we develop a model of causal ambiguity maintenance that theorizes the role of managerial sensemaking in establishing causal ambiguity within organizations. The model contributes to a revised understanding of causal ambiguity in the management literature, moving away from its prevailing perception as a static attribute of organizations, and instead highlighting how it can be intentionally maintained to avoid public scrutiny, particularly in situations involving sustainability concerns.

OMT: **The Crisis and Re-Negotiation of a Bank's Social Contract**

Author: **Sarri Nykänen**, *Aalto U., Department of Industrial Engineering and Management*

Author: **Robin Gustafsson**, *Aalto U.*

Author: **Perttu Kahari**, *Aalto U. School of Business*

Social contracts between businesses and society consist of institutionalized, reciprocal exchange arrangements that are enacted, negotiated, and monitored both publicly and through private engagements by the contracting parties, including members of the broader society. Existing literature in social contractarian theory predominantly offers normative insights but lacks empirical examination of how these contracts are formed and renegotiated. Our research fills this gap, focusing on the factors that precipitate crises in social contracts and the strategies stakeholders employ during renegotiation. Through the case study of Nordea, a Nordic bank that made a public threat to relocate its headquarters in response to a proposed increase in bank resolution fees by the Swedish government, we illuminate the dynamics of social contracts in crisis. We find that crises emerge from changes in parties' bargaining power, breaches in contract interpretations, loss of trust, and direct threats. Renegotiating these contracts involves stakeholders engaging in public deliberation to define fair terms while employing coercive, collaborative, and power-enhancing strategies. Our study reveals how environmental, technological, and regulatory changes trigger social contract crises, particularly the globalization and digitalization of businesses. Further, we expose the complexity of stakeholder renegotiation strategies that blend public deliberation with power-oriented tactics.

Gender Based Leadership: She's Walking on Fire

Session Moderator: **Jooyoung Kim**, *Deakin U.*

OMT: Breaking Barriers: How do Female Directors Make Access to the Inner Circle of the Boardroom?

Author: **Jooyoung Kim**, *Deakin U.*

Author: **He Gao**, *U. of Delaware*

Despite some improvements in gender representation on corporate boards, research has attributed such improvement to the firms' impression management efforts to mitigate stakeholder pressures (e.g., Benton, 2021). This implies that gender bias persists within boardrooms, requiring female directors to overcome the double bind of being perceived as having lower competence and warmth when seeking leadership positions on boards. To address this issue, this research investigates how board members evaluate female directors' leadership potential as indicated by her likelihood of serving board leadership positions. By integrating insights from status characteristics theory and research on gender stereotypes, we offer a nuanced understanding of female directors' attainment of board leadership positions by examining how different status cue indicated by their specific career backgrounds signaling her agency and communion may complement or violate the stereotypes against female directors. Analyses using S&P1500 company data from 2009 through 2020 revealed that the leadership gap between female and male directors disappears when a female director had financial experience and longer board tenure, whereas such gap widens when a female director had managerial experience.

OMT: **Value Creation on a Level Playing Field? A Configurational Analysis of Gender Differences**

Author: **Krista Lewellyn**, *Florida Southern College*

Author: **Walker Ross**, *U. of Edinburgh*

Author: **Jennifer Dapko**, *Florida Southern College*

Women remain underrepresented in executive ranks despite evidence that companies with female leaders outperform those with males at the top. The scarcity of females in these leadership positions has led researchers in a variety of fields to suggest that the human capital resource portfolios of women who do manage to crack through the ceiling to the highest level in the C-suite are valuable, rare and inimitable, bringing competitive advantages to their organization. Yet, research shows that women leaders have differences in the way they use their human capital compared to their male counterparts, which makes them strategically valuable whether they are a minority or not. This begs the question, what if women were not underrepresented in the leadership ranks – would they still outperform male leaders? Further, in such a context, are the ways in which men and women leaders use their human capital to achieve high performance different or do they converge? This paper seeks to address these questions, using an abductive approach with configurational set theoretic methods. Our empirical analyses with a sample of National Collegiate Athletic Association (NCAA) Division 1 Women's Basketball coaches supports previous findings that suggest team performance is not significantly influenced by the head coach's gender. However, our configurational approach reveals that the ways in which female and male coaches bundle their human capital attributes to lead their teams to successful performance are different. Further, there are multiple equally effective bundles for both male and female coaches. Our findings expand theoretical understanding about how both men and women leaders create value for their organizations and provide important implications for practice.

OMT: **CEO Divorce and Firm Performance: Gender Effects and Consequences for Wages and Mobility**

Author: **Jacob Lyngsie**, *U. of Southern Denmark*

Research has shown that divorce, among other major negative shocks to CEOs' private lives, negatively influences firm performance. However, it is unclear 1) how and why divorce impacts firm performance, 2) whether the influence depends on the CEO's gender, and 3) what are the consequences for employees in terms of wages and mobility. We hypothesize that the negative link between CEO divorce and firm performance is moderated by gender. Focusing on female CEOs, we proffer competing hypotheses with respect to the effects of the divorce of a female CEO. Finally, we hypothesize that a CEO divorce is negatively associated with employee wages and is positively associated with employees exiting the firm. Analyzing Danish register data, we replicate the finding that a CEO divorce event has negative effects on firm performance, but also find that the relation is stronger when the CEO is female. Additionally, we find that while the divorce of a CEO has no effects on employee wages. However, divorce does influence the gender pay gap. Following a female CEO divorce the gap decreases, and conversely for male CEOs. Moreover, relatively more men leave in the wake of a female CEO divorce.

Collectives, Collaboratives and Embeddedness: To Go Far, Go Together

Session Moderator: **Hagay Volvovsky**, *Coller School of Management, Tel Aviv U.*

OMT: **Organizing and Sustaining Loose Social Collectives**

Author: **Samia Chreim**, *U. of Ottawa*
Author: **Ann Langley**, *HEC Montreal*

We study loose social collectives, which are social formations characterized by fluid forms of organizing, unclear or contested membership, and minimal hierarchy. Specifically, we focus on communities of practice (CoPs), which can be viewed as loose social collectives. Our objective is to examine the processes through which these collectives are organized and sustained. Our study is informed by the notions of organizationality and partial organizing. We conduct a longitudinal, qualitative multi-case study of CoPs. Our findings point to three types of work, namely facilitation work, boundary work and custodial work, which contribute to organizing and sustaining the collectives to varying degrees. We show how the different types of work sometimes attenuate and sometimes exacerbate the tensions experienced by the collective. The findings also indicate that material practices play a role and interact with human practices in organizing and sustaining the CoPs. Finally, we show how democratic, loose social formations can be permeated by hierarchical practices that are subtly enacted and that contribute to organizing processes.

OMT: **Collaborating at the Tower of Babel**

Author: **Hagay Volvovsky**, *Coller School of Management, Tel Aviv U.*

Cooperation requires that exchange partners arrive at a mutual understanding of what cooperation means – i.e., the specific actions that constitute cooperation and defection. Absent such shared understandings, cooperative actions may be interpreted as defection, leading to the termination of the exchange. While previous research found shared understandings are present in long-term relationships, it leaves a crucial question unanswered: if relationship longevity breeds shared understandings of cooperation, how can new exchange relationships, lacking such understandings, survive into longevity? This paper proposes and validates a general process enabling exchange partners to arrive at a shared understanding of what cooperation means in changing and complex environments, thereby fostering both cooperation and long-term exchange: low-stakes joint problem-solving. The analysis differentiates between two contexts: one in which exchange partners can rely on established, pre-existing, commonly known understandings of cooperation and one in which they must jointly develop new relationship-specific ones. A set of online experiments validates the key theoretical implication. When established understandings are unavailable, low-stakes joint problem-solving helps forge mutual understandings that support cooperation and long-term exchange. By contrast, when relationships are not needed to develop mutual understanding, joint problem-solving (and long-term exchange may not be valuable for supporting cooperation.

OMT: **On the Embeddedness of Strategic Appropriation: A Social Practice Lens**

Author: **Qian Li**, *Warwick Business School*

How do industry actors appropriate a rising trend to their strategic advantage while their participation and interaction propels and sustains such a trend? Central to this question lies one undertheorized question of the embeddedness of strategic work and two methodological challenges of capturing the embeddedness empirically. Guided by the social practice theory, this study aims to make a case for social practices as a unit of analysis and a locale where strategic work is observed as a bundle of practices. Based on an ethnographic study, this paper demonstrates embeddedness as one focal actor—technology ventures—enacts, participates in, and responds to practices shared by various actors—incumbents, intermediaries, and industry media—across differing locales of discourse, social, and collaboration in their strategy formation process as digital innovation gained its popularity in the insurance industry. The study explains what embeddedness means in strategy research, highlights the notion of knowing in doing practices, and demonstrates how a social practice approach can be a valuable tool for understanding emerging and large-scale phenomena.

OMT: **Collective Action and Structures of Discourse: The Constitutive Role of Deliberation**

Author: **Fatima Ahmed**, *U. of Zurich*
Author: **Bennet Schwoon**, *U. of Zurich*

Literature on collective action increasingly investigates the role of thematic communication (i.e., what is being said) such as narratives and frames to explain collective action. Yet, only little is known about the role that structures of discourse (i.e., deliberative capacities including inclusivity, authenticity, and consequentiality) play for the constitution of collective action. To theorize this relationship, we conducted a single longitudinal case-study, analyzing the media-based public discourse about COVID-19 in the U.K.. We contribute to theory on collective action by unpacking the role of discursive structures for the constitution of collective action. We theorize from our data that collective action is importantly driven by “deliberative capacities” in media-based public discourse evolving in entanglement with “changing trust in collective action executing institutions”, “changing trust in science”, and “emerging imaginaries about the future”. Additionally, we advance theory on deliberative capacities and polarization in organization and management studies by exploring the diminishment of deliberative capacities explaining the important role of perceptions of formal organizations in the emergence of deliberative capacities.

Tensions and Paradox in Craft and Creative Industries: A Thousand Flowers

Session Moderator: **Amit Sharma**, -

OMT: **The Music Stopped but We Were Still Dancing: Rhythms of Persistent Tension in Creative Ecosystems**

Author: **Juliet Vink**, *Vrije U. Amsterdam*

Author: **Brian Vincent Tjemkes**, *Vrije U. Amsterdam*

Author: **Elco Van Burg**, *Vrije U. Amsterdam, School of Business and Economics*

Creative ecosystems are at their core characterized by persistent tensions; contradictory yet interdependent elements. While prior literature has investigated the embodiment of these tensions, we are left to wonder about social reproduction and recursiveness of these tensions. To advance our understanding of persistent tensions in creative ecosystems, we explored these over time. In a 2-year long inductive case study we find rhythms of three specific tensions in the techno-music creative ecosystem: competition vs collaboration, compliance vs deviance, and hedonistic escapism vs social reflexivity. These persistent tensions are (re)produced by actors in rhythms of foregrounding and backgrounding the extremes in response to variation in the frequencies of value creating activities, regulations, and confronting incidents. Specifically, the rhythm of competition and collaboration is shaped by variability in the frequency of value creating activities. The frequency of regulatory activities influences the tension between compliance and deviance. While the frequency of confronting events influences the tension between hedonistic escapism and social reflexivity. These three rhythms harmonize at specific instances, giving rise to a major joint event. We discuss implications for creative ecosystem studies and the importance of extending a dynamic understanding of tensions and harmonies over time.

OMT: **To Scale or Not: Resolving the Growth-Authenticity Paradox in Craft-Based Organizations**

Author: **Amit Sharma**, -

Author: **Roy R. Suddaby**, *U. of Victoria*

Authenticity is increasingly being recognized as an attribute that is socially constructed by the interaction of the object, the environment, and the observer. In this paper, we examine the socially constructed nature of authenticity in the creative craft industry. The craftsmen and organizations that employ craft methods of production often struggle with the paradox of scaling up while maintaining the perceived authenticity of artisanal products. We explore how they can influence the construction of authenticity to strike a delicate balance between craft, tradition, innovation, and authenticity and resolve the growth-authenticity paradox by providing the most effective authenticity cues. We present multiple dimensions of authenticity in creative crafts and propose a typology of artisanal products based on these dimensions. We also suggest scaling strategies that can help achieve the objective of growth while maintaining the perceived authenticity of artisanal products in the creative craft industry.

OMT: **A Configurational Approach to Paradox: How Cultural Leaders Deal with Three Paradoxical Demands**

Author: **Chris Moos**, *U. of Oxford*

Author: **Michael Smets**, *U. of Oxford*

Author: **Pegram Harrison**, *European Business School London*

Author: **Jonathan Schad**, *Vrije U. Amsterdam, School of Business and Economics*

Organizational leaders face a multitude of opposing yet interdependent demands arising from conflicting goals, pluralistic missions, and divergent expectations. Yet, paradox research has so far focused only on pairs of two paradoxical demands. This paper contrasts this research by presenting empirical evidence from an in-depth study of British 42 museum leaders that deal not with two, but three opposing yet persistently interdependent demands for Culture, Commerce, and Community. Current research that has so far focused on leaders' passive paradox acceptance, oscillation between two demands, and transcendence as a discreet outcome of paradox management. Rather than passive acceptance, we show that the cultural leaders in our sample used the practice of actively arranging compatibility between the three paradoxical demands through setting out their elements, and orienting them towards each other. Rather than oscillation between two demands, leaders created complementarity by situating the relationships between the three paradoxical demands, and forging relationships between them. Finally, rather than achieving a discreet state of transcendence, the leaders in our sample continuously transcended the tensions between the three paradoxical demands by orchestrating their elements, and creating interdependence between them. We discuss the implications of the leaders' dealing with three rather than two paradoxical demands for the literature.

OMT: **Navigating the Tension Between Tradition and Innovation in Cultural and Creative Industries**

Author: **Giulia Cancellieri**, *Venice School of Management - U. Ca' Foscari of Venice*

Management and organizational scholars have paid increasing attention to the role of tradition in strategy making. One trajectory of this literature has reached a consensus on the use of tradition as a resource to preserve valued rituals, support desired identities and bolster firm performance. However there is much less agreement about how firms can leverage their traditions to pursue innovation. Addressing this question is particularly important in cultural and creative contexts where respect for tradition and an orientation toward innovation often coexist in a dialectical way and organizations often face the challenge to mediate between adherence to a long-lived legacy and pursuit of innovation. Accordingly, I aim to synthesize and integrate the existing literature into a coherent perspective that delineates viable future research directions by asking the following fundamental questions: How can cultural and creative firms manage the tension between tradition and innovation? How can they accommodate the renewal of a tradition without stifling it? How can they use tradition as a resource for innovation in the present?

Institutional Logics

Session Moderator: **Peipei Yang**, *The Fraunhofer Institute for Systems and Innovation Research ISI*

OMT: **Decoding Institutional Logics: Unveiling Functioning Mechanisms of Symbolic and Material Elements**

Author: **Peipei Yang**, *The Fraunhofer Institute for Systems and Innovation Research ISI*
Author: **Yimei Hu**, *AAUBS, Aalborg U.*

The perspective of institutional logics has undergone a gradual change since the 2000s, and become an attractive topic currently. Symbolic systems and material practices constitute pivotal elements in institutional orders. However, our understanding of the causal orders and functioning mechanisms between them remains limited. To unveil the underlying mechanisms and decode institutional logics, we conduct a thorough review of 88 academic articles published in relevant top journals. Four main themes in three phases are identified. The relationships and roles of symbolic and material elements exhibit variation under different themes, and some also differ under one theme across various phases. Despite valuable insights provided by extant studies, some significant and intriguing questions remain unexplored. Therefore, we propose several potential avenues for future research, hoping to contribute to the development of the institutional logics perspective.

OMT: **Sacred Crossroad: Unraveling Organizational Decline in the Interplay of Religion and Community Logic** 

Author: **Abiodun Ige**, *U. of Detroit Mercy, CBA*
Author: **Diego Arias Padilla**, *U. of Detroit Mercy, CBA*

This study addresses a significant gap in the organizational theory literature by exploring the role of compatible logics, specifically religion and community logics, in organizational decline. Utilizing a longitudinal archival qualitative study focused on Scarboro Foreign Missions (SFM), a Catholic congregation from Canada, we examine the interplay between religion and community logics over a century, leading to SFM's organizational decline in 2018. The findings reveal that organizational decline occurs when one logic becomes dominant without being part of the original identity (community logic), while the other weakens (religion logic) but remains integral to the identity. The study sheds light on the counterintuitive yet neglected phenomenon of compatible logics contributing to decline and its relationship with organizational identity.

OMT: **The Cultural Constructs Contribution to Institutional Logic Construction** 

Author: **Arnaldo Luiz Ryngeblum**, *U. Paulista - UNIP*
Author: **Victor Silva Corrêa**, *U. Paulista - UNIP*

The literature on institutional logics acknowledges the importance of cultural constructs that, concomitantly with material practices, constitute the logics in a context. However, the literature has approached the cultural constructs without discriminating between them in the process of logic instantiation. Furthermore, studies mention these concepts without explicating their part in logic construction and confirmation. Thus, the influence of cultural constructs in the constitution of logics should be further explored. The combined participation of the concepts, their relation with practices, and how they relate to logic building are some of the questions that can be raised. We reviewed the institutional logics literature to identify possible inferences about the subject. Using theory building propositions and specific empirical examples from these works, we explore a process model that proposes a research agenda to deepen the knowledge about the subject. This exploration of the theme indicates that actors use constructs initially, such as understanding, assumption, awareness, interpretation, belief, or value, to evaluate a context when proposing or implementing a practice, which is often supported by a justification construct. In addition to their objective character, these practices are also expressed through tangible cultural manifestations that use symbols, declarations, theories, and others.

Authenticity, Trust and Validity

Session Moderator: **Alan Zhang**, *MIT Sloan School of Management*

OMT: **Authenticity Frictions: Harnessing Risk as a Catalyst for Authenticity in Fine Wine Production**

Author: **Alan Zhang**, *MIT Sloan School of Management*

The market for cultural goods prizes authenticity, valuing those products that seem “true” to what they claim to be. But unstable supply-side conditions can disrupt production activities and put the achievement of authenticity at risk. Drawing on 16 months of ethnographic field work at an internationally-renowned winery (Cal-Cru) in Northern California, I examine how actors contend with instabilities in the production of authentic fine wine. Cal-Cru is widely regarded in the industry as having achieved authenticity. Yet, Cal-Cru’s achievement entails a perennial struggle with volatile production conditions. Multiple kinds of actors (i.e., humans, weather, plants, microbes) are given latitude to participate in the wine-making process, making production conditions highly unstable. Instead of following industry practice to mitigate or suppress these risks, I find that Cal-Cru actively promotes and sustains them, thus harnessing risk for authenticity. By allowing heterogenous actors to contest and destabilize the course of production—fostering what I call authenticity frictions—Cal-Cru cultivates risky conditions as a catalyst in the production of authenticity. This is achieved through a set of trajectory management practices that assimilate ongoing instabilities into the production process. My research explains how Cal-Cru’s consistent achievement of authenticity is accomplished not despite supply-side instabilities, but because of them.

OMT: **Dynamics of Institution-Based Trust Mobilization in Early Stages of Digital Peer-to-Peer Platforms**

Author: **Clarissa E. Weber**, *Queen Mary U. of London*

Author: **Mark Okraku**, *U. of Goettingen*

Author: **Indre Maurer**, *U. of Goettingen*

Digital peer-to-peer service platform organizations need to mobilize users’ trust in order to attract and retain users. While prior research has provided a rich picture of the use and effectiveness of platform-inherent institutional mechanisms to build trust, we know little about how institution-based trust is mobilized in the early stages of platform organizations, when those mechanisms are not yet effective. Drawing on in-depth qualitative data from early-stage peer-to-peer service platform organizations in Panama and Mexico, we find that platform entrepreneurs engage in a delicate process of “grounding institution-based trust”—iteratively combining technology- and data-based mechanisms with practices that eliminate high risks, personally familiarize users, and leverage platform communities. The process model we develop shows how these practices depend on one another, how they develop over time and gradually enable institution-based mechanisms to become effective. We contribute to our understanding of trust in the context of digital peer-to-peer platform organizations, of institution-based trust and its production more generally, and of resource mobilization in early-stage organizations.

OMT: **Who Should I Believe? Organizational Members’ Prioritizations of Incoherent Validity Cues**

Author: **Angelo John Deleo**, *USI (Lugano)*

Author: **Paul Gouvard**, *USI (Lugano) / ESSEC Business School (starting September)*
